I fully expect that some of the statements in my last letter will surprise many English readers, and even possibly alarm some, who have been induced, by a wrong train of reasoning, to imagine that England had other advantages which caused her to be successful in manufacturing besides the security which we long comparatively enjoyed for such undertakings. It is of the greatest possible importance to undeceive all such as are of this opinion. The manufacturer must be undeceived, because it will direct his attention to the true objects that deserve it, and will give certainty to his calculations respecting supply and demand. The merchant requires correct information on this point, because, without such, he cannot know the extent and nature of the competition that he has to expect in foreign markets. The legislator must, by all possible means, seek to obtain clear views on the relative powers of different countries, for this will alone enable him to perceive the ease with which he can do mischief, and the extent of practical information he requires to enable him to serve the trader, by interfering to regulate his proceedings.

In my last letter I sought to make two points apparent. The first was, that coals and iron abound in Southern Belgium, and in the Rhinish province of Prussia, to an extent that offers every facility for manufacturing on the largest scale. In this I shall endeavour to show that these advantages (which are again met with in Silesia) are supported on all these points by a dense population, that offers, as is well known, a large supply of labour at a cheap rate. The difference between the view that I have taken of these circumstances and that taken by the writers who have gone before me on the same ground is, that Mr. Emerson Tennent, Mr. Sykes, Dr. Bowring, and other inquirers, have chiefly confined themselves to calling attention to this abundance and cheapness of labour, and to the pains taken to educate the working classes, and consequently to render their aid available for the manufacturer. All that these writers have advanced deserves the most careful study; but it is only one side of the extensive question, in the proper treatment of which the trader and producer (and no less the consumer) are interested.

The second point that I endeavoured to illustrate was, that these manifold advantages, which contain germs of inestimable wealth, and of material as well as moral benefits for the countries that possess them, are repressed in their development and stunted in their growth by the foreign and domestic political relations in which these countries stand. I am no hunter after peculiar forms of government, and am far from thinking that, in the present varying state of progress of the different countries of Europe, any one description of government, whether constitutional or not, would equally suit the wants of every land. But one thing the manufacturer and trader must demand of all governments, which is, that they shall encourage him to exertion, which they may in a great measure do by leaving him the use of his judgment, and protecting him in the enjoyment and employment of his earnings.

Of the nature of the risk to which the manufacturer and trader in every European country (not excepting England) are now exposed, we found a practical illustration in the recent proceedings between the courts of Berlin and Brussels. Since I first alluded to this subject, a new phase has occurred in these transactions, which gives us reason to reflect seriously upon the nature of this commercial warfare. Belgium has replied to the decree of the Prussian Monarch in a manner that shows it looked upon that decree as much in the light of an insult as of an injury. The court of Brussels has thrown itself upon the protection of France, and has taken steps indicative of its intention to enter into a cordial commercial alliance with France, in proportion as it feels itself pressed or abandoned on the side of Germany.

That this was altogether a wise move on the part of the Belgian Cabinet may be doubted. As far as the details have transpired of the new French treaty of alliance, the hostile measure applied to English and German yarns under the last treaty is now to be extended to English and German printed calicoes; French stuffs are to be exceptionally favoured. In return for this, Belgian coals are to be exceptionally favoured on their entrance into France. Much as the removal of any restrictions on trade anywhere is to be desired, yet the dispassionate observer cannot look upon these proceedings without a presentiment that such an exceptional mode of framing commercial regulations cannot lead to good. Nearly the whole of these steps have been taken since the prorogation of the Belgian Chambers. The manufacturing and mercantile classes are not represented in the Cabinet, and are thus deprived of even the slight support which they could expect from the Deputies. We need not expect that on the present occasion similar remonstrances will be made by the provincial councils to those which followed the appearance of the Berlin decree. The prospect, however distant, of an intimate commercial alliance with France is alluring for the Belgians; but the general effect upon the trader and the capitalist of this mode of revolutionizing the interests in which they are most concerned cannot but have the discouraging effect on which I have laid so much stress, as being the disease under which the industry of these countries labours. How many commercial houses are interested in the present state of the trade between

France and Germany no one thinks it necessary to inquire. The Bavarian Government, we are told, having purchased at a rather dear price 10,000 tons of rails from the Seraing Company, intend exempting this quantity from the operation of the decree, which lays 50 per cent. additional duty on Belgian iron. As no private person could claim such an exemption, and the same liberty could scarcely be taken by a small state without its being noticed by the more powerful members of the Zollverein, we have an explanation of the reluctance with which individuals undertake the responsibility of such undertakings abroad, and why it really is advantageous under present circumstances, when the state originates such improvements. On this chapter I shall have hereafter more to say. I return to my descriptions.

The "British and Foreign Review" some years back called attention to the fact, that in many parts of Germany the density of the population favours or prescribes manufactures, and that, instead of seeking an interchange with those countries, in order to prevent them from manufacturing, we should find that a free commercial intercourse with England would, for its first effect, call manufactures, on a larger scale than now subsist, into life. In No. 22, a survey of the population of the manufacturing districts is given, commencing with the part of Germany in which I now am; and, although it compares the population with that of England in 1831, yet it will still apply. The increase has been a proportionate one in the two countries.

The most populous portion of all Germany is the circle of Elberfeld, which contains 883 inhabitants to the English square mile, or considerably more than the average of Lancashire. We should, however, do wrong if we compared the two absolutely; for this circle has an extent of but 116 square miles. As in the Ardennes the manufacturing population accumulated on the banks of the small but rapid Vesdre, so here a small stream that traverses the circles of Elberfeld and Solingen forms the centre of the manufacturing activity of the district. The face of the country is highly varied without being picturesque, but the rapid undulations of the ground form a series of steep declivities of no great elevation, enclosing small valleys that send their brooks into the Wupper. The traveller who follows any small path that leads through the fields is sure, on reaching an eminence, to see some miniature factory situated where the brook can be collected into a pond, and allowed to drop into the valley over one or two wheels of small power that are mostly overshot. The mill-pond and the brook are usually shaded by groups of alders; and the landscape effect of such a mill is very pretty. The level country which surrounds Düsseldorf is cut up into the small patches that are characteristic of German husbandry; but in the hilly part the small properties are kept better together, and are in few hands, for reasons that I shall presently explain. This country has for centuries been a seat of manufacturing industry. Elberfeld was known in the 15th century for its trade in yarn and its bleaching-grounds. The silk manufacture, and the method of dyeing with Turkish red, were introduced in the last century; the latter by Greeks, who had also been encouraged to teach the art to the manufacturers of Rouen. A merchant of this town invented at that early period a loom for weaving staylaces, for which, and all kinds of tapes, Elberfeld has since been famous. The silk manufacture is here the most extensive within the Zollverein; but, notwithstanding the favourable position for the choice of the raw material as it passes the Rhine on its way to the Dutch and Flemish ports, it can attain to no real importance under present circumstances.

The reasons for the languishing state of the silk manufactures in these parts are two. The first is the dearth and scarcity of cottons, linens, and woollens in Germany, which prevent the inhabitants from requiring silks. The second is the refusal of Russia to admit the superior manufactures of the west of Europe to supply her Asiatic trade, which is in consequence of no importance, the Chinese not requiring any but the finest articles of European make at the price which a long land transport puts upon them. The objects of which the people of Elberfeld are now, therefore, proudest are their establishments for printing with cylinders. These factories are on a comparatively small scale, and being reduced to depend for cloths in a great measure upon hand-weaving, or in imported goods subject to a high duty, cannot look for large profits. By unrelenting industry and great economy, however, they thrive, and Elberfeld counts many wealthy citizens. The workmen receive for daily wages the sum usual in these parts, about one shilling; but the custom of piece-work is very general, at which a man easily earns four dollars, or 12s., per week. The largest house is that of Simon and Co., who keep 1400 out-door looms employed. The custom is to furnish the weaver with the loom and all materials, and he is paid for the mere weaving by the piece. A great article of production is the half-silk neck-handkerchief worn by the peasantry. For large shawls, 1½ yard square, in the Jacquard loom, one dollar and five gros (3s. 6d.) are paid to the weaver. The designs of the finer articles are pretty; but for silk as well as cotton the patterns are borrowed from France, and the execution, especially the combination of colours, is inferior to the French. The workmen help themselves by cultivating small gardens in the immediate neighbourhood of the town, which the masters endeavour to supply them with on moderate terms. For about four dollars (12s.) a plot of ground

can be rented that will furnish vegetables for a small family. Bread is dear for the reasons I before alluded to; but it may be expected that the railroad planned through Westphalia will cheapen it. In 1840 (when we were importing corn), the pound of wheaten bread cost at Elberfeld 2½d. The two-pound rye loaf sold then for 6d., and it is not now much cheaper. These prices may be considered as generally applicable to the Rhenish province. It is inconceivable that Prussia has not been more energetic in prosecuting the construction of railroads, and especially that the Government has refrained from taking the lead in these undertakings; but I believe I gave in a former letter the probable reason for this tardiness, which those alleged in the commencement of this letter in favour of a contrary course are not likely to outweigh. This fine manufacturing district is, however, suffering under the pressure of dear provisions, which is the more sensibly felt in proportion as competition increases.

Elberfeld is a beautiful town, with all the appearance of being a contemporary in its bloom of the manufacturing towns of England. The best houses are not built in clusters or in continuous rows, but stand isolated from each other by small gardens that surround them, and which give them an airy and cheerful look by means of the groups of flowers, the taste for which is universal. If the efforts of several very meritorious men, who are anxiously working in the cause of the poor, are successful in pointing out means of employment and comfort to the rapidly-growing class of labourers, this little town would be a *beau-ideal* of a manufacturing capital. Elberfeld counts 160 mercantile houses, 60 dyeing establishments, 10 bleach-grounds, 6 cotton-spinning mills, an iron foundry, and 3 machine factories. There are 2000 silk-loom worked within the town: 266 weave cottons, and 260 make tapes and laces. But the whole surrounding district is like one large manufacturing village, and the clank of the loom or the sound of the hammer proceeds from every cottage and group of trees you pass.

Elberfeld and Barmen, which now form one town, contain nearly 60,000 inhabitants, and form the centre of a district which joins on the north the coal and iron district on the Ruhr, described in my last letter; on the south it joins the circle of Solingen, the seat of another more remarkable and more celebrated manufacture—of the cutlery, especially sword blades. The whole manufacturing district of the Lower Rhine is divided by that river from the duchy of Cleves and Juliers, whose names are often met with in history as the cause and the seat of devastating wars, but which now are progressing in the peaceful arts. Large silk manufactories, although few in number, are found in those towns.

Solingen lies in the country I have already described as accompanying the course of the Wupper, and, like Elberfeld, forms a centre for the manufacturing activity of a large district. The circle of Solingen has 58,000 inhabitants, or about 500 in the English square mile. The Wupper, with its brooks and mill-ponds, traverses this circle, but here turns only iron hammers, grinding and polishing mills, turning lathes, &c.

The origin of the famous cutlery and armourers' trade is traced up to the period of the Crusades. Count Adolphus of Berg, who accompanied Frederick Barbarossa in 1147 to the Holy Land, is said to have brought some skilful artists in steel home with him, and to have enriched his country with the arts of Damascus. Another version of the story ascribes the introduction of the famous mode of tempering to some Styrian ironfounders. But there is no reason why both may not have some foundation in truth. The superiority of the Solingen blades (the fells are in the greatest demand) rests upon the quality of the Solingen iron, which, like the celebrated Styrian ore, is highly carbonated, and when melted with charcoal yields native steel of fair quality. The art of tempering has, however, been brought to perfection at Solingen, and even the Styrians can produce nothing to equal a Solingen fell. Napoleon, who was ambitious of possessing everything remarkable, transferred a great number of the cutlery of Solingen to Paris; but there they were not able to produce blades of the quality that were made at Solingen. The experiment proving a complete failure, it was supposed that the water or the sand of this district possessed peculiar qualities that are indispensable in the tempering. We are thus reduced to wonder at one of nature's innumerable veiled mysteries, if we do not believe that the traditions upon which the cutler's skill rests being handed from father to son in a merely practical manner, and without any help from science, or the slightest attempt at theorizing, are more easily lost when they are applied to a different locality where the surrounding objects do not aid the manufacturer's memory.

These cutlery, with the accompanying grinders and polishers, form a curious caste amongst the workmen of this district, and appear to regard themselves as entitled to more respect than the working men of the other branches of industry. In the present state of the trade a cutler must be the owner of one of the little mills that I have described. I visited several of them in a walk I took from Elberfeld to Solingen, and found they generally commanded from three to eight horse-power water-wheels which blew the bellows, and worked hammers of the small dimensions required for the fine cutler's wants. A great division of labour is observed, and the rules of the trade are strict in prescribing adherence to a custom which is unquestionably beneficial. All work is done by

contract, and it is usually bespoken by the large houses, which stand in connexion with all the War-offices, and not seldom with the insurgent chiefs, of the Continent. The latter, who of course do their business through mercantile houses, are, I hear, the best paymasters; and a considerable activity amongst the forges of Solingen has generally been the precursor of military operations in Greece, Spain, Italy, and Poland.

It is probable that the labours of the smithy, that are now simplified and alleviated by the use of machinery and the aid of association, were at one time not to be practised without attracting the robber of high or low degree to share in the gain of this industrious class. Some of the customs of the cutlers remind one of the laws by which secret associations for self-defence were in former times kept together and held in respect. Unhappily similar rules and observances have prevailed in our times, and accompany the strikes of English labourers, and the American custom of Lynch law. If any stranger attempts to intrude on this little community by purchase or otherwise, he is by various means made to feel that he is looked upon as an intruder, and even unusual efforts of competition are said to be visited with warnings or ill treatment that repress excessive zeal. In making this statement I should much regret creating any unfavourable impression respecting an industrious and struggling class of citizens, but the accounts that I heard were not told as secrets, nor did there seem to be any reserve in the declaration that no one who had not "grinder's blood" in his veins, or who had not married into a grinder's family, could hold a grinding-mill. It is impossible not to regret here, as in Belgium, that the want of confidence in the commercial views of Ministers and Governments should have become so essential a principle of self-defence with a large portion of the industrious classes as to leave them apparently no alternative but to abandon occupations for which they are fitted, or to guard their individual interests by means so subversive of the general security of society as some that I have heard mentioned. Freedom of exertion and security of enjoyment would have long since rendered combinations of this kind obsolete.

It is impossible to wander through this interesting district, with its secluded and busy mills, its emerald meadows, and active population, without feeling the full hardship of the case of men who are menaced with all the evil results attendant upon the growth of competition for which no preparation has been made. As I stood in a magazine belonging to one of the largest merchants and contractors, and looked over a large lot of side-arms and bayonets that he had collected to execute an order, I could not help thinking how ill-applied the ingenuity of the many master-cutlery, and the nice distribution of property were, which had for its result a product that the veriest clown, with the aid of a steam-engine, could produce. Had it never entered into the head of a Minister to protect these Solingen artists, what a market might they not have commanded! Instead of making common soldiers' arms, their skill would have been devoted to the production of instruments or fine blades, the demand for which would have increased in proportion to the cheapness with which Birmingham and Liege furnished articles of common use. As it is, we need no prophetic inspiration to tell their doom. Not allowed the benefits of competition, they will sink under its pressure; and in the foolish struggle to produce on the banks of the Wupper what can be better made on the banks of the Meuse, the social arrangement which was so eminently adapted to suit itself to the progress of the country to prosperity, and to open a field of art in proportion to the growth of circumstances discouraging for mere handicraft skill, will be destroyed, and who shall restore it? The attempt to induce these small millers to compete with the steam-engines and capitals of a country like England, when they possessed skill and the means of using it that we should have gladly purchased at any price that could be set upon it, is the true cause of the distress that has now for years been felt in this district, and that will probably soon change its character. In industrial matters a step that does not advance, retrogrades.

I may add that, last year, the Chamber of Commerce of Elberfeld drew up a memorial, while the augmentation of the duties was under discussion at the congress at Berlin, that was a masterpiece of sound judgment and practical knowledge. It made a great impression upon those producers, but was disregarded at Berlin.

If we pursue the manufacturing districts of the Zollverein; without regarding the much larger intervening agricultural tracts of country, we find in the third coal and iron district of Rhenish Prussia five circles of the Government of Treves, those of Saarburg, Merzig, Saarlouis, Saarbrück, and Elbweiler, containing 181,000 inhabitants on 602 square English miles, or about 270 per mile. The population is in reality denser than appears from these figures, as the forests are very extensive. The coal and iron beds in these circles form a part of the subterranean deposits that stretch far into Alsace, and furnish materials for the numerous factories in that province. The numerous streams that fall from the three mountain chains that meet near the Upper Moselle are covered with mills, factories, and hammers. Some of the iron and lead works are on a large scale, but the former are unable to compete with England, or even Belgium, in cheap production. Favourable as the course of the Rhine would appear for manufactures (and the Swiss have proved that it can be turned to account), there are the

only spots that have endured the experiment on a large scale. The eastern range of the Westerwald, on the western side of which the district of Siegen is situated, as has been described, belongs to the Duchy of Nassau, and is rich in iron ore, the management of which is very well understood by the inhabitants. Two English companies endeavoured to obtain possession of a part of this district, but from want of due appreciation of the knowledge and experience of the Germans, and an overweening confidence in agents who did not know the country, they both led to no result. The British Nassau Mining Company has at length wisely given up its mines, and will, I hear, confine itself to working up the metal which is produced around them, of superior quality, into bar and sheet iron. These are cases which prove the usefulness of spreading correct notions on these points. The cause of the poor success made by Germans in these undertakings does not lie in their inability to manage the resources with which nature has enriched their country; but in the state of trade, which deprives them of a market, and of the stimulus to exertion and economy on which the success of all manufacturing depends. That there is nothing national in such results from these causes is most clearly proved by the conduct of the two above-named English companies, who had, moreover, the previous experience of the Germans to guide them.

With the exception of a large spinning and weaving factory at Elbweiler, near Carlsruhe, erected and managed by a joint-stock company, the whole of the vale of the Rhine may be characterised as agricultural. The inhabitants of the Bavarian palatinate into which the coal fields and iron veins extend from Alsace and Prussia are more disposed to manufacture, and the first successful attempts are likely to be made in that quarter, where great intelligence and industry prevail. But the repressive causes must first be removed to enable them to progress beyond the mere handicrafts.

Where no more alluring prospects are held out to a district, the handicraft industry is itself capable of refinement. In the mountainous districts of Switzerland, whose soil and climate are not very propitious for agriculture, and coals and iron are scarce, we know that watchmaking, which demands a great deal of hand labour, has arrived at an extraordinary development, inasmuch as the excellence and cheapness of the Geneva watches has made all Europe tributary to that city. Something similar has taken place in the valleys of the Black Forest, which runs parallel to the Rhine from near Mannheim to the frontier of Switzerland. Under the influence of a national instinct, which is generally correct, the dwellers in the valleys of this range turn the wood, of which they can dispose to the best account, in the manufacture of the wooden clocks which are hawked about in the streets of all the capitals of Europe. Toys, carving in bone and ivory, and objects of turnery, are produced in every village of this industrious but very poor district. And here again is a country waiting for that emancipation of exertion that would confer upon it well-deserved wealth. All it produces belongs more or less to the class of luxuries (such at least they were in the last century), and every object would rise in value by the cheapening of articles of first necessity. Should foreign trade not be encouraged by those who undertake the regulation of, and consequently the responsibility attending failure in, industrial speculations, the only hope of these people must be, that the progress of the home industry will soon overtake the growth of population. With the best wishes for the accomplishment of this expectation, I must confess my opinion to be, that the fulfilment of their hopes is likely to be long deferred. Upon this point more in my next letter.

LECTURES ON THE CORN LAWS.

DEVICES.—On the evening of Tuesday last, a lecture was delivered at the British School-room by Mr. Falvey, from the National Anti-Corn-Law League, before a most respectable audience, consisting of upwards of 300 persons. R. Biggs, Esq., was called to the chair. Mr. Falvey then came forward and delivered a most lucid and argumentative address, which was heard with marked attention and interest; at the close of which votes of thanks to the chairman and to Mr. Falvey were carried by acclamation, and the meeting separated. Mr. Falvey gave notice that on Thursday evening he would deliver a second lecture on the evils of the colonial monopolies.

MARKET LAVINGTON.—On Monday evening a public meeting was held at the Parsonage-house, Market Lavington, to hear a lecture on the Corn Laws from Mr. Falvey. About 200 persons were present. The Hon. Admiral Bouverie having been called to the chair, after an appropriate introduction, called on Mr. Falvey, who proceeded to address the meeting. As Free-Traders (he said), they desired merely that the dispensations of God should be carried into effect; that the countries of the world should be allowed to interchange their respective commodities in proportion to the requirements of their people. He was a Free-Trader because the principles of Free Trade were in accordance with the law of God, with the Christian dispensation, and with the best interests of all classes, but more especially of the humblest classes, whose only income was their wages, whose only property was their labour. (Cheers.) By the Corn Law of 1815, passed when every commodity was at war prices, and meat in proportion, the price of everything was suffered to find its proper level, except rent. By that law 80s. per qr. was promised to the farmer; in 1821, prices fell below 60s. per qr.; and in the following year, the average price for the whole year was only 43s. 3d. What made this change? The price was fixed by law; but the law could not give people the money to pay it; it was therefore unjust for the Legislature to interfere to prevent men from

obtaining the largest wages for their labour, and laying out those wages in the cheapest market. (Loud cheers.) Mr. Bennett, at a recent agricultural meeting, said the farmers had been "fleeced like sheep." Ay, he would add, and squeezed like sponges too. (Hear, hear.) But who fleeced them? Not the manufacturers; for the landed interest had held the Government for the last 80 years; it must, therefore, be the landed interest who had fleeced the farmers; and they had done so under the pretence of "protecting" them. Truly it was such protection as the monkey afforded the cat when he took her paw to reach the chestnut from the fire because he feared to burn his own. (Laughter and cheers.)—Mr. Falvey's lecture lasted nearly two hours, and was listened to throughout with the greatest attention, interrupted only by frequent applause. A vote of thanks was given to Mr. Falvey; and on the motion of that gentleman, seconded by Mr. William Smith, thanks were carried, by acclamation, to Admiral Bouverie, for his kindness in taking the chair.—*Abridged from the Wiltshire Independent.*

THE REGISTRATION.

SOUTH LANCASHIRE REGISTRATION.—(From a Correspondent.)—Although the revision for the southern division of Lancashire is not quite finished, enough has been done to satisfy both parties that the doom of monopoly is sealed in this important electoral district. We have gained largely in every revision court; and the result will be the sweeping away their boasted 600 majority of last election, and placing the League in a majority of nearly 1000. The total gain will certainly be from 1500 to 1600 upon the register. This is our first county triumph, and it will show the Free-Traders in the West Riding, Middlesex, East Surrey, and some other counties that I could name, what may be done by a systematic effort. The Leaguers in Lancashire never worked half so hard when they were making the country resound with their public demonstrations as they have done upon the registration during the last two months; and right nobly have they done their work. You shall have the particulars of each district as soon as they are made up; but in the meantime be assured that the sceptre has passed from the Stanley, Egertons, and Scarisbricks into the hands of the Leaguers of South Lancashire. Hurrah for Corn-Law repeal!

NORTH AND SOUTH LANCASHIRE.—As we expect next week to give a complete analysis of the revision in this county, we forbear to furnish any details of the week's proceedings, except to inform our readers that the whole of the Monopolist objections for the Liverpool district have been declared void, in consequence of an informality. The number of objections that existed is about 750.

LIVERPOOL.—It appears upon a revision of the list of Parliamentary voters for the borough of Liverpool, that the Free-Traders have gained a considerable accession of strength, by the weeding of the list of several defunct and otherwise disqualified Monopolist freemen. The number thus struck off is no less than 452. This will make a contest very close at the next election.

CLOSE OF THE CITY REGISTRATION.

	Claims.		
	Free-Traders Allowed.	Monopolists Allowed.	Neutral Allowed.

	408	448	138
Claims	102	7	—
	510	455	138

THE MIDDLESEX COUNTY revision concluded on Wednesday. The names of three judges, the Attorney and Solicitor General, also 65 barristers and attorneys residing in the Temple, were struck out of the register: all these at the last election voted against the Free-Traders. Not one single farthing was awarded against the Free-Trade party, during the whole of the revision, for costs; this shows that their objections were fairly taken, and were neither groundless nor vexatious. The following is the result:—

	Free-Trade objections.		Monopolist objections.	
	Notices proved.	Sustained.	Notices proved.	Sustained.
Hedford	0	6	17	11
Brentford	0	0	26	10
Bethnal-green	36	25	28	22
Edgware	15	7	2	2
Enfield	7	7	33	15
Hammer-smith	29	22	51	30
Hamstead	0	0	5	5
King's-cross	67	56	95	62
London	306	247	49	34
Mile-end	61	38	118	59
Usbridge	13	12	2	2
Westminster	35	27	46	36
Total	578	427	472	297

Majority in favour of Free Trade, 130.

HAVERHAM.—The following is the result of the revision:—For the borough: Free-Traders, objections made, 37; sustained, 19; disallowed, 4; failed, 14. Monopolists, made, 14; sustained, 11; disallowed, 3. Doubtful claims, 7. For the county: Free-Traders, claims made, 105; claims failed, 6. Monopolists, claims made, 29; claims failed, 6. Majority in favour of the Free-Traders, 75 votes. These claims were lost on account of the High being sent away. Four out of the eleven are on as double claims, the gain only eight, leaving a majority of eleven in favour of the Free-Traders.

HYWEN.—The following is the result of the revision in this borough:—Free-Trade objections, 49; sustained, 43;

failed, 6. Claims, 29; admitted, 25; disallowed, 4. Monopolist objections, 29; sustained 19; failed, 10. Claims, 25; admitted, 19; failed, 6. An analysis of the above shows a considerable gain to the Free-Traders:—

Number of Monopolists struck off	43
Ditto of Free-Traders	19
Free-Trade majority on objections	24
Ditto added by claims	25
Monopolist ditto	19

Free-Trade majority on claims .. 6

Total Free-Trade majority .. 30

NORTH DURHAM.—The following is a complete account of the revision of the register of electors for the northern division of this county:—

	New Claims.	
	Free Trade.	Monopolist.
Durham district	39	42
Launceston	54	31
Hetton-le-Hole	26	32

Total gain in both .. 68

ROCHESTER.—The following is the result of the revision for this borough:—Monopolist claims, 43; sustained, 33. Monopolist objections, 53; sustained, 27. Free-Trade claims, 62; sustained, 38. Free-Trade objections, 96; sustained, 33.

Free-Trade gain on claims	5
Objections	6

Total Free-Trade gain .. 11

CAMBRIDGE.—The following is a statement of the result of the registration, which may be relied on as correct:—Liberal and Free-Trade claims allowed, 32; Monopolist claims struck off, 43. Monopolist claims allowed, 30; Liberals and Free-Traders struck off, 36. Majority for the Liberals and Free-Traders, 0. Our correspondent closes a very interesting letter by stating that "Mr. Foster's return for Cambridge is certain whenever an election may occur. At the same time, at a general election, with a good colleague for Mr. Foster, there is good ground to suppose that both would be returned. The Hon. George Denman, eldest son of Lord Denman, a thorough Free-Trader, is spoken of as a colleague for Mr. Foster. Should he be the man, his success is certain. He is a fellow of Trinity."

HAWICK.—The revision has concluded, giving a majority of two on the objections and four on claims, making an advantage in favour of Free-Traders of six votes.

LEWIS.—On Thursday the revision of the borough list was concluded. The Free-Trade interest was supported by A. R. Briggs, Esq., and the Monopolists by W. P. Kell, Esq. The Free-Traders made 16 claims, and sustained the whole; the Monopolists made 12, and sustained 10. The clot and lot claims and objections in St. Ann's were withdrawn by consent of both parties. The Free-Traders made 22 objections, withdrew 2, sustained 0, and failed in 14. The Monopolists made 23, withdrew 2, sustained 12, and failed in 9. In this borough

the Free-Traders have an advantage on this revision of 13, owing to some of the Monopolists being left off the register for non-payment of rates; and the Free-Traders being on the alert, have qualified themselves, and are on the register.

COCKERMOUTH.—(From a Correspondent.)—Free-Trade objections made, 28; sustained, 10. Claims, 5; allowed, 5. Monopolist objections made, 33; sustained, 9. Claims, 4; allowed, 2. Free-Trade majority on objections, 1. Free-Trade majority on claims, 3. Our total constituency is as follows, and those in support of the Free-Trade candidates are as under:—

	Total	Free-Trade	Against	Doubtful	Cannot
Voters.	Traders.				Vote.
Cockermouth	200	120	59	18	3
Bugham	43	11	32	0	0
Eaglesfield	30	12	17	1	0
Popcastle	25	15	7	3	0
Budekirk	11	2	9	0	0

Total 309 160 + 124 + 22 + 3 = 309

* Chiefly farmers and agricultural labourers, or employed by owners of limekilns in leading lime.

FROM.—Free-Trade objections, 14; sustained, 12. Claims, 16; allowed, 14. Monopolist objections, 11; sustained, 8. Claims, 4; allowed, 3. Free-Trade majority on objections, 4; on claims, 12. The correspondent to whom we are indebted for the above statement informs us that, since the general election, the Free-Trade party have put on the register about 80 or 90 persons, the Monopolist party only about 30 or 40; and as the majority in favour of the Monopolist candidate was only 29 at the late election, there is no doubt of the return of a Liberal and Free-Trade member at the next vacancy. He also informs us that there is a most gratifying change in the minds of many who voted at the late election for the Monopolist candidate, and who, on any future occasion, would support a Free-Trader.

WALSALL.—Free-Trade objections, 14; sustained, 13. Claims, 25; allowed, 17. Monopolist objections, 0; sustained, 0. Claims, 0; allowed, 0. Free-Trade majority on the objections, 13; Free-Trade majority on the claims, 17. 30.

COLCHESTER.—(From a Correspondent.)—Free-Trade objections, 38; sustained, 26. Claims, 5; allowed, 4. Monopolist objections, 0; sustained, 0. Claims, 0; allowed, 0. A clear gain of 30 to the Free-Trade party.

LICHFIELD.—Free-Trade objections, 54; sustained, 21. Claims, 33; allowed, 26. Monopolist objections, 23; sustained, 12. Claims, 6; allowed, 5. The correspondent who has favoured us with the above, adds, "that the new register will not be better than the present one by more than 4 votes, supposing that an appeal against a decision affecting 11 votes, objected to by the Free-Traders and not expunged, should fail. The comparison between the present register and that on which was the election of 1841, may be stated thus:—At that election the Free-Traders polled a little more than 9 parts out of 20 of the whole constituency, which gave a majority of about a sixty-ninth part of the actual voters. On the present and next register (increased more than 100) we should succeed by a majority equal to a sixteenth part of the actual voters."

WAKEFIELD.—Free-Trade objections, 48; sustained, 25. Claims, 12; allowed, 10. Monopolist objections, 44; sustained, 22. Claims, 9; allowed, 7. Free-Trade majority on objections, 3; on claims, 3. The correspondent who sends us the above, has also favoured us with the following analysis of the register as it now stands: Voted for Free-Trade candidate at the late election 328 Of these there are dead and disqualified since .. 90

Voted for the Monopolist candidate .. 300 Of these are dead and disqualified since .. 104

New Free-Trade voters since late election .. 144

New Monopolist voters since ditto .. 101

Present Free-Trade majority .. 85

PRUTH.—Our correspondent writes thus:—"The voters at present on the roll stand thus:—Free-Traders, 548; Monopolists, 289. There has never been any contest in this burgh to bring out the pure question of Free Trade; but from the known sentiments of Mr. Maule, and the attachment of the constituency to him, there is every reason to think that this is decidedly a Free-Trade burgh. The last revision of the list in the burgh made no material difference. It was, however (as it has been for some years back) in favour of the Liberal party."

KILKENNY.—From the letter of our correspondent we learn that the revision of the list in this borough has terminated in a gain to the Liberal and Free-Trade party of six votes; and he adds, that from a careful analysis of the register, and from an extensive knowledge of the constituency, he has no doubt of the return of two Liberal members at the next election.

MONOPOLIST DEFERRED IN PLINTHIRE.—Notwithstanding the great preparations made by the Monopolist party to swamp the Free-Traders in the present registration, they have met with a signal defeat, principally through the blunders of Mr. C. Ingleby, their great legal authority. At the Mold court, held on Thursday evening, before Leigh Trafford, Esq., Mr. Parry, one of the objectors on the Monopolist objection, proved the posting of the notice of objection against the vote of Mr. Batterbee, who was on the list of voters for the parish of Flint. Mr. Eytton, the advocate of the Free-Traders, raised an objection to the form of the notice, which omitted to state which list of voters was meant; as required by the schedule to the Registration Act, 6 Victoria, cap. 18. Mr. Rupert Smedley argued on the other side; but the barrister held the notice to be bad, and the consequence of this is, that the whole of the Monopolist objections will be void, as all the notices are in this form precisely, and the consequence will be a large gain to the Free-Trade party. The registration closed at Mold on the 8th inst. The Free-Trade gain on this registration places the Monopolists in a considerable minority, and leaves us room to doubt the issue of the next contest.

STATE RESPONSIBILITY.—The state which, without the command of justice and God, sends out fleets and armies to slaughter fellow-creatures, must answer for the blood it sheds as truly as the murderer must answer for the death of his victim.—*Channing.*

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, October 9, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the LEAGUE of the Saturday immediately succeeding, but are included in the list of the week following.

PORTUGUESE, "L'ESPIONNAGE."—The Correio, a Portuguese paper, calls Queen Victoria's youngest son, who has christened the other day, "the Prince of York." Then gliding naturally into an Irish subject, it eulogizes Mr. "Smith O'Brien" and dilates on the "Repeal."

CIVILIZATION.—The civilization of no race can be perfect whilst another race is degraded. It is a doctrine alike of the oldest and of the newest philosophy, that man is one, and that you cannot injure any member without a sympathetic injury to all the members. America is not civilized whilst Africa is barbarous.

LETTERS ON THE CORN LAWS, No. II.

TO THE RIGHT HON. LORD JOHN RUSSELL, M.P., &c.

MY LORD,—A Parliamentary Leader has no vacations. For you this is no season of rest and relaxation. Although the night does not summon you to debate, and the day is free from official cares, yet have you that upon your mind which must frequently task severely your thoughts and faculties. The House of Commons is still sitting in your brain. The next session has already commenced in your imagination. You must observe intently the course of events. The position has to be marked out which the party will occupy with whose guidance you are intrusted. The campaign must be planned. And never, perhaps, had chieftain, political or military, greater reason than yourself, while his followers reposed or sported, for anxiety and watchfulness.

You are the leader of an old party in new circumstances. Much difficulty might not be presented by that fact to an intelligent politician, were the circumstances such as to bear the application of party principles. In the present case it is not so; and hence the difficulty of your deliberations and the importance of your decisions. Whig principles have nothing to do with political economy. They might as well be brought to the determination of a controversy in chemistry or geology. No common measure exists between what constitutes your party, and what interests the public mind. The star by which that party has been steered belongs to a different hemisphere from the present horizon of public affairs. A Whig leader of Whigs, you contemplate a legislative campaign in which the only strife that the world cares for is between the cause of Free Trade and that of Monopoly. This will never do, my lord.

The battles of Whig and Tory are matter of history. There is no fighting them over again. They have followed those of Greeks and Trojans, and of Guelphs and Ghibbelines, to the land of shadows. What single Whig question, of any practical moment, exists between you and Sir Robert Peel? By what test can you unwhig Lord Stanley? The old party demarcation has dwindled to a geometrical line; it may retain historical length, but it has neither breadth nor thickness. You have shown yourself, and may again, an acute critic on the measures of the present Government; you are not the opponent of its principles.

No imputation on your consistency is intended by this assertion. Few public men have more of that quality. Nor does that concession imply the inconsistency of those Whigs, and they are not a few, who swell the ranks of your opponents. Whiggism never affected to be Anti-Conservative. Nor does Conservatism, as described on various public occasions by Sir Robert Peel himself, show any necessary antagonism to Whig principles. The practical differences are questions of degree; or questions foreign to the party distinction. That distinction represents nothing in the nation; absolutely nothing. It is a tradition, a conventionalism; the thin ghost of a departed reality.

Whiggism began to die out with the death of the Pretender, and the birth of popular democracy. The secessions from its ranks occasioned by the predilections of George III., the outbreak of the French Revolution, the second French war, and the growth of Radicalism, are the stages of its decomposition. Only the premature death of George Canning prevented the remains of the Whig party from being swamped in a Canning party. Catholic Emancipation, Parliamentary Reform, and Corn-Law Modification have been successively caught at; but they were not properly Whig questions, and at most they merely served to shed a flitting light over inevitable decay. Peace to the departed! You, my lord, are a living statesman, expected to do something for a living people. Come out from among the tombs; look abroad over fields and factories; ask what actually divides the nation, what it wants, and how its strifes may be healed, its wrongs redressed, and its prosperity advanced. Throw off the trammels of defunct faction. That power is gone; why wear its collar, or hoist its banner? Rise to the emergency of the times. It took Sir Robert Peel ten years to co-struct a party without a principle; you may create a party by a principle in a single session.

The country is divided by the disciples of the Free Trade and the monopolist systems. These would relieve distress and obtain wealth by unshackled commerce; those, by the agency of restrictive legislation. No other difference, whatever the topic to which it relates, touches people's thoughts and feelings with the force which this exercise. These are the antagonistic principles of the present mind. Ought they not also to be the antagonistic principles of the legislative body? Here is a real struggle, no field-day or sham fight, exciting only scorn or suspicion. Here are watchwords sure of the response of millions. A statesman fitted for the times should boldly and frankly take his stand upon one or the other, and work it out into the appropriate legislative results. I need not put the supposition both ways; you have, I be-

lieve, read Adam Smith too well for that; and if so, you have also read your own destiny to combat in Parliament for the new and glorious post of Free-Trade Minister; or to sink into the last of the Whigs, the evanescent point, which finishes the party's half century of taperings towards impalpable tenuity.

The future Free-Trade Minister! that will be something in the world, my lord, hereafter. There is not many a nobler niche in history. None so noble that is waiting, vacant, and saying, "Come and fill me." What is more to the purpose, it would be something now; everything to the existing generation. It is encouragement for the enterprising, bread for the hungry, and wages for the industrious. Even for the monopolist-landlord class in the Legislature, it would surely be more welcome to confront avowed hostility than to live in the everlasting suspicion of treachery. Till such a divarication ensues, how many on both sides of the House must feel the hollowness of their seeming union with real foes! Both you and Sir Robert Peel are at the head of followers that trust neither you nor each other. The air is rife with insincerity. Men speak of comrades, and think of conspirators. It is time for this age of fallacies to pass. Let the members divide not on the frivolous but the important; not on the nominal but the real; not on the obsolete quarrels of extinct parties, but on the great questions of national policy.

All things are ripening for a new distribution of the contending forces in the Legislature. Take the journals of this very day (Wednesday, October 9). The organ of your own party confirms my assertion of the extent to which it now coincides, in principle, with the opposite political party. It wages war on the past, not on the present. The *Morning Chronicle* says, "It is not to the objects, but to the sinister and dishonourable course which has been pursued by the Tory party that we object." Again, "In most cases Governments are wrong and Oppositions right; but the Tory Government is often right; whereas, the Tory Opposition was always wrong." It is only, then, to "let bygones be bygones." From the Whig journal I turn to that of the Ministry, the *Morning Herald*. There I find the editor balancing between the hypothetical repeal of the two sets of taxes, and advancing towards his conclusion by the aid of such facts, principles, and objects as form the staple of many of the League speeches at Covent-garden Theatre:—

"The evils and inconveniences of the malt tax are undeniable; but it affects agriculture only indirectly. It is paid by the consumers, and the consumers of ale and beer are, as a body, the least wealthy parts of the community; it is, therefore, raised mainly from the working classes. It is a tax on what is more than a luxury to the poor man—on what is, considering the staple of his sustenance, a necessary; it is, therefore, a tax which seriously diminishes the available value of his wages. But this is only its primary defect; by its severity it diminishes the consumption of beer, and consequently, the production of barley. Now, whatever diminishes the production of barley must, in some degree, lessen the demand for labour; and, whatever lessens the demand for labour, lowers wages. And thus not only does the malt tax diminish the available value of wages, but it also diminishes the demand for labour, and thereby lowers the rate of wages. The malt tax is, then, clearly much more of a labourers' question than a farmers' or a landlords' question."

"Still, it is equally undeniable that other indirect taxes have the same tendencies as the malt tax; and it may be doubted whether there are not several that might be repealed or greatly reduced with more advantage to the working classes, and, at the same time, with less inconvenience to the revenue than the malt tax. The existing weight of taxation on tea, sugar, and coffee precludes those wholesome and nutritious articles of food from being staples of poor men's sustenance out of large towns, and forces them, where those articles are used, on inferior, adulterated, and frequently hurtful works. Beer is within the constant or general reach of the very poorest; but from the habitual use of tea, coffee, and sugar, a very large class of the working people are excluded, and that mainly by the amount of taxation imposed upon those commodities. Now, fully acknowledging the evils of the malt tax, still the inducement to attempt to bring tea, sugar, and coffee into the habitual use of all the labouring classes is, we think, greater than the temptation to extend the consumption of beer, did even the finances of the country render the latter alternative possible. Of the wages farmers are able to pay their labourers, much too large a share goes to the revenue, and too small a proportion to their actual maintenance; and in no instance is this more the case than when the poor man ventures to purchase tea, coffee, and sugar."

No matter for the consistency or the immediate object of these lucubrations. They show how economical truth is diffusing itself through the political atmosphere. It is present like the electrical fluid in the air. The first leading statesman who shall adopt it for the spirit of his public policy will be a conductor to give it form and power.

Whig and Ministerial, there is a journal which is neither—the journal which is at once the greatest of power, and the truest and most honourable of echoes. I need not name the *Times*. Whether as power or as echo, its voice is an indication for public men to heed. The following passage, from its leader of the same date as those just cited, is by no means the least worthy of being heeded:—

"The 'condition-of-England' question, as it has been abjectly called, is fast becoming a question indeed."

People are now beginning to allow that it is a question. They confess that it is a question which must be attended to—that it is one which is growing, and strengthening, and deepening, and which cannot any longer be palliated with or avoided. It is true that they have been forced rather than persuaded to this admission. Wales and Suffolk have been in a blaze before it could be extorted. But we apprehend that it is coming at last. Men of all parties are beginning to see that the dry, mechanical, routine party principles of the last half century are unable to cope with the altered circumstances and increasing and overpowering exigencies of this great empire. Something more on the one hand than mere conversation, and something else on the other than simple levelling or cold utilitarianism, is required to meet and remedy the great social evils under which we are labouring. This is a truth which is now beginning to spread.

And thus, my lord, do all the elements conspire and cry out for a new political combination, a new political demarcation. We want a warfare with the Richmond and Knatchbull monopoly; not with the Peel and Wellington Ministry. The best portion of the Ministry would be with such a movement in their hearts; they would continually own its influence in their measures; and would not improbably be driven by the monopolists at their back into decided and active co-operation. It is their natural position; and many of the arguments in this letter might have been addressed with as much propriety to Sir Robert Peel as to yourself; but that he is too much fettered by the possession of office to originate such a movement, while you are perfectly free to do so. Your only fetters are in party associations and old habits; cobwebs, to a man of moral courage.

And what else, my lord, can you undertake, that will be either glorious for yourself or useful for your country? You cannot reit the shattered hulk of the old Whig party again, and make it sea-worthy. You may turn Irish politics to some temporary account in Parliamentary warfare, but Whiggism is pledged not less deeply than Toryism against repeal. You may play off the Monopolist section of the Ministerialists against the Liberal section; but such manœuvring will gain little of power or credit. I would not see you sink into a trickster; and with such a grand career open to you and inviting you to its pursuit. Above all, it behoves you to avoid tampering with the Free-Trade question as an instrument of party purposes. You have already had one lesson on the vanity of that endeavour; or, if not so, then of the peril of being suspected of such an endeavour. Your fixed duty was the demolition of the late Administration. It will never serve to construct another Whig Administration. You and your colleagues are the martyrs of the Free-Trade principle; without being, as yet, its confessors and champions. Your conduct has incurred the penalty without

winning the prize. You bear the brand without wearing the laurel. Like the Windsor Castle steamer, you made shipwreck upon the beacon. Look at the compass and change your course.

To form a Free-Trade party in the House, courted and feared by both sides on all close-run questions, would not be difficult. All purposes of personal importance would be more answered thereby than by the broader course now recommended; and many subordinate benefits would, at intervals, be gained. But this is far below what the exigencies of the time demand. By almost universal consent, Free Trade or restriction is the turning point of the policy by which the country must be governed. There needs but some leading statesman to say so, and the new arrangement of parties, representing (what is not represented now) the real division of opinions and interests in the community, will form itself around him. Genuine affinities and antipathies would displace the shadows that are still perversely treated as substances. The hour is come—where is the man? Art thou he?

A NORWICH WEAVER BOY.

DANGEROUS STATISTICS.

RENT, LAND-TAX, AND POOR IN SCOTLAND.

(From the *Manchester Times*.)

In the year 1792 Sir J. Sinclair sent circulars to every parish minister in Scotland, requesting communications on the civil history, the antiquities, the population, the agriculture, the gross produce, the rent, the provision for the poor, the rate of wages, &c., of their respective parishes; and the answers appeared in the "Statistical Account of Scotland," which was published in successive volumes in 1793, 1794, 1795, and 1796.

A similar work was projected in 1833, in accordance with a resolution of the General Assembly; the publication was commenced in 1834, and has only recently been concluded.

Had both works been well executed, a mass of information, not only of the actual state of Scotland at both periods, of the highest importance to the statist and the legislator, would have been accumulated, but materials would have been furnished for an accurate comparison of the condition, either improved or deteriorated, of each parish after an interval of forty very eventful years.

Neither work has been equal to what might have been expected from an educated body of men, each well acquainted with his own locality. Probably the fault lay in having no judicious editor to prune what was redundant, and to call for additional information where it was deficient. For want of this general supervision there is little unity in the design. In many notices the reverend pastors run riot on geology, botany, antiquities, meteorology, &c., according to their favourite studies; and thus the re-

quires considerable labour to collect such general results as ought to have been seen at a glance.

Notwithstanding, there is much to be gleaned from the heterogeneous mass; and out of the first ten half-volumes which we have examined we have found some important facts as to the advance in the rent of land, the proportion between the rent actually obtained and the valuation on which the land-tax is assessed, some approximation to the proportion between rent and gross produce, and the amount paid to the poor from collections at the church door and assessments upon the land. The result shows that if English landowners, notwithstanding all the acts passed to protect themselves, still suffer under certain so-called *exclusive burdens*, their Scotch brethren have contrived wonderfully well to keep them off their shoulders.

The following statements relative to fifty parishes have not been selected, but taken as they presented themselves in a search through successive half-volumes from No. 1 to No. 10:—

MARYTON, Forfarshire:			
Rental of the parish in 1833	£4,880		
Valuation on which land-tax is paid, £3000			
Scots, or in sterling money	250		
Gross amount of produce	14,508		
12 persons on the poor's roll average 3s. 9d. monthly each	27		
KIRKMUIR, Forfarshire:			
Gross produce, 1833	56,615		
Poor and parochial funds	290		
KIRKMAHON, Dumfriesshire:			
Gross produce, 1833	20,000		
Rental	£9000 to 10,000		
28 persons on the poor's roll average £2. 10s.	68		
KIRKMICHAEL, Dumfriesshire:			
Rental in 1795	2,500		
" 1834	6,475		
Gross produce	20,997		
Parochial funds	35		
CLOSKIRN, Dumfriesshire:			
Rental in 1795	3,500		
" 1834, above	12,000		
Gross produce	40,000		
For the behoof of the poor	71		
MOFFAT, Dumfriesshire:			
Gross produce	16,105		
Rental, 1834	8,000		
Assessments and collections for poor, less than one-half from the land	130		
ST. MUNGO, Dumfriesshire:			
Rental in 1746	373		
" 1794	1,800		
" 1834	4,000		
ROTHWELL, Dumfriesshire:			
Gross produce	10,100		
Support of the poor	55		
COMMERTRERS, Dumfriesshire:			
Rental, 1834	8,000		
Support of the poor	78		
KIRKPATRICK FLEMING, Dumfriesshire:			
Rental in 1792	2,870		
" 1834	7,369		
Poor collections	£30		
Assessments	110		
BARROUGHTON, Peeblesshire:			
Gross produce	21,231		
Expenditure on poor	42		
MANNER, Peeblesshire:			
Rental in 1795	1,685		
" 1834	4,145		
Poor and parochial funds	16		
KIRKURN, Peeblesshire:			
Rental in 1834	1,000		
Valuation on which land-tax is paid £1,108			
Scots, or in sterling money	92		
EDDLINGTON, Peeblesshire:			
Gross produce in 1834	13,693		
Rental	6,364		
Contributions to the poor	64		
LINTON, Peeblesshire:			
Rental in 1795	2,350		
" 1834	6,560		
Expenditure on the poor	100		
LINDERTON, Lanarkshire:			
Land bought in 1750 for £2700 yielded in 1834 £283 rent.			
" 1768, £2700 " 1834 £345 "			
DOLPHINTON, Lanarkshire:			
Rental in 1792	£ 600		
" 1834	1,700		
Valuation on which land-tax is paid	71		
CRIZON, Sutherlandshire:			
Rental in 1834	3,700		
Valuation on which land-tax is paid	248		
Distribution to the poor	20		
DURNES, Sutherlandshire:			
Gross produce, including herrings, salmon, lobster, kelp, &c.	8,000		
Rental in 1834	2,650		
Distributed to the poor	40		
ECLES, Berwickshire:			
Rental in 1793	11,000		
" 1822	20,000		
Valuation on which land-tax is paid	1,300		
WICKBURN, Berwickshire:			
Rental in 1834	5,000		
Collections for the poor £20. 5s. 4d.			
Assessments £91. 10s. 1d.	£112. 1s. 5d.		
CHANNEL KIRK, Berwickshire:			
Rental in 1834	5,400		
Collections for poor	£ 7		
Assessments	50		
BUNKLEGRAND, PAXTON, Berwickshire:			
Rental under previous leases	3,200		
Under leases in 1834, above	8,000		
Assessment for poor, one-half paid by landowners and one-half by tenants	76		
CHIRNSHUR, Berwickshire:			
"It was matter of astonishment to the writer of the late statistical account that the rents of land in this parish should have risen from 2s. to 12s., and from 6s. to 20s. How much more astonishing to find that those rents have risen to 36s., 40s., 54s., 76s., 84s., and sometimes even more per acre!"			

HUTTON, Berwickshire:
"Since the last statistical account rents have more than doubled."

Rental in 1795 £3,080
" 1834 7,526

St. Boswell's, Roxburghshire:

Rental in 1794 1,700
" 1834 3,080

Roxburgh, Roxburghshire:

Gross produce 22,268
Rental 9,000
Assessment for poor on landowners and tenants 160

MAKERSTOUN, Roxburghshire:

Gross produce 10,423
Rental 4,000
Poor's fund 14

SMALLHOLM, Roxburghshire:

Gross produce 8,850
Rental 4,000
Poor 47

LANTON, Roxburghshire:

Rental in 1794 2,213
" 1834 5,514
Poor 60

YETHOLM, Roxburghshire:

Rental in 1797 2,104
" 1834 5,600
Assessments 252

KINWORTH, Forfarshire:

"In 1792 the best arable land in the parish was rented at £1. 5s. per Scottish acre; but now it is rented at £2. 11s. 6d."

CRAIG, Forfarshire:

Rent in 1795 £1,000
" 1835 9,500
Contributions to poor 136

LOCHY PRAT, Forfarshire:

Rent in 1835 5,000
Valuation on which land-tax is paid 369

DUNDEE, Berwickshire:

"The most remarkable variation between the present state of the parish and neighbourhood, and that which existed at the time of the last statistical account, is in the rent of land; land which then let at 15s. and 7s., now lets at £2. 10s. and £1. 5s. per acre."

BURTON, Berwickshire:

Rental in 1794 £0,493
" 1831 15,200
Assessment for the poor £150
Collections 25 } 175

CRAWFORD, Lanarkshire:

Rental 8,500
Contributions to the poor 85

CURRY, Lanarkshire:

Rental 5,210
Collections for the poor 36

BIRNIE, Lanarkshire:

Rental 4,671
Valuation on which land-tax is paid 213
Assessments and collections for the poor 169

KNOCKAND, Elginshire:

Rental, 1835 3,000
Valuation on which land-tax is paid 165

NEW BERNIE, Elginshire:

Rental 4,764
Collections for the poor 31

ALVEN, Elginshire:

Rental in 1795 3,000
" 1835 6,000

PARSON KIRK, Haddingtonshire:

Rental 10,500
Assessments £120
Collections 15 } 135

WUTTERKIRK, Haddingtonshire:

Rental when wheat is at 60s. 9,727
Valuation on which land-tax is paid 640
No assessment for the poor.

WHITTINGHAM, Haddingtonshire:

Gross produce 17,275
Rental 7,596
Assessment £20
Collections 18 } 88

DUNBAR, Haddingtonshire:

Rental in 1792 8,000
" 1833 23,400
Valuation on which land-tax is paid 1,412

HUMBER, Haddingtonshire:

Rental in 1795 2,700
" 1835 6,300
Assessments 80

YARROW, Haddingtonshire:

Rental in 1795 2,000
" 1835 8,000
Valuation on which land-tax is paid 380

NEWBURN, Fifeshire:

Rental 2,400
Valuation on which land-tax is paid 162

MINNIE, Fifeshire:

Gross produce 26,000
Rental 10,000
Assessment £100
Collections 22 } 122

CANONKIRK, Dundee-shire:

Rental in 1794 3,000
" 1835 7,402

We do not attach much importance to the returns of gross produce as many of the Ministers seem to have known little of the manner in which the calculations ought to have been made. In pastoral parishes, where there is little expended in labour, the rent is fully one-half of the produce; in others which are arable it is about one-third, and in a very few others, very highly and expensively cultivated, it is little more than one-fourth. The average in ten of the above-named parishes is more than two-thirds, the produce being £157,323, and the rent £100,000. Thus of fifty shillings' worth of wheat, oats, barley, beef, and mutton, twenty shillings seem to go to the landowner as rent.

When the LAND-TAX was substituted for feudal services its amount was equal to one-third of the whole expenditure, but as there has been no new valuation since, its amount now is only about one-twenty-fourth of the ag-

gregate amount of taxation, or one-eighth of what it ought to be. In Scotland the proportion paid to what is justly due is still less. In twelve of the above parishes the rent amounts to £88,383, while the valuation on which land-tax is paid amounts to only £5278, or one-seventeenth part only of what it ought to be. The landowners of those parishes who pay only 1s. from the 17s. which they ought to pay, cannot, we think, have much reason to complain of the weight of their exclusive burden.

In twenty of these parishes it is shown that land which was rented at £67,695 in 1794-5 had so much increased in value during forty years, as to bring £167,774 in 1834-5, money being of the same value in both periods.

In only thirteen of the fifty parishes named is there any assessment for the poor, and even in those few the assessment is only to the amount of about twopence half-penny in the pound! Next week we shall give a statement of the manner in which the poor are relieved in a pattern parish.

THE INTERESTS OF THE RICH.

(From the Sentinel.)

One species of agitation has given place to another. The daily papers are no longer filled with semi-reports of Anti-Corn-Law League meetings, or garbled quotations from the speeches of Chartists and Complete Suffragists. The great and the noble are now in the field; they point to the work of their own hands; they sit round the wine-cup and congratulate themselves upon their virtues and success; they rise and say, "Are we not a blessing to the country we live in? Was it not well said by Sir Robert Peel (then Mr. Peel) in 1828, that it is 'the policy of the country to maintain the aristocracy and magistracy as essential parts of the community?'"

They do not say this. We would, for the sake of consistency, that they did say it. It is true, that each daily paper contains an account of a meeting or two, where the aristocracy and the magistracy have met together to talk over their own interests, called by them the interests of the country; but, strange to say, we do not catch in their speeches the triumphant tone of the champions of the League—we do not recognise in what they predict the spirit of prophecy which has alighted upon the claimants of the suffrage and the defenders of the rights of the citizen. Their orations are not laments alone, they are downright self-accusations. They proclaim, "What we are doing is not sufficient; we fall short of our duty; we must find work for the labourer. It is the interest of the rich to look a little better than we have done after the interests of the poor."

What is it that has produced this humility of mind? What is it that has brought the all-powerful landlord-agriculturalists into so public a confessional as the columns of a newspaper? It is simply this, and we say it in one sentence, the blessing of Providence has given grain to the sower, and allowed the earth to yield her increase. Did we hear any of these distressful appeals when wheat was at 70s.?

We could prompt a better method of speedy relief to the landlord than any which has been suggested by their own body. We would say, "Money is cheap, lend to your tenants; enable them to hold; let them starve the people for a few months, and perhaps a kinder Providence may give them a scanty harvest next year."

Let no one suppose that it is the vast importation of foreign grain which has brought this sad state of things to pass. The spontaneous growth of all those vast continents where grain can be grown for almost nothing, and from whence it can be brought for almost nothing (as we have been told it can), has not been able to compete with the teeming furrows of our own tax-laden country; and, of all trades, the unrighteous, because at present speculative, trade in foreign corn has this year proved most unprofitable to the merchant and importer.

Emigration is again, as it has been before, a favourite remedy. A country which has subsidised nations to fight battles to support legitimacy in the persons of pet Catholic sovereigns—a country which can support royalty with a pomp which throws all other courts into the shade, and an aristocracy which gives a sobriquet to the possessor of wealth (for a rich man is a Milord whenever he sets foot on other soils)—a country, moreover, which hires teachers of a single and distinct set of religious opinions at a rate which would make glad the heart of an Abbot or a Pope—this same country cannot support the poor wretched labouring man, who asks but room for his arm and no protection, to feed himself and eight other individuals by his unassisted management of the spade and the pitchfork.

The landlord has long chosen to have a great deal of his land in thistles. He has thought proper to leave the choice of the live stock upon his land to the unassisted ignorance of his needy and uneducated tenants. He has entrusted the supervision of the whole to a bailiff or land-steward, who has known how to colour his reports of "the sadly wet state of the soil," or the "terrible blight," in order to account for any deficiency of receipts; and, what is worse, it would seem that the landowner has been content to get the same return as formerly from his acres, receiving it rather from the increased price of each quarter of grain than from the increased number of quarters from each acre. This is certainly the worst of all; for if the possessors of the soil, being also legislators, have any one duty more than another clearly incumbent upon them, it is to see that that soil is turned to the best account to meet the growing wants of the people. When the city of Rome numbered its greatest population, it was almost the whole work of the Senate to see the town supplied with food. Had the Senate possessed the wisdom of our days, it would have talked of nothing but emigration.

It was said, a little while ago, that it would be to the interest of the country, and therefore of the rich, to sweep the land clear of manufacturers, and purge it from machinery and coal smoke. Had this been done, it would have been clearly necessary for the land, from that day, to have taken upon itself the burden of the state, and pay the interest of the national debt. The land, which so short a time ago proposed to raise, unassisted, a revenue of above £30,000,000, is deadly anxious now to rid itself of the cost of a few shiploads of labourers. Let the land for one year bear the whole burdens of the state, and the unfavoured manufacturer will undertake not only to support the superfluous agricultural labourers, but to take them to their work in great postchaises.

The aristocracy and magistracy have at last found out, and themselves declared at their agricultural assemblages, that it is their "interest" to employ the labourer. Is it not strange that they have not passed a single vote of

thanks to the vast body of manufacturers who are employing hundreds for their tens, and are ready to employ more, if it be to the "interest" of the aristocracy and magistracy to permit them? The little gleam of sunshine which has fallen lately upon the busy districts of Lancashire and Yorkshire is already beginning to drain the agricultural enclosures round about. In one town, that of Preston, in North Lancashire, we hear of 7000 looms in the course of erection, giving employment to 2300 additional people, at the rate of a workman to three looms. This alone is as good as three large emigrant ships, and no clever young farmer is required to expatriate himself to lead their steps to the banks of some distant stream, where they may forget their country and hasten to cease all connexion with the mother who sent them heartlessly from her bosom.

It is, then, the interest of the rich to find employment for the labourer! When did ever a Chartist body arrive at a conclusion equal in wisdom to this? Does it not show us in whose hands we are, when we see the all-powerful aristocracy and magistracy listening, with grave faces, to such a declaration as this? They have found out, at last, that the poor do not wish to live on alms, or in workhouses! After shaking their impotent fists, for half a century, at the industrious manufacturer who has employed their labourers for them, they find out at last that they themselves would have done better had they become manufacturers too—manufacturers, at least, of agricultural machinery and improved implements.

But let them, from this time, begin to do the best for their own interests, now that they have discovered what will contribute to them. Let them unshackle that which will give employment to more labourers than they can spare. And, moreover, let them carefully look over their legislative enactments, lighted by this new light which has so suddenly fallen upon them. Perhaps they may arrive at the fact, that the intellect which has been so long blind to the most obvious of all necessities, is hardly competent to legislate for a mercantile and manufacturing nation. We will return to this another time.

STRIKES FOR ADVANCE OF WAGES, &c.

WIGAN.—Three young men, Thomas Tunstall, Samuel Ashurst, and William Bliston, were brought before the magistrates of Wigan, on Monday, on a charge of absenting themselves from work that morning without having given the usual notice required by their agreements. From the evidence of Thomas Hesketh, an overlooker or manager for Messrs. William Woods and Son, it appeared that the defendants were throstle spinners, employed at Treacherfield Mill, and that they belonged to a body of hands who had struck for an advance of wages. The magistrates advised the defendants to return to their work. It was evident they had been selected as an example to the rest of the spinners, and they were told that, unless they chose to complete their agreements, a heavy penalty would be inflicted. All obstinately refused to comply with the recommendation of the bench, unless an advance of wages was given. This, of course, under the circumstances, was not likely to be the case. They were each fined 20s. and costs, and, in default of payment, to be committed for a month. The latter alternative was chosen, and the parties were taken to the lock-up, from whence, if the fines were not paid, they would be removed to Kirkcaldy yesterday morning.—*Manchester Guardian*.

STOCKPORT.—In reference to the spinners and self-acting minders, it may be stated that matters still remain *in statu quo*. A meeting will be held this evening (Wednesday), when, if the masters should still persist in refusing the rise demanded, it is expected that the hands will determine upon giving notice this week-end; and if that should be the case, and no arrangement be previously made, a general turn-out of this class of operatives may be expected in a fortnight.—*Ibid*.

LEEDS.—A turn-out of the persons employed at several of the principal flax mills in Leeds has taken place, owing to the operation of the New Factory Act, which came into effect on Tuesday so'night. The persons who have struck work, amounting to about 3000, are nearly all girls and women, classed as "young persons;" but they have caused 300 or 400 male adults also to cease work, through the consequent stoppage of the machinery at the different mills. By the new act, no factory can run more than five hours without an interval of at least thirty-five minutes as a meal time, during which period the machinery must be stopped, and the hands leave the mill. Hence half an hour must be allotted for breakfast, and half an hour for tea. Heretofore, in some of the flax mills, breakfast and tea have been taken during the time that the machinery was running and the work proceeding, and in others the mills have been stopped only a quarter of an hour for breakfast, and a quarter of an hour for tea; and thus, by the new act, the factory hours have in each case been made to extend over a longer period of the day, though the actual hours of labour remain the same. As the factory owners announced their intention to adhere—as it was indeed imperative in law that they should—to the new provisions, the hands turned out at several of the mills, and refused to work on Tuesday and Wednesday last. We understand that at Messrs. Marshall's mill, at Holbeck, a plan like that required by the new act has long been in operation; and therefore no strike has taken place at that extensive establishment. The number of hands employed at the mills brought to a stand are about as follows:—Messrs. Hives and Atkinson, 1000; Messrs. Briggs and Co., 900; Messrs. Wilkinson and Co., 700; Messrs. Holdsworth and Barrett, 400; Messrs. Hoyle and Gill, 250. Of these, however, the hands employed by Messrs. Briggs and Co. returned to work yesterday, on the old system; the hands employed by Messrs. Hives and Atkinson have also agreed to resume their work on being paid the same wages as before, and allowed for holidays; and we understand that such other arrangements are pending as will probably soon bring the strike entirely to an end.—*Leeds Mercury*. [The differences between the workers and their employers have amicably terminated.]

SOUTH AUSTRALIA.—Amongst the articles which we are told are likely, ere long, to be manufactured in the colony, we may mention washing soda, alkali, turpentine, and resin. We have seen specimens of the two former articles, which, so far as we can judge, were of very fair quality. A person called on us a day or two ago, who stated that he could make turpentine in any quantity at two shillings a gallon. Thus, piece by piece, will our resources be developed.—*Adelaide Observer*.

REVIEW.

The Castellans of the Rhine (Les Burgraves). By Victor Hugo. London: Courcier Office.

The beautiful allusion to the history of the Rhinish League, in the speech delivered by the Hon. Mr. Stuyt in the Free-Trade Hall of Manchester, to which we have adverted in another part of this paper, has directed our attention to Victor Hugo's admirable trilogy, and led us to examine it in its double relation to historic truth and dramatic art. It is only within the last few years that the character of the middle ages has begun to be appreciated, and that students have found in the chronicles and legends of their Teutonic ancestors as rich mines of philosophic and poetic interest as in the annals of Greece and Rome. Victor Hugo justly remarks that the age of feudalism bears about the same relation to modern civilization that the Titanic epoch bore to the classical period of the Grecian mythology; those who look back in both cases might well exclaim "there were giants in those days." Our history has reproduced what Grecian fable invented; the reality of the middle ages reflected as faithfully as a mirror the sublime wonders of Titanic fiction. Feudal tyranny, impersonated in more multitudinous forms than the monstrous progeny of Cælus and Terra, watched every free tendency with the hundred eyes of Argus, and crushed every nascent effort of liberty with the hundred hands of Briareus. Long, terrible, and arduous was the conflict in which this gigantic despotism was cloven down; vast, massive, and melancholy are the memorials of the conflict which still mark every field of battle. The strife was fiercest on the banks of the Rhine, and there the ruins which attest the desperation of the fight possess a gloomy grandeur scarcely less terrific to the imagination than the traces of destruction left by a volcano or a deluge. On the banks of the river—the richest in historical associations which the world holds—every rock was a fortress and every fortress a ruin. Extermination has passed over the robbers and their strongholds, leaving colossal fragments as evidences of colossal strife. Atë and Clio, the demon of destruction and the muse of history, are here identified:—

"And thus the record of their lot
Reads—THEY WERE—and—THEY ARE NOT."

The Titans were ideal creations; the Burgraves were men. The giants who

By mountains pil'd on mountains to the skies," are separated from us by an abyss which the imagination is wearied in endeavouring to fly across; but we may count the generations which separate us from the feudal oligarchy that once held Europe in its iron grasp. We can admire them because they were great, we can comprehend them because they were real, we can defeat them because they were tyrannical. In their fearful history crime rises above crime in all the tremendous majesty of a forest of guilt; the shudder which involuntarily thrills the frame at such a prospect is a real emotion; the gratitude at escape from such an aggravated Reign of Terror is a genuine feeling; we see that there was a possible future for Christendom worse than destruction, deeper than perdition, blacker than despair. Threefold was the penalty which fenced these feudal tyrants: they had indomitable courage, it was the armour of their heart; the armour of iron fenced their person; the armour of granite secured their homes. But over all these defences, commerce—aided by the intelligence which commerce alone develops—triumphed completely, decisively, and everlastingly. Trade worked out its own liberty, and Free Trade generated because it necessitated free institutions and free literature.

Engaged as we are in a holy strife to secure for industry its rights and for labour its reward,—associated together to prevent a pampered oligarchy from supporting its idleness, its luxury, and its extravagance, by siphoning away the wages dearly earned by the sons and daughters of toil,—we cannot without emotion survey the fields where our forefathers girded themselves to the battle against feudal injustice, and smote down the edifice of feudal tyranny. In the record of the strife we recognise with grateful humility the intervention of a superintending Providence, to weaken and divide the banded hosts of injustice.

"God of armies! did thy stars,
In their courses smite their cars,
Break their arms and burst their bars?"

"Verily there is a God that judgeth the earth," else simple justice could never have forced its way through the threefold canopy of feudal despotism. Let us, then, never despair of the triumph of a righteous cause; let us ever see "that we have strength in the memories of the past as well as in the hopes of the future." England has had a Marathon Moor as Greece had a Marathon.

But while we survey, with mingled feelings of gratitude and exultation, the battle-field on which our predecessors won the victory of civilization, let us in mercy call the attention of modern wrong-doers to the fearful lesson of retribution imprinted

on these prostrate castles and mouldering walls. It is as legible as the MENE, TEKEL, UPHARSIN, which predicted the approaching destruction of Babylon. In the twelfth and thirteenth centuries the lords of the Rhinish castles were possessed of royal power; "the title of Burgrave," says Kohlrausch, "ranked next to that of King;" but their past determined their future; crime has a genealogy more certain than any preserved in the records of heraldry. Violence procures power, power begets profligacy, profligacy engenders corruption, and corruption is the parent of decay. Such has been ever the fixed law of descent; Nimrod was the ancestor of Sardanapalus. Injustice is doomed to destruction by a double fate: it is menaced from without and from within; it may obtain temporary triumphs over avowed foes, but then it is foredoomed to perish by its own offspring.

Victor Hugo seems disposed to push the parallel between the Titans and the Burgraves to an extreme which is not consistent either with the poetic character of the one, or the historic truth of the other. He has fallen into an error shared by many modern scholars that Æschylus, his great master, was an opponent of the popular cause in Athens because he everywhere evidences a passionate reverence for antiquity. This is an error of the same kind as the classing of the admirers of our old Saxon institutions with the defenders of the abuses of Norman feudalism. In the gods of Olympus Æschylus recognised a new oligarchy such as has been formed in England since the accession of the Tudors on the ruins of the nobility of the Plantagenets. He went back to the old Titans as a more just, a more placable, and a more popular dynasty; his greatest hero was the greatest foe to monopoly; it was because he struggled with the people and for the people that Prometheus was chained to the Caucasian rock. In that unparalleled exhibition of the powers of intellectual endurance, of mental energy triumphant over physical suffering, of the prospect of a bright but distant future countervailing present and immeasurable torture, all the sympathies of Æschylus go with the oppressed, all the intensities of his energies are directed against the monopolist. The great moral of the drama may be stated in few words: "Limits of duration are assigned to oppression, but justice is eternal."

In the character of Count Job, Victor Hugo has essayed to portray the Prometheus of guilt; he has, therefore, abandoned the chief feature in the character of the Æschylean creation, for the Prometheus Vinctus is an incarnation of rectitude. Milton, who moulded his Satan, to a great extent, on the Æschylean prototype, everywhere takes care to bring

out the distinction between the resistance of the fallen Archangel and the upright Titan. He saw Æschylus did not present Jupiter as the type of Providence; for, in fact, Providence forms no element in the ideal of the Greek drama, its place there is occupied by Destiny. For the endurance of Prometheus, Hugo has substituted remorse—the remembrance of a fearful moment of guilt so vivid, that—

"Though a long time ago, it is yesterday still."

The hoary bandit has no point of identity with the benevolent Titan beyond that of obstinacy; but it makes all the difference in the world whether the unbending will is the result of conscious rectitude or of obdurate guilt.

The catastrophe of the Burgraves in the drama is singularly inartistic, and is not less a violation of history. Frederick Barbarossa is evoked from his grave to pronounce the pardon of Count Job. Had the brave old emperor really survived his Syrian expedition, he would have acted a far different part; he would, as in the earlier period of his reign, have sent the titled plunderers to the gibbet, and left the ruins of their castles to be the sepulchres of their names, and the memorials of their crimes.

The Hand-book for the Piano-Forte. By J. A. Wade, Esq. London: Whittaker and Co.

This is one of the best works of musical instruction which has been brought under our notice; the author unites an earnest love of music with sound knowledge of the art, and has therefore given a life and animation to his lessons which relieve the dry and technical details of teaching. We think, however, that he overrates the value of his favourite instrument, and we are far from being disposed to recognise its popularity as a proof of its excellence.

EMPLOYMENT OF LABOURERS.—At the late meeting of the Arundel and Bamber Association, the chairman, the Duke of Norfolk, proposed to give a premium of £50 this time next year to "that farmer who shall have proved to the satisfaction of a committee that he has employed the greatest number of labourers, according to the size of his farm, during the ensuing winter." His grace added, "I offer this simply as an experiment for one year, and I trust it may be found to answer the purpose intended, and, if it do, I beg to call upon all my friends to join in the speculation. If it should answer, I shall most readily continue the premium."

AGRICULTURE.

ENCOURAGEMENT TO TENANT-FARMERS AND FARM-LABOURERS.

Although we are inundated with lengthy reports of the proceedings at agricultural associations and cattle shows, there is such a strong family likeness between the speeches made in one place and those delivered in another that we have not deemed it useful to reprint them. Yet there is much worthy of observation in the tone which pervades all these discourses. Public opinion has evidently begun to act upon the landowners, who are, with a few exceptions, the only speakers on these occasions. The truculent ridicule of the *Times*, and the sarcastic wit of the *Examiner*, have gone far to render these meetings a by-word and a jest. And fairly so; for nothing can be more absurd than the assertions of the squires as to the effect of such associations. Much is now said about improvements in husbandry, and the necessity of growing a large acreable produce; while "protection," if mentioned at all, is referred to with a proviso. Thus, Mr. Tollemache, M.P., at the *South Cheshire Agricultural Association*, said, "he would take the liberty of expressing a strong opinion, that though he was more than ever convinced of the absolute necessity of affording British agriculture every protection, yet he was also no less convinced that their [the farmers'] prosperity mainly depended upon their own exertions." They had a great and increasing population, whose wants must be supplied; and it was their duty, as agriculturists, to take care that the increase of the means of subsistence kept pace with that increasing population; and he spoke the more confidently on this point, because he was of opinion that, instead of that population being a burden on the soil, the soil, if properly cultivated, was capable of raising food for four times the amount that now existed upon it." This is a large qualification of the "absolute necessity of protection," and, as coming from a monopolist adherent of the Government, affords a tolerably plain indication that the pressure of public opinion is in operation.

So again, Lord Combermere, as chairman on the same occasion said:—"They need not be afraid of American cheese. They could easily get rid of it. The Americans could not make an article that could compete with the Cheshire, and he hoped they never would. But the proper way to defeat them was to make better cheese than they. The grumblers were those who made bad cheese, and who, consequently, could not get good prices." And the only practical remedies his lordship appears to have suggested was the abandonment of mechanical improvements lately introduced into the process of cheese-making, and a return to the inferior breed of longhorned cows!!! Nor could the noble chairman's oft-repeated assurance that the American cheese could never compete with that of Cheshire afford much comfort to the cheese-makers present, for the judges of cheese, men practically engaged in the trade, distinctly stated that the American cheese did enter into direct competition with the inferior kinds of Cheshire cheese. Another of the judges told the farmers present, "that, unless they kept their land clean, they could not pay their rents." But why is not the land kept clean? Is it not from the expense required to clean strong land? Now, Cheshire is a county notorious for the inferiority of its husbandry, the wetness and heaviness of its soil, and the absurdity of the restrictions imposed by landlords upon the cultivators—circumstances not very favourable to competition with anybody. Yet not a word was uttered by the landowners which could imply an intention of doing their part towards the improvement of agriculture. Mr. Tollemache told them it was the duty of the agriculturists—meaning the tenant-farmers—to take care that food kept pace with population; but all he had to offer for that purpose was, the "good fellowship, praiseworthy emulation, and stimulus to mutual instruction," afforded by agricultural meetings. A slight glimpse of the necessities of Cheshire agriculture, however, appeared in the remarks of Mr. Carter, one of the "inspectors of farms," for he is reported to have "made some very sensible and pertinent remarks on the restrictions of tillage which exist in that county, in abstraction of agricultural improvement;" and stated, "that it was most injurious to the interests of the tenant-farmers that they should be confined to tilling a small portion of their farms. He was of opinion that the rotation of crops, to fully benefit the farmer and improve the land, should go through the whole of the farm, and not be confined to one section of it only." And he referred to the improved state of a particular farm as an example of the advantages of abandoning the old-fashioned restrictions.

The Cheshire tenants, however, are usually men of small capital, and the landowners seem afraid to trust them to break up old pasture land. Nor does the existing system of dairy farming in that county seem to be one likely to tempt men of capital to subject themselves to its annoyances; for Mr. Carter said, "He did not like the county to be so depreciated; therefore he stood up for the farmers. Their wives were most industrious, and worked hard at the cheese

vats from six in the morning till ten at night, which was a great contrast to the lacy lives of the tillage farmers in the corn-growing countries. Now, a system of husbandry which requires the farmer's wife to work at a most laborious occupation for sixteen hours a day is not one which would induce men of ordinary intelligence or moderate capital to undertake Cheshire farms; and therefore it may be safely predicted that, unless the Cheshire landlords abandon their restrictions, they and their tenants must suffer great and constantly-increasing depression; and the longer the delusion of protection is kept up, the longer will their time of suffering be prolonged. And here we may mention that the competition with American cheese, to which the Cheshire farmers have recently been exposed, has not grown out of the new tariff or any change in the duty on cheese,—for the duty on foreign cheese remains unaltered, and no colonial cheese has been imported,—but simply from the increased importation of an old article of commerce. The nearest approach to a remedy was that of Lord Combermere, who liberally said—

"He could not say that Cheshire farming was as good as in any part of England, though the Cheshire farmers were going on improving. He hoped they would study both theory and practice; and if they did, they could not fail to accomplish as much as in other counties. In some districts, however, Providence had been more bountiful—for in Cheshire the land was very wet. He would say a word or two on draining. He was sorry to say, that what he and others did in this line, many years ago, was done injudiciously. He hoped, now that they were more enlightened, the draining would be done more effectually. So anxious did he feel on this point, that he had proposed to Mr. Smith, of Drayton, the great draining authority, to come here to give a course of lectures; and he should be happy to have the attendance, not only of his own tenantry, but also of his neighbours."

Is not this something like inviting a parcel of hungry farm-labourers to look through a grating at a well-served feast? Something besides lectures on draining is required to enable farmers to drain their land. There must be security of tenure, steadiness of price, and self-reliance; which cannot coexist with the Corn Laws.

At Tyneside Agricultural Show, Mr. Bigge, who stated he was not a "practical agricultural man, though he was the son of one of the most successful agriculturists in Northumberland,"—"I am not the rose, though I dwell near the rose," says the oriental poet,—also roundly called upon the farmers to drain; saying:—

"There could now be no doubt of the advantages which draining conferred upon clay land; it exceeded every expectation which had been formed of it, and there was no doubt that, if it were fully carried out, so far from what was predicted by Cobden and the League, we would be able to support our own population with grain, and, in no short time, become an exporting instead of an importing country."

Now, the prediction of the Free-Traders with reference to draining and other improvements in agriculture is, that such is the capacity of our soil for increased production, that it may be practically deemed indefinite; but that so long as agriculture is hampered by protection, and the errors and burdens which grow out of it, such improvements will not and cannot become general.

Our limits will permit us only to refer to one other meeting, but that is an important one, for there a tenant-farmer fully laid bare the false pretences of the landowners at these agricultural meetings, and his sentiments were warmly applauded by a great majority of those present. The meeting we allude to is that of the South Beds and North Herts Agricultural Association, held at Luton, the Marquis of Bute in the chair. After the usual routine toasts and adjudication of prizes had taken place, Mr. T. Partridge, of Leagrave, one of the judges, in returning thanks, said:—

"If he might be allowed also to trespass a moment upon general matters, he would venture to say, that, if the aristocracy would come forward and hold out a prospect of liberal rents and long leases, the tenant-farmers would do very well, and he hoped they would see the diabolical spirit which induced incendiarism extirpated."

This was a home-thrust, but it passed off without observation. Afterwards Mr. Brett, one of the stewards, said:—

"They (the agricultural associations) brought together the landlords and tenants; and, if these classes would pull fairly together, the tenants and labourers would yet see better times. The tenants were anxious to do all they could to meet the wants of the labourers, and follow the views of the landlords; but they could not do this alone; they must be helped by their leaders. He had, in his avocation, seen a good deal of agriculture, and he was sure there was nothing wanting on the part of the tenants to make the land bear twice as much as it now did; but they must be helped by their landlords. (Hear.) A great outlay was required for improvements, and the benefit was not felt for three or four years; and really tenants were not in a condition to lay out the money without a stable guarantee. He was at the St. Alban's agricultural meeting last week, and he heard Mr. Ryder speak, certainly very well."

This also, being general, was well received. Mr. William Bennett, a farmer and land-valuer, who has tried to make himself conspicuous as an advocate of the Corn Laws, in referring to incendi-

arism tried to show that it was not caused by deficient wages, and he attributed it to the "invention of the abominable lucifer matches." Such are the explanations the monopolists are driven to make!! The chairman subsequently proposed, "PROSPERITY TO AGRICULTURE;" and, as an indication of the feeling which is lurking in the minds of the farmers, a loud and general call was made upon Mr. Charles Lattimore, whose Free-Trade opinions were known to every man in the room, to respond to the toast.

Mr. Lattimore, after some time, having been induced to rise—

"Begged to assure the noble chairman and gentlemen present that the sentiment conveyed in the toast was engraved upon his heart. But he held the opinion that the mere expression of good wishes, according to the mere fashionable custom of the day, was insufficient to promote it. He believed that something more was requisite at the present time, when he knew from experience and incontrovertible evidence that the capital of the tenant-farmer was sadly diminished. (Cheers.) With respect to the indissoluble connexion between agriculture and commerce, referred to in an early part of the evening, he apprehended this was now so universally acknowledged, in consequence of the public advance in political economy, that no one appeared with the hardihood to deny it. (Cheers.) He was happy to perceive the great advances in intelligence upon this point. But he deemed it a duty on the present occasion to state openly that a question had been frequently put to him, viz., for whose benefit and advantage are these agricultural associations established—for the landlords, or for the farmers and labourers?"

"Mr. W. Bennett: For all."

"Mr. Lattimore continued: He wished that all had the benefit, but he doubted it. (Hear.) He had not himself been able to give a satisfactory answer to the question, and he hoped that the present meeting would solve the doubt. (Cheers.) For, until this matter was decided, these associations would continue to be viewed with great suspicion as mere machinery for enhancing the fixed burdens upon the land, whereby the energy and skill of the cultivator and the labourer would be proportionably deprived of their reward." (Cheers.)

Mr. Lattimore then referred to an old lease of a farm in his own parish, Wheatthampstead, which had been granted for a term of 21 years, from 1748 to 1769, and from which it appeared that, while the rental had increased nearly 200 per cent., the fund for payment of labour had diminished; that the average price of wheat during the currency of that lease was 46s. 1d. per quarter, while the *Gazette* price of the past week was only 45s. 11d. This comparison was received with cheers and approbation. Mr. Lattimore then, in reference to Mr. Ryder's speech at St. Alban's, which had also been alluded to, with approval, by a former speaker, said:—

"That he felt that the farmers were degraded by honourable gentlemen recommending them to do that which, with the ability, he knew they never lacked the will to do, viz., give employment to the labourers. (Cheers.) And it was not a little singular to find gentlemen giving advice to the farmers as to their practical proceedings in husbandry, who professed themselves so thoroughly unacquainted with the principles of agriculture as not to know how to benefit their own tenantry; yet would kindly proffer recommendations to the practical farmers. (Cheers.) He thought there was something ludicrous in hearing one of their county members thus expressing his utter incompetency, yet proffering his advice respecting the quantity of seed-corn most desirable to be sown, and the necessity of saving the drainings from their farm-yards; can advice thus given to a meeting of practical, and part seigniorian, agriculturists, in the style of a mining gentleman, be considered but a sorry impudently for the present depressed condition of the farmers (cheers)? WOULD THE LANDLORDS HELP THEM IN REALITY? would they pledge that they will not take advantage of improvements when they are made? would they guarantee leases? would they take care that the crops were not decimated by game? If so, then the landlords might come to these societies with sincerity, shake hands with the tenants, and go to help the labourer." (Cheers.)

Here poor Lord Bute, who had long been fretful and fidgety, became furious, declared he would leave the chair, tried to stop Mr. Lattimore's remarks—which seem to have been too much to the point—and called upon the meeting to support the chair. The majority of the meeting, however, though duly oppressed by the presence of the great man, seemed more disposed to support Mr. Lattimore, who said:—

"He bowed to the chair, but he would add, that if landlords were sincere they should give security to their tenants. (A voice—"Nopolitics," and great noise.) He was sure that all thinking people must admit that a hopeless despair was not the thing to stimulate exertion. (More noise.) He could not be that hypocrite to support agriculture on any other than sound and just principles." (Cheers.)

The noble chairman, after rapidly giving one or two complimentary toasts, made his escape, when of course all the rest of the landlords likewise departed. But then occurred a most ludicrous scene. Mr. W. Bennett, the land-valuer, who was most conspicuous in reproaching Mr. Lattimore, and in trying to put him down by noise, stated that, as a tenant-farmer, he fully concurred with Mr. Lattimore. This was too much for the audience; and after a few observations by Mr. Lattimore on Mr. Bennett's liberality "when the aristocracy was out of the room," the consistent valuer was fairly driven from

the company by the scoffs and contemptuous jeers of the farmers. Mr. Brett also stated that he agreed with Mr. Lattimore.

It is impossible that the diversity which really exists between the farmers and the landowners can be more strongly marked than it was on this occasion, or that a more complete exposure of the delusive character of most of the agricultural societies' meetings could have been made.

THE GAME LAWS.—MORE HELP FOR THE HOME OFFICE.

Notwithstanding the official notification put forth through the agency of the *Morning Herald*, we had from the first serious doubts as to the good faith of the Ministerial intention to reform the game laws. We still entertain those doubts, for it is quite obvious that the magistrates, who were so emphatically cautioned to temper the administration of the forest code during the present autumn with "mercy," feel that the Home-office injunction is mere moonshine, else such scenes as those it is our duty to record could not have occurred. If there is one district more notorious than any other in England for the frequency of convictions for "offences against the game laws," and the severity with which those offences are visited upon the half-starved offenders, it is Buckinghamshire and Bedfordshire; and if there be any two persons whose names are more frequently connected with these crimes than any others, they are the Duke of Buckingham and the Rev. George Chetwode, his clerical magistrate. These game preservers have not mitigated the fierceness of their prosecution of poachers; they understand the influences at the Home-office too well to heed its make-belief cautions. And mark the iniquity of the system which the following cases indicate:—At the *Ashendon* petty sessions, on the 23rd of September, in the presence of Mr. T. T. Bernard and Mr. John Stone, both game preservers, and the Revs. George Chetwode (a most inveterate game preserver) and T. Martyn, as magistrates, the following cases are reported to have occurred:—

"THE GAME LAWS.—Lawrence Eborn, a quiet, inoffensive-looking man, a labourer, belonging to Oakley, was charged, on the oath of Jacob Saunders, of Chilton (a looker-out for the Rev. George Chetwode), with having, at about four o'clock in the morning of the 15th of September, used a snare for the destruction of game on land occupied by George Mortimore, in the parish of Oakley. Saunders said, 'I, and Thomas Edwards, of Chilton (another of Mr. Chetwode's lookers-out), were watching some snares during the night of the 14th; at about four o'clock on Sunday morning the 15th, Eborn came up, knelt down, and untied the string of a snare; the snare had not caught; we then immediately took him, while he was kneeling; am sure he untied the snare, but do not know what became of it; other snares were set in the locality; took him in custody to Chilton; he went very willingly; when at Chilton I allowed him to go back home; he said he hoped I would do what I could in his favour, for he had never caught a hare on Mr. Chetwode's liberty in his life; never saw him out before; he has a large family, and I believe it is his first offence.' Eborn cried and begged for mercy. He told the magistrates he had had thirteen children, had now four alive, three of whom were at home, the youngest being an infant. He had only had ten days' work for the last month, was never before a magistrate before, was in great distress, and his children had not a bit of bread to eat.—Mr. Stone said no farmer would employ a poacher if he could help it, unless it was in harvest or hay time. Night poaching was poaching in its worst form; for the offence of which he stood convicted he was liable to three months' imprisonment; but, as it appeared to be the first time he had been brought before them, his sentence was six weeks' imprisonment, with hard labour in the house of correction, and at the end of that time to enter into a £10 surety himself, with two other sureties in £5 each, or one in £10, for his good behaviour for 12 months; and in default of his so doing, then to be further imprisoned for six months!"

Here we find Mr. George Chetwode, the clerical game-preserver, sitting as a judge upon a poor half-starved peasant caught by his (the magistrate's) keepers in his own preserves; and then assisting to inflict a fearful and cruel sentence upon the offender. Upon this case the *Aylesbury News* observes:—

"Mr. Stone intimated that Eborn's want of labour was because he was considered a poacher. This we do not believe. He has never borne the character of a poacher; and we know that some of the farmers of Oakley detest the game-preserving doctrines of Mr. Stone, from the ravages done by the hares and other wild animals and birds of the 'game' class. Again, it is notorious that for the greater part of the year not more than half the labourers of Oakley can find employment at the hands of the farmers; and those with large families, and whose support in the poorhouse would be expensive, are many of them set to work on the roads at miserable starvation-point wages—the highest wages being seven shillings per week! At these wages Eborn was employed during the winter. Those with small families, and whose expenses, if in the house, would not be so severe, are, in many instances, told to do as they can. Then comes misery; we have witnessed it. The workhouse is, in many instances, avoided till the circumstances of the poor wretches become desperate. We have been informed, by a person likely to know, that Eborn and his family have of late been half-starved, and that he is a man of good character. The misery at Oakley would be greater than it is, were it not that Mr. Henley and others let portions of land in small allotments."

We believe the farmers in the neighbourhood of Oakley do not object to a man merely because he is a poacher, for not many weeks since we received a pamphlet, industriously circulated in that district by the farmers, in which

the evils of the game laws are admirably summed up. To the tract we shall have occasion hereafter to refer. Now we must proceed with the practical illustrations of those evils offered in Buckinghamshire. Here the Duke of Buckingham is the prosecutor, Mr. Chetwode sustaining the character of judge only:—

"William Slade, a roughly-clad, hungry-looking young man, of Waddesdon, was charged by Edward Guntrip, one of the Duke of Buckingham's gamekeepers, with having, on the 12th of September, shot at a covey of partridges, with intent to kill them. George Tarry, one of the Duke's lookers-out, was called to prove the charge. He declared that, about twelve o'clock on the day in question, he was in Mr. Deeley's field, and saw Slade, who was in Mr. King's 'mead,' shoot at a covey of partridges. He was not 100 yards from him. Slade denied the charge, and called George Tack, who said that, at the time stated, he was at the gate in the middle of Mr. King's ground, when a gun was fired into the hedge, but not at the birds, which were behind the person who fired the gun; who the person was he could not say. While this witness was giving evidence, Tarry interrupted him in an unfair way, which should not have been allowed. Mr. Chetwode said the bench considered the offence proved; and as this was not Slade's first offence, the sentence was, that he pay a fine of £5, and 10s. costs forthwith, and in default, three months' imprisonment. Slade was committed. Mr. Chetwode said, if the extreme penalties had been sought for, he (Slade) might have been imprisoned for nearly twelve months, in default of the payment of about £30. He was liable to a £20 penalty and costs, or six months' imprisonment; then, for trespass, to £2 penalty and costs, or two months' imprisonment; and then to the £5 penalty and costs, or three months' imprisonment."

So in the next case the Duke is the complainant. We use the word for lack of another, though it suggests unpleasant recollections of the tale of "The Wolf and the Lamb":—

"Thomas Ridgeway, a young man of Haddenham, was charged by the above Edward Guntrip with having shot at a hare, on the 20th of September, in the parish of Haddenham. The above George Tarry was called to prove the charge. He said that between eleven and twelve o'clock on the day in question he was on Mr. J. Langdon's farm, and he saw Ridgeway and Slade; Ridgeway shot at a hare with a gun, but did not kill it; and that both of them ran after it, he at the time of shooting being about 70 yards from Ridgeway. The prisoner denied the offence, and said he was at the time at work for Mr. Wm. Berry; and called Tacks, who said he was at work with the prisoner at the time. Under these circumstances the case was adjourned for a week."

On the following week, the 30th of September, the Revs. George Chetwode, T. Martyn, and J. S. Baron, and T. T. Bernard, Esqrs., being the administrators of forest law:—

"Thomas Botley, a young man of Grendon Underwood, was brought up, 'handcuffed,' by the Brill constables, and placed at the bar in that state, charged, on the information of Thomas Plested, of Chilton, one of the Revs. George Chetwode's gamekeepers, with having, on the 18th of October last, at Boarstall, used a gun for the destruction of game, whereby he had forfeited a sum not exceeding £5. Botley had been apprehended, by warrant signed by the Rev. T. Martyn, on the previous day (Sunday), at his father's house at Grendon. Prisoner denied the offence. Thos. Hopcraft, of Arncott, a looker-out for the Rev. George Chetwode, deposed to his having seen the prisoner, between six and seven o'clock in the morning of the day in question, shoot a hare in 'Barn-ground,' Boarstall, in the occupation of William Blake; was sure it was him; another man who was with him picked up the hare and put it in a bag; when he fired witness was not more than fifty or sixty yards from him. Prisoner said it was not him; he was innocent of this; he had two brothers, and they were all so much alike that a person could hardly tell them apart when close together; he was not there at the time, and the man who had sworn to him had sworn to the wrong; when he was guilty he did not mind suffering, but he did not like to suffer for that which he had not done; it was so long ago, or he might have brought witnesses to prove where he was at the time; his brother had told him that he was there, but he said that Hopcraft was further off than he had said he was. It appeared that the prisoner had been previously convicted of an offence against the game laws. Sentenced to pay a fine of £5, and 10s. costs, forthwith, and in default, three months' imprisonment in the house of correction, with hard labour. Botley said he had not been summoned, nor had he seen the warrant by which the parties now said they apprehended him. Stuchfield said he told him he had a warrant when he went to apprehend him, and that he should have read it, but the resistance immediately offered by the prisoner, his father, mother, wife, and sister, was such that it was impossible to do so. Botley was committed to prison forthwith."

Here the Rev. Mr. Martyn grants the warrant, and concurs with his brother clerical justices in the vindictive punishment of this poor labourer. But this is not all, for the prisoner's family, stung beyond endurance by the injustice of the law and apparent informality with which its myrmidons executed its behests, resisted the capture of poor Botley. The result is thus reported:—

Martha Botley, an elderly female (the mother of the above prisoner), Martha Botley (his wife, who had an infant in her arms), and Elizabeth Botley (his sister), were next brought into the chamber, charged by Henry Stuchfield with having, on the previous day, assaulted him, and with having endeavoured to rescue the above Thomas Botley from his custody. The mother appeared to be very determined woman; the sister sobbed loudly, and appeared to be in hysterics. From the statement of Stuchfield and Thomas Goddard, who had acted as his assistant, it appeared that, on their going to apprehend the above prisoner, he, with his father and the three prisoners offered a violent resistance, beat the complainants with stones, &c., and endeavoured to rescue the young man. The mother, who spoke with much energy, declared that the daughter did not interfere; that the two men who

came to take her son did not produce either summons or warrant; that one of them (Goddard) merely said he had got 'a bit of paper,' which was the reason why she tried to prevent her son from being 'torn to pieces'; that the complainants kicked her about shamefully. The wife said she stood in her husband's defence, and did not take up a stone till she had been kicked. Mr. Chetwode said constables must be protected in the execution of their duty. If Stuchfield merely said that he had a warrant to apprehend the man, that was sufficient: if he apprehended without a warrant, he was amenable to the law. This was a serious charge, one which they could not deal with summarily, but which must be sent to the quarter session. It was notorious that the whole family set the law at defiance. It was a distressing case; he should be sorry to commit them all for trial, but he could not see what else could be done, unless they could find bail for their appearance. The wife of the young man said she had two children, and at times they had not a bit of bread for two days together. The mother said her husband, when at work on the road, had 6s. per week. The parties were liberated on entering into a bond for their appearance at the quarter session. Mr. Chetwode said a warrant would be forthwith issued against Daniel Botley, the father, and if resistance were again offered, they would be deeper in the mire than before."

On this occasion Ridgeway's case, which had been adjourned the previous week, was gone into. Ridgeway did not appear, and the farmer for whom he had alleged that he was at work at the time of the offence, sent to say that that was not true.

"It was stated to the bench that Ridgeway had been twice before imprisoned for game-law offences; and he was sentenced to three months' imprisonment, in default of the payment of a penalty of £5, with costs, 10s."

No one who has read the foregoing reports will be surprised that the man did not appear, for it is plain that prosecution and conviction for game-law offences are convertible terms; and a labourer who had been "twice imprisoned for game-law offences" knew that for him there was no mercy. This man, then, has been compelled to become a starving vagabond; will it not be wonderful if he does not become a desperate criminal?

AGRICULTURAL SALES.

Judging from the large number of agricultural Michaelmas sales advertised in some of the country papers, the farming interest under the Corn Laws, and notwithstanding an abundant harvest, would appear to be at a very low ebb. In the *Norwich Mercury* of the 21st and 28th of September, and 5th of October, we find not less than 140 sales of farming stock; and in the *Suffolk Chronicle* of the 28th of September and 5th of October, 73. The following is a summary for Norfolk and Suffolk:—

	Horses.	Cattle.	Sheep and Lambs.	Swine.
Norfolk.....	1277	1722	13,075	1916
Suffolk.....	443	474	2729	873

While the above figures include, to some extent, stock sold in the ordinary course of business, or in consequence of the deaths of occupying tenants, in other cases the stock is not enumerated; so that the figures, all things considered, fall rather below than above the actual amount advertised by parties quitting or who have quitted their farms. Besides farming stock, the sales include an abundance of farming implements and household furniture.

COTTON GROWN IN CHESHIRE.—On Wednesday so'nnight, a fine specimen of Sea Island cotton was exhibited in the Exchange news-room. It was grown by Mr. Maury, at his residence in Liscard, and the specimen exhibited consisted of two bolls, one open, exhibiting beautiful cotton, the other closed. The cotton looked so natural, so much like a sample taken from a bag, that several gentlemen refused to believe that it belonged to the plant to which it was attached; and one of them was so pertinacious in his scepticism, that Mr. Jones tore open the closed boll, and exhibited to his astonishment similar cotton in its natural prison. Mr. Maury, we believe, will be glad to show the cotton tree to any gentleman calling. It is kept in a temperature of about 80°.—*Liverpool Journal.*

PUBLIC PARKS AND BATHS FOR THE PEOPLE.—Some attention has been directed within the last few years to the adoption of an improved sanitary system with reference to the dwellings of the less wealthy classes occupying large towns. Parks for their recreation have been commenced in Manchester, London, and other extensive congregations of the human family. One of the earliest benefactors to the working classes in this respect was the late Mr. Strutt, of Derby, who set apart for the recreation of the inhabitants of that town some twelve or twenty acres (we think it was) as an arboretum. Magnificent donations have been made towards the proposed Manchester Parks, as large a sum, we perceive, as twenty thousand guineas being now subscribed for that purpose. Another eminent benefactor of his fellow-species in this respect was the late Sir John Ramsden, who has left a large sum by will for the improvement of the borough of Huddersfield. It is only a few months since that extensive baths were begun in Edinburgh for the comfort of those who are not able to pay dearly for that wholesome luxury. The foundation of the new works was laid with all due pomp, the noble, the dignified, and the wealthy combining to give eclat to the proceedings. We are glad to find that London is at length awakening from its slumbers on this point, and that the Lord Mayor, acting on the requisition of some of our most eminent bankers and merchants—amongst whom we find foremost the Governor of the Bank of England, the Rothschilds, Barings, Gurneys, Wignans, Hoares, Goldsmiths, &c. &c.—has named an early day for holding a public meeting within the Mansion-house, "for the purpose," as they express it in their requisition, "of promoting the establishment of warm and cold baths and washing-houses for the labouring classes." We hope a numerous attendance of those whose wealth and public spirit enable and induce them to do good to their fellow beings will demonstrate that they are not void of sympathy for those who have hitherto been denied the means of furnishing themselves with that which is almost an indispensable requisite for the due maintenance of health—a cold or warm bath.—*Globe.*

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the *LEAGUE* forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadsby, Newall's-buildings, Manchester; and the *LEAGUE* may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

POSTSCRIPT.

LONDON, Saturday Morning, October 12, 1844.

Cheap food has produced its natural result, an increased revenue. The monopolists declared that a high price for corn was essential to the prosperity of the country; but facts have demonstrated that when provisions are dear commerce decays, and the income derived from commerce is of course diminished. We have not had Free-Trade in corn, but an abundant harvest has alleviated the evils of artificial scarcity, and allowed larger scope to the industrial energies of the country. The wages of labour have risen as food has fallen; and thus the gross fallacy of the "Quarterly Review," presented to the world in the form of an algebraic axiom,

Cheap Bread=Low Wages,

has been decisively refuted by undeniable and irresistible facts. The increase on the excise is the consequence of improved wages; it would have been greater but for the increasing diffusion of temperate habits among the people. Still we have not yet attained that height of financial prosperity which we had reached in 1836, and the revenue does not present such a result as should induce us to relax in our efforts for commercial freedom, which can alone afford security for the permanence of even our present degree of prosperity. Our population is too great, our political position too critical, for further dependence on the precarious chances of a variable climate and uncertain harvests. Now that we are just emerging from a period of severe depression, it behoves us to take precautions against the probable, or rather the almost certain, recurrence of a similar crisis. A new race of operatives is coming into existence, immigration into the manufacturing districts is rapidly on the increase; the Legislature will, therefore, incur a fearful responsibility if it leaves to the chance of the weather the means of support for these accumulated and accumulating masses. Another period of scarcity would bring a crisis the results of which no man can calculate. The present state of comparative prosperity is on all hands admitted to be the result of comparative abundance and consequent cheapness of food; our rulers are, therefore, without excuse if they again expose us to the perils of artificial scarcity.

We take the following abstract of the state of the revenue from the *Times*:—

"The return of the Quarter's Revenue has one distinguishing feature of a most cheering description—an increase in the Customs—compared with the corresponding period of 1843, on the year of £1,723,165, and on the quarter of £473,347. This is the true pivot of our national prosperity, and is the more gratifying when the bold reductions are considered which the Minister was encouraged to make when supported by so grand a reserve as the property-tax. Swift's remark, that in the arithmetic of the customs two and two do not always make four, could not have a more apt and definite application. In this case Sir Robert Peel's subtraction has been turned into addition, and he has proved finance to be his stronghold, whatever errors are to be found in his general system of policy."

"A trifling decrease in the Excise on the quarter is to be ascribed rather to growing habits of temperance in the lower orders than to any diminution of means. It will bear, in fact, no other construction, for activity reigus in almost all the departments of trade, and the wages of labour in the manufacturing districts have probably doubled in amount within the past year."

"It is consolatory also, and another good omen, to find that the Post-office—the great accumulation of pennies—has advanced £82,000 on the year, and no less than £40,000 on the quarter."

"The property-tax, which shows an increase of £106,413 on the year, and a decrease of £89,193 on the quarter, may be said to have found its level, and to provoke no remark, except to hope that, under circumstances of such promising augury, we may soon get rid of it. In the present account it is to be seen, moreover, the effect of the judicious application of the surplus revenue in paying off deficiency bills; only about £2,500,000 will be wanted to meet the charge on the Consolidated Fund for the quarter just ended."

"The total increase of the revenue for the year is £1,395,340, and on the quarter £520,914. But for the disadvantageous effect of the strange item termed 'miscellaneous,' which has no proper place in this account, the increase on the year would have been returned at about £2,160,000."

ARRIVAL OF THE KING OF THE FRENCH.

(From the *Morning Post*.)

In whatever point of view it may be estimated, the arrival of Louis Philippe will have a marked place in our chronicles. For ages no kings of France have visited our shores, unless driven away from their kingdoms, like our Kings Charles and James. Whilst all the great potentates of Europe have experienced the hospitality of this country, no king of France has received on our shores the greeting due to his rank—the homage cheerfully tendered to a great reigning sovereign—unless it were the obdurate King Jean, when he came to surrender himself a prisoner

to admiring enemies, after his lieges had refused to fulfil the conditions upon which he was liberated from duress. The visit of our gracious Sovereign to Louis Philippe last year, considering the sex, the power of the august visitor, and through its thoroughly amicable intention, and the political results that must naturally follow, has obliterated all the obnoxious splendour of the Field of the Cloth of Gold, and imposed upon the King of the French the obligation, as a man and a sovereign, to return the compliment as early as might be. Such being the circumstances, it is of course with feelings of deep satisfaction that we announce that King Louis Philippe has just reached our shores with such splendid accompaniments, both on his and our part, as should herald the arrival of a great king, and such mutual courtesy and friendliness as cannot but improve the reciprocal feelings of the two nations. We must now hastily record the circumstances.

At Portsmouth, at six o'clock on Monday evening, a French steamer, and next a brig of war, hove in sight, and it was soon discovered that the latter was the *Royale Amélie*, King Louis Philippe's sailing yacht, preceding the squadron of steamers escorting the King. It was found to be commanded by the Comte d'Harcourt, who had his noble father, the Duc d'Harcourt, with him on board. The Captain immediately came ashore, and waited on the Admiral, to whom he announced that King Louis Philippe would embark at Treport on Monday, between seven and eight o'clock p.m., and would probably reach Portsmouth between ten and eleven o'clock the following morning. However, at six o'clock, a.m., Tuesday, the whole town of Portsmouth, as well as the diplomatic and consular authorities who had come down to receive the King of the French, were awakened from their sleep by loud reports of artillery. The town, in a moment, became the scene of the most amusing hurry and confusion, which lasted until it became known that the battery ashore was saluting the Ambassador of France, and the *Royale Amélie*, the Admiral's flag—this having been omitted on the previous evening, as it is against military etiquette to fire salutes after sunset. The calm which ensued was not of long duration. Hardly had the townspeople and the authorities finished their toilette and taken their breakfast, before the guns of the Queen, 110 gun-ship, at Spithead, began to boom in the distance, announcing the coming in sight of the squadron of the eagerly-expected Sovereign. This occurred at a quarter to eight, and King Louis Philippe might have arrived much earlier: The wind and the weather were so fine and favourable that he neared our shores at seven o'clock, but knowing that his Royal Highness Prince Albert would not reach Portsmouth until nine or ten o'clock, the steam squadron was ordered to stand out to sea once more. The firing of the Queen brought out the three regiments of the line and the division of Royal Marines from their quarters, with their bands playing and colours flying, whilst the whole population thronged the beach. This general movement, combined with the display of flags streaming in every direction in the town, and covering the yachts and ships of war in the port, presented a scene of animation beyond all power of description. Every moment this scene increased in interest. The French squadron came on slowly and majestically, each ship of war saluting as it advanced, and each battery in turn taking up the salute; the climax, however, was when the armed steamers entered the harbour; then the cheers of the population on the shores, and of the sailors who manned the yards, struggled in intensity of sound with the reports of the cannon fired by the batteries, by the *Excellent*, and by the *Victory* (Nelson's renowned ship), moored within the harbour. Whilst the French steam squadron was coming to the moorings which Admiral Lasaze, its commander, had fixed upon a few days previously, the troops took up their position. They were disposed in two lines, each three deep, from the Royal Dockyard to the railroad terminus. At the inner and outer gates of the railroad station at Gosport, and in other favourable spots along the line of the royal progress, tasteful triumphal arches of laurel and other evergreens, with complimentary mottoes, had been erected. From the moment she anchored, the Gomer, which bore his Majesty, was an object of riveted attention; round her crowded every disposable boat or small craft about the port, whilst the most distant spectators examined her with their telescopes. Nor was this steam-frigate unworthy of their curiosity. She presented an aspect at the same time imposing and interesting. Her form is admirable, the wide expanse of her spotless deck, her masts, yards, and rigging show she has been the pet handiwork of the French shipwrights, and that she is the favourite of her captain and crew, who manoeuvred her in silence, and with a most sea-queen-like celerity and ease. Below she has all the character of a floating palace—the drawing-rooms are as convenient as they are magnificent; that in which the King received his visitors has its sides lined with crimson velvet; whilst in every direction you behold tables of the rarest woods, and luxurious *caneuses* and sofas lined with yellow satin. On the deck could be easily discovered, on one side, the French Marines in their peculiarly picturesque uniforms, with their officers and the band of the Prince de Joinville at their head; the aides-de-camp of the King, Generals Athalin, de Rumigny, the Colonel Count de Chabannes; Captain Thierce attending the young Prince; the physician, Dr. Fouquier; the surgeon of the King, M. Vaquer; his secretary, Baron Felt; the Comptroller-General of Havre, &c., all in splendid uniforms of bright and of different colours, were constantly seen crossing and re-crossing, ascending and descending, in the execution of orders. Amidst these moving groups were conspicuous the slight and elegant figure of the Admiral in command, M. Lasaze; the burly giant form of Admiral Mackau, with his aides-de-camp Captains Pellon and Page standing behind him; nor was the more diminutive figure of the great Minister of France, M. Guizot, the least anxiously observed. The personage who, however, perhaps attracted the greatest admiration was his Royal Highness the young Duke de Montpensier, above the middle height, with a noble countenance. This youthful prince (nineteen years of age) combines a handsome appearance and a manly bearing with a gracefulness of the most striking character.

As soon as the Gomer had anchored, Sir Charles Rowley sent a boat to take aboard the French *corps diplomatique*, which consisted of the Ambassador (his Excellency the Comte de Ste. Aulaire), the Counts de Jarnac and de Noailles, the Baron de Galleval, M. de Labaudy, de la Balizaye, &c. Hardly had they been introduced to their royal master than the corporation of Port-

smouth came aboard to present their address. Their ingress created much amusement amongst the crowd, not from any disrespect to the mace-bearer and the beadle, the mayor and the aldermen, but because their numbers were so increased by curious gentlemen termed livery-men for the occasion, that their line of march was interminable, and their visit had more the appearance of an attack than a compliment. They, however, received a most gracious reception, and a splendid extempore answer to their effusions of eloquence. By this time the two Admirals, General Sir Hercules Pakenham, Captain Lord Adolphus Fitzclarence, and several naval officers, had arrived on board, and were presented to the King in the presence-chamber below. Next came the French consular body, consisting of M. de St. Andre, consul-general; M. de Gautier, his *chancellor*; M. Laiane, consul at Liverpool; M. de Serres, at Edinburgh; and M. Dillon, at Newcastle. After these presentations all further visitors were excluded from the royal presence, and the King was left to enjoy his privacy, and, probably, to write letters to his relations at Eu, which, we heard, one of the smaller steamers was to convey to the coast of France. At half-past ten the arrival of his Royal Highness Prince Albert at the railway terminus was signalled. All the officers and dignitaries aboard the Gomer were then assembled on the deck. The King and his son shortly after appeared from below, and the approach of the Prince was announced by the shouts and cheers of the crowd. In an instant the yards of the Gomer were manned by the crew, and flags as suddenly displayed from all points. The Prince reached the main-deck closely followed by the Duke of Wellington, who came as lord-lieutenant of the county to compliment the King. His Majesty embraced Prince Albert *à la Française*, and repeatedly shook hands most cordially with the Duke of Wellington, which raised the most deafening shouts amongst the crowds in the boats surrounding the Gomer. Without descending to the saloon, the King and the Prince immediately proceeded to the railway terminus. The Admiral's barge, containing only Louis Philippe, his son, Prince Albert, and the Duke of Wellington, started for the shore, the band of the Gomer playing "God save the Queen," and the sailors who manned the yards shouting "Vive le Roi," to which the crew of the *Victory* responded by hearty British cheers, both ships at the same time firing royal salutes. The *coup d'œil* at this moment was magnificent. The Princes, with their brilliant suites, were seen steering across the harbour to Clarence Dockyard, the well-piled oars of the crews of the Admiralty barges keeping time to the music of the bands. The regiments were seen on the quay drawn up in military array, with the staff of the General Commanding at their head. The water was covered with boats, amidst which the ships of war reared their giant forms, while the shores were covered with crowds in their holiday suits. On the one side, you beheld in the background the renowned naval dockyard, presenting a tableau like Canaletti's magnificent picture of Venice Arsenal. On the other side were seen Portsmouth, the entrance to the haven, and the Isle of Wight in the distance. To the effect of these objects must be added the shouts of the crowds, the cheers of the sailors, the ringing of bells from every steeple, and the booming of cannon from every ship and battery. Through the double line of the military, the King, Princes, and suites were soon wafted by the royal carriages to the terminus. There but little delay intervened before their departure; and the cheers of the ladies and gentlemen assembled were so constant that all we could overhear was the observation of the royal traveller that the present was his first journey by a railroad.

EPITOME OF NEWS.

FOREIGN.

FRANCE.—The *Moniteur* of Tuesday contains the names of the 59 political prisoners liberated in virtue of the royal ordinance of the 4th inst. They are for the most part obscure persons, implicated in the insurrection of the 12th and 13th of May, 1839, in Paris; in the Republican plot of Marseilles; the expedition of Louis Napoleon to Boulogne; and the attempt of Quénisset against the lives of the Dukes of Orleans and Aumale.

The *Journal des Débats* publishes a letter from Cadix of the 25th ult., mentioning the complete evacuation of the island of Mogadore by the French, and the arrival at Cadiz of the garrison and the remainder of the squadron. The Moorish envoy sent from Tangier, in the Cuvier, to inform his countrymen of the conclusion of peace, was unable to meet in the town a single inhabitant to whom he could communicate that pleasing intelligence. Ever since the bombardment, Kabyle marauders daily entered Mogadore to search for booty among its ruins. On the 12th, these plunderers accidentally set fire to a mine, which had been opened under one of the forts, commanding the channel between the island and town, and the battery situated at the gate of the Marine. The latter was blown up by the Moors; but, the fuse leading to the powder magazine under the fort having been extinguished, no explosion took place. On the 12th the French garrison was awake by the report of an explosion which completely destroyed that fort.

CALAIS, Oct. 6.—Doctor Thorne, an English surgeon, who had been drinking on Saturday night in company with M. Sallor, commissioner of police for passports, while on his way with the latter to his office, had a quarrel with him, when M. Sallor stabbed him to the heart with a poniard. Dr. Thorne died instantly. The murderer was immediately taken into custody, and now awaits his trial.

A strange fact occurred at the late fair of Arlon—no purchasers presented themselves at it. All the country people of the Grand Duchy of Luxembourg applied to delay the expenses of a journey to Treves, to see the famous robe of Christ, the savings which they usually devoted to amusement and purchases at this fair.

CORN TRADE.—The *Moniteur* publishes the returns of the corn trade in France, from which it appears that the quantity of wheat imported during the month of August last amounted to 1,600,477 metrical quintals, whilst the exports amounted to 47,917 metrical quintals, and the stock remaining in the bonded stores on the 1st of September last amounted to 55,214 metrical quintals.

UNPLEASANT AFFAIR AT GIBRALTAR, Oct. 2.—A circumstance occurred yesterday, shortly after the departure of the Great Liverpool, which has caused no little sensation in this place, and will doubtless induce severe comment, if not disagreeable consequences, on the part of the Spanish authorities. A Spanish war-steamer,

in close chase of a coasting vessel (whether or not engaged in the contraband trade is unknown), passed Europa Point yesterday afternoon, about three o'clock; when having failed to show her colours, as is always customary, as well as imperative, in such cases, a shot was fired over her from the signal battery, to remind those on board of the neglected observance. This failing to produce the desired effect, a second gun was fired with more direct aim; but as the Spanish vessel found herself considerably out of range of the shot, she continued her course, disregarding both intimations and (it is currently reported) still refusing to show her colours. A gun of much greater calibre was then brought to bear on her from the battery, when so correct was its direction that the shot told with fatal effect, and she sunk shortly afterwards, whilst vainly endeavouring to make for Algeiras. Very fortunately a Portuguese vessel was not far distant, and with its timely aid, as well as some of the boats of the war vessels in the bay, the crew were saved.—*Herald*.

LEIPZIG FAIR.—Accounts from the Leipzig fair to the close of last month give a favourable statement of the business doing there as far as it had progressed, although the supplies of cloth fabrics were very large. The railroads were bringing an immense number of persons to this great trading-locality; and will, no doubt, have a wonderful effect hereafter in sustaining the importance of the fair, which, notwithstanding its advantages, scarcely offered a sufficient temptation to merchants to undertake the ordinary stage journey. The demand for calico, cloth, and cotton manufactures was brisk.

THE JEWS OF POSEN.—We learn from Posen, 25th ult., that a strong spirit of persecution on the part of the inhabitants generally against the Jewish inhabitants having been manifested, the authorities have received orders from the Government to give all possible protection to the Jews, and to punish with severity persons who are guilty of this persecution.

BADEN.—The Minister of Finance of Baden has published an order, dated the 14th ult., by which the importation of coals is to be free from the 1st instant.—*Galignani*.

SWEDEN.—Letters from Stockholm of the 24th ult. represent nearly all the Swedish provinces to have suffered severely from inundations, but in the greatest degree the country bordering on the river Roeyo, which rose 13 feet in less than an hour, rushing in torrents upon the large village of Konradsfors and its environs, which were quickly submerged; sweeping away all the houses and factories, and 22 windmills, and, in fact, leaving nothing but a mass of ruins. About 500 persons are said to have perished, and the loss of property is estimated at 800,000 rix-dollars, 1,200,000 francs. Subscriptions for the relief of the sufferers have been opened at Stockholm, at the head of which stand the names of the King and Queen, with considerable contributions annexed.—*Paris paper*.

The *Journal du Havre* states that accounts have been received by the India mail of the murder of the captain and two of the crew of the French merchant vessel *l'Indien*, by the natives of one of the islands in the Gulf of Bengal. The captain and two men had left the vessel in a boat to take soundings of the coast, and not returning, they were sought for by the rest of the crew, who found them lying murdered on the shore, and stripped of their clothing.

TAHITI.—There arrived at Paimouth on Saturday, the bark *Arachne*, from Sydney, New South Wales, whence she sailed on the 6th of June for London. She landed here her mails and passengers, among the latter of whom was Lieutenant Rose, of her Majesty's sloop *Hazard*, who is the bearer of some important intelligence to the Government, in connexion with a fresh outrage committed on the British flag at Tahiti, on the 4th of April, by the French commodore, Brunt, in command at that island. From what we can gather, it appears that the *Hazard*, Commander Bell, on her passage from the Sandwich Islands to Sydney, received instructions from Admiral Thomas, of her Majesty's ship *Dublin*, lying at the former port, to touch at Tahiti, with despatches for the acting British Consul there. At the same time Captain Bell was specially charged by the admiral not to recognise the French authority in the execution of this mission. Accordingly, on the date above-mentioned, the *Hazard* arrived off Tahiti, and having despatched a boat and four hands, under the command of Lieutenant Rose, to her Majesty's ship *Basilisk*, lying at anchor in the roadstead, they were interrupted in their passage thither by a large armed barge belonging to one of the French frigates, the officer on board of which stated that he had orders to take the British boat and crew to his commodore. This act Lieutenant Rose protested against, when, the French being about to use force, Lieutenant Rose at once surrendered his sword, and stated that he considered himself prisoner. They were then taken alongside the French frigate and detained some hours, after which they were released and allowed to go on shore, the French admiral afterwards sending an apology to Commander Bell, of the *Hazard*, for the interruption. On Lieutenant Rose's return to the *Hazard*, she immediately sailed for Sydney; and we understand Lieutenant Rose has come home expressly with despatches to the Admiralty, detailing the affair.—*Times*.

WEST INDIES.—The West India files received on Monday convey intelligence of a very decided shock of earthquake felt in several of the islands, Jamaica excepted, but more especially in Demerara, being also violent in Barbadoes. Fortunately, however, no particular damage appears to have been done, as far as is known, although it is feared that in the direction of Caracacas, famous for volcanoes, the effects may have been more severe. Writing from Demerara, eye-witnesses state that the wind, which usually blows from the east, deviated on the 29th of August in a most uncommon manner, and that in the night a tempest of thunder and lightning, of a very alarming character, forewarned the inhabitants of the awful visitation. At half-past three in the morning the shocks commenced, lasting no less than three minutes; and although no buildings were destroyed or lives lost, small fissures were made even in the alloy roll of Demerara; and the reverberation of waterfalls, &c., was so violent, that by the mere force of swinging, and without the vessels themselves being overturned, they were found nearly emptied of their contents when the shocks subsided. The prison, built on a rock, was shaken to a most alarming extent, and the prisoners were clamorous for temporary release. In the town some of the most accurate clocks were found stopped the next morning. As usual, preparatory to commencing the nature, the weather previously was very sultry. It

Tripled the earthquake was also felt, and in Barbadoes it was very violent, the people running out of their houses in affright.

DOMESTIC.

Mr. Bright, M.P. for Durham, has, without the slightest solicitation, generously sent the sum of £50 for the relief of the families of the sufferers by the dreadful explosion at Haswell colliery.—*Gateshead Observer*.

The various branches of machine makers in the Huddersfield district of the West Riding are in a flourishing state, chiefly with orders for home use. Considerable orders are also on hand for abroad.

On Saturday night a railway train left Croydon for London with about 700 persons, followed closely by a second, having also a large number of passengers. In consequence of the light in the rear of the first having gone out unperceived, a collision took place between the two, attended by an awful crash, which greatly alarmed the passengers. Two carriages were much injured. Several of the passengers suffered severe contusions, but no life was lost.

On Monday evening a destructive fire broke out on a large space of ground behind the London-road, Southwark, on which was erected a number of shops, occupied by various tradesmen, and known as St. George's Market. The flames continued to spread from one house to another for several hours, notwithstanding every exertion made by the several fire brigades, and were not completely got under till nine o'clock, at which time upwards of thirty tenements were either wholly or partially destroyed.

A meeting of several influential agriculturists took place on Monday, at the York Hotel, Bridge-street, Blackfriars. Mr. James Ellis, of Kent, in the chair. Mr. Baker, of Writtle, was also present. A resolution, condemning the malt-tax as unjust and oppressive, was passed; and it was also resolved to take the requisite steps to procure the abolition of the duty in the ensuing session of Parliament.

The will of the late Mr. Beckford, author of "Vathek," has been proved at Doctors'-commons. At ten years of age he succeeded to the enormous income of £100,000 a year. He expended £273,000 upon Fonthill, which he made a place of unparalleled magnificence.

On Monday week the farm-buildings of Mr. Cooke, of Lyde, near Holmer, were set fire to. Five hundred bushels of wheat in the straw were destroyed.

The *Gazette* of Tuesday night notices the elevation of Lord Stanley to the House of Peers, under the title of Baron Stauley, of Bickerstaffe.

The Repeal Association met on Monday in the Conciliation Hall, Dublin. The attendance was small, and the proceedings of little interest. The rent for the week amounted to about £616.

Some of the Irish Conservative newspapers are advocating a triennial Parliament to be held in Dublin. Federalism appears to be on the increase.

A convocation was held in the University of Oxford on Tuesday, for the election of Vice-Chancellor, when Dr. Symons was elected by a majority of 699—the numbers being, for Dr. Symons 882, and against him 183. The rev. gentleman is opposed to the Puseyite doctrines.

Lady Hlytesbury died on Sunday last at the Vice-regal Lodge, Phoenix-park, Dublin, of gastric fever.

A gigantic scheme is said to be under consideration at Liverpool, to connect the opposite shores of the Mersey by a stupendous chain bridge.

On Monday last Lord Ashley paid a visit to Bolton, for the purpose, it is said, of ascertaining the working of the new factory act, which has just come into operation. He visited several of the large establishments.

At the dinner lately given to Mr. Clifton, the new M.P. for North Lancashire, covers were laid for 300, but only 67 gentlemen attended, a significant exemplification of public opinion in the district.

A polytechnic institution is proposed to be formed in Dublin on the plan of that in Regent-street, London. Mr. Grey Porter, whose pamphlet on Federalism has recently attracted so much notice, is announced as secretary to the founders.

The Windsor Castle steam-boat, having on board nearly 250 passengers, was wrecked on Tuesday se'night while on her return home from Dundee to Granton. The vessel struck on the beacon of the North Carr Rock, and instantly began to fill with water; the passengers, as might be expected, were in a state of terror and confusion; but providentially the vessel grounded between two rocks near to the shore; and by the aid of her own and other boats which came to their assistance all were safely landed. Most of them found shelter for the night at Crail from the farmers and cottars in the neighbourhood. The vessel was built of iron in 1838, and was considered a safe boat. It is believed that she is irretrievably lost.

On Saturday afternoon an inquest was held before Mr. John Charley, one of the coroners for Bucks, at the tap at the railway station, Slough, on the body of Miss Jane Buckstone, a young lady 29 years of age, the niece of the late Mr. John Travers, who met with her death by falling from a window of the Royal Hotel. The deceased, it appeared in evidence, was found outside the window of the hotel early in the morning in a dying state. The jury returned a verdict that "the deceased came by her death in consequence of a fall from a window; but whether that fall was the result of accident or not does not appear."

LINCOLNSHIRE.—At Swaley, in the night of the 30th ult., a fire broke out in the stackyard of Mr. Roger Sharpley, of Great Carlton, and fifteen stacks of corn were destroyed, but the probable value of which has not yet been ascertained. We understand that this is the second incendiary fire to which Mr. Sharpley has been subject.

Early on the morning of the 2nd inst., a fire was discovered in the thatch of the house of Mr. Wm. Neville, farmer, at Wistow, which, however, before it had gained much strength, was happily extinguished. This was about one A.M.; very shortly after the family of Mr. Wm. Dixon, a small farmer, were alarmed by the discovery of flames of fire on their premises bursting out of the barn, and rapidly spreading to other parts of the homestead. Before the fire could be subdued it had destroyed two wheat stacks, one small oat stack, about sixty loads of wheat, and a quantity of barley in the barn, two foals, and, with the exception of the cowhouse, the entire range of farm-buildings on the premises. The whole is now a mass of ruins. From various circumstances, there is reason to believe that both these fires originated with some incendiary. The estimated damage to the tenant is £150, 11s.

Mrs. Pritchard, wife of Mr. Pritchard, late consul at Tahiti, has arrived in England with her three daughters.

Mrs. Pritchard left Tahiti towards the end of April. Before leaving, she had gone on board the *Basilisk*, where she had an interview with Queen Pomare.

We understand that the late respected James Heyworth, Esq., of Everton, has bequeathed a legacy of £10,000 to his principal clerk, as a testimony of the value which he placed on that gentleman's faithful services for a number of years.—*Liverpool Times*.

In the county of Huntingdon, containing a population of 58,699, there is only one savings' bank.

A serious accident occurred on Tuesday morning on the line of the Broadland Junction Railway, by which one of the passengers named John Brown was killed, and 15 others more or less injured. The accident arose from the collision of two engines, one of them attached to a carriage full of passengers on its way from Shields to Newcastle, or rather Gateshead, where the line terminates.

Parliament was on Thursday further prorogued by Royal Commission until Thursday the 12th of December. The Commissioners were Lord Wharcliffe, Earl Dalhousie, and the Lord Chancellor.

Dr. DALTON.—At a meeting of the inhabitants of Manchester the following resolution was come to:—"That it is desirable that a simple and suitable memorial should be placed in the cemetery at Ardwick, over the mortal remains of this illustrious philosopher and exemplary Christian; and that it is most desirable to found a professorship of chemistry in some public institution in Manchester, to be named the 'Daltonian Professorship,' one object of which shall be to illustrate the atomic theory, and the discoveries of Dalton in connexion with other branches of physical science."

The total number of deaths in the metropolis for the week ending last Saturday, as made up by the Registrar-General, was 961; showing an excess over the weekly average of the last five years of 15.

At the Battle petty sessions, on Tuesday, a boy named William Ralph, aged only nine years, was found guilty of having set fire to a faggot stack, on the 1st instant, the property of a farmer named Stapley. Mr. Stapley valued the stack at £5, in which amount and costs the bench fined the delinquent, who, in default of payment, was committed to the house of correction at Lewes for two months' hard labour.

On Wednesday evening last, a numerous and respectable meeting of the members of the Metropolitan Drapers' Association was held at Exeter-hall, in order to forward the movement, now so general, in favour of shortening the hours of business. Resolutions to that effect were unanimously agreed to.

Incendiarism in Suffolk appears at the present time to be alarmingly on the increase. A most destructive fire took place on Wednesday evening last in the parish of Whipstead, on a farm in the occupation of Mr. Holden. It was discovered in the stackyard, and in a short time ten stacks of different kinds of produce were burning at once, illuminating that part of the country for many miles. The fire raged with such unchecked fury, that it was useless to attempt to save the stacks. The dwelling-house, which was within a short distance, by continual damping, was saved from any material damage. This makes the fourth incendiary fire which has taken place in the neighbourhood of Bury St. Edmund's since last Friday—a fire taking place that day at Cheveley-park, belonging to the Duke of Rutland; one at Waltham de Willows, on Saturday; another at Hengrave (which we believe was extinguished), on Wednesday afternoon; and a fire at Whipstead on the evening of the same day. The inhabitants, generally speaking, are in a state of great alarm, and the destruction of property is immense.—*Times*.

MISCELLANEOUS.

THE REGISTRATION.—Many people ask "What is the League about now?" The short answer is, "Fighting the battle of Free Trade in the registration courts." And successfully in the League engaged in this arduous contest. Already has it made sure that both the representatives of South Lancashire shall, after the first vacancy, be Free-Trade. In Cheshire also, and other neighbouring counties, the constituencies are so much improved by the efforts of the League that the next election, come when it may, will exhibit a vast increase of liberal and independent voters; and it is not too much to expect that within a few years all the manufacturing counties will be thoroughly emancipated from the thralldom of monopolist majorities. Great numbers of decent operatives are availing themselves of the 40s. freehold qualification, and getting their names on the electoral roll by purchasing cottages worth 40s. of yearly rent. These can be bought or built for about £40 each, and such a sum is easily borrowed on the security of the property. The purchaser, therefore, if he has not the money of his own, pays interest for the loan of it, instead of paying rent, and thus becomes entitled to vote at elections on the simplest and most ancient of all existing qualifications.—*Edinburgh Weekly Chronicle*.

THE PRINCIPLES OF THE LEAGUE PERPETUAL.—"The League is dead!" exclaim the monopolists as often as they can get any one to hear them; but they know and feel convinced that the principles of the League are not dead. They may try the vain attempt to break up the organization of the League, but eradicate the principles they never can. These have been so elaborated in the mind of the nation that they have become identical with "common sense." How can a people pressing severely upon the food supplies of their own country ever conceive that it is better for them to endure short allowances than to open their gates and allow abundance to flow in? How can a manufacturing country, capable of producing more than it needs, ever consider that it is better to discontinue its connexion with the wide world where alone it is sure to find customers? The ideas of "Independence!" "Separation of nations!" "Eating our own food alone," instead of following the teachings of nature and reason, which lead us to regard the world as one common home, and the whole people as one family! Sufficient, however, of the sweets of commerce have already been enjoyed to explode all such exclusive notions.—*Lancaster Guardian*.

THE DISCOVERY.—It has been a subject of some perplexity and annoyance to the Suffolk squires of late, how they will put an end to lucubridism and make the labourers happy. But the discovery has at last been made. Professor Henslow, of Hitcham, is the great man who has done it.—*cries, Murella*. The Doctor says, "The subject of lucubridism is a very serious one,"—so is it. But he has discovered that the abolition of *Mr.*

works is the cure for it!!! As an argument against its expense, he says (writing to Sir Henry Bunbury on the subject):—"I am treated 'as one of the trade' by a maker of fireworks, as well as by a toy merchant, and one or two others in London, who furnish me in a wholesale way, at a very considerable discount, with sundry articles for our little annual exhibitions and the school children's festivals." He then says, explaining the feasibility of his plan:—"Where a village or a neighbourhood may happen to possess a taste for them, a very trifling subscription from the pockets of the public-spirited will furnish sufficient funds for the articles that are required (in a rough state), and which a little ingenuity will soon arrange in a manner to afford a good display. I never recommend any one to compound the ingredients for fireworks, which is a dirty as well as rather dangerous employment. The great saving of expense consists in procuring certain 'cases' ready charged, but unarranged. These may then be arranged in pleasing forms and devices. I am myself pretty expert in arranging 'fixes,' attaching 'turning cases,' and most of my family have tolerable skill in 'clothing speckles.'" This communication was actually made to a meeting of Suffolk gentlemen last week, and solemnly talked of as a panacea for the ills of the labourer's lot! A proposal to distribute gingerbread would be a trifle more rational.—*Economist*.

RECREATION OF THE WORKING CLASSES.—On Saturday evening last, Messrs. Cooke and M'Minnies, cotton-manufacturers, Warrington, gave their work-people a treat; upwards of 400 of them sat down to dinner, which took place about four o'clock, in a large shed just erected in connexion with the Hope Mill, Town's-end. B. Cooke, Esq., occupied the chair. John Rylands, Esq., briefly addressed them, and was followed by N. Cooke, Esq. The chairman then introduced Mr. J. P. Edwards, who was received with loud applause, and delivered a powerful address, of nearly an hour's duration, on the moral and intellectual education of the people, and the tendencies of the present age. The tables were then cleared away, and Mr. Thornley's band being in attendance, dancing immediately commenced, and was kept up for some time with great spirit. Coffee was afterwards served; and song, recitation, and dancing again alternated with each other during the remainder of the evening, until nearly twelve o'clock, when they finally separated.

FOREIGN CATTLE.—Fifty-five head of horned cattle have been imported from Hamburg since our last—thirty-two by the *Hanseatic steam-ship Leeds*, and twenty-three by the *Heleen M'Gregor*.—*Hull Packet*, October 4.

GUANO.—The sales of African guano at Liverpool during the past week have reached from 200 to 300 tons; the price obtained averaging £6. 2s. 6d. per ton. On the one hand, buyers are offering £6, and sellers want £6. 6s.; Peruvian is commanding £10 to £10. 10s. per ton.

THE CORN LAWS DEFIED.—The Corn Laws may be defined to be, the prohibition of foreign trade by act of Parliament for the benefit of the owners of land, who, by means of the imperfect state of the representation, have contrived to acquire a majority of votes in the House of Commons.—*Col. Thompson*.

THE HARVEST IN IRELAND.—The corn harvest in Ireland is very nearly brought to a close all through the country. The wheat crop is the finest and most abundant for several years; but oats and barley are scarcely an average. Potatoes, notwithstanding the early failures, promise a good crop. Altogether, the harvest is excellent in quantity and quality. A letter from Fethard, county of Tipperary, says, "Last year wheat was a good crop, but the produce this year is from 20 to 25 per cent. over it. The price here at present is 23s. 4d. per barrel of 20 stone."

BALLINAGH FAIR.—A letter dated on Saturday last says:—"The number of sheep at this year's fair was short; the amount sold on both days will be but little over 60,000. This day, wethers met a dull sale; Mr. Burton Perse sold a large lot at prices ranging from 37s. to 45s. each; and the same gentleman obtained £3. 15s. for a choice lot of two-year-old maiden ewes. At the sale by auction on Thursday, of the late Mr. Bernard Brown's sheep, very high prices were got for animals of the coarsest description."

FALL IN THE PRICE OF BREAD.—On Tuesday two men drove a light cart, laden with bread and covered with placards, through the northern districts of London, announcing that they sold "the best wheaten bread for 6d. a quarter." They made several stoppages on their journey, at which they had an auction of their bread. The fame of this novel mode of forcing sales anticipated them in many villages; and the bakers residing therein, resolved upon foiling their efforts, actually labelled their bread for 5d. the quarter, which appeared to have had the desired effect, as the itinerant bakers afterwards found few or no purchasers.

WISE BEQUEST.—Mr. Dick, a native of Forres, in Morayshire, was born in 1743. He went to the West Indies, where his talents and industry soon enabled him to amass a large fortune. He returned to England, and, dying in 1829, left a capital of £118,147 sterling, to be invested as a fund for increasing the salaries of schoolmasters in the three counties of Moray, Banff, and Aberdeen. Here is a lesson for foolish men how to leave their money wisely.—*Thit's Magazine*.

ADVANTAGES OF SAVINGS.—A calculation has lately been made by an actuary of a savings' bank, by which, if the labourer could be prevailed on to save two shillings a week from the age of twenty to thirty, he would be enabled, with a trifling assistance, to purchase an annuity of ten shillings a week after he arrived at the age of sixty.—*Savings' Bank Circular*.

SOUTHAMPTON.—The annual entertainment of Mr. Andrews to his workmen was given on Tuesday se'night. Mr. Beate, of Botleigh-grange, announced himself a candidate for the representation of Southampton at any future election, in compliance with a numerously signed requisition of electors that was presented to him the day before.

AGRICULTURAL COLLEGE.—We are informed that great progress has already been made towards the establishment of an agricultural college in the vicinity of Dublin, under the superintendence of the Royal Agricultural Society of Ireland. It has long been an object with Mr. Purcell, the founder of that society, and with the council, to have such a college established. The importance of such a college cannot be over-estimated; it would confer lasting benefit on the country.

THE ANGLESEY FARMER AND HIS LABOURERS.

To the Editor of the *Cornwall Herald*.

Amlwch, Oct. 2, 1844.

Sir,—I was happy to find, among other objects of public interest connected with the last agricultural meeting at Llanello, a hint thrown out by Mr. Stanley on the propriety of encouraging the general improvement, and of ameliorating the condition, of the agricultural class of labourers in Anglesey. I much admire the philanthropic view the worthy gentleman has taken in urging this important inquiry. It may lead the farmers to look for a more general manifestation of the principles of this philanthropy, and to hope that landlords will take the high rental of their land as a first point for consideration; for, if an amelioration takes place in this respect, the farmer, in justice to his labourer, will follow so good an example. It is well known that small farmers in this island have, to a great extent, found themselves unequal to their late rents, and it is much to be feared that several will be unable to bear up by the next rent audit. Nothing can be easier than for gentlemen landlords, who are allowed to assume their own data, and thence to draw their own inferences, to satisfy themselves by most plausible arguments of their accuracy; but the farmers of Anglesey are sufficiently sceptical to doubt this mode of reasoning, and will require them to establish the premises before they agree to the conclusion. Perhaps Mr. Stanley is not in full possession of facts as regards the actual state, resources, and capabilities of the Anglesey farmer to meet the exigencies of his agricultural labourer.

In a general point of view, the resident agricultural labourer, in ordinary employment, earns from 7s. to 8s. per week; but in harvest they get 10s. per week without victuals. When food is furnished, 10d. per diem is allowed. The principal labourers are allowed their cottages, others their meal and milk, and some their potatoes, according to their competency and the size of the farms they are engaged on; but most of them are maintained in the farmhouses, with wages averaging from 4s. to 4s. 14d. per annum. Their victuals are substantial and good. On Sunday a large piece of beef or pork is boiled, in some cases accompanied by a joint of fresh meat. On Monday and Tuesday what remains of that is served up cold. On Wednesday, harrings, or bread and butter and warm milk. Thursday, pork or beef boiled. Friday and Saturday same as Wednesday. The staple vegetable, potatoes, forms a material dish at every dinner, a basin of which they partake of in milk before the meal. For breakfast they have uniformly barley-bread and warm milk or soup. For lunch, bread, cheese, and milk. For supper, boiled groats, or potatoes and milk, with bread and butter; and a profusion of each at every meal. The farmer and his sons eat at the same board with the men, and generally work in the same ditch. This occurs in ordinary farms of 50 to 120 acres. It is not to be expected that in every farmhouse in the county an equal prosperity can be supposed to prevail, as some, either from disposition or from necessity, may not live so liberally as their neighbours; but the general habit and routine of the week you will find as above stated. In this case, query, which is the better off, the farmer or his labourer? It is very far from my feelings, as a farmer, to believe that Mr. Stanley ever meant to captivate the cupidity of the agricultural labouring class at the expense of the poor farmer; but I sincerely hope that, while he holds out the prospect of ameliorating the condition of the labouring class, he will speedily put the farmer in possession of a remedy, which must consequently be sought for in a reduction of our rents.

I am, Sir, yours, &c.,

P. P.

WYTHILL FAIR, HAMPSHIRE.—This fair, which is the most important in the south of England, was held yesterday in an extensive range of fields three miles from Andover. The fair continues for six successive days, for the sale of sheep, horned cattle, and horses, the supply of which this year was very large, and exceeding that of the preceding years. The sheep-pens covered many acres, and the trade was rather brisk, the best ewes making from 2s. to 3s., and good Southdown wethers obtaining good prices. The supply of horned cattle was large and the trade dull, the prices being 12 per cent. lower than the average of last year. The horse field was large, and prime cart colts made high prices. Most of the influential agriculturists and farmers of the adjoining counties were present.

GLoucester BANTON FAIR.—Saturday last being the great annual fair for the sale of cattle of all descriptions, was, if anything, more plentifully supplied than it has been for some years past, but the sale very dull. The cheese fair was not so full as on former occasions, the average price for best making being about 5s. to 5s. 6d. per hundred. Onions, of which there were great supplies, 1s. 6d. a peck. The number of shows and gambling tables, from the highest to the lowest description, was very great; the latter of which seemed to have had their share of gain from the weak and unguarded. And, according to a very long-standing custom, this celebrated fair has not lost its character by the annual visit of His Highness the Duke of Devonshire, who was in attendance to a very great extent; and their harvest, though not so abundant as in former seasons, was extensive, and would have been more so but for the vigilance of the police. The statue fair or mop was held on Monday, and never was it more fully attended, from the highest situation in agricultural pursuits to the cart and plough boy; but hiring, on the whole, was remarkably flat, and good and tried servants retained their situations. Several trains arrived from Bristol and Birmingham, so that the streets of the old city was due animated scene.—*Examiner*.

BROUGHTON HILL FAIR, WESTMORLAND.—This important and largest of all the fairs in the north of England was held on Monday and Tuesday last, in the extensive place of waste ground about a mile distant from the market town of Broughton. There was a tolerable supply of Scotch and Irish cattle, considerable lots of which were sold for wintering, at prices fully 8 per cent. below the prices of last year's fair. A goodly number of English cattle of all kinds were exhibited, but the sales effected were at declining prices. Practical agriculturists affirm that fodder for cattle during the approaching winter will be scarce, by reason of the oat and barley crops being so short in the straw, and the turnip crops scarcely average ones. There was a good deal of business done among the Scotch and other kinds of sheep, but the prices, like those of cattle, were looking downward. The horse fair was a

very thronged and brisk one, and a large number of very superior animals were shown for sale.

THE WELSH CATTLE FAIR.—Our cattle fairs during the month of September have been but thinly attended by the drovers who usually purchase for the purpose of driving cattle to the English fairs and markets. The failure of turnip crops, together with the short crops of hay and straw all over the kingdom (with very few exceptions), are alleged as the reasons. Compared with the business usually transacted at this season of the year, the amount of transactions has been small. Cattle fit for slaughtering were scarce, and in demand at from 40s. to 50s. per cwt. to sink the offal; prime sheep were worth 5d. per lb., also to sink the offal. Pork and bacon pigs are a little on the advance, while small ones and bare stores are at very low prices. Good horses are scarce and in demand, while poor ones are nearly unsaleable. At Abergwilly fair, on Wednesday last, the show of beasts was very indifferent, and few changed hands. Horses ruled nearly the same as at the September fairs.—*The Welshman*.

BRITISH NAVY.—The number of ships of war composing the British navy, either in commission, ordinary, or building, is 681, carrying from 1 to 120 guns each.

MARKETS.

CORN MARKET.

MARK-LANE, Monday, Oct. 7.—We have a good arrival of English Wheat and Barley to this morning's market, a large supply of New Irish Oats, Beans and Peas a moderate supply. The New Wheat comes in better condition than of late; the best qualities sell freely at last week's rates, inferior sorts meet a dull sale. The transactions in Foreign are very limited. Fine samples of Barley sell freely at 1s. advance from this day week, in inferior qualities there is no alteration. We have a good demand for Old Oats at last Monday's prices; the quality of the New Irish is inferior to the first shipments last year; the price of the same is 1s. 2d. per bushel, though we do not quote any reduction in the price of the same as last week.

S. H. Lucas and Son.

Oats	1121	31s. 0d.	Peas	1017 34s. 0d.

FRIDAY, October 11.—The supplies of all grain since Monday are very moderate. English Wheat sells but slowly at last day's rates. The Foreign Wheat trade is very inactive, although we cannot quote any reduction in price. In Barley the transactions are limited, owing to the short supplies. There is a good demand for Old Oats at Monday's prices, but New are more difficult of disposal. There is no alteration in Beans and Peas. No change has occurred this week in the daily on any article.

THE LEAGUE.

No. 56.]

SATURDAY, OCTOBER 19, 1844.

[3d.]

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All Subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive, a copy weekly of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends, in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

We beg to inform our subscribers that bound volumes of the LEAGUE newspaper, containing the whole of the first year's numbers, may be had on application at the Offices either in London or Manchester.

WHY ARE THE FARMERS IN DISTRESS?

In our last, we endeavoured to point out the cause of the present revival in trade and manufactures; let us now try to explain why the farmers are so generally embarrassed and distressed.

We have watched, somewhat carefully, the proceedings of the many agricultural associations which have met during the last month; but in scarcely one instance has an attempt been made to go into the causes of agricultural distress. Numberless have been the remedies prescribed, from tile draining down to that latest nostrum—the cultivation of the sunflower; but nobody has seemed to think it necessary to feel the pulse of the patient, and ascertain the nature of his disease. *What is the matter with the farmer?* This would be an excellent question for discussion at a farmers' club, and it would be followed, no doubt, by a unanimous vote of "low prices." Generally speaking, farmers attribute all their distress to the state of the markets. They are apt to confound price with profit, and to consider that low prices and low profits are one and the same thing. To prove the erroneousness of this view of their case, we need only point to the manufacturers, who are making, generally, fair profits, now, when goods sell for a lower price than at almost any former time. It is an unquestioned fact, that all the fortunes accumulated in trade and manufactures during the last thirty years have been the result of selling cheaper than previously. But, then, whilst the manufacturers have been selling cheaply, they have been also buying cheaply. If calicoes have fallen in price from twelve shillings a piece to six, cotton wool has dropped from eightpence a pound to fourpence. It is evident, then, that other trades have been profitable with low prices, but why has farming been the exception? Let us turn to the other side of the bargain, and inquire whether the farmer has not been buying dearly whilst he has been selling cheaply. The money outgoings of an English farmer are principally for rent, tithe, and wages: these constitute more than four-fifths of his payments. Wages, we are universally told, rise and fall with the price of corn in the agricultural districts, they cannot, therefore, interfere with the farmer's profits in periods of low prices; tithes, under the Commutation Act, also follow the price of corn; and next we come to the item of RENT, which constitutes nearly one-half of the farmers' money payments.

Rent to the farmer answers to the cost of cotton and wool to the manufacturer; they constitute the raw materials out of which the articles of calicoes and corn are manufactured. Does the price of the land—that is, rent—rise and fall with the price of corn; or have they, as a rule, borne a proportion to each other like raw cotton and calico? One fact will give a satisfactory answer to this question. For thirty years, beginning with the middle of the last century, wheat averaged 46s.* a quarter, a higher price than for the present week; and yet, in the

meantime, rents and tithes have increased at least threefold. Not only have not rents followed the market prices of corn during the last thirty years, but a totally different standard has been set up. Parliament, ever since the war, has professed to regulate the price of corn, with a view to keep it above the natural market level, and the land-agents have valued their farms according to this ideal standard. In 1815 it was to be 80s. a quarter, and the farmers took their land at a corresponding rent; but in 1822 the market price was down to one-half the act-of-Parliament price. In 1828 it was to be 64s.; but again, in just seven years, the markets set the Legislature at defiance, the current price being 39s. 4d. In 1842 Sir Robert Peel gave the cue to the land-valuers, by naming 56s. as the price aimed at in his new sliding scale; already are the markets 20 per cent. under the Premier's quotation, and they threaten a still further decline.

We are aware that the landowners now deny that Parliament can fix the price of corn. But have not the farmers for thirty years acted upon an opposite belief, and did not the landlords take advantage of their credulity; nay, were not many of the landed proprietors sharers in the delusion? Did not Mr. Benett of Wiltshire state before the committee of 1814, that wheat could not be grown for less than 80s.? What says Mr. Cayley, the member for North Yorkshire, in the account of his own opinions furnished to "Dodd's Parliamentary Companion for 1841"? Let the reader turn to the alphabetical list of members, and under the name of Edward Stillingfleet Cayley, he will find, appended to a personal description of his family connexions, the following declaration of his opinions—"Is in favour of the preservation of the Yorkshire registry, the mitigation of the criminal code, and such a course of legislation with regard to agriculture as will keep wheat at 64s. a quarter, new-milk cheese at from 52s. to 60s. per cwt., wool and butter at 1s. a lb. each, and other produce in proportion." Here is the great authority of the Protection Society, himself, avowing his faith in the power of Parliament not only to fix the price of corn, but to keep it at 64s., with wool, butter, cheese, and all other articles in proportion.

But the fact will not be denied, that, up to the last two years, until the thing was exposed by the Leaguers in and out of Parliament, a general belief prevailed amongst the farmers that the Legislature could regulate the price of corn. Their rents were adjusted, not with reference to the market value of their produce, but according to an imaginary act-of-Parliament price; they are still paying these artificial rents, AND HENCE ARISES THEIR DISTRESS.

Scotland furnishes evidence in corroboration of this opinion. At the close of the war the Scotch farmers, sharing with their brethren in England the belief that Parliament would secure them 80s. a quarter for wheat, entered into engagements with their lords to pay rents in proportion; and when, in 1822, the price fell to 42s., they partook of the general ruin that befel the tenantry of this country. Some of the more acute of the Scottish farmers now hit upon the scheme of corn-rents, agreeing to pay the value of a fixed quantity of grain, instead of a fixed amount of money. By this arrangement the rent rises and falls according to the price of the produce. If the average of the year be high, the rent is in proportion; if low, the landlord's share is reduced by a self-acting process. This system, which has been lately so strongly recommended by Colonel Powell in Herefordshire, has been extensively in practice amongst the best farmers in the Lothians, and other parts of Scotland. We lately had the opportunity of conversing with one of them, and he declared that the most profitable year he had ever experienced was in 1835, when his wheat sold for less than 40s. a quarter, and when the farmers in England, paying money rents, were plunged in terrible distress.

At the present time these farmers of Scotland who pay corn-rents are enjoying prosperity—and why? Their rents, payable in a fixed number of quarters of wheat, are more easily paid with an abundant crop than in a season of scarcity. We adduce this case of the corn-renting farmers as a conclusive proof that low prices are not injurious, provided rents be fairly adjusted.

Our whole argument may be summed up in the words of the Welsh farmer, John Jones, of Bryn Aunmon:—"The landlords," said he, at a meeting last year, "fix the price of corn by act of Parliament, and they let their land accordingly; but when we offer our corn for sale, we find that the market price is far below the act-of-Parliament price, and so we are unable to pay the rent. But does the landlord suffer any loss? No; for he has passed

another law—the law of distress,—by which he can sweep away everything upon the farm; no other creditor shall be paid, not even the man who sold the seed from which his crops have grown."

ROYAL VISITS.

Peace has been preserved in Europe for nearly thirty years, and under its influence many new and material interests have been developed, each of which is an additional security against the recurrence of hostilities. We have learned by bitter experience that wars only enable nations to purchase repentance at an enormous cost. The principles which Mr. Pitt enunciated on the 12th of February, 1787, are now beginning to be universally recognised; and those who wish it to be believed that his mantle has fallen on their shoulders find it necessary to take him in the earlier part of his career, ere his enlightened views of finance and commerce were warped by panic and distorted by party. Without laying claim to the miraculous powers of penetration claimed by our brother journalists of Paris, who far outstrip Puff in the "Critic," when he deduced a long and complicated argument from the shake of Lord Burleigh's head; without pretending, as they do, to discover a whole system of political intrigue in a royal cough or an imperial sneeze, we cannot help regarding the recent visits of continental Sovereigns to the English court as auspicious events likely to promote the amity of nations, and to substitute for existing feelings of rivalry a mutual anxiety for the development of their several resources. In the Times of October 16 there is a very powerful and well-reasoned article on the relations between England and Russia, taken in connexion with the Emperor's recent visit to this country. Our contemporary justly observes:—

"In the midst of a profound peace, whilst the elements of disorder are at rest, and the projects of the most sanguine ambition must at least be indefinitely adjourned, the alliance of two great states naturally turns upon those questions of policy which are incidental to this state of things. War brings with it its treaties of concert, its subsidies, its combined armies, and its coalitions; but the success of all these things is uncertain, and their duration is limited to the efforts of a campaign. The alliances of peace are as different in their means of operation as they are in their objects: they must be based on the permanent interests of states, and, above all, they must be cemented by commerce."

This truth is not less applicable to France than it is to Russia; an increase of commercial intercourse between two nations which steam is fast bringing into federative alliance would soon put an end to that rancorous feeling of jealousy which statesmen encourage for purposes of selfish ambition, but which good men deprecate as a serious obstacle to the improvement of both countries. The continuance of this jealousy is mainly owing to the prevalence of the fallacy of reciprocity; and this fallacy mainly rests on the recognised error that gold possesses some inherent and occult quality which gives it a value over and above its exchangeable value. Any one who has ever ventured upon the analysis of any single mercantile transaction must at once have detected the absurdity of the fallacy of reciprocity. Let us suppose that a foreign merchant sends a cargo of wheat to England; he has no means of compelling Englishmen to purchase it unless they want it more than that which he demands in exchange, and he would not sell it unless Englishmen possessed something which he wanted more than the wheat. Now, let us take the worst case put by those who make the absence of reciprocity a ground for resisting Free Trade; let us suppose that the foreigner demands to be paid in gold; it is a clear case that Englishmen will not purchase unless they happen to want the wheat more than the gold; but, furthermore, Englishmen must have previously bought this gold, which is not found in their country, by exchanging for it articles of their own production; they will consequently sell that gold at the same exchangeable value to the foreign importer of wheat which it has cost them; and, supposing the foreigners to persevere in refusing goods, the obvious result of their policy will be to raise the price of money and lower the price of their own produce in the English market.

In no trade would this result be more apparent than in that of corn, if it were an article of free commerce, left to regulate its own price by the natural standards of demand and supply; but unfortunately the corn trade under the sliding scale is an unnatural commerce, stimulated by one set of circumstances into a unhealthy energy, and thrown by another set of circumstances into an equally unhealthy lethargy. It is easy to show that the

* See M'Culloch's "Commercial Dictionary."

authors of this fallacy of reciprocity assume that what is true of this trade under this system of fits and starts will remain true when the trade is freed from those aberrations which are the natural and necessary results of restriction, and which are caused by restriction alone. When food under present circumstances becomes scarce, as it must occasionally do when we are limited for supply to a single set of markets, themselves dependent upon the most variable of climates, prices begin to rise towards the starvation point, the want of provisions is severely felt, and a supply must be had at all hazards. In fact, we have ourselves prepared the way for a crisis which unnaturally lowers the exchangeable value of our money, and unnaturally raises the exchangeable value of the foreigner's corn, for it renders our want to buy far more pressing than his want to sell. At such a crisis gold *does* go out of the country; but then it is a crisis of our own making that drives it out. We first create an artificial famine, and then complain of the cost at which the consequences of this famine are averted. We produce a state of things in which the country is made to want wheat more than gold, and then complain that in order to satisfy that want we are compelled to part with our gold. All commerce when left free has its own elements of self-adjustment: a system of protection perturbs this adjustment, and the country which fosters such a system has to pay the price of the adjustment, which would have cost nothing if left to itself, but which involves an enormous expenditure when it has to be set right by artificial means. The country which adopted the principles of Free Trade would throw upon those countries which rejected reciprocity the whole peril and expense of financial adjustment.

Our contemporary, in the able article from which we have already extracted, forcibly continues the Free-Trade argument:—

"No doubt it is within the power of the Emperor Nicholas to unite this country to his own more firmly than when the hosts of England and Russia were marching with one accord to the banks of the Seine; and the visit of 1844 might be the symbol of a friendship not less glorious, and infinitely more beneficial to mankind, than that which thirty years ago restored the peace of liberated Europe. The secret of such a union lies in no clandestine stipulations or diplomatic arts; in one word, let the artificial barriers which now restrain the commercial relations of the two countries be removed; let the industry, the capital, and the natural resources of the two states be left to find their own markets and to cultivate their own respective advantages; and, since Providence has intrusted the destinies of so prodigious an empire to the judgment and the will of a single man, let him advance boldly in the course from which other nations are withheld by their ignorance or by the conflict of jealous interests. An open trade with England would have the immediate effect of raising a large revenue to the Russian exchequer, from a judicious system of import duties. It would enrich the proprietors of the soil, and extend the market for their produce; it would supply the wants of the community, and furnish it with the inventions of mechanical genius and the commodities of more genial climates or more civilized communities, at a far lower price than they have ever reached in Russia. It would convert the great lines of water communication which intersect the empire into the channels of trade between Europe and Northern Asia, even to the confines of China. The force which would accomplish these vast and happy changes is here. It lives amongst us, incessantly stimulating the world by its example, and imparting motion to the ends of the earth."

This is admirable advice to the Emperor Nicholas; but we should be glad to know whether the lesson has been so thoroughly practised at home as to justify us in preaching the doctrine to foreign states? Is there no chance of the retort—"Physician, heal thyself?" Are there no artificial barriers against the importation of Russian timber, of Russian beef, and of Russian corn? These are the chief means of payment for English goods which the Russians possess; and is it quite reasonable to ask them to buy when we have laws to prevent us from receiving the only coin which they have to offer? Free Trade is clearly necessary to the extension of the prosperity of the Russian as well as every other empire; but is there not a country with a population infinitely denser than that of Russia, to which the employment derived from commerce has become a requisite of existence? It is not enough to complain that nations are withheld from the course of equity and "the plainest dictates of common sense" either "by ignorance or by the conflict of jealous interests." It is the duty and the interest of every man who wishes well to his country to denounce the selfishness in which monopoly was established, and the ignorance by which it is permitted to continue. We quite agree with the *Times* that an extension of commerce between England and Russia would open an immense and increasing trade between Europe and Northern Asia—a trade which would spread the blessings of civilization into those lands which have heretofore sent forth the worst scourges of the earth. We equally agree with the able writer that "the force which would accomplish these vast happy changes is here," but we find the energies of that force fettered, crippled, and contracted by restrictions and monopolies which not merely prevent it from exerting its full power, but sap the vitals of its strength.

The remarkable article on which we have been commenting thus concludes:—

"The case is a clear one, and the solution will eventually arrive. But we must add, that the ruler of Russia who should have the wisdom and the resolution to meet the commercial policy of England halfway, and who should associate his power with that spread of mercantile intercourse which is the true guarantee of peace and prosperity in the world, would accomplish a measure worthy of the greatest of his race, and would augment the resources of his dominions infinitely more than by the unprofitable excess of territorial dominion."

The ruler of Russia might reply, that he cannot meet England halfway until England has given unequivocal symptoms of a disposition to advance on the road to the complete emancipation of industry and deliverance of commerce from its fetters. The statesman who would base his power on the full development of Great Britain's industrial resources, and the consequent development of the resources of those countries willing to be customers for the produce of British industry, would accomplish a measure "above all Greek, above all Roman fame;" for he would not only incalculably augment the prosperity of his own country, but would lay the foundations of permanent tranquillity for all the nations of the earth. It is the interest, and it would be the glory, of England to set the example of opening her markets to all the nations of the earth, and to denounce the international war of protective duties and hostile tariffs; such an example is demanded of her by the position which she holds, and the destinies she has already accomplished. She may be summoned to take the lead in pacification by the same appeal that was addressed to Cæsar:—

"Tuque prior, tu parce, genus qui ducis Olympo."

THE POST'S PHILOSOPHY OF WAGES.

The *Morning Post* of Tuesday, in answer to the queries of a Manchester "Admirer," whom recent daily experience and observation have "considerably staggered" in the orthodox protectionist doctrine that "cheap bread means low wages," and who modestly solicits "fresh arguments" to keep him sound in the faith, devotes an elaborate two-column article to an exposition of the law of wages. Considering that the "Admirer" is certainly a heretic, and possibly a wag, we cannot but honour our contemporary's patience, as well as the adventurous chivalry with which he rushes to the rescue of the most rickety and battered of the whole corps of monopolist fallacies, now expiring in conflict with facts. The doctrine that wages rise and fall with the price of bread—in other words, that the less bread there is in the country, the more will come to every man's share; that the more the people spend on necessities, the more they will have left to spend on comforts and luxuries, and to remunerate the labour employed in their production—is one which it must be difficult enough to argue for at any time. In the present state of things in the manufacturing districts—full employment, successful strikes, and rising wages, with wheat at 46s.—one might have supposed that even the *Post* would think the subject better let alone.

We notice our contemporary's lucubrations, which otherwise might be safely left to find their own way to all whom they concern, first to correct a misrepresentation of League doctrine, and next to make an admission to which we consider him entitled.

The misrepresentation is as follows:—

"Does our correspondent dispute the proposition that wages are (speaking generally) regulated by the price of food? If he does, then our correspondent differs from the champions of Free Trade as much as he does from the advocates of protection."

"The Leaguers maintain most stoutly that the price of food regulates wages—regulates them inversely. When food is dear, then, according to the Leaguers, wages are low; while, as food falls in price, wages rise in amount."

"This doctrine has been repeatedly propounded by Messrs. Cobden, Bright, and Fox. At one of the League meetings held at Covent-garden Theatre last session, Mr. Cobden, when advertising to the increased briskness of trade, exclaimed:—'Holding the opinions which I do, I should be ashamed to appear before you if trade had not improved. For six months past the average price of wheat has been 46s. per quarter. In that fact you must look for the cause of our improved trade.'"

"Mr. Cobden, then, not less decidedly than the *Morning Post*, proclaims that wages are regulated by the price of food."

Mr. Cobden proclaims no such thing; nor have the Leaguers, that we know, ever maintained, stoutly or otherwise, the doctrine which the *Post* discovers in the words quoted. The Leaguers have been stoutly maintaining, these five years past, with the facts of each successive month to back them, that price is regulated by supply and demand;—the price of food by the relative supply of, and demand for, food;—the price of labour by the relative supply of, and demand for, labour. Not whether bread is high or low, but whether two men are looking for one master, or two masters for one man, is what, on League principles, determines the rate of wages. The Leaguers have always stoutly denied any direct and immediate connexion between the price of the one commodity called food, and the other commodity

called labour; but they have at the same time stoutly maintained that there is an indirect and mediate connexion between the two. The cheapness of food, when (as now) the result of plenty, and not (as in the winter of 1842-3) of national poverty and inability to buy, indirectly and mediately raises wages, by liberating so much of the nation's capital from the purchase of food, and adding it to the general wages-fund of the country. The doctrine is, not that cheapness of food raises wages of labour, but that the plenty, of which cheapness is commonly a sign, tends to raise wages, by increasing the demand for labour and its products. This is the doctrine of the League, as it is the doctrine of common sense; and the recent revival of trade and manufactures exactly agrees with it. Successful strikes, after a good harvest, with wheat at 46s., constitute one of those many-fulfilled predictions on which the League go before the country as testing and verifying the soundness of their principles.

But then, asks the *Post*:—

"How comes it that wages are falling so fearfully throughout the agricultural districts?" According to the doctrine of the League, the agricultural labourer ought to be now in the enjoyment of a larger measure of comfort than ever fell to his lot before."

Without stopping to scrutinize too closely the startling allegation of a "fearful fall" in agricultural wages—we were not aware that agricultural wages could fall—we freely give the *Post* the benefit of the admission, that the doctrine of the League, the common-sense doctrine, of the regulation of wages by demand and supply, *does not apply to the English agricultural labourer*:—and this is precisely the worst fact in the English agricultural labourer's condition, the root and rationale of all his miseries—except at harvest times, and in certain favoured counties in the vicinity of manufactures, the agricultural labourer is out of the law of demand and supply. If demand and supply were the law of his condition, he would die. But the poor law comes in the way, and says he shall not die—that the parish, i. e., the landlords and farmers, must keep him alive; and the cheapest way of keeping him alive is, not in the union-house as a pauper, but out of it as an independent labourer, at seven shillings a week, with forty shillings at the end of forty years, if he behaves well. Speaking generally, the wages of labour in the agricultural districts are not regulated by the natural wages-law, but by the Parliamentary poor law—not by the real market value of labour, which is often nil, but by the minimum of sustenance which the labourer can be got to live upon. As the *Post* says:—

"In England there exists—almost perpetually—intense competition for employment on the part of labourers. On the actual existence of this intense competition is based the Malthusian dogma as to the existence of 'a surplus population.' Intense, however, as may be this competition, still there are limits to its power. These limits are determined, ultimately, by the price of food. The competitors for employment must still be supplied with food sufficient in amount to sustain their animal energies. The price of their labour will, therefore, be directly dependent on the price of food. As food falls in price, so will fall wages in amount."

We are afraid the *Post* is right. The theory, though ridiculously false for Manchester and Leeds, has a terrible truth in it for Dorsetshire, and Suffolk, and Buckinghamshire. In the agricultural districts wages really do, to a certain extent, rise and fall directly with the price of food, on the same principle on which the keep of cattle and slaves varies in cost with the price of food. The English peasant's wages are not wages, but keep—what will keep him in working condition, and off the parish. He is habitually on the verge of starvation, and consequently when bread rises to famine prices he must have an extra shilling a week; but it is the poor law that gives him this extra shilling, not the law of wages. In the worst of times his wages are enough to keep him alive, for the law of the land says he must and shall be kept alive; in the best of times they are not more than enough, except when the vicinity of prosperous manufactures, or (as in 1835 and 1836) their vast and rapid extension, thus his market of competitors, and gives his labour a real marketable value. There he is, from one year's end to the other, with nothing to enjoy, nothing to hope, and nothing to lose,—kept steadily down at starvation point by a protective legislation which supersedes the necessity of farming improvements that would bring him into request, and chokes up the channels into which his labour would otherwise naturally flow—kept, however, from falling below starvation point by a poor law, which says he shall be fed though the whole rental of the country go to pay for it,—his so-called wages rising and falling by no other law than that which determines the cost of a horse's keep in my lord's stable.

The *Post* is right, then, in its wages-theory, as applied to the agricultural labourer in purely agricultural districts. If we have ever erred on this subject we are sorry for it, and will take care to be more exact in future. We frankly admit, for ourselves in particular and Leaguers in general, that when we talk of the wages of labour being governed by supply and demand, an exception should be made of that protected agricultural labour whose wages

are governed by the bare *minimum* cost of the labourer's keep. And, when we ridicule the nonsense of wages rising and falling with the price of food, we should not forget that the English peasant does get eight or ten per cent. added to his wages when food rises 50 or 60 per cent.

WHAT IS TO BE DONE WITH THE LABOURERS?

The reports of county agricultural meetings, which daily crowd the columns of the newspapers, teem with evidence of the hollowness and rottenness of the protective system, and give abundant signs that the time is near when it must break down under its own weight. We are sorry these meetings come so thick upon us that we are unable to notice them as they deserve, for most of them exhibit some special features worthy of comment. But, however they may vary in detail, in one important result they all agree—one great fact they all proclaim as with one voice—the landlords of England are beginning to feel that they have got an enormous difficulty on their hands, and they know not what to do with it. A certain tone of uneasiness, anxiety, hesitation, and bewilderment is in these meetings. The landlords are somewhat frightened, and excessively puzzled. After the loyal and constitutional toast-drinkings, the prize-givings for honesty, the compliments to one another, and the cajolery of the farmers are gone through with, there always comes the question—*What shall we do with the labourers?* They have been legislating for, and protecting, the labourer these thirty years—and there the labourer is still, ill-fed, ill-clad, ill-housed, ill-tempered, discontented, and dangerous. It all ends in the labourer being their "chief difficulty."

"Employ them, you farmers!" is usually the first—as it is the easiest and simplest-looking—solution of the problem. Farmers should "remember," says Mr. Fellowes, at Huntingdon, "that, by the regular employment of the labourers, they took away one grand ground of discontent; every man was worthy of his hire; let the labourer be constantly employed and fairly paid, and then he would have no cause for discontent." Only employ the labourers at good wages, and all will go well:—"The best way of preventing incendiarism was to keep the labourer employed, and give him those fair wages to which he was fairly entitled." To employ the labourer is more than a virtue—it is a necessity:—"They should remember, moreover, that the agricultural labourer, if not employed, must still be maintained, if not by the labour of his hands on the farmer's land, at any rate in the union-house." Never talk of difficulties, bad markets, unremunerating prices, and the like; if corn is lower than ever, grow more than ever, farm higher, pay more wages:—"He had observed that during the last twelve months there had been a diminution in agricultural labour in some districts, and he had been told that the reason of this was the low price of corn; now, he presumed to say that the argument was totally false, the principle was a wrong one to go upon; when prices were low, they should be met by improvement in quality and increase in produce; not by a diminution of labour, but by an increase of labour." No questions asked, as to where the farmer is to get the capital to set all this labour in motion, or where the profits are to come from by which the outlay is to be remunerated. Nothing said about aiding the farmer in his philanthropic enterprise, by means of lowered rents liberating a portion of his capital, and long leases securing him in the profit of his own exertions. Farmers must be above all such sordid considerations. As the Rev. Mr. Duane says, at the North Staffordshire meeting, "It must be the duty of the occupier to give employment to the labourers of the parish, and not, for the sake of saving a few pounds, to throw their poorer neighbours out of work;" that is to say, it is the duty of the farmer, casting aside all fear of the *London Gazette*, to employ the poor of the parish in farm labour, not because he wants their labour, but partly out of charity, and partly out of fear of having his house burned about his ears, and partly because he must pay for their keep, at any rate. It is pleasant to see that the farmer has some friends to stand between him and these preposterous exactions. At Colchester, Mr. J. G. Rebow "was grieved to know that it was useless to say, 'employ the labourers;' he would say, *where were they to get the money from to pay them?*" And Sir G. H. Smyth added, "It was most important to employ the labourer, but it was an insurmountable difficulty to know how it was to be done." An insurmountable difficulty, we venture to say, it will remain, till the farmer gets that which only Free Trade will ever give him—low rents, long leases, and a steady market.

The allotment quackery is the next grand panacea for the ills of the agricultural labourer's condition. We call it "quackery," not because the thing is bad in itself, but because it is ridiculously inadequate to the evils for which it is propounded as a remedy, the results of good which are absurdly expected from it, and the justice for which it is impudently offered as a

substitute. Of course, we of the League can have no quarrel with allotments, as allotments, any more than with savings' banks or benefit clubs. Where labourers are independent, i.e., where their labour bears a substantial market value, irrespective of charity, caprice, and poor rates, allotments, i.e., kitchen-gardens, of a reasonable size and at reasonable rents, afford a useful help to the domestic finances, and a wholesome recreation and profitable investment for spare hours. Allotments seem by all accounts to be working well at Bingley. But the Bingley experiment is no case in point for the labourers' friends. Bingley is in the heart of a great manufacturing district. Bingley is a place of power-looms and tall chimneys. The allotment tenants of Bingley are not pauperised seven-shillings-a-week farm-labourers, but self-respecting and self-supporting factory operatives. The shilling or two per week which a Bingley operative's allotment may be worth to him is *his own*; it is not sliced off his factory wages on Saturday night, but goes into the household exchequer so much clear gain. The working of an allotment system in the agricultural counties would give results as different as possible from those shown at the Bingley dinner of the 11th instant. The weekly value of a farm-labourer's allotment would be taken out of his wages; for the farm-labourer's wages are not ruled by the law of supply and demand, but by the poor law. They are the *minimum* on which he can manage to exist, and anything added to his means at one end would be presently cut off at the other. Allotments are compared, we see, to money in the savings' bank. The comparison is a tolerably correct one. To an independent factory operative, working at supply-and-demand wages, a savings'-bank deposit is an unmixed good, something over and above all he has besides. To a pauperised farm-labourer, found in work to keep him from the union-house and the lucifer-match box, a savings'-bank deposit is almost an unmixed evil; the only consequence of his having it is, that the guardians take care to keep him off the parish pay list while a shilling of it remains, and the farmer turns him off and employs a "chargeable" labourer instead, to save the rates. Nothing can really mend the case of the farm-labourer, which does not first repeal the radical curse of his lot—dependence on charity, intimidation, or poor laws, for the means of existence. Allotments would leave him, in this respect, exactly as they found him. The labourers' friends do not want to make him independent, or self-dependent; nothing can be further from their thoughts. The

supporters and the opponents of the scheme are alike agreed here: some advocate it as tending to make the labourer more completely dependent on his betters; others object to it as tending to a dangerous and disagreeable independence. At Colchester, Mr. Rebow "was in favour of the allotment system;" it would be "a means of rewarding good conduct," and of teaching the labourer to respect the game laws—a part of the system being that "for any breach of the laws he should be ejected." But some of the other gentlemen did not see the thing so strongly in this light. Mr. Hobbs cautioned the meeting against giving the labourer too much allotment; it would *occupy his time*, and "might turn out a curse and not a blessing." Mr. Round, the same: "He quite agreed that the allotments *should not be permitted to interfere with the employer's time*; nor should they be of such an extent as to *turn the labourers into small occupiers*, which, he feared, would end in discontent." Sir G. H. Smyth, too, "did not quite like the allotment system; it occupied too much of the labourer's time, and, if he had much land, might make him become *indifferent as to his employer*; and perhaps he might say, if he did not please his master, 'I have land to go to.'"

On the whole, it is pretty clear that the allotment system, should it ever be attempted on a large scale, will meet with a strong opposition, will excite infinite jealousy, and, if effectual, will only become an engine for breaking the labourer's spirit into a more thorough subjection to the landlord yoke, docking a shilling or two off his wages, and perfecting him in the art of living on turnips and potatoes.

The true source to which all rational and honest labourers' friends must look, for the social and industrious emancipation of the victims of landlord protection, is well suggested by Mr. Ralph Carr, at the Northumberland agricultural meeting—a meeting honourably distinguished from all the others we have noticed of late, by nothing being said about allotments, and very much about leases, draining, and the dependence of agriculture on commerce and manufactures. Mr. Carr said—in giving the toast of "the Peasantry of Northumberland"—

"He need not trouble himself with that which generally was most prominent in the minds of those who considered the matter, that was, *lowness of wages*. That source of regret did not apply to this county, throughout which the general condition of the labourer was more prosperous than in other counties, parts of Lincolnshire, perhaps, excepted. Far be it from him to fall into a mistake which he

was sure none would be more ready to detect than that company, viz., that this was all owing to any superior humanity or any superior sense of justice over the rest of England. They did not give higher wages because they felt more strongly that the labourer deserved them. No; the solution of the question lay in *the very close proximity to the prosperous collieries* in the southern parts of the county, to the collieries in the county of Durham, to the *great extent of shipping upon our coasts*, and to the *consequent great drain and demand for labour which took place*, and which carried off from the agricultural districts all that superfluous labour, which, if allowed to remain on the spot, would weigh down the agricultural labourers."

The "great drain and demand for labour," which the happy accident of geographical position creates in Northumberland—and which Free-Trade, with its concomitants of prosperous manufactures and improved agriculture, would create in every county of England—would be our best help towards a practical solution of all the most difficult questions that affect the condition and prospects of the agricultural labourer.

THE AMERICAN PRESIDENCY.

By the late arrivals from America it would appear that a considerable change is taking place in reference to the prospects of the two candidates for the presidency. The friends of Mr. Clay seem to be less confident, but more violent in their language, which for vituperation certainly eclipses anything we have ever read in Europe. We observe that their newspapers have been forging "political capital" by spreading the report that the Free-Traders in England have subscribed £100,000 to assist in carrying the election of Mr. Polk. We expect to hear next that we are setting up a new dynasty at Peking. By the way, the inventor of this story—the editor of the *New York Republic* newspaper—ought to be whipped by his employers for the clumsiness with which he has forged what Sheridan calls the "endorsements to the lie." He pretends to give a report of the public meeting in Manchester, at which this subscription was commenced, and puts the *Lord Provost* in the chair! Be it known to all interested that Manchester has no such functionary; and we need hardly add that the persons over whom he presided, a long list of whose names is given in the *Republic*, have no bodily existence there. Really if the monopolist press in America has any regard for the reputation of its citizens it will change its course. The arguments in favour of protection which some leading orators and newspaper writers in America are now putting forth are the thousand-times-refuted fallacies of the Duke of Buckingham's party, and the *Morning Post*. It is bad enough for the reputation of American democracy in Europe when we are told that there are any large number of persons in the United States to be deluded by such trash; but what must be thought of the readers of the *Republic* and other protectionist prints who can be gulled by raw-head-and-bloody-bones stories such as the above! Why, English school-children would be proof against such clumsy attempts upon their credulity.

COBBETT'S FARM AT NORMANDY.

The name of Farnham is said to be derived from the abundance of fern that once grew there. I doubt not but the fine deep soils where the hops now grow were at one time covered with fern. That plant is to be seen yet in great quantities on some parts of the Surrey and Hampshire heaths. I have observed that, in all parts of the kingdom, wherever the heath and the fern grow vigorously together, the soil, if broken up and planted with potatoes, brings forth first-rate crops.

Thus it is at Farnham. Notwithstanding all the prejudice and passion of Cobbett against potatoes and potato eaters, the finest specimens of this year's crop which I have seen in any part of England, I saw at FARNHAM. And in the country lying between that place and Normandy, where he had his farm, I saw some pieces of potato-ground bearing excellent crops; pieces of ground newly reclaimed from the heaths which, in the natural state, did not produce us, for each 2½s. produced now; besides not employing labour then as now. And there is much good land of that description still lying unreclaimed. Talk of emigration, of sending people to Canada or Australia, to get rid of a superabundant population! Our superabundant people there have to make war upon primeval forests, and waste half a lifetime in making corn-land, wasting more than a whole lifetime in getting a good market for the corn, the good market at best being a low-priced market compared with the lowest in England! Talk of the backwoods in Canada when there is so much of Surrey in England to cultivate: not the shallow heaths, but the good land.

But, unhappily, the parish of Ash, or a very considerable portion of it, cannot be cultivated as it should be because of lawsuits arising out of mortgages, which mortgages and lawsuits arose out of the Corn Laws. But of this presently.

Having seen the birth-place and the burial-place of William Cobbett, and the place where he first learned to

work in a garden and to eat garden fruit, I was desirous of seeing his farm. I knew it was a considerable distance from Farnham; but could not call to mind the name of it, although in the latter part of his lifetime every person that at any time glanced at his publications, or by any chance listened to one of his lectures, must have heard the name of *Normandy Farm*.

I had seen it in print and had heard of it many a time; yet, could not recollect it now. So I was about to inquire, when, passing along Farnham-street, I read the following among other advertisements of farm property for sale:—

"Normandy Farm, in the Parish of Ash, Surrey.—All the live and dead farming-stock, and part of the household furniture, comprising three useful cart horses; waggons, dung carts, and raved cart; three Guildford swing ploughs, and light and strike furrow ploughs; drags, harrows, rollers, ladders, corn lines, trace, thill, plough, and foot harness; Bennett's seed machine, corn screen, barley chomper, chaff box and knife, pair clasp drags, sieves, prongs, shovels, sheep bells, &c. The household furniture comprises fourpost and stump bedsteads, beds and bedding, chairs, glasses, card and other tables, fenders, fireirons, butter tumbler, mash and tun tubs, barrels, copper, pots, tubs, kievors, stools, and a variety of very useful effects, which will be sold by auction, by Messrs. Thomas Baker and Sons, on the premises, Normandy Farm, on Tuesday, the 1st of October, 1844, at eleven o'clock precisely."

The tenant now selling off is the second since Mr. Cobbett's decease in 1835; and he told me he was very glad to get out of it—he was losing money. He paid £40 a year more for the 160 acres, which is the extent of the farm, than Mr. Cobbett paid. Cobbett's rent was £160; this tenant's rent was £200.

It was the evening before the sale that I saw the advertisement, so I resolved to go to it next day. Next day having come, I hired a conveyance, which bore the dignified name of a "fly," but which was rather a primitive machine of the fly kind, and jogged away at a rate which was by no means too fast for making inquiries about land, cultivation, tenures, lawsuits, mortgages, wages, potatoes, and so forth, as we went along.

THOMAS PAINE'S BONES.

