

THE LEAGUE.

No. 41.]

SATURDAY, JULY 6, 1844.

[3d.]

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive a copy, weekly, of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND, are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

REGISTER, REGISTER, REGISTER!

The Free-Traders qualified to vote must everywhere prepare to enrol themselves and their friends on the register for the NEXT year.

To entitle a voter to be registered, he must have occupied during the twelve months previous to the 31st of July, premises of the value of £10 a year. He must have been rated for twelve months to the relief of the poor.

He must have paid, on or before the 20th of July, all poor-rates and assessed taxes due to the 6th of April preceding.

Further information and directions will be furnished on application, personally or by letter, to the Local Registration Societies; to Mr. Sidney Smith, 68, Cheapside, London; or to Mr. Hickin, League Offices, Newall's Buildings, Manchester.

For the convenience of individuals whose avocations render it difficult for them to call at the Registration Office, 68, Cheapside, during business hours, arrangements have been made by which attendance will be given every evening at that office until eight o'clock, to fill up and serve claims, and to supply every information relative to Parliamentary registration for counties, cities, and boroughs.

COUNTY REGISTRATION.

COUNTY VOTERS are such as have been possessed of a FREEHOLD worth 40s. per annum for six months prior to July 31 in the year in which they claim; of a COPYHOLD worth £10 yearly for the like period of possession; of a LEASEHOLD, for twelve months originally created for twenty years, of the yearly value of £50, or for sixty years, worth £10 yearly; and of a SUB-LEASE or assignee of an UNDER-LEASE in occupation of the premises. Except in the case of Freeholds not occupied by the Freeholder, no property that will give a borough vote will confer a county franchise.

Holders for life or good behaviour of the offices of Parish Clerk, Sexton, Dissenting Minister, or other charge, if drawing 40s. a year of their emoluments directly out of land, are also qualified.

Occupying tenants for twelve months prior to July 31, of premises of £50 value per annum are qualified, except for buildings situated within a Parliamentary borough.

Persons so qualified must, before July 20, send Notice of Claim to the Overseers of the parish where the qualification is situated.

Registered Electors who have changed their place of abode, as described on the register, must, before July 20, send notice of the change to the parish overseers.

These notices may be sent by post, and duplicates kept and stamped by the postmaster will be evidence of service.

The lists of persons entitled to vote will be published on the church and chapel doors of the parishes respectively on the two first weeks of August, and should be examined by electors and claimants, in order that, if they are left out or objected to, they may appear before the revising barristers and support their claim.

ON THE PRESENT CONDITION AND COURSE OF THE ANTI-CORN-LAW LEAGUE.

The action of the Anti-Corn-Law League upon the House of Commons during the present session has been only indirect and incidental. That such was intended to be the case was distinctly announced long before the meeting of Parliament. The address from the Council to the people of the United Kingdom, read on the 28th September at the first of that splendid and unparalleled series of meetings which has been held in Covent-garden Theatre, emphatically disclaimed any further petitioning to the present Parliament. This negative recommendation was enthusiastically received, and has been adhered to universally. All hope and expectation from that quarter was thus broadly disclaimed. We have not noticed such an occurrence, throughout the session, as the presentation of a single petition for the repeal of the Corn Laws. The people have never been excited or deluded into a momentary indication of returning confidence. No local interests, parties, or purposes have occasioned even one solitary deviation. The unanimity and consistency are complete. The alienation of public feeling from the present House of Commons, evinced from the commencement until now that we are hastening towards the close of a long session, is an historical fact. It portends a deep-rooted conviction amongst the people that the downfall of monopoly will not be effected by their present representatives, but will be effected by themselves.

Yet, without the application of ordinary means, there has been considerable parliamentary progress. Our analysis of the division ascertains this fact. Taking into account the later season of the year, and the number of friendly absentees, evidence is afforded of a greater advance than that of last year upon the preceding division. The honourable House has evidently pondered on the ominous silence which has left it to itself. Memorialized individual members have also, in sundry instances, been impressed by the still small voice that has whispered its admonitions in their ears. But the public has only looked on quietly. Its indifference seems to say to the Legislature, "Do as you please, gentlemen; the end is coming." And they are obviously uneasy under the ceaseless watching of that observant eye: it alarms and fascinates them; but its glance can neither be evaded nor interrupted.

We note the parliamentary progress of our question simply as a fact, not as in the slightest degree calling for a change of procedure. No hostile majority, diminishing or increasing, large or small, can now tempt to the revival of petitioning. It is done with. The House has disregarded it, and it will not reappear for the House to disregard again. The course marked out, on the occasion to which we refer, is still in progress; and thoroughly to work it out is the business of some months yet to come.

The immediate business of the friends of Free Trade is that on which we have so often dwelt, and which must never be forgotten or neglected—the Registration. Claims, we trust, are already made on behalf of those entitled to the franchise. The non-payment of assessed taxes and poor-rates on or before the 20th inst., is an occasion of disfranchisement that should be carefully avoided. Instances are not rare in which collectors have purposely allowed the day to be forgotten, who would else have been sufficiently urgent in their demands. Then will come the affixing the lists on the church doors, which will be on the first and second Sunday of August. Those lists must be looked to carefully, both for their sins of omission and of commission; claims will have to be made by those omitted, and objections to names wrongfully inserted, within eleven days after the second Sunday. Here is work in hand for every member of the League. This is of much more importance than anything that passes in the present Parliament. These are the preliminary proceedings of the trial of our question by the constituencies. Nothing should be omitted that tends to secure the fairness, completeness, and, if possible, the finality of that trial. We have carried it into that court, and in that court let us energetically work it through. Neglect is treason. We have chosen our ground, knowing the difficulties it presented, and the trouble it imposed. We have abandoned the usual tribunal, the parliamentary, as partial in its nature, and hopeless of just result, and must abide by our selection. Our appeal is lodged with the electors, and by them we fall or triumph.

No ulterior plan of operations can be opened up until the next registration shows its results. If it exhibit an electoral majority of Free-Traders, the League is pledged to bear that fact to the foot of the throne, and ask for the exercise of the royal prerogative that the people may be represented as the

constitution supposes them to be represented, and the majority of the House of Commons harmonized with the majority of their constituents. But even in pointing out this contingent measure we are, perhaps, premature. Let us first register. Let the Council of the League have the fact, and then will be the time to consider all the various modes in which that fact may best be applied to the purpose of obtaining the justice for industry which we are associated to demand. When the guns are loaded and the ranks marshalled, then will the command be forthcoming to fire or charge so as most utterly to rout the trainbands of monopoly.

All goes right, then, however the landlords' newspapers may patter about parliamentary majorities. The conviction of wrong done by the Corn Laws is deepened and extended. The power of redress by public opinion has only to be confirmed and consolidated for the decisive and triumphant effort. Transitory intervals of relief from some of the worst forms of suffering have produced no abatement of determination. Hostile demonstrations have sunk into quiescence under the scorn they excited. The way is open, and our march is onwards; firmly, steadily, diligently, and, as to the result, most hope fully.

THE LANDOWNERS, THE FARMERS, AND THE FARM-LABOURERS.

Mr. Cobden, at the late meeting of the League in Covent-garden Theatre, has justly directed attention to the importance of keeping in view the broad distinction that exists between the landed interest and the agricultural interest, and has powerfully exposed the fraudulent artifice by which the two are attempted to be blended together. In a perfectly healthy state of society the proprietors and cultivators of the soil might be bound together by community of interest and community of purpose, the law granting to both equal rights, and imposing on both equal duties. But in a system of legislation which gives the whole political power of the state, and the exclusive right of making laws, to the landlords, it must necessarily result that the rights of the proprietary will be extended to the utmost, and the enforcement of their duties utterly disregarded; while on the other hand the duties of the tenants will be continually aggravated to the utmost degree of severity, and the remedies for the establishment of their rights rendered utterly nugatory. The whole course of exclusive landlord legislation is naturally directed to secure the subservience and dependency of the tenantry, and to maintain that monopoly of legislation by which the proprietary class is enabled to secure benefits for itself at the expense of the rest of the community. For every law on the English statute-book designed to afford redress to an injured tenant there are at least twenty to afford facilities to the landlord for the enforcement of his claims. "Rent" appeared so sacred in the eyes of the Legislature that its recovery has been preferred to the payment of all other debts, however legal or equitable, and a tenant's expenditure on land has appeared of such little consequence, that no law exists for securing him a beneficial interest in his improvements. When the landed proprietors of the present day assert the perfect identity of their interests with those of the farmers, we must turn upon them and inquire, how, then, does it happen that the whole course of your class-legislation, both in spirit and letter, has been always levelled directly against your pretended copartners, the cultivators of the soil? Are your game laws designed for the protection of the farmer? Is it for his sake that you refuse the enfranchisement of copyhold? Was it for the purpose of raising the class of cultivators that you have placed such difficulties in the way of creating small freeholds, and that you have rendered the purchase of small estates in fee simple all but impossible? If your confidence in the farmers be so great as you pretend, what means this reluctance to give leases, and thus secure to the tenant a fair return of profits on invested capital and of just remuneration for his honourable skill and industry? We look at your estates: we find that you have added house to house and field to field; that you have been able to allocate jointures to your wives and make settlements upon your children to an extent quadrupling the whole amount of your ancestors' rental a century ago; and that you are able to sustain mortgages, the result of extravagant expenditure, infinitely beyond what the fee simple of your estates would have sold for in a past generation; but we find no proof of the cultivators of the soil having shared in your prosperity: on the contrary, we have abundant evi-

dence that the condition both of farmers and farm-labourers has been deteriorated, and is in a continuous process of deterioration. Cottages have sunk into hovels, hovels into sheds, and sheds have been ruthlessly swept away, so that at this hour the increased population of peasantry has fewer means of lodging and domestic accommodation than the smaller population possessed in the days of our grandfathers.

If, as you of the landed oligarchy impudently assert, your interests and those of the farmers are identical, how does it happen that the prosperity of these farmers has not grown with your growth and strengthened with your strength? We know that the proprietary rentals of England have been immensely increased in value; we should like to see the man who would assert that the profits on farming have increased in anything like the same proportion, or indeed in any proportion at all. On this subject we shall quote an extract from an able article in the forthcoming number of "The British and Foreign Review":—

"There are two kinds of improvements upon landed property which mark the advances of a nation in wealth and civilisation. The first consists of those extensive and permanent ameliorations which can only be undertaken by those who possess an enduring interest in the land as owners; often such improvements can only be effected by the combination of many owners, or even by the aid of the Government. Such, for example, was the first great operation in the fens of Lincolnshire, by Richard de Eules, Lord of Deeping, Chamberlain to William the Conqueror; and these have since gone on with a tolerably steady progress.

"But the second class of improvements, which relate to the actual cultivation of land, have not proceeded with the same regularity or uniformity. They have depended chiefly upon the condition of the occupiers of the soil, whose tenures have been often precarious, and who have been at different times subject to burdens which have rendered their employment one of the least profitable and most dependent of this country. This class of farmers or yeomen has been most affected by social and political circumstances; and though, if we take a long period of time, the productive power of the occupiers has greatly increased, they have not risen in social position in anything like the same proportion as the owners of the soil. The value of land in Great Britain has increased enormously during the last three centuries; the condition of the proprietors of the British soil has improved to an extent almost unparalleled in the history of the world; while perhaps a majority of farmers, especially in England, command the conveniences of life in a degree relatively lower than that of their ancestors of the sixteenth century."

To this general statement we shall subjoin a specification of very significant facts:—

"We shall close our notice of the culture of light land by the statement of a few facts gleaned during a ride over the two farms of one of the best light-land farmers in England, occupying land in Hertfordshire. These farms are situated on the chalk hills, and are sufficiently within reach of London to send fat calves, sheep, and lambs to Smithfield-market; they adjoin each other, and contain together about 800 acres of arable and about 60 acres of pasture land. The two originally differed but slightly in the quality of the soil, both consisting of a thin stratum of gravel, with red clay resting upon chalk; the one, which is held from year to year, having been let at about 10s. an acre in its unimproved state, while the other, which is held upon lease, used to let at 8s. an acre only. Both have been for many years in the occupation of the present tenant and his father, though the relations with the landlord of that farm which is not held upon lease do not seem to have been quite satisfactory, inasmuch as the tenant has been on the point of giving up the farm three times in the course of the last fourteen years. Both farms are in a high state of cultivation, far superior to that of the neighbouring land; but the difference between the crops growing upon the farm in lease—originally the worst land—and that held from year to year is so striking as to excite the attention of the most careless observer. The tenant would gladly cultivate both alike; but as the owner of the best farm has always refused to grant a lease, from some notions about game or politics, that is out of the question; for upon the farm held by lease, the occupier's outlay in permanent improvements and in forcing the land has been such, that he calculates ten years' occupation from the present time will be necessary to enable him fully to reap the fruits of his expenditure."

We could have wished that the intelligent reviewer had attempted an analysis of the "political motives" which prevent the owner of the best land from giving a lease; he would find that they resolve themselves into the determination to have dependent serfs instead of independent tenants. In fact, the landed oligarchy, so far from wishing to see their tenants acquire wealth and independence by the cultivation of the soil, dread nothing so much as the assimilation of agriculture to those other branches of manufacture which hold out reasonable prospects of acquiring a competency to frugality and industry. Under present circumstances the interests of the landed proprietors, so far from being identified with those of the farmers, are directly antagonistic, and the Corn Laws are maintained by the landed monopolists, not so much for the sake of their pecuniary profits as for perpetuating the bondage in which they keep the farmers.

But the pressure of this iniquitous system falls with the greatest severity on the poor farm-labourer. While the Corn Laws limit within the narrowest bounds the demand for labour, the new Poor Law treats the enforced idleness as a crime. The labourer is literally knocked down and beaten for falling. He hears the cry of protection to British industry raised by lords and squires, and when he seeks for

this protection against pressing starvation, he finds that it exists only in the shape of the union work-house or the gaol. *Punch's* "Home of the Rick-burner," which, viewed merely as a specimen of pictorial art, surpasses the entire exhibition in Westminster-hall, gives a fearful and too true a picture of the condition to which the farm-labourer has been reduced by the tender mercies of landlord-made law. Who can look at this wondrous realization of the misery which class-legislation has wrought—the dead wife, the starving children, the empty cupboard, the broken teapot, the ruinous hovel, and the heart-stricken father—without feeling that the torch presented by the fiend of darkness represented in the picture offers a powerful temptation to the wild justice of revenge? But we cannot dwell on this fearful portraiture: we recommend the study of it to those who have been taught the cuckoo cry, that protection to British agriculture means protection to British agriculturists.

IMPERIAL PARLIAMENT.

THE FREE-TRADE MIRROR OF PARLIAMENT FOR THE SESSION 1844.

Twenty-first Week, ending Saturday, July 6.

On Friday week a curious conversation arose on a notable proposition made to the HOUSE OF LORDS by the Earl of Winchilsea. The noble lord has evidently been studying the patriarchal history of *Joseph in Egypt*, and imagines that, if the Sliding Scale be but maintained, England can be kept in a social state, similar to that of the Egyptians before the erection of the Pyramids! We beg to call the particular attention of our readers to this conversation (we cannot call it debate), which we give entire. The speech of Lord Montagu, in reply, is deserving of considerable perusal, especially his apt citation from Burke's "Thoughts and Details on Scarcity;" while the chuckling gratulation of the Duke of Richmond over the speech delivered by Sir Robert Peel, in the debate on Mr. Villiers's motion, will provoke some amusement, or rather (seeing how great national questions are shirked by those who ought, from their position, to be "great men") a melancholy musing that the destinies of a great commercial nation constitute the shuttlecock between the political battledores of a Richmond and a Peel.

Here is the debate, if debate it must be called; and let it be noted that it occurred on Friday, June 28, 1844, while the remarks of Mr. Burke on "scarcity," penned at the request of Mr. Pitt, were published—or, at least, written—in 1795. Light, they say, travels at the rate of 192,000 miles per second: if moral light had a similar velocity, surely not in vain would Adam Smith and Edmund Burke be knocking for entrance into the dense region of the mind agricultural!

The Earl of WINCHILSEA, after presenting several petitions in favour of protection to agriculture, proceeded to call the attention of their lordships to the subject of the establishment of public granaries, of which he had given notice. In doing so, he said he should not make any observations on the question of the Corn Laws, or on the different plans which were proposed by various parties in reference to these laws. The proposition he wished to be carried into effect, as to public granaries, stood entirely on its own grounds. Their lordships were aware that from March in each year up to the present moment, and later, the wheat market in this country was under the sole control of a few individuals, the corn merchants in Mark-lane, who, by combination among themselves, were able to raise the price of that prime necessary of life to a most unnatural height. Now, if any measure could be carried into effect which would prevent these combinations from being operated, and would enable the people of this country to purchase wheat at a fixed and reasonable rate, this would be a great national blessing. (Hear, hear.) It was his fixed opinion, that the establishment of large public granaries would go high to effect this so desirable object. It was the worst possible policy on the part of any Government, and more especially on the part of the Government of a country like England, to suffer the supply of food for so considerable a portion of the year to fall into the hands of a few individuals. (Hear, hear.) In the event of a total failure of the harvest, not only in this country, but in the countries whence we derive our extra supplies, the result of such a state of things as that of which he now complained might be perfectly frightful. The plan which he should venture to suggest as a remedy for the evils, would be to establish five or six national granaries in different parts of the country—at Manchester, Hull or Liverpool, London—and each of them to contain from three hundred thousand to five hundred thousand quarters—say three millions altogether; having this supply, the Government could say to the landed interest—if you can supply the people with wheat at from, say 50s. to 55s. per quarter, very well; but if the price rises beyond that amount, we will open the doors of our granaries, and bring into the market a sufficient supply to keep down the price to that reasonable amount at which the public should be enabled to purchase their food. (Hear, hear.) The Government would be enabled to purchase their supplies, under ordinary circumstances, at prices which would place them in a position at any time to benefit the public, by selling it again at a justly moderate price. In 1835, for instance, the very best brown wheat was selling at 35s., so that had Government purchased at this price, and stowed their purchases away in national granaries, they would have been able afterwards to keep down the price to the public. He would at all times allow the Government to buy their corn as cheap as they could get it—to get it as well from abroad as at home. (Hear, hear.) It might be objected that, in the event of a series of good harvests, the corn stored up would get spoiled, the general notion being that corn spoiled in seven years; but the fact was, that, if well managed, corn might be preserved for fifty, nay, for two hundred years. It was not only the

manufacturing population that would derive benefit from this plan; it would be also highly advantageous to the agriculturists, for there was no class which suffered so much from fluctuations in prices as did the agricultural interest (loud cries of "Hear, hear," from the Opposition benches); and for this reason, that from the influx of foreign corn the farmers never obtained for themselves the high prices which were realized for the article by the speculators. This would be a great benefit to the agricultural interest, for sixty of price is what they wanted. (Hear, hear.) The adoption of such a plan, too, would greatly tend to put an end to the Corn-Law agitation, which was so injurious to all parties, setting the one interest against the other. He trusted that he should see this suggestion adopted.

Lord MONTAGUE wished to say a few words with respect to the very important speech which they had just heard from the noble earl. In many of the statements made by the noble earl he agreed, and, above all, as to inconveniences and evils which resulted to the whole community from the present state of the law; and he entirely agreed that these evils were more especially experienced by the agriculturists. The noble earl said that the present mode of carrying on the corn trade might be productive of great evil to the agriculturist. He (Lord Montagu) agreed in this, and also that the corn trade was thrown into comparatively few hands. The noble earl said these persons were generally great capitalists; no doubt they sometimes were so, but at other times the operations of the utmost importance in the corn market were carried on by persons who had no capital of their own, but traded on speculation with the capital of other persons. The noble lord, on the part of the public, complained of the fluctuations which took place in the price of corn, and also said that the agriculturists suffered more than any other class from this. He also stated that this great rise of price chiefly took place between the month of March and the ensuing harvest, and a rise of price at that time was of no advantage to the producers of corn in this country. But why was it that the corn trade had fallen into the hands of so few persons? There was no monopoly in connexion with it; there was nothing in the trade to prevent any person embarking in it. The reason, however, of this was, that, by our legislation in connexion with it, the trade in corn had become of such an extremely speculative character, that it drove from it men of sober minds, who did not wish to embark in such uncertain matters, and therefore the trade was left in the hands of persons of a different character. The truth was, that the present state of the law held out an inducement to get a rise of price by withholding corn from the market, when the public most required it. The state of the land also at the periods which he alluded to not only led to this fall in prices, but it also led to such a diminution of the duty that immense quantities of corn were taken out of bond at the lowest duty, and thrown upon the markets, thus producing the greatest fluctuations in prices. If, however, the authority of the noble earl was to be taken—and it was notorious that he was a great practical agriculturist—it appeared that in the average number of years in this country wheat could be produced as cheap as, or cheaper than in other countries. Now, if this was the case, it took away the great argument which was urged by the majority of those who were opposed to a repeal of the Corn Laws. He now came to the remedy which was suggested by the noble earl. He thought that the noble earl had acted logically in making his proposition, for he did not think that any improvement could take place as long as the House supported such an extravagant system as the sliding scale. Under a free state of trade, or with a small fixed duty for revenue in corn, no such evils could be produced as were alluded to by the noble earl. He should therefore say, that although the noble earl was logically right, he would be practically wrong. The noble earl must be aware that, not only in ancient but in modern times, the erection of public granaries, to guard against seasons of scarcity, had been much discussed. This question had been most ably handled by one of the most distinguished political writers that this or any other country ever produced: he alluded to Mr. Burke, who, in his pamphlet "On Scarcity," which it was generally understood had been prepared at the request of Mr. Pitt, distinctly pointed out many of the evils which would result from such establishments, and showed that, so far from tending to obviate or prevent the evils complained of, they would tend to increase and aggravate them. The following was the passage to which he referred:—"A report has gone abroad that intentions are entertained of erecting public granaries. I hear that such a measure has been proposed—that is, for Government to set up a granary in every market town at the expense of the state, in order to extinguish the dealer, and to subject the farmer to the consumer, by securing to the latter corn at a certain and steady price. If such a scheme be adopted I should not like to answer for the safety of the granary, of the agents, or of the town itself. The foul storm of popular phrenzy would fall on that granary. In an economical light I must observe that the construction of such granaries would be an expense beyond all calculation. The keeping them up would be at an immense charge. The management and attendance would require an army of agents, storekeepers, clerks, and servants. The capital required would be enormous. The waste would be a dreadful drawback on the whole dealing. The moment the Government appears in the market, all the principles of the market will be subverted. I do not know whether the farmers will suffer from it as long as there is a tolerable market of competition; but I am sure that in the first place a trading government will speedily become bankrupt, and the consumer in the end will suffer." And subsequently he said:—"There is no way of preventing this evil (fluctuations produced by errors of legislation), which goes to the destruction of all our agriculture, and of that part of our internal commerce which touches our agriculture the most nearly, as well as the safety and very being of our Government, but successfully to resist the very first idea, speculative or practical, that it is within the competence of Government, or even of the rich, as rich, to supply to the poor those necessities which it has pleased the Divine Providence to withhold from them for a while. We, the people, ought to be made sensible that it is not in breaking the laws of commerce, which are the laws of nature, and consequently the laws of God, that we are to place our hope for softening the Divine displeasure to remove any calamity under which we suffer, or which hangs over us. He conceived that the statement of the noble earl was the strongest possible argument against the sliding scale."

The Duke of Richmond said that he did not think that any advantages would arise from the establishment of public granaries. One speech this week, in the other House, had done more good than would follow from the erection of a hundred granaries—for, backed as that speech was by such an increasing majority, it would tend, more than anything else, to produce something like certainty with respect to agricultural pursuits, and thus ultimately produce cheapness and certainty of price. He denied that the present law produced great fluctuations in the price, for that was attributable to quite a different cause, namely, the seasons. He denied that there was the prospect of a bad harvest this year. He thought that his noble friend who spoke last was led away merely by feelings of enthusiasm, when he spoke so strongly of the alleged evils of the sliding scale.

The Earl of Winchelsea agreed with his noble friend who spoke last as to the importance of producing something like a feeling of certainty in the minds of those engaged in agricultural pursuits. For his own part, he would rather see no duty at all than a fixed duty. He confessed that he was surprised at hearing such observations as he heard quoted from Mr. Burke, respecting public granaries. With the opinions of that eminent man he could not agree, although he entertained the highest respect for him.

The petition was then laid on the table.

Burke, cited with so much effect on the subject of National Granaries, might have been useful on Tuesday on the subject of WAGES, in a debate which was raised by the Earl of Radnor. The idea that wages invariably rose and fell with the price of food was inculcated by people of high as well as low degree, and the idea has been so supported down to the present hour. "Nay," said Burke, "it is not so; it is not true that the rate of wages has not increased with the nominal price of provisions. I allow it has not fluctuated with that price, nor ought it; and the squire of Norfolk had dinner when they gave it as their opinion that it might, or ought, to rise and fall with the market of provisions. The rate of wages has no direct relation to that price. Labour is a commodity like every other, and rises or falls according to the demand."

The debate to which we refer, as turning on the question of wages, was raised by

The Earl of Radnor, on the occasion of presenting, on Tuesday last, that remarkable petition from Lynham Green, of the origin of which an account was given in last week's LEAGUE, p. 653. The noble earl stated that the present petition had been agreed to at a meeting held in Lynham Green, called in consequence of the circulation in the neighbourhood of some of the tracts published by the society of which his noble friend on the cross bench (the Duke of Richmond) was president, called the Society for the Protection of Agriculture. The meeting was attended by about 1000 labourers and journeymen, and resolutions and a petition in favour of a repeal of the Corn Laws were adopted. This petition he considered to be extremely well worthy of their lordships' attention. It had been adopted without a dissentient voice; there was no acerbity of feeling manifested; and nothing could be more orderly or creditable than the manner in which the proceedings were conducted throughout.

Lord Methuen bore testimony to the respectable manner in which the meeting had been conducted. There was no feeling of animosity displayed towards the landlords or farmers.

The Duke of Richmond said, as his noble friend had alluded to him, he would only say it had been stated that some persons had procured the signatures of labourers in an oppressive manner. He was not aware of the circumstance, and no man could regret more than he should that any person should adopt such proceedings. It appeared to him that the best way to obtain protection for agriculture was to let the labourers read those pamphlets of which his noble friend had complained, and they would then be convinced that the only object of the Anti-Corn-Law League was to lower wages throughout the country. He had a very great respect for the labourers, and he was delighted that they had set so good an example to the Anti-Corn-Law League. By exhibiting no animosity to the landlords or farmers they were showing an excellent example, which he hoped and trusted the Anti-Corn-Law League would follow; but the meetings of that body up to the present period had been the exception to the proposition. He thanked his noble friend for having spoken against Mr. Cayley's pamphlet, for he had obtained for it a sale to an immense extent. Before his noble friend referred to the pamphlet, he was afraid its existence had been but little known; but from the moment when his noble friend gave publicity to it in that House, it was sold and circulated in all parts of the country, and, he had no doubt, had gained a great many converts. (A laugh.) He did think it necessary for him on that occasion to say much to their lordships on the subject of the Corn Laws, but he must observe that his noble friend was always very sensitive about those protection societies. Now, really the protection societies would never have existed if the Anti-Corn-Law League had not forced them into being. The violent declamation of itinerant demagogues, who went about the country propagating the grossest falsehoods, and saying that this was not a tenant's question, but a landlord's question, and that the tenantry were in favour of no protection, induced the tenantry, who were a most respectable body, to come forward and give a denial to that assertion. The consequence was, that protection societies were formed in every part of the country nearly, and he hoped and trusted they would never cease what they were doing until the Anti-Corn-Law League was beat down. He did not think the Anti-Corn-Law League was entirely destroyed yet, but he thought they would find their interference at elections rather expensive. And there was another thing that made them quiet just now; demagogues were always quiet when Parliament met, because they were afraid of having their fallacies exposed; but he had no doubt they should have an autumn campaign, and he hoped the protection societies would continue what they were doing, and, in a fair fight between them, he did not fear the result. His noble friend would be the last man in the world to get persons to sign petitions against their inclination; but the truth was, that his noble friend was kind to the labourers in his neighbourhood, as he was to every one, and they hearing that he had a strong impression on this subject, naturally came forward and petitioned in this way, without deeply examining the subject. He had no doubt, if his noble friend would send

them the pamphlet he had referred to, he would next year have to present a petition stating that they had changed their mind, when they were once convinced that what the Anti-Corn-Law League meant by free trade in corn, was only another mode of expressing low wages.

The Earl of Radnor said that no abuse uttered by members of the Anti-Corn-Law League equalled the gross and scandalous abuse employed by noble lords and others at protection societies. Instead of being sorry, he was exceedingly glad that this subject was discussed; he hailed it as a great advantage, because the canvassing subjects of this nature by fair argument was the fair way of arriving at the truth. If the protection societies had published fair tracts he should not have complained; but he repeated what he had said before, that the pamphlet which his noble friend adopted was the most discreditable production he had ever read, because it falsified facts, quoted falsely, and perverted arguments. He recommended the petition strongly to the attention of their lordships.

After some further remarks from several noble lords the subject dropped.

On the same evening (Tuesday) on which the above debate arose, the Sugar Duties Bill was read a third time, and passed. It had been carried through all its previous stages without discussion; but on this, its final consideration, a debate of some interest was raised. The subject has been so fully discussed, while the bill was struggling through the House of Commons, that we shall only briefly advert to it here. The Government reasons for this bill were stated in a very clear and able way by the Vice-President of the Board of Trade—a young man who is establishing a character for business-like ability—the Earl of Dalhousie. Like his superiors in the Government, Sir Robert Peel and Mr. Gladstone, the noble lord makes excellent Free-Trade speeches, when it answers the purpose of the Government to do so; but the practical result of the principles avowed falls very short. Lord Montagu exposed this inconsistency very well; and

The Earl of Radnor said that while noble lords had referred to the distress of the West Indies as if it were of recent origin, and as if it had arisen solely out of the act of emancipation, he, who had been in Parliament twenty years, had never known the time when the West Indian interest did not complain. It might be said that it was not owing to the abolition of slavery, but of the slave trade. Now, he had before him the report of the committee of 1807, appointed to inquire into the condition of the West India interests; and the report, which was presented by the present Lord Seaford, said that, ever since 1799, there had taken place a progressive deterioration in the condition of the planters, resulting from a constant diminution in the prices of sugar, till the depression in the market was such that during the preceding year the estates had not paid their expenses; and the report further added, that from 1800 the profits had diminished from ten per cent. to two-and-a-half per cent., and one-and-a-half per cent., and ultimately to nothing; consequently it was not emancipation or the abolition of the slave trade which had caused the distress—it had existed several years before both. It was, therefore, an unfair argument to say that it arose from either. He believed that the difficulties of the West Indians arose from other circumstances, traced in the same report to the monopolies to which the West Indian proprietors were themselves subjected. One of those monopolies was the prohibition imposed on their refining sugar. (Hear, hear.) Of that the West Indian proprietors had a right to complain, as well as the English consumers and the whole world. The result of this prohibition was, that there was an amazing waste, which was of benefit neither to the people of this country nor to the West Indians themselves. This explained the passage in Mr. Deacon Hume's evidence which had been referred to by the noble earl. He had always looked upon that gentleman as a Free-Trader, and just before the passage which had been quoted, he found this:—"I am strongly of opinion that our colonies will be able to compete with all the world if Free Trade be afforded to them." That was, he proposed to do away with that monopoly which was supposed to be a benefit to them, the abolition of which would react on us by giving them advantages, just as the taking away of the restriction upon all sugars would be beneficial to the West Indians as well as ourselves. It had been said that they ought not to encourage slavery; but if they gave no encouragement to slavery they would get very little sugar. His noble and learned friend (Lord Brougham) drew a distinction between cotton and sugar, and said that we were not now admitting cotton for the first time; but he should recollect that we had got to a new state of things; that instead of a population of ten or eleven millions we had now a population of eighteen or nineteen millions. The West Indies could not supply this increase, and the question was, whether the people were to be deprived of sugar, or were to get any other? By the present bill they were encouraging slavery as certainly as if they took the sugar direct from the slave-growing countries; for the slave-grown sugar would go to supply the place of that brought there. The supply was not sufficient now. In 1801 there were 4,047,000 lbs. of sugar imported, and in 1810 there was rather less. We took all the sugar that the West Indians could give us, and had not enough. We refused to consume slave-grown sugar here, but we brought it here, and, having refined it, carried it back for the consumption of the West Indians themselves. (Hear, hear.) Nay, noble lords themselves must partake of this very slave-grown sugar sent out from this country if they ever eat Guava jelly, or other sweet preserves. In the course of the period since 1801 the population had increased upwards of 8,000,000. In 1800 there were imported 4,047,000 lbs. of sugar, which were sufficient for the population then; but in 1840 the same quantity was to be sufficient for the increase of eight millions in the population. There had been in the interval a large increase of consumption in the articles with which sugar was used. The increased consumption of tea had been 11,000,000 lbs., and of coffee 2,000,000 lbs., and as most, when they could afford it, with these articles now used sugar, it would have been supposed that there would have been an increase in the quantity of sugar consumed. In 1801 the whole consumption of sugar per head of the population was more than 30 lbs., and indeed nearly 31 lbs.

Lord Brougham: One half was exported.

The Earl of Radnor believed that was the home consumption.

The Earl of Dalhousie: In 1815, fourteen years afterwards, 4,000,000 lbs. were imported, and only 2,000,000 lbs. consumed. Where two millions were then consumed there were four now.

The Lord Chancellor: Oh, these figures!

[Let the reader imagine the sigh with which these words were yawned from the woolsack!]

The Earl of Radnor: At any rate, in 1840 there was no exportation. The average consumption per head that year was only 15lb., being two-thirds of the quantity consumed by the paupers, and not more than one-half of that consumed by each seaman in her Majesty's ships. (Hear, hear.) The monopoly of sugar, like other monopolies, benefited no one. There was no encouragement to the planters to cultivate in the best manner. On the contrary, there was often more profit from imperfect cultivation. The noble lord read several returns to prove that, when the produce was least the revenue to the planters was greatest. There was no recognition by them of the principle of division of labour; for the planter was at once grower, refiner, and merchant—a most expensive mode of acting. Every year it appeared that the quantity of sugar consumed in the country varied with the price; that was proved for eleven years by Mr. Foster's tables; and it only had one exception to it, the year 1830. He (the Earl of Radnor) had no objection, however, to the bill, because it was a step in the right direction. He doubted that the West India proprietors were entitled to relief on the grounds they had taken; but if they were entitled he had no objection to give it. He would, however, give it in money rather than in differential duties, because they were an unnecessary and improper tax on the people of England.

The bill was at last read a third time, and passed; and whatever may be its demerits, on principle, it will at least effect this good, of letting in more sugar for the benefit of the consumer. The time, too, is coming when we shall have to record that the bill for repealing the Corn Laws was "read a third time—and passed!"

MEETINGS.

GREAT MEETING AT GOVENT-GARDEN THEATRE.

The usual aggregate weekly metropolitan meeting of the members and friends of the League was resumed on Wednesday evening at Covent-garden Theatre—Mr. G. Wilson in the chair. The house was crowded to the very ceiling. The meeting was addressed in most eloquent speeches by Messrs. Villiers, Cobden, and Bright; and the enthusiasm of the audience was as great as on any former occasion.

Among the gentlemen present were:—

The Hon. Charles Pelham Villiers, M.P., Richard Cobden, Esq., M.P., John Bright, Esq., M.P., Major-General Robertson, Professor Key, Colonel Tucker, Dr. Tucker, Messrs. W. Bower, S. W. Griffin (Paisley), J. Howarth (Rochdale), J. Angus, Jacob Angus, Summers Barford, H. Stanforth (Hull), B. Metcalf (Liverpool), Chas. H. Lattimore (Wheatthampstead), Robert Hobbs, Thomas Hodgkin, Joseph Tierney, W. Gessin, Edwards, H. Moore, Crawford Burditt, Benjamin Thorne, S. Lucas, W. A. Wilkinson, P. A. Taylor, J. Gadsby, J. P. Burnard, Francis Stokes, Jarvis, Thomas Clark, jun. (Birmingham), Press Granger, W. J. Blake Blow, Samuel Graftley, A. Baner (Manchester), Richard Ware Cole, E. A. Smith, Crabbe (Leith), George Blaushard, H. L. Keeling, J. T. Campart, G. F. Minton, Wilson, J. Chalmers, Charles W. Cobby, Patrick McGee, George Beacon, J. Ridge, D. Miles, J. Fitzpatrick, W. Mackenzie, H. Baldwin, J. Troughton, G. Ridge, P. Duncan, J. Miles, W. J. Williams, H. Nicholson, J. Mitchell, J. Phelps, P. Howard, &c. &c.

The minutes of the previous meeting having been read by Mr. SAUL, on the motion of Mr. WILKINSON, seconded by Mr. ROBERT R. R. MOORE, they were unanimously confirmed.

The CHAIRMAN then advanced to the table amid loud and long-continued cheering, and said:—Ladies and gentlemen, I apprehend there are few here who are not aware of the fact that the monopolists in the House of Commons, true to themselves and to their own interests, have again succeeded in establishing their peculiar claims to the gratitude and admiration of their fellow-countrymen. (Cheers and laughter.) On Wednesday last they, by a majority of 202, decided upon the maintenance and continuance of the Corn Laws. I know not whether any one here may have expected a different result or not; but I confess that, looking at the parties, and to the composition of the great majority of that House, and knowing that these were the men who, three years ago, stood up silent spectators whilst monopoly was doing its work—I say, I confess I had no expectation that now they would be found giving their support in favour of that just principle which we seek to have established. ("Hear, hear," and cheers.) However, I rejoice to say that, strong as they are in that House, they are not so strong as they have hitherto been. ("Hear, hear," and cheers.) The tide has turned at all events, and is now setting in in another direction. Last year they voted 381. This year they voted 330 (cheers), having lost 51! (Renewed cheers.) Notwithstanding this it has been asked, where is the proof of your progress in the House? This year we voted 126. Last year we voted the same number. (Loud cheers.) Well, where is the proof of progress? In 1842 Mr. Villiers first put the total and unconditional repeal principle on issue in the House of Commons. On that occasion 92 voted with him, and 395, being a great majority of the whole House of Commons, voted against him. Now his minority is increased 34—his numbers have increased by 34. Their majority this year has been reduced 65, leaving them short by 100 of the majority which they had in 1842. (Cheers.) But although our numbers have been the same this year as they were last, we have had 28 new votes in favour of the motion; 32 of those who supported Mr. Villiers in 1843 were unavoidably absent, but their opinions are the same as they were, thus leaving his strength in the House of Commons, including pairs, at nearly 170. (Cheers.) Well, this, be it understood, is the same House of Commons which was elected specially and specifically to maintain the Corn Laws; and yet without a general election having occurred, with few means to operate upon them by reason and argument, we find in the space of two years Mr. Villiers's minority and votes are nearly doubled, while the majority

of his opponents is reduced by upwards of 65. Now, show me any other question which can exhibit the same progress in the same space of time, and which is not a party question, nor supported by great party leaders—show me, I say, any other which has made the same steady progress as this question has done. (Loud and continued cheers.) Every one knows that, whatever the House of Commons might have been in 1841, now it is much behind public opinion on this subject. How do I prove it? Why, look at your own city of London. One only of your representatives voting for Mr. Villiers, two voting against him, and the other running away and not voting at all. (Hisses, laughter, and cheers.) And yet will any body dare affirm that any one of those votes, except Mr. Pattison's, was a vote which conveyed a proper expression of the public opinion of the electors of London? ("Hear, hear," and cheers.) Well, then, there are other changes, too, which have taken place. There were eleven members who voted in the division against Mr. Villiers, a majority of whose constituents, had requested them to support him in the House of Commons. (Cheers.) Take these eleven, and add them to 170, and you have more than double the number of those who supported him in 1842. (Cheers.) We leave our opponents, then, with their majority—a very large, I admit, but still diminishing one. Twelve months' attention to the register will be sufficient to strip away all hopes of a majority being maintained whenever another election occurs; and I believe that there is energy, spirit, and intelligence enough on the part of the people of this country to undertake and secure such a result. (Loud and continued cheering.) You will be addressed this evening by the Hon. Mr. Villiers (loud cheers), and by Mr. Cobden and Mr. Bright. (Renewed cheers.)

The Hon. C. P. VILLIERS, M.P., on advancing to the platform, was greeted with three rounds of applause, and when the cheering had subsided, he addressed the meeting as follows—Ladies and gentlemen, your chairman has named to you that of which you were doubtless apprised, that since our last meeting in this house, for the purpose of considering the Corn Law, I have been to the house where that law was made, for the purpose of making my annual inquiry of its authors upon what grounds it was—either of justice, or wisdom, or humanity—that they defend its existence; and to ask them whether they had any fresh experience, or new circumstance, or policy of any kind, which they could allege as a set-off against that mass of misery and of mischief which did annually, and must ever flow from that law (great cheering); and I have now come, in compliance with a request made by our friend the chairman, and notwithstanding the contemptuous reference made to these meetings by Sir R. Peel (hisses, and "hear, hear")—I have come, I say, out of respect to those who attend here for the purpose of marking their sympathy with the people, and to manifest their interest in this question, in order to convey to them my impression of the result of the recent discussion and division in the House of Commons. (Cheers.) And I may at once say, for the reasons which have just been assigned by my friend in the chair, that I never felt less discouraged in my life about the cause, and that the result of the division has exceeded my most sanguine expectations. (Applause.) The motion was brought forward under every circumstance of disadvantage, and I was not prepared for that influence which public opinion had exercised over the constituencies, and which showed itself by so many fresh votes in favour of the motion I proposed to the House. (Cheers.) It is, I know, asserted by the organs of our opponents, in Parliament and in the press, that the result generally has been most satisfactory to them and disastrous to us. (Cheers and laughter.) But on that subject I have something to say. (Cheers.) The friends of scarcity in the House of Commons (great cheering) derive their satisfaction from the speech made by the President of the Board of Trade, Mr. Gladstone. They hailed that speech with joy and surprise, and they accounted for their feeling, as they said, from its honesty. (Great cheering and laughter.) That part of it seems to have taken them by surprise, and what they so designated in his speech was (as far as we could collect it), that he pledged himself as far as it was in his power, and during his life, to stick by the sliding scale (cheers, and contemptuous laughter); and they believed him, which is not always the case when the present Ministers pledge their faith. (Hear, hear, hear.) Whenever Sir R. Peel is more than usually solemn in his assurance of fidelity, and of his adherence to the protective system, some caustic friend is always heard to say, "Then he is going to attack us again;" or, "Now it is certain he has another corn bill in his pocket." (Great laughter.) On what ground this young statesman (Mr. Gladstone) has found such favour in their sight I do not know; for, as far as my experience goes, I think he is not exactly made of the stuff of which martyrs are composed (a laugh); and clinging to the scale through life savours of martyrdom, I think. (Renewed laughter and cheers.) In the House of Peers consolation is taken from the result of this division, and the organ of monopoly there, his Grace of Richmond, announces to the country, and tells his friends, the tenants-at-will, that now they may renew their engagements, and hire their land at the act-of-Parliament price, for the majorities in Parliament in favour of the scale are constantly increasing. (Ironical laughter.) And I dare say some poor farmers have, from the faith they feel in persons of such high degree, been induced to offer higher prices for their land than they would otherwise have done. But what is the fact? My hon. friend has just stated it, that so far from the majority having increased, it has decreased, and no less than twenty-eight members who never before voted for the total repeal did so upon that occasion. (Increased cheering.) Then we see the organ of these luminaries, on the morning after, so satisfied with the contentment of its clients, that it will not occupy itself with the truth or wisdom of what they have said, but enters at once upon a somewhat curious inquiry, to the extent of about two columns of the *Morning Herald*, of what it was that killed the League (a laugh); and why it is the people love protection so. (Derisive cheering.) The League is dead, it seems, and it is only engaged in inquiring how its death has been brought about. (Renewed laughter.) I own I did not understand the process, but it did arrive at a conclusion about the matter; which was this, that it was all owing to Sir Robert's measures; his measures have been of that comprehensive character that they have settled everything. (Laughter and applause.) It says that the agriculturists are now at peace—that they are at peace—that they know this question settled—and that is the reason why they are content.

Well, now that seems to me—venturing to differ from so venerable a personage as the organ to which I have referred (great laughter)—to admit of some question still. (Hear, hear.) Now, what is the reason for supposing this great agricultural question settled? What is the reason for telling the farmers they may now set about their business in peace? Why, it is that Sir Robert Peel has told them that he will stick to the sliding scale! But he has not told them another thing. [At this juncture considerable confusion was caused in the meeting by a person fainting in the pit. The usual remedies having been applied, and the invalid having been removed over the stage, the hon. member proceeded.] Gentlemen, I was just venturing to direct your attention to a rather important point of this question, viz., as to whether the Government either have settled, or have done anything towards settling, this question? We find that the friends of the Government, and those who are opposed to us, infer that the question is settled because the Minister has decided that the present form of protection, which is the sliding scale, shall be adhered to. I say that it is not enough for him to declare that he will stick to that scale. There is another condition necessary to assure the agriculturists, and that is, that the public will stick to Sir Robert Peel (immense applause), because, unless they do, his sticking to the scale won't do the scale much good, nor himself either (renewed applause and much laughter); and it is possible—nay, probable—that some day, and not far distant, that they may both sink as well as stick together. (Immense cheering, and waving of hats and handkerchiefs, which lasted several minutes.) But what is the truth about this sliding scale? Let us for the sake of the farmers examine the matter. Now, we do not find the public in these days very apt to agree about many things; but is it not the case that, if one thing does unite them more than another, it is hostility to this very sliding scale. (Cheers.) The commercial classes are not apt to be very united upon any point, yet upon this matter above all others they agree. The Liberal party in Parliament are not very apt to be united, yet upon this matter they are of one mind. Even Lord John Russell, who is not in love with the League—and who, the other night, was very cross about corn, because he had been crossed himself about sugar the week before (laughter)—says, if he gets into power again, and should be obliged to show favour to the agriculturists, that it will never be in that form; and also that, as long as the sliding scale exists, he considers that all and every agitation against it is not only justifiable but most commendable. (Great cheering.) There is not a single man likely to compose the next Government who is not opposed to the sliding scale; and what is the state of the present Government? Not quite so strong as it was, I think. (Cheers.) If you ask the man in the street what he thinks of it, he says, it is going, Sir. (Renewed cheering.) Everybody says it is tottering, very shaky, it might go any day. (Hear, hear.) Now, it is important to consider why this is the case. The fact is that, owing very much to these and other meetings of the kind, and owing very much to the dissemination of your opinions throughout the country, the public feeling generally is up against monopoly. (Cheers.) They may not be all agreed as to the mode, or as to the time, of abolishing it; but public opinion expresses itself against monopoly. (Great cheers.) Now, the present Ministry depend entirely for support upon monopolists. (Hear, hear.) The consequence is, that, whilst they do not dare to outrage public opinion by openly supporting monopoly, they cannot keep well with their friends without doing so; so that, on the one hand, they cannot get popularity without attacking monopoly, and they cannot keep their troops together while they do so. (Hear, hear.) For this reason I think we may expect a pretty constant recurrence of those "family jars" which very nearly upset them the other day, for that was all about monopoly. (Great cheering.) But so it is, however, that the sliding scale never before was in such jeopardy or the Corn Law so thoroughly unsettled; and any man connected with agriculture would, in my opinion, be a most arrant fool, if, on the faith of the continuance of the present system, he invested a single shilling in any improvement, or laid out a halfpenny on the faith of any expected or promised advantage secured to him by this law. (Hear, hear, hear.) How does this suit the agriculturists? Why, they say truly that they are now in the very worst position they can possibly be in. They say—"Give us total repeal—give us Free Trade—give us anything that will be final—let us have anything but this uncertainty." (Hear, hear.) Well, now, whose fault is it that they are in this plight? Why, it is the natural result of having a bad law, one that cannot be defended by its friends, which is an outrage on all that is just and right, and which must irritate as well as injure the people, and promote agitation till it is abolished. (Hear, hear.) The monopolist peers and their friends in the House of Commons, their organs, may pretend that the law is settled; but the fact is, that greater uncertainty never existed; and they know well that this very uncertainty, this very unsettlement of everything, which has lately taken place, is a strong reason for us to continue our exertions, and a sign to us that we must succeed if we persevere. The poor agriculturists see how they have been duped; and they know that the Government may any day be turned out, and their professed friends be any day turned round. (Laughter.) The Government might have fallen the other day; and at any time when any government choose to make a judicious distribution of "stars," and "ribands," and "places," the farmers' friends may be reconciled to any change. (Hear, hear.) The real reason, however, why those people in the Lords and Commons are so anxious to shake hands with Sir Robert, and say that after all he is their true friend, and that in future he shall be their leader, is, that these recent discussions in the Houses of Parliament have shown them their utter impotence, has proved to them that they can do nothing, and that, compared with former times, they are numerically weak, having no spokesmen amongst them within, and no public opinion to support them without. (Great cheers.) On the slightest grounds, therefore, they go back to Sir Robert Peel, eat "humble pie," and offer to do just what he pleases. (Laughter.) That, however, fixes upon Sir R. Peel the responsibility for what he does in future. He has supreme power—he has humbled his party—he can do what he likes; and if he does not do what is right he is wholly to blame. (Hear, hear.) Now, if anybody thinks that the prospects of progress in the cause of Free Trade are only based on the speculations of an individual, I would ask him to attend for one minute to the

progress which the cause has been invariably making for years past. (Hear, hear.) He will see, then, something certain in progress, which holds out every reason for hope, and none for despair. (Cheers.) Observe the altered tone of the supporters of monopoly as compared with those held a few years back when Mr. Canning was in office. There were then three parties on the subject of the Corn Laws in the House of Commons as there are now: those who were for the entire prohibition of all food entering this country; those who were for a sliding scale, and those who were against all monopoly. I will just give you a specimen of their opinions and their manners, when Mr. Canning, in 1827, proposed the sliding scale. Mr. Wolyche Whitmore, who represented the Free-Trade party, and who sat for the same district which I now have the honour to represent, wanted to expose the sliding scale; he predicted its mischievous effects, and said that he rose for the purpose of expressing his doubts as to the advantages which were promised to accrue from it. I find in Hansard that this was the way in which he was treated—"The hon. member was proceeding to state his objections when he was interrupted by loud and general coughing. Having waited till the noise had subsided, he said, he had proposed counter resolutions, he should not have been surprised; but he felt at a loss to account for this interruption. He conceived that the evils of the present system would not be alleviated by the new measure. (Renewed coughing.) He hoped they would not stifle the opinions of members who wished to give a free opinion on the subject. The hon. gentleman in vain attempted to proceed, the interruption continuing, he sat down." (Hear, hear.) That was the way in which the people were treated only a few years ago, when this sliding scale was proposed, and an independent gentleman ventured to express his doubts with reference to its merits. (Cheers.) Well, he was immediately followed by a person with whose name you are now familiar, who is not an unimportant person, as far as his position goes—it was Sir Edward Knatchbull. (Loud laughter.) Sir Edward Knatchbull, I should be disposed to think, would not be one of those who would have suppressed his cough, if he had been so affected at the time, and if he joined others in smothering Mr. Whitmore: the commencement of his speech is amusing. He said that "He entertained a very different opinion from that of the honourable gentleman who had just sat down." (A laugh.) This was an important question. It was, whether the House should legislate on the principle of prohibition, or admit corn on payment of a certain duty. He thought himself bound to state that he was in favour of prohibition in preference to a duty. That was his deliberate and confirmed opinion, and he took the opportunity of stating it distinctly to the House. He had heard with horror and distrust what had fallen from the right hon. gentleman (Mr. Canning): he had said that he inclined to Free Trade. He cautioned the House, then, against this dangerous measure." (A laugh.) This was the sliding scale. (Hear, hear.) Well, it did get through the House of Commons; but it was thrown out in the House of Lords; the prohibiting party there was headed by the Duke of Wellington, and it was thrown out. We know what was their fury against Canning for having in one session attacked both their monopoly in corn and the monopoly in church, for he pressed the Catholic emancipation upon them as he did Free Trade: they fairly worried him to death, and the session hardly passed before he expired. (Hear, hear.) Well, they then came into office, and carried the famous sliding scale, of which we have heard, and from which we have suffered so much. (Hear, hear.) Now, just let me mention to you what happened, in order to show what advantage there is in proposing moderate instead of extreme measures, and see what one gets for compromising great principles in that House. (Loud cheers.) This very Mr. Whitmore, who was coughed down for making observations opposed to the sliding scale, was more tolerated as the bill advanced, and he ventured to propose an amendment. Now, what do you think that amendment was? Why, it was a slight amendment, as he called it, but it was the very change that Sir Robert Peel proposed the other day. He proposed it as a small improvement fourteen years before. They went to a division. I am told that my minority was so small in consequence of the extreme motion that I made. I asked for the total repeal. Now, here is a slight diminution of the sliding scale, and the very safe, reasonable, moderate thing, as it is called, that Sir Robert Peel proposed himself two years ago: 385 voted against it, only 50 for it. ("Hear, hear," and cheers.) There is encouragement for moderation (loud laughter); and, mind you, it was repudiated by all the county gentlemen, with all the usual arguments, as highly injurious to agriculture, anarchical in its character, and as likely to cause confusion. (Laughter.) In fact, everything that was said the other night against a total repeal was urged against that and every other change. Well, after the excitement of the Reform Bill was over in 1833 and 1834, Mr. Fryer, Mr. Whitmore, and others proposed various alterations—some great, some small; but they were treated exactly alike—they were all voted as revolutionary and injurious to the best interests of society. ("Hear, hear," and laughter.) In 1837, Sir William Clay proposed a fixed duty, and had an enormous majority against him, and his minority was rather less than mine the next year, when I proposed a total repeal. (Hear, hear.) In 1838, seeing there was no use in attempting to reason with these men—that their hearts were really bent on prohibiting all food coming into the country, and cared for nothing but swelling their rents without reference to any other interest—I proposed that which I considered was only justice to the people, that which I was prepared to defend upon principle, and that which was at once intelligible to all: I contended for a total repeal. (Loud and continued cheers.) Now, I will just call your attention to what is the effect of constant agitation upon these questions when pushed earnestly and urgently, however bitter the opposition to them may be. (Hear, hear.) In 1838 there was a majority of 300 against the motion; and I so framed my motion as to admit of any person who, though not agreeing in the total repeal, might agree with me on going into a committee. I argued for a total repeal, but I only proposed a form that the House should resolve itself into a committee. There were 300 majority against me. In 1839 I proposed the same measure, and the majority was reduced to 147. In 1840 I proposed the same measure, and the majority was reduced to 123 (hear); I may mention that our friends here of the Anti-Corn-Law League were then in active operation. They were doing everything to diffuse

information throughout the country on this subject; and it was the result of their efforts and energy in this matter that had the effect of reducing the majority on this question. (Great cheering.) It was 300 at first. In 1840 it was reduced to 123. (Renewed cheering.) In 1841, such had been the evidence disclosed, such was the suffering of the people, so clearly was the connexion of this law to be traced with all that the people were enduring, that the Ministry of that day said they could no longer resist, and that they were bound to propose an alteration in this law as well as in other monopolies, and they could not retain their supporters or continue in office without proposing a change. ("Hear," and cheers.) In 1841, they proceeded to deal with this monopoly, and then we know it was that the present Government, and the present supporters of that Government, resorted to every means calculated to lower them in the eyes of the country. There was nothing that they did not say; there was no calumny, misstatement, no fallacy, that they did not circulate throughout the country, to make people believe that this monopoly could be maintained, ought to be maintained, and that it was for the interest of the country that it should be continued, and that, if they were brought into power, they would maintain it. (Great cheering.) In vain you may look through English history for such an instance of wholesale imposture as was resorted to for this purpose (cheers), and for the purpose of encouraging the people to believe that it was possible to put down the Free-Trade party, and to uphold the monopolists. (Hear, hear.) At the latter end of 1841 they came into power, and before the spring of 1842 you all know what happened. (Hear, hear.) There was, first of all, Sir Robert Peel proposing his tariff, which more or less attacked every protective duty but that of corn. (Hear.) Then he attacked the Corn Law, the necessities of the people leaving him no choice. (Hear.) Then he admitted every principle which his party had repudiated, allowing that the Free-Trade principle was true, that you should "buy in the cheapest market and sell in the dearest;" in fact, making a full and complete acknowledgment that they were wrong before, and that we were right all the time. (Cheers.) Well, it was in that year, seeing how the people were suffering; hearing that in our manufacturing districts there was hardly security for property, from the despair of the people who were actually starving; knowing as we all did that disease and mortality were spreading in a dreadful way, owing to privation and the want of necessities; it was then I said, now that the principle is acknowledged, now that these people avow they have been in error and have surrendered the ground they formerly occupied, it is time to propose to the House at once to repeal these Corn Laws, and to propose it in a way that should admit of no mistake in the vote that was given. (Loud cheers.) The law, I contended, was a murderous law, for it was a law that could be proved to be producing death, and ought at once to be repealed (renewed cheering); and if it was right to alter it, it was right to repeal it. It was in the year 1842, then, that I first proposed that all the duties on food imported from abroad to supply a sufficiency at home should cease and determine, and that trade in food should be free. And I beg to call attention now to the progress which this particular motion is making, and has made, during the last few years. (Hear, hear.) On the first division that took place in 1842, on this particular motion for total and unconditional repeal of the Corn Laws, the majority was 303 against the motion. In 1843 I repeated this motion, and the majority was reduced from 303 to 256. (Cheers.) Last week I repeated the same motion, and the majority was reduced from 256 to 204. (Loud and repeated cheers.) I say, then, what is that but progress?—what is that but the influence of public opinion?—what is that but a conviction on the part of the people reaching the electoral body that this Corn Law is an atrocious law, and that it ought forthwith to be abolished. (Renewed cheers.) I find in that division that there was not one single borough that returns a liberal member, with the exception of the city of Carlisle, that voted against the measure. Every town voted for the motion—the member was returned on liberal principles. (Cheers.) And those who do not return liberal members have returned monopolists, and have to justify their conduct to the people at large, for whom they profess to hold the franchise in trust. (Hear, hear.) Further to justify my opinion of our advance, I would refer to the argument by, and the manner in which my motion was met last week. I was determined that the case should be brought before the House clearly and distinctly, as to what it was we meant when we called for a total and immediate repeal of the Corn Laws, and I framed resolutions for that purpose. I did not want to dogmatize or dictate to them, or to have some test or sign to which people were to conform without knowing what I meant. I did not want to thrust the total and immediate repeal down their throats without showing valid reasons for it. I framed my resolution with the view of showing the necessity of removing a great obstruction to the welfare of the people, and also the urgency of that necessity thus requiring an immediate consideration of the law. (Great cheering.) And these resolutions declared that the people of this country, in large numbers, had been reported to the House as being deprived of the necessities of life; that those numbers were increasing; that the law existed for the express purpose of cutting off a supply of these necessities of life; and I extracted from the famous protest of Lord Granville, made in 1815 in the House of Lords, the just sentiments contained in that protest—to the effect that it was unwise and unjust to tamper with the subsistence of the people, and that a law, having for its object to cut off the supply of food, was unjust in principle, injurious in operation, and, as such, ought not to exist. (Marked cheers.) That was the nature of the resolution that I proposed to the House. I wanted to know if that could be controverted. I wanted the majority to say whether the people were well off in this country, and whether a mass of the people were not deprived of the necessities of life, and I wanted to hear from those who passed and maintained this law, whether this law did not limit the supply of food. (Cheers.) I placed the question distinctly before them in order that the whole world should be satisfied as to whether they are wrong, or we are right. (Cheers.) I want to know if any body who will look through the debate can point to a single word uttered in proof that the contents of those resolutions were not true. (Hear.) Did any body dispute the fact that the people were ill off, as I had described? I confined myself, in my opening statement, strictly to the resolutions that I proposed. I resorted to no declamation—I

did not appeal to feelings—I am no orator; but I merely stated facts in support of this resolution—facts resting on official authority, deduced from the reports of their own commissioners; stating the necessities of the people, stating that they were insufficiently provided with the necessities of life; and I asked for an answer, and I asked for a proof that these laws were not an injury to the people. I asked the agricultural gentlemen whether their labourers were well off, or whether their farmers prospered! I begged of them—I defied them—to adduce a tittle of evidence to show either; and I asked if they did, and could not do so, to resolve with me that any law that presumed or ever purported to have that effect, and had failed, should be repealed. Well, how was I met? Do you think that if they could have proved that the labourers were well off they would not have done so? Do you think that if the farmers could have been shown to have benefited in one single respect, or if advantages resulted to any body but themselves from these laws, that we should not have heard of it? No, they began to talk about the Anti-Corn-Law League. There was a long yarn about what the Anti-Corn-Law League had said or done a year before (laughter and cheers); but they could not deny that large numbers of the people were suffering from physical want—that the people were increasing, and they did not deny the effects, the odious effects, of the law, in adding to disease and injuring health. (Cheers.) I showed to them over and over again, that the sole object and the avowed intention of the law was to limit the supply of food, and to increase its price, and I begged of them that they would take that opportunity, if it was otherwise, of announcing to the world that this was not its purpose. (Hear.) Not a human being rose to say that such was not the object of this law. It was too clear that it was so from the only things that they did say. (Hear.) After listening, and straining our ears to hear what was the excuse for this law, Sir R. Peel at last rose and put some things together, which we are to take as an excuse for its continuance. He said it was part of a protective system. He did not say that the people were not starving; he did not say that the law was just, or that it was not what Lord Howick properly described it—"a robbery." (Immense cheering.) But he said it was part of a system, which we could have told him before. (Cheers.) It is a part of a system, and a very pretty one it is. (Hear.) The system is, that you are not to feed the people—that they are still to suffer, because A B C D have the right to injure them, and that the whole put together is a "system" (a laugh), which it clearly is, certainly. (A laugh.) He then pointed to the peculiar burdens which the landlords bore, and what do you think the particular burden was for which food was to be made scarce and dear? Of all the burdens that have been, or can be, named, would you imagine that the one he should select was the poor-rate. But what is the poor-rate? Why, the fund which is actually raised to relieve the poverty produced by this very Corn Law. (Cheers.) I have stated, and other gentlemen have stated it also, that there has not been one single exception to the rule, in the history of the condition of the poor, that they are worse off when bread is scarce and dear, and that they are better off when it is abundant and cheap. And it has invariably been found, both in agricultural districts and in towns, that when bread was cheap the poor-rates fell, whilst when bread was dear the poor-rates rose. (Cheers.) "Well," he says, "think of the poor-rates the landlords have to pay." Even supposing they had a greater share to pay than other people, yet that would be answered by what one of them said to me privately the other day, and when they speak privately, it is perfectly astonishing what different sentiments they express to those to which they give utterance in public. (Cheers and a laugh.) He said that all this poverty was very shocking, certainly; "but to tell you the truth," said he, "that poverty is not so mischievous to us as it is to other people. If the people could not consume food, it would be very bad for us; but, by means of the poor-rate, a fund is raised from the people in towns, tradesmen and others, to buy food to feed the paupers." So that, literally, you see they are the last people who can suffer from the poor-rates, or from the poverty they produce, because by the purchase of food, even to supply the work-houses, they are benefited. (Cheers.) Now, what other thing did Sir Robert Peel say? He said, "Think of poor Ireland." Think of Ireland! Only think of his thinking of Ireland! (Great cheers and laughter.) One of the consequences of shutting up Mr. O'Connell is, that they can take liberties with that country; for if Mr. O'Connell had been in the House upon that occasion, you know from what you have heard from him here, that he would never have permitted that Ireland should be pleaded as a cause for a Corn Law. (Great cheers.) Mr. O'Connell said here, as he has said before—and I must say there is no man who has voted more constantly for the repeal of this law than Mr. O'Connell (tremendous cheers)—he said, "I stand here as the representative of one of the most agricultural counties of all Ireland—I stand here better acquainted with the wants and the means of the people of Ireland than any other man who can stand before you, and I tell you that they have not only no interest in the continuance of this Corn Law, but that they share in the misery, and privation, and suffering, which it brings upon the people of the country." (Great applause.) They cannot be worse off than they are, and he mentioned also—I don't know whether he did so here, but, if not here, he certainly did at some other public meeting—that the landlords had attempted to get up a meeting in favour of the Corn Laws in two counties in Ireland, and that they were beaten hollow by the peasantry and the farmers themselves. (Cheers.) There is not a single man who really loves that country, there is not a native of that country who has been prominently before the world as its friend, who is not eager and anxious to repeal that law as one of the causes of its misery. Mr. O'Connell, Mr. Sharman Crawford—ay, the words were scarcely out of Sir R. Peel's mouth, when we find the son of Mr. O'Connell, the nephew of Mr. O'Connell, Mr. Sholl, and others, all voting for its repeal (cheers); and that was literally all he had to say by way of reason and argument. (Hear.) Well, there was another thing he uttered—a thing which people generally resort to when they have nothing else to say—and that is personality (cheers); a thing, I believe, constantly made use of against himself by his own friends. He said he really did not believe that any ten sane men could be found, either in the commercial classes or in any part of the community, who would really advocate

the total and immediate repeal of the Corn Laws. (Laughter, and ironical cheers.) Now, that is the old stale piece of offensiveness that is used by everybody against anybody that don't at any time agree with them in opinion. (Laughter.) Why, he has been twenty times called mad for some of his measures. There's his currency measure of 1819—some people have said, over and over again, that he must have been mad or be never would have introduced it. (Cheers and laughter.) But I want to know what right he has to call persons, whom you know to be the warm and strong advocates of the repeal of this law, insane. (Cheers.) I will venture to say, that he knows no more of agriculture than he does of the moon; then, what right has he to tell Lord Spencer, or tell Earl Ducie, who took the chair here upon one occasion, that he is a madman? (Cheers.) A man ought to know something of agriculture, to assert that this measure is unwise. He at once says that no man can for a moment think of totally repealing this law with the view to the improvement of agriculture; yet we have heard men, acknowledged on all hands to be the best practical farmers—most intelligent men—some of them landlords, proclaiming here that the total repeal of the Corn Laws is as essential to agriculture as it is important to the interests of the whole community (great cheering); and as to the safety of it, what business has he to tell such men as Mr. Jones Loyd or the Marquis of Westminster that they have not a sufficient stake in the country to judge of the importance of this matter? Why, they have a little property, those two. (Cheers and a laugh.) They have come to years of discretion, too, I suppose, and they may be trusted, I should think. (Loud cheers.) All you may be supposed to be mad (a laugh); and that is what he says of you; but surely those men who are supposed to be about the wealthiest individuals in the empire,—who have considered this subject, partially in reference to their own interests, and who come forward in the most public manner, declaring that the repeal of the Corn Laws is not only a wise, but a just and necessary measure, and giving the proof which men do give in this country, when they are sincere, of their attachment to this cause, by contributing largely to the funds of the League,—surely such men, I say, might be considered as something short of maniacs because they have come to this conclusion. (Loud and prolonged cheering.) Why, it is the strong part of our case, that there never was any question brought before the public which was fortified by the support of so many and so high authorities as is this which we now advocate. (Cheers.) We have some of the most reflecting minds in the country; we have some of the wealthiest men in the empire—men respected by all for their character and their station. And does Sir R. Peel think that a mere flippant reference to the state of their mind, because they differ from him, can be any ground for your stultifying your own proceedings and admitting yourselves hitherto wrong? (Cheers.) Then we see by their organs, and we hear from themselves in the House, that this question being brought before the House is a sad waste of the public time. (A laugh.) Will any one reflect for a moment on the things which do occupy the public time in the House of Commons, and which are not supposed to waste the public time? Are they not generally those that are of least importance to the public? (Hear.) If there are any of real importance you will find that at best they are but branches of this all-important question, and only an attempt to tinker or patch up some of the evils that spring from it. (Cheers.) Look at the Factory Bill—that has occupied considerable time in the House; and what is it but a mode of preventing the people from working hard and long, which by necessity they are compelled to do? (Cheers.) Is it not far more rational, by improving their circumstances, to remove the necessity for working for an unfitting period? (Cheers.) What is the Poor-law Bill? That is thought of great importance, and probably will occupy a month in discussion. It is actually a measure to mitigate the existing law, seeing that the people are so much distressed, and that poverty has so much increased of late, that alteration in the law is required. (Cheers.) The great question of the country is the condition of the working people, and that is what you are here considering—the mode of improving the circumstances and of elevating the social condition of the working classes. (Cheers.) Is it not laughable, then, to look upon such a question as unimportant, when small branches of it, when small remedies for some of its evils are constantly engaging the whole interest and time of the House? (Applause.) There is the Currency Bill; that is an important question, and, by-the-by, that measure is supposed to have been recommended to Sir Robert by the man he considers insane (Mr. Jones Loyd)—by the man whom he considers to be stark staring mad because he advocates the repeal of the Corn Laws. (Great cheers and laughter.) Everybody says that it is Mr. Loyd's measure. But the great benefit of the measure, as Sir R. Peel says, is, that it will prevent those great revulsions in commerce which have occasionally occurred in the history of this country. But every one who knows the consequences of this Corn Law knows that whilst it continues revulsions in commerce will constantly occur—the gold will go out as before, and the people will find themselves precisely, upon the occasion of a deficient supply of food, in the same difficulties under this new Bank Charter Bill as they were previous to its enactment, and perhaps worse. (Hear, hear, hear.) I only mention these things to show that we are not wasting the public time; but that we are calling attention to the great question of the country (cheers), to which if they would attend they might suspend their labours on other matters. (Hear, hear.) This country is generally in a healthy state as far as its wealth, its influence, and its relations with foreign countries are concerned; but attention is needed, and imperatively called for, to the condition of the great masses of the people, who suffer great want, and are daily increasing in numbers, in misery, and knowledge—a condition which we can regard as hardly consistent with the security of our institutions or of society. (Cheers.) We have then, gentlemen, ample excuse and abundant reason for persisting in our course. I have been anxious to show you that we have no reason to despair of the cause, if we persevere in expressing and making known and explaining our opinions. (Hear.) You contribute much by assembling here to form and direct and influence public opinion; and as long as public opinion is allowed to be fairly and freely expressed in this country, it must have great weight and influence. (Cheers.) You have no reason to despair; on the contrary, you have every reason to hope. There is no instance of a

measure, sound in itself, and founded in truth and justice, which has not succeeded in this country; and I say to you, regard not either the cowardice, or the baseness, or the desertion of other people; but for the satisfaction of your own conscience, and the good of your country, do your duty. (Cheers.) Go on in the course that you have commenced. Persevere in your determined resistance to the Corn Laws by every legitimate means, and to all monopoly, and they will yield farther as they have yielded already. (Hear, hear.) Precedents abound to justify your perseverance, for it is by such earnestness, energy, and independence as yours that every great measure of liberty has been carried in this country. (Immense applause.) I referred the other night to what had been done with respect to the slave trade, and have been informed since that Mr. Pitt, when, in the House of Commons, not forty years ago, he proposed the total and immediate abolition of the slave trade, was defeated by a majority of 80, the majority declaring that the abolition should be moderate, slow, and gradual, and that the planters' peculiar interests should be considered. How would you deal with that question now? (Cheers.) How would the House of Commons itself deal with it? Would not they totally and immediately abolish a system so fraught with misery and degradation to their fellow-beings, whatever the peculiar claim to continuing such cruelty might be? (Cheers.) We have abundant proofs that this Corn Law produces, and must produce, every evil which can afflict humanity, for it deprives millions of what is necessary for life. Can your benevolence, then, be better exercised than in continuing to call for its total and immediate repeal, as you would for the removal of any calamity, or misfortune, or nuisance, of the most enormous kind which could afflict the state? (The honourable member sat down amidst the most enthusiastic cheering from all parts of the theatre.)

The CHAIRMAN then introduced Mr. Cobden.

Mr. COBDEN upon presenting himself at the table was received with reiterated and most enthusiastic applause, which having subsided, the honourable gentleman addressed the meeting as follows:—Mr. Chairman, ladies, and gentlemen, after the narrative which our friend Mr. Villiers has given of the past proceedings of himself and others in the House of Commons, in connexion with that great question, the repeal of the Corn Laws, I am sure it would be acceptable to you as it would be pleasant to my own feelings to express my gratitude, as I am sure you will allow me to do yours towards that gentleman especially, who, fortunately for us and the country, took possession six years ago of this question in the Legislature, and who has so nobly and manfully supported it in spite of all sinister influences, in defiance of all those associations which he himself, as a member of the aristocracy, must have had brought to bear upon him. I thank him in your name and in behalf of the country for the consistent course he has followed in advocating this question. (Loud and prolonged cheering, accompanied with waving of hats and handkerchiefs.) He has told us that the progress which he has marked in the House of Commons has been measured by the progress of our agitation out of doors. Really, when I look back and remember what the Anti-Corn-Law League was six years ago, and when I consider the progress which the movement has made since that time, I cannot help thinking it affords a still greater hope and far more encouragement to us to proceed than even those obvious gains which the figures he has given you respecting the divisions in the House of Commons afforded to us in that arena. Why, I remember quite well that six years ago we could have mustered all the members of the Anti-Corn-Law League in one of those stage boxes, and even then I am afraid at most of our meetings we should have had a great deal of vacant space. Our funds were small, collections of 5s., and even at that low sum there were not very numerous contributors. Year after year I have seen the progress of this movement, not merely in Manchester but in every provincial town, until I find we are at length landed here in the midst of this mighty Metropolis, and have been during the last six months holding weekly assemblies in this vast theatre, filled on every occasion, and to-night as crowded as on any previous meeting. If this unabated interest of London and the Londoners, in the midst of so many distracting engagements, such numerous and inviting temptations of this attention to our cause is not proof of the hold which Free-Trade principles have on the public mind, I know not where to go to find evidence which can possibly prove the fact. Our friend has told you some of the arguments that are used in the Houses of Parliament, in opposition to our cause. Now, I am not so jealous of any of their assertions or arguments as I am of one which I see was used in the House of Lords last night by his Grace of Richmond. I find he is now continually stating in that august assembly, that the tenantry of this country arose as one man to oppose the League. I have myself heard the same assertion from the squirearchy in the House of Commons, and I have heard it asserted so often that I confess the repetition itself, if I had known nothing else upon the subject, would have made me rather suspect its authenticity; for it very much reminds me of the school-boy, whistling his way through the churchyard to keep his courage up. (Laughter.) Why the necessity for these assertions? Wherefore do the landlords and the dukes now state so continually that the farmers are with them? This must, I suspect, have arisen from some doubts which pervaded their minds as to whether the farmers really were to be beguiled and hoodwinked by their professions of protection. But when they tell us that the tenant-farmers rose spontaneously and formed the Anti-League Association, I tell them here in the most public place in the world, that what they say is not true. (Cheers.) I do not wish to be offensive, and therefore I will use the words "it is not true" in a logical sense. (Laughter.) I say it is untrue, and I will prove my assertion by facts. I will take, for example, the meeting at which his Grace of Richmond attended at Steyning, in Sussex, and I will mention facts which cannot be controverted. I know that that meeting was got up by the aristocracy and squirearchy of Sussex, and that if they themselves did not personally go round, and canvass and entreat the farmers to attend, that their land-agents, and land-stewards, and law-stewards did so; that the tenant-farmers were canvassed and pressed to come up to that meeting with just the same earnestness with which they are canvassed for a general election. Nay, more, the carriages, horses, and vehicles of the landlords, down even to the deer-cart, were put at the disposal of the farmers to carry them up to the Stey-

nings meeting. What I say of the Sussex meeting, of my own knowledge, is, I am well assured, a fact as regards almost every assemblage which has been held, purporting to be a spontaneous meeting of the farmers to oppose the League. In some instances dinners were provided for the tenantry at the expense of the landlord. The tenant-farmers were moved by the landlords; they were canvassed by the law-agents and land-agents in every part of the kingdom, often not knowing the business they were going upon, and in much more frequent cases not caring for the object for which they were summoned together. Why, what I am telling you now is patent to the whole community; there is not an individual here from any county in England where those meetings have been got up, who will not immediately respond to the truth of what I have stated. (A voice—"I can bear you out.") The land-agent—mark the tribe—is the finger of the landlord. He has but to point, and the farmer acts according to his direction, knowing that it is the bidding of his landlord at secondhand. And who are the men who have attacked the League at these meetings? Can you show me one specimen of a *bond fide* intelligent, substantial farmer, like my friend Mr. Lattimore, who I see sitting behind me (cheers); or like Mr. Josiah Hunt, who addressed us here a short time back; or those two worthy men who came from Somersetshire for the same purpose? Can you show me in all the instances of their meeting, *bond fide* respectable, intelligent men, known to be good farmers in their own locality, men of capital in the world, who have taken a lead in the movement? You cannot show me a man of that stamp who has attended a meeting, and taken the leading part in their proceedings. But if you ask who the men are that have been placed in the chair or put forward to speak upon such occasions, you will find that a hundred to one they are either agents, auctioneers, or land-stewards. (Hear, hear.) Who is Mr. Baker, of Writtle, in Essex? He is the man who has been put forward as the great leader of the protectionists in that county; it was he who originated the first meeting, who has written pamphlets and made speeches upon the subject of protection; and yet, who is this Mr. Baker of Writtle? I will undertake to say that he makes more money by agency and auctioneering than by farming. You may have seen his name advertised in newspapers, in one column as the author of a pamphlet or the writer of a letter for the protection societies in favour of the Corn Law, and in another column advertised as the auctioneer who is going to sell up some unfortunate farmer who has been ruined under the Corn Law. (Hear.) Does his Grace of Richmond or the squirearchy in the House of Commons, after the enlightenment and education which our great peripatetic political university—the League—has diffused through the country, think for a moment that the public will be so gullible by these unfounded assertions in either House of Legislature, or that they will really believe that the tenant-farmers spontaneously and voluntarily rose up to form anti-league associations, with the facts which I have mentioned being known in every county in the kingdom? Why, how can they get up and talk so foolishly! It appears to me that they must be about as cunning as the ostrich, which hides its head in the sand and thinks that no one can see its unfortunate body, because it cannot see it itself. (Cheers and laughter.) I am jealous of this practice of taking the tenant-farmers' name in vain. They tell us that we have been abusing the farmers, and therefore they have turned against us; why, if there has been one individual in the country who has more constantly stood up for farmers' interests and rights than another, I am the man. (Cheers.) I have a right to do so. All my early associations—which we do not easily get rid of—lead me irresistibly to sympathize with the farmers. I was bred in a farmhouse myself, and up to the time of my going to school I lived amongst farmers and farm-labourers, and witnessed none other than farming pursuits. I should be utterly unworthy of the class from which I have sprung if I voluntarily entered upon a crusade against one of the most industrious, painstaking, and worst used classes in the community. (Cheers.) I have said scores of times, in all parts of the country, that I believe the tenant-farmers have been more deeply injured by the Corn Laws than any other class of the community. The history of the tenant-farmers—oh, that we could have the history of that class in this country for the last thirty years! Would we could procure a report to be presented to the House of Commons of the number of tenants in this country who have been sold up and ruined during the last thirty years under the blessed protection of the Corn Laws! It would form a dark calendar of suffering, not to be equalled by the history of any other class of men in any other pursuit in this world. An enemy to farmers! If I am an enemy to the farmers, at all events I have not feared to trust myself amongst them. The monopolists did not come to meet me when I went into the farming districts, and they will not come to meet me if I go there again; that is the reason why I have not been lately; and I have often put this question to the protectionists in the lobby of the House of Commons: "Will you meet me in your own locality? Will you let your high-sheriff call a county meeting in any part of the country, I care not where it is; you shall choose your own county? Will you meet me in a public meeting in any county in the kingdom, and there take a vote for or against the Corn Laws?" No; they will not meet me because they know they would be outvoted if they did. (Cheers.) The Corn Laws protect farmers! Why, the farmers pay their rent according to the price of the produce of their land; and after that well-known fact, you need not say another word upon the subject. If Corn Laws keep up the price of food, they maintain the amount of rents also. The Corn Law is a rent law, and it is nothing else. But I am jealous of these noble dukes and squires attempting to make it appear that we are enemies to the farmer. In fact, I feel it is paying no great compliment to our own knowledge and intelligence to suppose that we should have gone on lumping the landlords along with farmers altogether in the way in which they lump them. No, no; I began my career in the House of Commons by a definition of this kind:—You landlords have called yourselves "agriculturists;" mind, I do not denominate you such; you are no more "agriculturists" because you own land than a shipowner is a sailor because he owns ships. (Cheers.) When the noble Duke of Richmond gets up in the House of Peers and says, "Oh, the Anti-Corn-Law League by their abuse of the agriculturists have set the farmers against them," he does not know the language of his own country, and requires to study an English grammar, if he is not aware that an agriculturist means a cultivator of the land. That term may be ap-

plied to the tenant-farmer and the farm-labourer; but his Grace of Richmond must change his pursuits, and become a more useful member of society before he will be entitled to be called an agriculturist. (Loud cheers.) Now, it is not only in the way you have heard pointed out that the Corn Law injures the farmer—it is not merely that the Corn Law has tempted him to make bad bargains by expecting high act-of-Parliament prices, and then deceived and disappointed him in those prices—that is not the only way in which the Corn Law has worked mischief to the farmers. It has injured them by distracting their attention from other grievances which lie near home—which are really of importance—keeping his attention constantly engaged with an *ignis fatuus*, which perpetually escapes his grasp, and which would not benefit him even if he could clutch it. What are the grievances which the farmer feels? He requires a fair adjustment of his rent; he wants a safe tenure for his land; he requires a lease; he must get rid of the game which are nourished in those wide hedge-rows which rob him of the surface of the land, whilst the game devours the produce of his industry and his capital. The farmer wants improvement in his homestead; he requires draining, and a variety of concessions from his landlord: and how is he met when he endeavours to obtain them? He cannot approach the landlord, agent, and steward, and ask for a settlement of any of those grievances; those parties are all in a plot together, and they forthwith tell him, "This is not the matter you should trouble yourself with: go and oppose the Anti-Corn-Law League, or else they will ruin you." Is there any other class of men who are dealt with in a manner like this? They cannot come to a *bond fide* settlement upon any existing grievance, because there is an act of Parliament pointed to which they are told they must maintain or else they will all be ruined. I have often illustrated to farmers the folly of this practice; I do not know whether I have ever done so to you; but if you will allow me, at all events, I will hazard the chance of its being a repetition; for I have found the illustration come home forcibly to the apprehensions of the farmers in the country. I have pointed out the folly of this system in the following manner:—You, as a farmer, deal with your landlord in a manner different from the way in which I transact business with my customers, and they with me. I am a manufacturer, having extensive transactions with linen-draperies throughout the country. I dispose of a bale of goods to a tradesman; I invoice it to him, stating it to be of a certain quality and price, and representing it as an article which he may fairly expect to sell for a certain sum. At the end of half-a-year, my traveller—who is my "agent," similar to that of the landlord—goes round to the draper and says, "I have called for this account," presenting the invoice. The linen-draper replies, "Mr. Cobden sold me these goods promising they were all sound, and they have turned out to be all tender; he stated they were fast colours, and they have every one proved to be fugitive. From what Mr. Cobden stated, I expected to get such-and-such a price, and I have only obtained so-and-so; and, consequently, have incurred a great loss by the sale of the article." Suppose my traveller—who, as I said before, is my "agent"—replied to the linen-draper, "Yes, it is all perfectly true which you have said; it has been a very bad bargain, and you have lost a great deal of money; but Mr. Cobden is a real linen-draper's friend, and he will get a committee of the House of Commons to inquire into the matter." (Laughter.) Then, still following up the simile of the land-agent, if the commercial traveller were to present his account and say, "In the meantime, pay Mr. Cobden every farthing of that account, for if not, he has got another act of Parliament, called the law of distress, by which he is enabled to come upon your stock and clear off every farthing in payment of himself, although no other of your creditors should get a farthing; but, notwithstanding, Mr. Cobden is a real linen-draper's friend, and he will get a committee of the House to inquire into the subject." That is precisely the mode in which farmers deal with their landlords. Do you think that linen-draper would ever prosper if they dealt with manufacturers in that way? They would very soon find themselves where the farmers are, in fact, too often found—in the hands of an auctioneer, agent, or valuer. Linen-draperies are too sagacious to manage their business in such a manner as that. I never will despair but that the farmers—the real *bond fide* tenant-farmers—of this country will get out—I say they shall find it out, for we will repeat the fact so often that they shall know it—how they have been bamboozled and kept from the real grievances, the real bargains, and actual transactions by which they should govern their intercourse with landlords by this *hocus pocus* of an act of Parliament which professes to benefit them. (Loud cheers.) What is it that these political landlords tell the farmers at the present time to do? Is it to petition Parliament to give them anything different from what they now possess? They are in distress. Their labourers, in numbers in every parish, are standing idle in the market-place wanting work and getting none. They find themselves threatened with being devoured with poor-rates, and they cannot meet their half-year's rent. What is it which the political landlords tell the farmers to do in order to remedy all these grievances? *Present petitions to Parliament, praying them to keep things exactly as they are.* (Hear, hear, and laughter.) That is really what the speeches at the protection meetings amount to. This attempt at deluding the farmers is a masterpiece of audacity compared with any previous pretext of the landlords; for in former times, when farmers were recommended to go to Parliament with a petition for a committee to inquire into their condition, it was invariably with a view of discovering a remedy for their evils; but now all which these political impostors profess to do, is to enable the farmers to keep themselves in the same downward course and hopeless state in which they at present find themselves. No, no; I do not despair that the farmers will yet find out this miserable delusion which has been practised upon them. The landlords tell me that at the meetings I have held in the counties I have not had the voice of the farmers with me. I am perfectly well aware that, in holding a meeting in a county town, even in the most purely rural district—such as Wiltshire and Dorsetshire—you cannot prevent the townspeople from assembling along with the farmers. I am quite ready to admit that many farmers may have attended those meetings without holding up their hands one way or the other. They came, however, and heard our statements, and that was all I wanted. (Hear, hear.)