When we arrived at the village of Ash, I stopped to make some inquiries of a general kind, or rather, to talk with anybody I met on any subject, to see what kind of topics might be introduced. Those to whom I spoke supposed at once that I was going to the sale at Normandy Farm, so that was the readiest subject of conversation. I inquired if the present tenant had been long in the farm, and also how long Mr. Cobbett had been in it. To which it was replied, that no one had been long in that farm since Mr. Weston left it; that he had been 21 years in it, and left it when Cobbett came. We then spoke of Mr. Weston's present farm; and, on my saying I would like to see that gentleman, they told me that I had nothing to do but to drive on a mile and a half and stop as I came to his door (I would know it by the new barn), and I would not only see himself, but see "Tom Paine's bones" as well, if I chose.

It was, as every person old enough knows, a matter of public notoriety once, that Cobbett brought Paine's bones from America. I believe it was this that caused some public writer, in a fit of that ill-nature which was so characteristic of Cobbett himself, when he had an opponent to deal with, to call him the "bone grubber."

The bones were found in a chest at his death, and would have been sold at the public auction that followed, but the auctioneer would not offer them! They told me at Ash, that the auctioneer said "he had never sold any man's bones as yet, and he would not begin now with Tom Paine's." The chest and the bones, on everything else being cleared away from Normandy by the purchasers at the sale and by Mr. Cobbett's family, were removed for a temporary deposit to Mr. Weston's house, about half a mile off. And there, I was told, they still remained.

I proceeded to Mr. Weston's accordingly. I would have done so for the sake of a conversation with him on farming affairs, especially on his olden recollections of farming in Surrey. But all these became secondary to my desire to see the chest and the bones, to see the skull of "Common Sense" and the "Rights of Man."

I knew Mr. Weston's farm and residence when I saw it, as I had been told I would, by the new barn. There were a pair of sawyers sawing boards, and carpenters nailing up the boards, for all the barns are wooden ones; and Mr. Weston was in the barn also. On his being sent for to the house, I found him a most willing and intelligent informant on many matters; but, by my not knowing precisely how to introduce the subject of Paine's bones, I felt myself in a difficulty. At last I became bold and asked the question broadly, if it was true that he had such curious relics in his possession. At which he shook his head, and said, "Not now." He had them up to about six months ago; but at that time a gentleman came from London and got them away to bury them there. He seemed unwilling to say more; and, as I had no right to inquire, I did not pursue the subject. But I was told elsewhere in the neighbourhood that this was correct. I heard names mentioned; but, as it seems some secrecy had been enjoined, I do not repeat the names. I think the parties performed a very proper duty if they really did take the bones to London to bury them.

NORMANDY FARM—RENTS AND MORTGAGES.

The fact of there being a new barn and other new

wooden erections in progress on Mr. Weston's farm, as also on some other farms which I had seen in the neighbourhood, led to conversations between myself and several parties on matters connected with the tenures and ownership of land.

An estate here had fallen into ruin through a mortgage which swallowed up its rents. The landlord, or a relative, his predecessor, had borrowed about £30,000 on mortgage of the rental. The borrowing, as was too often the case in mortgages of the last thirty or forty years, was a Corn-Law speculation. The money-lenders, depending on the power of the Legislature to keep up prices of corn and rents of land, had lent more money than enough. The owner, depending also on legislative prices, borrowed more money than he could pay the interest of.

Normandy Farm is on this estate, as is also Mr. Weston's present farm next to Normandy. In the year 1811 Mr. Weston commenced his occupation of Normandy at a yearly rent of £210. At that time the war and the political fictions which accompany war had raised prices, and he got on pretty well. So he hoped to do when the Corn Law of 1815 was passed to keep wheat up to 80s. a quarter at least; but that Corn Law, like all others, was a delusion, and up to 1822 Mr. Weston had a continued struggle for bare life. Having paid everything in rent, and more than everything—for, owing to the depreciated currency of 1819, he paid in the three succeeding years a rent much higher than he contracted for in 1811, as all farmers did—he paid at least £250 a year instead of £210; and he did this with low markets—with wheat down to 40s. a quarter in one year, while he had contracted to pay a rent which the stupid and most treacherous delusion of the Corn Law had caused him to calculate to pay, with wheat at from 80s. a quarter upwards;—having, as all other farmers had at that time, paid away everything derived from the farm in rent, and more than he derived—having paid away all spare cash, the savings of the years of war prices—he could not keep on at such a rent. He got an abatement, and for the next nine years paid £170 a year.

Mr. Cobbett came after him, and had the farm four years, at an annual rent of £160. He must have entered upon it, I presume, in 1831, as he died in 1835. No person, since 1811, has had a chance of doing much in it save Cobbett, not unless they had a good capital. It is a farm capable of great improvement. Had Cobbett been long enough in it to have done much, I would have been exceedingly surprised to see it as it is now, even nine years after his death; but he had not time to do much. Yet Normandy farm, as it is now, and was when he took it, is a proof of his sagacity. It is an excellent piece of land, which, from the day that the dove went out of Noah's ark to the day that the Farnham "fly" conveyed me to it—namely, the 1st of October, 1844—has never been treated in a manner deserving the name of good cultivation. Mr. Weston had nothing but a continual struggle with difficulties, paying everything away in rent. Besides, I must take the liberty of doubting whether either he or the present generation of farmers in Surrey are likely to do all they might do for themselves and their land, supposing them to have the money power.

Cobbett was not long enough in the farm to do much for it; and if he had been long enough, he was at best a crotchety farmer. In small things, upon the farm, he was great. He was a radical reformer in things political, but not in things agricultural. He had only his own experience to work upon. His inordinate self-esteem debarred him from profiting by the experience of others. In four years, only three of which it is fair to reckon upon as years in which he had an opportunity of doing anything, he could not have effected great changes; but to have been three years in power in such a farm as Normandy, it requiring such a thorough revolution, and nothing to have been done, as is shown by what it is now—its faults, deficiencies, and inconveniences of the present time being the growth of a century—all this proves little for Mr. Cobbett's reputation as a farmer. Indeed, we have only to read his own works—his tour in Scotland particularly—to find that he knew little of agriculture out of the breadth of a kitchen-garden. Still he was a keen-sighted man, and proved his acuteness in pitching upon so good a soil as Normandy, where there was room to do so very much at a moderate expense.

Next to Cobbett came a Mr. Thompson, or rather, a company, with Mr. Thompson at its head. The rent was now £200, a higher rent than that of the war prices of 1811, he it remembered, yet a rent which such land should easily afford where there is sufficient capital, good security of tenure, liberality of covenants, and no game; that accursed game is the ruin of these counties.

BEETROOT SUGAR.

It is said that Mr. Thompson began well, would have continued well, and would have found his rent of £200 an easy rent, as his intention was to grow beetroot, and manufacture sugar. Just, however, as the apparatus was got ready, and much expense incurred, the West India sugar interest took the alarm, and said to the Government, it will never do to make sugar in Surrey and refuse it into loaf sugar to compete with us; it must be taxed.

The owners of land naturally said, why is beetroot sugar to be prohibited by this tax? Shall we not be allowed to produce what we choose from our own land, if we can make a profit from it? To which the sugar interest replied, you cannot make a much larger profit of your beetroot sugar than you can of your wheat. If you make sugar in competition with us, we will not help you

to keep up the Corn Law. Give up sugar-making to us, and we will help you to maintain your Corn Law.

And accordingly Mr. Thompson, who had no doubt but he could easily pay £200 a year for Normandy Farm if allowed to make sugar, was prevented from making sugar, and left the farm; and a Mr. Wood, believing that the Corn Law would be kept on, and that it would keep up the rising prices of 1837 and 1838, undertook to pay as much rent as Mr. Thompson had undertaken to pay, namely, £200 a year.

Thus, taking this farm as a specimen, the landed interest seemed all right. The attempts to make sugar had increased the rent from 20s. to 25s. per acre; while the alliance with the India sugar monopoly, which promised to maintain the Corn Law inviolate, obtained for the land the continuance of 25s. an acre—the sugar price.

But the Corn Law never did and never will keep up prices. So far as the sliding scale is concerned, it unsettles prices, and unsettles them to the farmer's disadvantage; while the whole law tends to make the whole nation poorer and less able to buy and consume that which the farmer has to sell. The Corn Law has cheated every farmer, and it cheated Mr. Wood of Normandy like others. He found the Corn Law did not keep up prices, and yet he had £200 a year to pay, with £30 a year of other burdens, tithes, rates, and taxes.

THE CORN LAW INJURIOUS TO LANDOWNERS.

Moreover, he not only paid all he had away in rent, but he suffered part of that evil which results to the owners of land from the Corn Law. The estate had been mortgaged. A lawsuit ensued. It was for several years apprehended that the mortgagees would get possession of the estate, when, in order to take legal possession, they would eject the tenants who held from the landlord. This the mortgagees have at last done. And during the years of dispute, the tenants dared do nothing that required an outlay of capital. Barns and other buildings, and fences and gates, went to decay; no draining was done; no means taken to make the land fruitful to pay the rent. Yet the rent had to be paid. Receivers had been appointed by the courts of law, and to them the rent had to be paid with rigid punctuality.

And all this arose from the landlord and the mortgagees having expected that the Corn Law would be able to keep prices and rents at an extravagant height. The landlord has lost his estate; the mortgagees saw it fall into dilapidation, and must now bear the expense of comprehensive repairs. The tenantry suffered for the want of suitable conveniences, and also because they had no security in laying out money in properly cultivating their land. All of them lived from hand to mouth by reason of the Corn Law, hoping for something better; and all of them were cheated. Mr. Wood had an agreement for fourteen years, and must have remained until that time was out, or until

he became insolvent and was sold out, had not the success of the mortgagees given him the chance of escape, which, being cheated by the Corn Law, he was but too glad to avail himself of. He was served with a notice of ejectment, and he took that opportunity of quitting so bad a bargain as he found Normandy Farm to be at £200 a year.

A neighbouring gentleman named Warren has taken it at £180 a year from the mortgagees. But it is said the dispute is not yet settled, as the landlord is to make one more effort to regain possession.

But this is a rare instance of a farm being at present let for less than the old rent. I have been assured by several farmers who are now offering for farms that there is no chance of getting a new holding but at an advance on present rentals. This may not be so with the very large farms, for which there is not so great a competition; but for small ones, or those of moderate size, for which the competition is great, an increase of rent is asked everywhere. Some landlords, Lord King for one, near Guildford, are reducing the size of their farms and getting a higher rent.

This reduction of the size of farms will become universal in the course of a few years. From the discoveries in chemical science, and other circumstances, tenants cannot cultivate farms of from 600 to 2000 acres properly: they have not capital. A farm of from 150 to 300 acres is far more likely to be profitable than one of 1000 acres to a man of moderate capital. The desire for the reduction of farms is extending rapidly in the southern counties of Scotland at present, especially among the sons of farmers. The young men find they cannot get farms at all, the parcels of land are so large and so few. And they find that, to carry out the comprehensive new system of tillage requisite in such a district as the Merse of Berwickshire, they should not encounter more than 200 or 300 acres, even if they could get more. The sum of £4000 laid out in draining thoroughly; in subsoiling and in trenching with the spade; in saving and applying every particle and drop of home-made manure; in the raising of superior green crops and in stall-feeding; they understand quite well that £4000 would bring a larger profit out of 400 acres than that sum would out of 1000 acres. Yet 1000 acres is a medium-sized farm in Berwickshire.

Not so in Surrey, unless where there is a wide range of heath, and not even there, so far as I have seen; but on some estates there are large farms in Surrey, and, as already said, some landlords are reducing them, and, from the competition that exists, are obtaining higher rents.

OUTWARD APPEARANCE OF NORMANDY FARM.

¶ 14, p. 103c

that he has but little left to employ labourers to cultivate the land."—*Assistant Overseer, Cuckfield, Sussex.**

"Fearfully decreased. We have hardly a solvent farmer in the parish."—*Robert Ellison, rector; and N. Barnwell, Ashfold-lodge, Slaughtam, Sussex.†*

"Decreasing, from high rents, rot in sheep, and low price of produce."—*John Ellis, vicar, Wootton Wawen, county of Warwick.‡*

"Very much decreasing. I do not attribute it to the administration of the poor laws, but to the rents being too high in proportion to the price of grain."—*Edward Cooper, jun., Wootton Wawen, county of Warwick.§*

"They say it is on the decline, from the successive failures of tenants, and more particularly from the burden which presses on land in the shape of poor rate; but I am not able to mark any cause for this connected with the administration of the poor laws."—*J. T. Du Boulay, rector, Haddington, county of Wilts.||*

"The agricultural capital is certainly diminishing: there is a very great difficulty to procure substantial tenants for vacant farms in this district."—*George Lawrence, J.P., Whiteparish, county of Wilts.¶*

"Capital can scarcely be expected to increase under present difficulties, neither can it be much worse than it is at present. I think nine-tenths of farmers possess only the stock, live and dead, upon their farms; and I also think that many are insolvent. I cannot attribute the diminution or total absence of agricultural capital to any cause connected with the administration of the poor laws."—*Thomas Marriott, major-general and J.P., Pershore division, containing sixty-six parishes, county of Worcester.***

"The amount is yearly diminishing, partly in consequence of high rents and rates."—*Overseer, Farnhill with Cononley township (Kildwick parish), county of York (West Riding).††*

"We apprehend it is diminishing, owing to the decreased price of produce, while rent, taxes, and rates remain nearly the same."—*Overseer, Rastrick township (Halifax parish), county of York (West Riding).‡‡*

"The little capital there is in agriculture here is diminishing, and has been for some years; but we do not consider it so much the effect of the poor laws as the fall in the price of the produce, and continued high rents and taxation."—*Assistant Overseer, Shelf township (Halifax parish), county of York (West Riding).§§*

"Diminishing, caused by low prices of produce, high rents, assessed taxes, and poor's rates."—*Assistant Overseer, Stainland township (Halifax parish), county of York (West Riding).|||*

There was also much evidence to the same effect produced before the Select Committee of the House of Lords, appointed to consider of the Poor Laws, in 1830 and 1831. Thus the

Rev. James Beard, Cranfield, Beds, was asked:—"What rate of wages have single men of eighteen received within the last three years when employed on the roads?—Three shillings a week.

"Do you think it possible that a person of that age can subsist, with tolerable comfort, on 3s. a week?—Certainly not.

"What rate of wages do they now receive?—I asked the farmers, without compelling them as a magistrate, to increase those of eighteen to 5s., and those of twenty to 6s. a week.

"Do you consider such increase of wages to be sufficient?—They were very well satisfied.

"Have all the wages been increased in that parish, for single men as well as married men?—They have.

"What is the general state of farmers in that parish: is it conceived to be prosperous, or the reverse?—Quite the reverse.

"Do you conceive it possible that the farmers will be able to pay those increased wages of labour to those employed by them, or on the roads?—Certainly not.

"Do you happen to know whether in your parish the farmers pay with difficulty the present amount of poor's rates?—The greatest possible; that is to say, that several of them are summoned every time the rate is claimed."¶¶

Thomas Law Hodges, Esq., M.P. for the county of Kent, examined.—"Supposing the labourer to be paid after the rate of 12s. per week, and prices to remain as they are at present, do you think that the capital employed in farming can yield anything like a profit?—For several years past it has not; the rents have been paid out of the tenant's capital, and not out of profit."***

Mr. Richard Holloway, Shipley, Sussex, examined.—"Are the farmers in your neighbourhood considered to be in prosperous circumstances, or the reverse?—They are in worse circumstances than they were at that time of day.

"Are they well off now?—No, by no means; there are a great many that begin to be very poor."†††

Mr. George Harrison, Lenham, Kent, examined.—"Have rents been much lowered in your parish?—I believe not; I left off farming on account of my rent being too high."‡‡‡

John Grey Esq., Millfield-hill, Northumberland, examined.—"Do you conceive that the capital in the hands of farmers in Northumberland has been on

the increase or diminution?—It has been very much diminished. I believe the value of their stock has very much diminished.

"Do you conceive that the farmer's spare capital that is not employed upon his farm, the little money he has had out in mortgages, or land he has purchased, during the prices preceding the year 1814, has been decreased; that he has called in his mortgages, and has sold his land?—Yes; I have no doubt that his capital has been very much impaired.*

Earl Stanhope examined.—"Is there any surplus of labour in that neighbourhood, which enables the farmers to dictate such very low conditions to their men?—I am not aware of its proceeding altogether from a surplus of labour: and I should ascribe it rather to the want of sufficient means on the part of the farmers, who are greatly deficient in capital.

"Does your lordship think that their means have been reduced since the peace?—As long as I have known that country, I am clearly of opinion that the farmers have taken a greater quantity of land than their capital would warrant; and I am also of opinion, confirmed by my own experience as a landed proprietor, that their means are greatly reduced, and are daily diminishing.†

Rev. John Thomas Becher, Southwell, Nottinghamshire, examined.—"You state that you conceive the rental, including the houses, must be nearly the same as it was in 1815; how do you conceive, taking the prices of the last few years, that the tenantry have been able to meet that reduction in price without a loss of capital, particularly in poor soils?—In Nottinghamshire there has been a diminution in the amount of rents to the extent of 20 or 25 per cent.; and where such deductions have not been made the farmers have undoubtedly, in several instances, sacrificed their own capital and sustained a loss."‡

But the Appendix (D.) of the same Report of the Poor Law Commissioners, which is devoted to the subject of the Labour Rate, contains evidence of a still more decided and specific character, thus:—

"The present attempts to enforce employment by means of what is called a labour rate is, in my humble opinion, no less than a scheme to introduce slave labour into England, by making the farmers pay for what is in fact done for the especial benefit of the owners of land or tithes. Our legislators sufficiently show their own dislike of compulsion by refusing to take any measures for finding employment for the miserable surplus labourers in Ireland, though the benefit, if any, must ultimately come to the owners of the estates; and a labour rate, putting such compulsion on the English tenants-at-will, must of course be infinitely more unjust a compulsion, which every class of tradesmen or manufacturers would at once refuse to submit to. The cultivators of the earth are indeed more or less enslaved in most parts of the world. In Eng-

land a tenant may lay out money which may improve the estate he occupies for many years, and yet, up to the period of the meeting of the first reformed Parliament, the landlord may eject him at half a year's notice, and allow him no recompense whatever; and the sole object of a labour rate is to make a tenant improve the land, whether willing or not: an object, in my opinion, fit only for the meridian of Jamaica. Such a state of things, instead of leading towards the peace and happiness which should follow reform, will obviously tend to produce in the end a violent revolution, of which the riots and burning of 1830, &c., were premonitory symptoms.

"In a neighbouring parish, where the farmers have agreed to employ about one man for every 30s. in the poor rate, the overseer employs and pays the surplus men for digging land, ditching, draining, digging clay, &c., the farmers engaging to repay only one-fifth to the overseer. This plan implies (what I have long considered to be the case) that, in the opinion of the tenantry, the chances are, that about four-fifths of the ultimate profits of the above-mentioned operations will accrue to the landowners, and one-fifth to themselves. Now, if a labour rate were laid on the landlords instead of the tenants (as I conceive it ought, if it exist at all), the landowners who must receive the benefit would pay for the improvement of their own estates, as they ought, and the parish would cease to bear a burden which every one must see is unjust, and the enforcement of which evidently shows that the British farmers are still oppressed by the remains of feudal servitude. In addition to the slavish nature of the principle on which all the various kinds of labour rates which have been proposed are founded, there are many practical objections, such as their tendency to ruin every small farmer, the occupiers of pasture land, &c. &c., which I cannot at present take the trouble to detail."—*Thomas Batchelor, Liddington, Bedfordshire.§*

"At the same time such tradesmen could not do without those they employed, winter nor summer, two of them having pauper tailors, one a porter, and two or three parish boys. Such persons among the trade paid the same amount as the farmers, viz., 10s. in the pound, while myself and many of my neighbours paid 18s. 6d. in the pound: This astounding fact must prove that the bill ought not to be called 'a Bill for the Better Employment of Labour,' but a bill for laying a rate on non-employers of labour in aid of rent. It is very clear that such a bill is a handsome boon to the opulent farmers; and as large farms usually belong to wealthy landlords, it is calculated

particularly to favour wealth rather than relieve poverty,"—*John Hicks, Henfield, Sussex.**

"The landowners ought to lower their rents so much as will for a certainty enable the tenant to employ more hands; for any one may plainly see the land is not so productive as it might be were more hands put on to cultivate the same; and the reason why the land is neglected is because the rent, tithes, and taxes are so high, it puts it out of the power of the person having land to employ so many hands as they see they want, because they have not the money to pay them; so the land gets neglected, the crops less, and the poor worse off, and then the middle class are called on to support them, at the same time have enough, and more than they can do, to support themselves; and therefore it seems to me to be unjust and unwise to compel them to support the poor under such circumstances; and I think it nothing unreasonable for the middle class to expect the rich to take off the burden; they have had a pretty good time of it, and there ought to be a change, and a change there must be; but nothing like labour-rate jobs will answer the purpose. It must be insulting to the feelings of a tradesman to have sent to him agricultural labourers to employ, when, at the same time, they have not got a piece of land belonging to them large enough to swing a cat in; at the same time seeing a quantity of land, as it were, crying out for these labourers. Why, then, should the middle class be so much imposed on? I cannot tell. I am convinced tradespeople, now-a-days, have enough to do, and more than they can well manage; what with the deadness of trade, losses, taxes, &c., pressing on them continually, and in many cases brings them insolvent, and next to pauperism; and who cares for this? I take it on myself to answer, and I say, 'Not the rich.' I do not treat on this subject for my own interest; for I consider myself independent in spirit of every one; and therefore I give in my sentiments candidly. I am sorry to see the laws formed so much in favour of the rich, and so oppressive on the poor and middle class; for, whether they have the means of paying taxes or not, it is all one. Taxes must be paid, or the prison is to be the lot of the unfortunate. If there be cause for labour rates, I think those rates ought to be taken from the land proprietors. I am convinced I speak forth the sentiments of a majority of the parish of Hurst relating to that point; namely, where the burden ought to rest. If the rich people of England were to make it manifest they were desirous of doing their part to bring about prosperity amongst all classes, others would willingly attend to their part; and it must come to this, it being only common justice. The poor laws encourage idleness, and from that to worse; and, on the other hand, I am of opinion that if full employment could be had for the poor, and I doubt not but it could if things are properly managed at the fountain-

head, it would become a stimulus to industry, provided they were amply paid. Englishmen would not then be obliged to go tottering in their rags for parish relief, after being degraded in being obliged to move flints, &c., merely to kill time and keep them out of mischief; there being every thing provided in England, if properly dispersed, for the comfort of every man; therefore, the degraded state of mankind ought not to be heard of; and I sincerely hope some effectual measures will be attended to speedily for the comfort of all, both rich and poor; and I am further of opinion that labour rates, neither any such nonsense will do it, but in time make things worse and worse. I forgot to say that, during the time the labour rate was in force, footmen and in-door servants were charged as labourers."—*J. Lempiere, Hurstpierpoint, Sussex.†*

"I think a land tax would be much more proper than labour rate, in order to meet the want of the poor; for my part, I am decidedly against the labour rate, because I have seen the farmers shift off their men and throw them on such as myself, which ought not to be, so long as the land is seen so much neglected."—*John Still, Hurstpierpoint, Sussex.‡*

"The fact is, that few if any of our farmers are in a solvent state, and the coming crops have for several years been mortgaged to pay the sowing; and, from the unfavourable seasons, little or no surplus has been left after repayment."—*N. Darwell, Slaughtam, Sussex.§*

"Occupiers of land, &c., rated for the relief of the poor at £130 and upwards, charged their sons as similarly situated as other labourers; gentlemen, owners of land, who employed labourers to cut underwood in their own occupation to a greater amount of wages than required to work out their own rate levied for labour, transferred the surplus amount paid to such labourers in liquidation of the labour rate of their tenants, occupiers in some instances of 180 or 200 acres of arable and meadow land; the landowner thus transferring the amount paid to labourers, whom he was compelled to employ to cut his own growth of underwoods, to the credit of his tenants' labour rate, to enable the tenant to avoid paying his fair and equitable proportions for labour, thereby oppressing and injuring the small occupier of land, tradesman, and mechanic, and all rateable persons not similarly situated with such landlords and tenants, by throwing those labourers on them for support, which such tenants most assuredly in justice ought to employ to liquidate the labour rate levied on them. It may very probably be surmised and said by some persons not accustomed to attend vestries in large

agricultural parishes, that those who consider such returns unjust and oppressive should attend the vestry, and object to such items being allowed. I beg to inform those who may entertain such an opinion, that such attempt by a small farmer or tradesman would be of no avail, as the landlord and large occupier, I believe, will most frequently on all points be found to manage and conduct business for their own interest alone, and can, from the number of votes they are entitled to give under the act for regulating parish vestries, always command a majority of votes over the other rateable inhabitants; they do not consider the consequences that must ultimately arise by oppressing and bringing to poverty those who now, by industry and sobriety, with difficulty support themselves and families."—*John Edmunds, jun., Wisborough-green, Sussex.**

"I have been a practical farmer forty years. My first observation is to remark, through the whole course of my practice, when a less proportion of labourers were employed on the land (either extensive or small), it always became deteriorated, and not so profitable as land of the same quality cultivated by their more industrious neighbours, who employed a sufficient quantity of labourers to improve the soil in a proper and husbandlike manner.

"One more remark I have to make, that is, to encourage the industrious and renting farmer to cultivate his land in a superior manner to the (I am sorry to say) general present system. It will be necessary for rents, tithes, and taxes of all descriptions to be more proportionable to the prices realized when I first commenced life, for the farmer to be prosperous and to benefit the neighbouring poor around him. When such a plan can be accomplished, in proportion to the farmer's profit, you will then find (and not until then) no labour rate will be required."

—*Joseph Bull, Shere, Surrey.†*

Such was the condition of the tenant-farmers and labourers throughout the agricultural counties of England, in the period from 1815 to 1834, if any weight is due to the vast body of evidence collected and published by the Government and both Houses of Parliament. During the greater part of that period the importation of wheat was prohibited until the price was 82s. 6d. the imperial quarter, and afterwards (from 1828 to 1834) until the price rose to about 70s., by that means enabling the farmers to obtain at least 50 per cent. more than the natural value (that is, the value in the great market of the world,) of the produce of the land; but instead of either themselves or their labourers deriving the slightest benefit from such a system, the testimony is 1117 to 55, or about twenty to one, that more than the increased value of the produce went to rent; for we find that the farmers as a body were ruined by the excessive rents, that the labourers were paid with a less quantity of produce during the years of high prices than when the price of produce was only one-half, and that they had been reduced to pauperism by the joint combination of the rich landlords and the impoverished tenants, the latter seeking to save themselves from ruin by the compulsory reduction of the labourers' wages.

(To be continued).

THE REGISTRATION.

METROPOLITAN REGISTRATION.—The relative state of parties in the Metropolitan boroughs cannot be accurately known until the new registries are published; they cannot be open for sale until the beginning of December. The number of new votes placed on the list has been considerable in some boroughs, and it is known that of these Free-Traders greatly preponderate.

TOWER HAMLETS.—In this borough, Mr. Sidney Smith and Mr. Boxer succeeded in substantiating—
For Free-Traders .. 70 claims.
Monopolists .. 0

SOUTHWARK.—The overseers in this borough had placed so many Free-Traders on their lists that little was left further to be done. At the request of the Working Men's Free-Trade Association, Mr. Sidney Smith attended the court of revision, and substantiated the only claims for which appearance was made by the parties.
For Free-Traders .. 5 claims.
Monopolists .. 0

LAMBETH.—In this borough Mr. Sidney Smith substantiated—
For Free-Traders .. 42 claims.
Monopolists .. 0

FINSBURY.—Mr. Sidney Smith attended this revision and substantiated—
For Free-Traders .. 48 claims.
Monopolists .. 0

WESTMINSTER.—This revision has been attended by Mr. Trott on behalf of the Free-Traders, but is not yet completed. Particulars next week.

CITY OF LONDON.—Mr. Wansley attended the court of revision on behalf of the Liberals and Free-Traders. On claims and objections the revision stands as under:—
Liberals and Free-Traders .. 510
Monopolists .. 453

Majority for Liberals and Free-Traders 55
But, substantially, the work in the City has been done out of court, by the parties themselves acting on the overseers. The canvassers for the Free-Traders had reported upwards of 2000 deaths and removals; and as the result of a rough calculation, which will be more carefully given afterwards when the lists have been properly revised, it may be stated that on the overseers' lists there appear of names for 1844, which do not appear on the registry of 1843, 2045; and from the lists of 1844 there have been omitted names which appear on the registry of 1843, 1639. There is every reason for the belief that on these the Free-Traders

have an available advantage; but to ascertain the politics of so many is a work of time, which must necessarily somewhat delay the report of the result.

MIDDLESEX.—It has already been seen that in this county the advantage is on the side of Free Trade to the extent of 130 votes.

BOROUGH OF BOLTON.—Upon a careful examination, the total gain to the Free-Traders in Bolton, from the revision of the list of parliamentary voters in this borough, is 57.

LANCASTER.—On a careful examination of the revision it appears that the advantage of the Free-Traders and Liberals amounts to 36 votes. It may be stated as follows:—

From the freemen's list 76 names have disappeared, viz.:—

Free-Traders and Liberals ..	32
Monopolists	38
Doubtful	6

And on the same list 81 new names appeared, viz.:—

Free-Traders and Liberals ..	49
Monopolists	28
Doubtful	4

Omitting the doubtful and neutral, this statement gives the Free-Traders and Liberals a balance of 27 votes on the freemen's list.

The occupiers' list of Lancaster and Skerton being examined in the same way, there is a balance in favour of the Free-Traders and Liberals, viz.:—

Lancaster	4 votes
Skerton	5 "

Giving a total of 36 votes in favour of the Free-Traders and Liberals.

BRADFORD.—The result of the revision for this borough is as follows:—

Voters on last register left off this year by overseers:—

Free-Traders	50
Monopolists	58
Doubtful	2

New voters put on this list by overseers, not being upon last register:—

Free-Traders	142
Monopolists	128
Doubtful	15

Free-Trade majority .. 14

Objections.

Free-Traders struck off .. 48

Monopolists struck off .. 39

Monopolist gain .. 9

Clear—(New).

Free-Traders put on the list .. 28

Monopolists put on the list .. 2

Free-Trade gain .. 26

Total Free-Trade gain .. 39

YORKSHIRE.—WEST RIDING.—The barristers appointed to revise the list of voters for the West Riding have completed their labours, and we are glad to state that our return up to Thursday night is favourable to the Free-Traders and Liberals, the gain being 131 votes.

RIPON.—We leave the following extract of a letter from a valued correspondent, in reference to this borough, without comment, though we think it will provoke one from our readers:—"No person here takes any interest either in municipal or parliamentary elections. Mrs. Laurence's under steward alone manages them. Nearly the whole of Mrs. Laurence's agricultural tenants, within six miles of Ripon, have votes for the borough. All her house tenants are expected to vote for her nominee; the consequence of this is that the borough is in a political trance. It may see and hear, but has no power to make the least movement or exertion."

DURLEY.—Free-Trade majority on objections, 4; on claims, 1-5. Our correspondent informs us that the relative strength of parties will not be materially affected by this result.

NEWCASTLE (Staffordshire).—Our correspondent informs us that the revision in this borough has terminated by giving a majority of 7 to the Free-Trade party, which would have been much increased but for an informality, which was held by the barrister to be fatal to several of the objections made by them.

BARNSTABLE.—The registration has terminated favourably for the Free-Trade interest, as will be seen from the following analysis, which has been forwarded to us by our correspondent there:—

Free-Traders added to list .. 20

Monopolists do. .. 18

Free-Traders struck off .. 17

Monopolists do. .. 12

Majority for Free-Traders .. 6

WINCHESTER.—The following is the result of the late revision for this city and borough, which terminated on Friday evening, the 11th inst.:—Free-Trade objections sustained, 44; Free-Trade claims allowed, 17-61. Monopolist objections sustained, 7; Monopolist claims allowed, 23-27. Free-Trade majority, 34. The electoral lists for the present year, from various causes, exhibit an increase of 50 over the previous year in favour of the Free-Trade party. This is cheering, and will stimulate to renewed exertion.

TYNEMOUTH.—(From a Correspondent.)—

"In addition to the above, 4 other names were struck off by the revising barrister, their qualifications being bad on the face of them, 'being land without any building.' Of these, 1 was a Free-Trade and 3 were Monopolists. The

total Free-Trade gain is 22, including 13 amended qualifications." Our correspondent furnishes us with an explanation of the reasons why the Free-Traders were unable to substantiate so small a proportion of the objections made by them, which we subjoin:—"The point, with reference to the objections, arose upon the form of the notice of objection given to the overseers. In four of our townships the objections being numerous, instead of giving a separate notice to the overseer for each party objected to, I had included the names of all the parties objected to in the township in one notice. This was in accordance with our practice in this borough ever since the passing of the Reform Act in 1832, and has always been held by the revising barristers in previous years to be sufficient, and this is also stated to be the case in Shepherd's 'Election Law,' third edition, page 167. However, Mr. Hogg, the revising barrister, on the present occasion decided the contrary, to the very great astonishment of myself and my opponents, who had always pursued the same course themselves in previous years, and who never thought of objecting to the form of the notice, the objection being started by the revising barrister himself. This decision at once disposed of 34 of my objections: the remaining 2 I substantiated. With respect to the claims, the greater portion of those, in number 20, which have been disallowed, were made out under the following circumstances:—In one of the townships (Tynemouth) it is not the custom to write out the rate-book until some weeks after the day it bears date, and it is usually not allowed by the magistrates until two months after the day it bears date. A rate which bears date in March of the present year, was not written out until May, and was about the end of May allowed by the magistrates, and twelve or thirteen parties friendly to the Free-Trade cause having been left off the list by the overseers, on the ground of not having paid this rate, I had given in claims for the whole of them. These claims have all been disallowed. I argued the question at considerable length, and ultimately requested a case for an appeal. This he also refused, stating that the point had been often brought before him, and that he had always decided it in that way; that he could not grant a case unless he entertained a doubt on the point, and that he entertained on this point no doubt whatever. In case of an election we should take care to tender all our claims, and I have but little doubt that should the matter be carried so far, an election committee would reverse one if not both of these decisions of the barrister, thus making a difference of 30 or 40 on the poll. The present register contains 742 names. The list, as revised to day, contains only 707. The change is, on the whole, favourable to the Free-Traders. I think this borough may be relied on to return a Free-Trade candidate almost as a certainty."

MORPETH.—(From a Correspondent.)—The ascendancy of the Free-Trade and Liberal party in this borough will not be at all disturbed by the late revision.

PORTSMOUTH.—The revision of the lists for the borough took place on Tuesday week and Wednesday last, before G. P. Elliott, Esq.

Monopolists struck out of lists ..	55
Free-Traders and Liberals added ..	0
Free-Traders and Liberals inserted as claims 3	
Monopolists ditto	1-2

Gain to Free-Traders and Liberals 57
SOUTH HAMPSHIRE.—The revision for the Portsmouth polling district was also before the same barrister, on the following Wednesday.

Monopolists struck out ..	17
Free-Traders and Liberals ditto ..	7

Gain to Free-Traders and Liberals .. 10
The new claimants are also favourable to the Free-Traders and Liberals.

BOROUGH OF WORCHESTER.—Free-Trade objections, 116; sustained, 102. Claims, 71; allowed, 58. Monopolist objections, 47; sustained, 41. Claims, 75; allowed, 69. Free-Trade majority on objections, 61; Monopolist majority on claims, 3. Total Free-Trade majority, 58.

BOROUGH AND PARISH OF HUNTON.—Free-Trade objections, 5; sustained, 5. Claims, 3; allowed, 1. Monopolist objections, 1; sustained, 0. Claims, 1; allowed, 0. Free-Trade majority on claims and objections, 5.

ASHBURTON.—J. L. Lucena, Esq., revising barrister, held a court at the Golden Lion, on Monday last, the 7th inst., for revision of the voters' lists for this borough. The following is the result:—

Inserted in this year's list by overseers, new votes:—

Monopolists	13
Free-Traders and Liberals ..	9

Loss to Free-Traders and Liberals 4

Objections by Free-Traders and

Liberals .. 17; expunged 16

Objections by Monopolists .. 8; expunged 0

Deduct loss as above .. 4

Total gain to Free-Traders and Liberals .. 12

which added to a gain of about 13 on the last registration, and the majority of 45 at the election in 1843, shows a clear majority of about 70.

DOUWTON.—(From a Correspondent.)—"Enclosed I beg to hand you the form you sent me on behalf of the League. I am proud to say the registration is in favour of Liberal principles. I have no doubt in my mind that a Liberal may be easily returned for this borough."—The Liberal majority in the present revision is upwards of 16.

LIMSFORD.—
Free-Traders added .. 14
Monopolists struck off .. 20 = 40
Monopolists added .. 11
Free-Traders struck off .. 15 = 26

Free-Trade gain .. 14
TOTNES.—There has been a clear gain on the revision in this borough to the Free-Traders and Liberals.

TAUNTON.—Free-Trade objections, 54; sustained, 49. Claims, 44; allowed, 34. Monopolist objections, 83; sustained, 47. Claims, 40; allowed, 15. Free-Trade majority on objections, 1; on claims, 19-20. The friend who sends us the above informs us that "the Monopolists expected to have done wonders, because they entirely neglected the previous registration; they had, therefore, two years' sweep instead of one, but the vigilance of the Free-Traders defeated them. As to the county (Somerset), it remains in statu quo, but the farmers are sulky; and if

* Appendix (D), p. 186.

† Appendix (D), pp. 215, 216.

we could get a Free-Trader among the neighbouring gentry, well known, to contest it, I think the chances would be favourable for him over one of the present members."

LYONS REGIS.—The revising barrister (Mr. C. D. Devan) held his court for the revision of the list of voters for this borough, at the Town-hall, on Saturday, the 12th inst. The following is the result:—Monopolist objections, 38; sustained, 0. Free-Trade and Liberal objections, 34; sustained, 27. Monopolist claimants, 16; sustained, 13. Free-Trade and Liberal claimants, 16; sustained, 8. Free-Trade and Liberal gain on objections, 27; loss on claims, 5: total gain, 22. Several of the Monopolist claims were served on the Sunday. The barrister held such service to be good, but has granted a case for the opinion of the Court of Common Pleas on the important point.

EAST SUFFOLK.—F. Gunning, Esq., on Saturday week, revised the list of all the parishes in the Framlingham district. The following is the result of the day's proceedings on the objections:—By the Monopolists: taken, 5; sustained, 1. By Free-Traders and Liberals: taken, 80; sustained, 4. By overseers: taken, 25; sustained, 25.—On Monday week the revising barrister held his court at Saxmundham. The following is the result of the revision:—Objections by Free-Traders and Liberals: taken, 15; sustained, 8. By Monopolists, 0. By overseers: taken, 29; sustained, 28.

THE REGISTRATION IN WALES.—(From a Correspondent.)—SWANSEA.—Generally speaking, the results of the registration in Wales are highly satisfactory to the Free-Trade party. The foundation has been laid of a systematic registration hitherto unknown in this part of the country, and which will in another year produce still greater results. The public here feel that they owe this to the League. I shall next week furnish you with numbers, as to the state of the registers of the boroughs I have visited.

CARMARTHENSHIRE.—In the borough registration the result of the revision for Llanelly and Carmarthen is decidedly favourable to the Liberal interest. In these, as well as in all other revision courts for boroughs, agents collecting information for the League were present.—*Cambrian*.

CLOSE OF THE NORTH LANCASHIRE REVISION.—“The conduct of the League had been of the most insidious character. Foiled in their previous tactics, they were now looking to the registration.”—*Speech of J. Talbot Clifton, Esq., of Lytham*. Alas! for that sad admission. On Thursday last, at Kirkham, the newly-elected M.P. felt the full force of his misgivings by the unpalatable fact of his own two brothers being struck off the register for want of qualifications! The “insidious” League was represented by Mr. Moorhouse, of Manchester; and Mr. Fair, the steward of Thomas C. Clifton, appeared to support the votes of the Cliftons. In vain did he labour, for the humiliating admission had to be made, that they were not freeholders, but received £300 per annum each from their father, as a gift! Chapel-fallen was the steward, and the “foiled” League, in pure charity, allowed the maiden M.P. and ex-soldier to remain upon the register, not wishing to crush all their hopes at once. Many others shared the same fate as Mr. Talbot Clifton's brothers, including one strict and orthodox divine of the church as “by law established.” Let this attention to the register be followed up, as it will be, and Mr. Talbot Clifton's senatorial days are numbered, and North Lancashire will be unshackled, and properly represented.—*Correspondent of the Preston Guardian*.

INCENDIARISM.—Incendiarism still continues in some of the agricultural counties. On Wednesday, the 9th inst., a fire of this character broke out on Vinco's farm, in the parish of Wharfedale, a few miles from Bury St. Edmund's, in the occupation of Robert Holden, and, notwithstanding every effort was made to check its progress, it was found impossible to prevent the flames from spreading to all the stacks in the stackyard, ten in number—two of wheat, two of beans, two clover-stacks, one oats, one barley, one hay, one straw, one horse-hay, &c., all of which were totally destroyed. During the removal of the goods from the house, some person stole a bag containing forty sovereigns, which Mrs. Holden had placed for safety between the bed and the mattress. Mr. Holden is insured in the Farmers' Insurance Office.—A fire broke out late on Sunday night on the farm occupied by Miss Pyson, at Exning, about a mile and a half from Newmarket, which in a short time destroyed a barn full of wheat, all the outbuildings and stacks, four horses, &c.—On Saturday night week an outbuilding on the farm homestead of Mr. Bradbrook, of West Bergholt, was maliciously set on fire, which, however, was soon extinguished. At the same time a barn, at some half a mile distance, filled with wheat and barley, belonging to the same person, was discovered to be on fire, and before it was got under, about £300 of property was consumed. Within the last three years Mr. Bradbrook's property has been attacked and destroyed in a similar manner on no less than four different occasions, and there have been nine incendiary fires in that neighbourhood within the same period.—A fire was discovered upon the premises of Mr. S. Miller, of Harlton, Cambridgeshire, on Tuesday week, in a wheat rick at the back of the premises. The barn, stable, cow and cart lodges were all destroyed; the house and granary were saved.—On Friday week, a destructive fire broke out at an off-hand farm occupied by Mr. William Goodchild, at Cheveley, by which buildings and their contents, of the estimated value of £1500, were destroyed.—On Saturday night last, about twelve o'clock, a destructive fire broke out on the farm premises of Mr. R. H. Hutton, of Walsham-le-Willows. A very large and substantial barn, containing the produce of fourteen acres of beans and peas, together with some wheat and barley, was destroyed; also a stable and other outbuildings, with all the harness, a wagon, dressing machine, &c., and also some pigs and poultry. The assembled labourers, generally, lent their assistance freely; but there was a good deal of apparent apathy amongst many present.—On Sunday morning, about four o'clock, a fire was discovered in a stack of wheat, the property of Mrs. Unwin, of Dullingham, Cambridgeshire, which was destroyed.—An incendiary fire took place on Sunday night, at East Riddam, Norfolk, on the farm of Mr. John Freeman, by which a valuable barley-stack of forty yards in length was entirely consumed.

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, October 16, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the LEAGUE of the Saturday immediately succeeding, but are included in the list of the week following.

ERRATA.

In LEAGUE, No. 55, for “David Davy, 1, Cobourg-street, Euston-square, £1,” read “£1. 1s. 3d. and in the same number, “Richard Cleinlow, 28, West-street, Somers-town, 2s. 6d.,” was omitted, this subscription having been, by mistake, included among the small sums.

London, October 17, 1844.

GENTLEMEN.—We have the pleasure to send, in the place of our subscription of £5 to the League Fund, old silver coins (value £5 as old silver) for the approaching Free-Trade Bazaar, hoping, as they are in excellent preservation, they may yield a considerable profit above their intrinsic value. Wishing you every success in the cause we have each so much at heart—that of increasing the quantity both of food and employment for the poor,

We have the honour to be, Gentlemen,

Your obedient humble servants,
To the Council of the Anti-Corn-Law League. G. and H. F.

LUCIFERS.—No less than £200,000 worth of phosphorus is used annually in the metropolis alone in the manufacture of matches, lucifers, and in various chemical manufactures. This is all imported, although we have abundant sources whence it might be derived in this country.

TRADE AND THE REVENUE.—The great activity in the trade of the country easily accounts for the flourishing state of the revenue, as it does also for the reduction in the expenditure on the poor. In the township of Leeds the reduction in this expenditure is very gratifying. For the month of September, 1843 and 1844, the expenditure on the poor was as follows:—

In September, 1843	£1544 11 6
“ 1844	1198 11 9
Reduction in 1844	£345 19 9

It will be seen from our Manchester trade report that the home demand for cotton manufactures is excellent, and was never known to be better; and nearly the same remark applies to every other large branch of manufactures and trade. It seems almost superfluous, were it not for the interested blindness of many, again to point out the notorious truth, that this state of general prosperity is found co-existing with *cheapness of food*. It has always been so; and, on the other hand, national distress is always found co-existing with *dearness of food*. Surely this is the strongest possible proof that cheap food is the first of material blessings to a country, and that laws which make food dear are necessarily mischievous. If this be so, and nothing can be plainer—we hope the manufacturing and trading classes will never remit their exertions to obtain the entire repeal of the unnatural Corn Laws.—*Deeds Mercury*.

LETTERS ON THE CORN LAWS, No. III.

TO THE DUKE OF RICHMOND.

MY LORD DUKE,—In early life you won the reputation of a gallant soldier. In maturer years it has been your aim to sustain that of a high-minded nobleman. I appeal to your sense of honour, and invoke its judgment upon your conduct as a legislator.

It were a very superfluous and unpromising task to argue the Corn Laws with your Grace. An argument in political economy, affecting your own interests or prejudices, requires a patience of temper and a capacity of mind beyond what you are believed habitually to evince. Lord Radnor experienced—in the House of Lords during the last session—upon your logic and your urbanity. The results do not invite a repetition of the experiment. The assumption of your manner may be warranted by the superiority of your rank, or accounted for by your early training; you were bred under Wellington, and not under Chesterfield; but it certainly is not authorized by any other superiority. I confess your invulnerability to reasoning. Are you equally hardened to considerations that touch more nearly the soldier, the peer, and the gentleman? Are you willing to stand before the world as the foremost champion of a cause that is tainted with dishonour?

I bring this charge against monopolist laws as upheld by the privileged class to which you belong. I bring it against yourself; for you cannot, by mingling with a crowd, escape the impeachment. Nor does it avail that many may hold you unspotted in this matter. A question of honour is not decided by appeal to a majority. The result of a poll goes for nothing; it obliterates no blot upon a scutcheon—look well to your own, my lord.

You are not only a legislator but a trader; not only a peer but a merchant; not only a duke but a fishmonger. In the one capacity, you make laws to sustain the artificial prices by which you profit in the other capacity. A similar abuse existed under the old poor law. The baker got himself elected a guardian, excluded other bakers from the supply of the workhouse, and put his own price upon the loaf. England is a great poorhouse; you are one of the guardians; and deal in like manner with its bread. The petty nuisance you helped to put down, sternly and contemptuously. The greater nuisance, you both patronise and commit. The parish guardian might have been turned out; there, you are safe from retribution. Opinion can only reach you through shame, not by dismissal.

National policy is put forward as the defence of the Corn Laws, thus making the profit of the landowner an incidental consequence of those laws, and not the purpose mainly contemplated. For argument sake, let this be granted. Taking it so, what would be the most decorous and natural conduct for persons in your situation, if actuated by a nice sense of honour? Plainly, one of two courses: either to forego all such incidental advantage to their own revenues, and thus evince the sincerity of their support of the policy in question, as a national policy; or else, to leave the decision altogether to competent authorities and uninterested parties. Let the landowners do this, and where would the Corn Laws be on the morrow after the next meeting of Parliament?

In this statement I forego the strength of the argument against monopoly; I leave untouched the flimsy sophistries of "independence upon foreign nations," and "peculiar burdens;" the hardihood of assertions a thousand times disproved, is left unrebuked; I pass by the peril to our trade and commerce, the means of life to millions; I veil the sore privations and terrible sufferings which make the humane shudder at such interference with the bounty of Heaven; I let your comprehension and your compassion slumber unmolested, and only knock at your heart's door to ask if Honour be at home, and where she slumbers while the peer legislates for the trader's emolument?

You have often, perhaps, been out on a foraging party; and the army to which you were attached is said not always to have been over-particular, even in a friendly country. But neither is the legislator a party, nor the House of Lords the place, nor the British nation the subject, for a foraging expedition. Plunder may be very fair in the soldier, and yet very foul in the lawmaker. And money transferred by a law for that purpose from one class to another, in the form of enhanced prices, is really plunder, gild it with whatever phrases you may. The law of the question cannot affect its morality. Still less can it be a salvo for the susceptibility of a gentleman.

Amid the romantic scenery in which you are now sojourning; where the mountain rises in awful majesty, and the torrent foams in picturesque fury; you linger perhaps by streams which have other beauties to your eye than those which charm the lover of nature or the wandering artist. To you they are less poetical than Pictollian. There you catch revenue, and the means of splendour and importance. The salmon are spawning, and they breed for your profit. The racers of Goodwood feed on

the fish of the Ness. What say your tenants, your sub-fishers? Do they help you to curse Peel's Tariff? At any rate they listen respectfully. Salmon and Tariff excite not there the titter which greeted them in the House of Lords, even from your brother monopolists who happened to be of less bilious temperament. Your fishery tenants will button their mouths as they button their pockets. The laugh is kept down, and so is the rent. But if, my Lord Duke, you cannot sink the fishmonger, remember that you have still a "protection" of 10s. a cwt. on your salmon. This is not so good to you as an absolute prohibition. You say it makes £2000 a year difference. But think of what you still receive, and how you get it. The protective duty is as much as the salmon itself was formerly worth in the neighbourhood. You still protect the fish out of the mouths of the Scotch, and money out of the purses of the English. We cannot buy salmon without protection sauce. I have not the means of calculating how much you continue to gain annually, by law, in addition to the worth of your salmon; but, whatever the amount, the effect on the consumer is the same as if false weights were used at the fish-stall where he purchases. Scales ought to be equal, and so should laws. An act of Parliament is a false weight in merchandise. Coronets and parchments are as foul as penny-pieces in the exchange of earnings for food. Fish-dealing is no stain on chivalry (in this

commercial age) so long as it is fair dealing; but charging more for your fish, by the power of law-making, is less fragrant in the nostrils of honest and honourable men than the worst refuse of your agents' stalls.

This portion of the subject should make your Grace question your conscience as to the Corn-Law protection. Fisheries are free from the mystification about farms. You cannot talk of the salmon being in the same boat with you like the labourers. You make no boast of loving the spawn. Monopoly goes naked into the waters. And yet it is the same by sea or by land. You tell the occupiers and tillers of the soil that their protection shall not be diminished. Have the measures you support upheld the previous proportion between rents and prices? Your tenants are selling wheat at the same rate, or very nearly so, that they did half a century ago. Meanwhile, are the rents of your estates the same? Are they less than doubled? Are they less than trebled? Are there no instances in which they are even quadrupled? Is this fair play? Is this a simple and honest protection of the entire agricultural interest? You are pledged to the farmers to upset the present Ministry, if they (the farmers) be not protected as heretofore.

Look at the averages. Neither you nor Sir Robert Peel can obtain for them the prices you, by implication, promised. A higher power has interposed. By abundant crops, Providence casts scorn upon your "protection." It is held up to contempt. "He that sitteth in the heavens shall laugh." But in the vanity of the attempt there is wickedness. It is a deceit on the class which is, professedly, patronised. Yes, my Lord Duke, it is deception; and that deception practised on a confiding and dependent class, who are condemned to loss and struggle, often to ruin, while the class which practises it alone reaps the advantage.

Although the manifesto of your Protection Society—the notorious tract of Mr. Cayley—is a topic of which the people may well be tired, yet you may be assured it will not be forgotten. That publication stands alone in literary history for barefaced falsification. I need not repeat evidence which has been fully before the public; but the proof is complete of such perversion and garbling of the pages of Adam Smith, for the purpose of making him seem the defender of tenets which he wrote to refute, as amounts, not merely to a violation of literary etiquette, but of moral principle. And for this you are responsible. The falsehood is told for your behoof, under the shelter of your name, and with your subsequently-avowed approval. O Monopoly, what a tyrant art thou!

"Mongst all your Peers, could none be found but Richmond

To be the shameless herald of a lie?"

Lord John Manners told a public meeting lately that you presided at a dinner where labourers sat down at the same table with tenants and landlords. I have seen no report of this gracious reunion. But there is many a working man who would hold it no credit to associate voluntarily with any one implicated in deception such as is proved upon that tract. It was an attempt at a direct fraud upon the public mind. Labouring men see through these things as well as their betters. When they adopt the monopolist principle, they work it out; and, as they cannot make artificial scarcity by law, they try to do it by rickburning; and very properly get transported for the same. And when they condemn that principle, as unjust and dishonourable, their reprobation extends to all the ranks and forms in which it appears. They will not long, my Lord Duke, venerate your heraldic dignity, if the bend sinister remain in your moral bearing.

A NORWICH WEAVER BOY.

CORRESPONDENCE.

THE ANTI-LEAGUE TRACTS.

To the Editor of the LEAGUE.

Chelmsford, October 7, 1844.

SIR,—In my letter of the 19th ult., I asserted that the statements about prices and wages in these tracts are grossly dishonest. What, for instance, should we think of the honesty of a Prussian, who, to frighten Prussian ironmasters, should proclaim that the price of bar-iron in England was £3 a ton, he well knowing that its ordinary price was more than double that sum, but he having perhaps found such a figure in a bankrupt's list during the late distress? What, then, are we to think of the following conduct of the Essex Anti-League? They cannot but know that wheat averages at Dantzic at least 35s. But, in the Dantzic Consul's return for 1824, it appears that the price was then only about 23s., and in one week in September it is quoted even as low as 15s. 11d.; but it is stated to be improving, and that "the farmers and landlords would also be ruined, as they, in fact, almost are already." Upon the strength of this, in two of these tracts 15s. 11d. is quoted as the price of wheat in Dantzic in that year, and as one that may reasonably be expected again! Similarly it is proved that Hamburg wheat might be sold here for 30s. That this is a misrepresentation, we have their own acknowledgment. Being called to account for it, their orator, Copland, at once admitted, in a published letter, that it ought to be "33s. or 34s." And yet, though this half concession was made last January, the original misstatement is still circulated!

Then, in freights: Mr. Cobden having proved that, on a long average, it has cost 10s. 6d. per quarter to fetch wheat from the Baltic to the west of England, and though it is notorious that the difference to London is only 6d., these tracts actually contain the following:—"Why, he (Mr. Cobden) must have thought he was speaking to those who were as ignorant of geography as the farmer whom he held up to ridicule in another county; that you did not know that Liverpool is more distant from Dantzic than London; and therefore the cost to that port could not be a criterion as to the cost to London, seeing the distance is greater and the navigation more dangerous, ships to reach Liverpool having to go through the English Channel. This is the way they endeavour to throw dust in your eyes to deceive you." (Cheers.) Could shameless effrontery well exceed this?

And so as to wages: Mr. Cobden's statement, that in the manufacturing districts common labourers receive 12s. a week, is thus disposed of. To prove this cannot be the case generally, first, an account is quoted, without stating its nature, of the starvation earnings in Manchester during the dreadful distress in 1841. Then the combined average in factories of men, women, and children, is contrasted with that of able-bodied men in the south. But the following beats all:—"And Mr. J. Marshall of Leeds informs us that in one of his mills, where he employed 1229 persons, the average rate of wages of 1025 of them was only 4s. 11d. per week in the time of good trade." Now, on reference to the table, it appears that the 204 excluded from the average include every hand who is of age, man and woman; and that the average wages of boys and girls, from 9 to 11, is 3s. 1d., and that of men and women, 21 and upwards, 16s. 7d. Yet the tract actually proceeds thus:—"Are these men to charge us with grinding the faces of the poor, when from their own mouths we can convict them of paying only 5s. or 6s. a week?" (Cheers.) Could dishonesty go further?

One tract is on wages: and here, at least, I hoped for something like an argument in support of their assertions; but there is not even an attempt at it. The tract consists of quotations from alleged Free-Traders, to show that they believe cheap corn will bring down wages. Now, even if they thus showed that half the Council of the League expect what the Anti-League assert will happen, it must go for naught till they further confute the conclusive arguments in the LEAGUE, which clearly show that cheap corn cannot lower wages. But here are two specimens. I was forced to say alleged Free-Traders, for they actually quote as a League authority the notorious monopolist Sanders, he who, after he had admitted before Parliament (Committee in 1833), that the Corn Law takes from the many to give to the few—that it is the greatest of all monopolies, and cannot expect to stand before the spirit of the age—is now striving to bolster it up! And then they quote (and in two other tracts also) Mr. Bright's self-evident statement that our only mode of meeting the hostile tariffs we are bringing on our heads will be to lower wages. Let them quote this as often as they like, and let them tell us how it could more clearly be shown, both that wages may fall without corn falling, and that the Corn Law, so far from helping to sustain them, itself leads to their fall.

And, indeed, the very strongest expression does not in the least sanction their assertion, namely, that wages will fall more than to allow for the increased cheapness of food, and which is the only case in which the labourer can be hurt. No one goes beyond their own ally, whose words they are passing off as ours; and, as if they were so conclusive, print in italics. All that even he says is, that repeal "would leave matters, as far as he [the labourer] was concerned, just as they were." In which case, so far from it being the labourers' interest to support the Corn Law, they would have no interest in the question at all; as whatever were prices, as wages would vary accordingly, they would be equally well off; and, therefore, they could not possibly object to their masters reaping the benefit which it is admitted that cheap corn would be to them.

Where, then, is their evidence? Nowhere; and, moreover, in these very tracts, when it serves their turn, they themselves adduce contrary evidence, that wages not merely do not, but cannot possibly either fall or rise even as much as food, so that labourers must be best off when food is cheapest. It is obvious that when food is cheap, wages at once go further, so that there must be less competition for them; and then, further, the money saved in food being spent in other articles, the demand for labourers to make them must increase, so that wages must even rise. And none have borne more decided and conclusive testimony to these facts than the agriculturists themselves: see particularly their evidence before the Lords' Committee in 1814, and the Commons' Committee in 1833 and 1836. But, really, can evidence be required to disprove such an absurd assertion, as that increase in the abundance and cheapness of necessaries enables employers to give their hands still less of them than when they are scarce and dear? That when bread rises to 1s. a loaf, it is the rich who are put on short

allowance, and that the poor get even more of it than when it is plentiful?

In trades in general, of course, the demand for each kind of labour must increase simultaneously with the population, and the wages must be, in fact, equivalent to the value of the article produced, less the ordinary profit on the employer's science and capital; and therefore, whatever be the price of food, wages cannot vary on that account. These facts are well known in manufacturing districts, and are, indeed, self-evident.

But there is an exception as to agriculture. Here the increase of population causes no simultaneous increase in the demand for labour; there being no increase in the necessary land, the additional population must turn to other occupations. But, from the tendency and greater facility to learn a parent's calling, the agriculturist's sons will not turn elsewhere as long as they have not so increased the competition as to have reduced their wages below what they are satisfied with; and thus the supply of agricultural labourers will always tend to excess, and there will be some relation between agricultural wages and the price of necessaries. In England, however, through various impolitic acts, and particularly the restrictions on trade, the supply of agricultural labourers in many districts has already far exceeded the demand; and therefore they are quite at the mercy of their employers: what they receive is only the value of bare sustenance, slightly varying according to the kindness of the masters, or the public feeling of the particular district; and can only by courtesy be called wages. Being given in money, of course the money amount varies with prices. This fact constitutes the whole of the evidence for the Anti-League's assertion that wages vary with prices. The state of affairs that necessarily causes this is put forward by Mr. Baker himself in the first tract. He there announces that many farmers are employing four or five extra labourers merely to keep them off the parish. It is obvious from the foregoing that, so far from agriculturists benefiting from the Corn Laws, they are the greatest sufferers from such restrictions, as they have the greatest need for a free expansion of employment; and this state of pauper wages among them, which necessarily results from these restrictions, is the most conclusive evidence that could well be brought against them; and every fresh instance which the Anti-League are thus enabled to bring of what they call wages varying with prices is only further evidence against the Corn Law.

But even this state of affairs cannot cause their labourers to be put on *shortest* allowance, when bread is plentiful; and, they bring complete masters in these districts, if they could bring evidence that such were the fact, it would only be testimony to their own cruelty. Such, however, is not the fact, as they themselves clearly proved in their own evidence above referred to.

Some of these tracts, however, positively assert that, except when corn is very dear (the exception is worth noting), wages are six pecks of wheat a week. If this were true, of course the cheaper wheat were, the less money would be left over after paying for bread. A family, as is there stated, generally consuming ten loaves a week, on a reduction of 8s. a quarter, or 3d. a peck, being 1d. a loaf, they would only save 10d., while they would lose six times 3d., or 1s. 6d., and thus sustain a loss of 8d. Great, however, as this loss would be, it does not satisfy Mr. Baker; and so, determined to do the thing thoroughly while he was about it, in putting the calculation into figures he quietly cribs 6d. more, and calls the reduction in wages 2s., and so nearly doubles the loss, making it 1s. 2d.

Fraud, however, always betrays itself. This tale, invented to humbug the labourer, would, if persisted in, completely upset their *other* assertion, that the farmer will be ruined on a fall in prices, as his expenses will remain the same. So in tract No. 1, where this has to be proved, the impossibility of wages thus falling is clearly shown. The many other articles wanted by labourers are catalogued; and then Mr. Copland, having stated that the price of corn has fallen one-third, confidently asks what farmer has been able to reduce his wages one-third, to which "hear, hear," is responded; and, in a letter he published in support of this statement, he confidently asserts that wages have only fallen "one-fifth to one-sixth," or about half what corn has, and which, therefore, clearly has left the labourer even better off.

Let us not, however, suppose that, having thus contradicted and exposed the absurdity of his ally, Mr. Baker, he has left himself at a loss for a case for the labourer against cheap food. He beats Baker out and out. In the same tract, when he comes to that question, he proves the labourer would lose £16. 12s., and only save 7s. 7½d.!! And how do you think he does this? He commences with the moderate suggestion that wheat might fall 10s. a quarter; but he goes on to suppose that thereupon wages might fall 6s. (of course, this is only put hypothetically after the foregoing, though, methinks, it would be pretty well for an hypothesis at any time; and I should like to know what farmer would be injured in such a case. Even according to Baker's calculation, the fall in wages would be only 1s. 10½d.; and then Copland calls 6s. only *half* the wages! How many would rejoice if the whole of their wages even now amounted to that! and how, then, can they be only six pecks? But to proceed:—) and then, to complete the thing, he supposes all the labourers living in celibacy—determined old bachelors—spending only 2d. a day in bread, and spending their half guinea over in fun!! Is it to be believed that those statements are composed and diffused by sane men!

In conclusion, I assert the Anti-League generally know that these are falsehoods, and that neither are wages six pecks of wheat, nor do they vary with its price. I have little doubt Mr. Baker is himself giving his men the value of at least eight pecks; at any rate, the wages in my parish are worth that, and he cannot but know it, and I shall presently show he does. Then in the table of Mr. Marshall's wages, which Mr. Copland has so scandalously misquoted, he must have read the distinct statement that the wages have hardly varied at all for the last 20 years, though wheat has varied above 100 per cent. But, to quote more general evidence, the recent report on female agricultural labour shows the high wages, even of agricultural labourers, in all thinly-peopled districts, such as the North of England generally, and Lincolnshire, through the demand for labour; and in the neighbourhood of manufacturing towns, from the facility of obtaining other employment, which prevents their becoming excessive; and it also shows the low wages in all densely-populated merely agricultural, and, therefore, deeply pauperised, districts.

And to come quite home to the Anti-League—the real facts are nowhere more clearly shown than in the (just published) first part of the fifth volume of the "Journal of the Royal Agricultural Society," of which their president, the Duke of Richmond, is now also president.* Three essays in it are severally on the agriculture of Cheshire, Wilts, and Essex (this last being by this very Mr. Baker). They thus relate to the most distant districts, and they all clearly disprove these assertions. In the essay on Cheshire the following passage occurs:—"In the vicinity of manufacturing or large towns wages are nearly 20 per cent. higher than in many parts of the interior." "In the former there is a greater demand for labour;" and the two amounts are stated at 12s. and 10s. Wilts is notoriously pauperised, and accordingly wages are only "7s. or 8s.," and "vary with the price of wheat." But still it appears they have risen 1s. since the winter, and this is clearly not the result of a rise in wheat, but of increased demand. It also appears that they are 1s. higher in the north than the south. Yet corn is no dearer in the north, and, moreover, the land being poorer, it cannot arise from the better returns, but they are actually paid out of less. But the manufactures in the north diminish the competition for them.

Nor does even Mr. Baker's essay assert wages to be six pecks of wheat. There is not here a word of the absurdities he is spreading in these tracts. Having no sinister purpose to serve, he here tells the plain truth. These are his words:—"Wages differ considerably in various districts, being fully one-third higher in the districts near London, and towards the seacoast;" and these he states at from 10s. to 12s. And let me tell him that, at present prices, 12s. will buy eight pecks of wheat. And I will venture to affirm that he knows other parishes where his beloved Corn Law, having thoroughly done its work of pauperisation, wages are hardly worth four pecks.

If these exposures do not shame him into truth, they must, at least, open the eyes of his dupes.

Your obedient servant,

A FREE-TRADE FARMER'S SON.

Preston, October 16.

SIR,—Your readers may remember that, at the late election, Mr. Talbot Clifton's principal supporter was a Mr. Townley Parker, a landowner of this division, more renowned for his swaggering demeanour than for any leading mental qualities. Well, a week or so after the election, the annual meeting of the Leyland (North Lancashire) Agricultural Association was held at Leyland; and as these meetings are understood to be a kind of party review, where landlords and their agents may drill the poor farmers into proper discipline, and imbue them with a due sense of the value of parliamentary protection, there was a muster of M.P.'s and would-be M.P.'s, including amongst the former Mr. Talbot Clifton, and amongst the latter, Mr. Townley Parker.

The usual farce was of course gone through of awarding prizes, varying in amount from £1 to £5, to tenant-farmers for cultivating their land properly; and at the conclusion of their report the inspectors let out the following unwelcome piece of criticism:—

"The inspectors have also to state that Mr. Scotson's turnips are the largest in growth that have come under their notice this season, but were sorry to observe many entirely eaten off to the surface of the land by rabbits or hares, which is very discouraging to a tenant, having been eaten away after all the expense and trouble of cultivation."

No sooner was the next toast disposed of than up jumped Mr. Townley Parker, looking unutterable things. I give you a faint outline of his speech as reported in the *Preston Guardian*, but it conveys no idea of his excited manner:—

"Mr. Townley Parker then craved a word for himself. He had heard with great surprise that part of the report in reference to the mischief done by rabbits. He felt that the allusion was personal. (Loud cries of 'No, no.')

He felt that there was the insinuation that he (Mr. Parker) was to blame for it. Now, he detected the sight of a rabbit. His positive orders were that these creatures should not be allowed to exist on a farm. That part of the report was received with applause by the company—a plain reflection upon his conduct as a gentleman. (No, no.) If it pleased God to give him life forty-eight hours, he would inquire into the subject. He would have every rabbit expelled, and would take care that the tenant was remunerated for any loss which he might have sustained." (Loud applause.)

I would just remark here, that, although Mr. Parker very dexterously confines his hatred to rabbits, the turnips were eaten down by hares also according to the authority of the inspectors; and he does not attempt to show that it is less unprofitable to tenant-farmers to keep other people's hares than rabbits. But to the sequel. Mr. Parker did not lose forty-eight hours in sending a land-valuer and agent, one of that class ever ready to toady the squire, to put a valuation upon the damage done to Mr. Scotson's turnips; and how much do you think he has awarded him—guess?—guess again? Why, just 10½d. sterling! It now only remains to be seen whether the inspectors, who certainly evinced a spirit of independence not commonly witnessed at such gatherings, will stand by their report, in the face of the landlord and the obsequious land-agent. Mr. Parker has, I believe, left the society in disgust, expecting, no doubt, that a huge fuss will be made to induce him to return.

Here, in the case of Mr. Scotson, is an epitome of the condition of half the tenantry of the kingdom. His farm belongs to Lord Skelmersdale, who lets the game to Mr. Parker, upon condition that the rabbits be destroyed, but without restriction as to hares. Thus the farmer pays not only his rent, but is at the expense of supporting Mr. Parker's out-door amusements (mainly sports, I believe, they call them), and then this game-preserver and crop-destroyer joins an agricultural association, and gives premiums for the best field of turnips—to be eaten by his rabbits and hares! When will farmers see through such jugglery? Why, factory boys would not submit to be so bamboozled by a person of the calibre of Mr. Townley Parker.

ANTI-HUMBAG.

* There are many other truths told in this Journal to which we must call their attention, e.g., the bad farming caused by tenancy-at-will. Thus, this Mr. Baker mentions that the north-west of Essex is devoured by that most destructive weed *clarkib*, because "the traces are not sufficiently extended to repay the tenant his expense in affording so desirable an object as its extirpation."

ADVANCE OF WAGES, STRIKES, &c.

We have, from time to time, during the last few weeks, given paragraphs from local papers containing accounts of strikes in most of the manufacturing towns for an advance of wages. In almost every instance this demand of the operatives has been successful. How do these facts consort with the miserable fallacy—over and over again repeated with unblushing effrontery—that cheap food and low wages are inevitable concomitants? The manufacturers have been stigmatised as selfish, grasping, grinding capitalists, anxious only for Free Trade as the means of securing cheaper labour. Well! food is as cheap now as it probably would be with the most perfect freedom of exchange. Has this increased the power of the masters or the men? Experience is a stern teacher in most cases. Happily, in this instance, it comes with "healing on its wings," offering plain proof to the most prejudiced of the simple truth that the value of labour depends entirely on the demand for it, and that the consumption of all other commodities, and, consequently, the demand for the labour producing them, is increased just in proportion to the ease with which the first necessities of life can be procured. The following extracts contain additional confirmation of the truth of this principle:—

ASHTON-UNDER-LYNE.—We are glad to state that the cotton-spinners of this town have unanimously agreed to make an advance of five per cent. on the wages paid to the working spinners, both on self-acting and hand mules. —*Manchester Guardian*.

ADVANCE OF WAGES.—Last week, Mr. Richard Pennington, of Hindley, advanced the wages of his mule-spinners 2d. per 1000, which will amount to about 3s. 6d. per week, to be divided between the spinner and his piecers; and Messrs. Farrars, of Wigan, have already given out some gingham warps to their weavers upon the short-length system, deducting nine yards from the length of the piece, and 1s. from the wages. This arrangement seems to have given satisfaction to the weavers employed. Some of the other masters are making preparations to shorten their lengths upon the same system; but others appear not so willing to accede to the proposal.

OLDHAM.—On Friday last the operative spinners in the employment of Mr. James Holladay, of North-street Mills, Oldham, struck for an advance of 1d. per 1000 hanks. No sooner was their master aware of the nature of their demand than he at once acceded to it, and the spinners returned to their work immediately. The spinners of several other establishments in Oldham and the neighbourhood have requested a similar advance, to which it is stated that a number of the firms have readily acceded.

LEIGH.—We are glad to learn that the recent attempt made by one or two of the silk manufacturers in this town and neighbourhood to reduce the wages of their weavers has been abandoned. Several of the most respectable firms having signified their intention of taking no notice whatever of the reduction, and continuing to offer work at the old rates, the efforts of the others were rendered abortive. Great praise is due to those masters who have thus aided the operatives, and their kindness, we are assured, is duly appreciated.

STOCKPORT.—No steps have yet been taken to bring about the threatened turn-out amongst the spinners and self-acting minders. The hands have determined upon another appeal to the masters before that event takes place, and an address to them in favour of the sought-for rise is now in course of circulation.

TURN-OUTS.—The mule spinners and piecers at the "self-actors," at the Messrs. Eckersley's, Mr. Wood's, and Mr. Tipping's mills, Wigan, have turned out for an advance of wages. The power-loom weavers at some of the mills have already given notice, and others were expected to give notice on Saturday.

THE STRIKE OF THROSTLE SPINNERS.—Thomas Tunstall, Samuel Ashurst, and William Blinnton, the three young men brought before the magistrates of Wigan on Monday week, charged with neglect of work at Messrs. Wood's mills, were conveyed to Kirkdale on Wednesday morning for a month. Every means were taken to prevail upon the defendants to go to work, but without effect: they each swore they would not do so without an advance of wages; and consequently the law was allowed to take its course. We understand Messrs. Woods have determined to stop one of the mills entirely, until the hands are better disposed to accept employment. Several other partial strikes have taken place in other mills during the last and the present week.

PORTUGUESE MANUFACTURES.—The exhibition of Portuguese manufactures, now open in Lisbon, according to the confession of those natives who are at all enlightened or candid, and especially of those who have ever been out of the country, gives a very unflattering idea of the progress of native production. The only new things are English inventions, imported on the purchase of the patent right, such as the galvanized iron from Count Parrobo's factory at Ginjal. The only remarkable thing is the illiberal inscription (the newspapers call it "patriotic") over the specimens from the extensive Rosario foundry at Oporto:—"Not one foreigner is employed in this factory!"—*Times*.

STRIKE TO WORK-PEOPLE.—On Monday se'nnight, Mr. Schwann, the eminent merchant of Huddersfield, on the opening of an additional warehouse, gave a grand soiree to the persons in his employ, when tea was provided for upwards of 130 persons, including his men, their wives, and their sweethearts. Mrs. Schwann presided at the head table, accompanied by Mrs. Kell (her mother), Miss Paisley, and some of the younger branches of Mr. Schwann's family. After tea, the evening was spent in the most harmonious manner, and was diversified with dancing, recitations, and glee singing. In the course of the evening, Mr. Schwann gave an excellent address, and dwelt in particular on the harmonious workings of his establishment—the high moral attainments at which he recommended the young persons in his employ to aim—and advised them, to whatever condition they aspired, either in business or otherwise, to become the best, and fix a high standard as the chief aim of their ambition. The address was responded to by three times three hearty cheers. The amusements were kept up until half-past twelve o'clock, after which the national anthem was sung. —*Leeds Mercury*.

REVIEW.

The History of Sweden. Translated from the Original of Anders Fryxell. Edited by Mary Howitt. London: Bentley.

For more than a century, Sweden has ceased to occupy a conspicuous place in the state policy of Europe; and the revolutions of which it has been the theatre have excited little attention beyond the confines of the Baltic. Miss Bremer's delightful portraiture of domestic life in this land of lake and forest has, however, attracted some notice to the circumstances which have moulded and preserved such a national character as that which she describes; and the increasing regard paid to the state of the rural population in England may well justify our feeling and interest in a country where the peasants have played a most important part in determining the destinies of their native land, and where they still hold a distinctive place in the legislature.

For the most part the history of Sweden is rude as its climate and its soil; but its long winter is cheered by a glorious summer dating from the accession of the house of Wasa. The volumes before us do not bring down the narrative to the midsummer of Swedish glory under Gustavus Adolphus, but in the earlier days of comparative darkness we find much that is amusing and not a little that is instructive. As with all the northern nations, the earliest Swedish records are songs and legends, describing the wars and piracies of a bold but barbarous race, whose only virtue was courage, and whose only pleasure was bloodshed. Even ladies exhibited a savage passion for war, and as an example of a Swedish heroine in pagan times we take the account given of Queen Torborg:—

"King Erik had no son, but only one daughter named Torborg. She was more beautiful and wise than most other women. She was clever in all woman's work, as it was fitting she should be, but still more so in what befits a knight, namely in riding, fighting with sword and shield, and many other exploits of that kind which were her chief pleasure and delight. King Erik little liked his daughter having such masculine tastes, and begged her to sit still in her maiden chamber as other Kings' daughters used to do; but she told him, she had good need of these accomplishments, for, when she should inherit the kingdom from her father, it would require her best ability to defend it against foreign enemies. She therefore begged her father to give her at that time some province to govern, that she might accustom herself while he yet lived to rule both land and people. King Erik gave her, in consequence, a third of his kingdom, as well as an estate royal called Ulleraker, in Upland, and also many a stout and bold man to be her champions. Torborg then set out for Ulleraker, and held her court there with much might and wisdom; but she never could endure to hear that she was a woman, dressing herself in men's clothes, and ordering her men to call her King Torborg. Those who came here to court her were driven away with laughter and mockery, or, if those did not suffice, with lance and spear."

King Rolf courted this formidable heroine in her own way; he levied war against her, and won her hand by the sword. The termination of such a singular style of courtship is thus dramatically told:—

"Rolf called to Kettil, and bade him take Torborg prisoner, but not to wound her, as it would be shameful to use arms against a woman. Kettil was now so near her that he gave her a blow with the flat of his sword along the thigh, dropping at the same time some rude and contemptuous words; but Torborg gave him with her battle-axe so hard a blow on the ear, that Kettil fell with his heels in the air, and she called to him, 'Thus we punish our dogs when they bark too loud.' Kettil leapt to his feet again wanting to revenge himself, but in the same moment Rolf came up, grasped Torborg across the arms, and so she was obliged to surrender herself to his power; but Rolf only desired that she would permit her father to be judge in this matter. She therefore accompanied him back to Upsala, and laid down her arms at King Erik's feet, who was greatly delighted at this change. Shortly after her marriage with King Rolf was celebrated, and held in the most honourable manner, so that every man was invited to it, and the festivities lasted fourteen days, after which they all parted, and every one returned home to his own place. King Rolf and Queen Torborg lived long and happily together."

Even in the heathen age we find the Swedish peasants occupying an important position in the *Tings*, or national councils. Torigny, one of this order, compelled his Sovereign to make peace with the King of Norway, and even to give him his daughter in marriage as a pledge of amity. Part of the speech delivered by the bold peasant on this occasion deserves to be noticed as an example of the liberty allowed in the national assemblies:—

"Swedish Kings are different in character now to what they were in former times. My grandfather, Torigny, could well remember Erik Emundson, and related of him how in his earliest years he went in arms each summer round divers lands, subduing Finland, Kyrieland, Estonia, Courland, and many other countries to the eastward, and how the fortresses and other great works he had made could yet be seen. But he was not, however, so proud but that he could endure the words of those who had matters of moment to lay before him. My father, Torigny, was a long time with King Björn, and knew his mode of living well. King Björn's kingdom stood also during his whole lifetime with great might and strength, and without any deficiency, for he was friendly towards all his men. I have also a good memory of King Erik Segerdill, and have been with him on many expeditions. He increased the kingdom of Sweden, and defended it mightily; and yet it was easy for us to discourse and take counsel with him. But this King, whom we now have, will not permit any one to speak with him on anything but what he

himself chooses and intends with all energy to pursue. His tributaries, through feebleness and unworthiness, he permits to escape him. Nevertheless he chooses to retain the kingdom of Norway under his dominion, which no King in Sweden has ever before pretended to do; for which cause many sit in disquietude. Now it is our, the peasants' will, that thou King Olof make peace with Olof Tjocke, the King of Norway; and that thou give him thy daughter Ingegerd to wife. And if thou shouldst wish to reconquer the countries to the east which thy friends and forefathers possessed, we will all accompany thee for that end. But if thou wilt not agree to that which we now speak, we will fall upon and kill thee, and on no account longer endure disorder and dispeace. So have our forefathers done, who at Mulating threw five Kings into a well who were puffed up with pride and vanity as thou now art. Say now immediately which of the two thou wilt accept?" The people on this made much uproar and clashing of arms; but the King arose and said, that he would give way to the will of the peasants as all the Kings of Sweden had done before him. Then the uproar ceased, and the chiefs went together and concluded peace with the Norwegian Ambassadors on the conditions which Olof Haraldson had proposed, so that the Princess Ingegerd was then promised to him."

Birger Jarl appears to have been the first great lawgiver of Sweden after the introduction of Christianity. The following may serve to illustrate the state of society which he undertook to reform:—

"He assured the quiet of the land by his four Laws for Peace, namely: for the Peace of the Church, Women, House, and Assize; Kyrkofrid, Qwinnofrid, Hemfrid, and Tingsfrid."

"He ordained that none should assault another, either in the church or in the churchyard, or even on the road to or from the church. Whoever broke this ordinance was declared outlawed; and, should he even be slain by the wronged party, was to be unavenged. This was called Kyrkofrid,* or Church Peace. At this time the custom was adopted of unarming before entering church. The arms were kept during service in an outhouse built for the purpose, which is to this day called the Weapon House."

"It was also a universal custom throughout the North, in courtship, not only not to regard the bride's consent, but even not to consult her parents. Armed with sword and helmet, and accompanied by his brave companions in arms, the lover often presented himself, and, if by fair words he could not succeed, he carried off the lady by force; in which skirmish her fathers and brothers were often killed, and she constrained to marry a man whom she hated, who had murdered her nearest relatives, and in the most shameful manner treated herself. It was therefore not an uncommon occurrence that she revenged herself at the first fitting opportunity, even if she waited for it for years. Sometimes she murdered her husband, or in other cases their common children, to make the father's sorrow and her own revenge the greater. Such rapes took place, especially when an affianced couple were travelling to the church, or to a priest to be married. The rejected lover often laid himself in ambush with his friends by the road, fell on the bridal party, slew the bridegroom, and carried off the bride. For this reason some stout youths were always appointed to protect the bride on these journeys."

who received in consequence the title of bride-men, or bride servants. Birger Jarl caused a law to be published, that none should in this way disturb, or carry off a woman by force, without incurring the same punishment which he had before awarded for the breach of the law regarding the Peace of the Church (Kyrkofrid). This was called Peace of Women (Qwinnofrid).

"For the establishment of general personal security, he forbid, under the same penalty, the attacking any man, his wife, children, or servants, within his own house, or even the enclosure of his property. This was called Home Peace, or House Peace."

"He finally forbade in like manner all violence offered to those who were on the road to a *Ting*, or at the *Ting* itself. This was called Tingsfrid."

The history of Sweden under the Folkungar dynasty is a melancholy and wearisome repetition of domestic treachery, fratricide, parricide, and civil war. Their race, like that of the Plantagenets, finally became extinct; but "The evil that men do lives after them," and distractions did not cease until Denmark, Norway, and Sweden were united under one head by the Union of Calmar. Under the Danish Kings, Sweden was treated as a conquered province, and the many patriotic efforts made to assert the ancient franchises of the kingdom were defeated by the unwillingness of the nobles to act in concert with the peasants. Engelbrecht, who may be regarded as the Sir William Wallace of Sweden, was murdered by a noble; and the leader of the patriotic section of the patriots, Karl Knutsson, became an accessory, at least after the fact:—

"Karl Knutsson, by the death of Engelbrecht, was freed from a dangerous rival in supreme power, and seemed therefore not to disapprove of Mans Bengtsson's deed, even publishing an ordination throughout the kingdom that none should venture to attack or even to blame him for this matter. But he did not remain unpunished. He soon felt the bitterest remorse for his crime, and in his despair would have killed himself had he not been prevented. As he had suffered himself to be seduced by the Danes to this action, he and his son bore them an immeasurable hatred, never enduring to hear them mentioned. But all his repentance could not serve to obliterate his crime; the people looked on Mans Bengtsson with inveterate suspicion, and thought, in the misfortunes and misdeeds which afterwards overtook his family, that they read the vengeance of Heaven for the innocent blood he had shed. It is related that the ghost of Mans Bengtsson's mother, who through avarice, it is said, incited her son to the crime, is at night occasionally heard to sigh and lament in the closed vaults under Göksholm's old towers. The island is called Engelbrecht's Holm to this day; and the old people show the stunted grass burnt by the sun in the

* As, in these disquiet times, merchants had no security from violence in any other spot, they struck their booths by the churches, whence arose the first places for markets and commerce."

sand, saying that no green thing can thrive on the cursed earth which drank the innocent blood of Engelbrecht Engelbrechtsson."

The deliverance of Sweden by Gustavus Wasa, and the re-establishment of its independence as a nation, have been too often narrated to require repetition. There is a striking resemblance between the adventures of Gustavus Wasa and those of Robert Bruce. But the Swedish Monarch was a religious reformer as well as a political renovator; his energetic measures enabled him to overthrow the whole Romish hierarchy in less time than would be occupied in fixing the course of a turnpike road. The establishment of Lutheranism in Sweden dates from the diet of Westerås:—

"The Diet of Westerås did not last very long; scarcely eight days past ere it was closed; but never, at any Diet, has more been executed; never have any resolutions brought about a more complete change. The whole tremendous power of Popery in all its members was crushed. Deprived of their riches, their privileges, their great consideration, they were open to the continual and often unjust exactions of the crown and the nobility, to the attacks of the Lutheran priests, and left without power to protect themselves from the encroachments of enemies on every side. The Crown of Sweden, which before had been utterly impoverished and unable to pay the half of its expenses, became rich at once; the King formerly, in most respects, forced to act according to the will of the bishops and the clergy, now acquired a much wider rule."

the peasants felt a great alleviation in their taxes; but the nobility gained the most, for countless estates were redeemed or resumed from churches and convents. Gustavus, himself descended from the chiefest and wealthiest families, did not in this respect curtail ought from his own privileges, but received large property, which has since been known by the name of the Gustavian entail. It often happened afterwards that the nobles appropriated by force fields and possessions of the Church; in such cases, however, they soon perceived that they had in Gustavus both a strict and observant master. 'Ye good men,' he wrote to them on receiving information of such violence, 'are willing to pass for the heirs of much land and property to which you have little right. Were it now permitted to every one to help himself as he pleased, and appropriate property without reason, birth, or proof, we might also play the same trick, which we have not, however, done. So must you also, good men, not conduct yourselves as if there were neither authority, law, nor right in the land.'"

The peasants of Dalecarlia, by whose aid Wasa had obtained the crown, revolted against the changes introduced by the Reformation. In the interview between the King and the insurgent leaders there is an amusing contrast between his adroitness and their simplicity:—

"The King answered them with the utmost moderation, refuting and explaining every point. The peasants, for instance, complained of the new doctrines, and 'that the King and his Court went upon Fridays.' The King answered, 'that the peasants should not trouble themselves about such matters as they did not in the least understand.' The peasants complained 'that times were dear;' the King answered, 'that such were beyond his power to help.' The peasants complained 'that scalloped and slashed clothes were worn;' the King answered, 'that he had compelled none to do so; but he did not choose that they should dictate to him how he was to dress his courtiers; he might follow the customs of other princes if he pleased.' With such replies, most often serious and instructive, but sometimes pleasant, they were obliged this time to content themselves."

As the Romish clergy had the support of the people, Gustavus allied himself with the nobles, whose concurrence in his schemes he secured by giving them large grants of the lands wrested from the Church. In this course he adopted the policy of Henry VIII. and Queen Elizabeth, who raised up a new aristocracy in England, identified with the Protestant cause, for the cogent reason that their estates were derived from the plunder of the Romish Church, and the forfeited lands of its adherents. In Sweden the nobles exercised their new power with so much severity that they provoked insurrections, which embittered the reign of Gustavus, and brought down his gray hairs with sorrow to the grave. In the subsequent reigns the Swedish aristocracy reduced royalty to a mere shadow; but we must wait for the completion of the translation before we investigate fully the effect which political revolution, combined with religious change, produced on the fortunes of Sweden.

What does "Hamlet" mean? A Lecture by T. Wade, Esq. British Press, Jersey.

"Hamlet," says Mr. Wade, "is a visible incarnation of the unseen human soul bowed down beneath the weight of the burden of the mystery of the universe." He supports this theory by a very clever analysis of the prince's dramatic character, which will be found instructive even when it fails to convince. "The dread of something after death" is, in Mr. Wade's view, the clue to the vacillation and indecision which Hamlet exhibits in avenging his father's death, though he had bound himself to the task as the great object of his existence. We rather think that the great dramatist intended to show the ruin which infinity of purpose, arising from over-reflection in speculation, brings upon noble minds.

"The dream of love
Doth all the noble substance often doubt
To his own scandal."

Hamlet's weakness is evinced in his love to Ophelia,

which we, differing from Mr. Wade, regard as sincere. He hesitates to confirm his vows from a dread of consequences which are purely creatures of his imagination, and he throws away the best opportunity of revenge because he finds the murderer praying. He wants energy of will to execute the purposes which his intellect has framed.

We have countless examples before us of men of high intellect imperfectly fulfilling, or utterly neglecting, recognised duty, from this habit of refining on consequences. Many of those who call themselves "Free-Traders in the abstract" belong to this class: they see the impolicy and iniquity of restrictions on commerce, they recognise the national blessings that would result from the emancipation of industry, but when the period for action arrives they stop short to split ideal straws and decide on hairbreadth distinctions, until all their energies are wasted in speculation. A great man is required not only "to be" but "to do": he must ever dread

"some craven scruple
Of thinking too precisely on the event—
A thought which quarter'd hath but one part wisdom
And ever three parts coward."

The tragedy of "Hamlet" appears to us a philosophic exposition of such infirmity of purpose: his death is the sheer result of weakness and indecision. We scarcely lament his death, because in his life he had abandoned the aim of his existence. In political life there have been unfortunately too many *Hamlets*, men of high purpose, but deficient in resolution to burst through conventional trammels: they suffered the necessary consequence of their timidity; like Gulliver chained down by the Lilliputians, they were held fast by the combinations of little men, and were the slaves of those whom they despised. We have been pleased with Mr. Wade's lecture: it is an elegant specimen of æsthetic criticism, and, though we differ from his views, we suspect that a little explanation would show that the discrepancy is not of great magnitude.

COTTON TWIST.—The orders for cotton twist to the Continent, *via* Hamburg, from this port, cause the demand to be greater than the supplies can, at present, be obtained from the manufacturing districts. The insufficiency this week from Manchester caused the Hanseatic steam ship *Leeds* to proceed considerably short of the freight engaged.—*Hull Packet*.

THE SCHOOLMASTER.—Nothing is more deplorable than the state of education (speaking generally) of the schoolmasters who affect or pretend to teach the people. No system of education, no efforts for education, can be of much value until we shall have masters who shall be able to combine the improvement of the moral and religious knowledge of their pupils, as well as of their manners, with the general education they may impart. If their art of carrying on the discipline of the school and in the management of young people shall be such as to enable them to do this, then we may trust that they will be able to give them an education which may make them good men and good subjects. No pains that can be taken are too much in this matter. I wish I could say the business of a schoolmaster could be truly called a profession. I wish that the middle and lower classes of the people in this country could see in the situation of the schoolmaster a situation to which they might hope to arrive, and which would not only afford them a decent livelihood, but raise them in the scale of society to a station which the important trust reposed in their hands seems to require. This must be done by degrees; and yet, perhaps, there is no object more important.—*Lord Wharncliffe's Speech on Education*.

THE LEVIATHAN TELESCOPE.—The most striking and popular communication made at the late meeting of the British Association for the Advancement of Science was the account given by the Earl of Rosse of the construction of his great reflecting telescope. Nothing could be more engaging than the noble simplicity and openness, and the lucid plainness, with which the Earl described the course of his seventeen or eighteen years of experiments, which were only brought to a successful conclusion a few days before this meeting. This is by far the largest and most powerful telescope ever constructed, and will conduct us further into the regions of space. The focal length of the instrument is not less than fifty-three feet, and the diameter of its disc or speculum six feet; the weight of the metal disc is three tons fifteen cwt. To cast such a disc without fracture or flaw was a work of extreme difficulty, and occupied years of labour; then to polish it, and reduce it to the perfect parabolic form, was scarcely less difficult. The Earl explained the causes which led to failure after failure, and the contrivances by which they were remedied. The experiments were all conducted by himself, and by workmen of his own training; and they were carried on, not in the foundries of London, Birmingham, or Manchester, but in works of his own formation in a remote part of Ireland. The mere erection of so ponderous an instrument, weighing, with the tube and fittings, about twelve tons, was an arduous work. It is fixed to the ground at one end, and moves upon a joint, and it is so counterpoised that one man can manage it with ease and quickness. It stands between two lofty walls, and is made to command the whole meridian, from ten degrees above the horizon on the south, to below the pole on the north. It will not traverse more than to allow of observing an object for an hour as it passes the meridian; but this is sufficient for the most important astronomical observations. A series of moveable galleries command the eye-hole of the telescope at every elevation. The Earl stated that he had observed one nebula, which by the high magnifying powers of the telescope was separated into stars equal in brightness to stars of the first magnitude. The explanations of the noble savant, which were illustrated by models of the telescope and polishing apparatus, were received with the highest admiration by a crowded audience.

AGRICULTURE.

REPEAL OF THE MALT-TAX—A MONOPOLIST DIVERSION.

No one can read the sayings, or watch the doings, of the monopolist landlords, without observing that the present distressed condition of agriculture has driven them to their last shifts. They know not where to look for a plausible defence of the Corn Laws. Their old delusions are worn threadbare; even the farmers see through them, and grumble at their high rents. Even those farmers who aided the landlords in their late dodge of "Protection Societies" have entered into an active agitation against the game laws, and cry out for leases, with rational covenants and corn-rents. Semi-feudal landlordism trembles. Rents are in imminent danger; and there seems a fair chance that, if landowners are to maintain their present incomes, they must bring their commodity—land—fairly into the world's market. They will soon be reduced to let their farms for what they are really worth, and no more. Then will they speedily abandon their burdensome restrictions. High rents will no longer be to be wrung from the capital of farmers, or from the pockets of their creditors or their friends. Half the pleasure of owning land must be abandoned for the sake of retaining its profit. Against this consummation the monopolists are struggling to the uttermost; and all their stale fallacies having not only been thoroughly refuted in argument by the advocates of Free Trade, but rendered untenable by the course of the seasons, some new topic of delusion has become necessary to divert the farmers from an accurate examination of their own condition. Even the usual injunctions to farmers to drain their land, and employ a full complement of labourers, lead to the unpleasant question of "where is the money to come from, when the landlords have sacked our capital in the shape of rent?"

Those who have watched the windings and doublings of the monopolists will be fully prepared for some fresh "grievance;" some new call for extraneous aid to help the "farmers" through their present difficulties, anything, in fact, short of the real and only solution of all their difficulties, namely, a release from the trammels of "protection." This grievance has been found in the malt-tax. Sing hole-and-corner meetings have been held here and there for the purpose of memorialising the Lords of the Treasury to propose a repeal of the malt-tax. We have observed one memorial proceeding from "a meeting of agriculturists," held at the Star Hotel, Maidstone, at which "several of the leading owners and occupiers of land in the neighbourhood were present;" another from "the undersigned owners and occupiers of land, and other inhabitants, of the neighbourhood of Alresford, in Hampshire," appears in last Monday's *Mark-lane Express*.

These documents have a strong family likeness, which bears evidence that they have issued from the same parental pen; and the first paragraph is, undoubtedly, a bold use of language. The memorialists—in the east and the west—say, "that they have long seen with great concern the privations of the labouring classes, occasioned by the high duty on malt, which deprives them of that good old English beverage—good wholesome beer—so necessary to their health, strength, and happiness, and which, being the production of their native soil, is as much their birthright as their bread." Now, one scarcely knows which to admire most, the audacity or the hypocrisy of this paragraph. The malt duty is a heavy one, and certainly increases the price, thereby lessening the consumption of beer; but the effect of repealing the malt duty, so long as any restriction upon the importation of foreign barley is permitted to exist, would be simply to transfer the amount of that duty from the public Treasury to the pockets of the owners of barley land. Not an atom of benefit would be derived by the farmer from a repeal of the malt-tax, not a single extra glass of beer would the underpaid and half-employed agricultural labourer obtain; but some increase of consumption in towns and amongst the middle classes might enhance the price of barley for the benefit of the landowners. This is merely a scheme to avoid the reduction of rents. The object of the monopolists is to keep barley up to the monopolist standard at the expense of the revenue, which is at the expense of the industrious classes, from whom seventeen-twentieths of the revenue are derived. The present high price of barley is merely accidental from the partial failure of that grain from the drought. Farmers have at present little barley to sell; the monopolist move is, therefore, made in anticipation of a productive barley crop next year; or perhaps more especially to divert the farmers from awkward inquiries into the actual operation of the Corn Laws.

Fancy the concern of the memorialists for the "privations of the labouring classes" in the matter of beer, while they are banded together to subject those classes to privations in the article of bread! The Hampshire memorial is stated to have been "unanimously passed" at the *Alresford Agricultural Protection Society*, and the Kentish one obviously

proceeded from a similar clique of monopolists; while both probably owe their existence to the suggestions of the "Central Protection Society." Various speakers at the different agricultural associations have admitted—though with other objects—that where labourers are in employment their wages at this moment give them an unusual command over the necessities of life from the low prices of food, and we have repeatedly shown that it is to the operation of the Corn Laws alone. What, then, must be said of the honesty of those who pretend to desire to cheapen the beverage of the farm-labourer while they uphold a law to make his food dear and his employment precarious?

But there is a certain test by which the sincerity of their desire to cheapen even his beer may be tried; will they repeal the restrictions on the importation of foreign barley? That, just now, would do more to give the labourer "good-wholesome beer" than the repeal of the malt-tax. But what of the monopoly rents for land?

Nor do the monopolists who have cast this tub to the farmers expect or intend that the whole bearings of the subject of the malt-tax shall be thoroughly discussed, else why memorialize the Lords of the Treasury? Let them moot the question in Parliament; let them give the Free-Traders an opportunity of bringing all the facts before the public and the farmers, and let them see how Peel and Gladstone will be compelled—in theory—at all events—to deal with the proposition. Let them venture to use this argument of the memorial even in the monopolist House of Commons:—

"That the farmers are prevented from growing and malting barley for their labourers, by having to pay so heavy a tax, amounting to nearly 100 per cent. on the barley so malted, and that the labourer has the mortification to see the barley produced by his industry consumed by animals, and himself and family compelled to drink water!"

Malting barley for their labourers! We do not believe the repeal of the malt duty would cause ten quarters of malt to be made in all the farm-houses for domestic consumption. Then, again, what must be the labourer's mortification at seeing the wheat "produced by his industry" sold at a price which precludes him from purchasing a sufficiency of bread. Throughout the agricultural districts the chief food of the peasantry consists of potatoes, an esculent which alone saves thousands of them from absolute starvation. We do not believe that many farmers will be so silly as to be led astray by this malt-tax repeal diversion; but they should look at the quarter from which it proceeds, and examine the hollow pretences by which it is supported.

If the originators of the dodge had been doubtful, a meeting of the Farmers' Club in Bridge-street, Blackfriars, where Mr. Baker of Writtle, the landlords' chief tool in the protection societies' farce, was an active agent in procuring a resolution in nearly the terms of the memorial, would set that doubt at rest. At this meeting, we are told, "resolutions were passed, pledging the meeting to adopt the necessary proceedings to procure the abolition of the duty in the next session of Parliament." This is the old cry. The farmers are distressed from low prices and monopoly rents, and the monopolists say, "We will get Parliament to do something for you." The Central Protection Society must have great faith in the gullibility of the farmers if they think this old story will go down now; or perhaps the noble president, the Duke of Richmond, has another brother ambitious of serving the public; and such a resolution may serve the double purpose of a bait to gaping monopoly-deluded farmers, and a trial of Sir Robert Peel's nerves. The shallow and false assumptions of the monopolists in regard to the malt-tax only require to be observed to be treated with scorn and derision.

THE DORSETSHIRE LABOURERS.

THE VALUE OF AGITATION.

The agitation and exposures with respect to the state of the Dorsetshire peasantry which occurred last year are evidently producing some—though we fear but slight—effect upon the aristocratic monopolists of that unhappy county. At the late *Dorchester Agricultural Association*, Mr. R. B. Sheridan again pressed the subject upon a somewhat reluctant and most uneasy audience of squires and clergymen. For instance, take the following passage from the report of the local paper:—

"He felt, and he thought every gentleman present must feel, deep interest in the condition of the agricultural labourer of this country—interest in his physical wants and moral improvement. ('Hear, hear,' and some disapprobation.) If such were not among the objects of the society, they would not, as they had heard from his reverend friend (Mr. Lane) have the countenance and support of the clergy ('hear,' from the clergymen present); and he might say, for many of the landlords, that they would not belong to the society if the encouragement and employment of labourers, and the improvement of their condition, were not among its prominent objects. For himself, he wished it to be carried further than it was, and that rewards should be given for the best allotments, and cottages, and gardens."

Mr. Sheridan then proceeded to give his reasons for making the disclosures of last year, and asserted the truth and reality of the misery thus brought before the

world. He was much interrupted by a Mr. Phelps, who constantly wanted particular persons and places to be mentioned; but this was without the intended effect of stopping Mr. Sheridan, who said:—

"He knew that some had censured him for the part he had taken in this question—that many had misunderstood him, and some had misrepresented him ('hear, hear,' and partial dissent); but although he might have incurred odium, although he might have lost popularity, it was to him a source of the highest satisfaction to know that much good had arisen from the discussions upon the question—that public opinion, the best redresser of grievances, had been brought to bear on the subject; that many had given it their consideration who never thought of it before; that the dwellings of the poor very generally throughout the county had been repaired, and the wants of the inmates had received more attention. He felt every day the advantages which had been derived from the published statements of his friend Mr. Osborne, as well as from the accusations made by himself and others—which even at that moment he was prepared to maintain—that the dwellings of the poor in many parts of this county were filthy, loathsome, ill-ventilated, and over-crowded, and the wages of labour disgracefully low and quite insufficient to support the labourer and his family in decency and comfort. ('Name, name,' from Mr. Phelps and others, and much sensation.) If he were asked for a case, he might refer to Mr. Austin's report to the Rev. Mr. Osborne, and to the statements which had appeared in the county paper; but it was well known that in some parts the wages were not sufficient for the maintenance of the labourer. He did not say where the fault was—he was not about to lay all the blame of this to the tenants (hear, hear); and he felt certain that they—he meant the landlords—had much to answer for regarding the state of the labourers in this county (cheers from the farmers): the landlords had to answer for the state of the labourers' dwellings, and for the inadequate accommodation afforded to those who were tied and bound to a particular locality, as also for the immoral consequences arising therefrom."

He attributed much of this to the ignorance and indifference of the landowners, who know but little of the real state of even their own properties, and in illustration mentioned the case of a man he had discovered upon his own estate. He said:—

"He had been called upon to name parties and parishes: he was not going to shrink from naming in this case or in any other where he deemed it necessary. (Hear.) The name of the poor man is George Stickland, he belongs to the parish of Litton, and is living nine miles from my residence. He has a wife and six children, five boys and one girl, the eldest is sixteen years of age and the girl eleven; they are living in one of those dilapidated poor-houses, and occupy one room, in which there are only two beds. Now, perhaps they would require to know upon whose property this wretched man had been employed. He told it to them with shame and regret, that he (Mr. Sheridan) was the landlord upon whose property George Stickland had been employed. (Much surprise.) He had not been aware, until he had visited this outlying farm, that such a case or anything like it existed in any parish where he had the good fortune to possess property. He was prepared to explain and defend himself from the charge of neglect and indifference which they were justified in bringing against him; but then it would be at the expense of others, and he would forbear from defending himself in this instance. He was prepared to bear the blame himself, provided similar instances of misery and neglect, which no doubt existed elsewhere, were removed, and the attention of the county called to the subject. He had brought forward the case in order to prove that (however good the intentions of a landed proprietor might be) by ignorance and neglect much and distressing misery might exist on his property. The state of the labouring poor required the constant and earnest attention of the landlords. It ought not to be left altogether to agents or to chance. But he would ask the gentleman who had interrupted him, if Litton was the only parish where such cases of misery existed, or whether he was the only landlord unacquainted with the condition of the labourer and the state of the cottages on his property? He believed there were many other such cases, of which the landlords were utterly ignorant. He feared that non-residence, indifference, neglect, and a desire to improve property, as it was called, which, in other words, was pulling down cottages to prevent the increase of population in a parish, were the causes of much of the misery which existed in the county."

This is to the point. So long as landowners can enjoy their rents without trouble or annoyance, they care very little for their tenantry or the labourers; and it is notorious that those agents who keep up the rental and make the smallest allowances and outlays are most in favour with the great body of landed proprietors. This is particularly the case in the western and south-western counties of England. Now, there is some danger of a mass of agricultural labourers being thrown upon the poor's rate, which will seriously affect rents, and we find the landowners everywhere full of the most anxious desire to better the condition of the hitherto-neglected peasantry.

After some further observations on the causes of the wretched condition of the Dorsetshire labourers, Mr. Sheridan said:—

"Something must be done. (Hear, hear.) He had heard it said, that everything should be left to individual exertion! Why, everything had been left to individual exertion until last year, and what had been the result? Had not an officer of Government, Mr. Austin, come down and shown in his published report that the habitations of the poor in many parts of this county were unfit for human creatures, and that the wages of labour were insufficient for the support of the labourer and his family? Then, he feared, would have remained in the same wretched state if they had been left entirely to individual exertion. Then, again, it had been asked of him—show what single advantage has been gained by the discussion of this subject? If their excellent report for this year, whose absence on this occasion was much to be regretted, had been present, he should have asked him that question; it was reported that he

was of opinion that the dreadful scenes which had disgraced the counties of Suffolk had been prevented taking place in this county in consequence of these very discussions—but if he (Mr. Sheridan) was asked for a reply to the question, he should say that he had seen the allotment system established in five or six different parishes in his neighbourhood; he had seen cottages repaired in many parts of the neighbourhood, which, if it had not been for the discussion on the subject, would probably have been left in the same neglected state as they were when intrusted to the tender mercies of individual exertion. He could also bear testimony to another advantage: the labourer had been made aware that there was a feeling abroad which sympathised with his situation, and was prepared to ease the burdens he had to bear. Let him not be disappointed. His hopes had been raised, let them not be crushed—they should not be left long to decide: by other hands and by other means would the task be undertaken."

It is plain the landowners, as a body, will do nothing for the improvement of their own particular localities, except under compulsion; and that, so long as they can keep up any delusion for the purpose of avoiding the performance of the "duties of property," they will do so. That they will improve the condition of the labourer, that they can do so if they really wish it, until the removal of all restrictions on the trade in corn, is mere illusion. But once let the farming business be freed from its protective laws and semi-feudal customs, and we shall see even backward and aristocratic Dorsetshire become the field of agricultural improvements, the Blackmore Vale drained and well cultivated, and the bleak hills planted and rendered productive by high farming. Thus, and thus only, can the general condition of the agricultural labourers be advanced. And let us here note the fact that the attendance of the landlords at this meeting was small, the chairman observing:—

"He was much pleased to see the number of yeomanry present; but although this was not a meeting when they expected to have a large array of the aristocracy among them, he had hoped that some of the landed gentry and clergy of the district would have honoured them with their presence. However, he believed that, although many of the class to which he had alluded were absent, their hearts were with them, and they were desirous of seeing the beneficial effects of the society fully carried out; at the same time, he could not help hinting that the state of the funds were not in that situation in which they ought to be, to enable the society to effect its objects."

Wheresoever anything really useful is said at any of these meetings, it is certain to occur at an association not much patronised by the landed aristocracy. They go only where they are certain to meet with servility; but where the meeting is likely to contain some plain-spoken and independent men, who dare to declare the real state and requirements of husbandry, they shrink from the contact. Yet these be thy legislators, oh Englishmen!!

MONOPOLIST PROTECTORS AND PRACTICAL CHARITY.—A CONTRAST.

A few weeks ago that arch monopolist the Duke of Buckingham, when presiding at the Royal Bucks Agricultural Association, in the town of BUCKINGHAM, having, as is usual at these gatherings, dilated upon the benefits conferred upon the labourers by such societies, said:—

"It must gladden the heart of any man possessing a spark of true feeling to see so many worthy labourers come to receive the reward of their honesty and exertion—to see a tribute paid to humble worth—to see the aged receive honourable favour—to see the lowly made glad and the poor made happy. 'I am perfectly persuaded,' said his Grace, 'that such a society as this is of infinite benefit: it is the root from which nothing but what is goodly will spring—it is the encouragement calculated to bring forth blessings in which every Englishman must participate.' His Grace then compared the state of this county to that of others."

If the rewarded few of the Bucks agricultural labourers are really made "glad" and "happy," we should not think such associations altogether useless; but we believe that the sense of abasement which is excited in the minds of those labourers who actually receive prizes and rewards, by the manner of their bestowment, more than counterbalances any pleasurable or grateful feelings they may entertain. But the monopolist Duke does not stop there. He is so incautious as to go on from the "glad and happy" labourers who received prizes to the labourers in general. The happy are the recipients of such splendid rewards as these:—

"First prize of £4 to Thomas Knight, of Hogston, having had 13 children born to him in lawful wedlock, 12 of whom he has brought up without parochial relief. Second prize of £3. 10s. to John Norwood, of Bilton, having had eight children born to him in lawful wedlock, seven of whom he has brought up without parochial relief."

And that upon Buckinghamshire wages of 7s. a week!! Truly do Thomas Knight and John Norwood deserve to be rewarded for their plucking frugality; but what do those landed monopolists who, by their law to keep up rents, have reduced Thomas Knight, John Norwood, and the rest of their order, to such starvation wages, deserve? But we have said the Duke was incautious when he compared the state of the Buckinghamshire peasantry with that of the labourers in other counties; for mark the following report of a judicial proceeding in which some of the "happy Buckinghamshire labourers" bore a too conspicuous part:—

"BUCKINGHAM.—On Saturday last, three labourers from the parish of Steeple Claydon were brought before the magistrates by Mr. Samuel King, the relieving-officer,

and by order of the board of guardians, for leaving their wives and families chargeable to that parish. It appeared that these men had no employment at Steeple Claydon; that they had always been in the habit of leaving the parish to get hay work in the neighbourhood of London, and, in former years, have made their families comfortable by their hard, but well-paid, work. Owing to the short crops, they had wandered many a weary mile seeking work; but finding none, they were obliged to beg for food, as did hundreds more: they were ashamed to return, because they were in such a state of filth as to be unfit to join their families. When the corn harvest came on, they did get some work, and returned with about 30s. each. This was expended in paying the debts due by their wives during their absence; but they did not pay the parish! The parish, therefore, brought them before the magistrates, that their evil example should not spread amongst those exemplary labourers who stopped at home rather than even seek for work out of the hearing of their own church bells, and they were actually ordered each—one month's hard labour!! because they could not pay, each of them, some shillings less than £2, which had been given in bread during their eight weeks' absence. The gaoler had them down to Buckingham gaol, with orders to take them to Aylesbury! On Sir Harry Verney coming into the chamber, their case was talked over by the justices, all of whom saw the hardship of the case; but example! example!! was the word, both by relieving-officer and poor-law guardian! At length it was settled by Sir Harry proffering to employ them at 9s. per week, they agreeing to pay therefrom 1s. 6d. each until the enormous debt due to the parish of Steeple Claydon was duly settled. The appeal of these poor men to the bench, stating the privations and hardships they endured, and all for a praiseworthy purpose, was heartrending. No circumstance ever occurred which more fully depicted the state of the farm-labourers, and no scene more pleasing than the grateful thanks of those men to Sir Harry for his liberal proposal."—Aylesbury News.

Comment on this paragraph is unnecessary; temperate comment would be impossible. Let us note, however, that the Good Samaritan, who in this case stepped forward to enable these "protected" Buckingham labourers to save themselves from the shame and the horror of a gaol by means of their own labour, was Sir Harry Verney, a Buckinghamshire landowner, who has avowed his conviction that the Corn Laws form the great obstacle to improvements in husbandry and the regular employment of the rural population.

DESTRUCTION BY GAME.

At the Waltham Agricultural Society (Leicestershire), Mr. T. C. Beasley, of whose husbandry the Duke of Rutland, the chairman, said, "he had often had the pleasure of looking over his hedge, not with any rapacious intention, but with a view of learning something from his well-known system of good farming," made the following remarks on the destruction of crops by game. He said:—

"That some estates he had seen were a disgrace to the proprietors: he had recently looked in one field as many as 83 hares; and to keep these was equivalent to the support of 23 sheep; for his part, he would not keep them for any landlord in existence; and he would ask whether it was common honesty to expect any man to keep that quantity of game for their landlords?"

Now, here is a practical lesson by which the noble chairman and his fellow-landlords might learn something more than they are likely to do by looking over the farmers' hedges; but no sign was given that it produced any effect, for draining and spade husbandry formed the topics of the Duke's next speech.

SALE OF EARL DUCIE'S STOCK, &c.—On Wednesday week the annual sale of Lord Ducie's superfluous stock took place at Tortworth Court. The prices realized were extremely low, especially for lean cattle and sheep; and the sale of wool was far from brisk, the finest samples not fetching more than 31s. per tod. Some very excellent bull calves fetched corresponding prices; but, upon the whole, the sale was exceedingly flat.—Gloucester Chronicle.

FRENCH SUGAR.—The *Moniteur* contains the returns of the produce and consumption of domestic sugar in France, from which it appears that on the 1st of September last there were still 325 manufactories in operation, or 59 less than at the corresponding period of 1843. The quantity of sugar manufactured during the season, including 3,871,314 kilogrammes lying over from last year, was 32,531,313 kilogrammes, of which 30,091,161 had been sold for consumption. The duty levied thereon produced 5,443,490fr.

COTTON v. LINEN.—The manufactures of cambrics and lawns, formerly so flourishing in the rural districts between Valenciennes and Cambrai, and which for a long series of years ennobled the merchants of those two cities, are declining from day to day. The linen manufactures are almost superseded everywhere by those of cotton. At the commencement of the restoration 350,000 pieces of cambric were manufactured every year. At present not more than 90,000 pieces are manufactured, the value of which is about 3,000,000 francs.

INFLUENCE OF THE PRICE OF FOOD ON WAGES.—"Cheap food," say the monopolists, "means low wages." Such is the assertion; but what are the facts bearing upon it? Why, just these—that, as food has risen in price, wages in the manufacturing districts have fallen;—as the price of food has become moderate, wages have risen. This has been shown on many recent occasions, and we now supply another instance, in advance of wages at Ashton-under-Lyne. If there is any connexion between prices of food and wages, if they stand at all in the relation to each other of cause and effect, their operation must be exactly the reverse of that described in the allegation, of which so much use has been made by the supporters of the Corn Law; and it would be quite correct to say, that "cheap food means good wages." This is an important truth; and the working classes, notwithstanding the sophistry to which they have been exposed, will ere long thoroughly understand it.—*Manchester Guardian*.

GREAT LEAGUE MEETING at the FREE-TRADE HALL, MANCHESTER, on THURSDAY, OCTOBER 24th; G. Wilson, Esq., in the Chair. The Meeting will be addressed by RICHARD COBDEN, Esq., M.P.; JOHN BRIGHT, Esq., M.P., and other gentlemen.

The Chair will be taken at half past Seven o'clock precisely.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the LEAGUE forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadsby, Newall's-buildings, Manchester; and the LEAGUE may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

POSTSCRIPT.

LONDON, Saturday Morning, October 19, 1844.

One of the most gratifying signs of the times is the increased attention paid to the condition of the labouring classes; the subject was forced on the notice of our reluctant rulers by the Free-Trade agitation, which revealed the ruinous effects produced by restrictions on industrial exchanges in every class supported by toil. The consequences of a system which rendered labour cheap and food dear were necessarily an increasing deterioration in the physical condition of the working classes, and a growing diminution of all the outward signs of comfort and even of decency. These outward evidences were undeniable, but we find that many are anxious to remove them without touching the inward cause; there is a class of sentimental philanthropists anxious to gratify their taste by furnishing the poor with ruffles, heedless whether they do or do not possess the necessary shirt. While we join with them in wishing the operatives to have their full share of the ornamental, we hold it to be of greater importance that they should be amply supplied with the essential; when public walks are provided to give the labourers an appetite, we think that concomitant measures should be taken to furnish them with the means of gratifying that appetite; and when laundries are provided for their accommodation, we deem it desirable that they should have clothes to wash. Some sentimental dreamers have chosen to designate this common-sense view of the labourer's condition as "a cold dogma of political economy," forgetting that economy does not properly mean the sparing of money, but such a system of judicious management as will ensure the greatest amount of comfort at the least possible expense. Political economy points out the well-being of the nation as the great object of government and legislation, and its claims to rank as a science rest upon its demonstrating the surest means to gain that important end. Every science may be stigmatized as "cold," because passion holds no place in scientific investigation; and it is for this reason that men gifted with warm imaginations, uncontrolled by judgment, are so often found to denounce science because it brings their visionary fancies to the sober test of fact and truth.

A meeting has taken place at Highworth, in North Wilts, which forms an admirable contrast with those holiday assemblages where literary lions roar forth their eloquence to be admired, applauded, and forgotten. The chair was taken by the Earl of Radnor, and the following practical resolutions were adopted, having been moved by a small tradesman and seconded by a tenant-farmer:—

"1. That there prevails at this time amongst agricultural labourers and small tradesmen in this neighbourhood great distress arising from want of employment, and the inadequate wages which they can obtain when employed.

"2. That it appears that the population rapidly increases, but that the means of employment do not increase in an equal proportion.

"3. That it is the first and most important duty of all Governments to provide as fully as they can for the adequate supply of the food of the people; and, if no human care or foresight can entirely obviate the uncertainty of the seasons, to take care at least that no legislative enactments should intercept or diminish the amount or increase the cost of the supply which, but for such enactments, might be obtained.

"4. That the corn, malt, and other provision laws now in force, have the effect both of intercepting and diminishing the amount, and, at times, greatly increasing the cost, of the supply of food which might otherwise be obtained by the people; and that, therefore, they ought to be repealed.

"5. That these same laws, by throwing obstacles in the way of trade, and by impeding the natural course of industry in the manufacturing districts, greatly diminish the sources of employment which would otherwise be opened for the increasing population of this kingdom.

"6. That the working classes of this country have no desire to rely for support on gifts of charity or benevolence; that as free men they wish to support themselves by their own exertions and labour; that they have no doubt that, if human laws did not interfere, they would be able to do so; and that they, therefore, hope that all laws tending to curtail the supply of food, to diminish the sources of employment, and to press down the springs of industry, may speedily be abolished.

"7. That all laws enacted for the purpose of raising the price of food and other commodities used by the people above their natural price in the great market of

the world, may be beneficial to certain classes, but must be injurious to the great mass of the people."

Towards the close of the meeting, a discussion arose on the allotment system, which gave rise to some difference of opinion; but, as this was obviously unconnected with the proper subjects of discussion, the resolutions were finally adopted. On the allotment system we have not given any opinion; whether, however, it be desirable or impolitic, one thing is certain, that it can never be seriously proposed as a substitute for Free Trade. It is a stale trick with the monopolists, when they are unable to meet argument directly, to turn away attention by introducing some other topic to divert men's minds from the proper subject of consideration, on the same principle that a nurse diverts the child from an attack on prohibited food, by giving it a rattle. Even so we find the monopolists willing to give the poor holidays, games of cricket, baths and laundries, in short, anything but justice. But it was to obtain justice for the poor that the League has been formed, and all our efforts are directed to securing for labourers of every class "a fair day's wages for a fair day's work."

DEPARTURE OF THE KING OF THE FRENCH.

Monday morning the visit of the King of the French to her Majesty at Windsor terminated with his departure for France, accompanied by her Majesty and Prince Albert, on their way to the Isle of Wight. At 12 o'clock the carriages of her Majesty and of the King of the French, and of their immediate suites, were drawn up to the door of the great entrance of Windsor Castle, and in a few minutes after, having taken leave of the Duchess of Kent, their Majesties, the Duke de Montpensier, and Prince Albert, took their departure, attended by M. Guizot, Count de St. Aulaire, Count de Jarnac, the Baron Athalin, General de Rumigny, the Earl of Liverpool, General Wemyss, Colonel Bouverie, the Countess of Gainsborough, and the whole of their respective suites. The royal cortege proceeded to Farnborough by the same route as that by which they came to Windsor. From thence the royal party proceeded in a special train to Gosport. At the several stations along the route the national flags of France and England were exhibited, and groups of spectators were assembled, who greeted the illustrious travellers with hearty demonstrations of respect.

At Gosport the station presented a most animated appearance as the train came up. The decorations were nearly the same as those which were prepared for the reception of the King of the French. On the triumphal arch at the place of exit, however, there was a fresh inscription, "Welcome, Louis Philippe, Victoria and Albert." A salute, fired from the King's Bastion, gave notice to all within hearing of the arrival of the royal party at the Clarence Victualling Establishment, when the ships at Spithead gave their gayest colours to the breeze, and a roar from the guns announced further the arrival of the illustrious Sovereigns. At about a quarter to four the fleet at Spithead commenced firing broadsides, which had all the effect of a grand naval engagement. The Duke of Wellington was in the yard on horseback in his regimentals.

The royal carriages drove into the yard, the bands playing, and salutes being fired in the harbour, and their Majesties alighted at the office of Captain Carter, the Superintendent of the Victualling-yard, whence they were ushered into a room on the ground-floor. Their Majesties remained in this room for some time, the rain falling more heavily and the wind beginning to rise. After their Majesties had remained in the room for some minutes, a consultation took place, to which the Duke of Wellington was called in, as well as M. Guizot, Count de St. Aulaire, Sir Hercules Pakenham, Sir Charles Rowley, and Rear-Admiral Parker, as to whether the King should proceed at all by the Gomer, or whether her Majesty and the Prince should not accompany the King back to Windsor, or, at all events, on his way to France by some other route than direct to Treport. It appeared that a very heavy sea was running at the harbour's mouth, and from the state of the weather—a gale blowing—it was apprehended that, if the King of the French attempted to cross to Treport, he might not be able to land there, as the coast is most unfavourable for embarkation in stormy weather. It was at length agreed that the French Monarch should go by Dover; and for this purpose Colonel Bouverie was despatched in a special train to London to order a special train to Dover, and to send on an engine to order a steamer to be in readiness, as well as to make other arrangements for the due reception of his Majesty.

All these arrangements made, the royal party took dinner in Mr. Grant's house. At a quarter past seven the King of the French and the Duke de Montpensier took leave of the Queen and the Prince, and proceeded to the station, accompanied by M. Guizot and Count de St. Aulaire.

At Nine-Elms station Sir James Graham met and conducted his Majesty to a royal carriage, which took him to the Dover Railway station, the directors of which had been making every preparation for his Majesty's reception. The platform and entrance were covered with crimson cloth, and an awning was in the act of being placed over the platform, when an alarm was given that the octagonal building, the upper part of which was used as a painter's shop, and the lower part as a depot for locomotive engines under repair, was on fire. Captain Charwood, the Superintendent of the Dover Railway, Mr. Howell, Mr. Cubitt the engineer, and several other gentlemen connected with the railway, were on the spot, and gave every assistance possible, but the flames were resistless, and about eleven o'clock, when his Majesty, escorted by a troop of the Life Guards, drove into the station, the whole of that noble building was in flames. Every effort, notwithstanding the fire, was made to prepare the special train with the least possible delay, and at about a quarter past eleven o'clock his Majesty and suite entered the carriages provided for their reception, and the special train, under the direction of Captain Charwood and Mr. Cubitt, who took the management of the engine, left the station. The train arrived at Dover about half-past two o'clock, A.M. His Majesty and suite immediately proceeded to the Ship Hotel, where he passed the night, and the fol-

lowing day (Tuesday) he embarked on board Le Nord, one of the French post-office steamers, which was accompanied by the Princess Alice and other vessels to Calais, where they safely arrived, from whence he soon after started for Eu.

EPITOME OF NEWS.

FOREIGN.

FRANCE.—The accounts in the English papers of the affair between Lieutenant Rose and the French naval captain at Otaheite have excited some bitter remarks from the war party, as if the insult, if insult it was, had been offered to the French officer. The following appears in the *Moniteur*:—"Reports from the Governor of the French establishments in the Pacific arrived to-day (Wednesday) at the office of the Minister of Marine and Colonies. These reports are to the 11th of May. They make no mention of the accident which is said to have taken place relative to an officer of the English navy, and of which several journals of this morning have copied accounts from the London papers. No new engagement has taken place since the affair of the 17th of April, in which the insurgents entrenched at Mahana were defeated and dispersed. On the 1st of May the King's fête was celebrated at Papeiti with pomp, and amidst the most perfect order. The chiefs of all the districts of Otaheite and of the island of Eimeo were invited to attend. Almost all of them were present at the ceremony, accompanied by the principal personages of each district, and they showed dispositions of goodwill and of conciliation which Governor Bruat considered as very satisfactory."

It appears that Commandant Bruat has had to condemn and punish several of our soldiers and sailors for deserting and joining the Tahitians at the battle of Mahana. One of the sailors has been shot. He was probably the ringleader, for petitions for pardon of the rest have been presented to the Governor.—*Constitutionnel*.

The *Univers* states, that a plan for fortifying the city of Rouen is being at present prepared at the War-office. The Government have determined that Rouen and Havre (those two gates of Paris) shall be fortified. Since last year Treport has been rendered exceedingly strong, and a similar precautionary or defensive system is in contemplation in respect of all the seaports of France.

The *Journal des Débats* mentions, on the authority of the *Orleanais*, an act of gross barbarity said to have been perpetrated on a Polish ecclesiastic, who had returned in disguise to Poland, to adjust some pressing private affairs; he was recognised, arrested, and sentenced to the punishment of the knout, by the Russian authorities, and he actually expired under the punishment, after the 147th blow.

SPAIN.—The Queen opened the Cortes in person on the 10th inst. It is stated that a majority of the Spanish deputies are by no means disposed to give their unqualified assent to the measures intended to be proposed by the Cabinet. The sinking of the *Rayo* by the English battery at Gibraltar had caused the Captain-General of Andalusia to demand satisfaction of the Governor; and he was about to issue an order for the suspension of all intercourse with Gibraltar, but was deterred by Mr. Bulwer, who promised to have the affair inquired into, and all due reparation made to Spain.

LISBON.—A scandalous and horrible variety of the slave trade has been discovered in Lisbon. Proprietors and others, connected with the African colonies of Portugal, bring home from their possessions systematically a number of so-called domestic slaves, to whose personal attendance they are legally entitled (about a dozen) under the treaty of the 2nd of July, 1842, and immediately ship them off from this to Brazil, where they are sold again as slaves at a very high price, as they arrive by this means in excellent condition, without being subjected to any of the horrors of the middle passage. The scoundrels who have invented this new and swindling traffic inveigle the stolid negro to Portugal in the belief that there his journey is to terminate. And there indeed his career of slavery should be at an end, for if there were faith in the country the slave who touches the soil of Portugal should be as free as that of England. We have entered into a formal engagement with Portugal to this effect. It is found convenient, however, to evade our cruisers, laugh at our treaties, and coin the negro's life-blood into Brazilian *patacas* by this roundabout process. Viscount Sa has called the attention of the Peers to this subject, and the Duke of Terceira said that it will be strictly inquired into by the Government.—*Times*.

Accounts reached Lisbon on Monday, Oct. 7, of a signal defeat experienced by the Portuguese troops in Angola. Three companies of infantry of the line, under the command of a Captain Xavier, were cut to pieces in an encounter with the blacks of the Quissama tribe, upon a question of disputed right of fishing, where the justice was all on the natives' side. A lieutenant named Pogo, two sergeants, and 25 men, were hewn into bits by the knives of the natives, about 50 more wounded, some of them mortally, and the savages remained masters of the field, having taken possession of the two pieces of field artillery which the Portuguese brought with them into the action, together with all their ammunition, and a number of muskets. The killed and wounded of the Portuguese having been about 80, and the loss of muskets by the Portuguese admission near 200, at least 120 of their soldiers must have thrown down their arms to facilitate their desperate ardour in running away from the blacks. The origin of this affair was gross injustice and oppression on the part of the Portuguese towards a neighbouring independent tribe.

THE LEAGUE, Oct. 13.—The latest accounts from India state that, in consequence of the extraordinary drought, the rice harvest had failed this year in Java. By accounts of a subsequent date, it is stated that a Dutch squadron which had gone in search of pirates to the south of Sumatra, had met with them and sank one of their vessels and captured eight others with their crews.

THE ZOLLVEREIN.—The *Gazette de Cologne* announces that, according to correspondence of the 9th instant from Berlin, the treaty of commerce between Belgium and the Zollverein was ratified there on the 8th. The same journal mentions that Holland has made overtures to the Court of Berlin for the conclusion of a commercial convention with the States of the Customs Union. The association for the encouragement and development of industry in Prussia gave, on the 8th instant, in the Salle de Kroll, at Berlin, a grand fête to the numerous exhibitors who happened to be in the capital. The members of the Cabinet were also invited, as well as various

other high personages, among whom figured Lord Palmerston. During the feast the formation of a society in favour of the workpeople was proposed.

PRUSSIA.—The *Cologne Gazette* states from Berlin, 4th inst., that the Council of State is at present occupied with a project for the establishment in Prussia of tribunals of commerce, composed of merchants, as in France. It is also stated that the King was to give a grand dinner at the Palace of Potsdam to 800 of the exhibitors of the products of national industry.

BRUSSELS.—The *Observateur* of Brussels informs us that most of the principal merchants of that city have signed a memorial to the Government against the proposed augmentation of the duties on printed goods imported from England.

DR. WOLFF.—Letters have been received from Dr. Wolff, dated Bokhara, June 27 and August 1. In his letter of the 27th, the Rev. Doctor says, "I have now been already two months in this place, and, though five or six times the King has promised to send me instantly to England with one of his ambassadors, I am in the greatest danger. I cannot stir out of the house without a guard of three men. Dil Hassa Khan, the fellow sent with me by the Asseff Addaula, has shamefully robbed, deceived, and outraged me. The Persian ambassador, Abbas Kollé Khan, is kind to me, but I think he will not have it in his power to rescue me. Nayeef Abdool Samet Khan has extorted from me a writing to pay him 5000 tomans to effect my liberation. I suspect him that he was the cause of Stoddart's and Conolly's death, in spite of his continued protestations of friendship. The Ameer is now at Samarcand, and I am here awaiting the most fatal orders from the King daily to reach me. It is true that poor Stoddart professed openly Christianity after he had made a forced profession of Mahomedanism. Do for me what you can, as far as the honour of England is not compromised. All the inhabitants wish that either Russia or England would take the country. Do not believe any former reports of my speedy departure, for I am in great danger. **JOSEPH WOLFF.**"—The Doctor's letter of the 1st of August is an appeal to the monarchs of Europe, entreating them to come to the rescue, not of himself, but of 200,000 Persians held in slavery at Bokhara.

UNITED STATES.—The royal mail steam-ship *Britannia* arrived in Liverpool about ten o'clock on Monday night, having left Boston on the 1st inst., and Halifax on the 4th. The preparations for the presidential election continued with great spirit. The Vermont election had gone in favour of the Whig, or high-tariff party, which is something of a set-off against the Maine election, which had been won by the democrats, who are now Free-Traders. At a meeting of the Whig party at Boston, on the 19th, Mr. Webster made a long and eloquent speech. Alluding to Texas, he advised that she should continue to be an independent nation, and repudiated the idea that England will seek to acquire any special connexion with Texas. He spoke of the fixed determination of the British Government to discountenance slavery, on which a voice in the crowd exclaimed, "They are all slaves in England." Mr. Webster turned quickly on the speaker, and with a flashing eye and indignant voice, asked what blood they, the citizens of the United States, inherited? from whence were the first guarantees of the liberty of the subject derived? His course on the subject of protection would be the principle, "If you will trade with me, I will trade with you." He would, however, have the hand-labour of America protected against the cheap labour of the operatives of Europe.

CANADA.—Sir Charles Metcalfe has dissolved the provincial Parliament of Canada, and appealed to the people for their decision on the points in dispute between himself and the late administration. The new Parliament is to meet on the 22nd instant for the despatch of business. There had been some rioting between the students of Victoria College, Cobourg, Canada, and the inhabitants of the town. The forger lowered the British flag and tore it into fragments, afterwards hoisting the American colour; this was speedily hauled down by the citizens. No serious damage resulted. The royal party were completely triumphant.

MEXICO AND TEXAS.—The rumours of an intended invasion of Texas by 10,000 Mexicans is in a great degree confirmed; the troops were actually on the route, which is a circuitous one, inasmuch that they will not be able to cross the frontier until late in the autumn. In the meantime, couriers are despatched with all speed between the governments most interested in the matter. The town of Matamoros had been destroyed by a dreadful hurricane. Only two houses and one church remained standing, and upwards of 200 persons perished under the ruins of their own houses.—Madame Santa Anna, the wife of the Mexican president, died at Vera Cruz on the 22nd of August.

CENTRAL AMERICA.—Advices state that there had been much disturbance and fighting. The San Salvadorians, with the people of Nicaragua and Honduras, had marched against Guatemala; they took possession of an English schooner, the flag of which, after being lowered, was again hoisted, but the vessel was still in the power of her captors.

BRAZIL.—Her Majesty's ship *Linnet* arrived at Falmouth on Thursday with the mails from Brazil, bearing date Rio de Janeiro, 25th August; Bahia, Sept. 6, and Pernambuco, Sept. 13. Among the passengers is the Viscount D'Abrantes, who comes on a special mission to this country, relating, it is said, to the conclusion of a treaty of commerce between Brazil and England.

DOMESTIC.

Her Majesty has appointed Monday, the 28th inst., for the opening of the new Royal Exchange.

The Court of Aldermen have rejected the claim of Mr. David Salomon's to be sworn in as alderman of Portoken Ward. Mr. Salomon has announced his intention to bring the matter before another tribunal, "where," he says, "he will meet with more able judges and more temperate expositors of the law."

The inquest on the victims of the Haswell Colliery explosion was resumed on Friday the 11th inst., when, after the examination of several witnesses, the jury returned the following verdict:—"That the said Thomas Dryden, George Dryden, Robert Dryden, and James Dryden, and Edward Nicholson, together with uluety persons, being employed in working in the Haswell Colliery, were therein and then accidentally burnt, scorched, and killed by an explosion of fire-damp. And we further say, that no blame is attributable to any one connected with the pit. And we also further say, that the said Thomas Dryden,

George Dryden, Robert Dryden, and James Dryden, and Edward Nicholson came to their death by accident, and so say we all." A subscription has been set on foot for the benefit of the relatives of the sufferers, which already approaches to near £2000.

At the Ironmaster's quarterly meetings, held in the early part of last week, the trade was considered to be in a satisfactory state; the demand for consumption being steady, and the price fair and remunerating, with but little or no attempt at speculation.

The Merthyr iron works exhibit considerable activity; and, notwithstanding our reduction in price, and in the teeth of the German imposition of 50 per cent. on British iron as compared with that of Belgium, the works here at least are carried on vigorously. The Victoria works are likely to be put in operation again.—*Welschman.*

Lord Ellenborough has been raised a step in the peerage, by the title of the Earl of Ellenborough and Viscount Southam.

The good olden times of the year 1800 are again revived at Ewe. Our bakers are now selling four hot rolls for a penny, one sufficient for a reasonable man's breakfast.—*Suffolk Chronicle.*

On looking over the game-lists published last week we find that no fewer than sixty of the Yorkshire parsons have taken out shooting licenses for the present season.—*Leeds Times.*

On Wednesday night, the 9th inst., a collision took place, between Holyhead and Dublin, between the Ocean Queen, a barque belonging to Messrs. Gibbs and Bright of Liverpool, and the schooner *Nymph*, of Wisbeach: the latter was totally lost, with the master and two of her crew; the mate and the other hands saved themselves on board the barque.—On the same night the *Iron Duke*, which sailed from Liverpool with the mails for Dublin, ran down a boat in the Mersey, causing the loss of the lives of the persons who were in the latter at the time: no blame is attached to the steamer, which kept a good look out.

On Friday, the 13th inst., a grand entertainment was given by the inhabitants of Portsmouth and its vicinity to the officers of the French squadron. The chair was occupied by the mayor. Toasts and sentiments complimentary to eminent French and English military and naval commanders, &c., were severally given, and warmly responded to by the entertainers and their guests; and the most cordial wishes for the preservation of peace and the promotion of a friendly feeling between France and England were uttered, and heartily cheered by all assembled.

On Thursday, the 12th inst., the Duke de Montpensier, youngest son of Louis Philippe, and an officer of Artillery in the French service, paid a visit to Woolwich, where he passed some hours, accompanied by a verbal British military officers of high rank, in witnessing the various processes carried on in this vast naval arsenal, and also some gun and rocket practice.

On Monday night, while preparations were actively making at the New Cross Railway Station for the arrival of the King of the French and suite, who were to proceed by special train to Dover, a destructive fire broke out in a loft immediately over a large octagonal brick building, used as a storeroom in the engineering department. This storeroom was fitted up as a painter's shop, and was upwards of 80 feet in breadth, having in its centre a lantern roof, upwards of 70 feet in height. Before the fire could get under, the whole of the range of workshops were completely destroyed, and several engines that were kept there for emergencies. The loss is estimated at nearly £20,000.

At Worship-street Police-office on Monday, a pale consumptive-looking young woman, named Esther Pierce, was charged with illegally pledging a silk shawl which had been intrusted to her to be embroidered. The prisoner acknowledged pledging the shawl, but declared that she was obliged to do so to save herself from starvation. She then said that it took her a whole day to embroider the shawl in question, into which she had to work more than eighty flowers, for which she only received sixpence.

On Tuesday a new war steamer, called the *Gladiator*, was launched at Woolwich. She is 1190 tons burden, is bored for 20 guns, and will carry a complement of 175 men.

A violent storm, unequalled for many years, occurred in Ireland on Wednesday night week. Its effects were chiefly felt at Dublin and the towns along the seacoast, where its consequences to shipping and property in general, and in many cases to human life, have been dreadful. The river rose at Dublin, and filled the cellars in some of the adjacent streets. At a little island between Clontarf and the North Wall, the sea arose to such a height as entirely to cover it, sweeping away in its fury a temporary dwelling, in which unhappily were a man named Cromwell, a boatman, and his son, who were both drowned. At Rush, a vessel from Halifax was lost, and the captain, his wife, and one of the crew drowned. A large portion of the embankment of the Dublin and Drogheda Railway was swept away. Several steam-boats and trading vessels received considerable damage. On the same night the storm visited several towns on the Welsh coast, causing considerable destruction to houses, trees, &c., and also to shipping.

The Tipperary papers report two murders growing out of disputes about land. One of the victims was a wood-ranger, named Tim Cleary, who had been engaged in serving law processes on the tenantry of the Barnano estate, and who was shot last week near a wood, where his body was discovered. The other was a man named Spillane, a driver or care-taker on the property of Mr. La-touche, near the same place, who was shot in his own house; the cause in this case was much the same as in the former.

A most lamentable and awful calamity occurred at Portsmouth on Monday evening, at about twenty minutes to four, on the King's Bastion. As the artillerymen (Royal) were re-loading one of the guns, the charge went off, and blew one of them to pieces, and the other was so horribly mutilated that it is impossible he can live. The names of the unfortunate men are reported as Sandy Miller and Michael Walker, between twenty-five and twenty-seven years of age. Miller was blown into fragments, and Walker had his thigh broken, his arm blown off into the moat, and his body otherwise disfigured. At the time of this unfortunate accident a French seaman on board his French Majesty's brig *Le Favori* had an arm shot off by a similar accident.

The Repeal Association met on Monday at the Can-tilation-hall, Dublin. Mr. M. O'Connell read a long letter from his father, dated from Derrynane, in which

the hon. member expressed a decided preference for federalism. The week's rent slightly exceeded £400.

On Wednesday a numerous and respectable meeting was held in the Egyptian-hall of the Mansion-house, for the purpose of forming an association to furnish the labouring poor with baths and washhouses. The Lord Mayor presided. The Bishop of London moved the first resolution in a lengthened speech, in which he advocated the necessity of baths and washing-houses for the poor, and quoted largely from the Sanatory Report, to show how injurious to health was the want of cleanliness resulting from the inability of the poor to procure baths, or have their washing done out of their confined dwellings. Mr. Byng, M.P., and others, spoke to the same effect. The resolutions, affirming the necessity and advantages of providing baths, &c., and of an association to carry such object into effect, were all unanimously agreed to.

A colliery explosion occurred on Monday night at Cox-lodge Colliery, about two miles from Newcastle, but, fortunately, no lives were lost. There were about 70 men and boys working in the mine at the time, a few of whom were slightly burned, one severely.

The *Kilkenny papers* report a frightful murder, resulting, it is stated, from the struggle for land, committed on the person of a man named Brennan, on Friday, the 12th inst., at Coolecullen, by some persons unknown. The *Kilkenny Moderator* gives a melancholy account of the destitute state of the peasantry, from which it appears that poor men are willing to work for *twopence halfpenny* a day and spare diet, being the *maximum* rate of wages the farmers can afford to pay.

MISCELLANEOUS.

PROPOSED PUBLIC PARK IN LEEDS.—Some of our benevolent townsmen, among whom we may mention our public-spirited mayor, are desirous that Leeds should not be behind other towns in the formation of public parks or walks for the healthful and rational recreation of all classes. It has been suggested that the Zoological and Botanical Gardens, which comprise nearly twenty acres, in a beautiful situation and well laid out, might be purchased for this purpose. Some of the larger shareholders in the garden are, we know, disposed to transfer their whole property in them to the town council, or some other body, for the benefit of the public; and we think it likely that many others would follow this liberal example, thinking it more agreeable to see their fellow-townsmen of the humbler classes enjoying themselves in the gardens than to walk there in comparative seclusion. Those shareholders who took shares as an investment, and who could not afford to give them to the public, would probably accept a moderate sum for that which now yields them no dividend. A subscription would, therefore, be required to purchase the garden for the public; and we think this would be forthcoming, as the amount would probably not be very large. A yearly subscription would also be requisite to keep the gardens in order. We hope to be able shortly to report progress in this laudable attempt to promote the health and recreation of the industrious classes.—*Leeds Mercury.*

THE LARGEST POWER-LOOM SHED IN THE WORLD.—Messrs. Ainsworth and Son, cotton spinners, of Preston, have now nearly completed and filled their most extraordinary and extensive power-loom shed. The building covers one and three-eighths of an acre of ground, and will hold 1650 pairs of looms, which will require 825 hands to superintend them, and 75 horse power to drive them. The shafting connected with this monstrous shed is now finished: its length is 6500 feet. When the whole of the looms are in motion, they will require 24,000 feet of strapping. There are 3000 feet of gas piping, and 825 lights will be required. The roof contains 310 windows, or skylights, and is supported by 325 pillars. When the whole of the looms are in motion, they will turn off 50 yards of cloth per minute!

AN HONEST ADMISSION.—The full employment of the labouring classes in the manufacturing districts, and the cheapness of wheat, as compared with other articles of food, have occasioned a large increase in the consumption.—*Mark-lane Express.*

FOREIGN CATTLE.—The *Emerald Isle*, on Sunday week, brought from Rotterdam 10 head of beasts and 63 sheep. The *Hamburg*, from Hamburg, on Saturday, 28 oxen and 2 cows. The *Queen of Scotland*, which arrived here on Wednesday morning from Hamburg, landed 20 beasts. The *Victoria* arrived from Hamburg on Monday, and had on board 41 beasts.—*Hull Advertiser.*

IMPORTS OF FOREIGN FRUIT.—By the Princess Victoria, from Antwerp, we have had 60 baskets of walnuts; by the *Emerald Isle*, from Rotterdam, 63 baskets and 16 bags walnuts, and 45 baskets grapes; by the *Hamburg*, from Hamburg, 89 baskets and 20 boxes walnuts, and 3 baskets filberts. To these we have to add 204 baskets plums, brought by the *Queen of Scotland*, on Wednesday.

AUSTRALIAN SQUATTERS.—"Squatters" is the colonial designation of a numerous and respectable class of persons in New South Wales, of a totally different description from those who bear the same name in the United States of America. There the squatter is generally a poor industrious man, who goes forth into the unfenced wilderness with his axe on his shoulder in the van of advancing civilization, hews down trees, builds a log-house, clears fences, and cultivates a piece of ground, of greater or smaller extent as it may happen, to which he thereby acquires a right of pre-emption at the Government minimum price of five shillings an acre, and finally sells that right with all his improvements to the next owner, to repeat the same process farther on in the forest. Here, on the contrary, the squatter (who is often a man of substance, and not unfrequently a gentleman born and bred,) is a person who, like Abraham, Isaac, and Jacob, follows his flocks and herds into the vast wilderness beyond the settled districts, and fixing on a suitable station previously unoccupied, and generally of twenty or thirty square miles in extent (for which he pays £10 a year to the Government as a depasturing license, together with a tax on each head of large or small cattle he possesses), erects a bark hut, and a stockyard, and, like Alexander Selkirk, afterwards, for the time at least, "monarch of all he surveys." According to the Government returns, up to the 30th September, 1843, the squatters of New South Wales possessed not fewer than 16,401 horses, 592,333 horned cattle, 3041 pigs, 3,208,429 sheep; while the direct taxes they paid to Government for the preceding year amounted to £39,632. 6s. The squatters, consequently, form no inconsiderable class of our colonial community.

SOME OF THE WORKINGS OF THE NEW
TARIFF.

(From the Economist.)

It matters not to what article we refer on which the experiment of the removal of restrictions has been tried—on all it has proved equally successful.

Up to 1825 the duty upon foreign bar iron was £6. 10s. per ton. Mr. Huskisson proposed to reduce it to £1. 10s., which was met by great opposition from all interested in the trade. It was declared that the manufacture of English iron would cease, that ironmasters would be ruined, and thousands of labourers turned adrift. What was the result? The quantity of iron imported in 1825 was 23,657 tons, and the quantity of British iron exported was 58,843 tons. So far from the fears of the advocates of protection being realized, we find that the importation of foreign iron has been gradually reduced, and the exportation of British iron rapidly increased, during the whole interval since the duty was lowered, until last year the former had fallen to 12,809 tons, and the latter had increased from 58,843 tons in the last year of high protection to 369,398 tons in 1842; and it may now safely be said that we have possession of the markets of the world for this commodity. Nor can any one doubt that this policy has secured an employment for capital and labour infinitely greater than could possibly have been accomplished under the restrictive system, for nothing has contributed so much to this great increase of trade as the reduction of price consequent on free competition, and the extended uses to which the article has been applied.

Exactly similar has been our experience in the partial removal of the restrictions on our silk trade. The same predictions of ruined trade, of embarrassed manufacturers, of starving and workless operatives, were made by those interested in that trade; and the same falsification of their fears has been experienced. The import of raw silk in 1822, under the highly protective system, was only 2,680,000 lbs.; it gradually increased, until, in 1842, it was 4,362,000 lbs., in some recent years having been as much as 6,000,000 lbs.; and the export of our entire silk manufactures, which amounted in 1825 to £93,986, had increased last year to £664,661, and having been in a recent year as high as £865,000; and what is very curious, the quantity exported in 1842 to France—the great rival country which was to annihilate our trade—for consumption in that and the neighbouring countries, amounted to £181,000, being double the amount of our whole exports in 1825, before the restrictions were removed. So much for the fearful forebodings of the effects of Free Trade; and in every case, without any exception of which we are aware, have similar results been experienced.

But there are some striking examples of the same principles in our modern experience, now going forward, which are well worthy of notice. We have been much struck by the gratifying and encouraging accounts which we have recently received from Cornwall, as to the activity in the copper trade. Now, no one will forget the threatened rebellion in the Ministerial camp in 1842, headed by Sir Richard Vyyan, directed against the Free-Trade policy of the Tariff, and especially in reference to the introduction of copper ore. That measure, like all of a similar kind preceding it, was utterly to destroy the trade, render the copper mines of no value, and the poor miners homeless; but the result has been, like all others, the reverse. The deep depression in which the trade then was has been succeeded by great activity, and there is already greater briskness and demand for labour than has been experienced for a long time. In our last number we published the quantities of foreign copper ore taken into consumption from Jan. 5th to Aug. 5th of this and the three preceding years, which were as follows:—

1841.	1842.	1843.	1844.
Tons.	Tons.	Tons.	Tons.
2	25	29,777	33,481

But the export of manufactured copper had increased from £374,016 in 1841 to £1,088,075 in the present year for the seven months. In the face of so enormous a supply of foreign copper ore, the demand for British ore is greater than it has been for some time.

Then, again, every one is aware that the duty on foreign wool has been in the present year entirely taken off, and concurrent therewith we have had an enormous increase of imports. The quantities of foreign wool taken into consumption from Jan. 5th to Aug. 5th, in each of the last four years, have been:—

1841.	1842.	1843.	1844.
lbs.	lbs.	lbs.	lbs.
29,172,761	21,562,269	28,471,916	39,909,290

But has this increase been attended with the ruinous effects and disadvantages predicted by the Duke of Richmond and other adherents to restriction? Let the question be answered by the price obtained by the home grower for his wool this year as compared with late years. The price of Southdown fleeces at the clip, in each of the last four years, was:—

1841.	1842.	1843.	1844.
per lb.	per lb.	per lb.	per lb.
11d. to 1s.	9d. to 10d.	10d. to 11d.	1s. 1d. to 1s. 2d.

Thus, notwithstanding an increased import of at least 50 per cent. on that of last year, the price obtained by the home grower is 30 per cent. higher. At first sight people are much struck and surprised at these results, but a little consideration will show that they are only such as might be reasonably expected. If we exclude copper ore, or sheep's wool, from our markets by high duties, the only effect is to force their manufacture in other countries, at a greater disadvantage to the general consumers of the world; still they are manufactured somewhere, and the goods made therefrom are somewhere taken into consumption. The fact that these materials find their way to this country to be manufactured does not lessen the whole consumption of the world, but only increases the proportion which must be derived from this country, where we have such superior facilities and means for manufacturing. Thus, if we would increase our exports, we must be willing to increase our imports. If we import wool from Russia or Barbary, which would otherwise be badly and expensively manufactured in those countries, this fact does not diminish but rather increases the whole demand for woollen goods which would otherwise have existed, owing to the superior quality and economy of our manufacturing process. Hence we find increased demand for export always arising out of increased import, and, with the increased import of wool which we have alluded to, we find the following extraordinary increase in the export of our woollen goods:—

1841.	1842.	1843.	1844.
£3,743,583	£3,123,579	£4,150,004	£5,682,492

And, independent of this obvious effect, the home demand is greatly increased by the additional employment given to the numerous branches and occupations benefiting directly and indirectly from the increased trade.

But, again, we have in the present year another striking evidence of the truth of our proposition. Among other articles of agricultural produce which suffered great depression and reduction of price, in 1842 and 1843, were butter and cheese. That the depression was not caused by foreign competition, but by the distressed state of the consumer, we have frequently insisted, from the fact that the quantities imported in those years showed a great reduction on those of previous years when the prices were high. This year we have experienced a revival in the demand and price as compared with last year; but this has not been caused by restricting the foreign supply, but has arisen concurrent with a considerable increase of supply, the quantities imported having been for the first seven months of the last four years as follows:—

1841.	1842.	1843.	1844.
cwt.	cwt.	cwt.	cwt.
Butter..... 115,127	118,054	89,269	103,689
Cheese..... 131,798	109,197	82,391	109,598

For three years, from 1841 to 1843, the demand was more and more depressed, and prices fell lower each year in the face of a great diminution of foreign imports; but during the present year, though the supply has increased from 20 to 25 per cent., yet has the price of home produce considerably improved.

Are we not, then, justified, by all experience, in insisting upon the general adoption of Free-Trade principles, not as the means of contributing to the benefit of particular classes of society, but as the safest and best guarantee for the general prosperity and welfare of all. We may safely challenge those who think differently to bring forward one single example having a contrary tendency to those we have cited; and the number of such might be greatly multiplied.

MARKETS.

CORN MARKET.

MARK-LANE, Monday, Oct. 14.—There is a moderate supply of English Wheat and Barley to this morning's market; the condition of the New is inferior to last week, and prices generally are 1s. to 2s. per qr. cheaper. There is rather an improved demand for Foreign at late prices. The finest qualities of Barley fetch rather more money, and secondary sorts fully support the prices of this day week. The arrivals of Oats since last Monday fall short of what we had been led to expect. There is a good country demand for Old Oats at 6d. advance, and for New at fully last week's prices. Beans and Peas both 1s. dearer.

BRITISH.

Oats ..	14896	21s. 7d.	Peas ..	897 35s. 1d.

FRIDAY, October 18.—The supplies of all English grain this week are very moderate; of Irish Oats small, and of all foreign grain quite trifling, only 430 quarters of Barley having arrived, and not a cargo of Wheat or Oats. Both English and Foreign Wheat bring fully as high rates. The duty was paid on about 96,000 quarters of Barley previous to its rising to 4s. yesterday. The holders, however, are not pressing sales, and the trade remains in the same state as on Monday. Beans and Peas fully maintain former rates. The short supplies of Oats cause holders to insist on an advance in prices, and though buyers are very reluctant to comply, the sales made are at 6d. more than could be obtained on Monday.

S. H. LUCAS and SON.

Hunter, Liverpool, merchant—Dec. 3. R. K. Mann, Kingston-upon-Hull, wine merchant—Nov. 14. G. Craven, Jun., Rochdale, Lancashire, corn miller—Nov. 14. H. Lane, Derby, innkeeper—Nov. 5. M. M'Nulty, Liverpool, merchant—Nov. 5. W. Toff, Wakefield, alkali manufacturer.

London: Printed by ROBERT FALCON, (of Providence-place, Upper Kensington-lane, Lambeth, in the County of Surrey) and JACQUES CHARTIER (of Number 270, Strand, in the County of Middlesex), at their Printing-office, Number 10, Grace-court, in the Parish of St. Dunin, in the City of London, and published by AUGUSTUS WATSON, FALCON (of Number 55, Norfolk-street, Strand, in the County of Middlesex) and the Office of THE LEAGUE, Number 57, Fleet-street, in the County of Middlesex, on Saturday, October 14, 1844.

THE LEAGUE.

No. 57.]

SATURDAY, OCTOBER 26, 1844.

[3d.

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All Subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive, a copy weekly of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

We beg to inform our subscribers that bound volumes of the LEAGUE newspaper, containing the whole of the first year's numbers, may be had on application at the Offices either in London or Manchester.

BRAZILIAN AND BELGIAN TARIFFS.

Most of our readers are acquainted with the very celebrated pamphlet, generally attributed to Archbishop Whately, entitled "Historic Doubts respecting Napoleon Buonaparte," the author of which shows that the omission of a few circumstances in the best known transactions would produce such apparent inconsistencies in history as would afford grounds for disbelief to the full as plausible as any which sceptics have urged against the Sacred Scriptures. So able is the irony, and so cleverly is it managed, that many readers of the pamphlet have been carried away by the jest, and have in spite of themselves felt serious doubts respecting the real existence of the French Emperor. Our legislation, ever since the conclusion of the war, has directly tended to increase such perplexity; one of the causes most generally and most justly assigned for our perseverance in that war at a time when we were deserted by all our allies—

"When Europe bow'd beneath the yoke,
And Austria bent and Prussia broke,
And the firm Russian's purpose brave
Was barter'd by a timorous slave!"

was, that Napoleon was the inveterate enemy of the commercial prosperity of England, and evidenced his fixed purpose for its destruction by excluding our manufactures from the Continent. No sooner had the war terminated than the English Government adopted the very system of policy which it was the only rational purpose of the war to overthrow, and entered on a course of policy far more certain to lead to a system of exclusion than all the despotic decrees issued from Berlin or Milan. These decrees prohibited the English manufacturers from receiving for their goods the payment which their customers proffered, and they laid a tax upon the raw materials of production, which gave a decided and increasing advantage to rival manufacturers. But the English Ministers went farther in their injury to British trade and commerce than the French Emperor even meditated: Napoleon only contemplated the exclusion of British goods from the continent of Europe; but sordid avarice is wider in its grasp and more malignant in its influence than even the most despotic ambition; the monopolists of England took a wider range, and resolved to close against our manufactures the markets of North and South America. Hundreds of millions of money and hundreds of thousands of lives were wasted in dethroning Napoleon for attempting to effect what our rulers have successfully accomplished; and what the nation wastes in an almost equal expenditure of money and life, in endeavouring to support monopoly, is even worse than Napoleon. Death in the battle-field had some compensating glory, but death by starvation has no concomitants save misery and despair. The lavish expenditure of war purchased, though at an enormously dear rate, flags to hang as drapery in Windsor, and battered cuirasses to furnish a museum in the Tower; but the money wrested from the labourers by monopoly has only served to maintain in idleness the younger branches of some

noble family, to feed the dogs of one monopolist, or to pension the mistresses of another.

Our commercial policy provoked, justified, and almost necessitated restrictive retaliations. The settlers in the back states of America, along the fertile banks of the Upper Ohio, were in want of clothes; they sent down their corn and their salted meats to purchase the cottons and the woollens of England; but when their payment reached New Orleans they found that the Corn Laws prevented the English manufacturers from receiving it, and it was left to perish by putrefaction on the quays of New Orleans. At that very moment the English operatives were perishing from lack of food; monopoly enjoyed the signal triumph of spreading its blight in two worlds: it produced nakedness in America and starvation in England. Nor was this all: the tainted mass of putrefying provisions polluted the atmosphere, and produced a pestilential fever of fearful virulence. The yellow fever was in Louisiana the type of the commercial policy of England. It is no wonder that the Americans began to be alienated from a trade which brought the plague into the consideration of its chances, and answered the diplomatic pleadings of the negotiators of commercial treaties as the lover did the entreaties of his mistress when detected in falsehood:—

"The vows thou hast made,
To the wild currents fling them,
On the quicksands and rocks
Let the mermaid sing them;
New sweetness they'll give her
Bewildering strain,
But there's one who will never
Believe them again."

The lamentable occurrence at New Orleans exhibits in the most striking form the disadvantages to which English commerce was subjected so soon as the Government placed restrictions on the receiving of raw produce in exchange for manufactures. Those who had to give corn in exchange for cotton or woollens were always kept by the sliding scale in a state of uncertainty as to the rate at which their payment would be received, or whether, as in the American case, it would be altogether rejected. Our laws, in countless instances, turned the customers clean out of our markets, and at all times subjected them to uncertainties, annoyances, and inconveniences, injurious to them and far from advantageous to ourselves. England was placed before the world in the light of a gigantic monopolist, which aimed at dictating in the world's markets the terms on which it would sell its own productions, and also the terms on which it would receive in exchange the productions of other countries. Fortuitous circumstances may give to a people such a temporary pre-eminence as to enable it for a season thus to command both sides of a bargain; but such circumstances could only be fleeting in their nature, while the attempt to take advantage of them necessarily left permanent and not unjustifiable rancour behind.

It is confessed, even by those journals which are recognized as the organs of Sir Robert Peel's Ministry, that tariffs hostile to England are multiplying around us in every direction. Their attempts at consolation are at once ludicrous and melancholy, almost justifying the misanthropic adage—

"Nec sunt humane flebile ludibrium."

Thus we are told that "the exclusion of our manufacturers from the Continent can permanently injure the Continent only, and must give to England unapproachable superiority in all neutral markets." This would be perfectly true if the Continental manufacturers stood alone in the restrictive system while the trade of England was free; but the real evil is, that the English restrictive system is felt most severely in what are called "neutral" markets, because in such markets the principal articles of exchange are raw produce. An English and a German manufacturer meeting as rivals in the Brazilian market have to buy as well as sell, because all exchange ultimately resolves itself into barter; the German may demand nominally more for his own cottons, but if he at the same time proffers nominally more for the Brazilian sugar, in which form he has to receive payment, he more than compensates by his high price as a buyer for his high charge as a seller, and the Brazilian will, of course, deal with that merchant who, on the balance of the entire transaction, leaves him the greater share of profit.

This appears to be the view which the Brazilian Government has taken of the case, by reserving the right of levying discriminating duties on the productions of those countries which have set the example of levying discriminating duties on articles

of Brazilian produce. We may accept the excuse pleaded by the organ of the Government for the increased per-centages of the import duties on various articles in the Brazilian tariff, and believe them to be levied for the sake of revenue only;—this is a question between the Minister of Finance and the smuggler, with which, as Free-Traders, we are not directly concerned;—but discriminating duties belong to a very different category, and no man in his senses can doubt that they are designed to be retaliatory. "But," asks the Government organ, with the most anile simplicity, "for what are they a retaliation?" Deficient memory appears to be a convenient qualification for certain classes of public writers; one would have thought that the inconsistency and hypocrisy of the pleas under which differential duties were imposed on the sugars of Cuba and Brazil formed too memorable a chapter in the annals of human absurdity to be thus easily forgotten. The lectures of our Premier on botanical morality, proving that sugar is the only article which retains the taint of slavery,—laughed at by everybody, and by no one more heartily despised than by himself,—have naturally provoked the Brazilian sugar growers; they are mortified at finding their sugars excluded from the English markets, and they are indignant at finding the exclusion defended on a plea which could scarcely dupe a congregation of disinterested idiots. We pass a law which is designed to compel the Brazilians to purchase at a disadvantage, and find among ourselves blockheads ready to hold up their hands in amazement because the Brazilians refuse to accept our unequal terms, and express a determination to become purchasers elsewhere.

It is amusing to find the *Morning Herald* propounding doctrines of Free Trade to the continental nations, and quoting the tritest axioms of political economy as fresh and important truths:—

"The things, we know, are neither rich nor rare,
But wonder how the mischief they got there."

Hear what the oracle points out to the sovereigns of France, Belgium, and the German states as the result of their new restrictive system:—"Such exclusion really acts as a premium for England to monopolise the trade of all the rest of the world." The poor simpleton does not see that the necessary inference from his own principle is, that the English system of exclusion must shut her out from her proper share of the trade of the world.

"Quam temerè in nosmet legem sancimus iniquam."

If, however, we are shut out from our old accustomed markets, the Government scribe is prepared to furnish us with consolation and compensation. First, there are the new markets opened to us by the late Whig Government in China;—granting that the Chinese may be willing to purchase English manufactures, we have yet to learn what they have to pay for them with; we cannot take their agricultural produce after we have refused agricultural produce on cheaper terms nearer home; and we have not yet discovered what else they have to offer. We are next proffered the markets of Siam and the Indian archipelago in lieu of those which we are about to lose in Brazil; but we want to know why we might not have both? What reason can be assigned for abandoning markets which are known and profitable, for markets which are unknown and uncertain? Finally, we have held out to us in remote prospect the trade of the empire of Japan! This is certainly the climax of trifling with a nation's patience. Everybody knows that our chances of trade with Japan were long ago sacrificed to the monopoly of the East India Company, when, at the secret instigation of the lords of Leadenhall-street, Java and its dependencies were made a present to the Dutch at the Congress of Vienna. The Hollanders evinced no gratitude for a sacrifice which they rightly attributed to sheer ignorance of the value of the gift, for with Java we resigned all reasonable prospect of commercial intercourse with Japan.

It is an excessive demand on credulity to suppose that a commerce only to be obtained through the medium of an unjust war ought to be regarded as a compensation for the loss of a trade which wants nothing for its preservation but a just and equitable peace. The Government scribe further hints that colonization might help to compensate for our exclusion from European markets. We should be glad to know how many of our colonies at this moment pay their own expenses? But omitting, for the present, the general question of colonization, we should like to know what length of time, on the writer's own calculation, would elapse before a new colony would be so far advanced as to become a profitable customer? When that is settled we should

next demand what is to become of the manufacturing population of Britain in the interim? "Live horse, and you shall get grass," would be no very comfortable doctrine to the operatives of Lancashire and the West Riding of Yorkshire.

The evils produced by monopoly have become too pressing and too palpable to be any longer denied; even the *Morning Herald* will not venture beyond palliation. We turn, then, to the electoral body of the country, renewed and considerably altered by the present registration, and we ask them whether a system of legislation, which its authors recognise as evil in principle, and which experience every day proves to be more and more ruinous in practice, should any longer be supported by the constituency of an enlightened empire? We have reached a crisis where temporary expedients must be unavailing; nothing but a Free Trade can save the country.

JACK-CADE DOCTRINES OF THE POST.

We certainly had not thought that we should ever have to defend the rights of landlords against the attacks of the *Morning Post*. But so it is. Our contemporary has of late been getting so very Jacobinical (in the abstract) that we are really frightened, and feel it our duty as Conservative journalists to make what stand we can against the dangerous speculations of this recreant landlords' advocate.

Last week we gave a short notice of a public meeting held at Highworth—the Earl of Radnor in the chair—for the purpose of "taking into consideration the distress of the working classes, and to discuss the benefits likely to arise if the trade in corn and other provisions were free." Of the direct object of this meeting—one of the most interesting and important we have lately seen reported—and of the fact that a small tradesman in an agricultural town moved, a tenant-farmer seconded, and an assembly of seven hundred farmers, tradesmen, and labourers adopted a string of decided Free-Trade resolutions—the *Post* seems indisposed to say much; but it takes occasion, from a desultory conversation on the subject of allotments with which the proceedings of the day were diversified, to broach certain doctrines on the right of the landowner to his land, which, we should imagine, must be more surprising than agreeable to the majority of its landowning patrons. If these lords and gentlemen should have their eyes opened by the speculations of our contemporary, to see the sort of questions which are opening wider and wider before them with every month that this monopoly lasts, it will be so much the better for them.

The *Post's* doctrine, as developed in two leading articles of Saturday and Monday last, is, that the British landlord owns his land subject to the condition of leasing it out to the labourers, on demand, by the acre or the rood, at charity rents—i.e., at such rents as the labourers may find it convenient to pay. If the landlord demur to the demand (whether for the labourer's sake or his own), or higgles about the terms; if, in particular, the landlord prefer a tenant who offers 8d. a lug to a tenant who offers 5d. a lug, the *Post* tells him that he, the landlord, "traffics in the misery of the poor man," and that his conduct and principles are "most abominable." In short, the *Post* is for putting the whole lauded property of Great Britain into commission—in trust, to be granted out in acres and quarter acres, to the lowest bidder. And the *Post* thinks Lord Radnor little better than a brute, because he does not quite cheerfully fall into this arrangement.

As our contemporary gives us his views chiefly in the shape of laudatory or approving comments on quotations from poor men's speeches, we shall quote too; that the landlords may see exactly what sort of thing they are bringing on themselves by their prolonged denial of justice. We have only to premise that we are not going to commit the wrong of holding misery responsible for its rash and foolish words: if wretched agricultural labourers ignorantly talk agrarianism, the blame rests with the greedy and iniquitous legislation which knowingly enacts starvation.

At the meeting in question the *Post's* pet allotment system was introduced by a labourer of the name of William Speakman, a poor fellow with a wife and nine children, and wages ranging from 6s. to 8s. per week. After a significant menace to Highworth property, to the effect that it was his (William Speakman's) intention to go and take up his residence in the workhouse and cost the parish 30s. a week, "and he hoped that all labouring men with families would go there also," he added:

"Something must be done. The poor could not go on any longer. If the poor man wanted twenty lug (perches) of land, why could he not have it at the same price as the farmer? Why was he charged at the rate of 25 or 26 an acre? (A voice—'Yes, and 28 an acre!') How could the poor man pay that price? Why, if they let the poor man have a couple of acres of land for a year or two for nothing, and then charged him a fair rent for it afterwards, would not that be better than his going to the workhouse? (Cheers.) But it was of no use. They must all go to the workhouse. His advice was, to the poor

who had families, 'Flock to the union—all the union—and then something would be done.'

A couple of acres for a year or two for nothing, and a fair rent afterwards—and surely "nothing" is the only fair rent for pauperism to pay at any time—with crowded and overflowing union-houses as the alternative! And the good, easy *Post* looks on composedly at all this—rather enjoys it—and puts it into the hands of its landlord readers with the pleasant commentary, that "the labourers who composed the majority of the meeting approved themselves most inapt pupils in the school of Free Trade."

The next speaker of the labourer class was one William Cole. William Cole, too, is by no means an apt pupil in the school of Free Trade. He prefers cheap land, and "taking a good deal away from the parsons;" and, on the whole, shows himself an apt and forward pupil in a school far in advance of that of Free Trade. William Cole says:—

"We poor men are put upon very much indeed. The farmers make poor souls work many hours more than they ought, and give them nothing for it. They put taxes on poor souls, instead of which they ought to take them off. If they took a little of the duty off malt, it would be good for poor souls. Also, if they took a good deal away from the parsons (a laugh), it would be a good thing for the poor man to get his acre or two acres of land. (Hear, hear.) The farmer says he would not work if he got it. That is not true. What the working man wants is a little more wages, and then he would be able to pay his rent and taxes. (Hear, hear.) The Lord will be with the poor, and God knows what will become of the gentlemen when they die. I'm sure I don't know. (Hear, hear.) I hope the gentlemen will let the poor have a little land. (A voice: 'Yes, but not at 25 an acre.') Let them have land for one year for nothing, and then let it to them afterwards for a penny a lug (perch) more than the others have it for. (Hear, hear.) The speaker was going on to recommend that the tax should be taken off tea and sugar and put on thrashing-machines, when it was intimated to him that he was talking too long."

We should think that the Dukes of Buckingham and Richmond would also have been of opinion that William Cole was talking too long.

After Lord Radnor had given the meeting his views of the causes of the labourers' distress—an ever-stocked labour market, and an artificially-restricted demand for labour—and stated his objections to allotments as being a mere substitute for wages, and pointed to Free Trade as the only means of increasing the value of labour and raising wages, a Mr. Phipps spoke. This gentleman, with whose speech and the conversation that grew out of it the *Post* seems especially delighted,

"Was in favour of allotments, and thought it of no use talking about Free Trade. It was of no use to send the labourers to Manchester. They breed too fast there already. He was for allotments, but they should not be at rents too high for the people to pay."

Whereupon Lord Radnor very naturally asked:—

"Who is to fix the price? If a man is willing to give me 8d. a lug, of course I shall take it. If I could get 8d. a lug, and let it to you for 5d., of course I shall be making you a present of the difference."

The query was promptly answered by a Mr. Lawrence, who chalked out the thing for his lordship exactly—land for so much an acre, and the proceeds to be appropriated so-and-so:—

"If the noble lord let his land at £2 an acre, which would be £1 more than it was worth, and gave the second £1 as a premium to labour, then he (Mr. Lawrence) would be glad to meet him, and call him as a friend to the poor. (Hear.) Lord Radnor told them, that if one man would not give the price another would. He held that to be an abominable doctrine to be broached in a Christian country. (Cheers.) Was this the way to mend the condition of the poor man? Let him have the land at a fair rent. (Cheers.) If the noble lord let allotments, he should give them at a rent the poor man could pay."

We quite agree with the *Post* that "this discussion may not be regarded as other than instructive." Most instructive is it for landlords to see what kind of questions they will by-and-by have to deal with, if they decline dealing with the Free-Trade question. These gentlemen are playing a bold game. We venture to add, to the already ample list of fulfilled League predictions, that if the labourers of England once get the notion into their heads that they have a right to an acre or two of land apiece, gratis for a year or two, with a "fair" rent to pay afterwards, it will be a more difficult notion to get out, and a more dangerous one to leave in, than all the points of the Charter together. "Land at a fair rent"—the fairness to be estimated, not by market value and mutual contract, but by the tenant's needs acting on the landlord's charity or fears—is neither more nor less than agrarianism. "Let us have the land for one year for nothing," says poor William Cole, with the *Morning Post* crying "most abominable" on the hard-hearted Lord Radnor, or Lord Anybody, who shall dare to say "No." But suppose William Cole, and a parish or county of William Coles, could not make it convenient to pay his lordship rent for the second year, what would his lordship do then? Would the law of distress be of much avail against a few scores, or hundreds, of pauper tenants? Would ejectment be a process quite clear of difficulty and danger? Supposing this letting of land on charity to be—as the *Post* means that it should be—universal through England,

might not those landlords who should still hold the "most abominable," but very prevalent, landlord doctrine that their land is their own, and not somebody else's, be liable to be shot at sometimes from behind hedges, in case of a too strenuous assertion of their property-right? Is it possible that men who talk of saving a country by blocking up trade and granting allotments, have ever heard the name of IRELAND? With a population that increases at the rate of 1000 a day, crowded and crammed together on allotments at fair rents, every rood of ground keeping its man, and the channels of manufacturing, trading, and maritime industry choked up the while with protection, we should soon be, not exactly as Ireland is, but as Ireland would be—minus British troops to keep the peace, and the British labour market to draw off the overflowings of her population—a dense, squalid, potato-eating people, battling with one another, and with their landlords, for land as for life; dividing and subdividing the land as the exigencies of their daily increase would daily necessitate; their numbers and impotency reinforced, too, from the manufacturing districts by shoals of returned emigrants;—this is the state of things which the doctrines of the *Morning Post* would give us, rife with all the elements of Whiteboyism, Ribbonism, agrarian insurrection, and revolution. The landlords and the landlords' friends know not what they do when they talk of the "allotment system" (a thing good enough in its way and place) as a remedy—the remedy—for the pauper wretchedness of the agricultural labourers. "Allotment system" is a term of much width and ambiguity of import. Landlords mean by it something that is to ease the rates, and help out wages, and make the labourers more dependent on their will and pleasure, and cushion Free Trade, and throw dust in the eyes of the public. Labourers mean by it—so far as we can gather their meaning from the Highworth speeches and the *Post's* commentary on them—something which was to make them joint-owners of the soil, at rents measured by their own convenience. If the landlords of England were wise in their generation, they would vote civic crowns to such men as Lord Radnor, who came forward to throw the weight of a justly-earned influence into the scale against this most dangerous, popular, and fashionable crotchet. Should they succeed—as their *Post* seems determined that they shall—in fairly bringing to a head the question of the landlord's right to let his own land in his own way, they will have got up an agitation more perilous to their order than any this country has seen yet.

We warn the landlords that the further they go from the true question at issue—the right of the labourer to earn and eat his bread how and where he can get it,—the worse they will fare. The longer this question remains unsettled, the more they must expect to see their titles to their estates unsettled. If they go on much longer doing what they will with what is not their own, they may look to find themselves very unpleasantly abridged of the right of doing what they will with that which truly is their own. A more disorganising question than this, which they have made for themselves, never was. It is a characteristic vice of their unnatural and wicked Corn Law, that it opens to popular agitation a number of delicate, abstract inquiries which it were infinitely better for the quiet of society to keep closed—perplexes people's notions of the simplest social rights and relations—makes the theory of property itself a thing for discussion in newspaper columns, and open-air meetings of agricultural labourers. The *Post* of Saturday last says, "The power to make laws is akin to the power to claim private property." Exactly: the very theory both of the Corn Law, and of the compulsory charity of the *Post's* allotment system. The landlords begin with using their law-making power as a private property, a thing to get money by—they will end (i.e. they would end, if the Free-Traders were not at hand to save them) in seeing their private property itself thrown open to political agitation and agrarian legislation.

We must not leave this subject without a word on the curious theory of economics implied in the *Post's* attack on Lord Radnor. Our contemporary thinks it "most abominable" that his lordship should ask,—"Why should land be let to one man for less, when another is ready to give more?" To which we can only say,—Why, indeed? What is to become of the man who is ready to give more—whose readiness to give more is a presumptive *prima facie* evidence that he wants the land more, and means to do more with it? Is he to go landless because a competitor underbids him? At all events it is so certain that, practically and as a general rule, landlords will take high bids in preference to low ones, that, unless the *Post* is prepared to fix the price of land at once by act of Parliament, it is perfectly idle building any hope for the labourer on cheap, eleemosynary allotments. Another abomination with our contemporary is, his lordship's doctrine that "the farmer is not bound to give more for labour than he can get it for." Very cruel this, thinks the *Post*—most abominably unchristian. Yet what is the farmer to do?

If he indulge his benevolent sensibilities by paying a charity rate of wages, while his neighbours are paying the poor-law rate of wages, he will only get himself after a while into the *Gazette*, where he will leave off paying wages at all. Or, if all the farmers of Great Britain could be induced by a simultaneous charitable impulse, or forced by act of Parliament, to pay 12s. a week when they could get their work done for 7s., the only consequence would be that fewer labourers would be employed and less work done. It would only be lengthening the blanket at top, by cutting off a bit from the bottom. The *Post* forgets that, after all, the wages-fund is a finite quantity. Turn and twist it how you will, there is no curing the mischiefs of a system, which, by choking up the natural channels of industry, makes labour an unmarketable drug, the labourer a cumberer of the ground, work and wages a charity. Nothing can be done with such a system, except to do away with it. Charity-wages will only cut down the profits and eat into the capital out of which alone any wages can be paid. Allotments at fair rents—or at no rents—will only be, *pro tanto*, a substitute for wages. "Allot" to your pauper labourers the very freehold of the soil, and the only consequence will be (witness the case of Heyshot, detailed in the *Morning Chronicle* of the 17th instant), that the freeholders will get neither work nor wages till they have sold their freeholds, spent the money, and become chargeable again.

Protectionists call Lord Radnor, and Mr. Cobden, and their political economy, hard-hearted, cold-blooded, unchristian, &c. &c. Political economy has, however, no need to shrink from the test which Christianity itself applies to all manner of men and things, "BY THEIR FRUITS YE SHALL KNOW THEM." Political economy has just now been raising the wages of the Lancashire factory labourers: protection has just now (see the *Chronicle* of the 17th) been reducing, from 9s. to 8s., the wages of Sussex farm-labourers, in Mr. Cobden's own native parish of Heyshot. In these two facts will be found the whole of the philosophy of wages.

OPENING OF THE ROYAL EXCHANGE.

On Monday next Queen Victoria will proceed in state to open the Royal Exchange of the City of London. The pride, pomp, and circumstance of the pageant will, no doubt, attract multitudes of spectators; but a deeper interest and a greater importance belong to this ceremonial than to any of the ordinary processions of royalty. The great mart where merchants congregate may be regarded as the great centre of British commerce, and almost as the shrine of our national prosperity. Two hundred and seventy-four years have elapsed since first that mart was opened and dignified with the name of Royal Exchange by Queen Elizabeth. Since that period commerce has become more and more identified with the national existence of the British people, until London has become the commercial metropolis, not of England, but of the civilized world, and London's Exchange the chief regulator of all trading transactions over the face of the earth. In opening an edifice worthy of so high a destiny, it is natural to reflect on the causes that have placed such a destiny in the grasp of the British people, and the means by which its possession may be secured. When Queen Elizabeth visited the building erected by Sir Thomas Gresham, even her prescience must have failed to discover the glorious career on which the industrial enterprise of Britain was about to enter. Spain, Portugal, Venice, the Lombard cities, and the Hanseatic League were far before England in commercial power and trading prosperity; the thought of competing with any of them would probably have been regarded as one of the most visionary projects that ever entered into the head of a dreaming enthusiast. But where is the commercial greatness of those states now? where is even that of Holland, which, at a later period, threatened to engross the carrying trade of the world? Each and all of these states have fallen from their pride of place, and each and all have fallen under the blighting influence of monopoly. There is solitude in the plazas of Cadiz and Seville; the quays of Lisbon no longer are loaded with the precious bales of Asiatic produce; merchants have ceased to congregate on the Rialto, and the waters of Amsterdam sleep turbidly in their canals. It is not sufficient to open an Exchange, the ports must be open likewise. It depends on the course of legislation whether our gracious Sovereign will dedicate an edifice where the harmony of nations will be advanced, secured, and perpetuated by the strongest of all bonds, those of mutual self-interest, or whether the new building shall be dedicated to the planning of retaliations and reprisals, and the concerting of selfish conspiracies, alike directed against the true sources of Britain's wealth and the progress of civilization over the whole earth. On such an occasion the littleness, the baseness, and the destructive tendency of commercial rivalries must force themselves on every reflecting mind; to erect what may be regarded as a temple to trade, and then to maintain the fetters which class

legislation has imposed on trade, would be to render the ceremonial in which our Sovereign has been invited to take a part nothing better than a mockery and a delusion. It depends upon the people of England whether the new edifice about to be opened will be a type of national greatness and national happiness, or whether it will be a gorgeous monument of a proud position wantonly sacrificed, and unparalleled advantages recklessly thrown away. Destiny has never proved false to a nation until the nation has first proved recreant to its destiny. Providence has placed our country in the van of civilization; but, if we abuse our position, there are others not far behind in the march ready to take the place which we in our madness shall have abandoned. But we indulge more cheering anticipations. We believe that the iniquity and the folly of monopoly have been so clearly demonstrated that the existence of the monster is dated, and that the new Exchange will see a new career opened to Britain's commercial prosperity, based on the only permanent, because the only true, principles—perfect equity, and perfect freedom.

MEETINGS.

GREAT FREE-TRADE MEETING AT MANCHESTER.

MANCHESTER, Friday Morning.

The League opened their winter campaign of agitation in Manchester by one of the most crowded meetings in the great Free-Trade-hall, which has ever yet been assembled in that building. The admission was by ticket; and so great was the number of applications, and the anxiety manifested to be present, that not a place was to be had, except for the few seats reserved, after Wednesday noon.