mark the inconsistency of these landlords: one day they come and tell us that the whole population of the agricultural districts, shopkeepers, mechanics, artisans, every man in a county town like Salisbury, for instance, depends upon the Corn Laws, and benefits by this protection; and then when, I say, I go down to such a place and take the voice of the community, including the tradesmen of the town as well as farmers and farm-labourers, then they immediately separate that class of the community consisting of shopkeepers and residents in towns, and state, "We will not take their voices and votes as decisive in this matter," though they live in their own county; but they say, "It is the farmers and farm-labourers who alone must be judges between us." (Hear.) There is one other argument which has also been employed, and which I did not expect to hear, even from a duke. (Laughter.) I see that a noble duke tells the House of Lords that the Anti-Corn-Law League wish to repeal the Corn Laws in order that they may reduce the wages of their workmen. He asserts that the price of corn governs the rate of wages in this country; that when bread is high wages are raised, and when it is low wages are depressed. I say I did not expect ever to have heard this allegation made again, even in the House of Lords. Such, however, was the statement made in that assembly last night, which was promptly met by our noble and patriotic friend Lord Radnor, who is always at his post. (Loud and prolonged cheering.) It requires a great amount of moral courage in an atmosphere like that in which he was then sitting, in an assembly possessing very little sympathy for men possessing patriotic views and taking an independent course, such as he has always taken; and yet there is that nobleman always to be found, and never does his courage fail him; and I must say that he meets the noble dukes with their fallacies in a most clear and concise way, and puts his extinguisher upon them in a most admirable manner. Lord Radnor gave the noble duke an axiom which should always be borne in mind by you,—that if the labourer is already sunk so low in wages that he cannot subsist upon a less sum, that then the price of labour must rise and fall with the value of corn, because otherwise your labourers would be starved and die off; that, in fact, where labour has reached its minimum, the labourer is treated upon precisely the same principle as a horse or beast of burden: the same quantity of bread is given to him in dear years as in cheap seasons; just in like manner as you would give as much oats to a horse when they were dear as you would when they were cheap, because it is necessary to do so in order to keep him in working condition, otherwise you would not obtain his labour. (Hear, hear.) What does this fact prove, but that the man is reduced to the condition of a slave, where the wages are not the result of a free bargain between the employer and the labourer, but where, like the negro in Cuba and Brazil, he has his rations served out to him—his red herring and rice—no more and no less, whatever its price may be. (Cheers.) But will they venture to tell us that that is the condition of the working classes in manufacturing districts or in the Metropolis? (A person in the pit—"Yes.") I ask that man who answered "Yes," whether he ever knew an instance in London in which the price of labour followed the price of bread? (The person in the pit—"Yes, in the manufacturing districts.") I said in London. I will come to the manufacturing districts presently; but let us begin with the Metropolis; for I see there are some persons here who require instruction upon this point. (Cheers.) In 1830 and 1840 bread was nearly double in price that it was in 1835 and 1836; did the shoemakers, painters, tailors, masons, joiners, or any other operatives in London get an advance of wages in the dear years? (Loud and general cries of "No, no.") Did the porters of London even obtain any increase of remuneration? (Cries of "No, no.") You have in London 100,000 men employed in the capacity of porters in shops and warehouses, in the streets, or upon the river: did any of these 100,000 men ever hear in their lives, or their fathers before them, of wages rising along with the price of bread? (Cries of "No, no.") What is the mode of proceeding in your corporation? They fix the wages of many people, such as ticket-porters and watermen, and the rate of hackney-coach fares is also determined either by their orders or by act of Parliament. Did you ever know of their being altered because there had been a change in the price of corn? Whoever heard of a man stepping into a boat and requesting to be rowed from Westminster to Blackfriars-bridge, and upon arriving at the latter place asking the waterman what his fare was, and being told in reply, "Why, Sir, it is a dear year; the quarter loaf is up 2d, and therefore we charge more than we did when bread was cheaper." (Loud cheers and laughter.) As regards the manufacturing districts, I will tell you what the rule is there. You know that every word of what I am saying is taken down; and I am not speaking here to you only, but for publication, and, if untrue, refutation, in the north of England. If they can contradict my statement there are plenty of good friends who would rejoice to do so; we have, perhaps, one of them now here—I do not think there are more—who would be glad if he could to pick a hole in my argument. I repeat here what was recently stated by Mr. Robert Gardner in Lancashire. That gentleman, be it remembered, is a Conservative; the treasurer of a fund for building ten churches in Manchester, and himself a subscriber of £1000 to that object; but who, on the Free-Trade principle, nobly threw aside party, and at the last county election himself proposed Mr. Brown as a candidate for South Lancashire. (Cheers.) What did Mr. Robert Gardner say? Bear in mind he is one of our largest and oldest manufacturers in Lancashire. He stated on the hustings there, in the midst of men of his own order, but of different political views, and who therefore would have denied his statement if they could have done so, "I have been engaged extensively in this district for thirty years past, and I here state as the result of my experience that, so far from the wages in this part of Lancashire rising and falling with the price of bread, that there never has been an instance during my experience when the bread has become dear and scarce, that wages and employment have not gone down; but whenever bread has become plentiful and provisions cheap, wages have as constantly risen, and employment has become more abundant." (Cheers.) I quote that upon Mr. Gardner's authority; but I pledge my reputation as a public man and private citizen of this country to the truth of what that gentleman has stated. That these scandalous misstatements should have ever again been repeated, even in the House of Lords—that any one should have dared to venture upon such a worn-out, miserable fallacy, surpasses my comprehension. I say here,

deliberately, that instead of the price of corn governing the rate of wages in the way they state, so far as the north of England is concerned, the effect is the very opposite; and, therefore, to say that the Anti-Corn-Law League want a reduction in the price of food in order to reduce wages, and act upon the supposition that wages can be reduced when food is cheap in the manufacturing districts, is contrary to all experience. I do not content myself with arguing upon possibilities. I am not a duke, you know (laughter), and, therefore, I cannot content myself like a duke with arguing always in the future tense, and saying what *will* happen, and then take it for granted that common plebeians must take my assertions for prophecy or argument; but I mention facts and experience, the only ground upon which fallible men can form a judgment of anything; and therefore I say, if the members of the Anti-Corn-Law League who are manufacturers—although now a very small minority of that body are manufacturers, I am happy to say—but if those who are manufacturers want a repeal of the Corn Laws with the idea that to cheapen food would enable them to reduce wages, they are the most blind, and apparently the most besotted class of men that ever existed; for, if one may trust all experience, the effect of a free trade in corn must inevitably be to raise the money rate of wages in the north of England, at the same time that it will give to the working class their enjoyments, comforts, and the necessities of life at a cheaper rate than they have hitherto had them. (Cheers.) You remember our first appearance in London in 1839 and 1840. You did not take much notice of us then: we were assembled in Brown's Hotel in Palace-yard, in a comparatively small room. The reception you then gave us was a very cold one. If you had then known as much about the Corn Laws as you do now, or rather if you had felt as keenly—for I believe that at that time you knew quite as much as your fellow-countrymen—if you had felt as you do now, I believe that by this time you should have had a repeal of the Corn Laws. What was the state of the north of England when we first came up to London? Bread was dear enough to please even his Grace of Richmond. Good wheat, such as Christians ought to consume, was selling at about 80s. a quarter. What was then the condition of our manufacturing districts? Did we come up to London because we wanted labour cheapened, that we might get men out of the agricultural districts, and pull down their wages? Why, a large portion of our own population were in the workhouse or the streets wanting employment, and offering their labour at any rate. One-half the manufactories in Stockport were shut up; and men who were bred to skilful pursuits, worked upon the road at stonebreaking for 7s. or 8s. a week. Such was the state of things in the manufacturing districts when we first came to London. What was our object in coming here, and what remedy did we propose for that distress? By a free trade in corn to cheapen its price, to lower it materially from the price at which it then was—20s. per quarter higher than it now is. Our object then was by this means to enable us to employ our people at good wages. If we had wanted to lower the price of labour, we should have come up to Parliament and asked your noble dukes and squires to keep on the Corn Law; for that was the most effectual way of doing it. No; in London and the manufacturing districts, in all your cities, large towns, and villages, mechanics and operatives, blacksmiths, carpenters, and every class of people, are above that state at which they have rations served out to them like negroes in Brazil or Cuba: they are superior to that low condition when wages rise and fall with the price of food. If the Duke of Richmond tells me that agricultural labourers are in that state, then I say that that class have reached the lowest point of degradation which men, nominally free but really enslaved by circumstances, ever reached in any Christian country. (Hear, hear.) For myself I repudiate the motives falsely attributed to us of seeking by the repeal of the Corn Laws to reduce wages. I do not urge motive as argument, or as a ground for your confidence. We know nothing of men's motives: they may often be the very worst when we suppose them to be the very best. I say, from the facts I have told you, that the effect of the repeal of the Corn Laws, if it cheapen the price of food, must lighten distress, and will give a demand for labour by extending our foreign trade. If it reduce the price of bread, looking to all past experience, the effect in Lancashire, Yorkshire, and all the manufacturing districts must be, to raise the money rate of wages; in London and the large towns of agricultural districts leaving the wages at least where they are now, seeing that wages do not follow the price of food; and it will give all the people the necessities of life as cheap as by nature they were intended to enjoy them. There was another duke (laughter), his Grace of Cleveland, who applauded a pamphlet written by Mr. Cayley, in which the writer has taken great liberties with Adam Smith, as Lord Kinnaird, I think, recently pointed out to you from this place. (Hear.) Mr. Cayley and his party have taken Adam Smith and tried to make him a protectionist, and they have done it in this manner: they took a passage, and with the scissors snipped and cut away at it, until by paring off the ends of sentences, and leaving out all the rest of the passage, they managed to make Adam Smith appear in some sense as a monopolist. When we referred to the volume itself we found out their tricks and exposed them. I tell you what their argument reminds me of. An anecdote is told of an atheist who once asserted that there was no God, and said he would prove it from Scripture. He selected that passage from the Psalms, which says, "The fool hath said in his heart there is no God." He then cut out the whole of the passage, except the words, "there is no God," and brought it forward as proof of his statement. (Cheers and laughter.) As the Duke of Richmond and Cleveland have found out that there is such a work as that of Adam Smith, I wish they would just read the 8th chapter of his first book, where he speaks of wages of labour. I will read an extract from it to you. "The wages of labour do not, in Great Britain, fluctuate with the price of provisions. Wages vary everywhere from year to year, frequently from month to month. But in many places the money price of labour remains uniformly the same, sometimes for half a century together. If in these places, therefore, the labouring poor can maintain their families in dear years, they must be at their ease in times of moderate plenty, and in affluence in those of extraordinary cheapness." But I will not confine myself to Adam Smith: I will neither take him nor any other writer, but will be guided by experience and facts within our own knowledge, and then we cannot go wrong. (Hear, hear.) I do not

think we need argue this matter here to-night; we have come together upon this occasion almost as a leave-taking. We have had so many delightful meetings in this place (hear, hear) that I cannot help feeling regret that I should have heard our chairman whisper that our weekly meetings are drawing to a close. (Hear, hear.) Depend upon it we have given an impetus to this question, not merely in England; for in Europe, in America, and every part of the civilized globe, our meetings have excited the greatest attention. (Cheers.) I should not like to separate without a distinct enunciation of what our intention is, and, if opponents wish it, what our motives are. In the first place, we want free trade in corn, because we think it just; we ask for the abolition of all restriction upon that article, exclusively, simply because we believe that, if we obtain that, we shall get rid of all other monopolies without any trouble. (Hear.) We do not seek free trade in corn primarily for the purpose of purchasing it at a cheaper money-rate; we require it at the natural price of the world's market, whether it becomes dearer with a Free Trade—as wool seems to be getting up now, after the abolition of the 1d. a pound—or whether it is cheaper, it matters not to us, provided the people of this country have it at its natural price, and every source of supply is freely opened, as nature and nature's God intended it to be—then, and then only shall we be satisfied. If they come to motives, we state that we do not believe that free trade in corn will injure the farmer; we are convinced that it will benefit the *tenant-farmer* as much as any trader or manufacturer in the community. Neither do we believe it will injure the farm-labourer; we think it will enlarge the market for his labour, and give him an opportunity of finding employment not only on the soil by the improvements which agriculturists must adopt, but there will also be a general rise from the increased demand for employment in the neighbouring towns, which will give young peasants an opportunity of choosing between the labour of the field and that of the towns. (Hear.) We do not expect that it will injure the landowner, provided he looks merely to his pecuniary interest in the matter; we have no doubt it will interfere with his political despotism—that political union which now exists in the House of Commons, and to a certain extent also, though terribly shattered, in the counties of this country. We believe it might interfere with that; and that with free trade in corn men must look for political power rather by honest means, to the intelligence and love of their fellow-countrymen, than by the aid of this monopoly which binds men together by depressing and injuring their fellow-citizens. (Cheers.) We are satisfied that those landowners who choose to adopt the improvement of their estates, and surrender mere political power by granting long leases to the farmers—who are content to eschew some of their feudal privileges connected with vert and venison—I mean the feudal privileges of the chase—if they will increase the productiveness of their estates—if they choose to attend to their own business, then I say free trade in corn does not necessarily involve pecuniary injury to the landlords themselves. If there be a class in the community who may be said to have a beneficial interest in the Corn Laws, to whom there would be no compensation from their repeal if the price of the corn were a little reduced, that class is the clergy of this country, and them alone. The Tithe Commutation Act has fixed their incomes at a certain number of quarters of corn per annum. Suppose a clergyman gets 200 quarters of corn for his tithe, if that corn fetch in the market 40s. a quarter, it yields him as his annual stipend £400 as the produce of his tithe; but if the price of wheat be 60s. a quarter, then the clergyman obtains £500 per annum, instead of £400 as formerly. (Hear.) I am willing to admit, that if the result of Free Trade causes a reduction in the price of corn to the amount of 10s. per quarter—though I by no means use it as an argument—that it will be productive to him upon such a supposition of an uncompensated diminution of his income as a tithe-owner. He does not spend so much of his stipend in bread as to obtain from the decrease of its price compensation for the diminution of his income arising from the same source. But, I would ask, is this a right position for the clergy of this country to be placed in? Is it reasonable that they who pray for "cheapness and plenty" should have an interest in maintaining scarcity and dearness? I will put it to the clergy of this country whether, with this one fact apparent to the world, they can consistently with the retention of their character of respectability, be found in future assisting Anti-League meetings in upholding the Corn Laws? Why they would not be fit to sit upon a jury for the trial of the question; you might challenge them as interested parties, and they would, upon the commonest principles of justice, be excluded the box upon that ground. I appeal to them as they love their own reputation, and for the sake of decency, at least, to stand neutral upon the question: that is all I require of them. We believe that Free Trade will increase the demand for labour of every kind, not merely of the mechanical classes and those engaged in laborious bodily occupations, but for clerks, shopmen, and warehousemen, giving employment to all those youths whom you are so desirous of setting out in the world. O, how anxiously do fathers and mothers consult together upon this point! What letters do they write soliciting advice and assistance! I have frequently had such epistles addressed to me: "There is our boy, John, just come from school: he is now fifteen years of age; we do not know where to put him, every trade is so full, we're quite at a loss what to do with him; we can get nothing from Government, for they give every thing they have to bestow to the aristocracy." (Cheers and laughter.) Finally, we believe that Free Trade will not diminish, but, on the contrary, increase the Queen's revenue. This, ladies and gentlemen, is our faith; these our objects; and this the ground upon which we stand. We believe that we are right: our opponents have acknowledged that we are so; they have confessed that our principles are true; and we will, therefore, stand by the justice of our system. (Cheers.) Do not let us be disheartened by the apparent difficulty of our position: I never felt less discouragement in our cause than I do at this moment. (Loud cheers.) Our labours for the next few months may not be quite so noisy as they have been; probably we have had too much talking; but if they are not so loud, be assured they shall be quite as efficient as any labours in which we have hitherto engaged upon this question. The registration throughout the country shall be well and systematically worked. (Prolonged cheering.) In every locality where you may happen to talk, press upon your fellow-citizens the importance of watching the registration, that your own and

your neighbours' names may be placed upon the register, and that you may strike off those irreclaimable monopolists who are not so brought to the authority of reason upon this question. Let us attend diligently to this duty, and, if they will give us another registration, or even another after that, I have no doubt we can make a very different account of matters in the House of Commons. Ladies and gentlemen, one word more and I have done. In order to keep our question in its true position, do not let us be used, however we may be abused, by any of the existing political parties. I have no objection at all to an alliance, offensive and defensive, with anybody who adopts our principles; but if men are engaged in the pursuit of one object and we of another, do not let us think of shutting our eyes, and entering into an arrangement which promises to be a partnership in which the very first step we take will find us diverging, the one going one way, and the other another. Political parties are breaking up in this country: I mean the old factions. There never was a period in the history of England when an attempt was made to carry on an opposition with a more intangible line of demarcation than that which separates Whig and Tory at the present moment. I venture to say, looking back upon the history of this country for 200 years—to the time of Charles I., when party spirit ran so high that men drew their broad swords to decide political questions,—from that time down to the present there never has been a period when there was such an attempt to keep up an opposition against a party in power without apparently one atom of principle or any one great public question on which to support an opposition. (Hear.) There are many other subjects which the politicians of this country take an interest in besides Free Trade; but for none of those questions has the Opposition, as led on now by one nominal chief, the support of the people out of doors. If we give up the ground we have taken upon the Free-Trade principles, or surrender one lota of our principles, I know the temper and character of those who have nursed this agitation from its commencement, and by whom it is at this moment carried on, too well to doubt that, if there was the slightest evidence of anything which amounted to a compromise of our principles with any political party, that moment the right arm of every true friend of the League would be paralyzed. I ask you upon this occasion, whatever may happen in party papers, or be spoken in public against us, as Free-Traders—and in no other capacity do I prefer the request,—that you who have watched over this organization, who have helped—as you have so continually done by your numbers—to sustain it with your sympathies,—I ask you, whatever you may see, notwithstanding anything which may be put out by a party press—the pens of whose writers are often guided by the intrigues of political faction—to apply but one test to us, namely, are we true as a League to the principles we advocate? If we are, depend upon it, whatever obstacles there may be, if we cling to that truth, we have only to persevere as men have ever done in all great and good objects, and it will be found, that if we are true to our principles we shall go on to an ultimate and not very distant triumph. (The hon. gentleman resumed his seat amidst most enthusiastic and reiterated applause.)

The CHAIRMAN then came forward and said, Ladies and gentlemen, Mr. Bright will now address the meeting.

Mr. BRIGHT on presenting himself at the table was greeted with enthusiastic bursts of applause, which were repeated again and again; silence having at length been obtained, the hon. gentleman spoke as follows:—It is a matter of very pleasant reflection, after having been consigned to utter oblivion on several occasions, and after having been killed outright at least half-a-dozen times of late, that we are yet assembled in such overwhelming numbers, and feel ourselves in so very good and cheerful condition. It is satisfactory to feel that we are yet able to struggle for the great principle which has so often been the cause of our meeting together in this theatre; and although in the course of this warfare we meet with storm and sunshine, and those vicissitudes which most men have met with in the pursuit of any great object,—that notwithstanding we have ground for believing that the principle for which we strive—although it may be outvoted in both Houses of Parliament—is making sure and steady progress in the minds of the honest, intelligent, and reflecting portion of the people of this country. (Cheers.) It is satisfactory to think that the opposition we now meet with partakes more of the character of a political than a commercial hostility. We are certain that the principle of Free Trade is so beautiful and natural that it must commend itself to the mind of every unprejudiced person; we know that, if it were a question merely as to the benefits which the country derived from the infringement of that principle, we should easily persuade the whole—as I believe we already have a vast majority—of our countrymen that the principle of monopoly is unsound and vicious. But we have now to contend with a political opposition, and to engage in a conflict which assumes that character entirely. The questions about which we are battling are those around which political parties are turning. Some of the men of the party now in power are afraid that rents might be endangered by Free Trade; but they are fearful that their great party which they have been ten years in building up might be shattered and shivered to pieces at a blow, and then not only rent but every thing else which that great political party possess might be perilled. All the patronage and offices at home and abroad, including those of the army, the navy, and a vast amount in the church, in fact, the feeding and fattening upon not less than £50,000,000 of revenue, together with as much more, at any rate, in other departments,—all this might be sacrificed, and they be thrown into the cold shade of Opposition. But still though the opposition has taken this character, we are by no means daunted at it; we find that all great writers—the men who have put pens to paper to make their thoughts and opinions eternal—all who have touched upon this question have, almost without an exception, adopted the opinion which we have formed of it. We know that great men and eminent statesmen for fifty years past have held the same sentiments as ours; we are conscious that our opponents practise, in all their private affairs, the principle which we openly advocate. In buying and selling in their regular business they hold that Free Trade is the principle of common sense, although it may assume a different character in national affairs. All the past justifies us in the course we are pursuing, whether we regard it as conferring benefits on all those who have had Free Trade applied to their trade, or regard monopoly as inflicting grievous and indescribable evils on large portions of our population. The pre-

sent exerts us, also, to be working on this question; for, although there is now a respite from the evils under which this country lately suffered, yet it is but a respite which may be followed by disasters, at least, as great as those from which we have just escaped. The future is also before us, warning us that, if we refuse to be guided by the experience of the past, it has in store for us a lesson which will not only teach us the error we have committed, but which may make us a beacon to nations in future times, teaching them that there are dangers upon which countries may run and make fatal shipwreck. Our sincere opponents have honest fears, and, as far as I can bring their apprehensions to any one point, it appears to me that they suspect that the introduction of foreign produce, especially grain, would supersede the consumption of their own grain, and cheapen it in the market; would throw their land out of cultivation; and, in fact, make their trade as corn-growers unprofitable to the occupying tenantry of the country. Now, I speak of the past as giving us some ground for the course we are now pursuing. I will ask your attention to the past for a few moments, that we may discover how wholly visionary are the fears which the landowners, tenantry, and others entertain with respect to the dangers which they apprehend in consequence of a free importation of grain. If the introduction of wheat from abroad would supersede the consumption of that which is home-grown, it is, I suppose, because people would eat the foreign wheat; and, as they could not consume both that and our own, they would leave uneaten the English wheat. Their argument will apply to any other kind of article just as well as wheat. Take, for instance, the article of rice: suppose it was proposed, for the first time, to bring into this country the quantity of rice which is now imported annually, amounting to something like 500,000 cwts; the wheat-grower might stand up and say, "If you allow this rice to come in, the people of this country will inevitably begin to make rice-puddings, which must necessarily, to some extent, supersede bread puddings, and thus our great interest will be endangered by the importation of rice." Well, but this amount of rice does come in; and there was a time when it was not imported, and yet, all the wheat which is grown in this country is consumed, and, instead of having a superfluity, we even want rather more than they can find for us. Take another article—a root which is now of such universal use—I mean the potato. There was a period when there were no potatoes in this country; the quantity which is now consumed I am not able to state, as we have no statistics which give us the information; but every man knows that the consumption is enormous. We have potatoes also imported from abroad, although they were prohibited up to July, 1842. From a return just published by the House of Commons, I find that up to January, 1843, 11,000 cwts. of potatoes had been imported into this country; and in the year ending January 1844, the quantity had increased to upwards of 16,000 cwts. Now, those importations of foreign potatoes being allowed, it might have been supposed that they would have superseded the consumption of British wheat and potatoes; yet there is no such plenty; no man finds that his potato ground is not worth the cultivating—that he cannot sell everything eatable which his industry can extract from the soil of his country. (Cheers.) There are some other articles which are imported now, and which our forefathers did not consume. For example, the article of tea, not less than 40,000,000 lbs. weight of which were introduced into this country for home consumption in 1843, and in the same year more than 30,000,000 lbs. of coffee were brought from abroad; of cocoa, upwards of 2,500,000 lbs.; of sugar, not less than 437,000 cwts. Now tea, coffee, cocoa, and sugar, each make very pleasant beverages. Probably, some of the people who drink them now, had they been unable to obtain them, would have drunk beer of some kind made from malt, and malt of course manufactured from barley. Is it not clear that the importation of all this quantity of food must materially have interfered with the consumption of barley? And yet whoever finds the growers of barley in any part of the country experiencing a difficulty in selling their crops? Do they not find prices high enough, markets sufficiently open, and customers ready to purchase everything that they can produce? There is another article, namely, eggs. Last year there were introduced into this country upwards of 70,000,000 of eggs. I recollect seeing in a scrap-book an extract from a newspaper, which contained a petition to Parliament, presented many years ago, when the importation of eggs was first alluded to, from the hens of this country. (Laughter.) These hens stated their case in very pathetic language. They said that, for the supply of the population of the country with fresh eggs, they had deprived themselves of the gratification of sitting for a number of weeks upon millions of eggs; that they denied themselves all the joys of maternity, all the pleasures which they would have had in leading their young broods out, finding them their food, and so forth; that, therefore, they thought it was very unjust indeed that there should be a law by which a competition from abroad should be got up. They went into a variety of arguments precisely of that nature, and just as wise and creditable to the intelligence of the hens as are the arguments which the Duke of Richmond uses in the House of Lords in support of the Corn Laws. (Loud cheers.) There are certain other articles, such as live cattle. In 1842 the law was altered, and they were allowed to be introduced at a moderate fixed duty. What is the quantity which has come in since that period? I ask your attention to this fact, because it will teach you to know how much faith to put in the prophecies of men who tell us that, under a system of Free Trade, we should be inundated with foreign corn, and ruined by the very abundance of it. In the year 1843 the whole quantity of cattle imported was as follows:—oxen and bulls, 1114; cows, 368; calves, 40—very little necessity for any importation of that commodity (laughter); sheep, 210; lambs, 7; swine and hogs, 361; sucking pigs, 87—making a total of 2187. Just turn your attention back for one moment to the time when this law was introduced; what did these Dukes of Richmond and Cleveland say upon the subject? Why, that those cattle were actually upon the shores of foreign countries in the utmost agony of expectation that they might come over to this country to be devoured by the people here; that, in fact, we should have such an inundation that cattle here would not be worth having. In consequence of their absurd statements, the farmers of this country were panic-stricken to some extent, and that, coming in aid of their extreme poverty at that time, cattle fell 25 or 30 per cent., to the

immense injury of a number of the tenants of this country. I have read in history that there was a great alarm some 250 years ago, or rather more, when the Spaniards equipped an enormous fleet, and threatened to invade our shores; the Spanish armada even now comes up before one's imagination as some giant spectre threatening undefined calamities; but I do not believe there ever was half so much terror among the agricultural classes at the prospect of the Spanish fleet invading this country as the landowners caused amongst the tenantry when these poor, innocent, and half-starved oxen and cows were coming over here to feed the people of this country. It appears to me to have been a great want of ordinary care for the interests of the country that they did not, upon that occasion, call out the militia and the yeomanry. (Laughter.) By-the-by, the valour of the yeomanry has never been very conspicuous; it was once proposed, in an act which was passed to raise troops of yeomanry, that they should never be allowed to go out of the country, except in the case of an invasion. (Laughter.) But there are some other articles besides those which I have mentioned; among others the article of hides. In 1843 there were introduced into this country from abroad, hides to the amount of 535,000 cwts. Of hides you are of course aware that leather is made; of leather boots and shoes, carriage harness, and a variety of other things. In this country we have a large quantity of hides which come from the cattle slaughtered here; but nobody has ever found, because 535,000 cwts. were imported from abroad, that the English dealers could not sell the hides which were produced in this country: the one has not superseded the other, but they have been offered freely in the same market; and thousands and millions of people have now boots and shoes, and leather to use for other purposes for which they require it, who, if hides had been kept out of the country, could by no means have had any supply at all. Again, take the article of tallow. There was imported into this country, last year, tallow to the amount of 1,178,000 cwts. Well, that article is produced in this country also. It is very likely that, upon the tables of the Dukes of Richmond or Cleveland, if they condescend to burn anything but wax, they may, at the same time, have one candle the produce of English, and another made of Russian, tallow. They are both sold in the same market, the one not having superseded the other. Tallow is cheaper than it would be if there was none imported from abroad. Many a man can work on a winter's evening, or, after his work is over, can read his newspaper or his book, by the light of a candle, the tallow of which came from Russia, and the cotton which forms the wick from the southern states of North America. But if this principle of isolation—shutting us up to the use of what we may produce ourselves, and compelling us to be wholly independent of foreigners—if all these arguments in favour of restriction are good for anything, why, all laws under which these articles are imported are enactments which are calculated rather to decrease than to increase the comforts of the people who live under that operation. Take the article of silk. From 1820 to 1821 its average annual consumption in this country was rather less than 3,000,000 lbs. weight; in 1843, the importation was 5,743,000 lbs., very near double what it was from 1820 to 1827; and besides this more than 96,000 pieces of silk handkerchiefs were imported, coming from our possessions in the East. But, notwithstanding all this, does anybody find that the importation of these articles has superseded the products of this country out of which cloth is made? Take, again, the article of flax, from which linen is manufactured. In 1835 the importation of flax into England was 740,000 cwts.; in 1843 it had increased to 1,438,000 cwts., or nearly double what it had been in 1835. Now, although so much silk and flax were imported, as we find from these things having come into such common use, has it thrown out of use any other article of cloth or linen? There is no proof whatever of it, but all the evidence is to the contrary. What is the principal article grown in this country of which cloth is made? Why, wool. How stands the case with respect to that article? In the three years, 1826, 1827, and 1828, the average importation of wool into England was 25,000,000 lbs. weight; what was it in 1836, 1837, and 1838—ten years after? The average was then not less than 55,000,000 lbs. weight. What was the price during the former years when the importation was so small? It was under 10d. a lb. for English Southdown wool; but when the importation had more than doubled, the price was 16d. a lb. Now, you had all that silk, flax, and wool coming in from abroad, and yet there was no diminution whatever in the production of wool in this country; there were more sheep in these latter years than formerly by thousands and scores of thousands, and what is also notorious, those farmers who of all others have succeeded the best in this country for many years past, especially since 1824, are those whose chief business has consisted in keeping sheep, and in producing wool. But go to another article, which is the largest of all in its importation, namely, cotton: in the year 1810 the importation of cotton into this country was about 90,000,000 lbs. weight; in 1843, last year, it was 585,000,000 lbs. weight, not all consumed in this country, but all coming here to be manufactured, a large portion consumed, and the whole of it being here and free to be sold in competition with the woollen goods, the produce of the agriculturist of this country; and yet for all that you find wool not diminishing in price, produced in larger quantities than it was before, and the farmer who produces it making a better profit than any other farmer, however greatly protected he may be. (Loud cheers.) I am prepared to argue that no harm has come to the population of this country in any shape from the increased importations of these most useful articles. The power to purchase these goods from abroad indicates the possession of the ability, and actually creates it, to purchase the produce of our own land at home. There can be no doubt whatever that, if it were possible to put a stop to the importations which I have just alluded to, the effect would be that the price of wool itself, and also of agricultural produce generally, must fall in this country by reason of the cessation of trade and the impoverishment of the people who are employed and paid by the trades connected with these very importations. But, if we look to the protected trades themselves, we shall see how utterly rotten and worthless is the pretence of protection. What have your West Indian merchants been doing lately; and what has been the language of their mouthpieces in Parliament? I have seen them get up from their benches and come to the table to unroll a lot of papers, and with a face of perfect sincerity state to the House that they are producing sugar at an expense of

6d. per lb., and they cannot sell it in this market for more than 6d. Suppose I were to go with a roll of papers in the same way, and say that my business was in a very bad state; that I was selling cloth furnished to the Manchester market for less than I could make it—as I have done many a time—and that I was selling it in some other part of the world, in a neutral market, in competition with the American and the Swiss, and that they both of them undersold me; that, by some means or other, I had influence sufficient to get a law which should tax you and everybody else, in order to make my trade profitable: if I were to act thus, I suppose you would laugh at me and think I was a very great fool, or something much worse. But these men actually do this. Here are half a dozen of them rising at a time and going into all the details of the management of their business, and saying that they can not carry it on unless they could overcharge you to the tune of about 2½d. a pound on your sugar. If they cannot conduct their trade fairly, then let it drop. (Loud cheers.) You have in this country twice a week a publication called the *London Gazette*, ay, and a fearfully melancholy catalogue is presented in that publication, of men who from one cause or other have sunk, it may be from affluence and independence, into a state of dependence, poverty, and ruin! Why should not these men come week after week to the House of Commons, and ask that out of the public taxes they should receive as much as would pay their debts, set them up in business again, and carry them on comfortably in the circumstances in which they had formerly lived? That would be quite as just as that these men should come and ask to tax you, and me, and every body else in this country for the sugar which they sell. And who are they? Why, men who, if there be any on the face of this earth having no claim to sympathy, I say these are they—the proprietors of our West India colonies. (Loud and prolonged cheering.) There is another protected body—the shipping interest. Why, the voice that comes from them is one continued howl; it is not a mere ordinary complaint and growl, but it is an everlasting besetment of the Legislature that something should be done for their relief. They have been protected into their present wretched condition. There is now a committee of the House of Commons sitting to inquire why they are so miserable, similar to the committee that sat upon the condition of the agricultural interest when the farmers were so badly off. They have been examining a very large shipowner in London, a man who, if he polled at all at the last election, voted that few goods should be carried across the Atlantic; and there is another man also who has been examined, and who is a very great authority on shipping matters; and what do these persons say? That in the colonies they build ships so cheap that somehow or other the foreign shipbuilders are able to undersell those of this country; those gentlemen, therefore, recommend, for the benefit of the shipping interest of this country, that colonial ships shall have a pretty heavy tax levied on them, in order that the British shipbuilder might compete with them. Now, what can be more absurd than such a proposition? These men once had what they call complete protection; but now they have a partial protection. It is this system of protection giving them a monopoly, and inducing them to rely upon it, blinding their eyes to the usefulness and the necessity of exertion and competition—it is this which has reduced the shipping interest of this country to its present deplorable condition. Is it not utterly disgraceful that, in this island, which professes to be the mistress of the seas—which if not in that inglorious pre-eminence which springs from power exercised in war, is, at least, the mistress of the sea as far as its commercial marine exists; and I glory that it should be so (cheers);—but, if England be the mistress of the seas—if our ships are found on every ocean and in every part of the world, and we have a larger trade than almost all the nations of the earth added together—I ask you, is it not positively disgraceful that navigators of ships should come crawling to the squirearchy of your House of Commons, and ask for some assistance out of the difficulty into which they have plunged themselves? (Tremendous cheers.) There is another protected interest which used to be protected almost to prohibition, which means was almost nursed to death—that is, the silk trade. Nothing is more notorious than the fact, that that business has been more prosperous since the abolition of its protection than it was before; that the number of looms weaving silk in this country have enormously increased; that the persons employed on those looms have been multiplied in a corresponding proportion; that there have not been those fluctuations in their trade which were known previously; that, in point of fact, they are now upon a somewhat more natural basis, although their protection is not wholly done away with; and, I believe, there is no intelligent and honest man amongst the silk manufacturers of this country who would not admit that the very best thing ever done for his trade was the abolition of the prohibition with respect to the importation of foreign silk goods. (Hear.) Of English agriculturists I need not speak; they were protected from 1815 to 1828 by a prohibitory duty—protected to such a degree that our House of Commons has for many years been an agricultural club, for the purpose of ageing if it could not keep agriculture alive in this country. (Laughter and cheers.) Amid all this protection, how go on the unprotected trades? I know something of one of them, for my business is entirely with a trade upon which Parliament has never laid its deadening finger in the shape of an act of Parliament to protect it. Look at the cotton trade of Lancashire: sixty years ago it was scarcely known there. It is said that the man is living who hauled the first bale of cotton into Liverpool which arrived there from the United States. I doubt not that the man is now living who erected the first steam-engine to drive the machinery for the purpose of manufacturing cotton in Lancashire. But what has that county become? I stated here a few weeks ago what it was some 250 years back, and what is it now? A return has recently been made by the House of Commons, of the amount of valuation which has been made there to the county rate. Look at the value of land and building in Lancashire at this moment. This assessment to the county rate—that is, the annual value of the land and buildings, excluding altogether stock in shops, furniture in houses, and the enormous value of machinery in all the manufactories of that county—the annual value is £6,162,067. Now, how many counties do you think it would take in England and Wales to make a similar amount of valuation? I will just read them over to you. Huntingdon, Westmorland, Rutland, Anglesey, Brecon,

Cardigan, Carnarvon, Denbigh, Flint, Merioneth, Montgomery, Pembroke, Radnor, Berkshire, Buckinghamshire, Hereford, Hertford, Monmouth, and Oxfordshire. Here are nineteen counties, the amount of whose united valuation is considerably under the valuation of the one county of Lancashire. The population of that county in 1841 was 1,667,054; while the population of the nineteen counties, whose names I have just read, is 1,654,607, or several thousands less than Lancashire alone. Look again at the valuation of the principality of Wales, which is not equal by a great deal to half that of Lancashire: the latter being £8,192,000, while the former is only £2,443,000. The valuation of all England is only £48,000,000, Lancashire being more than £6,000,000 of that amount, or upwards of one-eighth of the whole. Yet, when you come to speak to squires, these facts are treated as very unimportant circumstances. They have been in Lancashire, they tell you: they passed through it once upon the mail when they were going to Scotland grouse shooting. (Laughter.) They say that it has a great many chimneys and a good deal of smoke, and a vast number of working men, who did not touch their hats to them as they passed. (Loud cheers and laughter.) That I believe is considered by them as a very disgraceful feature in the character of the men of Lancashire. But, notwithstanding, it is well that these squires should reflect that there is such a county; how it came to be a place of such magnitude and importance—how it was that the barrenest and least inviting part of the kingdom, which nature seems to have favoured least—that that spot of country should have become the most important tract in the dominions of the British sceptre. There are, however, some people living in agricultural districts who are more sensible than others. A gentleman of this description—a large miller at Lincoln—lately gave some statements at a railway meeting as to the quantity of Lincolnshire produce which goes into Lancashire. I will just read you one portion, without going through the whole of the extracts which I have made. He says:—"From the 1st of October to the 1st of April last, 59,365 quarters of wheat were sold in Lincoln market, of which five wholesale millers took 43,426 quarters; and he could affirm that the greater proportion of the wheat ground by the Lincoln mill was sent to Manchester, both flour and bran." Then he says, "With regard to barley and malt, the facts were pretty nearly in the same proportion; from the 1st of October to the 1st of April, there had been sold in these markets 26,685 quarters of barley: of this, 700 went to Leeds, 77 to Wakefield; of malt, 160 quarters were shipped to Leeds, and 400 quarters to Wakefield. In the same time, 5508 quarters of malt were sent to Manchester; and Mr. Thorpe, the largest maltster in that place, had that morning informed him (Mr. Seeley) that before the season closed he should ship 5000 quarters more, and all to Manchester." "Thus, it might be fairly assumed that Manchester and the places around were the districts that consumed the chief part of the wheat and barley grown in the Lincoln district." (Hear, hear.) Thus it would appear that every class would be interested in the abolition of the Corn Laws, and the full adoption of the principle of Free Trade, which we are here to-night—and have been so often before—to expound. I believe that even the landlord class would lose nothing in rental; they might be deprived of political power: but even that may be bought too dearly. A time may come, when, for the power they grasp now through the medium of this law, they may be made to pay, if it be possible, a thousand-fold, in the abolition of many privileges and immunities which they now prize so dearly. They protect native industry! I have been delighted to find this phrase in other countries besides England. The manufacturers of America ask for protection to native industry; that is, in other words, a law to make their goods dearer. The manufacturers in France, especially in the iron works, raise a similar cry, meaning that they are fond of keeping articles of our manufacture out of France, that they may overcharge their countrymen for their own produce. I have here a very amusing extract, one most pleasant for me to read, from a petition lately presented from the wine-growers of Narbonne, in France, to the legislators of that country, praying for the abolition of protection and a greater freedom of trade between France and foreign countries. Just listen if they do not quote our words, or we theirs:—"Under the name of a protective system, a state of things has been brought about which obstructs exchanges, arrests the progress of civilization, and restrains the growth of our commercial power. We doubt whether any nation has ever thus crippled its agricultural produce. The continental blockade itself was less injurious to our exports than the present system, for then, the French territory being increased, we profited by the markets that conquest opened to our commerce. Fifty years ago the city of Bordeaux exported to Great Britain and Ireland 18,000 tuns of wine; now the total export of all France to Britain is 3090 tuns. Russia, Sweden, and Prussia, a large falling off. By excluding the raw materials and manufactures of other powers, France has provoked retaliation. The same combinations which excluded foreign iron from our markets, have caused the exclusion of French wines from the markets of Europe. Nothing can be more natural. When you refuse to buy the produce of a nation, that nation refuses to buy yours; exchange, which is the very soul of civilization, then becomes impossible, and all commerce is destroyed. Favouring the exportation of manufacturing produce, and hindering that of agricultural produce, is called by many manufacturers 'protecting the national industry,' as if the cultivation of the vine, which gives employment to 6,000,000 persons, and is of the value of £20,000,000, was not national beyond every other industry. A nation is weakened by diminishing, is strengthened by increasing, the circle of its trade. Commerce raises up a similarity of interests among men which is advantageous to all. From multiplicity of exchanges spring riches, and consequently, power." (Cheers.) Then, I think, we have pretty nearly finished the discussion as regards the principle upon which we act, and for which we are contending. We have now brought it to such a point that it has become merely a question of might against right. (Loud cheers.) We have so battered down every argument for protection, and have made its advocates so ashamed of themselves and their cause, and so put to the blush every man who was wont to defend it, that now this great question—on which, according to the squirearchy, the preservation of this country depends—hangs entirely on the will of one or two men; that Sir Robert Peel and Mr. Gladstone, by speak-

ing out honestly to them, although insolently to us, have, they say, gained their confidence. What a disgrace to the aristocracy of this country that it should be brought to such a pass! Who are the two men who have gained this power over them? Sir Robert Peel's father was a man who made his fortune by honest and meritorious industry. Mr. Gladstone's father gained his wealth and independence by extended operations in foreign commerce. They have, at all events, nothing to boast of with respect to ancestry. They cannot say that

"Their blood

Has crept through acoundrels ever since the flood."

(Hear.) And yet these men, who have no aristocracy to boast of, of whom it may be said by a figure of speech, that people do not know exactly whether they had grandfathers or not; yet it is to these men that the great and magnanimous aristocracy of this country are indebted for the sustentation of a law, upon which they say the very existence of this great empire depends. (Cheers.) I know not which of the two is more contemptible or discreditable,—that the proud aristocracy of England should owe such degrading dependence to such men, or that these two men, having sprung from the ranks of industry, should lead themselves so infamously to support the usurpations of power. (Cheers.) But it may be found that the will even of these two men, although they may be firm and unchangeable—which nobody expects—may be insufficient to maintain this law. It is a happy thing for England that the sun does not shine and the showers descend at the bidding of a Peel or a Gladstone. (Hear, hear.) We have now the prospect of a favourable harvest; the Chancellor of the Exchequer looks at his barometer with something like satisfaction. We may, therefore, go on for a year or two, and it were well for us if we could ever go on thus; but we know that Providence does not arrange these matters to suit the vices, ignorance, and selfishness of legislators, and that those laws which never err will again bring round upon us deficient harvests—it may be a succession of them—and then I ask you and the country, and I put it even to the squires, how much will they give for the firm and unchangeable will, and for the power, of Sir Robert Peel and Mr. Gladstone? A few weeks' rain, a political accident, a shuffling of the cards, may bring about the downfall of this system which these men now are looking to as one upon which the safety of this country is based. Truth is going on in its career; in the meanwhile we shall not rest in our labours; so long as we have strength, we shall do as we have done hitherto; for, encouraged by the past, so shall the future be; and no man in this country shall with truth say that he has not had an opportunity of knowing what was right on this question. (Cheers.) These opinions spread, and continue to do so; truth, because it is truth, will prevail; and right, because it is right, will triumph, in spite of the miserable sophistry and the vile calumnies, and the execrable conduct of the organs of the monopolist faction, who assail us, and all who act with us, through the political press of this country. (Hisses and groans.) You know that of late it has been the policy of monopoly to create discontent between the operatives and the manufacturers, and discord between them and their employers. Ay, if we had gone into the rural districts and called the labourers together, and if we had pointed out the landowners in their baronial halls, and their gorgeous mansions in this city; if we had directed their attention even to the comfortable position which the farmers hold in society, so far as regards those among them who have capital; and then had pointed to the hovels of the labourers, the huts in which they were born, and bred, and starved—and to the gaol or union workhouse to which they were inevitably tending: if we had done all this, and had made these men even more discontented than they now are under their suffering, I ask you where would have been the safety of the agricultural counties at this hour? (Great cheers.) We did not do that: we told the farmers that wages were not at their command; we stated to the labourers that they could not have good wages except their labour was of value, and that it could not be of value unless there were fewer of them as compared to the work to be performed. But what has been the policy of our opponents? Take the writings of the *Standard* for the last week or two (hisses): has not that paper been constantly endeavouring to show the labourers of Lancashire that the employers are now obtaining enormous profits, and that they ought to come in for some share of those profits in the shape of advanced wages? (Cries of "Shame.") The *Morning Herald* has actually had the audacity to say that in the cotton districts wages have fallen 10 per cent. since 1842: there never appeared in the columns of that journal anything more infamously untrue. (Cheers.) I had occasion, not long ago, to speak of the *Standard* newspaper and its editor,—a man of whom I am happy to say now, as I stated then, I have no personal knowledge,—but I spoke of him in a manner I thought I had a right to do. I endeavoured to trace his lineage; I pointed him out, if I remember right, as a man who came from an island not far away from here; who gave the lie to the proverb that that island had never produced anything of the reptile species. (Vehement cheering.) That paper consigned the manufacturing districts, towns, and cities, ay, with the coolest effrontery, to utter, absolute, and irrevocable ruin; that paper has slandered us from that time to this; that journal is now in the pay of that Government (hisses and groans,) which made last Wednesday night another compact with those who are in favour of starving the people. (Renewed cheers.) Ay, I might tell you other things connected with that paper if it were necessary. In 1817, there was in some parts of this country, and especially in Scotland, a system pursued by the Government of that day—Lord Sidmouth and Co.,—which then obtained the name which has lately been applied to some other Government practices, of espionage: spies were then employed by the Government. In 1820, two deceived but erring and betrayed men paid the penalty of their lives at Stirling, on account of their having been connected with a seditious movement, which had its origin, there is abundant proof, in the spy system supported by the Government. I saw, the other day, an article in the *Standard*, in reply to one in the *Manchester Guardian*, with respect to this question of profits and wages. The writer in the *Standard* says, "The *Guardian* cannot mystify this question, for we have a practical knowledge of this matter of the cotton business." It will be remembered that one of these spies in Scotland was originally a cotton weaver. (Hear, hear.) It may be that that man

wrote this article in the *Standard*. I say not that it is so; you may make inquiries, if you please. (Cheers.) I have here a book, the title of which is, "Exposure of the Guy System in Scotland in the Years 1818, 1819, and 1820, including the Battle of Bonny-gair, with a Portrait." Now, there is a suspicion that that individual spy handles a pen which supplies the columns of one or both of those *gemini* of the press, the *Herald* and the *Standard*. (Hear.) Oh, it is a filthy trade! There is nothing more glorious to my mind than the possession of an organ of the press like a daily newspaper in this country, if it be managed with honesty and integrity. (Hear.) I do not think any man, however great his ambition, if he were to look narrowly into it, could wish a prouder position than one in which he would be enabled to pour forth every morning to ten thousand or twenty thousand readers the reflections of an honest, honourable, and intelligent mind. (Cheers.) Why, he is actually insinuating his own soul into the souls of the people among whom he lives! and, though he cannot trace precisely how much good he has done, yet he has the satisfaction of knowing that what he is publishing is a great truth; that it is a sublime idea which he has laid before the world; a great truth which he has developed; and the good seed which he has sown is going on vegetating from generation to generation, and until the end of all things the amount of good which he has done to his species shall never be told. (Loud cheers.) But when men—I suppose they are such; I have not seen them!—they pass as men, and write "we" in the paper ("hear," and laughter).—I suppose somebody knows them,—when men, I say, stoop to do the things which I see these men do in their newspapers, I maintain that they make a similar transformation to that which is made when an angel becomes a demon, and, instead of the proud and satisfying consciousness that they have sown good seed, they may go down in their old days to the grave with the conviction that they have been as a tree—a peevish tree—from which nothing but evil has gone forth to blight and destroy the best interests of mankind. (Tremendous cheers.) I say of these men now, as I have asserted before, that they are wholly impotent to eradicate those truths which we have sown in the public mind of this country; that they are utterly unable to blacken our character, or to destroy any influence which we may possess; that they are wholly powerless to prevent the swelling on of that great tide which, by-and-by, will throw down every barrier which they are now endeavouring to raise up, and destroy every vestige of that iniquitous system of which they are the contemptible approvers. (Cheers.) We ask that this wide earth, which the Creator of all things has spread as a table for his children, should be free to us to live in, and enjoy its abundance. (Cheers.) Why, to enjoy the good things which God has given is a great portion even of the obedience which we owe to Him! (Cheers.) Have we not proof, abundant proof, that those blessings were given for us, were bestowed richly for our use; that it is impious in any man or any set of men, to withhold the products of the gifts of His bounteous hand, especially from the poorest of His creatures. (Great cheers.) A writer, who was at once a monarch and a post, in the voice of praise with which and in which he often addressed his Creator, said, in the words and lines which are familiar, doubtless, to you all, when gazing upon the beauty of the earth and the abundance with which God hath filled it:—"Thou visitest the earth and waterest it: thou greatly enrichest it with the river of God, which is full of water: thou preparest them corn, when thou hast so provided for it. Thou waterest the ridges thereof abundantly: thou settlest the furrows thereof: thou makest it soft with showers: thou blessest the springing thereof. Thou crownest the year with thy goodness: and thy paths drop fatness." And not in that passage only, but in many other parts of the sacred Scriptures, you have full liberty to believe the earth was given for your enjoyment, and for the comfort of all the creatures whom Heaven has placed upon its surface. I ask you, then, whether the miserable sophistry of the wretch of whom I have spoken (loud cheers)—and no less the sophistries of those who speak in your halls of legislature, and give utterance to all the calumnies and horrid sayings which can be heaped upon us—I ask you whether all these things shall weigh down the balance against the cry of the suffering of this country; for millions now, and millions more, must suffer if this law be permitted to remain unrepelled. (Tremendous applause.) I tell you, you are not citizens of London—you are not inhabitants of a renowned country—if you now, or at any future time, for one moment let go this resolution to work perseveringly, unitedly, and as long as it may be needful, until this impious and blasphemous law shall be for ever wiped from the statute-book. (Mr. Bright retired from the table amidst vehement and reiterated applause.)

The CHAIRMAN then came forward and said, Ladies and gentlemen, I never made an announcement with greater pain in my life than the one which I am now about to make, and that is, that our next meeting will be the last for the present season. This meeting stands adjourned till the first Wednesday in August; and I feel we ought not to separate without taking the earliest opportunity which has been afforded to us of returning our thanks to Mr. Villiers, Mr. Cobden, Mr. Bright, Lord Howick (cheers), Mr. Milner Gibson, Mr. Ward, and other gentlemen who supported by their speeches, and also to those who supported by their votes, the motion of our excellent friend Mr. Villiers, last week. I propose, therefore, that we conclude this meeting by giving three cheers for the members of the House of Commons who are Free-Traders.

The suggestion of the Chairman having been enthusiastically responded to, the meeting separated at a few minutes before eleven.

HASTINGS

On Monday R. Cobden, Esq., M.P., and Robt. R. Moore, Esq., visited Hastings, and attended a public meeting which was held in the Priory Meadow at four o'clock. About one thousand persons were present, who listened with the most marked attention to addresses from the above-named gentlemen. The meeting lasted upwards of three hours.

On the proposition of Mr. KELLARD, Mr. Jolly took the chair.

Mr. COBDEN and Mr. MOORE severally addressed the meeting in able and eloquent speeches, which elicited repeated bursts of applause.

Mr. H. THWAITES then proposed a resolution in favour of the principles of Free Trade as being the principles of justice, and best calculated to promote the interests of all classes in this kingdom, which was carried by acclamation, and the meeting separated.

PRESENTATION OF A PIECE OF PLATE.

At eight o'clock a most crowded meeting was held in the Arcade for the purpose of presenting to Robt. R. Moore, Esq., a testimonial from the mechanics of this town. The present comprised a massive silver inkstand, elaborately chased in the highest style of art, with the following inscription:—

Presented
by the
Mechanics
of Hastings and St. Leonard's
to

Robert Ross Rowan Moore, Esq.,
in grateful remembrance
of his incessant labours,
when a candidate for that Borough,
in advocating the principles of
Free Trade,
which he so forcibly and eloquently
expounded.
March, 1844.

The chair was taken by Mr. Hislopp; and on Mr. Moore ascending the platform,

Mr. C. DEANE rose and spoke as follows:—"Sir, permit me on the part of this numerous and respectable assembly to welcome you again to this place, where you on former occasions so forcibly and eloquently demonstrated the principles of truth and justice. I am deputed by a portion of my fellow-workmen of this borough to present you with a small testimony of our gratitude and esteem for so nobly and generously stepping forward to emancipate so many of our brethren from their poor, servile, and degraded state, and strike off the heavy fetters placed on their industry. We are all well aware that the intrinsic value of this article hardly makes it worthy the acceptance of one who has done so much for so great and so glorious a cause—of one who has made almost superhuman exertions on behalf of millions of his suffering fellow-countrymen—of one who is devoting the morning of his life to the attainment of an object which will confer so great and universal a benefit on mankind; but we sincerely hope that when the great work you are so indefatigably labouring in is completed, and you rest from your herculean toils, the sight of this, our humble offering, will awaken some pleasure in you to know that in the hour of your greatest trial there were some honest hearts that could fully appreciate the sincerity and disinterestedness of your motives. These, Sir, are the weapons by which all our great moral victories have been won, and by which, through your able exertions, we eventually hope to obtain that which we most desire—a universal Free Trade. Therefore, in the name of this assembly, I present this testimony to you, conscious that in your possession it will ever be exercised for the welfare and benefit and the happiness of mankind." (Applause.)

Mr. MOORE returned thanks in an eloquent speech, for which we regret that we cannot find room.—*Brighton Guardian*.

WHEATHAMSTEAD FREE-TRADE ASSOCIATION.

This association held a meeting on Wednesday, June 19th. After the minutes of the previous meeting had been read, Mr. C. H. LATTIMORE, who presided, addressed the meeting. After noticing the principles upon which the society was based, and repelling the charge that the agitation of the Free-Trade question tended to promote disorder and confusion, he congratulated the meeting on the important and steady advance which the great cause of commercial liberty was making in the minds of the reflecting portion of the community, in proof of which he brought forward a variety of details and illustrations. Having pointed out some of the evils under which Ireland was labouring, he entreated the meeting to reflect that the evils of monopoly which were so conspicuous in that, an agricultural country, might furnish a hint of the probable fate of the agriculturists in England, if left to the tender mercies of the monopolists. (Cheers.) The ensuing winter would afford fearful experience how the deficiency of the farmers' means for employing the people would operate on the labourers. He saw no prospect of obtaining the blessings of plenty under a restrictive system.

The Rev. THOMAS GILBERT most cordially assented to the remarks which had been made by the chairman, the truth of which no honest man could pretend to dispute, as they were well calculated to forward the objects of this association, and to awaken men's minds to a consideration of matters deeply affecting all classes of the community. (Cheers.) The reverend gentleman then exposed the insincerity of those persons who insinuated that meetings of this description tended to set the farmer against the labourer, and the labourer against the farmer. One thing was manifest to every man who had eyes to see, and a heart to feel—that a large amount of distress existed in this country, and that that distress was on the increase. Nor was it to be wondered at: the farmer was eaten up with rents, tithes, poor's rates, and other taxes; and it was morally impossible for him to give employment, or pay that amount of wages which he considered the poor man's due, and which, under other circumstances, he would cheerfully pay. He knew that there were many, even in this neighbourhood, who, although they did not, dared not come to this battle for repeal, would heartily rejoice in the victory which they hoped speedily to obtain. He was strengthened in this hope of speedy victory by the encouraging progress of the good cause: not a meeting passed without the admission of fresh members, and the infusion of new zeal into their body—may those numbers and that zeal manifest continued progression! (Cheers.)

Mr. BRITTON, sen., followed, and drew a picture of the farmer in the olden time as contrasted with one of the present day: his graphic and life-like description was listened to with intense interest. The state of the old farmers and their servants was one of common enjoyment and mutual confidence, no trace of which was to be discovered now-a-days. The rate of the farms was then about 12s. an acre, tithes 2s. 6d. per acre, the wages of the labourers generally about 7s. per week, with which sum, though nominally small, they were able to do immensely more than with a similar amount under existing circumstances. Mr. Bruton entered into a statement of the great number of years during which farms used to be held

by the same tenant or in the same family. Some farms were held eighty years, others one hundred years; labourers were known to work for one master fifty years; one had worked sixty years, in the time of his relation, Gladman. The Corn Law of 1815 brought about a sad change in all these things: tenant followed tenant in rapid and miserable succession; and the ruin in which the farmer was involved necessarily and speedily deteriorated the condition of the labourer. Now all the old farmers are gone, the peasantry are in a state of destitution, their wives and children too generally without decent clothing; often shoeless, or next to it. Mr. Bruton proceeded to show how the shopkeepers were affected by this state of things, and to what annoyances the rate-collector was subjected in the performance of his duties. Reverting once more to the contrast with which he opened his speech, he stated that formerly the tithe-receivers were on harmonious terms with the tithe-payers. Mr. Bruton concluded by stating that the same impulse of duty that occasioned him to join the association had led him to make the statements he had made that evening: he sat down amidst warm applause.

Mr. THOMAS, of Welwyn, advocated Free Trade not only on the ground of abstract justice, but also for the benefits which he, as connected with the wool trade, had derived from the more abundant importation of that article. The speaker entered into details to show the evils he and numbers of his fellow-workmen had sustained from want of employment owing to the restrictions which had existed in the free importation of wool: and concluded by making a warm appeal to his fellow-workmen to rally with him round the standard of "Free Trade with all the world."

Several new members having been enrolled, the cordial thanks of the meeting were given to the chairman and the Rev. Mr. Gilbert, after which the meeting separated.

BOLTON.—On Monday evening se'nnight a lecture on Free Trade was delivered in the Temperance Hall, Bolton, by Mr. J. J. Funnigan. Mr. Joseph Crook presided.

WHITEHAVEN.—The last number of the *Whitehaven Herald* contains a report of an interesting lecture on the effect of the Corn Laws upon the agricultural interest, by Mr. Baker, which we shall notice more in detail in our next number.

THE SUGAR DUTIES DIVISION.

The following letter (omitted last week in consequence of a press of matter,) has been addressed to Mr. Cobden, by Mr. Sharmar Crawford, who was unavoidably absent on the division on the sugar duties:—

"Crawfordsburn, June 21, 1844.
"DEAR COBDEN,—I see you and my other Free-Trade friends are violently abused for voting with the Minister on the late division. Now, being firmly convinced that the proposition of Mr. Miles was framed and supported by those who were the originators of it, with the sole view of creating a greater amount of protection in favour of the West Indian monopoly, I take the liberty of expressing to you my entire agreement with your opposition to it, and to assure you that had I been in the House I should have joined you; and although, from unavoidable circumstances, I was absent on that occasion, I shall have no wish, when any opportunity occurs, to shrink from the responsibility of the opinion I now express to you. I cannot understand how those who, a few nights before, voted for the abolition of all protecting duties on the motion of Mr. Ewart, could reconcile it with the profession of the Free-Trade cause to vote for Mr. Miles's motion, the object of which was to increase protection. I acknowledge that I was proud to see that you voted on principle, and that you did not sacrifice the integrity of that principle to the paltry objects of party expediency.

"I regret very much that I was absent on the division, as I should not have hesitated to share the odium which an honest vote would impose, whether derived from Whig or Tory abuse and misrepresentation.

"Yours, very truly,

"WILLIAM SHARMAR CRAWFORD.

"R. Cobden, Esq., M.P."

FREE-TRADE CLUB.—The office of the Free-Trade Club is No. 11, Parliament-street, and not at No. 12, as we stated in our last. The secretary will forward the prospectus and terms of admission, on application, either personally, or by post.

TOWER HAMLETS.—The Central Committee of the Tower Hamlets Anti-Corn-Law Registration Society attend at the Grave Maurice, Whitechapel-road, every Tuesday evening, from seven till nine o'clock, to fill up claims and afford every information and assistance to persons qualified to be registered.

BETHNAL-GREEN.—The Bethnal-green Anti-Corn-Law Association meet every Monday evening, from eight to ten o'clock, at the Hope Tavern, Pollard-row, to assist persons desirous to be registered.

Most of the statutes or acts, edicts, arrêts, and placards of Parliament, princes, and states, for regulating, directing, or restraining of trade, have, we think, been either particular blunders, or jobs obtained by artful men for private advantage, under pretence of public good. When Colbert assembled some wise old merchants of France, and desired their advice and opinions how he could best serve and promote commerce?—their answer, after consultation, was, in three words only, "*Laissez vous faire*," "Let us alone." It is said by a very solid writer of the same nation, that he is well advanced in the science of politics, who knows the full force of that maxim, "*Pas trop gouverner*," "Not to govern too much," which perhaps would be of more use when applied to trade than any other public concern. It were, therefore, to be wished that commerce were as free between all the nations of the world, as it is between the several counties of England; so would all, by mutual communication, obtain more enjoyments. Those counties do not ruin each other by trade, neither would the nations; for no nation was ever ruined by trade, even seemingly the most disadvantageous. Wherever desirable superfluities are imported, industry is excited, and thereby plenty is produced. Were only necessities permitted to be purchased, men would work no more than was necessary for that purpose.—*Dr. Franklin*.

A farmer in the neighbourhood of Dunfermline was thus accosted by his landlord:—"John, I am going to raise you rent." John replied, "Sir, I am obliged to you, for I canna raise't myself."

THE DEBATE ON MR. VILLIERS'S MOTION.

(From the Economist.)

On Tuesday night Mr. Villiers introduced his motion for a committee to consider the present Corn Law with a view to its repeal, in a speech containing a wide and comprehensive consideration of the evil effects of the present law on the moral, physical, financial, and commercial interests of the country. Mr. Villiers established the fact that this country has become more and more dependent on foreign countries for a supply of food, as the population has increased; he established, by the best evidence, an undeniable and intimate connexion between the abundance of food and the extent of crime, sickness, and mortality; between a low and moderate price of food and the financial and commercial prosperity of the country; but notwithstanding this he found a law existing, the direct tendency of which, nay, the very object of which, is to prevent an abundant and uniform supply of food, and, consequently, to induce, particularly at periods when its operation is more distinctly experienced, to an increase of crime, sickness, and mortality; to a derangement of the finances and commerce of the country; and to a general disorganization of the peace, credit, and welfare of the nation. Mr. Villiers supported his views by the evidence of the best authorities, medical, economical, and political. His views on the physical effects of scarcity are sustained by the evidence of many of the highest authorities of European celebrity; he relies on the evidence of such men as Dr. Hawkins, M. Lamais, Dr. Allison, Dr. Grattan, and Dr. Hunter; from the latter high authority he quotes the following evidence:—

"An extensive practice for more than twenty years, almost in the very focus of typhus localities, has given me an opportunity of seeing that disease in all its various degrees of malignity. There are numerous predisposing causes, such as impure air, crowded neighbourhoods, want of cleanliness, and so on; but all these sink into insignificance and unimportance when compared with the great monster predisposing agent—I mean a scarcity of nutritious food; and it will be said, if other causes have slain their thousands, this alone has slain its tens of thousands. My experience justifies and warrants me in affirming that where the people have insufficient nourishment, there typhus fever manifests itself with all the horrors of a depopulating plague. Witness Ireland. No sooner does a year of scarcity appear, but this fell destroyer of the human race shows itself, carrying off thousands; and this affirmation will, I am sure, be confirmed by any medical practitioner who has had the misfortune to see, as I have, whole families carried to their weary bourne by this scourge of the human family, brought into existence and activity by the physical wants of the people. I happen to know a family of nine persons, seven of whom died in one short month, and all by the fell destroyer, typhus, and this, too, in an agricultural district, where the air was as pure as the morning breath of heaven, and where contagion was impossible, as the farmhouses were at a considerable distance from each other. But in the same district, where the families had sufficient food, and of a good quality, fever was wholly unknown."

But to the whole of the evidence and arguments which Mr. Villiers urged against this law the tone of the Government reply may be well expressed by Mr. Gladstone's words: "He (Mr. Gladstone) believed, that, with the sense of Parliament strongly in their favour, they were able to take their stand upon the law as it was." (Cheers from the Ministerial benches.) But Mr. Gladstone claimed peculiar merits for the modification of the law as introduced by the present Government in 1842. We will not deny that that modification had a tendency towards improvement; we say a tendency, because we believe that in

practice it will not be found to differ in any material degree from the old law. It must, however, be admitted that any argument that can be urged in favour of that modification, such as it is, that the arguments that were urged in its favour when passed, it good for so much as this modification affects, must be good for a great deal more. The modification in principle was based on all the arguments and reasons which suppose the greatest plenty the greatest blessing, the most extensive commercial intercourse, and consequent increased demand for labour, a great boon to all classes. But though that modification of the law was urged and supported on these broad principles, yet practically it was very little altered in its stringency, and in no way in its unwise and anti-commercial character. But Mr. Gladstone claims for the operation of this modification of the law the merit of rendering prices steady and preventing fluctuations:—

"It was customary to complain of the great fluctuations of prices under the old law. They had recently passed through two very critical years, in which there had been great changes in the harvest, and yet could any one say that these had been years, upon the whole, of unsteadiness in price? There had been deviations to a certain degree; but upon the whole there had been great steadiness of price, and even in the present year there had been a very remarkable steadiness of price. His right hon. friend (Sir R. Peel) did, when introducing his recent changes, state the prices between which he could wish corn to range; and stated that he should wish it to range between 54s. and 58s. a quarter. Now, the law of his right hon. friend came into operation in April, 1842, and at that time the price of corn was 55s. 10d., being within the limits; and in 1843 the average price was 53s. 1d.; but that was a year of abundance, and the farmers did not greatly complain. From the commencement of the present year up to the 15th of the present month, the average price had been 54s. 6d. Thus it singularly happened that two out of these three averages, under the operation of the law, had been within the two limits which his right hon. friend had affixed. Therefore, so far as regarded the steadiness of price, no complaint could be made against the present law. Within the last few weeks, the steadiness of price had been remarkable in a most peculiar degree."

We believe with Lord John Russell, that Mr. Gladstone has entirely mistaken the effects of two good harvests for those of the recent modification of the law; we believe it can be proved, in a most satisfactory way, that the same effects would have occurred had the law remained unchanged. Not only Mr. Gladstone, but Sir Robert Peel also, referred to the comparative steadiness of price during the last year, and to the fact that, though prices are moderate, yet that importation to a small extent still continues, as an evidence of the great advantages derived from their change in the law. We will, for the purpose of testing this, compare the prices and imports in similar circumstances under the late law and the present. From 1828 to 1831 were years of great scarcity and large imports. In 1831 and 1832 the harvests were much better, and prices became moderate. At a more recent period, the years 1839 to 1842 were of a similar character as those from 1828 to 1831; similar results ensued. In 1842 and 1843 we were blessed with abundant harvests, and prices have since been moderate. There is such a striking similarity between these periods, that it will be advantageous narrowly to compare them in order to form a correct judgment of the influence which can be fairly attributed to one law or the other.

The quantity of foreign wheat entered for consumption was, in

	Qrs.		Qrs.
1828	842,950	1839	2,521,527
1829	1,354,220	1840	2,024,848
1830	1,701,885	1841	2,340,898
1831	1,491,631	1842	2,667,944

In 1831 and 1832, and again in 1842 and 1843, the harvests were good and prices at each period became moderate, and the importation of foreign grain almost ceased. We will now compare the average prices of wheat at each period, under nearly the same circumstances, from the harvests of 1843 to the present time, with those from the harvest of 1832 to the corresponding period in 1833. The following were the weekly averages:—

	s.	d.		s.	d.
September 7, 1832	58	0	corresponding week 1843	54	2
October 5	54	7	"	49	5
November 2	53	3	"	50	5
December 7	54	7	"	51	1
January 4, 1833	52	6	"	49	10
February 1	53	3	"	52	3
March 1	52	2	"	56	2
April 5	53	10	"	56	5
May 3	53	5	"	55	4
June 7	52	10	"	55	6

From this statement it is evident that in similar circumstances the late law, which was admitted by all to produce great fluctuations, might have been referred to in June, 1833, as a pattern of steadiness of prices; as having succeeded most effectually in preventing fluctuations, as much, or even more so, as the present law can be referred to for that purpose now. In 1833, the law of 1828 had yet to be tried with a succession of good harvests, followed by those of 1838, 1839, and 1840, before its destructive character was fully known, or at least admitted. And now the country is doomed to wait for a corresponding experience before the same character of the present law is to be admitted. We ask, was there one principle in the old law which wrought mischief and disaster, that does not equally pervade the present law? True, the scale of duty is now limited to 20s., instead of having no limit before; but for all ordinary practical purposes a duty of 20s., with a price of 50s. per quarter or under, is as prohibitory as if it were ever so high. A duty of 20s., and 10s. charges, would suppose wheat to be purchased at 20s. a quarter abroad, in order to render a transaction possible, when the price here is 50s. Then, in the event of scarcity: does not all the inducement exist now to hold back supplies, to profit by a constantly lowering duty, that actuated our merchants in 1838 and 1839? There is, in fact, no essential difference in the two laws. There is no guarantee in the law of 1842 more than in that of 1828 against a recurrence of all the disasters and misfortunes of 1839 to 1842, when similar circumstances and causes came into operation.

There are many other points in the speeches of Mr. Gladstone and Sir Robert Peel of the deepest importance to the best interests of commerce and the general condition of the country, which it will be our duty to examine separately, in order to show the fallacious and erroneous reasoning on which these laws are now sought to be maintained. We were, however, prepared for every opposition which ingenuity could frame from the Ministerial benches. Not so from those opposite; or, if we anticipated any opposition from that quarter, we certainly hoped to hear intelligibly the grounds for it. We have read

with the deepest regret the speech of the noble lord the member for London, not only because he felt it to be his duty to withhold his support from the motion, but, also, because we think, as the professed leader of the Liberal party, he has placed himself, and in some measure his adherents, more and more in a false position in respect to this question, and the great body of their general supporters in the country. The noble lord has hitherto maintained his advocacy of a fixed duty on the grounds of revenue, and of special burdens, if they could be proved to exist. With a redundant revenue, that reason is no longer valid; and, from the repeated refusal of the House to inquire into the existence of special burdens, it may fairly be assumed that no faith is felt in their existence. On this occasion, therefore, the noble lord appears to have abandoned both these grounds of his former opposition to a perfect application of the principles of Free Trade to the article of corn, though he still says that "the time will come when the principles held sound as applied to other interests will be held sound as applied to the growers of corn."

Lord John Russell frankly and freely admits all the most serious consequences of the present state of the law. No right hon. member knows them better, or has described them from time in more vigorous terms; nay, his mind has become so familiar with them, that he expresses his surprise that Mr. Gladstone should venture a doubt on the subject; he almost thinks that Mr. Villiers had even taken too much trouble to prove what could not be denied.

"I will first notice the arguments of the right hon. gentleman. He began his speech with throwing some kind of doubt upon that part of the speech of my hon. friend—of which I thought the only fault was, that he was endeavouring to prove what was abundantly clear to every sensible mind—namely, that cheapness and plenty were great blessings, and that dearth and scarcity of food were great evils. My hon. friend pointed out that these evils were the cause of the increase of crime, disease, and death; and that fever and famine were the consequences of the high price of food. I should not have thought that any person would doubt that those results would follow from such causes. It really was saying no more than what common sense inspired, and what was daily read in our prayer-book, that cheapness and plenty were blessings for which we ought to be thankful."

What a serious admission! what an awful responsibility is thus made to rest on a legislative assembly, and especially on every individual member, who is not only a party to the enactment of such laws, but who is not a party to every possible means of abrogating them! Without this distinct admission of the noble lord, we would not have dared to have inferred such to be his opinions. What state policy, what class interest can possibly excuse a system from which flow increase of crime, disease, death, fever, and famine? And what is the only ground stated by the noble lord for his opposition to Mr. Villiers's motion?—

"What would you reasonably expect from a sudden revolution—from a state of considerable protection to one of entirely Free Trade? The first consequence, I apprehend, would be a great change among all concerned in agriculture: the landlord and the farmer would be doubtful how far their capital would be employed to profit. The effect would be a diminution in the employment of labour; and as long as that lasted there would be severe suffering. There would accompany it, I should think, a much greater importation than would be consistent with the advantage of the merchant. So important a change would give rise to extraordinary expectations; and the result would be, not a state of cheapness and plenty, but a sudden glut, occasioning much distress."

Now, can the noble lord seriously believe, with the information that he possesses on this subject—and, we may add, with the knowledge which the mercantile and agricultural public now possess on this subject—that any such consequences could attend a repeal of the Corn Laws? Can the noble lord seriously think that, with the rapidly-increasing population and prosperity of the continental countries—with the supplies which it is now apparent are required by France, Belgium, and Holland every year from the corn countries of northern Europe—the price of foreign wheat could ever be supplied below the rates at which English wheat sold in 1835 and 1836, or in 1822? than at which periods it is in parliamentary evidence that the labouring population of this country were never in so comfortable or so prosperous a condition. But the noble lord thinks "the landlords and farmers would be doubtful how far their capital would be employed to profit." Now, is not this, in a remarkable degree, one of the greatest evils arising out of the present state of the law, or out of any state short of a final settlement of it? The noble lord very justly says:—

"The honourable gentleman said that we should maintain the law on the ground of stability. I do not think it has any claim on that ground. It appears to me that there is something inherently vicious in the system of protection which requires the interference of the Legislature from time to time. The right honourable baronet (Sir R. Peel) must be aware that the present law is at variance with all those principles which he has so frequently stated ought to regulate the affairs of this country. The right honourable gentleman cannot be ignorant of the defects of this law. The principle he stated in 1842 would be fatal to the present law."

And again:—

"I do not think the existing law suited to stormy times. I do not expect that any vote of this House, however large may be the majority, will put an end to agitation upon this subject. I think the present system so unreasonable and so unwise, that it is impossible to expect that there should not be agitation against it. I do not believe that any settlement of the question will be come to, until the interest in land, the landowners especially, are exposed to consider this law as really unfavourable to the interests of the country, and therefore unfavourable to them as a class."

As far, then, as instability is concerned, as far as uncertainty for the landlord and tenant is concerned, and the impossibility of that uncertainty being removed, nothing could be worse than the existing system. And whence does the noble lord look for the overwhelming glut that affrights him from putting an end to a system from which he admits such serious evils arise? For four successive years, from 1838 to 1842, we took every quarter of wheat which the continents of Europe and America could spare, not at the ordinary prices of 45s. to 55s. per quarter, but all that we could induce them to part with at the extraordinary prices of 65s. to 75s. per quarter, creating scarcity and famine in other countries, by outbidding them for their own produce; and all this resulted in a quantity not exceeding 10 per cent. of our annual consumption! Had the noble lord the Secretary for the Colonies expressed so visionary a fear, we would have had less difficulty in tracing the source of his alarm. But why does the noble lord shrink from a confidence in

his own principles and opinions? No member of either House has from time to time shown more clearly and distinctly the necessary connexion between the prosperity of agriculture and that of commerce and manufactures. And even on this occasion, this intelligible principle was strongly expressed by the noble lord:—

"It is not mere words to say that there can be no better measure of the prosperity of the landowners than the prosperity of the whole nation. If manufactures are made to flourish, the landed interest need not fear that it will be long behind in the race of success. If commerce and manufactures are prosperous, the landed interest is sure to flourish also." (Cheers.)

But are all these principles and advantages to be bound up by a fixed duty of 4s. or 5s. or 6s. per quarter? We agree with the noble lord that the smallness of the duty and the fixity which he proposes are great advantages over the present law; but are all the great principles on which these advantages rest to be confined to a limited and arbitrary application of them? Was an 8s. duty necessary three years since, and would a 5s. duty be sufficient now? and will a 3s. duty be enough a year or two hence? These are arbitrary distinctions and exceptions to principles which cannot be maintained. And again, with the present amount of public enlightenment on these subjects, with the strong conviction that is evinced of the impolicy and injustice of any restriction in the supply of food (which will only be strengthened by the admissions frankly made in the noble lord's speech, and which we hold to be altogether inseparable from the subject), can the noble lord flatter himself that his 5s. or 6s. fixed duty, if passed to-day, would be a final settlement of this question? It would, as indeed the present law, however unreasonable and unwise, will probably do, last as long as we have good and abundant harvests; but the first period of scarcity, the first recurrence of one or two bad harvests, would make it as impossible to maintain the one as the other. The conviction of this, which has strongly possessed men's minds, would only prolong the present state of uncertainty, which is equally detrimental to agriculture and commerce. And again, can the noble lord really think that with a protection of 5s. or 6s. a quarter agriculture would be safe, while without it it would be so much endangered, that rather than hazard the consequences, he will not aid in abolishing a system which produces the fearful, the awful results which he acknowledges as the necessary attendants on the present system?

Lord Howick long entertained a preference for the plan advocated by the noble member for London; but when it became a matter of necessity to choose between the existing system and a *Free Trade*, he has not hesitated to follow up his avowed principles, and to advocate a practical and immediate application of them, in preference to countenancing either actively or passively the present "unreasonable and unwise" state of the law. The noble lord (Howick), in a speech replete with sound principles and confidence in their practical and immediate application, gave the following warning to the House, which we recommend to the careful perusal of all who still have doubts on the subject:—

"He would ask the House to beware how they persevered in the present system. The hon. gentleman who had just sat down seemed to treat with some derision the notion that this was a question of rent in which the farmers and the labourers had no stake. He (Lord Howick) told him that it was a question of rent, and of nothing else. He (Lord Howick) could not do otherwise than wish well to the land, because all his interests were involved in it; but he said that, if those who were connected with the land looked well into the matter, they would see that even upon the narrow ground of self-interest they ought to put an end to restrictions. Let them look at the continued succession of disappointed hopes of agricultural prosperity which had mocked their expectations, and the repeated series of agricultural distress with which they had been afflicted. He was persuaded that their own interests required an alteration of those laws; but, whatever might be their own interests, he was persuaded it was their solemn duty not to maintain them. (Hear, hear.) We knew that by Divine authority there was a malediction on those who withheld from the labourer his hire, and his persuasion was that the guilt was as great in the legislator who should maintain these laws as upon the private and individual extortioner, who deprived the labourer of his wages. In that guilt he, for one, would not take a share, and he called upon the House to beware how they lent themselves to it. All experience proved that, if justice were too long withheld, more than justice would be demanded, and he thought there were significant symptoms that we were now not far from that end. It was true the Government was all-powerful in that House, and in the constituency by which that House was returned; but he was a friend to the political institutions of the country, and should look with alarm at any sudden or violent disturbance of those institutions, and he warned the House, that their foundations were sapped from the moment when the persuasion became general that those in whose hands power was placed perverted that power to their own benefit, to the oppression of the rest of the community."

PROPOSED EXHIBITION.—A correspondent in Wiltshire writes:—"It struck me the other day, that were a pasteboard representation of one of our Wiltshire cottages, showing all its hideousness and want of accommodation, to be made and sent up to the Bazaar at Covent-garden, and were one of the most miserable of our agricultural labourers, with wife, children, and rags, to be sent up with it, a great sensation would be produced. It would not occupy much space, 14 feet by 10 being a very common size, and the height not above 7 or 8 feet. It might be used as a stall, the inmates to sell rush-mats or some article of that kind, such as they do manufacture and sell at home. If you think this a feasible scheme, let me have a line from you, and I will look out for a pattern both of cottage and inmates."

REGISTRATION.—"It is an ill wind that blows nobody good" is an old adage, but still a true one, and is now in the course of exemplification in Manchester. Reference is made to the demand that now exists for small properties sufficient to qualify parties for voting at the next election for South Lancashire. Detached cottages, therefore, and which for some years past have been totally unsaleable, are now sought after by both the Free-Traders and Monopolists with a zeal that is quite ludicrous, and, where these can be obtained without any chief rent upon them, extravagant rates are paid. The late defeat of the Free-Traders has given a zest to the coming registration that can hardly be conceived, whilst the narrow escape of the Monopolist candidate has also infused astonishing vigour into their proceedings. If all parts of the county are equally diligent with the Manchester division, some thousands of new voters will be placed on the register for 1844-5.—*Leeds Mercury*.

ANALYSIS OF VOTES ON MR. VILLIERS'S MOTION FOR A PERIOD OF THREE YEARS.

Members who voted 1844, for the first time:—

Armstrong, Sir Andrew	Hutt, William
Barclay, David	Leveson, Lord
Bell, R. M.	Matheson, James
Bernal, Captain	Mitchell, T. A.
Bouverie, Hon. E. P.	O'Connell, Maurice
Bright, John	Paget, Lord Alfred
Browne, Robert Dillon	Pattison, James
Childers, J. H.	Rawdon, Colonel
Clay, Sir William	Rutherford, Andrew
Colebrook, Sir Thos. E.	Shelburne, Earl of
Dundas, David	Shell, Right Hon. R. L. (pair)
Dundas, Frederick	Smith, John Abel
Dundas, Hon. J. C.	Troubridge, Sir E. T.
Fitzwilliam, Hon. G. Wentwh.	Warburton, Henry
Granger, Thomas C.	Wood, Charles
Guest, Sir John	Wrightson, W. B.

	1842.	1843.	1844.
Total number of members who voted against Mr. Villiers's motion, including Tellers	395	383	330
Number of members who voted for Mr. Villiers's motion	92	125	126
	303	258	204

The first motion of Mr. Villiers for "total and immediate" repeal, was made in 1842, the majority on which division was 303; in the course of two years that majority has been reduced to 204, showing a clear reduction of the majority against the motion of 99 votes.

On the first division in 1842, the number of votes recorded in favour of Mr. Villiers's motion was 92; in 1844, 126, an increase of 34 votes on the division.

In addition to 126 votes recorded on the last division, there were 28 members absent, from various causes, who have voted with Mr. Villiers in 1842 or 1843. The present number of Mr. Villiers's supporters in the House of Commons stands as follows:—

Voted	126	New votes	27
Absent	28		
Paired in favour	11		
	165		

In addition to the above, it may be stated that 11 members voted against Mr. Villiers, who had been memorialized by actual majorities of their respective constituencies to vote in favour of the motion.

REGISTRATION OF VOTERS IN SCOTLAND.

[We are glad to see that our Free-Trade friends in Scotland are zealously working the Registration. The following instructions have been issued by the Central Committee of Edinburgh to the various associations, and advertised in the papers. As the registration law for Scotch boroughs and counties differs in many particulars from that of England, we publish these instructions for the benefit of our numerous subscribers in the north, who may find this information useful or necessary.]

Numerous applications for information regarding details connected with registration matters having been made to the Council of the National Anti-Corn-Law League, from districts in Scotland where no organization exists by which attention is given to the registration of electors holding Free-Trade principles, a committee has been formed in Edinburgh for the purpose of affording advice and information, without expense, to the friends of Free-Trade, on all matters connected with the registration of electors.

As the 20th of July is the latest day on which claims for enrolment can be lodged, it is earnestly requested that, in those localities where no committees exist, ready to receive and support the claims of parties holding Free-Trade principles, committees should be immediately formed, and the business of registering Free-Trade electors commenced with the least possible delay.

As a guide to parties requiring information regarding their rights and duties, in reference to claims for enrolment under the Reform Act, the following abbreviate has been prepared, containing the import of the more important provisions of the statute:—

1. PROPRIETORS IN BURGHS.

1. All persons are qualified to be registered as electors who, not being subject to any legal incapacity (as peers, minors, women, aliens, lunatics, &c.), are the "true owners" of "any house, warehouse, counting-house, shop, or other building, within the limits of the burgh, of yearly value of £10.

2. But such persons must have resided for six calendar months previous to the last day of July, either within the burgh, or within seven statute miles thereof.

4. Joint proprietors are entitled to be registered, if possessing a share or interest in the joint property to the value of £10 yearly. But in this case, it is necessary that the claimant be in the occupancy of the premises.

5. Although the property be held only in life-rent, whether by the claimant or by his wife, such qualification is sufficient.

6. A proprietor is entitled to claim immediately after acquiring his property; and the evidence to be produced is a charter, or disposition, or indentment, or stamped minute, or missive of sale, in favour of the claimant or of his wife, or in favour of trustees vested for the claimant's or his wife's benefit.

II. TENANTS, OR OCCUPANTS IN BURGH.

7. All persons are entitled to be registered who, not being subject to any legal incapacity (as peers, minors, women, aliens, lunatics, &c.), have occupied premises of any description, as above mentioned, within the Parliamentary boundaries of any burgh for twelve months previous to the 31st of July, at a rent of £10 or upwards.

8. Residence for six months is necessary, as in the case of owners, &c.

9. It is not necessary that the occupancy shall have been of the same premises during the whole year; but continuous possession of some premises of the value of £10 a year is requisite; and this continuous possession should be carefully described in the claim, and supported by evidence. The claimant must be in the occupancy of premises of the requisite value at the time of claiming.

10. The requisite value of £10 may be made up by the occupation of premises rented from two or more landlords; and houses, shops, stables, workshops, lodgings, &c., may be joined together to make up the requisite amount of £10; but they must all be carefully described in the claim, and supported by evidence of value and occupancy.

11. Occupancy of land alone within the bounds of a burgh is not sufficient. There must be a house or other building held along with it from the same landlord.

12. The assessed taxes payable "in respect of the premises" (i. e., the window-tax on dwelling-houses, which is the only tax coming within the terms of the act), down to the preceding 6th of April, must be paid on or before the 20th of July, which is the last day on which claims can be lodged.

13. Joint tenants, having each an interest of £10, are entitled to be registered. A joint lease, however, is not enough; there must be joint occupancy. But the occupancy of a company is, under the act, held to be the occupancy of all the individual partners.

14. Lodgers, qualified by paying rent to the value of £10 a year, although in weekly, monthly, or quarterly payments, are entitled to be registered; but the portion of the house occupied by the lodger must be proved to be worth £10, irrespective of furniture, attendance, &c.

15. Tenants become disqualified by removal, and it is necessary for them to claim again to be enrolled on their new premises.

16. No person is entitled to be registered in any capacity, who has been in the receipt of parochial relief within a year previous to the last day of July.

17. Claimants should, along with their claims, lodge their receipts for the window-tax, if exigible on the premises for which the enrolment is sought, to show that it has been paid. They should likewise produce evidence that the value of the premises is £10, by lodging the receipts for the rent, or the receipts for local taxes assessed according to the rent, or such other sufficient evidence of value as they may be able to produce.

18. Claimants for enrolment, whose claims are to be objected to by any opposing party, at the ensuing registration courts, must receive notice by letter that their claims are to be opposed. These notices must be given not later than the 10th of August. When such notices are received, claimants should be careful to attend the registration court, either personally or by an agent, with proper evidence of value, occupancy, &c., in support of their claims.

Parties wishing farther information are requested to apply, by letters containing specific queries and the necessary explanations, and they will be promptly answered by the committee. Letters to be addressed to Andrew Fyfe, Esq., S.S.C., 15, Leopold-place.

Edinburgh, June 29, 1844.

AGRICULTURE.

"THE HOME OF THE RICK-BURNER."

Such is the title which "Punch" has appended to the most graphic and heart-rending picture of human misery it is possible to conceive—the interior of the cottage of an unemployed agricultural labourer. The dwellers in towns may deem it overdrawn, but we know its literal, its fearful accuracy. By the wretched pallet—placed on the brick floor—of his dead or dying wife, sits the stern and stalwart peasant, to whom the rent-raising law of monopoly has denied employment. The only furniture of the hovel consists of a three-legged stool by the side of the dying mother, on which stands a broken teapot; the remnant of a wooden chair; the open—and, oh, bare and foodless—cupboard; and the poacher's gun! With his chin resting upon his right hand, his elbow on his knee, his left hand clutching with convulsive energy his biggest, half-naked, and bare-foot child, while a younger one clings to him, and the two youngest, clasped in each other's arms, are crying by his side, sits the hardy peasant, looking intently on the wasted frame of the mother of his children. His sinewy form, his lean, hard features, the pallid, emaciated countenance of his wife, and, above all, the starving aspect of his four shivering infants bespeak the extremity of his and their destitution. Such is the home of the rick-burner. In one glance the history of incendiarism is told, and the tale goes home to every human heart. Would that each monopolist legislator could see that fearful sketch constantly before him, and scared as his mind is by the lust of power, warped

as it is by prejudice, and wrapped as it may be in aristocratic selfishness, we do not believe that he could long resist that mute pleading against the atrocious monopoly of food. And this is no ideal picture; no horrid sketch, the offspring of some distempered fancy. Oh no, in fertile and wealthy England, in the chief kingdom of the most powerful and most civilized empire of the world, there is, at this moment, scarcely a rural hamlet where some—ay many—peasants' huts are not to be found which might have been the originals of that sketch. There are now hundreds and thousands of agricultural labourers without employment—one called at our farm the other day, who during the last sixteen weeks had not obtained ten days' employment—there are thousands and tens of thousands of men working for 7s., 6s., and 5s. a week, and from whose miserable pittance deductions are made whenever the weather or the farmer's arrangements may render their services for a day or a half day of little use. This fact is clearly established. Such a state of things is proved to exist in the east of England by the evidence of the *Times* reporter, and the reports of other newspapers, by the admissions of the landowners, the magistrates, and the residents of that side of our island; in the west of England the labourers themselves have assembled in public meetings, and in simple and pathetic language have proclaimed the existence of the same evils there. This is enough to account for incendiarism, or any other of the dreadful crimes ignorant men commit when they are rendered criminal by the extremity of suffering and despair. We stop not now to inquire whether the particular way in which legal charity is afforded under the actual poor-law be an immediate cause of some, or all, or any of the incendiary fires in Suffolk and Norfolk, as the *Times* asserts and the *Chronicle* denies; but we know that the condition of the great mass of the farm-labourers is so destitute, and apparently so utterly hopeless, that we seek for no secondary or subsidiary cause. And what aggravates this evil is the fact, that all this misery, this, for the present hopeless misery, is the gratuitous infliction of our dominant landed aristocracy.