Among the principal persons present were Richard Cobden, Esq., M.P. for Stockport; John Bright, Esq., M.P. for Durham; Thomas Bazley, jun., Esq., William Evans, Esq., Thomas Woolley, Esq., S. Lees, Esq., Peter Seville, Esq. (Oldham), Samuel Eveleigh, Esq., Edward Shawcross, Esq., Joseph Brotherton, jun., Esq., J. Atkinson, Esq., R. Nicholson, Esq., J. Whitlow, Esq., D. Ainsworth, Esq., C. J. S. Walker, Esq., W. R. Callender, Esq., T. Chadwick, Esq., W. Morris, Esq., J. Charlton, Esq., W. Shuttleworth, Esq., — Higgins, Esq., T. Whitworth, Esq., W. Lockett, Esq. (Mayor of Salford), J. T. Crook, Esq. (Liverpool), P. Walker, Esq. (Patricroft), W. Walker, Esq. (London), Charles Cobden, Esq., W. Rawson, Esq., A. Prentice, Esq., Thomas Bright, Esq., Jacob Bright, jun., Esq., R. Matley, Esq. (Mottam), R. R. Moore, Esq., Wm. Rowland, Esq., J. B. Scott, Esq., T. Woodcock, Esq., John Shuttleworth, Esq., W. Sale, Esq., John Shawcross, Esq. (Gorton), Alderman Armitage, R. A. Atkinson, Esq., &c. &c. Mr. Cobden and Mr. Bright entered the hall, accompanied by the members of the Council of the League, who had arrived precisely at the time the meeting had been advertised to commence (half-past seven o'clock), and were received with great and prolonged cheering.

GEORGE WILSON, Esq., took the chair, and called upon Mr. HICKIN, Secretary to the League, to read the minutes of the last meeting in London; and these minutes were then, on the motion of Alderman CALLENDER, seconded by Alderman C. J. S. WALKER, approved by the meeting.

The CHAIRMAN then said: Ladies and gentlemen, if there should happen to be any stray monopolist here this evening, I would ask him if he believes in the rumours circulated by his party as to the death of the League? (Laughter and applause.) I would ask him to look at this meeting, and judge for himself how far it is worth his while to place any reliance on the veracity of a party instrumental in circulating reports to which this immense gathering gives such a triumphant and practical refutation. (Loud applause.) Ladies and gentlemen, after a comparatively "still" public life of the League for some ten weeks past we resume our meetings here this evening; and it will be my duty to give to you some information as to what has been the occupation of the League during the last ten weeks, in order that you may inform yourselves and judge for yourselves, whether, at this particular season of the year, there could have been any other business in which they could engage so likely to contribute to the success of the cause of Free Trade as that in which they have been occupied. (Applause.) Some months ago we made no secret of a resolution to which the Council of the League had then come, to institute a searching inquiry into the condition of the register of nearly 140 boroughs of the country; and we were compelled to do this from the knowledge that some one should do it, and that no other body existed whose funds, whose agents, whose correspondence, and information in every respect entitled them to do this so fully as the League. (Hear, hear, hear.) And although we have heard that the League have undertaken to do many things for which they have deserved the censure of their opponents, still I have never heard it said of them that they had undertaken anything in which they have manifested a deficiency of energy in the business; and that energy I will undertake to say has never been shown to greater advantage than in the present registration. (Applause.) The moment we announced our intention a great cry was set up as to the unconstitutionality of the League. (Laughter.) "Oh!" it is said, "look here!—here is the League going to pry into every one of those snug little properties that have escaped Schedule A. What business has the League to inquire into those little family jointures of men who, as Byron describes them, were only born 'to hant, and vote, and raise the price of corn!'" (Applause and laughter.) They were greatly offended at this interference: some threatened to resign—some of them thought it was of no use to have a Parliament if these things were not to be put on

end to, or to have an Attorney-General, or to have law, or anything else. (Laughter and applause.) Now, what is this interference of the League, after all? The League is a great—a national—body; it has its ramifications in every district of the country, and its registered members in every district. It may have its head-quarters in Manchester, or London, or elsewhere; but still it is the recognised organ of Free Trade in the country; and as such it has its agents in every part of the country. Well, what then? The members of the League are the agents of the League for their districts, and as such have a right to interest themselves and interfere in the representation of those districts; and we say that we interfere by correspondence and otherwise, in perfect good will and fairness, in those districts; and upon the letters and information we receive, we determine what steps we shall take in that locality where we are requested to interfere, and in no other case. (Hear.) What is the nature of this interference? We want to make the honest voter an independent and free voter. (Hear.) We interfere not to bribe or corrupt, but to enable the honest voter to drive away the corrupter and briber from his premises. We interfere to show him that the vote is his, and to be given for the best interests of himself and fellow-countrymen, and not to be used by any man for the advancement of his own purposes. Well, gentlemen, we are here then to-night to give some account of these last ten weeks' work in the registration in different parts of the country, not merely here but in the country generally, though more especially in these districts, which were the birthplace of the League. (Applause.) And first as to the borough of South Lancashire. Well, we all know the position of the boroughs in South Lancashire at the last general election. The boroughs returned at that election 12 Free-Traders and 10 Monopolists. There were seven boroughs which returned Free-Traders (or a Free-Trader), and five which returned monopolists (or a monopolist); there were two boroughs which returned one and one; and of the other boroughs there was one which returned a Free-Trader (who has become a Monopolist), and another which returned a Free-Trader, who was unseated on petition. But the members for each side of the question are 12 and 10, as I have already stated. Well, over and above these we have four county members, making fourteen monopolists to twelve Free-Traders for the county and boroughs together. I am sure there is no man in this room, knowing the state of feeling, but will say it is high time such a condition of things was put an end to. (Hear, hear.) Well, then, I hold in my hand a list showing the result of the attempts made to purge the register in the boroughs; and, in the first place, I would draw your attention to this fact, that, in four of the boroughs returning seven Free-Traders, the monopolists have never shown their faces in the registration courts—a pretty fair proof that the change of opinion, and the attention of the Free-Traders to the registration, have induced them to look with no expectation to the likelihood of altering the state of things in those boroughs. (Applause.) Now those boroughs are:—Manchester (returning two members), Salford (returning one member), Preston (returning two members), and Oldham (returning two members): in all these boroughs, in the recent revision, the alteration has been wholly on the side of the Free-Traders, the monopolists not having shown their faces. (Applause.) Then we have, in addition, three boroughs returning Free-Traders at the last election, in which the gain on the registration this time has been so considerable as to place the members of these boroughs out of danger: these are Ashton, Bolton, and Rochdale. (Hear.) You have, then, seven boroughs in this county, returning ten members to Parliament, in each of which there is not the slightest possibility of a monopolist being returned to Parliament provided a general election took place upon the present register. (Loud applause.) Then we have two boroughs which return one and one; and I blush to name as the first that of Bolton, which returned at the last election two Free-Traders: the only man who has thought proper to change his opinions on this question against us, the town of Bolton has the misfortune to return to Parliament. ("Hear," and a laugh.) Well, the gain there is 57. The register was fully as good last year as at the last election, and there is no doubt that at another election the burgesses of that borough will amply retrieve their mistake, and return two good Free-Traders. (Loud applause.) The next place is Wigan; and this is the only loss we have had;—we have gained in 13 cases out of 14;—we have had a loss there of two votes, and we give the monopolists the full benefit of it. (Laughter, and applause.) We have next Clitheroe, which was represented at the last election by a Free-Trader, but who was unseated by petition. The state of the borough on this revision is such as to render the return of a Free-Trader safe there—at least our information leads us to this belief, and we have the information upon good authority. Then we have the borough of Lancaster, which returns two monopolists; the gain on the revision there is greater than to cover the majority by which the highest of the monopolist candidates was returned at the last election. (Hear, hear.) The borough of Lancaster may be considered, with exertion, safe, should an election take place on this register. (Applause.) We next come to Blackburn, which returns two monopolists to Parliament; the highest of the monopolist candidates there at the last election had not a majority of more than half of what we have gained this year; so that the borough of Blackburn may be added this year to the gain. At Warrington the gain on the revision is 32 votes. Our friends there believe it is quite sufficient to change the representative for a Free-Trader at the next election. (Applause.) I have now shown that we shall have a gain, if an election takes place on this register, of one in the case of Bolton, two in the case of Lancaster, two in the case of Blackburn, and one in the case of Warrington. We come, lastly, to the borough of Liverpool. I wish I could report of the borough of Liverpool as of the others; but I am happy to say, though such is not the case, that there has been a gain on behalf of the Free-traders of 452 over their opponents—(loud applause)—and that that does repeated will be sufficient to change the representation of that town. (Hear.) Well, now we come to the county. We all know the position of South Lancashire; on the one hand you have evidence of the greatest amount—I may say the gigantic amount—of energy, of industry, of capital and wealth, ever seen; and on the other you have a landed proprietary with a territory almost unknown in any other county. At the last election—the first contest on Free-Trade principles—we all know the trifling majority which graced the victory of the monopolist candidate. It has been asserted that things

work of registration has been going on ever since that time; the monopolists placarded the walls immediately the contest was over, inviting their friends to come and claim to be on the register; and the League gave them due notice to "put their house in order," and hold themselves ready against another election. (Applause.) And if they have not done so, it is for the best of all reasons—that they could not. (Hear, hear.) Well, the first reports from the monopolists of what we were doing was our index to what would be the result—for they began to cry out against the shameful number of objections made by the Free-Traders. (Laughter.) We admit that there was a great number; and why? We took the register,—and every one knows that it was in a most shameful state: the properties giving qualifications were described in the most vague manner;—we took the registration upon our own hands, and, with the greatest anxiety to place it in the best possible state, we induced 2600 of our friends to re-claim, in order that they might give, as they were bound to do, the best and fairest description they could of the property for which they claimed to vote. (Hear.) Then we objected to our opponents, finding they had not done so, on that ground; and I am sure no man here will feel sympathy for men wishing to remain on the register with a wrong description while they had it in their power to amend such description. (Hear.) We had not the means of striking off these votes if they attended before the barrister, but we considered ourselves justified in order that we might have the descriptions corrected and given in accordance with the law. Most of you are probably aware of the result of the last election for South Lancashire. There were 14,544 votes given for the two candidates together; being for Entwistle 7571, and for Brown 6973, leaving a majority for Entwistle of 598. On the objections against those 7571 voters who polled for Entwistle we struck off 878 at the revision. (Loud and repeated rounds of applause.) And of the 6973 who voted for Brown our opponents have struck off 422:—we striking off more than two to their one, thus having a majority, or gain, on the objections over them of 456, and within 142 of the whole majority by which Mr. Brown was defeated at the late contest. (Loud applause.) Then the register has gained at this revision by the new claims. There were 4982 new claims; of these the Free-Traders made 3141, and established 2821 (loud applause), being a failure of only 320 of the whole of the claims made. So much for the reports propagated week after week, that the Free-Traders were filling the register with spurious claims! The number of claims made by the monopolists was 1841, of which they established 1357, being a failure in 484 cases, and giving us a majority on the claims of 1464 votes. (Cheers.) Well, then there are 169 new claims, belonging to parties whose opinions we have not yet had time to ascertain; but we will give the monopolists the whole of them, and we shall still have a gain on this revision, taking claims and objections together, of 1751 votes. (Great and prolonged cheering.) Now, it is quite right that we should see in what district this great gain has been accomplished. In the first place, in the polling district of Ashton we have 40 of the 1751; in Bolton 142, in the district of Bury 75, in that of Wigan 11, in that of Ormskirk 17, in that of Oldham 102 (applause), in that of Newton 106 (bravo!), in that of Rochdale 233 (applause), at Liverpool 490 (applause), and in the district of Manchester 704. (Loud cheering.) This makes a total of 1920, from which deduct the 169 unascertained ones, and that leaves us a gain of 1751. Then take from these 1920 the 598 majority of Entwistle at the last election and the 169 unascertained, making altogether 767, and we have a working majority upon this register of 1153 votes. (Loud cheers.) An analysis of the new register, therefore, shows—of old electors (Free-Traders), 6551; new electors (Free-Traders), 2821; total Free-Traders on the registers, 9372. Of the old electors being monopolists, 6693; do. new electors, 1357; neutrals, 169; leaving a total of 8219, or a working majority, as already stated, of 1153. (Applause.) And now, gentlemen, we come to the Northern Division. We have not done much there, but we have done something; we have attained a gain there upon the revision, with comparatively little exertion, of 533. (Applause.) The result has been, then, to give us a gain of 533 votes for North Lancashire—to give us two seats for South Lancashire (cheers), and to leave the monopolists three seats in the boroughs, or five out of the whole 26 members for the entire county; I think then you will agree with me that there never was, in the history of registration, so complete a sweep of a county as this has been. ("Hear," and loud cheers.) I have also in my hand a list of returns for 70 out of the 140 boroughs over which the League has exercised some influence, and of these there are 68 in which there has been a clear gain upon the registration—in some a great gain, but less or more in all. (Applause.) Well, now we will leave these results to speak for themselves: they are here, before the country; our opponents may gather from them whether the League has been dead or slumbering, and they will accordingly derive what consolation they may from them. (Applause.) We have concentrated our energies on these points. We thought it was where, for the season, our efforts were most required; and although I may say we have done much, I believe the League is but yet in its infancy, that it is opening up new fields of labour, is occupying ground not before occupied, and that the exertions before made will afford no parallel to its future efforts. (Loud cheers.) I now beg leave to call upon Mr. Cobden to address the meeting. (Renewed cheering.)

RICHARD CONDEN, Esq., M.P., now came forward. After much cheering the hon. gentleman said:—Mr. Chairman, ladies, and gentlemen, I congratulate you upon this magnificent meeting. I was thinking, as I sat here, that probably there never had been so many persons assembled under a roof in England, or in Europe, as we have at this great League meeting; and the occasion and the circumstances under which we meet afford the most encouraging symptoms—(Hear)—encouraging, inasmuch as they prove that it is from no transient motive that you have joined together in this great cause—(Hear)—that it is not from the pressure of distress, temporary distress, that you have banded yourselves together—that the cause of Free Trade is, in your minds, something more than a remedy for present evils—that you look at it, under all circumstances, as a great and absorbing truth—and that you are ready for it with an intellectual and moral

craving, which has made it almost a part of the religion of your souls. ("Hear, hear," and applause.) I venture to say that this meeting, held under these circumstances, with no pressure or excitement to call you together, will have more weight, more effect, upon public opinion than a score of those assemblies we used to hold, when we were driven together, as it were, under the pressure of local and temporary distress. (Hear, hear.) And quiet as has been those statistical tables that you have heard by our chairman, I venture to say that they will strike more terror into the ranks of the monopolists than the loudest demonstrations or the most brilliant declamation with which we have ever tried to interest you. (Cheers.) Upon the subject of this registration there is one thought that occurred to me as our chairman was giving you an account of the proceedings in the county revision. It is this, that the counties are more vulnerable than the small pocket boroughs, if we can rouse the Free Traders of the country into a systematic effort such as we have exercised in the case of South Lancashire. (Hear, hear.) In many of the small boroughs there is no increase in the numbers; there is no extension of houses; the whole property belongs to a neighbouring noble, and you can no more touch the votes which he holds through the property than you can touch the balance in his banker's hands. ("Hear, hear," and a laugh.) Now, the county constituency may be increased indefinitely. It requires a qualification of forty shillings a year in a freehold property to give a man a vote for a county. I think our landlords made a great mistake when they retained the forty-shilling freehold qualification; and, mark my words, it is a rod in pickle for them. (A laugh and cheers.) I should not be surprised if it does for us what it did for Catholic emancipation, and what it did for the Reform Bill—give us the means of carrying Free Trade; and if it should the landlords will very likely try to serve us as they did the forty-shilling freeholders in Ireland, when we have done the work. ("Hear, hear," and "Oh, oh.") The forty-shilling franchise for the county was established five or six centuries ago. At that time a man, in the constitutional phraseology of the time, was deemed to be a "yeoman," and entitled to political rights, provided he had forty shillings a year clear to spend. That was at that time a subsistence for a man; probably it was equal to the rental of one hundred acres of land. What is it now? With the vast diffusion of wealth among the middle classes, which then did not exist, and among a large portion, I am happy to say, in this district, of the superior class of operatives, too, that forty-shilling franchise is become merely nominal, and is within the reach of every man who has the spirit to acquire it. ("Hear, hear," and cheers.) I say, then, every county where there is a large town population, as in Lancashire, the West Riding of Yorkshire, South Staffordshire, North Cheshire, Middlesex, Surrey, Kent, and many other counties I could name—in fact, every other county bordering upon the sea coast, or having manufactures in it—may be won, and easily won, if the people can be roused to a systematic effort to qualify themselves for the vote in the way in which the South Lancashire people have reached to the qualification. We find counties can be won by that means and no other. (Cheers.) It is the custom sometimes for many to put their savings into the savings' banks. I believe there are fourteen or fifteen millions or more so deposited. I would not say a word to lessen the confidence in that security,

but I say there is no investment so secure as the freehold of the earth, and it is the only investment that gives a vote along with the property. (Hear, hear.) We come then to this—it costs a man nothing to have a vote for the county. ("Hear," and applause.) He buys his property; sixty pounds for a cottage is given—thirty or forty pounds in many of the neighbouring towns will do it; he has then the interest of his money, he has the property to sell when he wants it, and he has his vote in the bargain. (Loud cheers and cries of "Hear.") Sometimes a parent, wishing to teach a son to be economical and saving, gives him a set of nest eggs in a savings' bank; I say to such a parent, "Make your son, at twenty-one, a freeholder; it is an act of duty, for you make him thereby an independent freeman, and put it in his power to defend himself and his children from political oppression—(loud cheers)—and you make that man with £60 an equal in the polling-booth to Mr. Scarsbrook, with his eleven miles in extent of territory, or to Mr. Egerton. (Renewed cheers.) This must be done. In order to be on the next year's register, it requires only that you should be in possession of a freehold before the 31st of next January." We shall probably be told that "this is very indiscreet—what is the use of coming out in public and announcing such a plan as this, when your enemies can take advantage of it as well as you?" My first answer to that is, that our opponents, the monopolists, cannot take advantage of it as well as we. (Hear, hear.) In the first place, very few men are, from connexion or prejudice, monopolists, unless their capacity for inquiry or their sympathies have been blunted by already possessing an undue share of wealth. (Hear, hear.) In the next place, if they wish to urge upon others of a rank below them to qualify for a vote, they cannot trust them with the use of the vote when they have got it. ("Hear," and cheers.) But, apart from that, I would answer those people who cavil at this public appeal, and say, "You will not put salt upon your enemy's tail—it is much too wise a bird. They have been at this work long ago," and they have the worst of it now. (Hear, hear, hear.) What has been the conduct of the landlords of the country? Why, they have been long engaged in multiplying voters upon their estates, making the farmers take their sons, brothers, nephews, to the register; making them qualify as many as the rent of the land will cover; they have been making their land a kind of political capital ever since the passing of the Reform Bill. (Cheers and a laugh.) You have then a new ground opened to you which has never yet been entered upon, and from which I expect—in the course of not more than three years from this time—that every county (if we persevere as we have in South Lancashire) possessing a large town population may carry Free Traders as their representatives to Parliament. (Cheers.) Now, gentlemen, with just these preliminary remarks, I was going to notice a common objection made to us during the last two or three months—that the League has been very quiet of late—that we have been doing nothing. (Hear, hear.) Many people have said to me, "When are you going out into the agricultural districts again? I think they will be quite ripe for you now, for most of your predictions have fallen true, and the farmers will come and listen." (Hear.) My answer has been, "We are better employed at present

at home, and the landlords are doing our work very well for us at their agricultural meetings." (Loud laughter and cheers.) What have been the features of the agricultural meetings we had heard of in the last two months? Here is one very striking circumstance, that, from the Duke of Buckingham downwards, every president of an agricultural association has always begun the proceedings of the day by saying, "We must not introduce political topics in the discussions of this association." (Hear.) That means, "It is not convenient to us, the political landlords, to talk about the Corn Laws just now to the farmers"—(cheers)—and so they talk of everything else but the Corn Laws, and a very pretty business they make of their discussions. (A laugh.) We hear, in every case in which I have read their reports, of the deplorable state of the agricultural labourers. Now, I beg to premise, from my own personal observation, and much inquiry, that the agricultural labourers, as a class, are better off now than they were when corn was 70s. the quarter in 1839 and 1840. (Hear, hear.) I watched the poor-law returns during those years, when we had such deep distress in this district, and I found that able-bodied pauperism was increasing faster in the corn-growing counties of Sussex and Kent than they were in these manufacturing districts. (Hear, hear.) When we called together the conference of ministers from all parts of the country, the accounts they brought from the rural villages were as heart-rending as any thing we had ever known in these manufacturing districts. (Hear.) You did not hear the clamours from the agricultural districts then, because they were drowned in the concentrated cry from these populous regions; but they were suffering as much as you were suffering. (Hear.) And now, when in this district employment and comparative prosperity have returned upon us, we hear of the state of the agricultural labourers, which has been always bad, always at the lowest level of wretchedness, only because you have ceased to occupy the public mind with your complaints and your distresses. (Hear, hear.) But, if what they tell us is true, that the agricultural labourers are so distressed, what becomes of their plea in the House of Commons, that the Corn Law was passed and is kept up for the benefit of the agricultural labourers? (Loud cries of "Hear.") After what I have heard from these gentlemen, the squirearchy in the House of Commons, I should have expected that they ought to have been the last, upon the institution of agricultural associations, to complain of distress and of the dangers impending over them in the future—to have said, "I have a nostrum in my pocket that will quite prevent distress among agricultural labourers: have we not got the Corn Law; did we not pass it upon the pretence of remedying the distress of the agricultural labourers? Here it is—we have our sliding scale, and depend upon it our agricultural labourers have nothing to fear." (Hear, hear, hear.) But, instead of that, in no instance do they ever allude to the Corn Law as either a cause of employment or as a means of remedying the evil. (Hear, hear.) They never allude to any act of Parliament of the kind at all; and they seek, wide and far, for some other remedy for these distresses. (Hear.) What are their remedies? One of the latest declared is the allotment of land. To hear the outcry that we have from the landlords of the country, glorifying themselves with the idea of giving a patch of land to the labourer, you would have thought they had resolved all at once to make a present of a little slice of

their estates to the labourers around them (hear); but what does it amount to? It is proposed that each cottage should have a garden attached to it! The general advice is, I see, that it should be not more than half an acre, and some are recommending but a quarter of an acre in extent! It amounts to this, that the landlords, benevolent souls, are going to allow the peasantry that live upon their land to have a garden to their cottages! (Hear.) Why, there was a law passed in the reign of Queen Elizabeth ordering that no cottage should be built in this country without a garden being attached to it. (Hear.) I do not believe that that law has ever been repealed to this day; and the landlords, after violating the law, are now taking credit to themselves, and glorifying each other, that they are going to allow their labourers to have a garden to their cottages! (Hear.) Now, what is the mode in which these gentlemen go to work to benefit the agricultural labourers? They call them together for a ploughing match, then they bring them into the room and give them a glass of wine, and they give a reward of thirty shillings to one man who has ploughed best! Then they inquire who has served twenty-five years in the same place, and, perhaps, they condescend to give him 30s. as a reward for good conduct. (Hear.) Then the farmers—the farmers who sit at the table—have their names read over, and prizes are awarded: to one for successfully cultivating turnips, to another for having produced a good fat ox, and to another for having accumulated the greatest quantity of fat upon a pig. (Laughter.) And this is the way in which agriculture is to be improved! (Hear.) What should you think if a similar plan was adopted to protect you in your business? (Hear.) Let us suppose that a number of monopolists came down once a year—once a year mind you, for the lesson is only given once a year, and then only about two hours and a half long—that they held a meeting, in which they would have a spinning match or a weaving match. (Laughter.) And after they had been into some prize mill to see this spinning and weaving match, they sat down to dinner; and Job Hargreaves or Frank Smith is brought in, stroking his head down all the while as he comes before the squirearchy (laughter), and making his very best bow, to receive from the chairman thirty shillings as a reward for having been the best spinner and the best weaver! ("Hear," and laughter.) And, this being disposed of, imagine such a manufacturer getting a prize of £5 for the best piece of fustian! (Cheers.) And another "ditto, ditto," for the best yard-wide calico! (Great laughter.) Then imagine a shopkeeper rising from his seat to the table while the chairman puts on a grave face, and addressing him in complimentary terms, presents him with £5 for having kept during the past year his shop-floor and his counters in the cleanest state! (Shouts of laughter.) Then they call up a manufacturer, and he has an award of £5, because the inspectors had found his mill to be in the best working condition. (A laugh.) Then the merchant rises up and gets his reward of £5 for having been found by the inspectors to have kept his books in the best order by double entry. (Renewed laughter.) You laugh at all this; and well you may. You cannot help it. Where is the difference between the absurdity, the mockery of bringing up men in rough frocks to a dinner table and giving them 50s., because

they had ploughed well, or hoed well, or harrowed well—bringing up farmers to give them prizes for having the cleanest field of Swedish turnips, or for having managed their farm in the best way? Where is the difference, I ask, between offering these rewards and the giving out here of such rewards as I have just now alluded to? (Hear, hear.) Let us suppose, if you can keep your countenances, that such a state of things existed here, and what must be the concomitant order of things? (Hear.) It would argue, in the first place, that the proposers who were so treated were an abject and a servile class. (Hear, hear.) It would argue that the trader who could condescend to be treated so would himself be little better than a slave. (Cheers.) And if you needed such stimulants as these to make you carry on your business as you ought to do, how do you think you would be found in the race of industry as compared with other classes, were they even not quite so childish as to be fondled and dandled by a body of members of Parliament? (Hear.) Why, there would not be a country on the face of the world that you could compete with—that is evident. You would, like them, be going to these same parliamentary men who were your dry nurses, in order that they might pass an act of Parliament to protect you in your trade. (Hear, hear, hear.) The landlords do not give themselves praises, but they hold up their conduct as something deserving of the reward of public admiration because they can come forward and tell us that they make the most of their land, forsooth! (Hear, hear.) I was reading just now in this morning's paper a report of Lord Stanley's speech at the Agricultural Society's meeting on Tuesday, which, by the magic power of steam, has been carried to London and brought back to us here in Manchester in two days (hear, hear), and Lord Stanley tells us what must be done with land; he says:—"And I repeat what I have already said on a former occasion in this room, that there is no investment in the world in which a landlord can so safely, so usefully, or so profitably, invest his capital as in the improvement of his own farm, by money sunk in draining on security of the land which belongs to himself." ("Hear, hear," and cheers.) Well, what does this amount to? That it is the interest of the landlord to make the most of his land! ("Hear," and a laugh.) And he goes on to say, and he takes some little credit to himself and to his father for what had been done with his land here in Lancashire. He says:—"In this last year we have laid down in deep draining somewhere about 300 miles of drains, at an expense of between £5,000 and £6,000, and I think employed about a million and a half of draining-tiles." (Hear.) I believe my friend Mr. Bright here—(cheers)—who has been building a mill, has during the same time been laying down about a million and a half of bricks in erecting it—(laughter and cheers)—but you would be astonished, would you not, and I am sure the squirearchy would be rather puzzled, if Mr. Bright were to get up here and talk of that as something for which he might glorify himself, having first of all deemed it the most profitable investment any man could make. (Loud cheers and laughter.) By the way, I wish my friend here would calculate how much duty his million and a half of bricks pay to the Government, from which duty my Lord Stanley and his fellow-landlords have managed to exempt draining-tiles. ("Hear, hear," and applause.) Now, gentlemen, I do not want to say anything rude or uncivil, and I will not apply my remarks personally to Lord Stanley, but I will say this, that the whole course of the conduct of these gentlemen in their exhibitions—the landlords—when they parade to the world what they condescend to do with their land, is just a gratuitous piece of impertinence to the rest of the community. (Loud cheers.) What do we care what they do with their land? (Hear.) Whether they put down draining-tiles or not, all we say is this, "If you do not make the most of your land it is no reason why we should be starving that you may grow rushes." (Cheers.) It is a gross humbug, to use no milder term—(much cheering)—on the part of those who come forward at the agricultural meetings, to glorify themselves about the mode in which they choose to dispose of their private property. (Great applause.) There is a gross delusion lurking under it. (Hear.) It is intended to make us believe that we are indebted to them, and must wait until they choose to supply us with our food; that it is something like a condescension, or at least an act of favour, on their part, that they give us their food in exchange for our manufactures. (Hear.) Now, what is the reason that the land has not been improved before? Lord Stanley tells us here when these great improvements began, and mark what he says:—"Even within the last few years—within a much shorter time than that which I have named, within the last four or five years—I see strides which, small as they may be compared with what might be done, are gigantic when compared with what was done before." What was "done before"? What has there been done "within the last four or five years"? Lord Stanley gives the credit to the agricultural associations. Why, what have they been doing? Up to within the last year, when did they condescend to talk about the Corn Law? From one end of the kingdom to the other they were nothing but political clubs, for the purpose of drawing the poor tenant-farmers together, in order that they might be drilled by the land agent to be made subservient at a future voting day; and the whole talk of these agricultural associations was, not about improving the land, but maintaining protection to British agriculture. (Cheers.) And now what can these agricultural associations do for agriculture? They meet once a year; they generally have a man in the chair who begins, as Lord Stanley does, by admitting his practical ignorance of the question upon which he is going to dilate; and the chairman is generally the man who occupies three-fourths of the time of the meeting by his speeches. (Hear.) I have watched the proceedings of these associations, and I have observed they have had all sorts of people except farmers in the chair (hear); upon one occasion, in a part of Middlesex, I observed that the late Attorney-General, the present Chief Baron Pollock, was in the chair as president; and I must do him the justice to say (for he is a most candid and excellent man) that he began his opening address by declaring he did not know anything concerning what they had met about. (Loud laughter.) What have these associations done for agriculture? They assemble men together once a year; they bring prize cattle to be exhibited; they bring agricultural implements to be examined. Are improvements only to be sought for once in a year in agriculture? (Cheers.) Would that do for manufactures? (Hear, hear.) Only think of a commercial meeting once a year to see what our neigh-

bours are doing, where there was any new machinery invented, or which of the hands had discovered some new process in calico printing! Could not farmers see what superior farming was to be seen by riding out any day in the week to look over their neighbours' hedges? Could they not learn where the best breeds of cattle were to be had from the advertisements of those who had them to sell? and could they not get the best agricultural implements by writing for them any day by the penny post, whether they were to be found in Manchester, London, or Ipswich? (Hear.) The thing is a farce; and, when my Lord Stanley takes credit to these agricultural associations for having improved agriculture during the last five years, I say it is not due to those agricultural associations, but to the Anti-Corn-Law League. (Great applause.) It is owing to that that the agriculturists and the landowners have been roused from their lethargic sleep. (Cheers.) They are buckling on their armour to meet the coming competition, which competition will do for them what nothing else will do, and what it has done for manufactures—it will make the agriculturists of this country capable of competing with the farmers of any part of the world. (Immense applause.) They give up the whole case when they talk in this way. (Hear.) When they tell us what the land might do—and what it ought to do they admit it has not done—they plead guilty to all we have ever alleged against them and their system of Corn Law. (Hear.) I ask them this, can they bring a member of Parliament, a theorist, into Manchester with his books in hand, and can he suggest a single improvement in any of our processes of manufacture, whether they are connected with mechanical or chemical science? No. (Cheers.) I went the other day into several establishments with one of the most eminent French chemists—a man renowned in Europe. He had nothing to say in visiting the dye-works or the print-works of this neighbourhood, but to express his unqualified admiration of the perfection to which they had brought the arts among us. (Cheers.) Can they come here and say, as they say of themselves, in connexion with their industry, "You ought to produce three times as much as you do produce from your machinery, for it is already done in other places which we can name to you"? (Hear.) No! But what do they say of their own land? I have heard Mr. Ogilvy, who was engaged by Mr. Brooke, of Mere, and other landlords of this and the neighbouring county, as superintendent of their estates, declare—and he is willing to go before a committee of the House of Commons to prove it—that Cheshire, if properly cultivated, is capable of producing three times as much as it now produces from its surface; and he is willing the statement should be made public upon his authority, and there is no higher authority in the kingdom. (Cheers.) I say whatever improvement has been made in this respect it is to the Anti-Corn-Law League we are indebted for it, and more—the most bigoted of our opponents have made the admission. Whilst they abhor the League and detest its principles, they have made the admission—"At all events," they say, "you have done good, and are doing good, to agriculture." I passed last year about this time over to Knutsford, where I held a public meeting close to the gates of Mr. Egerton, of Tatton. As I went from the railway station across to Knutsford, I rode, at least for five or six miles, through the estate of that large proprietor, and I saw the land was in the same state as I believe it was at the time of the conquest, growing just about as plentiful a supply of rushes as of grass. (Hear.) It so happened that, upon the day I was addressing the meeting upon the racecourse at Knutsford, Mr. Egerton, of Tatton, was paying a visit to Manchester to preside at the Manchester Agricultural Association, and I took the opportunity of saying, in the course of my remarks, that I thought a gentleman who had such an extent of territory as he had might be better employed in exterminating his rushes, and setting a better example to his neighbours at home, than in travelling to Manchester to preach up improvements in agriculture. (Hear.) The other day I met a gentleman who happened lately to be at Knutsford, and he told me that while sitting at the inn there came in a number of the neighbouring farmers, whose conversation turned upon agriculture. In the course of their conversation one of them remarked, "What a deal of draining has been going on here since Cobden was here blackguarding him about the rushes?" (Loud cheers.) We have indeed given them a fillip; we have stirred them up a little; but, gentlemen, if the mere alarm of the approach of Free Trade has done so much for agriculture, what will free trade in corn itself do for it? (Cheers.) "Why," they say, "we should be an exporting country if we only grew as much as we may grow." I have no objection to it; if beside feeding the whole of the people as they ought to be fed—no short commons—(cheers)—if, besides feeding them well, they should send four or five millions of quarters of corn abroad, and bring us back tea and sugar, and such like matters in addition, we shall have no reason to complain of the British agriculturist. (Cheers.) But we do complain that whilst they stop our supplies from other countries, under pretence of benefiting agriculture, they at the same time come before us at these meetings of their own, and plead guilty to our charge, that under this system of protection they are not making the most of their land. (Hear.) I speak my unfeigned conviction—and we have the very best agriculturists with us in that conviction; men like Lord Ducre and others, who are agriculturists by profession—when I say I believe there is no interest in this country that would receive so much benefit from the repeal of the Corn Laws as the farmer-tenant interest in this country. (Cheers.) And, I believe, when the future historian comes to write the history of agriculture he will have to state:—"In such a year there was a stringent Corn Law passed for the protection of agriculture. From that time agriculture slumbered in England, and it was not until by the aid of the Anti-Corn Law League the Corn Law was utterly abolished, that agriculture sprang up to the full vigour of existence in England to become what it now is, like her manufactures, unrivalled in the world." (Loud cheers.) It is a gloomy and most discouraging thought that, whilst this system of Corn Laws alternately starves the people in the manufacturing districts and then ruins the farmers, it really in the end confers no permanent benefit upon any class. (Hear.) I told you in the beginning I did not believe the agricultural labourer was now so badly off as he was when corn was 70s. a quarter; but I will tell you where distress in the agricultural districts is now. It is among the tenant-farmers themselves. (Hear.) They are paying rents with wheat

at 45s. a quarter, which they have bargained for at a calculation of wheat being 56s., and, in many cases, 60s. a quarter. It is owing to this discrepancy in the prices that the tenant-farmers are now paying rent out of capital; they are discharging their labourers, unable to employ them—and theirs is the real distress now existing in the agricultural districts. This state of things will not continue either here or in the agricultural districts. What is the language that drops from the landlords at some of their meetings? It is, "We shall not very likely have higher prices for corn this year; we must wait for better times; we will give you back ten per cent. this year." No permanent reduction; and why? Because they know that, by the certain operation of this system, in less than five years from this time this wheel of fortune, or rather misfortune, will go round again; you will be at the bottom and the farmers at the top, and you will have wheat again at seventy shillings or eighty shillings a quarter, causing thus a pretended prosperity among the farmers. As sure as you have had this revolution before, so sure will you have it again. There is nothing in Sir Robert Peel's Corn Law to prevent the recurrence of similar disasters. The law is as complete a bar to legitimate trade in corn as the old law was. I speak in the presence of merchants shipping to every quarter of the globe, men who bring back the produce of every quarter of the globe, and I put it to them whether, with this sliding scale, they dare to order from a foreign country a single cargo of wheat in exchange for the manufactures which they sell? This being the case—and it is the whole case—you are not stimulating other countries to provide for your future wants, you are laying up no store here or stores abroad, and there will again be a recurrence of the disasters we have passed through. After some further observations the hon. gentleman resumed his seat amidst enthusiastic cheering.

Mr. BRIGHT, M.P., then stepped forward amidst most enthusiastic cheering. When it had subsided he spoke as follows:—"When I entered this room to-night, and cast my eyes over this vast meeting, I was led to make precisely the observation which you have already heard—that this meeting may be taken as a token of the firm resolution which the inhabitants of this town and district have come to, that, so long as there is an association which has for its object the abolition of the Corn Law, so long will they be found amongst its warmest supporters. (Applause.) And although, just now, in this district there is not that imminent danger which we have seen; and although we are disposed to argue that, because we have good harvests, therefore Corn-Law repeal is not necessary, and that therefore no agitation can be maintained, yet I am prepared here to contend that we are now in a better and more advantageous position with respect to the carrying out of our object than we have been at any former period; and more than that, we may derive consolation and delight from witnessing how beautifully, how harmoniously, the seasons are working round to carry conviction to the minds of the most bigoted, and to demonstrate to the whole country and the world, that

every principle which we have propounded on this question is well founded, and that experience constantly confirms it. (Applause.) We read of an invader and a usurper of old, that the stars in their courses fought against him; and may we not say also, with respect to those who invade the rights, the dearest rights of the population of this country, who usurp a power to which they have no just title, the power of feeding, or, if need be, of starving a great empire (loud applause)—may we not say that the seasons have fought against them, and that year after year, as it rolls over us, is but weakening their power, and strengthening that public opinion which we are rallying as fast as we are able for the overthrow of the worst species of tyranny with which any country was ever cursed? (Loud applause.) We are entering the seventh year of our labours in this great cause; and there may be some who—at the thought of this despond. If there be any who have a right to despond, or who may be forgiven if they feel fainthearted, it is surely those who have laboured hard in this cause; but, so far as the Council of the League are concerned, I can state to this meeting and to the public, that there never was a time when they were more convinced that they were right in the beginning and are right now, and that in their cause, as in all others, right must speedily triumph. (Applause.) If you feel despondent upon this question, think for a moment what it is you are fighting for: It is for no paltry triumph of a faction: it is not to elevate this man or that man; or to set waving this flag, or to pull that flag down. No; but you are fighting for one of the greatest and the noblest causes which ever united the exertions of any body of men; you are fighting for the liberation of the industry of twenty-seven millions of your fellow-countrymen, and not for the liberation of their industry only, but, as everything that is established here becomes a fashion for the world, you are also working out the liberation of the industry of the whole human race from all the tyranny which monopoly in every clime and in every age has inflicted upon it. (Loud applause.) Six years ago this country, and this district especially, had been passing through a season of great commercial prosperity and of extraordinary commercial excitement. At that period we found the prosperity decaying, and the excitement being changed into an extraordinary depression. We were led, as most men are led who feel themselves getting into danger, or in a dangerous position—we were led to inquire why it was that this change was taking place. We knew that Adam Smith had written, and that other men had propounded, the great doctrines of Free Trade; and we knew that there were laws upon our statute-book which in every sense infringed those great principles. We had not, however, had our attention so directed to this question as to make much ado about it, until danger was at our own doors. We then began to inquire; and we came rapidly, but still most surely and safely, and I believe wisely, to the conclusion that the cause and the source of the miseries which then threatened this district were to be found in an act of Parliament, which did not hesitate to starve the people, and to cripple commerce, merely for the aggrandisement of a class to whom your class would seem to be of no value, and who despised commerce in their very hearts. (Applause.) Well, we pointed out

the cause. It is of no use living in a free country unless a free man has the right to advise the people when he finds anything wrong in the public affairs of the nation. (Much cheering.) We advised our countrymen that the source of their evils was in the Corn Law. We pointed out how, during the good harvests of 1834, 1835, and 1836, prosperity had increased, how, the moment that we were deprived of good harvests, the very first season this prosperity received a very sensible check, and we began to go from that to the other extreme of depression and embarrassment. But monopoly refused to believe. So it has always done, and so it will always do. (Hear, hear.) There is nothing harder,—no, the nether millstone is not to be compared in hardness to the heart of monopoly. (Applause.) Monopoly never believes till it is grasped in earnest, and compelled to disgorge. (Applause.) Monopoly did not believe us, but made a variety of excuses, some of which had some little effect at that time, but now appear to be simply childish; and those persons who advocated in their favour must be very sorry that what they said was ever written and printed. (Applause.) They said that manufactures were subject to great fluctuations. Well, that is quite true, in this country, so far as our experience of the last thirty years goes, and so far as our experience of the period before that goes. But then the time before the last thirty years was almost a continual course of war, which ever interferes with the regular course of industry; and since the war the Corn Law has also interfered with the regular course of industry; and we have no proof whatever that any such fluctuations as we have suffered arose from the nature of things, but rather from the violent interference with the nature of things which has been inflicted upon us by war in one case, and by legislative interference in the other. (Applause.) Well, they had the audacity to say also that we were badly off because we competed with each other. Why, if we had not competed with each other, we should have had no prosperity at all. (Applause.) They said there are too many people come to Manchester Exchange, and they bid against each other. We said, "There do not come too many to sell, but there come too few to buy." (Applause.) Why, there is more competition now on Manchester Exchange than there was then, as far as the number of sellers is concerned, and the entire of the quantity sold is concerned; but there are more buyers than there were then, and those who buy are buying in larger quantities, while they give a little more for the goods. (Applause.) They said, too, that machinery was the cause of your calamity; and Sir Robert Peel—call him in this respect a great little man—did stoop to a meanness utterly unworthy of a man occupying the position which he occupies, that of attempting to spread this delusion amongst the people; and amongst the working classes such a notion must be very dangerous—that machinery and improvements in machinery were the cause of so many of the labouring population of this district being thrown out of employment. (Hear, hear.) But is it not notorious that there is more machinery at work now than ever in this district? Is it not notorious that it is more perfect, costlier, and exquisitely finished than ever it was before? Is it not notorious that it is turning out a greater quantity of work for the same amount of wages and of manual labour than before? And yet, for all this, there are no persons turned out of employment now by the invention of new machinery, and without anything being done to remove these particular causes to which they have attributed our distress. (Applause.) Some of them had the effrontery to say that this state of things arose from a greatly-extended foreign trade; and the columns of some of the monopolist newspapers were filled with arguments—no, not with arguments, but with assertions, to prove that, if we only stick to our home trade and our colonial trade, we should be extremely well off. And is it not notorious that these very people, the moment that the China war ceased, and the China trade was thrown open to us, began to rejoice in the extension of our foreign trade, and have all along attributed a considerable portion of our prosperity to the opening of that foreign trade. We have more foreign trade now than we had three or four years ago. This year there has been a great extension of export in almost every staple article of British manufacture; and yet, notwithstanding the increase of this evil to which the monopolists pointed us, we find we have a return of prosperity. (Applause.) Then, they said again that one great cause of the evil was, that there was so much agitation in the country. I have no doubt at all that their uneasiness arose from that source. (Applause.) But it must be borne in mind that, during the last two years, during the latter period of 1843, at any rate, and the beginning of this year, the agitation in favour of the repeal of the Corn Law was carried on with more energy than it had been at any former period; and yet during the time that the agitation was increasing in intensity, the cause of the evils in their eyes being increased, the evil itself was gradually diminishing, and we were returning to prosperity at a rate none of the slowest. (Applause.) Well, now, it is worth remarking, that not a single cause to which monopoly ascribed our distress has been removed, and yet the distresses itself, in this district, has, to a very great extent, vanished. (Applause.) Well, I should suppose then the monopolists were mistaken; but I dare say they won't acknowledge it; and, if people won't swallow the things that were said two or three years ago, they'll have a new stock for you; and if you are not intelligent and inquiring, some may be taken in with their new excuses. But what did we say with respect to the distress? The very first time that the Manchester Chamber of Commerce met, or the very first time that the association met which afterwards became the Anti-Corn-Law League, the Corn Law was pointed out as the cause of the distress, and we have never varied a hairbreadth on the point from that time to this. (Applause.) Well, the distress has abated, and the Corn Law is not repealed; and, therefore, my argument with respect to the monopolist excuses might be turned against me; but we have always said that if we had good harvests, by which food could be abundant and cheap; or if we had a repeal of the Corn Law, by which food could be abundant and cheap, then the distress would abate. We have not had a repeal of the Corn Law, but we have had abundant harvests, and that is tantamount to a temporary abolition of a great relaxation of the Corn Law; and under this the distress has abated, and prosperity has returned. (Applause.) Well, now, I consider our case to be tolerably well proved. I think, if we take twelve men from any county in England, not excepting even Buckinghamshire, and put them into a jury-box, and have an

impartial man from any country in the world to try the cause, and we bring the facts and arguments which we have brought before the public of this country before those twelve men,—I think they would have no difficulty in making up their minds as to the real cause of the sufferings which this district, and the population of the country generally, have endured during the last five or six years. (Hear, hear, hear.) Then, if our case has been proved from the past, what shall we say of the future? You have been told already that it would be a proof that you had not capacity equal to the level of ordinary instinct if you were to forget what is past, to disregard the lesson it has taught you, and to neglect to prepare for the future. The Providence which has given us two or three good harvests, may give us one, or two, or three more; but we must bear in mind that the course of the seasons cannot be changed, will not be changed, to suit the caprice, the folly, or the criminality of human legislation. (Applause.) As we have had before, so we shall have again a change of seasons; and when that change shall come, and if the people of this country have not, in the meantime, bestirred themselves and shaken off this iniquitous impost, I ask you whom will you blame but yourselves, and where can you run for refuge? for your own folly will have led you into danger, and by your own neglect alone will you have allowed these evils again to come upon you. You will again have to suffer those evils which arise from the price of bread rising all over the country; the consumption by the great mass of the people of all kinds of manufactured goods will be greatly crippled; you will have again a great exportation of gold, and a great derangement of the monetary affairs of the country; you will again have numbers of merchants and manufacturers going rapidly, week after week, into the Gazette; you will again have your shopkeepers impoverished; and, worst of all, you will again have the labourers of this district, our honest and industrious artisans, plunged into all that distress which we have lately witnessed, and arising from that distress, discontent and disaffection, and a brutalizing and barbarizing of the minds of the people, such as they have suffered from for the last half a dozen years, and which they are now only partially getting rid of. (Applause.) It is impossible to draw a picture too gloomy of that which we have already seen in this district, and it is much less possible to draw a picture of that which must come if we neglect the power that we have in our hands to wipe away these infamous laws. I am sure we have the power; the statements made by our chairman to-night prove that we have the power. (Applause.) The Reform Bill never has been worked by either the Liberal or Free-Trade party in this country. (Applause.) It may be a bad bill; it has flaws enough, we all know; it has pitfalls many for us, and it has privileges far too many for our opponents. (Applause.) But for all that, if we will only work it, I am persuaded there is within it enough of the popular principle to enable us to amend it, if need be (applause), and to do many other things which we may think necessary for our welfare. (Applause.) Well, then, if there be a possibility of bad harvests and bad times coming upon us again, I need no other argument to convince you that it is necessary that the agitation of the Anti-Corn-Law League should be continued. (Applause.) I am not one who is in the habit of apologising for our agitation, nor do I go "with bated breath and whispering humbleness" to ask my Lord This or Squire That whether it be proper or legal, or constitutional, or pleasant that the Anti-Corn-Law League should endeavour to repeal the Corn Law. (Applause.) I am sure, from what we have seen in former years, and what we know now, we have reasons sufficient to convince us that, if ever the agitation of this question were a duty, it is a duty now, and that if we were to discard it now we should deserve all the calamities which the very worst legislation of squiredom could possibly inflict upon us. (Hear, hear, and applause.) Now, I charge the monopolist landowners with being the cause, the direct cause, of the calamities which have afflicted this country for some years past; and I charge them also with being the direct cause of the deplorable state of things in which their own agricultural counties are now found. (Hear, hear.) They will find it out by-and-by; they will come and ask to have the Corn Law repealed, some day or other, if we do not force them to do it beforehand. (Applause.) It is a law which ultimately must bring ruin, and distress, and embarrassment, and discord around their own baronial halls, as much as it can do in this densely-populated county. These landowners are too ignorant to legislate for trade. (Applause.) Mr. Cobden, I think, charged them with being so ignorant that they were not fit to manage a chandler's shop. (Applause, and laughter.) One of them did rise in his place in Parliament to protest against such a charge, and to assert a higher character for the House with which he was associated; he said they were fit to manage a chandler's shop. (Great laughter.) Their ignorance is so great, in all matters of commercial policy, not only upon facts, but upon principles, that their selfishness runs them into danger. But there would be no great harm to this country from squiredom, if there were no men in this district foolish enough to help them. (Hear, hear.) If there be a creature of an order which has never yet been classified, it is a manufacturer in the cotton trade supporting a squire in carrying out a law to starve the manufacturer's labourers, and destroy his trade. (Applause.) And yet there are some—there are a good many—though in the south of England people cannot well believe it. (Hear, hear.) The monopolist landowners themselves when they passed the Corn Law never for an instant dreamt that they should receive great support from this district. They have their Buckingham; and manufacturers have their Birley. (Loud applause.) Now, I would be the very last man in this room to say a syllable against any man who was acting at an election in his political character different from me, if acting according to his honest conviction, and after moderate inquiry into the question before him. But when I see a man who, of all men in the world, one would think has a direct interest in the well-being of commerce and manufacture, presiding, as I believe this man did preside, over the election committee for the return of a person pledged to oppose every step in the direction of Free-Trade, I do say that that man is a traitor to the order to which he belongs. (Hear, hear, and applause.) And I abandon his duty especially to the great mass of the labourers of this district, to a large number of whom he gives employment. (Applause.) It may be that this gentleman was perfectly convinced that a fall in

the price of bread would involve a fall in the rate of wages; for I have understood that, during this week, there has been a procession of persons in his employ disgusted with the present rate of wages and seeking for an advance, grounding their claim upon the increase of business, and the improvement in business; thus proving that the statements of the monopolists in this respect were wholly false. (Applause.) I know not whether this brings conviction to the mind of Mr. Birley, or to any other of his class; I would hope that they acted honestly in the course that they took; but I do say that it becomes the duty of the Free-Trade men of this country, who are five out of every six of its population—(loud applause)—I say it does become us to mark with reprobation the conduct of any man himself deriving his property and his station from the commerce and the manufactures of his country, when an invader comes to besiege the town, that he himself, traitor like, by night, as it were, opens the gates, and lets in the enemy. (Cheers.) The last time I was in this hall I listened with extreme pleasure to a speech delivered by Mr. Smythe, the member for Canterbury, himself the son of a nobleman, and heir, I presume, to a peerage—a speech from which the monopolist manufacturers of this district would do well to take a lesson. (Applause.) He spoke of a time when a citizen of the distinguished city of Mayence combined with others to put down the spoliation of the barons who lived upon the banks of the Rhine—barons who, as he said, exacted a toll upon the first necessities of life. (Hear, hear.) Now, do you believe that there was a single citizen of Mayence who turned out to fight on the side of the barons? (Hear, hear.) And yet these monopolist manufacturers are surrounded by a body of men, nobles of this country, nobles by courtesy truly, who exact a toll upon the first necessities of life—who don't do it by pistol, musket, bayonet, or sword, but who do it by the not less powerful, far more subtle, machinery of an act of Parliament; and when we are assembled here—men all of one order, deeply interested in the prosperity of the industry of this district and of our country; when we are assembled together for the purpose of protesting against the invasion of our rights, and of calling upon the whole population to march with us, after us, or before us, to re-establish our rights—then we find the monopolist manufacturers—and this one I have named the chief among them—actually turning out from the district, and siding with the feudal barons—actually endeavouring to strengthen the oppression which we are striving to overthrow. (Loud applause.) I often wonder why it is that men are so willing to bow their necks to men who are ornamented with stars, and garters, and titles (applause); for I am sure the more I come in contact with these characters, the more I come to the conclusion that it is something far beyond titles which constitutes the nobility of character. (Applause.) And there is not any creature that crawls the earth, to my mind, more despicable and more pitiable than the man who sacrifices the interests of his own class, of his own order, and of his own country, merely that he may toady somebody who has a title to his name. (Applause.) He should recollect—

"fitly his ill-woven chaplet wears,
Full often wreathed around the miscreant's brow;"

and that there are men in the peerage of every country who are greatly to be despised, as there are some worthy to be honoured to the utmost, from whose hearts their high rank has not driven away all sympathy with the rights and interests of their fellow-men. (Applause.) And for whom is it that these men degrade themselves, and make these sacrifices? Why, for a class who do not like us—the producers; for it is no disrespect to the aristocracy of this country to say that they do not like trade, because it is notorious that they value themselves chiefly on the very long period of time during which their ancestors have not been connected with anything so sordid as trade. (Applause.) They prove that they do not like trade, because they make laws which cripple trade and keep it always, as it were, in swaddling clothes, which never let the infant become a youth, nor the youth a man. (Hear, hear.) And they are a class, also, of whom it may be said—and I say it with grief—that, however bad the laws they pass in Parliament may be, the administration of those laws in their own districts, where they reign predominant, is quite as bad as the legislation of which they are guilty. (Applause.) But there is a retributive justice. I heard Sir James Graham say that. (Loud applause.) And when men fail in their duty, or violate great principles, they may be sure that some time or other they will be found out and punished for it. In the southern counties, at this moment, how deplorable is the state of things! It is not of our telling, the evidence comes from themselves. It has not gone through the magnifying process of the council chamber of the Anti-Corn-Law League. The insurance-offices proclaim it. (Hear, hear.) Did not one office send down £200 towards the fund for opening public parks and walks in Manchester, with a letter in which they complimented the people of Manchester and the working classes for the energy, zeal, and courage with which they had assisted in preserving property when in danger of being destroyed by fire? (Applause.) And within a fortnight of that memorable letter, for I hold it to be memorable, and most creditable and honourable to this town—within a fortnight of that time, did not the united insurance-offices meet together, and issue a circular to all their agents in England and Wales, and I believe in Ireland, but certainly in England and Wales, in which they enjoin every agent to make especial inquiry before he insures farming stock as to the character and circumstances of the person who wishes to insure. (Hear, hear.) And what are the questions to be asked? In he a man who has received any threatening letters? What a horrid state of society it must be when it is necessary to ask a farmer has he received a threatening letter! What does this mean? Is there somebody who is ready to burn his premises; and, if may be, almost to destroy his life? Again, has the man who wishes to insure any steam-engine upon his premises, any machinery for thrashing his grain? Why, here you have your mills filled with the finest machinery in the world; and there is not a working man in Manchester who believes that he would be better off if this machinery did not exist. (Applause.) But here, in the southern counties, if a man has a steam-engine on his farm, as they have in Scotland, or a thrashing-machine which will thrash rather faster than a man can do with a flail, he is held in danger of the destruction of his property by fire, from the ignorance and the vindictive spirit of the labouring population; and, therefore, his property cannot have the safeguard of insurance on the

same terms, though, heretofore, farming property had been insured at common risks,—I believe at 1s. 6d. premium upon £100, which is the same as it is upon dwelling-houses in this district, and they have no tax upon their insurance as we have. (Applause.) Now they must pay, in all cases I believe, 3 per cent., and in cases where there is any machinery upon the premises not less than 5 per cent. Well, now, that is retributive justice! (Applause.) I am not blaming the farmers, except that they have not had spirit enough to prevent this state of things; it is the landowners who are chiefly to blame; against them public indignation will be turned, and they will be asked in a language which they dare not disregard, "How is it that ye have neglected the population about your own estates, legislating in Parliament almost without opposition, and administering those laws in your own parishes paramount in authority and unopposed,—how is it that in your districts such a lamentable state of things exists?" (Applause.) But for what has been already alluded to, it would be impossible to explain how helpless these unfortunate persons are. I confess I pity them from my heart, as I pity all men who, from ignorance, selfishness, or vice, get into a dilemma or a difficulty. They are in difficulties, and their helplessness, if it were not to be pitied, would certainly be greatly to be laughed at. (Applause.) What are their remedies? They propose to put down incendiarism by giving the people gratuitous exhibitions of fireworks. (Loud applause and laughter.) I believe it was a professor—Professor Henslow—who proposed this. And there are a variety of others of a like nature. (The hon. gentleman then read some extracts from an Aylesbury paper, showing the severe treatment of poor criminals in the county of Bucks, and then proceeded:—) And these are the men to whom Mr. Birley and the monopolist manufacturers of this district are looking up for an approving smile, and for a nod from whom they would endure almost a very agony. (Cheers and laughter.) These are the men who are helping to thin the slices three times a day for their poor children and suffering parents. Oh, I do wonder, after all the discussion we have had on this question, that there are men to be found who are not heartily ashamed that they ever said a syllable in favour of such an accursed system. (Cheers.) Another says, "If ever a committee should sit on the distress of the agricultural labourer"—but they took care last session when a committee was asked for that they would not have one—(hear, hear)—"I would find them plenty of cases in which single men of thirty years of age are only paid 6s. a week. I would prove that many farmers give only 6d. a day to men of three or four and twenty who have worked from childhood with them, and are known to be as useful as the best men they have!" And so they are. In this book there are many things of a similar description—many not suitable to read in an assembly like this, but there is one more extract I would read. He says the agricultural labourer is generally paid on the principle of giving him just that amount of sustenance that will keep him from claiming relief from the union-house. "That as a dweller he is considered an incumbrance on the soil I think is but a fair deduction from the fact of the pains taken to diminish the number of dwellings. And when I compare the trouble taken to get the best plans for stables, cow-houses, and pigsties, and the money expended in these improvements, with the little effect bestowed on the improvement of the labourer's dwelling, I am forced also to the conviction that he is the last-living thing upon the farm whose physical condition is regarded." And yet, he says, while it is allowed by all that the labourer is physically and morally oppressed, "to take up his cause is, alas! but to unite all parties against you; so much as a matter of course are the worst features of his condition considered, that you are at once considered as a conspirator, both as against landowner and occupier, if you venture to speak a word in his favour; that he is pauperized from the low wages paid him, demoralized by the circumstances that surround him, as a matter of general conversation, is allowed;—make but the feeblest attempt to enforce his claim to a better treatment, and you are at once set down as a propagator of dangerous ideas—one who threatens all manner of evil, and you will probably be told that you have some party motive or private pique at the bottom of your philanthropy." It appears by what he says here that it happens there, much as in this part of the country, that if any man speaks of those distressed, and presumes to interfere with the profits or amusements of another class, then that class say he is a dangerous man, and that the association he is connected with ought to be put down by law. (Hear, hear.) Now, I have taken this pamphlet on these grounds:—it speaks of the state of the county of Dorset; it is given by a reverend, and a man not likely to have been readily moved to take the course he has. And when we recollect that there has been down in this neighbourhood a noble lord who lays claim to feelings of philanthropy, and who professes a desire to improve the state of the working classes generally, there is something surprising about these statements. I can appreciate the motives of a man who seeks to do justice anywhere; yet I should admire it more if it were not of that expansive character which looks abroad for its object, while it never sees the evils which exist nearer home. (Loud applause.) Mr. Bright concluded by saying that if such was the state of the agricultural districts after 30 years of protection, surely this was not a time to abandon the struggle in which they had so far advanced towards success.

Mr. Bazley, President of the Chamber of Commerce, then moved a vote of thanks to Mr. Cobden and Mr. Bright, and the meeting, after giving three enthusiastic cheers, separated.

ANTI-CORN-LAW LECTURES, WILTSHIRE.—On Wednesday evening, the 16th instant, it being Highworth fair, Mr. Falvey delivered a lecture to the farmers who attended it, in the large room at the King and Queen, on the Evils of the Corn Laws. Mr. John Arkell of Stratton took the chair. The room was quite crowded, and many could not get in who were anxious to hear, from want of room. The lecturer took a retrospective view of Corn-Law legislation for the last 30 years, and clearly proved that neither farmers nor labourers had gained by it. At the close of the lecture, a person named Chudy attempted to rebut Mr. Falvey's statements; but he floundered about among paste and outcries until the farmers called out "Question," when he lost his temper, fell into a huge passion, and sat down. On the motion of F. Crowley, Esq., votes of thanks were passed to the chairman and lec-

turer. Mr. Falvey gave a second lecture to the townspeople on Saturday evening, which was well attended and gave the most decided satisfaction. Mr. Falvey lectured at Ramsbury, the seat of the late Sir F. Burdett, on Tuesday evening the 22nd; Joseph Atherton, Esq., in the chair. At the close of the lecture, the people present, chiefly farm-labourers, gave three hearty cheers for Free Trade.

SWINDON.—Mr. Falvey lectured in the Odd Fellows' room, Swindon New Town, on Wednesday evening. Mr. Arkell of Stratton was called to the chair, and, after a few appropriate remarks, introduced the lecturer, who spoke for nearly two hours in opposition to the Corn Laws, and in defence of Free Trade. At the close, some objections were urged by a Chartist mechanic with respect to machinery, and answered, if not to the entire satisfaction of the objector, at least to that of the meeting, as testified by their unqualified approbation at the close of the lecturer's reply.

COMMERCIAL CHANGES NOW IN PROGRESS IN THE NORTH OF EUROPE.

A plan has been some time in contemplation for effecting a junction between the river Elbe and the Baltic Sea, by the enlargement of the harbour, and by the construction of wet docks, on the best English principles, at Gluckstadt, a port situated a few miles up the Elbe, in the deepest and most accessible part of that river, and by a railroad nearly finished, from the new docks to the deep and capacious harbour of Kiel, in the south-western quarter of the Baltic. Kiel, one of the finest harbours in Europe, is the most commodious station in the Baltic for steam-packets to Copenhagen, Stockholm, Stettin, Dantzig, and all parts of the Baltic, and to St. Petersburg and all intervening places. This new and efficient line of railroad will not only connect Gluckstadt with Kiel northward, but also with Altona eastward, above the dangerous and difficult shoals off the Schleepsand, Schullin, and Blankenese, which renders the navigation of the Elbe, above Gluckstadt, so tedious and expensive; and at the same time, being below the Hanoverian port of Stade, will save all the onerous dues levied on vessels and merchandise that pass the guard-ship, placed there by the King of Hanover for collecting them. An English engineer of eminence has surveyed the locality, and made plans and estimates for the enlargement and improvement of the harbour, and the construction of the wet docks, which are to be executed under the control of a company now forming in that part of Germany and in London; half the capital to be raised in Holstein and half in England, with a joint board of governors in the two countries, that in England to have a *veto* and a general controlling power. To this co-operation the Government of Denmark have made several important and liberal concessions. By these means the long and circuitous voyage round the Shaws and through the Cattegat, by way of the Sound to the northern shores of the Baltic, will be shortened nearly 80 degrees latitude, and render the arrival of merchandise and passengers from England, France, Holland, Italy, and places southward by steam-ship to Gluckstadt, and by railroad from that port to either the Baltic, *via* Kiel, a distance of about forty English miles, or to Hamburg and the Upper Elbe, by similar conveyance, *via* Altona, a distance of about thirty English miles, far more certain and much shorter in time than by the present route. It will also avoid the slow and dangerous passage between Gluckstadt and Hamburg, which often detains large sea-going ships many hours out, and in waiting for water to carry them over the bars between those cities. Between the months of November and January last, upwards of 160 vessels which sailed from Altona and Hamburg were detained, as is well known, for six weeks in the Elbe, by the W.S.W. and W. winds that then prevailed, whereas had they loaded, and taken their departure from Gluckstadt, the same wind which brought them from Hamburg to the Kraustand, opposite Gluckstadt, would have taken them to the open sea. This important junction of the east and north seas will effect a junction between Great Britain, the greatest manufactory in the world, and those countries which border on the Baltic, and whose rivers empty themselves into that sea on the north, and into the Euxine on the south, the granary of Europe, and the most productive of timber, hemp, pitch, tallow, iron, and other materials used in ship-building.

It will thus open new sources for the reception of British manufactured goods, and new supplies of grain, cattle, and raw material in return, entirely free from and out of the jurisdiction of the anti-British impost of the Prussian Zollverein (Customs Union), from which Denmark, Holstein, the Hanseatic republic of Hamburg, Lubbeck, and Bremen, the kingdom of Hanover, and the empire of Austria are at present free. The Government of Hanover, alive to the importance of keeping free from the shackles of the Zollverein, have also resolved to make a port in the Elbe, and the same English engineer has reported to them thereon, recommending one at Bruchauven, at the mouth of the Swinge, a tributary stream running through Stade into the Elbe, in preference to Hamburg, opposite to Hamburg, for similar reasons, as being below the before-mentioned shoals and in deep water. Also a railroad from that place through Stade, with a branch line to Hamburg to the city of Hanover, where there is already a railroad just opened to Brunswick, which will shortly be connected by railroads with Magdeburg, Dresden, and Southern Germany, so as to make a railroad communication between the Elbe and the Rhine, through the metropolis of Hanover. The consequences of these projects to the commerce of Great Britain is easier foreseen than detailed within the narrow limits of a newspaper announcement. Since the above became known, a company has been formed at Harwich and London, to run a steam-boat daily from Harwich to Gluckstadt, which can be accomplished in twenty-one hours. It is called the European Steam-boat Company, and they propose building five iron steam-ships of five hundred tons burden, as a commencement of their operations. A public meeting of this company was held last Saturday in the Town-hall at Harwich, the mayor, R. Cobbold, in the chair. The hall was crowded to an overflow. The meeting was addressed by Mr. Bagshawe, the chairman; Mr. A. Bauer, of Hamburg, the deputy-chairman; Mr. Crofts, and other directors of the company; Captain Deane, of Harwich, who for years commanded a vessel from Harwich to various parts of the North and Baltic Seas, and who confirmed the facilities of the plan; and by Mr. Elmes, the surveyor of the port of London, and engineer to the Gluckstadt

Harbour and Dock Company. A meeting of the London friends of this latter company has been held at the London Coffee-house, which determined that, as they were thus supported by a projected as by existing steam-packet companies, and by the Government of Holstein, to complete the London arrangements forthwith.—*Sunday paper.*

MISCELLANEOUS.

AGRICULTURAL LABOURERS.—We understand there are more agricultural labourers, both single and married, now out of employ in the neighbourhood of Salisbury than have been known for many years.—*Somerset County Gazette.*

DARTMOOR.—About 5000 acres of this extensive common have been purchased by a company, who have already fenced and drained part of it, and calculate on letting the whole at 10s. per acre. Hitherto the land has been waste.—*Exeter Post.*

NEW GAME LAW ACT.—Sir James Graham's proposed bill for the modification of the game laws has been sent round to several influential sporting noblemen and landholders, and has, it is said, excited as much general indignation amongst the squirearchy, at such a diminution of their privileges, as the new medical bill has done among the surgeons of the country.

FREE TRADE—NO MONOPOLY!—On Tuesday evening, the 15th inst., Mr. Ackland delivered a lecture on the "Corn and Provision Laws, and their Effect upon the Wages of Labour," in the large room at the Wigan Arms, Scholes, Wigan. The arguments adduced appeared to tell heavily upon his hearers, and he was frequently much applauded.—*Preston Guardian.*

WORKING MAN'S HALL.—A large number of the Chartist operatives of Oldham and the neighbourhood, have been erecting a spacious public room, in shares of £1 each, for the holding of meetings, delivery of lectures, performance of concerts, &c. This building, which is designated the Working Man's Hall, may be in some respects regarded as a characteristic sign of the prosperous condition of the labouring classes in the manufacturing districts.

AMERICAN HAY.—The second experiment in submitting American hay to public competition took place on Tuesday at Lloyd's, the quantity offered being 85 bales and 38 half-bales, more as an attempt on behalf of the importers than anything else, though, if successful, the future trade may become important. As compared with the first auction, about three weeks since, much better prices were obtained, the quality being more satisfactory. The quotations are worth giving as a curiosity, and ranged from £4. 5s. to £4. 10s. per ton.—*Globe.*

THE TAMWORTH FARMERS' CLUB.—TAMWORTH, Oct. 19.—Sir Robert Peel would appear to have decidedly cut the agricultural associations of the present year. Great was the disappointment created (after his solemn promise at the last meeting) by his absence from Lichfield; but everybody supposed that he would most undoubtedly preside over the approaching festival of his favourite Farmers' Club at Tamworth. Here, too, his admiring agricultural friends are doomed to disappointment. The club have this day issued an advertisement, in which they announce "that the annual meeting of the Tamworth Farmers' Club, for the purpose of auditing accounts, will be held at the Castle Hotel, on Saturday, the 26th inst.; but the Town-hall being under repair, the dinner is postponed." The matter of the accounts, being a very small matter, will be a very short business; and Sir Robert Peel's speech may be considered as postponed *sine die*.—*Times.*

THE GAME LAWS.—At the Watford petty sessions, on Tuesday, three men were placed before their worships for poaching on the ground of Mr. Marjoribanks, they having, in the day time, with the assistance of a ferret, got possession of a coney. A child, who stated that he was eight years of age, was called to substantiate the charge. Previous to the desecration of the sacred volume, he was asked by the clerk of the peace if he knew the nature of an oath. The boy stared in evident amazement, which Mr. Blagg relieved by asking him if he knew where boys went who spoke untruths? "To hell!" rejoined the lad, with quickness sufficient to convince a sceptic that he had well learnt his lesson. He then swore to the men, and that he saw them in possession of a rabbit. Another boy, apparently two years older, gave somewhat similar testimony; and with no other evidence the county is put to the expense of maintaining three men in prison for two months, besides paying the fees of office. Compare this conduct with that of a nobleman whose estates nearly (if they do not quite) adjoin the above. A short time back two men were taken before the Marquis of Westminster for poaching, one of the under keepers having taken the men with a hare in their possession. The Marquis, perceiving the men to be in a state of wretchedness, asked them if they were willing to work if they could obtain work? "Most thankfully," said one, who had occasionally worked upon the grounds. "Then go and sin no more," repeated his lordship emphatically; "I cannot punish men who are willing to earn their bread by the sweat of their brow."—*Aylesbury News.*

POLYTECHNIC INSTITUTION.—The annual re-arrangement and classification of the almost innumerable collection of curious things which constitute the museum of the Polytechnic Institution, in Regent-street, has just been completed, after some trouble and much attention on the part of the directors, in consequence of the great accumulation of specimens, and the necessity of placing them in fitting places for the inspection of the visitors. The whole is now appropriately disposed of, and exhibits an aggregate of the productions of nature, the works of art, and the results of chemical and mechanical science, which can hardly be surpassed in number, variety, and importance in any collection in this kingdom. The catalogue might almost be transcribed, and yet not much would then appear with which it would not be desirable to have some acquaintance; but, as that is impossible, we will confine our notice to one of the most recent additions to the collection. We allude to the specimens of wood carvings, Reliance work, and architectural and Gothic decorations, cut by the instrument or steam-engine of Mr. Samuel Pratt, of New Bond-street, and for the invention and application of which he holds a patent. These carvings surpass anything of the kind we have ever seen, in many respects, in the accuracy, boldness, and delicacy of finish. The rapidity with which they are produced is a matter of astonishment; whilst the cost renders them accessible to most persons, even of moderate fortune.

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, October 23, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the LEAGUE of the Saturday immediately succeeding, but are included in the list of the week following.

CORN LAWS A CURSE TO BRITAIN.—On Wednesday evening, the 16th inst., a lecture was delivered in the Buck's-lane room, Wallgate, Wigan, by Mr. J. J. Finnigan, of Manchester—subject, "Commerce the main existence of England's prosperity." The lecturer clearly proved that by abolishing the tax on bread, and giving unlimited scope to our manufactures, England might once more be raised above the level of other countries, and become a land of prosperity and happiness. We imagine, from the frequency of these lectures, that our landed aristocracy in this town will begin to shudder for fear.—*Preston Guardian*.

THE BELGIAN TARIFF.—The Belgian tariff, which has just been promulgated, appears to be dictated chiefly by hostility to English manufactures. Printed cottons, which hitherto paid 211 francs per 100 kilogrammes (about 220 lbs. English), are now to pay 325 francs. On coloured or printed silks, the duties have been raised from 4 francs per kilogramme to 10 francs. With regard to France, the old duties on cotton cloths are to remain for twelve months. We perceive that some of our contemporaries seem to fear that the effect of these differential duties will be to substitute the printed cottons of France and Saxony for those of Manchester; but we doubt whether there is much ground for any such apprehensions. The prints of Rouen and Mulhausen are widely different from those which we export to Belgium; and therefore, unless a considerable change should take place in the fabrics manufactured by our continental rivals, they will not come into very serious competition with our merchants in the Belgian market.—*Manchester Guardian*.

LETTERS ON THE CORN LAWS, No. IV.

TO THE RIGHT HON. EARL RADNOR.

MY LORD,—In the leading article of the *Morning Chronicle* (Oct. 23) the following paragraph occurs, in reference, I presume, to your speech at the Highworth Anti-Corn-Law meeting:—

"What would the fashionable journalist say, were we to prove that the narrow, mercantile spirit which reaps where it has not sown has come to pervade the minds of the owners of land as much as those of the workers of cotton? At an agricultural meeting the other day, a poor man complained of the high rate at which allotments were let, and charged the landlord with taking too much. 'Why, if I took £5 where I could get £3,' rejoined the landlord, 'I should be making a present of the difference.' There is not a more liberal man or landlord than the utterer of these words. And yet, what a maxim!"

That you had offended some other journalists had appeared previously, and was naturally to be expected. The shock given to the editor of the *Morning Chronicle* affords some occasion for surprise. Is it the Whig cue not to be quite out of sympathy with the current humbugs of the day? Does the party policy for next session include more coquetting with some of the little cliques constituting Sir Robert Peel's very composite majority? Are we to have a continued war of parliamentary tactics and manoeuvres? If so, it is easy to understand why unmanageable men like your lordship, who take their decided course upon principle, should find that a Tory assistant will not lack a Whig bottle-holder. How long will it be before the organs and leaders of parties learn to construe the signs of the times, and ascertain—what is very plain to all beyond their limited circle—that nothing will ever again secure the weight of popular support but a defined national policy based on just and broad principles?

Instead of the expanded hands and upturned eyes, which his exclamation suggests to the fancy, the writer of the paragraph might more appropriately have adverted to the truth or falsehood of the "maxim" which so affected him. It expresses not a sentiment but a matter of fact. There is no denying it. If it be a "narrow" truth, or an uncharitable truth, or a hard-hearted truth,—and something of this sort the exclamation seems to imply,—that is the fault of the truth, and not of the speaker. It is of little use to shake the head at haughty truths. They retain their reality just the same, and we must e'en do the best we can with them. Truths were not made to please the Whigs, any more than their opponents.

I am not about to volunteer any defence of your lordship; the records of a long and patriotic career place you above defence; but to thank you for the timely enunciation of a truth which has occasioned aspersions that you can well afford to disregard. You have characterized the allotment system, which is now the panacea of certain sentimental politicians. By a single stroke, you have shown its true nature. It is a form of almsgiving. But no country was ever saved by almsgiving. No class was ever raised by almsgiving. No "bold peasantry" was ever created by almsgiving. And assuredly the prosperity of Great Britain will not be renovated or perpetuated by almsgiving.

It was as right as it was bold, my lord, to tell the labourers this; those of them, I mean, who were anxious to become landlords' headmen by allotments under the market price. The condition must ever be one of subservience and degradation. Such people would submit to be plundered, and thank the plunderers for a pittance back in charity. Want and wretchedness have worn them down to this condition, devoid of the moral elements of independence. The true charity is to open a path back to the point from which they have fallen; not to make their physical necessities the agency of prolonging and deepening their mental abasement.

You were not neglectful of this better part, standing alone as you did, amongst the aristocracy of the county, by your attendance at the Highworth meeting. A writer in the *Times* asks:—

"Why does not the noble lord begin at the top and work downwards? Why does he not convene a public meeting of the great landowners, the clergy, and farmers of the county, for taking into consideration the best means of bettering the condition of the working classes? If the noble lord would do this, he would have the willing co-operation of men of all parties."

Would he? Then why did not the men of all parties present themselves at the Highworth meeting? Such were its objects. Farmers were there, and labourers, and small tradesmen. But you, my lord, were left to represent the landed aristocracy. The fairest play was given, and the utmost freedom of speech allowed. Why were not these charitable landlords and clergy there? Because it was not a packed meeting, to praise in set phrase some bit of delusion and cajolery, by which the working classes may still be kept in their false and oppressed position. In the last two resolutions of the meeting, the intelligence, spirit, and interests of the working people are pitifully embodied. To contribute, as your lordship has done, towards cherishing in them such views as those resolutions express, is a service beyond all donations. It is

worth more than lakes of soup and mountains of blankets;—

“6. Resolved—That the working classes of this country have no desire to rely for support on gifts of charity or benevolence; that as free men they wish to support themselves by their own exertions and labour; that they have no doubt that, if human laws did not interfere, they would be able to do so; and that they, therefore, hope that all laws tending to curtail the supply of food, to diminish the sources of employment, and to press down the springs of industry, may speedily be abolished.

“7. That all laws enacted for the purpose of raising the price of food and other commodities used by the people above their natural price in the great market of the world, may be beneficial to certain classes, but must be injurious to the great mass of the people.”

Can “the great landowners, the clergy, and the farmers of the county” suggest anything better than that? If not, where is “their willing co-operation?” If they can, what is it?

Were allotments to become general, as some philanthropists anticipate, the result will be to make England another Ireland. Even the small scale on which they have been tried shows the tendency in that direction. The peasantry will compete for them like the Irish, till a scanty meal of bad potatoes is all that remains for their own portion. Like them, perhaps, compete till they have to work elsewhere, or beg, to make up the rent. Lord John Manners professes to expect, through allotments, the revival of the class of small farmers, an intermediate grade between the farmer and the labourer. He has not explained how. Small farms cannot exist at allotment rents. And certainly the tendency, at present rents, is not to subdivide large farms. No, the labourer will be a labourer still. And what will his quarter of an acre of ground (half an acre appears practically to be the maximum) avail him in the long run? The farmer will remember it in his wages. It takes nobody out of the labour market. There is no step towards independence. For the gainers, one must look partly to the poorhouse, and chiefly to the landlord. Instead of 20s. an acre, he gets £5 or £8. If the small holdings be troublesome to his steward, middlemen will soon come in, and the Irish system be complete. Such are the remedial measures of those who refuse to untax the people's food and allow free scope to their industry!

The *Times* critic on the meeting, although his own proposition is only for another meeting for “consideration,” objects that it offered nothing to the poor but “discussion.” Why “discussion” should feed the hungry, or employ the idle, better than “discussion,” he does not explain. But he is very angry with discussion. He deems you very stony-hearted for meeting the labourers for discussion. The real offence apparently is, that the labourers were treated as rational beings, and the Corn Laws were the topic of this offensive discussion. Attend, my lord, to his rebuke:—

“Sir, our able-bodied, honest, and industrious labourers do not want discussion, their appetites do not lie in that direction. With an empty stomach, they would willingly forego the pain of talking for the pleasure of eating. What they do want is constant employment, better diet and clothing, and to be protected from extortion. It matters little to a person in the last stage of a protracted disease whether his complaint does or does not proceed from a certain cause, and about which perhaps even his medical advisers themselves are not exactly agreed; neither would he care to be dragged from the privacy of his chamber to meet a consultation of doctors on his case at a public assembly. He, poor man, knows little and cares less for cause or effect. He wants no discussion;—all he wants is present relief from his sufferings, and, if his friends cannot give him that, they had better keep their discussions to themselves. Our labourers are reduced to the extreme verge of destitution, the unemployed are calling aloud for employment, the employed are asking adequate remuneration for their labour, their wives and children crying for bread, and the noble lord and his coadjutors give them—what?—not a stone, it is true; but a discussion on the Corn Laws!”

This is a fearful description; nor is it in the least exaggerated. But what a wicked trifling with wretchedness it is, to suggest that such landlords as like should let off some twenty acres of ground in little patches of quarter acres, at the rate of 20s. or 30s. each, or at any rate whatever? What would that do, for the great suffering class, towards “constant employment, better diet and clothing,” and protection from extortion? Would the allotment keep a single family out of the poorhouse? For health, convenience, and amusement, every cottage should have its garden; but the critic speaks of a whole body of men, with their wives and families, crying out for work and bread. True, a discussion on the Corn Laws will not feed, clothe, and employ them; to infer that the repeal of the Corn Laws would do nothing of the sort, is by no means sound logic. If Free Trade, i. e., more trade, cannot help the insufficiency of employment, then Heaven have mercy on the sufferers. Certainly it promises fairer than charitable allotments.

The plan which, as a proposed remedy for a national evil, deserves to be branded for a cold-blooded hoax upon the peasantry and the community,—an operation which your lordship has well performed,—may yet undoubtedly have its limited worth in particular localities. And to that extent it would be likely to realize itself, were labour dealt by fairly, restored to its rights, and enhanced in worth by the

increased demands of extending commerce. Land would be obtainable by the peasantry who could pay. They might treat for as much as they wanted or desired. There would be a bargain, and not a boon. The feeling of independence would be strengthened instead of being quashed. And to whatever extent the convenience and interest of different parties might be promoted by small holdings, for spade or garden cultivation, to that extent would the system be carried. It would take its natural position in the arrangements of society. Should it realize all the good that Young England predicts, Old England would greatly rejoice in the fulfilment of the prophecy. But to this benignant influence the previous condition of putting labour on a just and sound footing is essential. Insufficiency of work and wages can never be “cured by an allotment.”

Your practice, my lord, to the labourer, betters Young England's preachments. You do not promise him patronage, but you cherish his aspirations for independence. You do not teach him to worship a Queen Bee, but you back his claim to his own hive and honey. You do not catch his ball, but you listen to his grievances. Instead of bowling him out, you refute his prejudices. You meet him, not in his sports, as a lord with little skill at cricket; but in his deliberations, as a man of ability and information. Yours is the higher compliment and the greater service. It is the shorter and surer road towards the restoration of confidence between the different classes of society. So will it be felt by the people. If discussions will not feed them, neither will hummer and cricket matches. But discussions will show the way to employment and food, and so towards honest independence; while charity and games, leaving wrongs unredressed and the causes of wretchedness untouched, can only keep them sots, slaves, and beggars.

A NORWICH WEAVER BOY.

ADVANCE OF WAGES, &c.

GLASGOW.—We are much gratified to learn that at a meeting of the master cotton spinners of Glasgow, held on Thursday, it was agreed that, owing to the comparatively prosperous state of trade, they should advance the wages of their workmen 10 per cent. upon the present rates. It affords us great satisfaction to learn that a number of the masters of the power-loom factories in and around Glasgow have resolved to raise the wages of their workers immediately, and that there is every prospect of their example being generally followed by the entire trade. —*Glasgow Post*.

WIGAN.—We have been informed on undoubted authority, that Messrs. Taylor and Brothers, cotton-spinners, Wigan, have increased the wages of their hands from 7 to 10 per cent. This advance affects the whole of the spinners and card-room hands at the Standishgate and Wallgate mills, and includes in number several hundred persons. The hands at several other mills are still out for increased wages. —*Manchester Guardian*.

WIGAN.—TURN-OUT AT MESSRS. ACKERSBURY'S MILLS.—We are happy to inform our readers that this protracted strike for an advance of wages is now finally settled, the proprietors of the works having at length acceded to the terms of their workpeople. The hands, with the exception of the steam-loom weavers, resumed their work on Thursday morning last; and the weavers were to commence their labour on the morning following. We feel great pleasure in reporting the above arrangement. Had the operatives continued out much longer, many families must have suffered materially. We understand that the advance is very considerable. —*Preston Guardian*.

OLDHAM.—On Saturday last the cotton-spinners in the employment of Mr. Daniel Dronfield, of Werreth-mill, Oldham, struck work, for the purpose of obtaining an advance of a penny per thousand hanks. Mr. Dronfield afterwards agreed to give the desired advance to the spinners, but declined to increase the wages of the self-acting minders; and it seems the dispute with the latter is not yet arranged.

SINGULAR ADVANCE OF WAGES.—It seems that the reeler at one of the mills in this town last week received a voluntary addition to their wages of “three-halfpence per week.” This is certainly a short step in the right direction; and, in honour of the event, the mill is likely to obtain the unenviable name of “The Red Bobbin Mill.”

ADVANCE OF WAGES.—Mr. Whiteley, of Stones and Dyson Mill, and Mr. L. Pogson, both of Soyland, near Halifax, have, unasked, advanced their workpeople's wages to the amount of 2s. per week.

MACCLESFIELD.—The operative cotton-spinners and self-acting minders have held a meeting, and unanimously passed resolutions demanding an advance of wages from their employers.

FACTORY AMENDMENT ACT.—On Monday last, at the Town-hall, Little Bolton, Mr. William Garrett Taylor, cotton-spinner, was summoned before the Rev. J. S. Birley, and Robert Herwood, C. J. Darblshire, and W. F. Hulton, Esqrs., to show cause why he should not be convicted in a penalty of not less than £10, or more than £100, for having neglected to securely fence an upright shaft, in one of his mills in Halliwell, whereby a young woman named Jane Tong, had her hair and scalp torn off, on the 9th inst.—Mr. Ewings, sub-inspector (assisted by Mr. Horner, the inspector of the district), conducted the case; Mr. Taylor was defended by Mr. Pollock, barrister. After a technical objection taken by Mr. Pollock, that the act did not include mill gearing, which the magistrates overruled, evidence of the case was gone into. Two of the magistrates were of opinion that the iron fence was not high enough, and were therefore for a conviction. The other two magistrates, however, were of opinion that the case was sufficient to prevent accidents, with ordinary care; and therefore, under such circumstances, they had decided to dismiss the case.

NOTES OF A TRAVELLER IN THE SUMMER OF 1844.

No. X.

DEATH KNELL OF THE CORN LAWS.

COLOGNE, Aug. 15.

I had scarcely left the Belgian frontier before the improvement that I pointed out as feasible and practicable in the communication between England and Belgium was actually adopted. It is now possible to arrive at Brussels from London in one day, and no doubt the communication between the two countries will speedily assume new and interesting features. Perhaps a few suggestions as to what is practicable may not be thrown away.

The opening of the railway from Ostend and Antwerp to Cologne is an event of great historical importance. It is an act of retribution towards a large tract of country that for want of decent modes of communication was to a great extent excluded from the benefits of active and rapid commercial traffic. The Belgian Government was sharp-sighted enough to perceive that on the realizing of this connexion with Germany its virtual independence depended; and the vast sums spent in completing the line from Liege to the frontier were the best answer to the fears expressed of the overweening influence of France in the Brussels Cabinet. I may be allowed, perhaps, to wander from the more field of economical statement in a case where the means to remedy the mischief that has been unfortunately done will ultimately be found to be of an economical nature.

An intimate connexion with Germany in commercial respects was seen by the first Ministers after 1830 at Brussels to be a precursor to an intimate political alliance; nor can it be otherwise, for the commercial alliance is the greatest benefit that a political connexion can confer on two nations. Now, the party which unhappily has for some time conducted matters at Brussels is averse to a political union with Germany, not from any Gallican prejudices, but from a blind adherence to little factious views. It is, in short, a high church party to whose hobby the interests of landlords, traders, and manufacturers must bend when there is an appearance of conflict. But at the present day our high church statesmen have cleverness enough to hoodwink one or other of the parties selected as victims. Thus sugar-traders are lured into restrictive measures against trade under the pretence of abolishing slavery; and landowners are taught to believe that there is only one crop that will yield rent, when it suits the convenience of statesmen to band them against the majority of their fellow-citizens. Thus on this occasion the shipowners have been told (what they, of course, are willing to believe) that differential duties are the best receipt for concocting a national commercial navy, and it was hoped that the support of this interest would overbear the outcry of all the other interests against whom the new

Belgian navigation law evidently militates. The success of these expediency statesmen at Brussels, who, of course, affect high principles, and condemn, as savouring of the shop (to which they owe their station), all considerations affecting sales of merchandise, has been so signal that it is amusing to trace the progress of the political farce that has thus been got up, and which is a fair representation of much of the political twaddle that in all countries now keeps down the energies of the people. The object having, in the first place, been to interrupt the harmony subsisting with Prussia, it was most unexpectedly forwarded by the King of Prussia himself, whose sudden reply by raising the duties on Belgian iron 50 per cent. was, of course, shown to involve insult with injury to the nation. Matters might even then have been amicably arranged had King Leopold not likewise fallen into the snare; but by throwing this Monarch into the hands of France another object is accomplished, for which there offered no decent pretence in any other way, but to accomplish which the high church party in Belgium was most anxious—a breach with England. I repeat it, the measures which are about to throw the trading relations of three countries into confusion, and which have given a shock to the security of trading property in these parts that it will not recover, even if the breach be soon healed, for many years, have been concocted by men who know and care nothing about the interests of traders and consumers but the prejudices of those classes which they strive to turn to account. It is with this party that M. Nothomb has risked his political reputation by a coalition, and this is the work which they demand of him in return.

I should think that it requires no extraordinary acumen in politics to see that the friendship of the people of adjacent lands, purchased by a clear understanding of their mutual interests, must be the surest, if not the only, guarantee of Belgian independence, and the firmest support of the reigning dynasty. In the case of a momentary disagreement with either France or Prussia, which threatened to give to the weight of either rival an unwelcome preponderance, surely the friendship of England is not to be despised; nor are impediments to commercial intercourse the best means of awakening sympathy. The policy of the present ruling party is clearly quite opposed to that suggested by this simple view of the case. It remains for the Belgians to declare whether that policy is really national, and for the King to inquire whether it is loyal or not.

We cannot but lament the adoption of any impediments to trade in so important a highway as Belgium can become if it chooses, and suppose that in the next session of Parliament our Ministers will be called upon to de-

clear whether the accusation preferred against them in the Belgian Chamber of showing a disinclination to meet the Belgians with commercial concessions is well founded or not.

In the meantime the Dutch have cleverly seized the opportunity to treat with Prussia respecting the navigation of the Rhine. The modifications in the transit duties, which Holland published some time back, and which reduced these duties to a mere nominal recognition, were met by the Zollverein by the permission to carry goods in transit through the German states to Strasburg; by which means a treaty concluded between Holland and France, for the supplying of Lorraine and Alsace with colonial products, obtained efficiency.

The concession demanded now by Holland is, I hear, that Dutch vessels shall be placed on the footing of Prussian vessels on the Rhine, by Prussia's ceasing to refund the Rhine octroi levied at Emmauich to its own vessels, which refunding amounts, in practice, to a differential duty against Dutch vessels. This proceeding on the part of Prussia is also obnoxious to the small German state which have been obliged to refund the octroi (that they do not receive) to their vessels; and it militates against the principle of the Zollverein. As the maintenance of a good understanding with Holland is of great importance to all the Rhenish states, and they may, in the present dilemma with Belgium, be inclined to acknowledge as much, it is likely that this negotiation will lead to something, and, coupled with the effects of the differential duties in the Belgian harbours, may cause an unexpected influx of trade into the mouth of Father Rhine.

As a set-off to this, the Belgians could do no better than expedite the despatch of their trains, which now lose at least three to four hours in a most unnecessary manner upon the way from Ostend to Verviers, a loss of time that, for one half the year, makes it impracticable to perform the distance in one day. This delay is, in a great measure, owing to the want of a distinction between the luggage and passengers' trains. All are lumped together, and the passengers, who could be rapidly forwarded, are forced to wait until goods are classified and sorted. It is clear that the relative importance of passengers and goods is not yet distinctly appreciated in Belgium. The constant tendency of the one to increase in proportion to the rapidity of the means of transport, and the field for an unlimited extension of the other if opportunities are multiplied and trouble saved, have yet to be reduced to practical method in that country. There is no reason but this why the trains that leave Cologne at six in the morning should not arrive at Ostend in time for the passengers to start with an afternoon's boat to Dover. Nor is there any apparent reason why the afternoon's train, which the Dover boats may easily catch as they now do, should not be continued to Cologne on the same day. If passengers alone were

forwarded with the mails it could easily be accomplished. But the mails! that is the ticklish point. Perhaps, since such a cordial understanding subsists between London and the other courts, our Post-office will undertake to read the necessary communications for the benefit of other courts, and thus allow private and commercial correspondence to proceed as rapidly as our means of transport can convey it, and competition in trade requires. As a proof of the present state of the correspondence between England and Germany, I can allege the fact that the news of the late delivery of Queen Victoria was first known at Cologne through Paris, notwithstanding the improved communication with Brussels.

Another reason which makes it probable that an understanding between Prussia and Holland will be accomplished, is the desire of the King of Prussia to establish a direct navigation between his Rhenish states and the ports of the Baltic. To induce speculators to embark in this new trade, which would be of greater importance than is at first sight apparent, premiums have been published by the Prussian Government to the extent of 6000 dollars for the first Rhenish vessel that makes three voyages to a Baltic harbour. Half of the money is to be advanced in aid of the building and equipment expenses; and some vessels are, I hear, now in progress of construction that next year will make the experiment. By this highly judicious project the fate of our Corn Laws is, of course, decided. The throwing the resources of the fields of Pomerania and the traffic on the Vistula open to the manufacturing district that possesses all the advantages I enumerated in my two last letters, is like raising up a new power that will be irresistible in competition unless met on equal terms. I have it on good authority that orders frequently went to Elberfeld during the period of strikes at Manchester and in the cotton districts, and were there satisfactorily executed. You will remember the comparison made in a former letter between the prices of corn in different parts of Prussia, and the high prices that, owing to the density of the population and the bad means of communicating with the corn-growing districts, prevail usually in the Rhenish province. The stimulus that will be given by the cheap prices consequent on a removal of this disadvantage may be anticipated, and the success of the experiment may be regarded as the more certain that the premium offered does not exclude the co-operation of Dutch vessels ultimately, since a treaty of reciprocity in matters of navigation subsists between Holland and Prussia.

This important step threatens, therefore, a change of the utmost consequence both for Belgium and England; and it will soon be time to look out for more practical

Ministers than either country now possesses, if trade and manufactures are to be constant to our shores. The opinions and exertions of the League will thus probably soon be fairly appreciated both in England and in the civilized world in general.

Cologne appears to have no peculiar natural advantages that adapt it to become a harbour. The Rhine is scarcely so deep as at Düsseldorf, and is not much broader than at Bonn. But the traditions of commerce are of vast antiquity at Cologne, and with the mercantile experience the capital has survived there the storm that swept princes and empires before it. The Elector of Cologne was the first prince of the Germanic or, as it was called, the holy Roman empire. He was the representative and vicar of the Pope on the north side of the Alps, and, as arch-chancellor, was the guardian of the empire during an interregnum. With all these titles and prerogatives, the Prince-Archbishop was, of course, too mighty a potentate to associate his fortunes with those of a commercial city, whose independent citizens constantly held him in abeyance, and, as members of the Hanseatic League, enjoyed as much political power as they desired. In the fourteenth century Cologne was a leading commercial centre. Belonging to North or Low Germany by descent and language, the citizens of Cologne inherited the commercial and democratic propensities on which the greatness of England reposes. Equality between man and man, and the insight into the sphere that commerce opens for bold adventure, have ever been the creditable distinguishing characteristics of the men of Cologne. The city fell to the share of Prussia by a godsend after the storm of the revolutionary wars. It will show no small tact in the King if he opens to its inhabitants the field on which they are fitted to excel, and which has long been closed for them.

I cannot myself attach importance to any attempts made to restore to Cologne the rank of a seaport that are not based upon steam navigation. The attempt made some years back to open a communication by means of sailing vessels with London proved a decided failure; but steamers have gone across the German Ocean to and from Cologne with success. Even steamers must not draw more than seven feet of water if they are to go at all times, and cannot, therefore, be of great burden. Perhaps the understanding between Holland and Prussia will, after all, leave the deep-sea navigation to Holland on terms that the Rhenish inhabitants will gain by. However this be settled, it is interesting to survey the changes and improvements—political, mechanical, and intellectual—that it has been necessary for these countries to go through before the gift that nature seemed to have bestowed on them in a manner impossible to dispute was restored to them—the free navigation of the Rhine. And, after all, how was it obtained but by the opening a second communication with the sea almost equivalent in its results to the creation of a second river? What a lesson for those who advocate restrictions does not the history of this city, placed at the junction of a magnificent railroad with a splendid river, contain!

Cologne, as a member of the Hanseatic League, did not belong to the League of the Rhenish cities, which was created in imitation of its great prototype. The barbarous state of the open country, which was oppressed by the despotism of military and clerical lords, made the enlightened sovereigns of the house of Suabia, whose notions were improved by their connexion with Italy, repose upon the cities as seats of civilization; and they gladly used them as a political arm when trade had rendered them important. Mayence, Appenheim, and Spire took the lead in the Rhenish League, to which Strasburg was afterwards added. These cities supported the authority of the Emperors against the robber nobles whose castles infested the valley of the river which their ruins now serve to adorn. But the idea of freedom was in the earliest times a most ill-defined one, and the control of roads and streams was only wrested from the nobles by the artisans to be abused by the latter as soon as they obtained the power. All goods going up the Rhine were obliged to be brought to the market-house of these towns to pay a transit duty, and usually to be forwarded in ships or barges belonging to the city that enjoyed this right of "staple" (*stabile emporium*) to the next place of like importance. The inconvenience attached to this fashion caused it ultimately to be abolished in such places as were not under the political patronage of some powerful prince; and it was at the price of maintaining this unjust and detrimental privilege that the Archbishops of Cologne and Mayence obtained the ascendancy over the burghers of those cities, who, while they sought only the just and lawful gains of trade, were unapproachable both by despotism and degrading patronage. Cologne and Mayence reserved this right until very recently. The other cities, 70 in number, that at one time formed the famous Rhenish League, had long before merged into the territories of the small dynasties that gradually swallowed up the minor houses and corporations in their neighbourhoods.

The King of the Romans, William, Count of Holland, formally sanctioned the statutes of this league at a diet held at Appenheim in 1255; and as the nobles who were accustomed to levy tolls, and to be paid for the military escort which they afforded to the merchants from one town to another, did not willingly abandon what was termed a vested privilege, the citizens united their forces, and in 1271 destroyed every place that molested their passage from Strasburg to Cologne. The weakness of

the succeeding dynasties that filled the Imperial throne, and their residence at a distance from this great artery of trade, and jealousy of the power thus obtained by the citizens, favoured the renewal of the old abuses. But the offenders were this time the electors and other powerful princes, for whom the cities were not a match. The alternative of sending their goods by land, to evade the tolls on the river, was even prevented by an agreement between the princes, who, in 1408, erected the first *Zollverein*, not, however, to favour, but to enslave commercial traffic. These rulers agreed to levy equal tolls upon the roads to those which they demanded of goods conveyed by water. This description of *Zollverein* was often renewed, and treaties are extant by which a common system of imposts is agreed to by several towns from 1416, 1464, 1487, 1489, 1492, 1503, 1506, 1517, 1551, 1557, 1571, 1576, 1650, and 1717. The history of the difficulties thrown in the way of trade by one prince, and of the encouragement afforded by another, would go far to explain the sudden rise and fall of dynasties which trusted in political alliances to the neglect of the true sources of wealth and power. Thus Flanders, Burgundy, Holland, alternately occupied the position of leading powers, and at last all merged momentarily in the rising fortunes of Charles V. But that monarch had no idea of the mission that he was charged with, and the Spanish councillors of his and his son's court sought to repress the trade of the Germans in favour of that of Spain and the Netherlands. The death-blow to the Rhenish navigation was given by the license of the Spanish garrisons that were everywhere introduced during the religious wars, and by the ascendancy that Holland obtained at the peace of Westphalia in 1648. The unjust precedent of closing the Scheldt in favour of the Maes, so far from being of use to the middle and upper Rhine, deprived its cities of the second outlet, which has only just been restored to them by the Belgian railroad. While they depended on the one channel, that line of trade appeared so alluring an object of plunder that it was sure not to be spared. Between Cologne and the sea upwards of fifteen different tolls were gradually established, and all complaints at the Ratisbon diet against them were fruitless.

What share this state of things, and the annoyance it occasioned, as well as the demonstration that accompanied it, had in facilitating the extent of the French rule to the left bank of the Rhine, it is easier to conceive than to demonstrate. It is certain that the French were fully aware of the grievance, and professed to be anxious to remove it. The "Projet de Convention sur l'Octroi" of 1806 is a document of Napoleon's statesmanship that redounds more to his credit than many other more celebrated acts of organization. Its provisions are still a pattern for the management of the river. But he met with great opposition on the part of the princes of Germany who held the right bank, and defended their old duties on the plea of its being necessary to keep up the banks and the trackroads. At length he compelled them and the Dutch to agree to one toll, amounting to two francs on every cwt. of wares brought up the river to Switzerland from the sea, and one franc thirty-three cents for all that went down. The toll thus levied was divided proportionally between the claimants; and if his other proceedings had not alienated the affections of the Germans, and his wars had not checked the supplies of which he desired to facilitate the transport, this benefit conferred on the Rhenish towns would have given him a lasting claim on their attachment.

On the establishment of peace the navigation of the Rhine became an object of anxious discussion, in which England took a prominent part, and advocated its freedom. After many conferences an agreement was entered into by the princes interested, based on Napoleon's convention, the stipulations of which remained, with the declaration of the freedom of the navigation, under its protection, "jusqu'à la mer," which the Dutch chose to translate, "to the commencement of the sea." In order to be able to tax this commencement, they declared the sea to commence at Gorkum, a town situated about as far from the sea as Gravesend is from the North. This interpretation caused much ill blood and long negotiations, until at length the fear of competition from the railroads, and the necessity for conciliating Prussia, made Holland give way in practice, if not in principle; and by the treaties of 1831 and 1837 reduce its transit duties, that will now, in all probability, disappear. The strange treaty concluded by Lord Palmerston in 1839 with Prussia, and in which the Dutch harbours were declared to be considered as Prussian harbours by England for commercial purposes, awakened a feeling of jealousy in Holland, which was not a party to that treaty. But the feeling seems to be allayed, and cordiality with Prussia is the prevalent disposition, under the influence of which we may hope to see the Rhine assume its proper importance as a mighty link of connexion between central Europe and the sea.

The abolition of the exceptional treatment of its own vessels on the Rhine, to the masters of which the octroi levied in Prussia is, as I have stated, refunded, may be demanded in proof of the spirit of reciprocity which Prussia professes. Even the total abolition of the octroi may be looked forward to with the progress of the system of towing by steamers, which is gradually extending. It has long been adopted by Holland, and the clause of the treaty which binds Holland to keep the trackroads in

repair has been practically dropped in consequence of the improvement presented in the steam-tugs. Cologne and M. have now both steam-towing companies, and the traffic on the Rhine will, undoubtedly, rapidly increase with their aid. The conveyance of the mail by the steamers, which now surpass the speed of the public coaches threefold in going up and fourfold in descending the Rhine, may be hinted at as a recognition of the importance of a rapid circulation of intelligence, which the habituation to railroad calculations may induce.

I like to apply the experience of the double communication with the sea now offered to the merchants of Cologne to the growth of a powerful manufacturing district on the Rhine, and to think that, instead of interfering with the markets of Belgian and English manufacturers, it would, combined with an extended freedom of communication, increase the wealth of all. It would certainly be desirable to see it spring up, untrammelled by protection, the legitimate child of enterprise and calculation, and such an origin would ensure its duration and prosperity. In the prospect of active competition care would be taken to seek branches of industry that are as yet unoccupied; whereas protection, by its nature, drives all into the same overfilled channels of industry, often to mutual destruction. But, whether the result be mutual aid or more active competition than hitherto between Prussian and English manufacturers, I think you will agree with me that we cannot see the corn of the Baltic regularly and systematically introduced into the manufacturing districts of the Rhine, without at once getting rid of our impediments to prosperity, which, in the shape of *Corn Laws*, we have been foolish enough to submit to so long.

THE REGISTRATION.

LEICESTER.—The following is the result of the revision for this borough:—New claims—Free-Traders and Liberals, 95; Monopolists, 38. Objections sustained—Free-Traders and Liberals, 110; Monopolists, 61.

Free-Trade and Liberal gain on claims .. 57
On objections 46

Majority 103

BOROUGH OF CHATHAM.—Free-Trade objections, 54; sustained, 35. Claims, 25; allowed, 23.—Monopolist objections, 25; sustained, 10. Claims, 32; allowed, 22. Twenty-six of the Free-Trade objections were against Government officers here, and notwithstanding the Court of Common Pleas having decided in their favour on our appeal last year, and having the same barrister also who put them on last year, we succeeded in striking off 15 of them; the others must have gone had they not sworn that they could leave their quarters in the barracks when they chose (which every one knows to be false); nay, one even said that he could leave, and let them if he thought proper.

WEYMOUTH AND MELCOMBE REGIS.—The following is the result of the late revision in this borough:—Free-Trade objections sustained, 15; claims allowed, 3=18. Monopolist objections sustained, 33; claims allowed, 21=54. Monopolist majority on this revision, 36. This untoward result is owing to the gentleman who has the management of the registration confided to him having failed to re-claim for such Free-Trade electors who had removed, and who, being objected to by the Monopolists, were in consequence struck off. This will be remedied next year. From the following statement, with which we are favoured by a valued correspondent, it will be seen that, even deducting this year's loss, there has been a very striking gain to the Free-Trade party since the general election:—

Registration, 1841, Free-Trade gain .. 17
Ditto, 1842, ditto .. 88
Ditto, 1843, ditto .. 41

Free-Trade gain 146
Registration, 1844, Free-Trade loss .. 36

Gain since general election .. 110

KING'S LYNN.—Free-Trade objections sustained, 30; claims allowed, 19=49. Monopolist objections sustained, 10; claims allowed, 11=21. Free-Trade majority on this revision, 28.

BRIDPORT.—The register has been altered by this year's revision in favour of the Free-Trade party by 6.

BATH.—Free-Trade objections sustained, 56; claims allowed, 19=75. Monopolist objections allowed, 48; claims allowed, 6=54. Free-Trade majority on this year's revision, 21.

WEST RIDING BOROUGH.—In the whole of these boroughs the revision has issued in a gain to the Free-Trade and Liberal party.

REGISTRATION IN WALES.—The following is the result of the revision courts held for the under-mentioned Welsh boroughs. Throughout the report, objections mean "objections sustained," and claims refer to "claims admitted."

BOROUGH OF CARMARTHEN.—*Llanelli*.—

* Free-Trade and Liberal objections .. 4 4
Monopolist ditto .. 0 0
Free-Trade and Liberal claims .. 1 0
Monopolist ditto .. 1 0

Carmarthen.—

Free-Trade and Liberal objections .. 3 3
Monopolist ditto .. 0 0
Free-Trade and Liberal claims .. 2 2
Monopolist ditto .. 0 0

Clear gain, Free-Traders and Liberals .. 9
Add by new voters on list .. 25

Total gain .. 34

MONMOUTH BOROUGH.—*Newport*.—

Free-Trade and Liberal objections .. 7 6
Monopolist ditto .. 1 1
Free-Trade and Liberal claims .. 4 0
Monopolist ditto .. 2 2

Clear gain of Free-Traders and Liberals .. 4
Add for borough of Monmouth .. 3

Total gain .. 7

The relative strength of parties in the Monmouth boroughs is less affected by the revision than it is, by the overseers' list. In the borough of Newport a considerable number of new votes has been placed on the list, which will tend materially to augment the strength of the Liberal and Free-Trade party in these boroughs.

SWANSEA CONTRIBUTORY BOROUGH.—A faint rumour that these boroughs would be contested at the next election excited the Free-Traders to take precautionary measures as to the registration, the result of which has been to place on the overseers' list a considerable number of new votes favourable to the Free-Trade cause, and to render a contest by the opposing party, if attempted, a hopeless one. To show the importance of attending to the registration, it may be observed that on the register of last year a loss of from sixty to seventy votes occurred to the Liberal and Free-Trade party. The lost ground has been more than recovered this year. Not a single objection was made by the Monopolists throughout the whole of the boroughs.

BOROUGH OF MONTGOMERY.—*Montgomery*.—

REGISTRATION COURTS.—We have had good accounts from various parts of the Principality, particularly from Carmarthenshire, of Liberal gains in these courts, up to the latest accounts. Mr. Jenkins, of Swansea, agent for the League, is active on several of the circuits.—*The Merlin*.

GAMEKEEPERS' PRIVILEGES.—The Duke of Bedford, we hear, has ordered his tenants to deal with rabbits as rats, and clear their farms of these destructive animals, which only go to gamekeepers, who take care to pursue rabbit poachers to preserve their privileges at the cost of the farmer.—*Bedford Mercury*.

IMPORTS OF FOREIGN CATTLE.—One hundred and ten head of horned cattle have been imported by the steamers from Hamburg and Rotterdam since our last, viz.—30 on Friday, by the Leeds, Captain Mowle; 40 on Saturday, by the Helen Macgregor, Captain Frost; 12 on Monday, by the Emerald Isle, Captain Bouch; and 28 on Tuesday, by the Transit, Capt. Dickinson.—*Hull Packet*.

INCENDIARISM.—On Tuesday evening, the 15th inst., an incendiary fire broke out in a field situated at Hamp, in the parish of Bridgwater, Somersetshire, occupied by Mr. Charles Jeffries, an old inhabitant of this town, which destroyed a rick of old hay and a lock-up wood house, valued at £50.—On the same Tuesday, between three and four o'clock a.m., a fire broke out in a hay-stack, on a farm belonging to Mr. Isitt, situate between Bedford and Penlake, but was extinguished before any serious damage was effected.—Almost at the same moment fire broke out in a wheat stack, on a farm in the occupation of Mr. T. Wing, of Bedford. Before the flames were got under, the stack, which contained about 30 loads of wheat, was wholly destroyed. In both instances the owners were insured.—Another fire broke out at Hallow lane, near Hitchin, soon after 10 o'clock on Thursday night. The whole of the farm-buildings were consumed, and some cottages which abutted on the premises were much damaged.—Between 12 and one o'clock on Friday morning a most destructive fire took place at Penstanton, on the premises of Mr. Lambert, farmer, who usually employs a large number of labourers. The farm-servants and a number of labourers assisted cheerfully, but their zeal was in a great measure neutralized by terror, and as the flames encompassed the premises the men ran from point to point in a state of bowldermint. The dwelling-house, together with the out offices, several hay-stacks, barley and pea-stacks, the produce of 10 acres, was consumed.—Another fire broke out the same evening on the premises of Mr. T. Whinnett, of Wingfield, in the parish of Chalgrave, being the fourth fire which has occurred in the same parish within the last year. It was confined to the farm-buildings, the communication to the dwelling-house having, by judicious efforts, been cut off. The corn-stacks were pitched some distance from the yard, and owing to that circumstance escaped destruction.—On the night of Thursday, several stacks, on the farm of Mr. Bond, of Cawston, containing the produce of 18 acres of wheat, 18 acres of barley, and 43 acres of raskings, were discovered to be on fire on all sides, and were entirely consumed. Some other stacks and the buildings were preserved, by the prompt arrival of the engines.

* In Newtown a large proportion of the number objected to were inserted on the overseers' list for this year, and are not on the register now in force. A comparative analysis of the list and register is now in preparation. In the meantime it may be observed, that the clear Monopolist gain, as compared with the register, is estimated at not more than 29. The result of the revision on the whole, of the Montgomery boroughs will, in this case, exhibit a clear gain for the Liberal and Free-Trade party of 26. The whole of the Monopolist objections have, however, except, to say the least, the effect of the Court of Common Pleas, as an objection was raised to them, on which the revising barrister has granted an appeal.

REVIEW.

Vestiges of the Natural History of Creation.

London: Churchill.

This very able but rather fanciful work appears to have been suggested by Le Comte's "Positive Philosophy," from which the author has taken some of his most ingenious speculations. Combining the "nebulous" theory of the origin of the solar system with the theories of modern geologists, he traces a possible history of the earth, from its first existence in a rarefied state down to its present condensed and solid form. His boldest conjecture is, that life may be made the result of certain chemical combinations of matter; and for this he relies on the experiments of Mr. Cross, regardless of the refutation they received from Professor Henslow. Life once obtained, he thinks that a varied and more perfect organization might be the result of the organic changes to which the earth was subjected during the progress of its solidification; and with this theory he combines some of those startling deductions which Serres has developed in his "Transcendental Anatomy." His great postulate is, that there were no successive stages of creation, in which he is at issue not only with the Book of Genesis, but with nearly all the best geologists and naturalists. Setting aside, however, the question of authority altogether, we should require very strong evidence to prove that not merely life, but the power of reproducing life, could result from any chemical or mechanical combination of matter, and still stronger evidence to prove that thought is the result of material organization.

We are always reluctant to make any appeal to revelation in such discussions as are raised in the volume before us; the Bible was designed to guide our religious belief, not to instruct us in the mysteries of science; and those who use it to support or impugn cosmogonic theories incur the hazard of substituting their own interpretations of it for the written word itself. But, if the theory of this writer be received, such a thing as revelation is impossible, for the Creator is asserted not to have interfered in His work since first He called our system into nebulous existence.

In the "Natural History of Society" we endeavoured to show that the fact of civilization is in itself a proof of a revelation, for the reason assigned by the Archbishop of Dublin, that we have no recorded example of a self-civilized community, though we have many of self-barbarized communities. The writer of the work before us has felt that this argument was a very awkward impediment in his way, and he accordingly removes it with more cleverness

than success. We say, civilization is a fact, and the Scripture accounts for the fact; it tells us that, when God created Adam, He instructed him in the nature of the animals and plants by which he was surrounded, a knowledge which is clearly unattainable by instinct, and which experience could not have gained without the lapse of many generations. The importance of the point in issue may excuse the apparent vanity of quoting from ourselves; but we must further refer to the "Natural History of Society" for proof that the traditions of all nations describe the first elements of knowledge as imported from abroad; even the islanders of the Pacific ascribe their knowledge of imperfect arts to the teaching of the gods. Furthermore, we showed that there is no consistency in the barbarous state of existence; every savage tribe yet discovered possesses some peculiar bit of ingenious knowledge or contrivance, standing prominently out and above the general average of information; and we have shown that these must be received as evidences of a former and higher state of civilization, just as the ruined cities of Central America evidence a higher knowledge of architecture than is possessed by any existing tribe of the Red Indians. We believe that "Civilization, like every other good and perfect gift, came down from the Father of Lights, in whom there is no variableness and no shadow of turning;" and we think that the "Natural History of Society" exhibits proofs of design in social life not less evident than those that are displayed in the material universe. This is a question of fact, not of speculation; and we refer those who take an interest in the subject to the work to which we have alluded.

Differing widely as we do on almost every material point from the author of the volume before us, we deem it only justice to say that his work is ably and eloquently written; that it carefully avoids all irritating topics, and that it displays intellectual power of no common order even in its most daring and wildest flights.

Ballads, and other Poems. By J. G. Whittier.

London: H. G. Clarke.

Whittier has long been honourably distinguished as one of the most energetic and uncompromising advocates of negro emancipation; and his efforts to remove this foul blot from his country's escutcheon have been injurious to his literary fame in America. Now that Mr. Clarke has placed his poems in a cheap and accessible form before the

English public, by including them in his valuable series, we trust that, at this side of the Atlantic, Whittier will receive the meed of fame which has been unjustly withheld from him in the United States. He possesses some of the highest qualifications of a poet, and rivals Bryant himself as a delineator of external nature, while he is even more successful in associating each feature of the landscape with moral thought. Take the following as an example from the poem of the "Fratricide," describing a royalist who had killed his own brother when he met him in the ranks of the Republican armies:—

"He stood on the brow of the well-known hill,
Its few grey oaks moan'd over him still—
The last of that forest which cast the gloom
Of its shadow at eve o'er his childhood's home;
And the beautiful valley beneath him lay
With its quivering leaves, and its streams at play,
Like the sunshine over it all the while
Like the golden shower of the Eastern isle.

"He knew the rock with its fingering vine,
And its grey top touch'd by the slant sunshine,
And the delicate stream which crept beneath
Soft as the flow of an infant's breath;
And the flowers which lean'd to the west wind's sigh,
Kissing each ripple which glided by;
And he knew every valley and wooded swell,
For the visions of childhood are treasured well.

"Why shook the old man as his eye glanced down
That narrow ravine where the rude cliffs frown,
With their shaggy brows and their teeth of stone,
And their grim shade back from the sunlight thrown?
What saw he there save the dreary glen,
Where the shy fox crept from the eye of men,
And the great owl sat in the leafy limb
That the hateful sun might not look on him?

"Fix'd, glassy, and strange was that old man's eye,
As if a spectre were stealing by,
And glared it still on that narrow dell
Where thicker and browner the twilight fell;
Yet at every sigh of the fitful wind,
Or stirring of leaves in the wood behind,
His wild glance wander'd the landscape o'er,
Then fix'd on that desolate dell once more.

"Oh, who shall tell of the thoughts which ran
Through the dizzied brain of that grey old man?
His childhood's home—and his father's toil—
And his sister's kiss—and his mother's smile—
And his brother's laughter and gamesome mirth,
At the village school and the winter hearth—
The beautiful thoughts of his early time,
Ere his heart grew dark with its later crime.

"And darker and wilder his visions came
Of the deadly feud and the midnight flame,
Of the Indian's knife with its slaughter red,
Of the ghastly forms of the scalpless dead,
Of his own fierce deeds in that fearful hour
When the terrible Brandt was forth in power,—
And he clasp'd his hands o'er his burning eye
To shadow the vision which glided by.

"It came with the rush of the battle-storm—
With a brother's shaken and kneeling form,
And his prayer for life when a brother's arm
Was lifted above him for mortal harm,
And the fiendish curse, and the groan of death,
And the welling of blood, and the gurgling breath,
And the scalp torn off while each nerve could feel
The wrenching hand and the jagged steel!

"And the old man groan'd—for he saw, again,
The mangled corpse of his kinsman slain,
As it lay where his hand had hurl'd it then,
At the shadow'd foot of that fearful glen!—
And it rose erect, with the death-pang grim,
And pointed its bloodied finger at him!—
And his heart grew cold—and the curse of Cain
Burn'd like a fire in the old man's brain.

"Oh, had he not seen that spectre rise
On the blue of the cold Canadian skies?—
From the lakes which sleep in the ancient wood,
It had risen to whisper its tale of blood,
And follow'd his bark to the sombre shore,
And glared by night through the wigwam door,
And here—on his own familiar hill—
It rose on his haunted vision still!

"Whose corpse was that which the morrow's sun,
Through the opening boughs, look'd calmly on?
There were those who bent o'er that rigid face
Who well in its darken'd eyes might trace
The features of him who, a traitor, fled
From a brother whose blood himself had shed,
And there—on the spot where he strangely died—
They made the grave of the Fratricide!"

In the ballad of "Cassandra," Southwick, one of the early members of the Society of Friends, who had suffered the bitter persecution of the Puritans, Whittier has very cleverly contrived to make the external adjuncts of the picture subservient to exhibiting the maiden's strength of feeling and intensity of conviction:—

"Slow broke the grey cold morning; again the sunshine
fell,
Flecked with the shade of bar and grate within my lonely
cell;
The hearth-front melted on the wall, and upward from the
street
Came careless laugh, and idle word, and tread of passing
feet.

"At length the heavy bolts fell back, my door was open
cast,
And slowly, at the sheriff's side, up the long street I
passed;
I heard the murmur round me, and felt, but dared not
see,
How, from every door and window, the people gazed on
me.

"And doubt and fear fell on me, shame burned upon my
cheek,
Swam earth and sky around me, my trembling limbs
grew weak:
'Oh, Lord! support Thy handmaid; and from her soul
cast out
The fear of man, which brings a snare—the weakness and
the doubt.'

"Then the dreary shadows scattered like a cloud in
morning's breeze,
And a low deep voice within me seemed whispering words
like these:

'Though thy earth be as the iron, and thy heaven a
brazen wall,
Trust still his loving kindness whose power is over all.'

"We paused at length, where at my feet the sunlit
waters broke
On glaring reach of shining beach, and shingly wall of
rock;
The merchants' ships lay idly there, in hard clear lines
on high,
Tracing with rope and slender spar their net-work on the
sky.

"And there were ancient citizens, cloak-wrapped and
grave and cold,
And grim and stout sea-captains with faces bronzed and
old,
And on his horse, with Rawson, his cruel clerk at hand,
Sat dark and haughty Endicott, the ruler of the land.

"And poisoning with his evil words the ruler's ready ear,
The priest leaned o'er his saddle, with laugh and scoff
and jeer;

It stirred my soul, and from my lips the seal of silence
broke,
As if through woman's weakness a warning spirit spoke.

"I cried, 'The Lord rebuke thee, thou smiter of the
meek,
Thou robber of the righteous, thou trampler of the weak!
Go light the dark, cold hearth-stones—go turn the prison
lock
Of the poor hearts thou hast hunted, thou wolf amid the
flock!'

Another ballad describes an interesting incident
in this detestable persecution. Thomas Macey gave
shelter to a poor Quaker who had fled from the
cruelties of the New Englanders; but a Puritan
preacher discovered where the victim had found re-
fuge, and brought a party to arrest him:—

"Then kindled Macey's eye of fire:

'No priest who walks the earth
Shall pluck away the stranger-guest
Made welcome to my hearth.'

"Down from his cottage wall he caught
The matchlock, hotly tried
At Preston-pans and Marston-moor,
By fiery Ireton's side;

"Where Puritan, and Cavalier,
With shout and psalm contended;
And Rupert's oath, and Cromwell's prayer,
With battle-thunder blended.

"Up rose the ancient stranger then;
'My spirit is not free
To bring the wrath and violence
Of evil men on thee:

"And for thyself, I pray forbear,—
Bethink thee of thy Lord,
Who healed again the smitten ear,
And sheathed his follower's sword.

"I go, as to the slaughter led:
Friends of the poor, farewell!
Beneath his hand the oaken door
Back on its hinges fell.

"Come forth, old grey-beard, yea and nay;
The reckless scoffers cried,
As to a horseman's saddle-bow
The old man's arms were tied.

"And of his bondage hard and long
In Boston's crowded jail,
Where suffering woman's prayer was heard,
With sickening childhood's wail.

"It suits not with our tale to tell:
Those scenes have passed away—
Let the dim shadows of the past,
Brood o'er that evil day."

Not satisfied with this cruelty, the preacher wished
to have Macey arrested and flogged for giving shel-
ter to a Quaker; but Macey made his escape, and
became the first white settler in the island of Nan-
tucket:—

"And yet that isle remaineth
A refuge of the free,
As when true-hearted Macey
Beheld it from the sea.

"Free as the winds that winnow
Her shrubless hills of sand—
Free as the waves that batter
Along her yielding land.

"Then hers, at Duty's summons,
No loftier spirit stirs,—
Nor falls o'er human suffering
A reader tear than hers.

"God bless the sea-beat island!—
And grant for evermore
That Charity and freedom dwell,
As now, upon her shore!"

We shall extract a passage from one of Whittier's
anti-slavery poems, to show that there are still men
in America who dare to feel as Christians and speak
as men:—

"Just God! and shall we calmly rest,
The Christian's scorn—the Heathen's mirth—
Content to live the lingering fest
And by-word of a mocking Earth?
Shall our own glorious land retain
That curse which Europe scorns to bear?
Shall our own brethren drag the chain
Which not even Russia's menials wear?

"Up, then, in Freedom's manly part,
From grey-beard old to fiery youth,
And on the nation's naked heart
Scatter the living coals of Truth!
Up—while ye slumber, deeper yet
The shadow of our fame is growing!
Up—while ye pause, our sun may set
In blood, around our altars flowing!

"Oh! rouse ye, ere the storm comes forth—
The gather'd wrath of God and man—
Like that which wasted Egypt's earth
When hail and fire above it ran.
Hear ye no warnings in the air?
Feel ye no earthquake underneath?
Up—up—why will ye slumber where
The sleeper only wakes in death?

"Up now for Freedom!—not in strife
Like that your sterner fathers saw—
The awful waste of human life—
The glory and the guilt of war:
But break the chain—the yoke remove,
And smite to earth Oppression's rod,
With those mild arms of Truth and Love,
Made mighty through the living God!

"Down let the shrine of Moloch sink,
And leave no traces where it stood;
No longer let its idol drink
His daily cup of human blood:
But rear another altar there,
To Truth and Love and Mercy given,
And Freedom's gift, and Freedom's prayer,
Shall call an answer down from Heaven!"

We have received at the same time a copy of
"Carpenter's Songs and Ballads," some of which
possess considerable merit; but the author deals too
largely in conventional feelings, and seems to have
derived his inspiration more from the heated at-
mosphere of drawing-rooms than the pure air of
heaven.

A NEW EXPORT FROM IRELAND.—The banks of the
Shannon, says the *Limerick Chronicle*, are inexhaustible
in providing sustenance, not only for the natives, but our
constant customer, John Bull. Salmon has for some
time been an article of profitable export to the English
market; but what will the public think of that cheaper
and more abundant dainty—eels? There are 10 tons of
this prolific fish now in tanks at Killaloe, awaiting a con-
veyance to London; and a vessel adapted for the trade
will take on board from this port in the ensuing week 40
tons of eels for the London market.

HOPELESSNESS OF THE AGRICULTURAL LABOURER.
—When Dante had to express the concentrated idea of
utter misery, he said, "abandon hope;" and, when we
regard the actual condition of our agricultural labourers,
it would seem as if the warning of the poet were especially
and emphatically addressed to them, beyond all others
that compose the lower classes of our social state. In every
other calling, by industry and good conduct a man may
rise to a higher grade, and, finally, to opulence. The shop-
boy of the mercer, in a little time, stands behind the
counter, is then admitted as a junior partner, and, if things
go well, and the house flourishes under his management,
at last ends in being the principal of the firm. The bank-
er's clerk is not without his hopes of future wealth; and
half the merchants of London, "who are princes," have
risen from subordinate stations. Even the toiling opera-
tive of the manufacturer may, by diligence and skill, with
frugality, begin by hiring a small power—the phrase is
well known at Manchester—and then advance himself to
wealth that astonishes himself, and moves the envy of
those he has left behind. The man that went to his work
in wooden clogs a few years ago now rides in his chariot.
With the labourer in every other trade or calling there is
the chance and hope of elevation to a higher rank; with
him that tills the ground—none. Let him have what
skill he may—let him know every acre in his parish, the
culture most suited to produce the largest crops—let him
understand the value and the use of every kind of cattle
on the farm, be the best reaper and best shepherd—his lot
is cast; he is doomed to toil for a master all his life long
for wages just keeping him from starvation, and in age
and infirmity has an allowance of 5d. a day to stave off
death by hunger.—*Times*.

FRUITS OF THE LEAGUE AGITATION.—The most fre-
quent and favourite defence of the Corn Laws has been
that they are maintained for the promotion and encourage-
ment of the art of agriculture, for the good of the tenant-
farmer, and especially for the benefit of the farm-
labourer. But turn to the speeches of the landowners at
the numerous agricultural meetings held in the south of
England during the last fortnight, and what is their
staple? Lamentations over the backward state of agri-
culture as an art; the impoverished and spiritless con-
dition of the tenantry; and the wretched state, body and
soul, of the labourer, the insensate and brutalized incen-
diary of the stackyard. A short time ago, any man who
ventured to assert that the farmer was deluded and im-
poverished by his "protection," or that the farm-labourer
was lower in comfort and in intelligence than the la-
bourers in the "unprotected" branches of industry, was
denounced a revolutionist and an incendiary. But these
facts being now proved, the landowners, convinced against
their will, begin to confess it, and their own organs to
scold and urge them on to a remedy. As a specimen of
this change of tone among the monopolists, take the fol-
lowing from the *Church and State Gazette*, regarding one
of the richest agricultural counties of England:—"The
agricultural county of Suffolk has of late years suffered
more from the pauperism of its labouring classes than
any other county in England. The peasantry have
been ground down by famine, the farmers worn out with
fear, and the landlords tardily aroused to the conviction
that something must be done, only by the incendiary
glare, whose cause may be traced quite as much to the
neglectors of the poor as to the poor neglected."—These
are cheering symptoms; but we would never have seen
them, save for the League agitation. The English farmer
and labourer would never have been the subjects of all
this new compassion and kindness, had the League not
been thundering at the landowners' gates; and, as the
League has exposed the evil, it will also be its task to
show the true remedy, which the landlords are evidently
determined not to see.—*Kilmarnock Herald*.

AGRICULTURE.

A LECTURE ON LEASES.

BY A CABINET MINISTER.

Last year Lord Stanley, when presiding at the *Liverpool Agricultural Association*, eloquently expatiated upon the benefits of deep draining and similar agricultural improvements, but he stopped short at the point most interesting to farmers, namely, the security of tenure requisite to enable them safely to make such outlays. This his lordship, at that time, left to be dealt with by a tenant-farmer, who roundly told the landowners that without long leases farmers could never become improvers. The events of the past twelve months seem to have had a considerable effect upon Lord Stanley's mind, for at the late meeting of the same association, where Lord Stanley again presided, he distinctly stated that no great improvement could be expected without leases. This is the passage we allude to:—

"I say, and as one connected with the land I feel myself bound to say it, that a landlord has no right to expect any great and permanent improvement of his land by the tenant unless that tenant be secured the repayment of his outlay, not by the personal character or honour of his landlord, but by a security which no casualties can interfere with—the security granted him by the terms of a lease for years. (APPLAUSE.) I do not speak of a lease for lives. In my experience, with some exception; wherever I have found fields badly cultivated and buildings dilapidated, I have found that the property is held under a life lease. (A laugh.) I speak of a tenant who is prepared to join his capital and to go hand in hand with his landlord in the improvement of the farm. The greater the improvement you expect, the greater ought to be the lease you give. I consider it unjust, if you call for improvement, not to give to the tenant the moral certainty that the improvement he effects shall repay him during the course of his lease for the expense he incurs."

Now, this is a just and sensible admission, and, coming from one so influential from station and official connexion as Lord Stanley, cannot fail to have a beneficial effect upon the minds of the landowners of England. His lordship also gave further proof that the circumstances of the times are teaching him the true state of the relation of landlord and tenant. He said, "The real old class farmers shrug their shoulders and say 'What is the use of all this? It is not a question for the farmer. We shall only have our rents increased the more productive the land is;'" and added, that "such an argument is the very climax of absurdity." He did not expect a farmer to undertake any improvements in cultivation unless they appeared likely to promote his own individual advantage, or that "would not repay him capital, interest, and profit during his occupation of the land." He further said, that "there are some expenses, more especially with the class of farmers of whom the great majority are composed, which it is idle to expect that they should undertake. If they are to add a permanent value to the land they ought to be undertaken by the landlord himself, charging on the tenant such an amount of interest as may repay him for the outlay he has made, and at the same time afford a reasonable profit to the tenant." And his lordship distinctly recognised draining out land as a permanent improvement which ought to be undertaken by the landlord. All this is just, sound, and practical so far as it goes, and if the business of farming had been in a natural condition would leave little to be desired. Let agriculture be once placed on a stable foundation, and such landowners as Lord Stanley, judging from his speech, promises to be would have no difficulty in maintaining his rental and securing at the same time a prosperous tenantry. But there is a difficulty in the way which Lord Stanley seems to have overlooked. Not only must landlords be ready to grant, but farmers must likewise be willing to accept, leases. How will the great body of farmers—average farmers—venture at this moment to take leases? Nobody acquainted with the condition of farmers will hesitate to reply, "They will not." There must be some security against the fearful and unnatural fluctuations in the prices of farm produce which have occurred of late years before farmers will bind themselves by leases. Such fluctuations are the necessary consequences of the Corn Laws, and will cease only with the abrogation of monopoly. Yet without leases, apart from those permanent improvements which landlords ought to effect, and in many cases doubtless will do, in any event, no great increase in production can take place. Good farming can never be the rule with yearly tenants, however much the landlord may do towards permanently improving his property.

Besides, on what scale are rents to be calculated? Will landlords be satisfied to take the present price of 45s. a quarter for wheat, and, having estimated their rents at that rate, to turn them into corn rents? That they will not we have plain evidence in a proposition—put forth as a most liberal one—made by Mr. Gally Knight, M.P., to his tenants, at his recent rent feast. After stating that "he thought leases for terms of years were just to the tenant, and more advantageous to the community at large," he said:—

"And I think that leases of that description could be

arranged on such conditions as would be safe and equitable for both parties concerned. (CHEERS.) I think they would be so if they were carried out on the principle which has been adopted in the Tithe Commutation Act. According to that principle, the rent is governed by the average of the price of corn during the seven preceding years. This I propose to take for my model. The lease, I propose, would be a lease based on a fluctuating corn rent. (CHEERS.) With regard to the rent with which the leases would begin, whether for a term of fourteen or twenty-one years, I should equally propose to take the Tithe Commutation Act as a guide—(hear);—but, on this point, I will not look to the last seven years (the seven years immediately preceding Christmas, 1843), because during some of those years corn was selling at unusually high prices—(hear)—and the effect of taking those seven years alone would be too much against the tenant. (Hear, hear.) I will, therefore, take the whole seventeen years which have elapsed since the averages were first ascertained under the Tithe Commutation Act, and I find that the average price of wheat during those seventeen years is a little more than 56s. per quarter; I SHOULD, THEREFORE, CONSIDER IT FAIR TO TAKE 56s. AS THE SUM WITH REFERENCE TO WHICH THE RENT SHALL AT FIRST COMMENCE—(hear hear)—which rent, as I have said before, would fluctuate according to the price of corn in succeeding years."

This seemingly liberal proposition is, in fact, one to which no farmer in his senses would agree. The farm is now to be valued, and the probable produce of wheat having been ascertained that is to be converted into money upon the assumption that the quarter of wheat will sell for 56s., whereas, in fact, the real price of wheat is from 11s. to 13s. a quarter less than that sum. Instead of paying so many quarters of wheat, by this ingenious scheme the farmer would pay to Mr. Knight so many ten or eleven bushels. And this original miscalculation against the farmer would go through every fluctuation of this proposed corn rent. Mr. Knight said:—

"To this plan objections may be made as regards the farmer. It may be said that, by taking the average of the price of corn during the preceding seven years as the rule for the rent, it might happen that the tenant would have to pay a high rent in a year when his corn was selling at a low price; but no man would undertake a farm of any magnitude who has not an amply sufficient capital (hear, hear); and, if he is possessed of such a capital, it would enable him to meet such contingencies without inconvenience."

This is sheer misapprehension. No amount of capital could justify a farmer undertaking a farm upon a calculation of 56s. a quarter for wheat when he might often obtain no more than 42s. It would not be "contingency," but a certain periodical loss that he would by this scheme be called upon to "meet." It must be remembered that the last seventeen years comprise many years of absolutely famine prices, and many more in which prices were unnaturally enhanced by the Corn Laws; the average, therefore, of 56s. a quarter for wheat, which all the prices of those years give, is considerably too high. It is something, however, to find the monopolist landowners acknowledging the necessity of long leases and corn rents; but they have the further discovery yet to make, that leases will not, indeed cannot, safely be accepted by farmers until the Corn-Law question is settled. And we ask the wildest monopolist in the country whether any possible mode of settling that question exists except by a total repeal of all restrictions on the trade in grain?

TENANT-FARMERS THE REAL IMPROVERS.

We have often had occasion to remark that general and large improvements in agriculture can only be looked for from tenant-farmers. Here and there a landowner of spirit and intelligence may exhibit what a judicious and spirited outlay can effect in husbandry, but the numbers of such agriculturists must be comparatively few, and even they must always rely upon their managers for practically working out their views. It is the professional agriculturists, the tenant-farmers,—the men who live and seek to earn a competence, or a fortune, by farming,—on whom will rest the burden of agricultural progression. In general the most that landlords can do will be to avoid doing mischief, and to abstain from imposing restrictions and interposing difficulties in the way of the tenant's efforts to farm well. And even this negative assistance to agriculture requires some degree of intelligence on the part of the landowner, and, above all, requires the abandonment of those political influences and semi-feudal customs, to the maintenance of which the welfare of the tenant and so much of the real interest of the landlord are sacrificed. Thanks to the teachings of the League, and a plentiful wheat harvest, this is beginning to be acknowledged. We have now before us the reports of two agricultural meetings in Essex, where the proceedings assumed a more practical and rational character than is usual on such occasions. This is due to the circumstance that on both occasions the farmers, and not the landowners, took the lead in the discussions. The first was the *Witham Labourers' Friend Society*, formerly a branch of the *Chelmsford Society*; but the parent society having become defunct for want of funds, the off-spring has taken root, and appears likely to flourish alone. This was the first meeting of the society as an independent one, and after the arrangements necessary for its government had been made, and a few complimentary toasts gone through, some useful papers containing accounts of experiments made by farmers were read.

Then followed the most valuable part of the proceedings. Mr. H. Dixon, of Witham, an improving farmer, and a good Free-Trader, after stating in detail the results of some practices in husbandry, said:—

"He had asked Mr. Lungley whether he thought his 15-inch ploughing was a permanent advantage to the soil, for it was not the first or second year that they were to look to in these matters, but whether the improvement was likely to be of a real and permanent character. Then taking the good farmers (and he feared they were the exception), he thought there could not be a doubt the question should be how to employ the labourers as well as to give them rewards for their industry, their genius, and their talent, for instead of talking of a redundancy of labourers, if the land was cultivated according to its capability, they had not labourers enough. (CHEERS.) He had no idea of a redundancy of labourers, when the land was not half cultivated, and when, besides, there was a large quantity of waste land not cultivated at all, but which might, by the application of capital and labour, be made the best producing land we had." (CHEERS.)

This is the sensible and true view of the subject. Mr. Dixon further said that, at the late meeting in Suffolk, this, the most important point, had been too much lost sight of. Capital ought to be applied to land, and landowners should try to understand the management of their own property:—

"It was not merely a question for the tenant who was in the farm for a short time—it was not a question of occupation, but it was a question of the time of occupation, for no man could apply permanent and costly improvement to the soil unless he was protected for a sufficient time to enable him to reap the advantage of it. If he were so protected he would benefit himself by the application of his capital, skill, and talents,—and he would benefit the country by greater production and by employing a greater number of labourers. Therefore he thought it came much to the great landed proprietors to see that they let their land with full liberty to the tenant to put his capital on it, so as to be able to reap the benefit himself, and to confer a benefit on others."

The necessity of long leases as a preliminary to good farming is now loudly asserted by farmers, and is admitted by a rapidly-increasing number of landowners; but the Corn-Law-created uncertainties are an absolute bar to the general adoption of leases. The present transitional state of husbandry must be got over before landlords and tenants can find themselves upon the safe ground of long and rational leases. And Mr. Dixon stated that the best farmers and those who employed most labourers made, even under the existing system, the best profits. He said:—

"There were some gentlemen in that room, and some were not, who employed treble the usual number of labourers, and they, he believed, were getting on profitably,—while the bad farmers were getting back day by day, the good farmers were benefiting their families and conferring benefits on all around them. (CHEERS.) There was a great lack of attending to the main matter by applying judiciously capital to land."

And he particularly referred to Mr. William Hutley, who had recently laid out as much as £15 per acre in improving a farm. Mr. Butler had also, by draining, converted "land which before was unprofitable, and grew nothing but weeds," into productive soil. He had himself, also,

"Done a great deal of this deep draining, and he was happy to see a gentleman at the end of the table who had readily consented to drain with him, because their lands were mixed, though against the advice of his land-agent, protecting himself in the outlay of his money by the tenant paying 40s. as interest for the outlay, which was £25; this would save him for the outlay. The effects of this draining were clearly apparent. Here was land that he at one time had difficulty in walking over as snipe ground, for they were fond of wet, and now no more snipes for him." (CHEERS.)

Lord Rayleigh, the president, in reference to Mr. Hutley's improvements, said:—

"The improvements alluded to on Mr. Hutley's farm were certainly such as he thought must last for a great length of time; and it was, in fact, an example farm in this neighbourhood. He never saw such draining before—it was a novelty in farming; and both landowners and tenants might look with interest to see how the future crop succeeded, because if it did, as he hoped it might, it would be a great encouragement to lay out their money in a liberal way, expecting a fair return."

It is plain from the way in which his lordship referred to these improvements, that he doubted their success. There are no men so timid in laying out money in farming as landowners; and this, besides their inability to give effective superintendence, is the reason why they seldom succeed in farming, and yet they hesitate to let their farms upon terms which will secure enterprising tenants.

Mr. Hutley, on being asked to give some account of his improvements, said:—

"It was true when he took it he thought no farm was more out of condition than that was; it was in extreme poverty, and was overrun with thistles, docks, and everything that a man who pretended to good farming ought to try to eradicate. He took a lease of the farm, and, finding it in this extreme poverty, the first thing he set about was to take the water off it, which had cost him rather more than £200 on 160 acres, as he had made rather more than a mile of drainage through it, which had tested and proved the utility of this system of drainage. It was true he had a lease of the farm for sixteen years."

He next referred to the timber:—

"At the time he took the land there were a vast number of pollard-trees on it, and being fully convinced these were an injury to the farmer, and an impediment to good cultivation, he cut them down, and drew them home, and then he had been bid 2s. a piece for them. This was the value of them; and he felt that any landlord who per-

mitted such things to grow on his estate was no good judge either of his own or the tenant's interest. He had from 80 to 100 of these pollard-trees; he cut gate-posts out of the beat of them, and for the others, as he had said, he was bid 2s. each."

He then set about the tillage of the land. "It was a good piece of land, for which he gave a good rent, and he was satisfied, and he had no doubt the landlord was satisfied also." And, after detailing the means by which he brought the land into a state to bear a good crop of turnips—the great test of success on heavy land—he said:—

"The whole expense of bringing the land into this state was from £12 to £15 an acre; and, with the year's rent for the 160 acres, it had cost him, without anything for stock, except horses, £2600. (Hear.) He fancied it would be a profitable occupation, for he had a green crop such as no other man in the kingdom had got, and he would show it against any man in the kingdom for cleanliness and productiveness. (Cheers.) Therefore, he thought it was the duty of the landlord to take a tenant that was competent to employ labour and improve the soil." (Cheers.)

And having found substantial tenants:—

"The next thing was to give them a lease and stimulate them to lay out their money: they must let them have full flow and a fair opportunity to lay out their money to benefit themselves, and he was sure it would benefit the country at large. (Cheers.) He had seen a vast deal of mismanagement, but he never saw a man that could farm that had not got a lease, and he never saw him disposed to try. Therefore it was the duty of the tenant to offer the landlord a good rent, and get rid of those old pollards and trees which were of no use to the country and were so injurious to the tenant. He would say to the landlords, 'You cannot grow timber and corn too.' (Cheers.) They had a discussion on this subject at their Farmers' Club twelve months ago, and the conclusion they came to was that they should endeavour to get rid of the timber by offering the landlord 2s. an acre extra rent; he was sure it would be worth it; and he was sure, if the landlord laid out that money in land, in the course of ten years it would produce more than all his timber was worth. (Cheers.) Let them grow their timber where it ought to be grown—in woods; and let the tenant have a fair opportunity to lay out his money and employ his capital and skill upon the land. Looking around that neighbourhood, they would find invariably that when individuals were without leases, and had timber on the estates, they had little in their pockets and nothing in their cupboards. (Laughter.) If he had an estate he would cut down every tree, so that a man should not find a place to hang his bag upon."

This is just what Lord Ducie inculcates, both by example and precept; and most landowners are obliged to admit that their timber is a nuisance and a loss to the tenant; yet they cannot make up their minds to abandon the petty and purely imaginary benefits of reserving to themselves the hedgerow timber. Mr. Hutley's account is the more valuable, because he has himself made a good fortune by judicious and enterprising farming. We believe that he began life with only a moderate capital, and he has always maintained a sturdy political independence. Moreover, he has ever prudently abstained from embarking in any farm without the security of a long lease. If Mr. Hutley is not actively a Free-Trader, he has distinctly stated that he is not afraid of foreign competition, and has constantly refused to join the "protection societies."

But sound opinion is making way amongst other classes besides farmers; for, at the *Braintree Association*, Mr. Hanbury, the banker, said:—

"Formerly some of his friends were glad to have a little money, but he was now lending large sums at 1½ per cent. If that money was employed in agriculture, what a profit it would bring compared with 1½ per cent." ("Hear," and cheers.)

And Sir J. P. Wood said:—

"The agriculturists, as a body, were too much given to look for protection extrinsic from themselves. He could make use of no better language on this subject than that which was written in the Book of Proverbs, 'Put not your confidence in princes.' (Cheers.) That was a most appropriate adage of a club in the neighbourhood, 'God helps those who help themselves.' (Hear.) Whatever might be the extrinsic advantages given to agriculture, industry, with well-directed capital, was its chief safeguard."

Then, at the *East Essex Agricultural Association*, after Mr. Baker and a Mr. Rebow had enlarged in the accustomed fashion on the allotment system as the remedy for non-employment of the labourers, Mr. W. Fisher Hobbs, well known as a good farmer, said:—

"He would wish to make a few observations on what had fallen from Mr. Baker and Mr. Rebow. The subject of allotments was alluded to by them, and he was sorry to differ from them on that question. Mr. Baker had said the allotments ought to be savings' banks of labour; and Mr. Rebow observed, if the labourer spent one day in the week on his own allotment it would be better. His (Mr. Hobbs's) opinion was totally averse from that. He considered that, in the present position of agriculture, they ought to do all they could to improve the cultivation of the soil; and if they threw out labour to enable the poor man to employ himself, as suggested, he thought it might lead to consequences which might make the allotments a curse and not a blessing to him."

This is most true; and Mr. Hobbs deserves great credit for thus frankly stating what most intelligent farmers know, and in private admit. The only remedy for the distress of the rural labourers is improved cultivation of farms; but to this the Corn Laws form the chief obstacle. He further observed:—

"The more they dived into science and the practice of agriculture, the more they found there was room for improvement and for increasing the production of the soil; and therefore, instead of diverting the labour of the

husbandman to the cultivation of allotments, they ought to make improvements in the soil, and landlord, tenant, and labourer, unite together for their mutual advantage. The landlord ought to assist the tenant by giving him a lease on a long term, by aiding him to make improvements, by cutting down waste and useless timber, which was robbing the soil in a tenfold degree—by assisting him in making improvements by marling, chalking, and other means—by seeing that the tenant was a good practical farmer, and had capital to occupy the soil; and then it was the tenant's duty to employ his quota of able-bodied labourers throughout his parish. (Hear.) His opinion was that there ought not to be an able-bodied labourer out of employment throughout the country. He believed that if they would do this, and endeavour to cultivate their minds, they would hear little of distress, little of disturbances. He never knew the labourers paid so well in proportion to the price of corn as now; and therefore something besides lowness of wages must have produced the disturbances in some parts of the country."

Now, this "something" is neither more nor less than the fact, that the farmers are at this moment paying as rent the funds which ought to have been applied to the payment of the labourers. This is the direct consequence of the Corn Laws, which have led farmers and valuers to calculate on permanently high prices which no laws can secure. Mr. Hobbs concluded his very straightforward speech by saying:—

"He hoped the labourers would be found employment to pass through the winter, but, as he said, this could not be done unless the landlords supported their tenants in making permanent improvements; and this was a point to which their attention ought to be directed."

The effect of such outspoken truth was to compel the allotment quacks to draw in, and assert that all they advocated was giving the labourer a good garden to his cottage!! We should mention that at this meeting Mr. Baker earnestly declared his belief that leases were necessary to improved farming, and admitted that the "agricultural labourer had not received that attention of late years that was due to him." We also find the monopolist chairman feelingly admitting the effective existence of the League, when he said:—

"He need not tell them that there was such a body as that denominated the Anti-Corn-Law League. He wished he could speak of it altogether as a thing that was passed; but, though still in existence, he thought they had been far from able to carry out what they intended, yet he feared they were doing much mischief by their proceedings in the registration courts."

There is in these proceedings many evidences that the most ardent opponents of the League are gradually and silently adopting the sound opinions with respect to agriculture it has spread; and which, after all, are only those long entertained by the most intelligent landowners and agriculturists. Let them do this—let the landowners and farmers adopt our opinions, as they are doing, and act upon them—and we are quite content to be amongst the things which have passed away. But, until the Corn Laws are abolished, the monopolists will find the League over active and indomitable.

MONOPOLISTS, LOOK OUT!

We think the following paragraph shows that the "Central Protection Society" must be upon the alert, or other backdoors besides the Canadian Corn Bill will be opened upon their monopoly of grain:—

"FOOD FOR CATTLE.—The Lords Commissioners of the Treasury have given permission for upwards of 20 tons of the lotus nut to be admitted without payment of any duty for Earl Spencer, which he is about to import for the purpose of the article being tried as an experiment as food for cattle, which is expected to arrive in the sloop Peace, T. Bidwell, master, and will be denominated by the Portuguese name *Alfaroba*."—*Mark-lane Express*.

Now, if cattle will eat these lotus nuts, so much of beans, peas, or barley will be displaced; and therefore, according to monopolist views, a further breach is made in their "protective" system. We hope this venture will prove successful, for every fresh article of cattle food is a clear gain to the stock-farmer and the community; but how monstrously absurd it is for the Government to waive the duty upon some untried article of cattle food, while foreign peas, beans, barley, oats, and rye, well-known and cheap articles of provender, are zealously excluded.

THE MALT-TAX DODGE.

It seems the genuine monopolists are not taken in by this "artful dodge" of the political landlords. A correspondent of the *Farmers' Journal*, who stoutly upholds the Corn Laws, deems the call for a repeal of the malt-tax a delusion. He says:—

"The malt-tax possesses the singular feature of being acceptable to the parties who pay the duties. Not one maltster in twenty wishes to see the tax reduced one penny a quarter; for, in fact, from the exchequer allowing six months' credit on the duty (which annually amounts to 4½ millions sterling), it gives a large capital for the maltster to carry on his business, and enables him to give extended credits to his customers; and, were the duty abolished, the agriculturists would lose thousands of excellent customers, some of whom are now found in every market town."

"The consumers of beer are the persons who are principally affected by any remission of duty; but were the duties lowered 1s. a bushel, or 8s. the quarter, it would no doubt enable the brewer to supply the retailer at a reduced price; but such reduction could not be to the extent of admitting the price of the pint of beer to be lowered more than a fractional part of one halfpenny; and the consumer would not be benefited."

"In the parish in which I reside, containing 5000 acres,

the largest occupier of land does not consume 30 barrels of beer annually; the duty on the required malt would be £10, and I greatly doubt if the average consumption of the occupiers is ten barrels. My impression is, that the agriculturists had better let alone this question of the abolition of the malt duties."

So another correspondent of the same newspaper, addressing the editor, says:—

"I pray you, Sir, to pause before you give in your adhesion to this movement. You have now gained the proud eminence of editor of the leading agricultural journal; do not waste your energies in advocating small measures, write up, week by week, to some one grand object. Why not write down that miserable abortion, the 'Agricultural Protection Society,' and write up—organize a new society, freed from the Peel-ridden aristocracy, and to be composed of practical men—men of energy and action, who care not for the Minister's frown, but who, with heart and voice, thews and sinews, are ready and willing, by argument or by something else, to win that just protection which is their inherent right."

So, so, the real out-and-out monopolists are beginning to understand the illusion which the Duke of Richmond and his colleagues of the Protection Society have put upon the farmers.

FAR-OFF BENEVOLENCE.—It was said of some public man, who was notorious for taking care of his own family, that "his charity was of so domestic a nature that it never stirred abroad." Now, the following paragraph shows that Lord Ashley's benevolence is of quite a contrary turn, for, what with looking afar after factory boys and gipsy boys, he has no regard to spare for the half-starved Dorsetshire peasantry who linger out their days in his own county:—

"It has been determined to establish a gipsy school establishment at Farnham, Dorset, with the view of educating that neglected wandering race of people. Lord Ashley has taken very active measures to establish this novel school."—*Provincial paper*.

NOTICE TO CORRESPONDENTS.

The valuable paper on the Hosiery Trade, and several other articles in type for publication, are unavoidably postponed to make way for our special report of the Great Meeting at Manchester.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the LEAGUE forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadsby, Nowell's-buildings, Manchester; and the LEAGUE may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

POSTSCRIPT.

LONDON, Saturday Morning, October 26, 1844.

The League has commenced its new campaign by a great meeting in the Free-Trade Hall at Manchester, a full report of which will be found in another part of this paper. After all the boasts of the monopolists that the Free-Trade agitation was dying or dead, the report will show that its animation has not been suspended for a moment, and that during the period of the discontinuance of public meetings, the friends of truth and justice were directing their attention to the registration, so as to secure and strengthen the position of the Free-Trade constituency throughout the empire. Now that this important duty has been worthily performed, the meetings of the League have recommenced with one of the most crowded and enthusiastic assemblages that has ever been collected even in Manchester. We cannot do more at present than direct attention to the general tone and spirit of the meeting, comment on any of the speeches being out of the question. It will be seen that the members have entered on the new campaign with additional confidence and renewed energies. No stronger proof can be given of the rectitude of any cause than the steady perseverance of its supporters; truth alone can ensure the permanence or vitality of any agitation; and the cause of Free-Trade, though it has lost the freshness of novelty, has acquired in its place the more than compensating advantage of increased conviction.

EPITOME OF NEWS.

FOREIGN.

FRANCE.—An article in *La Presse* leads to the belief that, unless M. Guizot comes before the Chambers armed with a modification by England of the right of search (and to obtain which the public strangely continued to assert was the main object of the late visit to this country of the King of the French), he will find it difficult, if not impossible, to maintain himself in power. The known connexion of the alleged writer of that article with Count Molé leaves no doubt as to the quarter whence the opposition to that Minister will come.

The *Moniteur Parisien* says:—"It is announced that Captain Bruat, Governor of the Marquesas, is promoted to the grade of Commander of the Legion of Honour. The rank of officer of the Legion of Honour has been conferred on the Abbé Coqueran, canon of St. Denis, who went out as chaplain to the squadron under the command of the Prince de Joinville."

PORTUGAL.—The case of Dr. Kaley appears to have arrived at something of a crisis. The Portuguese Government has proposed to Lord Aberdeen to give a pecuniary compensation (about £200) for the doctor's imprisonment.

of 170 days, admitting the illegality of the proceedings against him; but upon the condition that he will immediately withdraw from Madeira and the Portuguese dominions. Lord Aberdeen's answer has not yet been received; but in the meantime, by a late arrival from Madeira, we learn that Dr. Kalley has again proceeded to preach publicly against the Roman Catholic religion in Funchal, and that a great ferment has been the result. The Charter tolerates every form of worship in private, or within the confines of heterodox churches erected within the Portuguese dominions; but it most distinctly announces the Roman Catholic to be the established religion of the State. If, therefore, Dr. Kalley will not consent to retire, he will certainly be put down by a special law, which no effort of British diplomacy can prevent from passing.

A very liberal offer, made by a London company to light Lisbon and Oporto with gas, was rejected several months since. The municipalities pocket a few pounds per annum by the present system, and, not being disposed to part with these, they throw cold water on the proposal, alleging that olive oil so abounds here that to introduce gas would be a sinful waste! Distracted as Spain is, her provincial towns are now preparing to light their streets with gas; and in Valencia they are actually laying pipes for the purpose. Yet olive oil is surely as abundant in Spain as in Portugal; but, with all their broils and bloodshed, in Spain they are far more civilized.—*Times*.

A bill introduced into the Chamber of Peers, for the abolition of slavery in the Portuguese possessions in Asia, by the Count de Lavradio and the Viscount Sa da Bandeira, was opposed by Ministers, and lost by a majority of 23 votes against 18.

BELGIUM.—The King of Belgium opened the Parliamentary session on Tuesday. In the course of his speech he announced the new commercial arrangements with the Zollverein, and increase of customs' prohibitions, from which France and Prussia are both excepted, and which fall exclusively on England.

Accounts from Belgium, received on Monday, tend to confirm the worst statements relative to the visit of the Viscount d'Abrantes to Europe, for they announce his Excellency's arrival at Berlin. We cannot at present say how far this may be correct, but, if it be true, it must be taken as an evidence of a very unpleasant fact, viz., that the Viscount has not even been in communication with our Government, and started immediately on his special mission, to effect a treaty with the Zollverein. The negotiations of the latter with the United States will depend, it is said, for their success upon the Presidential election.—*Globe*.

LEIPZIG.—Accounts from Leipzig, of the 12th inst., announce the conclusion of the principal wholesale business of the great fair. Skins and furs do not appear to have been in very brisk demand, few of the foreign buyers taking largely. Sheep's wool was in much request; cotton manufactures sold well as regards those of the Zollverein, but English were in less favour. The supply was large. Woollen fabrics were best supported in value. Linens had a satisfactory sale, and hosiery was bought to a large amount. The number of persons attending the fair exhibited a great increase.

FRIGHTFUL OCCURRENCE IN SAVOY.—We extract the following from the *Rhone* of Lyons:—"We have to recount an awful calamity. In consequence of a general order, all the children belonging to the charitable institutions of Lyons placed at nurse in Savoy have been recalled to France. On Monday last, at Chanaz, 28 of those helpless creatures were placed in a small boat on the Rhone, to be sent to France; but the children, when separated from their nurses, felt such a dread of the water, that they screamed violently, and rushing to one side of the boat, they capsized it. The two boatmen, who had not foreseen such an accident, could not even save themselves, but the Rhone engulfed in its flood the 28 children and the two boatmen. All perished."

ALGERINE NEWS THROUGH GERMANY.—A Prussian paper contains a private letter from a German in Algiers, dated Mustapha, Sept. 15, in which the writer says—"I write a few lines to inform you of my position here. I have built a good workshop, with a contiguous dwelling-place, and I carry on my business of turner and carpenter. How my business will succeed I cannot yet foresee, as the unfortunate war, which still continues, is very injurious to trade. At this very time the Arabs have made an attack on the town of Dellys, situated a few leagues hence, where there was a garrison of 800 men, and about 16 European families. Of these families every individual was sacrificed, with the exception of a little child, whom the soldiers rescued from the fury of the Arabs. Of the garrison only 300 men survive. This sad intelligence has just reached Algiers, whence a force has been despatched to oppose the Arabs." The writer of the above letter does not appear disposed to remain much longer in that scene of slaughter, which certainly does not present a very fair prospect for settlers, many of the French officers being of opinion that they will never succeed in subduing the Arabs. They place no confidence in a treaty of peace, which can be regarded merely as a truce to be succeeded, after a short or long interval, by renewed hostilities. Ismael, who has declared he "will not bend his neck to any yoke," is already preparing sanguinary work for the French.

MOROCCO.—The *Moniteur Algerien* states that Abd-el-Kader has retreated to the mountains farthest removed from the French position, and the strong places of Morocco, accompanied only by a few hundred followers. He is in the lowest condition, both as to the equipment of his soldiers, and the condition of his horses.

DAQUISTAN.—A letter from a traveller in Georgia states that the Russian expedition of 50,000 men sent to reduce to submission the mountainous province of Daghestan (this country is not to be confounded with Circassia), which had revolted under the command of Shamil Bey, a chief of great skill and bravery, had met with such serious reverses and difficulties as to have been compelled to retreat; and that this enterprising commander had then followed up his successes by carrying his arms into the neighbouring provinces, where he captured several fortresses, and completely intercepted the great lines of communication between the northern and southern parts of Georgia.

UNITED STATES.—The packet-ship Cambridge arrived at Liverpool on Tuesday, bringing New York papers four days later than those received by the steamer. The threatened crusade for the extermination of the Mor-
mones had assumed an aspect of immediate danger, and we find that the Anti-Mormon party of Hancock

county, Illinois, had called an armed assembly, to meet at that place on the 27th ult. Prompted by this movement, and in pursuance of his announced resolution, Governor Ford had ordered out 2500 of the State Militia for the preservation of the public peace, and to prevent the violation of the constitution and laws of the state.—The undisciplined orderliness and freedom from outrage, which have on this occasion characterized the preparations for the approaching presidential election, have at length been disturbed in New York, where a Whig procession was assailed by a Locofoco mob; and the ill-blood engendered by the collision had produced such a great and immediate excitement that both parties were threatening to come forth into the public streets on every future occasion fully armed.

WEST INDIES.—Advices have been received from Jamaica September 23; Barbadoes, 21; Demerara, 18; and the other islands of relative dates. At the desire of Lord Stanley, the Combined Court of Demerara had agreed to raise a sum of £75,000, for the purpose of procuring the importation of 5000 Coolies against March of next year. On the 29th of August, an earthquake was felt in several of the West India Islands, including St. Vincent's, Grenada, Trinidad, and British Guiana. It was accompanied by the usual terrific phenomena, and, although it does not appear to have caused any damage to property or loss of life, it produced very great alarm in the minds of the inhabitants.

MONTÉ VIDEO.—The following extract of a letter from Monté Video, dated the 30th of July, 1844 (says the *Times*), is worthy of attentive perusal, the accounts received through the channel of papers being either so meagre, or of such an exaggerated character, that little reliance can be placed in them:—"On the 27th of June the brig of war Imperial Pedro, which sailed from here with despatches, arrived at Rio Janeiro. On the 28th there was a meeting of the Brazilian Ministers, to take into consideration proposals made by this Government. On the 1st of July there was another consultation, to which the English and French Ministers were also invited to attend, and although what passed at these meetings has not transpired in Rio Janeiro, the result has been the arrival here of a corvette of 26 guns, a brig, a schooner, and steamer of war. The corvette brings 400 artillerymen, and the Carrisca frigate and another corvette are hourly expected, and 2000 men have been ordered from Rio de Janeiro to be embarked for Rio Grande. It appears that of the seven which compose the Brazilian Ministry, four are in favour of an immediate armed intervention, and all agree that Brazil cannot allow Rosas to take possession of Monte Video; but three of them are timid, and fear the war, and wish to press the subject of negotiation, although they do not know how to set about it. Negotiation is, of course, out of the question; and, as this will soon become apparent, there is no doubt the war party will soon prevail; and indeed Grenfell has already orders not to let Monte Video fall into the hands of Oribe. So that, should the latter make any attack, the war will break out immediately."

DOMESTIC.

The Liverpool annual agricultural dinner was held on Tuesday. Lord Stanley presided; and, in the course of a pretty long speech, strongly enforced the necessity of landowners granting leases. "I feel bound to say," he remarked, "that a landlord has no right to expect any great and permanent improvement of his land by the tenant, unless that tenant be secured the repayment of his outlay, not by the personal character or honour of his landlord, but by a security which no casualties can interfere with—the security granted him by the terms of a lease for years."

A gentleman's servant, out of a situation, who had been out on Monday evening with some friends, and having entered into play at cards and lost between £4 and £5, returned to his lodgings between one and two o'clock on Tuesday morning much intoxicated, and cut his throat. He was removed to the hospital without any hopes of recovery.—*Globe*.

A subscription is now on foot both in England and Ireland to relieve Father Mathew from pecuniary embarrassments caused by his promotion of the temperance movement in the latter country.

A Swede, named Brown, has been committed at Liverpool for an unsuccessful attempt, on Sunday morning last, to burn the barque *Hermes*, in which he was a sailor; when off Holyhead, on a voyage to Buenos Ayres.

The Customs' receipt at Liverpool for the quarter just ended is nearly £240,000 more than the corresponding quarter of 1843, having now reached £1,325,000.—*Liverpool Mercury*.

Sir George Philips has subscribed the sum of £500 to the Manchester fund for public walks and pleasure grounds. The amount already subscribed exceeds £24,000.

Her Majesty has expressed her intention to grant a pension of £30 per annum to the widow of the unfortunate artilleryman, Walker, who was blown to pieces at the King's Bastion, Portsmouth. The poor widow received so severe a shock when the intelligence was conveyed to her that she lost her senses, and has not yet recovered the use of them.

The "Oatler Subscription Committee" have informed their protégé of the failure of their efforts in his behalf. The public will not subscribe for his maintenance; and "William Underwood, vice-chairman," tells him that he is no longer under any obligation to labour for the public good, but quite at liberty to adopt "a private course of life," and exert himself to "procure a livelihood."—*Globe*.

It has been decided that the provincial meeting, in furtherance of the establishment of provincial colleges in Ireland, shall be held in Cork on the 12th of next month.—*Dublin Monitor*.

A respectable young man, named Westley, was last week so dreadfully injured on the Birmingham and Gloucester Railway by being caught by the propelling wheel of an engine, that he has since had to undergo amputation of both his legs.

For the week ending last Saturday, the increase of traffic on 22 railways for the 14 weeks just ended is, as compared with the corresponding period of last year, not less than £203,589. The only decreases on the Glasgow and Greenock Railway, namely, £54.—*Railway Record*.

On Sunday last, St. Thomas's Church, Southwark, was found to have been entered by burglars, who carried off the whole of the communion service, which had been in the possession of the parish authorities for the last 500 years.

During the past week there have been introduced into Jersey, 98 oxen, 7 calves, 10 pigs, 41 French sheep, and 101 English sheep.—*Jersey Times*.

Lord Ashley is holding meetings in the factory districts in support of the Ten Hours' Bill. He addressed a meeting at Bolton last week, and, in the course of his speech, paid a high compliment both to the master manufacturers and to the operatives of Lancashire, by whom, he said, he had everywhere been received with the greatest courtesy and kindness.

Mr. John Walsh, an Irish barrister, was accidentally drowned on Saturday evening last in a large quarry hole situate at Finglass, about three miles from Dublin. It is supposed that he fell into the water while amusing himself with two dogs that he sent in to swim. The deceased distinguished himself some years ago as a Repealer, and was prosecuted and imprisoned for a speech he then made. On his liberation he retired from politics and devoted himself to the law, in which profession he attained some distinction.

On Sunday week a poacher named Joseph Henshall, while in pursuit of game at Ringway, Lancashire, met his death by his gun having accidentally gone off, he receiving the contents in his body. The brother of the deceased was hung at Chester about 15 years ago for an attack on one of Lord Stamford's gamekeepers, at Dunham Massey.

Pursuant to a numerously-signed requisition, a great meeting of the inhabitants of Rochdale was held on Monday afternoon to oppose the introduction of the new poor law into that union. Mr. J. Leach, high constable, presided. The speakers were unanimous in their condemnation of the proposed measure, which, it appears, the Government have expressed their intention to carry into effect.

The Irish Repeal Association met on Monday in the Conciliation-Hall, Dublin. The proceedings were of the usual character. No particular notice seemed to have been taken of Mr. O'Connell's late declaration in favour of Federalism. The week's rent was £391. 6. The O'Connell tribute for the past year is about to be announced. The sum received is said to be no less than £28,850, and two parishes still remain to be "made up."

It is now definitively fixed that a winter gaol delivery shall take place in many parts of the kingdom; but it is believed that the subsidiary arrangements will no be made till the beginning of term.

A Mallow correspondent of the *Cork Examiner* gives a detailed statement of the expulsion of tenantry from two estates in that quarter. The total number is 81 families, comprising 498 human beings.

On Thursday so'night, Mr. Hutt, M.P., was entertained by his constituents at Gateshead. Lord Howick was present and took part in the proceedings of the evening.

On Saturday last a calamitous explosion of fire-damp took place in a coalpit belonging to Mr. Darby, at the Five Ways, Rowley Regis. The number of persons at work in the pit at the time of the explosion is understood to have been 17 or 18, and of these no less than 11 have fallen victims to this lamentable occurrence.

At the Central Criminal Court on Wednesday, the Honourable William Ross Tuckett was tried for shooting at, with intent to kill, Mr. Thomas Smith, of Holborn, gunmaker. The particulars of this case have already been made public. After a lengthened investigation, the prisoner was acquitted on the ground of insanity.

On Thursday the foundation-stone of the proposed new docks at Birkenhead was laid by Sir Philip Egerton. The event was celebrated by a grand banquet, which was presided over by Mr. John Laird.

The subscription for the widows and children of the Haswell sufferers on Tuesday last, amounted to upwards of £3000.

MORE SIGNS OF THE TIMES.—We have received a copy of the Rev. John Clay's Twenty-first Annual Report on the Preston House of Correction, from which we find that "the improved condition of trade and commerce, which has given full employment to the working classes, has had the effect, among other benefits, of diminishing the commitments to the gaol." In the year 1842-3 they amounted, in the whole, to 2050; for the year just ended they amounted only to 1549.—*Manchester Guardian*.

AGRICULTURAL POVERTY.—Having lately visited a part of the country on the borders of Bedfordshire and Buckinghamshire, and only a few miles from the Duke of Buckingham's, I took some interest in observing the condition of the agricultural labourers in that neighbourhood. Had I not beheld these poor people, I could not have credited a true description of their state. Where the manufacture of straw plait is carried on, you will now see a great many grown-up lads, and even the men, engaged in it, in consequence of the want of employ on the farms. And yet that business is overdone; the men and the lads are evidently not all wanted in it, but turn to the employment merely from having nothing else to do. Their next move is into the union-house. It is a difficult thing to depict, in a few words, the appearances of the misery here presented. We may say "very, very poor," "excessively poor," and so forth, using any general terms you please, which, after all, can only express some depth of distress as might occur to anybody from accidental circumstances and in a short time. It needs minuteness of description, to those who have not beheld it, to represent the character of the poverty seen here, which approaches very nearly to, if it does not quite equal, the lowest depths of wretchedness which you find in the most despotical states on the continent of Europe. The mud-made huts or hovels are fit only for pigs to live in, and the existence of such dwellings, for human beings, is a disgrace to our common country, more especially to that part of it where such things are seen; and still more especially to those great lords of the soil who inhabit that part, and who make so many loud pretensions of solicitude for the people on the land. The raggedness and the filth of that people are surpassed, I should suppose, nowhere but in Ireland. There is a squalidness which looks almost like the plague—denoted the suffering either of dreadful disease or long-continued famine. And this is in England! and in Bedford and Buckingham! two of the counties most exclusively possessed by those who call themselves "farmers' friends," and who demand "protection!" In the country to which I allude, and where the people are thus suffering, the land is nothing like fully cultivated; and it requires no more than for the people to be allowed to till it properly to furnish them all with abundance of food.—*Wills Independent*.

PROGRESS OF RENT IN SUFFOLK.

To the Editor of the Times.

SIR,—As you have established that "the want of bread and cheese" is the cause of incendiarism in Suffolk, and told the landholders that they, and not the farmers, are to blame for the present condition of the labourers, perhaps you will not object to allow me to show the public the effect that any material reduction in the price of agricultural produce has on the ability of the farmers to employ labourers.

Every one knows that the rent of farmers is fixed on an estimate of the quantity and value of the produce, and that the rent claimed by the landholders is the excess beyond the expense of cultivation at the rate of wages of the district, and a moderate allowance to the farmer for his services and the use of his capital. The rent claimed by the Suffolk landholders, when tithes is payable by the tenant, is at least two-fifths of the estimated value of everything that can be produced on, and sold off, the farm on the average of years, and about one-half when there is no tithe or rent-charge. Then, if the rent has been fixed on the assumption that 56s. the quarter will be obtained for wheat, and other produce in proportion, and is £200, the value of the disposable produce ought to fetch £500, which is equal to 178s. quarters of wheat at 56s., or quantities of produce of that value. Now, if there is a reduction of 12s. the quarter on wheat, and other produce in proportion, without any increase in the quantity, the farmer sustains a loss of £107. 2s., which is probably equal to the whole of the allowance on the average of years he had to live upon. Then, as the claim of the landholder is fixed, and that of the incumbent nearly so, the farmer has no other means of attempting to save himself from ruin than to reduce the wages of his labourers, and to discharge those that are not immediately required, whatever may be the consequences to himself and them.

The Rev. Professor Henslow and others do not seem disposed to admit that the present distress is occasioned by the inability of the farmers to pay their present rents, and to give the usual employment to the labourers; but if he will take the trouble to inquire, he will find that the Cosford division of farmers are in that position, and from the cause stated above. No trifling per-centage reduction of rent will be any real relief to the farmers. As the rent paid by them is so large a portion of the estimated value of the disposable produce, the reduction of rent ought to be equal to the difference between the present and the estimated value when the rent was fixed. The rise of rent in Suffolk astonished the landholders of the last century; and as it was obtained by them in consequence of the rise in the average price of produce after 1770, a reduction of rent ought now to take place, in justice to the farmers, when the price of produce has so materially fallen. Arthur Young, the great agricultural authority, was a Suffolk man, and, in treating historically of the rise of rent, says:—

"A neighbour of mine in Suffolk, who inherited a considerable landed property, informed me that, in various conversations which he had between thirty and forty years ago (between 1770 and 1780) with a relation far advanced in years, and from whom much of that property was derived, much surprise was expressed at the rise of rents, which then began to take place. Through the long period of his relation's experience no rise was ever thought of; and lease after lease, in long succession, was signed without a word passing on the question of rent. That was an object considered as fixed; and grandfather, father, and son succeeded without a thought of any rise; in many cases landlords were much more apprehensive of losing a tenant at the old rent than having the smallest conception of raising it to a new one." (Inquiry, 1812, p. 102.)

From what is above stated, it seems to be fair to assume that the rent of land previous to 1770 was about the same as at the end of the previous century. Therefore, that the Rev. Professor Henslow, of Hitcham, and others may be led to make their inquiries as to the causes of the present distress in Suffolk in the right direction, I subjoin a table of the rent of the parishes in his own locality (the Cosford division) for 1692, 1815, and 1843. The rental of 1692 is assumed on the amount of land-tax assessed, which, having been made at 4s. in the pound on the then rental, is probably as near an approximation to the truth as the property-tax valuation of 1843.

COSFORD DIVISION, SUFFOLK.

Parish.	Quota of Land-tax, 1692.*	Rent in		
		1692.	1815.†	1843.
	£ s. d.	£	£	£
Aldham ..	120 4 0	601	1,953	2,232

Wattisham ..	88 0 0	440	1,381	1,938
Whatfield ..	104 8 0	522	1,932	2,370

The above illustrations of the progress of rent in the Cosford division of Suffolk will establish one of two facts—either that the agricultural improvement of the district has been very considerable since 1815, or that the condition of the farmers and labourers has very much deteriorated, since the rent has so greatly increased, whilst the average price of wheat has fallen from 101s. 7d. the quarter, as in the six years ending 1814, to 63s. 2d. the quarter on the average of the six years ending 1842. And now that the price of wheat has fallen to about 44s., it is not to be wondered that distress should prevail among the farmers, if their rents are fixed on a valuation of 63s. 2d., or even 56s. the quarter.

THE CANADA CORN AND PROVISION TRADE.—It appears from the latest accounts that the exports of flour, corn, and provisions from the ports of Montreal and Quebec up to September 26, were as follows:—Flour, 373,032 barrels, to September 26, 1844, against 62,805, to

* Property-tax return, 810. 1844.

† Parliamentary return, 348. 1831.

September 26, 1843; wheat, 241,276 bushels against 15,417; oatmeal, 3085 barrels against 1,251; peas, 78,964 bushels against 31,873; barley, 60,606 against 300; oats, 20,488 bushels against 310; pork, 5201 barrels against 5127; beef, 3537 barrels against 545; butter, 1482 kegs against 846. The following is the last report of the Montreal papers:—"Thursday morning, Sept. 26, 1844.—Since Friday last flour has been in good demand, almost every lot in market fit for shipment having found buyers at 23s. 6d. to 24s. per barrel, though chiefly at the former rate. Sour has sold and is saleable at 23s. American (duty paid) has been in fair request; sweet selling at 24s. to 24s. 2d., and a single lot of 500 sour at 22s. 6d. Freight engagements are making to Liverpool at 3s. 9d. per barrel for flour.—*Liverpool Times.*

FOREIGN CORN.—AMSTERDAM, Oct. 11.—The stock of corn in hand, and the importation and exportation in Dantsic the first nine months of this year, are as follow:—

MARKETS.

CORN MARKET.

MARK-LANE, Monday, Oct. 21.—The supply of English Wheat this morning was very moderate, and, though the condition was not excellent, it was readily taken off at the same prices as last week. There was a fair demand for Foreign at last week's rates. The supply of Malting Barley was short, and 1s. advance was obtained. Other descriptions were the same as last week. Beans and Peas were in short supply, and each 1s. per qr. dearer. The arrivals of Oats last week were small; about a dozen vessels arrived from Ireland in time for this morning's market. There was a steady trade at the advance we reported on Friday, of 6d. per qr. from this day week.

Flour, 5663 sacks, 116 bars.

FRIDAY, October 25.—The supply of English Wheat this week is moderate. The trade in both English and foreign is just as on Monday. There is rather a large supply of foreign Barley, and a fair quantity of English has arrived since Monday; though the trade is not brisk, the prices of that day are well supported for all descriptions. There has been rather more inquiry during the week for Beans and Peas; and Monday's rates are fully maintained. About 19,000 quarters of Irish Oats have arrived, together with a few English and a few cargoes of foreign. There is not much animation in the trade.

but buyers are compelled to give Monday's rates for new Irish, and a little advance on old Irish and foreign.

S. H. LUCAS and SON.

THE LEAGUE.

No. 58.]

SATURDAY, NOVEMBER 2, 1844.

[3d

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All Subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive, a copy weekly of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

QUALIFY, QUALIFY, QUALIFY.

PRACTICAL INSTRUCTIONS FOR ELECTORAL QUALIFICATION.

The electors for counties are as follows:—Freeholders, copyholders, leaseholders, occupying tenants.

FREEHOLDERS.—The following persons are entitled to vote as freeholders:—1. Any person possessed of a freehold estate for himself and his heirs, or, as it is called, an estate of inheritance, of the yearly value of 40s. 2. Any person possessed of a freehold estate for life or lives of the yearly value of £10. 3. Any person possessed of such an estate for life or lives of the yearly value of 40s., under any one of the following circumstances:—If the estate was acquired on or before the 7th of June, 1832; or since, if by marriage or marriage settlement, by devise (i. e., by will), or by promotion to any benefice or office, or if the freeholder is himself the actual occupier of the property. In any of these cases it is sufficient if the property be of the yearly value of 40s. Parish clerks, sextons, schoolmasters, Dissenting ministers, and holders of offices have a right to vote if entitled to emoluments of 40s. per annum, arising out of, or charged upon, land, and may be registered as voters in the parish wherein the land is situate. The appointment must, however, be for life, not for a temporary purpose, or at the pleasure of any other party; but an appointment during good behaviour is considered to be an appointment for life. If the freeholder occupy his own freehold property in a borough, of such a nature and value as would confer upon him the right to vote for the borough, he will not be entitled, in respect of that property, to vote for the county. But if the freehold will not confer the right of voting for the borough, that is, if it be not of the annual value of £10, or if it be land without building, the freeholder may vote for the county, though he occupy it himself. And if the freeholder do not occupy his freehold situate within a borough, he may then vote in respect of it for the county, and his tenant may also vote for the borough. Six months' possession prior to the 31st of July will entitle a freeholder to be registered. And if the freehold lands or tenements should have come to him by descent, succession, marriage, marriage-settlement, will, or promotion to any benefice in a church, or to any office, no definite period of previous possession will be necessary.

COPYHOLDERS.—Any person possessed of any lands or tenements of the clear yearly value of £10, whether of copyhold or any other tenure than freehold, is entitled to vote. Tenants in ancient demesne may in general vote as freeholders, if they do not hold by copy of court-roll, but otherwise they will be entitled as copyholders. As freeholders, 40s. per annum will be sufficient; but as copyholders, £10 a year is required. The same period of possession previous to registration is required, in respect to copyholders, as in respect to freeholders. Copyhold property within a borough, if of such a nature as would qualify any person to vote for the borough, will not, under any circumstances, give a right to vote for the county.

LEASEHOLDERS.—The right of voting in respect of leasehold property extends to—1. Any person who is entitled by virtue of a lease made or assigned to him of any lands or tenements for the unexpired residue of any term originally created for a period of not less than 60 years, if the property is of the clear yearly value of £10 above all rents and charges. 2. Any person who is in like manner entitled to the unexpired residue of a term originally of 20 years, if the lands and tenements are of the clear yearly value of £30. The party to whom the lease was originally made, or a party to whom such lease has been assigned under the original lease, may vote, though not in occupation of the premises. Any sub-lessee or assignee of an under-lease may also vote, but only when in occupation of the premises. Lessors or assignees must have been in actual possession for 12 months previous to the 31st of July, unless the qualification is acquired by any of the modes before mentioned as excepted; that is to say, by the death of a relative, by marriage, by will, or by promotion to any benefice or office. Leasehold property in a borough, if of such nature and value as will give any person a vote for the borough, will not give a vote for the county.