Lord Ashburton—that Alexander Baring who has made a fortune of millions by commerce, and now uses his wealth and his influence to subject commercial industry to the yoke of a class of the meanest monopolists that ever crawled upon the earth—tells us, or rather he tells the House of Lords, "that labour is so redundant in this country that the labourer is reduced to that amount of sustenance which will only keep him alive. This was a misfortune which none of them could avoid. This was unfortunately the condition of this country, and of the greater part of Europe." In this speech there is a mixture of truth and falsehood, of fallacy and error, which proves that, if our aristocratic legislators are not very dishonest, they must be entirely ignorant of the real circumstances of the people who occupy and dwell on the very land they own.

It is true that the agricultural labourer is "reduced to that amount of sustenance which will only keep him alive," and it is unhappily too true that such is the condition of the majority of our peasantry; but it is the very reverse of truth to say that "this is a misfortune which none of them [the Peers] could avoid;" and it is utterly false to attribute the low wages and want of employment, and irregular employment of labourers in husbandry, to redundancy of labour.

Why are our labourers standing idle in the market-place, or brooding over their undeserved miseries in their wretched homes? Why do our farmers screw and pinch their workmen, and employ as few of them, and for as short periods as possible, while their farms are half-cultivated, undrained, unimproved, and, in many instances, rapidly deteriorating? Is it true that our lords and legislators cannot prevent these "misfortunes?" The answers to these queries are short and decisive. Lords and legislators alone interfere to render these "misfortunes" permanent. The labourers are unemployed because the capitalists—the tenant-farmers—who should set them to work, are in a state of uncertainty and insecurity; because the business of farmer has been rendered, by erroneous legislation, one of "hazardous speculation." The farmer cannot reckon that anything relating to his business will turn out as he calculated it should turn out, except his rent and taxes. These, his burdens, and these only, are fixed; all else is fluctuating: a dry spring or a wet harvest, or especially a year of abundance, may displace all his expectations and leave him with incomings woefully diminished, to struggle with obligations contracted upon calculations very different from actual results. The farmer is not different from other men: he regrets that he cannot properly cultivate his farm, or fully employ the labourers; but necessity has no law, and he must pay his landlord or retreat himself to the workhouse or the gaol. It is the mere instinct of self-preservation on the part of farmers, which in some years compels them to discharge their labourers. And, even in the most favourable

years, he can undertake nothing but the most moderate plan of culture, for though he may lay out his money, he has not the slightest security that he will be permitted to win it back again. He may sow, but his landlord alone can be sure of reaping the fruits of the tenant's capital and labour.

There is employment, and profitable employment in the rural districts for every agricultural labourer in the kingdom, if the business of husbandry could be only placed in a natural condition; could be it relieved from its boasted "protection." But our lords and legislators stand between the peasantry and employment. The lawmakers want high rents and subservient tenants; they want barbarian sports and feudal services; and these things are incompatible with such a high state of husbandry as would give full employment to the farm-labourers. On the landowners then, the monopolist landowners, lies the burden of the present suffering of the peasantry. They could remedy the evil, they could displace misery and want from the peasant's cottage, and give him instead, joy and food—food in return for honest, invaluable services. They could put an end to crimes which arise from destitution and despair, by a simple act of ordinary justice; by repealing the Corn Laws they could untrammel the farmer, and make the labourers independent; but though they have not a word to say in defence of their monopoly, they refuse to abandon it. On their heads be the consequences of their own iniquity.

And so obvious are these truths to any one who goes amongst the rural population with ordinary power of observation, that every inquiry into these things, by whomsoever instituted, and with whatever objects undertaken, leads to the same conclusion. Thus we find in the very last letter of the *Times* correspondent from Suffolk and Norfolk, that such views force themselves irresistibly upon him. He says that in Norfolk, upon the best lands, the farmers are men of limited intelligence and narrow prejudices, jealous of employing more than their share of labour, like Lord Ashburton, and looking upon the working men as "redundancies" they are compelled to keep "rather than as men upon whose toil they live." And we know that such occupiers are not confined to Norfolk. But, says the reporter, "the farmer is not without some excuse for his thriftiness, and some ground of complaint. His produce brings a lower and lower price, whilst his rent and expenses continue the same." And this writer cannot resist the conclusion that the Corn Law is the main cause of this wrong endured by the farmer; for he says—"Without entering into a Corn-Law argument, the facts of his complaint are deserving of attention." Now, what are the facts? The reporter says—"I heard an old farmer the other day say, at Ixworth, that he had worked for eight or ten labourers more on his farm, but he could not afford to employ them with his wheat selling at 26s. a coomb." This man had of course taken his land in a full reliance upon the monopoly price of 32s. a coomb (a sack) promised by the Corn Laws, or some 12s. a quarter more than he has actually obtained. In such circumstances a farmer must of necessity be distressed; and such distress is the direct consequence of the Corn Laws. It is said that, on the average land of Suffolk, twenty-eight bushels, or three quarters and a half of wheat to the acre are grown, and that the rent of such land is from 20s. to 25s. an acre; and that this would reduce the farmers' receipts upon every acre of wheat some 42s. below the amount he had calculated on receiving, and which his landlord and his landlord's law told him he should receive.

The reporter says the farmers attribute this fall in the price of wheat to Sir Robert Peel's Corn Bill, but declines himself to enter into that question, saying, however, "The fact is still the same,—there has been a diminution of the farmers' profits equal to double their rent. THEIR RENT REMAINS THE SAME; the tithe rent-charge has increased from 1s. to 2s. an acre, and they have the income-tax to pay. A farmer at Ixworth told me it was not now worth his while to fatten pigs to sell at 4d. a pound. This has compelled them to be niggard; and I am assured on the best authority that very many small farmers in Suffolk and Norfolk, who have not the capital to meet this pressure by enterprise and improvements, and better cultivation, are insolvent, and cannot, if they would, employ more labour." Here we have the root of the evil, which is, that farmers have taken farms, relying upon the Corn Law to give them a high price for scanty crops. By the systems they adopt they are assured of permanently scanty crops, but the high price no law can at all times secure to them. Hence, they are occasionally, as now, in a state of grievous suffering, which is fearfully reflected upon their labourers. The Corn Laws are entirely answerable for this state of things; and that fact is every day being brought so home to the farmers, and especially to the labourers, that the monopolist landowners will find when they assemble next year in Parliament that free trade in corn will have become an inevitable necessity.

FREE-TRADE AGITATION BY MONOPOLISTS.

The following extract from the letter of an intelligent correspondent gives an account of the origin of the LYNX.

LYNHAM LABOURERS' FREE-TRADE MEETING, which signally confirms the opinion we expressed from the first, that the only effect of the Pro-Corn-Law agitation would be to diffuse more rapidly Free-Trade opinions. See how naturally this has happened in North Wiltshire. Our correspondent says:—

"As the meeting at Lynham has attracted some notice, I drop you a line stating the circumstances in which it originated, as they have not been mentioned in the published report.

In some of the neighbouring parishes petitions were got up in favour of the Corn Law; and, I may state, in several instances labourers were threatened if they refused to sign; while in some others their names were attached without their knowledge.

"To enlighten the farmers, labourers, and others, papers were distributed, ASSIGNING REASONS FOR MAINTAINING THE PRESENT LAW. These occasioned much interchange of opinion among the villagers. The result was that a person signified his intention of publicly replying to the statements contained in these papers, which becoming generally known—all in a quiet way, without the use of any handbills, &c.—more persons came together than the place of assembly in Hillmarton parish could accommodate. The speaker did his work well—forcibly and clearly showing the erroneousness of the statements that had been circulated among them, and leaving one settled impression on his audience, that the Corn Laws are an unmitigated evil. This meeting broke up, after passing a resolution to the effect that another should be held in the neighbouring parish of Lynham.

"Such is the history of the meeting that has attracted no little attention. This evening (July 2) another is to be held at Spurt-hill, and speedily another at Brinkworth—all originating from the circulation of a tract in favour of the present Corn Law!

"There is one other point I wish the reporter had taken notice of, viz., that after the chairman put the questions to the labourers at the Lynham meeting as to the amount of their wages, &c., he also asked them, 'Do you think the farmers can give you higher wages in the present state of things?' To which they instantaneously responded from all parts of the meeting, 'No, they can't, they can't; 'tisn't their fault.' The omission of this is to be regretted, because this distinct and manly avowal as to the inability of the farmer to give them more money would have pacified the feelings of some farmers who were not present, but who saw the published report.

"And as Mr. Hennege, M.P. for Devizes, has said that though he would not countenance such meetings, yet he was glad that one had been held, for, till he saw the account, he did not know wages were so low, and that he would make his tenants give more; farmers, from this circumstance, may come to regard such meetings as tending only to raise the labourers' pay, which impression would be unfavourable to their conversion to Free-Trade meetings."

We will next week endeavour to give this monopolist member for Devizes an elementary lesson in political economy, from which it will be obvious that he cannot "make his tenants give more wages" in any other way than by supporting the immediate abolition of all monopolies, especially the Corn Laws.

A LESSON TO ACRED MONOPOLISTS.

THE LYNHAM LABOURERS' MEETING.

The meeting of the agricultural labourers on Lynham Green, in North Wiltshire, is so remarkable an incident in the history of the decline and fall of the corn monopoly that we give more copious extracts from the report of its proceedings than our limits usually permit. The *Wiltshire Independent* says:—

"In pursuance of a resolution passed at Goathere, in the parish of Hillmarton, on Thursday week, a public meeting took place on Lynham Green on Tuesday evening, at half-past six o'clock, to consider the effect of taxation, and more particularly of the bread-tax, on the industrious classes. A few days previous to the meeting notice of it was given by handbills, and such was the interest excited that, had it not been for the storm which was threatening for nearly an hour before the time of meeting, and which burst forth in all its fury just at its commencement, an immense assembly would have been present. As it was, nearly 1000 persons, chiefly agricultural labourers, with a good many farmers among them, gathered at the spot, and, spite of the useless pelting of the storm, stood their ground during the whole proceedings. A platform was erected on the green under a wide-spreading tree, which afforded shelter to a good many. A better conducted or more orderly meeting has rarely been witnessed."

With a courage and consistency worthy of imitation by the clergy, a Dissenting minister, the Rev. Mr. PILGRIM, presided over the assembly, and, while ably expounding the iniquities of the Corn Laws, made these judicious remarks:—

"There might have been an impression that this meeting was convened to set the labourer against the farmer, and the farmer against the labourer. But they had no such design in view, and he believed the meeting would have no such tendency. (Hear.) One thing was manifest to every man who had eyes to see or a heart to feel, that a large amount of distress existed in the country. The farmers said they were unable to give higher wages, and he believed them; the labourers said they could not even obtain a sufficient quantity of food on the wages they now received, and this no one could doubt."

Mr. ARKELL, a tenant-farmer, well known for his outspoken advocacy of Free Trade as essential to the best interests of agriculture, and whom we have before mentioned as the author of the Royal Agricultural Society's Prize Essay on Draining, then moved the first resolution, and, in so doing, said:—

"With regard to the labouring class, he understood that the labourers in the neighbourhood only received 7s. a week. (A voice at a distance, from the other side of the hedge, 'It's a lie.') Mr. Arkell: 'Then come forward and prove it;' the objector not answering this challenge, Mr. Arkell proceeded: 'To my knowledge, on many farms within six or seven miles of Stratton, only 7s. a week is paid. (Several voices, 'Yes, true, and no one can deny it.') He knew it to be the case in many parishes. He knew a parish where able-bodied men were receiving 1s. a week for working on the roads, and married men with families, 6s., to keep them from the workhouse. (Cries, 'Hear, hear, and cry, 'Shame, shame!') What produced this state of things? Why, the truth was, the farmers had no money in their pockets, on they would not acknowledge it, at least the proud part of them. (A voice, 'True, true, and laughter.) The farmers were sinking. (A voice, 'God grant they may.' Several others, 'Amen.') These are not times, said Mr. Arkell, to set man against man, brother against brother; for it is plain that if the farmer sinks, you—the labourers—who are a weaker class, must sink still lower. Now, mark what I say: Supposing the crops suffer from the want of rain, what will be the consequence? The price will rise, and there will be an influx of foreign corn at 1s. duty, and this just at a time when the farmer has on his hands the bulk of his crop for sale. The farmer thus being deprived of his sale, or obliged to sell at a low price, has no money, consequently he is unable to give employment to his labourers, and they must either starve or go to the workhouse."

Mr. Arkell then alluded to the tyranny which was practiced to keep the farmers away from such meetings, and to the subservience which evidently prevailed among them and caused them to submit:—

"He once attended an Anti-Corn-Law meeting where the clergy and the squires watched to see who came. He should not

wonder if some of their agents were present now. He would advise them to be quiet; and he hoped they would see no such doings here. (Only let there be more unanimity and good feeling between the farmers and the labourers (hear, hear), and all efforts against them might be subdued.)"

He then read the first resolution; but before the resolution was seconded several labouring men came forward to give a statement of their condition. The first was—

"WALTER MATHEWS said, he was thankful to be allowed to speak for himself, and he was not ashamed to state his condition. He resided in a little parish called Catcombe. He had a wife and five children, three of whom he had to maintain entirely, the others only in part. He was by trade a cordwainer, and occasionally worked at agricultural employment. On account of the present low wages and scarcity of work he was really often worse off than the farm-labourers themselves."

Catcombe is one of the worst cultivated parishes in the district, and is a good deal overrun with game, Mathews then said:—

"During this year he had worked till he trembled, with nothing but a few potatoes and salt and a bit of bread in the day. The farm-labourers, perhaps, received 7s. a week, out of which they had five or six to maintain, and frequently one or two wet days were deducted from their wages; from this 7s. a week 2s. or 2s. 6d. went for rent and a bit of fire stuff. Therefore they might see the state of the labourers was hard and dreadful. (Cries of 'It is; it is.') A man often labours from four in the morning to eight at night with nothing to eat but a bit of potato and salt. ('True, true.') When he took out his bills he might go to one place and take a few shillings, and at another none at all. Some of them would say they had a little money saved up for it, but they had been obliged to spend it in victuals. So he thought little tradesmen such as himself were, in fact, little, if any better off than the farm-labourers."

Again, we find

"WILLIAM PEGLER (an agricultural labourer) said, he stood up to speak the truth. He said he was out of work, but could get no relief from the parish; he might go into the poor-house, but he would as soon be sent to Botany Bay as be separated from his wife and family there. He had travelled hundreds of miles for work. He would not speak against the farmers. He thought they had no money, and there was nothing for them to do, for there was little or nothing on the ground. He thought the sins of the nation had brought this state of things on them, and he believed if the people all over the country humbled themselves, and prayed and fasted as the men of Nineveh did, it would be much better for them all; instead of which the poor men were cursing the farmers, and the farmers cursing the labourers."

Nor was this untutored son of labour far from the truth when he said "the sins of the nation had brought this state of things upon them;" for the existing distress is, in a great measure, caused by the Corn Laws, and the low state of agriculture they have occasioned; and can there be a greater sin on the part of the legislators of a nation than to make laws to produce artificial scarcity, to intercept the bounty of Providence, AND TO MAKE FOOD DEAR?

Two other labouring men spoke, one of whom said he had often spent days with only a bit of bread to eat once in the day; and we know that this is no overcharged account of the privations the agricultural labourers often have to endure in nearly all the purely agricultural districts.

"The CHAIRMAN said, you have now listened to the statements of three or four labouring men—members of a class one of the most honourable in the country. Have they spoken the truth about your wages? (Yes, yes.) How much do you get a week? (Numbers of voices replied, 'Seven shillings.') How many of you get 12s.? (Loud laughter, and cries of, 'Never a one of us.') Well, then, how many receive 8s.? (A voice, 'I got 8s., but I've a wife and six children to keep out of it.') Well, we won't be particular to a shilling; it is manifest, and it is the general impression among the labourers, that the farmers, many of them, cannot now pay higher wages, and therefore none should be said which would breed bad feeling between the labourers and the farmers; for, as Mr. Arkell has said, their interests are one. They were not met to cry out one against another, but to say that there is great distress felt by the farmers as well as by the labourers. Many farmers were living on their capital because their farms yielded no profit, and many were in arrears for rent. Every class, in fact, was affected."

The resolution was then seconded by

"WM. EDWARDS, a journeyman tailor, working in the neighbourhood. He said it had been stated that the Corn Laws were enacted to maintain good wages for the labourer. Had that object been realized? (No, no.) No, it had not; neither had the tenant farmers received any benefit from the Corn Laws. Who, then, had been benefited? Those who had eaten out the representative part of the Government—the House of Peers. The people were not now represented in the House of Commons. He had lived in the richest corn district in the country—the Pewsey Vale,—where, if anywhere, the agricultural population ought to be prosperous; but there their condition was truly shocking. Something, then, must be wrong. If Providence has provided bountifully for all the human race, why are you not provided for?"

Let the rich and titled monopolists, who met at Devizes not long since to support "protection," learn common sense and common honesty in dealing with the question of wages from this humble rural mechanic, who remarked,

"They had been told a repeat of the Corn Laws would cause wages to sink. How could that be, when commerce and manufactures would revive? When most labourers were in the market the lowest wages were given; how, then, could full employment, and a consequent demand for labourers, lower wages? The wages of female servants in Manchester were higher than in almost any other neighbourhood. Why? Because there was a demand for their labour. In one factory in Manchester 327 females were employed. If 327 females were employed in a factory at Catbe, would not the wages of females be much higher in the neighbourhood?"

Can monopoly's fall be long delayed when the people themselves arise up and instruct one another in this way?

"Mr. READ, Independent minister of Goathere, proposed the second resolution:—That, to prevent such a state of things as is contemplated in the foregoing resolution, this meeting be desirous of an immediate and total repeal of the malt-tax and Corn Laws, and of all other laws which affect the necessities of the labouring people. They did not come here to destroy the confidence of the labourers in their masters, or of the masters in their labourers. But he would ask one question: Are the farmers in a prosperous condition or not? If they are, they are acting wrong in not giving higher wages (hear); if they are not, something must be the cause; and that cause was taxation, especially the accursed bread-tax. It was evident that the labourer was in a deplorable condition. Who could say that 7s. a week was sufficient for a man to support a wife and family? Was not the labourer worthy of his hire? Who was it that ploughed the ground, that sowed the seed, that reaped and thrashed the corn, but the labourer? The labouring population was the staff of the country; and it was the bounden duty of every man to take means that the labourer might receive his fair proportion of the produce of the land."

The meeting closed in a manner highly creditable to those who took part in it.

"The second resolution was carried unanimously.

"The third resolution, 'That a petition, founded on the foregoing resolutions, be drawn out and signed on behalf of this meeting by the chairman, for a removal of all restrictions on trade and commerce, and that the same be forwarded by him for presentation to Parliament,' was then briefly moved, seconded, and carried."

"The CHAIRMAN concluded the proceedings with a few remarks of kind caution and friendly advice to the labourers; and the meeting separated after giving a vote of thanks to the chairman, three hearty cheers for the repeal of the Corn Laws, and three for Lord Radnor."

We trust such meetings as these will become general in the rural districts. These will be the true "Agricultural Protection Meetings."

A correspondent of the *Wiltshire Independent* says:—

"The depressed condition of agricultural industry was unfolded by statements made by several of the labourers themselves. It was a melancholy spectacle to witness, on the one hand, the touching simplicity and rude eloquence with which these hard-faring men laid open their case, and, on the other hand, to hear the coarse mockery with which their complaints were greeted from a neighbouring position by a parcel of unthinking individuals surrounded by half-a-dozen hireling bullies."

And the same writer adds:—

"A considerable number of farmers were present, half ashamed that such a meeting should have called them together, some inventing excuses for having come, one and another asserting that 'he could always make a little business at Lynham.' 'What's the use,' says a third, 'of telling the labourers anything about all this; what effect will these speakers produce by talking to men who know nothing about it?' Why, it may be asked in reply, were the farmers so solicitous to prevent their men from attending? We trust that ere long both farmers and labourers will reap the good effects."

We again repeat, this is the most remarkable Anti-Corn-Law meeting which has yet occurred.

NOTICES TO CORRESPONDENTS.

We are in receipt of our correspondent "Peter Playfair's" fourth and fifth letters, but press of matter obliges us to defer their insertion till next week.

Mr. Morse's valuable letter on the wages of agricultural labourers in our next.

"T. M., Plymouth," is informed that a tenant-at-will of premises of the annual value of £50 is qualified whether he pay any rent or not. The value is the sole criterion, not the rent. If the premises are situated within the borough of Plymouth, they will only confer the county franchise, if they are such (land without houses, for example) as would not confer a borough vote.

"J. B., and the other "embryo voters" will put up their claims to be admitted as freemen of York in the usual form recognised in that city. Of this claim they will, of course, preserve evidence, taking care to tender all the usual entrance and other fees, if any are due. If their names are, notwithstanding, omitted by the Town Clerk from the list of freemen entitled to be registered, they will serve him with claims to be registered in the usual form; and on proof of claims to be enrolled as freemen, and to be registered, the revising barrister is bound to register them. But it may be observed that the Town Clerk may swear in the claimants in presence of the magistrates (aldermen or other city officers) in the absence of the Mayor, and that will be a good enrolment as freemen. The Town Clerk would be entitled to insert them in the list of persons entitled to vote by their simply having claimed to be admitted as freemen.—Oakhampton, 1 Fraser, 166; Derby, 3 Douglas, 287; Drogheda, E. and D., 99; do., 105, Philip Hendleton.

"C. R. A., Edinburgh.—The Scotch Reform Act qualifies every person (not subject to any legal incapacity) to vote who, for twelve months prior to the 31st of July, shall have been "in the occupancy, either as proprietor, tenant, or life-renter, of any house, warehouse, counting-house, shop, or other building, which, either separately or jointly with any other house, &c. &c., or with any land, &c. &c., shall be of the yearly value of £10." Now, a lodger occupier, a lodger pays rent, a lodger is a tenant or holder, not indeed of a house, but of an "other building," under which term room is included; and, if he use the additional precaution to have a key to his room, and "free lease and entry," as the Scotch law terms it, from the street, without let or hindrance from the landlord, we know no principles of the interpretation of statutes in the Scotch law to prevent lodgers, and even the occupants of furnished lodgings, from being registered for Scotch boroughs. While we are on this subject, we beg to call the especial attention of our Edinburgh friends to the fact that, while the English Reform Act confines the franchise to every "male person," &c. &c., the Scotch Reform Act extends it to "every person" not subject to legal incapacity. We think that women should try the point of their right to be registered; and we may state for general information that, where females have votes, as in many parishes in England, for parish officers, they always elect the best representatives.

Several other notices to correspondents deferred.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order, to the Publisher, 67, Fleet-street, London, will have one-quarter's copies of the *LEAGUE* forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadaby, Newall's-buildings, Manchester; and the *LEAGUE* may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

POSTSCRIPT.

LONDON, Saturday Morning, July 6, 1844.

Incendiarism continues to rage in the eastern counties, and discussion of its cause in the Metropolitan newspapers. The *Morning Chronicle* has followed the example of the *Times* in issuing its commission of inquiry, and sending down an agent to investigate upon the spot. Unluckily, this doubling of the machinery seems by no means likely to double the useful results; or to have any other consequence than diminishing them. The *Chronicle* is just as sure that the New Poor-law is not the cause, as the *Times* is sure that it is the cause. The rival reporters in Suffolk fight out their controversial duel in the columns of their respective journals in London. An awkward and circuitous mode; like two parties shooting at each other round corners. This part of the business might have been done better at home. Meanwhile the really desirable object is not promoted. The great good which was anticipated from the commencement of the investigation in the *Times*, is put in abeyance, Little

REVIEW.

A Letter to the Duke of Richmond anent his Losses in the Sale of his Salmon. By a brother Fish-dealer. London: Unwin.

progress is made in illustrating and putting on authentic record, the physical circumstances and the mental condition of the peasantry throughout the districts where fires have been so frequent. A special purpose will henceforth be suspected in both sets of statements. Each will be regarded as one-sided, and the two one-sidednesses cannot, in this instance, make up an entire view of the subject. There is much that requires elucidation, and is most desirable to be known, which yet may not help the argument of either debater upon the share of the Poor-law in producing the conflagrations.

The curse of party spirit is upon our whole political system. The newspaper press faithfully reflects the perversion which that party spirit induces in legislation. Even such a question as this, of the state of the Suffolk peasantry in its relation to incendiary crime, cannot be worked out without taking a side. It is not, indeed, a question of Whig and Tory; but Pro-poor-law and Anti-poor-law have become as much a party division as Whig and Tory. The real public service, and a noble one, would have been to continue, as the *Times* commenced, and let the light in upon the hovels of the agricultural poor, displaying there to the world's gaze, the crowded wretchedness, and miserable fare, and sullen desperation, which are the nursery of dire purposes and guilty deeds. This would have been a work of public beneficence; we should be devoutly glad to see it resumed, and also to see the *Morning Chronicle* modify its controversy into co-operation.

As a case of humanity and justice, the condition of these poor creatures demands inquiry. Enough has been unfolded of their misery to stimulate every good feeling on their behalf. Not less is information requisite for the sake of their employers. No other portion of the industrious middle classes of England live in such a state of horrible insecurity. No other slumbers are liable, any night, to be broken by the glare of devastating flames; and the how and why of these fearful occurrences so connect themselves with the policy and tendency of legislation, as to give the subject an interest really national.

Enough has been already, and distinctly, ascertained to scatter to the winds the outrageous calumny of which certain reverend and "noble" personages had the hardihood to make themselves the heralds. The League is exonerated, but Monopoly is not exonerated. In the late debate, it was conceded by Mr. Gladstone that "the high price of bread is a public misfortune;" and public misfortune is the parent of individual crime. Bread is always high, in the cheapest years, to the family of the labourer whose wages range between 6s. and 12s. per week. These are the agriculturists who need protection; not that of prices which they cannot pay, or of workhouses which not even absolute destitution will drive them to enter; but the protection of Justice, interfering neither with the cost of their food nor with the multiplication and extension of other means of employment. Is it not a fact, which speaks volumes, that a silk mill, as at Hadleigh, is a practical insurance against rick-burning in the neighbourhood? He that runs may read such a fact as that. Those who will not yet read will, ere long, be compelled to run—at least from their present logical position.

STATE OF ENGLAND.—What alarms us in the state of England is the uncertain basis on which its prosperity is placed—and the prodigious mass of hatred which the English Government continues, by its obstinate bigotry, to accumulate—eight hundred and forty millions sterling of debt—the revenue depending upon the demand for the shoes, stockings, and breeches of Europe, and seven millions of Catholics in a state of the greatest fury and exasperation. We persecute as if we did not owe a shilling—we spend as if we had no disaffection. This, by possibility, may go on; but it is dangerous walking—the chance is there will be a fall. No wise man should take such a course. All probabilities are against it. We are astonished that Lord Hertford and Lord Lowther, shrewd and calculating lords, do not see that it is nine to one against such a game. It is not only the event of war we fear in the military struggle with Ireland; but the expense of war, and the expenses of the English Government, are paving the way for future revolutions. The world never yet saw so extravagant a government as the Government of England. Not only is economy not practised, but it is despised; and the idea of it connected with disaffection, Jacobinism, and Joseph Hume. Every rock in the ocean, where a cormorant can perch is occupied by our troops, has a governor, deputy-governor, storekeeper and deputy-storekeeper, and will soon have an archdeacon and a bishop. Military colleges, with thirty-four professors, educating seventeen ensigns per annum, being half an ensign for each professor, with every species of nonsense, athletic, sartorial, and plummageous. A just and necessary war costs this country about £100 a minute; whipcord £15,000; red tape £7000; lace for drummers and officers £19,000; a pension to one man who has broken his head at the pole; to another who has shattered his leg at the equator; subsidies to Persia; secret service money to Tibet; an annuity to Lady Henry Somebody, and her seven daughters, the husband being shot at some place where we never ought to have had any soldiers at all; and the elder brother returning four members to Parliament. Such a scene of extravagance, corruption, and expense as must paralyse the industry and mar the fortunes of the most industrious, spirited people that ever existed.—*Sidney Smith.*

It is no wonder that the clever author of this pamphlet should exclaim in the old phraseology of Elizabeth's reign, "Odds fish! my Lord Duke," and describe "Buy my fine salmon" as one of the many cries which his Grace of Richmond has brought from Billingsgate to the House of Lords. The world will not easily forget the appearance of an English nobleman in the character of an angry huckster, complaining that the price of his fish was reduced by competition. His brother fish-dealer introduces a case of a very different kind. It will be in the recollection of our readers that the inhabitants of the Orkney and Shetland Islands were some years ago reduced to such a state of destitution that an appeal was made to public benevolence in their behalf, and they were only rescued from famine by an extensive public subscription. To prevent the recurrence of such a calamity, a company was formed to teach the islanders a more efficient mode of fishing and preparing their fish for the Spanish markets, with such success, that £50,000 worth of fish has been exported from the Orkneys and Shetlands to Spain since the company was established.

"Soon after the establishment of the company, the Spaniards so much approved of the fish that a proposal was made to me by an eminent Spanish merchant to the following effect: He proposed to purchase fish of the Shetlanders at a considerably higher price than they had previously been able to realize, and to the extent of 20,000 quintals—being equal to the whole produce of the fishery,—on condition that they would receive in payment Spanish wheat, flour, or bread, and which he offered to deliver at the islands at a price that would have enabled the Shetlanders to supply themselves with the best of flour at about one-third less cost than what they were at the time paying for common Scotch oatmeal.

"Now, here was a proposal based upon the pure natural principles of international commerce, the exchanging of the surplus produce of one country for the surplus produce of another. The Spaniards had bread to spare, but wanted fish. The Shetlanders had fish to spare, and, above all things, wanted bread.

"The Corn Law with its sliding scale, however, stepped in between the Spaniards and the Shetlanders, and said in effect this: 'You Spaniards may buy the Shetlanders' fish if you will, but they shall not take your bread in exchange. You must pay the Shetlanders with your hard dollars, which hard dollars they must convert into pounds sterling, and bring them to the Scotch or English landowners in payment for what bread they may require.' It is true the Shetlanders will not, in consequence, be able to sell so much of their fish, nor at so good a price for hard cash, as if they had been able to take some of the Spaniards' spare corn or flour, nor will the Shetlanders be able to get nearly so much bread from the Scotch or English landowners as they would have got from the Spaniards. But never mind; what are the interests of a few thousand half-starved fishermen and their families in comparison with the maintenance of the rents and profits of the British landed aristocracy and gentry?"

"In fact, my Lord Duke, the Spanish merchant, in making this proposal, never dreamt for a moment that the Corn Law applied to these remote and barren islands. That ingenious instrument of monopoly, the sliding scale, was, however, in its full operation there, and with even more sinister results, as in other parts of the kingdom. The duty on foreign corn and flour had reached a high point, and was still graduating upwards. The slippery movements of the scale did not accord with the steady and prudent tenor of my commercial operations. The proposal of the Spanish merchant was therefore declined; and the Shetland fishermen and myself consequently lost, as your Grace announces that you have lately done, 'a large sum in the sale of our fish.'

On this plain statement we need not offer one word of comment. The Shetland fishermen and their families have been deprived of the very means of subsistence, and there is no pity for them in the Legislature, while all our sympathies are evoked for a slight diminution of the unjust gains which support the luxuries of the house of Goodwood. But, whatever may be the conduct of men, there is an Eternal Justice which will finally decide between the proud Duke and the humble Shetlanders.

"* * We find ourselves unavoidably compelled, owing to the great length of the Covent-garden meeting, to omit reviews of 'Macgregor's Statistics' and 'Knight's Weekly Volume,' which we intended to have given in our present number. They shall appear next week.

NOTES TAKEN BY A TRAVELLER IN THE SUMMER OF 1844.

The following paper is from the pen of a gentleman of the highest literary attainments and commercial experience. He is now travelling through Holland and Germany, and will forward for publication in the LEAGUE, a series of articles illustrative of the present position and commercial policy and prospects of those countries. From the well-known ability of the writer, and his established reputation as an authority in economical and political science, together with his extensive knowledge of the resources and policy of the different nations of Europe, both from personal intercourse and observation, as well as from his means of access to the highest official authorities, our readers may place the most implicit reliance upon the accuracy of his statements, and the soundness of his views.

Brussels, June 22, 1844.

It was a lovely evening on the 9th of this month when I

entered the port of Ostend, in the Sir Edward Banks. Our passage occupied fifteen hours from London Bridge, and I had meditated during no small portion of it upon the advantages derived by travellers from competition. This passage is, virtually, for the moment, deprived of such stimulus to activity, Government remaining as well satisfied with the old tubs of steamers that ply at inconvenient times in seven hours from Dover, as that meritorious body, the General Steam Navigation Company, is with its old servants the Liverpool and the Banks. The Princess Alice, now plying, I believe, between Folkestone and Boulogne, once ran in four hours from Dover to Ostend, and the Magician has reached the same port in little more than nine hours from London. But the report of such doings only tantalizes the sea-sick traveller, as the prices in foreign markets, quoted occasionally in the LEAGUE, torment our hungry artisans at home. For us, as for them, there is no help but in free competition, the sole effectual spur to activity, economy, and enterprise. Two years back the Belgian Government started a fine steam-boat, the Bruges, between Ostend and London; but she was not faster, although cleaner and better ventilated than the English boats. The establishment of a daily communication is now, I hear, determined upon, and the Chambers have voted sums for the purchase of three new vessels, which will probably lead to the usual result of making the company in Lombard-street economise about half its fuel, save some wear and tear in its vessels, diminish its fares, and increase proportionately the number of its passengers. The only impediment to the Belgian experiment that I can foresee, is about to be raised by the Belgians themselves.

I was not aware, while these thoughts were crossing my mind, that the subject was at the moment under warm discussion at Brussels in the Second Chamber; not the project of the new steam-boats, but the general one, of the advantages and inconveniences of competition, which has given rise to remarkable debates, and to a still more remarkable decision, which will cause as much regret to all the friends of enlightened progress in the rest of Europe as it has done here. On the day of my arrival at Brussels, the hitherto liberal navigation system that has been adhered to since the revolution of 1830 was voted a way, and the principle of a navigation law and differential duties was formally adopted. We, of course, have had our share in preparing this change, the history of which is deserving of attention, and will be best comprehended if connected with some general details concerning the trade and navigation of the country.

Ostend ranks as second amongst the Belgian ports, its disadvantage being that its harbour is dry at low tide. The inconveniences arising from this circumstance might be removed by the construction of wet docks, with sluices, and, to a certain extent, such are now formed by the canals communicating with the interior. But the central position of Antwerp, and the secure anchorage it offers, compensate for the tortuous navigation of the Scheldt, and are likely for a long time to give that port the preference that it has hitherto enjoyed. The official returns of the trade of Belgium show that the traffic in the Scheldt is on the increase, while that of Ostend is stationary. The following is the number of vessels from foreign ports that entered the four harbours in four recent years:—

Ports.	1839.		1840.	
	Vessels.	Tonnage.	Vessels.	Tonnage.
Antwerp.....	1177	175,931	1158	177,313
Ostend.....	523	56,124	387	41,947
Nieuport.....	109	2,722	103	2,093
Selzete (Ghent) ..	27	2,217	147	15,312
	1836	237,294	1797	237,269

Ports.	1841.		1842.	
	Vessels.	Tonnage.	Vessels.	Tonnage.
Antwerp.....	1217	180,659	1381	211,455
Ostend.....	445	49,046	532	56,369
Nieuport.....	153	4,347	188	5,921
Selzete (Ghent) ..	141	17,846	203	21,789
	1956	251,897	2303	295,524

But the general increase here indicated in the shipping that entered these ports between 1839 and 1842, and which is equal to one-fourth, did not take place in Belgian bottoms. The flags were as follows:—

Flags.	1839.		1842.	
	Vessels.	Tonnage.	Vessels.	Tonnage.
Belgian.....	597	74,825	542	74,409
English.....	455	38,631	733	73,208
Danish.....	56	6,362	160	18,788
Hanoverian and Oldenburg ..	196	17,342	239	20,126
Mecklenburg....	85	16,151	117	25,241
Prussian.....	71	15,985	80	15,882
Swedish.....	190	33,913	151	25,854

At the sight of this list the capitalists of Ghent, Bruges, and Antwerp seem to have taken alarm. The cry was raised that money was going out of the country. The general fact that trade had improved, that the imports which, in 1839, were equivalent to 217,000,000 francs, reached in 1842, 288,000,000 francs, and that this increase might be connected with the facilities for foreign vessels was overlooked. That the weight of merchandise forwarded by the railroads had increased from 102,154 tons in 1840, to 333,451 tons in 1843, was disregarded. That the dues received at the custom-house had increased between the same years from 9,370,000 francs to 10,634,172 francs, seems to have satisfied the Minister of the Finances, although this increase was obtained in spite of dangerous experiments, which occasioned a great diminution of the quantities imported of some important articles. Everybody seemed but to have fixed their attention on the freights paid to foreign vessels, for the loss of which nothing could compensate. The Ministry took the responsibility of the measure on themselves, and proposed a formal navigation law, establishing high differential duties between Belgian and foreign vessels, with the view, as they declared, of creating a national commercial navy.

For some years past the Belgian Government has made a deduction of 10 per cent. from the customs' dues levied on goods imported in native vessels; a distinction that it refused to abandon when a treaty of reciprocity was proposed by England. One would imagine that this was premium sufficient to Belgian capitalists who had funds to invest in shipping; and that the Minister might have made better terms for the other interests than he has done with those who desired to become shipowners. Another advantage that the Minister might have used to influence the speculative portion of his countrymen on this occasion was, the circumstance of his intending himself to take the lead in the shipping speculation, by the

establishment of the daily communication, to which I have alluded, with England, and by the opening of a direct packet communication with several American ports. Although, as far as the Government is concerned, differential duties only take out of one pocket to put into the other—and the previous American experience showed what may be expected to result from the present measure,—still, inconceivably enough, it is to be persevered in.

I must remark that the reduction of 10 per cent. on the duties in favour of Belgian vessels was from the first resisted by the United States. No attention having been paid to the remonstrance made by its agents, the Washington Government imposed a differential duty upon Belgian vessels with as little notice as the Brussels Cabinet had thought proper to give of its intention. The large steamer, the *British Queen*, which the Government had purchased, to open a communication between Antwerp and New York, was the first to incur these duties, which were only declared after she had sailed. She has consequently not repeated her trip, and is now lying idle at Antwerp, as a set off against the 10 per cent. additional duty charged upon strange vessels. The Minister did not attempt to conceal his fear, that other countries might, on this occasion, adopt measures of reprisal.

It is, however, creditable to the state of public opinion in general, that this measure was not carried in the Second Chamber without serious and well-directed opposition. In the speeches of many of the members, a perfect knowledge of the advantages of freedom of trade was eloquently displayed, and the sophistry of what is called a protecting policy in commerce was unsparingly exposed. They have been warmly seconded by the public press at Brussels and in all the large towns, the mode of arguing the subject having, on the part of the advocates of a liberal commercial policy, been very superior to the attempts of their adversaries to defend the new project. An excellent article in the *Independence of Brussels* exposes the unjustifiable assertion of the Minister before the House, that England refused to form treaties with other countries on the footing of reciprocity in navigation, and quotes the text of the recent treaty with Holland in proof of its incorrectness.

The measure proposed experienced many modifications during its discussion, but it preserves its obnoxious peculiarity of pledging Belgium to a system of commercial policy that is decried by all competent judges in every country, and that experience has proved to be unsound.

The following are the details of the bill as it goes to the Upper House for confirmation:—

Par. 1. The deduction of 10 per cent. allowed by the law of 26th of August, 1822, on manufactured goods imported in native vessels, shall be discontinued, with exceptions to be fixed by an order in council. These goods, when imported in foreign bottoms, to pay 10 per cent. above the rates of the present tariff. All other goods imported by sea to continue to enjoy the deduction of 10 per cent. in favour of Belgian vessels. A reduction of 20 per cent. to be allowed on importations in such vessels from ports situated beyond the Cape of Good Hope and Cape Horn.

Par. 2. Belgian vessels coming from transatlantic ports, or ports situated beyond the Straits of Gibraltar, can touch at intermediate harbours for orders, without losing the benefits allowed to direct importations. Such vessels must neither load, unload, nor in any way trade at the intermediate places. (Amendment as rider.) Foreign vessels chartered by Belgian houses, whose papers are made out on Belgian account and duly certified by Belgian consuls, coming direct to Belgian harbours, shall enjoy the same privilege as Belgian vessels.

Par. 3. The productions of Asia, Africa, and America, coming direct into Belgian harbours under the flags of the respective powers to which or the countries from which, they are imported, are to be admitted upon the same footing as Belgian vessels, if no differential duties against Belgian vessels exist in the harbours of those countries. The Crown is authorized to give effect to this paragraph by royal proclamation.

Par. 4. Vessels arriving by canals or rivers under the flag of a country that levies differential duties on Belgian vessels, are to be subjected to equivalent surcharges of duties or of navigation dues. The Government is charged with the execution of this rule.

Par. 5. The Government is authorized, for the space of one year, to admit foreign vessels to be registered as Belgian, on payment of a fee of 30 francs per ton. Vessels, originally Belgian, but now navigating under foreign flags, may reclaim their former rights, without fee, within the space of three months.

Par. 6. The Government can exact proof of origin for all importations, and is authorized to prescribe the form and nature of such proof.

Par. 7. The Government shall determine the period when this law is to come into operation according to the distances of the places of shipment.

Par. 8. Goods enumerated in the present law that shall be in bond at the time of its publication are to be subjected to its operation.

In addition to the important amendment (in par. 2), carried by the influence of the merchants of Antwerp, the manufacturers of Liege, Namur, and Charleroi, managed to obtain a concession specially adopted in their favour. Fearing that Holland, which, from the commencement, had protested through the ambassador at Brussels against this law, might put its threat of reprisals in execution, and interrupt the commerce now organized upon the Meuse, it is inserted in a special clause that 7,000,000 kilograms of coffee can be imported by the rivers and canals communicating with the Meuse without being subject to the differential duties charged upon foreign bottoms.

These two amendments change so essentially the character of the bill that it appears strange that a nation which was hitherto nominally exempted from the trammels of protection in matters of navigation, should volunteer to incur the evil, and to recognise as good in theory what it could not even shape out consistently as a practical measure. The law as adopted by the Second Chamber is certainly better than that proposed by the Minister, and clearly militates against the reasoning he put forward. According to the speeches of M. Mercier, this law was to create both a commercial navy for Belgium and (singularly enough,) to improve the revenue! The protest on the side of Antwerp and Liege modestly suggests that it would be paying dear for ships if they were to cost the sacrifice of the trade and the manufactures of the country.

As this change in Belgium may interest many friends of Free Trade in England, and unnecessarily alarm others,

I have preferred confining myself to the history of the measure on this occasion. In my next I propose to examine the position and resources of Belgium for trade, agriculture, and manufactures, and then to show in what manner the practical working of the new constitution aids or impedes the progress of the country in a sound line of policy. Many incorrect views have been put forward on all these points by English tourists, and the cause of good fellowship and of humanity can only gain by a clear understanding of the true interests of every country. I shall, therefore, gladly avail myself of any space the LEAGUE can afford me to throw light upon the position of these laws, which, although so near us, are but imperfectly known, and consequently not appreciated at their full importance.

Another advantage will result from your discussing the interests of our continental neighbours. A large portion of the educated classes is free from the selfish prejudices that away the ruling interests in England. This class is from its position, the employments of the Government being in a great measure in its hands, at once respected and influential. The education which abroad it is necessary to have enjoyed in order to be qualified for a public office renders this large class of readers accessible to sound reasoning, and desirous of adding to their knowledge. It cannot, therefore, but act most favourably upon public opinion in Europe generally to see the interests of every country discussed in London as those of brothers and fellow-labourers in the cause of humanity and civilization. It will strengthen the courage and stimulate the exertions of the friends of Free Trade in England to have the points in which other countries look to their endeavours for aid placed before their eyes, and to know that the battle in which they are engaged is not for a small gain, but one for the noblest prize and in the widest field that have as yet been held out to the champions of truth.

MARKETS.

CORN MARKET.

MARK-LANE, Monday, July 1.—During last week the supplies of Wheat from Lincolnshire and Cambridgeshire were good, and 12,000 qrs. arrived from abroad; this morning there was a rather better supply of Wheat from the near counties than last week, and a decline of 1s. to 2s. per qr. had to be submitted to. There was a very slow demand for Foreign, and it was with difficulty that last week's prices were obtained. Though the supplies of Barley were not large all descriptions were 1s. cheaper. The supply of English Beans was larger than last week, and a few parcels arrived from the Baltic ports; both Beans and Peas were 1s. lower. Only two vessels were reported from Ireland with Oats, but several cargoes of Foreign arrived since Friday; altogether the supply was large, amounting to 40,000 qrs., and a decline of 1s. per qr. must be reported upon all descriptions.

Oats	21063	25s. 2d.	Peas	634	36s. 9d.

FRIDAY, July 5.—The supplies of English Wheat since Monday are scanty, and the business doing is very limited. The arrivals of Foreign are limited, but the unsettled state of the weather has caused rather more inquiry, and Monday's prices are readily obtained. In Barley there is no alteration to notice. There is nothing passing in Beans and Peas. Considerable quantities of Oats continue to arrive from Scotland, as well as from abroad; sales of the latter are much pressed, from an unwillingness to put them in granary, and a reduction of 6d. per quarter is generally submitted to. The arrivals from Ireland are insignificant, and prices not lower. The duty on Rye, Beans, and Peas fell 1s. each yesterday.

S. H. LUCAS and SON.

Account of CORN, &c., arrived in the Port of London, from the 1st of July to the 5th of July, both inclusive.

[3d.

A society has been formed for bettering the condition of the dwellings of the poor; it is a noble object, and from our souls we wish all success to the benevolent exertions of its members. We doubt not that the cottages and dwellings which they propose to erect will afford means for ensuring some of the comforts and most of the decencies of life to many wretched denizens of cellars and garrets; but we fear that they will only find room for one wave of the immense mass of floating misery to

make room for another on the same savage and rugged shore. Behind those masses whose condition has engaged the attention of the benevolent projectors there are other masses beyond the sphere of their view, certain to be pushed forward by the inevitable law of competition, which is not less fixed in its operations on social life than the law of gravitation in determining the movements of the material universe. Hence it is that all schemes of beneficence have been baffled, and nearly all benevolent feelings paralyzed, by the consciousness of the utter inefficiency of mere philanthropic exertions to stem the increasing force of the tide. The misery relieved yesterday has allowed a larger mass of more aggravated misery to come to the surface to-day; and this day's relief will only open worse scenes for to-morrow. Ebenezer Elliott has forcibly portrayed this fearful and incessant struggle in one of his Corn-Law hymns:—

"Seest thou, O God, our deadly strife—
Our war for bread, for life, for life?
How like the war of seas and skies,
When struggling thousands fall and rise.

"On howling foam and tossing wave,
The rich and poor, the lord and slave,
Float like frail shells amid the shocks
Of senseless logs and solid rocks.

"What, though at times the sun looks down
Through shatter'd clouds on ocean's frown?
Though rocks may scorn the sea and sky,
While logs are safe and navies die!

"Can sunlit surge or sunlit shore
Cheer them who shriek in ocean's roar?
Lord, what avails the transient blue
That smiles on storms and shipwrecks too?

"Ah, what avails the dying might
That struggles still, through gloom and night,
If in them both we feel and see
The might of fatal prophecy?

"The sun that shines from deadly skies
No comforts bring to him who dies:
A torch may glare in gulf or tomb,
But chains are chains and doom is doom."

Competition is that "might of fatal prophecy" which, while it continues, must entail misery in its consequences with the inevitable force of destiny. If we allow it to go on as it does now with accumulating velocity, the fate of this nation is as inevitably sealed as if an Almighty hand had issued from the clouds and written the fatal MENE TEKEL in characters of flame upon the heavens. We must increase the means of subsistence for our increasing population, and this can only be done by increasing the demand for labour and its produce. This great truth has been recognised by one who still lingers in the camp of monopoly, though he has abandoned its Shibboleth, and tramped upon its antiquated cant—we mean the Hon. G. S. Smythe, to whose recent work, "Historic Fancies," it will be soon our pleasing duty to direct the attention of our readers. In an ode which powerfully depicts the results of commerce, he gives the following graphic sketch of our gracious Queen announcing to her Parliament the abolition of monopolies, and the final triumph of the principles of Free Trade:—

"But not of this our Sovereign thought when from her solemn throne
She spoke of the Poor and what they endure, in her low and thrilling tone;
And offered a prayer that Trade might bear relief through the starving land,
To the strong man's weaken'd arm, and his wan and workless hand;
And by the power that was her dower, might Commerce once more be
The Helper of the Helpless, and the Saviour of the Free."

Heaven hasten the happy time! We have now indicated the great source of the dangers and difficulties involved in the solution of the "condition-of-England" question, and we wish our readers to meditate upon it calmly and deliberately. The real evil cannot be too simply stated; it is contained in the single sentence, "Labour is cheap, and bread dear." We have examined the first branch of the national grievance, and in our next publication we shall direct our attention to the second.

PHILANTHROPY AND THE BREAD-TAX.

The sincerity of Lord Ashley and his supporters on the ten hours bill has been tested by their votes on Mr. Villiers's motion. They declared that the operatives of the country were overworked; that women and children were compelled to toil beyond the natural powers of endurance of their sex and age; they described their grievances to be of such magnitude that the whole manufacturing prosperity of England could not compensate for their continuance, and they end by voting for the maintenance of those monopolies which render such toil necessary for procuring the means of subsistence. They vote that bread shall continue scarce, and yet whine over the amount of labour necessary to procure the money for its purchase; they declare that the Corn Laws shall continue and affect sympathy for the miseries these laws produce; they close the markets against manufacturers, and then vituperate the manufacturers for yielding to the pressure of such disadvantages; they limit the operations of the capi-

talists, and pretend to be indignant that capital does not exhibit the healthy results of freedom; they restrict the field of employment within the narrowest possible bounds, and then give vent to their commiseration for the unemployed. Nothing like such conduct has been exhibited in Europe since that imperial hypocrite Charles V., after having taken the Pope prisoner, ordered public prayers to be offered in all the churches for the deliverance of his Holiness, while at the same time he gave strict orders to the gaolers to keep sharp watch over their pontifical captive. All Christendom cried "Shame!" on the barefaced hypocrisy of Charles; we shall not anticipate the world's comment on the conduct of Lord Ashley and his adherents; we shall only set the facts before the public, and leave our readers to deduce their own conclusions.

There were some who from the beginning doubted whether the philanthropy of such men as Lord Ashley or the Marquis of Blandford could be genuine; they pointed to the descriptions of the misery of the agricultural peasantry in Dorsetshire even within sight of the proud halls of St. Giles's, where Lord Ashley is accustomed to meditate on his plans for improving the condition of humanity; they referred to the terrible exposure of aristocratic oppression made by Mr. Hume at the late election for Woodstock, and expressed something like contempt for that charity which wandered to a distance in search of objects for its exercise, and took no heed of the more crying grievances, the more oppressive wrongs, and the more intense sufferings that surrounded the homes of the philanthropists. We, however, had hopes; we thought that mental like bodily vision might in some cases be subject to the disease of long-sightedness, and that the sufferings of the Dorset peasantry, far surpassing anything which the operatives of Lancashire have endured in the worst of times, might have escaped the notice of Lord Ashley, simply because they were too near him. We were unwilling to suspect him of that economic philanthropy which is lavish in its generosity at the expense of other people, but niggardly to the extreme of meanness if any portion of relief is to come out of its own pockets. We could not believe that his sympathies were like those of the French executioner who used to blubber like a whipped child over the "Sorrows of Werter," while he was proverbial for his brutality to the unhappy criminals who became his victims. We knew that "distance lends enchantment to the view," and hoped that Lord Ashley might be sincere in his declarations of pity for the overtaxed and overworked population of the mills and factories. We knew that he could not be ignorant of the fact that overworking was the result of overtaxation; that it was caused by the necessity of the operative earning not only sufficient for the support of himself and his family, but a farther sum to defray the charges of that monopoly imposed for the maintenance of Lord Ashley and his followers; and we therefore expected that the benevolent lord would abandon his share of the profits extorted by fiscal artifice from the earnings of those objects of his pity. We have been disappointed. Eloquent as his lordship was in denouncing the long hours of labour, he stirred not a finger to remove the iniquitous cause which renders such an amount of labour necessary; on the contrary, he gave his aid to perpetuate the cause, while he continued to lament the consequence. It is, however, creditable to his modesty that he did not attempt to defend his vote; indeed the strongest condemnation of his conduct was his own significant silence.

Whatever other classes may suffer from the iniquitous Corn Laws, there can be no doubt that their pressure falls most severely on the operative and labouring classes, for they purchase food out of their wages, and consequently whatever raises the price of food is a virtual reduction of wages. But this is not all. These laws superadd a positive reduction of wages to the virtual reduction; they limit the market for our manufactured goods, and, consequently, they limit in the same proportion the demand for labour, and they thus lower the price which labour would naturally bring. There is thus a double wrong inflicted on the workman—his bread is rendered dear, and his labour cheap; he is forced to buy in the dearest market and to sell in the cheapest; and it is because he has to bear up against this compound pressure that he is forced to have recourse to the labour of his wife and children.

We are now enabled to appreciate the humanity of the bread-taxers; they pocket, without compunction, the profits of the monopoly which crushes the operatives to the earth, and then they tell the victims to seek compensation for their wrongs, not from the authors of their calamities, but from some other classes of the community. They attempt to combine pity with rapacity, and commiseration with oppression. With words of charity upon their lips, "their treading is upon the poor, and they take from him burdens of wheat," and, like those whom the prophet Amos denounced, "They lie upon beds of ivory, and stretch themselves upon their couches, and eat lambs out of the flock, and calves out of the

midst of the stall;" and in the midst of these luxuries they prepare their appeals to humanity in polished phrase, while by their acts they declare

"That bread must still be dear,
And flesh and blood be cheap."

We have prepared a list of those pretenders to humanity; their names ought to be remembered, and their deeds duly chronicled as illustrations of bread-tax morality, philanthropy, and consistency.

List of the self-styled Philanthropists who voted in favour of a ten hours bill, and against Mr. Villiers's motion.

NATIONAL GRANARIES, AND THE EARL OF WINCHILSEA.

The Earl of Winchilsea took occasion, in the House of Lords, on presenting some petitions in favour of protection to agriculture, to call the attention of their lordships to

"the expediency and sound policy of establishing national granaries in this country under the authority and control of the Government. In doing so, he should studiously refrain from offering any observations on the Corn Laws; because, however widely the three parties—those who advocated the present system of a sliding scale, those who were for a fixed duty, and those who were opposed to all protection to agriculture—differed upon the question of the Corn Laws, he believed they must all agree that the establishment of national granaries would be a great public benefit. (Hear.) Their lordships were doubtless aware that the corn trade of this country was in the hands of a very small body of wealthy individuals; he believed he might fairly state that they had a larger amount of floating capital than any other body of men engaged in any other branch of trade. It was certain that from about the middle of March, when the corn was out of the hands of the grower, up to the harvest, the wheat market was under the sole control of this same body, who, by a combination, and by arrangements made amongst themselves, could effect a great rise in the price of wheat between those two periods, gaining thereby not only considerable profit individually, but also obtaining still further advantages by immediately employing their capital in refreshing their granaries with foreign corn at a low rate of duty. (Hear, hear.) If their lordships could secure a fixed price of corn, a fixed low price, they would secure an immense benefit to the country; and he thought the establishment of national granaries would go far to secure that benefit. It was not good policy, but the worst policy of all, for the Government of any country, more particularly of this country, where such an artificial state of things existed, to have an enormous population engaged in great and extensive manufactures throughout the land, depending for their supply of food, in any degree, or for however short a period, upon a few individuals. (Hear, hear.) He had often reflected with horror upon the consequences of a total failure of the harvest. What man was there either in that House or out of it who would deny that such an event was possible? who could say whether an approaching harvest would be productive, or whether we might not be wholly deprived of it? For the produce of the land was from the Lord, and the seasons were entirely in His hands, and might not the same event happen with respect to other countries to which we looked for supplies? The results of such a state of things in this country were too frightful to contemplate." (Hear, hear.)

The noble earl "assured their lordships that, in making this suggestion, he was not influenced by any interested feelings." But this is not the first time he has paraded his humanity and disinterestedness; we have not forgotten the noble earl's exclamation when the Whig fixed-duty measure was brought forward:—"Good God! tax the poor man's bread! he would never be a party to such a measure." Those who were then disposed to think this

was the declaration of an honest but mistaken man, may now, perhaps, adopt the views we have long entertained, that no man of common intelligence can be ignorant that the real object of the Corn Laws is to produce scarcity and high prices, for the purpose of keeping up high rents. It now appears that regard for the poor caused but a small share of Lord Winchilsea's indignation at the fixed-duty scheme. In the course of the debate on national granaries, the Duke of Richmond said:—

"His noble friend (Lord Montagu) supposed that the noble earl had spoken against the sliding scale; but he (the Duke of Richmond) was sure the noble earl would not vote against the sliding scale or for a fixed duty."

The Earl of Winchilsea in reply said, "He would not vote for a fixed duty, because it would be no protection to the agricultural interest." Here, then, is the key to the noble earl's indignation at the fixed-duty scheme. It was not, it appears, because the fixed duty was a tax upon the poor man's bread, but because it was not *tax enough*: "It would," says he, "be no protection to the agricultural interest."

That the noble earl is sincere in his apprehensions of the "consequences of a total failure of the harvest," we can readily believe. He may have read in history the consequences of famine in all ages upon an injured and oppressed people. He may occasionally call to mind that it was the failure of the harvest which was the immediate cause of the French Revolution; he may not have forgotten the outrages in Kent (in 1830, we think it was), which he was officially called upon to put down, when the poor ignorant labourers assembled in tumultuous crowds to wreak their vengeance on threshing machines and tithe collectors, which they supposed to be the causes of their distress. The time may come when they may find out the real cause of their misery; and if famine overtake us in such circumstances, we agree with the noble earl that "the results of such a state of things in this country is too frightful to contemplate;" and we further agree that the sooner steps are taken to provide against such a calamity the better. But, now, as to the means: Lord Winchilsea's plan of providing against famine, he stated to be

"To establish national granaries, five or six in different parts of the country, say Manchester, Hull, Liverpool, Bristol, and London, containing from 300,000 to 500,000 quarters of wheat, which would amount to about 3,000,000. The Legislature should then say to the agricultural interest of England—'If you can supply the market with wheat at such a price, say from 50s. to 55s. per quarter, you may do so.' He would propose, then, that the Government should have the power to open granaries, and pour into the market that quantity of wheat which would be sufficient to keep it at that price at which it was always desirous the country should have it. He could assure their lordships, that in making this suggestion he was not influenced by any interested feeling, but by two reasons,—first, that it was the sound policy of every state to give encouragement to home industry; and secondly, that upon an average of years the country would produce wheat cheaper than if it was dependent upon foreign countries for supplies. In 1835 the very best brown wheat was sold in England at 35s. He did not say that those granaries should be solely supplied with home-grown corn, but that the Government should have the opportunity of obtaining wheat at as cheap a rate as they could get it. But it might be said that if we had seven successive good harvests, where would be the use of hoarding it up?—it would not keep so long. The fact was, that wheat when kept long would ferment and form a crust on the outer surface of the heap which preserved it, and in that way it could be kept for fifty years, and be sound and good at the end. A friend of his had told him that he had seen heaps of corn in that condition. The object he contemplated was, to give to the labouring classes of this country wheat at the lowest possible price at which it could be grown in this country. Our manufacturing population was increasing every year, and he was anxious to see them so supplied with wheat."

The professed object of the noble earl is "to secure a fixed low price of corn," but his real object is transparent enough—it is to give the "labouring classes" corn at such prices as he thinks will keep them quiet, or, in his own words, "to put an end to the present agitation upon the Corn Laws which was so ruinous to all interests; that agitation which arrayed one great interest against another to their mutual detriment; that agitation which represented the gentry and aristocracy of the country as wishing to live for themselves alone, without caring anything for the mass of the people, and which, therefore, must produce bad effects upon the minds of the population." Now, this agitation may be put down any moment by a simple act of justice. What do the people claim? Why, simply that to which they have just as much right as the Earl of Winchilsea has to his estates, viz., the right to buy their corn where they can get it cheapest. But the national granaries scheme has no such object: it is only to give us, he says, "wheat at the lowest possible price at which it can be grown in this country—say from 50s. to 55s. per quarter!" The noble earl's first care is to get such a price for corn as will secure good rents, and then, kind man, if the poor can get cheap bread he will be easy and happy!

Let it not be supposed, however, from our observations, that we do not appreciate the importance of being provided with stores of corn: none can entertain more decided views of the policy and im-

perative necessity of having our granaries at all times filled with precious grain, to provide against, or to mitigate, the effects of bad or deficient harvests; and that Government incurs a fearful responsibility which leaves for a single day the feeding of the people to the chances of an uncertain climate like ours. But the question recurs, how shall we best provide against famine?

In those countries which have not the means of extensive foreign commerce, or where there is no mercantile body to furnish sufficient capital for the purpose, governments are often found which lay up stores of food in seasons of plenty against seasons of scarcity. This was formerly the common practice in Egypt; and we read of Joseph, directed by a dream, laying up stores out of the abundance of seven years of plenty, to provide against the seven years of famine which were to follow. Happily, in our times no such care on the part of the Government is needed: the progress of arts, science, and civilization has enabled us to traverse every sea and to open communications with every nation under heaven; and, as almost every country produces corn, we have the means of obtaining illimitable supplies from their abundance. Our plan, then, for providing against famine, is to repeal those laws which confine us to our own uncertain climate for our supplies of food, and to place the trade in corn on the same footing as the trade in all other commodities. Compare the stocks of those articles in which we are allowed *freely to trade*—wool, timber, tea, cotton, &c.—with the stocks of corn in which the law restricts us to an *occasional trade*. Take the article of cotton, the supply of which next to corn is the most necessary to our population, since two millions of our people are directly dependent on supplies of cotton for the means of obtaining bread. Last week (July 5) we find the stock of cotton in Liverpool amounted to 910,140 bags, and at the same period last year the stock was 961,190 bags. The average quantity taken for consumption from Liverpool weekly, is 23,000 bags; the stock on hand, therefore, is equal to forty weeks' consumption! This is the result of Free Trade. It happens that the cotton and the corn harvest are both gathered about the same period of the year, so that we are just as near to the one as the other. What, we ask, is our present stock of wheat on hand? Have we forty weeks' consumption? We question whether it be equal to thirteen weeks' consumption. Such is the result of monopoly.

Lord Winchilsea proposes that we should have national granaries to contain a stock of three million quarters of wheat, a supply equal to about seven weeks' consumption; and this supply he supposes would attain the great object he has in view, of keeping prices at 50s. to 55s. per quarter. We have seen that with a free trade in cotton we have a stock on hand equal to forty weeks' consumption. We believe the stock of tea is nearly as large. Is it less important that we should have as large a stock of the prime necessities of life as of cotton or tea? And if, as the noble earl says, "no interest suffered so much from fluctuations in the price of wheat as the agricultural," is a stock equal to forty weeks' consumption, or one equal to thirteen weeks, best calculated to secure steadiness of price?

Nothing but the law which prevents the like freedom of trade in corn which we have in cotton or tea, prevents our having similar stocks of corn as of those articles. Providence seems to have placed us in a situation peculiar to no other country—of being the great storehouse of the world. An island, surrounded with good ports, of easy access, and therefore with the means of cheap carriage and storage—the most extensive manufactures, and the largest commercial navy in the world, and therefore possessing the means of abundant exchangeable articles, and the facility of conveying them from every quarter of the globe—a superabundance of capital lacking employment, and therefore the means of holding great stores, and awaiting suitable markets. These are the peculiar advantages we possess of being the collectors and distributors of the abundance of every land, and of thus securing not only for ourselves but for the whole world the blessings which Joseph secured for the Egyptians, in laying up stores of corn in seasons of plenty to provide against seasons of famine. We should thus be the messengers of peace and good will to all the earth, for the Almighty gives abundance every year for all His creatures, but not always to every country—we should be one of the instruments of conveying the abundance of one country to supply the deficiency of another; and whilst we should be giving profitable employment to our own capital, skill, and industry, we should at the same time be conferring equal benefits on other countries, and binding all more closely together in peace and brotherhood.

We cannot take leave of the noble earl and his scheme without reminding him that the Legislature of this country have higher and nobler duties than to uphold their own interests by contrivances to keep wheat at 50s. to 55s. per quarter. It is THEIR DUTY TO SEE THAT THE PEOPLE ARE PLentifully FED. The noble earl appears to have a glimpse of the fearful responsibility of ne-

glecting this duty; but the law has made him a hereditary legislator—he cannot escape the responsibility; on his head, then, and on the heads of those who by wicked laws withhold corn will rest the curses of the people. "HE THAT WITHHOLDETH CORN (saith Holy Writ), THE PEOPLE SHALL CURSE HIM."

SIR ROBERT PEEL AND THE "SPECIAL BURDENS."

A correspondent has addressed us from the county of Norfolk, calling our attention to a passage in the speech of the Prime Minister during the recent debate on the Corn Law, relative to the "special burdens," which are asserted to form a ground for special protection to the owners of the soil. The passage is as follows:—"I do consider that there are special and peculiar burdens on land. I do believe that the policy of that act which, in imposing burdens for the relief of the poor, subjected the profits of trade to that relief—a policy, as regards trade, that has not been acted upon,—I do believe, I say, that on that account agriculture is entitled to protection." It is difficult to say what was the precise meaning intended to be conveyed by the speaker; but, after the best consideration we have been able to give to the passage, we suppose it is intended to say, not that agriculture is entitled to protection because the land is subjected to poor's rates, but because the original intention of the poor law as to rating stock and profits of trade has not been adhered to, and because stock in trade, and the profits or income derived from trade, are not now chargeable with rates for the relief of the poor. But this deviation from the original intent of the poor law is not made with respect to the manufacturers or inhabitants of towns alone, but is practised equally with respect to the capital and stock employed in the trade of farming. The manufacturer pays poor's rate on the value or estimated rental of his mill and premises, on his warehouses, workshops, reservoirs, dwelling-house, &c., but not upon his machinery, stock in trade of raw or manufactured articles, or the money or floating capital by which he buys and sells. The farmer pays poor's rate on the value or estimated rental of his farm, in which is included the rental of his barns, stables, sheds, &c., and on his dwelling-house; but he does not pay anything upon his machinery, his ploughs and harrows, his growing crops, his stock of produce in his granaries, or upon his money in the bank or elsewhere, by which he buys and sells and pays wages. So far, then, the manufacturer and the farmer are upon equal terms; and whether the practice of not charging the whole with the poor's rate be good or bad, it is clear that, as between the two classes, it is equal, and can give the farmer no just ground of claim for higher prices by law as a compensation. As regards the pressure of poor's rates upon the land itself, or rather upon the landowners, it is equally certain they have no right to complain. In 1801, the whole amount required for the relief of the poor was £4,077,891, of which the land paid about £3,000,000; whilst in 1841 the amount required was £5,500,000, of which the land only paid about the same sum as in 1801, the difference being obtained from property in houses, manufactories, &c. In 1801 the landowners had no *practical* protection to enable them to pay their poor's rates, and why they should have it now is beyond our ability to discover. The most evident and unavoidable effect of the restriction upon the importation of corn and upon trade generally, is to create a fiercer competition amongst labourers for the restricted employment permitted them, and thus to bring a larger number of labourers upon the poor's rate; whilst, at the same time, it attempts to shelter the landowners from the fair competition with foreign corn-growers to which they ought to be subjected. For those who support a law which makes paupers, to complain of their fair share of the burden of maintaining them, is natural enough; but we are sure such wretched excuses for perpetuating the hateful monopoly in the food of the people will not impose upon any honest and intelligent man who devotes a moment of his time to the investigation of the subject.

IMPORTATION OF COFFEE FROM THE BRITISH POSSESSIONS IN THE EAST INDIES.—By the 7th Vic., cap. 16, just passed, certificates of produce which were hitherto necessary for the admission of coffee imported from the British possessions in the East Indies, at the low duty, have been dispensed with, and the Act 5 and 6 W. IV., cap. 66, sec. 2, enacting that no coffee shall be entered as being the produce of any British possession within the limits of the East India Company's charter, unless the master of the ship importing the same shall produce a certificate under the hand and seal of the proper officer at the place of shipment, testifying that a declaration had been made and signed by the shipper of the coffee that it was really the produce of a British possession; nor unless the master shall also make a declaration that such certificate was received by him at the place where the coffee was shipped, and that the coffee so imported is the same mentioned therein, has been repealed. By this act, the duty on foreign coffee is reduced to 6d. per lb.

PAID OF BIRTH.—Those who depend on the merits of their ancestors, may be said to search in the roof of the tree for those fruits which the branches ought to produce.

IMPERIAL PARLIAMENT.

THE FREE-TRADE MIRROR OF PARLIAMENT FOR THE SESSION 1844.

Twenty-second Week, ending Saturday, July 13.

Nothing directly bearing on FREE TRADE has occurred in Parliament during the past week, unless we except the Railways Regulation Bill—an important measure, not only in relation to personal and private interests, but on account of the principle assumed, and the precedent which it creates.

In the early part of the session, the Government procured the appointment of a Select Committee on Railways, which sat for a considerable time, and issued various reports relating to particular and general matters. On these reports—or rather on one of them—the Board of Trade professes to have based the bill, now hurrying through the House of Commons, and which sets an example of interference with private enterprise not at all accordant with the true spirit of commercial legislation. Part of the opposition to the measure has been disarmed, by the assurances of the Prime Minister and the President of the Board of Trade that they do not seek for the Government an absolute power of interference, but only wish to reserve to the Executive and the Legislature a right to interfere and control, should future circumstances make it expedient. The less power, however, that a Government has of interfering with trade, the better for the people.

The second reading of the bill came on last Monday, when Mr. Gladstone spoke nearly three hours in explanation and defence of the measure. The debate was adjourned to Thursday, when Mr. Bright, Mr. Colquhoun, Mr. Gisborne, and various other members, spoke against the measure, while Sir Robert Peel defended it, being the only Minister, with the exception of Mr. Gladstone, who has done so. On a division, 188 members voted for the second reading, while 98 opposed it, giving a majority in favour of the bill of 88.

MEETINGS.

BIRMINGHAM.

On Tuesday evening at eight a meeting of the Committee of the Anti-Corn-Law Association of this town was held at the Public Office, for the purpose of receiving the report of the Finance Committee.

H. SMITH, Esq., took the chair at half-past seven, and briefly stated the objects of the meeting. He said they had been called together for the purpose of having submitted to them an account of the money which had been raised in aid of the League Fund; and, as it was probable that that was the last meeting they would have during the present season, he might be permitted to advert to what they had done, and the present position of the great question which they had been endeavouring to support. The objects they had in view in the formation of that committee were twofold: first, they designed to get up an expression of public opinion in Birmingham in favour of Free Trade; and, secondly, to obtain subscriptions in aid of the general fund. On looking over what they had done, he thought they had not only reason to be satisfied locally, but he thought the League had very great reason to be satisfied with the result of their exertions. He was sure the town's meeting was most decidedly favourable to Free Trade. They would bear in mind the very great efforts which had been made by some misguided persons to break up that meeting; yet, notwithstanding all those efforts, their subsequent vote clearly proved that the people of Birmingham were in favour of Free-Trade principles. Their subscription had been also highly favourable, amounting, as it did, to £1471 18s. 3d., and collected from nearly the same persons who had only contributed about £300 the year before. He confessed he was sorry, on looking at the subdivision of the list, to find that they had not been supported by many men of station and acknowledged intelligence, whom he certainly expected would have come forward. When he looked at their merchants, and reflected that the object of the League was to relieve their commerce from those shackles which were at present so great a hindrance to its prosperity—when he looked at their manufactures, and saw what difficulties they had to contend with, arising from the restrictions upon trade, he certainly must say he felt a little surprised that they should not have come forward with more energy in support of those measures which were essential to the speedy restoration of that healthy state of commerce, so necessary to the happiness of this great country. When he looked to the legal profession in Birmingham, and knew that they must be aware that many of the evils they had to correct proceeded from want of commerce, and when he reflected that the gentlemen of the medical profession could not be ignorant of the fact that much of the misery they daily witnessed was caused by those injurious restrictions on trade, he must say it was to him a matter of surprise that those humane and talented gentlemen could refrain from giving their aid to the cause in which they were engaged. They had only, however, to persevere, and those who now held back would be sure to join them. As had been often stated, it was not a mere party paltry squabble—it was a question purely of a commercial nature, in the discussion of which all parties could fairly join, and in which all were alike deeply interested. The result of the late debate in the House of Commons was highly satisfactory. The most powerful arguments had been advanced in favour of Free Trade, and he must say, that the reasons assigned for the rejection of Mr. Villiers's motion were not such as would stand examination. Sophistry had been opposed to facts and common sense, and partial interests were opposed to the general good. On the whole, the friends of Free Trade had every reason to be well satisfied with the result of their labours, and he had not the least doubt of ultimate success.

C. GRACE, Esq., then read the statement of accounts, after which, on the motion of Mr. Councillor Atkinson, seconded by Mr. F. Osler, the accounts were passed;

and after a desultory conversation the meeting separated. —*Birmingham Journal.*

YARMOUTH.

A meeting of the memorialists to the members for the borough was held in the Corn Exchange, on Thursday evening, the 27th ult., to take into consideration the answer to the memorial of the electors, calling upon Messrs. Rumbold and Wilshe to vote for Mr. Villiers's motion for the repeal of the Corn Laws.

Mr. D. A. Gourlay, the Chairman of the Yarmouth Anti-Corn-Law League, was called upon to preside.

The CHAIRMAN having read the notice calling the meeting, said that the electors who had signed the memorial to the members were met to decide whether the answer to that memorial was satisfactory or not. For himself he would beg to observe, that to him it was not so; opposed as he had been to the Corn Laws from the time they were enacted, he was naturally anxious to do everything in his power to promote their repeal. He believed that by signing the memorial he had done what all the other memorialists had, pledged themselves to the principle of the total abolition of the Corn Laws; and he intended to act upon that principle. The Chairman then called upon the Secretary of the League to read the answer of the members to the memorial, which would at once bring the question before the meeting, whether it was or was not satisfied with that answer.

Mr. BAYLY (Hon. Secretary) read the answer, and as the answer to the memorial of last year was referred to, it was also read. Mr. Bayly then showed that the one received this year did not all correspond with some parts of that dated 1843, inasmuch as in this year's answer it was stated that our members did not permanently oppose themselves to the total abolition of the Corn Laws; and in last year's that their repeal would entail misery upon the country. Mr. Bayly then referred to that part of the answer implying that the League would be willing to accept of something less than total repeal, and quoted the prompt and explicit denial of the organ of that body that anything short of total repeal would be accepted. After defending the conduct of those Free-Trade men who voted against Mr. Miles's proposition on the sugar question, Mr. Bayly moved the following resolution:—

"That it is the opinion of this meeting, that the answer of the members for the borough to the memorial of the electors, requesting them to vote for Mr. Villiers's motion, is unsatisfactory, inasmuch as it informs the memorialists that their sentiments have undergone no change since last year, and refers to the answer, dated May 5th, 1843, to the memorial of the electors of that year. In which answer it is stated, 'that the repeal of the Corn Laws would entail misery upon the country without affording any immediate relief to the distress' which that memorial affirmed existed in this borough. Because it affirms that, although the improvement in trade has not extended to the shipping interest, it is nevertheless sufficient to create doubts whether the depreciation of the property embarked in that important branch of trade, and the general want of employment, stand in close connexion with the Corn Laws. Because it conveys an impression, that the National Anti-Corn-Law League would be satisfied with less than a total repeal of the Corn Laws; an assumption at variance with the expressed and oft-repeated avowal of the Council of the League, and denied by its organ, the LEAGUE newspaper. Because by stating that the members for the borough would not be understood permanently to oppose themselves to the total abolition of the Corn Laws, the constituency is left in doubt as to the time when that opposition will cease. And because both letters evidently show that Messrs. Rumbold and Wilshe are decidedly opposed to the total abolition of those laws, and prove that they think more of expediency than of the question, whether the tax on food is good or bad for the community—a line of policy which this meeting cannot sanction, but condemns as unsound in principle, and contrary to the true doctrines of legislation."

Mr. BURROUGHS, in seconding the resolution, said he was so thoroughly satisfied that nothing but entire repeal of the Corn Laws, and carrying out fully the principles of Free Trade, could save this country from dreadful suffering, as to make it impossible for him to vote for our members with their present feeling on the corn question; he could not sacrifice principle to party. It was well known that the distress now existing in Yarmouth was greater than any one could remember; and it was not sufficient for those who advocated the Corn Laws to say that they had done no harm; they were bound to prove that they had done some good. Then, as regards the shipping. He was at a loss to conceive how any man could shut his eyes to the fact, that three parts of the corn imported into this country was brought by foreign vessels; for the sliding scale acted in this way: as soon as the duty was low, the merchant, in order to have the corn as soon as possible, caused it to be shipped in any vessel lying at the port from which it was shipped. Our ships were not there: foreign ones were. The corn must be had quickly, or the duty might rise; and accordingly it was shipped in foreign bottoms. Whichever way you looked at these laws, you found them acting as an impediment to trade and commerce, causing the labourer to be destitute of employment, and enhancing the price of his food, when he could get any.

The CHAIRMAN having read the resolution, called for a show of hands, when every hand appeared held up in favour of it, he declared the resolution passed without one dissentient.

Mr. JAMES LAWS said that a resolution had been put into his hands, the purport of which he cordially approved. It was:—

"That this meeting pledges itself to support such candidates only, at any future election, as are in favour of the total and immediate repeal of the Corn Laws and the principles of Free Trade generally."

He begged to remind the meeting that, during the last two or three years, the people had gone through great distress; that nearly all thinking men agreed that the Corn Laws had much to do with that distress; and that it was therefore desirable to abolish those laws. To accomplish this, men must give up party politics; and he thought that the resolution he had read to the meeting was one which could be acted upon by all parties in the borough.

Mr. ROBERT BAKER, in seconding the resolution, dwelt upon the injustice sustained by the shipping interest, from which protection was removed, while that of the landowners was continued. The state of Yarmouth, he said, was most deplorable; wherever you went, you saw scores of working people walking about with their hands in their pockets, and the tradesmen standing behind their counters without customers. He thought this state of things was sufficient to make people determine that an alteration was requisite. Believing that the resolution moved by Mr.

Laws was a right and proper one, he begged leave to second it.

The CHAIRMAN put the resolution to the meeting, which was carried by acclamation; and a vote of thanks to Mr. Gourlay being moved, seconded, and carried, the meeting separated amidst three hearty cheers for the repeal of the Corn Laws.—*Norwich Mercury.*

MIDDLETON, NEAR MANCHESTER.—On Monday last a Free-Trade dinner took place in this town. In this township, notwithstanding the adverse clerical and aristocratical influence, the Free-Traders succeeded in polling a large majority in favour of Mr. Brown at the late South Lancashire election—the numbers being, 80 Free-Traders to 36 Monopolists. It was determined that the electors should dine together, and advantage be taken of the occasion to forward the Free-Trade cause. Accordingly, the services of those talented lecturers, Messrs. Acland and Falvey, were secured, and, by the kind permission of the owners, the large room in Messrs. Stone and Kemp's new building was tastefully fitted up for the occasion. About 140 gentlemen sat down to dinner, R. J. Halsall, Esq., presiding, and Richard Gill, Esq., occupying the vice-chair. After the usual loyal toasts, the chairman, in an appropriate address, proposed, "The eighty honest, independent, and upright electors of Middleton who voted for Mr. Brown, giving a majority of more than two to one in favour of Free Trade."—Mr. William Jones replied, directing especial attention to the duty and importance of every elector's exercising his own judgment in the rightful disposal of his vote, unswayed by personal or impure motives.—The next toast was "Free Trade with all the world," to which Mr. Blane, of Rhodes, responded.—Mr. Falvey then addressed the meeting in an eloquent and impressive speech, in which he introduced many humorous illustrations, and excited great interest by his glowing advocacy of Free Trade.—"Earl Radnor and the advocates of Free Trade in the House of Peers," drew a warm eulogium from the chairman on the character, the consistency, and the patriotic conduct of that distinguished nobleman. "The eminent services and indomitable zeal of our great advocates in Parliament," was adverted to in happy terms by the chairman, and acknowledged, with great enthusiasm, by the assembly.—Mr. Dracup, of Salford, a venerable and earnest Reformer, responded, and bore testimony to the invaluable assistance of those distinguished individuals.—With suitable prefatory observations, the president next proposed "The total and immediate repeal of the Corn Law."—Mr. Acland responded in an able and argumentative address.—The company were favoured with a song, composed for the occasion, entitled "The National League," written by Mr. George Richardson, of Manchester, and set to music by Mr. W. C. Ridings, of Middleton, who gave the solo, and was accompanied in the chorus by the gleesingers and some of the company. Several other toasts followed.—On Wednesday evening a tea party of the wives and daughters of the electors was held, which was very numerously attended.

NOTES TAKEN BY A TRAVELLER IN THE SUMMER OF 1844.

No. II.

The southern and eastern coasts of the German Ocean have an uniform character and appearance for the traveller who approaches them from seaward. From Calais along the coast of Flanders to the mouth of the Scheldt, ridges of low sandy downs, extending occasionally for miles inland, contrast with the steep, bold shore of Britain, and seem to announce that the water recedes from the Continent as it encroaches upon our chalky cliffs. Every year sees new embankments formed, and land taken into cultivation, on the Dutch and Flemish coast; while falling cliffs and submerged districts are the tales that our Goodwin Sands and Sussex coast relate. These sandy ramparts, with their outlying banks and shallows in Flanders, are, however, constantly intersected by channels deep enough, with the assistance of the tide, to allow vessels with considerable burden to penetrate far into the lowland country. This stretches from the coast into the interior in a semi-circular shape, and includes between the heights near St. Omer, and that run, by Lille and Tournay, to Brussels and Louvain, a basin of varying fertility, but turned to better account, agriculturally and industrially, than any portion of the Continent to the north of the Alps. These inlets, under the name of "deeps," "flats," or "aïles," preserve their depth, even when they are left to nature, in consequence of the extreme mobility of the alluvial soil through which they run; and in the early times the whole of Flanders must have been inaccessible from the land side for carriages or horses, while these very impediments to the land traveller formed channels of the easiest communication for the inhabitants that were accustomed to them, and bred up to use them.

The most formidable enemies that these countries encountered, after they were deserted by the Romans, were people of similar habits, who came from a country of precisely the same nature. The Northmen, or Danes, who committed the ravages in England that are noted in our history, and who came from the Baltic and the mouth of the Elbe, entered into these inlets, to which they were familiarised, and crossing (with their boats) over into the Meuse, or even into the Rhine, carried devastation into the heart of Germany. In the ninth and tenth centuries the wars of the Normans were everywhere the main objects of attention. Their fearful incursions drove the peasant cultivator of the soil to build his hut under the walls of some castle, the number of which was multiplied by the need of defence. Perhaps nothing tended so much to give the nobility and the church the martial character which has since entailed so much inconvenience on society than these fearful irruptions of the Northmen.

The line of castles and strongholds built to check their irruptions is still traceable along the highlands that I have pointed out as enclosing Flanders in a semicircle. The Bishops of St. Omer, the Counts of Artois, the Dukes of Brabant, the Lords of Hainault, and the Bishops of Liege consolidated in this manner a military aristocracy, at constant feud amongst themselves, and the rude oppressors of a peasantry to whom they were still indispensable as protectors. The change in manners, in views of statesmanship, and of religion, which history points out between the age of Charlemagne and the commencement of the eleventh century, is one from sincere and enlarged projects of improvement on the part of rulers, who were beyond their subjects in civilization, to a narrow, egotistic policy of

most soldiers, using their efforts only to repress the energies of a rising race of industrious and too subservient citizens and peasants.

Between these eagles' nests, that finally served to introduce a methodised system of plunder along the high roads which they commanded and the coast, the deeps and flats of Flanders nourished a race of hardy fishermen, with whose occupation the nobles were less unwilling than unable to interfere. Here therefore, under precisely similar circumstances to those which attended the rise of Venice and Amalfi, the nucleus of a town could be formed unopposed by the rapacity of a baron or a priest, unassailed by the stifling protection or useless cost of a court or an army.

The kind of shelter which industry, with its humanizing tendency, was driven at that early age to seek is sufficiently indicated by the ground on which the city of Ghent now stands, and which, after all the changes that ages have produced, still counts *twenty-six islands*, united by eighty bridges, and divided by an innumerable number of navigable cuts, with sluices regulating the flow of the waters of the Lys and the Scheldt. The secure position of Ghent at the junction of these rivers seems very early to have made it a place of maritime importance, for we find Charlemagne mustering a naval expedition at Ghent in 811, which he destined against the Saxons and Northmen. Like Alfred, he knew that maritime powers must be encountered on their own element; but under his feeble successors these attacks were returned with interest, and all possibility of establishing any fixed settlements in the plains was precluded, notwithstanding the martial ardour of the landmen of the highlands. Bruges counts many bridges connecting its quarters that are intersected by numerous canals. It is not my intention, however, to give the history of these countries. I only wish to point out the circumstances that attended the rise of the great Belgian cities. These circumstances are in all nearly the same. Bruges and Antwerp arose in similar situations, accessible from the sea by means of rivers or fleets, and protected by the same watercourses from the attacks of land robbers. Termonde or Dendermonde, and Malines or Mechlin, are at this day seaports for barques of a peculiar construction, and a three-master is lying at the moment I am writing in the basin of Ghent. The comparative repose which the Flemish coast enjoyed after the Normans had found in England, Sicily, and Italy a richer field of plunder, sufficed to allow towns to spring up on the sides of those cities which I have named; and the navigators of the Hanseatic League and of the Mediterranean, when the naval art had made sufficient progress, found both industry and security within their walls. The republican form of government is incompatible with violence and rapacity. The origin of every trading city of importance on the Continent was republican, and with their political freedom, on which freedom of trade depended, the commercial prosperity of all has flourished or departed.

The reason of this dependence of trading prosperity on political liberty is lucidly displayed in the history of the Belgian cities. Trade is, naturally, the growth of a people's necessities. Wherever they are allowed fair play, the bulk of the people are the best customers; and those who furnish supplies for the satisfaction of the first wants ever enjoyed the greatest profit. Amongst a people that are allowed to take their own course in trade instinct points to the objects that are thus most remunerating; and, while the Flemings were exempted from the action of the political whirlpools into whose sphere they were afterwards drawn, an intimate connexion with England took place. The Flemish bowmen formed an important part of the English army. An interchange of wool and cloth for dyeing took place, which must have been equally advantageous to farmers and manufacturers. But the latter class unhappily learned from the former the principle of excluding rival products from their markets; or rather the alliance of the rich territorial nobles with the most successful and influential citizens formed a combination against the consuming classes, and which militated against the true interests of all. It would be easy to fill pages with the description of the splendour of these cities before the yoke of Spain and of Austria dried up the resources that had so long been prolific. But all I wish to insist upon here is that the causes of their prosperity as of their decline are no mystery; but, as they are easy to point out, so they deserve to be studied, as containing a deeper lesson than the antiquarian lore of dynasties and pageants. The inquiry into the origin and decay of the principal cities will enable us better to understand their present condition and prospects than a mere statistical survey would allow.