OCCUPYING TENANT.—Any person occupying lands or tenements for which he is liable to pay a yearly rent of

£50 is entitled to vote, if not within a borough, and not of such nature as would qualify a person to vote for the borough. In respect of the period of previous possession required, occupying tenants are placed on the same footing as leaseholders; but it is not requisite that the occupation be of the same lands or tenements: different lands and tenements occupied in immediate succession for twelve months previous to the 31st of July in each year will give the qualification.

GENERAL OBSERVATIONS.—Besides lands, houses, buildings, and the like, property and interests of the following description will entitle the owner to be registered and to vote, viz.—tithes, an annuity charged on land, a rent-charge,* fee-farm rents issuing out of an estate in fee; shares in navigable rivers, canals, &c., where the shareholders possess an interest in the soil; tolls of bridges, tolls of fairs and markets, purchases of unredeemed land-tax. Persons who have entered into an agreement of purchase of property, or who have paid any part of the purchase-money, or done any other act in part performance of the agreement, are considered to have equitable estates, and are entitled to vote and to be registered. Joint tenants and tenants in common have each a right to vote, provided the property be of sufficient amount to give to the share of each the value required. Mortgagees may vote, if in actual possession or in receipt of the rents and profits, but not otherwise. Trustees are expressly excluded from voting for any trust estate; the right of voting in respect of trust property is reserved for the *c'estui que trust*. In estimating the value of freehold or copyhold property, the marketable value of the property to let is the criterion to be attended to. If, owing to accidental circumstances, the rent should be less than might be obtained, the property will still give a right to vote. As regards leaseholds, the value required does not depend on the amount of rent. It is to be estimated by the profit which the tenant can make of the property, over and above the amount of rent reserved and any encumbrance charged on the property. The value required is to be "above all rents and charges." Under these words are included all encumbrances affecting the property, but not any public or parliamentary taxes.

We beg to inform our subscribers that bound volumes of the LEAGUE newspaper, containing the whole of the first year's numbers, may be had on application at the Offices either in London or Manchester.

GREAT FREE-TRADE MEETING AT MANCHESTER.—PROGRESS AND PLANS OF THE LEAGUE.

The late hour at which we received the report of the Manchester meeting last week prevented us from doing more than directing generally the attention of our readers to the subject. We must now enter more fully into details, and point out the significance and importance of the information afforded, and the plans proposed to the assembly. The enemies of the League boasted, and some of its friends feared, that the late revival of trade in the manufacturing districts would tend to diminish the zeal of the northern Free-Traders; but, so far is this from being the case, that at no period of the anti-monopoly movement was a meeting held more marked by enthusiasm, determination, and a resolute spirit of perseverance. The people of Manchester have shown that their hatred of monopoly is as lasting and as intense as their love of justice; in their noble struggle against the iniquitous taxation of a nation's food they have resolved to make no truce and accept no compromise; their march is onwards, and at every step of their progress they find new elements of strength, new grounds of confidence, and new evidence of the hollowness of the ground beneath the feet of their opponents. They have seen the monopolists driven from every position on which they have attempted to take a stand; they have seen one false pretence abandoned after another as its mendacity has been detected and exposed; and they have seen the opponents of the League driven to learn the language of the League, to repeat its statements, adopt its arguments, and urge its recommendations. Lord Stanley has become the plagiarist of Mr. Cobden, and the *Standard-Herald* has borrowed materials from our columns for a very tolerable Free-Trade lecture to the Zollverein. Though "these be promising pupils," as old Heywood says, "yet have the neophytes not thoroughly comprehended their catechism;" they still require further instruction in the elements of economic science, and continue to be fit objects for the charitable care of the League in its educational mission.

One lesson has been very successfully taught at the Manchester meeting, the compatibility of tranquillity with effective agitation. For ten weeks the forces of the League have been withdrawn from the public parade-grounds to fight the battle of Free Trade at close quarters with the enemy in the registration courts.

* No registration of annuities or rent-charges with the clerk of the petty sessions. *Standard* Oct. 21, p. 26, is repeated.

During that period there was no great field-day, but there was a most efficient drill, and large bodies of new recruits were added to our effective strength, ready to take up their respective positions when the cause of justice shall be tried in a fair field at a general election. The result of the labours of the ten weeks devoted to the registration, so far as the returns have been made up and verified, may be thus stated:—

In seven of the Lancashire boroughs, returning ten members to Parliament, there is not the slightest possibility of a monopolist succeeding should a general election take place on the present register.

Bolton has the misfortune of sending to Parliament, as one of its representatives, Mr. Peter Ainsworth, who enjoys the unenviable distinction of being the only renegade from the Free-Trade ranks since the agitation of the question commenced. The gain of the Free-Traders on the registration is such as to enable the burgesses of Bolton to relieve "the unkind deserter" from his senatorial duties, and allow him time for the cultivation of fashionable graces, without the interruption of legislative labours. The electors, at parting, should present him with a copy of Lady Blessington's "Hints on Etiquette," as a more suitable and appropriate work for his study than the volumes of Hansard.

Lancaster and Clitheroe have retrieved the position which they lost at the last election; Blackburn and Warrington give equal proofs of the advancing strength of Free Trade. Wigan, indeed, is the only borough in Lancashire where a majority of voters can be found to sacrifice themselves and their children to the Moloch of Monopoly; perhaps it is well that there should be one place to exhibit the absurdity of perverse obstinacy resisting its own obvious interests, and party prejudice gaining the ascendant over public principle.

We come next to the borough not very honourably immortalized in the annals of elections by Lord Sandon's memorable display of a wooden bible, aptly described as the proper emblem for the monopolist party, "hypocrisy outside, and stupidity within." In Liverpool the Free-Traders have gained 452 over their opponents on the present registration. This may not be quite enough to turn the scale against "the wooden bible" and its supporters among the venal freemen (?); but another year of similar exertion will enable the honest men of Liverpool to get rid of their present Ryder, and to remove Sir Howard Douglas from Punch's imitable group of "the dancing dogs."

South Lancashire is won: the gain of the Free-Traders on the registration amounts to 1751 votes; and, as the majority for Entwistle at the last election was only 598, it follows that the cause of truth and justice has a clear majority of more than a thousand over monopoly. In North Lancashire the gain of the Free-Traders on the registration has been 533; and though this will not ensure success, it will render the issue of a contest sufficiently doubtful to shake the preponderance of monopoly in that electoral division of the county. The result, then, is, that out of the twenty-six members returned by the Duchy of Lancaster, twenty-one are certain to be Free-Traders at the next election, and five only will remain to the monopolists. The returns from the 140 boroughs to which the attention of the League has been directed, are not yet complete; but out of the 70 that have been received, 69 exhibit a clear gain to the Free-Traders on the registration.

Much has been done, but more remains to do; an effort must be made to emancipate the counties from the thralldom in which they are held by political jobbers. Mr. Cobden has, with his usual power, drawn attention to the state of the county constituency, and the means that exist for its purification. He proposes to increase the number of small freeholders on the old constitutional principle which gave the right of franchise to every man having a clear annual income of forty shillings from land. This is a matter of immense importance not only to the political constitution, but to the social condition of the empire. During the meeting of the British Association at Liverpool, the subject was brought forward in the Statistical Section, and men of all parties unanimously agreed that to facilitate the creation of small freeholds would be a most efficacious means of elevating the moral condition of the working classes. The legal expenses for a small freehold are as great as for a large one; and this anomaly appears to have been established for the express purpose of preventing the increase of an independent yeomanry. A bill to facilitate the creation of small freeholds would be a great

boon to the operative classes: it would place before them an object of ambition attainable by honest exertions, and would at the same time lead them to consider what are their duties as citizens and members of a free state. The increase of the number of county freeholders is very appropriately suggested by a body like the League, banded together for the simple purpose of obtaining national justice. Its political and its moral propriety is so obvious that even the *Standard-Herald* is forced to admit the justice of the principle, though it affects to be alarmed at the application. The freehold cottage and the freehold plot of ground have ever been among the best and purest features in our county constituencies; and it was for this reason that too successful an effort was made to swamp them with dependent tenants-at-will. The restoration of the freeholders to their former influence would not only lead to something like a political regeneration of the constituencies, but would greatly add to the independence, the happiness, and the comfort of the great body of the nation.

A great work effected for the people is sadly impaired in its beneficial consequences when it is not accomplished by the people. It is one of the most honourable characteristics of the League that it seeks to associate in its labours the honest of every class. The suggestion under our consideration is a proof of the honesty of the purposes for which we have been associated, otherwise we should not be so anxious for the increase of independent voters. But the suggestion is still further valuable, as it affords a practical means of testing the sincerity of those who have so suddenly and so recently become loud in their professions of sympathy for the condition of the working classes. Will they aid the exertions of the League to restore the class of independent yeomen to their proper position in the body politic? Will they facilitate the creation of small freeholds, and make this a part of their allotment system? Will they support a measure for removing the legal impediments which interfere with the acquisition of an independent vote? We trust that an opportunity will be afforded them in the course of the next session of thus proving their sincerity, or of standing before the world branded as convicted hypocrites.

Mr. Cobden's suggestion has thrown the ranks of the enemy into confusion; it is so obviously in harmony with the best recognized principles of the constitution—it is so clearly a course to be desired politically, morally, and socially—that no one can dare to resist it openly. We have no doubt of its being very extensively adopted, and we have perfect confidence that its adoption will be found not less beneficial as a social reform than as a political amelioration.

Attention was properly directed at the Manchester meeting to the change of language observable in the addresses of monopolists to farmers and farm-labourers. Some have already begun to speak of the importance of leases; a few have insinuated doubts of the propriety of game preserves; and a vast number have begun to recommend agricultural improvements, taking credit to themselves for not neglecting their own property. The fox-hunters have been learning from the League; "the hands verily are Eban's hands, but the voice is the voice of Jacob;" it was the League which forced the slovenly state of English farms on the attention of the agricultural societies; it was the League that extorted the promise to shoot rabbits and buy a bull, in Birmingham; it was through the League that the fields round Knutsford have been drained and the rushes extirpated. If, then, the prospect of Free Trade has wrought such beneficial results, what may not be expected from a total abolition of the Corn Laws?

Mr. Cobden referred with good-natured ridicule to the farcical proceedings of what are called "Agricultural Associations;" it is a curious coincidence that on the same day Mr. Croker, an Irish agriculturist noted for his strong Conservative opinions, was exposing the absurdity of such associations at an agricultural dinner in Cork. He said:—

"He (Mr. Croker) was one of the deputation of 26, that represented the Cork Association at the Dublin dinner, and when going there he thought he would be put in possession of some valuable information that he could communicate on his return to the farmers (hear); but what was the fact? he heard nothing but compliments passing from my lord *that* to my lord *that*, on his kindness to his tenants; in fact, it was a mere mockery of farming, and nothing more than an advertisement of the good qualities of the noble lords and earls present. ('Hear, hear,' and laughter.) Now he (Mr. Croker) was of opinion before he went there that several of the nobles and gentlemen were good men (hear); therefore, in his opinion, there was the less necessity for their turning bellmen in sounding each other's praises. (Great laughter.) The 26 gentlemen that went up from Cork were thought up more of than if they had been 20 buck sweeps. ('Oh, oh,' and laughter.) On the whole, he would say it was the most ridiculous farce and humbug he had ever seen; and the men of Cork were not alone in saying so, for the representatives of all the associations in Ireland who were present said the same." ('Hear, and renewed laughter.')

The *Cork Examiner*, a clever paper, published in the midst of the most important agricultural dis-

trict in Ireland, thus comments on Mr. Croker's statement:—

"This is the character given by a Conservative gentleman and agriculturist, of the grand gathering of the high and mighty of the association in Dublin. Though tinged by a shade of spleen, the picture is done to the life. It bears out, to a fraction, our long-formed notion of the utility of such associations—conducted as they at present are.

"As it is, a cruel exterminator can purchase their homage by the revolting exhibition of an over-grown bull or plethoric pig. They fasten a medal to the tail of a disgusting ox, and decorate it, like an idol, with ribbons of various dyes, while hundreds of human beings rot upon the very soil where the offensive brute had been grown for their applause. God's creatures starve and are gaunt with famine, while swine are gorged to repletion—are educated for a prize! And the human brutes, their masters, are bedaubed and heaped, as benefactors of their native land—as fathers of their country! How insulting must such blasphemy be in the sight of Heaven!

"Then, there are new plans, and improved threshing-machines, and patent implements of various kinds, exhibited—by landlords, who receive prizes, or manufacturers, who gain purchasers. But is it ever known that any of these helps to labour have been bestowed, as an encouragement, by the landlord upon the tenant on his estate, who lives the year round on potatoes, happy if he can moisten them with a drop of milk? Why should we ask the question, when the rules of the association do not hold out premiums for such acts of practical benefit to the poor man's agriculture.

"There are also learned dissertations by professor this, of such a place, and by the disinterested Mr. Noodle, of Noodle-park, on subsoiling and thorough draining, and the green crop system. Very fine, and very grand are all these show lectures. They are truly edifying and enlightening. Some hundreds of sleek, fat gentlemen—many of them the counterparts of their own prize pigs—listen with a grave air—one learned on the bench, as a cover for incorrigible dulness—to the theory or the practice advanced or explained by the professor, or the disinterested Mr. Noodle, of Noodle-park; and these grave men applaud, warmly, bucolically. How many of these two or three hundred well-fed gentlemen have drained the boggy, marshy, spewey farms of their pauper, lumpen-fed serfs?—how many have given their tenants such a security in the land—a lease to wit—as would justify the farmer's outlay, in draining or subsoiling? Who of them could hold up his hand, and say—'I have done it.' Perhaps one, perhaps two—but it would be a risk to appose a third."

After quoting some specimens of the speeches uttered, which we gladly spare our readers, the *Cork Examiner* thus winds up the narrative:—

"Only imagine six-and-twenty gentlemen, a formal deputation from agricultural Cork, risking the accidents of flood and field, braving sea-sickness and coach-cramping with a heroism only sustained by hope—by the promise of all the wisdom they were to imbibe, of all the wonders they were to behold, of all the information they were to obtain—imagine, we say, these six-and-twenty gentlemen doled with the compliments of the 'head table,' in which my lord duke and his bull, and my lord marquis and his prize pig, were judiciously blended—awaiting, with six-and-twenty outstretched necks for the 'something wonderful' that was to come, and in vain—and returning home, at length, consoled by the delightful reflection that their six-and-twenty selves were 'thought no more of than if they had been six-and-twenty buck sweeps!' What a cheering contemplation! How recompensing for all their time, money, and trouble!

"No wonder for Mr. John Dillon Croker to pronounce it all 'a most ridiculous farce and a humbug.' In his sentiment we cordially acquiesce. He ought to be a judge; and when a man so competent pronounces so deliberately an opinion, who can have a doubt? Thank Heaven we are not among the sceptical!"

In the midst of an assembly of men combined together to obtain simple justice from a monopolist class, which had used its ascendancy to cripple the trade of manufacturers, to limit their resources, and to tax the food of those whom they employ, it was scarcely possible to avoid reflecting with equal sorrow and anger, that certain manufacturers had lent willing aid to the riveting of their own chains, and seemed to take pride in the clank of their own fetters. The histories of our predecessors in commerce, the Lombards and the Flemings, contain some melancholy instances of such apostasy, and to this hour the names of the renegades are branded by popular reprobation in the common proverbs of Italy and Belgium. The heritage they won by the abandonment of their order has been a continuous immortality of execration. But even in their lives "they had their reward:" they were treated as

"The broken tools which tyrants cast away."

Those who profited by their treachery were foremost in treating them with insult and contempt; for who can respect those men that show they have no respect for themselves? The homage which such men pay to titles and honours, and the caprices of fashion, is precisely similar to that which the savage paid to Robinson Crusoe's gun, when he prayed that "it would not go off and kill poor Man Friday!" There are too many specimens of this kind of "Man Friday" among the waverers of the commercial class; if they were more familiar with the objects of their worship, they would soon learn Whitehead's lesson:—

"Vain is the plumage o'er a brainless head,

Vain o'er the faithless heart the riband spread."

The last but not the least important subject introduced, was the condition of the agricultural labourer. Until the League directed attention to the condition of the peasantry, their misery was not only denied, but the monopolists resented any re-

presentation of their distress as an act of high treason against the landed obligarchy. Even in the last session, a committee to inquire into the distress of the agricultural labourers was refused by the landlord majority. The only hope of the labourers is in the success of the League; the Corn Laws have been proved to be an ingenious contrivance for securing the political servitude of the farmer, and preventing the free application of labour to land; their abolition, which is necessary to the prosperity of all classes, is absolutely essential to the healthy existence of the farmer and the farm-labourer.

THE TIMES' RECIPE FOR THE AGRICULTURAL LABOURER.

The oracle of Printing-house-square has spoken at last—quite distinctly, though in an under tone.

It has long been a matter of reproach against our very powerful and most eccentric contemporary, that, while launching all the thunders which he wields with so vigorous a hand against the wrongs of the agricultural labourers, he has been remarkably sparing of practical and definite suggestions for their relief. In his exposures of the horrible wretchedness and degradation of the protected agricultural poor, he is inimitably excellent—his industry unwearied, his zeal steadily at fever heat, his vigilance ubiquitous, his store of facts and figures inexhaustible, his pathos heart-moving, his invective tremendous. No one is better at a grievance. But when it comes to a practical question—What is to be done for the improvement of the labourer's condition?—his powers have hitherto seemed to fail him. He breaks off just when we most want him to go on. He execrates the new poor law, but hardly commits himself to the position that its simple repeal would extend the demand for labour, or raise wages, or add to the wages-fund of the country. He approves of Free Trade, in moderation, and compliments the League as a "great fact;" but Free Trade is not the thing: he does not yet consider the Free-Trade cause one worth thundering for. He gives his vote and interest to baths and laundries; but baths and laundries are not the thing either: he is not so silly as to think the "cleansing of the outside" of the starving man will cure the internal disease of starvation. The nostrums of the day he mostly laughs at. He throws cold water on emigration, and speaks irreverently of allotments—asking, to the scandal of all philanthropists, "Is there no box No. 2 of the pills?" Until within this past week, we have vainly searched his columns for a plain answer to the plain question, What is to be done with the labourers? He has been true to his own theory, announced not long since, that to ask a man for plain answers to such queries is just asking him to "show himself and be shot at."

We are happy, however, to be able to tell our readers, that at length—Tuesday last was the day—the *Times* has spoken plainly. The reproach of neglecting remedies, in his zeal for making the worst of the disease, is one to which our contemporary is no longer liable: he has come out boldly, to show himself and be shot at. After long waiting, we have got his specific for the ills of the agricultural labourer. And a notable one it is—worth the most particular consideration of all farmers who have anything left to lose. As we last week ventured to call the attention of landlords to the extraordinary liberties which the *Post* was taking with their land, we now advise the farmers to open their eyes and see what the *Times* talks of doing with their capital: warning landlords and farmers alike, that the longer the Corn Law and its consequences last, the more they must lay their account with having their private affairs impertinently overhauled for the benefit of the public, and their plainest rights coolly swept away in the cause of philanthropy.

The *Times*' recipe for the maladies of the agricultural labourer is not propounded in one of its own leaders, but appears in the shape of an editorial note of approval on a scheme recommended to the Surrey farmers, in a circular letter by Mr. H. Currie. As Mr. Currie's letter—in itself a great curiosity—becomes of considerable practical importance when regarded as conveying the sentiments of the *Times*, we print it at length. It is addressed to Mr. Molyneux, the chairman at the late meeting of the West Surrey Agricultural Association:—

"West Horeley-place, Oct. 25.

"Dear Sir,—Since our Agricultural Association meeting at Godalming, on Tuesday last, I have been thinking about the various plans proposed for the amelioration of the peasantry in our country; and I take the liberty to address you, as the chairman at that meeting, in the shape of a short published letter, with my ideas upon the subject.

"In the first place, it appears to me that the grand and principal difficulty is how to find labour, as I presume one will deny that daily labour is all that a poor man can look forward to.

"Now, I am convinced that, if we are but honest, sincere, and bold, not trusting too much in ourselves, but trusting, I may observe, in the righteousness of the cause, we need fear no difficulties.

"I would propose that, in every parish where the la-

bourers are not fully employed, a meeting should be called. Let it be ascertained how many men each occupier should employ (which may very easily be done); let them be divided fairly; and if it appear that to employ them all it is necessary to assign more than the quantity of acres justify, then let the landlord pay or allow the difference; publish a periodical statement of the demand for, or excess of, labourers, as may be—say quarterly; and any individual refusing to take his proper number of men, must in such statement be named, which will properly expose him.

"In carrying out this measure, I would, as much as possible, employ taskwork, either in draining the land or in spade labour; and no distinction should be made between married and single men. It is a common but most pernicious custom for the farmer to employ only the married man, and leave the young single man to take his chance, for the false reason of economy, that the support of a married man with a family swells the rates more than the cost of a single man.

"It must always be borne in mind that there are but too many, in the shape of the sick, the infirm, and the widows, who must be supported out of the rates.

"Sir, we live in a quiet and happy part of the country. We neither know the ups nor downs of manufacturing districts: and hitherto we have been preserved from the outrages which have disgraced some of the agricultural counties. Let us but do our duty, and say that no man shall want work; but let it be real work—let the wages be fair—such as a man can live upon; but let them be earned by the sweat of the brow.

"Let the landlord exercise that influence over his tenant which he is entitled to do. Let him say to him, 'If you do not employ your proper proportion of labourers, you are not a fit tenant for my farm.' Let him do this firmly—defraying the extra cost (if necessary) himself: and I will venture to say, that we shall no longer see the poor half-starved man walking from house to house, asking for his birthright, namely, remunerated employment.

"I conclude this hastily-written fragment, by saying, that I consider allotments, however good in themselves, as mere auxiliaries, and forming no feature in the proposed measure of relief.

"I have the honour to be, dear Sir, most truly yours,

"H. CURRIE.

"J. M. Molyneux, Esq., Lonsdale-park."

This document, was, it appears, handed to the *Times* by "A Surrey Farmer and Constant Reader," accompanied with a fervid expression of "hope and trust that every tenant-farmer will treat Mr. Currie and his despotic proposition with the contempt they merit." The *Times*, however, does not consider Mr. Currie and his despotic proposition as in any degree meriting contempt; but subjoins, as a note to the "Surrey Farmer's" indignant epistle:—

"We don't concur with our correspondent in his censure of Mr. Currie's suggestion. On the contrary, we wish it were generally adopted."

Mr. Currie's plan is, then, the *Times*' plan, and as such we shall take leave to treat it.

And now, what is this plan which the *Times* "wishes to see generally adopted"? Neither more nor less than ALMSGIVING—wholesale, systematic almsgiving, under the name of wages—with wholesale, systematic INTIMIDATION to make the thing work, and the landlord-screw turned tight to keep it constantly in working order. In the first place, the farmer is not to have an atom or vestige of free agency in the management of his own affairs. The business of farming to be put into commission, carried on under inspection by parish meetings, public opinion, and landlords. The whole end and aim of farming revolutionized: its object to be, not the growth of corn and breeding of cattle, but the employment of the poor of the parish. A parish meeting to ascertain (which may be easily done) how many labourers the farmer "should" find or make work for, the poor farmer himself having no voice in the matter—the *should* being a thing quite irrespective of his private opinion as to what is best for his farm. The labourers to be billeted on the farmer accordingly—"fairly," at "fair" wages; which means, of course, that should any farmer be ingenious enough to invent, or enterprising enough to introduce, a new machine for abridging labour and cheapening production, he is not to be let use his machine—it would disarrange the "fair" proportion voted at the parish meeting. Refusal on the part of the farmer to take his "proper" number of labourers to be punished by "proper exposure;" i. e., the recusant to have his name posted through the county, to be sent to Coventry by his parish, to be made a marked man—his person marked for all manner of odium and insult, his fields and fences marked for malicious trespass, his barns and stacks marked for the lucifer-match—and, finally, himself marked to be bundled off his farm by a landlord's notice to quit, which last item means, by the way, no leases. Then, the labourer to be something between slave and gentleman—the bondswoman of the parish, the tyrant of his master—slavery minus the whip comes the nearest to it. Nothing for him to gain, by any imaginable amount of skill and industry; a man who should do the work of two would be a nuisance to the whole parish, a disturber of the "fair" proportions decreed by the parish meeting. Nothing to lose, by any imaginable amount of laziness, carelessness, inaptitude, or disobedience, unless of a kind legally proveable and punishable. Let the farmer dismiss a labourer, and by-and-by the parish and the landlord would be dismissing him. And lastly, wages to be "fair," "such as a man can live upon;" not such as labour is worth and profits can afford,

but such as the parish thinks "proper"—i. e., parish keep, under the name of wages. Such are the main ingredients of the new Morison's pill, prepared by Mr. Currie, and prescribed by the *Times*. Farming, to be carried on without the security of leasehold tenure, or the economy of mechanical improvements; farmers to abandon their proper calling, and turn assistant overseers, purveyors of task-work for the poor of the parish; labourers to be turned into parish serfs, and assigned in gangs like convicts, to which we suppose we must add comfortable and respectable out-door parish pay to all supernumeraries. This is the delectable system which the *Times* "wishes to see generally adopted." It is a system, ten years of which would break and beggar all the parishes of England.

We observe that the duty of employing labourers is a point much insisted on in Mr. Currie's letter, as it is in all agricultural association speeches on the subject. It is our "duty" to employ the greatest possible number of poor people—to "say that no man shall want work." Whenever this language is held, it is a sure sign that many men do, must, and will want work, and that those who have work are ground to the dust. A more decisive evidence of a thoroughly diseased and rotten state of things could not be than this talk of "duty" in connexion with the employment of labour. If labour can be employed profitably, of course it will be employed, and nothing need be said about "duty." If labour cannot be employed profitably, the thing becomes mere almsgiving; and a nation can no more prosper by almsgiving than a tradesman can prosper by pawning his household furniture. Of course there must be almsgiving, in some shape or other—whether in parish rates, allotments, or charity-work and wages—rather than men should be let starve; but be it clearly understood that charity-work and wages are almsgiving, and that almsgiving, persevered in long enough, will bring the richest nation under the sun to beggary. To employ labour and pay wages as a "duty"—for conscience or charity's sake—is to pay a poor's rate out of capital. Box No. 2 of this pill would be national bankruptcy and revolution.

Thus it is, that, turn which way we will to get a remedy for the labourer's wrongs and wretchedness, without first of all emancipating the national industry, we find ourselves obstructed and hemmed in. The further we go from Free Trade, the more our difficulties multiply and thicken upon us: things which, in a healthy state of society, come as natural as eating and drinking grow into onerous "duties," and duties spread and swell into impossibilities. This latest device of compulsory employment of labour is almsgiving in its worst form; and national almsgiving, in any form, is the road to national pauperism. It is idle, too, to talk of "agricultural improvement," and consequent increase in the demand for agricultural labour, without Free Trade. Agricultural improvement will never be, except under the stimulus of agricultural competition. What at present there is of it, is the fruit of such competition as there is at present—the first fruits of the Free-Trade agitation. Free Trade is the only lever-power which can set in motion that machinery of leasehold tenure, agricultural improvement, and increased demand for agricultural labour, which (concurrently with an increased demand for all other labour) will redeem the English peasant from helpless pauperism to self-supporting, self-dependent manhood. The curse of the English peasant's lot is, that he is not wanted; the landlord does not want him, the farmer does not want him, the guardians and rate-payers do not want him. While this continues, his wretchedness and degradation will continue. The benevolence which racks its brain to find or make an artificial use for him—to stow him somewhere comfortably out of the way—only wastes its strength in a hopeless war with facts. The labourer is, and will be, a miserable beggar, till society really wants him; and society never will really want him till Free Trade opens new fields for the productive employment of capital.

The further we go in this question, the more contented we are to rest it on the one single issue:—Has any plan or theory, having the slightest pretensions to feasibility and permanent well-working, been yet broached for ameliorating the lot of the agricultural labourer, which does not presuppose, as the first condition of its success, the repeal of the Corn Law?

FREE TRADE THE FAITH OF THE MONOPOLISTS.

The *Mark-lane Express* is a leading agricultural journal, and, in pursuance of the great object of the majority of journalists, it seeks to please its readers, and writes in favour of "protection" to agriculture. From its repeated exhortations to farmers to unite in defence of the protective system, the public are, naturally enough, of opinion that its conductors believe in the doctrine of Ricardo, Muckingham, and Co. From much experience, and from some reflection, we have arrived at the conclusion that no man of ordinary intelligence receives those doctrines as a faith to be acted upon in all cases, and the

writers in the *Express* utterly repudiate them on all occasions when the supposed interests or prejudices of their readers are not involved. On Monday last the columns of that journal contained the following paragraph:—

"SIGNS OF THE TIMES.—For some years past, according to report, the 'Knights of the Cleaver' resident in Stockton, as well as others of the fraternity who were in the habit of attending the market at that place, have been united in an engagement not to sell their meat under a certain price, and to be fined in case of a deviation from such agreement. The coalition, however, is at length dissolved, the unholy compact is broken, and the result is, that prime beef, pork, mutton, and lamb, are now selling at 3d., 3½d., 4d., and 4½d. per lb., for which before the public were charged 6d."

There is much meaning and some instruction in this paragraph, and, moreover, it affords evidence that when corn is out of the question, and squires and farmers are not concerned, the writer of it takes an honest and common-sense view of his subject, and is as good a Free-Trader as ourselves. The butchers of Stockton, in imitation of their betters, had "united in an engagement not to sell their meat under a certain price;" and their object, we doubt not, was the very laudable one of protecting "native industry," so far as it is engaged in the slaughtering of beasts for the supply of the tables of the good people of Stockton; and, whatever the humane may say to the contrary, we, who have no antipathy to a beefsteak, stoutly maintain their particular industry to be as "native" and as important as most others. The *Express* does not enter much into detail with respect to the grounds on which these "Knights of the Cleaver" based their claim thus to keep up the price of meat; but it is more than probable that when the grocers, and drapers, and working men of Stockton complained of dearth, and some of the poorest of them who had large families that they were unable to purchase meat, except, perhaps, a very little for a Sunday's dinner, they were met by excuses of a most unsatisfactory character. The butchers doubtless talked mysteriously of "special burdens" on their honourable craft, and yet, with a modesty truly painful, refused every invitation to explain precisely how much they amounted to, and upon what articles they were imposed; they endeavoured to persuade their customers that the rent of butchers' shops and stalls was very high in Stockton, and that the wear and tear of cleavers and skewers were considerable; or the expense of maintaining an errand-boy was alluded to, and it was hinted that if prices were reduced the said errand-boy would be thrown out of employment; and, as matters grew more serious, they pictured to the complaining grocers and drapers the great value of the butchers as customers for sugar, and cotton prints, and blue aprons—the badge of their order—and foretold the ruin of the trade of the grocers and drapers if meat sold for no more than its natural price; or, failing all these and many other excuses, they spoke of the antiquity of their class, of their honourable calling, of its truly British character, of their being more numerous than grocers and drapers, of the number of errand-boys they employed, of their being the very source of the sustenance of all the well-fed portion of the population of this great empire, without whose aid we should be no better than so many Frenchmen living upon *soupe maigre*; and wound up by an affecting appeal on behalf of the fundholder, whose dividends could not be paid if the price of meat fell, as it was an admitted fact that butchers paid almost the whole of the taxation of the country. To the working men, especially, were the arguments of the butchers ingenious and striking; they were told that low-priced meat meant low wages, and that the grocers, and drapers, and ship-builders of Stockton only complained in order that when the price of meat fell they might have an excuse for reducing the wages of those they employed; and an attempt was even made to terrify the artisans into the belief that if the butchers' errand-boys were discharged they would rush into other occupations, and by competition with the said artisans force down their wages. But all these pleas went for nothing with the hard-headed people of Stockton. The grocers and drapers knew that the tax-gatherer called at their shops as often as at those of the butchers, that rent-day never failed to visit them twice a year, and that the expenses of their shopmen were not to be lightly spoken of: they knew also, that, if the butchers purchased sugar and blue aprons of them, they bought beef and mutton from the butchers; and that if beef and mutton were doubled in price, it required just double the quantity of sugar and blue aprons to purchase them with. They fancied that their calling was quite as useful and as honourable as that of the butchers; and that, so far as their contributions to pay the interest of the national debt were concerned, they would be able to pay them the more easily when they had got the broad hand of the butcher out of their pockets. The working men were a little puzzled at first about the wages and the competition; but they recollected that, when the heavy taxes on salt and other articles were repealed, they had not suffered, and that when provisions were cheap they always got most of them;

and as for the competition of the errand-boys to be discharged, they did not care a straw about that, seeing that if meat were cheaper, there would be more meat sold, and if there were more meat sold, there would require even more errand-boys than before; and that, instead of reducing the wages of artisans, the contrary effect would be produced.

All the expenses of the butchers, then, went for nothing at Stockton, and they evidently go for just as little with the editor of the *Mark-lane Express*. He calls the coalition of the butchers an "unholy compact," and rejoices that meat, heretofore sold at 6d., is now selling at prices varying from 3d. to 4½d. per lb. And yet the *Mark-lane Express* writes for a class who have "united in an engagement not to sell corn under a certain price," and he exhorts his readers, the growers and sellers of corn, to maintain their coalition, or "unholy compact," in spite of the complaints and the clamour of millions who are eaters of bread! To "unite in an engagement not to sell meat under a certain price" is an "unholy compact;" but to unite to keep up the price of wheat and of bread is deemed a patriotic and honourable thing, and worthy to be well spoken of in the columns of a respectable journal like the *Mark-lane Express*! It is only when corn is in question that the writer of the *Express* believes in the firm of Richmond, Buckingham, and Co.; in the articles of beef and mutton, and when butchers only are in the scale, he adopts, in all its fulness, the faith of the League. The paragraph we have quoted and made our text is headed, "Signs of the Times;" and we trust we may accept the omen, and, before long, have the aid of the *Express* in favour, not only of breaking down the coalition of the butchers at Stockton, but also of the suppression of the "unholy compact," by which great landowners, and men calling themselves nobles, refuse to sell bread "under a certain price;" a compact which exists to their everlasting disgrace, and to the beggary of multitudes of their countrymen.

THE SUGAR DUTIES—MR. MILES'S MOTION.

A correspondent calls our attention to leading articles in the *Times*, and in a Sunday paper, upon the sugar duties, in which the writers attempt to show that Messrs. Cobden and Bright, and the Free-Traders who voted with Government against Mr. Miles's motion, are accountable for the state of our present relations with Brazil. It is difficult to believe that these papers can be ignorant of the following true facts of the case:—Before the Free-Traders voted upon Mr. Miles's amendment, they brought forward their own measure for the equalization of the sugar duties, which was negatived. Next came Lord John Russell's motion for the admission of slave-labour on the same terms as free-labour sugar, which they also supported. Then followed the Government measure for admitting colonial sugar at 2½s., and foreign free-labour sugar at 3½s., a cwt.; upon which Mr. Miles moved an amendment, which would have reduced the duty on colonial to 20s., but virtually left the foreign free-labour at 3½s.,—thus, increasing the monopoly to the West Indians at the expense of the revenue, without benefiting the consumer. Against this amendment the Free-Traders voted with the Government. The interests of the Brazilian sugar-growers were not involved in the question. Neither the Government measure nor Mr. Miles's amendment affected slave-grown sugar; that question was disposed of upon Lord John Russell's motion. Had the Free-Traders been allowed to carry Mr. Ewart's motion for equalizing all duties on sugar, it would have ensured us the most favourable terms with the Brazilian people, and, at the same time, done perfect justice to the consumers at home. There is no other just settlement of the question but by imposing one uniform rate of duty upon sugars of every country.

WHAT IS RENT?

(FROM A KNOWN CORRESPONDENT.)

Sussex in the South; Haddingtonshire in the North.
To the Farmers of both Counties and all whom it may concern.

Brother Rent-payers,—It is not a mere whim of mine to particularize the two counties named above on such a general subject, though at first sight it may seem so.

The county of Sussex contains some remarkable farms; so does the county of Haddington. Sussex contains some of the best land and some of the worst in the kingdom; so does the county of Haddington. The one county skirts the sea, and so does the other. The one county contains the estates of distinguished public men, and so does the other.

But it is for none of these parallels that I join the two in the matter which I am about to introduce to you, to explain practically what rent is and what rent is not.

Neither is it to make the contrast which these two counties afford: one having, as a cultivator of its soil, Mr. John Ellman, of Glynde, author of the sliding scale, and zealous advocate of monopoly; the other having, as a cultivator of its soil, Mr. George Hope, of Penton Barns, author of the first of the League's Prize Essays, and the zealous advocate of Free Trade.

It is neither for parallels nor contrasts that these two counties are particularized. But it is, in the first place, because the Presbytery of Haddington (the local ecclesi-

astical court of the parish clergy) has appointed a day of "Solemn fast and thanksgiving to be held in their several parishes, to return thanks to Almighty God for the great blessing which He has vouchsafed in giving us the abundant harvest." And because Mr. John Ellman, of Glynde, published in the *Brighton Gazette*, while the northern harvest was still in the fields, a letter of hope and cheerfulness to the Sussex farmers, congratulating them on the continuance of wet weather, which for some weeks threatened to damage the harvest in the north, while the crops in Sussex were safe in the stackyard; bidding them keep back their corn from market, because the "muggy weather" would damage the northern crops and raise the prices of the southern. It is, I repeat, in the first place, because the greater portion, if not all, of the parish clergy in Haddingtonshire are in favour of the Corn Law; that in Sussex they are the same; that Mr. John Ellman, the mouthpiece of the Corn-Law clergy of Sussex, professes to be a religious man, and in that character congratulates his fellow-farmers in Sussex that the crops of the north will be damaged by the providence of Almighty God, and the crops of the south will be enhanced in value through scarcity; while the clergy of Haddington Presbytery, all supporters of Mr. John Ellman's sliding scale, return thanks to Almighty God that the harvest in the north was abundant, and was not damaged.

But, in the second place, I particularize these counties—Sussex especially—because a correspondent of the LEAGUE is publishing in this paper a detailed description of some of the Sussex estates and farms; and I know that such descriptions will be read in that county; the paper will be sought for; it will be bought and borrowed, sold and lent, and one will ask another if they have seen it. So, while that writer is drawing your attention to the paper by describing your own farms, I will take advantage of that circumstance to turn your attention to the question of rent.

But, by all the sorrows that afflict humankind! you need no writer to call your attention to the subject of rent. Michaelmas reminds you of that; or, if you should forget Michaelmas, the Browns of Cowdray, and the Rusbridgers of Goodwood will put you in mind of it.

Forget? You think of it all day, dream of it all night; and, sleeping or waking, you are planning, or sinking into despondency because you have no plan, how to get the rent paid. This wheat stack must be threshed out and sold; those young heifers must go to market; so must two score of wethers, that would be fitter for market when they have eaten the turnips and got fat; but off they must go for ready cash to pay the rent. You would drain some wet soil, as they told you at last public dinner, and as you will be told again when you pay your rent, and listen to the speeches delivered on the day you pay; but how can you drain? You must pay your rent, and you have no more money.

No more! you have not enough! you must get a bill discounted; the bank will not do it with your name to it only; you are a tenant-at-will, and are no security. Your uncles or brothers live in Chichester or Brighton. You have got them to join you in a bill before: they did not like it. You know that, and, rather than do so again, your wives must go. And, under pretence of having come to the kinsman's house to have a cheerful cup of tea, the poor woman, with palpitating heart, manages, after much difficulty, to tell her real errand. She tries to make things look as well at home as she can. I dare say she makes the crop and stock worth more than their value. Mr. John Ellman's letter in the *Brighton Gazette* is a good card for her, poor woman, if her kinsman is as blind a bat as John Ellman presumes the farmers to be: she says, "Corn is low now; but the weather is muggy and the northern harvest is not yet saved; it will be damaged; prices will rise in Sussex, and there will be no fear at all but we will be able to meet the bill when it is due."

But no delusion of "muggy weather" or of Corn Law—neither the protection to Sussex farmers of the one nor the other—will set the mind of the farmer's wife at rest. She spoke confidently to her kinsman; but she looks forward and fears the worst. Experience has taught her. Year after year everything has gone away in rent—year after year has she been to have some new article of furniture, but as often has the purchase been postponed until better times.

At last this dreadful rent-day is got over. The sleepless nights, and the dreams of agents and no money to pay the rent; and of lawyers who come in the nightmare in the shape of bulls and of cows which run after you where you cannot escape, and where they get you down and gore you with their horns, oh God! what horrid dreams are those dreams of a farmer in September! But Michaelmas past, all will be pleasantness and repose—at least for another year.

Will it? The bill comes due at Christmas. And a bill dishonoured is even worse than a rent not paid to the very day. It is one continual round of vexation. You know that your farm would bear many improvements. You know that you would breed a better stock, if you could pay a high price for rams and bulls. You know that liquid manures might be saved if you could lay out one or two hundred pounds on clatrus and the requisite accompaniments. You know that in many ways your crops might be increased if you could devote the money to the labour and the science. But you must pay all the money in rent. This dreadful rent-day, with

corn lower in price than you had calculated it to be when you took your farm, is ever recurring; and each, as it passes, leaves a new train of difficulties to you.

But why should there be any trouble about the rent if Mr. John Ellman is a true teacher in all things concerning the farmer? Mr. Ellman tells you that rent is the surplus profit after paying for labour, seed corn, keep of horses, rates, tithes, tradesmen's bills, interest on capital, and for farmer's remuneration for his personal labour. Why should rent be any trouble to the farmer when this champion of the farmers lays it down as an indisputable truth that rent is neither more nor less than the surplus after paying all those charges?

Brother rent-payers, you know well that, whatever this may be in theory, it is a fiction in practice. You know that you must first pay rent; and then pay tradesmen's bills, and find for draining, manuring, and ploughing, and sowing your farm. You know that neither yourselves nor wives, nor sons and daughters, must indulge in one bodily comfort or luxury, nor even necessary, until the rent is paid.

Moreover, you know that the landowners for whom Mr. Ellman speaks and writes, and takes the chair at Corn-Law county meetings, have, sitting in Parliament legislating for themselves, made a law which secures the payment of rent before anything else is paid. Yet you are taught to believe in what Mr. Ellman tells you! you are taught to deny that the landlords have legislated for themselves, and themselves alone. You are told to believe that they have legislated for the universal good—that the farmers and labourers have been their special care.

Why, their nearest neighbours the farmers, and the creditors of farmers, are the first that are victimized. The law of distraint gives a direct contradiction to Mr. Ellman's doctrine. Your kinsman who lent you money to pay last year's rent cannot be repaid this year should you fail until this year's rent be paid. No money can be set aside for interest on capital, nor for personal remuneration, nor for tradesmen's bills, until the rent be paid.

You know this every one of you. Yet Mr. Ellman is your guide who tells you that "rent is the surplus after paying interest on capital, tradesmen's bills, wages of labour, keep of horses, and personal remuneration." He said so at the protection meetings last year, and he said so in his essay on agriculture nine years ago.

I shall not in this letter pursue the subject farther; but shall return to it and give you practical proofs, so plain that you cannot mistake them, that Mr. John Ellman is just as wrong in respect of the theory of Corn-Law protection as he is in the theory of rent.

Meantime let those of you who can refer to the first volume of the "History and Antiquities of Sussex," published in 1835. The section on agriculture is written by Mr. Ellman: his name is at the top of it. And let these questions be asked:—Why is it that Mr. Ellman complains of corn being at a ruinously low price in 1835, the same as he does in 1844? Why is it that he told us last year, and at the Steyning meeting this year, that the Anti-Corn-Law League was the cause of our low prices and difficulties, when the same low prices and difficulties existed, as he himself records, five years before the League was formed or even thought of.

Ask the same question as regards the new tariff, which was only passed in 1842, seven years after the low prices of 1835, which Mr. Ellman speaks of in the book. And then read what he says of rent; and compare what he says of rent being the surplus, with your own experience of what it really is.

The work is not easily purchased: it is expensive. But it may be borrowed from the libraries of the nobility, gentry, and most of the clergy in Sussex. The Duke of Richmond and Sir Charles Burrell are amongst the subscribers to it, I perceive. They will probably permit some of their tenants to borrow it. And Mr. Ellman has doubtless a copy himself. Perhaps he will lend it to his neighbours, and explain to them how his theory of rent, when he is writing for the landlords, agrees with their experience of rent when they are paying to the landlords. At all events I shall explain the matter to them; and without leaving a shadow of doubt I will show them that he is as practically in error with protection as he is with rent.

STATISTICS OF THE MACHINE-WROUGHT HOSIERY TRADE OF THE UNITED KINGDOM.

Compiled from a Census taken in 1844, by W. Feltin, Fellow of the Statistical Society of London, and read at the Meeting of the British Association held in York.

Before the time of Elizabeth, stockings were usually knitted of very coarse woollen yarn; or, if desired to be cool and elegant, they were cut out of linen, and sometimes of silk cloth. This Queen wore hose of silk tissue, sewn after having been shaped by the scissors. It was during her reign, in A.D. 1589, that the Rev. W. Lee, M.A., a clergyman then living at Woodborough, in the county of Nottingham, invented the stocking-loom. It was brought about on this wise:—Finding the lady to whom he was attached, always more attentive to her knitting than to his addresses, in grief and anger he determined to supersede her employment, by inventing an engine which should be so much more speedy and effective as to make knitting hose altogether useless. He met with difficulties so great, in the complexity and nicety of adjustment requisite in the machine to be made, and so

unlike anything that in the then state of mechanical science had ever been seen or thought of, that, his own want of practical knowledge meeting with no aids from the skill or experience of others; he was long greatly baffled and almost in despair. At length he succeeded, and his Sovereign smiled in person on his discovery. She visited him at his lodgings in Bunhill-fields, where he had transferred his invention; saw him work in his stocking-frame, and accepted for her own use hose woven upon it, much praising their agreeable elasticity and beauty of texture. So great were the expectations formed of profit from this discovery, that her kinsman, Sir William Carey, afterwards Lord Hunsdon, wishing to participate in it through learning the art, bound himself by deed to Lee; and thus, in his person, a descendant of the Tudors became the first stocking-maker's apprentice. But these flattering prospects did not long continue; and after seeing his great yet politic patroness laid in her grave, and patiently waiting to see if her successor would encourage him to keep the invention at home, James I.'s continued neglect decided him to accept the pressing offers of Sully, and transfer it and himself to France, where at Rouen he established the manufacture. There, too, he was flattered and disappointed: the King was murdered and his Minister disgraced; and Lee died, after twenty-two years of deferred hope, an alien—almost an outcast—of a broken heart. Lee's brother returned to England, and brought his frames to London, where for ages stockings were very extensively wrought. The Frame-work-Knitters' Company of that city still survives, but is as useless as powerless for any trade purposes. Its arms are a stocking-loom, supported by a clergyman on the one hand, and a female presenting her unused knitting skewer or pin, on the other.

The stocking-frame was gradually simplified and improved, and its use rapidly spread over England, France, Spain, the Netherlands, and recently Saxony; in all which countries it has continued to furnish employment to many industrious and very skilful mechanics. Their inventions testify to their ingenuity. Out of 660 English frames in 1669, 400 were in London, and three-fifths of the whole wrought upon silk. At this time only two frames were found in Nottingham, and not 100 in the county. In 1695, 1500 frames in London, where, in 1710, 100 were broken on account of disputes about wages. In 1714 there were 2500 frames in London, 600 in Leicester, 400 in Nottingham—altogether about 8600 in this country. The trade soon began to escape from the London company's coercive protection, and most rapidly located itself in the midland district. This portion of the history of the English hosiery trade is exceedingly curious and instructive, but too long to notice here more than in its effects. In 1753 the frames in London had decreased to 1000, and increased in Nottingham to 1500, in Leicester to 1000.

The total number had risen to 14,000. Meantime, cotton hose, first woven in 1730, were getting into more notice and demand. Invention, also, was in vigorous progress. The tuck-rib of 1730 was followed in 1759 by Jed. Strutt's Derby-rib patent. While we are justified in describing Lee's frame to have been, considering his times and circumstances, the greatest effort of mechanical genius of his own and almost of any age, it was after this time succeeded by an extraordinary course of skilful variations and additions, so as to adapt the stocking-frame to the production of fancy work and imitations of pillow lace. Though imperfect at first, these led, in the course of the next 50 years after Strutt's patent, to the construction of the point-net, pin, warp, and bobbin-net machines. In 1776 came out Horton's knots, and soon after twilled and elastic hose were made. About this time 300 frames were broken near Nottingham, because they were employed upon spurious or under-fashioned work. In 1782, out of 20,000 English frames, 17,350 were in the midland counties. Notwithstanding all the skill, industry, and capital employed, the hosiery trade, though enlarging its number of frames and the amount of its production, has during the last 50 years suffered many depressions in the rate of wages, unattended by corresponding improvements in speed. In 1812, Blackner enumerated 29,590 frames; though in 1811, owing to the extreme privations of the hands, 687 machines had been destroyed by Luddism. Having named some of the inventions, of which a list of 101 up to 1828 has been drawn up by Mr. Gr. Heuson, and published, and to which probably as many more might now be added—including the very ingenious rotary steam-knitting frame of Mr. Whitworth (which is the only one nearly, if not entirely, constructed on other principles than that of Lee), Mr. Thorburn's, a curious one said to be Mr. Brunell's, and some others—it may be remarked that as yet, such is the speed of the hands and the difficulty of putting in fashion by power-wrought frames, that the superseding by the latter of the former seems to be very unlikely and remote. Hose, entirely fashioned by the scissors, may, however, undoubtedly be made by steam, and many frames are putting on to work by power. During this period, equally important efforts had been put forth in cotton-spinning in the same district. Paul having spun cotton by machinery in 1734, and removed to Nottingham, his plan was improved there by James and Foster. Hargreaves, driven thither by riotous women, spun 84 threads at once, patented his machine, was pirated and ruined, dying there in 1778. Hayes and Arkwright having spun cotton yarn by rollers, the latter came to Nottingham, taking out his patents of 1769 and 1775 in connexion

with Need, a hosier, and built his first mill in that town. There also Mr. Samuel Cartledge, in 1805, was the first who caused fine cotton yarns, spun by Mr. Houldsworth, to be doubled and applied to the manufacture of lace, which until then had been entirely of flax thread, or silk. There has been a twofold object in view, while marking these progressive steps in the history of frame-work knitting—firstly, to disabuse the minds of many persons of the latterly-prevailing notion, that the misery of the work-people engaged in this branch is at all consequent upon a lack of energy or skill in modifying and improving their machinery. In no trade have more unremitting, better directed, or, on the whole, more successful efforts been made: the entire machine-wrought lace trade has sprung from them. Secondly, to draw attention to the following points, viz.:—That the lace trade has commanded as high a rate of wages as any English manufacture; has been carried on in the very heart of the hosiery districts; and has drawn from the latter business, many of the best manufacturers and artisans in lace. Again, that the stocking trade remains, almost without exception—not under any pressure from steam power or even factory regulations—merely a domestic employment; yet that the rates of wages about to be shown in this census are of less average amount than are probably realized by any other class of skilled, or even of unskilled, labourers in this country. This inquiry was begun before the appointment of Mr. Muggidge as commissioner was known, but it is hoped that it may not be altogether without use in furthering his attainment of the facts of the case. The difficulty and importance of ascertaining the condition of the frame-work knitting trade are singularly great. Let it be observed, in passing, that the interests of at least 43,000 men, boys, and women (for many females work in these machines, although their number is lessening), and as many more who wind the yarn and sew up or seam their work, besides the sustenance of their families, are at stake; as also the profitable employment of a capital, fixed or floating, amounting to at least a million and a half sterling on the part of spinners and hosiers who supply and manage this trade. Stocking-makers are said by some to be, beyond other workpeople, idle and irregular in their habits, and unjust and dishonest in their dealings with their employers. Having known this body well from my youth, and observed them very closely, I have not found them worse in these respects than hard work and small earnings will make any class long subjected to them. But were they, on more accurate investigation, to prove so, their numbers and social importance demand of the wise and the patriotic that they search out and remove the sources of such extraordinary moral degradation, as well as of their undoubted physical sufferings. On the other hand; the hosiers who are their ultimate, though as I think, unhappily for them, not always their immediate employers, are not less just and honourable as a body of masters than others. Many of them have long and deeply lamented the depression of wages and prices, but know not how to command an adequate remedy. Benevolent men, like the Duke of Portland on the occasion of a former depression, and some priories at various times, have advanced capital to employ frames, and thus buy up labour for a time; but these experiments have failed, and done real harm to both hosiers and men; trades' unions have been organized, but with doubtful success even in propping up wages for a while. The workmen now desire a legal minimum of wages, the abolition of frame rents and other charges, and the regulation of the trade under the authority of a chartered body. Some masters express their conviction that placing frames in factories, and the introduction of steam power generally, are absolutely necessary to the improvement of the wages of labour. In the way of remedy, the suggestion may be permitted, that to obtain once more for hosiery goods the influence of fashion at home, and an extension of our foreign demand, appear the chief, if not the only, sources of real benefit to all engaged.

In order to understand the position of the persons who carry on this trade, in relation to those employed by them, and the kind and amount of labour performed by the latter, the following explanation is needful. Three-fourths, or thereabouts, of all the frames employed are the property of hosiers. The remainder belong partly to persons not in the business; partly to middle men, or, as they are termed, bag-hosiers; and some to the workmen themselves. Thirty shillings clear, whether working or not, are allowed for the use for a year of the narrow machines belonging to those not in the trade who thus hire them out. The middle master receives materials to be made up from the hosiers, and employs more or fewer work-people as the case may be. This class, though often very convenient to both hosiers and workpeople, are placed in the, perhaps unavoidable, difficulty of frequently giving satisfaction to neither party. In good times the hosier complains that he cannot get the orders given out to them executed; while during a depressed trade the hands tax these middle masters with obtaining exorbitant profits in the nature of full rent and other charges on partially employed frames, each hand being stinted to make only his share of the goods, for making which materials have been obtained at the warehouse. The rent charged for frames is from 9d. to 3s. per frame per week, according to width and quality: the greater number are narrow ones, the rent for which is charged 1s. per week by the hosier, or 1s. 3d. by the middle man. The cost of these machines second-hand is from 44 to 52 for narrow, and 48 to 512

for wide ones. The workmen pay for the replacing of the smaller parts when broken, and which, with other charges, as standing, fire, lights, taking in work, &c., often fall very heavily upon them. The master pays for recruiting, i. e., a more general and expensive repair. Many hosiers are willing to give out work to single hands direct, or to a man who employs his wife or son or journeyman under his own roof. Since, however, style of dress has been so much against fancy work and best fashion in hose, and competition for employment has depressed the men's energies and condition, the practice of giving out work to middle men has greatly increased. It were well if examinations into these matters might issue in drawing attention to the fact, formerly within everybody's experience, that stockings may be made as ornamental a part of male or female dress as any other, with the conviction that, whenever they are so again, wages and profits will rise, the hands will come more in contact with their real employers, and will take that fair share in settling the contract for their labour which their necessities have long put out of their power.

Foreign competition has not been in reality so pressing in this trade as some have alleged, though it certainly has tended to limit in some quarters our exports of hosiery. In Saxony 25,000 frames, or thereabouts, have been got to work, and are principally employed by demand from the United States of America. Our exports were 74,947 dozens in 1837, and 117,507 dozens in 1843—an amount so trifling as to call for strict inquiry into the cause. Were the nation in a state of prosperity, the home consumption alone would fully employ every British stocking-loom.

The stocking-weaver must labour with great activity and perseverance to obtain his scanty wages in this country. His art is not difficult to acquire; but the best-fashioned and all fancy work demand a quick sight, a ready hand, and in many cases retentive faculties. In Saxony the hands make from twelve to twenty-four courses of loops across the frame per minute: they are not so ready as the English in handling the frame, and their materials are often not even and pliable. In this country the hands make from twenty-four to forty-two courses per minute, averaging frequently thirty-six per minute, when making three hose at once, and using heavy worsted yarn. Having recently and repeatedly tried this labour, I found it very severe. Should any employer think these remarks and details unnecessary or intrusive, I would, in the spirit of kindness but of equity, urge him to place himself, by an hour's exercise, in the frame, in a condition to judge of the amount of his workman's fatigue and exhaustion. For the information of others it may be useful to describe that the workman being seated in his loom, and being supplied with mate-

rials wound on bobbins, a course of finished loops involve the following movements. The hands throw the thread over the needles, as the row of hooks is called technically; they then pass the body of the frame through four motions. The feet in each course are required to move alternately one of two treadles, requiring a certain force to move the instruments ("jacks") whereby the loops are formed upon the needles. And to put down a spring bar, whereby the parts of the hooks turned up are pressed into grooves, while the last formed loops are passed over those in process of formation. While the hands are thus busy, and the feet moving at the rate of 80 yards in a minute, the eyes must keep watch over the needles as to their soundness and regularity; and upon the work, that it be perfect and free from blemish. In narrow frames, the number of needles is from 150 to 600; in wide ones, there are sometimes 1500. Fashioned work is favourable to the hand, by relieving him during the shaping of the stocking, and other operations, which require change of labour and position of the body. Wide frames, on which usually the unfashioned work and that which has to be shaped by the scissors is made, are consequently very trying. The constancy of muscular motion is favourable to the stocking-maker's health; and, if the shop be sufficiently warmed and ventilated, sickness does not supervene in this employment, even so much as in some others. The failure of sight, at a comparatively early age, is common.

(To be concluded in our next.)

TORY-CHARTISTS DEFEATED AT WAKEFIELD, BY MR. ACLAND.

The good folks of Wakefield were last week taken by surprise and storm on the great question of Free Trade; when the subject was presented in a somewhat novel, if not improved, aspect.

At the commencement of the week the town was placarded to the effect that on the evenings of Wednesday and Thursday, Mr. John Harper would address the public in the theatre, to "show that a repeal of the Corn Laws, and the general adoption of Free Trade, will prove ruinous to British industry and destructive to the best interests of the working classes."—"Admission free."—"Discussion invited." This bill was headed in large capitals—"Protection to British Industry."

The invitation to discussion was immediately accepted by the Free-Trade Committee, who applied to the League for aid, and were promptly answered that they might depend on the punctual attendance of Mr. Acland. Blue tickets having been plentifully distributed among the colliers in the neighbourhood, and Wednesday evening having arrived, hundreds of these poor fellows were privately admitted to the theatre before the hour announced for the opening of the doors, and a full audience awaited the wordy onslaught.

Mr. Harman had but just commenced his address,

when Mr. Acland's appearance on the stage induced so cordial a reception, as to interrupt for several minutes the orderly proceeding of the evening's business.

Mr. Harper spoke until nine o'clock, followed by Mr. Acland until ten, when the meeting adjourned until Thursday.

On Thursday, Mr. Harper went to Leeds, to the office of the *Northern Star*, and, in the course of the day, West, the Chartist lecturer, and Hobson, the man-of-all-work to O'Connor, arrived at Wakefield. A placard was then put out by that party, setting forth that the evening's discussion was to be participated in by three speakers, in this fashion:—The first hour to be occupied by Mr. Harper, the second by Mr. Acland, and the third by Mr. West, or some other Chartist representative.

Mr. Acland having heard of the intention of the conspirators to put forth such a document, repaired at once to the printing-office of the Tory journal (the editor of which paper was the avowed agent of Mr. Harper's invisible employers), and, denying all participation in such placard, indignantly repudiated its publication; nevertheless, the Tory-Chartist Socialists had the modesty so to state at the foot of their placard, that they published it notwithstanding its repudiation by Mr. Acland, in order, doubtless, to prejudice that gentleman in the opinions of the people.

At seven o'clock, Messrs. Harper, West, Hobson, and several other Chartist leaders, presented themselves on the stage, and Mr. Harper stepped forward to read the placard adverted to, and had just expressed his regret that his opponent should have run from the discussion, when Mr. Acland made his *entrée*, and was received with a most gratifying cheer by an almost unanimous auditory.

Nominees, as chairmen, having taken their seats, Mr. HARPER desired to know if Mr. Acland intended to continue the discussion as advertised?

Mr. Acland said, he had been no party to the arrangement placarded; that he had already shown his readiness to meet Mr. Harper; that, man to man, he cared little who was his opponent; but he considered West to have thrust himself most unjustifiably into this discussion, and he would be no party to the deception so attempted to be practised upon the public.

Mr. HARPER: "Then you run from the discussion?"
Mr. Acland: With a bayonet at my breast, you bid me stand back, whilst your comrade here pricks me with his bayonet behind, and bids me advance. I will not consent to be placed in such a position. It is neither manly nor honest in you to plot this unfairness. If you do not think yourself my match, resign your pretensions; or, if you do, dismiss your obtrusive colleague.

Mr. WEST, on presenting himself, was received most roughly. At length he was heard to say, "If you won't hear us, you shan't hear Acland."

Mr. Acland: Why do you come here?
Mr. WEST: To show that you are both humbugs; to discuss the question with both of you.

Mr. Acland: Very well; and now mark my position. I came here to expose the new Tory scheme of locating poor people on wastes, and enabling them there to prosper under legislative protection, and I find, in the agent of the monopolists, a late physical-force Chartist leader. After one round, you, another Chartist leader, enter the ring and insist upon being one of the disputants; and you and your colleague affect to be opposed to each other that you may by foul play and unfair arrangement obtain at length some appearance of advantage over the League; for well you know, Sir, that I have beaten you again and again on the decision of your own partisans.

Mr. WEST: Will you discuss with me now?
Mr. Acland: I think I can better employ my time. I shall leave the stage, and become one of the audience. The play shall be "The Kilkenny Cats," and you Chartist representative of O'Connor, and you Chartist representative of Buckingham and Knarbro'—fall to—fight manfully, and prove if you can that you are not colleagues in this disgraceful plot upon the Free-Traders.

Mr. Acland stepped across the stage and entered the stage-box. The audience testified their delight by a shout of laughter, and the gentlemen on the stage were in a strange mystification for several minutes.

At length, amidst the uproarious laughter of the entire audience, Mr. WEST said he trusted Mr. Acland would not interrupt the discussion.

Mr. Acland: Not unless you attack me or make personal reference to those with whom I am connected. This is to me better than a play, being, forsooth, a most egregious farce, and I mean to be amused and delighted. If you each tackle your own proper animal, I will not interfere beyond laughing.

And then came three hours of most amusing and spirit-stirring discussion between this precious pair of Tory-Chartists—agreeing in everything, and on every point, save one.

Mr. WEST: I agree with my friend Mr. Harper on every minor point; but when he says we are to have allotments of land, I must say, I wish we may get them; and he has not shown us how we are to obtain possession.

Mr. HARPER: And when Mr. West proposes as his remedy the People's Charter, he does not tell us how we are to get it.

Mr. WEST then moved a resolution in favour of the People's Charter being made the law of the land; which having been duly seconded,

Mr. Acland (stepping from the box to the stage) said, on that motion I claim to speak, and shall conclude my observations by moving an amendment.

Such a scene as followed has been rarely witnessed. The house rose and applauded to the very echo. Many minutes elapsed before a word could be heard, and then it was the voice of West, in angry protestation against Mr. Acland being heard.

The CHAIRMAN took the sense of the house on this point, and pithy was the Tory-Chartist minority.

Mr. Acland then, in a few short but racy sentences, got the mind of the mass into a sound, healthy tone, and after laughing the miserable conspirators against the League into little bits, moved the adjournment of the question until the next night, when he promised to unriddle the sophistries of this Siamese embassy from O'Connor, Ferrand, and Buckingham.

After a few words from Mr. Morton in favour of Free Trade and fair play, the Chartists turned off the gas, let fall the drop-scene on the heads and shoulders of half-a-dozen people, and compelled the many dimly-lit assembled

to grope their way as best they might from the theatre to the street.

At half-past six on Friday evening a large crowd awaited the opening of the Corn Exchange Saloon, and by seven o'clock several hundreds had congregated in the spacious building, and wholly occupied the seats on the hustings which had been erected at one extremity for the occasion; so that when Mr. Acland took his position in the front of the platform, at a few minutes after seven, the gentlemen of the Free-Trade Committee, by whom he was accompanied, were unable to obtain even the slightest accommodation.

On presenting himself at the table to address the meeting, Mr. Acland was received with loud cheers, but no sooner had that gentleman observed—"And now, my friends, let us have more of argument and less of uproar," than Mr. Harper held up a paper and shouted out, "But I'll read this first, and if they won't hear me, they shan't hear you, and here I'll stand until they do hear me."

This provocative induced the determination of the audience not to hear another word from this very extraordinary agent of the Protectionists.

Mr. MORTON, one of the Free-Trade Committee, here presented himself on the platform, and appealed to the Chartist monopolist, who, with West and Hobson at their head, occupied the seats, to yield some portion of that accommodation to Mr. Acland's friends, but his appeal was answered by coarse jeers; and, calling upon Mr. Acland to leave the blackguards to themselves, Mr. Morton retired from his elevated position to the body of the hall.

Mr. WEST: I'll tell you what, Mr. Acland: I would not like to be made answerable for the keeping of the peace this evening.

Mr. Acland: Gentlemen—
Mr. HARPER: I will be heard first (much hooting); and here I take my stand until you do hear me.

Much uproar followed, and there was considerable pressure from the dense mass towards the platform—the trestles beneath gave way, the planks snapped—scores of its occupants disappeared, and before one half of the tumbler had crawled from the ruins, Mr. Acland's voice was heard from an elevation, at a distance of some six yards, calling aloud, "Peace, order, peace!" and having succeeded in quieting the excited numbers, delivered an able and convincing address, occupying an hour and a half in its delivery. Resolutions, condemnatory of the Tory-Chartist Monopolists, and in strong approval of the course pursued by the League, and personally by their lecturer, having been unanimously carried, Mr. Acland returned thanks, and declared the proceedings of the evening terminated.

It should be observed that, whilst Mr. Acland was speaking, Mr. Harper, having frequently endeavoured to interrupt him, had been quietly walked or carried out of the room.

After the close of the proceedings, Mr. West made yet another attempt to get a hearing, but was compelled to desist; and the precious twain retired to bewail their fate, and to wonder what Ferrand would say to the one, and Feargus to the other.

THE LEAGUE MEETING AT MANCHESTER.

Not having been able to give the whole of Mr. Cobden's speech at the Manchester meeting in our last number, we insert the concluding passage from the report in the *Manchester Guardian*:—

"I congratulate you upon the result of the South Lancashire registration. Gentlemen, do not think that, by carrying South Lancashire, you are merely carrying one of the 40 counties in England. No; Lancashire is the most populous, as it is the most wealthy, county in the kingdom, not excepting Middlesex or Yorkshire; Lancashire contains nearly double the population which all Wales contains; Lancashire has as many inhabitants within its borders as twelve rural counties I could enumerate, in the south of England; and the wealth of this county is in a greater ratio, as compared with other counties, than even its population. The verdict of this county will tell heavily at another election in favour of your principles. I have no hesitation in saying here, and it is not particularly my own idea, but what I have heard in London, that, if the West Riding of Yorkshire and Lancashire sent up a unanimous vote upon the question of the Corn Laws, no Government could remain in power, and resist that pressure upon it. ("Hear," and applause.) I have only to say that I feel, as I am sure you all feel, deeply indebted to those gentlemen who have given their labours for the last seven or eight weeks in this cause of the registration; and foremost and first amongst us all, I would say, we are indebted to our friend the chairman (great applause), without whose persevering and systematic labours it would have been impossible to have produced to you the results which you have had here to-night. These exertions will, I have no doubt, go on quietly, but perseveringly. These labours of the registration, though they refer to the whole kingdom, must have a centre and a source, and it must be by a few, first of all, that the leading direction of this movement must take place. I can say for all those gentlemen who have been at work in this cause, that it is from no desire for ostentatious display, from no desire for passing popularity, that they have laboured as they have done for the last five or six years. The movement, we are told, might have fallen into the hands of more able directors; it might have had men of more commanding talents, but I will venture to say, and this long apprenticeship has proved it, that as far as have come in contact with the men of Manchester, working in the cause, more disinterested, persevering, indomitable energies, were never shown by any men in any cause before. (Applause.) Gentlemen, I said that this movement must originate with a few, that it must be directed by a few; and I will sit down after reading an extract bearing upon this point, from the correspondence of Edmund Burke, lately published, which shows what he thought of popular movements, how they must be directed, and what would be the fate of the country if no men could be found who were willing to bear the heat and burden of the day. He says:—"To bring the people to a feeling, to such a feeling, I mean, as tends to amendment or alteration of system, there must be plan and management. All-direction of public humours and opinion must originate in a few. Perhaps a good deal of that humbug and opinion must be owing to such direction. Events supply materials; times furnish dispositions; but conduct alone can bring them to bear to any useful purpose. I never yet knew an instigator of any general tem-

per in the nation that might not have been traced to some particular persons. If things are left to themselves, it is my clear opinion that a nation may slide down fair and softly from the highest point of grandeur and prosperity to the lowest state of imbecility and mean-ness, without any one's marking a particular period in this declension, without asking a question about it, or in the least speculating on any of the innumerable acts which have stolen in this silent and insensible revolution. Every event so prepares the subsequent, that when it arrives it produces no surprise, nor any extraordinary alarm. I am certain that if pains, great and immediate pains, are not taken to prevent it, such must be the fate of this country." I say Amen to that, and I declare in the name of those who take the most prominent position in this movement,—I declare to those who co-operate with us in every part of the kingdom,—that in our registration, as in our other movements, we have no desire to arrogate to ourselves powers over any of our fellow-citizens. Our duty and object are co-operation with them; leaving every one free to exercise his right, and only offering our aid when that aid is sought by others. There is but one other point on the registration which I will further allude to. It is objected by a newspaper, professing to be friendly, that we have struck off many from the register, and that we are therefore disfranchising the voter. Gentlemen, we have struck off no man from the register who has a right to be there. But if he be illegally there, and that man votes against the repeal of the Corn Laws, we are doing a sacred duty, and an act of pure patriotism, in striking off that man, if we can. (Hear.) And mark me: no man's name can be struck off the register unless those who object to him shall have given him written notice many days before the revision, and thus given him an opportunity of coming to substantiate his vote if it be an honest one. These are the views and principles by which we are actuated. We go on, in good times or in bad, in the same course which we have pursued; and we shall continue, because we believe, under all circumstances, and in all countries and times, the principles we advocate are principles of truth and justice; and, by Heaven's help, the present generation shall realize those blessings in this country." (Applause.)

THE REGISTRATION.

DERBY.—The proceedings in the registration court here were not protracted, owing to the failure of the objections on both sides, through an informality. The Free-Trade party had a majority of four on the allowed claims.

SOUTH DERBYSHIRE.—We are happy to say that the apathy which has marked the conduct of the Free-Trade party in some counties has not been imitated in this division of Derbyshire. The Free-Trade majority on objections is 60, and on claims 19, making a total gain of 79.

LYMINGTON (Hants).—We are favoured by a correspondent with the following statement of the result of revision in this borough:—Free-Trade gain on objections 1; on claims, 4; total, 5.

SALISBURY.—Our correspondent observes in his communication to us "that he fancies we shall not hesitate to participate in the congratulations which are now passing between the Free-Traders upon the result of their labours. Notwithstanding the actual existence of 14 monopolist lawyers here, the talent of Southampton, on the same side, was enlisted against us, with a result, however, disproportionate to the means, both mental and pecuniary, at the command of our opponents. As soon as I can get time I will compare the old with the new register, and send you the result, which will, I believe, be very favourable to us." The following is a summary of the proceedings in the court:—

Free-Trade claims allowed ..	18	
Monopolist ditto ..	17	1
Free-Trade objections sustained ..	36	
Monopolist ditto ..	16	20

Clear Free-Trade gain .. 21

SOUTH SHIRING.—Our correspondent writes,—"The addition of Free-Traders to our borough lists at the late revision are 8; Monopolists, 2. There were no objections by either party, the list having previously been well purged. The number of voters now upon the register is about 700, of which the Free-Traders constitute fully two-thirds."

NEWCASTLE-UPON-TYNE.—(From our Correspondent).—On Friday the 25th ultimo, the revising barrister held his court for this borough. No one but myself has examined the rate-books this season, and at the court there was not an attorney or agent on the part of the Monopolists. A few claims were lodged, but no claimants appeared, nor was there a single spectator. The court was composed of the barrister, the town- clerk's clerk, the overseers, and myself. The barrister received my statement in support of claims, and the Free-Trade claims were consequently allowed, but the Monopolist claims fell to the ground. This apathy on the part of the Monopolists shows that they consider their chances of success in this borough to be very small. Indeed, it is generally believed that Mr. Hodgson Hinde will be returned for the county in place of Mr. Bell. I am satisfied that, by proper conduct on our part, this borough will return a Free-Trade member along with Mr. Ord at the next election.

RICHMOND (Yorkshire).—From a correspondent we learn that, at the revision of the parliamentary list for this borough, there were no claims or objections made by any party. The great majority of the electors of this borough are decidedly Liberals and Free-Traders.

NEWARK.—(From our Correspondent).—Enclosed you have a report of our proceedings in the revising court, by which you will perceive our great success. But I think it right you should know how great has been the change in this year's register; every case is marked off as it occurs and I get to know of it.

	Monopolists.	Free-Traders.	Splits.	Doubt.
Dead ..	27	4	0	0
Disqualified ..	26	7	2	1
Loss by objections ..	6	0	0	0
On new list, but since removed ..	7	0	0	0
	66	11	2	1
Being a majority of 62, giving the Monopolists the split and doubtful votes.				
New votes ..	16	9	0	0

The Monopolists gain seven on the new votes, which, being deducted from the Free-Trade majority of 52, as shown above, leaves a gain of 45; from which, if you deduct the 10 doubtful new votes, it leaves the Free-Trade party in a majority of 35 on this year's revision. This is no trifle for one year; and I have already got hold of a few who will be disqualified on objection or otherwise next year.

GREAT YARMOUTH.—The revision in this borough has ended favourably for the Free-Traders, notwithstanding the decision of the revising barrister, that the objections on both sides were informal—those of the Free-Traders because their duplicates of the notices were not directed on the outside, the notices being served by post; those of the Monopolists, because the objector had not stated on what list of voters his name appeared. Calculating the loss and gain by the number of claims and objections established by each party, does not give the true result of the registration here. The following is an accurate analysis of the new list as compared with the one now in force:—

	Free-Traders and Liberals.	Monopolists.	Gains to Free-Traders.
Left off lists by town-clerk and overseers in consequence of deaths, &c.	33	39	6
New names put on by overseers	41	19	22
Claims established	13	10	3

Total gain to Free-Traders and Liberals 31
The Monopolists made 53 objections, 8 of which were duplicates. The Free-Traders made 85 objections, 45 being against paupers, who, if they ever vote, can be struck off by a committee in the event of a petition on the return of members on the forthcoming register.

The number of electors who signed a memorial to the members to vote for Mr. Villiers this year, was 808
Free-Traders who refused to sign, thinking it useless 94

Since dead, &c. 23

Add Free-Traders put on by overseers 32
Claims established 12

Total number of Free-Traders capable of voting 923
No candidate has ever polled that number since the passing of the Reform Bill.

BEVERLEY.—The revision for this borough took place on Friday, the 25th ult., and ended in a further gain to the Free-Traders, who have now a working majority of upwards of 100. The Monopolists made a tremendous effort to gain on this registration, and offered many frivolous objections. In several instances they were mulcted in costs; in one case as high as 20s. was awarded. All things being equal, should an election take place under the present register, the return of two Free-Traders is certain.

READING.—The revision in this borough commenced on Monday last, and ended on Wednesday. Mr. Huggett appeared for the Free-Traders. The number of claims established by Free-Traders is 26; the general result of the registration has not yet been received. The Monopolists had objected to James Gibson, the party who signed the objections for the Free-Traders. Mr. Gibson appeared, and having established his vote, Mr. Huggett applied for costs on the ground that the objection was a vexatious one; the barrister granted the application; the Monopolist agent then gave Mr. Gibson 4s. 6d., the amount of his day's work, much to the chagrin of one party, and delight of the other.

WESTBURY.—The Free-Traders here succeeded in striking off the assess-tax collectors. The Monopolists have given notice of appeal, which if carried out will settle this question. The result of the revision is as follows:—

Monopolist objections	7	Sustained	5
Free-Trade ditto	15	Ditto	12

CORROBORATIVE CIRCUMSTANCES.

CHEAP FOOD AND HONESTY! DEARNESS AND ROGUEERY!
In the statistical report of Mr. Henry Ashworth, submitted to the Anti-Corn-Law Conference in 1842, it was shown by the returns of infirmaries, workhouses, and prisons throughout the country, that, along with a high price of provisions, we had an increasing amount of disease, pauperism, and crime; and on the present occasion we are gratified to find ample evidence that, with cheaper food, these lamentable indications of the state of the people have become so completely reversed. The following appear in the *Manchester Guardian* of the 24th of October:—

"At Salford Hundred quarter sessions, 1844, held on October 21, after the usual directions as to the duties of grand jurors, the chairman said, 'he observed that the number of parties amongst the prisoners who had been previously convicted was rather larger than usual, there

being not fewer than 18 out of the 67. It was satisfactory to him to be able to state that, with respect to the health of the gaol, it had continued very good; and with respect to the number now in prison, he was glad to say it was lower than in previous years. Taking the average of three years back, the first of those years gave an average of 744 persons in the gaol, the second year gave an average of 700, and the last year one of 620 only, showing a very considerable decrease; which was also observable in the returns made from other parts of this county. This was very satisfactory; and he could add to that, as to persons summarily convicted, that the average number was also diminished; being, for the first of the three years he had named, 359; in the second year, 364; but, for the third and last of the three years, 302 only. The number committed for trial the last quarter, on charges of felony, averaged about 22 per week; the weekly average of the quarter preceding was 20; and the corresponding quarter of last year, 22; so that there has been a diminution, which was exceedingly satisfactory."

"THE CHAPLAIN'S ANNUAL REPORT ON THE PRESTON HOUSE OF CORRECTION.—We have received a copy of the Rev. John Clay's twenty-first annual report on the Preston House of Correction, from which we find that 'the improved condition of trade and commerce, which has given full employment to the working classes, has had the effect, among other benefits, of diminishing the commitments to the gaol. In the year 1842-3, they amounted, in the whole, to 2050; for the year just ended they amounted only to 1519. The re-commitments within the year have been 108 (98 persons being the subjects of them); so that, although we have a record of 1549 offences, we have only 1441 persons.' Amongst other things the report states, that 'breaking into shops and warehouses has become more rare; and the removal of much idleness and destitution is evinced by the comparative, as well as absolute, small number of larcenies of "exposed articles." During a long period of embarrassment and distress, coal, clothing hung out to dry, and other unprotected property, tempted into crime the idle and the poor, until, in 1842, when the want of work was felt most severely, thefts of this character had increased to 119—nearly 20 per cent. on the whole sum of delinquency. In the last year, when all persons willing to take work could readily find it, offences of this description were committed in only 43 instances, less than 10 per cent. on the total of offences.'"

ADVANCE OF WAGES.—STRIKES.

LANCASTER.—Messrs. Greg and Co., cotton manufacturers, of this town, have just advanced the wages of their spinners from seven to ten per cent. The mechanics connected with their establishment obtained a similar advance a few weeks ago. We commend these facts to the serious attention of every impartial observer, striking, as they do, at the very root of that mischievous fallacy which has been so unblushingly propounded, in season and out of season, by the autocrats of the soil and their hireling supporters.—*Lancaster Guardian*.

OLDHAM.—A few days ago, the spinners in the employment of Mr. John Holden, Royton-lane Mill, received, without solicitation, an advance of 3d. per 1000 hanks.

TERMINATION OF TURN-OUT AT WERNETH MILL.—The turn-out of the spinners and self-acting milters in the employment of Mr. Daniel Dransfield, master spinner and manufacturer, Werneth Mill, Oldham, terminated on Friday week, the master having acceded to the demand of the operatives—an advance of 2d. per 1000 hanks.

ASHTON-UNDER-LYNE.—The power-loom weavers of this town are at present in a very unsettled state. On Friday evening, a meeting of weavers was held in the Chartist Association Room, when parties were appointed to form a committee to get up a public meeting to consider what steps shall be adopted to obtain an advance upon the present prices. Many of the spinners having received an advance, the weavers contend that they also ought to be better remunerated for their labour. It is expected that the meeting will be held this or next week.

TURN-OUT AT MESSRS. KENNEDY'S FACTORY.—About twenty men and women were brought up at the Borough Court, Manchester, on Monday, under warrants charging them with leaving their employment without giving the notice required.—Mr. J. Kennedy stated that the defendants, who were spinners for them, had left the mill on Friday last, without having complied with the rules, by giving a fortnight's notice previous to their leaving. Messrs. Kennedy had had no intimation as to what was their motive for doing so till after the warrants were put into execution, when they received a letter from one of the hands, asking an advance of 10 per cent. on their prices, though only a few weeks ago Messrs. Kennedy had made an advance equal to that amount.—Mr. Bent, on behalf of the defendants, said they did not mean to deny the fact of their having left work; but the truth was, that they had a grievance which they wished to complain of. The rules stated that not more than two persons in a room could give notice in one week; and, therefore, if any of the hands had an opportunity of improving their circumstances by leaving, they might be prevented by this rule from doing so for some months.—Mr. Maude said they should not have entered into such a contract if they did not approve of it; and he must see that it was fulfilled.—An opportunity was, however, given to the hands to make arrangements with Mr. Kennedy, and they agreed to return to the mill and work out their notice, when those who remained dissatisfied might leave.—*Manchester Guardian*.

STOCKPORT.—It was announced in the *Manchester Guardian* of Saturday, that the masters had agreed to allow their hands, from the highest to the lowest grade, a uniform advance of 5 per cent. upon their then rate of wages. It seems, however, that the hands generally are very much dissatisfied with the amount of this advance. They allege, that, when the masters seek for and make a reduction, they do not hilt themselves to 5 per cent.; and they require that the same latitude should be allowed on the other side. Certain it is that they seem disposed to persevere in their demand for a greater advance; for on Monday evening a meeting of power-loom weavers was held in the Bull's Head, Market-place, to devise means to effect that object. We are informed that, at the end of last week, some of the masters did not even give notice of any rise at all, as was generally understood would everywhere be the case.—*Ibid*.

GLASGOW.—We regret to find that, in consequence of a dispute between the hand-loom factory weavers and

their employers in this city, not fewer than seven hundred of the former are at this moment going idle.—*Glasgow Argus*.

LEEDS.—Friday week the hands in the employ of Messrs. Marriott turned out for an advance of wages; and on the following day a placard announced that a school would be open for males and females (on Westgate Common), where education would be given, and liberal wages for attending. We, however, hope that an amicable arrangement will soon be come to between the employers and the employed, so that peace and harmony, which is so desirable, may once more prevail.—*Leeds Times*.

PRESTON.—The month's notice of the power-loom weavers of Mr. R. Gardner, of this town, expired on Thursday night, the 17th ult., when the hands ceased working; but at a meeting on Saturday last the difference was amicably settled, and the weavers resumed work on Monday morning. Before the meeting broke up the following resolution was unanimously agreed to:—"That the thanks of this meeting be given to Robert Gardner, Esq., for his kindness in working his mill eleven hours a day, and that this meeting hopes he will continue so agreeable an arrangement."—*Preston Guardian*.

WORKING OF THE NEW FACTORY ACT IN MACCLESFIELD.

(From the *Macclesfield Chronicle*.)

We hear, on all hands, loud complaints of the injurious manner in which the silk throwsters and manufacturers of Macclesfield are affected by the new regulations, in regard to the working of children in factories; and, so far as we can learn, the employed are little better satisfied than the employers with the new arrangements. The abridgment of the time during which children are employed throws a considerable quantity of the machinery out of use during a great portion of the day, and hence accrues a most serious loss to the employers. The preparatory processes being performed by these young persons, the reduction of the amount of work produced by them inevitably affects the state of employment in the other branches of the manufacture. We are told that, in some of our establishments, the effect of the change has been to reduce the amount of silk thrown by about one-fourth, and we have even heard the proportion estimated still higher. There are three different results to which this state of things, according to circumstances, may be supposed to lead. The most obvious result, perhaps, and the one which, we believe, is generally anticipated by the working classes, is, the employment of a double set of hands, or the introduction of adult labour as a substitute, to a considerable extent, for the labour of the children. As to a relay of young hands, the thing is impracticable, at least in Macclesfield, as there was even a scarcity before the half-day system was introduced, and the employers say they cannot afford adult wages for the work which has been formerly done by children. The next effect, therefore, of the new law is, to drive the manufacturer to purchase prepared silk from the foreign throwster, in order that he may obtain a sufficient supply to keep his weavers in employment. We understand that this result has actually taken place to a considerable extent already, foreign-throw silk being obtained on terms which render it more advantageous to our manufacturers to buy the article, than to pay grown-up persons for throwing it. Superficial observers may say, that there is nothing in this to excite uneasiness or alarm, "our children obtain as much employment as is good for them, and it matters not to us whether the silk by which our looms are supplied has passed through their fingers or those of foreigners." This appears reasonable enough on the surface, but there is another result—the last, and the worst of all—to which we have not yet adverted. The cost of production being increased, by the necessity of employing adult hands, instead of children, in the throwing department, or of purchasing thrown silk, at an advanced rate, from the foreigner, has a tendency to drive the home manufacturer out of the market, and to throw the trade into the hands of foreigners. It is obvious, therefore, that the ultimate result of this change must be, to reduce the quantity of employment for the weaver, and of all others employed in the silk trade. The competition will tell first, and most directly, on the throwster, but it will inevitably reach the manufacturer, and affect the trade at large. Macclesfield seems to be peculiarly situated in regard to this question, and may, therefore, suffer more from the new law than most other localities. The whole of its available youthful population have hitherto been employed in throwing, at wages beyond which the employer cannot go, without sinking under the competition of the foreign throwster, as the past history of the trade will testify. Now, therefore, that the working hours for children have been abridged, there is no surplus youthful population which we can fall back upon to supply the vacuum thus created. There may be localities in which the silk trade is followed where this disadvantage will not be so severely felt, and it is possible, therefore, that our argument may not apply, in its full force, in a national point of view; but it is with Macclesfield that we have at present to do, and we think we should be wanting in our duty to the public of this neighbourhood, if we withheld our views upon a subject in which they are so deeply interested.

We are anxious that our intention, in making the above remarks, should not be misunderstood. Our principal object is to state facts, and to leave all parties to draw their own inferences. Least of all is it our wish to encourage a backward movement in any system of legislation which would, with due honesty and intelligence, seek at once to secure the proper education of the young, and to save them from premature and excessive toil. But we must say that we cannot perceive either the policy or the justice of the course which has been adopted by the landlords who govern the country, of tying up the hands of the manufacturers by new legislative restrictions, while they refuse to give up their own monopoly. They wish to appear exceedingly humane, forsooth, but there is a spurious humanity, which, oddly enough, seeks to display itself by a new blow at the manufacturers, whom they had sufficiently victimized before. The people begin to see through the cheat, and find that it is only "out of the frying-pan into the fire." The operatives may depend that no system can, in the end, work well for them or their families, which proceeds on the preposterous principle of diminishing the ability of their employers to compete with their foreign rivals.

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, October 30, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the LEAGUE of the Saturday immediately succeeding, but are included in the list of the week following.

ERRATUM.

In LEAGUE, No. 55, for "Charles Weight, 1, Water-lane, Blackfriars, 21," read "Charles Wright;" and for "R. J. Johnson, 43, New-road, Commercial-road East, 22," read "R. S. Johnson."

FREE-TRADE LECTURES.—On Wednesday evening week, Mr. J. J. Finnigan delivered his third lecture in the Buck-i-th'-Vine-room, Wallgate, Wigan. Subject—"The Interests of Labour and Capital Identical." The room was well filled, and the arguments advanced seemed to carry conviction to the mind of every individual present.

LECTURES IN WILTSHIRE.—Mr. Falvey lectured at Calne on Friday, the 25th, and at Cricklade on Saturday, the 26th ult. John Watts, Esq., occupied the chair at Calne, and W. Wells, Esq., M.D., at Cricklade. The greatest unanimity prevailed on the subject of Free Trade on each occasion, and the people clearly perceive that nothing else can permanently improve their condition.

LECTURES ON THE CORN LAWS.—On the evening of Monday week Mr. Liddell delivered a lecture on the corn and provision laws, and Free Trade, in the long room of the Sun Inn, Hiltwhistle. The room was crowded to excess by a respectable company, including many farmers from a considerable distance. The lecture occupied nearly two hours in the delivery, and was heard with the greatest attention. At the conclusion, Mr. Liddell invited any of his audience to defend the Corn Laws, but no one availed himself of this privilege. A vote of thanks was proposed to Mr. Liddell, and passed unanimously. Tracts were distributed at the close of the meeting. On Wednesday evening Mr. Liddell delivered a lecture on the same subjects, and with equal success, to a crowded audience, in the long room, Furnace Inn, Bel-lingham.—*Tyne Mercury.*

POLITICAL ECONOMY.—That political economy should have been complained of as hostile to religion, will probably be regarded a century hence (should the fact be then on record) with the same wonder with which we of the present day hear of men sincerely opposing on religious grounds the Copernican system. But till the advocates of Christianity shall have become more universally acquainted with the true character of their religion, than, universally, they have ever yet been, we must always expect that every branch of study, every scientific theory, that is brought into notice, will be assailed on religious grounds by those who have either not studied the subject, or who are incompetent judges of it; or, again, who are addressing themselves to such persons as are so circumstanced, and wish to exult and take advantage of the passions of the ignorant.—*Archbishop Whateley.*

REPEAL OF THE CORN LAWS.—It has been suggested that the present improvement in trade, together with the cheapness of food, dispenses altogether with the necessity for a repeal of the Corn Laws. Now, exactly the reverse is the case, for good harvests are equally argumentative with bad in favour of the removal of restrictions upon food. The position of the Corn-Law repeaters is this—that cheap food is conducive to the happiness and prosperity of the nation, and, as if to illustrate the truth of this position, Heaven has sent a good harvest, the blessings of which are already known and felt by the people. Nothing could better illustrate this position; and the demand founded thereon is, that provision should be made to secure at all times cheap food, and, consequently, at all times prosperity and happiness, by the removal of laws under which we can obtain cheap food only when Providence pleases to favour us with abundant harvests in Britain. And in bad harvests the same position is verified by contrast, for, with a scarcity of food, the people are doomed to physical sufferings, and their pecuniary means being almost wholly devoted to the purchase of dear food, the home demand for manufactures falls off, and trade in general becomes paralyzed. And what the Free-Trade ask in such times is, that advantage be taken of the superabundance of other countries to keep up a plentiful and cheap supply of food in this, without which, as we have before seen, we cannot be prosperous.—*Presses Guardian.*

LETTERS ON THE CORN LAWS, No. V.

TO HER MOST GRACIOUS MAJESTY QUEEN VICTORIA.

MADAM,—The ceremonial which engaged your Majesty on Monday last probably occasioned some fatigue, and perhaps afforded some amusement. It will be happy for your people should reflections have been suggested of a more enduring character than either fatigue or amusement. The opening of the new Royal Exchange will be an item in the chronological tablet of your Majesty's reign. May it be a type of the future policy by which that reign will be characterized.

The splendid and enduring structure with which the name of Queen Victoria will be indissolubly associated, is a monument of civic wealth and progress. Its superiority to previous buildings on the same site, and devoted to the same purposes, is even less, far less, in proportion than the present importance of the City, as compared with the London of Elizabeth and of Charles II. Since their days, a family of cities has grown up around the ancient metropolis. Miles of rural suburbs have been thickly planted with human dwellings. Of late, too, the remotest towns and districts have been brought comparatively near by the miraculous locomotive. The heart of the kingdom makes its pulsations felt at the extremities with unprecedented rapidity. And the impulse returns upon itself with augmented force. No such temple of trade and commerce has ever yet been erected in the world as that of which you have graced the inauguration by your presence. The reign of your Majesty is over the first of commercial countries.

Not unnatural is the desire that this fact should be strongly impressed upon the royal mind. Commerce is not merely one out of many splendid phenomena presented by your empire; it is much more than that: it is the character of the nation. We are a commercial people. Our position in the map of the world marks out our destiny. The tendencies of the population are in harmony with their locality. Our land is limited, but our coast is long, and our industry untiring. To commerce we owe it that we are a people at all. Our independence and your crown are amongst its bestowments. Fleets and armies have been created by the wealth of its production. Without the sinews of strength which it nourished, Nelsons and Wellingtons must have remained unlaurelled. Assailed from without, and exhausted by burdens at home, but for the vivifying energies of commerce Britain would have become the appendage of some great continental power. From the same source as our national wealth and safety, has flowed the greatness of the landed aristocracy. The proudest nobles of your court owe to it the augmented worth of their broad lands. They are pensioners upon commerce for the largest portion of their revenues. It is not an accident, but the essence, of our national being. It is not a limb which may be amputated, but the breath of life which preserves the body of the state from corruption and dissolution.

Why represent this fact to your Majesty? Because appearances do not force it on your notice, and because you are surrounded with advisers who are unlikely to commend it to your attention. The portentous anomaly may thus be hidden from your eyes, that we are a commercial people under the legislative government of a landed aristocracy. The laws which bind all classes are framed by one class, and that one bears a different character from the rest of the nation. We are a commercial people, with laws that impede, perplex, and restrain commerce. Trade, that feeds the millions and indirectly aggrandizes the landed proprietary, is limited by laws under the mistaken notion of enhancing the worth of land. The policy of legislation, so far as the Corn Laws are concerned, is anti-national, for it is anti-commercial. While this contrariety endures, there can be no security for the glory of a Sovereign or the happiness of a people. One of the plainest lessons and most solemn warnings of history, is the fatality of not consulting the genius of a community in its legislation. The spirit of the laws and that of the nation must be in unison; their discrepancy is dangerous, and their antagonism is destructive.

Amid the splendours of your Majesty's reception, and the countless thousands of welcoming faces that lined the streets from the Palace to the Exchange, no symptom presented itself of the mischiefs and miseries induced by this discrepancy. It was not the fitting occasion. Yet only about three years have elapsed since this city of London invited into its representation a falling Minister, simply because, in his falling, he had caught at the popularity of a relaxation of the laws restricting commerce, thereby breaking, for it was past averting, the disgrace of the descent. And only one year ago, this same city of London passed sentence of condemnation upon monopolist laws by returning a candidate who avowedly and distinctly stood forth as the champion of Free Trade, the advocate of the principles of the Anti-Corn-Law League. These facts are significant. They indicate the popular and

the perception of a practical grievance. Of the extent of that grievance little can be known within the walls of a palace. The shadow of it sometimes passes over the speeches prepared for your Majesty to read to your Parliament when they assemble, or are prorogued. There, on some occasions, you find the terms "Manufacturing Distress;" and on other occasions "Agricultural Distress;" terms designating the alternate phases of suffering which now is spreading dismay, insolvency, desperation, and crime amongst the humbler sort of those who cultivate the soil; and which, but lately, reduced the industrious inhabitants of many towns by scores of thousands to actual starvation. The wretchedness is shifted from class to class, by fluctuations in the price of food; and sometimes mitigated for a season by an extraordinarily abundant harvest; but there it is, and there it will be, so long as a commercial people is governed by an anti-commercial policy. Even the beast of burden will chafe, and fret, and bleed, if harnessed with a yoke unfitted to his form; and though his generous or enduring nature may accomplish much in spite of all impediments, that is but a poor alleviation of the suffering, or apology for the cruelty.

It is unnecessary to tell your Majesty that no consent of the two Houses of Parliament exonerates your royal mind from the obligation of considering what form or principles of policy may best subserve the interests of this great empire. Suppose the representation of the Commons to be as real and faithful, as all the world knows it to be otherwise; suppose the Peers of the realm to be entirely in sympathy with the peasantry and operatives, and the majority of the nation to be as much in favour of taxation upon food and all other kinds of monopoly as their legislators: the question would still remain whether monopoly be a wise and righteous policy. This insatuated accordance is supposable; and yet the path it chooses may be a road to ruin, with injustice in its course, disgrace and confusion at its close. The most enlightened Sovereign may not be able to save a people against their will; but it is something to have a Sovereign not participating in a ruinous popular delusion.

There are surer tests of the truthfulness of Parliament to its trust than those which elections afford, so long as the electoral machinery gives undue preponderance to a class which believes itself interested in monopoly. It may be tried by miscellaneous assemblages of the people. Throughout the length and breadth of the island no large meeting can be fairly convened which agrees with Parliament in its support of monopoly. It may be tried by our politico-economical literature, whether standard or popular. From Adam Smith to Ricardo—from the metaphysical formulæ of Mill to the narrative illustrations of Martineau—the voice of our authors has a nearer approach to unanimity in the condemnation of monopoly than can be found in any other topic whatsoever. Whether guidance to sound policy be sought in the voice of the interested many, or in that of the enlightened few, still the result is, that on Free-Trade principles should the government of the British empire be conducted.

Your Majesty is not the puppet of a party, or merely the central figure in a ceremony. You have shown yourself aware of your prerogatives and your responsibility. On one memorable occasion you replaced a Ministry that had resigned, and baffled such a Parliamentary movement towards change as is usually deemed irresistible. In 1839 the nobility of your spirit rebuked the crooked approaches of Sir Robert Peel, and refused to give the world the false assurance, by the household appointments, of a confidence you did not feel. Your Majesty, alone, decided the postponement, for more than two years, of the restoration to power of the Tory party. The factious abuse which followed may be forgiven and forgotten by your Majesty; by many it will be forever indignantly remembered. The spirit then evinced may hereafter serve your people more permanently and more efficiently. You scorned an acted untruth; and what is a worse falsehood than oppression? What more untrue than monopoly to your crown and dignity, and to your people's rights and prosperity? The fervent loyalty of Englishmen, now so concentrated on yourself, arose and attained its energy in times when the Sovereign and the nation made common cause against a feudal oligarchy. The alliance is natural; for by the same class have both suffered, and the restricters of public industry have also been the usurpers of regal authority. The last Parliamentary act of the great Elizabeth was an abrogation of monopolies, with a pathetic apology for having been misled into the sacrifice to "a private profit" of what was "good and beneficial to the subjects in general." The confession was worthy of that majestic woman, whose example you have this week followed in visiting the city of London, to give splendour and royal name to the edifice "where merchants most do congregate." Times are coming when the importance may be inculcable of knowing that the Sovereign is neither uninformed, indifferent, nor hostile to those commercial principles which are the lifeblood of the nation. From a Parliament elected

both in delusion and corruption, and from Ministers who compromise truths which they cannot deny to the demands of a class which holds them for its tools, the people will look wistfully towards the throne. They will call to mind the words of your reply to the address on Monday—words which, if prepared as a formality, were rendered living by your enunciation; words with which the citizens of London are adorning their dwellings in letters of gold, as a blessed omen of the future:—

"The relief of the indigent, the advancement of science, the extension of commerce, were the objects contemplated by the founder of the Exchange."

"These objects are near to my heart. Their attainment will, I trust, be recorded among the peaceful triumphs of my reign; and I shall rejoice if I am thus enabled, by the blessing of Divine Providence, to promote the prosperity and happiness of all classes of my subjects."

They will look for your favouring sympathy in the arduous though peaceful struggles by which alone such "triumphs" can be realized, and in which they embark, knowing that "the relief of the indigent, the advancement of science, and the extension of commerce" are only to be achieved through the repeal of the Corn Law, with its kindred monopolies, and the harmony of legislation and institutions with the free and commercial spirit of the nation. Such, may it please your Majesty, are the thoughts and desires of millions, to which it has been endeavoured to give respectful and loyal expression by

A NORWICH WEAVER BOY.

OPENING OF THE ROYAL EXCHANGE.

The grand ceremonial of opening the Royal Exchange, by her Majesty in person, took place on Monday. As early as seven o'clock, troops of pedestrians wended their way in every direction towards the line of route. So early as eight o'clock the streets near Temple-bar rapidly began to be thronged with spectators, and towards nine great numbers had taken up their positions in the hired and other seats which had been prepared for their reception. As had been previously announced, to prevent any inconvenience or interruption to the procession, barriers were erected at all the streets leading into the line of route; and more immediately round the Exchange itself, barriers were raised to check the approach of all persons not invited to be present at the ceremonial. The stringency of the police regulations promulgated last week, and which threatened to imprison the inhabitants of some of the streets near the Exchange, were, owing to the strong remonstrances of those parties themselves, enforced by the potent voice of the press, wisely relaxed; thus, nearly everything was done to facilitate the people in their desire to see the Sovereign, without making prisoners of any class who might have claims and duties demanding their time and attention for other objects. The usual posse of military and police lined the streets, and the best order was preserved throughout the whole line.

About twenty minutes to 11 o'clock the royal carriage, the magnificent royal state carriage drawn by eight beautiful cream-coloured horses, decked in their gorgeous trappings, drove to the Palace, followed by a troop of Yeomen of the Guard. About five minutes past 11 o'clock her Majesty entered the royal carriage, and the procession, composed of a detachment of the Life Guards, the six royal carriages, containing the lords and ladies of the household, the state-coach, surrounded by grooms, &c., immediately formed. On emerging from under the marble arch her Majesty was greeted with the greatest enthusiasm—the cheering and waving of hats and handkerchiefs being continued down the whole of the densely crowded line. Her Majesty repeatedly acknowledged these bursts of enthusiasm by bowing on either side. Her Majesty was dressed in white satin, and wore a silver tiara set with brilliants, and looked remarkably well. His Royal Highness Prince Albert, who was seated on the left of her Majesty, in front, was dressed in the uniform of the Hon. Artillery Company, of which his Royal Highness is colonel. He too, looked extremely well, and repeatedly bowed to the cheers of the crowd.

The carriages of the Ambassadors and foreign Ministers assembled at the lower end of St. James's-street, and fell into the line immediately after the Queen's procession.

The carriages of the Cabinet Ministers fell into the line immediately after those of the Ambassadors and foreign Ministers.

Along the line marked out the crowd of spectators was dense, every window and balcony, and many roofs of houses, being filled with spectators, who exhibited lively demonstrations of respect for her Majesty and admiration at the splendid pageant.

Within the railings round St. Mary's Church platforms were erected, gaily dressed with flags, and crowded with ladies; over the principal entrance to the church the Sunday school children were ranged on a platform, and sang the national anthem as the royal cortege passed. Their tiny voices were, however, but little heard amidst the deafening shouts of the crowd, of which the students of King's College formed no inconsiderable part. St. Clement Danes' Church was also surrounded on the Strand side by platforms, every inch of which was occupied. A short delay of the royal carriage took place at this narrow and inconvenient part of the Strand from the density of the crowd on either side, barely affording room for the royal carriage and its escort to pass. The royal carriage then proceeded from this point to Temple-bar at a very slow pace. Arrived at the bar, the royal carriage stopped under the archway, the gates being open, and was met there by the civil authorities.

The procession advanced in the order already stated, until her Majesty's state-coach had arrived immediately under the gateway. The Lord Mayor—wearing a splendid robe of crimson velvet with collar of SS, and Spanish hat and feather, followed by the Aldermen in their usual scarlet robes, mounted on artillery horses, led by their accustomed riders, but by no means displaying the graces of horsemanship, as shown by the good-humoured laughter of the spectators—now approached within a short distance of the royal carriage, and, after a moment's pause, alighted, uncovering and making a profound reverence,

presented to her Majesty the city sword. Her Majesty, having accepted it by touching the hilt with her right hand, was graciously pleased to signify her desire that the Lord Mayor should again resume and retain it. The Lord Mayor then remounted, and took his place in the line of procession, immediately preceding the carriage of her Majesty.

It may easily be supposed that the *coup-d'œil* which the vicinity of the Exchange presented was extremely pleasing. Every window of every house was crowded with occupants, consisting chiefly of the fair sex, who, determined not to miss the spectacle by any tardiness on their part, secured their several seats at a very early hour. The Bank of England, the Mansion-house, and some large establishments had all provided for their quotas of spectators, who had an admirable view of the royal cortege as it advanced. The various livery companies had arrived in procession so early as ten o'clock and taken up their positions. Lord John Russell arrived at the Exchange at eleven o'clock; and soon after the carriage of the Duke of Wellington made its appearance. His grace on being recognised was loudly cheered. The Duke of Cambridge, the Duchess of Kent, Sir Robert and Lady Peel, Sir James and Lady Graham, the Chancellor of the Exchequer, and Mr. Gladstone arrived soon after in rapid succession.

As twelve o'clock struck there appeared to be a general movement among the multitude congregated near the Mansion-house, and the cheers which were now raised, at first heard in the distance, but becoming more and more audible every instant, plainly indicated that the royal and civic procession was near at hand. Very soon after this the first part of the procession, as it had left Temple-bar, reached the Royal Exchange. In a few moments after passing the Mansion-house the royal carriage reached the principal western entrance of the Royal Exchange, where it drew up in the centre. Her Majesty was handed out of the carriage by Prince Albert, and leaning on his arm, passed on to the interior of the Exchange, preceded by the Lord Mayor, bearing the city sword of state, and bowing as he ushered her Majesty and royal consort into the new building. After inspecting which, she proceeded to the banquetting room.

The principal apartment in which her Majesty was received is called the subscribers' room. It is 98 feet long by 40 wide, so that it afforded ample room for a grand entertainment. The tables were heaped with every conceivable delicacy, and a profusion of the finest wines. There were four tables extending the whole length of the room, with seats on either side for the guests, the two centre tables being wider apart than the others, in order to afford a broad passage up the room to the cross-table, where a special preparation had been made for her Majesty, Prince Albert, the Duke and Duchess of Cambridge, and a few of the chief guests. This table was covered with massive gold plate, of most exquisite workmanship; and those who had arranged the banquet had not forgotten her Majesty's fondness for flowers, of which two large and beautiful bouquets were placed opposite where her Majesty was to sit. Her Majesty's seat was placed at the centre of this cross-table, a little raised above the rest.

Her Majesty's approach was announced to the guests by a call from the upper end of the room of "The Queen is coming!" and the national anthem was immediately played by the band of the Life Guards stationed outside. Immediately the whole mass of guests rose, and faced on each side of the avenue through which her Majesty was to pass to the top of the room. Two lines were thus formed on either side of this avenue of ladies and gentlemen, glittering with diamonds and jewels, and brilliant in uniform, military and naval, covered with orders and insignia. As her Majesty entered and passed up the room, preceded by the Lord Mayor, bearing the civic sword before him, and by the aldermen and members of the corporation, with their robes and wands of office, and followed by a brilliant suite of ladies, officers, Ministers, and Ambassadors, the whole company bowed repeatedly, at the same time receiving her Majesty with a loyal and respectful cheer. Her Majesty leaned on the arm of Prince Albert. Her Majesty took her seat on the throne, Prince Albert standing on her right hand, and the Duchess of Kent and the Duke of Cambridge on her left.

Here the scene was highly imposing. The room contained the *élite* of the whole company, all the most distinguished of the distinguished persons present in the Exchange; and as an assemblage of commercial wealth, of hereditary rank, of political and diplomatic talent, of military and naval renown, it would be difficult to match it within the same small space, or on an occasion characterized by so little of mere ceremonial, or of attempt at pomp and display.

The Recorder then, on an intimation given from the throne, proceeded to read a congratulatory address from the Lord Mayor, aldermen, and commons of the city of London to her Majesty, to which her Majesty delivered an appropriate reply.

Her Majesty was then graciously pleased to say to the Lord Mayor, "It is my intention, Mr. Mayor, to confer the dignity of a baronet upon you, to commemorate this event."

Several presentations to her Majesty then took place.

As soon as this ceremony had been performed, the corporation, the Ministers, Ambassadors, and others who had been present in the throne-room, retired to the banquetting-room, where they immediately took the seats which had been assigned to them. Her Majesty, accompanied by the Prince, the Duchess of Kent, and the Duke of Cambridge, retired to the private apartments, where they remained for nearly twenty minutes.

On her return, her Majesty proceeded to the cross-table, where she took her seat, Prince Albert sitting on her right, and the Duchess of Kent and Duke of Cambridge on her left.

The repast having concluded, the Lord Mayor, standing at the right of her Majesty's chair, said, "I have her Majesty's permission to give you the health of 'Her Most Gracious Majesty Queen Victoria.'"

The toast was received with every mark of loyal honour. The Lord Mayor then gave, in the same terms, "The Health of Prince Albert," which was also responded to enthusiastically.

The Lord Mayor next gave, in the same terms, "Albert Prince of Wales and the Royal Family."

The Duke of Cambridge stood up to acknowledge the toast, which was duly honoured.

The Lord Mayor then said, "Her Majesty has com-

manded me to give 'Prosperity to the City of London.'"

This toast was drunk with great enthusiasm. Shortly after the banquet had concluded, Mr. Masterman, M.P., presented to her Majesty and the Prince two superb medals commemorative of the occasion, executed by Mr. John Baird, of Cornhill.

At twenty minutes after two o'clock the royal party retired from the banqueting-room. On reaching the centre of the quadrangle where the statue of the Queen will be erected, her Majesty paused, and Sir James Graham having handed her a small slip of parchment, pronounced the following words:—"It is my royal will and pleasure that this building be hereafter called the Royal Exchange."

This ceremony having been performed, the Queen, leaning on the arm of the Prince, proceeded amidst the cheers of the spectators to her carriage, on her return to Buckingham Palace, whither her Majesty and royal cortege proceeded at a rapid rate, amidst the same tokens of respect which had accompanied her in the early part of the day. Her Majesty subsequently proceeded by railway to Windsor.

Westward of Temple-bar the illuminations were few, and confined chiefly to the tradespeople of the royal family. In Fleet-street the principal one was at the office of the Anti-Corn-Law League, which had a device consisting of the crown, in the centre of an inscription which commenced at the top of the building, "The Union of All Nations—Free Trade." Over this, from the summit of the house, waved the flags of various nations, emblematic of the union of commercial countries in the free reciprocation of their products, and from the centre was suspended a large crimson banner with the eye of Providence directing its rays on the words "National Anti-Corn-Law League." There was also an illuminated crown with the letters V. A. on either side. Beyond Temple-bar, the first illumination of any brilliancy was at the office of the *Illustrated London News*, where "V. R." a Grasshopper, and the words, "Victoria, Queen of Commerce," were exhibited in jets of gas. *Punch* came forth on the occasion in a fine transparent (when is he opaque?) portrait of himself surmounted by a large crown and framed in variegated lamps. The Farmers' Assurance-office exhibited a splendid crown with the letters "V. R." in gas.

A FACTORY IN MISSISSIPPI.—The planters themselves are going into the manufacturing business in earnest. A large cotton and woollen factory has been established at Natchez, Mississippi, the property of Messrs. Robertson, Osgood, and Wells. This is the natural consequence of our Corn Law, which has driven the United States to a retaliatory tariff, imposing such heavy duties on the importation of goods as to make it profitable to manufacture them in America.—*Manchester Times*.

PUBLIC PARKS AND WALKS.—Scarcely a week passes without bringing its own new and striking testimony to the deep interest felt in the promotion of this great object by all classes of the community. From the Premier of England to the humblest operative, all who claim a connexion with Manchester, and a sympathy in its civic and social fortunes, have manifested that sympathy by contributions of the most liberal and encouraging character and amount. We have already noticed the handsome contributions of Mark Phillips, Esq., M.P., and of Sir George Phillips; and we have now the pleasure to record the subscription of the clerks, salesmen, warehousemen, and porters, in the warehouse of the firm of which our excellent representative is a member,—Messrs. J. and N. Phillips and Co., Church-street. Including all classes of employees, youths, porters, &c., we find that ninety individuals in this establishment have contributed the very large and liberal amount of £221. 2s. in aid of the fund for public parks! We regard this as one of the most remarkable contributions yet made towards this admirable object, and we have no doubt that, as it is by no means the first in point of time,—though the largest in amount,—yet recorded, so it will have a long line of worthy followers in no spirit of envious rivalry, but rather in that generous and benevolent impulse of honourable emulation in which it is not only allowable but commendable to "provoke to love and good works."—*Manchester Guardian*.

BATHS AND WASH-HOUSES FOR THE POOR.—The corporation of Liverpool have lately built baths and wash houses for their poor, and are on the point of building more, the experience of about two years having satisfied them of the great advantages derived from the use of their existing establishment. In Edinburgh, Glasgow, Aberdeen, Dundee, Paisley, Greenock, Bolton, and Ashton-under-Lyne, the example of Liverpool is being more or less followed. The original establishment in Liverpool was small and inconvenient; but under all its disadvantages, and notwithstanding its first year was of course little better than experimental, the number of baths taken by the poor was more than 10,000, and the number of articles washed exceeded 231,000. In the second year the number of baths exceeded 12,000, and the articles washed 306,000. During the first year and part of the second, the charge for the baths (the use of a towel inclusive) was—for a cold bath 1d., and for a warm bath 2d. During the latter part of the second year the charges were raised respectively to 2d. and 3d. At the wash-houses poor women have the use of washing-tubs, with an ample supply of hot and cold water, the clothes being first boiled to soften the dirt. When washed they are rapidly dried in a hot room, and then conveniences are afforded for ironing them. The charge at the wash-houses was originally 1d., but has lately been raised to 2d. for every six hours' use of a tub. It is understood that six hours are in general sufficient for washing the clothes, &c., of one family. In a detached building is a wash-house for clothes and other articles which have been used by persons in fever or suffering under infectious disorders. On the certificate of any medical man, they are washed free from charge to the poor; and, at an expense of about £10 during the two years, a great benefit has been thus conferred. Care is taken to prevent infection by the use of the chlorides, &c. Detailed returns respecting these baths and wash-houses will be found in the Appendix to the first Report of the Health of Towns' Commission, page 105, where it is stated that the annual cost of the establishment is £281. 0s.; and that the income of the first year was £159. 11s. 1., and of the second £240. 2s. 6d.; so that it is now almost self-supporting. It is now proposed to carry out in London the same plan, of which the success and usefulness have been so fully confirmed.

REVIEW.

The Attaché; or, Sam Slick in England. Second Series. London: Bentley.

Sam Slick has long been an established favourite; the quaintness and felicity of his illustrations, the practical good sense of his opinions on social life, and the keen spirit of observation which gives the semblance of reality to all his remarks, more than counterbalance his political prejudices, which, indeed, are so exaggerated that they become harmless from their utter absurdity. Parties are always more violent in colonies and provinces than in the parent country or a metropolis. Englishmen, for instance, when mixing with society in Ireland, are quite perplexed at the heat thrown into party disputes, and the multitudinous inconsistencies, and even impossibilities, received as articles of faith in party creeds. The author of "Sam Slick" is what the Americans call "a red-hot royalist;" the very name of freedom rouses his spleen to fervour, and the mention of constitutional privilege seems to him as the herald of riot and revolution. Like Dr. Johnson, he believes that the devil was the first Whig, and that all Whigs since the days of Lucifer are faithful disciples of the founder of their order. Reformers of every kind appear to him nothing better than rebels in disguise, and he, without hesitation, attributes to them purposes and objects so utterly opposed to truth or even probability, that his recklessness in assertion throws into shade the practised impudence of Rigby. The fact is that he views imperial politics with a colonial mind, and thus finds everything great elude his grasp, just as a large globe escapes from the tiny hand of an infant. Still these defects, while they injure the authority of his volumes, add greatly to their amusing qualities; his misstatements are so gross, and his mistakes so ludicrous, that many are disposed to regard him as a radical in disguise, resolved to amuse the world by ironical specimens of Tory falsifications. Few readers of Slick, however, care one straw about his politics; his sketches of social life, and his sarcastic comments on its various phases, make us forget everything else. Take for instance his philosophic essay on a barmaid's smile:—

"Look at that gall," said Mr. Slick, "ain't she a smasher? What a tall, well-made, handsome piece of furniture she is, ain't she? Look at her hair, ain't it neat? And her clothes fit so well, and are so nice, and her cap so white, and her complexion so clear, and she looks so good-natured, and smiles so sweet, it does one good to look at her. She is a whole team and a horse to spare, that gall,—that's a fact. I go and call for two or three glasses of brandy-cocktail more than I want every day, just for the sake of talking to her. She always says, 'What will you be pleased to have, sir?' 'Somethin'," says I, 'that I can't have,' lookin' at her pretty mouth about the wickedest; well, she laughs, for she knows what I mean; and says, 'P'raps you will have a glass of bitters, sir?' And she goes and gets it. Well, this goes on three or four times a day, every time the identical same tune, only with variations.

"About an hour afore you come in I was there agin. 'What will you be pleased to have, sir?' says she agin, laughin'. 'Somethin' I can't get,' says I, a laughin' too, and a smackin' of my lips and a lettin' off sparks from my eyes like a blacksmith's chimney. 'You can't tell that till you try,' says she; 'but you can have your bitters at any rate,' and she drew a glass and gave it to me. It taste so bad that, is it? Well, now she has seen you before, and knows you very well; go to her and see how nicely she will courtly, how pretty she will smile, and how lady-like she will say, 'How do you do, sir? I hope you are quite well, sir; have you just arrived?'—Here, chambermaid, show this gentleman to No. 200.—Sorry, sir, we are so full, but to-morrow we will move you into a better room.—Thomas, take up this gentleman's luggage; and then she'd courtly agin, and smile handsome. Don't that look well now? Do you want anything better nor that, eh? If you do, you are hard to please, that's all. But stop a bit, don't be in such an everlastin' almighty hurry; think afore you speak; go there agin—set her a smilin' once more, and look close. It's only skin deep—just on the surface, like a cat's paw on the water, it's nothin' but a ripple like, and no more; then look closer still and you will discern the colour of it.

"I see you laugh at the colour of a smile, but still watch and you'll see it. Look, now, don't you see the colour of the shilling there, it's white, and cold, and silvery, it's a bought smile, and a bought smile, like an artificial flower, has no sweetness in it. There is no natur—it's a cheat—it's a pretty cheat—it don't ryle you none, but still it's a cheat. It's like whipt cream; open your mouth wide, take it all in, and shut your lips down on it tight, and it's nothin'—it's only a mouthful of moonshine; yes, it's a pretty cheat, that's a fact. This ain't confined to the women nother. Petticoats have smiles and courtly, and the trousers bows and scrapes, and my-lords for you; there ain't no great difference that way; so send for the landlord. 'Lardner,' says you, 'Sir,' says he, and he makes you a cold, low, deep, formal bow, as much as to say, 'Speak, Lord, for thy earrest is a dog.' 'I want to go to church to-morrow,' says you; 'what church do you recommend?' Well, he eyes you all over, careful, afore he answers, so as not to back up a wrong tree. He sees you are from t'other side of the water; he guesses, therefore, you can't be a churchman, and must be a Radical; and then that calculate that way miss a figure as often as not, I can tell you. So he takes his cue to please you. 'St. Luke's, sir, is a fine church, and plenty of room, for there ain't no congregation; McNeil's church has no congregation, nother, in a manner; you can only call it a well-dressed mob,—but it has no room; for folks go there to hear politics.' 'Why, what is he?' says you. 'Oh, a churchman,' says he,

with a long face as if he was the devil. 'No,' says you, 'I don't mean that; but what is his politics?' 'Oh, sir, I am sorry to say, violent—' 'Yes; but what are they?' 'Oh,' says he, lookin' awful shocked, 'Tory, sir.' 'Oh, then,' says you, 'he's just the boy that will suit me, for I am Tory too, to the backbone.' Lardner seems whamble-cropt, scratches his head, looks as if he was delivered of a mistake, bows, and walks off, a sayin' to himself—'Well, if that don't pass, I swear; who'd a thought that cursed long-backed, long-necked, punkin-headed colonist was a churchman and a Tory? The ugly devil is worse than he looks, d—n him.'"

Sam Slick delivers some sound though bitter remarks on ladies' boarding-schools, which are suggestive of deep reflection to those who feel interested in the discharge of parental duties:—

"Now, these boardin'-schools for gals here is a hundred thousand times wuss than the nigger nurseries was. Mothers send their children here 'cause they are too lazy to tend 'em, or too ignorant to teach 'em themselves, or 'cause they want 'em out o' the way that they may go into company, and not be kept to home by kickin', squeelin', gabblin' brats; and what do they learn here? why, nothin' that they had ought to, and everything that they had ought not to. They don't love their parents, 'cause they haint got that care, and that fondlin', and protection, and that habit that breeds love. Love won't grow in cold ground, I can tell you. It must be sheltered from the frost, and protected from the storm, and watered with tears, and warmed with the heat of the heart, and the soil be kept free from weeds; and it must have support to lean on, and be tended with care day and night, or it pines, grows yaller, fades away, and dies. It's a tender plant is love, or else I don't know human natur, that's all. Well, the parents don't love them nother. Mothers can get weaned as well as babies. The same causes a most makes folks love their children, that makes their children love them. Who ever liked another man's flower-garden as well as his own? Did you ever see one that did, for I never did? He haint tended it, he haint watched its growth, he haint seed the flowers bud, unfold, and bloom. They haint growed up under his eye and hand, he haint attached to them, and don't care who plucks 'em.

"And then who can teach religion but a mother? religion is a thing of the affections. Lord! parsons may preach, and clerks may make 'sponses for ever, but they won't reach the little heart of a little child. All I got, I got from mother, for father was so almighty impatient; if I made the leastest mistake in the world in readin' the Bible, he used to fall to and swear like a trooper, and that spoiled all. Minister was always kind and gentle, but he was old, and old age seems so far off from a child, that it listens with awe, scary like, and runs away screamin' with delight as soon as it's over, and forgets all. Oh! it's an unnatural thing to tear a poor little gal away from home, and from all she knows and loves, and shove her into a house of strangers, and race off and leave her. Oh! what a sight of little chords it must stretch, so that they are never no good arterwards, or else snap 'em right short off. How it must harden the heart and tread down all the young sproutin' feelin's, so that they can never grow up and ripen."

The result of this system of education is very happily hit off:—

"A taste for dress—a taste for company—a taste for expense, and a taste for beaux was larnt to boardin'-school, and larnt so well it's never forgot. A taste for no housekeepin', for no domestic affairs, and for no nothin' good or useful, was larnt to boardin'-school too, and these two tastes bein' kind o' rudiments, never wear out and grow rusty.

"Well, when miss comes home, when old father and old marm go to lay down the law, she won't take it from 'em, and then 'there is the devil to pay and no pitch hot.' She has been away three years, maybe five, and has larnt 'the rights o' women,' and the duties of 'old fogeys' of fathers, and expects to be her own mistress, and their too. Obey, indeed! Why should she obey,—haint she come of age,—haint she been to a female seminary and got her education finished? It's a runnin' fight arter that; sometimes she's brought to, and sometimes, bein' a clipper, she gets to windward herself, and larfs at the chase. She don't answer signals no more, and why? all young ladies voted it a bore at 'the boardin'-school.'

"What a pretty wife that critter makes, don't she?—She never heard that husband and wives was made for each other, but only that husbands was made for wives.—She never heard that home meant anything but a house to see company in, or that a puss had any end to it but one, and that was for the hand to go in. Heavens and airth! the feller she catches will find her a man-trap, I know—and one, too, that will hold on like grim death to a dead nigger,—one that he can't lose the grip of, and can't pull out of, but that 's got him tight and fast for ever and ever. If the misfortunate wretch has any children, like their dear mawmaw, they in their turn are packed off to be educated and ruined,—to be finished and bedeviled, body and soul, to 'a boardin'-school.'"

Here is a new version of the oldest of all animal illustrations of human morality, "The Spider and the Fly":—

"The eye of a politician is like that of an old lawyer, a sort of spider-eye. Few things resembles each other more in natur' than an old cunning' lawyer and a spider. He weaves his web in a corner with no light behind him to show the thread of his net, but in the shade like, and then he waits in the dark-olice to receive visitors. A buzzin', burrin', thoughtless fly, thinkin' of nothin' but his beautiful wings and well-made legs, and rather near-sighted withal, comes stumblin' head over heels into the net. 'I beg your pardon,' says fly, 'I reely didn't see this net-work of yours; the weather is so foggy, and the streets so confounded dark—they ought to burn gas here all day. I am afraid I have done mischief.' 'Not at all,' says spider, bowin' most gallus purlike, 'I guess it's all my fault; I reckon I had ought to have hung a lamp out; but pray don't move or you may do damage. Allow me to assist you.' And then he ties one leg and then t'other, and furls up both his wings, and has him as fast as Gibraltar. 'Now,' says spider, 'my good friend (a phrase a feller always uses when he's a-goin' to be tricky), I am afeard you have hurt yourself a consider-

able sum; I must bleed you.' 'Bleed me,' says fly, 'excuse me, I am much obliged to you, I don't require it.' 'Oh, yes, you do, my dear friend,' he says; and he gets ready for the operation. 'If you dare to do that,' says fly, 'I'll knock you down, you scoundrel, and I'm a man that what I lay down I stand on.' 'You had better get up first, my good friend,' says spider, a laughin'. 'You must be bled; you must pay damages; and he bleeds him, and bleeds him, and bleeds him, till he gasps for breath, and feels faintin' come on. 'Let me go, my good feller,' says poor fly, 'and I will pay liberally.' 'Pay,' says spider; 'you miserable oncircumcised wretch, you have nothin' left to pay with; take that,' and he gives him the last dig, and fly is a gone coon—bled to death."

We have had some hundred guides to etiquette, good breeding, the art of polite conversation, and the proper course of behaviour, but never was there a teacher whose lectures on high life had half the merit of Sam Slick's:—

"I'll tell you now what I call general rules for society. First, it aint one man in a hundred knows any subject thorough, and if he does, it aint one time in a thousand he has an opportunity, or knows how to avail it. Secondly, a smatterin' is better nor deeper knowledge for society, for one is small talk, and the other is lecturin'. Thirdly, pretendin' to know, is half the time as good as knowin', if pretendin' is done by a man of the world cutely. Fourthly, if any crittur axes you if you have been here or there, or know this one or that one, or seen this sight, or t'other sight, always says yes, if you can without lyin', and then turn right short round to him, and say, 'What's your opinion on it? I should like to hear your views, for they are always so original.' That saves you makin' a fool of yourself by talking nonsense, for one thing, and when a room aint overly well furnished, it's best to keep the blinds down in a general way; and it tickles his vanity, and that's another thing. Most folks like the sound of their own voices better nor other people's, and every one thinks a good listener and a good laugh the pleasantest crittur in the world. Fifthly, lead where you know; when you don't, foller; but soft sawder always. Sixthly, never get cross in society, especially where the gals are, but bite in your breath, and swallow all down. When women is by, fend off with fun; when it's only men, give 'em a taste of your breed, delicately like, jist hintin' in a way they can't mistake, for a nod is as good as a wink to a blind horse. Oncet or twice here to London, I've had the rig run on me, and our great nation, among men till I couldn't stand it no longer. Well, what does I do,—why, instead of breakin' out into a uproarious passion, I jist work round, and work round, to turn the talk a little, so as to get a chance to give 'em a guess what sort of iron I'm made of, and how I'm tempered, by sayin' naterally and accidentally like, 'I was in Scotland the other day going from Kelso to Edinburgh'. There was a good many men folk on the top of the coach, and, as I didn't know one, I jist outs with a cigar, and begins to smoke away all to myself, for company like. Well, one feller began grumblin' and growlin' about smokin', how ongenteel it was, and what a nuisance it was, and so on, and all that, and more too, and then looked right straight at me, and said it hadn't ought to be allowed. Well, I jist took a squint round, and as I seed there was no women folk present—for if there had a been I'd a-thrown it right away in a minit—but as there warn't I jist smoked on, folded my arms, and said nothin'. At last the crittur, findin' others agreed with him, and that I didn't give lip, spunks up to me, bullyin' like, and says, 'What would you think sir,' says he, 'if I was to pull that cigar from your mouth, and throw it right down on the ground.' 'I'll tell you,' says I, quite cool, 'what I'd think, and that is, that it would be most particularly d—d odd if you didn't touch ground before the cigar. Try it,' says I, puttin' my head forward so he might take it, 'and I'll bet you five pounds you are off the coach before the cigar.' I gave the feller but one look, and that was wicked enough to kill the coon, and skin him too. It cut his comb, you may depend; he hauled in his horns, mumbled a leetle, and then sat as silent as a pine stump, and looked as small as if he was screwed into an augur hole.' Arter tellin' of this story, I jist add with a smile, 'Since the Judges have given out here they intend to hang for duellin', some folks think they can be rude; but it never troubles me. I'm a good-natured man, and always was. I never could carry malice till next day since I was born, so I punish on the spot.' A leetle anecdote like that, with a delicate elegant leetle hint to the end on't, stops impudence in a minit. Yes, that's a great rule, never get cross in society: it tante considered good breedin'."

Turn we now to a capital story, in Slick's best style narrated, to show the folly of boasting, and the danger of being one's own trumpeter. The hero of the tale is the late Duke of Kent, the father of her present Majesty:—

"Oncet upon a time he was travellin' on the Great Western road, and most of the rivers those days, had ferry-boats and no bridges. So his trumpeter was sent afore him to 'nounce his comin', with a great French horn, to the ferryman who lived on t'other side of the water. Well, his trumpeter was a Jarman, and didn't speak a word of English. Most all that family was very fond of Jarman, they settle them everywhere a'most. When he came to the ferry, the magistrates and nob, and big bugs of the county were all drawn up in state, waitin' for prince. In those days abusin' and insultin' a governor, kickin' up shindy in a province, and playin' the devil there, warnt no recommendation in Downin'-street. Colonists hadn't got their eyes open then, and at that time there was no school for the blind. It was Pullet Thompson taught them to read. Poor critturs! they didn't know no better then, so out they all goes to meet king's son, and pay their respects, and when Kissinkirk came to the bank, and they seed him all dressed in green, covered with gold lace, and splendoriferous cocked-hat on, with lace on it, and a great big, old-fashioned brass French horn, that was rubbed bright enough to put out eyes, a-hangin' over his shoulder, they took him for the prince, for they'd never seed nothin' half so fine afore. The bugle they took for gold, 'cause, in course, a prince wouldn't wear nothin' but gold, and they thought it was his huntin' horn—and his belin' alone they took for state, 'cause he was too big for any one to ride with. So they

all off hats at once to old Kissinkirk, the Jarman trumpeter. Lord, when he seed that, he was bunglungered!

"Thun sie ihren hut an du verdamnter thor," says he, which means, in English, 'Put on your hats, you cussed fools.' Well, they was fairly stumpet. They looked fust at him and bowed, and then at each other; and stared vacant; and then he says agin, 'Mynheers, damn!' for that was the only English word he knew, and then he stampet agin, and says over in Dutch once more to put on their hats; and then called over as many (crooked) Jarman oaths as would reach across the river if they were stretched out straight. 'What in natur is that?' says one: 'Why, high Dutch,' says an old man; 'I heard the Waldecker troops at the evakuation of New York speak it. Don't you know the king's father was a high Dutchman, from Brunswick; in course the prince can't speak English.' 'Well,' says the other, 'do you know what it means?' 'In course I do,' says Loyalist, 'and oh if some o' them boys couldn't lie, I don't know who could, that's all; by their own accounts it's a wonder how we ever got independence, for them fellers swore they won every battle that was fought,' in course I do,' says he, 'that is,' says he, 'I used to did to speak it at Long Island, but that's a long time ago. Yes, I understand a leetle,' says Loyalist. 'His royal highness' excellent majesty says, 'Man the ferry-boat, and let the magistrates row me over the ferry.—It is a beautiful language, is Dutch.' 'So it is,' says they, 'if one could only understand it,' and off they goes, and spreads out a great roll of homespun cloth for him to walk on, and then they form two lines for him to pass through to the boat. Lord! when he comes to the cloth he stops agin, and stamps like a jackass when the fies tease him, and gives the cloth a kick up, and wouldn't walk on it, and says in high Dutch, in a high Jarman voice too, 'You infarnal fools!—you stupid blockheads!—you cussed jackasses!' and a great deal more of them pretty words, and then walked on. 'Oh dear!' says they, 'only see how he kicks the cloth; that's cause it's homespun. Oh dear! but what does he say?' says they. Well, Loyalist felt stumpet; he knew some screw was loose with the prince by the way he shook his fist, but what he couldn't tell; but as he had begun to lie he had to go knee deep into it, and push on. 'He says, he hopes he may die this blessed minit if he won't tell his father, the old king, when he returns to home, how well you have behaved,' says he, 'and that it's a pity to soil such beautiful cloth.' 'Oh!' says they, 'was that it? we was afraid somethin' or another had gone wrong; come, let's give three cheers for the prince's most excellent majesty,' and they made the woods and the river ring agin. Oh, how mad Kissinkirk was! he expected the prince would tie him up and give him five hundred lashes for his impudence in representin' of him. Oh! he was ready to bust with rage and vexation. He darsn't strike any one, or he would have given 'em a slap with the horn in a moment, he was so wrath. So what does he do as they was holdin' the boat, but ups trumpet and blew a blast in the custos' ear, all of a sudden, that left him hard of hearin' on that side for a month; and he says in high Dutch, 'Tunder and blitzen! Take that, you old fool; I wish I could blow you into the river.' Well, they rowed him over the river, and then formed agin two lines, and Kissinkirk passed up between 'em as sulky as a bear; and then he put his hand in his pocket, and took out somethin', and held it out to custos, who dropt right down on his knee in a minit, and received it, and it was a fourpenny bit. Then

Kissinkirk waved his hand to them to be off quick stick, and muttered agin somethin' which Loyalist said was 'Go across agin and wait for my servants,' which they did. 'Oh!' says the magistrates to custos, as they was a-goin' back agin, 'how could you take pay, squire? How could you receive money from prince? Our county is disgraced for ever. You have made us feel as mean as Ingians.' 'I wouldn't have taken it if it had been worth anythin',' says custos, 'but didn't you see his delicacy; he knowed that too, as well as I did, so he offered me a fourpenny bit, as much as to say, You are above all pay, but accept the smallest thing possible, as a keepsake from king's son.' 'Those were his very words,' says Loyalist; 'I'll swear to 'em, the very identical ones.' 'I thought so,' says custos, looking big. 'I hope I know what is due to his majesty's royal highness, and what is due to me, also, as custos of this county.' And he drew himself up stately, and said nothin', and looked as wise as the owl who had been studyin' a speech for five years, and intended to speak it when he got it by heart. Jist then down comes prince and all his party, galloppin' like mad to the ferry, for he used to ride always as if old Nick was at his heels: jist like a streak of lightning.' So up goes the custos to prince, quite free and easy, without so much as touchin' his hat, or givin' him the time o' day. 'What the plague kept you so long?' says he; 'your master has been waitin' for you this half-hour. Come, bear a hand, the prince is all alone over there.' It was some time afore prince made out what he meant; but when he did, if he didn't let go it's a pity. He almost upstot the boat, he larfed so obstroperous. One equal o' larfin' was hardly over afore another come on. Oh, it was a tempestical time, you may depend; and when he'd got over one fit of it, he'd say, 'Only think of them takin' old Kissinkirk for me!' and he'd larf agin ready to split. Kissinkirk was frightened to death; he didn't know how prince would take it, or what he would do, for he was an awful strict officer; but when he seed him larf so he knowed all was right. Poor old Kissinkirk! the last time I seed him was to Windsor. He lived in a farmhouse there, on charity. He'd larnt a little English, though not much. It was him told me the story; and when he wound it up, he said, 'It tante always sho shake, Minister Slick, to be your own trumpeter; and I'll tell you what, minister, I am of the same opinion with the old bugler. It is not always safe to be one's own trumpeter, and that's a fact.'"

Slick's essay on friendship contains some very painful truths:—

"Oh! squire, I am 'most afraid sometimes there aint no slich thing as real friendship in the world. I am a good natured crittur, and always was, and would go to old Nick to serve a friend. Father used to say I was like a saw horse, my arms was always open; and I'd find in the end I'd be sawed up myself for my pains. Faith! if I'm in trouble or keeled up with sickness, every feller has an excuse: one's gold to marry a wife, another to buy a yoke of oxen, and a third says it will cost him sixpence. Doin' a man a favor is no way to make a friend: the moment you lay him under an obligation you've sold him."

An obligation is a horrid heavy thing to carry. As soon as he buckles it on and walks a little way he says, 'Well, this is a-most a devil of a heavy pack to carry; I'm o'en a-most tired to death. I'll sit down and rest;' so down he pops and laments his hard fortin. Then he ups and tries it again, and, arter joggin' on a space, says, 'Plague take the strap, how it cuts into the shoulder, don't it? I must stop agin and fix it.' Then he takes a fresh departure, and grumbles and growls as he goes on like a bear with a sore head, and says, 'Oh! my sakes, am I to carry this infarnal bundle all my life long? Why, it will kill me, it's so everlastin' almighty heavy, that's a fact. I must stop to drink, for I am 'nation thirsty.' Well, he slips it off, and lays down and takes a drink, and then gets up and stretches himself, and says, 'Well, I feel a great deal better, and lighter too, without that 'tarnal knapsack. I'll be shot if I'll take it up agin, see if I do; so there now!' and he jist gives it a kick into the brook and walks on without it, a free man, whistlin' as he goes that are old psalm tune, 'Oh! be joyful, all ye lands!'"

As this is announced to be the last of Slick's appearances, we shall give his concluding remarks on the English nation:—

"Well, I don't know," said the colonel, 'it is a great country in one sense, but then it aint in another. It might be great so far as riches go, but then in size it aint bigger than New York State arter all. It's nothin' a-most on the map. In fact, I doubt its bein' so rich as some folks brag on. Tell you what, 'wilful waste makes woful want.' There's a great many lazy, idle, extravagant women here, that's a fact. The park is chock full of 'em all the time, ridin' and gullivantin' about, tricked out in silks and satins a-doin' of nothin'. Every day in the week can't be thanksgivin' day, nor Independence day nother. 'All play and no work will soon fetch a noble to ninnence, and make bread timber short,' I know. Some on 'em ought to be kept to home, or else their homes must be had taken care of. Who the plague looks arter their helps when they are off frolickin'? Who does the preservin', or makes the pies and apple sarco and dough-nuts? Who does the spinnin', and cardin', and bleachin', or mends their husbands' shirts, or darns their stockin's? Tell you what, old Eve fell into mischief when she had nothin' to do; and I guess some o' them flauntin' birds, if they was follered and well watched, would be found a-scratchin' up other folks' gardens sometimes. If I had one on 'em I'd cut her wings and keep her inside her own pallin', I know. Every hen ought to be kept within hearin' of her own rooster, for fear of the foxes, that's a fact. Then look at the sarvants in gold lace, and broadcloth as fine as their master's; why, they never do nothin', but help make a show. They don't work, and they couldn't if they would, it would spile their clothes so. What on airth would be the valy of a thousand such critturs on a farm?—Lord! I'd like to stick a pitchfork in one o' them rascal's hands, and set him to load an ox cart—what a proper lookin' fool he'd be, wouldn't he? It can't last—it don't stand to reason and common sense. And then, arter all, they hunte got no indigin corn here, they can't raise it, nor punkin pies, nor quinces, nor silk-worms, nor nothin'. Then as to their farmin'—Lord! only look at five great elephant-lookin' beasts in one plough, with one great lummakin' feller to hold the handle, and another to carry the whip, and a boy to lead, whose boots has more iron on 'em than the horses' hoofs have, all crawlin' as if they was a goin' to a funeral. What sort of a way is that to do work? It makes me mad to look at 'em. If there is any airthly clumsy fashion of doin' a thing, that's the way they are sure to git here. They are a benighted, obstinate, bull-headed people, the English, that's a fact, and always was."

We do not feel called upon to discuss or expose the political errors of this work: most of them are put into the mouth of a Rev. Mr. Hopewell, whom every reader will pronounce one of the greatest bores ever introduced into a work of fiction. We are, however, disposed to pardon his proving impertinences for the sake of his companion, the inimitable clockmaker; and we trust, in spite of the author's protestation, that we may have an opportunity of meeting Sam again.

THE HARE AND THE PEASANT.—Although many of the pure-minded who offer license at Exeter Hall may not be conscious of the fact, it is, nevertheless, most true that John Bull has his idols; to the which with most smotherous faces he is ever and anon sacrificin' men, women, and babes. John, with a look of plying disgust, talks of the superstitions of the past and of the present; he laments the darkness of the heathen who have their sacred apes, their consecrated crocodiles. Nay, John does more than this. John unbuttons his pocket, and pays men to build ships, that truth and wisdom may be carried to idolaters. He enlists missionaries—he sends forth the hopeful and strong-hearted to wither beneath a pestilential climate, so that, even withering, they may be ministrant of civilization to the savages. And all the while—simple John—that he is paying for and labourin' in these good works—he has his own pet idols—his own baboons and alligators—with his "bold peasantry," as their constant victims. Alas! ere John shall again count up these abominations of the heathen, let him calculate the number of men, with their wives and families, sacrificed at every quarter session to the idols of the landlord—to his hares, his pheasants, and his partridges!—Punch.—[Our witty contemporary appends these pungent remarks to one of those graphic sketches by Leech for which he is so distinguished. It almost equals in power and pathos "The House of the Black Burner." The peasant victim kneeling bound at the foot of an altar raised to and surrounded by the tiny quadruped; the noble executioner wielding not the sword of justice but "according to law," while his fellow peers look on in grim approval; the Union Work-house in the background, towards which the peasant's wife and children are seen wandring their way, and the vivid glare of the burning ricks, speak impressively to the eye and the heart of the beholder, and teach a lesson not soon to be forgotten.]

AGRICULTURE.

GAME-LAW OPPRESSION.

THE MODERN FOREST LAWS.

It is neither by a forced nor a fancied analogy that we designate the game law by that once well-known and abhorred term, the "forest law." The forest laws were introduced by the Normans, who were passionately addicted to sports of the field and the forest, and were the abiding cause of some of the most grievous tyrannies of the feudal ages. From the feudal aristocracy the taste for game-preserving has descended to our present landowners. But the Normans had far greater excuse for their game preserves than can be adduced by the landed aristocracy of this day. The former found two-thirds of the land of England in morass and forest, so that, with a few flagrant exceptions, they did not destroy human food, and keep the land half cultivated for the sake of their game; while the latter are trying to uphold, in the midst of a cultivated and peopled country, the sports and pastimes incident to a wilderness. The one might have retarded the growth of national civilization, the other would cast it back for centuries. In Reeves's "History of the English Law," the likeness between the modern game laws and the old forest laws, as well as the greater oppressiveness of the former, are thus referred to:—

"While these restrictions were imposed by the old forest law, a sort of new forest law began to show itself, which, since the enlargement it has received in later times, is endured with a little acquiescence as the old, being calculated, like that, to promote the pleasures of the great by restricting those of the lower orders of society. This new system is, perhaps, attended with particular circumstances of aggravation; for, whereas the old law was for the protection of the King's diversions, and was local, this is in favour of all lords and great landholders, and extends to every spot of ground in the kingdom: so that, coming more nearly home to the observation of men, it is more generally felt, though indeed less severely, than the forest law."

Until we had occasion to point out the game laws and game-preserves as important obstacles to improved cultivation, and as forming a principal cause of the alarm with which farmers at one time regarded the competition of foreign grain, the evil attracted but little share of public attention. Here and there a local journalist has pointed out from time to time some of the grosser cases of game-law oppression; but so habituated have the English public become to the prosecution of poachers by squires and landed magnates, that few persons troubled themselves to examine the law under which those prosecutions took place. Now the case is altogether altered. Inquiry has satisfied every one, not being a game-preserver, that we are living under a system of law, that we are subject to a rural forest-code, which is perfectly atrocious. Landowners who advocate the Corn Laws deliberately tell the farmers that they cannot grow corn in open competition with the rest of the cultivators of Europe, and at the same time those very landowners uphold a barbarous game law which is a main bar to productive farming. They say the British consumers shall eat no corn but that grown at home, and yet they annually cause a positive destruction of many millions of quarters for the sake of a few days of selfish and irrational amusement. They affect to mourn over the moral degradation and physical destitution of the agricultural labourers, while their own game preserves are greatly instrumental in creating crime and decreasing employment in the rural districts. Wherever game is preserved large farming produce cannot exist; for, first, the green and root crops which ought to furnish the manure for the grain crops are destroyed; and, next, the grain crops themselves are so seriously injured as to make all the difference between a good and a bad return. No one can be long in the company of farmers without hearing such incidental references to the damage done by game—damage so common as to be too often deemed inevitable—as we heard the other day in a railway carriage. A party of farmers, apparently neighbours, were conversing on local and rural topics, when one observing to another, that he must have had a good crop of wheat on a particular field, received this response—"No, I had not; it would have been a good one but for the plaguy hares and rabbits; one-third of the crop at least was destroyed by them." This was received as a very natural explanation—just as a blight or a flood might have been mentioned,—and the conversation went off to other subjects. Game-preserving, therefore, causes a low rate of produce. If the rents are to be high with low produce, prices must be kept up; and thus the passion for game offers a direct inducement to landlords to uphold a Corn Law to aggravate the scarcity their sports have occasioned. The moment farmers have completely shaken off the delusion that prices can by law be kept permanently high, they will soon make their landlords understand that they cannot have both game and rent—that they must choose the one or the other.

And in the examination which the game laws are now undergoing every day brings out secondary evil consequences. For instance, the discrepancy into which the administration of justice (!) by the county

magistrates has fallen is mainly caused by the game laws, and the way in which they are administered. So much is this the case that, when, at the late Buckinghamshire sessions, it was proposed by Dr. Lee "that lists of convictions, names of prisoners, crimes, amount of punishment, and the name of the committing magistrate be published every quarter in the usual calendar," the proposition was resisted by Mr. Raymond Barker, on the ground that "it would be invidious to publish the names of the committing magistrates."

Imagine a set of judges afraid or ashamed to publish to the world the sentences which they have inflicted upon the peasantry of the country!!! Now, it is chiefly in game-law cases, or cases which have a game-offence aspect, such as where poor people are caught trespassing in woods, nutting, and so forth, that English justices inflict sentences they dare not avow in the face of the world.

Some change, however, in this system will certainly take place, for, besides the intimation from the "Home-office," the subject has been mooted in the magistrates' chamber at quarter sessions in two of our most game-law-ridden counties, Buckinghamshire and Bedfordshire. In the former county Sir Harry Verney, whose efforts in the same way we have before mentioned, moved that a memorial setting forth the injury caused by game to the rate-payers and other inhabitants of the county should be presented to the Government; and in Bedfordshire Mr. T. A. Green proposed "that all expenses incurred in the prosecution and conviction of poachers should be defrayed by the parties prosecuting." Of course both propositions were rejected by the game-preserving squires of the respective counties; but the statements made by these gentlemen, themselves landed proprietors and magistrates—statements not attempted to be contradicted—will go forth to the public, and give a fresh impulse to the already strong feeling of just indignation, which has been aroused against the game laws. We have given some extracts from the proceedings in both counties in another column, as well as some new examples of game-law justice. Not that the propositions either of Sir Harry Verney or Mr. Green meet the necessities of the case, for the game law, like the Corn Law, is an unmitigated wrong—an evil not to be qualified, but abated. No reform of the game laws can be of any use; the amendment of them is impossible—they must be totally and for ever abolished. This will become strikingly obvious when the speech of Lord Charles Russell, in Bedfordshire, when defending the game laws, is perused.

MORE GAME-LAW FACTS FOR THE HOME OFFICE.

In pursuance of a notice given at the Midsummer quarter sessions, Sir Harry Verney, at the late Buckinghamshire sessions, called upon the magistrates of that county to memorialise the Government on the subject of the evils caused by the game laws. To ask a body of the chief offenders against public morals—the poacher-prosecuting squirearchy of Bucks—to plead guilty was certainly a bold proceeding; but while Sir Harry carefully abstained from giving personal offence, he, in an excellent speech, fully laid bare the mischiefs of the system. He said the magistrates

"Composed the body by which these laws were administered, and who had not only intrusted to them the management and control of the county funds, but were the class to whom the agriculturists generally looked for protection. If the game laws were found to be injurious to the agricultural interest, they would all feel bound to assist in removing the grievance. Was it right that the preservers of game should gratify their fancy at the expense of the rate-payers? All were interested in this question, as all were injured by the operation of the game laws—the rate-payers by the increase of expenditure, and the occupiers of land by the injury and destruction of crops occasioned by game, which were never compensated for. Some occupiers were especially injured by the game preserves. Those who held land in districts where game was in great abundance, and where, consequently, the temptation to poaching was so great as not to be resisted, had especial reason to complain of the operation of the game laws. He had been informed, on good authority, that the destruction occasioned by game amounted to at least one-fourth of the whole crop. (A Voice: 'In Bucks?') Yes, there were districts in this county in which one-fourth of the crops was consumed by game. Nor was this all of which the farmer had to complain; for, besides this serious loss, he had the increased county rates to pay, and to keep the poacher's wife and family in the union poorhouse while he lay in gaol. The farmers, in fact, were made to pay towards the preservation of that they most wished to see wholly destroyed."

This is perfectly true; and that after they have gone to all the expenses necessary to raise a full crop, and paid rent upon the expectation of receiving all the land will yield. And the farmers are not the only sufferers. Sir H. Verney truly said:—

"The degraded condition of the agricultural labourer was partly to be attributed to the game laws, and was a subject to which public attention had been so far directed that scarcely a public meeting could be held at which it was not referred to. Any system which rendered our rural population criminal, must be highly injurious to the best interests of society. Any law which could be shown to have that tendency, they (the magistrates) were bound to attempt a removal of. That the game laws had had that mischievous effect, few would attempt to deny. The

number of commitments under the game laws, great as they were, did not show the whole extent of the moral mischief occasioned by those laws, for the returns could not include those criminals who were made so by the game laws. And he (Sir H. Verney) believed that the number of criminals made by the game laws far exceeded the number of those made criminals by any other."

Game preserves make criminals in two ways: first, by causing inferior cultivation, they increase the destitution of the rural labourers; and, secondly, the game itself offers a ready and tempting resource to the starving peasantry. Nor can all the multitudinous laws for the protection of game by which our statute book is disgraced render that criminal in the eyes of the community which seems to be man's natural right; namely, to chase the wild creatures of the earth. Sir Harry confirmed this view, saying:—

"Among other evils of the game laws, it may be mentioned that it is not the worst members of the community who take to poaching. The lower orders do not consider it a crime to destroy game, and cannot be brought to look upon hares and pheasants as property in the same sense as sheep and poultry are property. Many a poor man thinks no worse of himself, nor is thought any worse of by his neighbours, for taking a head of game,—who would shrink with horror at the idea of stealing the smallest article of real property. Whatever laws may now be passed, those only would be respected and observed whose justice and reasonableness were apparent. He had said that they were not the worst characters who took to poaching, but he had not said that they would not soon become the worst and most dangerous of characters to the community. Many a man who did fair to be one of the most valuable members of society had become a scourge to society by the operation of the game laws. One of their effects was that the labourer became inured to danger and obtained a relish for it. They thus persisted in their lawless course, and were committed to prison again and again, until they became thoroughly acquainted with all the worst of the bad characters, came out of the prison accomplished rogues, and such as the country were glad to get rid of. There were many who a few years ago could be looked upon as the best and most honest of labourers who could only be regarded now as the most depraved of characters, and this solely through their being unable to resist the temptation to kill game."

That the game laws form the trap by which the country labourer is insensibly led into crime, no one acquainted with rural districts will venture seriously to deny. And it seems that in Buckinghamshire, "out of 559 prisoners in the goal, 169 were there for offences against the game laws;" and we have no doubt that if inquiry were made, it would be found that it was as poachers full one half of the rest were first initiated into the horrors and dangers of a gaol. Sir Harry also alluded to the fact, shown by the parliamentary return, that there are 4500 prisoners in England for game-law offences. And well did he add:—

"What an awful amount of moral depravity do these details show! And this was the system which was kept up merely as a source of amusement for the wealthy classes. The magistrates were anxious, no doubt, for more than the temporal good of the poor; they care not only for the moral but for the spiritual benefit also of the labourer, and they felt their responsibility to God as well as to man. They ought, therefore, to endeavour a removal of this grievance."

When will country squires understand that they are invested with a judicial authority for something more than the protection of their own amusements; and that a deep responsibility rests upon them as rural magistrates? At present there is a fearful balance against them on the debtor side of their account with the community. Sir Harry Verney then urged this prudential argument on his brother magistrates:—

"The present opportunity was too good a one to be lost. It was a very bad policy to leave an evil to grow to such a head that it was impossible any longer to postpone the remedy. It was much better to give now what would be considered a boon which in a little time they would be compelled to yield as a right. And from no other body could the attempt to remove this evil better originate than from them, the magistrates in quarter sessions assembled."

And he concluded by proposing a memorial to the Government in accordance with his speech.

Dr. Lee, in seconding the motion, well said:—

"These laws were a remnant of the tyranny and barbarity of the feudal system. The game laws were opposed to the peace and well-being of society in its present refined and civilized state, and alike inimical to public opinion and to common sense. As the benefits of the game laws were confined to a few individuals, and administered only to their luxury and selfish amusements, the welfare of society is sacrificed for their gratification, and the laws are deservedly unpopular. Dr. Lee then proceeded to argue that the game laws should be wholly repealed, being unsuitable to his enlightened age, and opposed to the interests of the labourer, the farmer, the tradesman, the mechanic, and the agriculturist; that wild animals, *feræ naturæ*, should no longer be protected by law for the amusement and selfish gratification of noblemen and a few country squires and clergy."

He also said that the law of trespass would give an ample protection to game. Not a single magistrate offered a word in opposition to these statements, and the question had been actually put by the chairman before any game-preserver made a remark. Then, however, Mr. George Pigott, who, the reader may remember, betrayed a sordid what confused notion of property, on the occasion of the former discussion, by avowing his inability to distinguish between the landlord's interest in his game and in his pigs and poultry, rose, and said that he thought the motion injudicious:—

"One effect of the motion was, to set the members of their own class in a bad position with regard to society

generally, and that course was, to say the least of it, a very injudicious one. He (Mr. Pigott) was a humble individual, and what was said of him he cared not for. He had risen to oppose Sir H. Verney's motion at the last quarter session, and had since found what he had said to be misrepresented, and himself held up in the LEAGUE as a defender of the game laws, an oppressor of the poor, and he did not know what beside. Now, he was one who would be glad to know that there was not a hare or a pheasant within twenty miles of his residence. He was as anxious as Sir H. Verney could be to put an end to the grievances occasioned by the game laws; and, like that honourable baronet, always convicted under these laws against his own feelings."

The quarter sessions was not the proper place for the agitation of such a question. On referring to the advertisement by which the magistrates were called together, he found

"That they were summoned to take into consideration the business relating to the assessment, application, and management of the county stock or rate, and other county business, pursuant to an act of Parliament. Ought such a motion as this to be put down on their notice paper? If so, where were they to stop?"

These fallacies were shortly and simply answered by Dr. Lee and Sir Harry Verney, who showed that the game laws very largely and unnecessarily increased the county rate. Mr. Pigott's speech, however, so different in tone and temper to that he made at the last sessions, shows that, notwithstanding all the noise and blustering of the squires, they must and do succumb to public opinion when fairly brought to bear upon them.

But the answer which Mr. Raymond Barker made, after the time for reflection afforded him by Mr. Pigott's speech, was the most curious and characteristic. He said:—

"Buckinghamshire was not the county in which most convictions took place under the game laws; for while there had been but 119 in this county, there had been in Wiltshire, during the same period, 197. Nor were the convictions most frequent in the neighbourhood of large preserves; on the contrary, the parliamentary return showed that most of the convictions were from those parishes in which the preserves were of the smallest extent."

This is rich. Verily there is nothing like letting a squire argue his own case. The game laws do no harm in Buckinghamshire because they do more harm in Wiltshire! Such is the logic of the class who affect to make laws to regulate the trade of the most commercial nation in the world. But Mr. Barker did not stop there, for he took up Mr. Pigott's cast-off idea of comparing the landlords' right to game with his property in domestic animals. He said:—

"When the game was entirely destroyed, what would be the next object? There had been no return of the number of hen-roosts robbed, nor of the other attacks on the farmer's property. When game was done away with, he supposed they would then attempt to do away with the farmer's property in his poultry."

Excellent Squire Barker! Such brilliant reasoning could only be met with in the nursery and—at quarter sessions.

"On the motion being put, five hands were held up for it, and a whole forest of hands against it. The five gentlemen who supported the motion were—Sir Harry Verney, Dr. Lee, W. Rickford, Esq., the Rev. J. Harrison, and the Rev. J. Baines."

In the Bedfordshire quarter sessions very similar arguments were used by Mr. Green in support of his proposal, that the prosecutors of poachers should bear all the expenses incident to their conviction, which now fall upon the county ratepayers.

Mr. Higgins admitted the injury done to the morals of the poor by the game laws, and that "it was an anomaly that those who preserved game should administer the game laws." Here the principal opponent of the proposal was Lord Charles Russell,—the Duke of Bedford is said to be an inveterate game-preserver,—and his lordship's argument only went to show that the game laws do not inflict all the evils wherewith they are charged. Possibly that may be so; but they do so much mischief that the sufferers may very fairly be excused for attributing to them some fraction of wrong more than strict accuracy might justify. He said:—

"Had Mr. Green brought forward his proposition, as announced, viz., that prosecutors in game cases should pay all the expenses of conveyance, maintenance of prisoners, &c., he (Lord Charles) should have been prepared to have met it with a direct negative, on the ground that, though the justices were bound to protect the pockets of the ratepayers, they were more so to guard the morals of the poorer classes; and he was persuaded, from having watched the practice of the game laws during the last nine years, that a certain quantity of game well watched was productive of far less evil than a smaller quantity not looked after. This he was prepared to prove by facts."

This, if it proves anything, is an argument against the game laws; for it shows that those who choose to apply their land to the nurture of game rather than in producing grain and cattle, can, if they like to incur the expense of watching, effectually prevent depredations upon their preserves. This they could do just as well without game laws as with them, and therefore, as far as honest game-preservers are concerned, no forest code is required. The simple law of trespass would protect them. Their cordon of gamekeepers could quietly turn back the poachers and drive in the game. Though such preserves would be evils, especially under the artificial scarcities occasioned by the Corn Laws, they would be but of limited extent; for the honest preservers are few. Landowners love game much, yet they love

rent more; and the object of the game laws is, by means of penal severities, to avoid the expense of "watching the game." Lord Charles, then, is a witness against the game laws. But his aristocratic mind thinks it necessary "that some laws respecting game must exist, and none could, he thought, be more simple and rational in principle than the present laws." Indeed; upon that issue we would not advise Lord Charles Russell and his fellow game-preservers to "go to the country." And he thus explains his conception of the "principle of the game laws":—

"They proceed on the principle, that those who occupy land should have the quiet possession of it. In ordinary cases, there being no strong inducement to trespass, an action at law is a sufficient protection; but, as game affords a stronger inducement to trespassers, it is necessary that there should be a readier way of punishing them. With respect to the evils ascribed to the game laws, the principal were these:—the demoralization of the poor—the great consumption by game of what ought to be the food of man—and the diminution of the amount paid for labour, by placing difficulties in the way of the due cultivation of the soil by not growing green and root crops. Now, with respect to the first of these, he believed there was much exaggeration on the subject; with regard to the two latter, he fully admitted them, but did not think them by any means necessary consequences of the game laws, but proceeding from want of moderation in the landlords availing themselves of them."

This may be lordly reasoning, but it is most illogical. Let those who would keep game watch it; let them drive their game into a place of security as they do their pigs—we wonder no enterprising Young Englishish landowner has thought of re-establishing a preserve of wild hogs—geese, and turkeys, and then a simple law to prevent trespass will protect these wild animals as much as they can be protected. Why should there be game laws for hares and partridges running whithersoever they list, more than for blackbirds and tomits? There might be as much sport in shooting small birds as in game-shooting. The ruder progenitors of our landed magnates would have probably looked with contempt at any game less than boars or deer; but civilization has compelled the modern feudal lord to content himself with pheasants, hares, partridges, and such small fry; but why should he not also progress with the age, and now that it has become obvious that it is inconsistent with good husbandry to preserve any wild animals so large as hares and pheasants, take rifle-shooting at skylarks, swallows, and starlings?

CLERICAL DUTIES.—If the clergy would come forward as one man from Cumberland to Cornwall, exhorting peaceableness on the one side, and justice on the other, denouncing the high rents and the game laws, and the carelessness that keeps the poor ignorant, and then wonders that they are brutal, I verily believe that they might yet save themselves and the state.—*The late Dr. Arnold.*

A NOBLE EXAMPLE FOR GAME PRESERVERS.—We have much pleasure in recording the following anecdote of the Earl of Burlington, which was communicated to us the other day, at the annual meeting of the North Lonsdale Agricultural Association, of which his lordship is president. The noble earl had an extensive game preserve in the very heart of Furness, watered by a well-stocked trout stream. In spite of the vigilance of the keepers, both were frequently poached, and the depredators, on more than one occasion, taken into custody, and dealt with according to law. Satisfied at length that the temptation of knocking a hare or partridge on the head, or "ticking" a trout, was too great to be withstood by the generality of the rural population, and finding also that the game committed serious ravages among the growing crops of his tenants, his lordship wisely abolished the preserve, and repealed the union between his keepers and the trout stream, thus closing up to a great extent two fertile sources of demoralization. We would say to every game-preserver, from John O'Grout's to the Land's-end, "Go thou and do likewise."—*Lancaster Guardian.*

TO THE OXFORDSHIRE ASSOCIATION FOR THE PROTECTION OF AGRICULTURE.—My Lords and Gentlemen,—I see, by an advertisement in the *Oxford Journal*, that your annual general meeting will be held on Saturday next. Taking you at your word, I presume you meet and are associated to protect the agricultural interests, and many thanks to you for that same; but how are they to be protected? My Lord Norreys will readily vote for legislative protection, if so ordered by Peel; and equally against it, if Peel thinks fit to propose the repeal of the Corn Laws, as in the opinion of many he would long since have done but for the clamours of the League, and to save the appearance of being driven by that body. The majority of county members are represented in Lord Norreys; but, whether I am right or wrong in the opinion I assign to him and them, we all know very well that, whatever our wishes are, the Corn Laws cannot be much longer maintained. What protection, then, will you give the yeomanry when the Corn Laws are no more? I can tell you what will satisfy us, nay, more, that will repay all the loss we can sustain by repeal of the Corn Laws. My lords and gentlemen, obtain for us the repeal of the game laws, save us the expense of maintaining the poacher (or, as is too frequently the case, the honest labourer who has omitted to touch his hat to the gamekeeper) in the county gaol, and his wife and family in the union workhouse; let us grow corn for the markets, and not subject us to the annoyance of seeing our crops devoured by worthless hares, rabbits, and pheasants. This, if you will do, you will be hailed as the true protectors of agriculture, and moreover you will gain, in lieu of a little amusement, the satisfaction of doing away with that source of heart-burning that is setting the labourer against the gamekeeper, the tenant against his landlord, the clergyman against his parishioners, and, in fine, is fast producing against the higher classes in the rural districts such a fearful recoil as I shudder to contemplate, and such as they, in their carpeted saloons, may perhaps most erroneously deem to be impossible.—I remain, my Lords and Gentlemen, your obedient servant, AN OXFORDSHIRE FARMHOLDER.—October 22, 1844.—*Oxford Chronicle.*

NOTICES TO CORRESPONDENTS.

"Anonymous, from Sheffield."—The LEAGUE has ever shown itself the true friend of the farmer: it pointed out to them that the so-called system of protection was a cunningly-devised fraud to hide from them the nature of the thralldom in which they were held, and the unfair conditions imposed upon them as tenants. It was the LEAGUE that first pointed out the necessity of leases, that showed the evils inflicted for the preservation of game, and the injury arising from a system of legislation designed solely for the maintenance of rents. These principles were first decided, then denounced, and at length, from very shame, adopted by the monopolists. Nor is this the only lesson that the oligarchy of land have learned from the LEAGUE. They have begun to recognize the distress of the agricultural labourers, which they had long denied, and even affect to show sympathy for their condition, after having denounced all such commiseration as something little short of treason.

"D. L."—We should be glad to see a copy of the work to which he refers.

"A Leaguer of London."—The allotment system has no earthly connexion with the question of Free Trade, and we do not feel called upon to discuss its real or supposed advantages. The price of land must always be fixed by competition in open market. So far as a landlord from deservng blame for accepting the highest rent offered, that he would act unjustly if he gave preference to the lower tender, unless there were special circumstances to warrant such favour. Every competitor for a farm has a right to say, "My money is as good as another man's." Instead, then, of blaming the individual landlord for obtaining as high a rate of rent as he can obtain, we should blame and endeavour to alter the system which invests land with a fictitious value, and, by restricting the field for the profitable employment of capital and industry, throws both upon the land, and thus increases the market price by producing a demand disproportionate to the supply. As some illustration of this state of things we insert part of a letter from a Norwich correspondent, describing the condition of an agricultural district in the vicinity of that city:—"On the subject of rents it is difficult to obtain information, apparently from the jealousy and the extent of competition now existing amongst farmers for land, approaching, I presume, in some degree, to that state of things exhibited in Ireland,—farmers' sons becoming labourers, yet seeking farms on which to enter without capital. From collateral circumstances, however, I have been induced to believe that rents here are high—about 25s. per acre; the nearest market town of any importance being upwards of sixteen miles distant from the respective farms. Almost all cultivators, however, complain, and are perfectly dissatisfied with things 'as they are.' Some, being disappointed probably, and not knowing the cause of their distress, are afraid of change of any kind, lest it should be from bad to worse: they would not object to Free Trade if they could be assured that it would not make their condition worse than it is, or derange existing agricultural relations. Others profess themselves to be as good Free-Traders as Bright is, but they dare not avow themselves as such. I had hoped to have furnished you with the name of a young farmer who, I doubt not, would have readily assented to having his name divulged as a Free-Trader; but I find he has recently emigrated to America. He was the oldest and cleverest son of one of those old-fashioned yeomen just alluded to, whose more enlightened views (I presume) not exactly agreeing with those of his antiquated sire, had not produced that unanimity which was deplorable, consequently he 'hived' off. The circumstances of the old man, I think (if I am not mistaken as to causes), illustrate the manner in which many of the same class come to be similarly situated. During 'the war' he saved sufficient property to purchase the farm upon which he now lives; but he has never accommodated himself to the times, but still persists in the same system of unskillful and mismanagement; and now, instead of advancing in the world, seems to be going back; his son seems to have seen this, hence, doubtless his emigration. I am informed that many families purpose leaving this neighbourhood for America during the course of next summer, where, I trust, they will meet with better fare and better encouragement. This district, I think, will be the most perfect portion of what a clever writer in the LEAGUE, in his classification of localities, calls the 'kale-pot district.'"

"K. A." proposal may speak for itself:—"This being naturally a poor country—for we do not grow even a cabbage on our soil for exportation, and can only be rich by importation, which must be paid for by the products of industry and labour—it seems to me odd that we should have a National Board of Trade, composed of noblemen, gentlemen, one lawyer, one archbishop, and one bishop, the history of which board consists of struggling to prevent importation. Now, suppose the counter-face of having merchants, manufacturers, and tradesmen to compose a National Board of Agriculture."

"A Subscriber" writes:—"I have just seen a letter, by the last packet, from my brother-in-law, who resides at Hamilton, in Upper Canada, in which he states that the wheat crop has been very abundant, and is well got in, so that it is a thing at 3s. sterling per bushel, just the amount of the Canadian labourer's day's wages. If the agricultural labourers were placed in the same circumstances by their friends who protect them, then they would have a bushel of wheat, or, in hard cash, a little more than 3s. a day."

"One who dare not give his Name."—Some of the rhymes are defective.

"W. R."—We have not seen the publications to which he refers.

"H."—The matter is under consideration.

"A Mechanic."—We are obliged by the hint, but think that the author is too sanguine in his hopes.

"A Free-Trader from Smithfield."—When we can find room.

"W. T., on the last Corn Monopoly."—We could not insert his very able paper without opening the way for discussions liable to be misunderstood, and sure to be misrepresented, as tending to lower the character of persons and things deservedly held in reverence.

"J. C." sends the following instance of the injury produced by the game laws, with vouchers of its accuracy:—

"Concerning a short time since, with a relative of mine, who holds a farm near Sevenoaks, in Kent, on the subject of game laws, &c., he informed me that, having occasion to pass an eight-acre meadow of his, he counted sixty-three hares and rabbits in it; and when it was mowed, although he paid 28s. rent, besides the person's title, he got less than 35s. worth of produce. The adjoining three-acre field he last spring sowed with wheat, which he said realized but nine bushels in the whole, owing, of course, to the ravages of those destructive vermin."

"W. B." is thanked.

"A sincere Advocate."—We have not the materials for making the calculations he desires.

"An Irish Leaguer."—The statistical information he requires has been already published in Dublin.

"Free and Unfettered Trade."—We shall comply with his request as soon as we receive the returns.

"R. O. C."—We shall take an early opportunity of discussing the subject.

"Ernest."—The verses have great merit, but they contain some passages in the sentiments of which we cannot concur.

"Fire-side."—The passage has been already quoted.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the LEAGUE forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadsby, Newall's-buildings, Manchester; and the LEAGUE may be had by order of

any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

POSTSCRIPT.

LONDON, Saturday Morning, November 2, 1844.

A very important article has appeared in "Fraser's Magazine" for the present month, to which we hasten to direct attention, reserving a more complete examination of its statements for next week. It discusses in a manly and philosophic spirit the relations between the landlords and the labouring classes, and contrasts them with the relations between the manufacturers and the operatives. The writer pays a just but tardy tribute of praise to the honourable exertions made by millowners and manufacturers to secure the physical comforts and moral elevation of their workpeople; and it shows the result in the increasing conviction, both of masters and men, that they have common interests, and that the advancement of the one class is essentially connected with the progress of the other. On the other hand, it is shown that destitution has broken the spirit of the agricultural labourer, and that, as a necessary consequence, his habits of cheerfulness and order have forsaken him. The game laws have made the peasant a poacher; game-preserving squires and parsons treat him as a felon; his heart is festored in prison, his moral principles corrupted by contact with guilt; his family, deprived of his exertions for their support, sink into depravity or despair; the very bonds of society are loosened, until, as a peasant has energetically stated it, "the poor man sees an enemy in every one who has a decent coat on his back." From the first formation of the League our attention has been painfully directed to the condition of the agricultural labourers; their wretchedness was denied, their misery was declared to be a fiction, and all inquiry into their condition was obstinately refused. But, while men were thus perversely blind to the circumstances around them, the wretchedness went on increasing in a fearful ratio, and the facts that gave undeniable evidence of such misery assumed a most alarming and appalling character. The public journals of the empire could not abstain from comment on the terrible facts daily recorded in their columns; the distress was not only recognised, but efforts were made to investigate its nature and its extent. Still to the LEAGUE is due the merit not merely of having first opened the painful truth of the condition of the agricultural labourers to public sympathy and public investigation, but also the merit of having steadily advocated the claims of labourers of every description to "a fair day's wages for a fair day's work." In the cause of humanity and justice we recognise no distinction of parties; we hail with satisfaction the appearance of such a fellow-labourer as the author of the article in "Fraser," even though he may differ from us on many points of minor importance. He has with us recognised the great truth, that the English labourer wants not charity but justice; and, when such a truth is once fixed on the public mind, the advent of justice cannot be long delayed.

EPITOME OF NEWS.

FOREIGN.

FRANCE.—The Paris journals of Sunday contain accounts from Algeria of the 20th, of an affair between a division of French troops and the Kabyles, in which the former had a heavy loss. According to some accounts the French had 70 killed and 170 wounded, amongst whom were 17 officers; other accounts state the number at from 20 to 30 killed and 130 wounded. The French had 1500 men engaged with 7000 to 8000 Kabyles. The loss on the side of the latter is given at about 600. The *Marseilles* journals state that Marshal Bugeaud was to set out on the 22nd with all his disposable force, for the purpose of acting vigorously against the Kabyles.

The *Moniteur Parisien* has the following:—"Nothing can prevent the women from gambling at the Stock Exchange. They were first excluded from the hall, next from the galleries, and afterwards from the portico. Now they have taken refuge under the lime-trees on the right and left of the Palace of Plutus. There courteous and discreet chevaliers come and acquaint them with the fluctuations of the funds, receive their orders to buy or sell, and, in short, affairs take their accustomed train."

The *Journal de Certe* (a small report in the south of France) gives an account of a terrible calamity which befel that place on Tuesday, the 22nd Oct. About four o'clock in the afternoon, a thunderbolt burst over the town, and produced such awful effects that it is described as resembling a place which had undergone all the horrors of a siege. The Royal Arsenal, a large building, was entirely destroyed—even the walls not being left standing. The zinc roof of the building was carried into the air, and broken into thousands of pieces, which fell in different parts of the town, where they did a great deal of injury. Several other large buildings were also destroyed. At the same time, a storm prevailed in the harbour which wrecked and sunk six or seven merchant vessels, besides a great number of fishing and other boats. The number of persons who perished is calculated at about thirty, but the exact number was not known, and numbers were still missing whose fate was uncertain. A great number besides are severely wounded from the falling of houses, and even at the time when the accounts came away the people were afraid of a renewal of the disasters, as the storm was not yet over.

The *Paris Globe*, which is supposed to be the organ of Guizot, has published an article entirely approving of the projected change of the Spanish Constitution. The language of the *Globe* is, however, different from that of the *Débat*, which is also an organ of the French Government.

SPAIN.—It appears from the Madrid papers that there is a general apprehension of a revolution in Spain for the purpose of re-establishing the power of Espartero; and a powerful force of infantry and cavalry was being concentrated round Madrid, to be in readiness to repress any outbreak which might be attempted. News of a subsequent date is of a more tranquillizing character; General Narvaez had taken every precaution against any popular outbreak, consequent upon the proposed innovations on the constitution. The *Heraldo* of the 21st Oct. states that the Government had received undoubted information of an extensive conspiracy in Catalonia; but says that the whole plan has been defeated by the energy of the authorities. A private letter says that the Government has not been menaced merely in Catalonia, but also in del Castilla, and that it has been found necessary to send off a large body of troops to that quarter. There is no doubt of the intention of the majority of the deputies to pass the new bill, but the Government does not appear to be at all confident as to the state of the country generally. Were a single leader of note to show himself, half Spain would again be in revolution.

Madrid papers of the 21st state that the Ministry has yielded to the force of public opinion so far as to allow a clause to be inserted in the "reformed" Constitution to prevent the Queen from contracting a marriage with any person who is excluded by the laws from the succession to the throne.

PRUSSIA.—We read in a letter from Berlin of the 21st: "The King has just granted permission to M. Gneist, one of the professors of the Royal University of Berlin, to open a course of lectures on the nature and operation of trial by jury. This measure has given great satisfaction to the public, as it looks like the announcement of an intention to introduce, at no distant period, into western Prussia the institution of the jury, which exists in our Rhenish provinces."

A royal ordinance in Bavaria has again reduced the price of beer in the royal breweries, and thus once more contrived to calm the public mind, which was already in a state of considerable effervescence.

SARDINIA.—The King of Sardinia has published an ordinance abolishing all the privileges and restrictions of trades in his states, and declaring that every man is now free to exercise his calling without control from any of the various bodies whose consent was hitherto necessary.

RUSSIA.—Accounts from St. Petersburg mention the great progress making daily by steam navigation in the Russian empire. The Baltic fleet numbers 17 steamers; the Black Sea possesses 13, and 5 for the service of the ports; on the Caspian Sea there are 4. There are likewise steam-boats on the Neva, the Wolchow, the Duna, the Dnieper, the Lake of Peipus, and the Kama. Even in Siberia there exists a steamer, upon Lake Baikal.

CONSTANTINOPLE, October 9.—In the night of the 2nd of this month, Pera, which has so often suffered by fire, was again visited by a great conflagration. The fire broke out in the quarters built of wood, and spread with great rapidity towards the north-west, and was not got down till it had raged for eight hours; the great street of Pera owing its safety chiefly to the long stone wall of the building belonging to the Russian Legation. The lowest estimate makes the number of houses reduced to ashes 200, the highest 400. We need not wonder at the difference, the streets and lanes, with few exceptions, being without names, and all the houses without numbers. According to other letters, the fire which destroyed the handsomest and richest houses in Pera was wilfully caused by the Turks.

Another correspondent of the 10th ult. has the following:—"Mehemet Ali has consulted the Porte upon the subject of the treaty with England for the passage of the Indian mail; and the answer received was, that everything in such an arrangement was left to his own judgment and prudence."

THE UNITED STATES.—The British and North American Royal mail steam-ship *Caledonia*, Captain Lott, arrived at Liverpool on Wednesday, from Boston and Halifax, from which ports she sailed on the 16th and 18th ult. She brought a large number of passengers. The dates of the arrivals by this arrival are:—New York, 16th; Montreal and Washington, 12th; Toronto, 11th; and Boston and Halifax, 16th and 18th ult. All interest and attention were centered in the fast approaching Presidential election. In New Jersey the Whigs had gained a decided victory, having carried the election for a Governor by a majority of 1400, and secured, on a joint ballot of both branches of the Legislature, a majority of 29, whereas last year they were in a minority of 18. In Ohio, too, where, in 1842, the Democratic candidate had a majority of 3443, they have been successful. In Pennsylvania, however, the opposing party was in the ascendant, with a majority for Governor of about 4000.

No violence had been used by the inhabitants of Hancock county, Illinois, towards the Mormons, and Governor Ford had disbanded such of the troops as had answered his call.

The *New York Herald* mentions an important decision which has recently been given in Boston, that a slave can only serve on board a United States national vessel while that vessel is within the slave limits of that country, and that the moment the vessel passes without those limits he can claim his discharge.

A true bill had been found in Baltimore against the Rev. C. T. Torrey, charged with enticing away slaves.

Pensacola, in the United States, had been the scene of a destructive fire. Thirty-five buildings, comprising half of one of the principal squares, had been destroyed.

CANADA.—A serious riot is reported to have taken place in Quebec on the occasion of an Irish procession in honour of the liberation of O'Connell. Some parties having refused to illuminate their dwellings were attacked, they fired from the windows, and several of the assailants were wounded.

The Governor-General of Canada has presented £100 in aid of the funds of the Montreal Temperance Society.

The dates from Rio Janeiro are two days in advance of those which came direct by the preceding Government packet. The *Journal de Commerce* contains an account of a rupture between the commander of the British brig of war *Alert*, Captain Bonanquet, and Captain Dumas, of the *brig Cyrus*, of New Orleans. It appears that, when

lying off Calinda, on the coast of Africa, the British captain came alongside of the *Cyrus*, and, suspecting her to be a slaver, demanded to see the brig's papers. This the American captain refused to do, and at length the box, or chest, containing them was broken open, and the documents were examined by the captain of the English vessel, he of the suspected brig protesting against the proceeding in loud and indignant terms. It is added that, after the British captain had left the *Cyrus*, she was sold to the Portuguese, and immediately filled with slaves.

INDIA.—By the *Hindustan*, which left Calcutta on the 18th of September, we have news from that presidency to that date; and from China to the 29th of July. The country at that period of the year being usually quiet, the intelligence brought by this arrival is not of much interest. The excitement occasioned by the recall and the departure of Lord Ellenborough has subsided. The subscription for the testimonial to him is going on increasing. The state of the Punjab is, at the present moment, on the whole satisfactory as regards its relations with the British Government. Much indignation has been excited in Calcutta by an attack on Major Wood, principal aide-de-camp to the Governor-General, who, while taking his evening ride, and returning after a while by the road near the hospital gate of the fort, was fired at by one of two men whom he had observed watching him. He immediately felt himself somewhat stunned, but managed to keep his seat. On his reaching Government-house he found himself bleeding from a graze on or near the temple, and that the ball had passed through his hat. He was, however, doing well. The men have been taken, and prove to be artillerymen from Dum-Dum.—In Scinde there has been again some fighting with the Beloochees, and the advantage was with Captain Mackenzie and the English.—Advices from Cabul mention that an engagement had taken place on the 2nd of August, between Ackbar Khan and Auddool Sumund, in which the former came off the victor.