I have already described cursorily the port of Ostend, but it is worth considering in detail, being the only harbour of any importance which the narrow-minded policy of our Cabinet has left to Belgium. The Scheldt is shut up by Dutch fortresses. Even Terneuse, the entrance from the sea to the splendid canal leading to Ghent, and Ecluse, the old port of Bruges, lie in the narrow slips of territory along the coast which political jealousy has retained in the hands of the Dutch; and, strange to say, while a diplomatic reserve was made on the subject of the partition of the mountainous districts of Limburg and Luxemburg, the rich land on the left bank of the Scheldt, on the acquisition of which the national independence really depended, was thought to be of no importance, or was arbitrarily decided by cabinets who would not allow it to become matter of discussion.

There can be little doubt that this mutilation of their seacoast, which cuts off a portion of the coast from the inland territory, that in many respects much resembles our mouth of the Thames from Chatham to Gravesend, has seriously operated to check commercial speculation in Belgium. As the repression of trade is felt by every other class, the country has in consequence generally suffered. But the natural tendency is reviving, and the result of renewed commercial activity will only be to make this dependence on Holland be felt as more burdensome. Will not such a feeling eventually strengthen the very influence—that of France—which it is evident that this shortsighted policy was intended to counteract? The government that will give the command of the sea to the citizens of Ghent and Antwerp will, ere long, be the most welcome; and we who had the power to do so, and refused, will look back with astonishment on a policy which refused to confide in the civilizing effects of trade. The Belgians, rich and active as in the middle ages, would be as sturdy and as independent as they then were. Crippled and fettered as we see them now, we can expect no national pride, no sensitive jealousy of independence, no confidence

in their right or in their might. We could not better have played the game of a future Napoleon.

This error (scarcely inferior to the sacrifice of Poland), which has deprived our merchants and manufacturers of those who by this time would have been valuable customers and coadjutors, invests Ostend with an importance that would otherwise scarcely attach to it. The harbour is not only dry at low water, but is at all times, when the wind is high, of difficult access. A bar crosses the entrance, which is equally dangerous from the swell that northerly and westerly winds occasion; and the coast between the port and the mouth of the Scheldt is formidable from the number of banks that line it. From these disadvantages an increase (and a small one it is) can be traced in the trade of Antwerp, while that of Ostend remains stationary. Five hundred and thirty-six vessels entered Ostend in the course of the whole year 1842, while the chronicles of the middle ages recount that two hundred vessels often entered the port of Ecluse to proceed to Bruges at a single tide. But Ecluse is now Dutch; and Bruges, like Antwerp, long excluded from the habit and benefits of foreign trade, measures its present decay and prosperity by the price of fresh butter in the London market, where it is (hospitably) received with a duty of 20s. per cwt., and five per cent. additional charge. Ostend thinks more of the list of sea-bathers than of the entry and departure of ships.

Ostend never was, nor can well be, the port of Bruges until a change comes over the spirit of the Flemings; to understand which we must recur to the origin of those towns to which I have alluded. Their position, amidst swamps and sand-banks, attests the necessity the first inhabitants were under of cutting off all communication with the land behind them. The old fishermen, who became burghers when they grew rich, knew nothing of the admirable qualities of chivalry and church hierarchies. They looked upon the noble as a pirate, whose ship was his horse; they knew that he understood as little about their interests as he did about managing a vessel. In this faith the Flemings, like the Amalfitans and the Venetians, grew rich and powerful. When the banks of their "fleets" were well dammed up, and the waters regulated in their flow by sluices; when the traders of Italy and the Baltic found security and freedom in these towns, and merchants from the interior established a communication with them, the nobles of the highlands, finding them more accessible, sought to approach and to form alliances with them. Bruges was first drawn under what may be called the continental hood. Baldwin, the forerunner of the wild in which the town grew up, carried off the daughter of Charles the Bold, who, finding so bold a son-in-law a desirable addition to his family, gave him the lordship of Artois, and created him, by his sovereign authority, Count of Flanders. That the counts of this race were able to exercise little authority in the town may be presumed from the simple fact that this nomination did not impede the rapid rise of Bruges as a mart of trade. Arras was the capital of the new dynasty. In fact, the whole secret of the original prosperity of the Belgian, as of the Italian cities, lay in their distrust of these noble patrons. All the civilization of which they were the promoters came from their connexion with the sea, and independence of the land; but on this, their proper element, the cities were each other's rivals. Hence a spirit of exclusiveness and mistrust was fostered by all the circumstances that surrounded them, which the religious instruction then in fashion was not adapted to modify or dispel.

According as their prosperity increased, this spirit of rivalry was strengthened, and frequently broke out in open hostility. Ghent and Bruges carried on deadly feuds like Venice, Genoa, and Pisa; and eventually these feuds threw them into the power of the sovereigns they had long distrusted with so much wisdom.

Ostend was early an independent town like the rest, and consequently could not harmonize with Bruges. Each little republic shut itself up within its walls and ditches, and, prepared to resist oppression on all sides, looked upon all who approached as aggressors. There is a great deal of this feeling still alive both in Belgium and in Italy, and in both countries it explains many problems that puzzle the stranger. The French military rule destroyed the civic feelings of Ostend more than the famous siege or the oppression of Spanish governors. But without this civic feeling no Belgian town is of any consequence. The laborious diligence, which in Flanders is rewarded with wealth, cannot be organized or directed by any centralizing authority, or even encouragement. Take away from the Belgian the feeling of his personal or civic independence, and you make him, what a large proportion of the population now are, a listless, awkward, dispirited, and, consequently, useless creature. Ostend, under Napoleon, was a French port and arsenal. It is now a fortress without a garrison, a harbour without ships; has a custom-house that adds little to the revenue, and sees its inhabitants periodically disappear before a crowd of fashionable sea-bathers, who occupy their houses and throng the streets. Had the new Government studied in the old Flemish instead of the new French school, and understood how to infuse a little of the civic feeling into the population of the great cities which it undertook to reconduct to prosperity, the result would have long since been perceptible. But the burghers of the towns and the skippers of the ports cannot possibly at the present day put more confidence in the knights of the pen and of the "tribune" than their ancestors did in the golden-spurred and iron-cased ancestors of the legislating classes. Thus railroads are planned and executed; canals abandoned or completed; and, to the astonishment of the good people of Brussels, no ship is built in Ostend, no manufacturing chimney smokes at Bruges. Merchants in countries that have no superabundance of capital cannot afford to embark what they possess on a footing so insecure as the vote of a chamber, even where venality is not openly professed and systematized. The profits of East and West India trade, of weaving and printing at Glasgow or at Manchester, may be great enough to allow speculators to run the risk of ministerial whims on tariffs, currency, and hours of labour. The Belgian mercantile speculator cannot afford to play such a game. Tariffs are, therefore, as I have said, made and unmade at Brussels. Chambers of commerce correspond with Ministers, who then do what they please. But ships and factories are not to be had on those terms. Bruges testifies by its venerable and even splendid appearance, to what unrestricted trade did in former times for a city whose inhabitants were able to assert the merchants' inalienable right before God and man. Until that right is restored, the capital, the talents, the labour of the citizens is dormant invested in the production of dairy pro-

duce, of which a portion is weekly shipped to London. Let every Englishman who reads "Ostend Butter" written up in a shop window, take to heart the lesson which the inscription records!

CORRESPONDENCE.

AGRICULTURAL LABOURERS' WAGES.

To the Editor of the LEAGUE.

SIR,—It may be useful to some of your non-agricultural members to know something of the progress of wages in Norfolk, both as to their actual amount, and considered, also, with reference to the amount of comforts they have enabled the working man at various periods to command. With this view, I send you below an account of the price of labour, both by the piece and by the day, at the present and at former periods; and, as affecting the argument of land going out of cultivation by the repeal of the Corn Laws, I also give you an account of the principal necessary outgoings on arable land farms, with the view to show that the actual expenses of farming are less at this than at any former period. The increase of rates, taxes, and other expenses are being daily cited as evidence for the necessity of protection; but a little examination will show that these are evils mainly created by the Corn Laws themselves. The first column below, the scale of wages, in 1790 is an average of 29 farms collected by the Secretary of the Board of Agriculture, and given in his report on Norfolk in 1803. The second column gives the prices of the same in 1843, and was partly communicated to me by an agricultural friend, and is partly the results of my own inquiry.

	1790.	1803.
Reaping wheat, per acre	5s. 8d.	5s. 0d. to 5s. 8d.
Mowing barley, do.	1 0d.	2 0d.
Threshing wheat, per comb of four bushels	1 11d.	1 4d.
Threshing barley, do.	0 11d.	0 10d.
Filling earth, per load	0 2d.	0 1d.
Filling dung, do.	0 2d.	0 1d.
Tire, per lb.	0 3d.	0 2d.
Ploughing, do.	0 3d.	0 3d.
Chains, do.	0 4d.	0 5d.
Shoeing, per shoe	0 4d.	0 6d.
Carpenter, per day	1 9d.	2 4d.
Mason	1 11d.	2 6d.
Thatcher	2 0d.	2 6d.
Collar-maker	1 11d.	3 0d.
Thatching both sides of long stacks, per yard (another communication)	1 0d.	0 9d. to 0 10d.
Day labour, per week, in winter	7 2d.	9 0d.
Do. (of 20 communications), in summer	8 8d.	10 0d.

Of the above items it should be observed that more wheat is mown now than formerly, which is a cheaper mode than reaping on light land. 8s. to 9s., and even 12s. an acre would still be given for reaping wheat on strong land, and where it is much laid. Mowing barley is higher, which may partly be accounted for by better crops. Threshing wheat and barley is lower; but this, which was formerly done with the flail entirely, is now chiefly done by threshing machines at a much less cost than that here stated. Filling earth and manure is less, which shows that simply laborious work is now less than ever. Ploughing and chains are much the same, though iron is cheaper. Shoeing is dearer. The wages of carpenters, masons, thatchers, and collar-makers, appear to have risen; but from the price of thatching by the piece, which I have given above, it may very probably be that as much work of these kinds is done for the money as ever. The expense of carpenters and masons, too, falls on the landlord and not on the tenant.

In an account of the progress of labour in various parishes, communicated to the Board of Agriculture in 1793, by the late Sir Thomas Bevor, Bart., there is a curious complaint as to the high price of provisions at that time. The account from the village of Hapton says:—

	In Norfolk, 1844, these are
"In 1792, Wheat, 5s. 6d. per bushel	7s. per bushel
Malt, 5s. 6d.	8s. 6d.
Meat, 4d. to 4½d. per lb.	5d. to 7d. per lb.
Cheese, 4d. to 5d.	7d. to 8d.
Butter, 10d. to 1s. per pint	8d. to 1s.)

"In 1752, the labourer could bake, brew, and hang on the pot with a piece of meat in it, and ask his master or neighbour to drink. In 1792, the very reverse. The high price of provisions, wool, and leather, altogether affects the labourer so much, that it is impossible for a poor man with a young family to keep them either full or warm without assistance. Some farmers let them have wheat at 5s. per bushel, and put out a deal of their work, so that the labourer may earn from 18d. to 20d. a day." "Daily wages in the same parish in 1792 1s. 2d. to 1s. 4d. per day." From this extract it appears that people in 1792 thought provisions dear compared with the previous periods of 1752 and 1772; they certainly were dearer, and the command of the labouring man over the necessities of life somewhat less.

We are sometimes asked what necessary connexion there is between the price of corn and wages. There is none that we know of, except that when corn is plentiful it is cheap, and is consumed in greater quantities by those who want it. That wages should not fall with corn, appears even a wise provision of nature: were they to do so, the surplus of a good harvest would never be consumed; and were they to rise with the price of corn, a deficient crop would be entirely consumed before three-fourths of the year were passed. A bad harvest diminishes the supply of corn from our own soil, and a Corn Law diminishes the supply of corn from other soils. The effects of both are precisely similar. Nothing can compensate a people for a deficient supply.

If we wish to show how good harvests and low prices operate upon wages, we may quote a passage from Tooke's "History of Prices," vol. i., p. 55, where he says:—"According to Arthur Young, the average price of wheat was, for the whole of the seventeenth century, 38s. 2d. per Winchester quarter; and for the sixty-six years from 1701 to 1766, 32s. 1d., being a fall of 16 per cent.; while the price of agricultural labour which, on the average of the seventeenth century, had been 10½ per day, was for sixty-six years, ending in 1766, 12d., or a rise of 16 per cent."

"The fact, indeed, of a rise of money wages in this country coincidently with a fall in the price of corn, during the long interval in question, rests on unquestionable authorities."

If we compare the period above quoted with the last fifty years, or the forty years before that, we find abundant evidence to show that a high price of corn does not produce high wages, and that a low price of corn may be accompanied by a rise of wages. It is incumbent on our opponents, in order to prove their own case, that they should either deny the facts or explain the reason of them.

If we are asked, why do wages rise and fall at all in agricultural districts, we answer, the labour market is in an unnatural state; there are more labourers than work can be found for; their condition is already so low that a rise in the price of food is absolute ruin to them, unless accompanied by a rise in wages; and this the farmer is compelled to give to keep men out of the workhouse. To the operation of the poor-law, then, we may attribute the rise in wages; nor ought we to find fault with the law on that account, for it is a just and a merciful law which says, that no one shall perish in England for want of food.

Of the expenses of farming, before going into an analysis of them, it would be as well to state first what they are, and then to examine the nature and extent of their reduction or increase. For this purpose I give the statement of the Secretary to the Board of Agriculture, of the average result of six communications of the expenses of farming 100 acres of arable land in 1790—these are as follows:—

	s.	d.
Rent	80	0
Tithes	15	19
Rates	17	13
Wear and tear	18	0
Labour	91	18
Seed	30	6
Manure	10	16
Team	46	10
Interest of capital	34	0

£348 3 0½

All the expenses of a farm, with the exception of the farmer's profit, are, I believe, included in the above items; and, from my own observation, the proportion they all bear to the expenses on a farm at the present day are pretty much the same, with the exception of rent and tithes. These two items have advanced considerably. Rates are somewhat higher, but this is caused principally by the high price of food, as more than two-thirds of the maintenance of paupers consist of flour; the clothing of paupers having greatly diminished in price. Surveyors' rates, being principally carriage of materials, consist mainly of the agricultural produce horses consume; and labour of the commonest kind, which I have before observed is as cheap as ever. Wear and tear, I presume, means tradesmen's bills for keeping implements in repair, shoeing, farriery, &c., though I cannot ascertain the particulars at that day. On Lord Ducie's Example Farm at Whitfield, I find the estimated expense of keeping implements in repair to be 10 per cent. upon their value; and the value of the implements on his farm of 250 acres being £407, the annual cost is £40 14s., or about 3s. 3d. an acre. On the same farm, the carpenter's bill is estimated at 30s. per horse for nine horses, the smith's at 30s. per horse, and the saddler's at 10s., which, with £8 for hurdles for sheep, makes altogether £39 10s., or about 3s. 3d. an acre more. These items are high—shoeing, for instance, being done by some farmers for a little, as from 8s. to 16s. per horse. Farriers' bills, too, are much less now than formerly, and the quantity of stock saved by superior knowledge and treatment much greater. If the cost of implements is greater now than formerly, they, at any rate repay, by their utility, the greater expense, and any additional cost on this head can hardly be charged against a farm as an increased expense. Labour which, in 1790, amounted to nearly £1 an acre, is now done for about the same. Some farmers it may cost 25s. an acre, and on Lord Ducie's Example Farm it costs 30s. 5d. per acre; but, when the extra quantity of stock that is now kept is taken into account, the labour on a farm amounts to but little, if anything, more than it did in 1790. The comparative price of piecwork and day labour now and in 1790, given above, will also corroborate this statement. Seed corn varies, of course, with the price of agricultural produce, and need not enter into the expenses of farming. Manure, supposing it to be oilcake, is a foreign agricultural product, and rises, or would rise, with the price of foreign corn. Horse corn is another produce of the farm, and need not enter into the calculation. Interest of money is as low now as it ever was, and, besides the farmer's profit, which is not given, is the only remaining item.

Of the above expenses, there are none except rates, labour, tradesmen's bills, and interest of capital, that can fairly be called an expense attendant on farming. Of these, an examination anywhere, in any county in England, will show that they are as low as at any former period, or that, where they are higher, the agriculturist gets really more for his money. Rent and tithes have materially and steadily increased in the last fifty years, while labour has remained pretty much the same; so that if our Corn Laws have been, as they are said to be, beneficial to the agricultural interest, there is at least matter for our serious consideration as to whom they have filled with good things, and whom they have sent empty away.

Apologising for the length of this letter, I am, Sir,
Your obedient servant,
Swaffham, June 22, 1844. ARTHUR MORSE.

(Glasgow, July 8, 1844.)

SIR,—I perceive by your last paper that you have omitted Colonel Fox, M.P. for the Tower Hamlets, in your list of pairs. He paired off with Mr. Beckett Denison.

I am, Sir, your obedient servant,

A FRIEND TO FAIR PLAY.

[As we have received a great number of letters both from the Tower Hamlets and the provinces on the subject of Colonel Fox's absence on Mr. Villiers's motion, we beg leave to tender the following general answer to all inquiries:—Colonel Fox did not pair off for the whole night. His name stands on the original list of pairs, as having paired with Mr. Beckett Denison only up to a quarter past eleven o'clock. Consequently at that hour Mr. Beckett Denison was released from the engagement, and at liberty to vote as he did—against the motion. The explanation given by Colonel Fox of his absence on this division is neither very candid towards Mr. Beckett Denison, nor satisfactory to his constituents. Colonel Fox, in a letter to the *Morning Chronicle*, states that he paired off not expecting a division, but fully

intending to vote for the motion. As we have received a great many communications calling in question the honour of Mr. Beckett Denison, under the impression that *he pair was for the whole night*, we feel bound to relieve him from this imputation by the above plain statement of fact.]

FOREIGN CORRESPONDENCE.

PETER PLAYFAIR'S LETTERS.—No. IV.

Maastricht, June 18, 1844.

The voyage down the Meuse or Maas, from Liege to Maastricht, is beautiful in the extreme. Between the sea and Brussels, and between the Scheldt and Brussels, the country is generally flat, though in a high state of cultivation. Towards the frontiers of Germany it becomes very mountainous, and nothing can exceed the picturesque beauties of the district. The Meuse, in its descent from Namur to Liege and Maastricht, passes through a bold and rocky channel, with high mountains and woodland scenery on every side. No landscape could be more lovely. You remember the valley of the River Wye, in Wales. The valley of the Meuse bears a strong resemblance to it, except that the mountains are bolder and more precipitous, and are occasionally covered to the summit with vineyards. It is true the wine produced is by no means valuable for its quality; and the banks of the Meuse will certainly never be famous for wine like those of the Rhine, the Rhone, and the Moselle. Neither is much attention paid to its cultivation, for beer is the national beverage in the south, as in all other parts of Belgium. The Belgium beer is a light pleasant drink, varying in price from three farthings to five farthings per pint. It is not so strong as our porter and ale, and has a bitter and sub-acid flavour, with the exception of the white beer of Louvain, which is merely an infusion of malt and hops, sweetened with honey, and has a sweet and somewhat sickly taste. Lombeck is the strongest beer; Faro the one most in request, and for a pint bottle of this latter I paid upon one occasion only ten centimes, a fraction less than a penny. I know that the habit of drunkenness prevails in my own country to an extent fearful to contemplate, when contrasted with the habits of the people through whose country I am now passing. I am conscious that no vice degrades and dishonours a man like drunkenness. "Oh! that a man should put an enemy into his mouth to steal away his senses!" but I deny that the legislation which would enforce sobriety as a national virtue by high duties and prohibitions is calculated to attain this end. I view it rather in the light of a premium and inducement to drunkenness. Let our legislators begin at the right end, by opening our ports and cheapening food and drink. Let proper and innocent amusement and recreation be made as accessible in England as they are on the Continent; above all, let us educate and encourage the better tastes of the people; and the stain of drunkenness, which has hitherto blackened the fair fame of our army, our navy, and our nation, will no longer tarnish the character of the people in the eyes of more sober nations. I am far from saying that drunkenness is unknown in the Low Countries, but I can truly affirm that I have witnessed very few instances of it since I have travelled through them.

Maastricht is a strongly fortified town of Holland, and one of the keys of the country. It contains a garrison of 3000 men, and presents all the characteristics of a cleanly, well-ordered Dutch town, with a quiet, sober, and orderly population, but with little or no commerce. The River Maas and the Great Canal both pass through the duchy of Limburg; part of the country being Dutch, the other part Belgian. I shall take the Canal route to Bois-le-Duc, because it will enable me to form a more correct opinion of the agriculture of the district than the common route. The Dutch and Belgian territories intersect each other, and the annoyance from the attacks of custom-house functionaries is almost unbearable. At Esdem, on the Meuse, a Dutch frontier post, the insolence and exaction of the customs people are absolutely intolerable. The steam-boat was stopped for half an hour in order that a charge with proper bill and receipt might be made upon a gentleman of sixteen centimes, or three halfpence, for an article in his own daily consumption. Such acts of petty annoyance, I am sorry to say, are practised by the custom-house authorities of both nations, very much to their mutual discredit. Belgium alone has an army of 5000 custom-house officers, in undress military costume, and the Dutch are nearly as numerous in proportion to their population. When will the nations of Europe learn to dispense with such odious and expensive burdens, and to trust more to the principle of barter and the mutual interests of the people? A new and powerful party is rising in both countries to contend for the principle of Free Trade, irrespective of political opinions; and the time is perhaps not far distant when a bloodless contest will decide between feudal monopoly on one side and the rights of commerce and of man upon the other.

Bois-le-Duc, June 19, 1844.

The journey from Maastricht, by canal boat to Bois-le-Duc, occupies 24 hours. It is partly through Belgian, partly through Dutch territory, and the petty nuisance of custom-house stations is repeated, with variations, throughout the performance. A considerable portion of the country is under grain cultivation, and the crops look extremely well: somewhat light for the want of rain, but during the last few days a good deal has fallen, and, if the weather continues favourable, doubtless the ears will fill. A considerable quantity of this land also, both in Holland and in Belgium, is unreclaimed waste land, called *bruyère*. These *bruyères* are vast level plains, dotted here and there with clumps of fir-trees. Near the roads and the canals, the ground is frequently cut into small fields, which present patches of cultivation like the oasis in the Desert. I examined the *bruyère* carefully in different directions, where cuttings had been made in the land for the purpose of drainage, and found that it consisted of a sandy loam, covered to a greater or less extent by alluvial deposits. The vegetable growths consisted chiefly of coarse grass, lichens, heaths, and marsh-mallows. Of late considerable attention has been devoted to reclaiming the *bruyère*, and it is a remarkable fact, that those who first attempted this work were an association of the monks of La Trappe, bound by vows to a life of labour, and of silence towards every one but the Superior, to whom, upon pressing emergencies, they may address themselves. The permission, however, is seldom

used, and the self-inflicted torture is commonly practised till death closes the scene. It is not true, however, that each monk is made to dig a part of his own grave daily; and the only thing like it is, that a grave is always kept yawning for the first Trappist who may die, and that, as a punishment, a brother who has transgressed any of the rules is sent to dig at it. There are about sixty brothers, of whom only the choristers, the porter, and the Superior are allowed to speak, with the exception I have mentioned of making known any pressing want to the Superior. They labour five hours a day, perform public worship for seven hours, and devote considerable time to private prayer. The estate consists of about 450 acres, is in a high state of cultivation, and the cattle and horses remarkably fat. The Belgium Government have also established colonies in different districts for the purpose of bringing the waste lands into cultivation; giving premiums and bounties for all improvements. They have also established, about ten miles from the estate of La Trappe, a convict colony, or *colonie forcée*, in which the advantages of regular work are shown. Rewards are given to the industrious and well-conducted. The most remarkable colony among the *bruyères* is that of Gheel. It is a colony of insane people, who are farmed out upon the inhabitants, who from generation to generation have followed the strange profession of taking care of the insane. They are quartered upon the different houses, and are to be seen walking about the fields, or working in the grounds. Scarcely any restraint is practised upon them, and they are certainly happier in the green fields and gardens than they could be in confined rooms or cells. The hospital of Gheel is a remarkably clean and well-conducted establishment. It is kept by fourteen Sisters of Charity, most of whom have moved in a respectable rank of life, and all have entered their present calling before they were twenty-five years of age. They have an excellent farm close to the hospital, in which the convalescents are employed. The sisters seem perfectly happy. The good deeds they hourly enact may inspire them with a cheerful confidence in a future bright reward. It is an extraordinary thing to remark the difference of feeling which the same religion seems to impart to its different disciples. Night and day are not more opposite than the gloomy frown of the silent Trappist and the benign smile of the good-hearted Sister of Charity.

Bois-le-Duc, or St. Bosch, is a fine old city, containing from 20,000 to 30,000 inhabitants. It is situated in a level country, upon a branch of the Maas or Meuse, which affords steam communication with Dordrecht and with Rotterdam. As the river approaches Dordrecht the land becomes low and marshy, and is chiefly used for pasturage, and vast herds of cattle are to be seen grazing on the banks. Fat beasts for the butcher were selling from £6 to £9; full-grown calves from 40s. to 50s.; sheep 15s. to 20s. At a public sale, *bruyère*, or waste land, was knocked down upon an average at 11 gilders, or about 19s. per hectare. But this land was far richer than many of the light sandy soils upon which the Flemings expend their labour in the upper districts. Potatoes sown in March promise an abundant crop. I feel satisfied, if proper drainage, and more especially the tile drainage recommended to our own agriculturists by a commercial man, was generally introduced, that the result would be most satisfactory. The surface soil in this district is so rich that no manure is needed; indeed, the "one thing needful" appears to be drainage; and wherever this has been practised in patches along the side of the canal, the crops are found in a most luxuriant state.

The commerce of Bois-le-Duc is chiefly confined to the supply of goods to the agricultural districts in the neighbourhood. It serves as an *entrepôt* for Rotterdam, receiving manufactures for the interior, and sending down agricultural produce in return. It is a Catholic town. The next town, Dordrecht, is a Protestant town; it was one of the birthplaces of the Reformation. As a general principle, full toleration is practised in the Netherlands. At Amsterdam, for example, there are 60,000 Jews, and a quarter of the city is called the Jewish Quarter. At Rotterdam they are also numerous, and one of the magistrates of the city is a Jew. I mention this as an evidence of full religious toleration.

Rotterdam, June 23, 1844.

The shores of the river above Rotterdam are covered with ship-building yards; and, as you approach the town, you discover the docks and wharfs, which have earned it the title of the little Liverpool. It is obvious, however, at a glance, that more immorality and drunkenness prevail here than in towns belonging to agricultural districts; still Rotterdam is remarkable for its general order, cleanliness, and propriety. Through the centre of its principal streets run wide canals, at whose wharfs the vessels are constantly loading and unloading. You awake in the morning, and see from your window the tall masts of a ship passing through the middle of the street to her moorings at the merchant's door. You go forth from the house, and find that to get into the next street you have to pass over a drawbridge or a ferry. You see wide canals, equal to docks, passing through every street, with rows of trees on each side, the green foliage contrasting pleasantly with the cool waters beneath. In some of these canals ships and barges of deep burden unload the rich cargoes brought from the Dutch possessions in the East; others are crowded with the brigs and schooners which navigate the northern seas; and others, again, of smaller dimensions and shallower depth, contain the craft which bring down from the interior agricultural produce, which is all conveyed by water carriage. Nor must the *trexchuyt* and the pleasure-yacht be passed over in silence. The former is a narrow passage-boat, fitted with saloons and drawn by horses, to convey passengers by canal through the country; and the latter a gaily-painted, highly-varnished, and brass-ornamented boat, of fifty or sixty tons, with great breadth of beam, round stem and stern, and half poop, with a comfortable saloon instead of a cabin, and the huge and unsightly, but inseparable, cutwater at its side. Strange and grotesque forms are carved on the figure-head, the anchor-bits, the tiller-handle, and prominent parts of the vessel; and the highly-varnished hull shines upon the water in the distance like a transparent lump of yellow resin. Such a craft as this now lies before me in the herring fleet of Rotterdam; and if it was to make its appearance off Cowes among the crack yachts of the club, it would astonish some of the natives. The Dutch yacht carries an immense volume of canvas, and is said to be very fast before the wind, though she has to beat against it. The same remark is made in

reference to the Dutch East India ships and ships of war.

The commerce of Rotterdam is not so considerable as formerly, but still its waters present a busy and thronged appearance. The river Maas, at Rotterdam, is about the same width as the Scheldt at Antwerp, and something wider than the Thames at London-bridge; but a dozen such rivers would not equal the Thames for shipping.

The houses in Rotterdam are built of brick, and tiled or slated in the same manner as in England. The *Deutches* *vroer* are especially notable for their love of cleanliness. The pail and the brush are constantly at work: windows, doors, arge, and street in front of the house, receive morning ablutions as regularly as the face of the housemaid. Cleanliness is indeed a passion and a pride with the people in Holland; and the marble lobby of the merchant's hall, and the white floor of the retailer's shop, are equally commendable for cleanliness. The Dutch, also, have a passion for flowers, and for trees, which tend much to ornament their towns. In the time of the tulip mania in Holland, as much attention was paid to the cultivation of this flower as is now paid in England to perfecting the breed of horses or other animals; and vast sums of money were given for rare roots. The tulip mania is over, but the passion has expanded into a love of flowers in general; and the garden connoisseur watches the bursting of a bud, and the development of the petals of a flower, with as much anxiety as the modern Nimrod would feel for the points of a Bay Middleton or Cotherstone colt.

In habits and appearance, the Dutch more strongly resemble the English than the Flemings, as the clear, healthy complexion, and open, honest face abundantly testify. In Flanders, towards the frontiers of France, the language and customs and feelings of the people are essentially French. In Holland more English is spoken than French, and the predilections of the people are decidedly English. Their favourable disposition to our country is shown in various ways. If you go into a shop, or accost a stranger in the street, to ask a direction, the chances are that he will himself guide you, or send somebody with you. The periodical literature of the country is full of English opinions, and extracts from English works. I have a copy of the "*Lees-Kabinet*" for 1844 before me. It contains articles on Ireland and O'Connell, Borrow's "*Bible in Spain*," Ingles's "*Don Quixote*," Miss Mitford's "*Tales*," and Blanchard's "*London Portraits*." The last, I presume, is the brilliant epigrammatic writer who writes with so much effect in the *Examiner*; nor do his characters appear to lose anything by the broad Dutch costume in which they are cast. The pen-and-ink sketches are accompanied by engravings of various officials—the city-marshal, with jolly nose; the sword-bearer, in spees; the alderman, with his never-failing turtle; and the sheriff, with his wand and chain. The foreign authors, who are preferred, and who are most generally perused, are also English. Scott, Marryat, Bulwer, Hazlitt, Dickens, and a host of others, are done into Dutch, and to be found in every house. So also in politics the tendencies are nearly all English.

The conquest of England upon Prince de Joinville's plan has been the grand subject of newspaper comment since the publication of the note in the journals of France, Germany, and the Netherlands. The Dutch papers in general ridicule its absurdity, and advise the Prince to be quiet, or he may find that he has "caught a Tartar." They also remind the French of the observation of the *Times*, that France is a great military country and a great naval country—the second naval power in Europe—and that to remain the second in Europe, requires only that she should keep on good terms with the first.

In the Free-Trade and Corn question, as it is agitated in England by the League, the Dutch take great interest. Their sympathies, as a commercial people, are strongly excited on this point. Time was that the Dutch were the greatest monopolists in the world. In the valuable article of nutmegs, the produce of their spice islands, they were known to east cargoes into the sea to enhance the value of those that remained. They tried the system of monopoly and restriction to its very uttermost, and the trial cost them the greatest part of their commerce. They are now wiser in their generation, and ardently pant for the time when trade will be thrown open, and their fine qualities and resources as a commercial people have an opportunity of developing themselves. Perhaps in no country in Europe have the Free-Traders such numerous and such intelligent partisans as in Holland; and probably in no country in Europe would the advantages of Free Trade be more strongly felt than in Holland. The Dutch, likewise, have none of the unwholesome pride of aristocracy to fetter and peril their existence. Genoa and Venice, and some of the earlier commercial states, were sacrificed to this pride. "Empire," says the Roman historian, "would be eternal if the arts by which it is sustained continued to be used for its conservation." An advocate of the "order," who has recently given expression to his aristocratic yearnings in England, exclaims:—

"Let wealth and commerce, laws and learning die,
But leave us still our old nobility."

Does the writer forget how much his vaunted "order" owes its existence to commerce and to learning, when that existence cannot be traced to less creditable causes? And does "England's trust" rest upon the shoulders of her feudal chiefs? If so, she would lean upon a broken reed, and the decline and fall for which her enemies pant would not be far distant. But he who reads the signs of the times aright, knows that it is far different. The nation is in an attitude of repose, from which she will spring up to rend asunder the bonds in which the lords of the soil have bound her, and to pursue, like the lion refreshed, her bold and successful career.

P. P.

SUGAR DUTIES.—The Sugar Bill on which the recent division took place, which has been amended in committee and on report, has been printed. The duties imposed by 6 and 7 Will. IV., c. 26, and 3 and 4 Vic., c. 17, are to be continued till the 5th of July, 1845, with the custom duties, and an additional duty of 5 per cent. Her Majesty by order in council to declare the sugars of other countries to be admissible as not being the produce of slave labour. By the seventh provision, power is given to her Majesty by order in council to declare, that the sugars of countries with which her Majesty has treaties of reciprocity as to duties, be admissible at 34s. per cwt., and 5 per cent. additional. Her Majesty may allow the importation of sugar, the growth of certain British possessions, at the lower rate of duty. There are twenty-five sections in the bill.

DEATH OF JOHN TRAVERS, ESQ.

It is with unfeigned sorrow that we have to announce the sudden death of Mr. John Travers, which took place yesterday (Friday) afternoon, at his house, Clapham Park. Of Mr. Travers we may say with truth, that he was a man possessing great ability, high principle, and a disinterested zeal for the advancement of the public welfare. He was probably the most useful and influential friend of the Free-Trade cause in the city of London, and his loss will be long felt and deeply deplored. Mr. Travers was chairman of Mr. Pattison's committee at the last election for the City; and the sacrifices he has made of time and labour and money for the promotion of the great principles with which his whole life was identified are such as to prove the earnestness of his purpose, and the disinterestedness of his character. Mr. Travers has left a large family to mourn his removal from amongst them.

MISCELLANEOUS.

MONTHLY CORN CIRCULAR.—The following is an extract from the Corn Circular of the Messrs. Sturge for the present month:—"Birmingham, 7th Month, 3rd, 1844. Though many of our accounts from different parts of the country state that copious and refreshing rains have occasionally fallen, yet, during the whole of the last month, with the exception of a very few slight showers, the weather in this vicinity has been uninterruptedly dry, and at times the atmosphere has been very hot and sultry. The drought has now continued with us more than three months; and, though the wheat plant is remarkable for sustaining dry weather without injury, yet in many soils it is evident that this season the quantity, if not the quality, will be seriously affected, while on others the crop looks well. Some individuals of considerable experience are of the judgment that the produce will, on the average, prove considerably deficient; but, as we have not had a similar season for half a century, we will not at present venture an opinion of its general effect upon the wheat crop. The prospect of an early and parallel harvest has caused a prevalent disposition on the part of our farmers to sell their remaining stock of old wheat, and an extreme reluctance on the part of our millers to purchase, except for their immediate consumption; and our prices have given away about 2s. per quarter, at which reduction we have a steady and rather extensive sale for good Dantzic and soft Odessa wheat, say for the former 7s. 6d. and for the latter 7s. per 60lbs. at Gloucester. For barley of all descriptions we have had an extensive demand; and there is now a general conviction, that though on some favourable soils the early-sown crops may prove an average, yet that the bulk of this grain is greatly and irreparably injured from want of rain. Our imports of oats have been again considerable; but we have such an increased demand in consequence of the very great deficiency in our hay crops, that they are taken ex-ship for consumption as they arrive; and, though the sale has rather slackened since the depression in Mark Lane, our former prices are nearly sustained. The bean crop is rather more favourably spoken of than it was a month since; and we think there are many fields which, though they are short in the straw, will not be much below an average produce. The crop of peas has also sustained much injury from the drought; and there has been a brisk demand for foreign, at 28s. to 32s. per imperial quarter, in bond, at Gloucester. Potatoes, in some districts, have suffered a good deal; in others they are more promising than could be expected."

GAME.—The alteration in the game laws which made wild animals property works famously for the landowners. Before game was made property, its preservation was attended with some expense, and there was no return, as it could not legally be sold. As soon, however, as it was made property, and its sale as much legalised as that of poultry, the landlords found that a very profitable stake had been thrown into their hands, or rather that, in altering the law, they had played for themselves an excellent card. Many of them have since considerably increased their revenue by the sale of game; the more game there is, the more profit for them; and this is the more admirable because the increase of game is attended with no increase of expense, and all the game is, in many instances—and we could give names and cases—kept by the farmers. The hares and the rabbits, the pheasants and the partridges feed on the farmer's corn; but he dares not touch one of them; though fed by him, the game, whether bird or beast, is claimed by the landlord as his property. The English landlord, in verity, is a man who gathers what another has sown; he takes what another has fed, claims it as his property, sends it to market, and places the money got from the sale in his own pocket. This is the landlord's notion of equity, justice, and fair dealing—a proof of their attention to the precept to do unto others as they would that others should do unto them. There is not a farmer in the whole length and breadth of this "highly favoured land" but knows and feels the truth of these observations, and who in his heart does not think words to which he has not courage to give utterance. The havoc made among crops by hares is greater than ever, because it is profitable to the landlord to have his hares and rabbits fed at the farmer's expense. The latter, generally a tenant-at-will, dares not grumble, which has been said to be the Englishman's privilege, as it certainly is that of the galley-slave, nor does he dare kill or disturb the hares that gobble up his wheat; but if an unfortunate wretch in human shape should happen to take a turnip to allay his hunger, or some perishing children some rape for a meal—such wretches being unprotected by a landlord, who has far less love for one of his own species than for a pheasant or a hare—the law is put in full force immediately, and the hunger of the man is visited with condign punishment. This contrast is going on every day in "merrie England," and people wonder why the peasantry are sullen! Another most amiable trait in the conduct and character of the landholders is furnished by the course they pursue in regard to foxes. The foxes of this country had be-

come nearly extinct, and the fox-hunters were in despair, till it was resolved to import some from abroad—France, we believe. These French foxes, brought in without sliding scale or import duty, were let loose upon the land, and we have it from a large practical farmer, not a hundred miles from Brighton, that his loss of poultry from the ravages of foxes is enormous. This is the sort of protection the landholders give their unfortunate tenants—they bring foxes from France and let them loose to devour the English farmers' poultry; they rear game of every description on the farmers' crops, and sell it for their own profit, and then meet at agricultural fairs, and talk about the interest of the landlord and farmer being identical? Out upon such hypocrisy!—*Brighton Herald*.

THE LEAGUE MEETINGS.—The interest taken in the proceedings of the League by the London public is wonderful and unprecedented. The Free-Trade question appears to have laid irresistible hold of the mind of the people here. Since the commencement of the session, a series of meetings have been held unparalleled in the history of metropolitan agitation. Week after week the largest theatre of London has been filled to suffocation by eager crowds, thronging to hear arguments against monopoly, and evincing the liveliest interest in the progress of Free-Trade principles. Even during the strongest heats of an unusually sultry summer, when the most sanguine friends of the League declared it folly to expect meetings, the theatre was still crowded to excess. All the temptations of fine weather, of cheap steam-boat trips, and all the attractions of the banks of the Thames and the green suburbs, failed to reduce the attendance on Wednesday evening, at Covent-garden. The invariable order and decorum which reigned at all the meetings was unlike anything I ever witnessed in the course of my experience, and was surprising to men who have grown grey in their attendance at public assemblies. London has emphatically declared for Free Trade, and if there be any truth in the opinion that the Metropolis gives the tone to the general feeling of the kingdom, the next general election will seal the doom of monopoly.—*Correspondent of the Cheltenham Free Press*.

THE LEAGUE AND THE SUGAR DUTIES.—We are glad to perceive that the merits of this question are now better understood; and that a portion of the press, at least, have been candid enough to acknowledge their error. The *Stirling Observer* says:—"Upon further information, we find we must qualify our remarks very greatly, if not discard them altogether, and at once frankly admit that the leaders of the League voted upon a better knowledge of facts and circumstances than we possessed, till only a few days ago."—*Edinburgh Weekly Chronicle*.

REGISTER!—In an ordinance of arms passed in 1319, King Robert the Bruce commanded every man in Scotland possessed of the value of a cow to arm himself either with a bow and arrows, or with a spear, to meet the enemies of his country. The value of a cow qualification has long since passed away, and now we have the ten pound qualification. The need of providing arms to resist foreign enemies has given place to the use of votes to resist domestic oppression. At the present time he who is qualified and neglects to register is as undutiful to his country as in ancient times his forefathers would have been had they refused to hold themselves prepared to repel invaders. The vote is now the weapon with which the battles of patriotism must be fought, and whoever neglects to secure it or to use it conscientiously, betrays his country, and is a political poltroon. There is no time to be lost.—*Ibid*.

FREE TRADE THE BEST STIMULANT TO AGRICULTURAL IMPROVEMENT.—Have our readers never noticed among tradesmen that whenever one of them happens to introduce an improvement in his establishment, either by outward decoration or by internal arrangements, the remainder generally emulate the enterprise of their competitor; and that whenever any stranger appears, offering an article decidedly cheaper than has hitherto been known, the whole trade begins to favour the public with reduced prices? In the latter case it is easy to see the principle which is brought into operation. The stranger diminishes the amount of "protection" enjoyed by the rest of the tradesmen, in the shape of a limitation of the numbers engaged in the trade. The numbers being increased, protection becomes diminished. This is exactly what we shall see in reference to agricultural operations and improvements when the Corn Laws are repealed. There will then be no land going out of cultivation, as the idle alarmists would have us believe. No; every hand will then be put to work, to make up by skill and exertion for that which the owners now receive through a Corn-Law protection. My Lord Lazybody will have to quit the south of Italy, and come and find out his estates. Squire Foxhunter will have something else to do than break down the hedges of his neighbours. The lords of the soil will be forced to breathe the bracing air of our northern climate. There will be fewer buildings wanted in London, but more in the country. Absenteeism will be changed for home occupancy, and the dilapidated huts of the peasantry will be replaced by modern cottages. Subsoiling, draining, manuring, field-squaring, and hedge-ridding will find employment for vast numbers, and ships of all sizes will be despatched for manure, to join in the effort to give supremacy to British agriculture. Instead of the steward being first and all, the tenantry will get to see the owner of the estates; and he from his books and breakfast table will be seen proceeding to direct and superintend the labourers on his estates. The language of despondency, which now hangs upon the lips of the protectionists, will be changed into that of defiance; and instead of going to Parliament, and beseeching the honourable House to rob others for their benefit, the high tone of self-sustaining agriculture will be sounded in every quarter. The everlasting complaint of bad farming will soon cease; and masters of land, like those of mills, will talk less and work more, instead of taxing others for their support. We believe the repeal of the Corn Laws absolutely necessary to real agricultural improvements; and when this is brought about, instead of the League being regarded as a pest, the character which is deservedly its due, as the best friend to agriculture, will then be acknowledged.—*Preston Guardian*.

The members of the Plymouth Free-Trade Association are duly alive to the importance of the registration of voters, in the prospect of a new election. "Register, register!" were the emphatic words of Sir Robert Peel when giving his advice to his adherents at a certain London festival; and we firmly believe that this advice deserves the vigilant attention of all political parties.—*Plymouth Journal*.