CHINA.—From the Chinese papers we learn that disturbances had again taken place at Canton. The English last year repaired the walls of the Company's garden, which had been broken down at the fire in 1842. They put on a gate, and were in the habit of walking, playing at quoits, and otherwise amusing themselves. On the 15th of July the Chinese endeavoured to force themselves into the garden, but were opposed. Upon this they threw brickbats, and broke down the gate, compelling the Englishmen to take refuge in a boat, in which they made their escape to the consulate. On the following evening a party of Chinese went armed with brickbats, and attempted to take possession of the other garden. Resistance being offered, they commenced an indiscriminate attack upon all the foreigners who came within their reach. Several American gentlemen immediately armed themselves, and drove them from the front of the factories. Still continuing to throw brickbats, they were fired upon, and one man killed and another wounded in the arm, which ended the affair for the day. The English and American consuls applied to the Chinese authorities for a sufficient force to protect the factories, and a message was sent to the American man of war at the Bogue, to request assistance. Intelligence of the 21st informs us that no further rioting had taken place, nor was any likely to occur at present, though it was quite certain that the authorities at Canton were either unable or unwilling to adopt measures sufficiently vigorous to check the riotous disposition of the community.

DOMESTIC.

A public meeting, for the purpose of promoting the establishment of a sailors' home, registry, and savings' bank in Liverpool, was held in that town on Friday week. There was a very numerous attendance of the leading merchants, shipowners, and others interested in the welfare of seamen. The mayor occupied the chair; and resolutions in accordance with the objects of the meeting were moved and seconded by Mr. A. Hodgson, Mr. Rush-ton, Mr. Aiken, Mr. W. Potter, the Rev. H. M'Nelle, Mr. Wm. Rathborne, Mr. Duncan Gibb, Mr. W. Brown and others, and unanimously agreed to. Many details were given, showing the frightful evils to which sailors were exposed in the port for want of a home where they might be safe from the vicious characters by whom they were beset and frequently plundered of all their earnings. Mr. Aiken stated that the corporation had given the land, and, before he entered the meeting, he found that twenty gentlemen had put down their names for £100 each, several for £50, one of whom signed "B. C.," and others for smaller amounts. The establishment of such an institution at the present time, and the liberal sums already subscribed to promote it, may be regarded as another indication of the prosperous state of trade.

The shipments of potatoes from the Isle of Man have commenced, and large cargoes are leaving that island for Liverpool.

A curious system of plunder has been disclosed at the Mansion-house. Several tradesmen have recently received orders for goods, with halves of notes enclosed. The orders having been executed, the other halves were not forthcoming, and on inquiry at the banks, it was discovered that the halves of the notes had been stolen.

Mr. H. Cope, jun., solicitor to the Metropolitan Anti-Bridge-Toll Association, has presented to the Lords of the Treasury a memorial from 10,000 merchants, manufacturers, and householders of the western and central districts of the metropolis, being one of several containing upwards of 200,000 signatures, already presented, for the free passage of Waterloo, Southwark, and Vauxhall bridges, as a paramount measure of metropolis improvement, by the commutation of the burdensome imposts thereon.

Mr. William G. Thompson, who had been reporter to the *Newcastle Courant* for upwards of twenty years, committed suicide on Monday last, at the Literary and Philosophical Institution, Gateshead. It would appear that the deceased had fallen into habits of dissipation, and on occasion of the recent dinner to Mr. Hunt, M.P., he rendered himself incapable of copying out his notes, which led to his dismissal. This preyed upon his mind, and may have aided in leading him to the commission of the dreadful act.

The Irish repealers met on Monday at Conciliation-hall. The attendance was small, and the proceedings unimportant. The rent for the week was £475. 15s. 6d. The *Kilmarnock Herald* reports an extraordinary double suicide which, happened in that town on Wednesday night week. The parties, a lady and gentleman, names unknown, had been residing in one of the inns for several

days previously, living together as man and wife. On the day of the night in question they paid their bill, and about five o'clock told their landlady they were going to take a walk, and would probably be late, as they wished to view some of the scenery in the neighbourhood by moonlight. They never returned; but the following morning the son of a labourer, named Hogarth, who was with him at the time, both proceeding to their work, discovered, on the east bank of the river Irvine, a lady's parasol stuck in the ground, supporting a man's hat, over which was thrown a lady's dark veil. Soon after, the bodies of the lady and gentleman were found at about ten yards' distance from the parasol, lying in shallow water. They were fastened arm to arm by two pocket handkerchiefs—a white cambric and a red silk—the gentleman's left arm to the lady's right. Both must have aided in the tying of the handkerchiefs, which were very strongly and securely knotted. Fastened inside the crown of the gentleman's hat was a ticket, evidently freshly written, bearing the words, "H. J. Atkinson, Esq., King-street, Cheapside, London;" but this is supposed to be a feigned name, as on some articles found in his portmanteau the name "G. Whittingham" was found. The gentleman appeared to be about 35; the lady, who seemed to bear a strong resemblance to him, about 50. They must have deliberately walked into the water and laid themselves down side by side without a struggle.

The Duke of Buckingham is increasing allotments of land. He has recently signified his intention of causing about 15 acres of now very unproductive land at Kingswood, called "Grub's Wood," to be let out in small portions to working men.—*Aylesbury News*.

The Great Britain steam-ship was last week released from her long imprisonment. She is at present in the Cumberland Basin, Bristol, undergoing a few repairs, after the completion of which it is intended that she shall make one or two trial trips, and then proceed to London.

A very serious accident happened on Monday afternoon at the Exchange, during the period of her Majesty's presence there. It appears that one of the men who had the care of the flags on the roof of the edifice lost his balance, and fell headlong through two skylights, alighting on one of the staircases. His injuries were so severe that it was at first thought that he was killed on the spot; but on his being removed to St. Bartholomew's Hospital it was found that he was still alive, although in a condition which leaves little hope of his recovery.

We have every reason to apprehend that, owing to the advanced state of all agricultural work in East Sussex, which the fine settled weather has favoured, there will during the coming winter months be a very diminished demand for labour, and consequently that much distress will fall upon the peasantry.—*Brighton Guardian*.

The Board of Trade have issued a circular to railway companies condemnatory of the practice of running trains with several engines, and recommending the division of "monster trains" into several sections, to each of which not more than two engines should be attached.

The total number of deaths in the metropolis during the week ending Saturday, Oct. 26, was 935; previous week, 985; average for five autumns, 990.

We have heard it mentioned as a positive fact, that an American gentleman of the most unblemished character was refused admission into one of the largest clubs in London, on the sole ground that he belonged to a republic that did not fulfil its engagements. All possible pains were taken to convince the gentleman that there was not the slightest personal objection to his admission, and that his own reputation was such that the club would have had the greatest pleasure in receiving him had he belonged to a more creditable government.—*Times*.

On Wednesday afternoon a soldier, named Sullivan, met his death at Chatham from suffocation caused by foul air, resulting from an explosion of gunpowder in a mine at the above place, where a sham siege has been carrying on for some days between two parties of Sappers and Miners. Two other soldiers nearly shared the same fate, but were rescued in time to restore them to animation.

A meeting of the friends of civil and religious liberty was held at the Three Tuns, Aldgate, on Tuesday evening, when it was resolved—"That, for the purpose of testifying the high respect entertained by the electors of the Ward of Portsoken for David Salomons, Esq., a testimonial be presented to that gentleman."

The subscription to relieve Father Mathew from his pecuniary difficulties is, we are happy to say, rapidly increasing. Mr. O'Connell has written to Mr. James Haughton, of Dublin, promising his cordial co-operation in support of this praiseworthy object.

MISCELLANEOUS.

EFFECTS OF GOOD TRADE IN BURNLEY.—Any one visiting Burnley with his eyes open, and a mind observant of what is passing, would immediately decide that this place will not be the last to profit by Free Trade. A revived trade has produced a spirit of activity and enterprise, no where surpassed for the size of the town. Buildings, to give employment to the labouring classes, are rapidly rising on every hand. There are three new factories in a state of great forwardness, with two or three loom-sheds, and other erections. The people are realizing once more the blessings of a bettered trade. And if Free Trade means increased and extended trade, with a prospect of continuance far beyond what we dare hope for under present circumstances, every man of common sense, and who can profit by experience, will recommend the monopolist to keep his mouth closed, or turn a deaf ear to him when he opens it in favour of restrictions.—*Preston Guardian*.

COMMERCIAL AND MANUFACTURING.—There is not a doubt that England would long ago have sunk into the wretched state that Ireland now is, but for the growth of commercial and manufacturing enterprise among our people. The landlords, fools that they are, have done everything to crush manufactures; and yet these alone, by absorbing the surplus population of the country, have saved them from the revolutions which swept over France and the Continent, breaking up the landed monopoly of the old feudal aristocracy. But the danger is again accumulating; manufactures being restrained by monopolizing laws, the population will now accumulate on the land, where they must either starve, or become reduced to the potato-eating, small-farming system of the Irish people; or unite their efforts with the population of the towns, to break down the great landed monopoly. Small allotments, indeed! These will never remove the evil, but will rather feed and encourage it. The people must look deeper; they must think; and we doubt not

that they will, in due course of time, make many notable discoveries.—*Leeds Times*.

BETTER LATE THAN NEVER—AN EXAMPLE WORTH FOLLOWING.—At the annual dinner of the Kerry Farming Society, holden on the 16th inst., in Tralee, the following wholesome piece of advice was given to the landed interest of Ireland by one of the most practical landed proprietors in the county Kerry. On the following toast being given from the chair, "The health of the Marquis of Lansdowne, Lord Listowel, and Henry Arthur Herbert, Esq.," Mr. Herbert returned thanks and said—"You cannot improve the land without serving the landlord, while the tenant is also benefited. Thus both landlord and tenant have a mutual interest in its improvement. However, the tenant cannot improve unless he has land at a fair rent, and can reap the fruit of his labour. This is a subject on which one may dilate considerably, but I will confine myself to this, that the tenant should have a certainty of the benefit of his improvements. (Cheers.) That is one thing that ought to be looked to and seriously considered by landed proprietors, as no landlord ought to expect a tenant to expend on improvements without allowing him to enjoy their benefits. (Cheers.) I would wish to be understood on this subject. The landlord should act like a father: 'train up a child in the way he should go.' I say, every tenant who had a prospect of improvement should come to his landlord for a guarantee that the fruits of such improvement would be secured to him; should the landlord object he would afford a cause of complaint, and would be standing in his own light were he to refuse it."—*Cork Examiner*, Oct. 21.

CONDITION OF THE PEOPLE QUESTION.—The political world is in a state of profound repose. The great Whig and Tory leaders are as dumb as newly-pensioned patriots; and their subordinates, knowing little or nothing of the ground upon which the battle for power is to be fought in the next session of Parliament, are prudently silent. The truth is, that the League and Young England have diverted the current of public opinion into quite new channels. Mr. Cobden has converted all the landlords of England into agricultural lecturers; and Mr. Disraeli has turned the heads of the agricultural labourers with visions of allotments, woodbine-wreathed cottages, chubby children, and village cricket grounds. The only question now that excites the shadow of interest is the condition-of-the-people-of-England question. The war for forms has ended, and the struggle is now for realities. Men sternly ask why the poor are unemployed, and why, instead of fertilizing the soil by their labour, they are driven into towns to hide their misery and to engender disease? They begin to inquire how it is that in Surrey, Sussex, and Bucks, and several other agricultural counties of England, the peasantry are less cared for than pheasants; and inquiries of this description are very apt to beget an irreverence for our game-preserving aristocracy. But no matter for that. The inquiry will lead to much practical good. It is something to have the truth told; and to see earnest-minded men, of every class and of every grade in society, determined to drag forth the monster grievance—to rend asunder the veil which has so long hidden poverty, and want, and squalor, and wretchedness from the fastidious eyes of luxurious and bloated affluence. Many of the landlords are themselves astounded at the amount of misery recently disclosed, and are praiseworthy exerting themselves to redress the wrongs resulting from their previous guilty supineness.—*Hull Advertiser*.

GOOD MASTERS AND FAITHFUL SERVANTS.—We have been favoured by some of the workmen at Messrs. Gaunt and Thompson's woollen mill, Horsforth, commonly called Clough Mill, with a list of the men now employed there, by which it appears that, out of the total number, thirty-three have been upwards of forty years; three upwards of thirty; seven upwards of twenty; twelve upwards of ten; two upwards of eight years; and the remaining three for the periods of seven, five, and one year respectively, making an average of nearly twenty years each; and we are requested to insert this statement as a manifestation of the gratitude they owe to two kind and humane masters.—*Leeds Times*.

PRINCE ALBERT'S ANNUAL SALE OF LIVE STOCK.—The sale of his Royal Highness's live stock, selected from the Norfolk and Flemish Farms in the Great Park, and also from the Home Park at Windsor, took place on Thursday, the 24th ult., under the superintendence of Mr. Tebbott, at the Norfolk Farm, and attracted, as upon the three former occasions, a great number of salcemen and butchers from London and the adjacent towns. The sheep, which were in excellent condition, realized the following prices:—213 Southdown ewes averaged from 25s. 6d. to 33s.; 160 Southdown two-tooth wethers from 22s. to 25s. The cattle sold as follows:—20 Scotch pole four-years old bullocks, fit for slaughter, averaged from £12 to £17 each; 29 highly-bred Welsh bullocks, from £11. 15s. to £13. 5s.; and 13 short-horned barren cows, from £10 to £17 each. Several Hereford oxen, Alderney cows, cart-horses, &c., realized very excellent prices. The proceeds of the sale amounted to upwards of £1400.

COST OF WAR.—The military and naval establishments of France are a charge upon the revenue of THIRTEEN MILLIONS of money, while her expenditure for the last five years ending in 1839 exceeded her income by about two millions per annum. This charge stands relatively to her whole revenue as 13 to 40, or as nearly one-third of the whole outlay of the state. The charge for the British army, navy, and ordnance (exclusive of the Canadian, China, and Indian expenses) amounted to something more than FOURTEEN MILLIONS EIGHT HUNDRED THOUSAND pounds, the entire gross expenditure being about FIVE FIVE MILLIONS AND A HALF in 1842. The expenditure exceeded the income of the country by upwards of FOUR MILLIONS. And all this outlay is extorted from the people's earnings, under the pretext of necessary defence!—a necessity which, if it exist at all, proceeds from the distrust which drives both countries to this worse than useless waste of money, and perils the life which might be employed in the production of wealth and happiness, but for this false direction of what may prove, as it has so often and so long proved, the destruction of life, wealth, and happiness! These things cannot be too frequently, too strongly, too pointedly submitted to the knowledge and reflection of the two nations. Both should be made fully to comprehend that one-third of the burdens for which they toil so hard and suffer so severely is expended in this fruitless display of the pomp and circumstance of war—fruitless, indeed, to any other purpose than to inflame the vanity and support the evil pas-

sions which plunge nations into the madness of mutual slaughter and devastation, under the degrading and delusive semblances of vengeance or of glory!! And this, too, amongst nations professing and calling themselves CHRISTIAN!—*Norwich Mercury*.

GUANO.—We understand some valuable information may shortly be expected on the guano subject. A vessel, on her return voyage from Bombay, has been ordered to scour the western coast of Africa from the Red Sea to the Cape, passing Latham's Island, and proceeding through the Mozambique Channel in search of the deposits of the boobies, the seals, and the jackass penguins,—precious savings-bank deposits which are to be drawn on at sight. We heartily wish the vessel a valuable discovery. Another such an island as Ichabos would be worth half a million of sterling gold coin.—*Liverpool Albion*.

AN AMERICAN ON REPUDIATION.—Dr. Durbin, an American traveller, says on this subject:—"In all former conflicts the liberal party in Europe have stood manfully in our defence; but now their mouths are stopped. I am clearly of opinion, that the cause of liberal opinions in Europe has been put back twenty years, if not fifty, by the non-payment of the debts of the defaulting American states. The whole country suffers for the guilt of the few. It is not Pennsylvania alone that is disgraced, but the United States of America."

PROVE ALL THINGS.—Above all, be afraid of teaching nothing: it is vain now to say that questions of religion and politics are above the understanding of the poorer classes; so they may be, but they are not above their own understanding, and they will think and talk about them, so that they had best be taught to think and talk rightly.—*Dr. Arnold*.

INCREASE OF ELECTORS.—To the Editor of the *Morning Chronicle*.—Sir, I have the pleasure to inform you that, through the exertions of that supposed defunct body the Anti-Corn-Law League and the Registration Society for the south side of the ward of Farringdon-without, the parishioners were enabled, at the making of the quarter's poor-rate this day, in public vestry, for the parish of St. Bride, to place upon the poor-rate book, in preparation for the next year's registration, 205 additional names. This number on the present list of voters is only 332. This is another "great fact" in addition to the important facts which were laid before the Manchester *renewed* meeting. Perhaps you will invite your readers to furnish you with similar facts for publication. I remain, Sir, your constant reader, CHARLES WOOD, Popplin's-court, Fleet-street, Oct. 31.

THE STEAM WHISTLE.—To prevent the explosion of steam-bollers, which generally results from a want of sufficient water, a new and simple method has been devised, and introduced into one of the largest manufacturing establishments in Leeds. By affixing a small pipe in communication with the interior of the boiler at the point below which it is well known to be unsafe to allow the water to be consumed in the generation of steam, and at the top of such tube putting one of the common whistles that are attached to the railway locomotive engines, a very efficient alarm, is formed; for as soon as the water within the boiler has been consumed below the point where the pipe enters the boiler, the steam will rush up the pipe, and thence into the whistle, giving a timely warning of the deficiency of water in the boiler.

YIELD OF CROPS IN SOUTH WALES.—We have not had so good a harvest for years. Our wheat this harvest reaches 64lbs. a bushel, which we believe is about the average weight in Essex, and the best wheat-growing counties in England.—*Walesman*.

GOOD NEWS.—A fortnight has passed over our heads, and we have not heard of any incendiary fire in the neighbourhood. It is hoped that many more fortnights may glide away without meeting with paragraphs in every paper announcing "Incendiary Fire;" for the operations of "Captain Swing" have lately been so very extensive in this neighbourhood, that he could long since have been dispensed with altogether.—*Hury Farmers' Journal*.

AN EXAMPLE WORTHY OF IMITATION.—On Wednesday evening, an excellent supper of roast beef and plum pudding was given at the Thornhill's Arms, Rastrick, by William Eddison Esq., to upwards of 70 of the work-people in the employ of Messrs. J. T. Clay and Co., on the occasion of his becoming a partner in the establishment. After the cloth was drawn the worthy chairman, Mr. Eddison, gave several loyal toasts, amongst which was the Queen, Prince Albert, and the rest of the royal family. On the health of the chairman being drunk with rapturous applause, he returned thanks in a short but excellent speech, in which he dwelt upon the necessity there was of master and workman uniting together, which he thought would have a tendency to germinate good feelings and love amongst each other. The remainder of the evening was spent in the most harmonious manner, interspersed with dancing, glee singing, and recitations, which were kept up till an early hour in the morning, all being highly gratified with the evening's entertainment.—*Sheffield paper*.

Absentee landlords receiving out of Kerry rent to the amount of £65,000 per annum, do not contribute one shilling to the agricultural society of that county.—*Cork Examiner*.

INCENDIARISM IN BEDFORDSHIRE.—A fire broke out on Sunday night in the neighbourhood of Croufield, which created much alarm, the resident farmers and labourers being roused from their beds. The flames were discovered in a barn on the farm of Mr. John Hall, of Whorley-end. The building was detached from the stack-yard, or the entire homestead must have been consumed, as there was a smart wind, and no water could be had. The produce of eleven acres of wheat, beside a quantity of beans, were destroyed. From the isolated position of the barn, and the fire having broken out full twenty-four hours after any person having entered it, there can be no doubt that it was the act of an incendiary, though at present no suspicion is attached to any person in particular.

INCENDIARY FIRMS IN THE EAST RIDING OF YORKSHIRE.—We regret to state that two incendiary fires have occurred in this neighbourhood during the last few days. The first was on Thursday morning, last week, when four corn stacks, belonging to Mr. Richard Horne, of Wold Farm, near North Newbald, together with a thrashing-machine, were destroyed. The other occurred on Saturday night, when some person maliciously set fire to a wheat stack on the farm of Mr. Thomas Robinson, of Ellerker, near South Cave. A very handsome reward has been offered for the offender.—*Hull paper*.

COTTON SPINNING IN AUSTRIA.

(From the *Manchester Times*.)

Our friend, Mr. R. Bunting, has received a letter, dated the 2nd of October, from a relative who has the management of a large cotton-spinning establishment in the neighbourhood of Vienna. We are kindly permitted to publish its startling contents:—

"I cannot conceive how it is that you have suffered a Tory to be elected for South Lancashire; it is really a shame that that division of England, which is principally supported by manufacturing industry, should be represented by a monopolist. When the subject is viewed in a rational manner, it is astonishing that men of understanding should be so blind to their own and their children's interest as to vote for a determined enemy to manufactures. What has raised England to her present height in the rank of kingdoms? Her corn? No. Her agricultural interests? No. What then? Why, her manufactures. It is a common saying, 'that we should praise the bridge that carries us safe over'; but the electors of South Lancashire are undermining its foundations. What do you think the general opinion here is concerning England? Do you think they will say, 'England is famed for her corn, potatoes, her wine? No. They will tell you, they are superior to England except in manufactures. England has her coal, her ships, her iron, her waterfalls, her men of genius in mechanics, and her temperate climate. So long as your Corn Law exists, you play into the hands of foreigners, and, to support them a few years longer, you have given us a facility to undermine your manufactures. The time will shortly come when Austria will want no cotton goods from England, but will meet you in the Continental markets with as good a yarn as yours, and much cheaper. What was cotton-spinning here a few years ago? We had old machinery, producing very little, at an enormous price, making much waste, and only inferior yarns. The weavers were prejudiced in favour of English yarns, even at a high price; the manufacturers were languid, adopting no improvements in their machinery, while the English, with rapid strides, were conquering us in every market against a high protective duty. If you had repealed your Corn Laws, you might have maintained your superiority; but, instead of doing so, you have suffered the exportation of machinery; you have given us a formidable weapon to fight you with, and before long, with your machinery, we will extirpate your Corn Laws, or ruin your trade, for it will be impossible for you to meet us in a foreign market. Previous to the 1st of September we had a protective duty of 30s. for every 123 lbs. of cotton yarns; now it is 25s., and on the 1st of February, 1851, it will be reduced to 20s. You may ask, how is it that the Austrian Government do not protect their manufacturers with a high duty? They find that the weavers are paying more than is necessary for their yarns, owing to this protective duty; and my opinion is, that protective duties are licenses for idleness, which I will show you. The spinners here, with their 30s. duty, were not content, believing that more duty meant more profits; but the weavers who bought this yarn thought otherwise: they considered it a tax paid to the rich spinners, and prevailed on the Government to try a less duty. They have done so, and it has compelled the spinners to awake from their lethargy, believing that 20 per cent. of this duty taken from them in six months was only a forerunner to another reduction. I find of this reduction lessening the profits of the spinners; it will increase them. They have pulled down no wages, nor have they increased the working hours; but they purchase new machinery from France, Belgium, Switzerland, and England (they begin here to make machinery in earnest), and with this machinery they are doing well, or should do. Since the exportation of machinery from England, the prices have fallen 25 per cent. in the French and Swiss prices. The Government are making a railway from Vienna to Trieste, and another to connect Vienna with Dresden, so as to lessen the price of freight, which is a great tax on manufacturing industry. I will show the relative positions between England and Austria. In Austria machines cost 30 per cent. more than in England, but labour is 50 per cent. cheaper, for overlookers have 15s. per week, strippers and grinders 6s. 6d., rovers and throstle spinners 4s., mule spinners 2s. per 1000 hanks No. 40 twist. In England you have 60 hours per week; here are 88 hours per week labour. Now, I know what can be spun in England, and can I not do it here? We have the same sort of cotton which you have; we have the same machinery which you have; we have splendid waterfalls; we have as good water-wheels and gearing as you have; we can run as quick as you can; we make our mills of the temperature as you do. Now, I ask you, what hinders me from meeting you in a free market without duty? Look at our advantages over you, and tell me our disadvantage. Stand we not better than you do? I expect you will say you are not in England. I tell you with truth, cotton-spinning can be made here profitable without protective duty, and, before another year is past, Hungary and Greece, which at this present time do not possess a single cotton manufactory, will begin to spin, and who knows what effect this will have on English yarns? In Hungary every sort of entablis is 25 per cent. cheaper than with us, and we are 50 per cent. cheaper than England. In Austria 105 lbs. English of the best wheat costs 4s. 6d.; 12 lbs. of the best super flour for 1s. 2d.; 1 lb. of beef for 2d.; mutton 2d.; potatoes 10d. per 100 lbs., or 2d. per score. In foreign produce—we pay for good lump sugar 74d. coffee 1s., rice 24d. per lb., English weights. The Austrian Government, by lowering the duty, have really conferred a blessing on the manufacturers. So long as it was high, no man considered improvements necessary, and kept on the old way; now a new spirit is come amongst them; they have begun to seek improvements, and by so doing they will in the end require no protection. The flax-spinning has begun to flourish, and they have a very trifling duty, merely to pay examination; but they have begun right, with good machinery, and on the best principle. In conclusion, I must candidly say, I have very little time for writing; we have great improvements in our works; we are putting up two water-wheels, each of 80 horse power, and new gearing, besides a very great quantity of new English machinery. I begin to feel the effects on my constitution; only consider, we spin three sorts of cotton, eight sorts of yarn, and about 240 different numbers.

"P.S. I have just heard that the kingdom of Romania intends to join the German Zollverein! It is a feather for the Austrian Government, previous to a general declaration.—We are all glad to hear of the 'Great Dan' being set at liberty."

CHEAP FOOD—HIGH WAGES.—The following letter from "An Operative" is confirmatory of the doctrine that cheap food and increased wages go hand-in-hand:—

"About three years since, I very well recollect being at a lecture on the Corn Laws, when a working man got up in opposition to the lecturer, and showed, as I thought very plainly, that if food were cheaper, wages would fall, and the masters would reap the advantage. At that time my wife was paying 1s. 10d. a dozen for meal, and 2s. 7d. a dozen for flour, and my wages as a mechanic were 16s. a week. At this time I am receiving 20s. a week for the same work, and my wife is paying 1s. 6d. a dozen for flour, and 1s. 2d. a dozen for meal. We are better off in wages and cost of food together, by at least 8s. a week; and we are now able to clothe ourselves, which we could not do before. I begin to think the lecturer was right after all, for this is just the effect he said low prices of food would produce."

MARKETS.

CORN MARKET.

MONDAY, October 28.—(Owing to the ceremony of opening the New Royal Exchange taking place on Monday last, we did not publish our usual circular. There was a larger attendance here on that day both of buyers and sellers than might have been expected; and though the market closed as early as twelve o'clock, there was a fair amount of business done in Wheat and other grain from the near counties, at similar rates to the previous week. There was not much done in foreign Wheat or Barley. The value of Beans and Peas was fully maintained. Though the trade in Oats was not large, previous prices were well supported. Since Monday the supplies of Wheat have been moderate; but of foreign Barley large, and plentiful of English. Several Oat vessels have arrived from abroad, and a few Irish, which, with those reported towards the end of last week, make a considerable quantity offering. Several of the cargoes from Archangel, however, are being sent to granary in bond.

Flour, 8449 sacks, 3726 bars.

FRIDAY, November 1.—To-day, the attendance of Wheat buyers is not numerous; but holders evince no disposition to press sales. The large supplies of Barley cause buyers to act with caution, and in most cases purchases are made on rather easier terms. Beans and Peas fully maintain their former value. Oats are held firmly, and though the trade is not brisk Monday's rates are well maintained. The duty on Beans rose to 6s. 6d. yesterday.

THE LEAGUE.

No. 59.]

SATURDAY, NOVEMBER 9, 1844.

[3d.]

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All Subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive, a copy weekly of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

We beg to inform our subscribers that bound volumes of the LEAGUE newspaper, containing the whole of the first year's numbers, may be had on application at the Offices either in London or Manchester.

Persons wishing to be on the Register next year, as Freeholders for County votes, must be in possession of the property before the 31st of January.

QUALIFY, QUALIFY, QUALIFY.

PRACTICAL INSTRUCTIONS FOR ELECTORAL QUALIFICATION.

The electors for counties are as follows:—Freeholders, copyholders, leaseholders, occupying tenants.

FREEHOLDERS.—The following persons are entitled to vote as freeholders:—1. Any person possessed of a freehold estate for himself and his heirs, or, as it is called, an estate of inheritance, of the yearly value of 40s. 2. Any person possessed of a freehold estate for life or lives of the yearly value of £10. 3. Any person possessed of such an estate for life or lives of the yearly value of 40s., under any one of the following circumstances:—If the estate was acquired on or before the 7th of June, 1832; or since, if by marriage or marriage settlement, by devise (i.e., by will), or by promotion to any benefice or office, or if the freeholder is himself the actual occupier of the property. In any of these cases it is sufficient if the property be of the yearly value of 40s. Parish clerks, sextons, schoolmasters, Dissenting ministers, and holders of offices have a right to vote if entitled to emoluments of 40s. per annum, arising out of, or charged upon, land, and may be registered as voters in the parish wherein the land is situated. The appointment must, however, be for life, not for a temporary purpose, or at the pleasure of any other party; but an appointment during good behaviour is considered to be an appointment for life. If the freeholder occupy his own freehold property in a borough, of such a nature and value as would confer upon him the right to vote for the borough, he will not be entitled, in respect of that property, to vote for the county. But if the freehold will not confer the right of voting for the borough, that is, if it be not of the annual value of £10, or if it be land without building, the freeholder may vote for the county, though he occupy it himself. And if the freeholder do not occupy his freehold situate within a borough, he may then vote in respect of it for the county, and his tenant may also vote for the borough. Six months' possession prior to the 31st of July will entitle a freeholder to be registered. And if the freehold lands or tenements should have come to him by descent, succession, marriage, marriage-settlement, will, or promotion to any benefice in a church, or to any office, no definite period of previous possession will be necessary.

COPYHOLDERS.—Any person possessed of any lands or tenements of the clear yearly value of £10, whether of COPYHOLD or any other tenure than freehold, is entitled to vote. Tenants in ancient demesne may in general vote as freeholders, if they do not hold by copy of court-roll, but otherwise they will be entitled as copyholders. As freeholders, 40s. per annum will be sufficient; but as copyholders, £10 a year is required. The same period of possession previous to registration is required, in respect to copyholders, as in respect to freeholders. Copyhold property within a borough, if of such a nature as would qualify any person to vote for the borough, will not, under any circumstances, give a right to vote for the county.

LEASEHOLDERS.—The right of voting in respect of leasehold property extends to—1. Any person who is entitled by virtue of a lease made or assigned to him of any lands or tenements for the unexpired residue of any term originally created for a period of not less than 60 years, if the property is of the clear yearly value of £10 above all rents and charges. 2. Any person who is in like manner entitled to the unexpired residue of a term originally of 30 years, if the lands and tenements are of the clear yearly value of £50. The party to whom the lease was originally made, or a party to whom each lease may have assigned

the original lease, may vote, though not in occupation of the premises. Any sub-lessee or assignee of an under-lease may also vote, but only when in occupation of the premises. Lessees or assignees must have been in actual possession for 12 months previous to the 31st of July, unless the qualification is acquired by any of the modes before mentioned as excepted; that is to say, by the death of a relative, by marriage, by will, or by promotion to any benefice or office. Leasehold property in a borough, if of such nature and value as will give any person a vote for the borough, will not give a vote for the county.

OCCUPYING TENANT.—Any person occupying lands or tenements for which he is liable to pay a yearly rent of £50 is entitled to vote, if not within a borough, and not of such a nature as would qualify a person to vote for the borough. In respect of the period of previous possession required, occupying tenants are placed on the same footing as leaseholders; but it is not requisite that the occupation be of the same lands or tenements: different lands and tenements occupied in immediate succession for twelve months previous to the 31st of July in each year will give the qualification.

GENERAL OBSERVATIONS.—Besides lands, houses, buildings, and the like, property and interests of the following description will entitle the owner to be registered and to vote, viz.—tithes, an annuity charged on land, a rent-charge,* fee-farm rents issuing out of an estate in fee; shares in navigable rivers, canals, &c., where the shareholders possess an interest in the soil; tolls of bridges, tolls of fairs and markets, purchases of unredeemed land-tax. Persons who have entered into an agreement of purchase of property, or who have paid any part of the purchase-money, or done any other act in part performance of the agreement, are considered to have equitable estates, and are entitled to vote and to be registered. Joint tenants and tenants in common have each a right to vote, provided the property be of sufficient amount to give to the share of each the value required. Mortgagees may vote, if in actual possession or in receipt of the rents and profits, but not otherwise. Trustees are expressly excluded from voting for any trust estate; the right of voting in respect of trust property is reserved for the *c'estui que trust*. In estimating the value of freehold or copyhold property, the marketable value of the property to let is the criterion to be attended to. If, owing to accidental circumstances, the rent should be less than might be obtained, the property will still give a right to vote. As regards leaseholds, the value required does not depend on the amount of rent. It is to be estimated by the profit which the tenant can make of the property, over and above the amount of rent reserved and any encumbrance charged on the property. The value required is to be "above all rents and charges." Under these words are included all encumbrances affecting the property, but not any public or parliamentary taxes.

HOW COUNTIES ARE TO BE WON.

We need not inform our readers that the Government of this country is in the hands of the great landed proprietors: the Corn Law is the badge which proclaims us to the world as the thralls of a landlord class. It was a needless insult on the part of the Duke of Richmond to proclaim from the hustings at Steyning, last autumn, that he and his order could make and unmake Ministers at their will and pleasure, for we feel their power in our stunted loaves, and diminished supplies of sugar. Granted, then, that we live under a landowner's yoke composed of some thirty thousand persons, are there no means by which twenty-seven millions may hope to throw off their yoke? It can, we believe, be demonstrated, that, if less than one in a hundred of our population could be roused to the exercise of the power they possess, the domination of the Duke of Richmond and his class might be peacefully, and legally, but totally abated.

The ascendancy of the landowners rests entirely upon the majority they possess in the House of Commons, and this they owe to the county representatives. Take away the 252 county members, and Mr. Villiers would in two years possess a majority in Parliament. Remove one-half of them, and the present Government would in the next division be in a minority. If we seek for the source of the power of the landlords in the county representation, it will be traced to the £50 tenant-at-will voters. Wherever a contest has resulted, as in Lancashire, the West Riding of Yorkshire, or North Cheshire, in the defeat of the Free-Traders, it has been proved, upon an analysis of the poll, to be caused by the votes of occupying tenants; and nobody will deny that the preponderance of the same class of votes in Buckinghamshire, Huntingdonshire, &c., renders a popular contest in those purely rural counties hopeless. What must be done? To attempt to disfranchise this dependent body of electors were a vain and fruitless task. The only plan remaining, then, is to bring an equal number of independent voters into the electoral field to neutralize them at the poll; and this is the practicable scheme to which we earnestly invite the attention of our friends.

By the late census it appears that there are in England and Wales 230,165 farmers and graziers

* No registration of annuities or rent-charges with the clerk of the peace is requisite. The 3rd Geo. III., c. 54, is repealed.

who are adult males. This number includes, of course, all the small dairy farmers in the vicinity of towns, besides many others paying less than £50 a year of rent; and, if we deduct rather over one-tenth for these, it will leave in round numbers 200,000 tenants-at-will, whose votes turn the scale at the election of the 158 members who represent the 52 English and Welsh counties. It would be wrong to assume that the whole of these are compelled to vote against Free Trade, for we know that some of the largest landed proprietors are opposed to the corn monopoly, and it can be fairly estimated that one-tenth might be deducted as being under such favourable influences, leaving about 180,000 as the net strength at the poll which the monopolist landowners can command in all the counties of England and Wales. From these 52 counties we will strike off one-fourth, being those which contain the least town population, and it leaves 119 seats where there is a sufficiently numerous middle class in the towns to carry our plan into successful operation. According to our calculation it would require 155,000 persons to qualify themselves as county voters to neutralize the power of the monopolist landlords in three-fourths of the English and Welsh counties. We confine ourselves to those parts of the kingdom, because the 40s. franchise for the counties does not apply to Ireland and Scotland. What a glorious field is here open to the prudent and patriotic citizen for extending his sphere of usefulness by enlarging his political powers! And how cheaply may this enfranchisement be purchased—so cheaply that it is within the reach of all but the very poorest of the population, as explained by Mr. Cobden in his speech at Manchester:—

"The 40s. franchise for a county was established five or six centuries ago. At that time a man, in the constitutional phraseology of the times, was deemed to be a yeoman, and entitled to political rights, provided he had 40s. a year clear to spend. That was at that time a subsistence for a man. Probably it was equal to the rental of 100 acres of land. What is it now? With the vast extension of wealth amongst the middle class, which then did not exist, and amongst a large proportion, I am happy to say, in this district, of the superior class of operatives, that 40s. freehold franchise becomes a nominal franchise, and is within the reach of every man who has the spirit to acquire it. I say, then, in every county where there is a large town population, as in Lancashire, the West Riding of Yorkshire, South Staffordshire, North Cheshire, Middlesex, Surrey, Kent, and many other counties I could name,—in fact, every county bordering on the sea-coast, or having manufactures within it, every county can be won, and easily won, if the people can be roused to a systematic effort to qualify themselves for a vote, in the way the Lancashire people rushed to the qualification when they found that the county could be won by that means and no other. It is a custom sometimes for men to put their savings in the savings' bank. There are fourteen or fifteen millions so deposited, or more. I would not say a word to lessen the confidence in that security; but there is no investment so secure as a freehold of the earth, and it is the only investment that gives a vote along with the property. We come, then, to this. It costs a man nothing to have a vote for the county. He buys his property, £60 in a cottage; ay, £40 or £50 in many of the neighbouring towns will do it. He has the interest for his money, the property to sell when he wants it, and his vote into the bargain. Sometimes a parent, wishing to teach a son to be economical and saving, gives him a sort of nest-egg in the savings' bank. I say to such a parent, make your son at 21 years of age a freeholder,—do it as an act of duty; make him thereby an independent freeman; put it in his power to defend himself and his children from political oppression, and you make that man, with £60, an equal in the polling-booth to Mr. Scarsbrick, with his eleven miles in extent of territory, or to Mr. Egerton."

A plan is here developed, which, however startling at first view, can, we feel convinced, be carried into practical and successful operation by means of the organization which the League possesses throughout the country. We shall, of course, have more to say of it hereafter. The first step, however, must be taken forthwith. Let every Free-Trader, not upon the county register, who can manage to put £50 or £60 out upon good interest, look about him for a freehold cottage, or a plot of land, which will yield him annually a clear 40s. of rent. To be entitled to vote next year he must have possession of the property before the 31st of January.

QUALIFY, QUALIFY, QUALIFY!

PLYMOUTH FREE-TRADE ASSOCIATION.

We have had frequent occasions of noticing the energy, activity, and intelligence of the Free-Traders of Plymouth. At their periodical meetings lectures have been delivered, illustrating the sound principles of economic science, and showing their identity with the behests of genuine philanthropy. The lecturers have shown that true science is identical with true

humanity, and have thus furnished a proper antidote to that cant of mawkish sentimentality which is one of the curses and plagues of our day. "Men," says the old proverb, "set themselves against reason no soon as they find that reason is set against them." It is on this principle that our sentimental monopolists declaim against "the cold axioms of political economy;" they have bound themselves to support a system which is demonstrably iniquitous and injurious, and they therefore denounce the science which furnishes the demonstration. It is on the same principle that the Fanatic anathematizes logic, the Ulema declares against mathematics, the *Standard-Herald* excommunicates statistics, and the Boudes of China prohibit the exercise of the reasoning faculties. It is true that political economy, like every other science, affords no scope for the exercise of the poetic fancy, and furnishes no incentive to the indulgence of passion; but those who complain of this may as justly be indignant because Euclid is not quite as jocular as Joe Miller, or a treatise on the Differential Calculus as affecting as the "Sorrows of Werter." But though political economy has neither the pathos of tragedy, the sentiment of comedy, nor the fun of farce—though Mr. Macaulay cannot twist it into a romantic ballad, or Mr. Disraeli fashion it into a clever novel—yet it has an interest of its own fully equal to that of any other department of literature, though very different both in its nature and its results. Mr. Collier's admirable lecture to the Plymouth association on the rise and progress of Free-Trade opinion is a fine example of the instructive pleasure which the study of political economy affords, and we gladly take the opportunity of directing attention to his eloquent address, which appeared in the *Plymouth Journal* of Saturday last, to add some comments on the general subject. Mr. Collier asserts that the science of political economy is of recent growth.

"Nothing has come down to us to show that the Greeks or Romans understood this subject—but much to show that they did not. Among other proofs to the latter effect, I might mention that the Romans passed laws against the exportation of gold and silver. It is true that men traded as they always will. The same scenes were going on at Athens as at Plymouth. The farmer brought his corn to market and exchanged its produce for shoes and clothes. Ships unloaded their cargoes in the port—the same busy bustling throng filled the streets, intent on the same objects. Yet it has always struck me as somewhat remarkable that Aristotle, that most curious and comprehensive of observers, should, as far as we know, have felt no interest to inquire into the laws which regulate the production and distribution of that wealth after which all men were seeking—the efficacy of division of labour—the causes which regulate price—the operation of the circulating medium—and those other interesting questions which occupy the political economist. In fact, no philosopher of Greece or Rome condescended to examine this subject, and men were, in general, in a profound state of ignorance respecting it. The merchant and shopkeeper were supposed to realize their gains at the expense of their customers. A state which grew rich by commerce, was supposed to grow rich by the stealthy and inglorious plunder of her neighbours."

We have, however, some indirect evidence to show that Free Trade was the source of the prosperity of the most celebrated commercial cities of antiquity, such as Tyre, Corinth, Cyrene, and Carthage. The best, and indeed almost the only detailed account we have of the trade of Tyre is in the Bible. Isaiah and Ezekiel have given us much precious information on the subject, and in particular the 27th chapter of the latter's prophecy is one of the most valuable commercial records bequeathed to us by any ancient writer. Now, Ezekiel distinctly declares, that there was a free interchange of commodities in the markets of Tyre, and that the Phœnicians felt their own prosperity to be intimately connected with the wealth of the nations with which they trafficked. They had, in fact, anticipated us in the discovery, that the more wealthy our neighbours become, the more likely they are to become good customers. "When thy wares went forth out of the seas," says the prophet, "thou filledst many people: thou didst enrich the kings of the earth with the multitude of thy riches, and of thy merchandise."

Carthage followed the same course of policy as Tyre, until the Barcino family obtained a fatal ascendancy, and introduced the system of territorial acquisition, which was soon followed by the imposition of restrictions on the trade of colonies and dependencies. But the commerce of the Carthaginians with the interior of Africa was conducted on the principle of fair and free exchange to the latest ages of the republic. Mr. Collier has very ably shown the cause of the neglect, or rather the ignorance, of economic science manifested by the Greek states:—

"War, the antagonist of commerce, was ever paramount in the ancient world. The present imperfect law of nations, by which peace and security are in some measure maintained, was then unknown. The military art was the one thing useful: for self-preservation was the first thing to be considered. It was, moreover, regarded as the readiest road to riches. The most flourishing commercial countries became a prey to their more warlike aggressors, and long accumulated treasures, borne in triumphal procession, dazzled the eyes of the multitude. Poets and orators sounded the praises of heroes—the saviours of their country. Military glory had its day,

and quiet unpretending commerce, contemned and reviled, slunk from the public gaze. Nor were philosophers unaffected by vulgar prejudices. Not one of them had the hardihood, though often sorely in want of topics to dispute about, to drag from its obscurity a subject so unfashionable as trade. I may add that this subject is one peculiarly unsuited to the tone of ancient philosophy—derived chiefly perhaps from a few minds (for the philosophy of ages is commonly governed by a few minds). A philosophy which delighted in the abstract and the ideal—which, absorbed in lofty contemplation, little relished the laborious task of searching this lower world for facts—of sifting—arranging—and classifying them—and arriving at conclusions by the slow and cautious process of induction.

"Political economy is a science which lives on the surface of the earth and not in the clouds—it is conversant with matters of pounds, shillings, and pence—of bread and butchers' meat, and would be naturally distasteful to a philosophy of the kind I have been describing; moreover, had Adam Smith lived in those times, he would have found it somewhat difficult to get at the exports and imports of Athens, and if he had, there was no press to circulate the information."

If we possessed the early history of the Greek cities and colonies of Asia Minor, we should probably find that commercial intelligence was more largely developed on that side of the *Ægean* than in Hellas. The imperfect notices which have been preserved, all indicate a recognition of the principle of fair exchange, which is the very essence of political economy. Archbishop Whately justly remarks, that political economy is nothing more than the science of exchanges (catalactics), and that in relation to this science man may be defined as "an animal that barter or exchanges," which no other animal does. This is a point worthy of being carefully considered before entering on the history of modern commerce. Every man is a trader, because every man daily exchanges what he wants less for what he wants more. The labourer is a trader, he exchanges his toil for wages; the landlord is a trader, he exchanges his land for rent; professional men are traders, they exchange their acquired information and their time for salaries or fees. All of them see that it is their obvious policy to buy in the cheapest market and sell in the dearest; and such also is their natural right, though, like all other rights, it is subject to be modified by circumstances.

The aim of monopoly was to restrict the market for the purchaser who wanted to buy, and thus raise the price of what it had to sell. This formed a part of the feudal system: the vassal, for instance, was compelled to grind his corn in the lord's mill, though he could have got it ground cheaper and better elsewhere; and so tenacious is monopoly that Lord Stanley has inserted covenants in his Irish leases prohibiting the tenants from grinding corn anywhere but in his lordship's mill, or selling the produce anywhere but in his lordship's manor town; and this on an estate where there is neither mill nor manor!

The feudal system rendered land a monopoly, because it limited the number of landed proprietors. The sudden increase of commerce consequent on the discoveries of Columbus and Vasco de Gama, came so unexpectedly on the old world that it was scarcely possible to investigate its principles; and the legislators of Europe applied to limitless commodities the same principles which feudalism had devised for the leasing of land. The object of feudalism was to render land dear, because that was what the lord had to sell and the people to buy; and also to render labour cheap, because that was what the people had to sell and the lord to buy. The mercantile system was but a simple extension of this unjust principle: it was an effort to secure what was called "a balance of trade," that is to obtain over and above the exchangeable value of the articles bartered, a certain amount of the precious metals as surplus profit. In this sapient system it was forgotten that, though lords of the soil could command the limited market for land, neither they nor any other human powers could command the markets of the entire world. When Spain refused a fair exchange, commerce sought the harbours of Holland and England; when Venice aimed at securing a false balance, trade fled to Leghorn and Genoa. Mr. Collier, having shown how often the fallacy of the mercantile system had been exposed by preceding philosophers, justly attributed the merit of its complete demolition to Adam Smith:—

"The system was finally overthrown, and the true theory of trade, for the first time, set forth, by Adam Smith in 1784. He was the first to extend the definition of wealth to every material thing capable of appropriation; to show the effects of division of labour and exchange in increasing that wealth; that man's natural instinct, which would lead him to buy where he can buy cheapest, and sell where he can sell dearest, is the true regulator of commercial dealings, and would, if uninterfered with by legislators, increase to an incalculable amount the necessities, comforts, and luxuries of life. He was the first to fully set forth the evils of protection, both to the unprotected and protected; to explain the laws which regulate capital, rent, and wages. Adam Smith may be properly designated the founder of the science of political economy."

Mr. Collier next entered into the history of the Anti-Corn-Law agitation, and demonstrated its necessity, its policy, and its justice. He then pointed out the beneficial results that would follow from the establishment of Free Trade; and with a

beautiful extract from this part of his lecture we shall conclude our notice:—

"But I look at Free Trade in another point of view, as the most powerful agent ever yet introduced into the world for its pacification. I may be asked, where religion has failed—where Christianity has preached in vain, how can you expect any new argument to succeed? Christianity does, indeed, preach peace, but painful experience has shown how her language may be misunderstood and misinterpreted. Her voice has been drowned by drums and trumpets; she has even been dragged to battle; the most atrocious deeds have been perpetrated in her name, and men have marched to murder under consecrated banners. (Cheers.) Men's evil passions and perverted reason can, indeed, make a Christianity of their own, talking any language they please, interfering only with crimes which are not to their taste. But the voice of commerce cannot be misunderstood—no ingenuity can represent her as countenancing deeds of violence—commerce, most tolerant of everything else, is absolutely intolerant of one thing, and that is war. She addresses, indeed, the lower part of man's nature, but one implanted for the wisest of purposes, and apparently essential to his progress—the desire of gain; a passion which too often shows itself an effectual court of appeal, where reason and conscience have been addressed in vain. A man may think it compatible with religion to wage war on his neighbours, but it is absolutely incompatible with trading with them. You may burn a heretic from a sense of religious duty, but you cannot burn him and retain him as your customer. We have faith, then, in this new argument addressed to the world, as soon as the world shall thoroughly comprehend it."

JOURNEY IN THE SOUTHERN COUNTIES.

FROM SURREY INTO THE WEST OF SUSSEX.

I left Normandy Farm, in the parish of Ash, before the sale began, which was formerly mentioned. My intention being to travel into Sussex, I went eastward from Ash to Guildford, having on my right hand that high ridge of chalk which runs from Guildford towards Farnham. Arrived at Guildford, I rounded the end of the ridge and turned to the south, in a fine valley where runs the river Wey.

This is the same river which comes through Farnham, down near Waverley Abbey and More-park, before mentioned, and which twists about in those beautiful meadows which, to keep it company, twist and expand or contract themselves with it, until it reaches the river Thames. One would hardly expect, after crossing such an undulating country between the Thames and Farnham, where the Wey has seemingly turned its back upon the country lying Thames-ward, that it could turn itself round and get away to the north; but it does so, and now that we travel southward in the valley between Guildford and Godalming, we meet the Wey coming to Guildford. On each side it has its pastures and its fields of farm culture; and on each side of them, rising abrupt and steep and high, and crowned with woods; or rising easily and gradually, displaying a chalky surface near the

top and red loamy soil at the bottom, extend the circling hills. In the copse woods which crown the high tops or clothe the chalky sides of these ridges; or which, interspersed with forest trees of large size, come down to the very margin of the Wey, as if to seek coolness and freshness in the valley, are many thousands of hares and rabbits, which seek the farm fields and live there at the expense of the farmers.

Since I wrote the first portion of my journey to Cobett's birthplace on the banks of the Wey, I have seen one of his books, in which he thus writes of the river, and an accident, almost fatal, which befel him at an early age:—

"At Farnham this river is a very small affair, which, if in America, would not be entitled to be called even a creek, but must be content to be called a run. Countable as it is, however, in point of magnitude, it was, about threescore years ago, quite broad enough and deep enough to have spared the boroughmongers and tax-eaters a monstrous deal of trouble; I, from one of the bathing-places in it, having about that time ago been pulled out by the foot, which happened to stick up above the water, and to enable a brother-swimmer, a great deal older than myself, to preserve this everlasting torment to the 'higher orders.'"

Cobbett was not backward at talking liberally of himself. But we who have grown up since his day, or who took little notice of politics then, may find that his tormenting of the "boroughmongers" was not a fiction of his own. In the life of "Lord Chancellor Eldon," lately published, we have his lordship's confirmation of Cobbett being a torment to the higher orders. The chancellor, writing to his brother Sir William Scott, is speaking of what he would have done in prosecuting the *Morning Chronicle* and other papers, advocates of Parliamentary reform, had he been attorney-general; and adds:—

"I am very sore upon this subject. I have growled and grumbled about it till I am weary. As to Cobbett, I am quite out of patience about those who will take in his paper; but I observe that all my friends, in short, everybody one knows, abuse him, but enjoy his abuse till he taps at their own door, and then they don't like the noise he makes—not a bit of it."

That river, and the bathing-place in it, which very nearly "saved the boroughmongers such a monstrous deal of trouble" by drowning Cobbett in his boyhood, is not to be looked on without interest for Cobbett's sake. Yet Cobbett's career cannot be looked on without regret. How great was the intellectual strength, and how persevering the industry, that were lost, or worse than lost—expended in advancing nothing, but merely in abusing other men, foremost amongst whom were some of the truest friends of humankind!

I did not at first go much further than Farnham up the valley of the Wey, yet I went far enough to see that it abounded in richness of soil and beauty of surface, and I have seen some of it since. Arthur Young, speaking of this valley in 1794, says:—"From Farnham, in Surrey, to Alton, in Hampshire, is a space containing the finest ten miles in the kingdom."

Cobbett believed Young to have spoken the truth, or nearly so, in saying this; and I believe both Cobbett and Young. I shall add to it, that this valley of ten miles, particularly near Alton, though narrow, feeds as much game at the expense of the farmers, which game comes from the thickets and heaths adjoining, as any other ten miles in the kingdom; and that is saying a great deal.

To persons unacquainted with the south of England, the mention of *heaths* must have some indication of mystery. The cultivated farm and the fertile meadow are by many people at a distance believed to cover every acre of the south of England; but they do not in reality cover one-half of Surrey, Sussex, and Hampshire. The stranger is amazed at the many miles of heath he has to traverse, and often at the miles of sterile sand, which sand barely sustains as much vegetation as covers its nakedness. But oh! the beauty and fertility of the wheat soils, where there are wheat soils; of the meadows, where there are meadows; and even of those thin soils on the hilly uplands where the oaks grow! In these southern counties we see this noble tree growing in great magnificence; and that on soils which, if cleared and ploughed, and enclosed as farm land, would be called poor and shallow.

The county of Sussex is soon entered after passing Godalming, that is, if the traveller holds on his way and does not linger: but, if he is not carried along on a stage-coach or some such persevering conveyance, he cannot help stopping and lingering.

Godalming, pronounced nearly as if written *Godliman*, is an ancient little town in the valley of the Wey, which is just wide enough to hold the one street and a few gardens and patches of meadow. The population of the town and parish is set down at 4328 in the census of 1841. The town has some good shops, which seem the more remarkable as it is only four miles from Guildford. But it is also a place of some trade, there being tan-works, flour-mills, and such like.

The name of Godalming is said to be derived from a Saxon lady who was called *Goda*, or *Godiva*, and who founded *almshouses* here. She is said to be the same lady that saved the city of Coventry, in Warwickshire, from a grievous calamity by riding through its streets with no covering but her luxuriant tresses; for looking upon whom, after all the inhabitants were warned not to look, *Peeping Tom* was punished by his fellow-citizens, and put up in effigy in his window, where he still stands, as every traveller by way of Coventry could see before the railway was made.

This may not have been the same Lady Godiva. But, if not, she of Godalming must have been a public benefactor—of no ordinary rank. She had wealth and power enough to select one of the most lovely and fertile valleys of the south as the seat of her almshouses. As a matter of course these endowments were wrested from their original purpose, and made private property when the kingly and the feudal powers united to plunder and ravage and destroy all religious endowments in which the commonalty had any share, to wit, in the reign of Henry VIII., of blessed memory.

Between Godalming and Witley, going south, we pass over some miles of ground variegated with timber and farm-fields, a larger proportion of the latter than is usually seen bearing crops of Swedish turnips. These, as all other turnips seem to be in the south, are sown broadcast, that is, not in rows, as is done in the north. I shall not say that good turnips are never grown from seed sown broadcast; but I maintain that finer bulbs will be formed if the turnips are grown in rows. Besides which, the soil can be so much more easily cleaned of weeds to fit it for the ensuing crops of grain. The trampling of the men in attempting to hoe the turnips when broadcast—which, however, they cannot do with precision and care—hardens the soil about the roots, and takes from the bulb that freedom of growth which it would have in a soil well pulverized before seed-sowing, and preserved so.

But I did not go into the southern counties to find fault with what I saw in the manner of farming, nor to extol there the customs which I left behind.

SECOND CROPS IN THE SOUTH.

I observe that on most of the fields which have had crops of barley and wheat this year there is now a second crop of different things, intended for the winter feeding of sheep, such as barley, *peas*, and turnips, the latter pretty good, considering that they are the second crop of the season. This abundance of green food is of much service to these farmers, compared with their professional brethren of the north, who must be content with one crop in the year. At the same time the chief green crop of the south does not equal—summer sown and autumn sown put together—the one crop—the turnips, I mean—grown in Northumberland and the counties bordering it northward. Whether this may be attributable to the style of working the land in Surrey (and it must be partly so), or to a difference in the land itself, I cannot decisively say; but the ability of getting two crops in the year does not seem to put the Surrey farmer before the farmer of Tweedside to the value of one penny.

And if we take the game into account, which the farmers of the south have to feed, their green crops are of still less value. A farmer, near to where I am now writing of, told me that if his landlord sent two Southdown sheep and a dozen rabbits, and asked him which he would choose to feed at his own expense for the landlord's sole profit, he would choose to feed the two sheep. Of ten acres of barley this year, he had not reaped the produce of more than three acres, allowing the three acres to have a full average crop. He admitted that the drought in the early part of the year had injured the barley, "but," said he, "the rabbits finished what the drought spared; and what makes it the worse is, that the dryer the weather is, the rabbits breed the faster. In some of the sandy hills near me they breed the whole year round, they are so dry and warm, and full fed." He continued to state that he paid *one rent* to his landlord for the land, and a gentleman, a stranger there, paid *another rent* to the same landlord for the shooting of the rabbits and the game. And this is very common. I shall particularize some of the cases when I advance farther into the west of Sussex.

I was here speaking of the neighbourhood of Witley. The soils there have much variety in them. The extreme redness of the road, especially when a shower of rain falls, tells us that there is iron at no great distance, the stones laid on the road being the depositories of that metal. And on looking into an old roadbook I find that there was at one time a manufactory of iron at this place.

The woody variety of the vegetation, and the undulating surface of the soil, the scattered houses and the gardens, and the orchard-trees bending beneath their autumn fruit, make Witley and neighbourhood a sweet place. The parish contains 1488 inhabitants.

THE ESTATES OF THE WYNDHAMS.

We are now ascending into a higher country. A road leads to the left going to the seacoast, thirty miles off or more, by way of Petworth, through the country of Colonel George Wyndham, and another inclines to the right, and goes to the same part of the seacoast, by way of Haslemere and Midhurst. And, if we go four miles to the right of the road between Haslemere and Midhurst, we shall get upon the Rogate estate, the property of Colonel Charles Wyndham, one of the members for Sussex. Colonel George and Colonel Charles are the sons and inheritors of the property of the late Earl of Egremont, a nobleman highly popular in Sussex. And here I may observe, to prevent confusion of ideas, that, as I shall have to speak of the present Earl of Egremont more than once, that his is a distinct title and family from *Egremont*. There is now no Earl of Egremont. The last earl was George O'Brien Wyndham, who died a few years ago, leaving no legitimate offspring, but leaving his large estates in land, hunters, hounds, and money to his son, Colonel George and Colonel Charles. The Earl of Egremont is a new nobleman. He purchased a life interest in the great Cowdray estate a few years ago, and was created an earl. His name is Perceval.

But I have not yet arrived at his estate, so we may defer further remarks until we arrive at Cowdray and Midhurst.

Omitting all description of fifteen miles of the road for the present, farther than to say that it is now down hill, now up; now suddenly west, now suddenly east; now on the lofty heights, giving you views of great magnificence in the deep valleys below; now hiding from you all view, when you are in the deep valleys, save the elevated tops of hills crowned with copses or with forest trees; save to say this, we need not now stay longer on this fifteen miles of road. We leave the disfranchised borough of Haslemere behind us on the southern border of Surrey, and proceed into Sussex. Turning out of the direct way to Midhurst, we get to Rogate, the estate of Colonel Charles, one of the members for this division of the county.

Having talked with several farmers, millers, woodmen, and other persons before reaching Rogate village, I found that all of them had been put in possession of different kinds of controversial tracts. First of all, it seems, the Anti-Corn-Law League had sent tracts into that part of Sussex, as, I believe, into every corner of the kingdom. Subsequently, the Duke of Richmond's League has distributed another class of tracts; and I must confess the matter contained in some of these last is very remarkable matter indeed. I intend to quote some of it in future letters, and apply it to the Sussex tenantry, and ask them to examine it by applying it to themselves.

But there is another tract of which nobody could give an account, neither if it was circulated by the Anti-Corn-Law League, nor by the Kent League of the duke. It was a reprint of a speech of Colonel Charles Wyndham, delivered in the House of Commons on the 30th of March, 1843, on a motion made by Mr. Ferrand, of Knaresborough, for leave to bring in a bill to compel the allotment of waste lands to the poor. The speech is satirical upon the Anti-Corn-Law League, so it is not probable they circulated it; indeed, I know they did not. Its arguments in support of the Kent League are not peculiarly brilliant; and I believe they also disclaim all connexion with its circulation. I heard whispers that Colonel Charles knew how and at whose expense it had been circulated; but cannot undertake to say that he actually had it reprinted for the enlightenment of his tenantry. But it is reprinted; and is in the hands of his tenantry and friends. And, after all, it would not be surprising if that practical common sense, strong in itself, which so dignifies

this eminent county member, on his own estate and in the senate in which he sits, had suggested to him the propriety of having his speech reprinted. This is a common ambition in commoner men than he is. The genius that could be gratified with the echoes of its own voice, and with seeing itself reflected in the reports of the daily papers, in such a beautiful oration, would not think it too much to stoop to have it republished from the daily papers. It does not seem to have been revised by the orator. It is reprinted from the London morning papers; and the morning papers, as all the world knows, give the speeches to the public faithfully. Here it is:—

"Colonel Charles Wyndham's Speech, delivered in the House of Commons on the 30th of March, 1843, on Mr. Ferrand's motion for leave to bring in a Bill for compelling Allotments of Waste Lands."

"Colonel Wyndham rose and expressed a wish that the Government would allow the hon. member for Knaresborough to bring in his bill, although he (Colonel Wyndham) must confess that he thought the hon. member's scheme impracticable. (A laugh.) There was much waste land in the country, and in no county more of this description of land than in Surrey, and in (said the hon. member, addressing the Speaker) your own county, Hampshire. (A laugh.) I should be delighted—yes, very much delighted, continued the hon. member—if the people would come and settle in these lands, and cultivate the wastes and deserts. (Laughter.) There was a large tract of waste land situate between Epsom and Portsmouth. I should like to see that waste land cultivated—yes, I should like to see the whole of England cultivated. (Loud laughter.) Let the hon. member for Knaresborough bring in his bill. Do you suppose at this time, when there was an unusual depression in agriculture, that the bad land would remain long in cultivation? Do you mean to go prowling about the heath? (Loud laughter.) Keep your land in cultivation. I will stand by the Government as long as they stand by agriculture; and when they throw that overboard, I will throw them over. (Cheers and laughter.) I have been particularly honoured during the last few days—(laughter)—particularly honoured. (Continued laughter.) I know no person whatever in the manufacturing districts. I have received a letter. I have been honoured with a letter—(laughter)—a letter from a working man in the manufacturing districts. Now, let me say one word to the hon. member for Stroud. This measure is only one degree worse than the measure of the hon. member for Knaresborough. (Laughter.) Now, recreation is very well for the working man. Many men would consider it recreation to drink a gallon of beer. (Laughter.) Well, now, about this letter. It bears the post-office mark of Cheetham, although it comes from Manchester. Perhaps, said the hon. member, addressing himself to the Opposition benches, the hon. member for Manchester knows the way to Cheetham. (Loud laughter.) I should think 'the way to Cheetham' would form an admirable motto for the Anti-Corn-Law League. (Cheers and laughter.) I should advise them to take that motto. (Laughter.) It would do them good. (Continued laughter.) I will read the letter. I am opposed to the Free-Trade doctrines. The writer of this letter says, 'I wish you would favour the country with a few more of your speeches in the House of Commons.' (Roars of laughter.) See what a character this House has! Thank God, I am going away from it on Saturday. (Loud laughter.) The writer continues, 'for home truths are not often spoken there. The people want work, not recreation.' I think I have said enough." (Loud laughter.)

The reader who has never seen Rogate, in Sussex, will be prepared from this to hear that Colonel Charles has some of the "waste lands lying between Epsom and Portsmouth" on his estate. He says, "I should like to see that waste land cultivated—yes, I should like to see the whole of England cultivated."

No one will doubt from this that he does all he can for the cultivation of the wastes; as also for the good cultivation of the good land which has been for many years enclosed. He wants the Corn Law preserved to enable him to cultivate the wastes; and he has got the Corn Law! What does it do for him? or rather, what does it do for his tenants? Let us see.

ODDS AND ENDS ABOUT ROGATE.

Rogate Common is a high hill with a deep circular valley called a "Coombe" behind it; all covered with heath, save where the heath is cut off for fuel, or where the surface is broken by sand and gravel pits; and, I may add, by rabbit burrows. The common lies north and north-east of the colonel's house, which is at the southern bottom amongst trees. In front of the trees, on a still lower level, is the small village of Rogate and its ancient church. Straight before us to the south are three or four miles of land enclosed and cultivated—the soil inclining to clay. Beyond this, rising high and bold, are the Downs, stretching across before us. This is the chalky ridge covered with brown herbage, which stretches across Sussex from Kent to Hampshire, as we now see it. Beyond this ridge lie ten miles of a rich level country, stretching to the sea. This level country contains the city of Chichester and the Duke of Richmond. The Duke's race-course is on the Downs; and his fine park is on the southern front of the Downs, neither on them nor off them, but resting itself with its face to the sun, while it sits looking down upon Chichester and the miles of fruitful farms—unsurpassed in fertility throughout all England.

The Downs are generally from three to five miles in breadth; and, as said already, there is a low cultivated country three or four miles broad between us, at Rogate, and the Downs. Behind us, to the north, are the colonel's house, the colonel's park, the colonel's game preserves, the colonel's common—which used to be the common people's common—the colonel's sand hills, the colonel's rabbit warrens, and the colonel's everything which breathes and moves and has a being; for everything is the colonel's.

And the colonel is everybody. Having been in the church, we have seen his pew, his prayer-book, and the hassock on which he kneels to pray; and we learn that he is a good Christian as well as a good member of Parliament. In the church and in the churchyard the name of God may be seen and may be heard; but the colonel's name is the great name in every one's mouth, inscribed everywhere.

We come out of the church and find the public-house bearing the colonel's arms. But there is another public-house—the old village inn—and we learn in due time from some one or other that the new inn was built by the colonel on his coming to the estate a few years ago, in opposition to the old-established inn, because the old-established offended him by some such rebellious conduct as this, that it refused to discontinue taking in the *Weekly Dispatch*, and also to put up the colonel's arms as a sign. The other house does not take in the paper which the colonel holds to be so obnoxious, and which would pollute that beer which all the people over whom he has any control must only drink.

It may be urged that there is no need to be thus particular in speaking of Rogate and the colonel. Such an objection would hold good with ordinary men; but the member for Sussex is not an ordinary man.

We are on the colonel's common, which used to be called Rogate-common. We inquire why in the narrow gorge of two hills, where evidently a public road seeks to pass and cannot,—why a house surrounded by a garden and garden fence is there? We learn that this, as we may easily judge, was a roadway before a Wyndham breathed in England; that when Colonel Charles came to the estate, and took the common to himself, he put up a bar-gate at the bottom of the gorge to prevent people from passing from Rogate either to get their turf to burn, as had been done from times far beyond the memory of man, or to exercise any other privilege. The bar-gate was demolished at the dead of night, and the right of way again and again insisted on. At last the colonel built the house across the public road. The gorge is narrow, the sides steep, and there is no room to pass with a cart to the one side or the other.

"I should like to see that waste land cultivated," said the gallant gentleman; "yes, I would like to see the whole of England cultivated." Let us see how he proceeds.

In the same hollow, a few hundred yards lower down, several cottages stood at the time of his coming to the estate. The dwellers in them had enclosed patches of garden ground from the heath. There they lived, and there they cultivated land which never could be cultivated at a profit by anybody else. These people were not able to show any other title to their houses and enclosures but that they had enclosed them from the public common, or that somebody else had done so. The gallant colonel ordered them to be levelled with the ground; and now the heath grows upon the household spots which were the gardens, and the inhabitants are paupers.

When the colonel says that he wants the wastes cultivated he must mean by somebody who will pay to him such a rackrent for them as is paid for good soils. And for this he wants the Corn Law. But let us proceed across the common, and we shall meet the gallant colonel once more.

Here some of the dwellers on its verge, who do not live on it but very near it, have erected a pigsty which abuts from the cottage garden upon the common. The colonel has caused all pigs and every other domestic animal that goes astray on his common to be taken to the pound. Some of the richest hunts that ever a Wyndham rode at have been seen at these pig hunts. The animals have been captured; the poor wretches of cottiers, who were not clever enough to get them off before the colonel and his party surrounded them, have had to pay five shillings for the release of each from the pound. Which sums of five shillings went to a few of the colonel's favoured domestics and a tenant or two for a glorification at the Wyndham Arms.

But, to the pigsties. The colonel holds that it is now law to open the door of a sty and take the pig to the pound if that sty abuts upon his common. And he has done so. Yet, he says in the House of Commons:—"I should be delighted—yes, very much delighted—if the people would come and settle in these lands and cultivate the wastes and deserts."

Now, he does not only take the pig out of the sty from the settlers who infringe even so far as to let a mere pigsty settle on the very verge of the "waste and desert," but he does much more. And what does the reader think he does after making such a speech as that?

He sends his waggon and waggons and horses to carry away all the horsedung which the young children and the old men have gathered bit by bit, and heaped together for their gardens, from the roads which cross, or which come near, the common; and that dung he puts upon his own farm field, and tells the wretched cottiers that the bits of horsedung which fall on the roads are his own bits of horsedung.

On talking to some of these people, who seemed to have large gardens, which had, at some time or other, been taken from the common, they took me to see the roads—the common thoroughfares—which the game make through the hedges from the colonel's preserves into their vegetables. One of the men showed me where he had planted 400 cabbages this summer, and where only

14 of the plants had been allowed to grow up by the hares and rabbits. His neighbour, on this, showed me where he had planted 500 cabbages this summer; "and there," said he, "there is every one of them standing now which the hares and rabbits have left. My neighbours can all tell you that these five cabbages are the only plants that escaped out of 500."

This man assured me that he had that very morning, on getting out of his bed, counted 16 pheasants in his garden, all at his potatoes. I had never before heard of pheasants touching potatoes; but this man declares that they do take up the potatoes at this season and eat the inside of them. I have seen rooks do so, and it is possible pheasants may do so as well. It cannot be doubted, however, that rabbits and hares, where they have unrestricted freedom, and where they abound so as to be literally swarming, do mischief to all garden-stuffs.

These people told me that they dared not even be seen looking at a hare even though it was in their own gardens. The place was full of gamekeepers as well as game, and they were continually watched. It might not be actually against the law to set a snare or trap for a rabbit in their own gardens; but if they did do so, and a hare or a pheasant was taken in the snare or trap, they knew that the gaol and the treadmill were waiting for them. And they added, that as the colonel wanted to wrest from them these cottages and gardens to demolish them and turn them into his game preserves, but which he could not do at present, nothing would answer his purpose better than to get some of them imprisoned or transported. They were watched night and day to see that they did not disturb the game; and they therefore chose to submit quietly to have their garden produce eaten up.

Another person said to me, in speaking of all these evils, and the fact that wages were falling from 9s. to 8s. a week, that in that part of the country the people were almost goaded to madness. What between their poverty and the hairbrained freaks of the colonel, who, it seems, has the reputation of being "cracked in the head," nobody knew what would happen; but everybody was afraid.

It may be added that the farmers' crops were exposed in the same way, or even more so, as the cottagers' gardens. But of the farmers hereafter.

ONE WHO HAS WHISTLED AT THE PLOUGH.

AN INQUIRY INTO THE EFFECTS OF ENGLISH LEGISLATION UPON AGRICULTURAL WAGES, PROFITS, AND RENT.

BY A BARRISTER.

(Continued from page 55.)

CHAPTER VII.

Seventh Period—From the Passing of the Poor Law of 1834 to the present time.

SECTION I.

It appears from the foregoing evidence that, from the early part till within a few years of the end of the eighteenth century, a progressive increase took place in the wages of the agricultural labourer, without a corresponding rise in the cost of subsistence; that after that time, viz., towards the end of the eighteenth century, a considerable rise took place in the cost of subsistence without a corresponding rise in the wages of the agricultural labourer; that an attempt was made to supply the deficiency of wages, by allowance in aid of wages, under the poor law of 1796; and that the effect of the proceeding was to lower both the moral and physical condition of the labourer. It also appears (and on no point is the evidence more conclusive) that between 1815 and 1834 the share of the produce obtained by the landholders as rent was such as to impoverish the farmers as a body. Under this poor law, then, neither the labourers nor the farmers prospered; and at length, from certain ominous symptoms that began to manifest themselves, there appeared reason to suspect that at no very distant time it might prove prejudicial to rents themselves. It is but justice to the Government to suppose that one of their objects was to take away the power of reducing the able-bodied and willing labourers to the condition of paupers, and to put a stop to the wide-spread demoralization which the system had introduced; yet one of the principal arguments employed to gain the support of the landholders was the protection of rent, it being urged that in some parishes the poor rates had absorbed the whole of the rent.

Accordingly, there was a reform of this poor law. It will be necessary, therefore, to inquire how that may have affected the result. If it be true that this physical suffering and this moral degradation of the agricultural labourers of England were caused by the poor law of 1796, such a reform of this law as would amount to a removal of the alleged cause of the phenomena should by consequence, if the alleged cause was the true and sole cause, remove the effect. Let us now see, then, whether this effect be really removed.

It was supposed by many that the Poor Law Amendment Act would have the effect of improving the condition at once of the labourer, the farmer, and the landlord: of the labourer, by raising him above pauperism, and enabling him to obtain the fair market value of his labour; of the farmer, by the money laid out in wages instead of poor rates producing a better return; of the landlord, by ensuring greater certainty and regularity in the payment of his rents. The condition of the landlord would appear from the evidence we have given, to have

improved so considerably within the preceding forty years that further improvement might well appear somewhat difficult; but we believe he will be found to be the only one of the three who has benefited by the new poor law, inasmuch as he has continued to draw nearly his former rents, instead of having to give them up altogether, as happened under the operation of the old law to the landlords of the parish of Cholesbury, in the county of Bucks.*

The ameliorating operation of the new poor law on the farmer has not as yet, we apprehend, been very distinctly felt, or at least ascertained. In regard to the labourer, the general effect, as far as we have been able to gather it, as well from the best information to be obtained on the subject as from personal observation and inquiry, appears to have been rather to deteriorate the physical condition of the labourer, while any improvement in his moral condition seems to be as yet very problematical. It is true that, while the Corn Law is in operation, the poor law cannot be considered as acting freely—as having its operation left free and undisturbed—as having quite fair play. But our business at present is to inquire what is the result of the two acting together.

Mr. Alfred Austin, one of the Assistant Commissioners appointed to make a special inquiry into the employment of women and children in agriculture, in his report (dated March 25, 1843) to the Poor-Law Commissioners on the counties of Wilts, Dorset, Devon, and Somerset, states that, in the district of Wiltshire which he visited, the wages of the agricultural labourer varied at different times of the year from 8s. to 10s. a week for work not paid for by the piece.† On comparing this with the returns given in Appendix (B. 1.) to the Report of the Poor-Law Commissioners of Inquiry from the county of Wiltshire before the passing of the Poor-Law Amendment Act, it would not appear that the effect of that act has been materially, if at all, to raise money wages. In these returns the wages in the parish of Liddington are stated to be 12s. in summer and 9s. in winter. In other parishes the yearly average is stated to be 9s. The chapel-warden of South Broom states that, "in the tithings of Roundway and Nusteed, 15s. per week is the average of the earnings in summer, principally piece work; winter 9s., without beer. Any extra work, over time, usually paid by food and beer."‡ And though the churchwarden and overseer of West Dean states that they used there to pay 8s., he adds that they have paid 10s. ever since the rioting.

But the wages paid in money to the labourer are not a complete measure of his condition, which depends, though principally upon that, yet in some degree also upon other sources of income. Before 1834 the principal of those other sources was parish allowance depending upon the number of children. Since 1834 the principal of those other sources has been the earnings of the labourer's wife and children; the allowance system, as it was called, having been put down by law.

In the list of questions issued by the Poor-Law Commissioners of Inquiry there was one which followed the questions relating to the labourer's own earnings and those of his wife and children, and asked, "Could the family subsist on these earnings? and if so, on what food?"§ The answer received to this question from different parishes varied: some of the witnesses answering "Yes;" others, "There is no want in this parish;" others, "The family could subsist on bread, meat, and vegetables, with wholesome beer, if the malt could be procured free from duty;"|| others, again, "Do not think they could;" others, "Yes, but almost wholly on vegetables, with bread occasionally;" others, "A labourer can with difficulty supply his family with food, consisting of potatoes and bread."¶ But the result in the former state of the law was far less important than in the present, since formerly any deficiency was made up by the parish allowance, whereas now the labourer has no such resource.

Let us now see what the result is under the present law; that is to say, whether the labourer's family can subsist on their present earnings.

"The average rate of wages amongst the farmers is 8s. per week, or 1s. 4d. per diem. The price of the gallon of bread is now 1s.; it was formerly at 1s. 3d. and 1s. 6d."

"Much is done to relieve their distresses by many, and is done with judgment and discrimination; but, when all is done, I never could make out how they can live with their present earnings."—Communication from the Rev. J. Guthrie, vicar of Calne, Wiltshire.**

"The wages are certainly insufficient. Even when there are only two children, it requires good management to keep them decently out of 8s. a week. Take any standard of comparison, and it will show the insufficiency. Perhaps the fairest is the cost of the pauper's food in the union workhouses, where the articles are generally such as form the poor man's food at home—bacon, bread, and potatoes, without beer or other luxury—and where the quantity is supposed to be absolutely necessary to keep the inmates in health. If the labourer has not as much food as the pauper, he ought to have. In our union the cost of each individual, taking the average of men, women, and children, is 1s. 6d. weekly for food only; and,

** Appendix to Mr. Austin's Report, pp. 54, 57.

buying by tender, and in large quantity, we buy at least 10 per cent. cheaper than the labouring man can. But, without considering this advantage, apply the scale to the poor man's family. A man, his wife, and two children will require, if properly fed, 6s. weekly; then rent, at least 1s., and fuel, will very nearly swallow up the remainder. But there are yet many things to provide: soap and candles, clothes and shoes. Shoes to a poor man are a serious expense, as he must have them strong, costing about 12s. a pair, and he will need at least one pair in a year. When I reckon up these things in detail, I am always more and more astonished how the labourers contrive to live at all."—*Dr. Greenup, M.D., Calne, Wiltshire, examined by Mr. Austin.**

"If women and boys who labour in the fields suffer in their health at all, it is not from the work they perform, but the want of food. The food they eat is not bad of its kind, but they have not enough of it, and more animal food would be most desirable; but with the present rate of wages it is impossible. Their low diet exposes them to certain kinds of diseases, more particularly to those of the stomach."—*Thomas King, Esq., surgeon, Calne, Wiltshire, examined by Mr. Austin.†*

"What description of food do they live on?—Bread, potatoes, with a very small quantity of bacon; they sometimes have cabbages from their allotments; they get a little beer, tea, and they drink water.

"Is that the food of the family?—Yes, they all live alike.

"Do they never get fresh butcher's meat?—Very rarely; hardly ever, unless it is given to them."—*Mr. Henry Phelps, of Bremhill, Wiltshire, agent to the Marquis of Lansdowne.‡*

"I have six children; the eldest, a boy, fourteen years old; the youngest, also a boy, a year and a half old. My husband is a farm-labourer, and for the last seven months he has had 8s. a week, also two dinners for some extra work he does at his master's house in cleaning knives, &c. This is all our family has to live on. We occupy a cottage with three rooms, for which we pay 50s. a year. We have also two small pieces of ground, together 65 perches, for which we pay £2. 7s. a year, and upon which we grow potatoes. The land we have does not furnish potatoes enough; we have to buy some in the spring. We never see such a thing as butcher's meat. Our food is principally potatoes, with bread. We eat about six gallons of bread a week. Sometimes, when cheap, we buy half a pound of butter a week, but most frequently fat, which we use with the potatoes to give them a flavour. Our neighbour, the Rev. Mr. Guthrie, gives us a little milk. We lay out about 2½d. a week in tea, chiefly to let my husband have a comfortable breakfast on the Sunday, the only day he breakfasts at home, and as it is the only thing I indulge in. Our common drink is burnt-crust tea; we also buy about half a pound of sugar a week. We never know what it is to get enough to eat; at the end of the meal the children would always eat more. Of bread there is never enough; the children are always asking for more at every meal; I then say, 'You don't want your father to go to prison, do you?'"

—*Mrs. Wiltshire, wife of — Wiltshire, farm-labourer, Cherhill, near Calne, Wiltshire.§*

In Dorsetshire, Mr. Austin states, wages are higher than in Wiltshire; in the neighbourhood of Blandford the wages paid in money averaging throughout the year 11s. a week.¶ On comparing this with the rate before the new law, we find a rise: the average of the whole year in the Blandford division of the county of Dorset being stated to be from 9s. to 10s.¶ But this rate of wages appears to be very much above the average in Dorsetshire at present.

In Devonshire the average rate of wages appears to be about the same as in Dorsetshire; in some instances, perhaps, a trifle higher.** In the part of Somersetshire which Mr. Austin visited, the average wages during the whole year, paid in money, appear to be rather lower than in Wiltshire; but the labourer has an allowance of cider (three pints daily), considered by both master and labourer as worth about 1s. or 1s. 3d. a week. But in that county generally Mr. Austin believes the labourer has very few or no advantages in addition to his wages; and he adds that, were the case accurately investigated, it would probably be found that in Somersetshire the labourer is worse off than in Wiltshire, and considerably worse off than in Dorsetshire and Devonshire.††

The highest wages, then, in these four counties appear to be those in the Blandford division of Dorsetshire; and as to the subsistence which those wages can procure the labourer, we have the following evidence:—

Edward (Oke) Spooner, Esq., Blandford, surgeon, examined by Mr. Austin:—

"The food of the labourer's family is bread and potatoes, with a little cheese and bacon. I know many families who do not taste butcher's meat from one year's end to the other. I do not think that there is a deficiency of food, except in special cases of distress, arising most frequently from drunken habits, and such a general loss of character as to interfere with profitable employment; or, in cases of very large families, where the children are

young; but I think the quality of the food is too low."* Mr. Austin's statement in his report, though guarded in expression, will be found to vary little in substance from the foregoing evidence:—

"The testimony of the medical men whom I consulted induces me to believe that the quality of the food of the agricultural labourers is not too low where the general state of their health is good; but that if there is a disposition to disease, or any deficiency in the quantity of the food, then the quality is found to be defective. Generally speaking, the labouring population is healthy; but it appears, that when grown-up women are attacked by diseases of certain descriptions, the low quality of their food is unfavourable to their recovery. It would appear, also, that when the quantity of food is sufficient, any effects from its quality are less felt by women accustomed to out-door labour than by those who keep at home. In Wiltshire the food of the labourer and his family is wheaten bread, potatoes, a small quantity of beer (but only as a luxury), and a little butter and tea. To this may sometimes be added (but it is difficult to say how often or in what quantities) cheese, bacon, and, in the neighbourhood of Calne, a portion of the entrails of the pig, a considerable trade being carried on at Calne in curing bacon. I am inclined to think that the use of bacon, and those parts of the pig, only occurs where the earnings of the family are not limited to those of the husband; or, if his wages form their sole means of support, then it depends upon the number of his family. In more than one cottage, where the mother went out to work, or two of the boys were earning perhaps 3s. or 3s. 6d. a week between them, I saw a side of bacon hanging against the wall; but nothing of the kind was visible when the only earnings were those of the husband, or the family was numerous and young. Where, from poverty, bacon cannot be obtained, a little fat is used to give a flavour to the potatoes. In Dorsetshire and Devonshire, in cases where the labourer is in constant employ, and possesses the advantages he frequently enjoys in those counties, the consumption of bacon would appear to be more constant, with now and then a little fresh meat. I believe that in these two counties the labourer not uncommonly is in a position to keep for his own use a part, and sometimes not an inconsiderable share, of his pig when it is killed.‡ But in Somersetshire the food appears to be much the same as in Wiltshire—bread and potatoes, with bacon and cheese at times. In the generality of cases the beer that is consumed is drunk by the husband, the universally favourite drink of the women being tea. At harvest the women drink beer, when given by the master; and not unfrequently, in the cider counties, a portion of the cider which is allowed them as part of their wages, though generally the greater part of it is kept for their husbands.¶¶

Mr. Denison, in his Report to the Poor-Law Commissioners, dated February 2, 1843, on the counties of Suffolk, Norfolk, and Lincolnshires, gives the following account of the amount and mode of expenditure of the wages of an agricultural labourer and his family, consisting of a wife and five children, belonging to the parish of Lavenham, in the county of Suffolk:—

Name.	Age.	Earnings.	Expenditure.
Robert Crick ..	42	9 0	Bread 9 0
Wife	40	0 0	Potatoes 1 0
Boy	12	2 0	Rent 1 2
Girl	11	1 0	Tea 0 2
Girl	8	1 0	Sugar 0 3
Girl	6	0 0	Soap 0 3
Boy	4	0 0	Blow 0 0
			Thread, &c. .. 0 2
			Candles 0 3
			Salt 0 0
			Coal and wood .. 0 9
			Butter 0 4
			Cheese 0 3
Total earnings ..		13 9	Total expenditure .. 13 9

When we know that the income of Robert Crick is greater than that of the majority of agricultural families, equally numerous, in several counties, and when, in examining the expenditure, it is observed that there is nothing for clothing or furniture, the hardship to which such families are exposed must be evident. Twelve shillings a week are considered liberal wages; but with that income Crick's family would be deprived of all their "luxuries of the nature of necessities," and even for soap and candles a reduction in their allowances of bread and potatoes would have to be made. It is only by such illustrations that the extent of destitution to which the industrious labourers are reduced can be estimated. The quantity of solid food required to maintain a sailor and a soldier in health is fixed; but, except in Northumberland, no attempt has been made in England to supply the labourer and his family with at least the necessities of life.

On comparing the rate of wages with the returns from Suffolk, in "Appendix (B.) to the Poor Law Inquiry Report," we do not find that wages have risen since 1834. Thus, the return from the parish of Thoxington gives, to the question as to the man's wages, for answer, "averaging about 10s. 6d. per week, winter and summer;"§ as to the earnings of the wife and children, "summer, if work for them, they can earn 3s. at spinning, or about the same at weaving; but, unfortunately, there is no employment

¶ Ibid., p. 62.

for them; winter, nothing; harvest, about 5s. per week at gleanings;"* and as to parish allowance in aid of wages, "no allowance, and no part of the labourer's wages paid by the parish;"† and throughout the county we find wages vary from 9s. to 15s.,‡ or even £1,§ with but little employment for women and children.

The following observations on the above-cited account of the wages and expenditure of Robert Crick, by Mr. Scott, the relieving officer of the parish of Lavenham, show that the amount of wages of Robert Crick and his family, viz., 13s. 9d., is rather above than below the general average:—"But there are numbers of families who, although in the possession of the amount of wages shown above, do not dispose of it with such frugality, but appear in the greatest state of destitution; many others, with the same number of children, do not get the wages this man's family have. The family I have given as an example is more to show you that, with industry and frugality, their diet consists principally of bread and potatoes. There are, however, some who, when their families are grown up, by putting their earnings together, occasionally get a piece of meat at their supper-time, and their Sunday dinner."||

In some cases the total yearly earnings of the agricultural labourer and his family considerably exceed the amount above stated of the earnings of Robert Crick, which, nevertheless, we apprehend may be assumed as above rather than below the average throughout England. Thus, Mr. Vaughan, in his report on the counties of Kent, Surrey, and Sussex, states the amount of the yearly earnings of one labourer in Sussex to be £19. 13s. 6d.¶ But the employer of this labourer stated that he "was the best workman in his employ, physically strong, and could turn his hands to all kinds of work as the seasons drew round." And Sir F. H. Doyle,** gives the following as the amount of the earnings of Joseph Allen, an intelligent and industrious agricultural labourer at Bolton Percy, near York, and those of his wife and boy. His family consisted of seven individuals, but only one child was able to assist him. It is probable that Joseph Allen was as much above the average of labourers in skill and industry as the Sussex labourer last mentioned, whose earnings exceeded the other labourers working for the same employer by from £6 or £7 to £10:—

Himself, 50 weeks, at 14s. ..	£35 0 0
" 2 do., at 14s. 6d. ..	1 9 0
His Wife, 29 do., at 5s. ..	7 7 6
" 4½ do., at 4s. ..	0 18 8
" 0½ do., at 3s. 6d. ..	0 2 8
Boy, 29 do. (4½ days), at 3s. ..	4 9 3
" 7½ do., at 4s. ..	1 9 4
Total income of family ..	£50 16 5

The following is a summary of the expenditure of the above income, made up from the accounts kept by Joseph Allen himself, from the 1st of March, 1841, to the 28th of February, 1842, and given in the same report of Sir F. H. Doyle:—

Flour, 152½ stone	£20 1 1
Oatmeal	0 8 0
Meat	4 12 4
Bacon	0 6 8
Potatoes	0 16 7
Cheese	0 3 0
Butter	1 1 6
Milk	0 17 6
Yeast	0 12 0
Candles	0 14 2
Soap	0 17 2
Tea	0 16 4
Coffee	0 14 0
Sugar	2 2 0
Apples, salt, pepper, &c. ..	0 6 8
Coal	1 18 2
Clothes, making, &c. ..	6 12 4
Miscellaneous	0 15 0½
Boy's schooling	0 6 0
House rent	4 0 0
Balance	2 15 4½
Total	£50 16 5

When, besides laying by between £2 and £3 in a year, a family expends upwards of £8 upon meat, tea, coffee, and sugar, we may conclude that they had a sufficient quantity of bread and other absolute necessities. But it is almost unnecessary to repeat that the income of this family is very considerably above the average income of families of the same class at present in England. If we deduct the £10 specified above as expended on "necessaries of the nature of luxuries," there will remain about £40 for the support of a family of seven persons; from which it appears that such a family, with £40 a year, which is considerably above the general average at present, could not taste meat, tea, coffee, or sugar, from one end of the year to the other, and could not lay by a farthing towards a fund to provide for the necessities of sickness or old age, and to keep them from dying in the workhouse.

The condition of the agricultural labourers in Yorkshire, in Lincolnshire,†† and in some parts of Kent, appears to be considerably better than in any other part of

* Ibid., question 12. † Ibid., p. 469 b, question 24.
‡ Ibid., p. 469 a, question 8. § Ibid., p. 472 a, question 8.
¶ Ibid., p. 472 a, question 8. ** Report, p. 304.
†† Mr. Booth, one of the witnesses examined by Mr. Denison, says:—"Labourers here (Kilnham, Lincolnshire), seldom miss a day without having meat. The labourers, generally speaking, who combine themselves by the year, have about £20 in money, a cottage and garden rent free, the keep of a pig in the

England. It has been shown that, even in Yorkshire, the condition appears to have deteriorated within the memory of some of the witnesses. A gentleman who has farmed part of his own estate in the county of Kent for fifty-five years, who has not paid less than 12s. per week, and whose thrashers, working by the great, earned, upon the average, 17s. per week during the last winter, informs me that he is persuaded that the condition of the agricultural labourer is not so good as it was previous to the war of 1793. And extensive inquiries made among farmers and labourers in Kent have led to the same conclusion. The same gentleman informed me that those labourers of his, with 17s. a week upon an average, assured him that with those wages they cannot save. One who has a family of six told him that if he had a few shillings more per week he should consider it his duty to spend such increase upon some comforts which, at present, his family have not the means of procuring.

In a return from the Dover Savings' Bank, made up to the 20th of November, 1843, out of 1782 depositors, whose deposits amount in all to £53,518. 11s. 8d., there are 73 agricultural labourers, whose deposits in all amount to £2440. 15s. 1d., averaging to each depositor about £33.

Upon this return a gentleman of practical knowledge in agriculture in that district, to whom I applied for information, has favoured me with the following observations: "I have made extensive inquiries both of farmers and labourers as to the condition of the labourers, and the result of the information I have obtained only tends to confirm me in the opinion and belief I have entertained for some time that it is impossible for a day-labourer, with a wife and two or three children, to save from his honest earnings if he receive only the usual rate of wages; and if he be fed to maintain himself in good working condition. It is, however, possible, I think, that a married man, without any children, and a good help in his wife, may be in a condition to put by a little from their honest earnings, though I do not know of such a case, nor can I hear of one. Single men, living with their parents, are known to save from their wages. Married men, without and with families, have deposited in savings banks, but then such cases arise from adventitious circumstances: legacies that have been left; money obtained by smuggling, in which business near the coast many agricultural labourers are employed, and oftentimes earn by their night work more than by day work; there are also many agricultural labourers engaged some months during the year in fishing, and in the mackerel season make a net profit of from £3 to £15.

"There is not a doubt that many bailiffs and waggoners are in a position to save, and do save.

"Benefit and medical clubs are much contributed to in this part of Kent; indeed, the agricultural labourers of all descriptions are becoming generally members of such associations. If the purely agricultural married labourer, with or without a family, contribute to a benefit and medical club about 2s. monthly, and keep out of debt, upon the rate of wages, 12s. per week, now paid hereabouts, it is quite as much as he can do; that is to say, if he maintain himself in the physical condition he should be to do a day's work."

A practical farmer of much experience, and possessing a very accurate knowledge of the condition of farm-labourers, observes:—"I have no hesitation in saying it is impossible for agricultural labourers in this district to save from the money paid them by their employers. I doubt not the sums that may stand in the savings' banks in East Kent, in the names described as agricultural labourers, have been obtained by smuggling and midnight depredations."

A naval officer, who has been for many years engaged in the coast guard service for the suppression of smuggling, stated:—"That in the neighbourhood of the Isle of Wight, and further to the westward, the farm-labourers were, near to the coast, very generally concerned in smuggling; the farmers with whom he was acquainted said they, the labourers, had means of getting money known best to themselves only; for the style and comfort in which they lived could not have been accomplished by the money paid to them for agricultural work."

Another naval officer stated:—"Devonshire was in my recollection a noted county for smuggling and fishing."

In the volume of "Extracts" from the Reports of the Assistant Commissioners, published by the Poor Law Commissioners of Inquiry in 1833, at p. 261, a scale is given, showing the comparative condition of each class as to food, from the agricultural labourer to the convicted and transported felon. The agricultural labourer is at the bottom of the scale; the transported thief at the top. The quantity of solid food obtained by the *honest* agricultural labourer, allowing a loss in cooking of one oz. in four, is stated to be 123 oz.; that by the transported thief, 330 oz. The allowance of the agricultural labourer is thus made up:—

"Bread (daily) 17 oz. = per week, 119 oz.
Meat, per week, 4 oz.
Loss in cooking 1 oz. 3 oz.
123 oz."

In the winter, and run upon the farm in the summer; a family to get potatoes on, four quarters of barley at 30s. per quarter, two quarters of wheat at 60s. If they sell a cow they have £10 less in money. The labourers are generally better fed in Lincolnshire than in any county in England."

It is proper to remark that the wages paid by gentlemen to their own land are usually somewhat above the general average of the district.

Next lowest in the scale to the agricultural labourer is the soldier, whose amount of solid food is 168 oz. The soldier's allowance is stated to be:—

"Bread (daily) 16 oz. = per week 112 oz.
Meat (do.) 12 oz. = do. 84 oz.
Loss in cooking 28 oz.
56 oz.
168 oz."

In some dragoon regiments the allowance of bread is 1½ lb. per day, or 24 oz.; and we have been assured by men who have made the experiment themselves, that, in the case of young men with a good deal of hard work (as is the case in horse regiments, but the work is not greater than that of a hard-working agricultural labourer), they have not found the pound and a half of bread sufficient; but have been obliged to purchase bread and cheese in addition from the small sum remaining out of their pay. Now, such a man's allowance of solid food is, to the agricultural labourer's, in the proportion of 224 to 122, or nearly 2 to 1; and bearing in mind what we have stated above as to the insufficiency in some cases even of the 224 oz., we have as vivid an idea of the condition, as to food, of the English agricultural labourer as need be desired.

The agricultural labourer's allowance of solid food, as given above, seems to be obtained from the account of the income and expenditure of an agricultural labourer near Newbury (given at page 251 of the Report), whose wages, together with the earnings of his wife and children, are stated to be 13s. 6d. per week. The number of his children was six, consequently the allowance would be twenty-pence a head; the exact sum computed by Sir Matthew Hale and Mr. Gregory King to have been necessary in the time of Charles II. At page 251 of the Report, indeed, there are three accounts given. The above is the first of these, and gives the labourer's family a somewhat larger portion of food than the other. The second is thus stated:—"A man, his wife, and four children, receive in wages 9s. a week, and a gallon loaf from the parish weekly, and live rent free in a parish cottage. The quantity of solid food which they thus procure weekly is stated to be five gallon loaves and half a pound of bacon, which, when divided among six persons, gives the following result:—

Bread (daily) 16 3-7ths oz. = per week 115 oz.
Bacon, per week 1½ oz.
Loss in cooking ½ oz. 1 oz.
116 oz."

Now, there are many families of this class and number living at the present time upon the same, or less, wages, without the addition of the gallon loaf from the parish weekly. Deducting this gallon loaf from the weekly allowance of bread, we find it to amount to only 92 oz., or the whole amount of solid food to be only 93 oz. Or, taking another view, 9s. a week for six persons will only give them eighteen-pence a head instead of the twenty-pence declared to be necessary for their subsistence about 200 years ago, when food, fuel, and house-rent were so much cheaper. According to the third account given, the weekly portion of bread for each individual would be only 111 1-5th oz. The proportion of meat is not easily ascertainable. The account states for the whole year, "Purchase of pig, £1. 7s."

But a still more exact standard of comparison is afforded by the regulations now in force for victualling the navy, established by an Order in Council of the 23rd of June, 1824. The following is a copy of these regulations:—

"There shall be allowed to every person serving in his Majesty's ships, the following daily quantity of provisions, viz:—

Bread 1 lb.
Beer 1 gall.
Cocoa 1 oz.
Sugar 1½ oz.
Fresh meat 1 lb.
Vegetables ½ lb.
Tea ½ oz.

"When fresh meat and vegetables are not issued, then shall be allowed in lieu thereof:—

Salt beef ½ lb. }
Flour ½ lb. } alternately.
Salt pork ½ lb. }
Pease ½ pint. }

"And weekly, whether fresh or salt meat be issued, oatmeal, half a pint; vinegar, half a pint.

"On the days on which flour and suet are ordered to be issued, suet and raisins, or currants, may be substituted for a portion of the flour, at the following rate:—

1 lb. of raisins being considered equal to 1 lb. of flour.
½ lb. of currants } do. do.
½ lb. of suet }

"In case it should be found necessary to alter any of the above species of provisions, and to issue others as their substitutes, it is to be observed that:—

1½ lb. of soft bread, or
1 lb. of rice, or
1 lb. flour } is to be considered equal
to 1 lb. of biscuit.
½ pint of wine, or ½ pint of spirits = to 1 gall. of beer.
1 oz. of coffee, or ½ oz. of tea = to 1 oz. of cocoa.
1 lb. of butter = to 1 lb. of sugar.
2 lbs. of cheese = to 1 lb. of cocoa.
½ lb. of onions or leeks = to 1 lb. of other vegetables."

It appears from this that the following is the quantity of food allowed for the maintenance of "every person serving in her Majesty's ships," sailors and marines, for one week, which may be assumed to have been found necessary to preserve them in health and good working condition, with the value of the same when the average price of wheat is about 56s. the quarter.

7 lbs. flour or biscuit, or 8½ lbs. soft bread .. 1s. 5d.
7 gallons beer 2 4
7 oz. cocoa or coffee 0 10
1½ oz. tea 0 6
10½ oz. sugar 0 4½
7 lbs. fresh meat 3 2
3½ lbs. vegetables 0 2
½ pint oatmeal 0 1
½ pint vinegar 0 1
9 0

Now, if an able-bodied seaman can be said to be harder worked than an agricultural labourer, which, except on extraordinary occasions, is not the case, a marine certainly cannot; nevertheless the quantity of provisions judged necessary to keep one marine in health and serviceable condition is greater than, in a majority of cases, can be procured by an agricultural labourer and all his family.

The reader will find, on turning to the scale of the Berkshire magistrates, printed in a preceding page, that 9s. 9d. was the magistrates' allowance to a family of four persons when the gallon loaf was 1s. 5d., out of which, be it remembered, they had to procure not only food but clothes and shelter. But we apprehend that even 9s. is above the present average of agricultural labourers' wages. It is now admitted on all sides, even by the friends of those who formerly maintained that the Corn Laws were beneficial to the labourer, that, "with wages reduced to six or eight shillings a week, the countryman can no longer boast that, however coarse his fare may be, at least he has enough of it."

But even this is not all. In all our reasonings respecting the agricultural labourers it is to be carefully kept in mind that a very large proportion of them have not constant employment, not probably, on an average, more than three or four days in the week. From want of due attention to this fact, it is probable that the hardships of their condition have been rather understated than otherwise. Even the lowest scale of wages is supposed in argument to be uniform, to be attended with constant employment, whereas it will be found, in point of fact, that many a man whose earnings range from 1s. to 1s. 4d., or at the highest 1s. 6d., a day, is out of work altogether many days in the year—some half the year. Consequently below the lowest yet sounded there is still "a lower deep." The lowest-stated level of wages does not, in the case of the English peasant, enable the mind to form a thoroughly accurate and adequate conception of the "gauge and dimensions of misery, depression, and contempt."

(To be continued).

ADVANCE OF WAGES.—STRIKES.

WIGAN.—Some of the operatives, at several of the mills, have obtained an advance of wages without turning out; and it would be well if the differences of the others were settled, without any further inconvenience to the trade; for it is reported that the strippers and grinders at the respective mills intend to strike to-day, their term of notice having generally expired.—*Preston Chronicle*, Nov. 2.

LANCASTER.—We last week recorded an advance made by Messrs. Greg and Co., cotton-manufacturers of this town, to their workmen, and we have now great pleasure in stating that Messrs. T. H. Higgin and Co. have raised the wages of the weavers in their employ from five to seven per cent. Here is an additional nut for the cheap-food and low-wages croakers to crack.—*Lancaster Guardian*.

ASHTON-UNDER-LYNE.—A public meeting of the power-loom weavers of this town was held in the Charter Meeting Room, on Wednesday evening, for the purpose of taking into consideration the propriety of endeavouring to obtain an advance of wages, together with weekly payment. A resolution to that effect, and also a resolution requesting employers to pay weekly, were unanimously passed. A weaver from Droylsden said that he, along with others, were sent as a deputation to that meeting, to know what advance should be asked, as the masters of Droylsden were governed in prices by those of Ashton. After some discussion it was agreed that 7 per cent. should be asked upon all sorts. It was then arranged that shop meetings should take place throughout the town, after which the meeting separated.

DOLTON.—On Thursday last, the hands in the extensive machine shop of the executors of the late Mr. Benjamin Dobson turned out in consequence of some new regulations, to which the men refused their concurrence.

On Monday so'night, at the Borough Court, a number of the iron-moulders in the employ of the firm of Messrs. Metcalf and Barlow, as executors of the late Mr. Benjamin Dobson, were summoned for leaving their work without giving the usual notice. William Lyons and Thomas Mason were first proceeded against. It was proved that the rule of the shop was to give and receive a week's notice. The defendants were ordered to return to their work, or be committed to the New Bailey for a month.

* The average price of wheat for the ten years ending 1841 was 56s. 8d., which is 7s. per bushel, and, allowing 1s. 6d. for baking, makes the half-peck loaf 1s. 8d. at the least.

† "Fraser's Magazine" for November, 1844, p. 607.
‡ The following statement of the churchwarden and overseer of the parish of Goudhurst, Kent, conveys probably a view of the matter which will hold true pretty generally:—"Good labourers in constant employment, from £25 to £40 a year; the average say £30. Many, from want of employment, do not earn £20."—Appendix (H. L.), question 16, p. 348 &c.

The other cases were not entered into, the men agreeing to return to their work, and pay expenses.

STOCKPORT.—We understand that the hands employed in several mills in Stockport gave notice at the end of last week that, if their original demand for a rise of wages were not complied with, they should leave work at the expiration of their term this week. Unless, therefore, some arrangement shall, in the meantime, have been made, it may be expected that before our next publication a number of the factory hands will have turned out.—*Manchester Guardian.*

THE PRESS AND THE LEAGUE.

(From the *Weekly Chronicle.*)

Two questions have been gravely debated by the daily press this week—the first, between the *Post* and the *Standard-Herald*, turns upon the question—Whether the League be dead or not? The second, between the *Times* and the *Herald-Standard*—Whether the City visit of the Queen, to open the new Royal Exchange, is, or is not, to be taken as a Free-Trade demonstration, and, consequently, as another heavy blow and a great discouragement given to the agriculturists by Sir Robert Peel? The first impulse one feels is to laugh at this solemn fun; nevertheless, no inconsiderable amount of ability (if we except the *Standard-Herald*, which is the stupidest of all stupid productions known to the reading public) has been expended on these points; and one, therefore, is led to suppose that there are clever men in the world who think them worth debating, in the absence of other and better subjects of debate,—as *Falstaff* thought his ragged regiment were good enough "food for powder," and "capable of filling a pit as well as better men."

Is the League dead? Not so, shout a thousand voices, backed by a thousand facts. It has been busy in the registration courts—too busy to attend public meetings; it has had so much to say to revising barristers that it has found no breath to throw away at public meetings; it has been all work with it, while it was yet time, in the broad sunshine, since no man knoweth when the dark night shall come; it has been taking a leaf from the book of Sir Robert Peel, in exchange for the many leaves he has pillaged from it; and it has quoted that leaf fairly, between inverted commas, and with an acknowledgment of its authorship; whereas Sir Robert Peel has played the plagiarist with the works of the League, in the spirit of petty larceny, which conceals from everybody what from anybody it may steal.

Thus stand the facts: still, at every pause in the category, the *Standard-Herald* drivels forth, betwixt a laugh and a cry, "I don't care; you're dead. I tell ye—you are dead! so I don't care!" And as this is all which the *Standard-Herald* can do—*il est*, add drivel to drivel, the *Herald-Standard*, which, though it may foam at the mouth, in the intensity of its rage, and long again for the glorious ascendancy times, when unarmed Quakers could be shot with impunity, is, nevertheless, cunning and strong of fence, rushes to the rescue, catching up the battle cry of "The League is dead!"

"Nonsense," cries the *Morning Chronicle*, "the League has commenced its winter career of agitation in greater force, in a higher tone, and with a stronger purpose than ever." "Pooh!" says the *Standard*, "you're a League touter!" Whereupon the *Morning Chronicle* looks about for evidence in contradiction of a calumny so opprobrious to all who have not shaken off the fears or the hopes of Whiggery; and, seeing no other means of escape from so discreditable a supposition, it pounces upon the *League* newspaper, abuses it soundly for sneering at the Wiltshire system of allotments, and makes a propitiatory admission, for the especial use of the *Standard*, to the effect that a free trade in corn will be injurious, for a time, to the agricultural labourers. The *Herald-Standard*, of course, seizes *impromptu* on the admission, becomes civil to its flattered morning contemporary for the time being, and, pointing out this as an admitted evil from a Leaguer, consequent on the policy of the League, shouts forth another exulting pean on the League's death. Here, however, the *Standard* is met by an opponent of better pluck and heavier metal—the *Morning Post*.

Now, I like the *Morning Post*,—for downright, positive, unshrinking consistency of policy, such as it is—for honestly sticking, through thick and through thin, in success and defeat, by its adopted friends, and by them alone—and for real ability in enforcing its views,—I consider it, paradoxical as the idea may seem, as the very head of the daily press. There is no shirking the point with the *Morning Post*: say its policy is destructive to the Ministry; its answer is—Perish the Ministry! and, again, tell the *Morning Post* that its policy could not be carried out unless a wall were built all around England, the answer of the *Morning Post* would be—Then build a wall round England! and it would inconspicuously set to work to demonstrate in most unexceptionably rolling periods—good English, if not very good sense—that it was the duty of Parliament to contract with Messrs. Grissell and Peto, immediately, for the masonry thereof; nay, the *Morning Post* would exult over the encouragement such a great national undertaking would afford to British industry, and would not even object to its being fabricated of cast iron! This may be insanity; but, in the midst of tergiversation, trickery, and vacillation, it is more respectable than the self-saving and self-seeking sort of common sense manifested by certain of its contemporaries.

Well, the *Post* exclaims—"The League dead! phew, your Mr. Gally Knight, who adopts this nonsense, is more like the stalking ghost of what he once was, than is the League!"

"Pooh," cries the *Standard* again, "You are a League touter."

"And you," retorts the *Post*, springing eagerly to the contest,—“You, who have covered Sir Robert Peel with the slings of your adulation, how do you account for the great gathering of last week in Manchester?”

"Mere talk," replies the indomitable *Standard*; "a large meeting it might have been, but the League it could not have been, for the League is dead."

But, the argument proceeds—"Look at what the League has done in the registration courts; obtained signal advantages in 80 boroughs, and snatched South Lancashire, at one grasp, from Ministerial and Conservative hands."—"That," says the *Standard*, "is part of a registration struggle—that's not the League."—"Look, again, at the threat which promises to swamp the county constituencies by an irruption of forty-shilling freeholders."—"That," says the *Standard*, "may be done by

individuals, but individuals are not the League."—"Mr. Cobden says—"Mr. Cobden," shouts the *Standard*, "is not the League!" Thus of all the rest. The *League* newspaper is not the League; the League subscriptions are not the League! Nothing is the League; for, the League being dead, the League is nothing! And so I commit the last consolation of dying monopoly to the winds of heaven and the wings of laughter: it is worthy of no better reply.

But if this be evidence of the shifts to which Monopoly has been driven in its efforts to keep up the drooping spirits of its friends, or, rather, of the shifts to which the traitor leaders of Monopoly have been driven in order to cast dust into the eyes of its betrayed friends, how miserably hopeless seems that position which can think it necessary to assure the agricultural section of the community that the visit of the Queen to the city of London, for the purpose of giving grace and dignity to the re-opening of the great mart of commerce for the metropolitan city of the empire, is not, by any means, to be construed into an admission, on the part of the Crown, of the superior importance of the mercantile and manufacturing classes in the State!

The *Times* seizes on the occasion to pen a grandiloquent article, which may be evidence of the commercial leaning of the *Times*, as well as of the *Times's* incapacity to be poetical, since never has the truth of the Tom Paine and Bonapartian maxim—that from the sublime to the ridiculous there is but one step—been more satisfactorily established than by this very article; but why should the *Standard* feel the thing so acutely, or why should it recognise the general distrust in Sir Robert Peel by Sir Robert Peel's majority, so much as to deem it necessary to assure its readers that the visit of the Queen to the city of London, on the occasion of Monday last, is on no account to be construed into an admission of the principle that the agricultural section of the community is inferior to the mercantile, or into a recognition of the fact insisted on by the *Times*, that the merchants of England are the "Great Feoffers of the Crown!"

Why, how miserably absurd is all this in the *Standard*! and what a low mental and moral level do these agriculturists fashion for themselves! As well might the manufacturers and merchants of England deplore, through the press, the genteel small farming of Prince Albert, who fattens an ox at a loss of ten hundred per cent., to have the prize snapped up from under his nose by Yeoman Tompkins, and who churns inferior fancy butter for the royal breakfast-table at a cost not exceeding 5s. a pound!

Is there no one among these people of sufficient knowledge to tell them that this very particular sensitiveness is but proof of a sense of their own intrinsic insignificance; and that all their talk about leases and allotments, and manures and agricultural chemistry, is but one more proof that the age has left them behind?

Nov. 1, 1844.

COTTON TWIST.

SOUTH LANCASHIRE ELECTION.

A meeting was held at the League-rooms, Manchester, on Monday evening, to consider the best means of increasing the county constituency on the next year's register, by stimulating such of the Free-Traders throughout the division who have no votes immediately to purchase qualifications. The meeting, which had been convened by circular, was numerous and respectable, consisting of some of the principal subscribers and friends of the League in Manchester and the surrounding districts. The warmest interest was manifested in the object for which the meeting was convened. Every one present zealously undertook to canvass his respective district and friends, and to report to an adjourned meeting, to be held on Friday evening. Several individuals pledged themselves to obtain in that time each ten persons for new qualifications. The late success of the Free-Traders in this division, so far from having induced them to rest from their labours, has only served to increase their enthusiasm, and to stimulate them to greater exertion. A long and interesting discussion took place on the best and readiest means of qualifying the great number of persons who are anxious to possess the county franchise, and whose names are already enrolled in the books which have been opened by the League for that purpose.

Besides those immediately connected with South Lancashire, there were also present several gentlemen connected with North Lancashire, the West Riding of Yorkshire, and North Cheshire, all of whom urged the necessity of inducing the South Lancashire Free-Traders to qualify for each of those divisions of counties. The chairman stated that the Council of the League had already turned its attention in that direction, and had a number of names on their books of persons who would qualify for all the divisions named; and he had no doubt, by the exertions of the gentlemen present, that list might be greatly extended. A resolution was passed, authorizing the sending of a circular to all the Free-Trade committees and agents throughout the various districts, to request that immediate meetings should be called for the purpose of co-operating with the Central Committee, by a general canvass, and such other means as will be most likely to promote the object of the League in this movement. A strong opinion was also expressed, that, if a similar and simultaneous movement were made by the Free-Traders in other counties, that these also might be rescued from the hands of the monopolists,—such, for instance, as North and South Staffordshire, East Worcester, East Gloucester, Middlesex, East Surrey, Lancashire, and others. It was finally resolved that meetings should be held in the League-rooms on the Wednesday and Friday evenings in each week, for the purpose of receiving reports of the progress made to carry on the work, and to give advice whenever and wherever it shall be needed.

REGISTRATION.

WESTMINSTER.—The revising barrister for this city has decided that lodgers are entitled to vote, if the landlord does not retain any part of the premises for his own use; and that they are not entitled, if the landlord retains any part of the premises in his own occupation. Against the former opinion the Monopolists have appealed to the Court of Common Pleas; and against the latter opinion, the Free-Traders have appealed. The judgment of the court on these points will determine the question of the right to vote of every occupier of premises of the value of £10, and, it is hoped, will abolish the absurd distinctions that have interposed in the attainment of the fran-

chise. The Free-Traders have, at last, succeeded in compelling the parish officers to insert the names of the occupiers of compound houses on the rate-book; which, it is expected, will make an addition of at least 600 on the next register. The following is the result of the revision:—

Claims, by Free-Traders, allowed ..	120
Objections, by ditto, allowed ..	120
	240
Claims, by Monopolists, allowed ..	9
Objections, by ditto, allowed ..	231
	240

The advantage on the register is much in favour of the Free-Trade party. Many of the 231 objections sustained by the Monopolists were to persons dead, &c., who could not have voted, even had their names been retained; while the whole of the 120 claims established by the Free-Traders are of persons ready to vote at an election. Mr. Trott, solicitor, and Mr. Huggett, secretary to the Westminster Reform Society, appeared for the Free-Traders.

NORTH CHESHIRE REGISTRATION.—MOTTRAM DISTRICT.—The revision for the list of voters in this district is now completed; and, notwithstanding the strenuous efforts made by the Monopolists to obtain a majority, we may congratulate the Free-Traders upon the result, which the following table will show:—

New claims by	Overseers' objections to	Monopolist objections.	Free-Trade objections.
Free-Traders.	Free-Traders.	Sustained.	Sustained.
Monopolists.	Monopolists.	Failed.	Failed.
Total.	Total.	Total.	Total.
137	71	21	31
		121	68
		56	23
		16	7

Thus, the Free-Traders have a gain of 66 on new claims, and 7 on overseers' objections, while they have a loss of 52 on party objections—making their net gain 21. The Monopolists were four times, and the Free-Traders once, mulcted in costs.

HALIFAX.—Our correspondent informs us that by mutual agreement both parties abstained from making any objections. The number of Free-Trade claims allowed was 83; Monopolist claims, 36.—Free-Trade majority on the claims, 47. This year's list, when printed, will contain 1009 names, and consists of 602 Free-Traders, 334 Monopolists, 32 doubtful, and 41 double entry. Giving the 32 doubtful votes to the Monopolists, it leaves a clear Free-Trade majority of 232.

SWANSEA.—(From a Correspondent.)—In Swansea a considerable accession has been made to the list by the insertion of 118 names, 97 of which are those of Free-Traders. Not a single claim or objection has been made by the Monopolists throughout the five contributory boroughs. Opposition seems to be given up as hopeless.

MERTHYR TYDFIL.—(From a Correspondent.)—A few additional names have been inserted on the list favourable to the present member. No Monopolist objection or claim. This borough is perfectly safe.

THE LEAGUE.—We cannot but admire the perseverance, the self-denial, the patriotism, and the great ability and zeal of this band of Free-Traders, who, notwithstanding all the checks they receive, and the obstacles thrown in their way, still struggle manfully in the cause which they believe to be based on the eternal principles of truth and justice. Thanks to such men, the question of Free Trade has now become an important element of public opinion. Free-Trade views have now become engrafted in the minds of the middle classes, at all times difficult to be inoculated with new and liberal views on any subject. Through their influence the Legislature—which, as at present constituted, cannot fail to reflect their peculiar wishes and opinions—has become instrumental, in some measure, in the promotion of the principles of Free Trade, and will unquestionably advance just in proportion to the march of opinion among the middle-class population of Britain.—*Leeds Times.*

MEETING OF LABOURERS AT CLACK, IN WILTSHIRE.—On Wednesday, the 30th ult., a meeting of labourers and others was held in the Primitive Methodist Chapel, Clack, at which the speakers were all labourers. The addresses were marked with great good sense and feeling. The following resolution was adopted:—"That, in the opinion of this meeting, it is highly desirable that an humble address be signed by the working classes in Wiltshire, and presented to the Queen, imploring her Majesty to urge, at the opening of her Parliament, the necessity of instituting immediately an inquiry into the state of the working classes in the agricultural districts." Mr. Read, independent minister of Gouatere, confirmed the statements made by the labourers from his own knowledge, as he was almost daily an eye-witness to their sufferings. The chairman closed the meeting by exhorting them to maintain peaceable and orderly conduct, to use every opportunity to improve their friends, and to endeavour, as much as possible, to make themselves acquainted with the true bearing of the Corn Laws; assuring them nothing would have the effect of inducing others to respect them so much as their respecting themselves.

FRUITS OF COMMERCIAL PROGRESS.—The overflowing opulence of Liverpool is gradually producing those effects on the Cheshire suburbs of this great city which men have not observed without astonishment, even on the Lancashire side of the river. Who that has lived here for twenty years does not know of the changes that have occurred in the value of land once considered waste and almost useless; who has not heard of the fortunes that have been acquired here by land speculations; and who does not know where to point to whole tracts, once covered with corn, cattle, and gardens, now teeming with a busy population? Even adjacent villages have been embraced by the giant arms of the town. The surrounding country is dotted with the beautiful villas of our wealthy citizens; watering places have sprung up, here and there, on the margin of the river Mersey; and villages, which once consisted of but a few huts, have become places of formidable note and pretension. The flourishing communities on the opposite shore have been fed from the same rich source, are saplings from the same root, and proofs of the healthy and vigorous condition of the parent tree.

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, November 6, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the LEAGUE of the Saturday immediately succeeding, but are included in the list of the week following.

ERRATUM.

In LEAGUE, No. 58, for "George Ridge, 15, Lower Wharton-street, Lloyd-square," read "George Ridge, 21, Wharton-street, Lloyd-square."

10th Month, 31, 44.

DEAR FRIEND,—The active and energetic manner in which the affairs of the "League" have been conducted during the past year renders it no less a pleasure than a duty to renew my humble contribution. The Council ought forthwith to issue an "Address" to our friends in all parts of the country, urging on them the imperative duty of qualifying themselves as 40s. freeholders before the 31st of 1st month, 45.

Your particular attention should be directed to *Cheshire, Cornwall, Durham, Lancashire, Middlesex, Northumberland, Cumberland, Rutland, Stafford, Surrey, and York*. The attention of our Scotch friends ought to be directed to the state of the representation in the following counties:—*Ayr, Edinburgh, Lanark, Perth, Roxburgh, and Stirling*. The city and county of Dublin want attending to.

I think we have every reason to be satisfied with the progress we have made during the past year. The inward monitor will never permit one of us to look back. "Forward" is and must continue to be the motto of our steady march.

With sentiments of respect and esteem, I am, &c.,

WILLIAM ANDERSON,
Castleton, Gushbro'.

LETTERS ON THE CORN LAWS, No. VI.

TO "YOUNG ENGLAND."

GENTLEMEN,—I address you by the name to which you answer; and because you answer to it. The application is not made "in derision;" neither is it intended to recognise the probability of your becoming the social renovators of Old England. There is much to be done before you present a clear title to a destiny so honourable. But censure on the aspiration may well be spared if it stimulate you to active and worthy service in ameliorating the condition of the people. The present is not the time for such service to be acknowledged grudgingly; nor is it a time, either, for looking quietly on, while exertions that might contribute materially to the public good are made in a wrong direction, and robbed thereby of their full increase of efficiency.

You profess a strong perception of the degradation of the working classes. "Not a man present," said Mr. Disraeli, at the Bingley meeting, "would have the audacity to quote a verse once met with in everybody's mouth—a bold peasantry, our country's pride." Your acknowledgment of existing evils is comprehensive. It includes the physical, intellectual, moral, and social condition of the poorest and most numerous classes. And you profess not only to see, but to feel; not only to feel, but to act. You come to meetings of the people for literary and scientific purposes; you eloquently assert the alliance of Commerce with Intelligence, and the property of the landless in the great "seed-field of time." You cherish a taste for wholesome sports and recreations, not only by oratorical approval but even by personal participation. On allotments of garden ground, whether for the farm-labourer or the cotton-spinner, you pronounce glowing eulogies. The course you pursue has the charm of novelty, at least in the spirit in which you pursue it. Where others, of your station, have plainly shown that they were only keeping an inevitable engagement, drudging through a needful form, or purchasing some portion of popularity against the next election, you have evinced the earnestness and ardour of men fulfilling a mission. The most distinct statement of your purposes I take to be that expressed in the words of Mr. Disraeli, at the Bingley meeting:—"We believe that it is not so much to the action of laws as to the influence of manners that we must

look for an efficient means to ameliorate the social condition of this country." This belief is the soul of your proceedings. It is the source, also, of the incongruities with which you are chargeable. Hence you look graciously on cricket clubs, and asstance at the Anti-Corn-Law League. Hence you encourage the peasant to grow a peck of barley, and vote against admitting to a free port the ship that brings a cargo of wheat. Hence you patronise Athenæum tea parties, and support the sugar monopoly. You tell the people to mend their manners; and you warn them not to tell you to mend their laws. You see the dependence of the social condition upon the physical, but shut your eyes to the dependence of the physical upon the economical. You anticipate much from the affability of noblemen and the liberality of landlords; nothing from the justice of Parliament and the wisdom of legislation. This is beginning at the wrong end, and curiously carving the capital of the pillar with no care to lay the foundation or build the pedestal.

Mechanics' institutions are supported in proportion as mechanics are prosperous. Well-enjoyed play presupposes well-paid work. The means of subsistence are the soul of sport. Labourers on low wages never aspire to the luxury of libraries. Athenæums arise when factories flourish; and increasing trade is alike favourable to the culture of the soil and the culture of the mind. Manchester listens delightedly to Young England's lectures because cheap food gives Manchester both work and leisure. Advancing wages are the guano by which manufacturing towns are manured for the growth of taste and the harvest of intelligence. How would Coningsby have been heard at Paisley in 1841? It is worse than preaching to the winds to tell starving weavers of manly sports and intellectual recreations. The comparative prosperity of the day makes your admonitions appropriate and yourselves popular. You must sustain that prosperity to sustain your own position. That is not to be done by speeches, nor by libraries, nor by walks in parks, nor by free cricket-grounds, though the son of a duke guard the wicket or discharge the ball. The working classes will enjoy your rhetoric only as a dessert after dinner. They have no relish for it fasting. You do them a world of good; but they would not hear you if they were hungry. Should storms lay next year's crop, they will beat down Young England also. In manufacturing districts your popularity and usefulness are marked on the sliding scale. It may be calculated beforehand by the amount of duty upon corn. As wheat falls, you rise; and should that come to famine price, you sink to nothing.

Little need be said, therefore, of your attempting to act directly upon the manners of the working classes. That it does good in the more fortunate localities, *as things are*, is thankfully acknowledged, and with no stinted praise. You offer both stimulus and guidance; and they are eagerly received by those whose favouring circumstances allow them time and heart to think of parks and gardens, books and casts, lectures and soirées. You present yourselves gracefully and frankly amongst them; they at least reciprocate the frankness, and are not unconscious of the grace. But you are alone in the work. You have not drawn down aristocracy from its skies to dwell among men of the working class. A general action upon manners would imply a general co-operation from that section of society. Your movement only shows that it is unmovable. Aristocracy has too much confined its intercourse with the people to the debaucheries of electioneering clubs, or the blackguardism of the Fancy and the Turf. It has chiefly been familiar with the veriest scum of the people. But if the manners of the people are to be refined by aristocratical intercourse, there are two parties for you to act upon, and you have not yet experimented upon the most difficult. The question is not whether the many would receive the few, but whether the few will come to be received. When lords intermingle socially with mechanics, no doubt the mechanics will mend their manners. "When the sky falls, we shall catch larks." How long will it take you to bring down the sky? The enterprise is unpromising. And were we to suppose the miracle accomplished, and such a change as usually requires generations to effect, compressed into years instead of generations, still the question remains whether the refinement of the working classes must not be mainly their own work? The rough stones on the beach rub themselves into smoothness by their ceaseless and equal collision much more efficiently than you can do it by throwing amongst them handfuls of the most exquisitely polished pebbles.

The only economical measure you have, as yet, recommended, is that of allotments. To become general it must be made compulsory; and there is an end of your relying on "the influence of manners" in preference to "the action of law." As a partial charity, it can never elevate the labouring class. It generates no sense of independence: it is superfluous when wages are high, and inadequate when work is not to be had. In many districts, as already in Sussex, it will become a substitute for wages, and

REVIEW.

On the Condition of the Agricultural Labourer.
Hood's Magazine, No. 11.—Fraser's Magazine,
No. 179.

It may be regarded as a remarkable sign of the times, that nearly all the periodicals for the present month have discussed, more or less directly, the condition of the agricultural labourer; far the most important articles on the subject, however, are those which are contained in the magazines we have named in our heading, and we deem it our duty to give some account of both to our readers. Though Hood, like "Poor Yorick," is chiefly known as "a fellow of infinite jest, of most excellent fancy," his "Song of the Shirt," and many of his other productions, prove him to be gifted with the most lively and generous sympathies; even in his humorous pieces we can discover an under-current of deep pathos and warm feeling, which often makes the heart palpitate with emotion while the face is wreathed in smiles. Hood presents himself as the accidental visitor at a small alehouse, where some dozen of peasants had collected to talk over their condition and discuss their grievances. At first he felt it rather a delicate position to be the listener to the minute details and frank disclosures which formed the staple of their gossip, but a little reflection taught him that on this head there was no occasion for scruple:—

"The poor men had no domestic secrets—no private affairs! All were public—matters of notoriety—friend and foe concurring in the advertisement. The law had ferreted their huts, and scheduled their three-legged tables and bottomless chairs. Statistical Grocers had taken notes, and printed them, of every hole in their coats. Political reporters had calculated their incomes and outgoings down to fractions of pence and half ounces of tea; and had supplied the minutiae of their domestic economy for paragraphs and leading articles. Charity, arm in arm with Curiosity, and clerical Philanthropy linked perhaps with a religious Inquisitor, had taken an inventory of their defects, moral and spiritual; whilst medical visitors had inspected and recorded their physical sores, cancerous or scrofulous, their humours, and their tumours.

"Society, like a policeman, had turned upon them the full blaze of its bull's eye—exploring the shadiest recesses of their privacy, till their means, food, habits, and modes of existence were as minutely familiar as those of the animalculæ exhibited in Regent-street by the solar microscope. They had no longer any decent appearances to keep up—any shabby ones to mask with a better face—any petty shifts to slur over—any household struggles to conceal. Their circumstances were known intimately not merely to next-door neighbours, and kith and kin, but to the whole parish, the whole county, the whole country. It was one of their last few privileges to discuss in common with the Parliament, the Press, and the Public, the deplorable details of their own affairs. Their destitution was a naked Great Fact, and they talked of it like proclaimed Bankrupts, as they were, in the wide world's Gazette.

"What matters?" said a grey-headed man, in fustian, in answer to a warning nudge and whisper from his neighbour. "If walls has ears, they are welcome to what they can catch—ay, and the stranger to boot—if so be he don't know all about us already—for it's all in print. What we yarn, and what we spend—what we eat, and what we drink—what we wear, and the cost on it from top to toe—where we sleep, and how many on us lie in a bed—our concerns are as common as waste land."

"And as many geese and donkeys turned on to them, I do think!" cried a young fellow in velvetens—to hear how folk cackle and bray about our states. And then the queer remedies as is prescribed, like, for a starving man! A Bible says one—a Reading made Easy, says another—a Temperance Medal says another—or maybe a Agricultural Prize. But what is he to eat, I ax? Why, says one, a Corkonian Jew—says another, a cricket-ball—says another, a Maypole—and says another, the Venus bound for Horsetraille."

"As if idle hands and empty pockets," said the grey-headed man, "did not make signs, of themselves, for work and wages—and a hungry belly for bread and cheese."

"That's true, any how," said one of the water-drinkers. "I only wish a doctor could come at this minute, and listen with his telescope on my stomach, and he would hear it a-talking as plain as our magpie, and saying, I wants wittles."

The conversation soon assumed a more serious tone:—

"If the speaker's voice faltered, or his eyes moistened, it was only when he painted the sharp bones showing through the skin, the skin through the rags, of the wife of his bosom; or how the traditional Wolf, no longer to be kept from the door, had rushed in and fastened on his young ones. What a revelation it was! Fathers, with more children than shillings per week—mothers travelling literally in the straw—infants starving before the parent's eyes, with cold, and famishing for food! Human creatures, male and female, old and young, not unweaned and torn by single woes, but worried at once by Winter, Disease, and Want, as by that triple-headed Dog, whelped in the Realm of Torments!"

This general description is followed by a specimen of "the short and simple annals of the poor," as they exist in our day:—

"The job up at Bosely is finished," said one of the middle-aged men. "I have enjoyed but three days' work in the last fortnight, and God above knows when I shall get another, even at a shilling a day. And nine months to feed, big and little—and nine backs to clothe—with the winter a-settin' in—and the rent behind-hand—and never a bed to lie on, and my good woman, poor soul, ready to— a choking sound and a hasty gulp of water smothered the rest of the sentence. 'There must be something done for us—there must,' he added, with an em-

phatic slap of his broad, brown, barked hand, that made the glasses jingle and the idle pipes clatter on the board. And every voice in the room echoed 'there must,' my own involuntarily swelling the chorus."

The "Lay of the Labourer" is then sung in full chorus; it is worthy the author of the "Song of the Shirt":—

"A spade! a rake! a hoe! A pickaxe, or a bill! A hook to reap, or a scythe to mow, A flail, or what ye will— And here's a ready hand To ply the needful tool, And skilled enough by lessons rough, In Labour's rugged school.	"Wherever Nature needs, Wherever Labour calls, No job I'll shirk of the hardest work, To shun the workhouse walls, Where savage laws begrudge The pauper babe its breath, And doom a wife to a widow's life, Before her partner's death.
"To hedge, or dig the ditch, To lop or fell the tree, To lay the awarth on the sultry field, Or plough the stubborn lea; The harvest stack to bind, The wheaten rick to thatch, And neyer fear in my pouch to find The tinder or the match.	"My only claim is this, With labour stiff and stark, By lawful turn, my living to earn, Between the light and dark; My daily bread, and nightly bed, My bacon, and drop of beer— But all from the hand that holds the land, And none from the overseer!
"To a flaming barn or farm My fancies never roam; The fire I yearn to kindle and burn Is on the hearth of home; Where children huddle and crouch Through dark long winter days, Where starving children huddle and crouch, To see the cheerful rays, A-glowing on the haggard cheek, And not in the haggard's blaze!	"No parish money, or loaf, No pauper badges for me, A son of the soil, by right of toll, Entitled to my fee. No alms I ask, give me my task: Here are the arm, the leg, The strength, the sinews of a Man, To work and not to beg.
"To him who sends a drought To parch the fields forlorn, The rain to flood the meadows with mud, The blight to blast the corn, To him I leave to guide The bolt in its crooked path, To strike the miser's rick, and show The skies blood-red with wrath.	"To dress so mean, and to eat the lean, Instead of the fat of the earth; To make such humble meals, As honest labour can, A bone and a crust, with a grace to God, And little thanks to man!
"A spade! a rake! a hoe! A pickaxe, or a bill! A hook to reap, or a scythe to mow, A flail, or what ye will— Whatever the tool to ply, Here is a willing drudge, With muscle and limb, and woe to him Who does their pay begrudge!	"Who every weekly score Docks labour's little mite, Bestows on the poor at the temple door, But robb'd them over night, The very shilling he hoped to save, As health and morals fall, Shall visit me in the New Hospital, The Spital, or the Gaol!"

The author then proceeds to plead for mercy in an individual case, to which and to other parts of this magazine we shall return again, after having examined the general question as stated by the writer in Fraser. This writer pays a high and merited compliment to the exertions made by the millowners and manufacturers of the north of England to increase the physical comforts and raise the moral and intellectual condition of the operatives they employ. This testimony is the more valuable, as it comes from a quarter where the manufacturing interest has hitherto found but little favour; but the writer is one of the few partisans of monopoly who has the honesty and the courage to do justice to a political adversary. The following passage is not less creditable to the writer than to the gentleman whom it describes:—

"Take, as an example, Mr. Cobden, of whom it is scarcely necessary to say, that, as far as he is the principal mover of the Anti-Corn-Law sedition, he is no favourite of ours, and from whom, on many other questions of general policy, we have the misfortune to differ. He believes that there never lived, in any station, an individual who had more deeply at heart than he has the best interests of his people. That he takes on all occasions the most direct and, according to our notions, the surest method of awakening a right spirit within them, we are not prepared to say; but we should baffle his character and outrage our own feelings were we not to acknowledge that he is just as anxious to raise his operatives in their own esteem and in the scale of moral being, as he is desirous, through their instrumentality, of adding to the amount of his own capital. And the same facts may be predicated of scores in the same rank of life, whom we do not care to specify by name, because they are not, like Mr. Cobden, public property."

The writer then proceeds with fearless hand to tear away the veil with which the so-called protectionists have endeavoured to conceal the sad condition of the peasantry:—

"Time was when to contrast in terms in the highest degree unfavourable to the latter, the social condition of the rural with that of the manufacturing population of Great Britain, constituted a favourite topic with a large class of writers on political economy. Peasant life was painted by them in the gayest and most attractive colours. We were reminded of the free fresh air which was continually breathed by the labourer and his family; of his clean cottage, his neat garden, his tidy wife, his hard-working children, the friendly intercourse which was kept up between him and his employer, and the inexpressible advantage which he derived from the pastoral visits of the

the occasion of their reduction. It will be only a better sort of outdoor relief. It cannot be expected so to prevail as to render the produce of the country equal to its consumption, and thus keep the price of food moderate and steady, and the manufacturing districts secure from the disastrous reverses to which they are subject from the want of a Free-Trade policy. If it could, the landowners' objection to Free Trade would be destroyed; and whatever of good there is in it, whatever of real subserviency to the interests of tenants and landlords, would be sure to realize itself, were a Free-Trade policy adopted.

You can, at best, make nothing more of allotments than a help and an enjoyment. The effect is both limited and questionable. The manufacturing towns must continue to be the drain and outlet of an increasing surplus population in the agricultural districts. But the expedient of allotments, as an alleviation of distress amongst the agricultural labourers, is a confession that the outlet is, even now, not wide enough. Even in these cheap times, that most extraordinary of human necessities, the want of work, is rife in the land. Law, not nature, has produced that monstrous want; and by law must it be removed. Let dear times come again; two bad harvests in succession; and where then will the agricultural population be? Where, then, the manufacturing? How will "the influence of manners" stand the storm that will then thunder in the towns and blaze through the country? Your Atheneums, and museums, and amenities, will be swept away as by a whirlwind. The convulsions of an earthquake will rock Young England's cradle, and its last sleep be ushered in by the lullaby of a "rebel drum."

The good effect of high wages upon the manners and morals of the operative is destroyed by his only obtaining them occasionally. Vicissitude ruins his character; prosperity plunges him into excess, and adversity makes him a bold beggar. His life is the alternation of drink and destitution. The fact is alike notorious and deplorable. Here and there one of this victimized class may be converted by your speeches, and lay by, of his surplus, against the time of need; but you must be the most sanguine of missionaries if, by such means, you expect the conversion of whole bodies. Habits are changed by events, not by words. Steady wages and steady prices make steady workmen. How get them? You have not told us; it should have been the first point of your orations, but you were silent on it; it should have been the preface of your historical fancies, but you have left it unwritten.

If the libraries you patronise contain standard works of political economy, the intelligent operatives will seek it there. They will find distinctly traced, by able hands, the laws which govern the creation and distribution of wealth with almost as much exactitude as the laws which rule in mechanical action and chemical combination. They will learn that all industrial interests are identical; and all dependent upon freedom of trade for their prosperity. They will perceive that writers who have been sneered at for "cold" calculations, were warm assertors of the rights of labour, and diligent investigators of the means for securing those rights. In all the great masters of the science, from Adam Smith downwards, they will find a continuous protest against commercial restriction. They will then not fail to observe that the political economy of law is in complete hostility to the political economy of science. Its first principles are violated, and in conformity with the supposed interests of the majority of lawmakers. The doctrines it disapproves are practically adopted, and those it demonstrates are held in abeyance. And they will then ask of you, gentlemen, why you side with the false political economy against the true; with the conclusions of avowed ignorance against those of admitted knowledge; with Richmond against Ricardo, and Philip Miles against James Mill? They will demand why you are parties to a robbery upon their wages, in the form of enhanced price by taxation, a taxation imposed not for the advantage of the national revenue, but for that of a "protected" class; why you uphold a system which has reduced their consumption of sugar, and after drives them from bread to potatoes; why you speak for institutions and recreations that imply the sufficiency and steadiness of their employment, for them to be in a state to continue either contributors or recipients, and yet vote for laws, or against the repeal of laws, by which trade is limited in its extent, and rendered irregular in its operations. All this, and more, they will ask you, gentlemen; and "what the devil will you say?" Bethink yourselves of the matter, I pray you, before Parliament assembles, and Mr. C. Villiers brings on his annual motion for Corn-Law Repeal. A NORWICH WEAVER BOY.

CATTLE IMPORTS.—Whilst fodder remains scarce the price of fat stock must continue relatively high; the graziers are, however, held in check by constant arrivals from abroad, of which we have this week had into Hull, by the Hamburg and Rotterdam steamers, 60 head of horned cattle; namely, by the Leeds, 22; Helen M'Gregor, 31; and Transit, 15, from Hamburg; and by the Emerald Isle, 7. The last-named vessel also brought 37 sheep.—Hull Advertiser.

curate. We sat down with him to his frugal but nutritious repast every day at noon; we closed his eyes in a sound sleep soon after nightfall, and beheld him rise again fresh and vigorous for his task at early cockcrow; and when the Lord's-day came round, the respectability of his appearance in church delighted us. Alas! whither shall we turn in search of these things now? Not to Cambridgeshire, nor Suffolk, nor Norfolk, where the torch of the incendiary is still in operation; not to Kent or Sussex, where union workhouses are full, and industrious and willing men struggle to keep clear of them, even though they be offered for their week's labour no more than eight, or, at the most, ten shillings. Not even into Wiltshire, honoured though it has recently been by a visit from Young England and a lordly game at cricket, where one of the most distinguished of the party covered himself with glory. There is no such thing nowadays as Arcadian happiness anywhere to be found within the realm; for the spirit of the poor peasant is well-nigh broken, and all his habits of cheerfulness and order have forsaken him. Who is to blame for this?

"If we have ever been among the number of those—and it is not impossible that we were—who held up the landed aristocracy of England as objects of imitation to the cotton lords, we are constrained on the present occasion to reverse the picture, and to recommend to the owners of the soil the adoption, as far as may be, of a course on which the owners of mills and manufactories seem fairly to have entered. The poor peasant derives no advantages, either physical or moral, from the improvements that are in progress. We get our subsoil plough from Scotland, and send for the inventor, Mr. Smith, of Deanston, to teach our bailiffs how to apply the instrument. We charter ships for Ichaboe, and bring back in them guano wherewith to manure our fields. And landlords rejoice that they see a prospect of keeping up their rents, even if the Free-Trade crisis, so long expected, should arrive; and tenants are glad inasmuch as a largely increased production promises to compensate for the fall in the price of their commodity. But what is done for the peasant all this while? Nothing. He continues precisely what he was. More work is not found for him; better wages are not paid to him. Neither he nor his little ones are directed to improve their minds, nor taught to feel that they have a permanent stake in the country. As yet there is no hope for the peasant. He cannot rise beyond the sphere in which the accident of birth has cast him. No living soul appears to care for him, except at those annual gatherings, when, with as much ostentatious show as kindness, he is paraded before a company of landowners, land-occupiers, and clergymen, to compete for some paltry prize. Contrast this with the behaviour of the millowners at Leeds and Manchester towards their workpeople. See how considerably the latter are beginning to be treated. No middle-men stand between them and their employers, except so far as the necessities of business compel; and in all their more rational amusements the master-manufacturers join them. The consequence is a continuous and steady elevation of character everywhere. For while the poor respect themselves the more because of the companionship to which the rich admit them, the rich acquire habits of thinking and acting, which, seeming to bring them down, raises them, in point of fact, higher and higher in the scale of rational beings. Nor let us omit to state that foot by foot with this wise attention to the temporal comforts of their people, goes the anxiety of very many of the leading manufacturers of England to promote among them a sound religious principle. The places of public worship which have arisen and are daily arising in the great towns vouch for this, and from these, aided by the schools, for which properly-trained teachers cannot be found fast enough, the happiest results are to be anticipated.

"The landowners of England must bestir themselves. They, too, have a great part to play in the national revival which has begun; and if they do not enter upon it at once, and vigorously, their good name will suffer. They must strive to become personally acquainted with the labouring classes round them. It will not do any longer to deal exclusively with the farmers; they must speak face to face with the men who dig, and plough, and reap, and thresh; and enable those same farmers to appear at rent-day with money in their purses. For the farmer has in too many instances abused his trust, and the landlord mourns the shame, and the peasant the sorrow."

In conclusion, the writer gives the following pithy advice to his agricultural friends:—

"There are points which the most virulent of the League orators deserve to be looked at by them as models for imitation, and among these a growing desire to improve the condition of their workpeople, both moral and social, is one. Let the 'Gentlemen of England' go and do so likewise; and they themselves, not less than the objects of their care, will find abundant reason to rejoice."

It is but justice to "Fraser's Magazine" to say that, though from the beginning it has been a very decided partisan of what are called ultra-conservative opinions, it has never allowed politics to narrow its sympathies, or interfere with the integrity of its judgment in literary matters. Men of every shade of opinion have contributed to enrich its pages, and all have found that a wider latitude has been allowed to free discussion than in any other periodical which has worn the badge of party. The article that has on this occasion more especially attracted our notice does not stand alone: in both the earlier and the later numbers of the magazine there occur essays in which earnestness of purpose has enabled the writers to burst the conventional trammels of political party, and fairly to grapple with the grievances which disturb the mechanism of society, and render its workings dangerous or injurious.

"Hood's Magazine," though bearing for its second title the "Comic Miscellany," is one which constantly suggests matter for deep reflection. In the present number there is a tale illustrating the consequences of the game laws, so naturally told that the heart feels an instinctive conviction of its truth. The moral of the story is pointed by a woodcut, which we are permitted to copy, and which forms a

"AM I MY BROTHER'S KEEPER?"

proper pendant to *Punch's* "Rickburner's Home." No words could more effectively paint the iniquity of training a class of men to be the guardians of hares and partridges at the expense of the lives of their fellow-men. A keeper is as necessarily exposed to almost resistless circumstances of demoralization as a poacher. However he may gloss over homicide by regarding himself as the protector of property, he cannot help feeling that a man's life is "of more value than many partridges." The fearful question which Hood has placed under the representation of the slain poacher is one that must suggest itself to the mind of the keeper, who has been doomed to pull the fatal trigger. In estimating the condition of the agricultural peasantry, it is but justice to take into account the corrupting principles which are perversely maintained to destroy the moral sense, both in those who preserve game and those who illegally take it. The keeper feels himself to be a man marked for the detestation of his fellows, and, as his mind revolts against such a doom, he in his turn becomes harsh, cruel, and vindictive. He knows that the bent of public opinion in his village is

"To praise the poacher, precious child of fun,
Who shot the keeper with his own spring-gun."

On the other hand, the peasants feel that they must be viewed as enemies, when armed bands are maintained to watch their secret movements. The evil rapidly spread: the keeper and the poacher come to be regarded as types of the landlord's retainers on one side, and the agricultural labourers on the other. The struggle for the preservation of game thus becomes a war of classes; and history has been written in vain if men have not learned that such a state of things portends woe to the victors as well as to the vanquished.

The writer in "Fraser" fairly confesses that it is owing to the exertions of the League that the condition of the agricultural labourer now engrosses so large a share of public attention. Such a result is in itself a remuneration for the labour and expense which our agitation has involved. The results of protection are stated as broadly by the protectionists themselves as by the most determined foes of monopoly; and men of every party are convinced that "something must be done." A system which rendered labour cheap and bread dear has been continued until the value of the labourer has sunk below that of a paltry bird or even a mischievous rabbit; the moral man has been deteriorated as the physical man has been depreciated; and it is fearful to contemplate the solution of Lord Bacon's question, "Where shall be the end?" But this is a question which must be forced by the mere exigency of circumstances more and more painfully on the attention of legislators and electors, until a great act of substantial justice shall strike off the fetters of industry, and leave the labourer free to buy and sell in the world's open market. The monopolists themselves confess that they cannot give employment to the agricultural population, that is, they cannot buy the poor man's toil, though they compel him to purchase their corn. Under such a system the labourer must sink deeper and deeper in misery, until he reaches the point where wretchedness passes into despair. We, however, have strong hopes, or rather high confidence, that such exposures as those to which we have directed attention will lead the public to join with one voice in demanding for the labourer not scanty charity, but substantial justice.

Specimens of English Dramatic Poets. By Charles Lamb. Vol. I. London, Moxon.

Were Juvenal to return on earth, and re-write his Seventh Satire, he might commence it,

"Et spes et ratio studiorum in *Moxon* tantum;
Solus enim tristes hac tempestate Camœnas
Respexit."

Such was the thought that rose in our minds as we opened the little volume before us, which forms one of a series of poetic gems placed within the reach of persons of moderate means by a publisher who combines a noble spirit of commercial enterprise with a refined and cultivated taste. Mr. Moxon, himself a poet of equal power and sweetness, has afforded the Muses a shelter when banished from the Row, and denied admittance at the West-end. He has rescued the name of poetry from the oblivion with which it was threatened, by bringing out the bards who drank deepest at "the well of English undefiled"; the writers of our songs and our dramas, which, like Fox's oratory, are all "over English," and which, when we are called upon to take our inspiration from ancient or foreign sources, induce us to say with the patriotic Syrian, "Are not Pharpar and Albama, the rivers of Damascus, better than all the rivers of Syria?" Taylor and Talfourd, Barry Cornwall and Leigh Hunt, have already appeared in this beautiful series, and form modern companions worthy to rank with "Lambe's Specimens," and "Percy's Reliques."

Lamb was among the first to do justice to the dramatists contemporary with Shakspeare; and when the second volume is published we hope to be able to take a survey of the condition of English literature previous to its decay under the corruptions of the Restoration. But we have yet to examine a previous volume of the series, Mr. H. Taylor's "Philip Van Artevelde," not so much for its poetic merits as for the light it throws on the character of a commercial hero.

Ireland and the Irish, during the Repeal Year, 1843. From the German of Herr J. Venedey. Translated, and with Notes, by Wm. Bernard Mac Cabe, Esq. Duffy, Dublin.

The first chronicler of the never-to-be-forgotten Repeal Year is the author of the work whose title we have given above. He is a German of the sentimental school. He honestly avows his hatred of almost every thing English; and he is more Irish, if possible, than the Irish themselves. He seems to have been peculiarly unfortunate in the company he kept, or his sentimentalism found little sympathy in the land of railroads and "tall chimneys—the sitting minarets which point out the faith and idolatry of the English;" and yet here and there, through his really entertaining book, he is obliged to admit,

directly or by implication, that there are things in which these idolaters may be copied with advantage. He tells us that "in England the spirit of infidelity had descended upon him;" but "a few days in Ireland sufficed to effect his cure." He omits, however, to tell us what his faith was in Germany (he means faith in humanity); but, seeing it so easily quitted him during his brief stay in England, we may conclude that it was not very stable at home; and, now that he has escaped the excitement of monster meetings and Irish hospitality, we suppose this faith of his has settled down pretty much at the point at which it stood before he started on his travels. English readers can afford to smile at these vagaries; and, taking the author's philosophy for what it is worth, will read his book with that interest which a vivid and novel picture of the stirring events of the Repeal Year is sure to excite. He has found a faithful translator in Mr. Mac Cabe, whose notes will be found valuable either as elucidating the meaning, where obscure, or correcting some of the perhaps unavoidable errors of the author—a foreigner. The following particulars prefacing the account of the "Tara monster meeting" will not, we think, prove unacceptable to our readers:—

"From the reports of eye-witnesses, as well as from the statements made by the public journals, it is manifest that never before was there such an assembly of people together in Ireland; and, if the numbers mentioned be any thing near the truth, it must be allowed that never was there in Europe beheld such a multitude collected on the one spot. It is stated that there were 500,000 men assembled, but 200,000 would be an extraordinary number. According to the tickets delivered at one single toll-house—that at Cabra—it appears that there passed through it 700 cars, and 32 coaches; through Philaborough 321 cars, and 60 coaches; and 300 through Blandherstown:—1400 vehicles from Dublin alone! Almost every part of Ireland had representatives at this meeting. The names of not less than forty-two bands of music, belonging to different bodies of teetotallers, were mentioned in the papers, and many of them had come a distance of more than fifty miles. That fact alone will afford the means of calculating the scale on which this festival was conducted.

"The Hill of Tara is, of all the places in Ireland, that which touches most deeply the fibres of the Irish heart, for it is identified with facts on which their feelings are the most susceptible, and can be the most easily moved. Here it was that St. Patrick preached, and converted to Christianity the kings of Ireland; here it was that formerly they elected the chief kings of Ireland; and here, too, it was that a party of the United Irishmen, in 1798, fought for the freedom of Ireland. Religion, the love of father-land, and of freedom, see in the ruins of this hill the most precious relics united. The situation of the place, which can be reached in a day's march from Dublin,

as well as many of the second-class towns, afforded a very favourable opportunity for assembling together a large mass of people."

Herr Venedey had introductions to many persons of eminence, repealers and non-repealers, amongst others to Mr. O'Connell, and whom he has an opportunity of seeing in the midst of his family:—

"O'Connell wore a green coat with a black collar, and over that a blue cloak, which he kept on during dinner time. He begged me to excuse him for not taking it off, having the habit of keeping himself thus wrapped up after he had spoken in public. He kissed his daughter and daughter-in-law, and sat down in the circle. All eyes were of course directed towards him. And, indeed, without either his name or his acts, O'Connell is a man to be of himself the centre of any company. He sat there like a colossus or statue of Jupiter, dominating all. There were the signs of exhaustion on his countenance, but this did not prevent spirit sparkling from his eye, and humour playing round his mouth. Speaking little himself, he encouraged others with cordiality and cheerful smiles. Dinner soon came. O'Connell sat at the head of the table; Mr. Morgan O'Connell at the foot; Mrs. French sat on the right of her father, and Mrs. Morgan on the left; and at either side the guests and other members of the family. Before we sat down, O'Connell said a short grace. It was Friday, and therefore no meat was brought to the table. There was every thing else in abundance, the best wine, and the newest fruits. During dinner O'Connell was always the leader of the conversation, though he spoke little, and only to his children and his guests, to beg of them to help themselves to such and such a dish, or such and such wine. The greatest silence prevailed during the whole dinner, and, at times, I felt a certain uneasiness seize me, such as I had not for a long time before had, and which brought back to my recollection the days of my boyhood. After dessert, O'Connell's grandchildren came in, a dozen of them this day, for he has a great number of them. They each gave their grandfather a kiss. He then took his daughter by the hand, and held it in his for a short time; he gave the other to his daughter-in-law, and thus sat hand in hand with them. There was something solemn in this, which one would not have expected at such a moment of relaxation. When the dinner was over O'Connell said grace, and again kissed his grandchildren, and all the ladies then left the room with them. The whole dinner had quite the character of a patriarchal family scene, and inspired me with more and more veneration for the man—a sentiment which increased every day I remained in Ireland. The conversation did not get quite free even after dinner, and I perceived it was necessary for O'Connell to talk himself, in order to get his friends to do the same. None of his sons spoke save young Dan, just returned from travel."

His views of the relative influence which the Catholic clergy and the people exercise over each other are thus given:—

"The Catholic clergy have become a powerful and a democratic body. It would, however, be a great error to suppose that they blindly lead the people. It cannot be disputed that they exercise great influence, but that influence exists rather in consequence of the people leading them, than their being led by them. The impulse does not come from them, though its direction may be left to them. It is easy to affirm that the clergy have created the present movement, whilst it is impossible for any one to doubt but that partly owing to their influence it is kept within certain limits. That they have not created it could in a moment be demonstrated if they attempted to stop it. They would, in that case, preach to the whirlwind—or if they ventured to affirm that the union was a blessing they would be scorned; and perhaps, despite of the respect entertained for them, they would not be scathelless of all injury if they attempted to say that England had been the benefactor of Ireland, or that England and Ireland were brothers of the same father. The present tendency of the Irish feeling is too consistent with their nature for any aid being required on the part of the priesthood to create it, although their influence over that tendency is frequently of very great importance. It was that influence, for instance, which gradually brought into operation the prevailing spirit of peaceful agitation. In the history of the first efforts of the Catholic Association for suppressing the tumultuous and violent acts of the peasantry, we find constantly repeated admonitions 'to peace and quiet.' These admonitions have at length produced good fruit, 'Honour to whom honour is due.'"

Our limited space will not allow us to do more than extract a curious passage from his chapter on Irish popular literature:—

"There is one work, entitled 'The Life and Prophecies of St. Columbkille.' This Columbkille was one of the apostles of Ireland, and a follower of St. Patrick. His 'Prophecies' are to be found in various editions, and to be met with every where, with all sorts of introductions, additions, and supplements. They date from the time when the hopes of Ireland rested upon Spain, and they were nothing more than an announcement of the liberation of Ireland, first by Spain and then by France. 'Ireland,' say these prophecies, 'will be invaded by Spaniards, Portuguese, French, Turks, and locusts; but the Spaniards will be the most numerous, and have away over all the rest; then will the bold Kieragh O'Donnell (an Irish family who had taken refuge in Spain), as general, command the Spanish army, while the king's son will be second general under him.' Then, it is said, they will prepare for battle, and the Protestants will conspire to destroy all the Catholics. And all this will come to pass in the time of the thirteenth king or queen from the beginning of heresy in England.* And when England finds that its might, and its magnificence, and its wealth will be taken from it, it will offer to give to the fifteen parts out of the sixteen, in order that it may be able to enjoy that sixteenth in peace at home. And the foe will refuse to accept such terms. Before, however, these events come to pass in Ireland and in England, the birds in the air, and the fishes in the waters—in the lakes as well as the sea—will disappear from the banks and the shores, &c. &c."

* These prophecies, which the editor, the Rev. Mr. J. V. That is, if rightly calculated, under the reign of Victoria I., who is the thirteenth sovereign since the reign of Henry VIII.

Taffe, declares he has translated from 'an ancient parchment,' are followed by others; amongst them, by one of St. Patrick, who, in a fit of inspiration, sees that the fire on the mountains will, at one time, announce the regeneration of Ireland. Then comes a visit of St. Bridget's, in which she says that 'the people will become abandoned and irreligious, and will fall into want, misery, and slavery, until their time of probation is past, and then God in his grace will again exalt them.'"

Map of London.

The proprietors of the *Railway Bell* have just issued a Map of London, which is at once one of the most elegant and complete that has been brought under our notice. It is minutely accurate and perfectly legible; we have rarely seen a more beautiful specimen of distinctness in printing. It will be found particularly valuable as a guide to the different railway stations, a matter of which there are few who reside in London, or who visit the metropolis, that have not often experienced the want.

CORRESPONDENCE.

To the Editor of the LEAGUE.

Macclesfield, Nov. 5.

SIR,—I am in treaty for the purchase of a freehold cottage for £130, subject to a ground-rent of 11s. The cottage pays a rent of £8. 18s., which, deducting the ground-rent, leaves a net rental of £8. 7s. I have two sons, both of age, and I wish to know whether, if the property be conveyed to us jointly, we shall all be entitled to a vote for the county? If so, I am determined to fortify my lads with constitutional weapons of defence against Mr. Egerton's retainers.

Will you call the attention of the Lancashire Leaguers to our county. North Cheshire is noted for the good quality of its cheese, and for the bigotry and ignorance of its monopolist squires. Probably, nowhere in all Britain is there greater contempt for trade and manufactures than in the breasts of nine-tenths of the landed proprietors of this county, which owes nearly all its value (for it owes next to nothing to its own agriculture) to the enterprise, skill, and capital of the cotton manufacture. This division of the county may be easily wrested from the clutches of the monopolists, if the Mottram, Stockport, and Macclesfield polling districts will only imitate the South Lancashire people by an energetic attention to the register. I trust the Manchester men, who have so nobly done their own work, will cross the Mersey, and come to the rescue of their brother Free-Traders in North Cheshire. I am, Sir, your obliged servant,

A SUBSCRIBER TO THE £100,000 FUND.

[Our correspondent and his two sons may be qualified together for this property. In fact, any number of persons may be jointly qualified, provided the property yields a clear 40s. a year to each shareholder; and the conveyance may be made in one deed. We commend these family purchases of freeholds to general imitation. Our Lancashire friends will, we hope, pay a visit to North Cheshire;—they need not be reminded that a plurality of county votes, so that they be in different counties or divisions of counties, may be given by the same person.—Ed. LEAGUE.]

THE BELGIAN TARIFF AND THE MANCHESTER CHAMBER OF COMMERCE.—We understand that a special meeting of the board of the Manchester Chamber of Commerce and Manufactures was held on Saturday last, at the offices of the chamber, King-street, to take into consideration the impending alterations in the Belgian tariff, particularly as regards the differential duties about to be established on British printed and dyed calicoes; when it was determined to send a deputation to the Board of Trade, to call their especial attention to the subject. The deputation, we believe, consists of Messrs. Leo Schuster, Edmund Potter, Salis Schwabe, John D'Hauwregard, and Alex. Glendinning.—*Manchester Guardian*.

INCENDIARISM.—On Wednesday evening, the 31st ult., a stack, the property of Mrs. Radcliffe, situate at Hoole, was discovered to be on fire. Means were taken to repress the flames, which were successful, but not until very considerable damage had been done. No doubt existed that it was the result of incendiarism.—*Chester Chronicle*.

—On Saturday night last, a destructive fire took place in the stackyard of Mr. John Ebbay, of Broughton Villa, near Wem, Salop, which destroyed two stacks of wheat, a stack of oats, and a small stack of straw. We regret to state there is every reason to suppose the fire was occasioned by the act of incendiarism.—*Ibid.*—We regret to state that a fire broke out on Tuesday last, on the farming premises of Mr. R. Phypers, Dry Drayton, a village situate about six miles north of this town. The fire was first discovered about one o'clock, in the stackyard between a barley, pea, and bean stack, nearly the whole of which was consumed, with the addition of a beanstack.—*Cambridge Advertiser*.

—The crime of incendiarism has appeared in the East Riding of Yorkshire, two destructive fires of agricultural produce having occurred.—On Saturday night week, a wheatstack was set fire to on the farm of Mr. T. Robinson, at Ellerker, near South Cave. The stack was consumed.—On Thursday, the 24th ult., four cornstacks belonging to Mr. Richard Hornes, of Wold Farm, near North Newbold, together with a thrashing-machine, were destroyed by fire.—On Tuesday evening, the 5th inst., a fire broke out at Hill-house Farm, Bucklebury, Berkshire, in the occupation of Mr. Hayward, which resulted in the destruction of a large quantity of corn, and several farm-buildings.—On the night of the 17th ult., a diabolical attempt was made to set fire to the cornstacks of Mr. J. Silvester, of Froxfield, but the late rains penetrating the unprotected stack, and the stillness of the wind at the time, frustrated the design of the wicked and malicious incendiary.—*Hampshire Independent*.—About 1 o'clock on Thursday morning, a cry of fire was again heard in this town, and it was soon ascertained that it was at Flampton, upon some premises in the occupation of a Mr. Cooke, of that place. A large barn, containing the wool of five years' fleeces, with a quantity of wheat and barley, was set on fire, and damage done to the amount of between £2000 and £3000. The barn was wholly destroyed, with a very considerable quantity of the wool.—*Bury Herald*.

AGRICULTURE.

THE GHOSTS OF PROTECTION SOCIETIES.

Casting our eye over the newspapers to see whether any variations had occurred in squirearchical advice to over-rented tenant-farmers, we were somewhat startled by the apparitions of defunct "protection societies." The curious will wonder what could induce these shadows of the departed to visit the scenes of their troubled and shortlived being; while those learned in ghostly lore may be satisfied with the fact, that these melancholy gatherings took place on the first anniversary of the birth of the respective societies.

The two meetings we allude to were those of the *Cheshire Agricultural Protection Society* at Crewe, and the *Somerset County Protection Society*, held at Bridgwater; and truly the tone of the speakers at both places was lugubrious enough to melt the hearts of their bitterest enemies. Nor was the muster of monopolists less sorry than sorrowful. One short year ago the country resounded with the fervid exhortations of the landowners to their tenantry to put down the LEAGUE. Squire after squire worked himself into fury by his efforts to convince the farmers that the Corn Laws formed "a tenant's question;" and the Pro-Corn-Law agitation was ostentatiously declared to be the spontaneous act of the tenant-farmers. Everywhere some amphibious farmer—half-farmer, half-landowner—was placed in the chair, while farmers were set to move resolutions intended to exterminate the Free-Traders, which were humbly seconded by landowners and monopolist grandees. Yet, even then, every one acquainted with the rural districts were aware that the farmers were only induced to attend these protection meetings by menaces or cajolery.

They were told by the steward, or the bailiff, or perchance by the gamekeeper, that they must go. They had intimation that their attendance, and not their subscription, was required; that the landowners would find the needful funds; and that it should not cost the farmers a penny. No shift was left untried to get up a protection demonstration. We know an instance of a farmer, also dealing largely in corn, who was induced to take an active part in this agitation by an intimation from a landed magnate, that the person who had theretofore supplied his large establishment with corn had not evinced so much alacrity in defence of the Corn Laws as had been expected, and that in future the great man's custom would be conferred upon a more earnest protectionist. The farmer-dealer, though convinced of the impolicy of the Corn Laws, fell into the trap, and eagerly swelled the protectionist clamour; but the anticipated custom has never been bestowed upon him. He is now no longer a protectionist. And this is only a specimen of the way in which the Pro-Corn-Law movement of last year was got up. Based on error and delusion, it was supported by devices necessarily temporary and suicidal. Look round the country, see where the shadows of the protection societies still linger, where the farce of "secretary, treasurer, and committee" is still kept; and inquire "where are the tenant-farmers now?" Echo answers "where?"

This is forcibly illustrated by the Cheshire Society, where the local journals inform us:—

"Only about a dozen landowners were present, among whom were Lord De Tabley, Mr. Wilbraham Egerton, Sir Richard Brooke, Bart., Mr. G. C. Legh, M.P., and Mr. R. E. E. Warburton. Two or three agents were also there, but no farmers. In fact, the whole meeting did not comprise so many as twenty persons."

And, to show the small interest farmers took in the matter, the annual subscriptions only amounted to £17. 2s., while the donations—the landlords' contributions—amounted to £560. 14s. 6d. Of these sums, £50 had been remitted to the Central Protection Society in London, £72. 5s. 8d. expended in local distributions of Pro-Corn-Law tracts, and £178. 18s. 11d. remained in hand!

Let the Cheshire squires seriously ask themselves whether "the insidious" doctrines of the League have not made vast progress amongst the farmers of their district during the past year, and whether their £72 worth of tracts have not rather helped to disseminate Free-Trade opinions; and if, as they must, they reply in the affirmative, what cause for congratulation have they in the success of their movement? Are they prepared to renew their donations? Do they believe they can withstand the efforts of the Free-Traders, which they recognise as "persevering?"

The report, however, having been adopted, the attention of the meeting was turned towards cheese, and the recently increased importation of American cheese—though, in fact, the aggregate quantity of foreign cheese imported had diminished—created "some uneasiness." The more sanguine talked of petitioning for "increased protection" on cheese; but Mr. George U. Legh, one of the county members, told the meeting (no farmers being present to be gulled) "that he was confident the Government would never listen to such a proposition for a mo—"

ment; in fact, that they would much sooner take off the duty of 10s. 6d. per cwt. altogether than make any addition to it."

They then determined to petition that monthly returns and averages of the prices of cheese should be made and published as of corn. But here a fresh difficulty arose. Farmers won't give correct returns of the weight and prices of their sales of cheese, and had great repugnance to disclose their dealings. For this two reasons were alleged, first, farmers were so bound to factors from being in their debt that the farmers submitted to deliver 120 lbs. and 121 lbs. as the cwt. of 112 lbs.; secondly, that just before rent-day farmers often sold their cheese at "an inferior price" to raise the money to pay their rents, and "they would not, on that account, name the price they sold at." This is not quite the language used by the landowners and their agents at the agricultural societies; indeed we wonder reporters were not excluded, for it is plain that, on this occasion, they were admitted behind the scene. The only practical conclusion this knot of monopolist landowners came to, "after much consideration," was to "strongly recommend a return to legal weights in selling cheese and other agricultural produce." Such is the "lame and impotent conclusion" of the Cheshire Protection Society.

Turn now to the Bridgwater apparition of monopoly. There we find Mr. Wm. Miles, M.P. "happy to say that in eight districts of the county (the whole being divided into nine) either that those district committees are formed, or are in rapid progress." How rapid must be the progress, and how eager the haste, of the monopolists of Somersetshire, as indicated in this congratulatory address! He asked the society to "stick by the resolution of the Metropolitan Society for the Protection of Agriculture, namely, that we will maintain—(because it is intelligible)—that we will maintain that protection which they at present have." This sentiment was received with much cheering by the squires present, for here, as in Cheshire, there were no farmers; the meeting was exclusively one of landowners and their retainers. Mr. Miles also admits the League is not dead, for he said:—

"We are threatened, and I would ask you to look at the papers placed in my hands during the last two or three days. Your adversaries may have ceased for a short period their labours. Your earnest energies in opposition to them may have, for a short time, defeated their projects, but they are up and doing now. Your enemies still exist, and it becomes your duty to use all caution."

And Sir Alexander Hood said that they "had met that day to ascertain their strength, and show that they were determined to maintain their ground." We don't think the review could have proved very consolatory. The reader will recollect Mr. Miles's anti-tariff demonstration in 1842, on the matter of horned cattle, which Sir Robert Peel so easily and so contemptuously defeated, though it seems to have satisfied the Somersetshire protectionists; for Sir A. Hood, in proposing Mr. Miles's health, called him "the pillar of agriculture." Let us hear, however, what the real out-and-out monopolists say on the subject. The *Morning Post*, commenting on this meeting, says:—

"Mr. Miles has always 'broken down' when the moment of pressure came. He has shown that he understands perfectly how intimately dependent is the prosperity of the British empire, on the action of economical principles precisely the reverse of those on which the industrial policy of Sir Robert Peel is based; and, having thus proved that his deepest convictions are Anti-Leaguish and Anti-Ministerial, Mr. Miles has always contrived to withdraw his opposition to the schemes of the League and of Ministers, at the very moment when stern adherence to his principles must have worked mighty results in favour of the great body of protectionists."

Reader, what think you of that for a "pillar of agriculture," and the parliamentary leader of the monopolists? But that is not all, for the indignant monopolist journalist adds:—

"They (the Protectionists) doubt the faith of all public men, and they regard as mere shams, as the veriest delusions—diversions in favour of the policy of protection such as Mr. Miles affects to excuse—diversions which end in nothing. By flattering, as he always does, at the critical moment, Mr. Miles plays, in the most effective fashion, the game of the League and of our 'Conservative' Ministers. He dispirits the Protectionist body. He aids in inducing in their minds the belief that effort on their part is useless. He furnishes fuel to the ardour of the League."

And after referring to an absurd statement made by Sir Alexander Hood of the low price at which foreign wheat could be imported, and the expressed object of the society to maintain only the present rate of protection, the *Post* justly says:—

"They declare, in other words, that they are now utterly unprotected; yet, in the same breath, they proclaim that they will not submit to any reduction in the amount of 'protection' which is, at present, vouchsafed to them!"

Nothing can be more complete than this dilemma. How the Ministerial monopolists escape from it we leave to be discussed between Mr. Miles and the *Morning Post*. In the meantime we will inquire what the west of England farmers really think about this question. At the Sandford plough-

ing match, in Devonshire, Mr. Tremlett, a farmer, said:—

"He had seen the rise of agricultural associations, and had seen them extend over the kingdom; he had seen gentlemen attend them, and had heard some recommend foreign manures; one advised the farmers to make experiments, and another pressing him to industry—that advice, he believed, the farmers did not need (CHEERS)—recommending him to pull down his hedges, and to throw open his enclosures—to drain all his waste land—to prune and thin his trees, so that the sun and air might get into his estate. But he never heard or saw any of these gentlemen, while advising the farmers at these associations, say anything about an abatement of the present high rents. (GREAT CHEERING.) Let gentlemen look back to the year 1840, and see what had occurred since, and what the Legislature had done with the produce of the farmer. (CHEERS.) In the first place, they interfered with the then existing Corn Laws, and reduced 8s. a bushel to 6s.—he had this season sold a very good sample of wheat for 5s. (Hear, hear.) They had also brought in a new tariff, which had made a terrible reduction in the value of stock—they had brought in a Canada flour bill, which had regularly swamped them. (Hear.) They had reduced the price of their commodities more than 20 per cent.; he could show it in figures. (Hear.) In addition to this reduction on the produce of agriculture, look at the increase of their burdens. They had a new union workhouse, and a new lunatic asylum (one solitary and tremendous cheer of "Bravo!"); in the next place an income tax, and an increase of nearly 20 per cent. on their tithes. (Hear, hear.) This they would find, on going into figures, reduced their produce nearly 25 per cent. How was it possible for the farmer to cultivate his land in the manner proposed? It could not be done. (CHEERS.) He said we don't want the landed interest to give us an estate for nothing; we only want to be able to live! Only give us a surplus after we have farmed it, and I won't sell farm the estate as a man ought. (GREAT CHEERING.) GENTLEMEN, GOD FORBID THAT WE SHOULD EVER SEE HIGH PRICES AGAIN—I NEVER WANT TO SEE THEM; CHEAP FOOD AND CHEAP RENT IS THE HIGHEST BLESSING FOR A NATION, BUT DO GIVE US CHEAP RENTS, DON'T GIVE US HIGH RENTS AND CHEAP FOOD! (Tremendous cheering.) I don't know that we need be told we are to improve our lands or farmyards; if we have got a surplus after the rent is paid, I believe we don't want energy and spirit to do that; but I believe the great secret will be, when the audit day comes, can the farmer pay the rent? (GREAT CHEERING.) Will these improvements pay the rent? (CHEERS.) I knew a farmer—a very excellent farmer—who improved his estate, drained his waste land, threw down his hedges, and did all that the most improving man could require; but when the rent-day came, he had spent all his money in these improvements, and had none for his landlord; and, after all his exertions, he was called on by the steward, and pronounced to be a bad farmer. (Hear, hear.) No; we must not improve the land so far as not to be able to pay our rents. (GREAT CHEERING.) We must pay the rent. (CHEERS.) Therefore I only appeal to the landed aristocracy of this country. I do hope that this appeal will be heard by them. (Hear, hear.) Now is the time—this is the day—this is the hour of salvation—the time for the landed aristocracy to come and meet the farmer, and not to let us sink beyond hope; for, depend upon it, if the farmers be plunged into the dust, they will not rise very soon—they will sink, and, if not speedily helped, they will be paralysed." (CHEERS.)

This is to the purpose, and it goes home. Landlords know well enough that such are the sentiments existing in the minds of their tenants, but that in the majority of cases the expression of them is suppressed from one motive or another; but the existence of such opinions, and the fear of their finding vent, render the squires very chary of reviving the protection meetings. At agricultural meetings they can, when convenient, take shelter under the pretence of no politics.

MONOPOLISTS! WHERE ARE THE FARMERS?

We frankly admit the monopolist landlords have fallen upon hard times. It is no easy task for those who have promised a law to keep wheat at 50s. a quarter to make speeches to farmers when it has fallen to 43s. In fact, it requires more nerve and "face" than the generality of squires possess. Hence the agricultural societies have been but thinly attended, and have subsided into very humdrum affairs. But, if landlords have been shy of these meetings, farmers are becoming more shy, and with more of mainly purpose in their absence than the squires. Thus we find that the last meeting of the *East Sussex Agricultural Association* the company, besides Mr. Darby, M.P., the judges, and the reporters, consisted of only eleven persons. Of course the paucity of attendance formed the main subject of discourse, both with Mr. Darby and Mr. John Ellman, the principal speakers; and the latter indulged in various lamentations at the blindness of farmers to their own interest in absenting themselves from the meeting, where they would be stimulated to "enterprise and improvement." This was too much for agricultural human nature, and we find that Mr. John Ellman was quickly succeeded by his brother, Mr. George Ellman, who, as a farmer, was evidently impatient of the lecture which had been read on the absence of his brother farmers. He said:—

"No one can regret more than myself the absence of the influential men. Whether the landlords are ashamed to meet the tenants as a humble body, or whether they are afraid of hearing something that would not be palatable, I cannot say; but I can guess which works in their breast the most. I am sorry that some influential tenant has not risen, I am not a tenant, but a humble bailiff. The cause of their absence is this—they deem the treatment of the aristocracy of this neighbourhood to be anything but what it ought to be towards them. I cannot imagine that they can be afraid of hearing any stupid tomfool like myself speak. I am at a loss to know their

reason for absenting themselves; but from what I hear in the market, when they attend these meetings there is nothing but recommendation of great landowners to set labourers to work, manure, drain your lands, but they omit one principal feature—they never tell the tenant how they can afford to pay for it. I hope I don't give offence by starting this; BUT IT HAS BEEN BROODING IN MY BREAST FOR SOME MONTHS, and I had it from some of my friends, who had more courtesy towards them than I have myself. I feel that the tenantry of the neighbourhood have been slighted by the aristocracy. It is all very well for the aristocracy to point out what we should do, but the farmers know it is out of their power to employ the labourers. I have been obliged, in pursuance of the direction given to me by my brother, to discharge four honest, respectable men from our farm, not because we have not plenty of work, but because he says he cannot afford to pay; and I have been obliged to obey his mandate, and I am afraid the men are gone to the workhouse. The grand cause of the farmers not attending these meetings is, that they feel aggrieved. They will not come to hear only fulsome compliments paid by one gentleman to another at these meetings. That may please some people, but it does not please us." Mr. Ellman, having obtained permission to propose a toast, gave in conclusion, "Liberal landlords and good tenants."

This is all so strictly and literally true that there are few farmers in England in whose "breasts" such sentiments have not "been brooding for months." A few more such speeches as that of Mr. George Ellman in Sussex, and of Mr. Tremlett in Devonshire, and these politico-conservative-protectionist-agricultural clubs will receive their coup-de-grace.

MONOPOLIST BEWILDERMENT.

LIGHT BREAKING IN ON THE LANDOWNERS.

When the scheme of establishing monopoly "protection societies" was broached, we hailed those seeming opponents as the best allies of the Anti-Corn-Law League. Nor have our expectations been disappointed. The farmers as a body are men little given to reading, who entertain narrow views, and who had been taught by their semi-feudal superiors, the landlords, to regard Free-Traders with dislike and apprehension. Though some impression had been made upon them by the Free-Trade meetings, and doubts had been suggested and difficulties raised with respect to their preconceived notions of the effect of the Corn Law upon prices, further discussion was required to prepare their minds for the inevitable change from restriction to Free Trade. This the "protection societies" have accomplished. By their direct efforts in favour of monopoly the "protectionists" have reduced the question to an absurdity, and have exposed to the most unthinking the infirmity of their case, while their indirect effect has been to render every agricultural meeting practically a Free-Trade lecture. Whatever they may say for the moment, every landowner of ordinary capacity sees the game of monopoly is up, and is pressing upon the farmers the argument of the Free-Traders, namely, that upon themselves only must farmers rely for success in their avocation. Some of the most intelligent landowners urge this argument broadly and sensibly, while others betray a ludicrous state of puzzlement, desiring the end without willing the means. Of both classes some examples appeared at the meeting of the *Saffron Walden Agricultural Society*, where Lord Braybrooke, a furious monopolist, betrayed much confusion of mind in reference to the actual condition of agriculture. Mr. Pusey, M.P., on the other hand, exhibited a clear apprehension of its wants and difficulties. Indeed, though Mr. Pusey's votes in Parliament compel us to class him as a monopolist, his speech on this occasion was that of a sound Free-Trader. The preliminary ploughing match and cattle show having been concluded, the chief men went to dinner:—

"The chair, over which was placed the stand with the prize cups, was occupied by the noble president; and at the same table we observed Henry Colman, Esq., the celebrated American agriculturist, at present on a visit to this country; Sir J. P. Wood, Sir John Holleau, P. Pusey, Esq., F. Pym, Esq., the Hon. H. Greville, H. J. Adeane, Esq., F. Pym, Esq., Rev. Professor Henslow, Colonel Hall, C. Barnett, Esq., R. Gosling, Esq., the Rev. J. Graham (chaplain to the society),—Hammond, Esq., G. Rush, Esq., R. Baker, Esq., W. F. Robbs, Esq., W. C. Smith, Esq., G. W. Gent, Esq., Humblat Dunn, Esq. (Mayor of Saffron Walden), the Rev. D. Gwilt, Rev. H. Majendie, —Solly, Esq., &c. Among the company at the other tables were the Rev. C. Griffinboote, Messrs. Frost, Emsen, Webb (3), Hodges, Giblin, Pies, Smiths, Burroughs, Cottingham, Spencer, Parrie, Woodley, N. Catlin, Low, Andrews, Bowsher, Nockolds, Taylor, &c. The Hon. A. Herbert acted as vice-president. The total number of guests was 125."

The President, Lord Braybrooke, in proposing "Success to the society," said the members "must congratulate themselves on the success of their endeavours, and being allowed, under Providence, the privilege of doing some little good in their generation." To those who know how entirely most of our best farmers regard these societies as playthings of the gentry, the idea must occur that his lordship is wonderfully thankful for "small mercies." Except as showing the process by which the landowners and farmers are becoming alive to their real position, these societies are quite useless, and are obnoxious to all the ridicule with which they have been visited. After referring to the presence of the reporters, his lordship said, "the task of those who were expected to address them annually on the same subject became every year more difficult, and he, for one, must confess he felt it greatly."

That this confession was honest we have no doubt; for a monopolist landowner must just now feel that, tick-

lish as is the task of talking to the farmers, the making a speech to be read by the public is still more so. He then said:—

"Unquestionably there never was a period in the history of agriculture when more active hands, honest hearts, and master minds were at work to solve the many problems connected with the successful cultivation of the soil. He had no doubt that these efforts would ultimately be attended with the desired result, but at present the way was very imperfectly paved."

He then went on in a strain of banter to cast some slight on the current agricultural quackery. He also complimented Mr. Baker for having "petrified" the League, a somewhat dubious compliment; and then thus went on to show that the teachings of the League had not been altogether lost upon himself:—

"From what has happened in this county he felt satisfied that the landlords would not be wanting in doing as much as was in their power to assist their tenants. (Applause.) The question was, what was best to be done? but this he did believe—that as soon as the principle was recognised they should have no great difficulty in working out the result. (Cheers.) He had heard and read much on the subject of leases; but his own opinion was, they were not desirable or necessary in all cases. As far as his own experience went his tenants had never required leases; and he could mention an instance of one who actually refused one, and preferred holding his farm from year to year."

Now, this is no more than saying he would not make his tenants independent if he could avoid it; but he is almost afraid he must at last do so. As for the tenants refusing leases, that is by no means so strange a matter as his lordship seems to suppose. Monopoly rents and natural prices, though the latter are probably only temporary, do not form a very tempting prospect for the tenant-farmer. His lordship heard something on this head later in the evening. He then added:—

"He must say, however, that he was no enemy to leases—(Hear, and loud cheers)—but he did think that where they were granted they should be drawn upon a fair basis, and that if the landlord did his part the tenant ought not to neglect his. (Hear, hear.) From combined efforts of this kind he looked for the best results. (Cheers.) In many instances leases would, doubtless, be of great benefit, but he was quite sure that a landlord would do a great injury to himself and to the community at large by letting a large farm to a man who had not sufficient capital to do justice to it. (Hear, hear.) He had seen many instances of men wishing to raise themselves in the world by taking farms upon borrowed capital, and in almost every case the result had been that after the first bad season the tenant began to put less manure on the land than he ought; the next step was to discharge the labourers, and after a few years the land falls into the hands of the landlord. Now, the effect of all this was, that the owner probably lost some of his rent—the land was deteriorated—and the labourers thrown into distress by being deprived of the work with which, under other circumstances, they would have been employed. (Hear.) Let them not suppose for a moment that he was advocating one side only; but he was fully convinced that a landlord would best consult the interests of his tenant by preventing him from taking a farm which he has not sufficient capital to cultivate as it ought to be."

Nobody doubts that a landowner ought, as a prudent man, to ascertain that his tenant has sufficient capital and skill to manage his farm before he grants a lease; in fact, such an inquiry should precede his acceptance as a tenant. But it is the expectation of a high price for a comparatively small produce which has induced most farmers who are so circumstanced to take farms beyond their means; and when that expectation fails, as in the present year, they are distressed or ruined. This is the immediate consequence of the Corn Laws. His lordship then got upon the safer ground of "thick or thin sowing." He admitted that the allotment system was no remedy for the present depressed condition of the labourer:—

"He firmly believed that it was calculated to do a great deal for the labourer, especially where he had a large family; but the most exaggerated produce of a quarter or half an acre of ground would not furnish much towards supplying the absence of employment. He looked much more for a remedy for present evils to increased employment from the improved cultivation of land. The more capital there was expended in this way the more labour would be required, and by this means money would be put into the pockets of the poor man, and his means of subsistence increased."

And the company, by their cheers, responded to that opinion. His lordship also admitted the scanty cottage accommodation which exists, and bad state of the actual dwellings of the agricultural labourers. This is entirely the fault of the landowners.

Professor Henslow thought the "difficulties under which the labouring poor of Suffolk suffered were of a trivial character," an expression which will not give the reader a very high opinion of that gentleman's sagacity.

The most important landlord's speech of the evening was that of Mr. Pusey, M.P., who, after some compliments to Essex farming, stating his approval of rural sports, and, objecting to emigration as a remedy for the distress of the peasantry, said:—

"But, even then, this was a distant remedy: it would not remove the present evil, or provide for the coming winter. (Hear.) Then they had the allotment system proposed, and on that subject he would speak confidently. He was aware there were objections to it on the part of the farmers; he found it so when he carried it into effect fourteen years ago; but that was passed away, and the farmers, he believed, no longer feared allotments. For the last fourteen years he had had 400 or 500 allotment tenants, and it certainly had answered extremely well. But still this must be regarded as a palliative; it was not a sufficient remedy for the present want of employment; that remedy was to be found in the employment

by the landlord of the surplus population of the villages during the season in permanent improvements of the soil. He thought nothing else was worth listening to. He learned this from his relative, Lord Kinnaird, who, thirty years ago, used to employ a number of labourers in improvements on his estates: he (Mr. Pusey) had done the same himself; and he believed, if he could get this principle established in every parish, we should hear no more for some years of a surplus population."

This is in part true. If landlords generally would set about the steady improvement of their own property, they would relieve much of the distress; but any such general employment by the owners of the soil is out of the question. They are a spending class, and outlays on improvements are strictly accumulations. Besides, after all these improvements, when done, are made once for all, and therefore the tenant-farmers must form the constant employers. Mr. Pusey's plan would, however, do much to relieve the immediate pressure, and so allow time for attempting more permanent ameliorations. Nor would it be so expensive as many landlords suppose, for Mr. Pusey said:—

"He did not think gentlemen were aware of how far money would go in improvements. If they had men for 10s. a week for the winter months, for £300 they might employ fifty labourers, and they would not only benefit them but all the other labourers, because, as a little corn thrown in would sometimes spoil the whole market, so if they withdrew these labourers they rendered employment better for all the others."

Neither need there, in most cases, be any difficulty about finding the necessary funds.

"Then the question came, where were the landlords to find funds for this purpose? He knew this country well, and he knew there was not a place from Plymouth to Berwick in which the landlords might not make improvements; but when the tenant was short of money, the landlord generally would be short of money too. (Hear.) But he would tell them how to find funds. There were many districts where there was a great superfluity, not only of useless but of mischievous timber; and if they would cut that down, which excluded the sun and air and fed on the soil, and sell it, they would benefit the farmer by cutting it down, and they would benefit the farmer and the labourer too by laying out the proceeds in under-draining the soil. (Cheers.) There was another mode in which they might find money. He knew that on some properties a large sum was spent in the preservation of game. (Cheers.) It was not at all unusual for the game to cost £500 or £600 a year; and if this were given up the money would employ 100 able-bodied labourers in improving the property. (Cheers.) This was another fund for the landlords of England to benefit the labourers, and the farmers at the same time."

Mr. Pusey has, it is said, himself entirely given up the right to reserve the game on his estates, from the conviction that good farming cannot be adopted where game abounds. Even, if from such sources the landlord could not find the means:—

"Still" (said Mr. Pusey), "if the landlord did his utmost, he might not be able to find money sufficient for the purpose; but let him give security to the tenant that, if he will lay out his money in permanent improvement, he shall reap the reward of the outlay. (Cheers.) This might be done by a lease, and it might be done without a lease, for they ought not to lay down an absolute rule, as leases were not universally applicable; and it was not desirable that the landlord should give up the land for 10 or 14 years to a man that was not able to do justice to it. His own experience of tenants taught him this:—

He to their faults a little blind,
Be to their merits ever kind."

But without leases there was a plan adopted in Leicestershire, by which they might give security for money expended in improvements. If a farmer boned his land it was supposed that would not be exhausted in less than three years, and if the tenant left the first year he received back two-thirds of the expense. Then if he chalked the land, that was not exhausted under ten years, and if he left it in five years he received back one-half. Therefore, if the landlord objected to granting a lease, he said let him give security in this way for the outlay in permanent improvements on the land."

These makeshift agreements will seldom be accepted by enterprising farmers, but they show the growing opinion of both landlords and tenants that greater security of tenure is necessary.

Again:—

"There was another source of employment for the population—that was the breaking up of grass land. He had broken up a great deal of grass land himself, and he never repented of it. It appeared to him that since the system of fattening cattle on artificial food, grass land had sunk in value. Now, they would see at once the great increase of employment that would arise from breaking up these lands; they might reckon one labourer for 100 acres of grass land, but it would take four to 100 of arable; and thus, if they had 500 acres of grass land, and broke it up, instead of five families they would employ 25 on it, which would considerably relieve the distress." (Cheers.)

The preliminary obstacle to all or any of these improvements in the management of landed property becoming general, lies in the uncertainty and false hopes engendered by the Corn Laws. Free Trade is the condition precedent to their adoption. Mr. Fisher Hobbs afterwards spoke, and, as a farmer, told the squire and gentlemen a few home truths:—

"He fully concurred in everything that had fallen from Mr. Pusey; that gentleman had explained that much might be done for the labourers by permanent improvements in agriculture; he had stated that by this means constant employment might be found for them, and he (Mr. Hobbs) thought this would do more good than the other suggestions lately propounded to them. (Hear.) He believed if the landlords were to view the subject in the same light that Mr. Pusey did they should not see

so many labourers out of employment. But what was the great cause why, at present, the labourers were out of employment? It was BECAUSE THE FARMERS WERE REDUCED IN THEIR MEANS, AND WERE NOT ABLE TO EMPLOY THE LABOURERS AS THEY WOULD OTHERWISE DO. (Cheers.) He had been present at various agricultural meetings, and he had perused the proceedings of others, where much was said as to the improvement of the labourers, but nothing was said of the improvement of the farmers (hear); but he believed the tenant-farmers were in a more reduced state than in his recollection they ever were before; they would soon find that poor tenants would make needy landlords; and if they did not do something to improve the condition of the farmers as well as the labourers, many of the poor farmers would soon have to become labourers on the soil. (Hear.) They were now selling their corn at a lower price than they could grow it at. (Hear.) It was known to every farmer that he could not grow wheat at 50s., and therefore, unless something was done to improve the tenantry of the country, they might expect worse results than they had yet."

Every farmer in the room warmly applauded these sentiments. Mr. Hobbs should have added that, though corn is selling low, rents are as high as ever. This fully accounts for the farmers' distress.

Mr. Baker went at once to the point, saying:—

"They beat about the bush for the cause, but that cause was, that wheat was under 50s. a quarter. (Cheers.) The remedy was in its again rising to 60s. From 1835 to 1842, they heard of no distress, because wheat then ranged 10s. or 15s. a quarter higher than now, which enabled the tenants to employ the labourers; and it was only from their inability to employ them now that they came before them as objects of their solicitude." (Cheers.)

Mr. Baker, like a genuine monopolist, sees no hope but in the return of artificial scarcity. This is all very well for a land-agent, but the farmers are beginning to see through these landlords' jackals. Mr. Baker admitted that

"He could not tell them how this was to be effected, but he trusted they had passed the worst point, and that they should gradually rise for some time to come—that they should see the labourer in the situation they wished to see him, and that the tenant might be restored to that condition in which every one might congratulate himself. But they must recollect that the transition state was a painful one, and that while that was going on many tenants might pass into the condition of labourers, unless they were kindly assisted by the landlords."

Again he said:—

"Mr. Pusey had adverted to a point he (Mr. B.) alluded to in that room two years ago. He then stated that in going to the meeting of the Royal Agricultural Society at Liverpool he noticed the great quantity of grass land, and he stated that if two-thirds of it were put to arable cultivation as much stock might be raised, and four times the number of labourers would be employed, on it. He was still of that opinion. He believed that by the alteration of green crops as much stock could now be kept on arable as was formerly kept on grass land. He happened to be at a meeting of farmers in London a short time ago, and there met a Somersetshire farmer, a Mr. Hudson, and he (Mr. B.) proposed this question to him; but he was startled at it, and it seemed to him next to committing murder to break up grass land. It was some time before he could be got to reason on it. He (Mr. B.) then told him that on two farms adjoining his—he would say nothing of his own—if he came down he would show him more stock where was no grass land than on his farm, where it was nearly all grass; and if he did not he would pay him his expenses. Mr. Hudson said that in Norfolk he would show him double the number on farms under similar circumstances; and when they came to tell the farmer the amount of stock kept he was quite convinced they were right. Therefore what Mr. Pusey had said was correct, and it was only for him to advance it in such a society as that to get attention paid to it. He would only add that so long as wheat was at its present price there would be distress, for the farmers could not afford to pay the labourers. A Frenchman had said that, of all the surprising things in this country, what surprised him most was the fact of all the publicans in putting a quart of wine into a pint bottle. (Laughter.) They need not be more surprised at this than at the farmers paying £100 when they were only receiving £300; for that, in fact, they were called on to do." (Cheers.)

The rent is a fixed burden; the Corn-Law-promised price is a fluctuating quantity. We have seen above what even Mr. Baker, of monopolist notoriety, tells of the result.

IRISH FRUIT.—Apples and pears are now imported in great abundance from various parts in Ireland, and take the market in preference to the common sort of fruit from abroad. Irish apples range from 9d. to 1s. 4d. per stone of 14 lbs. Ayrshire bring a little more; but, upon the whole, Sir Robert Peel's tariff has conducted much to the lowering of the price of fruit in this part of the country.—*Greenock Advertiser*.

STOCKPORT MUNICIPAL ELECTION.—TRIUMPH OF FREE TRADE.—At this election eleven Free-Trade Reformers, two Free-Trade Conservatives, and one Tory Monopolist, have been returned. By some even the last is considered to be a Free-Trader, and that he would not have been elected but for that opinion being entertained of him by some of his supporters. He has not, however, as yet given us either a vote or subscription in any way. Such has been the homage paid at this election by the monopolists to the Free-Trade principle, that the circulars convening their meetings have been headed—"Good and Extended Trade." Monopoly would be nowhere in this borough, but for the influence of a few of those nondescript animals, the Tory-Monopolist manufacturers, those traitors to their own valuable order. This being the year when half the aldermen have to be elected, the Monopolists have made the most desperate efforts, but all in vain. We shall have a Free-Trade mayor and Free-Trade aldermen, so that monopoly is prostrate for some years to come. The improvement of trade has added, and is adding, both to the number and independence of the burgesses.

HOSTILE TARIFFS. (From the Liverpool Mercury.)

A rapid review of the progress of commercial circulation since last year will probably startle those of our readers who have been led to believe that our horizon was bright and unclouded. Besides the gigantic weekly and hourly loss upon the bread, meat, and sugar of the nation, which the *Economist* reckons so diligently every week, we have to note with infinite concern the certain loss of our Brazilian trade after the present month of November. Austria threatens to join the German Zollverein, if not through the whole extent of her Italian, Hungarian, and Slavonian dominions, yet to the extent of Austria Proper, an accession of great influence, and which, a few years ago, would have been deemed incredible by our political rulers. Belgium, likewise, has concluded her treaty of union with the same great commercial confederacy; and Holland, Hanover, Hamburg, and the Hanse Towns, must, sooner or later, succumb, as they cannot long hold out against the pressure of the general movement. With the mediatised princes of Italy the influence of Austria is all-powerful; and it is not chimerical to suppose that Genoa, Naples, as well as Leghorn, Venice, and Trieste, may, in the progress of time, be absorbed in the same great union, which will then possess all the elements of a first-rate commercial and maritime power. We learn, from recent advices, that Austria is fast increasing the quantity of her machinery and her home-spun yarn, and by the aid of her cheap food, light wages, and unlimited water power, she is not unlikely, when aided by railways from Trieste to Vienna, from Venice to Milan, and from Vienna to Dresden, to lessen the price of freight, which is so great a tax on manufacturing industry, until she makes up for the present superior advantages enjoyed by British skill, capital, and machinery, and meets us on an equality. Nor is it safe to trust too much to the superior powers of endurance of English labourers. In England we have sixty-nine hours' labour per week; in Vienna they have eighty-eight hours.

Belgium having long hesitated between France and the Zollverein, has at length joined the latter. On a small scale she is fast becoming what England might have been—the mine and workshop of the Continent in coal, iron, machinery, hardware, cotton, &c. The duty on her iron, in bars and unwrought, has been lowered 50 per cent. on the whole charge, and that upon wrought iron has been lowered to a still smaller scale of differential duties. A reciprocity treaty likewise places the ships of the two powers on the same footing in each other's ports. For the moment, this new Belgian tariff has not created so great a sensation as was expected in the Manchester market, because it happens that the demand for the Chinese market is exceedingly brisk; but let the ports of China be glutted with our cloths (as will infallibly happen), and we shall then feel the bad effects of this permanent diminution in our Belgian and German exports.

The effects of the American tariff are most prejudicial to both countries; perhaps it would be difficult to say which suffers most, England or the United States. Our respected townsman, Mr. William Brown, who is so good an authority on this subject, has too often demonstrated the injurious effects both of the American tariff, and the English Corn Laws, to require us to recapitulate them here. The Canadian smuggling trade is increasing, and although the American woolen and cotton cloths are both dearer and worse than the British, yet the tariff is striking deeper root, and the manufacturers of the North-East States gaining influence every day. The principle of isolation is at work everywhere. It is true we see our exports somewhat increased, owing to transient causes, particularly the demand for China, but at the same time we see hostile principles and permanent causes of decay established against us, which will act with sure and fatal effect when the present term of prosperity is over. In this formidable competition we may, like Atlantis, stop for a moment to pick up the golden apples that prosperity drops in our path, but, by so doing, we shall lose the race.

RAILWAY SPECULATION.—Railway undertakings, especially in the latter country, are rapidly on the increase. The *Irish Railway Gazette*, a new paper issued in Dublin, is full of details concerning various railway projects now on foot in Ireland; but the editor, who appears to be fully conversant with such matters, while expressing his feelings of gratification at this state of things, and the prospect it holds out for the future well-being of Ireland, gives a word of friendly caution lest speculation should run riot, and defeat its own purpose.

MONOPOLY DEFEATED AT HORBURY.—Mr. Harper, the monopoly lecturer, having announced by large placards that he would lecture on Monday night, the 28th ult., in the large room at the King's Arms, at Horbury, in support of the Corn Laws and Monopoly, the friends of Free Trade at that place determined to meet him, and discuss the question with him. The meeting was numerous, and the chair was taken by Mr. G. Foster at a quarter to eight o'clock, when the lecturer proceeded to address the meeting, but he soon found that his audience were too wide awake for the monopolist; he therefore turned round and avoided the question of the Corn Laws as much as possible. He found himself utterly unable to answer the arguments advanced by Messrs. Quarby, Burrows, Foster, and the Rev. Mr. Kilner. In order to show the sense of the meeting of the lecturer's conduct and object, Mr. Burrows proposed the following resolution:—"That, in the opinion of this meeting, the Corn Laws are an injury to the labouring classes, and further, they are a national curse,"—which was put and carried by an overwhelming majority; after which Mr. Ellis proposed three cheers for Free Trade, which were given in the most enthusiastic manner. A vote of thanks was then passed to the chairman, after which the meeting separated, having satisfied Mr. Harper he need not come to Horbury to lecture on monopoly. *Leeds Mercury.*

DEFEAT OF THE MONOPOLISTS AT OSSETT.—On the following Tuesday, Mr. Harper convened a meeting in a lodge-room, at Mr. Berry's, innkeeper, Ossett, to listen to addresses in support of the Corn Laws and Monopoly. The room was well filled. Mr. Harper, having been defeated at Horbury on the previous evening, called to his aid the Tory-Christ West; but, notwithstanding they had beat up the whole of the surrounding district for monopoly supporters, they were again firmly met and defeated by the Free-Trade, who carried a resolution to the effect "That the Corn Laws are an injury to the labouring classes."—*Ibid.*

NOTICE TO CORRESPONDENTS.

Owing to a great press of matter, we are unavoidably compelled to postpone the conclusion of "Statistics of the Machine-wrought Hosiery Trade of the United Kingdom." It shall appear in our next.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the LEAGUE forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadsby, Newall's-buildings, Manchester; and the LEAGUE may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

POSTSCRIPT.

LONDON, Saturday Morning, November 9, 1844.

A Manchester correspondent of the *Standard* bears unwilling testimony to the efficiency and progress of the League, averring that the course of proceedings now adopted by the Council is more likely to effect the desired result than the former meetings and agitation. He declares that the plans which have been matured for strengthening the Free-Trade constituencies in counties must lead to decisive changes in the representation, especially as he finds that the Conservatives have become "still and apathetic." He does not venture to explain the cause of this "stillness and apathy," which is, however, obvious enough; those interested in the support of monopoly have already carried the manufacture of votes to the fullest extent, and the disinterested followers of the party are beginning to perceive the delusion that has been practised on them. "I can see no hope of successful resistance to this policy (of the League), unless our friends can be roused to a sense of their danger. The working men, too, are taking the matter up, as they are becoming more convinced than before, that there is some connexion between cheap corn and advancing wages." Rigby's algebra is at a discount; the undeniable evidence of facts has shown that the less families pay for food, the more they will have to spare for clothing, and, consequently, the greater will be the demand for the labour of those engaged in the manufacture of the materials of dress. The interest of the operatives in the repeal of the Corn Laws is, even by the testimony of this reluctant witness, so clearly established, that all future efforts to excite the operatives against the League must be unavailing; the unholy alliance between Monopoly and Northern-Slavery is dissolved, for neither can bring the contingents of dupes into the field, which they had before deluded by pretending to dread a fall of wages.

South Lancashire, according to the correspondent of the *Standard*, is hopelessly lost to monopoly; and he expresses his fears that North Lancashire, North Cheshire, and the West Riding of Yorkshire will share the same fate. Our hopes run in the same course as his fears; we have good grounds for confidence that the measures taken by the League will deliver many county constituencies from the thralldom in which they have been held by jobbing and political landlords, and that the independent voice of purified constituencies will deliver the nation from a yoke which cripples its commerce abroad, and fetters its industry at home.

EPITOME OF NEWS.

FOREIGN.

FRANCE.—The *Moniteur* of Monday publishes a royal ordinance authorising the establishment in the Royal College of La Rochelle, of four chairs—of hydrography, of the theory of naval construction, of the elements of maritime law, and of commerce and commercial geography.

A new species of Temperance Society (a provisional one, however,) has just been formed at Cernay (Haut-Rhin). The beer-drinkers have entered into a pledge with each other not to drink a drop of their favourite liquor until the brewers return to the old usage of making it without any other ingredient than malt and hops and water. They have appointed a committee in each canton to taste the beer offered for sale, admitting that which they find genuine, and rejecting all other.

The monthly table of the price of wheat for the whole of France, published by the Minister of the Interior, makes the average for the last month 17s. 8½d. the hectolitre, being a reduction of 12s. upon the average of September. This fall has been almost general, but has been more particularly felt in the departments forming the second section, the regulating markets of which are those of Bergues, Arras, Roye, Soissons, Paris, and Rouen, and in which the reduction is more than a franc.

A fatal duel has just taken place in the environs of Versailles between two pupils of the Polytechnic School. One of them was killed, and the other took flight, declaring his intention to surrender himself when the time came for him to take his trial. The seconds and the surgeon who attended them to the ground were arrested at Versailles, and brought to Paris on Friday.

THE KABYLES.—A letter from Algiers, dated the 21st ult., contains an interesting account of the Kabyles, the tribe with which the French have lately come into collision, after a peace for several years. This account is as follows:—"The great chief of the Kabyles is a lieutenant of Abd-el-Kader, named Ben Salem. These Kabyles have their own manufactures of arms and gunpowder,

besides those of a domestic nature. They come daily to the markets of Algiers, are very rich, and, it is said, coin their own money. Their country produces olives in such abundance that it is generally believed their crops of oil would supply all the city of Algiers. They are the true aborigines of the mountains of North Africa, and declare that they never had masters, dating their liberty from the beginning of the world. They submitted neither to the Romans, nor to the Saracens, nor to the Turks, and they now emphatically add, with indomitable pride, that they will never submit to the French."

SPAIN.—This wretched country continues to be the scene of political commotion; plot and counter plot follow each other in rapid succession, and threaten the destruction of all government. General Prim, who was so active in his efforts and intrigues against Espartero, has been arrested for a conspiracy to assassinate General Narvaez, the present military dictator. The Madrid correspondent of the *Times* casts suspicion on the validity of the affair, considering it a mere ruse of Narvaez to draw off men's minds from the reform question now so much agitated in Spain. At Barcelona several individuals have been arrested, and four condemned to death.

BRUSSELS, Oct. 31.—In the Chamber of the Representatives, the Minister of the Interior said:—"Gentlemen,—On the 28th of November, 1843, a plan was presented to you for the revival of the law of July 31, 1834, relative to corn. This plan has given occasion to a great number of objections. Many petitions have been referred by you to the Government—further discussions have been commenced. We therefore think it advisable to withdraw this project of law for the present. You have voted every year temporary measures relative to the importation of barley and rye; we ask of you the continuation of these measures."—Mr. A. Rodenbach: And for potatoes.—The Minister of the Interior: As for potatoes, it does not appear that any exception is necessary this year; there was none last year. The second object of the project is the re-enactment of the law of June 6, 1840, which permitted (independently of the quantity, the importation of which is authorised by the law of June 6, 1839, the importation at a reduced duty of a further quantity of corn from the duchy of Limburg into the arrondissement of Vervier. A representation of the commune of Aubel has been addressed to the Government, which shows that the quantity, the importation of which is authorised by the law of the 6th of June, 1839, was already exhausted this year at the beginning of September. We propose to authorise for an indefinite time the importation at a reduced duty of 500,000 kilogrammes of corn per month above the quantity the importation of which is already permitted by the law of the 6th of June, 1839. The Minister presented a project of law for the purpose stated by him. The Chamber then entered on the general discussion of the project of law for the augmentation of the salaries of Ministers of the Courts of Justice. After a pretty long debate, the President announced that there was not a sufficient number of members present, and the Chamber adjourned till Monday.

The Belgian Minister of the Interior is endeavouring to obtain the favourable report of the national Chambers of Commerce for allowing English thread, suited to gloves, we believe, to pass through Belgium for re-exportation.—*Globe.*

THE HAGUE, Oct. 30.—Among the petitions presented to the Second Chamber respecting the tariff of import and export duties, there is one from the Chamber of Commerce at Tilburg, in which it is affirmed that the woollen manufacturers are not in general sufficiently protected; that they require to be powerfully supported; and that it is of the greatest importance to the Netherlands that suitable measures should be adopted to make them flourish. It is stated that in England, France, Germany, and Belgium, manufacturers are infinitely more protected than with us; that in all those countries the importation of woollen manufactures, if not wholly prohibited, is subject to such heavy duties that the importation is impossible. The Chamber goes into the subject at great length, and proposes an import duty of 34 florins for 100 lbs. of woollen manufacture.

RUSSIAN TRADE WITH CHINA.—St. PETERSBURGH, Oct. 22.—At the fair of Nishni Novogorod there were 39,000 chests of tea and 60,000 lbs. of copper. The supply of cotton goods was much the same as that of last fair. There was very little Persian silk, and what there was is said to have been purchased for England. Tea was bought very rapidly, though at reduced prices. On the whole, trade was brisk. A great deal of woollen cloth was sent to China.

The *Paris Globe* publishes the following extract from a letter, dated St. Petersburg, the 15th ult.:—"Our merchant navy in the White Sea is at present composed of 455 vessels, all constructed by peasants. The pilots and seamen employed in the service of these ships amount to 1650."

ADEN.—Some interesting particulars have appeared in the *Times* from a correspondent, descriptive of this 'key of the Red Sea,' and which some few years ago was taken by the British by a coup de main. The writer says:—"Of the 47th, which arrived in April last, about 1100 strong, 40 died, 70 were sent home, and 106 remain in hospital. No acute diseases are here known; smallpox is unheard of; and vaccination will not take, as though nature had implanted discretionary powers to adopt or reject measures of alleviation or prevention, as the system might need or could dispense with them. The sickness arises rather from exhaustion and gradual reduction of strength with exposure to the sun, which is not always avoidable. Dropsy and depressed spirits are the prevailing characteristics. In despite of sickness and desolation, Aden has its charms, if the increase in the population of the suburbs may be taken as an indication of such an impression. When first occupied the population did not exceed 4000; it is now upwards of 30,000; and every morning at day-break you will see from 50 to 200 camels coming into the town laden with the produce of the interior,—provisions, vegetables, &c.—to console and comfort the otherwise benighted occupants of this extinguished crater. The fact is, the security to property afforded by a residence within the limits of British possession and influence has contributed in no inconsiderable degree to this outward sign of prosperity and thriving appearance."

DR. WOLFF.—This intrepid man has written to Captain Grover from Meshed. He dates his letter the month Shaban 23rd, having forgotten the Christian month from not venturing to keep a journal at Bokhara. He may now be considered as out of the clutches of the tyrant, but he has been sadly plundered of his property, and a promise

has been extorted from him by Nazib Abdool Summat Khan to pay him £2500, in default he will suffer imprisonment in Persia. He attributes the preservation of his life to the intervention of the Persian Ambassador. He states also that Lieutenant Wyburd, who went to Khiva in 1835 on a diplomatic mission, has been murdered at Bokhara. Dr. Wolff had, at Captain Grover's charge, released a batch of Russians held in slavery, for which Captain G. received the thanks of his Imperial Majesty.

INDIA.—The Bombay mail of the 1st of October has arrived. The chief intelligence relates to disturbances in the southern Mahratta country, which has been some time in a disturbed state. Some of the malcontents seized two of the strong hill forts, where they hoisted the standard of revolt against the Rajah of Kholapore. They consist chiefly of Arab troops, who placed themselves under some bold leaders, and bade defiance to the Rajah and his allies. A force was sent by the British authorities to disperse them. It consisted of fifty artillerymen, and troops, amounting to about twelve hundred men, under the command of Colonel Wallace, of the Madras army. An attack is said to have taken place on one of the forts, in which the rebels defended themselves stoutly with their long guns. Some soldiers were wounded on the side of the British, for the hill forts from their position are difficult of access. The British were subsequently firing and throwing shells into the first fort, which is situated about 25 miles from Belgaum. The other is 18 miles further off. The Bombay Government was on the alert in making arrangements for having its disposable regiments ready for any emergency that might arise. Serious riots took place at Surat, on the 29th of August, in consequence of the popular dissatisfaction at the increase of the salt-tax from half a rupee to one rupee (2s.) per maund of 80lbs. Troops were promptly sent there by the Government, and the disturbances ceased. In the Punjab, confusion and anarchy prevailed. Heera Singh governed at Lahore, in the name of the young Maharajah Dhuleep. He was engaged in collecting a force to combat with his own uncle, Ghoolab Singh, and with the widow of Suchet Singh, the brother of Ghoolab, who was anxious to punish Heera for the late dastardly murder of her gallant husband, Suchet Singh. The government of Afghanistan, as administered by Dost Mahomed, was in the usual state of turmoil; conspiracies, revolts, and skirmishes about the revenue, kept that chief in continual employment. The new rulers at Gwalior, although appointed under the British, are busied in speculations, and in oppressing the Ryots and Zemindars subject to them. The object of those rulers being to gather money as soon as they can, they care not about the means they use for that purpose. It was thought that the British authorities would have to compel them to adopt another course. The advantages of steamers being fully recognised at Bombay, several companies had started for building steam-vessels for the coasting trade, &c. An express had arrived from Belgaum with the following important intelligence:—The Governor summoned the council to meet this afternoon, at Parrell. The steamers are in readiness, and it is expected that some European troops will be sent off, as the deputy quartermaster-general of the army has been sent for to attend the council. It is said that the company of artillery that lately went to Surat will be sent to Vingoria, in order to proceed from thence to Belgaum. It is expected, notwithstanding, the forts will be reduced before the Bombay troops arrive.

CHINA.—The news from China comes down to the beginning of August. Trade was dull at Canton, but extending itself in the newly-opened ports.

CAPE OF GOOD HOPE.—Cape of Good Hope papers to the end of August have arrived, according to which the frontier Boers were complaining of the inadequacy of protection and the repeated infringements of the Caffres, notwithstanding the treaties entered into with the local government. The Dutch farmers, it would appear, lay much of the blame arising from aboriginal aggression to the ready access the natives have had to firearms and ammunition in the way of trade with the British, and they seem to consider that the Boers have been misrepresented here as persons who were only desirous of exterminating the original possessors of the soil for their own exclusive advantage. An active investigation was being made into the circumstances of these atrocities, and the Lieutenant-Governor had so disposed his military force in the neighbourhood as to command the movements of the tribes within a certain distance of the frontier, and trace the guilty parties if they were within the range of his district.

DOMESTIC.

Her Majesty has sent £200 and Prince Albert £100, in aid of the fund for the erection of baths and washhouses for the labouring poor of the metropolis. The poor, it is stated, are already anxiously inquiring at the office in Crosby-square, when the washhouses will be opened.

On Tuesday evening a meeting of the friends and members of the Metropolitan Tradesmen's and Operatives' Protestant Association was held at Exeter-hall. The object of the meeting was not stated on the card of admission, but that card contained this regulation:—"The person using this ticket pledges himself to be governed in all cases by the decision of the chairman." The meeting was presided over by Mr. T. B. G. Smith. The speakers were—Rev. A. T. Thelwall, Mr. Allan, Mr. Bindin, the Rev. H. Stowell, from Manchester, and others; and the speeches and resolutions of the same character as those of former like occasions, deprecating the alleged increase of Popery, and calling upon the friends of the Protestant Association to continue to uphold and multiply them and their operations. The meeting was prolonged from six o'clock until after ten.

Alderman Gibbs has written to the *Globe* to explain that the cause of his absence from the civic procession on Monday week was solely in acquiescence with the wish of the Lord Mayor, who feared that any demonstration of unpleasant feeling towards him might prove an annoyance to her Majesty.

The Royal Exchange will not be opened for public business until after Christmas. Workmen are now busily engaged in removing the decorations used at the opening, and fitting up Lloyd's, the insurance departments, shops, &c. &c.

The *Manchester Guardian* states that there is every reason to believe that the parties who committed suicide at Kilmarlock, under such extraordinary circumstances, were a Mr. Joseph Barker, formerly of Manchester, and his wife. Mr. Barker was one of the firm of John and Joseph Barker, Cromford-court, who were largely en-

gaged in the German trade, and failed somewhere about the year 1814. Mr. John Barker, we believe, died very shortly afterwards; but Mr. Joseph Barker subsequently resided in London, and more recently travelled for some time for a house at Birmingham. This employment he left a few months ago, with a view to a connexion with a house in London, in which, however, he did not succeed; and it is supposed that disappointment on this score, and probably the exhaustion of his resources, led to the commission of the fatal act.

Accounts from Dublin state that a frightful gale commenced there, and along the neighbouring Irish coast, on Thursday, the 31st ult., and continued the following Friday and Saturday. The casualties to the shipping are said to be numerous and severe. The vessels moored in the Liffey were knocked to and fro by the heavy ground swell in that river, and serious apprehensions were entertained for their safety. At Kingstown the sea dashed up to the height of fifty feet, and several vessels were greatly damaged. The mail packets to Liverpool were detained many hours beyond their customary time, and caused much alarm for their safety. The *Drogheda Conservative*, of Saturday, reports a steamer trading between Dublin and Liverpool, with all hands on board, as lost off Lambay; a vessel driven on shore at Skerries; another near Balbriggan; and a third wrecked near the North Bull, at the mouth of the Drogheda harbour. The Shannon, of Whitehaven, was wrecked; the crew were saved with great difficulty, one man perishing.

A large quantity of timber and other things belonging to ships were picked up between Balbriggan and Drogheda; the figure-head of a ship, and a piece of board with the name "Fairy Queen," were found at Balbriggan. Several small craft were more or less injured at Baldoyle, Malahide, and along the coast. A large vessel, supposed to be an Indiaman—but all inquiry proved unsuccessful to ascertain anything about her—was seen in a wrecked condition off Ireland's Eye. The Drogheda Railway did not sustain the slightest damage, although the trees and bridges adjoining the line suffered to a very great extent from the severity of the gale.—A collision took place at Kingstown, between the *Capricorn* of Liverpool, a West India vessel from St. Domingo, and a brig called the *Kingston*, which seriously damaged both vessels. On Saturday night the latter vessel caught fire, and was consumed to the water's edge.—Of over 50 vessels riding in the harbour, which had to put in from stress of weather, some were deprived of their jibbooms, bowsprits, &c., but no otherwise material injury had occurred to them. Several other wrecks were also ascertained to have taken place.

On Friday forenoon, about twelve o'clock, a fire broke out in the quiet little town of Strathaven, by which upwards of forty houses, with a brewery and tanwork, were burned to the ground, nearly 100 poor families thrown destitute on the street, and the annihilation of the entire town seriously threatened. The conflagration commenced at the south end of the town, a little way beyond a place named Todd's-hill, where the houses are nearly all covered with thatch, and where the population are chiefly weavers; and the wind being high at the time, and blowing from the south-east, rapidly spread the flames from house to house on both sides of the street, until, in the space of a few hours, notwithstanding the efforts of a body of the inhabitants who turned out to check the flames, forty houses or thereabouts were completely destroyed, in addition to the brewery of Mr. Vallance, and the large tanwork of Mr. Sample, where it is alleged not less than £2000 worth of property has been consumed. It is calculated that from fifty to sixty looms, with webs, principally belonging to Glasgow manufacturers, have been consumed; and it will take a long time indeed before the loss to the operative weavers can be made up.—*Glasgow Saturday Post*.

On Friday night, the 25th ult., a party of young men met at a dance in the townland of Doneen, in the county of Sligo, within a few miles of Ballyna. Some dispute arising, they attacked two men, brothers, named Foody, and beat them severely. Immediately after, another brother rushed into the party with a knife, and killed one of them on the spot, by stabbing him in the heart. He also wounded several others, who are so dangerously ill that their lives are despaired of.—*Sligo Journal*.

The Repeal Association met on Monday at the Conciliation-hall, Dublin. A resolution, pledging the association to give its aid in the collection of the O'Connell tribute, passed unanimously. A letter from Mr. S. O'Brien was read, in which he expressed a decided preference for simple repeal; but he was not prepared to reject any plan for the repeal of the Union which should appear to be now practicable. A letter from Mr. O'Connell was read, denouncing Repeal societies as secret societies, the members of which rendered themselves liable to transportation; and that no Repeal could be allowed to remain a member of the Repeal Association. The rent for the week was announced to be £289. 15s. 2d.

On Tuesday, whilst a number of workmen engaged in arching over the Glitting Mill-brook at Derby, which they had just completed, while removing the props the whole mass of material fell in, burying the men in the ruins. Six men, one of them the son of the contractor, Mr. Sims, were taken out of the ruins quite dead. The cause of the calamity is supposed to have been the removal of the centres before the setting of the material.

On Friday, the 1st inst., a meeting of noblemen and gentlemen was held at Dublin, for the purpose of considering and adopting measures for the relief of Father Mathew from his pecuniary difficulties; when it was resolved, that it was advisable to raise a sum of £20,000 first, for the discharge of his debts, and next to purchase him an annuity, so that he might henceforth continue his benevolent labours in the promotion of temperance free from all embarrassments of a pecuniary nature.

It appears that one of the soldiers stationed in Wigan recently received 150 lashes for disobedience of orders, in the Wigan Barracks; and although, according to report, "he stood it like a man,"—that is, never whined under the lash,—still some of the inhabitants complain that such disgraceful scenes should take place within the borough.

There is at present a great competition amongst the butchers in Gatehead. On market days mutton and beef are ticketed at 4d. per lb., and, in some instances, it has been offered at 3d.

There were 966 deaths within the bills of mortality last week; more than had been in any week for the three preceding months, except in one. The mortality from small-pox and scarletina continues to be about twice as great as usual; but it has slightly diminished since last week.

Upwards of 300 engineers, sub-engineers, draughtsmen,

chain-bearers, and assistants, are now employed, at salaries from £2 to 13s. a week, surveying the lands for the projected railways in the south of Ireland.

About eleven o'clock on Saturday, between fifty and sixty yards of the south-eastern wall of the n.w. market, now in course of erection at Birkenhead by the contractors, Messrs. Fox, Henderson and Co., fell down, with a tremendous crash, burying six of the workmen in the ruins. Three were seriously injured, but no life was lost.

The cost of rebuilding the Royal Exchange, together with the improvements in its immediate vicinity, is stated to be upwards of £400,000. The rental of the Royal Exchange is estimated at about £14,000 per annum. The Royal Exchange Assurance Company is rented at £2400; Lloyd's at £2000; and the London Assurance at £1400.

The Worshipful Company of Grocers have forwarded the munificent donation of £100 towards the fund now collecting for the establishment of baths and washhouses for the poor. Queen Adelaide has also subscribed £100 to the fund for providing baths and wash-houses for the labouring classes.

FALL OF A COTTON MILL, AT OLDHAM, AND LOSS OF LIFE.—At half-past three o'clock on Thursday afternoon, the 31st ult., the new end of a cotton-mill, six stories in height, and seven windows in length, belonging to Messrs. Samuel Radcliffe and Co., fell to the ground, near to Greenacre's-moor Church, Oldham. The building is what is usually called fireproof, and had been erected during last summer. It was partly filled with machinery, the erection of which would have been completed this week. From sixty to seventy persons were employed in putting up machinery when it fell, and, as might have been expected, large crowds of people assembled on the spot after the catastrophe; and the screams of wives and children were beyond description. The other factories in the town and neighbourhood ceased working, and persons began to remove the materials, and continued at work during the whole of the night. On the following morning twenty persons, twelve males and eight females, were got out of the ruins, having lost their lives by the calamity; several others have been more or less injured. An inquest was held on Saturday when several witnesses testified to the fact of the falling of the mill, the gale end going first, the roof and arches following. The inquest was adjourned to give Mr. Fairbairn, engineer, and Mr. Bellhouse, builder, time to make their calculations in order that they might produce such a report as would be satisfactory both to the jury and the public. A public meeting for the relief of the families of the sufferers has been held, and a handsome sum subscribed. Messrs. Radcliffe have contributed £100. The adjourned inquest was held on Wednesday, when Mr. Fairbairn read a report, which entered into full details as to the construction of the mill, and attributed the accident mainly to the weakness of the iron beams which supported the roof. After a short discussion the jury returned the following verdict:—"Accidental death, caused by the falling of the building; and the jury are unanimously of opinion that the causes of the accident are fully pointed out by the able report of Messrs. Fairbairn and Bellhouse." The subscription for the relief of the bereaved families has already reached £300.

HONORARY DEGREE OF D.D. CONFERRED ON THE REV. J. W. MASSIE, OF MANCHESTER.—The *New York Journal of Commerce* of the 7th of October contains the gratifying announcement that, on the 2nd of that month, the honorary degree of D.D. was conferred on the Rev. J. W. Massie, of Manchester, by the Theological Faculty of Columbia College, Washington, United States. This honourable testimony to the character and attainments of Mr. Massie must be doubly gratifying to that gentleman, from the fact of its having been spontaneously conferred without his cognizance or solicitation, on the representation of several of his warm admirers and friends, who, as citizens of the United States, have not forgotten to honour with just tribute the virtue, zeal, and talents that secured their respect and admiration in another clime. It gives us sincere pleasure also to record this mark of honourable distinction to one who has always been a ready champion of every good cause—the friend of freedom, religion and civil—as well as the earnest and uncompromising advocate of unshackled commerce.

GAME LAWS.—With respect to the injury done to the maintenance of the poor by the game laws, we must take into account as a subordinate circumstance the heavy expense incurred by keeping a pack of hounds. We were sometime since informed by a gentleman, himself accustomed to hunt, that a certain pack of these animals in this county cost their owner £1000 a year—£1000 a year for the amusement of killing harmless hares, and the pleasurable excitement of chasing them over hedge and ditch, at the hazard of a dislocated limb, or a broken neck.—*Plymouth Journal*.

POACHING.—At the magistrates' office, on Tuesday week, James Rayner, of Marsden, was brought up by Riley, gamekeeper to Captain Arncliffe, for being with two other persons in pursuit of rabbits, on Sunday morning, the 6th inst., on Marsden Moors. Being the first offence, and the gallant captain not pressing the charge, he was convicted in the mitigated penalty of 10s., and 14s. 6d. expense, or one month to hard labour at Wakefield. [If this be game-law mercy, may Heaven help those who are subjected to game-law justice.]—*Bradford Observer*.

MIDHURST.—A correspondent at Midhurst informs us that "Lord Egmont, the present owner of Midhurst Park, has now laid claim to all the acorns on the estate, which have from time immemorial been considered the property of the tenants, and used by them for the general purpose of feeding their pigs; but it appears," adds our correspondent, "that the tenants are to feel still further the landlord's oppressive weight, for his little regiment of gamekeepers are employed on the different farms thrashing down and carrying away the acorns to feed the game during the winter." As his lordship has but recently put 10 per cent. on the rents, one would have imagined that he would have been able to keep his game without making further encroachments on the ancient privileges of his already overburdened tenants.—*Brighton Guardian*.

TO THE EDITOR OF THE TIMES.

Sir,—My name is Yangfang; I was born at Wang-fong, in the province of Guangdong, and I am a distant relation of the poor Keesen that was killed. I learned some English at different ports, as Canton, Macao, Hong-Kong. I came to England about the fifth moon this year to learn better the language, and some of your customs and religion. But I am much confused with those things I see and hear, and must ask your kindness, or some of your correspondents, before I believe, as I am told yours is the largest gazette of these western countries. I shall then believe what you write to me, for I know you will speak nothing but true, and shall thank you for instructions. Pray answer some questions for me.

Do you call our inner land, the flowery country of Cathay, by the name of China? Do you say the needle of the magnet we use for guiding ships in their courses on the great sea points to the north? We discovered it many ages before you knew it, and consider it rather points to the south.

You are Christians by religion. Do you put a tax now on the food and corn for the poor people which is so big that the food cannot come to the poor people? for in Cathay, and all its countries, we are pagans, and worship different gods, which you call idols. I, like most of the other Chinamen, am a worshipper of Buddha; but our good Emperor, the Brother of the Sun and Moon, gives a reward to all the big ships which bring in enough rice, or he does not order them to pay the dues of the port where they come, which is a great help to them; this is to make the food cheap and plenty for the poor men; but tell me, do you want to make it dear for the poor men, and very little of it?

Do your good Christian priests give help to make the food dear, that they may get more money, and do they act for our proverb that the full stomach never thinks for the empty stomach? Is it true that the poor really drop down dead for hunger, as I have read in your great paper of news? In our inner land, when people are crying for want, we think it best to give them some work to do and pay them, then with the money they buy the food; but I am told you think it best to give them baths and warm water. In your country is water good for the hunger? Do the kind priests always give the water for the hunger? In our country we and it takes away the thirstiness, but we do not drink it when we want the food. Does the climate here make any difference in this, or is it only in the customs of the English Christian people?

When people are very poor in our land we give them work to do that they may buy the food and eat rice; but you give them what you call charity, or put them in prison, where they must not see their friends; wife must not see husband, husband must not see wife nor children,—is it so? This very bad. Pray, Sir, do tell me if it costs more money to put them in the prisons than it does to let them work and pay for their own food out of the prisons? I think it is in England, but not in Cathay, that the big fish eat the little fish, the little fish eat the shrimps, and the shrimps eat the mud.

But the Mandarins in our country are very bad, and do the people much harm, and steal their food and money, and then they say Mandarin very good indeed to poor man. Are your Mandarins like ours? Pray tell me this plainly, with your own real English honest word.

I hope you will pardon me for asking one more little question. Is it true that you put all your manure and nasty things, not on the land, but into the rivers? What for do you this? It makes the water not good to drink, but very nasty, and we could not drink it so; but is this why you give water and the bath to feed the hungry people? Let me understand.

In our inner land we save it all and sell it all, even the hairs from shaving the head, and put it on the land to make the rice, and many other things, grow well and fast. Is it true that you send big ships to the other side of the world to get the manure of birds to make the corn grow in the place of what you have, and put into the rivers?

Pray forgive the faults I make in English, and all the mistakes of another land, and give me a true answer to all these doubts which I ask you, that I may tell my countrymen when I get home, which I intend soon to start.

From your humble slave,

YANGFANG.

Gloucester-place, Kentish-town.

CARDIGANSHIRE CATTLE FAIR, &c. — For many years stock has not been so low in Cardiganshire as at present—quite a drug. At Newcastle Emlyn fair last Friday, good 3-year old steers were offering at 45 each, and no bidders. Three years ago, at the same time and place, the very same kind of steers fetched 10 guineas each. Fat stock of the best description met with purchasers at good prices. Sheep also quite a drug. At Capel-cynnon fair last week, most of them were driven home unsold, and scarcely looked at. Everything else at the same fair excessively low. Horses, particularly the best description, found purchasers at fair prices. All kinds of grain are on the advance, about 1s. a bushel. Potatoes also very high, owing to the failure of the crop. Hay is getting up; and fodder is scarce throughout the county, and is likely to be very high. The weather is favourable for sowing wheat, and the farmers are busily employed about it.—*Welshman*

A QUESTION TO THE LANDOWNERS.—Much continues to be said about protection, rents, prices, &c. &c. Now, we have a plain statement and a plain question to put to the landholders. On reference to the Mark-lane prices of wheat, we find the following prices quoted:—Wheat—Essex, Kent, and Suffolk—old red, 40s. to 48s.; white, 44s. to 52s. We refer to the average price of wheat in 1773, it is 51s. 10d.; 1774, it is 52s. 8d.; 1775, it is 48s. 5d. The average price, therefore, of the present market may be taken as about the average price sixty or seventy years ago. This is, we think, a plain fair statement; now for the question. The price of corn is about the same as sixty or seventy years ago; what is the average amount of rents? Are they not double? Are they not treble? Are they not quadruple? Are they not more in very many cases? Landlords, you do not condescend to answer us these questions; but if they should be put to you by your victims—by your tenants—as noblemen, men of honour, gentlemen, answer them fairly and truly, and they then will see that, whilst Corn Laws have been protecting you, they have not protected them.—*Brighton Herald*.

MARKETS.

CORN MARKET.

MARK-LANE, Monday, Nov. 4.—The supply of English Wheat this morning was moderate, and much of it in inferior condition. The best samples were taken off readily at fully last week's rates, but other descriptions were not disposed of without difficulty, and on scarcely such good terms. There was a steady sale for Foreign at former rates. There was a good supply of English Barley, on which a decline of 1s. to 2s. had to be submitted to before a clearance could be effected. There was a good demand for Foreign Barley from the country, and notwithstanding the large supplies that have lately arrived, the prices of that article were tolerably well supported. Beans and Peas were scarce, and 1s. dearer. The supply of Oats was short; there was a ready sale at last week's prices.

Flour, 6174 sacks, 45 bars.

FRIDAY, November 8.—The supply of Wheat since Monday has been moderate; there is a fair demand at Monday's rates. The arrivals of Barley, both English and Foreign, are quite trifling. The holders of foreign have withdrawn from sale much of the recent arrivals, and the quantity offering is, consequently, not large. There is also a continued demand from the country, and an advance of 6d. to 1s. per quarter on Monday's rates is easily obtained. There is more inquiry for Beans from the country, and Monday's prices are fully supported both for this article and for Peas. The supply of Oats is scanty of all descriptions, and buyers are unable to purchase on quite such favourable terms as Monday. There was an alteration in the duties yesterday.

S. H. LUCAS and SON.

THE LEAGUE.

No. 60.]

SATURDAY, NOVEMBER 16, 1844.

[3d.]

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All Subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive, a copy weekly of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

We beg to inform our subscribers that bound volumes of the LEAGUE newspaper, containing the whole of the first year's numbers, may be had on application at the Offices either in London or Manchester.

Persons wishing to be on the Register next year, as Freeholders for County votes, must be in possession of the property before the 31st of January.

QUALIFY, QUALIFY, QUALIFY.

PRACTICAL INSTRUCTIONS FOR ELECTORAL QUALIFICATION.

The electors for counties are as follows:—Freeholders, copyholders, leaseholders, occupying tenants.

Freeholders.—The following persons are entitled to vote as freeholders:—1. Any person possessed of a freehold estate for himself and his heirs, or, as it is called, an estate of inheritance, of the yearly value of 40s. 2. Any person possessed of a freehold estate for life or lives of the yearly value of £10. 3. Any person possessed of such an estate for life or lives of the yearly value of 40s., under any one of the following circumstances:—If the estate was acquired on or before the 7th of June, 1832; or since, if by marriage or marriage settlement, by devise (i. e., by will), or by promotion to any benefice or office, or if the freeholder is himself the actual occupier of the property. In any of these cases it is sufficient if the property be of the yearly value of 40s. Parish clerks, sextons, schoolmasters, Dissenting ministers, and holders of offices have a right to vote if entitled to emoluments of 40s. per annum, arising out of, or charged upon, land, and may be registered as voters in the parish wherein the land is situated. The appointment must, however, be for life, not for a temporary purpose, or at the pleasure of any other party; but an appointment during good behaviour is considered to be an appointment for life. If the freeholder occupy his own freehold property in a borough, of such a nature and value as would confer upon him the right to vote for the borough, he will not be entitled, in respect of that property, to vote for the county. But if the freehold will not confer the right of voting for the borough, that is, if it be not of the annual value of £10, or if it be land without building, the freeholder may vote for the county, though he occupy it himself. And if the freeholder do not occupy his freehold situate within a borough, he may then vote in respect of it for the county, and his tenant may also vote for the borough. Six months' possession prior to the 31st of July will entitle a freeholder to be registered. And if the freehold lands or tenements should have come to him by descent, succession, marriage, marriage-settlement, will, or promotion to any benefice in a church, or to any office, no definite period of previous possession will be necessary.

Copyholders.—Any person possessed of any lands or tenements of the clear yearly value of £10, whether of COPYHOLD or any other tenure than freehold, is entitled to vote. Tenants in ancient demesne may in general vote as freeholders, if they do not hold by copy of court-roll; but otherwise they will be entitled as copyholders. As freeholders, 40s. per annum will be sufficient; but as copyholders, £10 a year is required. The same period of possession previous to registration is required, in respect to copyholders, as in respect to freeholders. Copyhold property within a borough, if of such a nature as would qualify any person to vote for the borough, will not, under any circumstances, give a right to vote for the county.

Leaseholders.—The right of voting in respect of leasehold property extends to—1. Any person who is entitled by virtue of a lease made or assigned to him of any lands or tenements for the unexpired residue of any term originally created for a period of not less than 60 years, if the property is of the clear yearly value of £10 above all rents and charges. 2. Any person who is in like manner entitled to the unexpired residue of a term originally of 30 years, if the lands and tenements are of the clear yearly value of £20. The party to whom the lease was originally made, or a party to whom each lessee may have assigned

the original lease, may vote, though not in occupation of the premises. Any sub-lessee or assignee of an under-lease may also vote, but only when in occupation of the premises. Lessees or assignees must have been in actual possession for 12 months previous to the 31st of July, unless the qualification is acquired by any of the modes before mentioned as excepted; that is to say, by the death of a relative, by marriage, by will, or by promotion to any benefice or office. Leasehold property in a borough, if of such nature and value as will give any person a vote for the borough, will not give a vote for the county.

OCCUPYING TENANT.—Any person occupying lands or tenements for which he is liable to pay a yearly rent of £50 is entitled to vote, if not within a borough, and not of such nature as would qualify a person to vote for the borough. In respect of the period of previous possession required, occupying tenants are placed on the same footing as leaseholders; but it is not requisite that the occupation be of the same lands or tenements: different lands and tenements occupied in immediate succession for twelve months previous to the 31st of July in each year will give the qualification.

GENERAL OBSERVATIONS.—Besides lands, houses, buildings, and the like, property and interests of the following description will entitle the owner to be registered and to vote, viz.—tithes, an annuity charged on land, a rent-charge,* fee-farm rents issuing out of an estate in fee; shares in navigable rivers, canals, &c., where the shareholders possess an interest in the soil; tolls of bridges, tolls of fairs and markets, purchases of unredeemed land-tax. Persons who have entered into an agreement of purchase of property, or who have paid any part of the purchase-money, or done any other act in part performance of the agreement, are considered to have equitable estates, and are entitled to vote and to be registered. Joint tenants and tenants in common have each a right to vote, provided the property be of sufficient amount to give to the share of each the value required. Mortgagees may vote, if in actual possession or in receipt of the rents and profits, but not otherwise. Trustees are expressly excluded from voting for any trust estate; the right of voting in respect of trust property is reserved for the cestui que trust. In estimating the value of freehold or copyhold property, the marketable value of the property to let is the criterion to be attended to. If, owing to accidental circumstances, the rent should be less than might be obtained, the property will still give a right to vote. As regards leaseholds, the value required does not depend on the amount of rent. It is to be estimated by the profit which the tenant can make of the property, over and above the amount of rent reserved and any encumbrances charged on the property. The value required is to be "above all rents and charges." Under these words are included all encumbrances affecting the property, but not any public or parliamentary taxes.

BOROUGH FRANCHISE FOR 1845.

In order to secure a borough vote next year, those who occupy premises giving a qualification should immediately see that their names are placed on the poor's rate-book.

A claimant must be rated, or have claimed to be rated, to all rates made during the year ending the 31st of July. If, therefore, his name is omitted from any rate made during that time, he should immediately claim to be rated. The overseers are required to put the name of a person so claiming on the rate last made; consequently, if the claimant suffers two rates to be made before he claims, he will be unable to get upon the former one, and will thereby lose his vote for one year.

No particular form of claim to be rated is prescribed by the Reform or Registration Acts; but the following form may be adopted:—

"CLAIM TO BE RATED."

"To the Overseers of the Parish of _____
"I hereby give you notice that I occupy a _____ at No. _____ Street, in your parish, and I claim to be rated to the relief of the poor in respect of such premises, in order that I may be entitled to vote in the election of a member (or members) of Parliament for the city (or borough) of _____.
"Dated this _____ day of _____, 1844.
"(Signed) _____
of _____."

Insert the name of the parish, the nature of the premises, as house, shop, room, or as the case may be, and the name of the street, &c., and of the city or borough, also the date. The christian and surname and place of residence of the claimant should be inserted at full length. Give the claim to an overseer, keeping a correct copy, on which should be written the date when, and the name of the overseer on whom, it was served. If any poor's rates are due for the premises at the time of making the claim they must be paid, or the amount tendered. Should the overseer refuse to accept the money, or omit to enter the claimant's name in the rate-book, he will be deemed to be rated notwithstanding; but, if the claimant's name be omitted from any future rate, he should again claim to be rated.

HOW TO WIN COUNTIES.

THE WEST RIDING OF YORKSHIRE.

Few persons are aware how greatly the West Riding of Yorkshire surpasses in importance any other electoral district of the United Kingdom. The superiority in point of population and number of voters will be best understood by a few comparisons. In population it exceeds the following ten

English counties, sending 25 members to Parliament, viz.:—

Bedford,	Huntingdon,
Berks,	Monmouth,
Bucks,	Oxford,
Hertford,	Rutland,
Hertford,	Westmorland.

By the last census, the 12 Welsh counties contained a population of 911,603 souls, whilst the West Riding gave a return of 1,154,101. The number of its registered voters exceeds the aggregate constituencies of 22 Irish counties returning 44 members, and outnumbers, in a similar comparison, 28 of the 33 counties of Scotland. London and South Lancashire contain each about 20,000 registered voters; they are next in importance to the West Riding, which, however, beats either of them on the register by upwards of 50 per cent. These facts constitute the moral power of the two members for this vast district,—a power which surpasses the mere numerical votes of the representatives of a dozen ordinary counties. These, too, are the facts which compel our statesmen and politicians to concentrate their attention at a general election upon the contest for the West Riding, the result of which goes far to decide the policy, and even the fate, of cabinets. It was the election of Henry Brongham for Yorkshire that gave the coup de grace to the rotten boroughs, and when, at the last election, Lords Morpeth and Milton were defeated, it was the signal for the fall of the Whig Government. Sir Robert Peel, seeing the whole force of the West Riding triumph, when the new Parliament assembled in 1841, placed in the hands of Mr. Stuart Wortley the motion for an amendment to the Address, declaring a want of confidence in the late Ministry. "It is not long," said the latter in the commencement of his speech, "since her Majesty put a question to the country, and asked them to return an answer that might serve as some guidance to her in the future conduct of her Government. Now, I appear here as the bearer of a portion of that answer, and I hope that, without presumption, I may say I appear as the bearer of not the least significant portion of that answer." Loud and long were the cheers with which the speaker was greeted by the monopolist majority; and well might they cheer, for they knew that whilst the West Riding sent such an answer, monopoly was secure.

It cannot be for a moment expected, by any sane mind, that the Corn Law will be repealed until this constituency shall have so decreed at another election. We do not say that such a decision will of itself determine the fate of monopoly, but no Minister will ever dare to propose the total repeal of the Corn Law, unless he can reckon amongst his supporters both the members for the West Riding of Yorkshire. Its present representation, then, blocks the way to our success, and until this obstacle be removed the triumph of our principles is impossible. Nothing is so certain as that this impediment may and will be slung aside by the vigorous efforts of the Free-Traders of Yorkshire. If any person doubts this, let him take a map of the county and run his eye over the district, from Sheffield in the extreme south, to Pateley Bridge in the north, and from Saddleworth in the south-west, over that chain of populous towns and villages running north-east, and including Leeds, Bradford, Halifax, and Huddersfield, let him count the numbers, estimate the wealth, and remember the spirit and liberality of this great manufacturing community, and then ask himself if it be possible that such a population will submit to be imprisoned and fettered by the squirearchy, who domineer over the comparative wastes and wildernesses of the county? No! such a fate for such a people is impossible; it could befall none but willing slaves. It requires but the will to emancipate themselves; the means are everywhere at hand; our plan of operations is already known. Let every Free-Trader fortify himself with the constitutional weapons of war, by purchasing a forty-shilling freehold. This is his first duty; the next is to induce his unregistered friends and neighbours to do likewise. Let an active canvass be entered upon as for an election—the registration is, in fact, virtually the election—to persuade all who take an interest in the success of our cause to place themselves in a position to aid in the polling booth. Let nobody believe that everything possible has already been done, whilst so much that is absolutely indispensable remains undone. At the last revision for the West Riding, we had a gain of less than 100 upon the register of 30,000 names, whilst in South Lancashire the Free-Traders gained upwards of 1700 upon a register of only 19,000, which was accomplished by a bold, determined, and successful effort

* No registration of annuities or rent-charges with the clerk of the peace is requisite. The 3rd Geo. III. c. 64, § 4, § 5.

to win the county. Whatever can be done in Lancashire, Yorkshiremen can do. The task to which they have to set themselves is to qualify at least 2000 new voters before the 31st of January. Nothing less than this must be aimed at. There are 16 manufacturing polling districts; an increase on an average of 130 in each will more than give the required number. This can, and, we have no doubt, will be done. Then there are our friends across the borders in Lancashire, the North Riding, and in Westmorland; we have no doubt they will send their contingent of new qualifications from Clitheroe, Colne, Rochdale, Oldham, York City, Kendal, &c., to swell the noble army of Free-Traders at the next general election. The Manchester Leaguers have, we take it for granted, all qualified, or are preparing to do so, for the West Riding. We tell them, for their encouragement, that Messrs. Wortley and Dennison's stronghold is in the non-resident monopolist voters, their friends and partisans in all parts of the north of England having been induced to qualify.

There is one circumstance of an encouraging kind to be noticed. The West Riding contains a far larger number of towns which have not the borough franchise than South Lancashire. This is especially advantageous to the Free-Traders in the county registration. Those persons who occupy their own property, if of the value of £10 a year, in Parliamentary boroughs, are disqualified from voting, in right of that property, for the county; but all occupiers of their own freeholds in Barnsley, Rotherham, Saddleworth, Holmfirth, Dewsbury, Hebdenbridge, and the other unenfranchised towns and large villages of the West Riding, are entitled to be on the county register. It is the only vote they can have, and it is far more easily obtained and retained than a borough vote; for how few can afford to enter upon or occupy a £10 house, compared with those who may conveniently invest £40 or £50 in a freehold qualification, paying good interest! We venture to predict that a very large number of persons already qualified to vote will be found, who have been omitted from the register. We heed not those who, having been employed upon the late revision, declare that every voter is registered. Such reports are mere matters of course. The same was said of South Lancashire this time last year; but the chance contest of the summer roused the enthusiasm of both parties, and led to a determined struggle in the registration courts, which has resulted in an increase of 3000 voters.

One word as to the *modus operandi*. Let not our friends fear giving publicity to their movement. They need not be afraid of rousing the enemy. He is wide awake to the importance of the registration, and has been so whilst we have been sleeping. The monopolists have left themselves no work to do in the subdividing of their farms, and placing their dependants, down to their gamekeepers and park-keeper keepers, upon the county list. They have done their worst in parking the register with spurious votes, and if there be a thorough ferreting of the rural polling districts, as was done in South Lancashire, a thousand of their bad votes may be struck off at the next year's revision. But the important object to be kept in view up to the 31st of January, is to increase the number of new qualifications. To this end the exertions of every Free-Trader should be directed without the loss of a day. Let committees be called together in every borough, town, and village; let each district be subdivided and canvassed; let books be opened for the names of all who are willing to qualify, and a register be kept of any freehold property for sale in the neighbourhood. We may add, as a hint, that we know an enterprising young lawyer, in Lancashire, who, through his own exertions in finding qualifications, has been employed in preparing the title deeds for upwards of 100 freeholds since the contest for that county. We trust there are no good lawyers as he in Yorkshire.

Men of the West Riding! Yours is a proud pre-eminence. The country looks up to you for a sign of its deliverance. Yours will in all probability be the casting vote, for or against Monopoly. Your verdict will be potent to set free our industry, or to rivet more closely its fetters. How say you, gentlemen, is Monopoly guilty or not guilty? A nation awaits your decision at the polling booth.

QUALIFY, QUALIFY, QUALIFY!

FALSE PUBLIC MORALITY—ALMS *versus* JUSTICE.

The subject of allotments still occupies the provincial press; but we think we can perceive a disposition on the part of the more crafty of the monopolist writers to shirk the controversy by changing the question at issue into one of *gardens or no gardens for the poor*. They are afraid of their own nostrum. "We have pill-box No. 1, where is No. 2," was cuttingly remarked by the *Times*, and we have no doubt that another and another will be produced for the amusement, if not cure, of the national patient. But our business is with No. 1. It is not true that the allotment system, as put

forth by the monopolist party, meant only cottage gardens for the agricultural labourers. No man in his senses would oppose the attaching gardens to cottages; nay, it will surprise many of our town readers to learn that, as a rule, such a convenience is not enjoyed by every peasant householder in England. There is no controversy about cottage gardens. The real question which we have to deal with is, how to furnish employment and subsistence for a distressed population. That was the question which drew the 700 persons together at the Highworth meeting, and it was with strict reference to this object that Lord Radnor declared himself in favour of the abolition of the Corn Law, and against the allotment system. His lordship at the same time vindicated the right of the owners of land to dispose of their property at its full market value—a principle, by the way, already acted on so universally, that land varies in price more than any other commodity, according to the adventitious circumstances which determine its value, from the plot at the Royal Exchange worth £20 a square yard, to the allotment at Highworth paying a rent of 4d. a "lug;" and for this avowal of a doctrine which every body follows in practice, and which is indispensable alike to the rights of property and the independence of the labourer, he has brought down upon himself a full measure of that obloquy which always awaits the man who encounters a pleasant popular delusion with a disagreeable truth. "Most abominable!" cries the *Post*; "What a principle!" ejaculates the *Chronicle*; while the *Examiner*, we are sorry to add—a journal usually foremost to mark and correct the aberrations of public opinion and morality—criticises the speech in two successive weeks' articles, in which such epithets as "screw-driving," "gripping," "inhumanity," and "tyrant" are applied, directly or by implication, to the speaker and his doctrines; and the attempt to enlighten the poor labourers on the real facts of their condition, and the causes and remedies of their distress, is stigmatized as "pedantic prating."

We do not recur to this subject—which may now, perhaps, be regarded as pretty well worn out—with any especial purpose of defending Lord Radnor. Such defence as may be deemed necessary to vindicate, from the charge of inhumanity and tyranny, the acts or words of a man who has laboured through a lifetime in the cause of the people, has been already more than sufficiently supplied by his lordship's manly and straightforward letter to the *Examiner*, given by our contemporary last week. But we cannot be satisfied to let this matter drop out of public notice, without entering our protest against the false moralities to which the recent attacks on the Highworth speech have given sanction

and currency. In the bitter and unsparing censure directed against Lord Radnor, by the press, for the offence of refusing to adopt a particular description of almsgiving as a rule in the management of his property; in the fact that Lord Radnor, with all his substantial claims on public esteem and honour, has brought upon himself a not small share of temporary unpopularity, by speaking a few plain, un sentimental truths in season, while others of his order, with not one-hundredth part of his title to the people's confidence, are lauded to the skies as pattern-philanthropists, at the very moment that they have their hands in the poor man's pocket;—in this we see the signs of a radically false public morality, a purblind intelligence and perverted conscience, which is a greater public evil than even the Corn Law itself, for it is the element in which Corn Laws and all other iniquities live and thrive. Any injustice which newspaper criticism may do to Lord Radnor is an affair of very secondary importance: the way of thinking, on the part of newspaper writers and the portion of the public represented by them, which prompts and sanctions injustice is an evil of first-class magnitude. The peer who tells peasants, in a clear, strong way, the real facts of their condition, traces their distress to the iniquitous and sordid legislation of his own order, and refuses to have anything to do with wretched makeshift expedients which, while that lasts, can only tend (as he believes) to increase the mischief, is denounced as little better than a monster. The peer who taxes peasants in their food, and (the proceeds of the extortion jingling the while in his pocket) plays cricket with them and drinks their health, is extolled as a philanthropist. We accept a little bad bowling, or a ten-hours bill, as a composition in lieu of justice, and an atonement for robbery. Too truly is it said, by a weekly literary critic, in the number of the *Examiner* containing the first of the articles we have alluded to, "The character of PECKENILL is emphatically English: not that Englishmen are Peckenills, but that the ruling weakness is to countenance and encourage the rascal."

What is the ground of the odium sought, by our contemporaries, to be heaped on Lord Radnor?

Simply, that Lord Radnor declines to make a practice of letting his land on charity; refuses to adopt almsgiving as his rule in the management of his estates; stating, at the same time, special rea-

sons for believing the particular mode of almsgiving in question to be ineffectual and mischievous.

The principle which it is attempted to fasten on Lord Radnor and other owners of land, would strike every one as outrageously absurd if applied to any other class of proprietors. We do not require a merchant or shopkeeper to show his charity, by advertising a promise to carry on his mercantile concerns on other than the mercantile principle—nor raise the cry of cruelty and hardheartedness against the baker who declines selling loaves for sixpence when he might get sevenpence. If the baker is charitably disposed, he may give away a loaf to a poor man privately; and if the prosperous trader feels the obligation of ministering from his abundance to the needs of poverty, he does it, not by renouncing or curtailing the profits of his trade, but by appropriating a per centage of them after they are realized. Why set up a different rule for the landowner's charities? If the landed proprietor be desirous of assigning to eleemosynary purposes a portion of the rents which his land will fetch in the land market—"making a present" to the poor of the parish "of the difference" between the market price and the charity price of land—he can do so, without introducing a new, uncertain, and most dangerous principle into the land-letting line of business: he may receive his rents publicly, in the way of business, and distribute a portion of the proceeds privately, in the way of charity.

For our own part, we see not what else he could do, on system. Now, suppose Lord Radnor did make a rule of accepting low bids in preference to high ones, and giving the difference as a present, what would follow? First, on what principle—the business principle being renounced—would he be governed in his selection of charity tenants? Probably by the rule of the greater destitution. Superior poverty would be the tenant test—a large family being, of course, taken as constituting a main element of the poverty required; which would immediately let in a potent inducement to that most dangerous and fatal form of pauper improvidence—reckless marriages. Under the new allotment system, as under the old poor-law system, the "burden" of a large family would be a passport to privileges and comforts unattainable by prudent, self-supporting celibacy. Or, perhaps, the distribution would be by the rule of religious and moral character, certified by the clergyman and churchwardens of the parish;—a fair-seeming device for inundating the parish with knavery, hypocrisy, servility, and cant. And then, what is to be done with the rejected, disappointed, and exasperated highest bidder?—the very fact of the existence of competition showing, be it always remembered, that a surplus of unsatisfied applicants will remain, after the favoured lowest bidders are provided for. Is he to go laudless till he has acquired the due qualification for pauper landholding—a starving pauper progeny? Is he to have an equivalent for the land that is refused him, in a grant from the landlord's private purse? Or is it to be made up to him out of the rates, in the shape of a more liberal scale of out-door parish pay? Or shall every parish have its pair of pauper factions—the faction of landlords' favourites, and the faction of rejected candidates for landlord favours—with all the feuds and jealousies, the envy, hatred, and malice, the mutual bickerings and worryings, possibly the faction fights and murders, which such a state of things would but too naturally bring forth. Take it how we will, we can see nothing in this charity-allotment system, at its best, but a dubious and transient palliative for the ills of the labourer's condition—founded on the most dangerous of principles—and tending ultimately both to the increase of all existing evils, and the creation of new and worse ones.

And it is for refusing to adopt this system of administering his property, and publicly justifying his refusal on its plain, true grounds, that Lord Radnor is to be lectured for hardhearted principles and screw-driving doctrines. The *Examiner* of last Saturday says, that his lordship's Highworth speech

"Was a speech of bad example, for, whatever his practice to the contrary may be, his speech would serve for a sanction of the screw-driving of every gripping landlord."

"There is not a Tory landlord in the United Kingdom who durst have uttered such a speech, however it may have squared with his practice and with his ideas, excepting only the few words about Free Trade. In saying this we do not mean to imply that the Tory landlords are generally severe and rapacious; there are many kind and just men amongst them; but amongst them also have been oppressors, who have asserted their right to make merciless use of their powers of property, as 'doing what they would with their own.' Had one of those men uttered the speech delivered by Lord Radnor, omitting only the allusion to Free Trade, the whole country would have rung with the expressions of disgust and abhorrence, and it would have been agreed that the tyrant's old offence of the claim 'to do as he willed with his own' was immeasurably surpassed."

We quite agree with the *Examiner* that no con-lawing landlord, Tory or Whig, "durst have uttered such a speech" as that which Lord Radnor addressed to the Highworth labourers. Lord Radnor dared it, precisely because he is not of this school of landlordism. It is the privilege and reward of a life of public honesty and justice, that it enables a man to

"dare" many things from which he would else shrink; in particular, it gives him daring to speak disagreeable and unpalatable truths to his fellow-citizens. Lord Radnor, by his upright and straightforward political course, has earned the right to "dare" to set himself against a popular delusion, and announce, broadly and freely, an unpopular conviction. He can look the poor man in the face, and tell him roundly that systematic almsgiving, under the name of "allotments at fair rents," is not the remedy for the poor man's distress, and that, whatever others may do, he will be no party to the experiment. He can tell the poor man this, with a plainness that critics call hardhearted, for he is not of those who make the poor man poorer still, by blocking up his industry and taking toll on his wages. He can expound to a labourers' meeting the rights of property, for he has never legislated against the rights of labour. He can set his face against all the miserable expedients of the philanthropy that substitutes alms for justice, for his own hands are clean of injustice. The difference which seems so much to surprise the *Examiner* between the daring of Lord Radnor and the daring of "Tory landlords" is a most legitimate and natural difference: the "allusions to Free Trade" (which, by the way, was not "alluded to"—it was the very business of the meeting) furnish an adequate explanation of this piece of lordly and landowning daring. The right and power to tell the people truths which they do not like—the most precious of all the rewards that wait on public integrity and consistency—are the well-earned meed of Lord Radnor's political career.

The epithets of "kind and just" applied by our contemporaries to a certain class of Tory landlords afford a notable instance of that false public morality, that want of keeping and proportion in the distribution of praise and blame, against which we are protesting. "Kind and just" are the men who use their legislative power to put money in their own pockets; who clutch a per centage out of the revenues of destitution to add a trifle to their own superfluities; who tax hungry and toiling labour to grace their own idleness with extra luxuries; whom not even national distress, wide and deep as that of the years from 1838 to 1842, can move to relax their hold: they may be greedy as Midas, and obdurate as Pharaoh, still they are "kind" when they play cricket matches with labourers, and "just" when they remit to farmers some ten or twenty per cent. of the rents which their own legislation has pushed up unnaturally high. "Kind and just" is the *Examiner's* designation of men on whose virtues, whatever these may be, there is always this drawback—that they pinch poverty, tax starvation, and oppress and plunder industry:—while "screw-driving," "gripping," "pedantic prating," and so forth, are bestowed on the man whose first object, throughout a long public life, has been to undo the wrongs which his order have inflicted on the community; who shows his sympathy with the poor, by seeking to emancipate their industry and untax their bread; and, not the smallest of his public services, by exposing the true nature of those wretched and equivocal makeshifts, those pitiful beggars' "boons," which landlordism tenders them in lieu of justice. We regard all this, to use the *Examiner's* phrase, as decidedly "of bad example." To the way of thinking, feeling, and speaking of public men and their acts, which the recent attacks of the press on Lord Radnor tend to foster and confirm, we English people owe our Pecksniff. The race will continue to thrive so long as there is a public opinion to cry "most abominable" and the like on an honest man who declines publicly, as all do privately, parting with his property under market price, and to fall into ecstasies with the philanthropy which legislates to raise food above market price. A people that compounds felony in consideration of philanthropy and cricket, and will bear being robbed more quietly than being refused alms—a people that rapturously cheers amiable and well-meaning sentimentalities that cost nothing, and hisses disagreeable facts, is in a fair way to be Pecksniffed to the end of time. There is no one thing which we English people more need to learn, than how and where to bestow our indignation.

THE BAZAAR.

In the early part of May last, it was announced in the columns of this journal that, at the suggestion of several ladies of distinction, the Council of the League had determined upon holding a Bazaar in Covent-garden Theatre in July.

Several of our contemporaries in the provinces also noticed the proposed undertaking, and urged it upon the prompt attention of their readers. It was afterwards found necessary to postpone the holding of the Bazaar, and a statement to that effect was made in this paper.

From these circumstances our readers will be in some degree prepared for the announcement, that the Council have finally determined that the Bazaar shall be held in May, 1845, and they have again appealed to the friends of Free Trade for the assistance necessary to crown the enterprise with success.

During the brief space which elapsed between the previous announcement of the Bazaar and its postponement, offers of contributions and co-operation were received from all sides to an extent which exceeded expectation, and rendered it certain that it would have surpassed in interest and success the splendid Manchester demonstration of 1842.

The principal element of success will be, undoubtedly, the zealous co-operation of the ladies. They have attended our meetings in London and the country in great numbers; they have been foremost in making the requisite preparations for any festive occasion, when some eminent advocate of commercial freedom was to be welcomed, in most of our large towns. In the coming Bazaar another opportunity presents itself of appropriate and effective aid. The glory of success will, in this instance, be entirely their own. The ladies who have suggested the present Bazaar, and who have undertaken an important part of the preparations connected with it, will, we doubt not, receive the most cordial and sympathising support from their own sex.

We are strongly of opinion that the Bazaar, considered apart from its probable pecuniary results, is one of the most effective exhibitions of public opinion, perhaps even more so than public meetings, or the other ordinary modes of its expression.

The ladies, it is notorious, are the most efficient collectors on behalf of institutions having for their object the relief of indigence or suffering, or the propagation of truth. Their co-operation is essential to the success of our benevolent enterprise. We invite them to renew their efforts in this work of humanity and justice.

"Ours are the plans of policy and peace:
To live like brothers, and, conjunctive all,
Embellish life."

We subjoin the prospectus recently issued by the Council of the League, and earnestly commend it to the attention of our readers, who will, we hope, lose no time in acting upon its suggestions.

BAZAAR,
To be held in Covent Garden Theatre, London,
May, 1845.

"The Council of the League, at the earnest entreaty of a number of ladies, have determined upon holding a Bazaar in the Theatre Royal, Covent Garden, London, during the month of May, 1845, in aid of the £100,000 Fund now in the course of collection. This mode of assisting the efforts of the Council the ladies have themselves suggested, as being the most appropriate method of expressing their sympathy with the objects of the League, and their approval of its proceedings. In accepting the co-operation so nobly proffered, the Council cannot omit to record their grateful acknowledgments to those ladies by whose exertions alone the Bazaar held in Manchester, in the early part of the year 1842, was begun, carried on, and brought to a most triumphant conclusion, giving an impulse to the public mind on the subject of the Corn Laws of greater and more permanent value than the pecuniary results of that undertaking, unprecedentedly large as they were.

From the commencement of the Anti-Corn-Law agitation, no point has been more scrupulously adhered to than its entire disavowance from all party or political connexion whatever. Of the wisdom of this determination every day's experience furnishes additional evidence; and this, coupled with the oft-repeated determination still to adhere to it under all circumstances, renders the co-operation thus gracefully tendered not an unnatural intrusion into the arena of politics, but an evidence of active humanity and generous zeal which form some of the highest embellishments of human character.

The objects of the League and its proceedings are now matters of daily discussion, so that a momentary reference to them here will be all that is necessary. To give to labour its just remuneration for reasonable exertion, to give to commercial skill and enterprise a fair field for their employment, are in themselves noble objects, and may appear to some the only principles involved in the present controversy; but it ought never to be forgotten, that until the monopoly in the food of the people, with others of a kindred character, are abolished, the best sustained efforts for the social and intellectual improvement of the great body of our countrymen must prove abortive. The settlement of this great question involves a nation's prosperity; and the Council hope that the efforts of those who have suggested the holding of the present Bazaar will receive support proportioned to the importance of the movement to which it is auxiliary.

The recent partial revival of trade, whilst justifying this renewed appeal, will not tend to abate the ardour of those who have reflected on the principles of Free Trade, or regarded the pernicious influence of the Corn Laws, both on agriculture and commerce; for such reflection will convince them that the cloud of depression, out of which we have so lately emerged, will again envelop us, and cause probably more enduring embarrassment to the manufacturer and capitalist, and more protracted and accumulated misery to the operative, unless the only remedy capable of averting such an otherwise inevitable calamity be applied. It would be a reproach to our principles and our humanity, were we to become careless or apathetic, when the interests of the labourer, of agriculture, of commerce, and, in some degree, of civilization itself, are committed to our care.

The first particular requiring the attention of those who may be desirous of assisting the promoters of the Bazaar will be the formation of a *Ladies' Local Committee* in each town, whose names should be immediately transmitted to London or Manchester, distinguishing that of the Secretary, in order that a correspondence may be opened and carried on between such Committee and the Council during the preparations for the Bazaar.

Each town should, if practicable, endeavour to furnish a stall entirely; and the Committee are requested to depute one or more ladies to superintend its arrangements, and the disposal of the various articles during the days of sale.

The Council would also recommend the formation of a *Committee of Gentlemen*, whose names should also be transmitted to London or Manchester, a part of whose

duties will be to canvass for contributions of various fabrics, to be worked into useful and ornamental articles.

It is respectfully suggested that if the contributions from each town were to consist in a great degree of articles for the manufacture of which it may be celebrated, this would secure a suitable variety, and, by so doing, contribute to the success of the undertaking. This, the Council are aware, cannot be always accomplished, but they consider it worthy of some attention.

There will doubtless be many places where the formation of a Local Committee will be found impracticable, but the Council trust that this will not deter individuals from assisting the ladies at whose instance the undertaking has been commenced, and upon whom, from that circumstance, some slight responsibility rests. The Council will be happy to correspond with such persons, from whom they hope to receive timely notice of their intentions, in order that the necessary directions may be given for the transmission of the contributions to London.

It now only remains for the Council to observe, that any article that the taste of the donor may suggest or his ability dictate will be most cheerfully and gratefully accepted, although the following classification specifies the articles most suitable for such an occasion:—

1. Articles usually contributed to Bazaars.
2. Articles of Manufacture, British and Foreign.
3. Models of Mechanism, &c.
4. Designs, Architectural and Fancy.
5. Specimens of Coins, Minerals, Birds, Insects, &c.
6. Books and other Publications from Authors, with Autograph.
7. Autograph Letters from celebrated Men and Women of the present and former times.
8. Portraits, Pictures, and Illustrated Works.
9. Philosophical Instruments.
10. Music.
11. Original Poetry and Tales.
12. Pecuniary Contributions.

The Council would, in conclusion, beg respectfully to request that, as the time for preparation is comparatively limited, immediate attention may be given to the subject, in order that the full and complete success of the undertaking may be secured.

By order of the Council,

GEORGE WILSON, CHAIRMAN.

5, Newall's Buildings, Manchester,
Nov. 11, 1844.

NOTES OF A TRAVELLER IN THE SUMMER OF 1844.

No. XI.

Hamburg, Aug. 20, 1844.

One would think that the Germans felt sufficiently the inconveniences attending the position of the Rhine, whose mouth is commanded by a rival that makes its power weigh heavily on their commercial interests. The rivers over which the Confederation have power in their whole length might be expected to be regulated with every regard to the interests of the trader, who is the representative of all the other classes, whether buyers or sellers. This is, however, far from being the case with the many noble streams that present the easiest thoroughfares on long continued lines in nearly every direction. In making the tour, which I sketched out in a former letter, through the iron district along the valley of the Ruhr into Westphalia, and coming down by the Sieg again to the Rhine, the traveller sees the advantage which these rivers present to the country which they traverse, with no great depth of stream, but with an evenness of current that admits of their being navigated by small craft to a great distance up the stream. The Germans are not fond of boating, and pleasure-boats are amongst the rarest objects that the traveller sees. But in the use of simple means to turn their rivers to account they are unrivalled; and, if they had been spared the protracted infliction of baronial and corporation influence, they would have long since derived more profit from their skill. The Ruhr is but a few miles distant from the Lippe, that runs parallel to it; and from Hamm on the latter river the distance is not great to Münster, the chief town of the Prussian province of Westphalia. Nothing is more striking than the state of this province after being long under the rule of an active government like that of Prussia. Westphalia, the land of lords and squires, formerly of princely abbots and clerical institutions, is nearly a hundred years behind the Rhinish province, with which it is now only connected by two high roads. And yet this province, besides the rivers that flow into the Rhine, is in one part crossed by the Weser, and in another by the Ems, both flowing into the North Sea. A third communication with the sea is by the Vechte, which has been prolonged by a canal to Münster, and which runs through the Dutch province of Overijssel into the Zuider Sea. The northern part of this large province is flat, and covered with vast moors, between which spots of rich land intervene as oases. The southern circuits are hilly, and a large portion is covered with forests. Some of the scenery is highly romantic, and the Ruhr and the Louisa afford a very pretty variety of scenery that has given artists employment. In the valleys of the Weser and the Lippe flax is very much cultivated on the rich soils, and the domestic linen manufacture is still carried on to a large extent. Grain, too, is produced in much greater abundance than is required, but the general appearance of the country is not cheering. The peasants are wretchedly poor, and have a neglected look. This wretched exterior of the peasants increases as you traverse the frontier into Hanover, although you follow the course of the Ems, which is (or ought to be) navigable. The duchy of Arnsberg, and the bishoprick of Osnabrück, the most southern district of Hanover, are the poorest and most neglected parts of Western Germany. Proceeding northwards through Oldenburg to the seacoast, you leave the sandy

plain, and reach the belt of rich marsh land which I described in my first letter as running all round the coast of the North Sea, and forming a remarkable contrast to the country at the back of it, both in the agricultural advantages it offers to the inhabitants, and in the character of these inhabitants. To the north of the Zuyder Sea this rich marsh belt stretches through the Dutch provinces of Friesland and Groningen, which, although densely peopled, send hundreds of tons of butter and cheese to the London market. East or Hanoverian Friesland is a continuation of the same, as is the coast of Oldenburg, and the line of coast between the mouths of the Weser and the Elbe. The marsh land runs up the mouth of this river to near Hamburg, and on the north side covers the Danish duchy of Holstein.

All these districts are well known to our merchants, who, in spite of the enormous duties imposed on articles of food, carry on a large importation, especially of butter, from them. For practical purposes the omission to report on this rich tract of country in the instructions given to Mr. Meek, in his well-known posting tour, was of no great importance, although it affords a curious instance of the degree of information which is supposed to suffice when trade is to be legislated for. Harlingen, in Dutch Friesland, and Emden, in Hanoverian Friesland, are the principal points where this trade is carried on: our neighbours wisely profiting by our fancy for the culture of wheat to supply us with an article more regular in its return in a northern climate, and which yields a better return to the farmer than grain.

This country preserves the character of the Netherlands in the lands being intersected by numerous fleets, which form harbours for coasting vessels and small canals. Behind these natural bulwarks the Frisians and Dithmarsers maintained their freedom against the encroachments of barons and bishops; and all the efforts made at an early age to establish a great northern bishopric at Bremen were ineffectual. A fine race of hardy farmers and mariners maintained in these tracts a republican indifference to political speculations, and now stand as distinguished from their neighbours in their superior mode of farming, and in the fine breeds of horses and cattle that fill their stables, as well as in their hardihood as seamen, as they did when they manned the fleets of the Hanseatic League, and asserted their freedom against the nominal Earls of Friesland.

As in few parts of Germany the people have retained both the feeling of independence which anciently characterized them, and the habit of displaying it, the traveller crosses this marsh district with peculiar interest. By the cession of East Friesland by Prussia to Hanover, this district lost the exceptional position it so long maintained, and has, formally at least, been amalgamated with the rest of the kingdom. The inhabitants, however, sympathized but little with the political combinations that were forged beyond the heath, or their opinions on this subject of the overthrow of the constitution would in all probability have commanded respect.

Of the large rivers that traverse the land at their backs the Frisians and Dithmarsers have all along made good use. Of these the Ems is, in the upper part of its course, in a most neglected state. The Weser has derived some advantage from an understanding which the numerous lords of its banks have come to respecting the tolls which they are to levy from its trade, but more from the establishment of a steam-boat company by the merchants of Bremen. The ships of this company now ply between Bremen and Hanoverian Minden, and will, doubtless, soon introduce the enlivening play of industrial interchange into a country in which it is very imperfectly known. Prussia obtained, in exchange for Friesland, the district of Lauenburg, on the north bank of the Elbe, by which it became the neighbour of Hamburg and Lübeck. Lauenburg was afterwards ceded to Denmark.

At Bremen I was shown the treaty of navigation concluded between the liberal potentates that control the destinies of the Weser, and which was the fruit of long years of negotiation. It will serve to exemplify the nature of such arguments, and the condition of Germany with regard to these questions.

This document is dated 10th of September, 1823, and begins with the declaration that all privileges, whether held by corporations or individuals, regarding the navigation of the river, are abolished, and cannot be renewed. Exceptions are the case of ferries, and the navigation of the river within the territories of each separate state. All rights of staple, or of unloading and reloading, such as were enjoyed at Bremen, Minden, and Münden, are abolished.

Each government shall be able to grant the privilege of navigating the river, and shall judge of the competency of those who apply for the privilege. The conditions of freight and charges are left to free agreement, as is the power of establishing regular passage-boats between one town and another. The following liberal states agree, in lieu of all tolls, to levy one rate, in the proportions for the ship's pound (300½ kilogrammes):—

Prussia ..	50 Pfenninge.
Hanover ..	126 ..
Hesse ..	41 ..
Brunswick ..	16 ..
Lippe ..	13 ..
Bremen ..	60 ..

315 Pfenninge, or 1 dollar 3 groschen.

Thus, for about 1s. per cwt., or 2s. per ton, the right of

navigating is purchased from Hanoverian Minden (where the Weser is formed by the junction of the Werra and the Fulda) to the sea, a distance of about 100 miles in a straight line, or 150 miles by the river. In return the governments undertake to keep the trackway in a serviceable condition. Now, it must be confessed that the charge made for this service is a very high one, and it cannot well be otherwise, for, besides the outlay for repairing the path, the dues have to defray the salaries of a set of officers employed in the control bureaux of the six contracting powers, and of inspectors and police, who watch that the drivers do no damage on the way. Thus, before boats are built and men are hired, a preliminary expense equal to the average freight paid from London to any European harbour is incurred, besides the inconvenience of weighing, inspecting, and controlling goods that are exempted from import dues, but on which these navigation dues fall in common with foreign wares. Heavy articles for inland consumption, corn, lime, timber, and coarse goods, are, on the Weser, and generally on the other rivers, allowed to pass at a reduced rate of duty. Still, the charge forms a heavy deduction from the small profits of trade in such articles; and its calculation by weight, which saves the inconvenience of inspection, makes it fall unequally, and, consequently, unfairly. This tariff is, however, an improved one. If we look at the condition of the river previous to its establishment, or to that of the Elbe and the Rhine at the commencement of the present century, we shall not wonder that the German rivers contributed so little to facilitate inland trade as we find was the case. Even now, the wool sent from Breslau and Vienna to Hamburg, for England, is carried by land in preference to the Elbe, or to the route by Stettin and the Oder. The total of the tolls levied on the Elbe from Metnik, in Bohemia, to Hamburg, amounts to 1 dollar per centner, or about 3s. per cwt., consequently, to a transatlantic freight before any carriage charges are incurred. Below Hamburg the goods again encounter the disgraceful relic of barbarous times, the "Stade Zoll," which is alone now supported by party connexion in England, to the injury of our trade and the serious diminution of our legitimate political influence with the German Confederation and the Zollverein.

The navigable length of the Elbe may be compared with our seaboard from London to Aberdeen. Let us suppose that a toll of 30s. per ton were levied at Scarborough Castle or Languard Fort on all our coasters, what would become of Newcastle, Shields, Sunderland, Hull, Berwick, or Leith? Yet this is the case with the German rivers. It will be argued, perhaps, that this constitutes the difference between a seacoast and inland navigation, and that trackroads must be kept up. I do not wish to enter into the merits or the necessity of such an imposition: I merely look at its effects upon the trade of Leipzig, Frankfurt on the Oder, and Bohemia, and find that, while these tolls, with their effect in diminishing the means of cheap carriage, form a serious addition to the present heavy import duties on foreign goods, they, in a still greater proportion, impede the accumulation of wealth in domestic trade. Their effects cannot, perhaps, be traced in a diminution of trade that they have prevented from springing up; but the general result of large and industrial populations remaining poor through years of exertion must be traced to some such causes.

The establishment of bonded warehouses, and the privilege of sending goods *in transitu*, for which Germany is indebted in a great measure to the Zollverein, has been of but little effect, owing to the inconveniences attending the inland navigation. The traffic has increased so little (in merchandise) ever since the introduction of steam-boats, that no foreign powers have thought it necessary to name consular agents at any place marked by the navigation treaties, or the "Zollverein" resolutions, as places for bonding. England has no consul, as far as I am aware, in the whole course of the German portions of the Rhine, the Elbe, or the Danube.

The introduction of steamers is of the greatest importance on the large rivers, whose occasional breadth exposes barges to the wind, and whose varying depth and rapidity offer innumerable obstructions. All parties are interested in seeing steam-tugs substituted for horses, and then the pitiful excuse of the trackway would disappear, and the rivers be left free as they were by nature intended. In this case the increase in the import duties would richly compensate the respective Governments for the small sums now derived from the tolls that occasionally figure (not very creditably) in their budgets.

An amusing instance of the manner in which the consolidation of small into large states affects these minute questions that trammel the prosperity of whole countries has been told me as a result of the cession of the duchy of Lauenburg, on the north bank of the Elbe, to Prussia, that obtained it as part exchange for East Friesland to Denmark. A water communication between Lübeck and the Elbe subsists by means of the little rivers Stecknitz and Delvenau. This line forms the communication between the Baltic and the mouth of the Elbe; and, during the flourishing period of the Hanseatic League, was preferred to the passage round the Belt. The productions of Russia, and a large proportion of the wares sent thither, took therefore this route, and formed a source of gain for the boatmen on the rivers, in whose gilds the names of nobles and princes were proudly inscribed. The toll was one of the sources of the power of the Dukes of Saxa-Lauenburg, who participated in the gains of the Dukes of Luneburg and Brunswick, who were very creditable salt-mar-

chants through a long period of their history. The effect of tolls and corporations is to increase in burden in proportion as trade extends and profits lower in rate. It will, therefore, not be found surprising that the navigation of the Stecknitz diminished as the direct communication between Western Europe and the Baltic increased and became secure. It appears from the registers that in 1740 the freights from Lübeck through the Stecknitz amounted to 2445 lasts, while in 1838 only 2062 lasts came down the river. In 1841 the quantity increased to 3547 lasts, of about 20 tons each. These figures give a curious insight into the stationary character of the inland trade of Germany. With the navigation of the Stecknitz the right of staple, or of discharging and reloading into boats of Lauenburg, was united, as was the custom on all small rivers, and is still on some of the large ones. The Commission united to regulate the navigation of the Elbe, and which arrived in 1821 at the result I have mentioned, proclaimed the suppression of all rights of the kind, and of the privileges of all gilds, both on that river and its tributaries. Lauenburg still made a hard stand for its old immunities; but in the present year it has been decided by the Danish Government that the privilege is to cease. This right of the Lauenburg gild is now nearly the last of the old monopolies, the growth of which tended to wean the affections of the people from the old Imperial Government, that was too feeble to protect them, and whose yoke was therefore shaken off.

This little river Stecknitz can afford us an illustration of the operation of impediments to rapid movements in trade, by which all parties are losers. The little town of Mollen, on the Stecknitz, was the seat of a large corn trade, a great deal of grain from Mecklenburg being sold there for shipment to the Elbe. Owing, it is said, to the carelessness of the privileged boatmen of Lauenburg, the want of security in their mode of loading corn, and their high charges, the greater portion of the trade has been transferred to Boitzenburg on the Elbe, whither the grain goes by land. Land carriage for 50 or 60 miles is a serious addition to the price of corn, and can only be incurred when the market price is high enough to cover it. The tendency of our corn laws is to make the recurrence of such prices rare in Germany, because not only the price of wheat, but the fluctuations of our duties, must be taken into account by the German grower. The corn monopolist in England has thus been protected not only by his own enactments, but by the circumstances of the Continent, from the competition with farmers who produce cheaper; for, whoever takes the trouble to follow the thousand restrictions on trade that exist here in the manner that I have done, these will soon discover the mass of energies that is paralyzed, and the amount of wealth that is restricted from starting into life in every quarter.

With every successive improvement in machinery, and with every extension of knowledge in the political world, some one or other of these stifled sources is opened; and if the peace continues their stream will soon be too powerful to be again impeded. These fetters and impediments are what have given North Germany the appearance that Mr. Jacob has described in his report, and on which it was at one time attempted to found the argument, that the abolition of the Corn Laws would be of no use, because these countries cannot produce sufficient to supply us with what we require. The argument took in a great measure the effect for the cause, because every country is careful to grow no more corn than it can sell. But the argument will be found to be nugatory, and the requisites stated by Mr. Jacob will be found to be immediately furnished, when the improvement of the communications shall ensure a sale for the produce of the soil. The excellent farming of the nobility and gentry generally in these parts, and the scientific views that they have circulated amongst their poorer countrymen, will cause the latter to lose no time in increasing the quantity of produce which they raise as soon as they see the prospect of getting rid of it. Draining and enclosures, the value of which is well understood, would soon employ capital if it promised to remunerate the investor, and the result of this increased activity in the home manufactures and foreign trade of the country would be magical. Circumstances are now favourable for such a change, and we may hope to see our prohibitive duties fall with even more rapidity than the Germans improve their communications.

The Sound dues are a parallel nuisance to the toll at Stade; although they have at least the pretence of supporting a lighthouse. If anything diminished the sympathy felt generally for the catastrophe which has recently deprived the heir presumptive of the Danish crown of his young and beautiful consort, it was the fear alone that Denmark might rely upon the aid of Russia to support this odious impost against the loudly-spoken public opinion of all Europe. If anything is likely to add to the complication threatened on the extinction of the present dynasty respecting the succession to Schleswig and Holstein, and to justify foreign interference in the internal concerns of Denmark, it will be the persistence of the latter in the levy of this obnoxious tribute.

The Sound dues, the Stade toll, and the transit duties on the Rhine levied by Holland are impediments to the prosperity of trade in Germany that, in the present temper of the times, will not be submitted to; and, in the event of any political crisis, would infallibly set the political independence of the countries partaking in an ob-

noxious course at stake. Political as well as commercial prudence warn all parties to come to an early understanding on the subject. The sacrifice is trifling, indeed it may be said to be *nil*, when compared with the gain resulting from improved trade. On the other hand, the consolidation of governments and dynasties at the present day is only achieved by identifying their interests with those of humanity at large. This description of policy may be sneered at by diplomatists, but will be found to outlive court intrigues.

As far as England is concerned it must not be forgotten that the removal of these obstructions to internal communication operate two ways. If they tend to facilitate trade with us, they have the same effect in other places. If Prussia opens the Elbe, and cheapens the cost of transport on the large rivers and their tributaries, her own manufactures from the Rhine can go up, and those of Saxony can go down, those streams as well as our own; and the produce of the plains of the north can be sent to the manufacturing districts of other countries, the advantage of which we deny to our manufacturing labourers. This gradual opening of the sluices of internal trade comes to the aid of the efforts I mentioned in my last as making by Prussia to open a market for her Baltic produce on the Rhine. The railroads will, at all events, gradually effect what may be overlooked in the improvement of the inland navigation; and, while central Europe is thus freed from the shackles that have so long kept it back in the scale of material wealth, we may find ourselves left, with our policy and institutions of times gone by, in the presence of youthful rivals whose intellectual vigour we have been taught to respect, but whose material resources we are inclined to undervalue.

As I stated in my last letter, the first shipload of corn that enters Cologne from Stettin must cause the abolition of our Corn Laws. The burden of my letter to-day I wish to be the importance for a nation of keeping the means at its disposal for promoting industrial exertion in a healthy state, and the necessity of attending to every complaint of obstructions to constantly increasing activity. The removal of the impediments to domestic trade in Germany can only give a greater stimulus to foreign commerce; and instead of looking with jealousy at the prospect held out to Prussia of improving her position by extending her internal trade, or that which Bavaria is preparing by the completion of the Danube and Main Canal, which again opens to the Rhine a rich source of abundance, I rejoice at the expectation of the increased demands upon our own industry which must be the result of these changes. But, as an Englishman, I must, too, wish that the good sense of the nation would speak out a little more imperatively than it has hitherto done, and demand that our means of production and transport should, too, be freed from the trammels that now obstruct them, not, perhaps, in the shape of corporations and obnoxious imposts, but in sundry acts of Parliament that are quite as antiquated in their spirit, and fully as mischievous in their tendency, as the grievances which the Germans have undertaken to remove.

STATISTICS OF THE MACHINE-WROUGHT HOSIERY TRADE OF THE UNITED KINGDOM.

(Continued from page 85.)

We will now proceed to the numerical statistics of machinery, wages, and the ultimate results of operations in this trade. The machines (usually called frames, and from which these workpeople have acquired the name of frame-work knitters) for the manufacture of hosiery are spread chiefly over upwards of 240 parishes in the three midland counties of Nottingham, Derby, and Leicester, lying between Chesterfield northwards, Newark on the east, Ashby-de-la-Zouch westward, and Market Harborough to the south. This district is about seventy miles in length, and forty-five in its greatest breadth. Within its limits there are sixty parishes in Nottinghamshire, where are more than six stocking-frames in each at work. These have all been visited for the purposes of this inquiry, and an account has been taken of each frame, its gauge, width, and employment. The number of the separate workshops was ascertained to be 4621, giving an average of little more than three frames to a shop, exclusive of a few of those in the town of Nottingham, the whole of which were not separately visited, though the particulars have been ascertained, except as to gauges. And the number of frames in employ in this county is ascertained to be 14,879; out of employ, or in frame-smiths' hands for repairs, 1503. Total in Nottinghamshire, 16,382. In Leicestershire, 100 parishes contain more than 6 frames each; of these 60 have been visited, and most of them counted. Returns of the number and employment of the machines in the other 40 parishes have been furnished to me by the secretaries of the trade at Leicester, Hinckley, and Loughborough respectively, including the 6750 frames in those three important seats of this manufacture. The number of frames in Leicestershire is—at work, 18,554; unemployed, or at smiths' shops, 2303; total, 20,857. There are also 60 parishes in Derbyshire in each of which are more than 6 frames; 50 of these have been visited and counted; and as to the other 10, including the frames in the town of Derby, local trade returns have been obtained. The number of frames employed is 6005, and unemployed, 792,—total, 6797 in the county of Derby. The parishes not enumerated by the parties sent out by me for this purpose are distinguished by a cross in the tables appended to this report.

Having tested several of the most important of this class of returns, I find them to be very nearly correct. This remark equally applies to the statements of frames in Nottingham, furnished by the trade secretary there. In this case the names of the shop-masters having been furnished, make the returns nearly complete, and very satisfactory. The frames in each county are chiefly employed in the trade carried on at the county town—worsted and coarse cotton at Leicester, finer cotton and silk at Nottingham, silk at Derby, &c. Discrepancies between the statements of the masters and the men, as to earnings, will be noticed as we proceed; but there is one occurring between the numbers of frames supposed hitherto to have been in the trade, and the numbers shown by this paper, which requires remark here. At no former time have the machines been estimated at above 33,000 to 36,000. These were the numbers stated in 1833. We have above enumerated in the midland counties as employed, 39,442; unemployed, 4598; together, 44,040. To which add, those in other counties of England, 1572; in Ireland, 265; in Scotland, 2605: there will prove to be 42,652 employed, and 5830 unemployed—thus making 48,482 frames as the available machinery of this trade. This number will undoubtedly surprise many well acquainted with the business, as it has done myself; but former estimates were formed in times of great trade distress, and on those occasions no account was taken of the then very numerous unemployed frames. This was a great oversight; and, together with defective enumeration of those then employed, will probably account for the otherwise inexplicable apparent increase of frames during this period of ten or twelve years; in which I find from frame-smiths, the best authority on the subject, that only about 450 new frames have been constructed in the counties of Nottingham and Derby, and not more than 550 in Leicestershire—none of moment being made elsewhere—say 1000 in all. The number unemployed is smaller than ever before known during the present century.

An account may be taken of the gauge, width, and employ of about 1000 machines, with very cursory remarks upon wages and condition, by an active agent, per week, when enumerating Notts and Leicestershire, where the people usually live in house-rows in towns, and even in some villages; but not more than 700 or 800 can be taken account of in a week in Derbyshire, where the cottage dwellings are spread over the whole face of the various parishes. My enumerators were persons well conversant with the trade, active, and of good character and intelligence.

It appears that there are 16,826 frames making *fashioned* cotton hosiery, 4936 *spurious*, 1336 *gloves*, 1280 *drawers*, *shirts*, &c., 445 *fancies*—total, 24,823—producing 2,872,000 dozens annually, and of the market value of £998,700. 9156 frames make *fashioned* woollen hosiery, 2014 *spurious*, 923 *gloves*, 1376 *drawers*, *shirts*, &c., 314 *fancies*—total, 14,083—producing 2,360,000 dozens, value £1,223,750. 1055 frames work upon *fashioned* silk goods, 362 *spurious*, 2206 *gloves*, 148 *rib-tops*—total, 3771—making 470,000 dozens, of the value of £333,763. 86 frames use *FLAX* thread, and produce 3600 dozens, worth £6500. The total number of frames making *fashioned* work is 27,423; *spurious*, 7312; *gloves*, 4465; *drawers*, *shirts*, &c., 2656; *fancies*, 759; silk *rib-tops*, 148. There are 31,991 narrow, and 8951 wide frames. They used up, in the last year, 147,960 lbs. of raw silk, which, when thrown, weighed 141,880 lbs., worth £159,256; 5,590,000 lbs. of raw cotton wool, when spun and doubled, 4,851,000 lbs., worth £233,200; 8,000,000 lbs. of animal wool, when carded and spun, 6,704,000 lbs., worth £650,000; 9000 lbs. of raw flax, prepared into 8000 lbs. of yarn, worth £3000. Total prime cost of raw materials imported, £301,880; of home growth, £100,900; together, £705,780, but costing the hosiery as yarn £1,015,456. On this was expended in wages to frame-work knitters, including all charges to them, £1,019,130, producing 5,700,000 dozens of hosiery goods; in finishing which, including all charges and profits to the customers, there was added £168,127, making the total returns of the trade, in 1843, £2,562,713. The pecuniary benefit directly accruing to the country by the operations of the hosiery branch has been the circulation of £1,856,933 in wages and profits during the past year. In all, about 100,000 persons have been wholly or partially employed; winding and seaming, being operations usually performed by the wives and children of the operatives themselves, are often in part supplementary to domestic engagements. The total consumption, and indeed almost the total production, of machine-wrought hosiery in the United Kingdom, is not more than would supply each year to its inhabitants one pair of stockings or socks, and one pair of gloves, at a cost, together, of 1s. 6d. to each person.

In connexion with statements of the rates of wages prevalent in various departments of the trade, as it is carried on in different localities, out of a very large mass of individual cases which have been received, the highest paid and the worst paid have been noted, and an average account has been struck, as showing the condition of the workpeople in the principal places where this trade is carried on. In Leicester, 3620 frames at work. Of these, 1200 make gloves. The masters state the earnings to be 16s. by best hands, 12s. inferior ones, per week. Four shops of 128 best hands in this branch, earned 16s. 11d. clear, during the three or four first months of this year, in a brisk trade. The employment is, however, very irregular; and some of these hands have occasion-

ally received tickets, certifying non-employment, entitling them to parish relief. This is the best paid department of the hosiery trade. The hosiery estimate the drawer and shirt hands (700 frames) earnings to be 11s. 7d.; 1200 wide hose frames 7s. 10d. to 10s. 6d. The men state clear earnings in Leicester to be 6s. to 7s. a week, taking all kinds together. The medium would be, I conceive, nearest the truth. The clear earnings of the country hands are, according to the masters' estimate, upon narrow frames 5s. 6d. to 6s.; wide, 6s. 3d. The men's statement is 5s. per week, on an average of the whole of the Leicestershire country hands. Men in the best work seldom earn enough to enable them to provide against bad trade, sickness, or age and decrepitude. Take a case which I visited accidentally in Leicester:—A female at work by candlelight, between nine and ten at night, her husband and two journeymen labouring over head, up a step-ladder, above the damp kitchen which she occupied. Her age was fifty-three, but she had the appearance of seventy—skin, sinews, and bones,—no flesh. Was the mother of fifteen children, ten of whom were bred up framework-knitters. Not being strong enough, could not work before breakfast, but laboured (making three hose at once) until towards ten every night. Clear wages about 2s. 6d. weekly. She had worked the same frame nineteen years; it had been "patched up" twice. The frame rent was 1s. 6d. a week. She was cheerful and uncomplaining. The house rent was 2s. 6d. a week: an ill-drained, damp, unhealthy place, as are all around it. If any family could have laid by, surely this might, and have saved this poor woman from any necessity to labour thus. But cases like this are not by any means uncommon. Charges upon frames throughout Leicestershire are levied in proportion to width and quality; and it is to be feared, that when only partly employed, the full amount is often charged. Rent of frames varies from 9d. to 5s. per week, besides charges, sometimes, for "standing," "winding," "taking in," "turning hose," &c. The workman finds "needles," "fire," &c. A shop of 60 frames making gloves will bring in to the undertaker (if his own property) £575 a year, less the expense of repairs, say £75; or £500 clear, for his original outlay in machinery of £500, and his labour and skill in management.

At Hinckley 1600 frames are at work, chiefly making very coarse cotton hose. The earnings here, as stated by hosiery, are 5s. 3d. a week; the trade secretary states the average not to be more than 5s. 6d. My agent makes them 5s. 3d.; and adds, "that the condition of the hands here is so deplorably bad as to beggar all description." 1s. 1d. per head per week is the average left the families for food, fuel, clothing, rent, &c. *Rothley*, net earnings 4s. 6d.; *Bowthorpe*, 4s. 6d.; *Burbage*, 5s. 6d.;—hands described to be in a miserable condition. At Barwell the small earnings are assisted by cultivating large plots of ground with the spade. In *Stoke Golding* there is much distress. At *Dadlington* the people dwell in houses built on the waste, paying a mere acknowledgment as rent. At *Markfield*, net wages 4s. 6d. At *Ibbstock*, 4s. At *Barleston* the hands are in deep poverty. At *Oadby* the frame rents are charged from 1s. 10d. to 3s. 6d. a week; out of 350 frames, the earnings on 150 are paid by truck. At *Glen* the net wages are 5s. a week. At *Kibworth*, 5s. 6d. At *Smeeton* the workpeople are steeped in poverty. Earnings at *Bleckney* 4s. 6d. a week. At *Kilby* the hands were unable to earn enough to give bread to their families. At *Barrow* much misery was witnessed; clear wages here 4s. 6d. a week. At *Loughborough*, where are 667 frames at work, the hands earn better wages when employed on wide and rotary frames; but the common hands obtain but little above the common average: eight families' income was found to be, for 41 persons, 29s. 7d., or 9d. a head per week. At *Belgrave* the hands are very much impoverished, but their dwellings were remarkably clean and neat. At *Countesthorpe* the gross average earnings were found to be 11s. 6d., cut down by charges to 5s. 6d. a week clear. The hands at *Great Peatling* found to be very poor. At *Willoughby-Waterless* they are described as steeped in poverty. At *Ilaby* the gross average wages were found to be 5s. 4d., net 3s. 1d. a week. Men earn here, however, 7s., leaving 4s. 9d. clear; the amount left per head per week to subsist upon, in eight families, including 31 persons, was 12d., cases taken at hazard. *Whetstone*, clear earnings 4s. 6d. At *Knighton*, 4s. 6d. At *Sheepshead*, where are 1055 frames at work upon wrought hose, the clear wages are 5s. 6d. on an average. In a row of nine houses here, not selected cases, the clear earnings were 5s. 0d. per frame; there were 43 individuals; the income from all sources, after paying rent of cottages, and fuel and light, was 11d. per head per week. This includes the best case found, that of a young man and wife, both workers, 2s. per head; and the worst case found, that of an old man and wife, both workers, 3d. per head per week, to find clothing and food. Take the expenditure of one of these nine families, seven in number, four workers earn: man, 4s. 6d.; wife, 1s. 6d.; two children, 1s. 0d.; together, 7s. 0d. Pay for rent of house, 1s.; coals, 10d.; candles, &c., 9d.; rice, 4d.; salt, 3d.; milk, 3d.; bacon, 7d.; bread, 2s. 2d.; sugar, 3d.; potatoes, 1s. 6d.

The average hours of labour are in Leicester about 60 hours clear a week; in the country villages 70 hours. The more fully fashioned work is the worst paid; the hands have often to carry out materials and return the

wrought goods great distances. They complain grievously of charges, and that deductions are made for inferior work, arising, they allege, from being obliged to use up rough materials. Also mutual complaints arise between them and the hosiers about the state of the materials when weighed out, and the hose when weighed in. Each side charges the other with often weighting the articles for a fraudulent purpose. It is certain that the produce of such frauds on the part of the workpeople is disposed of indirectly to some of the masters at an inferior price, to the great detriment of the fair trader, and the disgrace of the trade. On the other hand, if a man's account of materials be declared deficient, he is often a very serious, though he may be an innocent sufferer. These are only symptoms of the injury and demoralization resulting inevitably from competition for labour and profit in an overloaded and crippled business.

In *Derby* there are 620 frames at work, chiefly making silk hose and gloves; the earnings upon the former are 7s. 6d., and 9s. the latter, when employed regularly; the average of the year is, however, not more than 6s. 6d. a week clear. At *Melbourn* there are 100 warp looms, on which 25s. are earned by making fancy gloves. At *Shirland* the clear earnings are 6s. At *Chesterfield*, 5s. 6d. South Wingfield, 6s. Here in the finest gauged frame (a 70 gauge) making cotton hose, using No. 240 doubled yarn, at 8s. a pair workman's wages. In this parish, and at *Belton*, *Bugthorpe*, and a few other places, they cultivate gardens, or have a right of common, keep a pig, and some a cow, helping out their resources very greatly, so that they live in comfort. Of how many commons have the labourers been deprived, without any compensative use of their own land! But, in prosecuting this inquiry, it has been ascertained that gardens once attached to cottages on the road sides have been added to the neighbouring fields or parks; and sometimes the separate, neat, and quiet dwellings themselves have disappeared too. While, however, in some districts the cultivation of gardens has diminished, in others it has increased. Wherever the framework-knitter has preserved or obtained his fair plot of ground, especially if attached to his separate dwelling, his means have increased in far greater proportion than his outlay; and the superior cleanliness, comfort, and order of his family have been very perceptible. Their bodily powers are also decidedly improved by the greater amount of wholesome food they are enabled to consume.

At *South Normanton*, net earnings on narrow frames 5s., on wide 7s., a week; and frame rents on "top" frames 2s., and "bottoms" 3s., a week, and are complained of as being as much as was paid for their use when labour was paid for at double the present prices. This is the view taken on the subject of frame rent by the workmen through the whole trade; and does not appear to be an unreasonable one.

At *Kirkby* are 471 frames at work, earnings being 6s. a week clear. At *Hucknall*, 815 frames at work, on which the average earnings are, for plain goods 6s. 6d., for open fancies 7s. 6d., a week. There is much trucking in this place: bread and other articles, charged at very high prices, are given in return for labour, much to the dissatisfaction of the hands. At *Eastwood*, clear earnings 6s. At *Kimberley* 197 workpeople earned 4s. 1d. clear, all upon fashioned cotton hose, with twelve hours' labour. At *Bulwell* 596 frames make chiefly cotton gloves; gross earnings 11s., clear 7s. 6d. a week; ten hours' labour a day. This business fluctuates; and the average of the year is therefore given in this estimate.

At *Skegby* and *Hucknall-under-Hustwayte* are 410 frames, nearly all paid by truck; 200 to 300 acres are here let, clear of charge, at 40s. per acre, for cottages, gardens, &c.

At *Sutton-in-Ashfield* there are 1702 frames at work, chiefly upon spurious cotton hosiery; the gross earnings upon which run from 7s. 6d. to 16s. a week, and the net receipts from 5s. 9d. to 10s. 8d., all paid in cash, trucking having ceased here. A row of eight houses taken at hazard, in which were dwelling 42 persons, averaged 9s. 1d. per frame, and gave 1s. 31d. per head per week for food and clothing; 500 to 600 of these hands have gardens, hired, at the rate of 35s. per acre per annum, of the Duke of Portland.

At *Mansfield* are 776 frames. Here is the singular practice of hands working in silk-knotted frames part of the year, and in other frames the remainder of it. For the former, rent is paid only during the time they are employed; but for the latter during the whole year, whether at work or not. In all this district the work passes through the hands of middle men—practically, in bad times, full charges come on the limited employment,—and the parish rates must, in one way or other, keep the operatives from absolute want.

Arnold, *Calverton*, *Woolthorpe*, *Carlton*, and *Southwell*.—The wages in this district, where wrought cotton hose are made, are for 30 gauge and under 5s. 6d. clear, 6s. 6d. on 32 gauge and above. A row of eight houses at *Arnold*, taken by lot, gave the following returns:—The wages clear upon 23 frames, 4s. 8d. each frame; each family's earnings clear 16s. The amount left per head per week for the 10 persons was 2s. 7d. This is the largest average I have yet found; and therefore I may state, as showing how low their situation is, that one of these men had a new coat 16 years ago; another a velvet jacket three years since; a third a new coat 20 years ago; the rest of them could not remember when they had had any new

outside clothing. All the families were found in a ragged state in clothing, and with little furniture. They stated generally that they purchased their clothes usually at the second-hand shops or old clothes stalls. In *Arnold*, not one child in twenty attends any day school, owing to their poverty; many of the parents never attend divine worship. Here, as elsewhere, a fearfully moody and irreligious state of mind is evidenced by too many of the framework-knitters. Nor is this much to be wondered at; for, after a general review of the visits made throughout the whole of the fashioned cotton-hose districts of the three counties (including 15,890 frames), the condition of these people is found to be very deplorable. They labour generally from daylight until 10 at night in winter, and during daylight in summer, at least five days in the week, averaging about 14 hours a day. This inquiry shows, by a variety of particulars, great differences as to the conduct towards hands and the rate of wages paid on the part of different hosiers, and in the regularity and application of the hands to labour or otherwise. It is a great advantage to be employed by certain hosiers; but some hands are so loose and vicious in their habits as to indispose them to earn even the moderate amount which may, by extreme diligence, be obtained at present in this underpaid manufacture.

At *Trukeshury*, an ancient seat of the fabrication of full-fashioned cotton hose of excellent quality, there are 380 frames at work, 550 unemployed. Wages are exceedingly depressed. Distress prevails amongst the hands to a greater extent than had been known to some even of themselves. "Such scenes of wretchedness as those witnessed this day," says my correspondent, "I never saw before, and hope never to see the like again."

In *Nottingham* and *Sneinton* there are 755 frames making cut up, 1107 gloves, 682 drawers, shirts, &c., besides many others; altogether 3090 at work.

Gloves are irregular work. When employed, a hosier estimates that a good hand may earn 12s., an inferior one 10s., a week. Drawers and shirts are more regular employ. Some get for making these 15s. a week, warehouse pay; the employers think they pay on an average 12s. a week; but the shop charges are from 2s. to 5s. a week. A middle master in this branch, employing 30 frames in his shop, clears £250 a year by rent, standing, winding, seaming, making up, and taking in. The cut-up earn on an average 12s. gross, or 8s. clear, a week.

At *Gutham*, steady good hands earn on "dandies" 9s., inferior 7s., a week clear.

The average clear earnings, taking the whole of the past year for 60 hours' labour, throughout the counties of Nottingham and Derby, I believe to be as follows:—Wrought cotton hose, 6s. a week; silk hose, 7s. 3d.; silk knots, 8s.; silk gloves, 7s. 9d.; cotton cut-up hose, 8s.; wrought cotton gloves, 6s. 6d.; cut-up cotton gloves, 7s. 6d.; drawers and shirts, 7s. 6d. This scale differs considerably from the estimates I have received from em-

ployers, especially in the glove and drawer branches; but the discrepancy may be partly accounted for by want of constancy of employment, partly by the introduction of middle masters, and partly by the superior kind of work given out by some hosiers, which, though raising their own average of payment, affects but in a slight degree the general average of the trade.

In conclusion, I must remark, that most frame-work knitters have been for some years at the minimum point as to consumption, even of the commonest necessities of life—bread and potatoes; sometimes brought to the starvation level. With clothing and furniture they are but very scantily supplied, and can rarely purchase any new. Their houses are, as I can testify from personal observation, often the abodes of filth, discontent, and misery.

GATESHEAD FREE-TRADE ASSOCIATION.

On Monday evening a respectable meeting of the Free-Trade Association of Gateshead was held in the large room of the Grey Horse Inn, in that borough. Mr. Fawcett, having been voted to the chair, called on Mr. George Crawshaw to address the meeting. Mr. Crawshaw opened by dwelling on the soundness of Free-Trade principles, principles in the promulgation of which he sympathized with the Anti-Corn Law League. After pointing out the interest which every man had in the repeal of the tax on corn, he said that they would be fools, and worse than fools, if they allowed their partial prosperity to lull them into forgetfulness of the Corn Law. A fixed duty would have the same effect as a sliding scale—increase the price of corn by limiting the supply. By imposing a tax on foreign corn, they benefited the monopolists rather than the Government, for where the latter received 1s. 9s. went into the pockets of the former. Their principles were promulgated, and they had a right to expect a beneficial result from them. Two hundred and fifty-two members had signed a requisition, expressing their wish to be represented in Parliament by a total repealer. In briefly touching upon the conduct of their member in reference to this question, he should be delighted if he thought he had misunderstood that gentleman. On a previous occasion, Mr. Hutt did not vote for Mr. Villiers's motion for the abolition of the Corn Law; had he done so, probably their society would not have been heard of. The last time that Mr. Villiers brought forward a motion for an unconditional repeal of the Corn Law, an intimation was conveyed to them that Mr. Hutt would support it. He certainly did vote with Mr. Villiers; but in the course of the evening he made a speech, intimating that he was still in favour of a fixed duty. (Applause and laughter.) The meaning of this was, that Mr. Hutt would vote with total repealers so long as he saw there was no chance of a repeal being carried; but that when that event appeared likely, he would throw the repealers aside, and stick to a fixed duty. At the dinner recently given in that town to Mr. Hutt, that gentleman

promised such an exposition of his views as would satisfy them; but they had no reason to conclude that anything which he said upon that occasion was satisfactory. They had plenty of fine words and praise of Free Trade, but that was all. The speaker then proceeded to quote passages from Mr. Hutt's speech, in order to show that their construction was by no means favourable to the cause of Free Trade. He especially referred to that part of the honourable member's speech in which he said that he distinguished between duties raised for the purposes of revenue, and said that in the word "purposes" there was a juggle and an ambiguity. Mr. Hutt considers the purpose of a fixed duty in corn, instead of looking to what would be its effect. He (Mr. Crawshaw) contended that it was a duty for monopoly and not for revenue; if it were for the latter purpose, they were bound to show that the greater part of it went into the exchequer. He asked them if they could believe that a fixed duty on corn was intended for revenue. As a sensible man, Mr. Hutt must make up his mind before the next election, and come forward as a fixed-duty man, or a Free-Trader. The voters of that town owed it to themselves to say whether Gateshead should be a Whig fixed-duty borough, or be foremost in the ranks of Free Trade. Let them follow the example of the Anti-Corn Law League in hearing of no compromise, and Free Trade must flourish among them. The question whether they were to have a fixed duty or a total repeal would be decided by the members of either party that might be returned to the House of Commons. It was the duty of the electors, whatever their creed, to return a Free-Trader instead of a fixed-duty man to Parliament at the next election. Unless the League became predominant, the Whigs would, whenever it was possible, adopt a fixed duty, and there would be no removal of differential duties. If the League became predominant—they could trust them—they would not only repeal the Corn Law, but take off every protective duty. It was their intention to canvass the whole of the electors to ascertain whether they were in favour of the total repeal of the Corn Laws, and whether they would come forward and put their shoulders to the wheel to aid their removal. They wished to see Gateshead represented by a man who would vote for the total repeal of these laws and no compromise. There would be no disgrace in being defeated, but there would be if they did not try for victory. (Applause.) It would now go forth to the world that there was a party in Gateshead not satisfied with the declaration of their member. In conclusion he begged to move that this meeting be decidedly opposed to any tax upon corn, and that it pledges itself to remove every impediment by every lawful means in its power.

Mr. T. PIRNIE seconded the motion, and said that, if private friendship were sacrificed to principle, Gateshead might be represented by a Free-Trade member. He did not doubt but that, if Colonel Thompson were put forth as their representative, he would meet with support from even the friends of Mr. Hutt. He exhorted them to persevere in their exertions for a repeal of the duty on corn.

Mr. WM. COOKE thought Mr. Crawshaw did not go far enough. If he would act with decision by bringing forth Colonel Thompson the cause would be much strengthened. Colonel Thompson was a Free-Trader, not only in corn but in legislation; he would give to every man a right to vote. He moved that this meeting take steps to communicate with Colonel Thompson, requesting him to stand for the borough.

Mr. CRAWSHAW thought such a step would be premature before the Free-Traders had ascertained their strength, and requested Mr. Cooke to withdraw his motion.

Mr. COOKE courteously acceded to this suggestion, and the original motion was unanimously carried.

Mr. BLACKBURN moved a vote of thanks to the Chairman, which Mr. CRAWSHAW seconded. The resolution having been carried, the meeting separated.—*Tyne Mercury*.

FREE-TRADE LECTURE AT SOUTHAMPTON.—On Monday evening, the 11th inst., a lecture on the evils of the corn and provision laws was delivered by Mr. Falvey in the Royal Victoria Rooms, Southampton. Francis Cooper, Esq., the President of the Free-Trade Association, occupied the chair. Mr. Falvey spoke for nearly two hours, and his exposition of the evils of monopoly elicited loud cheers from his audience, which was both numerous and highly respectable. At the close of his address, on the motion of Mr. Andrews, a vote of thanks was given to the lecturer, and three hearty cheers for Free Trade. A vote of thanks was then, on the motion of Mr. Falvey, given to the chairman by acclamation.

FREE-TRADE LECTURES.—On Thursday the 7th and Friday the 8th of Nov., Mr. Acland, of the League, delivered lectures in the Music Saloon, Wood-street, Wakefield, on the Free-Trade question. On Thursday evening the audience was numerous and respectable, being comprised of tradesmen, manufacturers, and mechanics. A more orderly and attentive audience we never saw met together on any political question, and the conduct of the people of Wakefield when left to the exercise of their reason, free from their foreign exalters, shone out to their credit. The admission was free, and the proceedings passed off without a dissenting voice. Mr. O'Connor lectured in the Theatre, at the same time, with a charge for admission.—*Leeds Mercury*.

THE REGISTRATION.

WALLINGFORD.—(From a Correspondent.)—Benson, Nov. 10, 1844.—I beg to inform you that no public statement of the result of the revision for the borough and district of Wallingford has taken place; but from an analysis of it, carefully gone into by the parties employed by Mr. Morrison to defend the Liberal interest, we find we have a clear gain over last year of 38 votes. In Benson, which has my particular care, I trust, by great attention and perseverance, I have enlarged the franchise at least by 15 votes; and on this register of voters I placed six names for properties never on before, and succeeded in every case. The Monopollist objections were four, two were retained, and two struck out: one of these left the place; and the other not being in occupation long enough, will be all right next year.

NOTTINGHAM REGISTRATION.—Free-Trade claims, 162; sustained, 125; failed, 37. Monopollist claims, 69; sustained, 37; failed, 23. Free Trade objections, 131; sustained, 78; failed, 57. Monopollist objections, 118; sustained, 68; failed, 40.

Total Free-Trade claims sustained over Monopolist .. 68
 " Free-Trade objections sustained over Monopolist 10

Free Trade gain 78

IPSWICH.—The following is the result of the revision of the list of voters for the borough of Ipswich:—

Objections by Free-Traders sustained .. 30
 Claims by do. allowed 6

Objections by Monopolists sustained .. 20

Claims by do. allowed 7

Majority in favour of Free-Traders 9.

THE COUNTY REGISTERS FOR NORTH AND SOUTH LANCASHIRE.—It is now officially ascertained that the number of names on the register of county voters for North Lancashire, for the present year, is 10,507; and for South Lancashire, 21,940; so that the entire number of county electors in this county may be taken to be 32,447. There has been a small increase in the number of names on the register for North Lancashire, and a large one, exceeding 3200, on that for South Lancashire, as compared with the registers of last year. The following are the numbers for the two years:—

	1843.	1844.	Increase.
North Lancashire ..	10,336 ..	10,507 ..	171
South Lancashire ..	18,666 ..	21,940 ..	3,274

Total county .. 29,002 .. 32,447 .. 3,445

We understand that the register for North Lancashire is printed and ready for delivery; and that that for this division of the county is in progress of being printed, and will probably be ready for delivery in about a fortnight.—*Manchester Guardian.*

REGISTRATION APPEALS.

In the Court of Common Pleas, notice has been given that the court has appointed the following days for hearing of appeals from the decision of the revising barristers, under the act of the 6th Vict., cap. 18, viz., Monday, the 18th day of November, and Thursday, the 21st day of November, on which days the court will proceed to hear the same in the order in which they are entered, as follows:—

No.	Place from which the appeal comes.	Appellants.	Respondents.
1	Westminster, City of ..	Pitts.	Smalley.
2	Tewkesbury, Boro' of ..	Whithorn.	Thomas.
3	Lancashire, South. Div.	Gadsby.	Barrow.
4	Do.	Do.	Warburton.
5	Do.	Eckersley.	Barker.

SOUTH LANCASHIRE REGISTRATION.

Offices of the League, Manchester, Nov. 13.

Since our last publication there have been two meetings of the Registration Committee. The first was held on Friday evening, the 8th instant, R. Cobden, Esq., M.P., in the chair; and the second yesterday evening, Mr. G. Wilson in the chair. The latter meeting was convened by circular, and was very numerously attended, a great number of the most active members of the League in Manchester and the neighbourhood being present.

The CHAIRMAN in opening the proceedings, explained the particular business to which the attention of the gentlemen present would have to be directed during the next two months, namely, the continuation of the canvass, which had been but partially commenced, for the names of Free-Traders who would be willing to qualify for South Lancashire. While doing this, whenever they met with gentlemen who were already on the register for South Lancashire, they would endeavour to induce them to give their names for qualifications, in either or all of the following counties—North Cheshire, the West Riding of Yorkshire, and North Lancashire. He was happy to inform them that their friends in other parts of their own division were moving in the work, and by the end of January he hoped many hundreds of new qualifications would be taken up, which would not have been but for the exertions of their friends of the League.

Mr. COBURN, M.P., and Mr. BRIGHT, M.P., also addressed the meeting. The latter gentleman explained the course adopted by their friends in Rochdale, and stated that he had no doubt that by the end of January next at least a hundred names of persons in that town and neighbourhood would be found to have possessed themselves of new qualifications for this division.

The Secretary, Mr. HICKIN, informed the meeting that since the 5th instant he had entered sixty names for South Lancashire qualifications, and a considerable number for the other counties to which the chairman had called their attention.

Mr. J. E. ROYLE reported that, in addition to six names which he had given on Friday evening, he had now three others for South Lancashire, and four for the West Riding.

Mr. S. LEES handed in four names, and several others were given by other gentlemen present.

Mr. JOHN BRAGG said he would take a qualification in each of the divisions.

Mr. JOHN LEDDEATER, who is on the register for South Lancashire, said he would also qualify for the other three.

The CHAIRMAN then urged upon the meeting the necessity of completing the arrangements for a full canvass of the Manchester polling district, and he would be glad to receive the names of gentlemen who could render the necessary assistance.

The names of 25 persons were handed in *seriatim*, and these were appropriated to the various districts, and will proceed with their canvass forthwith. The meeting then adjourned to Friday evening at six o'clock.

GRAND GAME MEETING.

(From *Punch's own Correspondent.*)

Last night a very numerous meeting of the game of Lord CORPUSCAR was held in one of his lordship's preserves. The meeting was very numerous; so much so that it would have brought the water into the mouths of those wretched animals, destitute labourers, to behold the hares, pheasants, and partridges, present on the genial occasion. They all appeared in their very best sleekness, and in their finest feathers.

The chair was taken by the Rev. Mr. STYRUS (a jack-hare of the very first respectability), who briefly stated the purposes of the meeting. He said it was impossible for them to witness the unceasing efforts of the owners of the soil in the cause of all that was sacred—need he say he alluded to the game laws?—(loud cheers)—without feeling the heaviest debt of gratitude towards the English landlord. It was to express this gratitude, that they had met. They could not but feel that they were privileged creatures of the earth—beings guarded by peculiar laws—creatures consecrated from the vulgar mouth, and protected even at the cost of human blood and suffering. (Cheers.) Hence their gratitude to those enlightened and patriotic men who had protected them by statutes. (Hear, hear.)

Mr. FINEWHISKER (a young hare, of very jaunty appearance) moved the first resolution. Whilst it might be proper to express gratitude and all that, it was onerous upon them to call for further protection. The present laws were not sufficiently strong to appal the poor and starving. Nothing could exceed the arrogance of the lower orders: he himself had that morning had a stone thrown at him by a famishing hedger (*Sensation*); whilst a friend of his, whom he regretted not to see present, had, three nights ago, narrowly escaped wires, evidently laid down by one of the inferior classes. Something must be done to check this arrogance, or there was an end to the best interests of the society.

Mr. OLDSOUP (a sedate, middle-aged hare), in seconding the resolution, remarked that now vigour was necessary, otherwise "their order" would soon be confounded with that of rabbits and vulgar barn-door poultry. Though suffering under severe domestic affliction, he could not refrain from appearing among them. A week ago, he was a happy husband; the meeting now beheld a disconsolate widower. (*Sensation.*) The wife of his bosom had been snared from him by a labourer: yes, one of themselves—for it was their common cause—had been caught and killed by a low unlicensed person, and devoured by a boor and his wretched family! Had his wife been killed by a gentleman, by one duly licensed to shoot, he trusted that he should have been the last of husbands to complain; but to be butchered by the starving vulgar—to be consumed for a mere dinner, not used as a dainty—it was too much to endure with resignation. He could have been content to lose his wife to the nobility or gentry, but that she should have been eaten without current-jelly sauce was too much for his conjugal affection. The speaker concluded by calling for more vigorous measures.

Mr. SILVERCROW (a cock-pheasant, in very bright feather) moved the second resolution. He was not, he said, much of a genealogist or antiquary; nevertheless, he believed that his brethren were originally of Asiatic stock; and if, indeed, there needed an argument to prove this, it might be found in the beneficent laws passed by English senators for their protection. Was it not a cause of gratification to all of them, that at that very moment the English labourer was made a slave to them—that even the English farmer was compelled to see them devour his grain, nor yet, but at his peril, to kill or wound them? Had they not the grand satisfaction of tempting the fingers of famine to break its fast and the law at the same time? Had they not the sweet consolation to know that at that moment there were scores and scores of men—husbands and fathers—locked up in goal, and their bits of household furniture seized and sold—for indignities offered, ay, even to members of that meeting? Beidoo, if they had any wrong to complain of against men in general, were they not sweetly revenged for the injustice; for did not they, as game, tend to work more humanity, more tyranny, more heart-burning (with now and then a little wholesome blood-spilling) than any other beasts of the field, or birds of the air? For himself, he never thought of the men that he and his fellows caused to be locked up for felons, that in the exulting feeling of his high privilege he did not crow the louder for it. Nevertheless, with the last speaker, he thought they should petition their landlords for more vigorous measures.

Mr. SHORTBELL (an elderly and very respectable partridge) seconded this resolution. He said he begged to call the attention of the meeting to a paragraph which he would read from the *Oxford Chronicle*. It was to this effect: that—

"RICHARD NUTT, of Postcomb, a lad about 15 years of age, was charged by PALMER with looking at seven

wires on the 15th of October. The poor boy said he was coming down the footpath and saw the wires, and only stopped to look at them, but did not touch them. Fined 15s., including costs, and in default 14 days' imprisonment!"

The speaker observed that such a paragraph must be especially sweet to the feelings of the meeting (loud cheers), as it assured them of the more than paternal care exercised towards them by their enlightened landlords. Looking upon himself as of the aristocracy of birds, he could not but feel grateful for such protection. Seeing that the country had a superabundant population, nothing could be wiser than to continually sacrifice the peasant to the pheasant. (Cheers and laughter.) Instead, however, of fining a labourer for looking at wires or at any game soever, he would stop the chance of such disrespect, by compelling every labourer—unless upon lawful work—to walk blindfolded! (Cheers.) He hoped another session would not pass away ere this was done. It was an axiom that could not be too sternly preached, that the poor were made for game, and not game for the poor.

The resolutions were passed, thanks returned, and the meeting separated.—*Punch.*

TO MR. JOHN BULL.

(From the *Times*.)

DEAR MR. JOHN BULL.—When I received the pleasure of your chop in answer to my questions, I was struck dumb with surprise how you could be so learned, and possess so much milk of kindness as to choose to lighten the darkness of a poor Chinese Fanqui.

I rested so long a time with my head upon the ground in honour of you, that a violent rush of blood into it forced me to get up again, or else I truly believe I should have remained so till the present time. This it is which has emboldened me to trouble you once more for the last time; but I humbly petition you to hand me over to the board of punishment for my great temerity in venturing to ask you any more favours.

I should tell you that, since I have been in your western land, a wonderful new light has beamed upon my mind; I have been as good as born again, for I am become a new man; your immense wisdom will at once tell you I am become a Christian. I now look with pity on the follies, the errors, and vices of Buddhism, my former religion, and I feel most anxious, through your help and the help of Heaven, to bring all my countrymen in the way that leads to everlasting bliss! There is only one difficulty in my path, which your infinite knowledge and condescension will remove from before my feet, that they stumble not. I will tremble to tell those new doctrines of eternal life to the ignorant men of Cathay, only for fear of their saying to me, that the tree I desire to plant among them, though it smells so nice and looks so green, is like the upas of the East, surrounded with destruction, and that the fruit which I shall bid them taste, as being so sweet that it will confer on them the knowledge of salvation, looks to their pagan eyes like the berries of the deadly nightshade! How wicked and foolish is such a thought! Pray help me, that I may put it out of their minds. They will put many questions to me.

Why, they will ask me, do the Christian good people not live and let live? Why not do as they would be done by, and love their neighbours as themselves? This they preach, but do not practise. Why do they make rice so dear and scarce, and men's blood, bones, and sinews so cheap, that their people faint and die of hunger? Why may not the poor of the outer land change the fruit of their industry for meat, and eat bread by the sweat of their brow? Why are provisions shut out of their reach by the hand of the tax-man, while you say the victims of famine linger in every street covered only in part with the clothes of wretchedness; while the eye of the western land is dimmed by grief, and the pages of the great gazette of the *Times* are sullied every day with tales of death and starvation in that Christian country that make pale the cheek, appal the heart, wring the bowels of compassion, and fill the eye of the reader with big tears, that he can no longer continue to read? And all this time among us, whom you call idolaters, our Ko-zu, which you call a premium, is given to ships for bringing in plenty of rice. In a word, why do those who know the only true religion of the Holy Cross make severity and death, while we inner barbarians desire to make plenty, cheapness, and fatness, always to wait at the door of industry? Why should the poor man be forced, against his will, to eat the cold rice of charity, and why should he not have, if his industry can buy them, not only the necessities, but even the luxuries of life? Why, if he can honestly pay for them, should he not even taste salted earth-worms, young rats, nice fat little puppies, half-hatched chickens, sharks' fins, birds' nests, and even sea slugs? All he wants is fairly to sell the produce of his labour in the dearest market, and to buy his food in the cheapest, as your great mandarin, the eye of your beloved Queen, has promulgated in his great chop.

You have, no doubt, studied the works of our divine sage, Confutsee, who you will recollect in the 499th chapter of his great work on morals has these words:—"For while on the left hand of blooming benevolence sits soft Charity, Justice, with her healthy face, sits on the right hand, occupying the more honourable station."

Deign, then, most honourable Mandarin, to help me in my difficulty, and throw the effulgence of your wisdom into my misty mind, by telling me what I am to answer to those questions, and my heart will leap with lightness, I will sing a new hymn of gladness, and I shall quickly carry the good tidings of great joy through all the land of Cathay. I will, dear Mr. Bull, hang a garland of gratitude, love, and affection, on your horns. I will drop the sweets of faith like flowers all over my native country. I will illuminate the minds of men as the dew of heaven fructify and fertilize each blade of grass. I will make them to destroy all their wicked joss-houses and trumpery temples, lighted with thousands of painted paper lamps; and I will cause them to break in pieces their stupid, senseless idols.

I promise never more to trouble you with my dull, foolish questions, for next moon I go away to Chius. I bid you an eternal farewell, and bless you, dear Mr. Bull, my eye fills with water, and I can write no more. I have knocked my head nine times against the ground with the utmost force to do you royal honour. A respectful memorial from your slave,

YANUFANG.

Gloucester-place, Kentish-town.

CORRESPONDENCE.

To the EDITOR of the LEAGUE.

Calne, Wilts, Nov. 11.

I have taken the liberty of forwarding the following, which he pleased to insert in your paper, thinking it may be beneficial to some of my brethren.

My land joining a gentleman's preserve, and being annoyed by his vermin's depredations, I tried every art I could think of, till at last I hit upon the following plan:—I hung tar-twine (loosely) round my wheat, and let it hang about one or two feet from the ground; afterwards I sent my boy once or twice a fortnight with a tarpot to fresh tar the twine. Sir, I can safely say that I did not see six hares on the piece after I had done this; when before I have seen from two to three dozen at a time.

By inserting the above you will oblige a brother-worker in your cause, and a

FRIEND TO THE FARMER.

To the EDITOR of the LEAGUE.

Sir,—Mr. Cobden's injunction to create 40s. freeholders in counties is one mode to be adopted to secure counties; and I think it is worth the attention of Free-Traders to consider how easily freeholders in one county may become freeholders of another county merely by a reciprocal change of interests, by granting rent-charges of £10 for life on each other's estates; the cost of obtaining votes in this way might be kept under £5. Hundreds and thousands of votes might in this way be created, and many counties secured from monopoly. The plan would not in any way affect the title of the estates or their sale, as it is not necessary for electoral purposes that the deeds should be registered.—Yours, &c.,

A LEAGUER.

ADVANCE OF WAGES.—STRIKES.

"Cheap bread—low wages."—Quarterly Review.

CHORLEY.—We are happy to state that the powerloom weavers have resumed work at the advance of wages for which they turned out. One part commenced on the 1st, another part on the 4th, and the remaining on the 5th instant. In consequence of a number of families removing to other towns, where they had got employment, it appears masters took the alarm, knowing that there would be a deficiency of hands. Had it not been for this circumstance, it is probable that the matter would not have been settled so early.

OLDHAM.—On Monday morning the spinners, card-room, and other hands of Messrs. Wild, Moss Hey, Crompton, turned out for an advance of wages, of about 1s. per week. Messrs. Wild had offered an advance of 6d., but it was rejected. On Thursday morning last, the cotton-spinners and card-room hands in the employment of Mr. Benjamin Wrigley, of Littlewood Mill, Hey Side, Royton, turned out for an advance of wages. Their demand amounts to 1s. 6d. per week; Mr. Wrigley offered about 1s. per hand, but this the operatives declined to accede to.

BOLTON.—A meeting of delegates from Manchester, Ashton-under-Lyne, Oldham, Stockport, Heywood, Bury, Blackburn, Preston, Clowth District, Wigan, Hindley, Farrington, Cauden Green, Lees, Waterhead Mill, Chorley, Horwich, Ashton-in-Makersfield, Hyde, &c., was held at Bolton on Sunday last, at which it was resolved to engage Mr. Roberts ("attorney-general" for the colliers), "to obtain a redress of the grievances of some of the members." It was also resolved, "That it is the opinion of this meeting that each district should do all in its power for the men of Stockport during their present struggle for an advance of wages, and that each district shall call meetings next week, for the purpose of taking the subject into their most serious consideration."

HINDLEY.—On Friday so-might, the throstle-spinners, doffers, reellers, &c., in the employ of Mr. Richard Pennington, struck for an advance of wages. Mr. Pennington, we understand, made the throstle-spinners an advance of sixpence, but, as he reduced them a shilling each at the last reduction, they wish to have that shilling restored. The powerloom weavers have held several meetings during the past week.

ASHTON-UNDER-LYNE.—The miners in the employ of the Fairbottom Coal Company still remain out. At present there is no prospect of an amicable arrangement being come to.

STOCKPORT.—Deputations from the workpeople in all the mills have waited upon their employers, and the spinners have demanded an advance of 10 per cent., and the self-acting piecers, as they are called, have asked an advance of 20 per cent. above their present rate of wages. This being refused by the masters, the usual notice has been given, and on Saturday the workpeople employed at several establishments left their employment, and are now walking about the streets. The masters have met several times at the Warren Bulkeley Arms, and offered the men a general advance of five per cent. This advance the workpeople decline to accept, and stand firmly by their demand. The associated masters met on Friday, and, after some deliberation, passed a resolution expressing their determination to adhere to their present offer, and thus the matter stands.

LETTERS ON THE CORN LAWS, No. XII.

TO THE BISHOPS.

RIGHT REV. PRELATES.—There is a delusion abroad, derogatory to the glory of Divine Providence, and mischievous in its influence upon Christian morals. The author of those laws by which material agency is exerted, and voluntary conduct directed, has also constituted laws for the regulation of those industrial efforts by which the wealth of nations is produced, and for the reward of such efforts by its appropriate distribution. The knowledge of these laws is the science of political economy. Like all other sciences, it has its worth in a system of natural theology. Like all other sciences, which are in fact only interpretations of the will and ways of creative power, it has its propitious bearing upon rectitude and beneficence of character. Yet there are many who treat it scornfully or scoffingly; and vilify its influence, without regard to its being taught correctly or incorrectly, as tending to coldheartedness, and destructive of the kindly charities of life. For clergymen to do this, and to abet it in others, is surely an unseemly act; though not an uncommon one. I pray you, look to it; for the credit of the Church, and for the sake of truth and usefulness.

In the intercourse of merchants, the exportation and importation of commodities, the adjustment of the capitalist's profits and the operative's wages, the effects of allowed facilities of exchange, or of interposed difficulties, nothing happens by chance, any more than in the rising and setting of the sun, and the fulfilment of her courses by the moon. The phenomena of trade and labour are as much under law, Divine law, as the phenomena of the seasons. Ought we not to aim at understanding those laws? Does not the fact of our being placed by Providence in a great commercial country render it a duty? If they have been erroneously interpreted, whether by Adam Smith or any other received authority, let the error be corrected, but not the knowledge depreciated. No human error can make vicious the effort to trace His footsteps "whose paths drop fatness." Whether the pursuit of wealth be sinful, either in itself or beyond certain limitations, is a different question. The philosophy of light is not less valuable because some may gaze on the sun till they are blind. To know how wealth is produced and distributed, no more makes the miser than the spendthrift. I shall endeavour to show your lordships that it tends to render the Christian yet more devout, and the philanthropist yet more beneficent.

You take your texts from David, and bid your hearers consider the starry heavens. The difference of the stars in glory is not greater than the diversity of earth's regions in fertility. The mutual relation pervading this difference is more apparent in the produce at our feet than in the sky above us. Some lands are rich in fruits and some in minerals. One region contributes the cotton or the silk, and another the skill and toil that fashion them for purposes of clothing or adornment. The spice trees and the bread corn are parted by oceans. Materials for the humble dish on the peasant's table are brought from the ends of the earth. The distribution of the means of subsistence and enjoyment is not the work of chance. The stimulating effect of their interchange upon intellect, industry, and civilization is not the work of chance. Plan and purpose are everywhere visible. Material nature points to unrestricted commerce as its result; as the distributor of the surplus which it pours forth in one place; the corrector of the sterility which it has marked on another region; and the equalizer, in proportion to man's industry, of Heaven's gifts to all that dwell on the face of the earth.

And is this lesson of piety not to be observed because certain petty and sordid interests obstruct the freedom of interchange, and bid the profusion rot in one region that deficient supply may enhance prices in another region? Must Heaven's laws be scorned theoretically, because they are violated practically? Must a chapter be torn from the proof of Divine wisdom and goodness, because it contradicts a black leaf in the statute-book? Philosophy has often been called the handmaid of Divinity; is Divinity only the dumb bond slave of Monopoly?

In old and limited countries the population tends to increase faster than the means of subsistence; and its redundancy is checked by war, vice, and misery. That doctrine, my lords, was put in proof by a clergyman. The unbeliever forthwith pointed out that here was a plan for the production of evil attributed to Providence. What is the reply? That with Free Trade, the limitation of soil and the increase of population no longer signify. The multitudes of manufacturing countries have their fertile fields across the Atlantic. Earth and ocean must be exhausted before mankind are redundant, or the horrible corrections of war, vice, and misery are necessarily applied. People may inhabit wherever they are born, or like best, or find most good for their industry. The world is theirs. "Now, I add, I have thee on the hip." The objection vanishes, unless monopoly be in the laws of nature or of morals. To that reply must we return?

have the pages of our Bibles blotted. Only Free Trade overturns the altars of the demon triad of War, Vice, and Misery. Priests of the Gospel of peace and goodness, have you no concern in this?

That we should "buy in the cheapest market and sell in the dearest," is undoubtedly the maxim of political economy. It is often reprobated, but with what reason? Why is an article cheap, but because it is abundant? Why dear, but because it is scarce in proportion to the want? Those who inhabit the locality of the two supposed markets are alike inconvenienced: these from a superfluous supply, those from a deficient supply. Acting on the above maxim, the merchant who buys from the one assists in obviating the evil of superfluity, and raising the price so as to repay the producer; and when he sells in the other, the act tends to lower the price, and remove the evil of insufficiency. He benefits both parties, and has his own advantage in recompense of his services. Let him spend a fortune in doing the reverse of this. He will make the cheap market cheaper, and the dear market dearer. Those will have more who had too much; and those have less who had too little. The man deserves to be beggared for his pains. It is the punishment of Nature and Providence upon his pernicious folly. And, eventually, Nature and Providence will beggar the nation whose laborious children are compelled to buy their food artificially dear, and consequently sell their products artificially cheap, by the class cupidity, or the wrong-headedness, of their legislators. Beggary for beneficence is honourable. But the beggary whose blundering has only beggared others is neither moral nor Christian: it is condemned for wickedness unless excused by imbecility.

Sometimes it is assumed that there is a want of Christian and neighbourly charity in buying of the foreigner rather than of a countryman, the foreigner being supposed the cheapest vender. The existing laws say we shall not do this. They raise, by duties, the price of the foreigner's corn up to that of home-grown produce. And this is done although the home produce of food for the population is notoriously inadequate. May not the multitudes who must go unfed unless they buy of the foreigner, and unemployed unless allowed to work for the payment which he proffers, ask the question, "Who is my neighbour?" Whoever finds them work and food is their good Samaritan. Whoever diminishes their profitable employment is but the churlish brother of that other parable, though born on the same soil. A churlish brother indeed; for his restrictions occasion suffering, destitution, crime, disease, and death. Compare, my lords, the annual returns of the prices of corn, and the number of commitments. They are demonstrative of the demoralizing tendency of the present system. It is a wholesale agency of sin and guilt. Adam Smith might not be a sound believer; but his economical principles, in their application, co-operate powerfully with Christianity for the diminution of crime.

There is one circumstance which should make your lordships, as the heads of the Church, particularly sensitive at the present time. The incomes of your clergy are in course of augmentation by the working of the Tithe Commutation Act. Incumbents are enriched by high prices. In direct proportion to the distress of the poor is the stipend of the clergyman. The position is an unfortunate one. It can scarcely fail to bias the mind of such a body as the clergy. And the temptation is strengthened by the lauded aristocracy, amongst whom they look for patrons, being the great supporters of commercial restrictions. Humanity, even under holy vows, is a weak thing in such circumstances. You are the shepherds of the shepherds: remember their frailty. Rebuke their compromise of the interests of morality with the dictates of Mammon. Counsel them to be the friends of the needy. Uphold their feebleness when it winks before the frowns of lords, the wealth of monopoly, and the attractions of augmented tithe. Admonish them that gain reaped from robbery of the poor man's loaf is an accursed thing, which they should dread to touch. Church revenues increased by laws which diminish the food of the industrious, and abridge their industry itself, are worse than money-changers in the temple of the Lord, and make it more a den of thieves. Tell your clergy this, my lords: and if the love of the world render them refractory, scourge them to their duty, and so discharge your own.

A NORWICH WEAVER BOY.

RAILWAY EXTENSION.—An additional *Gazette* was published on Saturday last, on account of the great number of notices concerning applications to Parliament for railways.

RAILWAYS.—The Board of Trade, we are informed by a private communication from London, have determined to send a commissioner to this country, about the close of the present month, to make some important inquiries into the various railway projects which now engage public attention. Our correspondent states that the gentlemen who will be deputed on this most important mission are Mr. O'Brien, Mr. Laing, and Mr. Porter, who are all members of the railway department of the Board of Trade.—*Irish Railway Gazette.*

REVIEW.

Essays. Second Series. By R. W. Emerson. London: Chapman.

"Think wrongly, if you please," said Lessing, "but in all cases, think for yourself." In all ancient systems of philosophy and legislation the object proposed was the advancement of the community at the expense of the individual; society, or the state, was every thing, and the man nothing. It was the peculiar attribute of Christianity that it appealed to man in his individual consciousness, and laid down no laws for the regulation of masses, or the guidance of society. The Christian was required "to believe" before a definite formulary was presented to him as a creed,— "to do justice" before a moral code had fixed the principles of equity,— "to love mercy" before ethics had explained the cases to which that feeling was applicable, and "to walk humbly before God," ere casuists had supplied the weights and measures of true humility. The philosophy of the Gospel required not that a man should be Jew or Gentile, bond or free, patrician or plebeian, royalist or republican: it simply required him to be himself, and, as such, to hold fast to his own personal responsibilities. But while the Christian philosophy did not interfere with the framework of society, so neither did it supersede social existence; it was a new science, revealing to man a new form of life in his inner soul, but leaving all his outward relations unaltered.

To appreciate the value of such a philosophy we have only to reflect on our own experience, and see how difficult is the attainment of that self-reliance which makes within its own consciousness the standard of its own opinion; or, should self-love hide the mortifying secret, we have only to cast a glance around, and see how few are the persons whom we can recognise in their perfect individuality.

"Seek not thyself outside thyself to find," said a poet to whom the world has not done justice, the true-hearted Parnis; the precept has been ill-obeyed, for it is *outside themselves* that we have to look for the greater part of mankind. Investigate the constituent elements of their mental existence:—ask for their religion? it is in their church;—for their politics? it is in their party;—for their moral code? it is in the public opinion of the circle in which they move;—or for their philosophy? and it is in the last new school that has won the homage of fashion. It is right that there should be a social science, with its weights and measures, its cold axioms and its rigid formularies,—there must inevitably be such a science, because there must inevitably be society. But beyond that social science, because beyond and outside social existence, there lies the science of self, the development of man in his individual existence, within himself and for himself. Of this latter science, which may perhaps be called the philosophy of individuality, Mr. Emerson is an able apostle and interpreter. He perhaps is rather disposed to under-rate social science, for we find him not free from the mockery of arbitrary rules of social life, which is as often a sign of weakness as of strength; but, unlike the vulgar herd of sneerers against political economy and its sister sciences, he revolts not against universality of rule, but partiality of application.

In the essay entitled "The Poet," he sets himself against the conventional trammels of schools; he refuses allegiance to Aristotle, snubs Longinus, defies Dacier, and openly revolts against Boileau:—

"For poetry was all written before time was, and whenever we are so finely organized that we can penetrate into that region where the air is music, we hear those primal warblings, and attempt to write them down, but we lose ever and anon a word, or a verse, and substitute something of our own, and thus miswrite the poem. The men of more delicate ear write down these cadences more faithfully, and these transcripts, though imperfect, become the songs of the nations. For nature is as truly beautiful as it is good, or as it is reasonable, and must as much appear, as it must be done, or be known. Words and deeds are quite indifferent modes of the divine energy. Words are also actions, and actions are a kind of words."

The distinction which he makes between the natural and factitious poet is eminently just, and is at the same time one of the most beautiful examples of judicious illustration with which we are acquainted:—

"He does not stand out of our low limitations, like a Chimborazo under the line, running up from the torrid base through all the climates of the globe, with belts of the herbage of every latitude on its high and mottled sides; but this genius is the landscape garden of a modern house, adorned with fountains and statues, with well-bred men and women standing and sitting in the walks and terraces. We hear, through all the varied music, the ground-tone of conventional life. Our poets are men of talents who slug, and not the children of music. The argument is secondary, the flash of the verses is primary."

There are some principles enunciated in the "Essay on Experience" which cannot be received without very large qualifications. Mr. Emerson seems to limit experience to all that is brought under the consideration of the mind subjectively, and to set aside the category of objective truths:—

"Life will be imaged, but cannot be divided nor

doubled. Any invasion of its unity would be chaos. The soul is not twin-born, but the only begotten, and though revealing itself as child in time, child in appearance, is of a fatal and universal power, admitting no co-life. Every day, every act, betrays the ill-concealed deity. We believe in ourselves, as we do not believe in others. We permit all things to ourselves, and that which we call sin in others, is experiment for us. It is an instance of our faith in ourselves, that men never speak of crime as lightly as they think; or, every man thinks a latitude safe for himself, which is nowise to be indulged to another. The act looks very differently on the inside, and on the outside; in its quality and in its consequences. Murder in the murderer is no such ruinous thought as poets and romancers will have it; it does not unsettle him, or fright him from his ordinary notice of trifles; it is an act quite easy to be contemplated, but in its sequel, it turns out to be a horrible jangle and confounding of all relations. Especially the crimes that spring from love, seem right and fair from the actor's point of view, but, when acted, are found destructive of society. No man at last believes that he can be lost, nor that the crime in him is as black as in the felon; because the intellect qualifies in our own case the moral judgments. For there is no crime to the intellect."

Now, in this passage the moral judgment is set up as a thing perfectly distinct from the intellect: the one belonging to the science of society, and the other to the science of individuality. If this distinction be admissible, the commencement of the paragraph is negatived: there must be duality in man, for there is no man whose moral judgment has not been moulded and formed from external sources. It is true that we possess a power of assimilation, whereby what comes from abroad is so united with our own framework as ultimately to form part of our individual consciousness.

Social science has real existence within us: those who sneer at political economy have a political economy of their own—a pet system which they would gladly force upon the world, though it contradicts the demonstrable laws of public utility and public happiness. There are persons who call themselves "practical men," and sneer at all theory, while they are themselves the greatest theorists in existence. The difference is simply that the philosopher infers his theory by a copious induction from all ascertainable facts, while the practical man bases his theory on his own narrow and limited experience. Mr. Emerson justly remarks:—

"The life of truth is cold, and so far mournful; but it is not the slave of tears, contritions, and perturbations. It does not attempt another's work, nor adopt another's facts. It is a main lesson of wisdom to know your own from another's. I have learned that I cannot dispose of other people's facts; but I possess such a key to my own as persuades me against all their denials that they also have a key to theirs. A sympathetic person is placed in the dilemma of a swimmer among drowning men, who all catch at him, and if he gives so much as a leg or a finger, they will drown him. They wish to be saved from the mischief of their vices, but not from their vices. Charity would be wasted on this poor wailing on the symptoms. A wise and hardy physician will say, Come out of that, as the first condition of advice."

This "treatment of the symptoms," which he justly reprobates, is the fashionable quackery of our day. A limited demand for labour, the necessary result of restrictive laws imposed by interested monopolists, has narrowed the field of employment, and consequently lowered wages to the point where they are insufficient to produce the necessaries, much less the comforts, of life. The poor labourers are hungry, sad, and discontented. Men begin to be alarmed at such results, and they propose, as a cure for hunger, out-door relief;—for sadness, a game of cricket;—and for discontent, a bundle of tracts preaching the virtue of resignation! We say, remove the source of the disease, and you will soon get rid of the symptoms.

The "Essay on Character" contains many passages on which we would gladly comment; but the following is to us the most pregnant with instruction:—

"The hero sees that the event is ancillary: it must follow him. A given order of events has no power to secure to him the satisfaction which the imagination attaches to it; the soul of goodness escapes from any set of circumstances, whilst prosperity belongs to a certain mind, and will introduce that power and victory which is its natural fruit, into any order of events. No change of circumstances can repair a defect of character. We boast our emancipation from many superstitions; but, if we have broken any idols, it is through a transfer of the idolatry. What have I gained that I no longer idolate a bull to Jove, or to Neptune, or a mouse to Hecate; that I do not tremble before the Eumenides, or the Catholic Purgatory, or the Calvinistic Judgment-day,—if I quake at opinion, the public opinion, as we call it; or at the threat of assault, or contumely, or bad neighbours, or poverty, or mutilation, or at the rumour of revolution, or of murder? If I quake, what matters it what I quake at? Our proper vice takes form in one or another shape, according to the sex, age, or temperament of the person, and, if we are capable of fear, will readily find terrors. The covetousness or the malignity which saddens me, when I ascribe it to society, is my own. I am always environed by myself. On the other part, rectitude is a perpetual victory, celebrated not by cries of joy, but by serenity, which is joy fixed or habitual. It is disgraceful to fly to events for confirmation of our truth and worth. The capitalist does not run every hour to the broker to coin his advantages into current money of the realm; he is satisfied to read in the quotations of the market that his stocks have risen. The same transport which the occurrence of the best events in the best order would occasion me, I must learn to taste pure in the perception that my position is every hour mellorated, and does already command those events I desire. The evaluation

is only to be checked by the foresight of an order of things so excellent, as to throw all our prosperities into the deepest shade.

"The face which character wears to me is self-sufficiency. I revere the person who is richer; so that I cannot think of him as alone, or poor, or exiled, or unhappy, or a client, but as perpetual patron, benefactor, and bearded man. Character is centrality, the impossibility of being displaced or overset. A man should give us a sense of mass. Society is frivolous, and shreds its day into scraps, its conversation into ceremonies and escapes. But if I go to see an ingenious man, I shall think myself poorly entertained if he give me nimble pieces of benevolence and etiquette; rather he shall stand stoutly in his place, and let me apprehend, if it were only his resistance, and know that I have encountered a new and positive quality;—great refreshment for both of us. It is much that he does not accept the conventional opinions and practices. His non-conformity will remain a good and a remembrance, and every inquirer will have to dispose of him in the first place. There is nothing real or useful that is not a seat of war."

This truth is even more signally manifest in classes of society than in individuals. Why is not the commercial character, with its high moral principle of integrity, undeniably demonstrated by the enormous extent of commercial credit, as highly estimated in England as it was in Tyre, Corinth, Carthage, Venice, and the Lombard cities? Simply because commercial men look everywhere but to their own order for the evidences of their respectability and worth. There is a want of self-sufficiency among the mercantile men of England; they look for their character not among their brothers, the sellers of hales, but among the squire, the sellers of bullocks. Emerson follows up the value of self-dependence in his "Essay on Manners."

"The word *gentleman* has not any correlative abstract to express the quality. *Gentility* is mean, and *gentleness* is obsolete. But we must keep alive in the vernacular the distinction between *fashion*, a word of narrow and often sinister meaning, and the heroic character which the gentleman imports. The usual words, however, must be respected: they will be found to contain the root of the matter. The point of distinction in all this class of names, as courtesy, chivalry, fashion, (and the like, is, that the flower and the fruit, not the grain of the tree, are contemplated. It is beauty which is the aim this time, and not worth. The result is now in question, although our words intimate well enough the popular feeling, that the appearance suppresses a substance. The gentleman is a man of truth, lord of his own actions, and expressing that lordship in his behaviour, not in any manner dependent and servile, either on persons, or opinions, or possessions. Beyond this fact of truth and real force, the word denotes good-nature or benevolence: manhood first, and then gentleness. The popular notion certainly adds a condition of ease and fortune. But that is a natural result of personal force and love, that they should possess and dispense the goods of the world. In times of violence, every eminent person must fall in with many opportunities to approve his stoutness and worth; therefore, every man's name that emerged at all from the mass in the feudal age, rather in our ear like a flourish of trumpets. But personal force never goes out of fashion. That is still paramount to-day, and, in the moving crowd of good society, the men of valour and reality are known, and rise to their natural place. The competition is transferred from war to politics and trade, but the personal force appears readily enough in these new arenas."

Reluctantly passing over much that is valuable, we turn to the "Essay on Politics," which opens with the following development of a great but too often a neglected truth:—

"In dealing with the state, we ought to remember that its institutions are not aboriginal, though they existed before we were born: that they are not superior to the citizen: that every one of them was once the act of a single man; every law and usage was a man's expedient to meet a particular case; that they all are mutable, all alterable; we may make us good; we may make better. Society is an illusion to the young citizen. It lies before him in rigid repose, with certain names, men, and institutions, rooted like oak-trees to the centre, round which all arrange themselves the best they can. But the old statesman knows that society is fluid; there are no such roots and centres; but any particle may suddenly become the centre of the movement, and compel the system to gyrate round it, as every man of strong will, like Pisistratus, or Cromwell, does for a time, and every man of truth, like Plato, or Paul, does for ever. But politics rest on necessary foundations, and cannot be treated with levity. Republics abound in young citizens, who believe that the laws make the city; that grave modifications of the policy and modes of living, and employments of the population; that commerce, education, and religion, may be voted in or out; and that any measure, though it were absurd, may be imposed on a people, if only you can get sufficient votes to make it a law. But the wise know that foolish legislation is a rope of sand, which perishes in the twisting."

This is a decisive answer to all the nonsense that has been talked about finality, immutable laws, and essential principles of the constitution. The greatest change that could be made in the constitution would be to declare any one of its parts incapable of change. Its royalty was altered when James II. was expelled;—its peerage when the Tudors attained old peers by wholesale, and James I. created new peers with greater lavishness; its House of Commons when the power of issuing writs to new boroughs was abandoned by the sovereign, and when the power of abolishing and creating boroughs was conceded to the Reform Bill. The bugbear that haunts the mind of the advocates of finality is, that some revolutionary change may destroy the due influence of property; but this is precisely the result which it is impossible for any revolution to produce.

"Things have their laws as well as men; and things re-

fuse to be trifled with. Property will be protected. Corn will not grow unless it is planted and manured; but the farmer will not plant or hoe it unless the chances are a hundred to one that he will cut and harvest it. Under any forms, persons and property must and will have their just sway. They exert their power as steadily as matter its attraction. Cover up a pound of earth never so cunningly, divide and subdivide it; melt it to liquid, convert it to gas; it will always weigh a pound: it will always attract and resist other matter by the full virtue of one pound weight;—and the attributes of a person, his wit and his moral energy, will exercise, under any law or extinguishing tyranny, their proper force,—if not overtly, then covertly; if not for the law, then against it; with right, or by might.

"The boundaries of personal influence it is impossible to fix, as persons are organs of moral or supernatural force. Under the dominion of an idea, which possesses the minds of multitudes, as civil freedom, or the religious sentiment, the powers of persons are no longer subjects of calculation. A nation of men unanimously bent on freedom, or conquest, can easily confound the arithmetic of statistics, and achieve extravagant actions, out of all proportion to their means; as the Greeks, the Saracens, the Swiss, the Americans, and the French have done.

"In like manner every particle of property belongs its own attraction. A cent is the representative of a certain quantity of corn or other commodity. Its value is in the necessities of the animal man. It is so much warmth, so much bread, so much water, so much land. The law may do what it will with the owner of property, its just power will still attach to the cent. The law may in a mad freak say that all shall have power except the owners of property: they shall have no vote. Nevertheless, by a higher law, the property will, year after year, write every statute that respects property. The non-proprietor will be the scribe of the proprietor. What the owners wish to do, the whole power of property will do, either through the law, or else in defiance of it. Of course I speak of all the property, not merely of the great estates. When the rich are out-voted, as frequently happens, it is the joint treasury of the poor which exceeds their accumulations. Every man owns something, if it is only a cow or a wheelbarrow, or his arms, and so has that property to dispose of."

We had marked several other passages for extract, but our limits warn us to conclude. Before doing so, however, we must say a few words on the objections which we find most commonly urged against the social sciences, as if they were necessarily fatal to the exercise of man's individuality. In fact, the objections ignorantly made to political economy are all based on the stupid assumption that the establishment of general rules destroys individual freedom. The object of political economy, "the greatest happiness of the greatest number," may easily be misrepresented, inasmuch as it admits of exceptional cases. There are some who write as if the object should be "the absolute and perfect happiness of the universe," now such, if attainable, is clearly the same as that of the political, whose formulæ does not admit the necessary existence of exceptional cases, but merely their possibility. But what will the economists do with these exceptions? When economic rules are fairly applied, and when exceptions arise, it will be quite time enough to answer the question. The philosophy of individuality is that which must deal with the exceptional cases, and pass sentence on the minute differences which shut those cases from the general rule, just as the practical knowledge of the sailor enables him to correct the general guidance afforded by chart, chronometer, and compass.

We are not of those who regard it as an evil sign of the times that the utility of the social sciences has been called into question; we should be much more alarmed at seeing their principles received with unhesitating and implicit faith. Controversy is necessary to make belief something more than otiose assent; we all want to be stirred not only to believing, but to acting on our belief. It is also useful for us to see into what mazes the advocates of monopoly fall when they allow their rhetoric to run away with their logic; we have a heap of such illustrations, but we gladly spare our readers the weary task of wading through absurdity: they all serve but to establish the truth of the old aphorism; that men set themselves against reason, so soon as they find reason set against them.

But while we insist on the value of general rules, or, what is the same thing, scientific principles, for the guidance of social life, we are not less strenuous advocates for the assertion of man's individuality than Mr. Emerson. We would have every man be himself, and not the ape of somebody else. Neither would we consent to limit language or feeling to abstractions, no more than we should confine the description or enjoyment of a landscape to the geological formation of its strata, or the botanical structure of its plants. Facts and figures are but the dry bones of humanity: the spirit of individuality must pass over them to give them life, motion, and active value. The true economist is as little likely to lose sympathy as the anatomist his taste for physical beauty; the botanist will receive as much delight from a garden as the student of floriculture. But, while it is necessary to proclaim this to the world, it may not be inexpedient to whisper to men of science, that economic truths need not be enunciated in terms of inflexible rigidity, and set forward as if their results were as independent of human volition as the law of gravitation.

Impressions of Ireland and the Irish. By the Author of "The Great Metropolis," &c. London, Cunningham.

Mr. Grant has in these two volumes given a very graphic and correct account of the impressions which Irish scenery and Irish society produce on the mind of a casual visitor gifted with more than ordinary powers of observation, and free from the warpings of political bias or national prejudice. He made his brief tour in Ireland at a period of considerable interest and excitement. O'Connell and his associates were confined to the Richmond Penitentiary; the movement which they had organized was placed under the direction of new leaders; and the Irish people remained in that state of deceptive apathy which often occurs in political agitation when men look to their neighbours, anxiously inquiring—what will come next? With the political results of any of the facts recorded by Mr. Grant it is not our purpose to meddle: we shall best discharge our duty to the author and the public by selecting some of his most striking pictures of the Irish land and people, and leave the inferences which they suggest to be drawn by the reader.

Like every other stranger, Mr. Grant was both surprised and pleased by the aspect of Dublin—in architectural beauty, judicious arrangement of streets, cleanliness, and completeness of municipal arrangements. He is even inclined to pardon the inconvenient Irish cars for the sake of the carmen:—

"In speaking of the Dublin cars, I must not overlook the Dublin carmen. They are a most amusing class of persons. They are always full of spirits, and ever ready with their repartee or joke. You cannot put them out of temper. They know not what it is to abuse a customer; and, what may appear still more extraordinary, they rarely attempt to make an overcharge. They are, considering their occupation, a singularly civil and honest set of men. A more perfect contrast, in this respect, to their brethren in London, it were impossible to imagine. So harmless and good humoured is this class of persons, that they very seldom quarrel, or have any misunderstanding, even among themselves. They are, to a man, repeaters, and, with very few exceptions, teetotallers also, having, in the majority of cases, received the pledge from the hands of Father Mathew himself.

"It will be inferred, from what I have already said, that Dublin is a remarkably fine city. It is singularly fortunate in its promenades for pedestrians, and in its drives for vehicles of all descriptions. What could be finer for either than the Quay? It extends for nearly three miles along the centre of the town. On either side of the Liffey, the road is about sixty feet wide, and is beautifully macadamized. The shops which front the Quay are appropriated to a variety of purposes; and, from the tasteful manner in which they are fitted up, give a very pleasing appearance to this part of the city. It may be doubted whether a finer place for walking, riding or driving, is to be met with in the centre of any city in the world."

In contrasting Dublin and London, Mr. Grant justly declares that the Irish metropolis is free from those exhibitions of revolting misery which are to be found in the pauperized localities of the capital of England:—

"I could not discern any symptoms of the misery which are so visible in many parts of London. Here we often read details of destitution ending in death, which make the blood curdle in one's veins. In Dublin such cases are exceedingly rare. In the lower and most wretched districts of that city I saw a measure of contentment and a buoyancy of spirits which filled me equally with surprise and gratification. The houses in these districts are so old and ruinous, as to threaten every moment to fall about your ears as you pass along the streets. You are unable to discover a single pane of glass which has not been broken in a dozen places—in many instances it is a question whether there ever were any glass in the window-frames at all; you wonder how human beings can bring themselves to live a single hour in such wretched and ruinous abodes; and yet in these very abodes I found a cheerful and contented people. At almost every window you saw one or more smiling faces. The children looked redolent of health and happiness. And what pleased and gratified me exceedingly, was the fact of seeing flower-pots in the windows with flowers of various kinds, which had every appearance of being well attended to; and cages with canaries and other birds for their inmates. I believe I did not omit visiting any of the poorer or more miserable localities of Dublin; and yet I saw nothing which, either as respects filth or wretchedness, could be compared to many districts in London. They who would form their ideas of the lower localities of Dublin from our St. Giles's, would do Dublin a great injustice. There is no place in the latter city so low and filthy as the St. Giles's of London. The creatures who grovel in the latter locality are not fair specimens of the poorer class of Irish character; nor are their manners and habits fair specimens of the manners and habits of their countrymen in Dublin."

The ladies of Dublin seem to have charmed our observant traveller, and the warm eulogy he has bestowed upon them is sure to win him extensive popularity at the western side of St. George's Church:—

"The claims of the ladies in the one country and the other are so nicely balanced, that it would be difficult to say which of the two countries carries off the palm. But this, I am sure, will be admitted by every unprejudiced Englishman who has walked, on a fine afternoon in August, on the promenade at Kingston Harbour, that he never, in any part of England, saw, in an assemblage of women of the same extent, an equal number of fine figures. There is, too, in the carriage and manner of the better order of Irish ladies generally, a marked superiority to the English women. There is comparatively little in Ireland of that cold reserve and distant demeanour which strikes foreigners

as so unfavourable a characteristic of our English women. The Irish ladies have much of the ease, gracefulness, and vivacity of the French, without any of their exceptional qualities. There is not in the world a more modest race of women than the Irish; a remark which equally applies to all ranks and classes among them."

Having obtained letters of introduction to the State prisoners, Mr. Grant visited them in the Richmond Penitentiary, and was much pleased with his reception. He has portrayed the characters of each with so much individuality that even those who are strangers to these gentlemen must feel convinced of the accuracy of each likeness. We shall take a glance at them when collected at the dinner-table:—

"At five o'clock we all dined together. The party numbered about twenty-five, there being, in addition to the wives of several of the prisoners, ten or twelve of their particular friends. I should here observe that the day was Saturday, and, consequently, not one of the three days on which there was a general admission of the friends of the prisoners. We had an excellent dinner, and spent a remarkably pleasant evening. One thing that struck me much, during my intercourse with the traversers, was, the perfect cordiality of feeling which subsisted amongst them. There seemed not the slightest indication of any disposition on the part of either of them to be considered a greater lion or greater martyr than the rest. Even the three journalists, Mr. Barrett, Dr. Gray, and Mr. Duffy, in whom a little sort of rivalry might have been excusable—even they appeared to regard each other with the warmest and most sincere friendship. The feeling of all seemed to be, that they were suffering for their country; and that, if their country's interests were only promoted by their imprisonment, it mattered but little as to which of them should receive most of the glory. What I have said of Mr. O'Connell in reference to his cheerful submission to his fate, and his determination to listen to no terms which would, in the slightest degree, compromise the cause for which they were suffering a living martyrdom, may be said with the same truth of one and all of the prisoners. They bore their incarceration without a murmur; no indication of impatience was visible in their countenances, or in their words, or conduct. They seemed rather to rejoice in their sufferings, because they were for what they considered to be the cause of their country."

Turning to a more amusing topic, we have been much entertained by Mr. Grant's description of Donnybrook Fair, the glories of which have not departed in consequence of the temperance movement:—

"The 'swings' were crowded; they seemed to be objects of very great attraction. The wooden horses enjoyed no rest. Wooden though they were, you could not help pitying them. Theirs was, indeed, a hard condition; they performed the same circuitous journey times without end. The tents or marquees were not neglected. There Pat, with his arm around his sweetheart's neck, or her hand affectionately grasped in his, poured into her ear the honeyed accents of love, and into her mouth some harmless liquid, which cheered while it did not inebriate. Lemonade and ginger beer—such as they were, met on that day with a brisk demand. Nor was there any lack of tea and coffee. A small turf fire, lighted in a little hollow made in the ground, served to keep up the needful supply of boiling water. Meat, hams, cheese, bread, were piled up mountain high in every tent. Need I say that music, that indispensable element to humour and happiness among the Irish peasantry, was not wanting? From every marquee issued the sounds of the violin; and here and there were to be heard—of all instruments in the world—the tones of the Scotch bagpipes. The latter instrument did discourse music; but, truth to tell, it was not 'sweet.' At one and the same moment, though proceeding from different quarters, your ears were regaled with 'Rory O'More' and some standard strathspey. The musicians did not play in vain. Their 'heavenly strains' met with a ready and hearty response from the crowds whose ears were regaled by them. You saw, as you glanced at the patrons of the marquees, happiness in every eye, joy in every countenance, and motion in every leg. The Irish peasantry cannot resist the wailing tones of the violin or other popular instrument. If you would keep them in their seats, you must fasten them down. On this occasion, they seemed to have gone all mad. Any one, unacquainted with the genius of the patrons of Donnybrook, must have come to the conclusion that they were set in motion by some electrical agency. Who could have believed—yet such was the fact—that among the light-hearted and happy thousands then and there assembled together, there were many who had not partaken of a meal that day, and probably would not partake of one on the morrow."

Our traveller gives a very honest, impartial, and suggestive account of the College of Maynooth. The unmeasured attacks which have been made on this institution, made up for the most part of patent falsehoods and palpable absurdities, have diverted public attention from the real nature of the defects of that establishment. It is a college forming no part of a university, and is thus a counterpoise to no other Irish anomaly, a college co-extensive with a university. Maynooth confers no degree and has no power of giving rewards to literary or scientific merit: it is essentially nothing more than a theological seminary; and, though provision has been made for an extended course of classical and scientific instruction, no incentive of honour or emolument has been offered to induce students to devote their attention to anything but theology. There are no scholarships, no fellowships, no bursaries, and no exhibitions. Degrees giving literary rank are not to be obtained in Maynooth, though such would be eagerly sought by candidates for the Irish priesthood, because there is no part of the world in which established claims to literary merit are so highly respected, we might almost say venerated, as in Ireland. A reconstruction of the Irish Univer-

sity which would include Maynooth as well as Trinity College would be of incalculable benefit to both institutions. In the latter the important distinction between the College and the University can scarcely be said to exist, and hence University offices have become mere sinecures, and are for the most part held by persons who have already very ample revenues from the proper funds of the College:—

"Maynooth College is under the government of trustees appointed by Parliament, but the executive department is confided to the president and vice-president, assisted by the various other professors. The salary of the president is £326 per annum, and that of the vice-president £150. The prefect of the Dunboyne establishment and librarian receives £140 a year. The senior dean, the bursar, the professors of theology, and professor of scripture, respectively receive £122; while the salaries of the junior dean and remaining professors are severally £112 per annum."