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, July 10, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the *League* of the Saturday immediately succeeding, but are included in the list of the week following.

AGRICULTURE.

DISTRESS OF THE FARM-LABOURERS—WHAT IS THE REMEDY?

The depressed condition of the agricultural labourers in most of the counties of England is now an admitted fact. In the western counties 7s. and 8s. a week seem to be the average wages of the farming man, while in the eastern counties 8s. and 9s. a week are given; in both districts, indeed universally throughout England, deductions are made from these miserable pittance on account of wet days or other occasional interruptions of out-door labour. The following passage, extracted from the letter of a correspondent of one of the daily papers, shows the state of the labourers in Berkshire, which is by no means one of the worst agricultural counties:—

"A large proportion of the agricultural labourers in this district of the county of Berks are, and have been for several weeks, out of employment. In the parish of Farringdon, from 70 to 100; in that of Buckland, from 50 to 60 persons; and in Stamford, from 30 to 40: say 150 in these three parishes alone. The men who are employed receive in some instances 7s. per week, in others 6s., and even 5s., and boys (in one case) as low as 1s. 6d. per week. The appearance of the labourers who are out of work is such as I never before witnessed pale, enfeebled, and ghastly. During 50 years I do not recollect witnessing so much real distress."

Conceive, too, what must be the state of the peasantry in Suffolk when the chairman of quarter sessions, Sir A. Henniker, finds it necessary thus to guard the rural population from the seductive temptations of transportation. In his charge to the sessions grand jury, he said:—

"There was one subject upon which he would make a few observations, namely, the punishment of transportation; because a great error seemed to prevail with respect to the subject, and it was the more necessary that the truth should be told at the present period, from the too frequent commission of a certain crime in particular districts of the county, for which transportation was the punishment awarded to those found guilty of its commission. He believed there were many persons who imagined the punishment of transportation to be light, and that, after the preliminary imprisonment in this country, and the confinement consequent upon the sea voyage had ceased, upon arrival at the penal settlements convicts were better fed and better clothed than they could hope to be in this country; and that, with the exception of being under the obligation of leaving their families, there were but few pains and penalties in their new condition, and that their position was better than honesty and industry could secure for them here. Those who held such opinions were, however, sadly mistaken. Such was not the case now, however it might have been."

Besides, the cottage accommodation of the peasantry is so insufficient, that, though they often live in hovels scarcely fit for human habitation, they are obliged to pay enormous rents for even such scanty shelter. Lords and squires, and protectionist associations made the most audacious denials of these things, until actual inquiry in the west and the incendiary fires in the east proclaimed these facts with a force which even the brazen mendacity of the monopolists could no longer resist or deny.

This is the condition of the farm-labourers after

twenty-nine years of monopoly; and yet a few purblind landowners in the Lords pretend that their monopoly of corn is necessary for the welfare of the peasantry. Yet the very Lords disbelieve it, and only act upon the lie for party-political purposes.

The evil, then, being proved, admitted, deplored, the practical common sense of the British public immediately asks what is the remedy? Two have been put forward and advocated with somewhat of zeal. The one is a relaxation of the poor law, by which more legal charity may be afforded to the labourer and his family, and upon easier terms than under the present poor law; the other is the giving to each rural family a plot of ground on which they may grow wheat and potatoes for their own consumption. But both remedies are totally inadequate to the necessities of the case, and both are put forward with a view to distract public attention from the real and only remedy. As to the false and fraudulent pretence that poor laws can meet the evil, it is sufficient to observe that the peasantry want not charity but justice; not parish pay and outdoor relief, but steady, certain, and regular employment, at fair wages. The only legitimate purpose of a poor law is to provide against the casualties and temporary or permanent infirmities of those who, living on daily wages, can scarcely lay by a provision to protect themselves from such ills. Then, as to allotments being a remedy for low wages, this is so absurd, that nothing but the gravity with which some well-meaning persons have advocated it could entitle it to notice. That a garden, a plot of forty perches of land, is a minor benefit to an agricultural labourer, we fully admit. It is an amusement, an object of interest, and becomes a sort of saving's bank in which he lays by a few spare pence and a little spare time, which would otherwise be wasted; and thus an allotment improves the condition of the employed labourer. But even this is not an unimproved good, especially to those labourers who are partially employed or whose wages are very low, inasmuch as it induces them to live very much on potatoes, and thus lowers their standard of living.

Now, what is the only effective remedy for the distressed condition of the peasantry? Can any one doubt that it is more employment, more constant employment, and at better wages? And how is this improved employment to be found? There is but one source, though that would be a most effective one, namely, improved agriculture. If any one doubts this, let him ascertain where agricultural wages are highest; and he will find that in Lincolnshire, and other districts where capital has been applied to husbandry upon the largest scale and in the most business-like way, wages are full one-third higher than they are in Wiltshire, Dorsetshire, and Buckinghamshire, where the farmers are poor and dependent, steward-ridden, and game-ridden. Now, there is no magic in a chalk hill in Lincolnshire. There are chalk hills in Dorsetshire and Wiltshire; there are undrained vales in the west, ay, in every English county, on which three times the capital now employed might be used profitably to all parties concerned. The labourers would be the first to benefit by such outlays. There would be no longer any cry of redundant labourers: there is, in fact, no redundancy of agricultural labourers in any part of England; and if only one-half of the land were well cultivated, such would be the increased demand for workmen in husbandry that we should hear nothing of turning off men on wet days, and so forth, for farmers would be too glad to secure and keep their constant hands. Again, if any doubt the effect of good farming on the condition of the labourer, let them observe the way in which the best farmers treat, and pay, and retain constantly their labourers. Let them see how a Lattimore or a Hatley finds twice the employment for workmen that inferior farmers do on the same number of acres. It is thus plain that nothing but a general improvement in husbandry can improve the condition of the peasantry; all who pretend to have any other specific are intentionally or otherwise diverting public attention from the actual and effective remedy. And what is it but the CORN LAW that prevents the general extension of agricultural improvements? Good farming requires capital, and capital will not be laid out without secure tenures, and complete dominion over the land on the part of the tenant-farmer. Now, the corn monopoly alone enables the landowner to extract from a poor and dependent tenant, who half cultivates his land, a rent which a wealthier tenant rendered independent by a long and rational lease could pay with ease. But then with a dependent tenantry the landlords get rent, with game and votes into the bargain. This, and mortgages, form the great objects for which the landowners cling to the Corn Laws. How long will the people of this country submit to be robbed, and to see the whole rural population rendered destitute and demoralized for the sole purpose of upholding this system?

THE TIMES REPORTER AND THE CORN LAWS.

The following passage occurs in one of the letters from

the able correspondent of the *Times* upon the state of Suffolk:—

"The farmer, however, is not without some excuse for his thriftiness, and some ground of complaint. His produce brings a lower and lower price, whilst his rent and expenses continue the same. Without entering into a Corn-Law argument, on which subject your readers must have heard and read *usque ad nauseam*, the facts of his complaint are deserving of attention. I heard an old farmer the other day say at Ixworth, that he had worked for eight or ten labourers more on his farm, but he could not afford to employ them with his wheat selling at 26s. a coomb. The difference between this price of wheat and its price two years ago (32s. a coomb) was more than double his rent. I have made some inquiry into this, and I give you the facts. Average land in Suffolk will grow seven coombs of wheat per acre, that is, three quarters and a half. Land of this description lets at from 20s. to 24s. per acre. There is very little land not accommodation land let for more. The difference, therefore, in the price of the produce of an acre of wheat, at 52s. a quarter (the present price), and 64s. (the price two years ago), is three and a half times twelve, or 42s. per acre, just double the rent."

It is quite apparent from the above paragraph that the *usque-ad-nauseam* arguments of the Leaguers have not been very carefully studied by this intelligent writer, who has been mystified at secondhand by the monopolists, through their dupe, the Ixworth farmer. The Duke of Richmond's party assert, and the poor old Ixworth tenant believes them, that the rent of land amounts to only 6s. a quarter on wheat. Their object is to persuade the farmer, on the one hand, that, if the Corn Laws were abolished, no reduction of rent would enable him to grow wheat in competition with the foreigner; and, on the other hand, to convince the consumer that less than one halfpenny in each quarter loaf goes to the landlord for rent. Again and again have we exposed the shallowness of this fallacy, yet still do the monopolists insult the understandings of the farmers by its repetition. Their argument is founded on the false assumption that every acre which pays a yearly rent, also grows wheat every year. But the truth is, not one acre in four on an ordinary tillage-farm is devoted to the growth of wheat in the same year. Yet every acre pays rent—whether it be lying fallow, or growing turnips, beans, or oats, or remaining in permanent pasture. The leases and agreements imposed upon the tenants by these very landlords, generally restrain them from growing more than a certain quantity of wheat, and interdict them from breaking up meadows and pastures. Now, if the Anti-Leaguers mean to argue that wheat is the only saleable produce out of which rent is paid, they must put the rent of four acres at least, and more probably five, upon each acre of wheat.

But wheat, although the chief remunerating crop, is not the only article taken to market by farmers. Barley is an important item. They also make a profit of turnips through their cattle and wool, and they frequently turn a portion of their oats, beans, clover, &c., into money. The only way in which a farmer can calculate what proportion the rent he pays bears to his other outgoings is, by keeping a strict account of all he receives for his sales of every kind, and then ascertain how much of the money goes to the landlord. He must exclude altogether from this money calculation the produce consumed upon the farm for horse-keep, seeds, &c. These items should be taken into account if his object be to ascertain the particulars of the distribution of the gross produce; but, as they are never converted into money, they can have no bearing upon the question of money price. If a farmer wishes to ascertain how much rent he pays upon a quarter of wheat, the mode is obvious. He must turn the whole of his sales of all kinds of produce into quarters of wheat, and then ascertain how much per quarter the rent amounts to. We have seen this tried frequently, and the result has shown that the rent is scarcely ever less than 20s. on each quarter, and in the best farming districts it frequently amounts to 26s. or one-half!

LORD DUCIE AND THE MONOPOLISTS.

A number of statements, or assertions—*ipse dixit*, as Bentham would have said—have been put forth by the monopolists in various parts of the country, with a view to weaken the effect of Lord Ducie's clear and practical demonstration of the fact that, with a sufficient capital, wheat may be profitably grown in this country at a cost so low as to make competition, in ordinary years, quite innocuous to a good farmer. But all his lordship's assailants are singularly inconclusive, and entirely fail to meet the question. For instance, a Mr. Samuel Jonas, who dates from Ickleton, in Suffolk, estimates the cost of fallows for turnips and other green crops thus:—

"Haydon says the cost will amount, without rent, tithe, and taxes, to £9 14s. 2d.; add to this your lordship's own charge of 50s. per acre for rent, tithe, and taxes, the total will be £12 4s. 2d. From this sum we must deduct half the amount of the manure charged by Haydon, as well as by your lordship, at £5 per acre. From the sum of £12 4s. 2d., therefore, I deduct 50s., as your lordship has charged that in the cost of the wheat crop."

This brings the expenses down to
Your lordship's statement of expenses for producing the wheat crop £9 14 2 for fallow for turnips.
5 14 6

Total expenses of the two years' crop £13 8 8

Now, this statement is, upon the face of it, absurd. It may cost £10 an acre to bring land from a state of neglect into that of good cultivation, but to rate the expense of a root crop, on well-cultivated land, at that sum, is a simple falsehood. It can only be got up by charging an arbitrary and ideal price for the labour of the horses, and by making, or pretending to make, nothing of the fallow or green crop. Let us try this by a practical case or two. If,

after the wheat crop is off, the land be sown with winter tares; here there will be simply one ploughing, harrowing the land, and drilling the seed, together with the cost of the seed. Now, an acre of good tares will keep fifty sheep a month, and, with a pint of corn to each sheep daily, they will speedily get fat. And does this Mr. Jonas pretend that there would be no profit from such a use of the land, or that the whole cost of the green crop must be laid upon the wheat? And the root crops and clover crops may be tried in the same way.

With such an infirm foundation for his positions, Mr. Jonas's statements won't go for much; but let us see what is the experience upon which he impugns Lord Ducie's statements. He says he is no land-agent, and adds:—

"I have been brought up at the plough's tail, and am a tenant-farmer, now occupying 1700 acres of arable land, and growing annually about 400 acres of wheat, which I do sincerely wish cost me only 28s. per quarter to produce."

It would have been more satisfactory if Mr. Jonas had stated his average produce of wheat per acre, and the amount of capital to the acre he employs upon the farm; and then we should, probably, have seen plainly enough why—besides the ridiculous exaggeration of expenses—he cannot produce wheat at 28s. per quarter. How many bushels of wheat above 20 does he grow to the acre, taking one year with the other? Does he employ £15 per acre of capital to the acre—which would amount, on his 1700 acres, to £25,500—or has he even £10 an acre? The latter would require £17,000. We would venture a wager Mr. Jonas has not half that sum—£8500—on his farm. If this be so, and from what we know of farmers, especially protectionist farmers, we have no doubt that it is, this defender of the Corn Laws has a farm three or four times too large for his means, and thus—though possibly a man of some considerable capital—he is, in fact, a poor farmer, half cultivating his land, and, with scanty returns, relying chiefly upon high prices for profit. Let Mr. Jonas give up 1000 of his 1700 acres, and employ all his capital upon the remaining 700 acres, and we will answer for it he will be able to grow wheat at a much lower cost per bushel, and to farm with more profit to himself than heretofore. Above all, he will cease to look to artificial scarcities and national calamities as the grand elements of his individual success.

Another objector, with infinite, we had almost said infantine, simplicity, gives in the *Mark-lane Express* the following

"ANSWER TO WHITEFIELD EXAMPLER FARM STATEMENT. In 1842, ten acres of land of mine were fallowed, heavily manured and limed, sown with wheat; the wireworm destroyed the whole. In the spring of 1843, I drilled oats on the same ground, and seeded it down with clovers; the oats failed in consequence of the wetness of the season. I ploughed the ground over about midsummer, broke it down and put in turnips, boning it heavily, but the season was too far advanced to make a full crop. These were eaten on the ground, and the land this spring sown with oats and seeded again, and from the dryness of the season will just find me seed again, or perhaps a quarter to the acre. This field has in two years been seeded six times, manured, limed, boned, and brought forward nothing. Query, how much profit is there? Lord Ducie will perhaps tell me."

Lord Ducie, or any other good farmer, would tell this simpleton that all these errors must have arisen from the bad condition of his farm, or his own negligence, or, probably, a combination of both. The "wireworm" is an unfailing indication of the poverty and exhausted condition of the land, and, moreover, its ravages may be stopped by the prompt adoption of means well known to farmers, which give solidity to the ground. The failure of oats from wetness could only have happened because the land wanted draining, and the subsequent failure of the turnip crop was almost the necessary sequence of former errors. Even in the present season, the oats ought to have been in the ground before the commencement of the drought, and then there would probably have been plenty of grain, though the straw might have been short. This person belongs to a very numerous class of farmers, who are always "a day after the fair"—men commonly known as "afternoon farmers"—and, in all probability, in his case as in that of most others, this arises from want of capital and the unimproved state of his farm. One of the first effects of improvement is to render the farmer much less dependent upon seasons than before; if the season be wet, his well-drained fields allow him to take advantage of any short cessation of rain to put in his crops, and when once in they are in no danger, for no quantity of wet weather can very seriously injure the crops on drained land; so, if the season be dry, his land being well pulverised, and the staple deepened, his seed having been sown early, the crops make such an advance before the drought becomes confirmed that, instead of no crop like his unimproved neighbours, the good farmer has an abundant return. Besides, after a farm has been once got into high condition, it is cultivated with a positively lower cost than a low-conditioned farm. The last statement worth noticing is the following by three monopolist farmers and land-agents, who, after referring to Lord Ducie's statement of a farm near Stow and Northleach producing twenty bushels to the acre, say:—

"In the above statement his lordship has estimated the produce at from one-fourth to one-fifth too much on the average of seasons; and the straw to be consumed on the premises at two-thirds above its value, and full double the value even to be sold off. If his lordship will take the trouble to amend his calculations upon those two items, he will find the cost of growing a bushel of wheat so great as to throw the poor land on the Cotswold-hills out of cultivation, should a Free Trade in corn take place."

"JAMES KEARNEY,
"PETER MATHEWS,
"DANIEL TRINDER."

"Cirencester, June 20."

Do these land-agents mean to assert that fifteen or sixteen bushels of wheat are all that can be grown on the

Cotswold-hills with good farming?—and it was from farms tolerably well farmed that his lordship's statements were taken—or that the straw of an acre of wheat is not worth 5s., even to be sold off? These assertions are so preposterous as to carry their own refutation. Why, if only fifteen hundred weight of straw should be produced on the acre at 6d. a hundred weight, which is not a spending price, it amounts to more than Lord Ducie has charged. But this system of low produce and high expenses is one created by the Corn Laws, and which can exist no longer than the Corn Laws last. But then the occupation of Mr. D. Trinder and company in valuing in and selling up the farmers might be somewhat diminished.

A COUNTRY GENTLEMAN ON THE GAME LAWS.

In the very sanctum of monopolist and squirearchical prejudice—in the quarter sessions meeting of the justices of the peace for Buckinghamshire—an incident occurred a few days ago, which plainly shows that much of the seed of sound agricultural knowledge sown by the LEAGUE has fallen upon good ground, and is springing up abundantly. At the meeting of the Buckinghamshire justices to vote away the money of other people, which they call transacting "county business," the adoption of the report of the "NEW GAOL COMMITTEE" having been moved, Sir Harry Verney proposed an amendment—

"That it is the opinion of this court, that in the construction of the proposed county gaol, it is desirable that the east and west wings only should be proceeded with, and that store-rooms and other offices be provided, so that the institution may be complete without the addition of the south wing;"

and in so doing he made a speech which deserves to be both applauded and recorded. Applauded, because, though in accordance with the opinions of the most intelligent persons of the day, it must have required a high effort of moral courage on the part of the speaker to address to the landed blockheadism of Bucks; and recorded, because it affords decisive evidence of the fact that amongst our intelligent country gentlemen the real wants and burdens of agriculture and the agricultural classes are becoming understood and acknowledged. Sir Harry Verney said:—

"The new gaol was calculated to accommodate 300 prisoners, and the largest number ever known in this county was 270."

And there was reason that an improved classification and discipline about to be adopted would tend materially to lessen crime, by preventing the younger offenders coming in contact with the more hardened culprits. He thought also the magistrates ought to provide a better system of police:—

"They were about providing accommodation for 300 prisoners, when they ought to be turning their attention to the prevention of crime, which was of more consequence than the punishment of it when committed. With a competent and efficient police establishment, 200 would be ample to provide accommodation for; but this efficient police the county could not have in the present body of parish constables. Crime is increasing rapidly in the rural districts. The inhabitants of towns were hardly aware of the demoralization now going on in the agricultural districts. An intelligent person had told him (Sir H. Verney) the other day that the increase of crime was entirely in the rural districts; in the towns nothing was heard of this."

On that ground alone he might urge his amendment. But there is a more deeply-seated moral disease in the county. Sir Harry said:—

"There was another subject to which he would call the attention of magistrates. He had been led to a consideration of this subject by the scrutiny of the financial accounts of the county, which he had gone into in company with his brother members of the finance committee. If he were wrong in his opinions, he hoped some magistrate would set him right—but, if right, he hoped they would adopt his motion. He was of opinion that the game laws were a fertile source of crime, and of consequent expense and demoralization to the community. Of 530 prisoners, 169 went to gaol for infractions of the game laws. They were taken to gaol at the public expense, kept there at the public expense of the county, and their families kept in the union-house at the expense of their parishes. This ought not to be. As game was preserved for the mere amusement of the country gentry, those who kept preserves ought to be at the whole expense of the game prosecutions, and of the maintenance of the poachers in prison."

True; but even the maintenance of their own poachers by the squires would afford no redress for the demoralization and crime their game laws and game preserves occasion. Sir Harry, however, knew his audience, for he continued the same argument to the breeches pocket, which alone the squires, as a body, can comprehend, when he said:—

"He was come to the conclusion that the whole expense of prosecuting and keeping poachers and their families ought to fall on the gentry preserving game. The parish ought not to be made to bear the expense, nor ought the county, nor ought we to be building a gaol for the reception of poachers."

Then, the actual mischief caused by game is enormous:—

"Property in game ought not to be protected as other property, inasmuch as it had not the responsibilities of other property. Game preserves were the source of great mischief; farmers lost a great deal by the depredations of the game; labourers by the want of employment, for it was impossible to have good farming where there was much game; and the whole community lost by the destruction of food which game occasioned. Game affords great temptations to crime and to the infractions of the law. A labourer could earn but 9s. or 10s. per week, while in one fortunate night a poacher could make from 20s. to 30s. And when once a labourer is tempted to leave his daily employment for poaching, he soon becomes depraved, and is led to the commission of real crimes. If, while he is out prowling in the night-time, he cannot capture any game, he will be led to take a sheep; and thus are criminals made by the game laws. Our great game-preservers are thus the cause of all this crime, and this for the mere amusement of the country gentry."

Not a justice dared to gainsay this. We shall see presently how they attempted to meet it. It is especially incumbent on the Buckinghamshire justices to look to these things.

"We (said Sir H. Verney) country gentlemen ought to meet and take this matter into our serious consideration, examining the question in all its bearings. There are districts in this county where the game-preservers are so large, and the game so plentiful, that the preservation of it costs the community as much as another income-tax."

Dr. Lee seconded the amendment, saying:—

"The game-laws were the source of crime in this county, and ought at once and entirely to be done away. He quite agreed

that the expense of prosecuting poachers ought not to fall on the county at large."

The monopolists and game-preservers made this sorry defence:—

"Mr. Carrington expressed warmly his disapprobation of a debate on the police question and the game-laws being then raised on a mere question of detail, quoting a saying of Sir William Jones, that the administrators of the laws ought not to consider themselves wiser than the laws themselves. The object of the game laws was to make game the property of those to whom they belonged, and to protect that property. Should the Legislature think proper to withdraw that protection, and refuse also to protect the property in turkeys and guinea fowls, they (the magistrates) must submit; but why introduce the subject here? Sir H. Verney seemed to forget that he was not in Parliament. Such remarks might be appropriate there, but quite out of place in a court of quarter sessions."

No doubt the squires thought these remarks quite out of place at quarter sessions; but what say the public?

Let us, however, take the squire upon his own terms, and see whether the "protection" which the Legislature has thought fit to accord to "turkeys and guinea fowls" would not be sufficient for game; and this rampant game-preserver tacitly admitted that he could not demand more. If a man keeps turkeys and guinea fowls upon the speculation that they can be fed on other people's crops, it is clear that his poultry may be destroyed, and himself subjected to actions of trespass for the depredations they have committed. Why should not the same law be applicable to game? Again, suppose a landowner should offer to let a farm at the full market rent, and impose, as a stipulation, that from 500 to 1000 "turkeys and guinea fowls" should yearly breed and be fed on the farmer's crops, besides from fifty to sixty wild sheep, would not the very silliest dupe of the protection societies who calls himself a farmer laugh in such a landowner's face? Yet that is exactly what the landlords do daily, substituting pheasants, hares, and rabbits, for turkeys, guinea fowls, and sheep.

Sir Harry stuck to his text, and in reply said:—

"If we had a good and efficient police force, the large gaol would not be wanted; and as to the game laws, it would be an honour to the county if it could be brought to make a stand against those fruitful sources of crime and expense. WE ARE NOW BUILDING A GAOL FOR THE RECEPTION OF POACHERS. ('No,' from Mr. G. Pigott.) Yes, we are building a gaol for the reception of poachers, criminals made by the laws enacted merely for the amusement of the country gentry."

"Mr. Pigott interrupting: Don't say we are building a gaol for the reception of poachers merely; there are other criminals besides those committed for infractions of the game laws."

"Sir H. Verney: Well, then, WE ARE BUILDING ONE WING EXCLUSIVELY FOR THE RECEPTION OF POACHERS; OF 530 PRISONERS COMMITTED, 169, THAT IS, ONE-THIRD, ARE POACHERS."

And the justices were dumb. But will not this speech find an echo in the hearts of the English yeomanry? We sincerely hope that Sir Harry Verney will occupy a seat in the next House of Commons; and we should be delighted to see him sent there by a rural constituency. Such are the men farmers should, and if they had real votes doubtless would, choose as their representatives.

The justices then tried to get rid of the amendment upon a point of order, and a tiresome discussion ensued thereupon; but they were finally obliged to meet it by a direct negative. Let it therefore be understood throughout the British empire, that, in the county of Buckingham, ONE WING OF THE GAOL HAS BEEN BUILT EXCLUSIVELY FOR THE RECEPTION OF POACHERS, CRIMINALS MADE BY THE LAWS ENACTED MERELY FOR THE AMUSEMENT OF THE COUNTRY GENTLEMEN!!

GAME-PRESERVING AND INCENDIARISM.

We have long since, and often, referred to the game laws as a constant cause of the demoralization of the peasantry in the agricultural districts, yet none but residents in those districts are fully aware of the potency of that cause. Our remarks upon the subject have led to much discussion of the "game-law nuisance," and every day brings forward fresh testimony to the effect, that, not only is game-preserving one of the main causes of that defective husbandry which renders so many farmers afraid of foreign competition, but that it is most detrimental to the national morals. The following letter by "A FARMER," dated from Bury St. Edmund's, in Suffolk, and addressed to the editor of the *Times* newspaper, presents rather a new phase of the evils of the game laws, while it fully corroborates much we have said upon the subject. The writer, after stating the *Times* "must not leave unnoticed our code of game laws" as one of the causes of "that fearful state of recklessness" amongst the agricultural population indicated by the "nightly fires," says:—

"It will perhaps excite surprise when I state that those who are the chief encouragers and instigators of poaching, and that in its worst form—when it is followed as an occupation, instead of honest industry—are the country gentlemen themselves."

And in this way the "Farmer" tells us:—

"You will also be surprised to learn that it is quite a common thing for the gamekeepers of gentlemen to buy pheasant and partridge eggs from notorious poachers. In this town they have a regular market price of 1s. an egg. A noted poacher near here boasted to a magistrate that he had made 15s. before breakfast that morning by selling pheasants' eggs. But if he could sell there must have been those that would buy. A gentleman wishing to preserve his game appoints a gamekeeper; the man is engaged, because he knows his business and his master wishes for game. The more game on the estate, the better he will please his master, and he is allowed every necessary expense. We will inquire presently what class of men the gamekeepers are taken from. The gamekeeper does his best both to get and to preserve game; and to stock his master's ('Squire A's') estate, the game eggs on Sir B's (his neighbour's) estate have been duly stolen by the poacher, and sold to 'Squire A's' keeper, of course without the knowledge of 'Squire A. But what if the poacher should be detected, and taken before 'Squire A' as a magistrate? Why, 'Squire A' shakes his head at him, says, 'Oh! you lazy, hardened rascal, will you never cease poaching? I must send you for six months to gaol and hard labour, as incorrigible.' But breeding is a slow process, and 'Squire A' may wish to afford his friends a battue. He tells his keeper he has three gentlemen coming down from London to shoot next day, and he hopes there is game enough. The keeper knows his business, and he knows too, well enough, that there is hardly a head of game on Squire A's estate, but there is a little on both Sir B's and Squire C's, on each side of it, which have been preserved. Well, the gamekeeper sends to Dick the poacher in this village, and Jack in another village, and wants to see them, and by a sort of half-pantomime, half-mysterious set of ejaculations, Dick and Jack are given to understand that 'of course they know where the game lies,' and 'he should not wonder,' if Sir B's and Mr. C's covers were well brushed and beaten that night, it might be as good as a sovereign a piece in their way. Of course, the poachers don't know that Mr. A's gamekeeper tells them this, and of course they do not drive

Mr. B's and Mr. C's game on to Mr. A's estate, and of course they do not expect a sovereign for the job. If they should be caught by Mr. B's keepers or Mr. C's, and be taken before Squire A, Justice of the peace, why Squire A must ex officio assert the majesty of the law, and send them to gaol. Sometimes, however, it happens that there is no game-preserver on the estate, and then the gamekeeper is rather in a fix. But he pantomimes to Dick the poacher, who undertakes the job. Dick sends word to an associate in a preserved district to get as many pheasants as he can; if he cannot get them in this way, he writes to some London dealer in game, with whom he deals, and the pheasants are procured one way or another, and sent down in baskets to Squire A's preserves. Squire A has Lord D coming to join his battu; Lord D fires away, and knocks down Squire A's newly-arrived pheasants, and praises Squire A on his capital preserve and his quantity of game, and wants to know if he will part with his keeper, little thinking that they came from his own preserves, ten miles off, two or three days before. Squire A is pleased, because his friends are; the keeper is praised and rewarded, and the poacher—picks up a living. But should the poacher 'get into trouble,' that is, get caught whilst poaching for Squire A, through the instigation of Squire A's keeper, and be taken before Squire A; well then, of course Squire A has a horror of poachers, and, like a good game-preserving English gentleman, he sends him to gaol, and perhaps gets him transported. BY EXERCISING THIS SORT OF THING OUR QUITS SYSTEMATIZED. There are here and there about the villages notorious poachers who take out licenses to shoot, having which they are entitled, under the New Game Act, to possess and sell game to dealers. These men do not often poach themselves, but have in their pay some dozen who do, and receive all their game. If their assistants are taken while poaching, they pay the fines inflicted on them, and get them defended. One of these men not long ago was taken before a magistrate near here, notoriously severe on poachers. The case against him was fully proved, and just before the magistrate was about to fine him, the poacher addressed him on the bench—"You must be as lenient as you can, Mr. M., for the fine will all have to come out of your preserves in the next three days." It is not very long ago that nearly 500 head of pheasants were stopped near Tunstall, on their road to London; and at Colchester, not many weeks ago, several large crates crammed with game, and weighing many cwt., were stopped at the railway train at Colchester on their road to London.

"A fishmonger in this town (Bury) just before the hatching season had a guinea a brace offer for live pheasants for breeding, if he would procure them. The offer, of course, came from a game-preserver, and the demand, had it been acceded to, must have been supplied by poachers.

Thus is it that the very makers of one of the most iniquitous laws which ever disgraced a civilized nation are amongst those who offer the most constant temptations to its breach. Then contrast the large gains a labourer may occasionally make by these means, which render it no matter for wonder that,

"Notwithstanding, therefore, the severe laws to prevent it, poaching is quite common, and with such encouragement it is likely to be."

Again, sheer distress—always the consequence of the fluctuations and bad farming resulting from the Corn Laws—is another source of poaching. The "Farmer" says:—

"Others again are tempted by want to steal eggs in order to live. And many an honest labourer, not knowing where to get work or bread, and refused relief, unless he will abandon his cottage and go with his family into the union house, there to be separated from them and from every earthly consolation, which he will not submit to, is driven to poach in order to live, because he thinks it better than to beg or steal. If, no matter what led to the offence, the poacher is detected, he gets into gaol, and then, in the emphatic words of one man to me, 'he is done; many of the farmers dare not employ him if they would, others will not; he cannot go any where but he is watched; he can get no employment, and he must poach again in order to live, or do something worse.'"

And in nine cases out of ten he does eventually become a hardened and a desperate criminal.

The writer also fully recognises the direct pecuniary loss occasioned by game, when he says:—

"But this is not all the evil. Does the game itself do no mischief? In the Suffolk Chronicle of last week I observe a well-written letter, written by a gentleman of character of the neighbourhood of Ipswich. He says:—'Many a respectable proprietor and occupier of land has to deplore his contiguity to the estates of our game-preserving landlords, and many an industrious tenant of theirs to rue the day that he entered upon his tenancy. A farmer, and neighbour of mine, assures me that last year, off twenty-four acres of barley which he sowed, he did not reap ten cwt.; and that £200 per annum would not cover the loss which the game occasioned to his crops. Another remarked that the game might frequently be seen on an evening, by hundreds, feeding upon his land, and were he to shoot one, he could not tell the consequence; it was distressing, he said, to be obliged quietly to witness the destruction of his property. I have no hesitation in saying that I believe there is not a tenant-farmer on these game-preserved estates that does not curse the system bitterly in his heart; and it is generally admitted that you cannot calculate the amount of mischief that is done.'"

All lovers of good order must deeply regret the disaffected state of our rural population; it springs doubtless, in a great measure from ignorance, coupled with misery and want. But these have their causes; and I venture to suggest, more particularly in reference to the latter, the game laws as one of them; they are barbarous in their origin, wasteful and destructive in their operation, demoralizing in their effects upon the lower classes; they generate ill-will between landlord and tenant, are injurious to agriculture, and, in short, are an evil crying loudly for redress."

And it is to maintain this state of things that Corn Laws and artificial scarcities are to be visited upon this industrious nation!!

THE GAME LAWS! THE FARMER'S BANE, THE PEASANT'S CURSE.

It is scarcely possible to take up a provincial paper published in a rural district without being struck with some wrong or oppression, some injury or crime, arising out of the game laws. From the landlord-ridden and ill-cultivated county of Buckingham we have often cited instances of the oppressiveness of the game laws, and the widely-extended demoralization they cause amongst the rural population. And our readers will doubtless remember the name of a "Captain Dayrell," as that of a magistrate often reported as assisting in those legal immolations of country labourers which pass by the name of "game-law convictions." It is not a small aggravation of this cruel law that it must of necessity be carried into execution by partial judges, for every country magistrate is either a game-preserver himself, or he is a game-preserver's ally, or a game-preserver's toady. This is especially the case in Buckinghamshire, where the magistrates lately gave, as the act of the body, a considerable gratuity out of the county rates—in other words, out of the farmers and tradesmen's pockets—to the rural police, for their diligence in apprehending poachers! Nor have such rewards been fruitless, as the following report of a trial in the Court of Exchequer, which we have extracted from the Times newspaper of last week, will bear witness:—

"Court of Exchequer, Thursday, June 27.—(Sittings at Nisi Prius, before Sir F. Pollock, Chief Baron, and a special

jury.) *Barnell v. Dayrell and Seaton.*—Mr. M. Chubb and Mr. J. Jervis appeared for the plaintiff; and Mr. Jervis and Mr. Humfrey appeared for the defendant (Dayrell), Seaton having suffered judgment to go by default against him.

"This was an action of trespass for falsely arresting the plaintiff on a charge of stealing game. The plaintiff is a respectable man, and coachman to a lady, by whom he is allowed to rear pheasants and to deal in dogs. The principal defendant, Captain Dayrell, is a magistrate in the county of Bucks, where he has a large estate, near the town of Buckingham. From the evidence adduced by the plaintiff it appeared that game laws having been 'lost or stolen' from the seat of Captain Dayrell, the lady of that gentleman, he being then in town, sent over about it to Buckingham, whence the defendant Seaton, who was a policeman of the borough, was despatched by the superintendent to town, on certain reasons which were not disclosed, for the purpose of searching the premises of the plaintiff. Seaton accordingly went there, and by the permission of the plaintiff took possession of nine pheasants, which, together with the plaintiff, he carried off in a cab to Captain Dayrell's house, in New Cavendish street. That gentleman being out, the plaintiff went over to the offices of a friend, Cooper, by name, an attorney, where the matter was gone into. Soon afterwards Captain Dayrell came in and claimed the birds as his property, while the plaintiff most indignantly repudiated the charge, and asserted that he could fully account for his possession of them. In the course of the conversation which ensued, Seaton admitted that he had no warrant for arresting the prisoner, but said, 'It did not signify, as if he had exceeded his authority, the justices would help him out,' to which the captain said, 'No, that was not the case, for the justices would do no such thing.' After this, however, he gave a sovereign to Seaton, who went off with the plaintiff and the birds to Buckingham by the last train. Arrived there, the plaintiff was looked up that night, and on the following morning was admitted to bail till the same evening, when, no one appearing to prefer any charge against him, he was finally discharged from custody, and the birds restored to him. Besides these facts, certain witnesses were called, to show that the birds in question were fairly reared at Headcorn, in Kent, and forwarded thence by the breeder to the plaintiff. At the close of the case for the plaintiff,

Mr. Jervis addressed the jury, contending that there was no evidence on which they could safely come to the conclusion that Captain Dayrell had given the plaintiff in charge. The fact was, that Seaton had exceeded the law no doubt, but his own client was not concerned in the matter [what about the sovereign?], and ought not, therefore, to be included by the jury in their verdict. If, however, they should think otherwise, it was clear that it was not a case for more than nominal damages. Captain Dayrell did not intend to make any charge now, at all events; and the plaintiff having had an ample opportunity of vindicating his character, which was the ostensible cause of his bringing the action, had not therefore any valid ground to ask for substantial damages.

The learned Chief Baron then summed up the case to the jury most impartially (Abinger is dead, and Pollock presides in his stead), and left it to them to say what damages the plaintiff was entitled to as against Seaton in the first instance, and in the next whether they thought Captain Dayrell was guilty of the trespass laid to his charge by interfering and uniting with Seaton in his illegal conduct towards the plaintiff.

The jury, after a short deliberation, returned a verdict for the plaintiff, with £20 damages against both the defendants."

Upon such a case it is impossible to comment; every one who has a heart to feel and a head to reflect, must grieve at the terrible store of retribution the landed aristocrats are laying up for themselves.

The next case we shall refer to occurred in Essex, where a farmer was convicted in a penalty under the game laws for destroying pheasants' eggs on his own farm, at the instance of some person who would appear to rent the manor of the landowner!!!

"BRINTWOOD PETTY SESSIONS, June 13. Before C. T. Tower, Esq., P. Button, Esq., and the Rev. T. Ludhy.—*Destroying Pheasants' Eggs.*—Mr. Henry Robinson, of Dutton, farmer, appeared to answer an information for destroying pheasants' eggs, he not having the right of killing game, nor permission from the person having such right.—Mr. C. C. Lewis attended to support the information, and Mr. Hilleary for Mr. Robinson.—Mr. Lewis called Benjamin Kent, who stated, I am underkeeper to Mr. James, and assist to look after the game on White Hall Botney Farm, in the parish of Dutton, and in the occupation of Mr. Henry Robinson. For the last six weeks I knew we had lost eggs off that farm, having missed them from the nests, and in consequence they had been strictly watching. I knew of a pheasant's nest in the Twelve Acre Field, which is in the parish of Dutton, and in Robinson's occupation, and about half-past six on the evening of Sunday, the 2nd of June, Dickerson and myself looked into this nest. Saw several eggs in it, but did not know how many. I saw they were then all right. I kept about the spot watching this nest, and about an hour afterwards saw Robinson coming towards it. I then laid in the ditch, and, seeing him on the bank of the Twelve Acre Field, crawled along the water-furrow in the wheat towards the nest. He was at this time standing on the bank. I saw him look round three or four times, as I supposed to see if any one were there. He then came off the bank into the field, and walked directly up to the nest, which lay in the hedge about twenty yards from where he had been standing on the bank. I saw him then strike into the nest with his right hand three or four times. I was at this time lying in the furrow, and immediately got up and ran to the nest. He saw me coming before he left the nest, and he then went out of the Twelve Acre Field the same way he came in, and walked as fast as he could. I went to the nest and found nine eggs in it, and eight just broken. I produced the nest and eggs just as I then found them. After I saw the eggs were broken, I followed Robinson and overtook him in the next field. I said, 'Well, Mr. Robinson, then you won't leave off destroying the game.' He said, 'I have not destroyed any.' 'Why,' I said, 'you've broken all the eggs in that nest,' and he answered, 'If that is a pheasant's nest, I never saw one before.' He then said he would give me a spank on the head if I told him he broke the eggs any more. Then he said, 'I have destroyed them, and I will, in spite of you or your master. I'll be d-d if I keep the d-d vermin any longer.' I then went and informed my master and afterwards went with Dickerson and fetched the nest; it has since been at Mr. James's house, and it is now exactly in the same state as it was when I went to it after Robinson left it. I have measured the distance from where I was lying from the nest, and found it to be as nearly as possible 150 yards. Mr. Hilleary then addressed the bench on the part of the defendant, but called no witness, nor said anything to shake Kent's testimony. The defendant was convicted in the full penalty of 40s., bring in an egg, with the cost of the conviction."—*Chelmsford Chronicle.*

Yet, will it be credited, our landlord legislators, finding this law not sufficiently stringent, have just passed a law making it felony for two labourers to be seen walking near a game preserve, and, probably, for we have not yet read the act, making it a misdemeanour for the farmer to destroy the game-vermin which are eating him up alive?

THE LOST MONOPOLISTS.

The following very natural inquiry appears in the columns of a monopolist newspaper:—

"THE AGRICULTURAL PROTECTION SOCIETY.

"To the Editor of the Farmer's Journal. 'Sir,—Pray can you inform me whether the Agricultural Protection Society in London have yet distributed a single tract. What are they about? Mr. Alison's pamphlet, published under their sanction, is of that class that not one farmer

in a hundred would be at the trouble of reading or lending or argumentative a production. Why do not the Committee circulate some articles addressed to the labouring classes, and let them be sent to every parish in the kingdom?' H. H."

The "Central Protection Society" is singularly unhappy in its publications: if it writes, or employs others to write briefly, its alleged facts are discovered to be fictions, and its pretended authorities to be misquotations, as witness Mr. Cayley's notorious tract. On the other hand, when monopoly is sought to be defended by such cloudy argumentation about things in general—the real points of the Corn-Law question only excepted—is the case with Mr. Alison's pamphlet, the farmers, on whom alone these make-believes are intended to act, reasonably enough treat such tracts as unintelligible.

But, for the information of the farmers who still delude themselves by reliance on protection and protectionist legislators, we may inform them that the Duke of Richmond, having effected his own little family arrangements at the Treasury, is doing nothing; that the Duke of Buckingham is helping the Duke of Richmond, and that all the rest of the "Central Committee," at the room in Bond-street, when they go there, are energetically engaged in supporting the Dukes of Richmond and Buckingham. The secretary reads the *Morning Post* diligently, and receives his salary punctually; while the mortgaged owners of unimproved farms are resting on the comfortable assurance that they will receive for another year all the rent they can get from their impoverished yearly tenants, under terror of the law of distress.

Will any monopolist venture to deny the literal truth of this statement—of the no-doings of the "Central Society?" And what do their dupes think about it? The next general election may show.

THE TRUE FARMER'S FRIEND.

We generally find those who have taken upon themselves this title leaving their deluded clients in the lurch whenever a personal or politico-party object is to be gained; but in the following paragraph we find mention made of a "farmer's friend," whose instincts are sure to lead him constantly to befriend the game-ridden tenant-farmer.

"POACHING EXTRAORDINARY.—We have often heard of the ravages committed by the hooded crow on the eggs of game during the breeding season, but we were scarcely prepared for such a proof of wholesale destruction as the following fact discloses. A few days ago Mr. Purves, tenant of Linton Burfoot, ascertaining that there was a hooded crow's nest in a certain tree on his farm proceeded to the spot with his gun with the intention of destroying the brood of young, before they took their departure from the parent nest. On arriving at the place, however, Mr. Purves was much disappointed in discovering that the whole brood had flown. Knowing the destructive propensities of this vermin, he had the curiosity to examine the ground around the foot of the tree, and was so astounded at the number of partridge egg-shells which he found strewn about, that, lest he should be accused of exaggeration, he took the precaution of requesting two gentlemen, his neighbours, to assist him in counting the shells, when, to their astonishment, they picked up the enormous number of one hundred and ninety-six shells of partridge eggs, within a few yards of the tree! The whole of these eggs were evidently consumed in feeding the young birds; but how many the old lady and gentleman had themselves gobbled up without ever bringing them near the family domicile, it would be difficult to estimate.—*Kelso Mail.* It would be a happy thing for this county if the breed of hooded crows could be encouraged about Wotton."—*Aylesbury News.*

We know a farmer whose farm is surrounded by game-preserves, who tells his men never to omit to destroy a hare or a rabbit, but to be especially careful to preserve all the weasels and polecats. If this plan was more generally acted upon by the tenant farmers, they might abate some of the game-nuisances by which they are so often injured.

FREE LABOUR IN BRAZIL.—The provincial authorities of Rio de Janeiro have engaged with a