Such salaries are miserably inadequate to the exigencies of a common school, much less to an institution for training the spiritual instructors of six millions of people. Mr. Grant shows good reason for believing that bigotry is not inculcated in Maynooth, and the facts on which he rests his argument are too notorious to be denied:—

"It is alleged that, not only is the old Roman Catholic doctrine, that no faith is to be kept with heretics, and that there is no hope for them hereafter, systematically inculcated at Maynooth, but that the inculcation of all kinds of uncharitableness and bitter feeling towards the Protestant part of the community forms a portion of the daily occupation of the professors. There never was a greater calumny. And that it is a calumny, may be inferred from the fact, that no unkindness of feeling towards Protestants, merely because they are Protestants, is ever shown by the Roman Catholics of Ireland. I appeal to any man who has travelled through the more Catholic parts of that country, whether, so far from observing any such bitterness of feeling towards the Protestant portion of the population, he did not observe just the reverse. Nothing more forcibly struck me in my travels through Ireland, than the very marked manifestations I everywhere saw, of a friendly feeling towards those Protestants who do not demean themselves in an unkindly manner towards the Catholics. Nor is this Catholic regard for liberal Protestants confined to mere feeling; it is shown in action. In how many instances are Protestant candidates returned to Parliament by the exertions and votes of the Catholics, even where candidates of their own persuasion were in the field. Still more numerous are the cases in which Protestants are chosen by the Catholics, for municipal offices, in preference to persons of their own religious views."

The subject of university and collegiate education, not only in Ireland but in England, is far too important to be discussed incidentally. We shall, therefore, pass onward to matter of a lighter character, and we are sure that our readers will be amused with the sagacity of the Limerick pi, s:—

"I was amused with some details which were furnished me respecting the intelligent habits of the Limerick pigs. I was surprised at seeing in the suburbs several groups of the swinish species proceeding, in the most staid and orderly manner, from house to house; sometimes entering for a few moments, and at other times going no farther than the door. This was beyond the compass of my philosophy to comprehend. The mystery was explained to me. There is a certain number of their pigships who, in detachments of three and four, make the tour of the poorer districts of the town, with unflinching punctuality, twice every day. Their first visit is paid in the morning, and the other in the afternoon. Their object is to solicit something to eat, or rather to take whatever the gods have provided for them at the doors of the good people to whose humble habitations they pay their respects. Not more punctual is a lover to the moment sworn, than are these four-footed mendicants in making their rounds. They answer all the purposes of a clock to those who have no other means of ascertaining what is the hour of the day. What may appear very extraordinary is, that their pigships never deviate from their prescribed 'walks.' Neither does one of the groups ever quarrel with the other when they meet. They are also remarkable for the silence they observe in going their rounds. Not only do the most friendly feeling and perfect harmony subsist among them, but they maintain a wondrous silence. They keep their minds to themselves; or, at all events, reserve it for other occasions. They rarely indulge in a grunt, and never so far forget themselves as to utter a squeak. It is a curious fact, that these swinish tourists never visit the better class of streets. Whether it be that they are aware that their presence would not be tolerated there, or that there is nothing to be picked up in such places, is a point which I must leave to be determined by more competent authorities than myself."

Mr. Grant's hurried tour to Limerick, Killarney, Glengarriff, and back to Dublin by Cork and Kilkenny, afforded him but limited opportunities of observation; and, though he certainly has made the most of them, his sketches are inferior to those of Mr. and Mrs. Hall. There is, however, something so picturesque in his description of the Irish beggars that we are tempted to extract it:—

"Being led to speak of Irish beggars, I may mention that the first thing that gives the stranger an idea of the poverty of Ireland, is the immense numbers of mendicants who beset him for a few pence. They meet him wherever he goes; they cross his path in all directions. They are generally most deplorably clad. Clothing, properly speaking, they have none. Your philosophy is puzzled to know how they continue to keep together the mass of rags which is attached to their persons. You are afraid they will drop off their backs while soliciting your charity. I could not resist the suspicion that many of the Irish mendicants are actually in love with their rags, and that to put them into a suit of new clothes would be to render them altogether miserable. Of this I am quite certain, that they would never rest satisfied until they had made a number of holes in their coat; for a coat would seem to them in-

complete without a few holes in it. You are struck with the fact, that many of the large perforations which you see in their apparel are easily susceptible of being mended, and that if they were patched up, the appearance of this class of persons would be greatly improved. The use of the needle, however, is comparatively unknown to the Irish mendicant. Nature has not made him a tailor, and he has no notion of attempting to set at nought the purposes of nature. That, he thinks, would be a reflection on her. He seems to find a peculiar pleasure in his tattered garments. You will always see more holes in an Irish beggar's coat than buttons on it. And yet, amidst all his rags, there is the absence of that actual misery in the Irish mendicant which you see in the English beggar. You are surprised at the jolly-looking and often ruddy countenance which you see associated with so much outward seeming wretchedness. No one can be half an hour in Ireland without being impressed with the conviction that the Irish possess constitutionally all the elements of happiness, and that, if their physical condition were but ameliorated, they would be the happiest people on the face of the earth."

Some amusing anecdotes are related illustrating the whimsicality of the Irish character. We take one, not as the best, but as the most novel:—

"The oddity of the Irish character is not confined to their life. In some instances it accompanies them unconsciously even to the grave. In a small churchyard in the county of Kerry there is the following inscription on a tombstone:—'Timothy O'Connor died in 1779 for himself and his posterity.' Now, just let the reader, before he comes to my explanation, here pause for a few moments, and try if he can make any meaning out of this. I in vain attempted for a part of two days to throw some light upon it; and possibly might have been at this hour as much in the dark on the subject as when the inscription first met my eye, but for the aid of a gentleman who had previously had the thing explained to him. The explanation is, not that Timothy O'Connor, as the inscription would have led one to suppose, died in 1779 for himself and his posterity, but that he died in that year, and that the burial-ground in which his remains were interred was for himself and his posterity."

Mr. Grant discusses the condition of the agricultural peasantry of Ireland with good feeling and good sense, but we must defer the consideration of this subject until we receive the Report of Lord Devon's Commission. In the meantime we commend these volumes to the attention of those who wish to obtain on easy terms some notion of the present condition of Ireland. Mr. Grant is an amusing and, what is far more important, an honest writer. He has fallen into some errors, which could hardly be avoided in a hurried visit, but on the whole his volumes are equally creditable to his sagacity and his integrity.

THE CRY OF THE PARTRIDGE.

(From Punch.)

"The Eagle-King may plume his wing,

Alone on his granite throne;

The Vulture may boast of the warrior-host

On the plain, for his banquet strown;

But the first am I of birds that fly,

For they are slaves to me,

In whose high hands are the good broad lands

Of the Island of the Free.

"Of Egypt old the Gods, 'tis told,

Were reptile, beast, and fowl;

And temples were raised, and altars blazed

To Isis, Hawk, and Owl;

But in modern time, in a Christian clime,

I am a bird divine;

And Christian blood in many a flood

Is shed before my shrine.

"My sacred ground they guard around

With arms of deadly strife;

And laws restrain the hand profane

That dares attempt my life;

A felon's pains, a dungeon's chains,

Await the peasant-slave,

Though by famine wrung, with children young,

And a starving wife to save.

"Then who so proud, of the feather'd crowd,

Can vaunt himself as I?

The Idol-Bird, to men preferred,

For no condemned to die."

So the Partridge sung, (ill the greenwood rung

With his shrilly notes of glee;

And none said Nay to his beautiful lay,

So rare a bird was he!

REPEAL OF THE MALT TAX.—The agitation of this question appears to have commenced in earnest. A most powerful and active organization is going on, and a system of appeal to every parish throughout England is about to be established, in order that it may be brought before Parliament as a question for grave consideration in the ensuing session.—*Times*.

LORD STANLEY—PRIVITY OF TENURE.—Lord Stanley's accession to this great principle, it is argued, is of the utmost value. But is Lord Stanley sincere? He has considerable property in and around Tipperary and Cashel. His estates are, to a great extent, the most productive, fertile, and best situated of any in either county. Without capital, manure, stock, or skill, no one could fail to pay a reasonable rent for such land, and be comparatively comfortable. Having these advantages from nature, no great encouragement would be needed, on the part of the landlord, to raise the tenants to a position of comfort, cleanliness, and respectability, far beyond any in their neighbourhood. Are they so? But, unfortunately, the facts in this case exclude every inquiry. Not only are they not above their neighbours, but they are infinitely below many of them. We know not where there are a tannery, as a class, who exhibit less appearance of comfort and culture, such as are visible on the estates of kind, indulgent, and encouraging landlords.—*Tipperary Free Press*.

AGRICULTURE.

ANTI-MALT-TAX AGITATION.

ARE THE FARMERS RUNNING RIOT?

A little knot of farmers and land-agents not many days since gathered together in London, for the purpose of agitating for a repeal of the malt-tax. After laughing heartily at the oratory of their leaders, we began to consider what could be the meaning of this very absurd move. Our first impression was, that it formed a new "dodge" on the part of the monopolist landowners to divert the farmers from the very inconvenient scrutiny with which they have of late begun to regard the almost universal mismanagement of land property in England; and we are by no means sure that the first impression was not the correct one. For, first, the most active promoters of the scheme were Mr. Baker, Mr. Ellman, Mr. Ellis, and other well-known tools of the Richmondite monopolists; and next, Mr. Baker, after stating that they had received promises of support and subscriptions from many agriculturists, expressly said, "there were some also in the background who do not at present appear, and they thought it better not to call upon members of Parliament in the first instance, but to show them that the cause had been taken up in such a manner that they could not fail in joining them." On the other hand, the *Morning Post* is, or pretends to be, vastly angry with Mr. Baker and his clique, for trying to induce the farmers of England "to waste their energies on a foolish attempt to repeal the malt-tax." Of course the *Post* desires their energies to be directed against what it designates as "the Free-Trade policy of Sir Robert Peel." Now, assuming that journal to represent the opinion of the monopolist landowners—if their crude notions deserve the name of opinion—does its angry denunciation of the malt-tax repeal agitation indicate that the farmers are running riot?

We predicted, when the squire put forward the farmers to "work" the protection societies, that their worship were playing with edged tools. No men of any class have suffered so much at the hands of the landowners as the tenant-farmers, and it was absolutely certain that, after they had been urged to the agitation of their landlords' question, they would go on to agitate their own. Does not this anti-malt-tax meeting point to something of the kind? It is true that the total repeal of the malt-tax would not, upon their own showing, be of the slightest benefit to the farmers; and that the arguments by which the speakers at the late meeting supported their proposition were in the highest degree ridiculous and false. But at the same time there were symptoms of a spirit which brooked landlord domination and performed landlord bidding less readily than of yore. Thus Mr. Baker said, "they were told on all hands that, before they petitioned the Legislature for the repeal of so large an amount of taxation, they should be ready to propose a remedy. Well, he was ready to propose a remedy, and that remedy was—a continuation of the property-tax. Nothing could be more just than a property-tax; and if a sufficient sum could not be raised at £3 per cent., he would, without hesitation say, let it be increased to a sufficiently high per centage to prevent a deficiency." This was received with loud and long-continued applause. What will the squire think of that?

Mr. Ellis and Mr. Ellman also asserted that the property-tax was a far better tax than the malt-tax. Mr. Baker urged them not to call for assistance "from those above them" until they found they could not obtain assistance among themselves. "He would rather have this question carried by the farmer and the tenant than by those above them." Now, it is something to see the tenant-farmers seeking to act in public matters independently of their landlords, though their first exhibition of independence be neither very wise in its end nor very effective in its means of attainment. Mr. Weall said—as we have again and again said—"There was not any county or parish in this kingdom where there was one agricultural labourer more than was necessary for the tillage of the soil." They had been told that farmers should give employment to the labouring men; but they had never been told how they were to find the means of paying them." Here the acquiescence of the meeting was expressed by loud cries of, "It is true," and "Hear, hear."

Even Mr. John Ellman could not forbear giving his patrons, the landowners, a back-handed blow or two. He said he had laboured heartily in the cause on account "of the very reduced circumstances of the tenant-farmers of England. They must all know and feel that, although the prices of farming produce had been so very much reduced, their expenses had been little, if at all, diminished. They had been called upon to employ the labourers; they had been recommended to use science; but it was useless to call upon a man to use the means he did not possess. They had been recommended to lay out their capital in the draining of land and in the cutting of hedges; but let him ask, how was the tenant-farmer to acquire the means for making these improvements?" Now, whether the speakers at this meeting have

really broken loose from landlord control, or whether they have been employed to put the farmers upon a false scent, it is plain that, in order to enlist the sympathies of the farmer in their object, they are compelled to give utterance to truths, the dissemination of which will dissipate all the delusions upon which the Corn Laws are based.

How the farmer is to be benefited by a repeal of the malt-tax was not made very clear by the speakers. Thus Mr. Ellis:—"He should be very glad to sow 10, or 15, or 20 acres of barley, and malt it, and give it to the labouring poor, if the Legislature did not call upon him to pay four or five times the rent of the land for permission to give away the produce."

So Mr. Baker said:—"He was sure the value of barley would not advance [if the tax were repealed], but he was equally sure that the growth would increase in a tenfold degree." Now, if there would be no advance of the value of barley from a repeal of the malt-tax, it is difficult to understand why its growth should increase! Yet Mr. Baker afterwards said: "There were two ways in which it would assist the farmer—it would equalize the value of his barley, and procure him a fair and remunerating price." These passages do not seem easily reconciled. As regards the agricultural labourers, whose "desperate and deteriorating condition" was admitted by most of the speakers, the repeal of the malt-tax was to benefit them mainly, by enabling them to brew at home!!!

This is a proposition so silly, that we wonder any man or men, acquainted with the state and habits of the farming labourers, could state it seriously. If there was no tax on malt the rural labourers would not and could not brew a gallon of beer. They have not the four or five pounds necessary to purchase the plant—the copper, tubs, barrels, and other utensils—nor have they any of the conveniences required for brewing and keeping beer. Then the necessity or value of such a beverage to the labourer is vastly exaggerated. The money which beer costs, expended in food, would be of far more physical benefit to him, to say nothing of the moral good which must arise by his abstinence from his besetting propensity.

Farmers, generally, like giving beer to their workmen, because it stimulates them at particular seasons to make considerable though temporary exertions, and because the beer counts in wages for much more than it is really worth. But we have watched attentively the effect of the practice, and that in a district in which it is a good deal resorted to, and we have no hesitation in saying that payment of part of his wages in beer has most mischievous consequences to the farm-labourer.

SENTIMENTAL BENEVOLENCE TESTED.

The notion that the "allotment system," the giving poor men without capital one or two roods of land, can form any substitute for that wholesome employment of the agricultural labourers which would be the immediate consequence of a free trade in corn, is absurd. Yet in such an illusion are the protectionist landlords just now indulging. They have declared that the Corn Law is necessary for the profit of the farmer, and for the regular employment of the agricultural labourer. Well, they have their Corn Law; yet the farmer is sinking into distress and poverty, his capital is being absorbed to pay rent, while destitution is the only term by which the constant state of the rural labourer can be properly described. Monopolists feel the actual state of the industrious agricultural classes to be decisive evidence against their monopoly; they see that the labourers are becoming aware of the injury which has been inflicted upon them by the landlords' law, and hence with one accord the whole of the monopolist landocracy is seized with a sudden zeal to improve the lot of the labourer by a patch of potato-ground. Monstrous absurdity! But it may be well to test even the sincerity of these new-born professions of sentimental humanity; and it will be found that monopolist landowners sometimes cant and whine over the state of the farm-labourers, whilst they permit their farming tenants to be treated most oppressively.

Amongst the many accounts of landlords petting their "allotment tenants" which have lately appeared, we find, in the *Dorset County Chronicle*, an account of the "interest excited in the town of Cerne by an intimation that Lord Rivers would attend personally the audit for receiving the rents from his numerous allotment tenants." (Of course the bells were set ringing, and the "town band assembled," to do honour to his lordship for such active benevolence.)

"The allotments of his lordship in this neighbourhood extend over twenty acres of good land, and portions of from ten to forty perches, according to the family, or other circumstances, are let to each person at a small annual rent, under the superintendence of a committee, at the head of which is the respected Vicar of Cerne. The present number of allotment tenants is eighty-nine, and a great amount of good has been effected from the judicious adoption of the field-garden system. On this occasion two practical persons, one of whom was entirely unconnected with the parish, were requested to go over and examine the respective allotments, and to make a report, for the purpose of premiums being awarded to the most deserving, and other steps taken with those who might have wholly or partially neglected the cultivation of their ground. The noble landlord also walked over the allotment grounds previous to the audit."

The vicar and others of his lordship's train and adherents assembled in the schoolroom:—

"The noble lord having taken his seat, the names of the tenants were called over, and they came to the table and paid their rent, there being but four defaulters. Two of the tenants were then called up, and told by his lordship that, in accordance with the report made to him, they were disfranchised, it being considered that they had forfeited their holding, by a breach of the rules, in the great, if not almost total, neglect of the cultivation of their land."

Two others were admonished. The business being ended, his lordship made a speech, in which he expressed "the pleasure he felt at meeting, for the first time in his life, so many of the inhabitants of Cerne, and especially the poor people, his tenants, to promote whose interests he was most anxious"—a sentiment which was received with rapturous applause. Oh, there is nothing like sentiment! Lord Rivers then said the success of the system in Cerne "depended upon the judicious supervision of the committee":—

"He had property in another parish, where he once granted allotments, but the plan failed through bad management. (Hear, hear.) His lordship then stated to the tenants that there were many of them to have prizes for the good management of their respective allotments, and he had no doubt that generally they had been well managed. These prizes would be given in money, which would be placed in the hands of the committee, and the tenant who obtained a premium might have it laid out for him in any article, whether of clothing or otherwise, of its value, or towards an article of greater value, if he should wish to add the remainder. After other observations, containing much kindness and consideration for the labourers, his lordship said he had adopted the plan, with the premiums, as he had stated, believing it to be best adapted for the benefit of those who obtained them." (Loud applause.)

Could any one believe that all this was addressed to grown, adult, mature men? Uneducated men perhaps, but men who are as capable of forming an opinion within the limits of their observation as their self-satisfied patronizers themselves. It was then announced

"That the fourth rule of the allotment regulations had been altered, so that the tenants would no longer be restricted from growing wheat, barley, Swedish turnips, &c., which gave the utmost satisfaction."

A Mr. Digby, his lordship's companion, then advised them to use, what may be called the landlords' specific, guano for manuring their potato-patches. The vicar also promised to give two sovereigns as prizes "to be laid out in guano;" and he concluded with this, doubtless deserved, eulogy on his lordship. He said:—

"Lord Rivers would allow him, as the minister of the parish, further to say, in his presence, that his lordship felt the responsibility of those who held property to him from whom every 'good and perfect gift' proceeded, and to whom all were accountable for the right use of the talent they had received. His lordship was desirous that his property should be made conducive to the good of the labourers and poor, by encouraging the honest, industrious, and well conducted, and such would be encouraged and rewarded by his lordship."

Such is Lord Rivers at Cerne.

In another parish of which his lordship is the owner, we have had occasion to view his influence in a less favourable light. At *Sturminster Newton*, in Dorsetshire, his lordship had a tenant named Dowding, who had occupied a small farm of about twenty acres for fifteen or sixteen years. He had always paid his rent regularly, three months after it became due, as was usual with his lordship's tenants in that place. According to the opinion of his neighbours, he had considerably improved his land. But within the last two years his lordship's agent—a lawyer—had become desirous of getting Dowding out of the farm, and gave him many hints that he had better quit. This the poor tenant was unwilling to do, for his means were humble, and the dwelling-house, which is a tolerably good one, afforded him an abiding-place for his family—he has six or seven young children and his wife's aged father, a ruined farmer, verging upon eighty years of age, dependent upon him—and a bare subsistence. He attributes—whether rightly or wrongly we know not—the agent's anxiety to accommodate a larger tenant of his lordship's, who, with a much more considerable farm, had an inferior house. At all events, the great farmer has now taken poor Dowding's little holding at an increased rent of £5, and has moved into the dwelling-house. But we anticipate.

For six weeks previously to Lady-day last Dowding had been seriously ill, having been confined to his bed for several months, and the day after Lady-day, without any notice that the rent would be required before the usual time, the 11th of July, without any previous demand of the money, a distress was sent into the sick man's cottage for the half-year's rent alleged to have become due the preceding day to Lord Rivers! The wife went to his lordship's agent, and promised to pay the rent as usual after midsummer, if he would let them alone until that time. This he refused to do unless some third person would be answerable for the rent. A neighbouring farmer (apparently to the disappointment of the agent) was kind enough to guarantee the rent, and poor Dowding and his wife were installed, but permitted to remain. The rent was paid in July. The agent, however, refused to allow the landlord's property-tax which the tenant had paid, and which was allowed (as by law it ought to be) to all the other tenants. This shows that Dowding was a marked man. He had now partially recovered his health, and hoped to have gone on in his occupation. But no: the nature of his suffering was not yet full.

On the 8th of last October—three days before the rent became due, and more than three months earlier than the time at which it had usually been paid—another distress was put in for Lord Rivers's rent, and a bailiff remained in possession. On the same day a notice to quit on the 6th of April next was served. Not the slightest hint of this severity was given—no demand of the rent had been made. Poor Dowding, who had supposed that the land-agent had relented, was in despair; he was literally struck to the earth. On the fifth day after the seizure, which was on Saturday, the agent sent to say that if Dowding would give up possession, and leave the house immediately, the goods seized should not be sold, otherwise that handbills would be immediately printed and the sale made on the ensuing Monday. They begged hard to be allowed to remain until Monday, for—to use the wife's words—"they knew not whither to go;" and their two youngest children were seriously ill with the hooping cough. This was reluctantly granted. On Monday the weather was so bad that they could not move their bedding. At twelve o'clock, however, the agent sent for the key; but "after some entreaty" they were permitted to sleep on the floor one more night; all their goods except the beds having been removed into the house of a charitable neighbour. "Next day they tied up their beds, and left the house in which they had resided for sixteen years;" and, with their younger children in arms, they walked "three miles for a night's lodging." "It was," says the wife, "dark and raining when, with two sick and helpless children, we reached our friends' house, but when they found the children had the hooping cough they would not let us in; so we went two miles further."

Such is the way in which the "protected" tenants of our monopolist landowners are dispossessed at the will of an agent. And it is remarkable that in both instances the distresses were levied before the rent was due, and were therefore illegal. His lordship has thus become liable to serious damages, which, we understand, Dowding will be assisted to enforce should such an extremity become necessary. In all probability, however, Lord Rivers knows nothing of this act of harshness which has been perpetrated upon his property; but whilst landlords permit such deeds to be done in their names they must bear all the public obloquy with which recent inquiries into the management of their estates have caused them to be visited. If his lordship merits the eulogy bestowed upon him by the Vicar of Cerne, "that he feels the responsibility to God of those who hold property for the right use of the 'talent' they have received," he must secure agents of a different sort. It would not be the smallest of the benefits of a free trade in corn that landowners would be induced to make their tenants independent, and would emancipate themselves and their estates from the pernicious influence of land-agents.

FEUDAL, SEMI-FEUDAL, AND RATIONAL LANDLORDS.

The injury and destruction of food caused by game is now generally admitted to be so great as to render game-preserving a national calamity. Landlords are being acted upon by public opinion in this matter, though in very different degrees. First, there are your genuine monopolist landowners, who still persist in "sacrificing" the peasantry to game. These are aptly represented by the Duke of Buckingham:—

"**ABUNDANCE OF GAME.**—The game on the preserves of the Duke of Buckingham at and around Wotton Underwood is immense. A correspondent informs us that, when on his way from Ashendon towards Brill, a few days since, he observed in a field near Ashendon a countless number of hares, and that they were in such clusters that a good shot, with a double-barrelled gun, might have killed a dozen."—*Aylesbury News*.

Such are the feudal landlords.

Then we have the half-and-half landlords, who abandon rabbits, but hesitate to surrender hares and pheasants. Such, it would seem, are represented by the Duke of Bedford:—

"The Duke of Bedford has ordered his tenants to deal with rabbits as rats, and clear their farms of these destructive animals, which only go to gamekeepers, who take care to pursue rabbit poachers to preserve their privileges at the cost of the farmer."—*Bedford Mercury*.

It is no use to give up the rabbits to the farmer whilst the landlord reserves to himself the hares and pheasants. On this matter there can be no half measure; the alternative, game or rent, is daily becoming more pressing, and the owners of land must make up their minds to give up the one or the other. Hares as well as rabbits must be thrown overboard, my Grace of Bedford!

Lastly, we have the rational landowners, such as Mr. Pusey and Sir Harry Verney, who frankly and entirely give up the game to their tenants. The latter gentleman, at a dinner given to his tenants, said:—

"That, although he was fully aware of the difficulties which on every side surrounded the British farmer, he had no fear but those difficulties would be surmounted by industry and practical science, aided by the liberal assistance of the landed proprietors, but more particularly by reducing the redundancy of game!" And, in order to show his tenants that his theory and practice agreed, the worthy baronet concluded by saying—"He wished each of the tenants to shoot the game on each of their several farms; he, at the same time, did not expect they would have sporting parties; it would then be the tenant's fault if he suffered the game to increase so as to do him an injury!"

This is the way in which all landlords will, sooner or later, be compelled to deal with the question. Wild animals cannot be kept upon land which is really and highly cultivated.

LEFT-HANDED FREE TRADE.

It appears that the importation of live cattle from abroad has of late slightly increased, and of course the agricultural alarmists are again raising an outcry against the tariff. The facts, however, do not seem to bear out their allegations as to the reality of the competition between foreign and domestic cattle. Thus the *Mark-lane Express* of the 4th of Nov. says:—

"We have remarked, in the foregoing observation, that a great improvement has taken place in the quality of the beasts lately imported. This was never more marked than in the supplies brought forward here on Friday last, for out of 135 head in the market on that day, at least 50 of them were in what may be considered good condition: indeed, we saw several that weighed 160 stone (8lbs. to the stone) each. The sheep were better than we have hitherto noticed them; but there were none calling for particular observation."

"Strange as it may appear, not a single instance has occurred—even though such experiments, both in pasture and stall, have been numerous—in which it has been found possible to fatten foreign beasts in this country with advantage. Notwithstanding all the care and attention shown, they—arising, no doubt, from change of food—have gradually decreased in weight, and have been very often attacked by the epidemic."

This is true. There is little chance of keeping or feeding foreign-bred cattle with a profit; and it does appear to have been a most erroneous scheme to shut out the cheap foreign provender for feeding our own stock profitably, and to admit lean foreign stock, which die or waste in becoming acclimatized. We had a Norman cow, which, being out one of the cold nights of June, 1843, was attacked by the epidemic—pulmonary consumption—and died; while not one of a herd of English cows was at all affected. The same thing happened to the calf of this cow, which had been weaned in the previous autumn, with a number of English calves. The French calf died consumptive, though no English calf so much as caught cold.

The farmers who fear competition have a right to complain of Sir Robert Peel's one-sided Free Trade, for the idea of rendering lean cattle cheaper by the import of live stock is absolutely ludicrous, while that which would have really benefited the English stock-farmer—cheap foreign grain—is absolutely excluded.

ANOTHER "SACRIFICE TO THE HARE."

The following paragraph, from a provincial paper, gives a fearful account of another sacrifice to the modern Moloch, game:—

"**AFRAY WITH POACHERS.**—A dreadful encounter took place on Thursday night between a party of watchers and some poachers on the Ravensworth estate, about three miles from this town, in which two of the keepers were dreadfully wounded, and now lie in a precarious state. It appears from the statement of the head keeper, Henry Wallace, who has been only about six months in the service of Lord Ravensworth, that, having been told that some of the under keepers had heard the report of a gun in the preserves, at Ilag Wood, on Wednesday night, he determined on placing a strong watch there on the following night. Accordingly, he went himself, with three others, named respectively George Grundy, Peter Johnson, and George Ironside, to the south side of the wood, and sat down under a hedge. After remaining there about an hour, two men came down the wood, but the watchers did not observe them till they had approached to within a short distance of where the watchers were sitting. Wallace, on observing the men, shouted, 'Holloa, ye blackguard fellows, what are ye doing here?' He then got on his feet and went towards them, when one of them exclaimed, 'Stand back, ye —,' and fired immediately, the shot taking effect upon Wallace near the left shoulder. Grundy had made an advance immediately after Wallace, and the other poacher, without saying a word, levelled his piece, and fired almost instantly after the first shot. Grundy was wounded in the groin and thighs. The other two watchers had fallen back into the wood, and were not near enough to render assistance. The poachers then made off, calling out as they retreated, 'Come on, ye —, we have still more for you.' The poachers then disappeared. It was about nine o'clock at night, and exceedingly dark. Medical aid was procured, and a great number of the shots have been extracted."—*Newcastle Journal*.

And it is to maintain the blood-stained code by which this system is upheld that we are subjected to a Corn Law. It has now been placed beyond all dispute that the soil of this country can scarcely be called half cultivated, that full one-third more of corn might be produced here than is produced, whilst the industrious classes—those whom the *Morning Post* calls the "idle consumers"—are prevented from obtaining corn elsewhere. It has also been demonstrated that the requisite agricultural improvements can never be made until farm-leases become universal.

Now, anxiety to preserve the game forms the principal reason why landlords are unwilling to grant leases, and the uncertainties induced by the Corn Laws are the main cause why tenant-farmers are unwilling—and wisely unwilling—to accept leases. Out of this legislative net there is no escape but in absolutely Free Trade.

"**THE GAME LAWS.**—I sow corn: partridges eat it; and, if I attempt to defend it against the partridges, I am fined or sent to goal—all this for fear a great man, who is above sowing corn, should be in want of partridges."—*Bentham's Truth to Ashurst*.

NOTICES TO CORRESPONDENTS.

In the *LEAGUE*, last week, we answered a letter from Macclesfield respecting the purchase of a freehold cottage for £130, subject to a ground-rent of 11s. Our attention has been drawn to our answer, which we gave under the assumption that our correspondent was in error in calling it a ground-rent; it is presumed it is a rent-charge. If the cottage is subject to a ground-rent it cannot be a freehold, and, should not be purchased as such.

"**A Free-Trader, Stockport.**"—"I am possessed of freehold property worth £100 per annum, which is assessed at £50. I occupy the entire of it myself, consequently let none of it to a tenant; will it qualify me as a county voter?"

[Occupation of your own freehold (being in a borough) destroys your county claim.]

"**W. W. Nicholson.**"—"Conjointly with my brother, I hold a copyhold house and premises, situate in High-street, Poplar, which lets for £40 per annum, for which we pay 4d. per year quit rent; are we eligible to vote for the county of Middlesex, and, if eligible, is it too late to claim this year?"

[A copyhold in a borough of the value given (£40 per annum, and 4d. quit rent) will not confer a county vote.]

"**B and C, Burnley.**"—"We purchased a leasehold property in May last, a part of which premises we occupy ourselves as a manufactory, the remainder we underlet for upwards of £100 per annum to several other tenants. We desire to know, if we are entitled to become county voters for the northern division of the county of Lancaster, and how such claim is to be made, &c. One of the partners is an unmarried man, and lives with his parents; the other occupies a house in the township of Burnley, where the above property is located."

[If the lease is an original lease from the freeholder for 20 years, and the premises are not situate within a city or borough, and the value of the lease is £100 over and above the reserved rent and charges, two votes may be claimed; if the term was originally for 60 years, then £20 value over the rent and charges will be sufficient.]

"**Kent.**"—"The holder of the lease for fourteen years, at £90 per annum, is not entitled to vote."

"**W. A., Liverpool.**"—"Is incorrect in supposing that the Scotch and English qualifications to claim to vote for members of Parliament are the same. We acquiesce in giving the information he requires. In Scotland the claimant for a county qualification must have been six months previous to the 31st of August in the present, or the last day of July in any future year, the owner of any lands, houses, feu duties, or other heritable subjects, within the shire of the yearly value of £10, after deducting any feu duty, ground, annual, or other consideration which he may be bound to pay, provided he be in actual occupation, or in the receipt of the profits thereof to the extent of £10; or a leaseholder, whether in his personal possession or not, for a period of not less than 57 years, or for the lifetime of the said tenant; of the value of £10 above reprises, or for a period of 19 years, where the value of such interest is not less than £50, or in the actual personal occupation at a rental of £50, or where the sum as a consideration of not less than £500 has been truly paid. In Scotland there is a system of registration before the sheriff, who is generally a judicial officer of considerable experience at the bar. The sheriff is directed to examine every claim whether objected to or not, and he is to write the word "admitted" or "rejected," and mark them with his initials on the claim not objected to, precisely in the same form and manner as he marks the claims which have been objected to. The sheriff's judgment granting or refusing registration is conclusive of the right of the parties. The person claiming the right to vote must give in a claim, subscribed by himself or his agent, to the schoolmaster of that parish of the county within which the property on which he claims is situated, in the form following:—

"I, A. B. (designation) hereby claim to be enrolled as a voter in the county (or town) of —, as proprietor (tenant or occupant) of the lands (or houses, feu duties, &c.) of —, in the parish (or town) of —, and county of —, and in cases within burgh, in support of my claim I produce herewith in disposition, lease, &c. of cetera, of date, &c. &c. as the way be."

"**J. T.**"—"I am possessed of a leasehold house and ground, and in actual occupation; the house is worth £25 a year clear of taxes; the lease is direct from the freeholder for ninety-eight years at a peppercorn ground-rent. Does this give a county vote, and, if not, should I be entitled to a vote by building another house of equal value on the ground?"

[If the lease is an original lease from the freeholder, for any term originally created of sixty years or upwards, and is of the yearly value of £10 above reprises, it will confer a county vote, provided the premises are not situate in a city or borough.]

"**R. W.**" holds a lease (originally granted for a term of years exceeding sixty) of premises situate in a borough. He lets the same to a tenant (for a term of years), who pays him an improved rental of above £10 per annum. Has R. W. a claim to be on the county registry?

[A leasehold in a borough of premises of the value of £10 will not give a vote for a county. The occupier may have a vote for the borough.]

To the Editor of the LEAGUE.

11th mo., 1844.
RESPECTED FRIEND,—I have perused, with very considerable interest, the account of the late meeting of the League in Manchester, and I highly approve of the plan recommended by our valued friend, Richard Cobden, for increasing the county constituencies; and I believe a reply to the following queries in the next number of the *LEAGUE* would tend to facilitate it:—Supposing a person to purchase a 40s. freehold, and afterwards to mortgage it, would he still be considered entitled to have his name inserted upon the register? And supposing, with the like property in a borough, and not much exceeding that amount, or rather under £10, would he be qualified to vote for that borough, or for the division of the county in which it is situated?

I have paid a little attention to the subject of registration in my time, but the questions which I have been troubling thee with have until the last week never occurred to me; and I find I am not the only one in ignorance upon these subjects. Hoping I shall not be found troublesome,

I remain a sincere friend to the League, S. J.
[If the property mortgaged yield a clear 40s. after paying interest on the borrowed money, it gives a vote; but not otherwise.]

If a person occupies his own freehold house or shop, &c. in a borough, and if it be of £10 a year value or upwards, so as to give him a vote for the borough, he cannot vote for the county in respect of that property. But if he occupy his own house, &c., under the value of £10 a year, he can vote for the county in respect of that property. Or, if a person owns a house in a borough above £10 a year, and lets it, the tenant may vote for the borough, and the landlord may vote in respect of the same property for the county.—*Ed. LEAGUE*.

"**A Leaguer,**" Brighton.—We are of opinion that the payment of ten pounds a year only, for rooms in a house of the value of £10 a year, where the owner is himself in occupation, will not carry a vote for the lodger; the owner might, possibly, establish his vote.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the *LEAGUE* forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadsby, Newall's-buildings, Manchester; and the *LEAGUE* may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

POSTSCRIPT.

LONDON, Saturday Morning, November 16, 1844.

We have just received a file of American papers, and the intelligence they contain affords gratifying evidence of the progress of Free-Trade opinion in the United States. The monstrous fiction that £100,000 had been raised by the English Free-Traders to influence the coming election for President had been most diligently circulated by the monopolists; and the reaction against the detected falsehood is as great among the American mechanics as that against the detected sophism of cheap bread involving low wages has been among the operatives in England. It is not yet certain whether Clay or Polk will succeed; but it is beyond dispute that the Free-Trade party, even as an opposition, will be sufficiently strong to compel the supporters of protection to modify, if not to abolish, their restrictive system. From the many exposures of the iniquity of the tariff, we select one signed "A Mechanic," which would require but slight modifications to be equally applicable at this side of the Atlantic:—

"Fellow Citizens,—Look at the following items (only a part of the system), and then say whether it is deserving of the name of protection to American industry.

"For example, striped shirting, for the labourer, pays a duty of 65 per cent., while gold-edged pays but 33 per cent. Iron chains used by farmers pay more than 100 per cent., while gold watch-chains for the rich are taxed only 74 per cent. Common brown sugar is taxed 70 per cent., and the wines of the rich but 60. The hammer of the blacksmith pays 70; the saws of the carpenter 75; the irons of the hatter and tailor 110; but the silks of the belle pay only 40, and the cigars of the beaux not 20. Common carpets pay 103 per cent., while the finest Brussels and Wilton pay 30 to 50. Coarse cotton goods pay 100 per cent., and the fine only 33. The cheap calicoes pay 100 per cent., and dearer ones 33. Common flannels pay 88 per cent., and fine ones for the rich only 35. The low-priced velvets pay 150 per cent., fine velvets only 40 per cent.

"Are not the pursuits of the farmer, the shipbuilder, carpenter, mason, blacksmith, cartman, stevedore, longshoreman, wheelwright, tinmith, &c., American industry? and is it just that they should be taxed so enormously upon every thing they consume, for the advantage of the few? I think, upon reflection, you will answer no!"

The *New York Journal of Commerce* has published some able articles on Free Trade, and pointed out not only its undeniable economic advantages, but its incidental results in securing international peace and mutual harmony. These articles have produced a marked effect on the public mind in America; we select a passage from one of the most striking:—

"The most perfect exemplification of actual Free Trade which the world ever saw, is to be found in these United States, considered as twenty-six 'sovereign and independent' communities. Each buys what it pleases of the others, and sells what they respectively please to buy of it, without let or hindrance, without the interference of custom-house officers, without charges of duties of any kind. Is it not a convenient system? Is it not a just one? Does it not promote the interests of all?"

"Apply the protective system to those states, and each of them would lay duties upon the products of each of the others. New York would prohibit the admission of wheat from the West, and of cotton and woollen manufactures from New England, or charge them with exorbitant duties, because she can produce her own wheat, and manufacture her own cloths. Georgia would prohibit the importation of sugar from Louisiana, and elsewhere, because she could grow her own sugar; and, by making the duty high enough, the business would be eminently profitable to the growers, though eminently unprofitable to the consumers. Every state, instead of exchanging the commodities which she could most naturally and advantageously produce, would, by duties and prohibitions, seek to exclude those foreign commodities. Thus all would do what they could to invert the order of nature, raising oranges in Maine, and ice in Louisiana."

Substitute twenty-six nations for the twenty-six states, and the argument remains unaltered.

DREADFUL ACCIDENT. NINE LIVES LOST.

About five o'clock on Tuesday afternoon a most frightful and fatal accident, involving the death of nine persons, occurred on board the steamboat *Gipsy Queen*, lying at one of the Blackwall buoys off the Brunswick Pier.

It would appear that the unfortunate vessel (the *Gipsy Queen*) is a new iron steamer, of about 500 tons' burden, having two engines of 150 horse power each. The boat is the first built by the firm of Jacob and Joseph Samuda, who, within the last two years, took premises in Howe-creek, for the purpose of carrying out their intention of building steamboats. The engines, too, with which the *Gipsy Queen* is fitted are upon a new construction, being what are called "bell-crank" engines. At three o'clock in the afternoon the vessel left the creek for an experimental trip, having on board about 20 persons, including Mr. Jacob Samuda, the principal of the firm. She went down the river to below Woolwich in gallant style, answering all the expectations of her constructors. On her return to Blackwall she was moored to one of the buoys, where it was intended she should remain all night, and be got ready for another trip the following day. In a short time after the vessel had been made fast, an explosion was heard by persons on the Brunswick Pier to proceed from the direction of the steamer, and almost immediately afterwards cries for help proceeded from the same quarter. Not a moment was lost in making towards the steamer, when the most heart-rending sight presented itself to those who went to the rescue. Five persons were there found, apparently in a state of madness, running to and fro on the deck, screaming with anguish, while their

appearance showed that their lamentations were real. With all speed they were conveyed on shore, and met with every attention that could be afforded to persons in their situation by Captain Routh, managing director of the Blackwall Railway, and assistants. The agonizing cries of these unfortunate persons was said to be dreadful. They were all conveyed, without loss of time, to the London Hospital.

As soon as the engine-room was sufficiently clear, a descent was made, and seven human forms, scalded to death, were there discovered, with features contorted with agony; some bleeding from the nose, ears, and mouth, and their flesh peeling from the bones at the touch. The bodies were taken ashore, and placed in one of the Blackwall Railway warehouses, where six of them were shortly afterwards recognised, and proved to be Mr. Jacob Samuda, the head of the firm; Dodds, engineer; James Saunders, also an engineer, appointed to the *Gipsy Queen*, and who only went on board a few hours before he lost his life; Mr. Scofield, engine-fitter at the factory of the Messrs. Samuda; Thomas Nugent, an apprentice; John Newman, stoker; and a man whose name is not yet known, he having been employed only a few hours by the firm.

The names of those who were taken to the hospital are—Mr. W. Riley, foreman to the Messrs. Samuda; James Hill, boiler-maker; Charles Mills and William Donovan, stokers; and a third stoker, whose name could not be ascertained.

It is conjectured that the cause of the explosion was that the main steam-pipe to the engine became affected by a stuffing-box in the junction-pipe, the giving way of which let the steam into the engine-room. It is also said that the boilers were made to stand a pressure of 40 lbs. per inch, and their working power was 25 lbs. per inch.

Amongst those who are injured, and whose lives are saved, three were dragged on deck from the engine-room on the first alarm, and narrowly escaped with their lives.

In addition to the death of Mr. Jacob Samuda, the head of the firm of engineers, who from their ingenious construction of atmospheric railways, have repeatedly been brought under public notice, and of six of his workmen and engineers, who were brought dead from the vessel on Tuesday night, two more of the five conveyed to the London Hospital have since died; viz.: W. Riley, the foreman, and J. Donovan, stoker; J. Hill, boiler-maker, was not expected to live. The inquest on the bodies was held on Wednesday, when the particulars detailed above were stated by several witnesses: no decision was come to by the jury, and an adjournment to Friday took place.

EPITOME OF NEWS.

FOREIGN.

FRANCE.—The *Moniteur* publishes a royal ordinance authorizing the trial of the atmospheric system of railroad to be made between the station of the Paris and St. Germain's Railway, at Nanterre, and the town of St. Germain.

The *National* states that the French Government, enlightened by the information received as to the causes which led to the late war with Morocco, are about to appoint a special agent to reside with the Emperor of Morocco, and to remain in constant communication with him.

The *Memorial d'Air*, in giving an account of a storm which took place on Sunday week in that neighbourhood, states that the hailstones which fell were of such an enormous size, that its readers can scarcely form an idea of them. One, it says, weighed ten pounds. Fortunately the storm was of very short duration, and, taking place in the night, neither man nor animal was struck by any of these terrific hailstones.

THE ROTHSCHILDS AND THE FRENCH LOAN.—The *France* says:—"There are in Paris at present the heads of three of the different houses of Rothschild, namely—M. M. Anselm, Salomon, and James Rothschild. Their meeting is said to have been occasioned by the approaching adjudication of the loan of 300,000,000 francs. They were all received on Saturday by the Minister of the Finances. It is said that the chief of the London house of Baring is also expected, and will also tender."

The *Semaphore de Marseille* of the 9th inst. publishes a letter from Leghorn of the 6th instant, giving a distressing account of the disasters occasioned by the overflowing of the Arno. Florence was partly under water, the suspension bridge had been carried away by the flood, the old bridge of the Jewellers threatened ruin, the Customs stores and the fine promenade of the Cascines were completely inundated. The Arno carried along a quantity of agricultural instruments, furniture, and cattle, and the plains of Tuscany, watered by the river, presented the aspect of immense lakes. The railroad between Leghorn and Pisa was so deeply sunk in the water that the communication had been interrupted.

SPAIN.—We learn by the Madrid journals of the 5th instant, that the court-martial on General Prim has broken up, after annulling all that it had done on the ground of irregularity and error in the indictment. It is announced, however, that when the form of procedure shall have been reformed, the court will assemble again, of which due notice is to be given.

The Barcelona journals of the 5th inst. mention the execution, on the preceding day, of Don Antonio St. Just, the son of the unfortunate general who was murdered some years ago in a riot at Malaga. St. Just had been condemned to death for participation in the Centralist conspiracy. He preserved to the last moment an admirable serenity. He made his will, wrote to several of his friends, and received the consolations of religion with edifying piety.

MOROCCO.—The following is an extract of a letter received at Lloyd's from their agent at Gibraltar, dated Nov. 4:—"By private intelligence received here from Morocco, it appears that the state of that country is very unsatisfactory, particularly in the neighbourhood of Mogadore, where there was a scarcity of provisions, owing to the disorders amongst the Kabyles in the interior. However, very little reliance can be placed on such unauthenticated reports."

EGYPT.—The *Augsburg Gazette* of the 6th inst. states that the crops in Egypt have been deficient this year, and that the public revenue has in consequence suffered.

AMERICA AND CHINA.—COMMERCIAL TREATY.—The correspondence of the French papers, and the last arrival of the Indian mail, announce that Mr. Cushing, who had been sent on a mission to China by the United States Government, had effected his purpose, and concluded a commercial treaty with the Chinese Government, which was signed on the 4th of July, the anniversary of

the Declaration of American Independence. The Court of Peking appears to have acceded without difficulty to the wishes of the American Envoy, and Key-ling, an Imperial Commissioner, was at once appointed, with a numerous suite of Mandarins, to treat at Macao. The American merchants at Canton and the adjoining stations discouraged the notion of attempting to proceed to Peking; and Mr. Cushing prudently yielded to their suggestions. It was said, however, that he would proceed with the American squadron, consisting of the *St. Louis*, the *Brandywine*, and a brig, to visit a part of the coast.—*Times*.

UNITED STATES.—By the packet-ship *England*, which arrived at Liverpool on Saturday, New York papers have been received to the 16th of October, one day later than the previous arrivals. They bring election returns from the States of Pennsylvania, Ohio, and Georgia, which are of importance as bearing upon the contest for the office of President between Mr. Clay, the high tariff and anti-Texas candidate, and Mr. Polk, his Free-Trade and annexation competitor. All these returns are favourable to the latter gentleman, who has now, at least, as fair a prospect of being elected as his better-known opponent.

The *Acadia*, royal mail steamer, arrived at Liverpool on Thursday morning, bringing New York papers to the 1st instant. The American papers are filled with discussions and speculations on the approaching presidential election. There are accounts from all quarters of the late disastrous gales. In the Havannah especially they seem to have been terrible. The loss of coasting vessels has been very severe, as in the harbour of Havannah alone 76 vessels were totally or partially destroyed. The southern papers report another terrible steam-boat explosion. The vessel, the *Lucy Walker*, left Louisville for New Orleans, full of passengers, and when about four miles from New Albany, her engine was stopped to make repairs of some of her machinery, and within a few minutes after her three boilers exploded, blowing the upper part of the vessel into atoms and pieces: from 60 to 80 persons were killed and wounded. A fine ship, the *Mary Kingsland*, loading at New Orleans for Liverpool, has been almost totally destroyed by fire, together with 1700 bales of cotton.

PERU.—Accounts from Peru state that General Castello, with the troops under his command, acting under the provisional government formed by the exertions of Elias at Lima, had brought Vivanco to an action on the 22nd of July, in which the latter was totally defeated, and the troops acting under his orders completely dispersed. Vivanco had suffered himself to be taken by surprise, and offered but a feeble resistance; he made off with about thirty of his officers, but subsequently they were made prisoners; and afterwards Vivanco and three or four officers were expatriated to the coast of Mexico; the others were set at liberty. The example set by Chile, and the prosperity that country has enjoyed since she got rid of the military domination, has at length aroused the Peruvians, and produced a strong feeling amongst the more respectable classes in support of a rational system of civil government.

WEST INDIES.—The royal mail steamer *Kent* arrived at Southampton on Friday the 8th inst. The Governor of Jamaica had issued his proclamation for the assembling of the new legislature, and proceeding to business on the 15th of October. The convocation of the house thus early was attributed to the measures taken in England with respect to immigration from India. The West India body in this country having guaranteed the cost of sending 5000 Coolies to Jamaica during the approaching season, the opinion of the House of Assembly upon the scheme was required, as also upon the proposition to raise a loan in England, with the guarantee of the Government, of half a million sterling for carrying on such immigration in future. The island of Cuba was, on the 2nd of October, visited with a most terrific hurricane, which continued, however, only a few hours, passing over without doing much damage from that time until the morning of the 4th.

CAPE OF GOOD HOPE.—Cape of Good Hope papers state that the Caffres were still in a restless and excited condition upon the border. Sandilla appears to be a chief most amicably disposed towards the British, and within his district he had desired the presence of the military to crush and disband the native depredators. The murderers of De Lange, the Boer farmer, had been discovered and surrendered to justice, Sandilla at the same time ordering 60 head of cattle found in their possession to be given up to the widow. One communication respecting the state of Caffreland is noticed in the Cape Town papers, and would seem at once to give a contradiction to this rumour, the words being—"The country is very tranquil, and full of corn; and there is now plenty for man and beast." Nothing is reported in the papers with regard to Natal, except the old story that it is a fine and promising country.

SYDNEY.—Sydney papers to the 14th of July have arrived, which give a return of the revenue of New South Wales, exclusive of Port Phillip, for the quarter ending the 30th of June. From this it appears that the gross receipts were £71,832 against £82,129, in 1843, showing a decline of £10,297. Prices for all articles of consumption continued low, and the markets are not reported to be in a better condition. Great hopes are, however, expressed of a revival of business when the export trade should set in; and, from the estimates given in the papers, there is every reason to expect that tallow will before long become an almost equal staple with wool.

DOMESTIC.

The annual civic procession to celebrate the inauguration of the new Lord Mayor took place on Saturday last, and, notwithstanding the unfavourable state of the weather, there was a larger attendance of spectators than is usual on such occasions. The newspaper accounts of the chief magistrate's reception vary as to the extent of unpopular feeling manifested, but they all agree that throughout his progress his lordship was subjected to loud expressions of disapprobation from the crowd, whose frequent references to the Wallbrook accounts must have been anything but pleasant on such an occasion. The banquet took place in the evening in Guildhall, the Lord Mayor in the chair. Among the guests were Sir James Graham, Mr. Gladstone, M.P., Count de St. Aulaire, &c. Sir J. Graham proposed the health of the Lord Mayor. On the health of the Count de St. Aulaire and the foreign Ambassadors being drunk, that nobleman responded, and in the course of his speech said—"Three years ago, when for the first time I came to London, it seemed to me that this city had

already reached the highest point of splendour, so immense and so magnificent did it even then appear. Yet at the present hour I still see it increasing in size, and adding in every way to its beauty. Within the last few days we have taken part in the ceremony of the inauguration of one of those monuments of art which seem to spring from the earth as by enchantment. That building is itself the temple of commerce, and in asking the presence of the representatives of foreign Sovereigns at the ceremony of its opening, you had in some sort a right to do so, for the transactions of the Exchange of London are important to all the world. Your commerce, gentlemen, is one of the most powerful instruments of the civilization of the universe. Its noble mission is to bear, even to the extremities of the earth, the laws of a holy religion, the discoveries of scientific intelligence, and the comforts of domestic life. Let us work together in this noble cause, and may that temple of commerce, in which but a few days before we met together, endure for many centuries. May it continue an evidence of your prosperity even to the end of the world."

In the Bail Court, on Saturday, the Solicitor-General applied on behalf of Mr. Salomons for, and obtained, a rule calling upon Mr. Moon to show cause why a *quo warranto* should not issue requiring him to show by what authority he claimed to exercise the office of alderman of the ward of Portsoken in the city of London.

On Saturday last, at Manchester, Mr. D. Waddington, millowner, was convicted in the penalty of 20*l.*, under the new act, for not having securely boxed off and guarded an upright shaft in his weaving establishment, in consequence of which a girl, named Emma Hurst, had received several bodily injuries, having been caught by the shaft while in rapid motion. This is the first conviction under the act.

A dreadful encounter took place on Thursday night, the 7th inst., between a party of watchers, Henry Wallace, George Grundy, Peter Johnson, and George Ironside, and some poachers, on the Ravensworth estate, about three miles from this town, in which two of the keepers, Wallace and Grundy, were dreadfully wounded, and now lie in a precarious state.—*Gateshead Observer*.

An Irish landlord, Mr. Arthur Gloster, was, early last week, while on his way from his property at Teonagh to Limerick, shot through the heart by some person or persons unknown. One of the local papers states that on the day of his funeral, as his remains passed along, some of the peasantry turned off from their work to witness it, and exhibited manifest exultation.

A letter received in Dublin on Tuesday, from Limerick, states that the late Mr. Arthur Gloster's steward was murdered the previous morning; and mentioning also that shots were fired into the house of Mr. Samuel Canwell, at Killaloe, a respectable merchant of Limerick, and who had recently purchased an estate near to his property in the county of Clare. Providentially, Mr. Canwell had left the apartment the moment before the shots entered the windows, or otherwise, it is thought, he could not have escaped the doom prepared for him by the assassins.

The Repeal Association met at Dublin on Monday. The attendance was unusually thin, and Mr. M. O'Connell and Mr. Ray were the only leading Repealers present. A long letter was read from Mr. O'Connell, in which he promised to be at the association on Monday the 25th, when he would submit two propositions: first, to consider of the impeachment of the parties principally concerned in getting up and conducting the monster trial, and, as a preliminary step, making an appeal to the English people, either through the press, or by a personal visit to England; and, secondly, the formation of the Preservative Society of 300—a matter which, he says, is encompassed by great difficulties. An address from the council of the Complete Suffrage Union, signed by Mr. Sturge, was read, setting forth the principles of the Suffragists, and urging on the Repealers to adhere to them. The rent for the week, including a sum of £500 from America, was £838. 16*s.* 3*d.*

Mr. Serjeant Andrews, who attempted suicide on Saturday, by inflicting several severe cuts on his throat with a razor, died of his wounds on Wednesday morning, at his residence at Hampstead-hill.

The *Blundell*, a fine brig, bound to Trinidad, started from Liverpool on Saturday last, but meeting with a succession of heavy gales during the night of Sunday and following day, was obliged to put back, after carrying away foretopmast, jibboom, with all the gear connected with them, besides being dreadfully strained. On entering the Mersey she came in contact with the American ship *Feronia*, and sunk almost immediately off the magazines in 9 fathoms at low water, the crew saving themselves with difficulty on board the *Feronia*, which vessel also sustained considerable damage.

For a few weeks past the blue flag, signifying that no more ships can be admitted into the docks, has been flying.—*Hull Advertiser*.

According to the *Mining Journal*, certain London speculators, or rather, swindlers, have hit upon a plan of procuring shares in new railways and other schemes by applying for them in the name of persons resident in Liverpool, Manchester, &c.

The mortality in the Metropolis continues to augment in the proportion of about 1-31th. The deaths last week were 989; the week before, 960. The ravages of small-pox and scarletina remain about double the average for the last five years. The number of violent deaths was last week 29—five more than the five years' average; of these, a dozen were cases of drowning, nearly all of which, it is to be feared, were suicides; added to which are five or six cases of suicide by hanging.

MISCELLANEOUS.

MR. STURGE—MALTING OF BARLEY.—Mr. Joseph Sturge has published the following letter in justification of the resolution of the firm of Joseph and Charles Sturge, cornfactors, Birmingham, not to sell barley for malting:—"To C. D., Corn Exchange, London. Birmingham, 11th month, 5th, 1844. Esteemed Friend.—Thy letter of the 4th ultimo has the following remark on the notice contained in our last monthly circular:—"The singular revolution you have come to, as to not selling malting barley, has been much canvassed here to-day. I regret it much, and the more so as I can discover no good and sound reason for it."—This observation, and some other circumstances, induce me to give a further explanation why this resolution was adopted, believing that thyself, and many other of our friends, though differing in

opinion, will not condemn a course which results from a conviction of duty. Intemperance produces such an incalculable amount of vice and misery, that I consider it right to use my influence to promote the principles of total abstinence. This I feel the more bound to do, as nearly twenty years' personal experience, and much observation in this and other parts of the world, have convinced me that fermented liquors are not necessary to health, and that those who refrain even from what is termed the moderate use of them, are in consequence capable of more bodily and mental exertion, and exempt from many maladies which afflict others. In accordance with these views, our firm has long altogether declined the sale of malt, or the supply of any grain to distilleries, and converted to other uses cellars which many years ago we let to wine and spirit merchants. Our continuing to take commissions for the sale and purchase of barley for the purpose of malting, has for some years caused me much uneasiness; and I have recently been so fully convinced that it is wrong to do so, that I must have withdrawn from our concern had it not been relinquished. The belief that we are responsible for the means of acquiring, as well as for the use we make of our property, and that we cannot exercise too rigid watchfulness over our own conduct, is compatible with perfect charity towards those who differ from us in opinion. I am, respectfully, JOSEPH STURGE."

EXPEDITIOUS MODE OF CONVEYING GOODS *via* SOUTHAMPTON.—A novel experiment, and one of considerable importance to Southampton, and, as it may turn out, to our merchants also, is about to be tried in the fruit trade. The *Eleanor*, Captain Wickham, from Fayal, has made the passage to Southampton in eleven days, with a cargo of 950 boxes of oranges. By arrangements now completed, the Dock and Railway Companies respectively having acted with considerable liberality, these boxes will be landed at Southampton, and put on the same trucks at the docks which will run on the railway, and on arrival at the Nine Elms terminus they will be horsed and drawn to the warehouses of Keeling and Hunt in the City, the brokers to whom the management and sale of the cargo is intrusted by the merchants about to try the novel experiment. There will, by the new plan, be no removal of the oranges from the time of their being unshipped until their arrival in Monument-yard, the trucks having been built expressly for the purpose. In busy or bad weather, together with adverse winds, it is no uncommon occurrence for vessels to be nine or ten days beating round to the port of London, which, with perishable cargoes, is an object of importance; the whole voyage from the Azores occupying only eleven days in the present instance. By discharging at Southampton, the vessels will sail again instantly, save the detention and risk of a Channel voyage from London, and will be enabled to make three voyages where only two have been practicable hitherto; and as there will likewise be a considerable saving of port and dock dues, lights, freight, insurance, &c., by the vessel terminating the voyage at Southampton, there is no doubt, should the experiment succeed, that other descriptions of produce will be brought to London by similar means by many of our merchants, where time and saving of charges are considered an object. The *Eleanor* arrived on Saturday last at Southampton, between twelve and one, and by six o'clock in the afternoon 950 boxes had been landed and despatched to London; and, had not Sunday intervened, the brokers would have been selling the cargo in London 21 hours after it had been landed at Southampton. It is but justice to state, that every facility was afforded by the Customs in expediting the unloading of the cargo, and the railway directors were so impressed with the importance attached to the result of the operation, that special engines were ordered to be applied, if found necessary, to increase the speed to London; and the result being attended with the best success, will, no doubt, be productive of much increased business to the port of Southampton.

THE TENANT-FARMER.—The present situation of the tenant-farmer is by no means an easy one. With all the advantage of cheap labour, which the superabundance of that commodity in the market gives him, he cannot get a profit at present prices sufficient to repay him for the capital and labour he expends. The small farmer finds it impossible to maintain a family out of his returns; he throws his farm up, and it is added to another or several other farms, from which a man with larger capital thinks he may succeed in getting that which the small farmer failed to get. Thus it is that small farms are continually disappearing, and that farms may be found in this and every other county within whose extended bounds are to be found half-a-dozen homesteads, the once happy, but now abandoned, homes of the diminishing race of small farmers.—*Brighton Herald*.

MONOPOLIST ARGUMENTS.—Thomas Carlyle says that he has never heard an argument adduced in defence of the Corn Laws which was not of a nature, too literally, to make the angels weep. But we have men, of superior powers, who daily speak and write what they mean to be understood as arguments in defence of these laws. These men will admit that plenty of bread is a good thing; also that it is desirable the people should have the easiest access to that plenty. They might as well admit that knowledge is a good thing, and then make and defend a law for the destruction of the printing press.—*Bradford Observer*.

WHO ARE THE TEACHERS.—The people are now the teachers of their rulers. Opinion works up from the lower to the higher gradations of society. Senators and kings but ceremoniously perform the national will. Scarcely ever does it happen that they are in advance of the public mind. From it, but slowly, they gather their information and their decisions.—*Rev. Dr. Hamilton*.

AN EXAMPLE FOR LANDLORDS.—The example set by Sir Harry Verney, in allowing his tenants to shoot over their respective farms, is the theme of conversation in all companies. The farmers' tables ring with praises to Sir Harry. None rejoice more than the Duke of Buckingham's tenants, because none are greater sufferers than they are from the destruction they yearly witness and feel done to themselves by the enormous abundance of game. No person unacquainted with a nobleman's preserves can form any idea of the injury hares and partridges do the whole country.—*Aylesbury News*.

MANUFACTURES AT PERTH.—We understand that a manufacturing establishment here has taken premises to commence the manufacture of the goods called unions, that is, dresses of cotton and woollen, combined by means of power-looms. This is the first attempt at the introduction of steam power to manufactures in this place, and we hope it will be successful, and lead to an extension of such establishments. The prices of handloom-weaving

have advanced a fraction during the last month, and the prospect of the winter trade is here favourable for the workman.—*Perth Courier*.

BELGIAN TRADE.—A memorial was being signed on Thursday last, in Bradford, by the worsted and cotton spinners and manufacturers, to the Board of Trade, praying for the interference of Government with that of Belgium. The memorial states that the Belgian Government has imposed duties upon the English manufactured goods, while those of France and other countries had been admitted at the old rate of duty. This is the return we are to have from the kingdom, the king of which is a pensioner upon England.—*Leeds Times*.

REDUCTION OF DUTIES ON TEA, COFFEE, AND SUGAR.—A reduction of the duty on tea to 1*s.* per pound, of that on coffee to 2*d.* per pound, and of that on sugar to 10*s.* per cwt., while it would afford a very great relief to the labouring classes as consumers, would tend still more to improve their condition by the prodigious impulse it would give to trade, and the consequent demand for additional hands in almost every department of industry which would thus be created. We trust that a movement in this direction will be made speedily and effectually.—*Manchester Guardian*.

GRAND EXHIBITION OF NATIONAL INDUSTRY AT BERLIN.—It is stated, in accounts from Berlin, that the exhibition of national industry to take place in that city promises to be a very grand affair. It was calculated that there would be about 3000 exhibitors, taking all the states comprised in the Zollverein, and that the number of objects would be 30,000.

FOREIGN CATTLE.—Ninety-eight head of horned cattle and 40 sheep have been this week imported by the steam-ships from Hamburg and Rotterdam.—*Hull Packet*.

THE DEATH OF THE LEAGUE.—Cobden and Co. having unexpectedly survived the jokes of the *Morning Herald*, the *New Farmers' Journal* has taken the field, armed with a pocketful of deadly conundrums, one of which was let off on Monday. Here it is:—"Why is a lady's bustle like the Anti-Corn-Law League? Because they wish it to be thought a 'great fact'." If this does not create an explosion fatal to the ideas of the League, the editor has more combustible conundrums in store. Perhaps Cobden and Co., like Davy Crockett's 'coon, will think it prudent to "give in."—*Gateshead Observer*.

ROYAL POLYTECHNIC INSTITUTION.—Dr. Ryan has been engaged in lecturing on acid poisons, the tests for discovering their presence, and the most effectual means of counteracting them. Prussic acid formed the subject of this, his second lecture. Our columns are too confined to follow the learned Doctor through his valuable lecture, but we will confine ourselves to some of the tests and antidotes. The tests by which its presence may be discovered are—first, its odour. Secondly, the formation of Prussian blue. Add caustic potassa to the suspected liquid, then add a protopersalt of iron, and eventually a few drops of muriatic acid. Thirdly, the formation of cyanide of silver, by adding nitrate of silver to the suspected liquid. The cyanide is distinguished by its solubility in hot nitric acid. Fourthly, by the formation of cyanide of copper and its conversion into a diocyanide; this is done by adding caustic potassa to the suspected liquid; then introduce a few drops of solution of sulphate of copper; the cyanide is formed of a yellowish green. On the addition of muriatic acid a white diocyanide is precipitated. And fifthly, by the action of tincture of guaiacum; add the tincture to the prussic acid liquid, a white resin is precipitated. Then introduce a few drops of solution of sulphate of copper, and a beautiful blue results, made more intense by the addition of alcohol. A fallacy may occur here, as tincture of guaiacum will produce a similar blue colour, with spirit of nitric ether. Sixthly, where the odour is not detected, distillation will discover the acid. The antidotes are chlorine, ammonia, cold effusions, artificial respiration, and finally the recently discovered method of the celebrated chemists, Messrs. Smith, of Edinburgh. Their antidote is thus prepared:—Boil sulphate of iron with sulphuric acid and water, and add a few drops of nitric acid. In this way a protopersalt of iron is formed. Give to the patient first of all a solution of carbonate of potassa, and then a dose of the protopersalt of iron. The change which takes place is a most beautiful and effective one, resulting in the formation of Prussian blue, which, being insoluble, is consequently inert.

INCENDIARISM.—An alarming fire broke out on Monday night, about nine o'clock, at a farm called Lilley Hoo, situated about midway between Hitchin and Luton, in Bedfordshire. The farm-buildings, principally thatched, were wholly destroyed, notwithstanding the strenuous exertions of many gentlemen and farmers living in the neighbourhood, assisted by the labouring population, who, with some exceptions, behaved in a most praiseworthy manner. The fire is supposed to be the act of an incendiary.—On Thursday night, the 31st of October last, a fire broke out on a farm called Camps Hill, in the parish of Stevenage, Herts, in the occupation of William Sheffield, which destroyed a barn and other out-buildings, &c.; it was the work of an incendiary. We understand that William Sheffield has been apprehended by Inspector Good, and is now in custody on suspicion of setting fire to the above premises.—*Bedford Mercury*.—On Friday, the 25th ultimo, some men, passing to their work at seven o'clock in the morning, discovered a barley-stack on fire, belonging to Mr. Pearce, of Mauthy. The whole of one side was in a blaze, but it had evidently been ignited only a very short time. Assistance was soon procured, and by means of water, and cutting away the burning portion, the fire was extinguished with comparatively a trifling loss.—On Saturday evening, about 10 o'clock, an incendiary fire broke out in a barn in the occupation of Mr. Gorringe, a farmer at Withdean. The barn was full of corn, and, owing to the inadequate supply of water, there was no means of arresting the progress of the flames. The villagers, one and all, hastened to the spot, and exerted themselves to save the corn, but with all their praiseworthy efforts scarcely a handful was saved. The fire continued to rage during the night. The building was built of flint and tiles, but the flames spread so rapidly that the roof was soon on fire, and in a short time the whole fell in. A young man, named Ledbetter, is in custody, suspected of being the guilty person.—A large rick of straw was on Monday week willfully destroyed by incendiaries, at Box. The value of the rick is estimated at £40. The accused perpetrators of the outrage are stated to be in custody.

PRICES IN AUSTRALIA

(From the *Wife Sentinel*.)

We have been favoured with a sight of a letter from Australia, of date August 10, 1844, to a gentleman of this place, from which we take the following extracts, relative to the prices paid for various commodities and kinds of labour. The information therein contained will, we doubt not, be interesting to our readers:—

"The country is far from being in a good state for any class of men, with the exception of the sheep farmers, who are making fortunes rapidly. Oats are now selling at from 2s. to 3s. per bushel. Wheat from 2s. 6d. to 4s. Potatoes from 30s. to £2 per ton. The four pound loaf, from 5d. to 7d. Tea is from 1s. 6d. to 4s. per pound. Flour is from £9 to £13 per ton. Sugar is from 14d. to 4d. per pound in the country. Brandy, gin, and whisky are still at 1s. per glass. Mutton is from 14d. to 2d. per pound. Beef the same. In regard to sheep and cattle, a new system has been commenced here of mauling the fat down for tallow, which, however strange it may appear, has increased their value to a great extent. Previous to this scheme being put in operation, sheep were sold as low as 1s. per head, and cattle at 12s., but at the present moment sheep realise from 8s. to 10s., and cattle from £2 10s. to £4. Colonial butter is about 10d. per pound. The butter exported from Ireland to this place is perfectly unsaleable. Cheese is generally sold at 10d. per pound. Clothing is now selling in proportion with everything else. Mole-skin trousers from 7s. to 14s. per pair. Striped shirts from 2s. 6d. to 4s. each. Flannel shirts from 5s. to 8s. each. English light boots from 8s. to 10s. per pair; and colonial from 12s. to 14s. What the price of leather is I do not know, but it is considered the best trade in the country. Wages at present are very low. Shepherds from £15 to £18 per annum. Carpenters from £30 to £35, and their victuals. Blacksmiths have from 20s. to 30s. per week, and their board costs them from 12s. to 15s. Shoemakers from 8s. 6d. to 10s. 6d. Women servants £10 per annum. You may give my best respects to every person, whom you know, who intends to come out here, and tell them that it is my opinion that, if they can live at home at all, they are just as well off as we are in this place. If they have less money, they have more domestic comfort, for that is a complete stranger amongst us.

PRICES OF PROVISIONS IN WALES AND JERSEY.—It is satisfactory to us to know that the wages, added to the privileges of the working classes in this vicinity, are superior to those of the same class in many parts of England, while they have house-rent and provisions much cheaper. It may be interesting to our distant readers to learn the prices of the luxuries of living in Carmarthen; our London friends in particular will be astonished at finding that in the market last Saturday might be bought—fine geese at 2s. each; a fine young turkey, 3s. 3d. to 3s. 6d.; a pair of ducks, 2s. 2d. to 2s. 6d.; and fowls from 1s. to 1s. 6d. a couple. Our poultry is certainly not so large as that from Norfolk, but for succulence and delicacy of flavour it is not to be surpassed. Beef, mutton, and pork are to be bought at 4d. and 4½d.; picked joints of the finest meat, 5d. We have a most plentiful year of potatoes; they may be bought, fine and good, at 1s. the bushel, 60lbs. to 65lbs. to the bushel. Fresh butter, 26 ounces to the lb., at 1s. 5d. Eggs are now 24 a shilling; in the summer they are 20. Good heavy oats, 40lbs. to the bushel, are at 1s. 11d. to 2s. Cheap, however, as all this appears to be, we are quite outdone in Jersey, which, being a free port, is enabled to import duty free, from Brittany, one of the cheapest provinces of France, provisions, wines, &c., at very low rates. There (in Jersey) a turkey is 2s. to 3s.; ducks, 1s. 6d. a pair; gunpowder tea, 5s. per lb.; double-refined sugar, 4½d. to 6½d. a lb.; and Brazil sugar 3d. Very good port and sherry at 24s. the dozen; claret, at 18s. to 21s. the dozen; brandy, 4s. the gallon; very fine and old stout, 7s.; Holland, 2s. 10d. to 3s. 4d. the gallon. The prices are still further reduced by the English shilling passing for thirteenpence. Add to all this, there are no taxes, and there is not a toll-bar in the island.—*Carmarthen Journal*.

EDWINTOW FAIR AND FEAST.—On the morning of Oct. 24th, the village crier made proclamation that he had the commands of the lord of the manor to inform the public, that Edwintown fair should be held for one day, "to buy and sell." Not much business was done. There were plenty of sheep in the fair, and many exchanged owners, but, being an indifferent sample, they went off at low prices. Before the Corn Laws made barley dear, and the railroads made travelling cheap, this fair had a notoriety for pigs, and the neighbouring villagers were wont to look to Edwintown fair as an excellent "bristling" mart. Improved modes of transit have made our larger markets ply fairs for all seasons, and, as a consequence, there were very few customers to be found at this pig fair; the few that were sold were quite a bargain.—*Notis Review*.

FREE TRADE MUST PRECEDE EMIGRATION.—We know that, down to the most wretched classes of mankind, "home is home, be it ever so homely." But, if circumstances which cannot be controlled force a removal from it upon the agricultural labourers, is a two or a ten hours' flight by the railroad a harder lot than a six months' voyage upon the ocean? Is it a more cruel fate to be moved ten, twenty, fifty, or a hundred miles from the village of their youth, to Manchester or some other manufacturing town, with the certainty of a comfortable house over their heads and full employment wherewith to clothe and feed them in it, than to be shipped off by hundreds and thousands as emigrants to the antipodes, with all the chances of the winds and waves by the way, and some swampy Eden, it may be, in the wilderness or the desert, to receive them when they arrive at their destination? Out upon the hypocrites who so talk, say we. They strain at a gnat while they swallow a camel. And why? A change of mere locality in England is denounced as the very climax of cruelty, because it is proposed in conjunction with Free Trade. But perpetual banishment from their country is a happy idea, because it is hoped that, by its help, monopoly might rub on a little longer. Let us not, however, be mistaken when speaking on this subject. We are not opposed to emigration when the necessity for it arrives; but it is an ultima ratio which we would not try till then. First let us see what Free Trade will do for the unemployed masses in the rural districts. If it fails, then there will be nothing for it but emigration. But, let it be tried first. Previously, to export our people like so much lumber would be the worst of crimes.—*Liverpool Albion*.

MARKETS.

CORN MARKET:

MARK-LANE, Monday, Nov. 11.—The supply of English Wheat this morning was moderate; the greatest part of it was in very inferior condition, and for such a decline of 1s. to 2s. per qr. had to be submitted to before a clearance could be effected; the best qualities were taken off at the prices of this day week. Though the supply of English Barley was not large, the trade was not brisk, and secondary qualities of Malting were in some instances sold at a reduction of 1s. per qr. Foreign Barley, on the contrary, both for Grinding and Distilling, was in greater request, and an improvement of 1s. per qr. from last Monday was easily obtained; this was particularly the case with Barley in bond, which was in demand in anticipation of a fall in the duty. Beans, both Old and New, were in short supply, and 1s. to 2s. per qr. dearer. Peas were 1s. dearer. The arrival of the Irish Oat vessels is still delayed by the stormy weather; the supply, in consequence, was very scanty this morning, and an advance of 6d. was maintained, but buyers were unwilling to purchase more than to supply their immediate wants.

FRIDAY, November 15.—The supply of all grain since Monday is moderate; there is a small attendance of Wheat buyers, and the trade in both English and Foreign Wheat is the same as on Monday. The demand of English Barley is slow, Monday's prices are supported, but not without difficulty. Foreign, both in bond and free, is held at such high rates as to prevent sales to any extent being made. The value of Beans and Peas is fully maintained. The change in wind has not brought up more than two or three cargoes of Irish Oats. Buyers are holding off in expectation of further arrivals, and the business doing is consequently not large. The sales made are at fully Monday's rates. The duty on Beans and Peas fell 1s. yesterday.

THE LEAGUE.

No. 61.]

SATURDAY, NOVEMBER 23, 1844.

[3d.]

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All Subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive, a copy weekly of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

We beg to inform our subscribers that bound volumes of the LEAGUE newspaper, containing the whole of the first year's numbers, may be had on application at the Offices either in London or Manchester.

Persons wishing to be on the Register next year, as Freeholders for County votes, must be in possession of the property before the 31st of January.

QUALIFY, QUALIFY, QUALIFY.

PRACTICAL INSTRUCTIONS FOR ELECTORAL QUALIFICATION.

The electors for counties are as follows:—Freeholders, copyholders, leaseholders, occupying tenants.

FREEHOLDERS.—The following persons are entitled to vote as freeholders:—1. Any person possessed of a freehold estate for himself and his heirs, or, as it is called, an estate of inheritance, of the yearly value of 40s. 2. Any person possessed of a freehold estate for life or lives of the yearly value of £10. 3. Any person possessed of such an estate for life or lives of the yearly value of 40s., under any one of the following circumstances:—If the estate was acquired on or before the 7th of June, 1832; or, since, if by marriage or marriage settlement, by devise (i. e., by will), or by promotion to any benefice or office, or if the freeholder is himself the actual occupier of the property. In any of these cases it is sufficient if the property be of the yearly value of 40s. Parish clerks, sextons, schoolmasters, Dissenting ministers, and holders of offices have a right to vote if entitled to emoluments of 40s. per annum, arising out of, or charged upon, land, and may be registered as voters in the parish wherein the land is situated. The appointment must, however, be for life, not for a temporary purpose, or at the pleasure of any other party; but an appointment during good behaviour is considered to be an appointment for life. If the freeholder occupy his own freehold property in a borough, of such a nature and value as would confer upon him the right to vote for the borough, he will not be entitled, in respect of that property, to vote for the county. But if the freehold will not confer the right of voting for the borough, that is, if it be not of the annual value of £10, or if it be land without building, the freeholder may vote for the county, though he occupy it himself. And if the freeholder do not occupy his freehold situate within a borough, he may then vote in respect of it for the county, and his tenant may also vote for the borough. Six months' possession prior to the 31st of July will entitle a freeholder to be registered. And if the freehold lands or tenements should have come to him by descent, succession, marriage, marriage-settlement, will, or promotion to any benefice in a church, or to any office, no definite period of previous possession will be necessary.

COPYHOLDERS.—Any person possessed of any lands or tenements of the clear yearly value of £10, whether of copyhold or any other tenure than freehold, is entitled to vote. Tenants in ancient demesne may in general vote as freeholders, if they do not hold by copy of court-roll, but otherwise they will be entitled as copyholders. As freeholders, 40s. per annum will be sufficient; but as copyholders, £10 a year is required. The same period of possession previous to registration is required, in respect to copyholders, as in respect to freeholders. Copyhold property within a borough, if of such a nature as would entitle any person to vote for the borough, will not, under any circumstances, give a right to vote for the county.

LEASEHOLDERS.—The right of voting in respect of leasehold property extends to—1. Any person who is entitled by virtue of a lease made or assigned to him of any lands or tenements for the unexpired residue of any term exceeding a period of not less than 60 years, if the property is of the clear yearly value of £10 above all taxes and charges. 2. Any person who is in like manner entitled to the unexpired residue of a term originally of 99 years, if the lands and tenements are of the clear yearly value of £10. The party to whom the lease was originally made, or a party to whom such lease may have assigned

the original lease, may vote, though not in occupation of the premises. Any sub-lessee or assignee of an under-lease may also vote, but only when in occupation of the premises. Lessees or assignees must have been in actual possession for 12 months previous to the 31st of July, unless the qualification is acquired by any of the modes before mentioned as excepted; that is to say, by the death of a relative, by marriage, by will, or by promotion to any benefice or office. Leasehold property in a borough, if of such nature and value as will give any person a vote for the borough, will not give a vote for the county.

OCCUPYING TENANT.—Any person occupying lands or tenements for which he is liable to pay a yearly rent of £50 is entitled to vote, if not within a borough, and not of such nature as would qualify a person to vote for the borough. In respect of the period of previous possession required, occupying tenants are placed on the same footing as leaseholders; but it is not requisite that the occupation be of the same lands or tenements: different lands and tenements occupied in immediate succession for twelve months previous to the 31st of July in each year will give the qualification.

GENERAL OBSERVATIONS.—Besides lands, houses, buildings, and the like, property and interests of the following description will entitle the owner to be registered and to vote, viz.—tithes, an annuity charged on land, a rent-charge,* fee-farm rents issuing out of an estate in fee; shares in navigable rivers, canals, &c., where the shareholders possess an interest in the soil; tolls of bridges, tolls of fairs and markets, purchases of unredeemed land-tax. Persons who have entered into an agreement of purchase of property, or who have paid any part of the purchase-money, or done any other act in part performance of the agreement, are considered to have equitable estates, and are entitled to vote and to be registered. Joint tenants and tenants in common have each a right to vote, provided the property be of sufficient amount to give to the share of each the value required. Mortgagees may vote, if in actual possession or in receipt of the rents and profits, but not otherwise. Trustees are expressly excluded from voting for any trust estate; the right of voting in respect of trust property is reserved for the *c'estui que trust*. In estimating the value of freehold or copyhold property, the marketable value of the property to let is the criterion to be attended to. If, owing to accidental circumstances, the rent should be less than might be obtained, the property will still give a right to vote. As regards leaseholds, the value required does not depend on the amount of rent. It is to be estimated by the profit which the tenant can make of the property, over and above the amount of rent reserved and any encumbrance charged on the property. The value required is to be "above all rents and charges." Under these words are included all encumbrances affecting the property, but not any public or parliamentary taxes.

BOROUGH FRANCHISE FOR 1845.

In order to secure a borough vote next year, those who occupy premises giving a qualification should immediately see that their names are placed on the poor's rate-book.

A claimant must be rated, or have claimed to be rated, to all rates made during the year ending the 31st of July. If, therefore, his name is omitted from any rate made during that time, he should immediately claim to be rated. The overseers are required to put the name of a person so claiming on the rate last made; consequently, if the claimant suffers two rates to be made before he claims, he will be unable to get upon the former one, and will thereby lose his vote for one year.

No particular form of claim to be rated is prescribed by the Reform or Registration Acts; but the following form may be adopted:—

"CLAIM TO BE RATED."

"To the Overseers of the Parish of _____
"I hereby give you notice that I occupy a _____ at No. _____ in _____ Street, in your parish, and I claim to be rated to the relief of the poor in respect of such premises, in order that I may be entitled to vote in the election of a member (or members) of Parliament for the city (or borough) of _____.

"Dated this _____ day of _____, 1844.
"(Signed) _____
of _____."

Insert the name of the parish, the nature of the premises, as house, shop, room, or as the case may be, and the name of the street, &c., and of the city or borough, also the date. The christian and surnames and place of residence of the claimant should be inserted at full length. Give the claim to an overseer, keeping a correct copy, on which should be written the date when, and the name of the overseer on whom, it was served. If any poor's rates are due for the premises at the time of making the claim they must be paid, or the amount due tendered. Should the overseer refuse to accept the money, or omit to enter the claimant's name in the rate-book, he will be deemed to be rated notwithstanding; but, if the claimant's name be omitted from any future rate, he should again claim to be rated.

THE COUNTIES! THE COUNTIES!

We gather from the letters which reach us from many parts of the kingdom, that fresh hopes have been infused into the minds of our friends since the announcement of the plan for rescuing the more populous counties from the grasp of the monopolists. The counties were regarded as the electoral preserves of the landlords, as sacred as their game covers, until our facts and figures showed that in a large proportion of cases they were more vulnerable to the

* No registration of annuities or rent-charges with the clerk of the peace is requisite. The 3rd Geo. III., c. 34, is repealed.

systematic efforts of the Free-Traders in the towns than many of the small boroughs. The example of South Lancashire has given a new impetus, in a fresh direction, to the exertions of the Corn-Law repealers. As is natural, the movement has extended itself in the first instance into the neighbouring districts of North Cheshire, the West Riding, of Yorkshire, and North Lancashire, where active committees are at work. But it will not stop there. Our friends in the metropolis are rousing themselves to the consciousness of the means within their grasp of returning two Leaguers for Middlesex. From South Staffordshire, a district crammed full of towns, workshops, and furnaces, we hear that an organization is begun, which, if persevered in, will assuredly dispossess the monopolist squires of any share in the representation of that division of the county. In Scotland, too, as we learn from the *Edinburgh Chronicle*, a call is being made upon the Free-Traders to emulate the example of Lancashire; and, although they have not the facility which our 40s. freehold qualification gives us in England, yet we expect that all obstacles in the way of success in several counties will eventually be surmounted by the well-known intelligence and resolution of the Free-Traders of the north. But the good work must not be confined to particular districts. Wherever an individual Free-Trader may happen to reside, be it in Kent, Devon, or Northumberland, let him make it his first duty, after having provided himself with the franchise, to urge all his neighbours and friends, who are favourable to our cause, to qualify themselves with the 40s. freehold. Let him not be deterred by the apparent weakness of our party upon the present register. *Ours is a growing body.* Besides, the register affords an exaggerated idea of the actual strength of the monopolist party. The county registers have seldom undergone a thorough revision. In three cases out of four, they have been left to the care of blundering and partial overseers, to whose lists no objections have been offered in the barristers' courts. But, previous to a League contest for a county, the register will be subjected to a thorough revision, by which all the bad and illegal votes will be struck off the list. Let nobody, therefore, omit to possess himself of a vote from the notion that it will be useless; nor must anybody hesitate to qualify, merely because there happens to be no organization in the neighbourhood for aiding him in the formal business of registering his vote. If every Leaguer in the country will only do his best to secure possession of a 40s. freehold before the 31st of January, and induce such of his friends and neighbours as are Free-Traders to follow his example, we undertake to furnish them afterwards with ample instructions how to enrol their names upon the county list, and to retain it there.

We observe, in some of the monopolist papers, an effort to stigmatize this movement as an attempt to swamp the counties with fictitious or "sa. got" votes; and the old cry of "unconstitutional," which has been raised by the defenders of every time-honoured abuse, is again revived against us. What! is it not constitutional to place ourselves within the electoral pale, by conforming to the letter and spirit of the Reform Act? That act decides that a man, possessed of a freehold of 40s. a year, is entitled to vote for knights of the shire. We say to every unenfranchised Free-Trader who is able to invest £50 at good interest, buy a freehold cottage, and become a free citizen. Lay out as much more as you please, or as is convenient, in the purchase of lands, or houses; but, at all events, let your first investment be in that description of property, and to that amount, at least, which the law prescribes to be necessary to secure a county vote. Our scheme involves no agitation for an alteration of the law: we desire to induce a few hundred thousand persons to conform to the spirit and letter of the Reform Act. Our project requires less of public agitation or exciting demonstrations than of close, earnest, and business-like application; and we hope to see our friends in all parts of the kingdom rivalling the Leaguers of Lancashire, in their quiet but effective mode of carrying out a plan which appears to us, the more we consider the matter, to be by far the most important, from its practicability, of any that has been put forward by the League: a plan which, if persevered in for a few years, will solve the problem of—How can just and equal legislation be extorted from the landowners of this country?

COMING ROUND.

Among the many signs of the progress made by the principles of Free Trade none is more signal than

the altered tone assumed by such landlords as have ventured to meet the tenant-farmers either at their audit-dinners or agricultural meetings. The Marquis of Londonderry, whatever may be his faults as a politician, has always ranked among the first of good landlords in Ireland, and, as a necessary consequence, his tenantry is one of the most prosperous in the sister country. On the 11th of this month he gave a dinner to his tenants at Newtownards, and addressed them at great length on a variety of topics with most of which we have no concern. In the course of his oration he touched upon the Corn Laws, and declared in very plain terms that it is impossible for any Minister to retain them much longer. We quote from the *Northern Whig's* report of his lordship's speech:—

"There was one question which had agitated the country a great deal since the period to which he had alluded, and to which he felt it necessary to allude—he meant the Corn-Law question. (Hear, hear.) And he did solemnly adjure them not to depart from those means to improve their agricultural position which science had opened up to them, lest the question which he had alluded to should be carried. He did not understand how any Minister who thought right to introduce into his policy Free Trade at all—he did not know how that Minister could make corn an exception. (Hear, and cheers.) He implored them to consider that that might not be the case; and, in order to prepare for such a change, he implored them to go on cultivating the soil on which their existence depended. (Hear, hear.) They had seen, during the last twenty years, many changes—they had seen the Minister, by the force of circumstances, by the pressure from without, obliged to follow out a course of policy which was contrary to his mind to pursue; and having seen that, he could not sit down without impressing them with the fact that similar things might take place with regard to the Corn Laws. (Hear, hear.) He wished them to bear in mind that, when every thing else was free, they could not expect that corn alone would be an exception."

This is the declaration made in a speech almost wholly devoted to the advocacy of Sir Robert Peel's Ministerial policy; and similar sentiments were expressed by Lord Castlereagh, the marquis's son, who was almost in terms announced at the meeting as a candidate for office. But, whatever may have been a politician's motive for making such a statement, there can be no mistaking the sentiments of the farmers when the declaration was made. They received it with cheers, and thus virtually disclaimed the mockery of protection with which their order has long been deluded. We doubt not that other farmers would similarly denounce the same monopoly but for the vassalage in which the system of the Corn Laws enables their landlords to hold them. We happen to know that the tenants on the marquis's estate in Ireland are men of great intelligence and rare independence; had the noble lord taken the opposite side and advocated monopoly, his observations would have met a very different reception. The noble marquis further stated:—

"He had always considered the interests of tenant and landlord closely united; he considered the tenant-right, by which the tenant held his farm, the same as that by which he (Lord Londonderry) held possession of his house. * * * Having made these observations, he would follow them up by telling them some directions which he had given with respect to his tenants and his property here. He had given directions to have the estate viewed, and to have his instructions, with reference to it, carried into effect. He was aware that there was a large portion of it much improved, and that the rents were fair and just. But what had he done with regard to a large portion which was out of lease? Why, he had directed his agent to join with an individual tenant, such a one as they might select, and have perfect confidence in, and go through every field that was out of lease, and put a fair value upon it; and when that was done he would flat it; but he would not do so until next year—until he would see whether the Legislature would interfere between landlord and tenant. They had, perhaps, been much pleased with the interesting discussions which had lately taken place in England with regard to leases. The question was different in Ireland. In England the landlords had all the buildings and improvements to make; but in Ireland the case was different. Here the tenant made improvements, and erected the buildings, and was, consequently, better entitled to a lease. When, therefore, the valuation to which he had referred was completed by his agent and one of their own body, there would be no hesitation, on his part, in giving them leases, and so make them doubly sure."

We have nothing to say to political divisions, and we have never allowed party to guide our decisions or pervert our judgment. We had these sentiments as worthy of a beneficent landlord and an enlightened tenantry, without caring to inquire what other opinions on questions of Church and State may be held by the parties. But we think that more importance may justly be attributed to the reception of such sentiments by the farmers than even to their utterance by the noble lord. Here was a collection of men, wholly dependent upon agricultural pursuits, protesting against a system professedly devised for their protection, declaring that they would get on much better without it, and rapturously cheering the announcement of its downfall. And here, too, was an intimation of the benefits which tenant-farmers have to expect from the abandonment of such an unnatural system, viz., such security of tenure as will give them fair returns for every investment of capital made in agricultural improvements. The Corn Laws are thus recognised by practical farmers as the chief cause of the agricultural depression of which they so loudly complain. Capital has been so fet-

tered in its application to land by selfish and capricious restrictions, that the farmer has been in the condition of an artisan condemned to work in fetters. A free trade in corn must be followed by a corresponding adjustment of the terms on which land is held; and the farmers who suffer from the present unequal terms cannot long be held in servitude to the monopoly which has enabled such terms to be dictated. The sophism that the Corn Laws were established for the protection of the farmers has been completely demolished; and even the *Standard-Herald*, or, as the twin-journalism is now designated, "The Goose and Shadow," will hardly venture on its repetition.

The sophism that monopoly was designed to protect the farm-labourer has met a similar fate; we take the following from the *Liverpool Mail*, a paper which has long been conspicuous for its advocacy of what are called high Conservative principles:—

"It is impossible to look over the surface of England without seeing that the land is not half cultivated, not half manured, not a tenth part drained—not turned to one quarter of the advantage which it might be. Whose fault is this? The landowners—the aristocracy—the preservers of game—the demoralizers of the poor—the fine poverty-park and lawn men—the keepers of hounds—the preservers of rabbits, who rejoice in hunters, and whose dogs are better fed and more kindly treated than their Christian hedgers and ditchers, and whom they tempt to steal and assist to transport, or take a degree in felony under a gaol education, which ultimately leads to the same result."

"We have from the first start in life supported the Corn Laws, for the sake of the noblest portion of our countrymen, the agricultural labourers. But if their former happy condition is no longer to be upheld—if they are to have no prospect beyond a union workhouse in their latter days—if they are to be treated as felons, and worse than felons, for no sin or crime but that of poverty—then, we say, we shall not support the Corn Laws one hour longer. If the farmers cannot afford to pay labourers fair wages for such improvements as their farms require, simply because the rents are too high, THE RENTS MUST GIVE WAY! He that has twenty thousand a year must be content to live upon ten thousand, and so on in proportion. The nobleman or gentleman who thinks that the pride of his family is involved in his spending two or three thousand a year upon hounds and horses, must drop the quadrupeds, and devote the expenditure to the amelioration of his labourers. If he refuse to do this, his lands and parks must be transferred to more discreet and charitable owners. He may resist for a while, but it will be foolish and vain. This is too small a country now for fox preserves and pheasant retreats, and rabbit warrens; we want corn, and labour, and industry, and an increased portion of an indispensable article in the present day—common sense."

The want of corn has been the source of the want of labour and industry; for corn is the remuneration for both, and when the price of any article is restricted, the supply must necessarily fall short. As to the want of common sense, Esop long ago described the policy of food-monopolists in the fable of "The Boy and the Goose that laid Golden Eggs;" there could be no better illustration of the old proverb than to impoverish the manufacturers who are the consumers of agricultural produce, and then to look for high rents from the farmers who are its producers.

Until the League commenced its operations, the condition of the agricultural labourer excited less attention in England than that of the Negroes or the Esquimaux. Every attempt to direct public attention to their depressed state was met with an indignant howl of reprobation from the whole monopolist press. But the League persevered: it has brought into broad light the miserable condition of a decaying peasantry, and shown the true results of pretended protection so strongly that none but the self-interested can any longer resist such evidence, and those who were honest dupes are coming round to the cause of truth and justice.

THE BITTER FRUITS OF IGNORANCE.

THE SUGAR MONOPOLY AND THE ANTI-SLAVERY SOCIETY.

It was a grievous spectacle to the reflective friends of the abolition of slavery to behold a section of the Anti-Slavery Society on a recent occasion banded together with ex-slaveowners to uphold the sugar monopoly. We wonder it never occurred to these benevolent monopolists to ask themselves the question, How is it that we find ourselves in union with those who have ever been the most uncompromising enemies of the great object for which our society was established? Wherefore is this new-born regard for the welfare of the negro on the part of those who but a few years ago defended the flogging of negro women with cart-whips? Is there nothing suspicious in these extraordinary professions of humanity? Are they dictated by a kindred spirit with our own, or does there lurk some hidden object in the background? Reflections like these might have saved them the regrets with which they will one day look back on their past imprudence and folly.

It was one of the great maxims of the first and most enlightened leaders of the anti-slavery party, that slavery is *unprofitable* as well as *inhuman*. The late James Cropper of Liverpool, who will be long remembered as one of the most ardent friends of emancipation, and who combined with large philan-

thropic great intelligence and sagacity, proved beyond controversy, thirty years ago, that free labour is *cheaper* than slave labour. This view was formerly considered the strong argument in favour of the abolition of slavery, and it was also the ground of the opposition to the grant of £20,000,000 to the slaveowners, because the gain by free labour, it was urged, would more than compensate for the loss of property in the slave. But what say the anti-slavery monopolists? Why, in effect, "that the great maxim of the early abolitionists is false; that free labour is *not* cheaper than slave labour; that the free negroes in our colonies cannot compete with the cheap slave labour of Cuba and Brazil; that it is, therefore, unchristian to allow slave-grown sugar to be eaten, because slavery and the slave trade will be thereby encouraged."

We cannot conceive a more fatal blow to the cause of the abolition of slavery than this departure from the practical wisdom of the early abolitionists, and it has already been the source, as we shall show, of an amount of crime and misery such as the heart sickens to contemplate.

The rational course to accomplish the great end in view, and the course pointed out by the great and good men who are "gone to their rest," was to convince the slaveowner that *his own interest* and humanity went hand in hand—to prove to him, not by wordy and offensive declamation, but by practical demonstration, that by free labour he could grow a larger quantity of sugar, and at a less cost, than by slave labour. But what course have the Legislature, influenced by the Anti-Slavery Society, pursued? No sooner was slavery abolished in our colonies than the advantages of free labour, about which so much had been said, were not only forgotten, but it was contended that the emancipated labourer ought not to be exposed to competition with the slave labourer. No course could have been adopted better calculated to make free less productive than slave labour, than thus upholding and cherishing the blighting monopoly under which the British colonies have become the worst cultivated countries in the world. In fact, the growth and process of making sugar has undergone little change since it was introduced into the colonies about three centuries ago. On this subject the *West Indian* and the *Globe*, Barbadoes papers, in an elaborate and well-written article observe:—

"It is a most remarkable fact, that the art and practice of manufacturing sugar in the colonies should have been so long stationary, or should have made so little progress towards perfection, while almost every other branch of manufacture has been so greatly benefited by the discoveries which science has made, and by the application of scientific principles to purposes of general utility. This is the more remarkable, when we reflect upon the vast magnitude of the interest involved, and the wealth and intelligence of those persons most deeply interested in this important branch of their staple production. It cannot be that the most decided enemies to innovation, those whose predilections are the strongest in favour of long-established custom, can contend that the present system is so perfect as to admit of no improvement, that none or so little has been made. In point of fact, the process of making sugar has proceeded in nearly the same undeviating course for centuries, and still continues to exhibit the rudest and most destructive features, involving a principle which in its operation subjects the planter to an enormous loss, the full amount of which he has been unable to estimate, because the absence of a better system has left him without the means of comparing its results."

Three centuries have now completed their revolution since the sugar cane was first introduced into the island of Barbadoes, from the Brazil. Considerable improvement appears to have been made in the quality of sugar, between the years 1611 and 1656, the date at which Jamaica first fell into the possession of the British; at which period, it is said, there were only three small sugar plantations established in this Queen of the English Antilles. After the lapse of three centuries of practical experience the manufacture of sugar has effected so little in the shape of improvement, that it strongly tends to confirm the assumption, that the system hitherto pursued is radically defective, and that the evil is inherent and inseparable."

Here is proof enough how little protection has stimulated or contributed to improvements, and how little production has been advanced by monopoly. It would be almost incredible were the fact not so notorious, that to this day the plough is almost a stranger in our West India colonies. The land is still cultivated by scratching it with the hoe; and the Governor of Jamaica, a few months ago, in his address to the Legislature, actually congratulated them on the increasing use of the plough as an era in his administration!

Whilst, however, the British colonies have been slumbering under monopoly, and sinking into ruin and decay, foreign sugar-growers have been highly prosperous—not because slave labour is cheaper than free labour, but because, being exposed to wholesome competition with all the world, instead of living at a distance of 3000 or 4000 miles from their estates, and leaving them to the management of attorneys and agents like the West India planters, they have been obliged to reside on and to manage their own plantations, to practise economy, and to

* The cultivation of cotton by the plough, instead of the hoe, was introduced into the United States about 25 years ago. The result is an increase in the growth since that period of 700 per cent., and a diminution in the cost of production of 60 per cent.

adopt improved modes of cultivation. By these means capital has been accumulated, cultivation increased, new labour called into operation, and that labour supplied by the horrible slave trade. But who is to blame for all this? Who, but the British Legislature and the Anti-Slavery Society, who, by fostering and upholding monopoly, have made slavery and the slave trade profitable.

It were well if the consequences of monopoly ended here; but, as too frequently happens when men lose sight of principles, one error leads to others, and with the best intentions they become the unconscious instruments of crimes as revolting to their own natures as they are horrible to contemplate. Such has been the case in the means resorted to by the upholders of monopoly, to put down by the sword the evil of their own creation—the slave trade.

Sir Powell Buxton estimates the sum spent by Great Britain in bounties, payments to foreign powers on account of the slave trade, and of the armed force in various parts of the world to intercept the traffic, at the enormous sum of £15,000,000; and yet not only have all these efforts entirely failed, but in spite of our exertions the traffic has greatly increased in extent, and in the degree of suffering inflicted upon the negroes. Sir Powell gives the most horrible and revolting details of the existing slave trade:—"Of 400,000 annual victims torn from their homes (says he), one-half perish before embarkation from casualties incident to the seizure, march, and detention; one-fourth die on the passage; one-fifth die in the seasoning: so that there only remain available to the planter 120,000."* He further shows that by far the greater portion of this awful waste of human life is the result of our armed interference to repress the trade. It is impossible to make an exact estimate, but, if the statements referred to are correct, we shall be safe in calculating that, whereas under an open and unfettered trade 120,000 available slaves would be procured by a loss to Africa of 250,000 negroes, the same number now costs that devoted country 400,000 of her sons. For the difference of 150,000 yearly the British squadron is responsible.

These are startling statements, but they rest on the authority of the leaders of the anti-slavery party, and are supported by the testimony of our ablest officers on the African station. The auto da fés of the Inquisition, and the human sacrifices of Mexico to a bloody superstition, fall into insignificance when compared with the appalling cruelties, misery, and suffering inflicted on the negro race by the decrees of a Christian (?) Parliament "under our most religious and gracious Queen assembled." Few, we think, are aware of the horrible truth, that ONE HUNDRED AND FIFTY THOUSAND HUMAN VICTIMS ARE ANNUALLY SACRIFICED AT THE BRITISH ALTAR OF MONOPOLY; a number equal to the entire population—men, women, and children—of the borough of Leeds!!!

Such are the bitter fruits of the false-directed efforts of well-meaning but ignorant statesmen and enthusiasts! We need scarcely ask, is it fitting that such a state of things should continue? Will not the British people sweep away this horrible disgrace to a Christian name and nation? We feel assured they will. But is it vain to hope to put an end to slavery? We answer, No. As sure as there is a just God, slavery will come to an end; but there never was a greater mistake than the attempts to put an end to it by the sword. Such attempts are founded on the most extraordinary ignorance of human nature. Mr. Laird, then whom no man living has had equal means of judging from personal acquaintance with Africa and its people, says, that the interference of our cruisers has been a fearful aggravation of the horrors of the slave trade, and has proved to the negro a curse in place of a blessing. "Our interference (says he) has made it a smuggling trade, and has raised the mortality to from 25 to 33 per cent. The numbers exported are not diminished. Each individual has more to endure; and the number of individuals has increased to twice what it was. The result, therefore, is, that aggravated suffering reaches multiplied numbers." Our interference has made the slave trade a smuggling trade. Can smuggling be put down by the sword? Have we put it down by such means in our own country? How absurd, then, is the attempt to put it down on the death-devouring shores of Africa.

The course pursued to put down smuggling at home is founded in the same error as the attempt to put down the slave trade. Smuggling is the offspring of high duties. The Legislature, first by bounties on fraud and dishonesty in the shape of exorbitant taxes on articles of consumption, excite cupidity—the absorbing passion of bad natures—and then spend millions in the vain attempt to put down by force the evil of their own creation. The smuggler laughed at the great Napoleon, even at the height of his power, as he does now at our cruisers by sea, and our hosts of coast-guards and

customs officers by land, which, at an expense to the country of about a million per annum, cannot prevent him from supplying one-half the silk goods, one-half the tobacco, and a considerable portion of the brandy imported.* The remedy for this evil is palpable enough: render smuggling unprofitable by reducing the enormous duties on smuggled goods. Is not the remedy for slavery and the slave trade equally palpable? Render slavery unprofitable. Let the Anti-Slavery Society retrace their steps, and instead of warring against nature, upholding blighting monopoly, and the putting down of the slave trade by the sword, let them return to the golden maxim of the early abolitionists, that free labour is cheaper than slave labour; for it were a libel on human nature to contend that the slave turned out of his hut in the morning to the crack of the whip, worked under its lash during the day, and taking his allotted portion of food and rest, not as the price of his labour, but as the means of subsistence—mere necessities—given because they could not be withheld, can successfully compete with the free independent labourer, stimulated by the receipt of the whole reward of his toil. We have the best evidence that he cannot; and this is a cheering fact to all who are prone to think that Free Trade has no natural alliance with moral turpitude.

The free labour of Java is a perfect reply to all the assertions in favour of the cheapness of slave labour. Notwithstanding Java has had openly to compete with the slave labour of the whole world, the productions of that island, in the face of low prices (prices varying from 25 to 50 per cent. less than the British planter has obtained for his produce), have increased in a manner without parallel in the history of the world. Independently of its enormous increase of the production of coffee, indigo, and some minor articles, that of sugar only has gradually increased since 1826 as follows:—

1826	23,565 cwt.
1836	607,330 "
1843	1,300,000 "

But we need not travel to foreign lands to convince ourselves of the superior cheapness of free labour. Our able contemporary, the *Economist*, of the 26th of October last, contains a letter from an intelligent West Indian, ridiculing the alarm of the West Indian planters at the recent alterations in the sugar duties, which they assert (in petitions to the Queen), with so small a bounty as 10s. per cwt., will bring ruin on the colonies; in the face of which, their own newspapers contain the following extraordinary facts:—

In the "Jamaica Royal Agricultural Society's Reporter" of June and July last, are contained the particulars of a competition for a prize of £20, offered by the "Clarendon Agricultural Society," "to the manager in the parish making the greatest quantity of sugar at the smallest cost from the 1st of January to the 31st of December, 1843, all things considered." Two competitors appeared, one of whom obtained the prize. The result, as showing the actual cost of the sugar produced, appeared in the *Economist* of the 26th ult., and to which we must refer our readers for the particulars of the calculation. It appears that the successful competitor produced 3105 cwt. of sugar at a total cost (inclusive of every charge except rent of land) of 6s. 9½d. per cwt. In the other case, 2567 cwt. were produced at a cost of 10s. 2d. per cwt. Now, adding one-third for rent, and for freight and all other charges attending transmission to this country, 8s. per cwt.,* we have in the one case 17s., and in the

* The poor West India planters are eaten up with charges: the merchants, who are mortgagees of their estates, monopolize the carrying of the sugar, and charge them £5 to £6 per ton freight, besides exorbitant commissions for the sale of their produce, whilst, with Free Trade, the freight of sugar from Brazil ranges from 30s. to 60s. per ton; from the East Indies, 30s. to 60s. per ton; and from Manila, a distance five times as great as to the West Indies, the freight ranges 60s. to 80s. per ton.

other 21s. 7d., as the price of the sugar here. The prices of foreign sugar of a similar kind now in bond range from 14s. to 20s. per cwt. But if, as suggested by "A West Indian," we deduct the extra cost of overseers and assistants, consequent on a delegated management, the total cost on the spot would be brought down, in these two instances, to 4s. 6½d. and 7s. 5d. per cwt., and, making the allowance for rent and profit 50 per cent., we have the prices here at 14s. 9d. and 19s. 1d. Here we have evidence, upon West Indian authority, of what may be done by the very first effort of competition, extended over only one parish in Jamaica, and with no greater stimulus than a £20 prize.

Talk of slave labour being cheaper than free labour, indeed! In what country in the world shall we find slave labour so cheap as is the free labour

* We are cognizant of a fact which will probably be made public in the forthcoming parliamentary report on the frauds in the tobacco trade. Small quantities of tobacco were purchased in a certain large town at twenty-six tobacco shops; twenty-five of the parcels were adulterated, and only one was genuine tobacco. The duty on tobacco is 1000 per cent. on its value! no small temptation to fraud.

of our East Indian territory? What can prevent that country, which is capable of supplying all Europe with sugar—where the sugar cane is indigenous—where there is abundance of cheap free labour, and a fruitful soil—what can prevent it from growing sugar cheaper than foreign slave-growers, who are forced to pay high wages in the shape of exorbitant prices for slaves? Nothing—nothing but the continuance of blighting monopoly. To uphold monopoly, then, is to uphold slavery.

We have the pleasure of being acquainted with the intelligent "West Indian," the writer of the letter addressed to the *Economist*, and we are happy to know that he is preparing to proceed to the West Indies next year, to demonstrate to the eyes of his countrymen, by actual experiment, that their fears of competition with slave labour are as groundless as was their dread of the results of emancipation. We have no doubts of his success; and we anticipate happier results from his labours than from all the labours of the Anti-Slavery Society, and all the blood and treasure squandered by the Government in the vain attempt to put down slavery and the slave trade by force of arms. God speed the holy enterprise.

In conclusion, we conjure our anti-slavery friends to reflect that there are mightier weapons than the sword; and when this truth shall be again appreciated—when the eternal laws of the Almighty shall be permitted to resume their sway, and take the place of the feebleness and folly of man—when trade shall stretch her unfettered wings to the ends of the earth—when free labour, unshackled by monopoly, shall assume her natural dignity and rights—then will it be manifest that mightier than the sword in crushing slavery are the operations of the simple truth, that FREE LABOUR IS CHEAPER THAN SLAVE LABOUR.

MEETINGS.

GREAT LEAGUE MEETING AT ROCHDALE.

A meeting of the League was held at Rochdale on Wednesday night, in the New Hall, Bailie-street, preceded by a tea-party, which was most numerously and respectably attended. Indeed, so great had been the application for tickets that it was found necessary at the tea-party to divide the company into two rooms—the tables being removed afterwards so as to make room for the whole company in the hall, to take part in the meeting. The gentlemen invited to be present, and who had accepted invitations to address the meeting, were—George Wilson, Esq. (Chairman of the Council of the League), Richard Cobden, Esq., William Sharman Crawford, Esq., John Bright, Esq., and Wm. Brown, Esq. (late candidate for the county); and, in addition to these gentlemen, we noticed the following influential parties resident in Rochdale—Mr. George Ashworth (magistrate), Mr. George Ashworth, jun., Mr. James Littlewood, Mr. R. Schofield, Mr. John Petrie, Rev. Mr. Thorburn (Independent minister), Messrs. Holgate and Roberts (attorneys), Mr. Robert Heape, Mr. Benjamin Heape, Mr. Jacob Bright, Mr. Pagan, Mr. Turner, Mr. Frederick Lane, and Mr. Gibson.

GEORGE WILSON, Esq., in taking the chair, after congratulating the Liberals of Rochdale on the public spirit displayed by them in the erection of the magnificent hall in which the meeting was assembled, said:—Ladies and gentlemen, I do not believe that the most sanguine amongst us expects to be able to introduce any novel topic on the subject of Free Trade this evening, and yet I take it for granted that there is not one here who holds it to be out of place for us again and again to reiterate and express our uncompromising hostility to the continuance—the endurance, for a single day longer than possible, of that iniquitous tax, the food-tax. (Loud applause.) It is true that it has been greatly modified of late in its pernicious influence; not by the influence of the Minister, but by the interposition of a higher and more beneficent Power (applause); but it is abstracting by its operation from the just interest, the just reward, of that large class whose only inheritance at the best is hard and protracted labour, and whose right it is to have a just reward for their remuneration, uninterfered with by any act of the Legislature. (Hear, hear.) We may have few topics that are new to speak of, but we may look back at the ground with pleasure over which we have passed, and with anticipations of hope and certainty to that over which we may have to pass; and, though we may have a strong army of monopolists to contend with, we may draw an assurance from the past, and take courage from knowing that the day is coming which shall scatter to the winds every combination, however powerful, which interferes with the just rights of the people. Ladies and gentlemen, although we have few topics that are novel to speak of, I trust that the experience of the last few months has shown that we are not undeserving of the confidence reposed in us by our fellow-countrymen. I allude, of course, to the efforts made to purge the registration lists, and place the boroughs and divisions of this county in their right, and just, and true position. (Applause.) In the first place, I would express most unqualifiedly my thanks to your fellow-labourer in the good cause, Mr. Charles Walker, of this town—(applause)—without whose constant and persevering assistance we should not nearly have had the gratifying result which has been obtained. Since we first met on the subject of Free Trade, a great many changes have taken place in opinion. A great many of the old joint-stock fallacies which existed in this neighbourhood have been removed. We hear no more of over-production. (Hear, hear.) A great many of those who were loud and confident in their hostility to the Corn Laws, were accustomed to see the charge that all the distress then existing was due

consequences of over-production. Well, we see many of these gentlemen now erecting large mills for the purpose of increasing this production. ("Hear, hear," and a laugh.) We heard also that cheap food means low wages: I see my friend, Mr. Brown, from Liverpool, here, yet I imagine he would not now, with all his influence, induce a certain gentleman there to come forward again now and repeat his opinions on that subject in public. If he did I think he would not find three sensible people who should be listeners who would believe him. (Applause and laughter.) We have seen, since this agitation commenced, the relative positions of the agricultural and manufacturing districts almost entirely changed. While we have had our heavy and unjust restrictions to contend against, they have had their monopolies and their agricultural societies for the protection of those monopolies; yet we have emerged from suffering, while they, according to their own accounts, are sinking into a state similar to that from which we have risen. But the question naturally arises, "Where are their protection societies now? If protection will relieve them from their distress, why are they not meeting in every town and hamlet of the country for the avowed purpose of obtaining more employment for their population? (Hear, hear.) They cannot say that protection is not sufficiently given, so far as the present law is concerned, for during some weeks past the scale, the gauge, has been at its full maximum, and they have had all the protection that Sir Robert Peel intended to give them. (Hear.) And yet the protection societies are entirely out of the field: we hear of cricket bats, and of cricket balls (laughter), and of allotments, and yet not one word do we hear of the meeting of agricultural protection societies for increasing the effect of protection. (Applause.) I have spoken of the registration. We believe it is the only lever by which we shall be able to acquire, without danger, without convulsion, without violence in this country, the total abolition of the Corn Laws. We have devoted years of labour—we have spared no means, no time, no expense—in order that every person should acquire a useful and comprehensive knowledge of the subject with which we profess to deal. We have sacrificed private friendships; we have given up all the usual enjoyments and occupations of men in the same station of life with ourselves; we have appealed to men in the agricultural districts; the doctrines of Free Trade have never been modified to suit the views of this or that politician—they have been maintained in open argument and open debate by my friends on the left (Mr. Cobden and Mr. Bright) in open air country meetings, and in every one of those meetings, except one, the decision has been against monopoly. (Applause.) After speaking of the eminent support, pecuniary and otherwise, at all times given by the Free-Traders of Rochdale to the League, and of the desirability of the county having a commercial representative such as Mr. Brown, who had a majority at Rochdale in the late contest, the Chairman proceeded to caution against those men who it was pretended were Free-Traders, and yet would not join the League: they were not to be believed: there was no neutral ground. (Applause.) The battle of Free Trade must be fought on Free-Trade principles alone; and the man who should strike his opinions on the day of trial, under any pretence, was little better than a monopolist. (Loud applause.) They had petitioned, memorialised, and sent deputations in vain to Government for the repeal of this law; they had now changed their course of action—they

were now determined to work out their object through the registration courts, and, calling upon their friends who could afford it to secure a vote, they would become independent of Ministerial caprice, or the patronage of lofty names: they were determined to rely upon their own strength, and when the day of contest should come they would thus be able to measure strength with their antagonists, and obtain for the people of this country the second charter of their liberties—unrestricted commerce. (Loud cheers.)

Mr. COBBEN, M.P., was received with loud and protracted cheering. He spoke as follows:—Mr. Chairman, Ladies and Gentlemen,—I was saying to my friend Mr. Bright that I never spoke so badly any where as at Rochdale, and I never came here yet that I did not give you a very bad speech, and a very short one; I promise you that I shall do no more to-night, and I can also tell you what is the reason. When I have to speak, I like to fancy, at all events, that I have somebody to be convinced, or somebody opposed to me: but I always have the impression that at Rochdale your minds are pretty well made up on the subject of the Corn Laws; and your kind reception of us to-night convinces me more and more that I have no work to do here. (Applause.) It makes no matter what our errand may be. In going to some places to beg money one has to brace up one's nerves, and get up a face for the occasion; but when we come to Rochdale to beg money—though I am happy to say we have not come to beg to-night (applause)—I am always sure to be told that the money has been all subscribed and collected in Rochdale some days beforehand. (Applause.) And now, when our object, as my friend in the chair has said, is to induce as many people in Rochdale as possible to become freeholders, and qualify themselves to vote in this and the neighbouring divisions of counties, I am told that an active canvasser in the room has a book in which there are already down somewhere about one hundred names of persons intending to become freeholders, so that our work is done before we begin to talk about it. (Applause.) Our chairman has told you correctly that the labours of the League have hitherto been those of preparation; that is, they have been trying to convince the minds of their fellow countrymen that Free Trade is a good thing, and the Corn Laws a very bad one. But something more than that must be done before we can convince the House of Commons. Only one argument goes down in that House: it is, as Mr. Gibbings once said, a majority; no other argument but a majority goes down there. (Applause.) Now we want to alter the majority in that House; and that is to be done out of the House and not in it. It is to be done not merely by converting some of those who make members of Parliament, but by adding as many as possible to those who are qualified to elect representatives. Hitherto we have been an Anti-Corn-Law League, instructing the people and agitating them about Free Trade; now, I really think we are going to take my friend Sherman Crawford's business out of his hands, and advocate an extension of the suffrage. (Applause.) We want to persuade our fellow-country-

men to buy the property that will qualify them to vote; and I most sincerely wish that every head of a family in this county was worth the money necessary to buy that vote. But it is much easier done than many people suppose. Another light has dawned upon us within the last few months. We pledged ourselves some time ago to contest the boroughs and try what we could do to gain them; but it never occurred to us that we could win counties in this country. And yet, with 252 county members in the House, and not six of them voting for Free Trade, it has occurred to us that, unless we can make some change there, we shall not be likely to get a majority in that House. (Hear, hear.) Now, I believe, the counties may be won in many instances, as I have before said, much easier than the little pocket boroughs. There has been a great misapprehension—both as to the nature of the county representation, and the means by which votes may be had for a county. We have such a superstitious notion about landowners and land, that people in the towns have tacitly agreed to allow that, to a certain number of lords and squires, who dress in top-boots, and waste most of their time in hunting or worse idleness, belongs the county representation,—that this representation belongs to a totally different class from the town representation. Now, this is the old superstition derived from feudal times, which it behoves us to get rid of. (Applause.) What is the county representation? Not the representation of acres, or cattle, or sheep. There can be no interest in a county apart from the interests of the towns within that county; for counties without the towns contained in them would be about as valuable as the unclaimed land in New Holland. (Applause.) The counties belong to the towns, and not the towns to the counties; and to the towns ought to belong the county representation. (Applause.) I believe England is the only country in the world having a constitutional form of government, where the distinction has been kept up of votes for counties and votes for boroughs; in all other countries with which I am acquainted the votes are given from sections of country, or by a population of particular districts; but in no other country is the absurdity continued of sending one description of representatives for the towns and another for the counties. We have derived this from our own feudal system; it sprung up at a time when there was a general belief, and when probably that belief was founded on something like fact, that there was an antagonism between the interests of towns and the interests of counties; in fact, when our representative system first dawned in this country there was an antagonism between towns and counties. The towns were the residences of men who had attained a certain amount of freedom, having escaped from the clutches of their feudal lords; the counties were still in their hands; and whilst the towns sent up their citizens, their burgesses, to vote in Parliament, the feudal lords and the counties sent up their knights of the shire to vote in Parliament also; and they were at times very much at war with each other, having separate and distinct rights. But all that is gone by; nobody pretends now that the people in counties can have different interests from those in boroughs; and what I want to bring to your conviction is, that, as there is but one common interest in country and town, you have an undoubted right to take a part in the representation of the counties; and, in fact, it cannot be a representation of the county unless it represents the large towns in the county. (Applause.) Now, there has been another great misapprehension: people have had an idea—"Oh, it's

out of my power to be an elector for the county; it costs so much to be an elector for the county, I shall never be able to get a vote." (Hear.) They have a notion that it must be a rich man with an estate to vote for a county, or somebody renting at least fifty acres of land. Now, a vote for a county may be much more easily gained, and much more cheaply kept, than a vote for a borough. How few of you in this borough, now, can afford to take and to keep a £10 house; that is, how few to what there ought to be. (Hear, hear, hear.) But how many more of you can manage to lay out £10 or £50 in buying a cottage, or a share of a cottage, and getting 7 or 8 per cent. for your money. It is your own; the purchase-money is invested instead of putting it into the savings' banks; you get your interest and your vote besides; and you have not to pay something additional every year, but the investment is paying you something additional every year instead. (Applause.) Now, seeing how much easier it is to have a county vote than a borough vote, we come here to agitate, to try to induce you to get as many county votes as you can. (Applause.) Don't let us merely talk about theories for getting the franchise in some great sweep, which can be carried some day, I don't know when; but let us do something as well as talk; let every body who can manage to get a vote for the county, get it as soon as he can, and it will help him to get every thing else right and just that he wants to get. (Applause.) A little while ago there was an election for North Lancashire. Well, Mr. Townley Parker, a leading man amongst the squires, not a very wise man, you suppose, —it does not require a very wise man to lead that order—(applause and laughter),—in addressing the constituency at one of the towns, said—"I should like to see any one come forward here to oppose Mr. Talbot Clifton. Look at the requisition that has been presented to him; it is signed by people whose income amounts to £400,000 a year; and I should like to know who would contend against such an amount of influence as that." Nothing so easy as to contend against it; and I'll show you how. £100,000 a year; how many votes will that give the landowners? for that is what he meant? (Hear, hear.) We know that £50 a year gives a vote; a rent of £50 gives a vote to the tenant, and that vote the landlord puts in his pocket along with the rent. (Applause.) But farms are not divided now into £50 each; it is not convenient to do so. Mr. Talbot Clifton's father finds it necessary to make up his land into farms of 400 or 500 acres, and to get Scotchmen with money to manage them in order that he may get his rent. Now, I'll suppose that they have this £100,000 a year let in farms of £100 a year each, and that will give them their 4000 tenants-at-will; and we'll suppose that they command the votes of all of them. This £100,000 a year of landed property represents a capital, at thirty years' purchase (which land is worth), of twelve millions. Twelve millions of money, paying £100,000 a year of rent, let to 4000 tenants-at-will at £100 a year, gives 4000 votes. Now, let us see how many votes may be owned in the towns in North Lancashire—Blackburn, Lancaster, Preston, Clitheroe, and the rest—and what will they cost? Why, 4000 votes at £50 each, of capital, mind you (for you may buy a vote for that sum, I mean the property

that will give you a vote, quite easily), 4000 people might qualify themselves at £50 each of capital, which would be £200,000. Thus, the mere investment of £200,000 in cottage property in the towns of North Lancashire, would just give the same power to the owners of that property in the polling booth as Mr. Townley Parker and his brother squires get by investing their twelve millions in the land. (Applause.) Well, now, if these squires will come out, and swagger and point to their requisition, and say—"See what an amount of property it represents, how can you stand against such an amount of influence as this?"—I say, "Town against country—plain pantaloons against top-boots and breeches, if you will." (Loud applause and laughter.) And I have no doubt, if we can only raise our fellow-countrymen to that feeling of self-respect which I long to see within them, that the towns are better prepared now to make a fight, in this constitutional and peaceful way, against the squirearchy who are attempting to retain a portion of that old feudal barbarism which is exploded in every other civilized country in the world,—money for money, in the polling-booth,—than ever our ancestors were when they knocked them out of those old castles of theirs, and brought their houses about their ears. (Loud applause.) Now, we shall be told that this is very unconstitutional, if it is not illegal,—that is, that we should be adding to the constitution of the country. Why, what does Sir Robert Peel say? "Register—register—register;" and we are but taking his advice. (Loud applause.) But you cannot register—register—register till you have obtained a qualification to be put upon the register. Now, the very plan that he proposed for increasing his strength, and the strength of his motley party in the polling-booth, is the plan we propose in our case; but we don't endeavour or intend to do that which the monopolist lords and squires have done,—that is, not to make fictitious, or put spurious and fictitious votes upon the register. (Hear, hear.) We have no convenient gamekeepers, or park lodge-keepers, whom we can cram on,—no sons, or brothers, or nephews of farmers, whom we can compel to register, and to swear that they are partners, if necessary, when they are no more partners than I am. (Applause.) What I say is this: lay out £40 or £50 in property which will bring you in £4 or £5 a year, and get yourselves upon the county register, and have a vote. Now, I was not born and bred a lawyer; but I will defy all the lawyers in the land, including Mr. Smith, the Irish Attorney-General—(loud laughter)—to prove that there's any illegality in a man buying a freehold property that will give him a vote, along with interest for his money. (Applause.) Whether it is constitutional or unconstitutional I don't profess exactly to understand; for I never yet knew any thing good in this country got—whether it was abolishing the old borough-mongering system, or getting rid of Catholic disabilities, or of the Test and Corporation Acts, or abolishing the hanging of people for a matter of 6s. (loud applause),—I never knew any thing good of that kind accomplished in the shape of reform, but there was one party in the state—that party who used to be led on by the venerable Lord Eldon—who were always sure to get out their white pocket handkerchiefs, begin a-crying, and declare that if that measure passed the constitution would be irretrievably ruined. (Loud applause.) Now, I don't profess to know what is constitutional; but if there be anything unconstitutional in becoming a county voter, I think, as there happen to be already a great many 40s. freehold-

ers, the constitution has been pretty much tried in that point already. (Applause.) But I would guard you against supposing that there is anything like trick, or manoeuvre, anything savouring of finesse, in endeavouring to increase the voters on the register. It is in accordance with the spirit, as well as with the letter of the law, that men should aim at becoming voters. Why is 40s. mentioned, and not £10, as it is, unhappily, in Ireland, as Scotland? Why, because it is considered that an Englishman, having the intelligence, and the spirit, and the desire to possess 40s. a year of interest for an investment, will be a prudent, careful, thoughtful man, who will be likely to send proper representatives; and, therefore, the qualification is fixed at that amount. (Applause.) It holds out an invitation to every man who has the means to qualify himself, and become a voter for representatives in Parliament. And I cannot imagine anything more calculated to do good to that honest and large class of operatives, who cannot afford to live in a £10 house, and who yet ought not to be excluded from the franchise; I cannot imagine anything more calculated to raise them as a class in their own estimation (and you cannot raise a man unless by raising him in his own estimation), than by inducing and persuading as many of them as possible to possess themselves of the county franchise by investing their savings in a freehold purchase. (Applause.) You thus do good not only to those who are encouraged to save money with such a prospect, but to a large class besides, amongst whom you scatter men who have themselves obtained a vote, and who will act as missionaries in trying to induce those with whom they work—stimulating them by example and by a spirit of rivalry also to become freeholders, and thereby have a vote in the representation of the county. (Applause.) After a few general observations upon the Corn Laws, the hon. gentleman concluded his speech, and sat down amidst enthusiastic cheering.

WILLIAM BROWN, Esq. (late candidate for South Lancashire), said, his friend Mr. Cobden had told them that, on the occasion of the late contest, they went on a "forlorn hope." Such was the fact: they were repulsed, but they were not defeated. (Loud cheers.) He felt convinced, after the care taken in the registration, that, whenever another contest should take place, they would be able to return not only one, but two candidates. (Applause.) He very much questioned whether they should not gallop in to the victory without the enemy daring to take the field and fire a shot. (Laughter and applause.) During his late canvass he stated on several occasions some facts regarding the commercial position of this country with the United States of America, and, with their permission, he would now further allude to that subject. In 1805, 1806, and 1807, our exports to that country were nearly £3,000,000 per annum. The population of the country was then six millions. It was nearly one-third of the whole export trade of the kingdom, if we took the official value. Embargoes, orders in council, and other decrees, interrupted the trade for several years after that; and in 1815 came those abominable

Corn Laws—laws which were daily shutting us out of the best markets of the world, and, by inducing retaliation, were a positive injury not only to the manufacturers of this country, but to the parties for whose protection and advantage they were designed. (Applause.) Looking at the intercourse of this country with the United States from 1833 to 1837, he found that our exports had increased from £7,900,000 to £8,400,000, while in the succeeding five years they had fallen to £6,467,086, and in the succeeding year (1842), to £3,528,000. (Hear, hear.) And when he told the meeting that our Corn Laws, our heavy duties on tobacco and timber, had induced them to retaliate by encouraging manufactures at home, so that it had recently been ascertained, on the authority of statistics collected by Government itself, that those home manufactures amounted to £50,000,000 sterling per annum, and that they had engaged at work no less than 2385 fulling mills, and 1420 woollen manufactories, it would be seen to what an extent we had been injured by our unwise and insane protective policy. (Hear, hear.) But the markets of the United States would not have been long limited to even this population: the population there was increasing at the rate of thirty-five per cent., and ere the end of the century would probably be equal to 100,000,000; and these were people we should not have sacrificed our trade with, when the only obstacle to their continuing to deal with us was the condition that we should take in payment that which alone they were able to pay with. (Hear, hear.) He might give some idea of what our trade with the States might ultimately have reached when he told them that one of its rivers alone (the Mississippi), with its tributaries and streams, had a shore to which our goods might have been carried of 58,000 miles. (Hear, hear.) And did the landed interest pretend that our trade with that country would not have promoted their prosperity? Why, commerce had made them what they were (hear, hear, hear); and upon what principle would they argue that its further prosperity would work to their injury? It might be interesting to consider what a people under prosperous circumstances could consume of agricultural produce; and he found it stated that the consumption of the people of the United States amounted to about 27 bushels of grain per head, with 5 bushels of potatoes, while the consumption of this country was only 16 bushels of grain, with a proportionate amount of potatoes. (Hear.) The landowners fell into the error of supposing that the consumption of the people was a fixed quantity; the example of the United States showed that the consumption of a people in food, as well as of other things, was in proportion to their means. (Hear, hear.)

JOHN BARNET, Esq., M.P., next addressed the meeting, and forcibly pointed out the practical illustration of the truth of Anti-Corn-Law doctrines afforded by the depression and improvement of trade, in conjunction with good and bad harvests, within the last few years. He said it was within the memory of all that the late period of bad trade commenced with the failure of the harvests; and then, when the season of Corn-Law protection, of high prices to agriculture, and great excitement among landlords because rents were constantly rising, passed away, and a power infinitely above all human power, infinitely more benevolent than human governments, stepped in and gave to this country abundance from its own soil—when the sun shone and the rain fell, and the labour of the husbandman was repaid by the bountiful profusion of the earth—when, in fact, dealers in famine (for they are nothing else) were baffled of their prey (loud applause)—you found all these bad symptoms disappearing, and, as if by magic, the country rose from its depression, and exhibited a state of things such as you had not known since the similar period which existed in the years 1835 and 1836. (Hear, hear.) I cannot understand how it is, after this, that there should be certain manufacturers in this town in favour of the Corn Law. (Applause.) During the last county election I spoke to a gentleman in the British School, then one of the polling booths—a gentleman who, I believe, always goes with our opponents. I was endeavouring to reason with him, and really it seemed a very foolish thing (laughter); and I asked whether it was not possible for us manufacturers all to unite and hold one opinion on this great question. I believe he is a partner in the very largest cotton concern in this town. And he had the simplicity to state that in his opinion, if the Corn Laws were abolished, the people of this country would be very like what their ancestors were a long time ago—that, if a man had a coat when he was married, the same coat would have to last him till he was buried. (Laughter.) He held the opinion, that by some extraordinary combination of circumstances which he could not explain, and which nobody else can understand, that the working people all over the country would somehow or other be quite unable to buy clothing if they got their food for anything less. (Applause and laughter.) You may be sure I was not disposed to enter into a long discussion with a man who held an opinion like this. I should think, after the experience of the last ten years, that man's case must be set down as a very hopeless one. (Laughter.) But, if the ranks of any very ragged man to discover which way the wind will blow when the discussion on this subject is gone on a year or two longer in the country. I believe no man has ever yet been able to assign any cause for the late period of depression but the recurrence of bad harvests; and the existence of a Corn Law prevents us from removing the evil effects of those bad harvests. (Applause.) Speaking of the decay of the woollen trade in Rochdale as the consequence of protection, Mr. Bright said, had it been that another trade, cotton, had been introduced there, which was almost entirely an export trade, the town and district would have gone to ruin. The cotton manufacturers were now almost all going into the cotton trade. Why? Not because they liked it, but because there was no field for them in their own trade. And yet there were men in this town who would stick a finger to remove that tariff, and the Corn Law caused it. (Applause.) Contemptible fellows! such as they, the country would soon be in a state of anarchy. They had heard the course about to be taken by the League. They had been charmed and with stimulating insurrection. Abandon everything which could countenance such a charge, and would lay hold of that truly constitutional weapon, the electoral franchise, and would lay claim to the county

representation (hear, hear); and, if there were any truth in the opinions they had formed as to the prevalence of Free-Trade principles, the bulk of the middle and working classes would unite with them. (Applause.) He was delighted to think what an outcry there would be in a few months, when they found the West Riding of Yorkshire and North Cheshire wrested from the monopolists. Squire after squire, noodle after noodle (laughter), would rise to protest against the unconstitutional proceedings of the League, and would call on the Secretary of State to interfere. (Hear, hear.) But when those counties, the seats of the manufactures, were secured, and the system was extending to Warwickshire and other large midland and southern counties, the monopolists would take alarm, and surrender the question of Free Trade in corn, in the hope of preventing further progress in that direction; but he hoped that, having once obtained possession of a weapon so powerful, Free-Traders would not so easily resign it. (Applause.)

MR. SHARMAN CRAWFORD next came forward, and was received with great applause. In the course of his address he alluded to the expressions which had fallen from Mr. Cobden relative to the registration, and said:—He rejoiced to hear from his hon. friend the course which it was the intention of the League to take in reference to the franchise. He had had the honour of his support in the House on the Suffrage, and he was happy to see that he was now making an improvement on his (Mr. Crawford's) attempt: he was trying to bring about practically, by means of an existing law, what he (Mr. Crawford) was attempting by a more circuitous route. (Hear, hear.) If there was anything calculated to obtain for the League the enthusiastic support of that portion of the working classes which had hitherto held aloof, he should think it was their conduct in this respect. (Applause.)

The meeting, which did not break up till a late hour, was characterised by the best feeling throughout; and at its conclusion a vote of thanks was given to the gentlemen who had taken part in the proceedings.

ANTI-CORN-LAW LECTURES IN WILTSHIRE.—A second lecture on the Evils of the Corn Laws was delivered by Mr. Falvey, in the Independent Chapel, Malmesbury, on Monday evening. The chapel was crowded—every seat being occupied—and many standing at the door for want of sitting room. Henry Gale, Esq., who stands so high in the estimation of his townsmen for his invariable defence of the interests of the poor and the rights of labour, was again called to the chair. He said that, although labouring under considerable indisposition, he had attended that meeting because he had the fullest confidence in the potency of Free Trade for increasing the happiness and prosperity of the people. He (Mr. Gale) was convinced as firmly of the truth and goodness of commercial freedom as he was of any demonstrated fact. He believed in it as faithfully as he believed in Scripture, because freedom of exchange with other nations was in accordance with the language and commands of Scripture. After expressing his pleasure at the numerous attendance, the chairman introduced the lecturer to the meeting. Mr. Falvey commenced by expressing his thanks to the Rev. Mr. Whitmore, for the use of the

chapel on that occasion. He said, the most fastidious casuist must admit that the question of Free Trade involved the best interests of all classes of society, and must, therefore, be worthy the attention and consideration of every philanthropist and Christian. He had often lectured in schools and chapels, and the ministers, directors, and congregations had never regretted having lent them for so righteous and all-important a purpose. Freedom of industry was not only an economical, but a moral and religious question; and in this view of the case he was borne out by more than a thousand Christian ministers of all denominations, who, in Manchester and Edinburgh—in public conference assembled—had entered their solemn protest against the continuance of the bread-tax. Mr. Falvey then entered into the general question, as it relates to the farmer, the labourer, the manufacturer, and artisan; and proved to the evident satisfaction of his hearers that each and all of them had suffered, and were suffering, from the injurious effects of the corn and colonial monopolies. At the close of the lecture, which occupied more than two hours in the delivery, Mr. Gale again addressed the meeting, urging upon them the necessity of using all legal and constitutional means for the establishment of Free Trade and the destruction of monopoly. Votes of thanks were then given to the chairman and lecturer, and to the Rev. Mr. Whitmore for the use of the chapel. A vote of thanks was also (on the suggestion of Mr. Gale) given to the National Anti-Corn-Law League, for their great exertions in favour of Free Trade, for the instruction afforded the country by their lecturers, and for their successful efforts in the registration courts.—*Wiltshire Independent*.

WINCHESTER, Nov. 15, 1844.—(From a Correspondent.)—Last Thursday evening, Mr. Falvey delivered a lecture on the Corn and Provision Laws in St. John's House, in this city. Notwithstanding the unfavourable state of the weather, the attendance was numerous and respectable. The lecture was exceedingly instructive and convincing; expressions of approbation were given repeatedly during the delivery of it; and at the conclusion the whole assembly rose and gave three hearty cheers for Free Trade and Mr. Falvey. Though the lecture was more than two hours long, and though eleven o'clock had nearly arrived, the company, I believe, would have cheerfully remained an hour longer to listen to the arguments and anecdotes of the eloquent and able lecturer. The impression left on the minds of the company is deep, and in perfect unison with the objects of the League.

AN INQUIRY INTO THE EFFECTS OF ENGLISH LEGISLATION UPON AGRICULTURAL WAGES, PROFITS, AND RENT.

By A BARRISTER.

(Continued from page 102.)

CHAPTER VII.

Seventh Period—From the Passing of the Poor Law of 1834 to the present Time.

SECTION II.

We have seen that the necessary expense of a labourer's family consisting of six persons, the father,

mother, and four children, was estimated in the time of Charles II., by competent authorities, at 10s. a week, or twenty-pence a head. It follows that the necessary expense of a family like Robert Crick's, consisting of seven persons, would at that time have been 11s. 8d. a week. We have also seen that the average price of the Winchester quarter of wheat, for the 20 years from 1686 to 1685, was £1. 16s. 7 1/2 d., and from 1686 to 1705, was £1. 16s. 3 1/2 d. The average price of wheat per quarter during the quarter ended Lady-day, 1842, was £3. 0s. 7 1/2 d., or very nearly double what it was when 10s. a week was the necessary cost of subsistence of a labourer, his wife, and four children.

It might be shown that most of the other articles on which the labourer expends his 13s. 9d. (with the exception of tea and sugar) have increased in at least as great a proportion as wheat. Thus Richard Dunning states the labourer's house rent in 1698 to be upwards of 4d. weekly, his fuel not to be less than 3d.,* being about one-third of the sums specified in the above-cited account of the weekly expenditure of Robert Crick. Dunning indeed states, in his pamphlet referred to,† that the labourer's "full wages in some parts of the country (Devonshire) are, weekly 2s. 6d.; in others, 2s. 8d.; in some places less; and where more is paid, house rent and wood are dearer." "But this," observes Mr. Craik, "apparently, must have been his money wages only—what he received in addition to his diet, which, it will be observed, is charged, in the above account of his expenditure, only for Sunday. This circumstance, strangely enough, appears to have escaped Sir Frederick Eden, who, in his work on the state of the poor, assumes, from what is here stated by Dunning, that in Devonshire, in the latter end of the seventeenth century, a working man's income was only about £6. 10s. a year, and labours through a long quarto page to reconcile this account with those of other contemporary authorities—with that of Sir Matthew Hale, for instance, who, as formerly noted, computes the necessary expense of a labourer's family of six individuals, in Gloucestershire, about the time of the Restoration, at £26 a year; and with that of Gregory King, who, as we have just seen, estimates the ordinary income of a labourer, having a wife and two children to support, at £15, within a few years of the very time when Dunning's pamphlet was published. If we suppose the cost of the Devonshire labourer's food to be equal to the amount of his wages, Dunning's statement will very nearly agree both with King's and Hale's. In that part of the island, where there were no manufactures, and where living was cheap, it may be supposed that wages would be rather below the average."‡

It is abundantly evident from what has been said, that even the money wages of the agricultural labourer have

hardly, if at all, increased for more than 150 years; his actual wages, we need scarcely add, have consequently very much decreased. Ten shillings a week have been shown to be the means of subsistence of a family of six persons about 150 years ago; and, at the moment at which we write, the number of families of agricultural labourers in England whose whole amount of wages is less than 10s. a week very far exceeds the number whose amount of wages is greater than 10s. a week. Let us now endeavour to discover what has been the fate of rent during that same period of time: whether it has increased or diminished, or remained stationary. It so happens that we possess, in parliamentary papers, the means of performing this investigation with a more than ordinary degree of accuracy. In the Population Abstracts of England and Wales, 1801-1831, is given the annual value of the real property as assessed April, 1815; and the returns moved for by Mr. Charles Villiers in 1843 give the annual value of real property assessed to the property-tax for the year ended April, 1843; also the quota of land-tax assessed on each parish for the year 1798, under the act 38 Geo. III., c. 5. This quota of land-tax was the same as that levied in 1695 (the last year in which the land-tax was assessed according to the "full true yearly value at the time of assessing thereof"), viz., 4s. in the pound upon the full true yearly value of the property in that year. The rental of 1695, taken then at five times the land-tax of 1798, will be about the same approximation to the truth as the property-tax assessments of 1815 and 1843; and the proportions rather than the actual amounts being what we want for the present purpose, the results thus obtained may be considered as possessing a high degree of accuracy.

These returns, however, are made out with so little uniformity, that it is impossible to give almost any district complete; the same name being in one return attached to a parish, in another to a township or tithing, or part of a parish, so that the returns in the Population Abstracts of 1815 often do not correspond to the property-tax returns of 1843. This circumstance reduces the number of parishes very much in some of the districts which we have selected.

It will be recollected that wages are stated to be higher in the Blandford division of Dorsetshire than in not only the other parts of Dorsetshire, but in Somersetshire and Wiltshire; and that Mr. Alfred Austin has stated his opinion that, were the case accurately investigated, it would probably be found that in Somersetshire the la-

Average increase per cent. from the year 1815 to the year 1843

On looking carefully over these tables, it will be observed, 1st, That the rise of rent is 200 per cent. less in the Blandford division of the county of Dorset, where the labourer is stated to be better off, than in the Bridport division of the same county; 2nd, That in the county of Somerset, where the labourer is stated to be worse off than in either Dorsetshire or Wiltshire, the rise of rent is more than double what it is in Dorsetshire, and nearly treble what it is in Wiltshire; being, upon the average of these fifteen parishes in the Chepton division of the county—which have not been picked out, but taken simply because they were the only ones the descriptions of which corresponded in the returns of 1815 and 1843—no less than 909 per cent. from 1695 to 1843. The average increase upon about double the number of parishes which we calcu-

lated for the time between 1695 and 1843 was quite as large. We shall be enabled to throw further light on this subject in the next section.

It appears from the parliamentary returns of the annual average price of wheat from 1646 to 1841,* that the average for the 80 years from 1690 to 1769 was 39s. 8d. There is reason to believe that during this period there was scarcely any rise of rent. "It is a remarkable fact," observes Mr. Joseph Lowe,† "that from the beginning of the century until towards 1770, they had hardly experienced any rise." Mr. Lowe then quotes the following passage from the great agricultural authority, Arthur Young:—"A neighbour of mine in Suffolk," says Mr. Young (Inquiry, p. 102), "who inherited a considerable landed property, informed me that, in various conversations which he had, between thirty and forty years ago (between 1770 and 1780), with a relation far advanced in years, and from whom much of that property was derived, that much surprise was expressed at the rise of rents, which then began to take place. Through the long period of his relation's experience no rise was ever thought of; and lease after lease, in long succession, was signed without a word passing on the question of rent. That was an object considered as fixed; and grandfather, father, and son succeeded without a thought of any rise. In many cases landlords were much more apprehensive of losing a tenant at the old rent than having the smallest conception of raising it to a new one."

Now, a glance at the course of the prices of wheat for the next 45 or 50 years, viz., from 1770 or 1765 to 1814, will sufficiently explain the 300, 400, 600, 900 per cent. rise of rent between 1695, or rather between 1765 or 1770, and the present time. And at the same time it will be satisfactory to exhibit at one view the averages from 1690 to 1814:—

1690-9	51	6
1700-9	36	1
1710-19	44	10
1720-29	38	6
1730-39	32	9
1740-49	32	7
1750-59	38	6
1760-69	42	8

8) 317 4

Average of 80 years .. 39 8

1770-79	46	7
1780-89	46	1
1790-94	49	6
1795-99	65	8
1800-4	81	10
1805-9	84	6
1811-14	101	5

We should therefore, we think, be very near the truth if, for the heading of the column in our tables, "Rent in 1695," we were to substitute "Rent in 1695-1770." There certainly appears to be a very high degree of probability that nearly the whole of the vast rise in rents specified above took place since 1770.

But one of the most curious phenomena which the tables given above present to our contemplation is this, that while, on the one hand, during the forty-five years in which the prices of agricultural produce were advancing, rents were tripling, quadrupling, and in many cases more than quadrupling, on the other, while prices of produce have fallen back to the level of 1770, rents have remained at, in a majority of cases in the general average, somewhat above the level of 1815. This fact surely throws some light upon the causes of the distress of the farmers and their labourers, more particularly when taken in connexion with the other fact of the rise of rent being the greatest in those districts where the condition of the labourer appears to be the worst.

The great rise of rent exhibited in the foregoing tables is corroborated by other evidence of the strongest and most unexceptionable character. Thus it appears, in the case of the Attorney-General v. Caius College, Cambridge,‡ that under the will of Dr. Stephen Perse, dated 27th of Sept., 1615, the sum of £5000 was invested in the purchase of land, producing at that time £250 a year: that the income of this land had increased from £250 in 1615, to upwards of £2000 a year in 1837. It also appears from the case of the Attorney-General v. the Master of Catherine Hall, Cambridge,§ that rents, which in 1745 amounted to £674 a year, had in 1820 increased to nearly £2000 a year. In the case of land built upon, the increase has been very much greater. Thus it appears, from the case of the Attorney-General v. the Master and Wardens of the Skinners' Company,|| that certain lands and tenements situate in the parish of St. Pancras, in the county of Middlesex, and in the parishes of All Saints, and St. Paul's, in London, which in 1654 were of the yearly value of £50. 13s. 4d., in 1820 yielded a yearly rental of nearly £1000. And in some situations it will be found that a still greater increase has taken place in the same time.

Thirteen shillings and nine pence being, as we have seen, rather above than below the general average of the means of subsistence in the year 1843 of an English agricultural labourer's family consisting of seven persons; and 11s. 8d. being shown to be the means of subsistence of an English

agricultural labourer's family of seven persons more than 150 years before, it follows that, during this period of upwards of 150 years, the money income of an agricultural labourer has increased only in the proportion of 11s. 8d. to 13s. 9d. We have already shown the increase of the incomes of the receivers of rent that has taken place. There is no doubt that the money incomes of other classes have also greatly increased during the same period.

Mr. Gregory King, in the same work in which he computes the ordinary income of a labourer with a family, estimates the incomes of the nobility as averaging £2800; of the bishops, £1300; of the baronets, £880; of the knights, £650; of the esquires, or untitled landed gentry, £450; of the gentlemen, £280; of one-half of the public functionaries, £240; of the other, £120; of the foreign merchants, £400; of the home merchants, £200; of the lawyers, £140; of one-fifth of the clergy, £60; of the remaining four-fifths, only £45; of two-ninths of the freeholders, £84; of the remaining seven-ninths, £50; of the farmers, £44; of the men of science and the liberal arts, £60; of the officers of the navy, £80; of the officers of the army, £60; of the shopkeepers and tradesmen, £45. Compare the rise that has taken place in all these classes of incomes with the rise in the income of the agricultural labourer. But, as King's calculations can only be considered as an approximation to the true results, let us see if we cannot obtain evidence establishing more positive conclusions.

The Honourable Roger North, in his life of his brother Francis North, Baron of Guilford, who was Lord Keeper of the Great Seal under Charles II. and James II., states that the allowance made to his brother Francis for his support as a student of the Middle Temple, by his father, Sir Dudley North (eldest son of the first Dudley Lord North, and himself afterwards the second Dudley Lord North), was £60 per annum. And to show that this was all his brother had to subsist on, Roger mentions immediately after that the sum was reduced to £50 on his receiving £20 a year from his grandfather. Now, the allowance that would be made for the support of a young man at one of the Inns of Court at the present time by a family, even though not rich, of the rank of a peer, cannot at the lowest be estimated at less than four or rather five times the sum which was considered sufficient for the maintenance of Francis North at the time at which the necessary expense of a labourer, with a family consisting of six persons, was computed to be 10s. a week, or £26 a year.

We have mentioned the county of Kent as one of those in which the condition of the agricultural labourer is better than in most other parts of England. It appears from the following table that the average increase upon 20 parishes in the Ashford Division of Kent is 372 per cent. between 1695 and 1843, and 6 per cent. between 1815 and 1843. This appears to be a moderate rise when compared with that in the Bridport Division of Dorsetshire, or still more when compared with that in the Chepton Division of Somersetshire, in both of which districts the labourer is worse off than in Kent.

We do not say that the rule holds universally: we do not even say that the facts are sufficiently uniform to warrant the conclusion that such a rule exists at all. But the results we have given above have struck us as remarkable; and, as far as they go, they certainly do appear to lead to the conclusion that frequently when the condition of the labourer is found to be the worst, the rise of rent is found to have been the greatest.

There is one case that, at first sight, appears so marked an exception to the course of facts given above that it may be worth while to bestow some special attention upon it. We allude to Northumberland, where the rise of rent appears to have been prodigious; while the condition of the peasant, though bad enough in some respects—particularly lodging—is by no means on the whole to be reckoned among the worst in England. There are, however, special causes for the rise in Northumberland, and which take it out of the category or class of cases to which the midland and southern counties of England belong, and place it in that of the Scotch agricultural districts upon which it borders. Two of the principal of these causes

* Parliamentary Return, 1841-2, pp. 16, 17.

† Present State of England, Appendix, pp. 55, 56.

‡ 2 Keen, 150. § Jacob, 286. || 2 Russ., 407.

are the comparative security, the result of the union with Scotland, and the superior system of cultivation. But it is to be observed that the labourers, though principally from their being hired by the year, and consequently having constant employment, not in that state of extreme misery to which so many of their brethren in the south are subjected, have by no means advanced in anything like a degree proportioned to the advance of the value of the land they cultivate; their food being of the coarsest, and their dwellings of the most wretched description.

Morpeth Ward, County of Northumberland.

REGISTRATION APPEALS.

SOUTH LANCASHIRE CASES DECIDED ON MONDAY IN FAVOUR OF THE LEAGUE.

COURT OF COMMON PLEAS.—Before the LORD CHIEF JUSTICE, Mr. Justice MAULE, Mr. Justice COLTMAN, and Mr. Justice ERLE.

John Gadaby, appellant; and James Barrows, respondent.

CASE.

The respondent's name appeared in the list of persons claiming to be entitled to vote in the election of a knight of the shire for the southern division of the county of Lancashire, in respect of property situate within the township of Fillingworth, being a township within the polling district of Manchester. The respondent was objected to by the appellant. The qualification in respect of which the respondent claimed to be entitled to vote was described in the column of the said list headed "nature of qualification," in the following words and figures, namely, "occupation of land and buildings at a rental of £50 and upwards."

It appeared in evidence that the respondent occupied land and buildings for which he paid £50 a year, under two different landlords: to one of whom he paid a rental of £35 per annum, and to the other a rental of £20 per annum, and that he occupied the said land and buildings as tenant, and was and is *bona fide* liable to the several yearly rents aforesaid, amounting together to the said sum of £55 a year; but that he did not occupy as tenant under one and the same landlord any lands or tenements for which he was and is *bona fide* liable to pay to the same landlord the yearly rent of not less than £50. It was contended on behalf of the appellant that the occupation of the respondent not amounting to the yearly rental of £50 to any one landlord, he could not unite the two occupations of rental so as to qualify him to vote as tenant of lands or tenements for which he was *bona fide* liable to a yearly rent of not less than £50.

The revising barrister was of opinion that the respondent was an occupier of lands or tenements for which he was or is *bona fide* liable to a yearly rent of not less than £50 within the meaning of the statutes 2 Wm. IV., cap. 45, and 6 Vic., cap. 18, and retained his name on the list of voters accordingly. The question for the opinion of the court was, whether, under the circumstances mentioned and set forth in the above statement of facts, the name of the respondent was rightly retained on the said list of voters. If the court should be of that opinion, the said list is to stand without amendment; but if the court should be of the contrary opinion, then the said list is to be amended by expunging the name of the respondent therefrom.

Mr. COCKBURN, Q.C., with Mr. Serjeant KINGLAKE, appeared for the appellant, and Mr. CARDWELL for the respondent.

The LORD CHIEF JUSTICE, in giving judgment on the case, said:—This question arises upon the latter part of the 20th section of the Reform Act, 2 Wm. IV., cap. 45, "or who shall occupy as tenant any lands or tenements for which he shall be *bona fide* liable to a yearly rent of not less than £50, shall be entitled to a vote." &c. Looking to this word "rent," I think the sense of the word, not only in grammar but in looking to the construction of the sentence, "for which he shall be *bona fide* liable to a yearly rent of not less than fifty pounds," if the Legislature meant rents, it was just as easy to alter the sentence to "shall be *bona fide* liable to a yearly rent or rents of not less than £50." Now, in reference to that being the construction of the act, see what the same section says in giving a right of voting in two other cases. First of all it gives a right of voting where any person is entitled as lessee or assignee of any lands or

tenements, whether freehold or any other tenure whatsoever, for the unexpired residue, whatever it may be, of any term originally created for a period of not less than sixty years (whether determinable on a life or lives or not), of the clear yearly value of not less than £10. In that case there can be no doubt what the meaning is. It may be made up of several tenements of smaller value, so as to make up £10, because the expression is of any term. So, in the next, the right of voting in respect of an unexpired residue, whatever it may be, of any term originally created for a period of not less than twenty years (whether determinable on a life or lives or not), of the clear yearly value of not less than £50: there, again, you have a description in respect of the single term. And when you come further on, "or who shall occupy as tenant any lands or tenements for which he shall be *bona fide* liable to a yearly rent of not less than £50," by that it is clear what is meant. The language of the clause I should say is, that he should show himself to be liable to a single yearly rent not less than £50; and when we come to the 27th section, which has been referred to, the proper reading is, who shall occupy, not who shall be liable to a yearly rent. In the 27th section there is no mention at all of a yearly rent. There he is the occupier, as tenant or owner, of any house, warehouse, counting-house, shop, or other building, being, either separately or jointly with any land within such city, borough, or place occupied therewith by him as tenant, under the same landlord, of the clear yearly value of not less than £10; and the term which is used in the 20th section is, "the yearly rent of not less than £50." It seems to me also, if you look to the 6 Vic., cap. 18, sec. 73, which recites this former section, if it had been the intention of the Legislature to alter the former section, they would have put it in this; but it is not so. It says, in the first place, that any successive occupation of £50 shall be sufficient, and then joint occupiers may vote; they have used the singular number, and therefore the singular number in this case also must be used. On these grounds the proper construction is, that the party was not entitled; therefore the construction put on it by the revising barrister was wrong.

Mr. Justice COLTMAN: If we look to the words of the section, it is for which he "shall be *bona fide* liable to a yearly rent." Suppose he held under two landlords, one at £40 and the other at £40, it cannot be said in either case he occupies at a yearly rent of £50. I think there is nothing in the 20th clause which leads to the inference that the intention of the act of Parliament was that these lands, which are occupied under two different landlords, should give the franchise: he might not know which of them to oblige, or to whom he owes allegiance; and that which appears to be the intention of the act is, that any lands or tenements held under the same landlord of the required value would confer the franchise, and those held under different landlords would not. The voter not being liable to "a yearly rent" of £50, which is necessary, on these grounds I am of opinion that the party was not entitled to a vote.

Mr. Justice MAULE: I am also of opinion that he was not entitled to vote for the county. I cannot see anything in the act which induces me to think that the Legislature intended to make two occupations a sufficient qualification; and for this reason I think the decision of the revising barrister ought to be reversed.

Mr. Justice ERLE: I am of the same opinion. I think no person can construe that section to mean any other than a single rent of £50, and that appears to me to be the language and meaning of the words. I think the Legislature could never mean to give a qualification made out of two occupations. It therefore appears to me clear that this was not a proper decision of the revising barrister.

John Gadaby, appellant; and Samuel Warburton, respondent.

The respondent's name appeared on the list of persons entitled to vote in the election of any knight of the shire for the southern division of Lancashire, in respect of property situate in the township of Harpurhey, within the polling district of Manchester, and the place of his abode was correctly stated in the said list to be "Newton, near Hyde, Cheshire." The appellant had sent to the respondent, through the Post-office, an objection, as follows, that is to say:—

"To Mr. Samuel Warburton, of Newton, near Hyde, Cheshire.—Take notice, that I object to your name being retained on the Harpurhey list of voters for the southern division of the county of Lancashire, dated this 18th day of August, 1844. (Signed) John Gadaby, of Poplar-grove, Didsbury, on the register of voters for the township of Manchester."

The appellant's name appeared on the register of voters for the township of Manchester, and the place of his abode was stated in the said register to be, as stated in the said notice of objection, Poplar-grove, Didsbury.

It appeared that the place of the appellant's abode was truly described in the notice of objection, to the extent that it appeared in that notice that he had himself described it on the register of voters to entitle him to vote; but it was objected on behalf of the respondent, that the description of the appellant's place of abode, as it appeared in the notice of objection, was not sufficient to sustain the notice of objection against the voter on the list for the purpose of expunging his name, though it might be sufficient on the register to entitle the appellant to retain his name on the list of voters. The revising barrister held that notice *invalid*—in fact, that something ought to have been added to the description of the appellant's place of abode, as Lancashire, or near Manchester, Didsbury being a few miles only from Manchester, and the township within the polling district of Manchester, or the like, as the case might be; and retained the respondent's name on the list without calling upon him to prove his qualification. It was then contended on behalf of the appellant, that he had described his place of abode in the notice of objection in the same words as he had described it on the register of voters to entitle him to vote, and that it was sufficient; and that by law he was not bound to describe his place of abode in the notice of objection more fully than he had previously described it on the register of voters then in force. The revising barrister ruled the contrary.

The question for the opinion of the court was, whether the appellant's statement in the notice of objection of his place of abode as he had stated it for the purpose of his own vote is, under the facts and circumstances before mentioned, sufficient in law to sustain the said notice of objection against the respondent. If the court should be of opinion that the description of the place of abode is

sufficient, the respondent's name is to be expunged from the list of voters, otherwise to remain.

Mr. COCKBURN, Q.C., with Mr. Serjeant KINGLAKE, were for the appellant, and Mr. CARDWELL for the respondent.

The Lord Chief Justice TINDAL, in giving judgment, said:—I think the best way is to lay the notice aside by side with the form of notice and objection which is given in the Schedule A, No. 5, to the act, to see whether it does or does not agree; and, when I look at the notice against the respondent, I find it the same as the form in the schedule, "place of abode, on the register and voters for the parish of ——" The notice is signed, and the place of abode is stated, according to statute. If you look to the section which refers to the schedule, there is no difference in that: the section is, "it shall be given according to the form in the schedule, or to the like effect," and this notice is in compliance with the form in the schedule. The notice is to be given by merely giving it according to the form No. 5. With regard to the objection that has been raised, that there may be two Didsburys, I think the learned gentleman who revised the list should have had it shown to him that there were two Didsburys before he gave his decision, and the case might then have been very different. The notice of objection is to give the party objected to an opportunity of knowing whether the person who objects is a proper person to object; and in this case I think sufficient has been done to give him that opportunity, and, therefore, the decision must be reversed.

Mr. Justice COLTMAN: It appears that the voter has had sufficient notice where the objector is to be found. I think it is sufficient if the objector puts the same residence in the objection as he has stated in his claim. It has been said that a party may change his residence after registration: that may give rise to a question; but that is not the question in this case; I therefore think the notice is sufficient.

Mr. Justice MAULE: I think, also, that this decision must be reversed. I agree with the rest of the court in thinking sufficient notice has been given to enable the party objected to to identify the objector with the register as a person entitled to object; and I think the same residence should be put in the notice of objection as is stated in the register: if it were not so there might be two voters of the same name, and it would be very difficult to identify the objector; and at all events it would be very convenient that it should be stated as is described in the register of voters. It is not necessary that the objection should be in the precise words of the form No. 5, Schedule A, but to the like effect. This notice is to the like effect. The object being to give the party the means of ascertaining that the party objecting has a right to object, that is, that he is on the register of voters, I think on these grounds that the barrister was in error, and accordingly the name must be struck out.

Mr. Justice ERLE: It appears to me also that the revising barrister was wrong; it appears to me that the same description should be given in the objection as is given in the register, the object being to enable the voter to know whether the voter is entitled to object. I should be inclined to think, if the residence was sufficiently stated in the register, it would be had if stated differently in the notice of objection. I am therefore of opinion that, it being stated the same as in the register, the notice was sufficient.—Decision reversed.*

One of the appeals in the Southern Division of Lancashire, namely, "Eckersley, appellant, and Barker, respondent," was heard; but the court took time to consider its judgment.

BOROUGH OF TOTNESS.

Cumming, appellant; and Thurs, respondent.

The question in this case was, whether under the 100th section of the 6th Vic., c. 18, the production of the stamped duplicate notice of objection must necessarily be made by the party who posted such notice, in order to make it evidence of the delivery of the notice to the party objected to. The revising barrister decided that the duplicate could only be produced by the party who posted the notice; and, as that person happened to be ill at the time of the revision, he held the proof of the service of the notice of objection had failed.

Mr. COCKBURN, Q.C., appeared for the appellant; and Mr. Serjeant KINGLAKE for the respondent.

The Lord Chief Justice TINDAL, said:—I cannot see any reason why the general maxim of law, *qui facit per alium, facit per se*, should not apply in this particular instance. The whole faith and credit is given to the stamp of the Post-office, and that stamp is the same whether it is produced by the clerk or by the principal. The words of the section are, "And whenever any person shall be desirous of sending any such notice of objection by the post, he shall deliver the same, duly directed, open, and in duplicate, to the postmaster of any post-office where money-orders are received or paid; and after paying the fee which shall from time to time be imposed, the postmaster shall stamp the duplicate; and if you can get over the difficulty of the objector being bound to take the notice to the post-office himself, it seems consistent, under the circumstances, that the proof of service should be sufficient, whether the notice is produced by the clerk or by the principal himself. Therefore the decision must be reversed.

Mr. Justice COLTMAN: We had a case before the court last year, where the notice had been received by the clerk in the post-office, and not by the postmaster; it was then held by this court that the delivery of the notice to the clerk was sufficient. It appears to me that this is a similar case. I cannot see why the objector should be the person actually putting the notice in the post, or why the objector should be obliged to produce it himself. The decision must, therefore, be reversed.

Mr. Justice MAULE: It would require very strict words to make the court depart from the common law. It does not require the delivery or service to be personal, unless it is expressly and particularly required to be so. There is nothing in the section of this act of Parliament that requires us to put so unusual a construction on the language of the section in question. I am, therefore, of opinion that the production of the stamped duplicate by a person other than the person who took it to the post-office is sufficient.

Mr. Justice ERLE: I am of the same opinion. I think by the words of the statute it would be sufficient if produced by a person other than the person who posted it.—Decision reversed.

*Two thousand notices of objection were taken by the League, and lost by the revising barrister's decision.

*In the returns for 1815 the description and classification differ much from those of the returns for 1843 that it has been found impossible to fill up the 1815 column in this table, and ascertain the progress between 1815 and 1843.

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, November 20, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the *League* of the Saturday immediately succeeding, but are included in the list of the week following.

THE GOLDEN FLAX.—A specimen of Irish linen, denominated "The Golden Flax," has recently come before us, as a manufacture in this neighbourhood; and we cannot withhold our testimony to the beauty of its bleach and fabric, uniting the greatest softness and brightness with the strongest fibre. This bids fair to put further off than ever all foreign competition with Ireland in the linen fabric, and to extend our home consumption for this beautiful manufacture; affording, at the same time, an additional encouragement for the production of the finest qualities of flax at home, for which our soil and climate are found, in every way, suitable. We cannot help indulging the hope, that ere long, Belfast may be to the linen trade what Manchester is to the cotton, with this further advantage on the side of the former, that her looms may be working up the product of a happy industry—gradually extending itself throughout our agricultural districts in the south—yielding food and clothing—an appreciation of comfort, with means for its gratification; and, above all, issuing in an honest independence of mind, capable of discerning, and daring to choose the truth.—*Belfast paper.*

THE TIMBER, WOOL, AND GUANO TRADES.—It is said that the above trades are the only ones in which large sums of money have not been lost by importers during the present year; and it is a fact worthy of notice, that in two out of the three of these trades the protective system has been, in whole or in part, abandoned during the last four years. It will be remembered that one of Sir Robert Peel's earliest measures was to diminish the amount of protection on colonial timber, and that it was most confidently predicted at the time that the colonists would be ruined by the change. The result has shown that this was a false prophecy, for the timber trade has never been in a more healthy or prosperous state. This is partly the result of the breaking up of a system of speculation and overtrading, but still more of the revival of trade and commerce. People have once more begun to build houses, mills, warehouses, and ships; and the result has been to create a brisk demand for timber, and to show that commercial and manufacturing prosperity are of infinitely more value to the timber trade than all the protecting duties that ever were invented. Another trade which has prospered, either in consequence or in spite of the repeal of protective duties, is that in sheep's wool. The repeal of the duty of 1*l.* a pound on foreign wool has not only been followed by great briskness in the demand for that kind of wool, but also by equal briskness in the demand for colonial and British wools, to which the duty served as a sort of protection. They have seldom sold better than during the present year; and although it would be too much to say that this is owing to the change in the duties, yet it is clear that the change has had no injurious effect upon the wool-growers, whilst it has greatly benefited the manufacturers and all dependent upon them. The import of colonial wool, which twenty years ago was a mere nothing, has now reached the large amount of 70,000 bales from Australia alone.—*Liverpool Times.*

LETTERS ON THE CORN LAWS, No. VIII.

TO THE WOMEN OF GREAT BRITAIN.

LADIES.—By a majority of the other sex you are excluded from direct interference in political matters. On the wisdom or justice of this exclusion I make no comment. It suffices that by this same majority, and by universal consent, you are invited to interpose in matters of charity. There, your right is unquestioned; and, by inference, your duty also. When there is the power to relieve suffering, especially if it be unjustly inflicted, right and duty are identical. To a good work of this description you are invited (and invited at the suggestion of some of yourselves) by the Council of the Anti-Corn-Law League. The peculiar reason why you should respond to that invitation may be given in one word: the Corn Laws are INHUMAN.

Who of you has not sympathized with the poor sempstresses of London, stitching through fifteen hours a day for 3s. per week? Who has not grieved over that weary toil and that wretched remuneration? Who of you, with all the legislative power combined of Queen, Lords, and Commons, would abridge that pittance by the worth of one farthing? It is abridged by the Corn Laws. Measuring its worth in bread, on which most of it must needs be expended; and comparing the Free-Trade price of grain here, close at hand, in our own Channel Islands, with the Corn-Law price, even in this comparatively cheap year, paid by the poor of this island, there is a difference of one-sixth which fixes itself directly and distinctly on the Corn Laws. A difference of one-sixth, i.e., sixpence a week, is taken by the Corn Laws out of the sempstresses' wages of 3s. It is the worth of one day, every week, of that eye-blinding and heart-bleeding work. Is not this inhumanity?

You have been exhorted to compassionate these wretched people by Lord Ashley; yes, by Lord Ashley, who votes in the House of Commons for robbing them of this weekly sixpence, and belongs to the class for whose benefit the robbery is perpetrated! Take his advice, and estimate his conduct. Your injured sisters are not helped by society meetings, and sentimental resolutions, and reports, and patrons or patronesses' names, and vituperation of Moses and Son. The first help is to get back for each her stolen sixpence. Repeal of the Corn Laws would give her that; and by indirect influence on other monopolies, and on the state of trade, a great deal more withal. Help to obtain justice for her; else is charity an insult.

While the Paisley weavers were at their lowest depression, three years ago, a poor old man and woman there, overlooked perhaps amid the starving multitudes, were not forgotten by their sons who had migrated to Canada. The dutiful youths were mindful of the first commandment with promise. They thought to honour father and mother by some of the first fruits of the produce of their little farm. The Custom-house of a monopolist Legislature cares not for commandments. It respects filial piety as little as it pities starvation. The aged couple heard of the arrival of the package of oatmeal from their distant children—its opportune arrival—for they had neither food nor money for the purchase of food: they were famishing, and the Corn Laws told them to famish on, for there could be no delivery of the oatmeal without payment of the duty. This, too, I call inhumanity.

Many of you are not unfamiliar with the dwellings of the poor. You witness the host of privations which they endure, from the fluctuations of employment, and the prices, often beyond their reach, of various articles deemed necessities of life. To a large extent both the want of work, and the disproportion of prices to their means, are demonstrated results of monopolist legislation. Bread and sugar are at the head of the list thus rendered more costly. They are taxed to the toiling poor that British land and West Indian plantations may yield a larger revenue to the proprietary. The natural course of commerce is thus disturbed, and the manufacturer, by foreign retaliation, shut out of markets which else would enable him to give steady employment to multitudes. This is the soul of evil that presents itself to your sight in so many affecting particulars. You see families that are ragged because even an insufficient purchase of food leaves them no surplus for clothing; boys that cannot avail themselves of your gratuitous teaching because they must be earning something towards the scanty common stock; men and women that absent themselves from church because they cannot appear there decently. Your moral and religious efforts are baffled by physical misery; and your attempt to alleviate that, aided by all the contributions of your relatives and friends, still beats unavailingly against the iron pressure that forces down the objects of your compassion. Your kindly energy wages an unequal contest. A fiend comes from your angel visitations, and battles with your benevolence for every cottage and hovel. You are overborne by INHUMAN LAW. It grasps its prey like a tiger. It is merciless as the devouring waves. The law must be conquered, or your mission is doomed.

feated, though it be one of light and love from heaven. While monopoly triumphs, charity is powerless.

Some of you have, in the daring of a beneficence intent upon spiritual good, ventured beyond the hovel of the wretched into the cell of the criminal. In seeking to relieve the wants and heal the diseases of the moral being, has it not occurred to you that causes are at work in society for the multiplication of crime which are capable of being abated? The tendency of law is again, in this case, a counteracting power to your zeal for good. A long course of years proves that the number of committals for crime varies with the price of food. The dearth of bread is the frequency of offences. A law to uphold prices is a law to promote crime. Such is the Corn Law. It would foster rather than you can heal; it does the work of evil by wholesale; it stimulates depravity, and breaks down conscience; it is a legally-erected direction-post to the gates of perdition. As you value the souls you try to bring back to the good shepherd's fold, encourage those who would abolish the cause of temptation; strengthen the hands of those who would destroy some of the fruits of unrighteousness, by laying the axe to the root of the tree of monopoly.

In a thousand other ways must sorrow and privation fall under your observance, traceable, either entirely or in their heavy aggravation, to the laws which enhance the cost of provisions, and obstruct the extension and regularity of trade. You know the secrets of hearts which are doomed to endurance by limited or failing means, with, perhaps, increasing demands for their application. The system which annually pauperizes or banishes nearly 300,000 persons, is a blight on many homes that once were happy. There must be fearful struggles, and hidden tears, and the martyrdom of ceaseless sacrifice. On your sex, especially, falls this heavy burden. On them, out of the turmoil of exertion, comes the care of savings, and retrenchments, and self-denial; theirs is the daily plan, and contrivance, and suffering. They are surrounded by the omnipresence of iniquitous law, ever taxing to the utmost their capacity of ingenious effort and of patient endurance. What wonder if spirits often fail in the ceaseless endeavour, and hearts break in the repeated disappointment. For their sakes—for your own, suffering in their sorrows even when your circumstances are happiest—is your co-operation sought: such co-operation as it becomes philanthropic men to ask, and you to render.

The proposed Bazaar, to be held in Covent-garden Theatre, affords a most unquestionable mode in which your aid may be as efficient as it will be welcome. Information as to all requisite particulars is already given, in the appeal put forth by the Council of the League, and need not be repeated here. On you must the plan be mainly dependent for success. Often have distinguished individuals of your sex adopted similar means for promoting charities of a limited and transitory description. What mere charity can be compared with the great and sacred cause of justice which you are thus invited to advance? And in this, as in the attendance with which you grace our meetings, it is not only the direct countenance and aid that is sought, but the moral power of Woman in whatever public good she advocates. How much you achieved towards the abolition of the slave trade; and how much you may achieve towards the abolition of the starvation-trade! Monopoly, like slavery, will shrink from your withering rebuke. You will exalt the coming victory of policy in the triumph of humanity. Of you the toil-worn will gratefully think, as the table is spread for a better meal; of you the fainting heart, renovated by the dawn of more prosperous days; and on you will come the blessing of those who were ready to perish. It is fitting that not without your aid should this battle be won, but that, foremost amongst the elements of triumphant success, should be the strong and true heart of the Women of Great Britain.

A NORWICH WEAVER BOY.

IMPORTATION OF FOREIGN BEASTS AND SHEEP.—On Wednesday last were landed from off board the Emerald Isle, Captain Bouch, from Rotterdam, seven oxen and twelve sheep. Same day, from off board the Helen McGregor, Captain Frost, from Hamburgh, 39 oxen.—*Hull Advertiser*, Nov. 16.

PLenty the Parent of Agricultural Depression.—In all ages and in all countries, bountiful harvests have been reckoned amongst the choicest blessings of Providence. The sacred writings are full of the most beautiful allusions to the joy and gladness produced when, in abundance, "the earth brings forth her increase;" the prayers of the church are for plenty; and, if there be one thing in which the whole human family agree more than in another, it is, that there can scarcely be an over-production of food for the use of man and beast. Such is the feeling which has its birth in the natural instincts and universal common-sense of mankind. Surely, then, there must be something radically vicious in any system which alters this state of things; which makes the husbandman despond in times of plenty, and rejoice in times of comparative scarcity; and which, so far as one large and important class of the community is concerned, reverses the order of nature, and turns the bounties of Providence into mockeries.—*Bristol Mercury*.

A JOURNEY THROUGH SUSSEX.

Explanatory Note.—In my last communication I stated that there was now no Earl of Egremont, and that, therefore, the Earl of Egmont, who is a "new nobleman" in that part of the country, must not be confounded with the late Earl of Egremont. But it seems there is an Earl of Egremont. It is true, as I said, that the late earl left no legitimate offspring; and that he left all his property in Sussex to his illegitimate sons; but it seems the title descended to a nephew; and I believe some property which is not in Sussex, and which could not be disposed of by will, went with the title. In Sussex his very large estates went wholly to his sons, Colonel George and Colonel Charles Wyndham; and I, not having consulted a peerage list, but going with the common belief of most people that I talked with near the Egremont property, was led to say that there was no Earl of Egremont. It is, however, as requisite now, as it was said to be before, to understand that the Earl of Egmont, of whose estate and tenantry I am about to write, is not the Earl of Egremont so long and so lately well-known in that same part of Sussex.

THE PARISH OF HARTING.

From Rogate I went three miles southward over a good district of soil. Here I found 8s. a week to be the common wages of the labourers. At Harting, a pleasant village near the bottom of the chalky ridge called the Downs, I found many people out of work; to those in work the wages were somewhat better, a carter or ploughman getting 10s. a week.

The soil here is rich, and exceedingly fertile. It is the property of Sir Harry Featherstone. Including a part of the Downs upon which his residence stands, it is said his property amounts to 10,000 acres. It is mostly in his own hands, managed by bailiffs. The tenantry who used to be on it are now, some of them, in the workhouse as paupers; some have gone elsewhere to compete for land, and raise its price by their competition; and, as a matter of course, some are deposited in the churchyard.

Besides the loss to the respective families who were driven from their land by increased rentals and other means which I need not specify, the loss to the village is great, by the destruction of the middle class who supported its tradesmen. I was told that Sir Harry, through his steward, was very kind to the poor. "For instance," said my informant, "since this steward came here he allows them to lease on the fields. And, that they may all have fair play, he orders that the gate of the field they lease on is not to be opened until eight in the morning. So you see a poor woman who has a family can get them all ready to come with her to the leasing by that hour, whereas, if every one began as soon as they liked, single persons would go and lease by daylight in the morning."

"This is very well, so far," said I, "yet, I do not see more kindness to the poor than merely a little, a very little, discretionary regulation."

"But," said my informant—who was rather desirous to say something good for Sir Harry, to cover the melancholy truth that in the wars of the rents the best of the population had been reduced to pauperism—"But," said he, "this is not all that has been done for them: the steward sends out on the first day of leasing, from the barn, a shock for the leasers, and this is put in the field, and they all go and pull from it as soon as eight o'clock comes."

This shock of ten or twelve sheaves of wheat contains at most from one to one bushel and a half of grain. The number of leasers who crowd around it and tear it to pieces, and appropriate it to themselves, and who are expected to bless God and Sir Harry's steward for this munificent gift to them, "the poor of the land," is seldom less than about one hundred persons. Some of them have been small owners of that land which is now Sir Harry's; some have been occupiers; and all the others have been workers on it, or are the children of workers.

What beautiful humanity it is! The benevolent and noble-minded Lord Ashley recommended the farmers of Dorsetshire, last year, to remember the poor when they gathered in their harvest, and not to rake up every head of grain; but to obey the scriptural injunction. This is worthy of so good a lord, who votes for a tax on the bread of the poor, to put money in his own and his father's pockets.

Would not such a generous mind be delighted to stand in the parish of Harting, and see the scriptural injunction observed of leaving something to the poor? "And when ye reap the harvest of your land, thou shalt not wholly reap the corners of thy field, neither shalt thou gather the gleanings of thy harvest. * * * Thou shalt leave them for the poor and stranger."—Leviticus xix. 9, 10.

In lieu of the corners of the fields, a shock of ten sheaves is brought from the barn. It is laid down, and none must enter the field until the larger and the smaller families, the aged and the very young, the widow and the fatherless, are all at the gate. The gate is opened, and they rush in to tear the sheaves to pieces, and appropriate them. Sir Harry's foxhounds, in his hunting days, if kept hungry, and one bone had been thrown among them, would have scrambled for it, and growled and threatened to worry one another: those farthest from the bone would have sprung over the backs of those nearest it: still there would have only been a scene of hungry strife; and nobody would have thought such an exhibition of dog torture a very cruel one save the most benevolent of men. But infirm paupers and young children do not spring over one

another like foxhounds. The more feeble the aged man and the aged woman are, the more need have they to hasten forward to the shock of grain. The more numerous the family of young children, the more need have they of what they can get for bread. The more strong and eager those are who have strength on their side, the sooner will they get hold of the sheaves. Hence there is a scramble far outdoing the scene of Sir Harry's hounds and the bone. The old fall on the young, because the strong push them down; the young lie and scream, because they cannot get from below those above them. Their mothers, who should be leasing, must fight and scramble to extricate them. The strongest, in the meantime, appropriate the largest share of the sheaves. At last some families find themselves in possession of a peck of wheat, torn clothes, and scratched faces; other families have half a peck of wheat, and sprained ankles; some have bruises, and no wheat at all. All of them have as many quarrels to settle and to dispute about as keep them in hot water and animosity until Christmas.

But the consciences of the steward and Sir Harry are appeased. Lord Ashley and his injunction have been obeyed. Restitution has been made to the poor of that landed property and produce which was once wrung from them. And nobody can longer say that such supporters of the bread-tax grow rich at the expense of the bread eaters, and do not return anything to the poor. It must be a great comfort to such benevolent bread-taxers as Lord Ashley to hear of the generosity of the rich owner of ten thousand acres in the parish of Harting. What a loss to the nation that each of the other owners of ten thousand acres does not carry out a shock of wheat after harvest as a gift to the poor! To a sporting man there must be capital fun in seeing a hundred persons, comprising old men, old women, little children, mothers with babies, and babies left at the gate while their mothers scramble. What genuine fun for a sporting lord! and what genuine balm and comfort to the conscience of a very benevolent lord, who makes bread scarce and dear for the sake of his own pocket!

JOURNEY TO MIDHURST.

Leaving Harting after being told of many curious things of Sir Harry, which need not be repeated as they concern domestic matters only, and not the public questions which we are all interested in, I returned by Rogate, and proceeded eastward to the parliamentary borough of Midhurst, distant from Rogate six or seven miles.

At about three miles from Midhurst I was in the parish of Trotton. The village stands beautifully in a wooded valley by a stream. The road had skirted the side of the wooded park belonging to the parson of Trotton for half a mile, perhaps more, I found some people at work near the road, as also a farmer riding along, who occupied land there; and once more, as at Rogate, all was complaint of

low wages, and rabbits and hares. The workmen complained of the low wages, and the farmer of the rabbits and hares. The parson was the game-preserved here. He is the brother, and this is the native place, of one of the police magistrates of the metropolis.

Still nearer Midhurst, on this road, I passed through the parish of Woolbedding, where the same complaints prevail as to the swarms of game. Here the owners of the land are Liberals in politics, and, I believe, not much opposed to Free Trade. But, having mentioned what is said of their neighbours as game-preservers, I think fit to mention them. Indeed, Liberalism is worse than useless if it is not practical. And how any body can be excused for doing such prodigious mischief to the farmers, and indirectly to the whole population, as is done there by the game and the rabbit vermin, I cannot conceive.

From near this I had a man on the road with me who had been about fifty years in and around Midhurst. He was not very profoundly learned in even the common topics of the day. But he was willing to talk, and seemed to have a store of olden recollections upon which he could draw liberally. Amongst other things, he remembered since the road we were now upon was so deep in mud that the axle-trees of carts sank in the earth. At a part within five hundred yards of Midhurst it used to be called "Cobden's Lane"; but it was now enlarged, and called the Petersfield Road, it being the direct line to Petersfield, in Hampshire, through Rogate.

I had before heard that Midhurst was the native place of the honourable member for Stockport; and, hearing this man mention "Cobden's Lane," I asked a question or two. But he did not know anything of the gentleman whom I named, only he had heard that one of them was "grown a great man up about London." He could not tell me if he had heard of Lancashire. He had heard talk of the Corn Law, but did not know what it meant. He had heard that one of the "young Cobdens had grown wonderful great;" but did not know what the greatness consisted of. He understood, however, that, if there were fewer men seeking work in the parish of Woolbedding than there were masters seeking men, the masters would have to give higher wages than they give now. He understood that if three farmers used a farm, and there be only one farm that they can get, they are likely to offer more for it than it is worth. He understood that, if the landlords promise to the farmers to pass a law to keep corn at a high price; that if the farmers believe them, and bid high rents for the farms accordingly; and if that law does not keep corn always at a high price, but lets it down as often as it keeps it up, he understood that the farmers must be defrauded and made poor.

He understood that, if a farmer must pay away the greatest part of his money in rent to the landlord, he cannot pay wages as he should do to labouring men, nor get such crops from his farm as he would get if he employed and paid for a sufficient number of labourers.

He understood that if farmers continue to have children growing up to men and women, the men to become farmers and the women to be the wives of farmers, there must be more farms made for them, or else they must remain in the families of their fathers. And he understood that, if England is not growing larger than it was a hundred years ago, the children of farmers must not expect farms; but that, if they are not to be a burden on their parents and leave off marrying, they must go and follow some trade or profession.

He understood that the families of farm-labourers would be left in the same difficulties if it were not that they were crowded back into the workhouses.

He understood that if bread be so high in price that all the wages of a man must be paid for bread for his family, while nothing can be paid for clothes, that all the makers of cloth and those who sell it, and those who make clothes, must have bad trade, and be less able to buy the bread and beef of the farmers; and again in their turn be less able to buy clothes, which would still add to the badness of trade and the inability of others to buy bread and beef.

I told him that these were a few, and only a few, of the great questions affecting everybody in the kingdom, and affecting, less or more, everybody in the world, which his fellow-townsmen, Mr. Cobden, was endeavouring to make people understand, and more especially the farmers and the members of Parliament; and that the law, which the landlords who sat in Parliament made, called the Corn Law, to keep corn scarce and at a high price that they might get high rents—I told him that this was the question which led to all the others which I had explained to him.

We had lingered on the road near the side of a heath while speaking of these things. And then he pointed out to me a modern-looking villa, amid some trees in a field, which stands on the site of the farmstead and malting works of old "Maltster Cobden." Such was the popular designation of the grandfather of the member for Stockport. All the elderly people remember Maltster Cobden as a substantial yeoman of the olden school, who for several years filled the chief office of bailiff of the borough; and some of them said they remembered the beer he brewed, and wished they had some of it now, at that moment of speaking to me. One recollected the goat which he kept, and which used to butt the boys who went into the malt-house or the yard who had no business there. Another recollected the life they used to lead the old goat. Then they all recollected that this goat used to go out to the heath at a certain hour every evening and bring home the cows. There were four cows belonging to Maltster Cobden that the goat would go and fetch from among others, to be milked, and would take them out again when they were milked.

ODDS AND ENDS ABOUT MIDHURST.

Midhurst is a town containing, with its parish, 1536 inhabitants, and returning one member to Parliament—Sir Horace Seymour. It is alleged by some, who pretend to know this gentleman's opinions, that, though a Tory, he is persuaded of the justice of the Free-Trade cause. But such is the constituency of Midhurst that he could not expect to be returned for that borough again if he voted against the Corn Law, and the wishes of Earl Egmont and Colonel Wyndham of Petworth. The largest portion of the voters are farmers, holding under one or other of these landlords. The town is very small; but its parliamentary extension into the country is as wide as the Reform Act allows. It used to return Whig members; but on the sale of the Cowdroy estate to Earl Egmont, the majority of the borough voters went with the estate.

Before the Reform Act this place returned two members; but the tradesmen were then saved the trouble and danger of voting. At a certain part of a stone wall the question was asked officially if a certain stone in the wall had any objection to return so and so as members of Parliament; and, if the stone did not object, so and so were returned. This convenient custom of election is now done away with. The Reform Act disfranchised the stone, and gave the votes to the tradesmen and farmers: to the grocers, shoemakers, tailors, and such like. And now the grocers, knowing that the earl has all his household goods in which they deal from London, must vote for the earl's nominee lest they lose the earl's custom. The tailors know that no one of them is the *Stultz* who clothes the person of the earl; yet they cannot afford to offend his lordship. He might condescend to get a coat made with them some day. So with the shoemakers. They have less discretion than the *stone*, for it said nothing and did nothing, and offended nobody when asked for its suffrage. But they vote for the earl's nominee lest they lose their trade. They vote for dear corn and little trade lest they lose the little trade they have got. And, not without cause, as will be seen in the following paragraphs:—

LORD EGMONT SETS UP AS A MILLER AND A BAKER.

It seems that a large new mill, called the North-mill, was found by a tenant to be too dear. He left it. Other offering tenants thought it too dear also, and his lordship

could not get the required rent for it. He said he would prove it to be worth that rent. Accordingly, he took it into his own hands; turned miller himself; had the sacks all marked with his own name and title; had the waggons marked with his own name and title; and then he set vigorously to work. There were four other mills on his estate, all competitors with this. He employed his steward, Mr. Brown, to go round the estate to the customers of the other mills, and desire them to go and deal at the North-mill. And Mr. Brown went to all the labourers over whom he had any control; he said you must buy your flour at the North-mill. At a brickfield he set up a flour-store for the workmen, and gave them to know that they must deal at that store if they expected to continue in work. The store was, of course, supplied from the North-mill. Some of the men at that work, and also the woodmen in Farnhurst, said, "But we be dealing with Mr. Ayling, at his mill, and we owe him for a sack of flour. He let us have flour when we was out of a job; we pays one sack and owes another; what must we do with him?"

This Ayling was also a tenant of Lord Egmont, paying rent to his lordship for his mill and for his farm; but the reply was, "You must have your flour at Lord Egmont's store, and pay Mr. Ayling as you can."

Also the bakers of Midhurst were canvassed for custom. One said that he would willingly become a customer to the earl at the North-mill, but he had been many years dealing at another mill, which was held by one of his lordship's tenants, and he did not like to take away his custom from it; but Mr. Brown gave him to know that, if he did not deal at the North-mill, his lordship would set up a baker's shop in Midhurst, and draw away his (the baker's) customers.

This baker was stubborn. So the throat is fulfilled; and his lordship has sent a new baker to the town, who deals at the North-mill; and, to make this baker's custom all the greater, the influence of his lordship and of Mr. Brown has procured for him the contract to serve the union workhouse with flour.

THE FARMERS IN NEED OF PROTECTION.

The tenant-farmers on that great property I found to be in a state of discontent equal to that of the millers and the bakers. Last winter some of them were obliged to kindle fires around their turnip-fields to frighten off the hares and rabbits, but they have been told that they must not do so this year. They make the game of less value by so doing; and the game is *rented* from Lord Egmont by gentlemen who shoot it.

Last year 10 per cent. was deducted from all their rents. This year they got notice that the 10 per cent. was again put on. They grumbled, and asked what for? Some of them would not go to the audit dinner; one, a Mr. S., who used to lead the "*hip, hip, hurrahs*" at the dinner, stayed gloomily away this year. He, like some others, paid away some of his labourers as soon as he had to pay this 10 per cent. Upon which Mr. Brown mounted his horse and rode round among the farmers, telling them that they must not pay away their labourers. He said the 10 per cent. had been taken off last year that they might employ more labour, and they had not done so, which was the reason for putting it on again. To this they replied, that even with the 10 per cent. off, and all the game to feed, which was again let at a rent on some parts of the estate, they could not employ sufficient labour. They were then told that if they were not satisfied they might leave their farms. And some of them are leaving; but the greater part would not know where to go if they did leave.

It is expected that such tenants, holding on such a tenure—the tenure by which the scullion in the kitchen holds her place—should be improvers of their land! This is a practical joke on the poor yeomen. But there is a better joke still. Mr. Brown calls them together every week in Midhurst to support a society for *protection* to agriculture. And they have been all called upon to subscribe to it, and have subscribed. Such tenants do want *protection*; there is no question of that.

Scarcely inferior is the joke of some of the Midhurst shopkeepers who subscribed to the Anti-Corn-Law League having subscribed to Mr. Brown's Protection Society, which is a branch of the Duke of Richmond's great rent league. Some who gave half a crown to the Anti-Corn-Law League, gave five shillings to the other side when they found themselves in the dilemma of seeing two Leagues. They, seeing what Lord Egmont had done with refractory millers and bakers, did not know but he would fill the town with rival tailors, shoemakers, and grocers. So they gave five shillings to the rent league, as if to say, "Pray don't!"

A hundred other remarkable particulars of this place and neighbourhood remain to be told, but they must be deferred until another letter.

ONE WHO HAS WHISTLED AT THE PLOUGH.

WANT OF EMPLOYMENT AMONG AGRICULTURAL LABOURERS.—The October agricultural report for the neighbourhood of Reading, appearing in the *Farmers' Journal*, thus alludes to the non-employment of our agricultural population:—"The hiring trade for farm-servants which takes place at this time of the year, has been extremely dull, which we fear is a sign of bad times; instead of their coming as formerly to our markets at New Michaelmas and old Michaelmas only when places were to be obtained, they are now obliged to come continually every week, and after all many return unprovided with situations." (*Oxford Chronicle*).

CORRESPONDENCE.

To the EDITOR of the LEAGUE.

Edinburgh, Nov. 10, 1844.

SIR,—I beg to offer a remark upon the letter signed "A Leaguer" in your last paper, recommending the exchange of county votes by granting life rent-charges of £10. This plan appears to me to favour the creation of fictitious votes, and to be unworthy of the adoption of the Free-Traders. It has been largely resorted to by the landed proprietors of Scotland for swamping the counties, but is attended with so much inconvenience by compelling the titles to their estates that I think the scheme has been virtually abandoned by all parties. If report speaks truly, one of the members of the present Cabinet could speak feelingly on this subject. Instead of resorting to any such legal manoeuvres, I beg to advise the Free-Traders of England to carry out the recommendation of Mr. Cobden, by possessing themselves of the *bona fide* 40s. freehold. If we had the same low qualification in Scotland, a dozen counties might easily be rescued from the monopolists in a couple of years; and, with your superior wealth in England, I cannot doubt that you will carry out the object with complete success.

A WRITER TO THE SIGNET.

[We heartily join in the opinion and recommendation of our correspondent.—ED. LEAGUE.]

To the EDITOR of the LEAGUE.

Manchester, Nov. 20, 1844.

SIR,—I fear the remark in your notices to correspondents in last LEAGUE, in which you say, "if a cottage be subject to a ground rent it cannot be a freehold" may mislead our friends in Lancashire or elsewhere, unless explained in your next. Half the freehold property in Manchester is subject to a "chief" rent, which is a perpetual ground-rent or *rent-charge*. In some places these perpetual rent-charges are called ground-rents, and in others rent-charges; but, whatever they may be called, they do not affect the character of the freehold, or the right to vote for the county, *provided the land be bought for ever*, and provided there be a clear surplus of 40s. rent accruing to the owner, over and above the ground, or "chief" rent. I apprehend your remark was made more particularly in reference to the building land in London, which, when subject to a ground-rent, is almost invariably sold for a term of years. The principal guide for your readers in all cases is to bear in mind that freehold land means ownership for ever, and not for a term, whether 99 or 10,000 years.

I am, Sir, your obedient servant,

A LANCASHIRE LEAGUER.

[Our correspondent is correct in his definition. The misapprehension has arisen from the different interpretations of the term "rent-charge." The safest, because the simplest, rule to follow is that which he has laid down.—ED. LEAGUE.]

Bridport, Nov. 18, 1844.

DEAR SIR,—I send you herewith the *Wills and Dorset Herald*, containing an account of Mr. Cochrane's annual meeting with his constituents, and in which you will find a most audacious attack on Mr. Cobden by him. The meeting was altogether well worthy of the man, the object of his visit (judging from its effect) being to demoralize the constituency, who were regaled in the Town-hall with bread and cheese and beer. From all accounts the scene of drunkenness and debauchery baffles description.

Believe me to remain, dear Sir,

Yours very truly,

A LEAGUER.

[We are much obliged to our correspondent for his attention; but we have no time to waste either upon the puerilities or the other very congenial pursuits of *dear* Cochrane. Let the electors of Bridport look to it.—ED. LEAGUE.]

ADVANCE OF WAGES.—STRIKES.

"Cheap bread—low wages."—*Quarterly Review*.

OLDHAM.—On Saturday, Mr. Birch, of Lower Lees Hall mill, raised the wages of his spinners five per cent., and took off the charge for gas. He also gave an advance of from five to ten per cent. to his card-room hands and reelers. Most of the millowners in the neighbourhood of Waterhead have taken off the charge for gas, which will be equivalent to an advance of 2d. per thousand hanks, or about 2s. weekly. The spinners employed by Mrs. Mary Broadbent and Son, Hopwood-mill, Side of Moor, have given notice of an intention to turn out, for the purpose of obtaining an advance of 3d. per thousand hanks. Their employers are understood to have offered an advance of half that amount, to which the men will not accede. The operatives at the cotton mill of Messrs. Wild, Moss, and Hey, Shaw, Crompton, have returned to their employment, on the understanding that their wages should be advanced about 1s. per week; but the dispute does not appear to be yet fully settled. On Saturday, the turn-outs at Mr. Wrigley's factory, Littlewood-mill, Heyside, returned to work at an advance of about 1s. per week. On Saturday, the hands of Messrs. Milne, Travis, and Milne, of Shaw, Crompton, struck work for the purpose of obtaining an advance of wages; and they are still out.—*Manchester Guardian*.

WARRINGTON.—Messrs. Hadfield and Frost, cotton manufacturers, have advanced the wages of their work-people ten per cent.

HISLEY.—The throstle spinners employed at Mr. Gidlow's mill, Ince, turned out on Saturday last for an advance of 1s. per week. Mr. Gidlow proposed to advance them 6d. per head, but this they declined to accept, and, in consequence, the mill was stopped, and the hands remained out until Monday, when some of them returned to their work, and the mill partially resumed work in the afternoon.

ASHTON-UNDER-LYNE.—There appears to be a general move among the factory operatives of this district, for the purpose of obtaining an advance of wages. For several weeks past, various meetings have been held by almost every branch of factory operatives, at which preparations have been making to adopt some steps to obtain an advance.

STOCKPORT.—The turn-outs having notified to the masters that they were disposed to return to their employment, the strike may be considered as at an end.

WIGAN.—On Friday, the 8th inst., the reelers employed at Mr. Acton's mills struck work for an advance of wages, and, in consequence, the mills were stopped.

altogether. The reapers at some of the other mills also tendered their notice to their employers on the same day. Mr. Acton having consented to advance the wages of his reapers one penny per score, the mills resumed work on Monday afternoon. The hand-loom weavers struck against the length of the pieces of another master in this town; and, according to report, they were making preparations for a succession of strikes against the most obstinate of their employers.

THE TAILORS OF EXETER.—The respectable well-conducted body of working tailors of this city struck in the early part of the week; but we are happy to say that, from the equitable spirit in which they proceeded, and the moderation of the masters, the disputes are all but adjusted, and some of the leading houses have given in their adherence to the list of prices submitted by the men. We hope that further concessions on both sides will be made, and harmony restored.—*Western Times*.

SHIPWRIGHTS OF SOUTH SHIELDS.—A part of the shipwrights of South Shields, we regret to hear, have this week struck work, claiming an advance of 6d. per day on their present wages.—*Tyne Mercury*.

NEW LANARK.—The workers in the extensive spinning mills at this place struck work on Thursday for an advance of wages; and in the afternoon of the same day, Mr. Walker, the managing proprietor, agreed to give them a rise of 1d. on the shilling, or 8½ per cent. There had been no previous advance of wages at this establishment since the late improvement in trade.—*Scottish Herald*.

MONTROSE.—We are happy to learn that an advance in the wages of all hands employed by the three extensive flax-spinning establishments here has taken place this week. The rise is from 10 to 15 per cent., making an aggregate increase to the income of that section of our population of about £50 per week. We sincerely hope that the advance will be general throughout the country, and that the state of trade will justify its continuance. Notwithstanding this appearance of prosperity, we could wish to see the manufacturing interest in a more favourable relation, for the seller finds it impossible to realize an advance on linen equivalent to the rise on yarns.—*Montrose Review*.

SCOTCH COUNTY REGISTRATIONS.

(From the *Edinburgh Weekly Chronicle*.)

The skill and success with which the League at its headquarters has recently brought its efforts to bear on the county registrations, while eliciting the admiration of the Free-Traders throughout the country, should also stimulate their efforts. There are many districts in England in which the Free-Traders might, by means especially of the forty-shilling qualification, do much for the good cause—quicker, cheaper, and easier than it could be done, by efforts emanating more directly from the executive of the League. The instrument which has been found in the forty-shilling qualification, is of too useful and formidable a character not to be employed to the utmost of its capabilities. There are other means also by which much may be effected towards making the constituencies somewhat less the instruments of the monopolists, and somewhat more the organs and representatives of the people.

In Scotland, unfortunately, the Free-Traders, though able to do much more, in some districts, than they have yet done, do not possess the same facilities for purifying and increasing the county constituencies as exist in England. The difference in price between a property of £10 and one of £22 annual value is of itself a great obstacle; but there are several other difficulties co-operating with it; for instance, the greater proportional quantity of entailed property in Scotland, and the greater strictness of the entails, rendering it much more difficult than in England to obtain property qualifying for a vote. Besides this, the different qualification affords to the monopolist landowners the means, in all cases, of materially counteracting, and in some cases of completely overwhelming by fictitious voters, almost any number of *bona fide* £10 owners whom it would be practicable to place on the roll. In some counties, however, especially in the West of Scotland, these difficulties are less formidable, and the means of overcoming them considerable. In some of these—as Dumbartonshire—the monopolist landowners have been vigorously, though not always successfully, met; but others, having been given over to the monopolists through apathy and mismanagement, are in a position to be retrieved by the exertions which the times and the cause now claim from the Free-Traders.

Ayrshire, for instance, is not a county which should ever have fallen into the hands of the monopolists, or which should be permitted to remain in them. At the first election under the Reform Bill, an anti-monopolist—the most liberal county member ever sent from Scotland—was returned with ease, and by an overwhelming majority; and even in 1835, when the monopolists had "worked" the register, and when their opponents possessed a less popular and influential candidate than on the first occasion, the monopolist lost the election by a majority of nearly two to one. This county is now in the possession of the monopolists, not because monopoly is more popular in Ayrshire in 1844 than it was in 1835, but because the monopolists have been swelling their numbers on the register, while their opponents have been standing idle. That this, and not "reaction," has been the cause of Ayrshire falling into the hands of the enemy, is demonstrated by the fact that, in 1837, the last occasion on which an anti-monopolist was returned by a very narrow majority, he polled upwards of a hundred votes more than he polled in 1835, when he had a majority of two to one. Had the anti-monopolists of the west of Scotland acted with ordinary energy and union, these things could not have been. Would they now but imitate, to the best of the means at their disposal, the example set by the men of Lancashire, the lost ground would be more than reconquered. Possessing a less proportional amount of entailed property than any other county of Scotland, a large admixture of manufactures, and an active and ardent population, Ayrshire presents a most favourable field for a rally of the friends of Free Trade, and an effective assault, with honest weapons, on the system of trickery and subterfuge, by means of which the monopolist lairds have, in so many instances, swamped the real constituencies of the Scottish counties.

There are other Scotch counties in which the Free-Traders might do much towards bringing the register into a healthier state, by efforts even much less energetic than those we have lately witnessed in England. In such counties as Dumbarton, Lanark, Renfrew, Stirling, Forfar, and Fife, although the immediate result could not be

so brilliant as in the case of Lancashire, much might be effected, and a good beginning made.

As the period is now approaching at which all persons desiring to be enrolled as county voters at next registration must acquire the subjects on which they intend to claim, the following memoranda as to the persons qualified as county voters in Scotland may be useful:—

1. Any persons are qualified to be registered as county electors who, not being subject to any legal incapacity (as peers; minors, women, aliens, lunatics, &c.), are *proprietors or life-renters* of lands, houses, feu-duties, or other heritable subjects (but not heritable bonds and debts) within the shire, of the yearly value of £10, after deducting feu-duty and ground annual, provided the claimants be in possession either of subjects or of rents. Fairs are not entitled to enrolment during the life of the life-renter.

2. But persons acquiring such property by purchase, or by other means than those mentioned in the next article, must have been in possession for six months previous to the 31st of July of the year in which they claim.

3. Where the party acquires by inheritance, by marriage, by testamentary or marriage settlement, or by appointment to place or office, six months' possession is not necessary.

4. A *joint-proprietor*, whose share or interest is of the yearly value of £10, after all deductions.

5. *Husbands* who, in right of their wives, enjoy subjects worth £10 of yearly rent, after all deductions.

6. *Tenants* who shall have been in possession for *twelve months* prior to the 31st of July, under a lease of not less than nineteen years, of subjects for which the tenant pays £50 of yearly rent, or which are worth £30 yearly, after paying the rent.

7. *Tenants* who shall have been in possession for *twelve months* prior to the 31st of July, under a lease of not less than fifty-seven years, or for lifetime of tenant, of subjects worth at least £10 yearly more than the rent paid.

8. *Tenants* in possession for twelve months prior to the 31st of July, of any subjects, for the lease of which, whatever may be the rent, they have paid a price, *grassum*, or consideration of not less than £300.

9. In cases where the rent is payable in grain, to be estimated by the fairs of the last three years; where payable in other kinds of produce, to be estimated according to the market prices of the neighbourhood.

10. *Tenants* who have succeeded to their lease by inheritance, or testamentary or marriage settlement, do not require to have been in possession previously for either twelve or six months.

DUTY OF A CLERGYMAN.—FOOD AND WAGES.

"If the price of bread go down, the price of labour will go down too."—*Rev. H. M'Neile*.

The thinking part of the public will remember that the Rev. Hugh M'Neile, not being sufficiently occupied by his other duties, has occasionally lectured on political economy; and that he took an active interest in propagating that doctrine, which none but those with large vacancies in their heads could possibly take in, but which the bread-taxers of the aristocracy and the monopolists of warehouses and schools have been anxious that all their apologists should foist upon the ignorant, for it was a capital delusion, namely, that, "cheap food meant low wages;" that the demand of employers for the one only intimated their desire to pay the other. In vain did the Free-Traders argue that they cared not for price in the abstract: freedom of trade was the object sought, and as to prices of food and labour, they would soon find their proper level; in vain was it shown that the people of this country were eating dear bread, while foreigners were eating cheap bread, and both parties were trading to many of the same countries; and that this inequality ought to be put an end to. The argument was disregarded; the delusion referred to was propounded and swallowed, and Tory dupes and Tory Churchists united in declaring it a truth—that "cheap food meant low wages."

Mr. M'Neile showed either his deplorable want of knowledge on the subject, or his more lamentable love of delusion, when it serves a Tory purpose, by adopting and cherishing this absurdity. He contended that dear bread was a blessing to the poor man; that when provisions were double the usual price, wages were of course double; and that, after paying for food, the working classes had always then a larger surplus left for clothing and various comforts, than they could possibly have as the result of cheap food and the necessarily low wages which would be its concomitant.

For some time past it has happened that prices of food have very decidedly declined; and what is the case with respect to wages? Why, we never now open a provincial paper, from Manchester, Leeds, Bolton, or the mining districts, but we find instances not only of a demand for advanced wages, but of advances being actually made. North, east, west, and south, we look around, and find that while food has been falling, wages have been rising—the latter being, indeed, a very natural and very satisfactory consequence of the former.

We were gratified to hear Mr. Alderman Sands, during the last week of his mayoralty, speak as follows to several hundreds of the industrious classes, amongst whom a decided improvement in appearance had recently taken place. He said, "I wish to your better condition as to dress to the good harvest which Providence has bestowed upon us; for, in consequence of food being cheaper, you have more money to spend in clothing and other things, and this increases the demand for labour so much as to cause wages, in many businesses, to advance, and this again adds to the comfort of the people at large."

Of course, this is the inevitable result of a fruitful harvest, such as Free Trade would secure to us every year, having all the world to derive it from; and, though we know a deficient harvest must be a loss to the farmer, yet, as it is seldom that all his products fail in any one year, he would be better paid for whatever crops he had, by a busy, flourishing community, than by one reduced to poverty by dear bread and short employment.

Now, on the question of food and wages, Mr. M'Neile has propagated an error. He professes to be a disciple of truth; what, then, is his duty? In reply to this question we do not hesitate to record three opinions:—1st. That it is clearly his duty to undeceive the ignorant crowd of whose state of intellect he has taken advantage; 2ndly, That he will feel it to be his duty, as a man and a Christian, to do so; and 3rdly, That he will not do it.—*Liverpool Mercury*.

REVIEW.

The History of British Commerce.—The Camp of Refuge. (Knight's Weekly Volume, XX. and XXII.)

Barrow's Life of Sir Francis Drake. (Murray's Foreign and Colonial Library, No. XIV.)

The history of British commerce and maritime enterprise is almost identical with the history of social progress in England; and the circumstances which moulded and formed the political condition of the people of England at home have been the same as those which gave it a foreign commerce and a colonial library. Until the publication of the "Pictorial History of England" we had no history of the British people, and no collected materials for estimating the successive steps of national progress. Historians seemed to think it their duty to record nothing but what was striking and exceptional—wars, usurpations, changes of dynasty, and insurrections—from which it was just as impossible to form any accurate notion of the real state of affairs as for a geologist to discover the nature of the stratification of a country from a collection of its rarest and most curious fossils. In fact, our first glimpses of the truths in English history were derived from fiction: Scott's "Ivanhoe" for the first time revealed to the great mass of historical students that, long after the Conquest, England continued to be divided between an upper and a lower nation—a tyrannical ascendancy and a struggling serfdom. It is to the successful struggle of that serfdom that England owes all the social happiness and prosperity which it has ever gained; it is to the predominance of any of the principles on which the Norman ascendancy was based that the country owes every disgrace abroad and every misery at home.

The Norman Conquest is too often regarded as a mere change of dynasty; it was the subjugation of an industrious race to a band of mercenary barbarians, who had no principle but plunder, and no policy but the supply of means for licentious pleasure. We have heard persons declare with pride that the names of their ancestors were to be found in the roll of Battle Abbey; it would be a far more legitimate subject of boast that they occupied a conspicuous place in the "Newgate Calendar." A fierce resistance, protracted for more than five years, was made to the barbarous invaders; but the robbers finally triumphed, and soon began to quarrel for their shares of the spoil.

But though the independence and freedom of the Saxons was cloven down—though their chiefs capitulated and their prelates bowed to the yoke—the stubborn spirit of the English nation was unbroken.

Mountains and forests gave shelter to daring bands that scorned all servitude; and even those who submitted to become tenant-vassals gave the full support of their sympathies to the gallant outlaws. The Normans were sufficiently wise to discover that civilization is the worst foe to tyranny; they applied themselves to devising a scheme by which both the land and the people should be kept in barbarism; and for this purpose they devised the horrible forest laws, which the course of time has frittered down into the modern game laws. It was a plan worthy of a band of ignorant robbers, to reserve a large portion of the land in savage wildness for the sport of savages; but for this a plausible pretext was devised: it was declared to be part of a system of "protection," a name which for nearly eight centuries has been identical with legalized robbery.

The plea for the forest laws was, that the lands of England having been portioned out on the condition that its new owners should take upon themselves the sole charge of the defence of the realm, it was necessary to preserve the chase—that "ministry of noble war"—to have them trained in military habits. The conditions on which the estates had been granted were soon violated by the Norman nobles; but, notwithstanding this, they kept their lands and their game laws into the bargain.

Thucydides has remarked that all ancient oligarchies fell so soon as their infantry became of more military value than their cavalry. The forest laws had very considerable influence in training the English infantry: the bow was the great weapon of the poacher, and the poacher was the true patriot in the days of the Plantagenets. Large as were the grants which the Conqueror made to his mercenary followers, they failed to satisfy the avarice of the titled plunderers. Private wars broke out between the barons; and whichever party prevailed placed a new sovereign on the throne, to have a pretence for unking new forfeitures. The contests between Stephen and Henry II. were wars for land between the barons who had arrayed themselves on each side. Neither faction had yet discovered the value of the support to be derived from the English people; but both perpetrated on the Saxons every outrage that cruelty could dictate. Recourse was frequently had to torture by the titled brigands, to extort from the people the produce of their industry. "Some," says the "Saxon Chronicle," "they hanged up by the feet, and smoked with foul smoke; some by the thumbs or by the beard, and hung coats of mail on their feet. They put them into

dungeons with adders, and snakes, and toads. Many thousands they wore out with hunger." Such was the old nobility, for the restoration of which a noble poet has declared himself willing to sacrifice all the learning, arts, and commerce of the nineteenth century!

Henry II. ascended the throne of a distracted kingdom: to curb the turbulence of the nobles, he was obliged to seek the aid of the people; and in order to conciliate the Saxons, he made one of their race, Thomas à Becket, Archbishop of Canterbury and Lord Chancellor of the kingdom. History has never done justice to the character of Becket: he lived in an age and country when the Church alone possessed any elements of social order. The sovereign was proverbially the greatest liar in Christendom, ever ready to use the basest artifices to gratify the meanest and most depraved passions; his queen was one of the most notorious profligates in Europe before he married her, and a wife engaged in fomenting rebellions not wholly without excuse afterwards; the nobles and the younger scions of the aristocracy had formed themselves into troops of armed banditti, and not only plundered travellers on the high roads, but attacked and sacked several villages and even towns. Becket laboured to establish some principle of sanctity in the midst of such demoralization; and he aimed at giving preponderance to ecclesiastical influence, for no other power existed which could make the slightest pretension to moral principle. Becket's death was even more advantageous to the Saxons than his life: they saw one of their proscribed race honoured as a saint, and the most powerful of their oppressors compelled to do penance at his tomb.

The "Camp of Refuge" is designed to illustrate the early part of the Anglo-Saxon struggle, when the Isle of Ely and the Fens of Lincoln gave shelter to a few who would not consent to be treated as aliens in the land of their fathers, and is intended to show how this struggle was likely to be viewed in the reign of Henry II. by the descendants of those who had witnessed the result of the ineffectual strife. We have as yet only a portion of the work; but we shall take the opportunity afforded by the publication of the second volume to continue the subject.

Agincourt; a Historical Romance. By G. P. R. James, Esq. London, Bentley.

Mr. James is the most prolific of modern novelists; he has produced three volumes after three volumes with a rapidity which Scott himself has not surpassed.

Reviews behold him spurn their bounded reign,
And panting Time tolls after him in vain.

With many excellencies he has some glaring defects, and one of the worst of these is the substitution of sentimentalism for science, whenever a point of ethics or political economy comes under his cognizance. Fiction, as a supplement to history, ought to be a generalization of facts; now, in *Agincourt* there is no such thing as judicious generalization: it has much merit as a story, and contains several passages of great dramatic and graphic power; but it throws no light on the peculiar character of the age in which the story is laid, and with a mere change of names would be as applicable to any period of history previous to the invention of gunpowder as it is to the reign of Henry V. The great merit of Scott's historical romances was, that they always afforded us some glimpse of the condition of the people; James writes as if the people formed an element of society quite unworthy of his notice. He defends the Corn Laws as a means of preventing the middle class from pressing too hard on the position and privileges of the titled orders; and that such would be his policy might have been inferred from his novels, in which the titled orders are represented as alone worthy of any share of human sympathy. Acting on these principles, he can but produce such historical pictures as would be thrown from the slides of a magic lantern, fit only to amuse persons who have resigned themselves to voluntary darkness.

RAILWAYS IN PRUSSIA.—The *Cologne Gazette* states, that forty-eight lines of railroad have been proposed in Prussia, extending over a space of 641 German miles, since the 1st of the present month. The capital expended on the lines already opened amounts to 35,551,143 crowns. The roads in construction require a capital of 56,619,500 crowns. The roads projected will require a capital of 68,000,000 crowns.

THE GAME LAWS.—These are among the most fertile of all the sources of rural demoralization. They produce irregularities which lead to the corruption, through example, of numerous families; they familiarize the peasantry with breaches of the law, and with the interior of the goal; and they break up accustomed habits of steady industry, to substitute for them reckless daring, a love of excitement, and a thirst after money, gotten without prescribed toil. And, then, the cost of maintaining these obnoxious laws. The worth of all the preserved game in the kingdom would not cover the sums paid yearly for the trials of poachers, their maintenance in goal, the keep of their families under the poor law, and the proportionate burdens which they add to the expenditure of the country for local constabulary services.—*Presses Chronicle.*

AGRICULTURE.

LEASES AND TENANT-RIGHTS.

The examination and discussion of the question of Free Trade is now rapidly drawing to a close. The benefits free trade in grain—and free trade in grain implies free trade in everything—would bestow upon the community are generally admitted, and the only doubters to be found are amongst the agricultural classes. But in truth the condition of British agriculture furnishes the strongest arguments against monopoly, and in favour of Free Trade. Of this comparatively few were aware until the inquiries of the League brought out the fact, that the greater part of the land of England is under a very inferior state of cultivation. Many causes have conduced to this, most of which may be traced to the Corn Laws, but one of the most prominent is the absence of secure tenures by tenant-farmers. So sensible have the landed interests become of this, that most proprietors, who claim to be considered good landlords, are offering leases, while nearly every farmer of spirit declares that a lease is indispensable to successful farming. Still a lease containing all the barbarous or useless covenants and restrictions hitherto commonly inserted in such documents, is little better than a snare to the farmer, and a demand has arisen not merely for leases, but for rational leases.

Now, a rational lease implies the grant to the tenant of so much of uncontrolled dominion over his farm, that landlords have great difficulty in conceding them. The relation of landlord and tenant in this country has hitherto had so much of a quasi-feudal character that proprietors scarcely believe they are owners of the land if their tenants be not subjected to more or less of petty interference. At the same time we believe that the great majority of English landlords will do everything that is just and fair towards their tenants short of absolutely surrendering their social and political influence over them.

This has led to the suggestion, and in some partial degree to the practical adoption, of a middle course, by which, under a system of tenant-right, the tenant, who has spent money in permanently improving his farm, is supposed to receive back what he has so expended, in the event of his being summarily dispossessed. Upon this principle Lord Portman's bill of last session, for securing "compensation to tenants who shall make permanent improvements on the lands they occupy," was founded, by which it was proposed to establish and enforce by law some system of tenant-right to payment for outlays.

Although we are well aware that in some parts of Yorkshire and Lincolnshire considerable improvements have been made by tenants upon the faith of such tenant-rights, together with a personal confidence in the honour and integrity of their landlords, we have no hesitation in saying that tenant-rights are not and cannot be any efficient substitute for leases. It is, to use a term which seems to have excited the reprobation of an anonymous correspondent, a mere *make-shift*. Let us not be misunderstood. We do not say that such a right to compensation as Lord Portman's bill proposed to confer, or the Yorkshire tenant-right professes to give, if either could be made available to all yearly tenants who have already expended money in improvements, would not place them in a condition of much greater security than they at present enjoy; but to assert that any tenant-right will generally form an effective protection to the enterprising farmer is a sheer delusion. To attribute such influence to tenant-right, because certain farmers, in some districts, have improved upon the faith of tenant-rights, is to convert the exception into the rule, and will only lead to error and mystification.

The tenant-rights of the north have led to much litigation; and though, in some instances, the landlord or succeeding tenant, who pays for such right "according to the custom of the country," may receive the full value for his payment, yet in many cases payment is made for much that is absolutely useless. That is an objection which a landlord or an incoming tenant might fairly make to them. Besides, mere payment for outlays judiciously made in improvements or high farming is no sufficient compensation for depriving a tenant of his farm, and the profits which, under a lease, he would have obtained from his expenditure. This concerns the actual tenant. It may be worth while for a landlord or a competing tenant to pay an enterprising farmer the full cost of well-executed improvements, and that according to the highest scale of compensation which any tenant-right in any district sanctions, yet the improver who has been sent adrift to seek a new farm, and begin his improvements over again, will find himself in a very different position from that of a tenant who has expended his capital under the security of a lease. The holder of a lease calculates his outlay and return according to the length of his term; he knows how long his occupation will endure, and has ample time and opportunity to seek a new farm should there be no prospect of renewing his lease. The system of payment to an outgoing tenant for acts of husbandry, according to the custom

of the country, is not confined to Yorkshire, Lincolnshire, &c.: it exists throughout England, and is often made the source of much imposition on an incoming tenant. And it is certain that the system which has grown up to be the "custom of the country" will not be the best, and it is often a very bad, method of cultivation. There may be districts in which the usual system of farming is so high that a good farmer, entering upon a farm and paying the outgoing tenant, in respect of tenant-rights, may pay only for that which is valuable; but such districts are so comparatively limited that it would be absurd to treat them as furnishing any general rule in agricultural management.

We have said that under colour of paying for acts of husbandry the incoming tenant is often, perhaps generally, imposed upon. For instance, to mention cases which have very recently occurred within our personal observation, in Hertfordshire, where, according to the custom, a certain proportion of land is to be left for the incoming tenant's wheat the first year, we lately saw two year's old clover ley, one half, at least, of which consisted of weeds and couch-grass, left for that purpose. The custom was satisfied, but the incoming tenant's chance of a crop of wheat was but slender, and, in fact, he had no crop worthy of the name. Another custom in the same county is, that the incoming tenant pays for summer fallows; and we know a case in which seven ploughings and four harrowings were paid for, though, in fact, not one good ploughing had been done upon the land. And in every district, whatever may be the peculiar "custom of the country," it will be found on examination, that nothing like the certainty and security obtainable under leases is believed to exist from any tenant-right. We know of the case of a positive agreement by the landlord to pay his tenant, in the event of his being turned out, for all outlays in respect of which he had not received full remuneration, and on the tenant having received notice to quit, although some £4 per acre was the lowest estimate of the compensation to which the tenant was actually entitled, the probability of successfully enforcing the agreement was deemed by the tenant's legal advisers so remote, that he was recommended to put up with a loss of £1200. Yet this gentleman had been farming under the full belief that his agreement was equivalent to a lease.

In fact, every one, who has observed the state of agriculture in various districts, will agree that the practice of granting long and reasonable leases can alone be relied on to raise the standard of cultivation amongst the mass of ordinary, average farmers. Such a practice, however, will never become general until the Corn Law is abolished, for, besides the fluctuations and uncertainties produced by this law, both farmers and landlords have been constantly looking for some artificial enhancement of price.

WHY DO WE ASSAIL THE GAME LAWS?

A correspondent, who signs himself "A Yorkshireman," says, "every Sunday the LEAGUE arrives I find it abusing game and the game laws. Now, will you oblige some of your friends here by telling us what it is you do wish to be done with game and the game laws." Now, the answer to that query is very short and conclusive. The scheme of the Corn Laws is to prevent the British community from consuming any grain (except when actual famine is imminent) but that grown on British soil. That law, so manifestly unjust, is defended by its authors, the landlords, upon the plea that the British grower is unable to compete with the foreign grower in the production of grain, and therefore requires to be "protected" by duties ordinarily prohibitory of importation. To this the Free-Traders rejoin, first, that if grain can be grown cheaper abroad, it is a grievous wrong to compel the industrious people of this country to eat only the dearer home-grown corn for the benefit of a class; and, secondly, that if the actual state of English husbandry be examined, it will be seen that the home soils are badly cultivated, and mainly in consequence of burdens and obstacles created by the very lawmakers who have imposed the Corn Laws. The landowners prevent the people from importing foreign corn; and, having imposed that restriction, they prevent, for exclusively class or personal objects, so much grain being grown here as might be grown under a natural state of things. Now, the game laws, and the practice of game-preserving, cause an enormous destruction of grain and other farm produce, of which the Corn-Law-burdened people of these realms have a right to demand an account. This brings the game laws strictly within our cognizance; and it is only necessary to notice the occurrences in connexion with game, which are revealed in the public journals from day to day, to be aware of the injury the game laws inflict upon the community.

If the Corn Laws were repealed, we, as Free-Traders, should have no right to inquire whether a proprietor stocked his land with hares and rabbits, or sheep and cattle; that would be a simple question between him and his tenants and his neighbours; but so long as the British people are for the exclusive advantage of the landowners, made solely dependent upon British produce for their daily food, we have a right to inquire "why are not larger crops produced?" "Why is the people's food devoured by game?" There is no analogy between the interest in game and the property in domestic birds or animals, because,

in the one case, the interest a man has, of necessity ceases as soon as the wild animals have quitted his land; while, in the other, the property of the owner still exists. He can identify his domestic animals, and is liable for any damages they may commit by trespassing. Let landowners keep their game at home, and they will then want no game laws, for they can, of course, prevent persons from trespassing on their land. Bearing in mind the above remarks, let us take a few paragraphs from the newspapers illustrative of our argument:—

"**BATTEE SHOOTING.**—On Thursday last, Lord Stanley, Lord Lilford, Mr. Talbot Clifton, Mr. Wilson Paten, and two other gentlemen, shot upwards of 300 head of game on Lord Lilford's estate, near Warrington."—*Provincial paper.*

We shall show presently at what expense to the corn-law-burdened people these creatures have been nurtured. Again:—

"One day last week, C. Scarisbrick, Esq., of Scarisbrick-hall, and another gentleman, killed upwards of 900 hares, all of which were presented to the tenants."—*Mark-lane Express.*

Next we have the following account of

"**EXTRAORDINARY SPORT AT HIS GRACE THE DUKE OF RUTLAND'S.**—On Tuesday last, in a small cover called the 'Links,' near Newmarket, his Grace the Duke of Rutland, Colonel Anson, Mr. Stanley, and Mr. Fairlie, with only four hours' shooting, bagged the extraordinary number of 714 head of game—viz., hares, 336; pheasants, 265; partridges, 33; rabbits, 80; and the following day upwards of 50 hares, pheasants, &c. (wounded the previous day), were picked up. Out of the four hours' shooting, two of the party were absent an hour and a half, attending a meeting at Newmarket—viz., his Grace and Mr. Fairlie. In the evening a considerable portion of the game was distributed to the tenantry, tradespeople, &c."—*Local newspaper.*

If our correspondent be, as he professes to be, a constant reader of the LEAGUE, he may recollect that, at a recent agricultural meeting where the Duke of Rutland presided, Mr. Beaseley, a farmer, stated, that he had lately seen upon a preserved property, 83 hares in one field, and he estimated that these 83 hares would consume as much food as 23 sheep; in fact, that four hares are equivalent, as consumers of farm produce, to one sheep. We know that estimate is too low; but take it upon that footing, and let us examine the probable amount of loss in human food caused by the two preserves of Mr. Scarisbrick and the Duke of Rutland only. Now, in one day the former killed 900 and the latter 336 hares (without reckoning other game), making a total of 1236. Now, it may fairly be assumed that in this day's slaughter—we can't call it sport—not more than one-fourth of all the hares in the respective preserves were killed; and that the actual number of the creatures fed during the present year upon the crops of these gentlemen's tenants must have amounted to 5034—equal to 1236 sheep!!! This upon two estates only! Does it

not form a sufficient reason with those who desire to abrogate the Corn Laws and relieve the country from attempts, by means of those laws, to cause an artificial scarcity, for objecting to game-preserving?

WORKING THE AVERAGES.

We all recollect the outcry raised by the monopolists when, corn having risen to famine price, some dealers in foreign grain were suspected of having "worked up the averages" by means of fictitious sales. The object of such operations, if in fact they occurred at all, was to hasten the period when foreign corn could be imported at a low duty. Doubtless the purpose of the operators was profit to themselves, but the effect was in some small degree to relieve the national distress, to mitigate in a very minute proportion the landlord-created scarcity. How eager were then the demands for the prosecution of those who were supposed to have deprived the farmers of a fraction of their starvation price! How rigidly were the corn returns scrutinized lest a sale too many, or a price too high, should have been inserted! Yet let us see what is the conduct of these self-same monopolists at this moment. Barley, and other spring corn, as all our readers know, were short crops last year, consequently the prices are now exorbitantly high, and the machinery of the averages is used as the means of excluding relief by importation much beyond the time at which, by the letter of the landlords' law, such relief should be attainable. This has been well exposed by Messrs. Sturge, of Birmingham, in their corn circular of the 6th of November. They say:—

"We alluded, in our circular of the 3rd of last month, to the glaring omissions in the returns of spring grain in three parts of the kingdom where it is principally consumed; and where, of course, the returns would be comparatively high. While we deprecate the present Corn Law as injurious to all classes of the community, and amongst other evils include the temptation it holds out to making returns for the purpose of lowering the duties, it is surely equally culpable on the part of the officer appointed for that purpose, practically to defeat the operation of the law, by neglect of making the returns in districts where, if it were properly attended to, the averages would be greatly advanced; as a proof of this, we need only refer to the returns from which the last week's averages are made up. The counties of Suffolk and Norfolk, where less barley is consumed than grown, returned 18,776 quarters; the counties of Lancashire, Warwickshire, and Staffordshire, where an equal quantity is probably sold for consumption, return only 1946 quarters; the former at about 34s. 4d., the latter at about 36s. 1d.; Essex and Kent return 640 quarters of beans, at about 31s. 6d., and 277 quarters of peas, at

30s. 2d.; while Stafford, Warwick, and Worcester, where a much larger quantity are sold than in Essex and Kent, return 196 quarters of the former, at 43s. 8d., and five quarters of the latter, at 40s. The same remark applies to rye and wheat, though not to a similar extent to the latter, while scarcely any oats, except Irish, are entered in the returns. Indeed it would appear, that in almost all the consuming markets, except London, the returns are shamefully neglected; and that, were they equally well attended to in the manufacturing as in the agricultural districts, at the present time the duty on beans, barley, peas, and rye would all be nearly at the minimum of 1s. per quarter, instead of the present rates of 6s. 6d. for beans, 4s. for barley, 5s. 6d. for rye, 9s. 6d. for peas. The quantities returned ought to be greater instead of less in consuming districts than in the producing, as not only is much of the growth of the neighbourhood sold at the former, but a great portion of what has been previously bought in the latter."

Here we have distinct evidence that the protectionists who would keep up duties understand how to work the averages far more effectually than the dealers who seek to lower duties; and yet, at this very moment, these monopolists are sending forth their agents and their creatures to agitate for the repeal of the malt-tax upon the pretence that the great object of their move is to give the labourer cheap beer! Must not the system which encourages and invites such frauds and hypocrisies be one which every well-judging legislator should hasten to abolish?

DESTRUCTION CAUSED BY GAME.

To the Editor of the Times.

SIR,—Having read several letters in your valuable paper concerning the damage done by game, I am induced to offer a few remarks on this important subject, if you will kindly give them space in your valuable paper. I am a renter of a considerable tract of land in the midst of large game preserves, and, take one year with another, I do not lose less than from £150 to £200 a year, reckoning loss of corn, grasses, vetches, turnips, labour, rent of land, bone dust, and other manures. There is an impression on the public mind that the rent of land is lessened according to the stock of game preserved on it. But if any disinterested person would take the trouble to go into a district where game is strictly preserved, to ascertain the real fact, they would find this impression to be a most erroneous one, and that the land there would be rented after the same rate that the unfested land is. The land I occupy I rent rather above than below the average price of Wiltshire farms; and never since I have occupied it has there been a penny allowed for the damage done by the game. Certainly, when I have asked for some remuneration, I have had a fair share of promises that it shall be kept under; however, the game increases.

The game in this country is now kept in such myriads, that it is become a most serious and iniquitous affair, and one that calls imperatively for a great and immediate change. The whole theme in the markets is of the injury done by the hares and rabbits. Every person is a sufferer, some to a vast extent, even more than myself. I have known the labourers here plant their gardens twice in one season with cabbages, and then have none to cut; and even their potatoes rooted up and devoured by the rabbits and pheasants. Is it right that the many should suffer

for the few? If the value could be ascertained of the destruction the game does, what would be the amount? And whose pockets does it come from? Not the game-preservers, but from those who toil to feed it.

It is not a question of politics, but of pounds, shillings, and pence, and ought to be taken up by everybody.

Hoping I have not uselessly occupied space in your valuable paper, I remain, Sir,
Nov. 19. A TENANT FARMER.

LITERARY INSTITUTIONS.—A meeting was held last week in Barnstable, for the purpose of establishing a literary institution on a basis sufficiently comprehensive to admit of all classes availing themselves of its advantages. Resolutions to that effect were agreed to. Mr. Rock, of Walbrook, London, a native of Barnstable, has stated his intention to give the munificent sum of £100 as his annual subscription towards the support of the institution.

HOW TO MAKE CLEANLINESS AVAILABLE FOR GOOD.—Tact and intelligence, in addition to an untiring spirit of philanthropy, must be employed to make the means of cleanliness about to be offered to the poor available for good, to an extent in any degree commensurate with the expectations of those who have taken so warm an interest in furnishing them. It is not enough that the means be there. We must also have, in those for whose use they are intended, a disposition to use them. One of the most constant results of a life of poverty in a large city is an indifference to personal cleanliness. Such an indifference is, we believe, at this moment, almost universal among the poor and labouring classes of London. It would, indeed, be surprising if it were otherwise. In the first place, cleanliness is scarcely compatible with the miserable domestic arrangements, and the privation of light, air, and water, to which the poor of a city are always, more or less, closely habituated. Their occupations, also, which, with the industrious, fill up nearly the whole of their waking hours, generally oppose a barrier to the cultivation of a taste for cleanliness. If it could be supposed that there is in man, as there seems to be in some of the lower animals, a natural tendency to be clean, we might, perhaps, depend upon its displaying itself whenever the obstacles to its indulgence might be removed. But experience and observation show that this is not so. Where food and warmth are scarce, there is, on the contrary, a strong tendency to shun cleanliness as a positive infliction. There is an old Scottish proverb—"the clatter the cooler"—which recent researches in animal physiology have stamped with the authority of a scientific truth. It is found that men who are insufficiently fed and clothed are literally not fitted to bear cleanliness. It augments the rapidity of the process by which the vitality of the body is in a constant course of reduction, and renders an increased supply of food and warmth essential to its preservation in a state of tolerable comfort. These, we apprehend, are causes which will greatly reduce the numbers of those who are expected to take advantage of the establishment of the proposed baths and washhouses for the improvement of their personal habits.—*Globe.*

NOTICES TO CORRESPONDENTS.

"B. A."—First: Four or more persons can vote for a freehold house, &c., if the profit, when divided, will give 40s. per annum clear to each. Second: The voter must be 21 years of age. Third: The law expenses of conveyance will vary according to the extent of investigation of title, &c.; in some cases it may not exceed £10. Fourth: The expense of mortgage would be about the same as that of conveyance.

"W. W."—Will the following property give a vote for the county of Middlesex?—Two houses, coach-house and stabling, with field about four acres. The rent is £60 per annum, on lease for twenty years, wanting ten days.

[It being a sub-lease, without a beneficial interest above the rents and charges, it will not confer the franchise for a county.]

"W. J., High-street, Wapping."—Will a leasehold, at a rental of £130, give a county vote? I am also a trustee for a rental of £60 per annum on a chapel.

[The leasehold, being in the borough of the Tower Hamlets, will not confer a vote for the county of Middlesex; and trustees, by the new Registration Act, are restricted from voting.]

"J. P."—I am a freeholder on the register for North Stafford; value £15 per annum. I have three sons, who are of age: can I put any, or all, of them on the register?

[The value required to qualify four persons would be £8 value, and by your granting a rent charge of 40s. to each of your sons, you may qualify them. This must be done by deed before the 31st day of January next.]

"T. W."—I am owner of two leasehold houses in Clerkenwell, of 77 years unexpired; rental from each, after paying ground-rent and charges, exceeds £30 per annum, am I entitled to a vote for the county of Middlesex?

[A leasehold in a borough will not confer a county vote, as the houses will qualify the occupiers for the borough.]

"J. D."—Will a small copyhold estate situate in North Lancashire, comprising five acres of land, four cottages, and other outbuildings, burdened with a small mortgage, but yielding a clear annual value of £10, confer a county vote? If so, how is he to get his name inserted on the list of voters?

[A copyhold of the value of £10, over and above the interest of the mortgage, will confer a county vote provided the property is not situated in a borough or city. A claim in the form of the statute must be sent in to the overseer of the poor of the parish wherein the property is situated, in the month of July, any day before the twenty-first.]

"W. S."—Will two freehold houses, situated at Edmonton, left to two daughters and their children, one daughter dead; the property now belonging to my wife, entitle me to vote in right of this property?

[The right to vote will depend whether the property is secured to the wife's sole and separate use or not.]

"A. Z."—Will a lease of eighty years to run, bringing in a rental of £14. per annum, not occupied by the leaseholder, give a county vote?

[To confer the franchise the lease should be an original lease of the value of £10, above all rents and charges.]

"A. Z."—Will a share in the Grand Junction Canal give a vote for the county of Middlesex?

[Shares held under corporate bodies will not give a county vote.]

SIR,—My brother and I rent a house jointly, and both reside in it; the lease is drawn out in our respective names, and signed by both of us. The rent is £43 per annum. Am I entitled to qualify as a parliamentary voter?

Your obedient servant, FRANK TRADE.

P.S. My brother has another qualification, and I wish to vote upon the house if I can.

[Both our correspondent "Free Trade" and his brother are entitled to vote for the borough, the premises occupied by them being of £20 annual value.]

"T. W., Leicester."—I have been tenant since Michaelmas of premises: am I entitled to a vote for the ensuing year, or when can I exercise the franchise?

[If you are bound *de facto* to a rental of £60, and have been in occupation *de facto* prior to the 31st of July, you can claim in that month to have your name inserted on the list of voters for the ensuing register, provided the property is not situated in a city or borough.] The communication of "A Stockport Leaguer" is under consideration.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the LEAGUE forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadsby, Newall's-buildings, Manchester; and the LEAGUE may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

POSTSCRIPT.

LONDON, Saturday Morning, November 23, 1844.

Baron Langsdorff, the special envoy sent from France to negotiate a commercial treaty with the Brazilian Government, has returned to Europe as unsuccessful as the English Ambassador, Mr. Ellis: both negotiators have failed because they were fettered by the influence of the aristocracy of the sugar-hogshead in their respective countries. Mr. Gladstone's journal, the *Standard-Herald*, or, more properly, "The Goose and Shadow," deems the failure of the French negotiator a proper subject for congratulation, and intimates a hope that the beet-root manufacturers of Germany will be able to prevent the Zollverein from yielding to the terms demanded by the Brazilians. What Brazil particularly wants from England are manufactured articles of wool, cotton, &c., wrought metals, prepared skins, and fermented liquors. The Germans have begun to accommodate several of their manufacturing products to the Brazilian taste, and the beet-root interest would not bear competition with the chance of gaining a market for German manufactures to the amount of about three millions annually at the expense of France and England. But the Gladstone *Goose* has a pet remedy in reserve, "the illicit importation of British goods;" for the first time in English history, smuggling has been recommended as an avowed part of commercial policy in a journal professing to be the organ of the Government, and in an article bearing strong internal evidence of having emanated from the Board of Trade. Because the Government has acted on dishonest pretences, it is deemed necessary that our mag-

chants should violate the laws of the countries with which they trade. Because Mr. Chancellor of the Exchequer Goulburn has to protect his own sugars in the West Indies, and Mr. President Gladstone his father's sugars in the East Indies, the traders of England are invited to adopt a system of demoralizing fraud, and to proclaim themselves a kind of felon outlaws in the face of the world. The morality of such advice is equal to its modesty, and both are characteristic of the miserable hypocrisy to which the Brazilian trade has been wantonly sacrificed. The Gladstone Goose has for the nonce abandoned the slavery cry, and gone fairly back to the old pretext of protection: it declares that, with a differential duty of ten per cent., the French and English West Indian islands could not compete with Brazil or Cuba, and consequently that such a reduction would give to Brazil the mastery of the sugar market throughout the world. If such a result were attainable, it would only show that the change would render the Brazilians better customers for English manufactures than they have ever been. In order that they should buy, they must be able to pay; we cannot expect them to purchase when we refuse the only return which they have to offer. All commerce resolves itself into barter; and the more we depreciate Brazilian produce, the more we diminish the ability of the Brazilians to become consumers of British manufactures. The custom-houses in England will thus effectually aid in preventing the smuggling recommended by the Gladstone Goose. The only sure means for recovering the Brazilian trade are, the abandonment of fraud and hypocrisy, and the adoption of the principles of common sense and common honesty.

EPITOME OF NEWS. FOREIGN.

FRANCE.—The *Revue de Paris*, commenting on the system of solitary confinement, says that practical experiment is not favourable to the system; and that during the six months it has been pursued in the prison of Senlis, two suicides have been committed.

About two o'clock in the morning of Tuesday a considerable mass of earth detached itself from the hill of Montmartre, on the side of the Barrier of Rochechouart, Paris, and fell upon a lime-kiln, a cartwright's factory, a weaver's workshop, and a dwelling-house, which were partly buried under it. The inhabitants were fortunately awoken by the cries of some dogs, and escaped in time. At six o'clock another house experienced a similar fate, and a third was surrounded with earth up to the first story. Fragments of earth and stone continued to roll down the hill, which is extremely steep on that side, during the whole day, and the alarmed inmates of a number of dwellings at the bottom of the declivity abandoned their homes, carrying away their furniture and most valuable effects. The event had been long foreseen from the extensive excavations made in the hill to procure "plaster of Paris."

The price of bread in Paris has again been reduced. From the 10th instant the 4lb. loaf, best quality, is to be sold for 62 centimes (6d. British); the 4lb. loaf, second quality, for 48 centimes (4½d. British).

The price of bread at Brussels is at this moment five centimes higher per kilogramme than in Paris; but there is a still greater difference between Paris and Marseilles. In the latter place the price is ten centimes higher. We cannot understand why there should be so great a difference as one-fourth between Paris and Marseilles.—*Galignani*.

A new system of defrauding the revenue has been discovered on the Belgian frontier. The officers of the Customs at Verviers, who, it seems, are always wide awake, having conceived some suspicions of 13 terrines, or earthenware pots, bearing every appearance of containing *pates de foie gras*, from Strasbourg, and even smeared outside with that appetizing confection, opened them, and found them to be filled with 980 sealed letters, which, it was hoped, would arrive at Brussels free of postage.

SPAIN. There has been some discussion in the Chamber of Deputies with respect to the commercial policy of the country. Unfavourable as the present Government are to commercial freedom, they were not prepared to go the length of many of their adherents; and they were defeated by a majority of seven, on a motion for taking into consideration the subject of further protection, which, however, was not persevered in. The address was finally voted, after a bold speech from M. Ochoa, the only Progressista member in the Chamber, in which he spoke very strongly against the Government policy.

The *Journal des Debats* publishes a letter from the frontiers of Arragon, which states that for the last forty years so severe a winter as the present had not been experienced in those mountains. "Neither has there ever been seen so many wolves as during the past month. They proceed in packs and commit great destruction. A few days since they devoured ninety sheep and several horses between the Eaux Chaudes and Gubia."

Another revolt has taken place in Spain, headed by General Zurbarán. It is not considered very important. His actual force was only between 50 and 100 men, but his popularity at Logroño and his known courage and enterprise forbid the expectation that El Pastor (Jauregui), who had been sent against him by General Concha, would do more at the outset than compel him to take refuge in France. Other accounts state that the insurrection was spreading rapidly, and that from the character of Zurbarán, the strength of his position, and the courage and veteran character of his troops, it is likely to become exceedingly formidable.

MAURITIA.—The *Times* correspondent, writing from Lisbon, says:—"We have very alarming accounts from Madeira. By the *Impetrial* of Funchal, of the 11th inst., I learn that the preaching of Dr. Kalky has led to even a more considerable ferment than I announced to you as probable some time since. The bishop of the island had adopted means of endeavouring to arrest the progress of the doctor's labours, and the authorities, alarmed by the extent of his success, had sought to put him down by

measures of a strong character. The administrator of Machico had proceeded to the parish church of San Antonio da Serra to effect the arrest of "one of the propagators of the schism," when the populace arose in large numbers, and prevented him from effecting the capture. This took place on the 16th of September. The superior authorities of Funchal immediately met in council, and the result was, that a body of troops was marched to the refractory parish, accompanied by the *juiz de direito* (principal judge) and the chief law officer of the crown. After the customary legal forms seventeen men and five women were arrested and conveyed prisoners to Machico, all charged with being implicated in a conspiracy to resist the due course of law. The military force remained stationed in the district, and the prisoners had appealed to the Tribunal of Second Instance.

GIBRALTAR, Nov. 9.—A melancholy accident occurred in the Bay in the early part of this week, by which seven unfortunate beings have found a watery grave. The packet-boat which plies daily between Gibraltar and Algiers having left our port on Monday afternoon rather earlier than usual, six passengers, who arrived too late, hired a small sailing-boat at the quay to convey them across the bay. This boat, with its ill-fated charge, left our shore about three o'clock in the afternoon, but had scarcely proceeded more than half way across to Algiers, when, from some unknown cause, she was seen to go down, and seven immortal souls were launched into eternity.

A daring act of piracy was committed in the port of Gibraltar on the night of the 5th Nov., on board the Sardinian polacca schooner *San Michael*, by a party of armed Spaniards, who with their faces masked, boarded the vessel, secured the master and three of the crew who were on board, and then, having failed in obtaining a large sum of money which they expected to find, rifled the vessel and carried off several articles of property. The Governor has offered a reward for the apprehension of the pirates.

BENNETT, Nov. 13.—The late exhibition of the productions of German art and manufactures has given occasion to the formation of a society, the object of which is to ameliorate the condition of the mechanics and workmen in the manufactories, not only by relieving their distress, but by establishing savings' banks and schools, and distributing useful writings. His Majesty the King has written a letter to M. Plottwell, the Minister of Finance, expressing his satisfaction at the institution of this society, and has given a sum of 15,000 dollars to promote its object. His Majesty promised further assistance in proportion to the increased exertion of the society.

The *Prussian State Gazette* contains the following, under date Vienna, 3rd instant:—"The changes introduced into the tariff last July have exercised such a beneficial influence over the receipts of our Customs and our manufacturing interests, that the Government is thinking of applying the same system of reduction to several articles of manufacture, either by reducing the import duty or by converting the prohibition into a moderate protecting duty. The duties on fine and mixed cotton goods, printed and others, will be modified, but those on woollen cloths will continue the same."

The *Augsburgh Gazette* states that it is contemplated to effect a commercial arrangement between the city of Hamburg and the Zollverein. The same journal states that the commercial negotiations commenced between the King of the Two Sicilies and the Governments of France and England make no progress. His Majesty is more favourable to an arrangement with the Zollverein.

The *German Gazette* states that a haldresser at Ulm has invented a machine with which he pretends to be able to fly from Ulm to Paris in three days.

The *Berlin Gazette* states that of 80,000 children who inhabit the city of Berlin, 40,000 only attend the schools, the remaining 40,000 are employed in manufactures.

THE JEWS IN HUNGARY.—The *Gazette des Postes* of Frankfurt publishes the following account of a circumstance which occurred some days since in Hungary:—"An Israelite having been condemned to pay the amount of a bill of exchange which he had accepted in favour of a gentleman, the latter wished to seize his debtor's goods; but, as he possessed none, the tribunal ordered that the Israelite should serve as a slave to his creditor during 15 days. The unfortunate man was then led to the estate of the gentleman, a crowd of ruffians pressing on his footsteps, whilst some hooted and others produced discordant noises with trumpets and other instruments."

The *Cologne Gazette* of the 12th inst. states that the late riots in Bohemia had not a political cause, but that they originated in the excessive taxation imposed upon the people, as well as the seigniorial privileges and other abuses.

Letters from St. Petersburg say that negotiations pending for a treaty of commerce between England and Russia are on the eve of being concluded. There are some clauses on which the parties have not yet agreed, but which, it is hoped, will soon be settled.

SYRIA.—Letters from the Levant, received by express, mention that the state of Syria was hourly becoming more deplorable. A proclamation issued at Constantinople, forbidding any person whatever to appear in the streets after sunset, had occasioned some disorders.

ANTAGUA.—The *Antigua Observer* of the 21st of October, 1844, says:—"We believe that it may be asserted with truth, that not more than one-third of those who, during slavery, were employed in the field labour of estates, are now continuously employed in that work; or it may be more correct to say that not more than one-third of the amount of manual labour which was formerly dedicated to the growth and manufacture of our staples is so engaged now. We have been told so by persons competent to judge, and from our own observations are convinced of it. A great many have withdrawn from sugar cultivation altogether. The boys and girls, who used to form the weeding and grass gangs of an estate, are no longer there; many work only occasionally as jobbers, when their own independent settlements do not require their presence; others confine their labour to three or four days in the week; and very few give six days. Notwithstanding, however, of this enormous limitation in the amount of labour actually applied—notwithstanding of the idleness and thieving propensities charged against the peasantry—the last ten years of freedom, with one third the number of labourers, have given at least as large, and I believe larger, average crops than the last ten years of slavery, with three times the hands. How is this fact explained, and how does it comport with the heavy and abounding complaints which we constantly hear? And

how does it affect or bear upon the future prospects of the island? We should like to see the subject handled by some intelligent practical man, for really it suggests matter for consideration of vast importance, and well deserving of mature and dispassionate consideration. It would also be satisfactory, and probably useful, to see correct comparative statements of the expenses of an estate during slavery and freedom; for instance, what were the expenses of an estate that made 100 hlds. during slavery, and what are the expenses of the same now, making the same quantity of sugar? Such and similar inquiries would enlighten, and lead to far different results than the mischief and ill-feeling which is created by the dogmatism and gratuitous railing which we so frequently hear in conversations and discussions relating to the state of the island. It is certainly consolatory to reflect that, whatever may have been the fate of some other islands, the average crop of Antigua has not diminished since emancipation, although she has had to strive against the disastrous effects of an unprecedented physical evil [the earthquake on the 8th of February, 1843, is here alluded to], which the others in a great measure escaped. The prospect at present, for next year, is exceedingly favourable; and with a continuance of seasonable weather, and the blessing of God upon our agricultural exertions, the ensuing crop is likely to be as large as the present."

MAURITIUS.—Accounts to August 20, from the Mauritius, state that the new duties were published. On articles not specified, the impost, *ad valorem*, will be 6 per cent. from British colonies, and 10 per cent. from other parts.

DEMERARA.—On Wednesday afternoon, October 16, a dreadful conflagration, the work of incendiaries, broke out on the property of Mr. C. J. Visser, a resident planter in this island, which it desolated, and then spread to several other plantations, committing frightful havoc. The *Georgetown Gazette* says, "Nothing but heavy rain, of which there are not the least symptoms, can, we fear, save the whole of the northern, and by far the most valuable, bank of the canal, from its centre to its head, from complete destruction."

GUADALOUPE.—By a letter from Guadaloupe of the 9th of September, we learn that since the earthquake not less than 429 new houses had been built, of which 118 cost, each, 15,000f. and upwards, exclusive of the purchase of ground; 166, 6000f. to 15,000f.; and 145 under 6000f. At the date of this account 173 houses more were in the course of construction.

TAHITI.—Later accounts have been received from the Society Islands by way of the United States, from which it appears that there has been another battle between the French and the natives, in which great numbers of the latter have been butchered by their well-armed and well-disciplined assailants. Louis Philippe's new officer of the Legion of Honour, Captain Bruat, is, we suppose, the hero of the new slaughter. The *Frigate English* frigate has conveyed Queen Pomare to the Island of Bolabola.—*Liverpool Times*.

DOMESTIC.

A total eclipse of the moon will take place on Sunday night. The eclipse will commence at 8h. 36.9m. P.M. mean time at Greenwich. Total darkness will begin at about 10h. 58m. P.M.; middle, at 11h. 44.5m. Total darkness will end at 12h. 31m. A.M. on the morning of Monday, the 25th, and the whole eclipse will finally terminate at 2h. 52.1m. A.M.

A memorial, originated by the East India Association of this town, with the signature at the Exchange and Underwriters' Rooms, from and after to-day, praying for a considerable reduction of the duty on tea.—*Liverpool Albion*.

Owing to the late numerous arrivals of vessels from foreign ports, the London docks at present have a very bustling appearance, giving employment to a great number of casual dock labourers and others.

Very large quantities of potatoes have been shipped from Liverpool to New York. If the export continues the stocks in that neighbourhood will be considerably reduced.

On Thursday, the 7th instant, a boat belonging to the island of Eday left Kirkwall for home, about three o'clock P.M., with nine persons on board, viz., three brothers, named Garrioch; two brothers and a sister, named Tulloch; a young man, John Potheringham; a girl, named Elizabeth Garrioch; and a girl, named Hercules, all belonging to the same island. It is thought that, finding the Stormy Firth rough, the boat may have returned, and that she was upset in Kirkwall Bay, or near the mouth of the String, off Shapinsay, as the boat was found next morning near Saverock, driven ashore, with the body of one of the sufferers in it, all having perished.—*Caledonian Mercury*.

HONOUR TO THE PRESS.—On Saturday week, Mr. James Steele, editor and proprietor of the *Carlisle Journal*, was elected mayor of the city of Carlisle; and, on the same day, Edward Dowling, Esq., editor of the *Monmouthshire Merlin*, an Irishman and a Catholic, was unanimously elected mayor of Monmouth for the ensuing year.

Andrew Rutherford, Esq., the late Whig Lord Advocate of Scotland, has been elected Lord Rector of the University of Glasgow, by a majority of 92 over his Conservative opponent, Lord Eglinton.

Doctor Abercrombie, of Edinburgh, eminent both as a physician and a writer, died suddenly last week, at his residence in Edinburgh.

On Saturday an inquest was held on the body of Mr. Serjeant Andrews; and on the evidence of two surgeons, who stated that he died in consequence of a flowing of blood in the lungs, and not from the wound inflicted by a deerskin on his throat, the jury found "That the death of the deceased had been caused by natural disease, produced by a flowing of the blood in the lungs." It is understood that there is in existence a policy of insurance on the life of the late Mr. Serjeant Andrews for the sum of £10,000, and, had it been proved he had committed suicide, the policy would have been vitiated.

In the inquest on the body of Mr. Samuels, and the other victims of the explosion at Blackwall, the jury have found a verdict in which they attribute the fatality to "the false and improper construction of the joint of the main steam pipe, and from its not being sufficiently secure."

An investigation has been going on at Wolverhampton involving a Miss Ralton, her sister a Mrs. Huddell, and a Mr. Sherriell, assistant-surgeon, in the charge of infanticide. The charge mainly rests on the admission of Miss Ralton, the mother of a female child whose body

was found on the 28th ultimo at the back of the premises of Mr. Quinton, surgeon, whose assistant, Mr. Sherriff, with the knowledge and consent of this lady and her sister, Mrs. Hildreth, procured abortion. From a post mortem examination held on the body it is stated that the child was born alive. A further examination into the circumstances of this distressing case took place at the Wolverhampton police-office on Monday. Evidence was given of the finding of the body of the child, of its having been born alive, and of the part taken by Miss Ralston, (on her own admission to the deputy constable of Staffordshire), Mr. Sherriff, and Mrs. Hildreth, in procuring abortion. The prisoners were further remanded until an inquest should have been held on the body of the child, and it was intimated to them that they would have to take their trial at the next assizes.

On Saturday morning last the manufactory of Messrs. Morris and Thompson, coach-builders, Oxford-street, was totally destroyed by fire, with every article it contained. The loss of property is estimated at several thousand pounds. The factory was insured for £20,000.

On Sunday last, being the day appointed for the collection of the O'Connell tribute in Ireland, a sum of between £3000 and £4000 was received at the doors of the chapels in Dublin and its vicinity.

The Irish Repeal Association met on Monday, at the Conciliation Hall, Dublin. The attendance was small. The secretary read a letter from O'Connell, strongly dissenting from the views of Mr. Sharman Crawford on Federalism, and stating his intention to move, on Monday next, for a committee to inquire into and report on Mr. Crawford's project. The rent for the week was announced to be £337.

We state on what we conceive to be good authority, that her Majesty's Ministers have advised the Sovereign to confer a high distinction on Sir Henry Pottinger for his diplomatic services in China.—*Standard*.

From the records in possession of the London Fire Brigade, it appears that no fewer than 800 fires have occurred in the present year; but that they have not been of so extensive a character as in former years. The number of lives lost, however, is, we regret to say, much greater than the average.

In the course of the last few days several vessels laden with guano have arrived in the river Thames. The manure is meeting with a ready sale, at about £6 per ton. The guano is brought over in bags of from 1½ cwt. to 1½ cwt., which are sold on board the ship. Several more vessels are expected in a few days from Ichiboe. A few months ago the price varied from £10. 10s. to £11.

A respectable and well-conducted widow woman, named Harriet Chandler, was found brutally murdered on Tuesday night in her shop at Yarmouth. She had drawn, it appears, a sum of £150 left by her husband's mother, and uncle; and she had imprudently mentioned that, as the money was for her son, she should put it under her bed until she should hear from her trustee. This got noised abroad, and parties, doubtless, scudulously watched her movements on the night in question, in order to plunder her, and, as they were recognised and known by her, to murder her rather than be detected. The £150 was taken without disturbing the bed; £100 was in a cheque on Messrs. Gurney and Co.'s bank. During the inquest a portion of money, consisting of gold, silver, and about £8 or £10 in coppers, was found near the Battery, in a bag which was taken from the deceased's premises the night of the murder—the contents of the till, doubtless. The party or parties who perpetrated the frightful crime remain undetected.

The total number of deaths in the metropolis, during the week ending last Saturday, was 1072, showing a considerable increase of mortality, probably caused by the unseasonable warmth of the last ten days. The weekly average for the last five years has been 946.

On Thursday evening, and up to a late hour at night, London was enveloped in a dense fog. All the craft and the steamers on the river were compelled to remain stationary; and the omnibuses, cabs, &c., were obliged, unless where preceded by links, to go at a walking pace; even with such precautions, the crossing of the streets was a matter of no small difficulty and danger.

On Thursday an inquest was held by Mr. Baker, at Stepney, on the body of the Rev. Edward Parsons, who died from the effects of injuries received the previous week by accidentally falling down stairs in his own house. Verdict—"Accidental death."

On Monday morning, about three o'clock, a vessel named the Ranger was accidentally run down on the river near Gravesend, by a collier brig. The master, Mr. Duffield, who was in the cabin at the moment of the collision, perished; the rest of the crew, four in number, narrowly escaped on board the brig.

On Thursday an alarming accident took place on the Midland Railway, at Beccaton, about four miles from Nottingham, in consequence of a collision between a London and Derby train. The stoker and four passengers are reported killed, and many others severely wounded.

MISCELLANEOUS.

THE ANTI-CORN-LAW LEAGUE.—Our domestic politics are as dull as the dark days of November. There is an organized party, however, who enjoy no repose. The Anti-Corn-Law League is neither dead, nor dying. It is a great "fact"—a living reality. Its Council has at length adopted the true policy. They have appealed from the Parliament to the people. This, in our judgment, is the dictate of true wisdom. We have the principle of representative government, however imperfectly that principle may be carried out; and in any nation, whose political constitution is based on that glorious principle, the primary concern of any party anxious to accomplish any great object, is with the people—the people who are, after all that has been affirmed to the contrary, the "true source of political power." We admire the conduct of the League, then, in transferring their efforts from the high court of Parliament to the humbler sphere of the registration courts. And nobly are they "labouring in their vocation" in these courts. Their success is marvellous in our eyes. In Lancashire alone they have virtually secured the representation of several parliamentary boroughs, and of one, at least, of the divisions of the county; while in several other parts of the country their success has been almost equally signal. No man can say that this system is illegal. It is eminently constitutional. In a recent speech Mr. Cobden has announced a magnificent plan for securing the representation of the English counties. His plan is very feasible, and, though the game

he recommends is one at which two parties can play, it is one in which the friends of the League may play with more than ordinary power and effect. It is substantially this—that the friends of Free Trade residing in towns should invest money in the purchase of small freeholds in the several counties, and thus secure parliamentary votes. So convinced are we of the immense power which the friends of freedom—of freedom in commerce and conscience—may obtain by this strictly honest and honourable plan, that, if we possessed the means, we would secure a parliamentary vote in every county of England and Wales, on or before the 1st day of January next. In the meantime we earnestly recommend those who do possess the means, to secure, in every fair and honourable way, the parliamentary franchise, and to remember, that for the fact of its possession and the mode of its exercise they are accountable to the nation, and to God. We may take this opportunity of announcing our intention, during the ensuing year, of reporting the progress of the League; while we have high satisfaction in stating that a series of papers—by a distinguished hand—embracing a calm and serious argumentative discussion of all restrictions on the food of the people, will probably enrich our pages during the same period.—*Christian Examiner*. [We are happy to find that a journal, conducted with so much talent and energy as the "Christian Examiner," and having a large circulation among the most enlightened and public-spirited of the Dissenters of England and Scotland, approves the plan recently commended by the League to the adoption of the people of this country, and intends, moreover, to give publicity to the proceedings of the League, and a series of papers in elucidation of the great principle on which the movement is founded. We have no doubt that the ability which distinguishes the writings of the "Examiner," will be conspicuous also in the promised series of papers.—*ED. LEAGUE*.]

CHESHIRE PROTECTION MEETING.—At the Cheshire Agricultural Protection Society meeting, lately held, it was stated that the Cheshire farmers were so bound to the factors by being in their debt, that they delivered 120 lbs. or 121 lbs. as the cwt. of 112 lbs. The cause here assigned is altogether a mistake, for every body connected with the trade knows that it has always been a custom in Cheshire to deliver 120 lbs. for the cheese cwt., and to allow a pound over. As to the statement that farmers are in the factors' debt, we leave the Protectionists to reconcile this with the maintenance of the Corn Law, which they pretend was enacted for the farmer's benefit. Instead of factors being in the farmers' debt, which used to be the case, is it come to this that protection has done nothing better for them than to compel them to put their cheese in pawn before they are ready for selling? We need not, however, wonder at the ignorance displayed at this protection meeting, when we learn that the farmers themselves did not think it worth attending. Indeed, the society has dwindled to a mere ghost. The local journals inform us that "only about a dozen landowners were present, among whom were Lord de Tabley, Mr. Wilbraham Egerton, Sir Richard Brooke, Bart., Mr. G. C. Legh, M.P., and Mr. R. E. E. Warburton. Two or three agents were also there, but no farmers. In fact the whole meeting did not comprise so many as twenty persons.—*Preston Guardian*."

MEETING IN BIRMINGHAM FOR THE ESTABLISHMENT OF PUBLIC BATHS AND WALKS.—The inhabitants of Birmingham have followed the example set before them by the inhabitants of Manchester and the metropolis. For some weeks past a committee has been engaged in making preliminary arrangements, and a public meeting, convened by a requisition to the mayor, and signed by gentlemen of all parties, was held in the Town-hall on Tuesday, with a view of carrying the measures projected by the committee into effect. The Mayor entered the organ-gallery shortly after one o'clock, and was accompanied by Lord Lyttleton, Lord Calthorpe, Mr. Adderley, M.P., Mr. Spooner, M.P., Mr. Newdigate, M.P., Mr. Muntz, M.P., Mr. James Taylor, the Hon. and Rev. G. York, Mr. Joseph Sturge, Mr. Hill (Queen's Counsel, the Recorder of the borough), the Rev. J. Garbett, rural dean, most of the municipal officers of the borough, and indeed the leading men of all parties, Tories, Whigs, Complete Suffragettes, and Chartists. Such a complete amalgamation of parties was never before witnessed in Birmingham. The meeting was extremely well attended by the working classes. The Mayor presided, and resolutions in favour of the object were moved, seconded, and supported by Lord Lyttleton; Mr. J. Taylor, of Moseley-hall; Mr. Mason, a Chartist; Lord Calthorpe, the Rev. J. Garbett, the Hon. and Rev. G. York, Mr. Spooner, M.P., Mr. Newdigate, M.P., Mr. Harlow, Mr. T. Lee; Mr. Hill, Recorder of the borough; Mr. Sturge, Mr. Muntz, M.P., and others. The subscription at the close of the meeting amounted to nearly £3000.

DUTY ON COTTON WOOL.—An important meeting of the Chamber of Commerce of Manchester, including most of the large manufacturers of this district, was held in the rooms in Town-hall-buildings, King-street, Manchester, on Friday, the 15th instant, for the purpose of considering the propriety of memorializing Government for the repeal of the duty on cotton wool. The attendance of members was large, including a great portion of those manufacturers who, having seceded from the chamber when the Free-Trade party had first gained the ascendancy in its councils, have thought fit again to place their names upon the books. Among the members of the chamber present, were—Thomas Bazley, jun., Esq., president; Richard Cobden Esq., M.P., John Bright, Esq., M.P., James Atherton, Esq. (president of the Athenæum), Robert Gardner, Esq., Henry Ashworth, Esq., Edmund Ashworth, Esq., Richard Birley, Esq., Thomas Cooke, Esq., William Rawson, Esq., Edward Shawcross, Esq., George Clarke, Esq., Alexander Henry, Esq., Samuel Leas, Esq., Matthew Curtis, Esq., Edward Tootal, Esq., W. E. Keluall, Esq., Thomas Ashton, Esq., Lewis Williams, Esq., William Morris, Esq., James Aspinall Turner, Esq., J. B. Smith, Esq., Alderman Murray, Alderman Tys, Henry Houldsworth, Esq., Solomon Helbreus, Esq., J. Guest, Esq., Wylle, Esq., and Marshall, Esq. Several gentlemen addressed the meeting, who all agreed in condemning the tax in the strongest terms. In the end, a memorial to the Lords of the Treasury was unanimously adopted in favour of the immediate repeal of the tax.

GAME.—HANOVER.—At Rostelberg, in five days, 5087 hares, 2393 partridges, 316 pheasants, and 178 rabbits were killed. There were only 20 sportsmen.

AGRICULTURAL DISTRESS.—Since Thursday last, not less than seventy-seven persons have been admitted into the workhouse of the Banbury Union; and we believe we are not mistaken when we state that an equal number are ready to present themselves for a like purpose. Of the seventy-seven, forty-one are from the parish of Bloxham, and they entered together on Friday last, passing through our town in a melancholy procession.—*Banbury Guardian*.

THE FREE-TRADERS OF TORRINGTON.—Through the active exertions of the Free-Traders of this town, Thomas Knight Tapley, Esq., surgeon, has been elected to serve the office of town councillor for the ensuing year. The event was celebrated on Monday evening by a dinner, at which Mr. Tapley presided. The health of the champions of the League, and other Free-Trade toasts, were given, and warmly received.—*A Correspondent*.

WORTHY OF IMITATION.—On Tuesday, Nov. 5th, Mr. Peter Woodhead, of Cock-hill Shelf, reduced the rents of all his tenants 10 per cent. We hope this will cause others to follow his example.—*Leeds Times*.

LIBERALITY OF MANCHESTER.—The Manchester subscription for public parks and pleasure-grounds now exceeds £27,000; and that for the Rowland Hill testimonial to more than £1400, with every prospect of an increase to both.

ABOLITION OF SLAVERY.—Most gratifying intelligence has reached us from Sweden. We recorded with pleasure and with hope, the movement made in the Diet of that country in 1841, when an address to the King was voted, praying for the abolition of slavery in the island of St. Bartholomew's. We now learn with high satisfaction, that King Oscar has returned an answer to this address, altogether concurring in its prayer.—*Anti-Slavery Reporter*.

DUTY OF AN ELECTOR.—When a man acts in the capacity of elector he votes for others as well as for himself, and the others expect that he will perform his duty faithfully. He is to consider what candidate will be most useful to society—not, what candidate will give him the most ale, gin, beef, silver, or gold; and if he permits the latter consideration to outweigh the former he is acting just as honestly as a treasurer would do, when intrusted by an association with its funds, in applying them to his own profligacy. As the funds were lodged in the treasurer's hands for different and better purposes, so a vote is intrusted to an elector for a higher purpose than to promote his own sensualism. Nor can the plea be accepted that one vote cannot materially affect the issue of an election; for this plea granted to one man must be allowed to every man, so that universal honour or universal depravity becomes in the end a matter of indifference.—*Preston Guardian*.

INCENDIARISM.—Several incendiary fires have taken place in Norfolk within the last few weeks. On Thursday night, the 7th inst., some barley and straw stacks, the property of Mr. Hickling, Reepham, were consumed. About the same hour, on the preceding Monday night, another fire broke out in a shed, standing in a meadow, within less than a mile of Reepham, belonging to Mr. Bircham, farmer, and who is also a preacher in the Wesleyan connexion. The shed was burned down before assistance could be procured.—On Friday evening, a fire broke out in a range of buildings intended for saw-mills, at the gas works, near Moushold, which, being chiefly of timber, were speedily consumed, though an engine was in attendance. The origin of this fire has not been ascertained.—Four other fires, attended with trivial loss, being speedily discovered, have been reported from other parts of the county; and, in addition to these actual outrages, the farmers are kept in a state of alarm by threatening letters, the burden of which is want of employment and low wages. Altogether the state of the peasantry is such as to excite serious apprehension for the security of agricultural property during the ensuing winter, when field operations must be altogether suspended, and from the fact that thrashing, and other indoor work formerly done by manual labour, are now very generally executed by machinery.—About one o'clock on Thursday night a fire broke out in a detached barn, in the occupation of Mr. John Cooke, of Flempton, near Bury St. Edmund's, belonging to Sir Thomas Gage, Bart., and in a short time the building with its contents, consisting of a large quantity of corn and wool (the latter the produce of three years), were totally destroyed.—*Suffolk paper*.—We regret to state, that about twelve o'clock on Sunday night last, a barn upon Currant's farm, the property of Mr. Gosling, and in the occupation of Mr. John Ratcliff, of Panfield, situate about a mile and a half from the town of Braintree, was discovered to be on fire; but, notwithstanding the exertions of those present, the barn, with its contents, consisting of the produce of nine acres of oats, and 2½ of beans, a stable and cart-lodge, were totally consumed. There appears to be little doubt that this destruction of property was wilfully occasioned, and at present there is no clue to the guilty party. Mr. Ratcliff, it will be remembered, suffered from a similar villainous act in May last.—*Essex Herald*.—On Tuesday evening last, a fire, which illuminated the surrounding villages, took place in the stackyard belonging to Mr. Henry Skipworth, of Rothwell, when a large barley-stack, straw, &c., were entirely consumed. It is to be lamented, there is great reason to believe, that the catastrophe is the work of an incendiary.—*Hull Advertiser*.—About one o'clock on Friday morning, the 15th inst., a straw-stack was discovered on fire, on the farm of Mr. Silverstone, of Saxham (which is the second fire on the same farm within the last few weeks), contiguous to the extensive farm premises, attached to which are several cottages in a direct line. When the straw-stack was nearly consumed, a wheat-stack, some hundred yards distant, was also discovered to be on fire; owing to the prompt arrival of the engine, it was soon got under, but not before another wheat-stack on the same farm, about a mile distant, was also blazing away. There was but little damage done to the two wheat-stacks; the principal danger being at the time that the straw-stack was on fire, a change of wind occurring, which placed the farm-buildings and cottages in a most perilous situation, but owing to the arrival of the Norfolk engine, and its effectual assistance to that of the Suffolk Fire-office, the flames were prevented from spreading their devastation to the contiguous premises. No clue has yet been obtained which may lead to the authors of this diabolical transaction.—*Bury and Suffolk Harmer's Post*.

OUR CORN LAWS.—AUSTRIAN MANUFACTURES.

(From the *Pfe Herald*.)

We astonish foreigners. Our laws absolutely surprise them. We are enveloped in a mist of interests. We cannot for the mist see clearly how we stand. Austria sees clear enough whether our Corn Laws are driving us. Could we but see the rapid changes that have in a very brief period of years come over that country, we would soon see with equal clearness.

The granaries of Austria overflow with grain—have always done so. A rich soil produces more than the Austrian nation can waste. Hence cheapness. Estates are there 50 per cent. cheaper than with us; in Hungary, 25 per cent. cheaper than in Austria. In Austria 105 lbs. English of the best wheat costs 4s. 6d.; 12 lbs. of the best super-flour, 1s. 2d.; 1 lb. of beef, 2d.; mutton, 2d.; potatoes, 2d. per score; lump sugar, 7d.; coffee, 1s.; rice, 2d. the English lb. But what of manufactures? A few years ago they were wretched. The manufactures were languid, unimproving. The machinery was old: it produced little—of inferior value, with much waste, at an enormous cost. The weavers were prejudiced for our goods. But what of that? They wanted our goods. They could not purchase them. They had their corn to give us for them—they offered us their corn. We refused to take it. What could Austria do. To our cost we know. She imported machinery. She manufactured for herself. She is doing so, and will soon do without us. She has cotton, waterfalls, waterwheels, gearing as good as we have, operatives at lower wages, food at a lower cost. We have been battling to protect agriculture, and this is the fruit of it.

Austria is learning a better lesson. Previous to the 1st of September, she had a protective duty of 30s. on every 120 lbs. of cotton yarns. Now it is only 25s. On the 1st of February, 1845, it will be only 20s. What is the effect? Are the spinners ruined? The very contrary. Every step in the progress is stamped with a valuable lesson. The spinners had a 30s. duty. They were not content—they wanted a higher protective duty. They were like our farmers. They believed higher duty to mean higher profit. But the weavers had a distinct opinion to the contrary. They believed it a tax paid to the rich spinners. They did not wish to pay it. They addressed the Government, and the Government lowered it. What did the spinners do? Give up spinning in despair? They did the very thing our farmers would do, and would be forced to do, if the corn duty was abolished. They plucked up spirit—awoke, as it were, from dreaming. They improved—they bought good machinery—they set their Government to railroad-making. Lanes are shooting from Vienna to Trieste, and from Dresden to Vienna. The profits of the spinners are not lessened. They are increased. They have pulled down no wages. They have not extended hours. They will soon be content to spin with no duty whatever to protect them.

What if this experiment should be tried upon English agriculture?

AUSTRALIAN WHEAT.—Capt. Bulley, of Dartmouth, brought in the *Ormonde*, from Sydney, 3600 bushels of Adelaide wheat. This wheat had been grown in South Australia, shipped from Adelaide to Sydney, transhipped thence to Old England; and we are informed bore all these expenses with a fair profit to the importer. The wheat cost 3s. 9d. a bushel in Sydney, 30s. a quarter freight, the duty being 6s. a quarter. It stood the voyage exceedingly well, and was perfectly free from weevil when landed. It averages 61 lbs. per bushel, and Capt. Bulley gives it as his opinion that, in the event of the duty being reduced, it would become a staple article of trade with this country. —*Western Times*.

SAVINGS BANK RETURNS.—The following return gives a comparative statement of the progress at specified periods during the last seven years of the St. Marylebone Bank for Savings, 76, Welbeck-street, which was established July 5, 1830.

	Open Deposit Accounts.	Sums Invested with National Debt Commissioners.
On 20th November, 1838	11,278	£196,334
Do., 1839	11,935	223,353

Do., 1844	15,124	350,089

D. FINNEY, Sec. and Actuary.

LIVE CATTLE TRADE.—This trade is now beginning to assume more importance. From Holland and Belgium transit of fat cattle is becoming rapid. Large quantities of poultry are also shipped weekly. One vessel from Holland to London brought last week 60 head of cattle, in high condition, besides large quantities of poultry. In a few years this trade will make itself felt to some extent; as will the provision and corn trade from Canada and the United States. —*Times Mercury*.

IMPORTATION OF DUTCH OXEN, &c.—On Wednesday afternoon, at four o'clock, the steam-packet *Batavier*, Captain David Dunlop, arrived at the St. Katharine's steam-packet wharf from Rotterdam. She brought 50 head of live oxen and cows, and an immense quantity of live poultry, chiefly geese, turkeys, and ducks. The importation of all kinds of live poultry is now carried on to a greater extent than usual, as the ice on the Dutch coast may be expected to put a stop to the navigation in a few weeks, and dealers are bringing over large quantities at present to be fattened for Christmas.

AGRICULTURAL SERVANTS IN THE NORTH.—Whit-sund and Martinmas are the usual times of hiring agricultural servants in the more northern counties. At nearly all the hirings this Martinmas the wages of servants of both sexes, taken altogether, have been on the advance, and the engagements more numerous. At Carlisle the attendance of servants was unusually large on Saturday week, and good men servants were engaged at wages ranging from £6. 1s., £8, to £9. 10s. for the half-year; half-grown lads were engaged for £4. 10s., £5, and £5. 10s. each; known women servants were hired at £4, £4. 10s., to £6; and the younger girls got from £3 to £4. 10s. each who were hired. The servants get their victuals, and lodge and sleep in their masters' houses, in the northern counties. The above quotation of wages, with very little variation, will apply to the hirings which took place at Cookernouth, Keswick, Wigton, Brampton, Fowlth, Appleby, Kendal, and other places.

MARKETS.

CORN MARKET.

MARK-LANE, Monday, Nov. 18.—There was a moderate supply of English Wheat this morning in very ordinary condition. The few samples which were fine in quality and condition realized last Monday's rates, but the rest sold very slowly though offered on lower terms, and a clearance had not been effected at the close of the market. The trade in Foreign Wheat was slow at last week's rates. The very finest samples of Malting Barley maintained the rates of this day week, but other qualities of English were a dull sale, though not cheaper. Foreign met a good country demand at fully former prices. We were again shortly supplied with Beans and Peas; the land-carriage samples from the near counties were taken off at 1s. advance, but the high rates demanded for those offering ex-granary checked business. About 15 cargoes of Irish Oats have arrived; the stocks of the dealers have been so reduced by the short arrivals we have had of late, that we had a free sale at fully last week's rates. S. H. Lucas and Son.

Flour, 5807 sacks, 671 bars.

FRIDAY, November 22.—The return below shows a large arrival of English Wheat; it is chiefly from Lincolnshire and Cambridgeshire, and most of it direct to the millers. There are, consequently, but few samples of English offering; those in good condition are in request at Monday's prices; for all but these the trade is heavy. There is rather a large supply of English Barley, and, owing to factors being unwilling to submit to lower prices, the business doing is very limited. Distilling and grinding quantities of Foreign maintain former rates. 10,000 quarters of Irish Oats are reported this week; but most of the vessels had arrived in time for Monday's market. Though the trade is not brisk, Monday's rates are firmly supported for all descriptions. There is no alteration in the value of Beans and Peas. The only alteration in the duties yesterday was on Rye, which is 1s. higher. S. H. Lucas and Son.

Account of CORN, &c., arrived in the Port of London, from the 18th of November to the 23rd of November, both inclusive.

THE LEAGUE.

No. 62.]

SATURDAY, NOVEMBER 30, 1844.

[3d.]

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All Subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive, a copy weekly of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

The League Bazaar will be held during the month of May next, in the Theatre Royal Covent Garden.

We beg to inform our subscribers that bound volumes of the LEAGUE newspaper, containing the whole of the first year's numbers, may be had on application at the Offices either in London or Manchester.

Persons wishing to be on the Register next year, as Freeholders for County votes, must be in possession of the property before the 31st of January.

QUALIFY, QUALIFY, QUALIFY.

PRACTICAL INSTRUCTIONS FOR ELECTORAL QUALIFICATION.

The electors for counties are as follows:—Freeholders, copyholders, leaseholders, occupying tenants.

FREEHOLDERS.—The following persons are entitled to vote as freeholders:—1. Any person possessed of a freehold estate for himself and his heirs, or, as it is called, an estate of inheritance, of the yearly value of 40s. 2. Any person possessed of a freehold estate for life or lives of the yearly value of £10. 3. Any person possessed of such an estate for life or lives of the yearly value of 40s., under any one of the following circumstances:—If the estate was acquired on or before the 7th of June, 1832; or since, if by marriage or marriage settlement, by devise (i. e., by will), or by promotion to any benefice or office, or if the freeholder is himself the actual occupier of the property. In any of these cases it is sufficient if the property be of the yearly value of 40s. Parish clerks, sextons, schoolmasters, Dissenting ministers, and holders of offices have a right to vote if entitled to emoluments of 40s. per annum, arising out of, or charged upon, land, and may be registered as voters in the parish wherein the land is situate. The appointment must, however, be for life, not for a temporary purpose, or at the pleasure of any other party; but an appointment during good behaviour is considered to be an appointment for life. If the freeholder occupy his own freehold property in a borough, of such a nature and value as would confer upon him the right to vote for the borough, he will not be entitled, in respect of that property, to vote for the county. But if the freehold will not confer the right of voting for the borough, that is, if it be not of the annual value of £10, or if it be land without building, the freeholder may vote for the county, though he occupy it himself. And if the freeholder do not occupy his freehold situate within a borough, he may then vote in respect of it for the county, and his tenant may also vote for the borough. Six months' possession prior to the 31st of July will entitle a freeholder to be registered. And if the freehold lands or tenements should have come to him by descent, succession, marriage, marriage-settlement, will, or promotion to any benefice in a church, or to any office, no definite period of previous possession will be necessary.

COPYHOLDERS.—Any person possessed of any lands or tenements of the clear yearly value of £10, whether of copyhold or any other tenure than freehold, is entitled to vote. Tenants in ancient demesne may in general vote as freeholders, if they do not hold by copy of court-roll, but otherwise they will be entitled as copyholders. As freeholders, 40s. per annum will be sufficient; but as copyholders, £10 a year is required. The same period of possession previous to registration is required, in respect to copyholders, as in respect to freeholders. Copyhold property within a borough, if of such a nature as would entitle any person to vote for the borough, will not, under any circumstances, give a right to vote for the county.

LEASEHOLDERS.—The right of voting in respect of leasehold property extends to—1. Any person who is entitled by virtue of a lease made or assigned to him of any lands or tenements for the unexpired residue of any term originally granted for a period of not less than 60 years, if

the property is of the clear yearly value of £10 above all rents and charges. 2. Any person who is in like manner entitled to the unexpired residue of a term originally of 20 years, if the lands and tenements are of the clear yearly value of £50. The party to whom the lease was originally made, or a party to whom such leases may have assigned the original lease, may vote, though not in occupation of the premises. Any sub-lessee or assignee of an under-lease may also vote, but only when in occupation of the premises. Lessees or assignees must have been in actual possession for 12 months previous to the 31st of July, unless the qualification is acquired by any of the modes before mentioned as excepted; that is to say, by the death of a relative, by marriage, by will, or by promotion to any benefice or office. Leasehold property in a borough, if of such nature and value as will give any person a vote for the borough, will not give a vote for the county.

OCCUPYING TENANT.—Any person occupying lands or tenements for which he is liable to pay a yearly rent of £50 is entitled to vote, if not within a borough, and not of such nature as would qualify a person to vote for the borough. In respect of the period of previous possession required, occupying tenants are placed on the same footing as leaseholders; but it is not requisite that the occupation be of the same lands or tenements: different lands and tenements occupied in immediate succession for twelve months previous to the 31st of July in each year will give the qualification.

GENERAL OBSERVATIONS.—Besides lands, houses, buildings, and the like, property and interests of the following description will entitle the owner to be registered and to vote, viz.—tithes, an annuity charged on land, a rent-charge,* fee-farm rents issuing out of an estate in fee; shares in navigable rivers, canals, &c., where the shareholders possess an interest in the soil; tolls of bridges, tolls of fairs and markets, purchases of unredeemed land-tax. Persons who have entered into an agreement of purchase of property, or who have paid any part of the purchase-money, or done any other act in part performance of the agreement, are considered to have equitable estates, and are entitled to vote and to be registered. Joint tenants and tenants in common have each a right to vote, provided the property be of sufficient amount to give to the share of each the value required. Mortgages may vote, if in actual possession or in receipt of the rents and profits, but not otherwise. Trustees are expressly excluded from voting for any trust estate; the right of voting in respect of trust property is reserved for the cestui que trust. In estimating the value of freehold or copyhold property, the marketable value of the property to let is the criterion to be attended to. If, owing to accidental circumstances, the rent should be less than might be obtained, the property will still give a right to vote. As regards leaseholds, the value required does not depend on the amount of rent. It is to be estimated by the profit which the tenant can make of the property, over and above the amount of rent reserved and any encumbrance charged on the property. The value required is to be "above all rents and charges." Under these words are included all encumbrances affecting the property, but not any public or parliamentary taxes.

BOROUGH FRANCHISE FOR 1845.

In order to secure a borough vote next year, those who occupy premises giving a qualification should immediately see that their names are placed on the poor's rate-book.

A claimant must be rated, or have claimed to be rated, to all rates made during the year ending the 31st of July. If, therefore, his name is omitted from any rate made during that time, he should immediately claim to be rated. The overseers are required to put the name of a person so claiming on the rate last made; consequently, if the claimant suffers two rates to be made before he claims, he will be unable to get upon the former one, and will thereby lose his vote for one year.

No particular form of claim to be rated is prescribed by the Reform or Registration Acts; but the following form may be adopted:—

"CLAIM TO BE RATED."

"To the Overseers of the Parish of _____,
"I hereby give you notice that I occupy a _____ at No. _____ Street, in your parish, and I claim to be rated to the relief of the poor in respect of such premises, in order that I may be entitled to vote in the election of a member (or members) of Parliament for the city (or borough) of _____.

"Dated this _____ day of _____, 1844.
"(Signed) _____

Insert the name of the parish, the nature of the premises, as house, shop, room, or as the case may be, and the name of the street, &c., and of the city or borough, also the date. The christian and surname and place of residence of the claimant should be inserted at full length. Give the claim to an overseer, keeping a correct copy, on which should be written the date when, and the name of the overseer on whom, it was served. If any poor's rates are due for the premises at the time of making the claim they must be paid, or the amount due tendered. Should the overseer refuse to accept the money, or omit to enter the claimant's name in the rate-book, he will be deemed to be rated notwithstanding; but, if the claimant's name be omitted from any future rate, he should again claim to be rated.

THE COUNTIES—OBJECTORS ANSWERED.

An able weekly journal, so expert in finding flaws that it might be called the censor-general, in alluding to our plan for increasing the county constituencies, asks—"Is not this a game which two can play

* No registration of annuities or rent-charges with the clerk of the peace is requisite. The 3rd Geo. III., c. 24, is repealed.

at, and will not victory be with the richest?" Our answer, to some extent, has already been given to this objection; we repeat that the monopolists have played this game, and played it out, whilst the inhabitants of the towns seem to have been forgetful that there was such a clause in the Reform Act as a 40s. freehold qualification. Take the register of any county containing a mixed manufacturing and agricultural constituency, and it will satisfy even our contemporary, the *Spectator*, that whilst the land-agents have worked the Chandos clause in the rural districts to the last available vote, the middle class in the cities and boroughs have looked on unconscious of the power which the 40s. freehold gives them to outnumber the tenants-at-will in the polling booth. To quote an illustration or two from the register for the West Riding of Yorkshire:—There is Huddersfield, containing by the last census a population of 38,464 souls, with only 104 votes on the county register; whilst the obscure rural township of Thorne can boast its 181 electors in a population of 3507. Barnsley, the great seat of the linen manufacture, without the borough franchise, has been so indifferent to the possession of the only vote within its reach, that out of a population of 12,310 there are only 285 county electors. Rotherham, one of the largest unenfranchised towns in the kingdom, with a population of 13,439, contributes 127 voters to the county list; whilst the land-agents in the unheard-of agricultural township of Tickhill have contrived to place 163 electors on the register out of a population of 2040.

There are, we venture to say, 500 Free-Traders in Huddersfield, and half as many at least in Barnsley or Rotherham, who are able and, we have no doubt, willing immediately to purchase property which will give them the county qualification; and there are hundreds of places in England and Wales similarly circumstanced. All that has been wanting is that their attention should be called to the privilege they possess. This could only be done by a public appeal, and, in making it, we must take the risk of rousing a few of our enemies along with the multitude of our friends.

Allowing, for the sake of argument, that our critical contemporary is right—that ours is a game which two may play at—still whatever increases the number of voters favours the Free-Trade party. The aim of the monopolists is restriction of the franchise as well as of commerce. They know that it is far easier to manage a small than a large constituency; they know that the Free-Traders have a better chance of success in the West Riding, South Lancashire, and Middlesex, than in Hertfordshire, Buckinghamshire, or Monmouthshire.

But we deny that the landlord monopolists can play the game of extending the franchise. It has been said, by another journal, that they may increase the number of voters indefinitely on their estates by granting life rent-charges. Our first answer to this is, that not one in four of the monopolist landlords has his estates at his own disposal, the title-deeds being in the hands of mortgagees. In the next place, supposing the property to be in some cases free, where are the men to be found, in sufficient numbers, to whom they dare trust their property or their vote. The farmers? They are already on the register as tenants-at-will. The agricultural labourers? We think the squire will hesitate before they trust a £10 annuity for life to the Lawrence Eboras of their villages. Will they, then, come into the towns, to grant the qualification to the members of the Operative Conservative associations, or Orange lodges? We doubt if the investment would be profitable or safe. From the moment that the landlords begin seriously to stir in the business of increasing the number of their dependant voters, they will find themselves at a dead-lock for want of the three essentials in great public movements—men, money, and enthusiasm. The landed monopolists must expect no active support from the respectable members of the Tory party in the large towns. The latter may give a vote to their party at the day of election, even if that party upholds the Corn Law, which their better judgment, in the absence of any pecuniary stake, utterly condemns. But there will be no organization in the towns, no active efforts of any kind to qualify voters, or in any way to counteract the exertions of the Leaguers. Landlordism is especially at a discount, just now, in the manufacturing boroughs, where Free-Trade principles are tacitly acquiesced in by men of all parties.

We say then, to our opponents, in the first place, —increase the number of county voters if you dare— the more you put upon the register the better chance will there be for some of them to escape from your

ranks at the poll. But, secondly,—we defy you, for the reasons given, to meet our challenge in the registration courts with any chance of eventual triumph. Upon this point we have had the opportunity of perusing an interesting letter from an extensive land-agent, who says:—"I could name landed estates with which I am connected, the rent of which amounts to £16,000 a year, worth at thirty years' purchase £480,000, and which makes 68 votes. Now, £3000 invested in cottage property, in any manufacturing town in Lancashire or Cheshire, would pay £6 per cent. interest at least, and qualify 70 votes, or more than are registered from half a million of property in land." The same writer adds:—"You possess the power of increasing the number of county voters which the landlords dare not exercise; but what is more, and I speak with a full knowledge of the class, they have not the spare money."

The writer lays it down as a rule that £50 laid out in towns, in the purchase of cottage property for qualifying voters, will give to the purchaser as much political power as is acquired in an average of cases by the investment of £5000 in land. And there is this important prospective advantage for the towns, that, although the land remains of the same extent, houses are continually multiplying, and whilst it requires 40 or 50 acres to confer a vote upon a tenant-at-will, every twelve yards square of freehold land in a town, if only covered with a cobbler's stall or a butcher's shambles, will give the owner a county vote. In every point of view, we find encouragement in the new field of labour that is opened to the friends of Free Trade, with whom the sole watchword up to the 31st of January must be

QUALIFY, QUALIFY, QUALIFY!

THE EXAMINER AND OURSELVES.

"In argument," says the *Examiner*, "we play heat at the roughest game, and in the heat of controversy we use the weapons that heat presses home our points." To which mode of political warfare we make no sort of objection, so long as our contemporary's rough play is kept within the bounds of fair play, and the heat of controversy does not betray him into injustice and misrepresentation. We are sorry, however, that we have to charge him with a very gross instance of that shabbiest sort of controversial unfairness—misstatement of fact, backed by garbled quotation.

On the 16th instant we wrote as follows, of the comments made by the public press on Lord Radnor's speech at the Highworth meeting:

"For this avowal of a doctrine which everybody follows in practice, and which is indispensable alike to the rights of property and the independence of the labourer, he has brought down upon himself a full measure of that obloquy which always awaits the man who encounters a pleasant popular delusion with a disagreeable truth. 'Most abominable!' cries the *Post*; 'What a principle!' ejaculates the *Chronicle*; while the *Examiner*, we are sorry to add—a journal usually foremost to mark and correct the aberrations of public opinion and morality—criticises the speech in two successive weeks' articles, in which such epithets as 'screw-driving,' 'gripping,' 'inhumanity,' and 'tyrant' are applied, directly or by implication, to the speaker and his doctrines; and the attempt to enlighten the poor labourers on the real facts of their condition, and the causes and remedies of their distress, is stigmatised as 'pedantic prating.'"

We do not recur to this subject—which may now, perhaps, be regarded as pretty well worn out—with any especial purpose of defending Lord Radnor. Such defence as may be deemed necessary to vindicate, from the charge of inhumanity and tyranny, the acts or words of a man who has laboured through a lifetime in the cause of the people, has been already more than sufficiently supplied by his lordship's manly and straightforward letter to the *Examiner*, given by our contemporary last week. But we cannot be satisfied to let this matter drop out of public notice, without entering our protest against the false moralities to which the recent attacks on the Highworth speech have given sanction and currency. In the bitter and unsparring censure directed against Lord Radnor, by the *Post*, for the offence of refusing to adopt a particular description of slavegiving as a rule in the management of his property; in the fact that Lord Radnor, with all substantial claims on public esteem and honour, has brought upon himself a not small share of temporary unpopularity, by speaking a few plain, unornamented truths in season, while others of his order, with not one-hundredth part of his title to the people's confidence, are lauded to the skies as pattern philanthropists, at the very moment that they have their hands in the poor man's pocket;—in this we see the signs of a radically false public morality, a purblind intelligence and perverted conscience, which is a greater public evil than even the Corn Law itself, for it is the element in which Corn Laws and all other iniquities live and thrive. Any injustice which newspaper criticism may do to Lord Radnor is an affair of very secondary importance: the way of thinking, on the part of newspaper writers and the portion of the public represented by them, which prompts and sanctions injustice is an evil of first-class magnitude. The peer who tells peasants, in a clear, strong way, the real facts of their condition, traces their distress to the iniquitous and sordid legislation of his own orders, and refuses to have anything to do with wretched patchwork expedients which, while *that* lasts, can only tend (as he believes) to increase the mischief, is denounced as little better than a monster. The peer who taxes peasants in their food, and (the proceeds of the extortion) juggling the while in his pocket) plays cricket with them and drinks their health, is extolled as a philanthropist. We accept a little bad bowling, or a ten-hours bill,

as a composition in lieu of justice, and an atonement for robbery. Too truly is it said, by a weekly literary critic, in the number of the *Examiner* containing the first of the articles we have alluded to, "The character of Pecksniff is emphatically English: not that Englishmen are Pecksniffs, but that the ruling weakness is to countenance and encourage the race."

Of the above passage, the *Examiner* quotes from "The peer who tells peasants" to "atonement for robbery," as a calumny against itself; and, after very superfluously proving that it does not extol cricketers as philanthropists, nor accept ten-hours bills as a composition in lieu of justice, adds:—

"But as our honest contemporary, the preacher of morality, may pretend that he did not point at the *Examiner* in these passages so grossly misrepresenting it, let us put that out of doubt by quoting the commencement of the very next sentence—

"Too truly is it said, by a weekly literary critic in the number of the *Examiner* containing the first of the articles we have alluded to," &c.

"So much for the candour of our opponent at the outset."

It does not need candour, so much as eyes, to see that we had "alluded" to the "two successive weeks' articles" of our contemporary—not by implication and innuendo, in the sentences quoted by him—but by express and particular mention, in the preceding paragraph. This the *Examiner*—with what we must regard as a breach of faith towards its readers and ourselves (unless apologised for as a blunder)—chooses to suppress; and, by this simple expedient, puts it "out of doubt" that we have committed, not merely the "gross misrepresentation," but the incredibly absurd and impudent falsehood of saying that it extols cricket-playing lords, and accepts ten-hours bills, in two articles in which not one syllable is said of either the one or the other.

We confess we cannot understand how any man, capable of understanding the meaning of written words, can discover a reference to the *Examiner* in the passage which it so perversely appropriates to itself. The *Examiner's* high and well-merited reputation for controversial fairness was not earned by articles like that of last Saturday, and is not, we trust, destined to be further expended at this lavish rate.

The general question as regards Lord Radnor and Lord Radnor's doctrines, and the allotment system, we are contented to leave as it stands. It will be time enough to recur to it when the *Examiner* thinks proper to notice our argument—that a system of charity allotments, with the Corn Law unrepealed, would certainly be no real and permanent relief to the agricultural labourer—would probably do more harm than good. We need scarcely remind our readers that we have never objected to allotments, except as a proposed substitute for justice and Free Trade. The allotment system, in itself, we are no more concerned to write up or write down, than the savings-bank system.

The *Examiner* asks a question which is deserving of notice, though not of a serious reply:—"Do the Anti-Corn-Law League join in denouncing all palliatives, all mitigations of the rural labourer's wretched condition?" Which is about as pertinent a question—as much called for by anything the Anti-Corn-Law League have ever said or done—as though we were to ask, "Does the *Examiner* join in recommending a general division of property?" It is sufficient to say that, while the Anti-Corn-Law League "denounce" only one thing, the efforts of its speakers and writers will, in all probability, never be wanting to expose the true nature of such alleged "palliatives" as, in their judgment, are founded on false principles, and would tend in their practical operation to make bad worse.

THE SUGAR QUESTION.

Moral Botany, a doctrine probably learned from the wooden bible which Lord Sandon paraded in Liverpool—for we know not where else to look for its principles—appears to be one of the most perplexing sciences ever forced on the study of a Cabinet. "Party" has been defined to be "the madness of many for the gain of a few;" Lord Sandon has given it a different form, for his anti-slavery amendment has turned out to be the folly of faction for the gain of nobody. We often wondered how people could keep their countenances when they protested against the importation of slave-grown sugar for home consumption, while they admitted slave-grown cotton, coffee, and tobacco; nay, when they allowed sugar tainted with the crime of slavery to be refined in bond for exportation to the Continent and our colonies; but the result has been no laughing matter: the Brazilian markets are ready to be closed against our manufactures, and we encounter this peril because our rulers will not abandon a hypocritical pretence, too threadbare to cloak dishonesty much longer. The colonial interests, to which the commerce and industry of the country were ruthlessly sacrificed by the system of sugar duties, are now thoroughly understood; the experience of the last year has confirmed what the experience of many

preceding years taught our Ministry in vain, that the system of protection gave no real advantage to the West Indies, while it was fraught with the most injurious consequences to the parent state. It is now evident that the Ministry has found out the perilous trap which it set for its opponents, but in which it has been caught itself. Cabinet councils have been held day after day, and the discussions have been anything but sweet, though sugar has been the subject. Mr. Gladstone, who represents his father, and Mr. Goulburn, who represents himself in the conflict of selfish interests, from which the very semblance of principle has been rent away, begin to feel that new sermons on the evils of slavery would be little heeded in the teeth of the fact that a cargo of slave-grown sugar was entered, on Monday last, at the Custom-house of Liverpool. The Brazilian Ambassador, armed with that fact, is proof against all the specious reasonings of Mr. Gladstone, even though backed by the moral botany of Lord Sandon's wooden bible. It is probable that some concessions will be made, for we have a Cabinet whose characteristic policy has been a course of miserable palliatives for evils too gross to be denied, but associated with too much parliamentary support to be removed.

In the meantime confusion has been introduced into the stores and warehouses of London. The sugar trade, like the corn trade, has become a mere gambling speculation, in which sane men shrink from hazarding an investment, not knowing what a day may bring forth. The colonial interests, like the farming interest, suffer more from this uncertainty than any direct diminution of their produce could possibly inflict: they find their credit at the lowest ebb in the money market, because no human being can even approximately calculate the value of the security which they have to offer, and their situation must daily become worse, while it passes their ability to determine what crops they can most profitably cultivate.

There is a general impression that "something must be done." It is, therefore, incumbent on Free-Traders to exert themselves, in order that the "something" should be substantial justice. It is monstrous that the Gladstone scribe of "the Goose and Shadow" should gravely tell a mercantile nation that it may make up for the loss of a legitimate trade by diligent smuggling. The Prussian Minister has effectually cured Lord Aberdeen of preaching political economy and its best lesson, freedom of trade, to the Zollverein, when we ourselves set the example of maintaining the most unprincipled monopolies in Europe. The delusive pretexts under which these monopolies have been supported have been so effectually exposed that they have all been successively exploded; and at length monopoly stands before the country in all its naked deformity of avowed tyranny. We are not doubtful of the issue when once a question is placed upon its right basis.

But we must remember that the sugar question, like that of all other monopolies, must be regarded as a question between a class and the country, not between Tory and Whig or between Ministers and Opposition. It may suit the tactics of party politicians to bid for the support of a class; the duty of all true Leaguers is to look solely to the interests of the country. Difficulties may arise, as they have arisen, from pursuing this upright and independent course. An amendment may be proposed in the interest of monopoly by the opponents of Government, for the ethics of party warfare allow considerable latitude in moral practice. But the League is not a party; it seeks nothing for a class; it seeks everything for the community; and it is because the League is thus identified with the country that it has so often to endure the splenetic effusions of party spirit. On the question of the sugar duties the Leaguers had one opportunity of showing that men of principle are independent of party, and uninfluenced by merely personal considerations. We have already exposed the cavilling objections made to the conduct of the Leaguers on that occasion, and it is not our custom thrice "to slay the slain." But when the probability of a similar crisis looms in the horizon—when the same question threatens at no distant date to bring a renewal of warfare on the same battle-field—it is the duty of the League to declare that it will adhere to no class, make sacrifices to no interest, be led by no party, but that, under all circumstances, it will adhere to its demand of justice for the country. The sacrifice of permanent interests to temporary spite has been unfortunately no rare spectacle in the political history of England. Lord Sandon's raising the anti-slavery cry on the sugar question is a signal instance of it. The permanent interests of the country can only, therefore, be secured by severing them from political party; and it is the duty of the League to keep them apart, because the object of the League is to work by all, with all, and for all.

EFFECTS OF THE CORN LAW ON EMIGRATION, CRIME, AND MORTALITY.

In our last number we were only enabled to give a sketch of the proceedings at the interesting meeting

held last week at Rochdale. On looking over the excellent report in the *Manchester Times*, we find some facts and figures brought forward on that occasion by Mr. Bright, to which we are desirous of directing the especial attention of our readers. The monopolists have asserted that a rise in the price of bread is not injurious to the operative classes, because, as they affirm, the price of that staple article regulates the price of labour and of all other commodities; and they have, on this pretence, appealed to the operatives for support in their struggle with the League. Every person who has examined into this pretence must know that it is altogether false and absurd. The general advance of wages now in progress, or which has recently taken place in almost every manufacturing district, whilst the price of bread has been falling, must be sufficiently conclusive to all candid and disinterested minds. There are, however, other and fearfully conclusive evidences of the appalling effects of scarcity and high prices of food, and by whom those effects are most acutely felt. We are not about to quote from documents prepared by agents of the League, but from returns made to and published by the Government, and which may be fully relied on as giving no more than the bare facts of the case. From the emigration returns we are enabled to give the following figures, showing that, as the price of food advanced during the recent years of deficient harvests, the number of our countrymen who sought a home in foreign lands steadily and rapidly increased, and that, so soon as the scourge of famine was abated by the goodness of Providence, the tide of emigration received a check. The number of emigrants from 1838 to 1843 is as follows:—

1838	33,222
1839	62,207
1840	90,743
1841	118,592
1842	128,314
1843	57,212

When we consider how terrible was the pressure upon the country from 1838 up to the harvest of 1842, we shall not be surprised that increasing multitudes fled from a land which, however dear to them by the ties of birth and association, denied them the first of all rights, that of earning their bread by the sweat of their brows. And of what class were these emigrants composed? Of lords spiritual or temporal, who vote almost unanimously in favour of dear bread? Of members of the House of Commons, a large majority of whom do the bidding of their masters in the Lords? Of rich squires, who pamper their dogs, and preserve game while the labourers on their estates are dying for want of food? Of the comfortable clergy, who bless God for "cheapness and plenty," while they canvass and vote for the bread-taxing candidate? Of the rich merchant or manufacturer, who spurs the industry by which he has risen, and votes away the very living of his poorer neighbours for the paltry recompense of a smile from a squire or a lord? No: the emigrant is drafted from the masses, from the men who toil, and toil incessantly that they may live in honest independence; it is in the cottage of the artisan, and not in the mansion or the palace, that the emigrant ship finds her sorrowing freight: and the tears which fall upon her deck are the tears of the poor whom a cruel and heartless policy has driven out as strangers upon the earth.

But the emigration returns stand not alone in the testimony they offer against the Corn Law. The voice which speaks from our courts of justice proclaims the misery it inflicts; and the hand which is upraised at their bar is a condemnation of the wrong by which men, once honest and upright, are converted into felons. The number of commitments in England and Wales from 1837 to 1843 is as follows:—

1837	23,612
1838	23,094
1839	21,443
1840	27,187
1841	27,700
1842	31,309
1843	29,591

The variation is not important during the years 1837, 39, and 40. In the last-mentioned year the pressure of famine rapidly increased, and from that period to 1842 the number of commitments increased from 24,143 to 31,309, whilst in 1843, when the price of food had considerably fallen, the commitments also fell to 29,591.

The tables of the Registrar-General also tell their tale of woe in the muster-roll of evidence against the laws which decree starvation. We have before us the returns of the number of deaths in nine divisions of the north-western district for the years 1840 and 1843: they are as follows:—

	1840.	1843.
Bolton	2,000	2,576
Bury	2,170	1,832
Rochdale	1,688	1,531
Preston	2,637	1,934
Blackburn	2,140	2,031
Wigan	2,144	1,832
Prescott	1,155	920
Manchester	6,489	6,284
Ashton	4,873	4,391
	24,196	23,384

showing a diminution of not less than 2862 deaths during the cheap year 1843, as compared with the dear year in 1840, in nine districts out of 115 to which the report refers.

The 2862 human beings whose removal from life is noted in the return for 1840, and is in excess of the number who died in 1843, were of the poor, may we not say of the poorest of our population.

Have the working classes of this country, then, no interest in the repeal of the Corn Law? Deficient harvests would not have brought famine if the Corn Law had not stood in the path. Our artisans were producing goods of almost every kind; the world begged that they might buy them from us and sell us food in exchange; but our bread-taxing lords and squires interposed lest if the people were thus fed rents should fall. But the working men and their families suffered. From their ranks the Corn Law picked its victims:—they loaded the emigrant ship—they stood in the felon's dock—they were consigned prematurely to the grave! The friend of the Corn Law is the enemy of the artisan, and of every man who lives by the reward of his toil. The League is the foe of the Corn Law, and every blow which tends to break down this grievous usurpation of the landowners, by so much contributes to give independence, and comfort, and happiness to the labourer.

GREAT TRIUMPH OF FREE TRADE IN THE UNITED STATES.

The most remarkable feature in the Presidential election in America, now virtually concluded, is, the utter scorn with which the advocates of a protective tariff have been treated, even in the eastern states; and the contempt manifested for the miserable sophisms of monopoly. Polk, perhaps, owes his decisive triumph to a variety of causes; but the advocacy of Free Trade has been the principal source of his success: it obtained for him the votes of many thousands who differed from him on all other points of democratic policy. Clay and his friends, in fact, staked the election on the Free-Trade issue; Webster expatiated on the virtues of prohibition to the Pennsylvanians with a perversity of logic which might well excite the envy of our oratorical monopolists in England; he adorned the cant of "protection to domestic industry" with all the charms of eloquence and poetry; but the absurdity was too gross and the evil too palpable to be disguised by decoration, and, as the Gentoo proverb says, "the wings of the butterfly did not hide the body of the disgusting caterpillar." Henry Clay himself, at the very eve of the election, exclaimed at Brooklyn, that "Free Trade was but a disguise of the Tory principle of 1776—a mere renewal of the attempt to tax America for the benefit of England." This was exaggerating our English fallacy of "no dependence on foreigners" with a vengeance; but the very exaggeration helped to expose the delusion, and the voters of New York state revolted from such sophistry with disdain. The American monopolists, like their brethren at this side of the water, did not shrink from inventing the most daring falsehoods: they asserted that our League had interfered in their election, and that one hundred thousand pounds had been subscribed to ensure the return of Polk and Dallas. But this very falsehood helped to ensure the defeat of its inventors: it would have been an additional recommendation to the Free-Traders of America had those candidates possessed the confidence of the League, and consequently, so far as the falsehood was credited, it served rather than injured their cause; while its subsequent detection and exposure showed so strongly the base and unscrupulous character of monopoly, that many, who had before doubted, enlisted under the banners of Free Trade.

It had been vainly supposed that the states of New York and Pennsylvania, the seats of many protected manufactures, would have been found staunch advocates of the Tariff; but monopoly is most distressed where it is most known: the men of those states discovered that the Tariff was an excuse for high prices, just as the English farmers have found out that the Corn Laws are an excuse for high rents. Monopoly has been defeated on its own chosen grounds, as it would be in the English agricultural counties if farmers dared to give independent votes. The state of Ohio, like South Lancashire at the late election, has made a return opposite to its palpable interests, and this, singularly enough, has been caused by the English Corn Laws. Several efforts have been made by the people of Ohio to obtain English manufactures in exchange for their corn and other provisions; but when they have sent these down to the seaboard, the uncertainties of the English sliding scale have prevented merchants from venturing on so hazardous an export, and the commodities have rotted on the quays. The men of Ohio have voted not so much against Free Trade, in the success of which no portion of the Union is more directly interested, as against the unsuccessful efforts to open trade.

Our joy at the success of a Free-Trader in the Presidential contest is not a little dashed by the doubts that have been thrown on the rectitude of

Mr. Polk's opinions in other important matters, and particularly in relation to the great question of American slavery. Though we are not of those who would advocate any interference with the domestic institutions of foreign states, we are always grieved to find any section of Free-Traders who do not fully carry out their own principles: Free Trade includes Free Labour, and must, in its results, lead to the perfect emancipation of industry in all its forms. We earnestly hope that our brethren in America will learn this truth from the calm exercise of reason, before it is forced upon them by the irresistible influence of circumstances which those who best foresee are least willing to contemplate.

On this subject we have been favoured with the following letter, written by an intelligent member of the American Legislature:—

"New York, Nov. 8, 1844.

"I cannot refrain writing you a few lines, to announce to you the triumph of our democratic candidate, Mr. Polk, over the great champion of the Whigs and the father of the American protective tariff. This state has cast its vote for him, which gives him already 142 votes, the majority required being 138. There are also several states to be heard from, which will increase his majority to 152, or perhaps even more.

"Mr. Polk's success will greatly strengthen the Free-Trade party, and lead, as I have before said to you, to the overthrow of the whole system of high duties.

"I find the export of provisions attracting more and more attention; and as this trade increases will the great grain-growing Western States become more Free-Traders in their principles. We could not reach them by reason or argument prior to Sir Robert Peel's bill of 1842; but that measure has enabled us to approach them through their pockets, and that is an argument which requires no reach of understanding to comprehend. The people of the West understand it well, and do not stand in need of the politicians to enlighten them in finding out their true interests. I hesitate not to repeat my firm conviction that a reasonable concession in the duties on beef, pork, and bacon in Great Britain would be followed by a complete change in our tariff; and now that the Free-Trade party is triumphant is the time to strike the blow, and destroy for ever this system of plunder and oppression."

It is constantly urged by the monopolists, that, if we were to take the corn and provisions and timber of America, she would make no change in her tariff—she would still shut out our manufactures; but we have here the statement of an American legislator, that the trifling change in our tariff of 1842, in the article of provisions, has already produced a feeling in the western states in favour of Free Trade with England, and the most decided conviction is expressed, that a "reasonable concession in the duties on beef, pork, and bacon" will be followed by a complete change in the American tariff. The change in our tariff by Sir Robert Peel in 1842, referred to, was as follows:—

	Old Duties.	Sir R. Peel's Duties.
Bacon ..	per cwt. 28s.	14s.
Hams 28s.	14s.
Beef salted, not being corned 12s.	8s.
Do. fresh, or slightly salted ..	Prohibited	8s.
Lard 8s.	2s.

Thrice have we shut the door upon trade with the United States, and vainly hoped that, though we refused to buy their produce, we could still continue to sell them our manufactures. Mark the result of our folly. In 1805, 1806, and 1807 (before the iniquitous Corn Law was passed), our exports to the United States were about £8,000,000 per annum. The population was then about six millions, so that every man, woman, and child of the population annually consumed British manufactures of the value of 26s. 8d. per head. In 1842 our exports had fallen to £3,528,000, and during the present year they will amount to about £5,000,000; and we hear of the market being overstocked, and English goods selling at a loss of 20 to 30 per cent. Taking an export of £4,000,000 per annum as sufficient to supply the demand at the existing rate of American duties, and taking the present population at eighteen millions, the consumption of British manufactures per head now, instead of 26s. 8d. as it was nearly forty years ago, is only 4s. 6d. Such have been the results of our corn and provision laws!!

We have the strongest evidence to prove that the first hostile American tariff was passed in retaliation of our prohibitory duties upon the corn and timber of that country. Mr. Addington, the British Minister at Washington, in his despatch to Mr. Canning on this subject, said, "I have only to add that, had no restrictions on the importation of foreign corn existed in Great Britain, the tariff would never have passed through either House of Congress, since the agricultural states, and especially Pennsylvania, would have been opposed to its enactment." Can it be expected that the corn-growing states of America, which comprise three-fourths of the population and seven-eighths of the wealth of the country, will submit to the continued exclusion of their produce from our markets, without retaliating by the prohibition or the imposition of heavy duties on our manufactures? We know, by bitter experience, they will not. But will our Government and our Legislature learn wisdom by this experience? Will they still persevere in a system so unjust and impolitic, so injurious to the best interests of the coun-

try? We shall see whether, in face of the facts that our population is increasing at the rate of one thousand souls per day,—that in the agricultural districts the existing population cannot find employment, and that, therefore, unless this increasing population are to be kept in idleness, they must all be employed in manufactures,—we shall see whether the Government will dare, in the face of such facts, again traitorously to sacrifice the people to a monopolizing aristocracy, and condemn our industrious population to pauperism by rejecting for the third, and it may be for the last, time the opportunity which now offers of enabling us to exchange the superabundant produce of our industry for the food we so much need, and which America can so abundantly supply.

THE CONSCIENCE-SMITTEN LANDLORDS.

When the lecturers of the League first commenced their labours in the agricultural districts, four or five years ago, we had frequent occasion to record the obstructions they experienced from the stewards, bailiffs, clergy, and other dependants of the landowners. A better spirit, however, has since prevailed; but there are yet some districts in which great fear is manifested lest the people should get a little light. Why is it that "men love darkness rather than light?" Let their own consciences answer. Do they feel that "their deeds are evil?" Mr. Falvey has been lecturing in Wiltshire, and we learn from a correspondent that "It had been announced that Mr. Falvey would deliver a lecture in a malthouse at Christian Malford, the owner (a publican) having given his consent. When, however, he reached the place yesterday, an extraordinary scene presented itself. Men, women, and children came running towards him, shouting that the landlord had been threatened, and that we could not have the room. He went to the house, and found such to be the fact. The owner was quite terrified, and begged that he would not address the people near his house. There were hundreds of labourers with their families present, and they raised a cry for an out-door lecture. The moon was shining brilliantly, and, after retiring from the house to an open green, he got a chair, and spoke to them for more than an hour. In the course of his address he turned to account the dastardly tyranny by which it was sought to "bark" the meeting. The labourers shouted lustily for Free Trade, and declared that they would petition the Queen and Legislature to that effect. It is said that the parson of the parish exerted himself to put a stop to the lecture. He that as it may, the attempt did much service, as it convinced the people that monopoly will not stand the test of investigation."

When our lecturers first visited Huntingdon, a row was got up by the agents of the squire, which succeeded for that time in preventing them from being heard; but the people cried out, "We do not need any lecture now; we know that the Corn Laws injure us, else they would let you be heard." So that, whether our lecturers are allowed to be heard or not, the same effect is produced on the minds of the people. If they are heard, conviction always follows the truths they deliver; if their mouths be stopped, the people naturally infer that the landowners have some object in thus attempting to extinguish truth. Our lecturers always invite discussion, but it is seldom the squire thinks it prudent to accept such invitations: it is far easier to quash it by the aid of the parson, as at Christian Malford. We hope in future, however, this Christian minister will learn that more pious duties than obstructing lectures on the infamous bread-tax are looked for from one who professes to be the servant of Him who taught us to pray for daily bread.

COUNTIES REGISTRATION MOVEMENT.

WEST RIDING REGISTRATION.

MEETING AT HALIFAX.

A meeting was held at Halifax on Friday, the 22nd inst., to receive a deputation from the Council of the League, on the subject of the registration for the West Riding of Yorkshire. It was called by circular, and about sixty of the most active Free-Traders were present. Mr. Wilson, Chairman of the Council, and Mr. Bright, M.P., attended. The chair was taken by Joseph Thorp, Esq.

Mr. Wilson addressed the meeting on the means to be taken to promote the return of two Free-Traders at the next election, and entered into a statement of what has been done in South Lancashire, showing how easy it is for the manufacturing towns to secure the representation of the manufacturing counties, and urging upon all the Free-Traders of the district the necessity of their procuring qualifications for the county as well as for the boroughs.

Mr. Bright spoke at some length on the same subject, pointing out the absurdity of the opinion that the landed gentry were the natural possessors of the county representation. He argued that the increase of the county register was a duty upon them; and that, inasmuch as the squire had swamped the old county constituency by their tenants-at-will, it was needful to restore it to a healthy and independent state by adding to the number of freeholders. He ridiculed the idea that the landed proprietors have any claim to dictate the law on matters of commercial policy, and expressed a confident opinion that a little zeal and exertion would prevent the possibility of any monopolist venturing in future to appear on the hustings of the West Riding to solicit the suffrages of that great constituency, that he might vote in favour of a system by which trade was crippled, and the vast population dependent upon it impoverished.

Wm. Morris, Esq., and the CHAIRMAN also spoke, pledging the Free-Trade Association of Halifax to a hearty co-operation with the League in carrying out the great work in which they were engaged.

The meeting was a very influential one, and seemed moved by one sentiment, and resolved to work earnestly to deliver their division of the county from the disgrace it now labours under; and we have no doubt they will find their efforts attended with complete success.

MEETING AT HEDDEN BRIDGE.

On Monday evening last a meeting of the influential Free-Traders of this important district was held in the large room of the White Lion Inn. It was called by circular, and was attended by Mr. Cobden and Mr. Bright, from the Council of the League. James Hodgson, Esq., of Stubbing-house, was called to the chair, and opened the proceedings by expressing his opinion that the Council of the League deserved and would have the cordial support of all the Free-Traders of that town and district.

Mr. Cobden then explained the present operations of the League; its efforts to stimulate the boroughs to defend their commercial rights and existence by a watchful care to improve the electoral register; and its important movement upon the county constituencies. He entered into a statement to show how foolish is the superstitious feeling that has been entertained as to the power of the landed proprietors, and how easily this power may be overthrown or controlled. The landowners had swamped the county constituencies by the creation of 450 tenants-at-will, without exception the most dependent portion of the electoral body of the kingdom; and now it was the duty of all independent men to endeavour to restore the healthy tone of those constituencies by becoming freeholders.

Mr. Bright spoke of the results of the South Lancashire registration, and showed how easily the West Riding might do what South Lancashire had already done. He asked, what had made their beautiful and romantic valley not only habitable, but wealthy and abounding in comfort? Was it not its manufactures, which through that narrow pass had cut a canal, and made a road and a railway, and had built up a succession of villages equal in size to many of the considerable towns of the south? he exhorted them to a just conception of their own importance and their country's interests, and promised them complete success if they would manfully work for it.

Several gentlemen then briefly addressed the meeting; and a committee was appointed to carry out the plan recommended by the League.

In the Hedden Bridge polling district there is an overwhelming majority of Free-Traders, and from the measures now in progress this majority will soon be greatly increased.

THE LEAGUE AND THE COUNTY OF MIDDLESEX.

A very important meeting was held on Monday in the League-rooms, the object of which was to take the necessary steps in reference to the county of Middlesex, so as to make the return of Free-Trade members in any coming election certain. The meeting, which was a very crowded one, was composed of highly influential gentlemen, well known as ardent supporters of the Free-Trade movement. Amongst others, were the Hon. C. P. Villiers, M.P.; J. L. Ricardo, Esq., M.P.; Messrs. W. A. Wilkinson, Camberwell; Thomas P. Gibson; W. Leavers, James Barker, W. Cumming, &c. &c.

G. Wilson, Esq., the Chairman of the Council of the League, who presided, opened the proceedings by detailing the plan already adopted with so much success in Lancashire, and now in progress in the West Riding of Yorkshire with every prospect of the same result, viz., of creating a majority of Free-Trade voters by the increase of 400 freeholders.

Several gentlemen delivered their sentiments, warmly approving of the project, and promising their co-operation to achieve the desired end.

The object proposed was very warmly received, and a most enthusiastic spirit pervaded the meeting.

A numerous and influential committee was appointed, and after the necessary preliminary arrangements were made the meeting was adjourned till Wednesday, when active operations were commenced.

Thanks were voted to the chairman, and the meeting separated.

A JOURNEY IN SUSSEX.

The rent of land in the Midhurst district of Sussex has not advanced much during the last thirty or forty years. Perhaps it was quite as high forty years ago as now, but of this I could get no distinct information. If a stranger inquires of a farmer what he pays for his land, and what his predecessor paid, he will not readily get an answer, neither here nor elsewhere. The farmers are apt to suspect that you have some design upon them—some intention of bidding for their farms over their heads. The insecurity of their tenures and the great competition for farms—the increasing number of farmers and the decreased number of farms—render them naturally jealous of persons who put questions to them about the produce of the land and the rent they pay for it.

But though rent may have remained the same as thirty or forty years ago—though it be even something an acre less—it is in reality higher, taking the prices of corn as the standard. And it is a matter of regret that farmers should be so unwilling to see that while each successive Corn Law has fixed upon a lower and a lower price—first 80s., then 70s., then 64s., then 56s. as the prices at which the farmer might afford to sell his corn—the makers of those laws never proposed an adjustment of rent to such prices. This one fact, or series of facts, should alone make farmers question if there is any real friendship evinced towards them by those who say they are "farmers' friends."

It struck me as worthy of remark, that in this hilly part of Sussex, as well as on the richer soils lying level between the Downs and the sea, the farmers were laying out all their manure to dry in the fields. It was dry weather, high winds, without a shower of rain, for three weeks together, and all that time I saw the farmyard dung carted out, and laid in little heaps; and fields which were dotted with these heaps when I went first into the

county still retained them when I left, excepting in some cases where the dung had been spread out, as if to dry more effectually.

What a curious thing it is that the ammonia brought from the coast of Africa in the guano should be so carefully preserved, so eagerly sought after, so dearly paid for, and that the identical same substance, the ammonia of the stableyard, should be given to the withering winds and the scorching sun.

Mr. Brown (Lord Egmont's steward) has said that nothing will teach tenants but difficulties—nothing will stir them up to good farming but distress. I do not believe Mr. Brown. A tenant will farm better if he can pay his rent easily than if he has a hard struggle to pay it. But to me it would be amazing if they farmed well when they are liable to be ordered to leave their farms at any time a landlord bids them, liable to be told what men they shall employ and what not, as is the case now.

THE GAME AND THE GAMEKEEPERS.

I went through Cowdray-park one day, and walked to Petworth, six miles from Midhurst. Before I had gone many hundred yards beyond the park, the bottoms of the fences on each side of the road showed that rabbits and hares were frequent visitors to the fields within the hedges. Over a space of road not quite two miles and a half I counted between five and six hundred runs into and out of the different fields. While counting them I met a farmer who owns some fields and rents a farm close by. He told me that from the fields he owned he had not this year got more barley than would pay seed, labour, and poor-rates: had he been obliged to pay rent for that land he said he must have paid it entirely out of his capital, or have been distrained upon. I remarked to him that, the land being his own, he was surely at liberty to kill the rabbits upon it. He replied that he was; but it mattered little what he did, when his neighbours on each side of him bred the rabbits which came to him to be fed. "But," said he, "they be getting pretty well sick on't." And he went on to prove to me that rabbits and hares, though let at a good rent to gentlemen who shoot them, or though sold in the market by those who feed them, are not profitable; they eat a great deal; but they destroy—he thought he could prove it to any one's satisfaction—twice as much as they eat. He told me, and so did some other farmers, that Colonel Wyndham, of Petworth, did not do them so much harm as a preserver of game. He turned his attention more to foxes. They said the colonel took most interest in breeding, and then hunting and killing foxes. And that where foxes were numerous the rabbits and hares would be kept within bounds.

It was to the north of this road to Petworth, about three miles from where I then stood, that some of the Cowdray tenants were obliged to kindle fires around their turnip-fields last year to frighten off the hares. One of

these tenants alleges that he suffered damage from the game last year to the amount of £70. The size of his farm I could not ascertain precisely, but it is not above 200 acres. This year he alleges a loss of £20 in one field. He has had it valued, and the valuers give that sum as the amount of damage done. The gentleman who rents the game on this part of the estate from Lord Egmont has offered £6 for the damage. The tenant had refused to take it; but he had no remedy save at great expense, and then it was doubtful if he would succeed in recovering higher damages. He was, however, leaving his farm. And I was informed of several others who had been told that they were at liberty to go if they did not like their bargains. The renter of the game, and not the landlord, employs the gamekeepers in these outlying districts. It is the business of these gamekeepers to have as much game for their masters as they possibly can; hence they and the farmers are not on the best of terms.

On the road between Cowdray-park and Petworth, where there were so many runs through the fences, I observed that almost every field had a gate formed of upright spars of wood nailed to the cross bars. These spars were about two inches apart, and were, when entire, a sufficient barrier to the rabbits; but every one of the gates had one or more of these spars broken away at bottom. I asked the reason why, and was told that the gamekeepers had broken them to let the rabbits and hares get more freely into and out of the turnip fields. There being so many patches of common, so many thickets of furze, and so many coppices in the neighbourhood, the farmers were obliged to resort to many schemes to defend themselves from the game; but the keepers generally took the part of the game and of its owners against the farmer.

WHAT IS MACHINERY?

Petworth is a small town, belonging to the Wyndham estate, containing, with its parish, 3304 inhabitants. Its streets are narrow, intricate, and indifferently paved, but its situation is lovely, on the rising bosom of a beautiful country. Close behind it, and looking over its head, is the park and residence of Colonel Wyndham; both of them extensive, pleasant, and fit to be inhabited by the noblest of the land.

The only thing that struck me at Petworth as noticeable, after looking at the handsome church, with a spire rarely equalled in elegance, was the House of Correction, and not the house itself so much as a board stuck up against the wall, painted and lettered. It set forth that a variety of articles could be bought at the house, the work of the prisoners, such as horse-clothes, girths, sackings, canvas, and other textile fabrics of a similar kind; and persons visiting Petworth were recommended to buy these in pre-

ference to what could be bought elsewhere, these being said to be *all woven by hand, and superior to anything made by machinery*. How long the woodcutters and farming men, who get lodgings in the house for poaching and pilfering, take to learn to make goods in this superior style I could not ascertain; but they must get long sentences if they learn to be such very superior weavers; and they must be very extraordinary criminals indeed if they can make such articles without *machinery*, with bare teeth and nails.

Rents vary from 15s. to 30s.; but 30s., including taxes, is a common rent for the average quality of land. Upon this barley is a more frequent crop than wheat; but there is fine wheat land in the lower grounds lying between the sandy heaths behind us and the chalky downs four miles in front of us. Some of that land is as high as £2; and I have heard of some which, including rates, was little short of £3 per acre; but this is an exception. Wages were commonly 9s. a week on the farms; for every man that got 10s. a week there was a man only getting 8s., taking all the estate into estimate; and a great many men were not employed at all.

HEYSHOT PARISH.

I went one day out of Midhurst in another direction, namely, to the south, whereas Petworth lay in the direction of east or north-east.

The sand hills, covered with heath, and in parts planted with scrubby trees, were more frequent on this side, and extended almost to the very bottom of the Downs, interrupting that range of clayey soils which elsewhere bordered the base of the chalky ridge; and yet, amid those sandy heaths, there were spots of high fertility and great beauty. Here, again, I found the noble oak tree strong and healthy, enjoying himself on such soils as he would die upon in the north. Again I found the rabbit warrens and the game preserves on and under these sandy heaths; and again, wherever there was a farm-field, devastating inroads were made upon it by the game. Wherever there was a cottager's garden, complaints of the same kind were made.

At the distance of about two miles from Midhurst I descended from the heath and entered a narrow green lane, in which was a waggon track, hedged on each side by thriving thorns overhung with brambles, the brambles loaded with berries black and ripe. I came to a gate where a footpath led over a stile into the inside of a field, still going the same direction as the waggon track, upon which I stood, but keeping the bank above, while the waggon track went down a cutting between the high banks of soft sandy rock, getting deeper and deeper as it went.

I continued in this lower way; found a little spring of clear water, which trickled in the wheel track, and went by its side until a level was reached, where it spread itself and made a mire across all the road knee deep and more. From this it was necessary to climb to the bank, where the wisdom of the path that kept itself high and dry was demonstrated. But this soon descended to the level of the marshy road, only it did not wet itself. There was a brook, which at a short distance higher up drove a flour-mill, and over this brook the path crossed by a small wooden bridge; then it left the ravine in which the brook ran, and went direct forward to the south, having high ground thickly wooded on the left, and ground not quite so high, yet quite as thickly wooded, on the right.

This wood on the right soon ceased; and where it left off a garden and orchard and house occupied its place, and beyond these one or more farm-fields were indistinctly seen.

The path was still in the hollow, but the hollow widened, and there was an acre or two of a grassy green. In the centre of this green stood a waggon-shed, and at the waggon-shed I stood for some minutes, considering whether I would turn off and go up to the house. I knew nobody lived there but working people; but, from some cause or other which I cannot account for, I feel always a diffidence, as if doing something wrong, when going to a working man's house unbidden and without business that particularly and immediately concerns him. I have heard it complained that those who are in the habit of visiting the houses of the poor do so with an air of freedom that is highly offensive; and I believe there are some such people; but, so far from everybody behaving in that way, I have often stood near a labourer's cottage, or have walked past it and back again, and past it once more, all the time as if looking at something else, before I could muster sufficient assurance to go in. When a man is met in a field at work or on the road breaking stones, it is easy to talk to him. The hardness of the stones he is breaking is an introduction immediately to all you want to know. You remark that they are either very hard, or rather too soft for road metal; and he, ten to one, answers that they are too hard to make a living from; too hard to get bread out of for a family. The information of the wages he earns, the number of his children, and the kind of food he can afford to eat, follow this as naturally and as easily as you can desire.

Also, when in the cottage where there is a family of seven, they retreat from a stranger and get behind the mother, or stand up in a corner. But a few pence and kind words never fail to bring them out and elicit their names, ages, and so forth. I never addressed them with any other design than to make them feel at ease, and to gratify a natural feeling of my own which takes delight in their friendliness; but I would advise those

whose sole object is to obtain information from the mother, not to overlook the children. In a great majority of cases the wives of farm-labourers introduce the subject of their incomes and outgoings, which I am unwilling to speak of first, because I am speaking to a child whose toes are out of its shoes, whose pinafore is torn, or whose clothing is otherwise scanty and much worn; and, unhappily, we may go over many miles of country, and across some entire counties, and not alight on a family where this is not the condition of the children's clothes. In these cases the mother very commonly makes a remark on the difficulty of getting clothes for them. Seeing you notice the children, she says, "Ah, poor dears; I had intended all summer to get some new things for them after harvest; but now winter is coming on, and I have not got them yet." Then she says she owed some rent, and that had to be paid out of her husband's harvest wages. It grieved her much to see her children going barefooted; but it was all they could do, even by selling the pig, which they should have kept to eat themselves, to pay the shoemaker for her husband's shoes, for he *must* have them to work in; and to pay for some other small things which they could not possibly do without, unless they went naked altogether.

I have almost always found a conversation of this kind arise out of an attempt to be friendly with the children. Two things ever ready to a mother's thoughts—the love of her offspring, and the struggle she maintains with the world to fill their little mouths and clothe their little backs—are at once appealed to and excited by merely speaking to them, if they be any way ragged. But the pleasure of holding converse with innocence, with those whose souls came latest from Heaven,—the mere pleasure of making them feel that the world does not contain such very bad men, as that every stranger should be one come to steal little children from their mothers and carry them away in bags, as even kind mothers will foolishly frighten them to a belief of,—the mere pleasure of receiving and giving gratification has always secured to me a free and easy conversation with their parents, as soon as I got seated at their fireside.

But I have never been able to overcome the first difficulty of an introduction to a poor man's house with whom I had no business to transact, and from whom I had no invitation. On the occasion now under narration, I stood a short while by the cart-shed on the green, gathering as I best could as much confidence as would introduce me to those who inhabited the old farmhouse, which, with a small garden before and a larger garden behind, stood about a hundred yards to my right.

I went up to it, and entering that part which had once been a scullery or back kitchen, and where a labourer and his family, of wife and five children now lived, I inquired if this was Dunford, and was answered in the affirmative.

A few observations about the transition of farmhouses into the dwellings of labourers, and the amalgamation of one farm with another—the making a few large farms out of many small ones—soon brought out the fact that the farm to which this house belonged was still of the same size, or nearly, as when "the late Mr. Cobden occupied it." The farm itself was now occupied by a farmer who had a flour-mill, and who lived at the mill. The family in the kitchen paid £3 a year for their rent; and each of the others paid £4. The garden was divided about equally among them; and was little more, if more at all, than a quarter of an acre. They got turf to burn, and some wood; but never had any coals. The wages were 9s. a week; but the farmers of the parish had just had a meeting, and had given their men notice that they would be reduced to 8s. a week. One reason for this reduction was that they had all got allotments of land, and they could thus live cheaper.

W. A. told me, and on a subsequent day showed me, that his allotment was at best of little value to him, and that this year it had been a loss. In the first place it was a light sandy soil; next, it was three quarters of a mile from his house, and the nearest road by which he could convey manure to it was two miles. Worst of all, it was part of a small field situated with plantations full of game on three sides of it; and a heath, on which the game was also preserved, on the fourth side of it. Every thing which he sowed or planted upon it was eaten up with the game, save his potatoes, and they were also destroyed less or more. I myself counted sixty and odd rabbit holes, mostly made by young rabbits learning to excavate, as young rabbits do, among the potatoes. He had sown peas, expecting a few dinners of green ones with a bit of bacon in the summer; but he only had in all about a gallon, where he should have had at least a bushel. This was entirely the result of the game. He had tried both last year and this to get some turnips and greens for the winter; every blade went to the rabbits. All his neighbours were in the same predicament, less or more. This land was rented from Colonel Wyndham, of Petworth, and the game was his game.

But W. A. was rather worse conditioned this year than any of the others. The neighbouring farmer turned out his hogs into the wood to eat the acorns, and the hogs had got into the allotments; and W. A.'s quarter of an acre being the first met with, they had employed themselves a whole half day rooting up his potatoes with their snouts, and eating them.

He was not better situated with the hogs than with the game: there was no redress for the damage done by either of them. All he could do was to give up his allotment, and that he was about to do; for he said it was a hard

thing that it should be no profit to him, and that wages should be falling a shilling a week because it was said that the labourers could live cheaper having allotments.

The difficulty of getting manure to it operated in a two-fold degree. It had been the custom for the farmers to cart home the turf for fuel to the labourers on condition of getting the ashes and the dunghills in return. If W. A.'s dunghill were taken to his allotment, it would not only cost the hire of a cart to take it round two miles of road, but he would have to pay for getting his turf carried home.

This turf is very inferior: the vegetable substance is exceedingly thin. The soil is nearly all sand; so that there is only a blaze of dry heath, and then the fire is nothing but black sand. Where there is a thick vegetable mould comprising the turf it is excellent fuel; but this is not the case in this part of Sussex.

W. A.'s wife told me that were it not for the potatoes they would die in the winter. "But, Sir," said she, "how it hurts the constitution of a man to work hard on potatoes, and nothing else but a bit of dry bread." And then she told me that, on an average, there were four days of the week that they had nothing more than potatoes and dry bread. They said nothing evil of their master, far from it; he was as good as the best of them; but this was to what they were reduced in common with all other labourers whose families numbered the same as theirs. W. A.'s mother lived with them, and she had 2s. 6d. a week from the parish.

While I staid in the house I observed what gave me great pain. His wife was preparing some little articles of baby-linen; her slender stock, of even the most fragmentary rags, was collected, from which to patch up one or two of those indispensable articles required for newborn babies. All that "over-production" of clothing, which ill-informed politicians sometimes complain of as coming from the factories, afforded nothing to her. Cheap as the fabrics of the loom now are, the cheapest of them were too dear for her. Her family could not get bread enough. The amount of her purchases in tea and sugar in a week was a penny for the one and a penny for the other. They had often to sit in the dark for want of a candle, because the money must first go for bread. Now there was another mouth coming to be filled, another back to be clothed; and though the world teems with human food, and though those who keep up the Corn Law to keep up the prices of food in England, *all for the good of the labourers*, proclaim that the looms are making too much cloth, there was neither food nor clothing in waiting for the expected little stranger. At best, some of the veriest fragments of rags, more than worn out, were all that awaited it; and for food it would have to compete with those who had not now enough.

A little boy in this family, 12 years old, sometimes got a job to do. He got 3d. a day, and had been some days picking potatoes, where he got 4d. a day. He sometimes drove the plough, for which he got 3d. a day. The hours at plough were eight; but his real hours on the farm altogether being twelve each day, I mention this only to remark that the earnings of a boy at such work for such hours will not supply him with the bread he could eat. I have a lively recollection of my keen appetite when I used to be in the fields for so many hours at this age.

HOW ALLOTMENTS OF LAND BECOME NECESSARY.

Heyshot is the name of the parish in which this farm is situated, and I proceeded to the village of Heyshot. The most remarkable circumstance which came to my knowledge there was the reduction of a class of small copyholders to pauperism by the united working of the Reform Act and the poor law. The labouring men, who had homes and gardens and orchards of their own in the village, were obliged to part with them—all, save one or two, who have as yet withstood the means which are brought to bear against them. The farmers refuse to give work to such owners of houses and gardens, save in harvest time, or when there may be a great scarcity of hands, which seldom happens. These owners of houses and gardens thus find themselves without work; they cannot get parish relief until they have sold their houses and have spent the money; so to get work they have been obliged, one after another, to sell their houses. The money was not difficult to spend. Colonel Wyndham has bought the houses, and has managed to turn them into farmhouses, over which he has the complete control.

THE DUKE OF RICHMOND'S COUNTRY.

Going down to Chichester, and from that to Bognor, I found the farms getting larger, and the soil richer. Three, four, and five hundred acres were but moderate-sized farms there. It is a fine wheat soil, which seems to be fallowed once in every rotation of crops. The want of labour upon this land is very striking to a stranger, such as I was, the more so as there is a large union workhouse close by on the Duke's estate, full of people, most of whom are able and willing to work.

I was told between Chichester and Bognor what is the reason that the farmers in that part are making so many complaints. I do not give the reason as my own, but simply as that given by a gentleman resident there. "I shall tell you, Sir, why it is. The farmers have been ruined because wheat was once £40 a load. Had it never been so dear, they would have been more prosperous now. They became gentlemen all at once; they paid high rents, and yet they could live like gentlemen; they got their blood-horses, their gigs, their servants, and their grey-hounds. Prices have come far below £40 a load, but they

cannot get down their rents. And why? Because the present generation of them have been bred to be gentlemen, and gentlemen they will be. And what says the Duke of Richmond, who is landlord to so many of them just here? Why, he says this:—"If my tenants can cut such a dash as they do, with their gigs and silver-mounted harness, and blood-horses to ride on, and greyhounds with them when they ride, they cannot be in great distress; they must be able to pay their rents. If I have a farm to let, there are many of them all ready to offer for it. They offer a high rent, why should I not take it?"

This may be true. But the Duke should understand that it is not the worth of the farm that makes them compete for it: it is their own numbers; they must get farms or be without the means of living. I am not one who would cavil at their being gentlemen. Every man has the right to live the life of a gentleman if he can do so honestly. The farmers may not be able to live so well and so easily as they did when wheat was £40 a load. But it is the rent-burden that wants reduction. It is the delusion of the Corn Law which wants removal—the delusion that has led them to bid high rents in the expectancy of high prices, which high prices cannot be maintained but by the high prosperity of the consumers of food.

The rents are about £2 in this district; but the poor rates are heavy. The gentleman with whom I talked had no doubt but one half of the whole labouring population would have to seek relief at the workhouse this winter. He remembered since there used to be seven and eight men employed on each 100 acres, that was when farms were smaller. Now the highest number was five to the 100 acres; and only that number on a very few farms.

I may remark, however, that the coast of Sussex was a great smuggling coast once, and the farm-labourers, over many miles inland, used to be in the pay of the smugglers; so that when a seizure was about to be made, in conveying contraband goods inwards, the labourers were ready on an alarm to turn out, with pitchforks or more deadly weapons, and help the smugglers. This was part of their employment.

I saw on the wall of a barn which was near the road, two miles from Chichester, a board nailed up with this warning on it—"Man traps and spring guns set on every part of these premises." On inquiring why this should be put up—knowing, as I did, that no one was allowed to set "man traps and spring guns"—I was answered that everybody did not know that; and that there was no keeping corn from the labourers now-a-days, neither in the barns nor in the stacks. In reply to a question it was added that, in the first place, the morals of the population had not recovered the deterioration undergone in the days of smuggling; and, in the second place, there was neither work enough, nor wages to get food enough when there was work; and that hunger drove men to steal corn. One who had stolen some wheat at that place had been taken to prison, and had committed suicide, so desperate was his sense of misery.

On this farm of 300 acres the number of hands employed was five men and two boys. Some of the men were getting 10s. a week, but were afraid of a reduction. They had to pay 2s. a week of cottage rent, and there was only a very small garden to the cottages.

I found it customary in some parishes to have the men who sought parish relief at work upon the roads. For instance, at Easebourne, near Midhurst, there were twenty of them working one week and lying out of work one week alternately, at the wages of 9s. a fortnight. Most of these had large families; all of them were married. Some of them had allotments of land, and it was only by having these allotments that they could exist on 4s. 6d. a week. Thus the allotments, though good in themselves if allied with full wages, are made instrumental to a depreciation of wages. In short, they are in this case made to reduce wages and to reduce the poor-rates at the same time. The number of persons who are in the workhouse at Easebourne is great for such a population, even though the married labourers be thus disposed of upon the roads.

It is certainly a curious question to inquire how such a population as this is to support that *home market* which the manufacturers are so often told is their best market, and the only one they should seek to sell in. But I have not left myself room to go farther into this subject. I have placed some rough facts before the reader: let him draw his own inferences.

ONE WHO HAS WHISTLED AT THE PLOUGH.

AN INQUIRY INTO THE EFFECTS OF ENGLISH LEGISLATION UPON AGRICULTURAL WAGES, PROFITS, AND RENT.

BY A BARRISTER.

(Continued from page 135.)

CHAPTER VII.

Seventh Period—From the Passing of the Poor Law of 1834 to the present time.

SECTION III.

We have already adduced evidence of the operation of the poor laws in sweeping away the small proprietors, by rendering it impossible for a man possessed of a little property to obtain employment while he has any property left. We have also touched upon the fact of the great scarcity of cottages in proportion to the demand, and the consequent exorbitant rent exacted for them. We have seen it stated in the evidence of Henry Drummond, Esq., quoted in a former chapter of this inquiry, that one of the

causes of this increased demand and increased rent of cottages was "the farmers being very anxious to get the gardens to throw into their fields." This cause, in so far as it is traceable to legislation, belongs to the Corn Laws. But though this undoubtedly is one cause of the effect in question, there is another, and a most powerful one in its operation, of which the poor laws are the parent. The landlords, partly in order to prevent an increase of birth settlements and keep down the rates, partly from an unwillingness to invest money in cottage property, not only allow no new cottages to be built, but let the old ones fall into ruin. Mr. Drummond had stated in his evidence before the committee of the House of Commons in 1824—"All around us most proprietors have pulled down cottages because they yield no rent without distraining, which gentlemen are unwilling to do."

This operation appears to have been carried to the greatest extent in a part of the county of Norfolk, where the labouring population are suffering under a complication of evils, moral and physical, which we will venture to say, are not exceeded in Europe, if they are in those countries where slave labour is employed.

We have seen it given in evidence before the Lords' Committee of 1830-31, how the condition of the receiver of rent in the county of Norfolk had improved under the operation (at all events, in spite of the operation—*post hoc* if not *propter hoc*) of the poor laws and Corn Laws. That the profits of stock and the wages of labour have not risen is quite certain; that the condition of either the farmer or the labourer has improved in any degree we think it would be very unsafe to affirm, if we desire our affirmation to be conformable to truth. And we think most persons will be disposed to be of the same opinion who have read the evidence we have already given as to the prosperity both of the farmers and farm-labourers, and who read the valuable evidence which we are about to quote from Mr. Denison's Report to the Poor Law Commissioners in 1843, on the employment of women and children in agriculture.

It appears that the proprietors of some ten or a dozen parishes situated around or in the neighbourhood of the parish of Castle Acre in Norfolk have, by the means above described, forced the labourers and their families resident in those parishes to quit them, and go to reside in Castle Acre. Mr. Denison explains this by saying that "Castle Acre is what is called an 'open' parish: that is, in the hands of a considerable number of proprietors, while the neighbouring parishes are each owned by one or two (or very few) proprietors." The Rev. J. H. Bloom, however, vicar of Castle Acre, in his "History of Castle Acre," recently published, informs us that the Earl of Leicester is the proprietor of Castle Acre, to whom it came by descent from Sir Edward Coke, the celebrated Lord Chief Justice of the King's Bench, who purchased it from William Cecil, son of Thomas Cecil, Earl of Exeter. Mr. Bloom also dedicates his book to the Earl of Leicester as such proprietor. Perhaps the following remark of Mr. Bloom may help to explain the apparent inconsistency of the inhabitants of other parishes being driven from their parishes, because belonging to one or two proprietors, and being allowed to settle in Castle Acre, though belonging to one proprietor. "There are three principal manors carrying fine arbitrary. The increasing population of the place, and the frequent transfer of copyhold from seller to purchaser, render the manorial privileges of this parish of some importance to their owner." The extent to which the above-mentioned practice of depopulating parishes has affected Castle Acre will appear from the following classification of the inhabitants of Castle Acre given in Mr. Denison's Report:—

"1 Clergymen.

4 Farmers.

80 Tradesmen and journeymen.

49 Labourers, with families, belonging to Castle Acre.

12 Poor widows, ditto.

103 Labourers, with families, belonging to other parishes."

Of one of the results of this disproportioned distribution of labourers, Mr. Denison gives the following account:—

"In the parish of Castle Acre, near Litcham, in Norfolk, my attention was directed to the gang-system of employment which prevails in that and some of the neighbouring parishes, and is said to be the cause of much hardship and immorality.

"I investigated the matter as carefully as my limited time would permit, and I believe the following to be a true account of it. The system is this:—

"Suppose a farmer, in or near Castle Acre, wishes to have a particular piece of work done, which will demand a number of hands; he applies to a gang-master at Castle Acre, who contracts to do the work, and to furnish the labour. The bargain is made with the gang-master; and it is then his business to make his bargain with the labourers. He accordingly gets together as many hands as he thinks sufficient, and sends them in a gang to their place of work. If the work, as usually happens, is such that it can be done by women and children as well as men, the gang is, in that case, composed of persons of both sexes, and of all ages. They work together, but are superintended by an overseer, whose business it is to see

that they are steady to their work, and to check any bad language or conduct. The overseer usually goes with the gang to the place of work, and returns home with them when they leave off for the day.

"This is a general outline of the system; and on paper it may seem not open to much objection; but, in practice, it certainly works very ill for the employed, though very well for the employer and the gang-master."

As showing the extent of the operation of this system in this particular district, Mr. Denison gives a table of farms in no less than ten adjoining parishes where the gangs issuing from Castle Acre are employed.

"From these two causes," observes Mr. Denison, "viz., the excess of labourers in Castle Acre, and the defect of them in the neighbouring parishes, sprung the gang-system of employment. The neighbouring occupiers wanted hands, and applied to a person in Castle Acre to supply them. This was easily done, owing to the great numbers living there, all together, anxious for employment. Thus the farmer got his work done well, quickly, and very cheaply (as I shall show presently); and so the system spread by degrees throughout Castle Acre itself, and over all the neighbourhood; and, as it proved very beneficial to the employer, more labourers were continually either driven or drawn to Castle Acre, in order to get work in the gangs, till at length that parish has become (to use the expression of one of the overseers of the gangs) 'the coop of all the scrapings in the county; if a man or a woman do anything wrong, they come here, and they think by getting among them here they are safe.'"

Mr. Denison gives the following clear summary of the advantages and disadvantages of this gang system. It will be observed that the advantages are all on the side of the employer, the disadvantages on that of the employed; for the advantage to the former attributed to it by Mr. Denison, being solely applicable to the present vicious artificial state of that district, cannot be considered as an advantage in a natural state of things:—

"It is advantageous—

"1. To the employer—because he gets his work done quickly, effectually, and very cheaply.

"2. To the gang-master—because it makes him a master instead of a labourer, which he would be if the gang system did not exist.

"Because it gives him great local power and an indefinite sort of patronage.

"Because it enables him to make money, not only as gang master, but as vendor of necessities to the members of the gangs.

"3. (As there is no unmixed evil in the world) in some degree to the employed.

"Because, in the present state of Castle Acre, were it not for the gang-system, many persons would be out of work altogether, who are now enabled, by great toil, to earn some sort of livelihood.

"It is disadvantageous—

"To the employed—1. Because it is a mode of getting out of them the greatest possible amount of labour, in a given time, for the smallest amount of pay: for, as the gang-master contracts to do a job *by the piece*, he makes his gang work as hard by compulsion as they would do freely were they working by the piece on their own account, while, in reality, they are no more than day labourers, receiving *day labourers' wages*. The farmer thus gets his work done as quickly as though it were done by the piece; the gang-master gets the extra profit which the labourer usually derives from piecework; meanwhile, the labourer undergoes all the toil of piecework without any of its extra compensation.

"2. As the gang-master engages to do a particular piece of work on a particular day (say, to pull turnips in a field five miles off), if it comes on to rain, so that the gang cannot get upon the land, they have to walk there and back for nothing. On a farm they would have a chance of some barn or yard work, or some sort of indoor employ; and, even if unemployed, they would in many cases (as I have frequently found) get half-a-day's pay. The gang system cuts them off from these chances, and subjects them to the chance of going through great fatigue for no pay.—(See Samuel Peeling's evidence.)

"3. Children of six years old sometimes have to walk five, six, or seven miles to their work, and then, if it rains, to walk back again without earning anything.

"4. [I give this in the words of one of the witnesses.] 'Unless they do a certain amount of work in the day, they get nothing: they go to do a piece, and are to do so much for the day's work. If they go in a morning and stay a little time only, for rain or other cause, they don't get paid. So they (the gang-masters) get each one of the gang, to do short work, and then don't pay them; but still the work is done: that's the master's gain. The day is divided into quarters: if they stand the time, they're paid for it; if not, they get nothing'—[i. e., a day is divided into four parts, 2d. a part: if they work for one part they get 2d.; if less, they get nothing; and so on with each part].—(See Mrs. Sculfer's evidence.)

"5. As children can do many little jobs on the land very well at a very early age, if they are kept close to their work—and as owing to the unnaturally dense population of Castle Acre there are very many children of all ages, and owing to the gang system there are the means of keeping them close to their work, the children

† P. 221.

are constantly subjected to laborious work—at very early ages (four, five, six), and thereby debarred from all opportunities of school instruction.

"6. As the only object of the gang-master is to fulfil his contract, he regards the labourer solely as a living instrument, valuable only in proportion to its available power: hence all sorts of characters from all the neighbouring parishes are mixed up in the gang, male and female; and, as the large proportion of females consists of grown-up girls, the consequences were thus described to me by one of the overseers of the gangs:—'I believe that, owing to ganging, 70 out of 100 girls are very imprudent girls—prostitutes. They get working along with the lads in the daytime, and make appointments at night; but still, if you was to come in among them when they are at work, you would not know but that they were all very prudent women and girls. * * * I should not like, myself, to take a wife out of the gang.'

"7. As the place of work is sometimes ten miles or more from Castle Acre, the gang-master then sends them over in carts. 'Then they ought to stop all night; but my husband would not allow it, for they sleep in barns or anywhere; that's what they said.'

"There's pretty work for boys and girls! We could not agree for ours to stop by no means; not if they lost their work.'—(See Mrs. Sculfer's evidence.)

"8. It throws the whole labouring population into the power of the gang-master, who, if he be a low, hard man, illustrates the proverb, that no tyranny is so grinding as that of a poor man who oppresseth the poor.' He has neither the will nor the power much to mend their condition; he may, on the other hand, exact any amount of toil from them, on any conditions he pleases.—(See Mary Churchman's evidence, and Mrs. Sculfer's, about Fuller's shop.)

"It thus seems that, to the employed, the gang system has a large balance of evil; and, as I took great pains to ascertain the general opinion of all classes at Castle Acre respecting it,—from the clergyman of the parish, the Rev. J. H. Bloom, who has very justly described its evils in his 'History of Castle Acre;' from Mr. Hudson, whose letter and evidence I subjoin; from the labourers themselves at their own homes; from one of the overseers of the gangs (see evidence annexed); from the talk of a gang of grown-up girls and children, with whom I walked some distance; and also from the neighbouring farmers and clergy (see Mr. Francis's evidence, and that of Mr. Hogge and others),—I can come to no other conclusion than that it is a very pernicious system, and very destructive of the real elements of happiness to those who are so employed."*

The hardships of this system are so many and so great, that I do not think it necessary to offer any apology for dwelling upon it at some length: I shall, therefore, add a few extracts from the evidence taken by Mr. Denison.

"Mr. Hudson, of Castle Acre.—I think it is owing very much to the neighbouring landowners; in many parishes round, the whole parish belongs to the landlord; he will not allow any new cottages to be built, and he lets the old ones fall into decay. The labourers are by degrees forced to quit those parishes; they then come and settle in ours, which is an open parish. There are very many small tradesmen who let the land at large rents—£4, £4. 10s.; and then new houses are built; and, moreover, it's a great hardship on the old parishioners, because the rents of all houses are raised by the competition; labour is drawn here from the surrounding parishes.

"When I first resided here, the gang system was not known; the work now done by them was performed by women, or rather it was left undone. But from one or two farmers cultivating their lands in a superior manner, getting their farms perfectly clean and free from weeds, many others have been induced to follow their example, and employ more hands; and where there used to be £1 expended in the cultivation of the land twenty years since, there are now £5 expended for the same."†

"Mrs. Sculfer, labouring woman at Castle Acre.—I have six children: three girls and three boys; my two eldest girls go out—most to my grief that I am obliged to send them. They worked for Mr. Fuller (the chief gang-master) more than for any one else; one now works for Mr. Moulton: both are large gangmasters. My second girl was nine when she went out; a great many go out at the age of seven. Mr. Fuller has four or five overseers; he has 100 people in his employ. They go out at seven in the morning now, at this time of the year; sometimes two-journey work. If two-journey day, they come back at twelve, go again to work at one; from one till dark, in height of summer sometimes nine o'clock. In summer they go out between six and seven; generally two-journey work then; but not more than an hour's rest.

"They seldom come back to dinner; feed themselves—chiefly on bread.

"My eldest girl has a thorough dislike to it. She almost always goes crying to her work. She would almost rather do anything than it. The worst place she could get anywhere, poor thing. I wish I knew of any place I could get for her, but I don't. I am sure I don't know what to do.

"My girls can't read; nor boys: I a very little. My husband can't.

"The children here generally go out so early that there can't be any schooling. There are many go out at

six. They can 'quick,' and single turnips. They like the small ones for that better than the large ones.

"Wages, 8d. a day; they have given 9d. wheat-hoeing. Unless they do a certain amount of work in the day they get nothing; they go to do a piece: you're to do so much for your day's work.

"My husband says he's quite astonished to see how the girls work.

"Fuller keeps a flour-shop, and forces all his gang to deal with him. When my husband worked with him, I was obliged to deal with him; my girls don't board themselves, else they'd be obliged to deal with him. He says he would give those who would deal with him a ld. a day more.

"My children's hands are so blistered pulling the turnips, that I've been obliged to tie them up every night this winter. Pulling turnips blisters the hands very much; they're obliged to pull them up; they must not take turnip-crowms (a sort of fork) for fear of damaging the turnips.

"There can't be healthier children than mine are, they can stand all weathers. I never heard any one who did not say they disliked it. The gangmen (overseers) have 12s. to 15s. a week in summer."*

One of the most grievous hardships resulting to the labourers and their families from this practice of pulling down cottages, and so driving them altogether out of certain parishes, is the distance they are thus very frequently compelled to walk to and from their day's work. Only think of young girls and children walking ten, ay, and fourteen miles a day, in addition to their hard day's work of pulling turnips—"very back-breaking work," as one of the witnesses calls it, feelingly alluding to his daughter's sufferings, a child of 11 years of age, who came home sometimes so tired that she could not eat! The same witness said: "Their walks are worse than their work." He might well say so, when his child of 11 years of age "went five miles to her work." The condition of the villeins *regardant* was surely in some respects better than this. The very condition of their being *adscripti glebe* (bound to the soil) would save them from this cruel hardship of having to walk so far to their daily toil.

"Hannah Arnold, 19 years old.—Walked seven miles to Barton; got breakfast as we went along; set off between seven and eight; left off at four, got home about six; got to work at nine or half-past, as soon as we got there; had no rest in middle of the day at all: we walked home. Children of the ages of four, five, six, work in the gangs. Girls and boys earn 3d., 4d., &c. If we're idle he'd mob us or send us home; he daresn't beat us."†

"Samuel Peeling, labourer.—The gang system prevents one getting regular work, as on a farm; because, if we could not get out-door work on a farm, we should get in-door; but we can't in a gang, because we've only that particular bit of work to do, so we lose in time. I don't think it a good thing at all for the poor. I have a daughter turned 11 years of age, who has worked two years along with the gang.

"Pulling turnips is very back-breaking work; she's too young to pull turnips; she don't often pull 'em; the man pull and the girls set 'em up.

"I'm forced to let my daughter go, else I'm very much against it. I earn nothing myself; she does not like it at all, she hears so much blackguard bad language, and she's never used to hearing that at home.

"She has complained of pain in her side very often; they drive them along—force them along—they make them work very hard. Gathering stones has hurt my girl's back at times. Pulling turnips is the hardest work, they get such a hold of the ground with their roots; when the land's strong it's as much as we can do sometimes to get 'em out, pull as hard as we can pull. It blisters their hands so that they can hardly touch anything; my child's hands have been blistered by it.

"Ganging is what leads 'em into so many bad ways; that's what causes many girls to be out of nights when they ought to be at home. My girl went five miles yesterday to her work, turning up; she set off between seven and eight; she walked; had a piece of bread before she went; she did not stop work in the middle of the day; ate nothing till she left off; she came home between three and four o'clock. Their walks are worse than their work; she is sometimes so tired she can't eat no victuals when she comes home."‡

"Mr. B. Francis, Litcham.—I am quite of opinion that out-door work unfits girls for domestic service; I abominate it; I always set my face against it; their morals are depraved very much by it, particularly in large gangs; where masses are congregated there is more depravity. Ganging is a sort of slave-driving system—a vile system: I am decidedly opposed to it. There must certainly be a superintendent to keep young persons at work. Formerly the mother used to superintend the children. I don't think there's any cruelty practised towards them. I think ganging sprung from slugging turnips—in short, from the high state of cultivation, though you might have it without; but ganging does it quickest."§

"Letter from the Rev. M. Hogge, Rector of South Acre.—From your own recent investigation in the parish of Castle Acre, you must be well aware that the congregating together of such numbers as seventy or eighty in

each of the two gangs now existing there must naturally produce, from its very composition of good, bad, and indifferent, great immorality. I have been resident in this parish forty years, and can, from my own personal knowledge, affirm that the gang system has produced, and is still producing, on the rising generation, morally, physically, and intellectually, immense evils."**

"Letter from the Rev. A. Gilbert, Vicar of Gayton.—The gang system is extremely injurious in most respects to the persons employed. The leader's profit is sometimes, as I have heard, 15s. per day. The only advantages of the gang system are to save the farmer the trouble of keeping his people at work, and forcing the persons composing the gangs to be industrious."†

"Letter from F. W. Keppel, Esq., Laxham.—I fear that the gang system will and must increase, particularly upon large farms, as the men not in gangs require more looking after than the farmer can afford, to see that the work is not slurred over."‡

"Letter from A. Hamond, Esq., of West Acre, Norfolk.—One of the prime causes of the increase of the gang system (I may almost say its origin) was the new poor law; for previous to that act, if an able-bodied man could not maintain his family, the parish assisted him; that assistance being withdrawn, it became necessary that all who could work should support themselves, and the improved system of agriculture (particularly as regards the cultivation of turnips adopted in this country) gave them an opportunity of so doing."§

It is evident that, with things in their present state, the principle of the new poor law cannot be carried out. "There exists," says Mr. Denison, in his brief but valuable report, in which he has told truths by no means of a pleasing character to those whom such reports have but too often sought to please and to favour, with a courage which does him infinite honour, "there exists in many parts a practice of giving lower wages to single men than to men with families." He cites evidence to show that "it arises from the farmer's giving employment to men with families, as single men can be maintained at a lower rate if compelled to enter the union-house." And he adds, "even if they are not so compelled, the employer, by this threat of the union-house, gets the average amount of work done at the lowest possible rate of wages."||

The county of Norfolk is, perhaps, the county in England in which agricultural improvements have been carried to the highest point. It appears, then, that with the present Corn Laws in existence, agricultural improvements are not necessarily attended with any improvements in the condition of the agricultural labourers. Several of the witnesses whose evidence is cited in Mr. Denison's Report attribute the gang system to the "high state of cultivation," to the improved system of agriculture,** and intimate that it works beneficially to the farmers, that the work could not be done without it; all which amounts to saying that the farmers could not pay their present rents without it. Let us now see what light our parliamentary return information will throw upon this important point.

The first of the two following tables shows the progress of rent in the division of Norfolk in which Castle Acre is situated, omitting therefrom the parish of Castle Acre itself, and all the other parishes where the gangs resident in Castle Acre are employed. The second shows the progress of rent in Castle Acre, and the parishes where the gangs resident in Castle Acre are employed.

Freebridge Lynn Division of Norfolk.

Average increase per cent. on the whole gang-system district between 1805 and 1843. 498
Average increase per cent. on the whole gang-system district between 1815 and 1843. 18

It appears from these tables that in the division of the county in which Castle Acre is situated, exclusive of the parish of Castle Acre itself, and the other parishes in which the gang system prevails, the rise of rent has been 358 per cent.; while in Castle Acre, and the parishes in which the gangs resident in Castle Acre are employed, the rise of rent has been 498 per cent.: appearing to indicate by this rise of 140 per cent. over the surrounding district, that "agricultural prosperity" may be, if not caused by, certainly attended with, extreme degradation, hardship, and misery in the condition of the agricultural labourers and their families.
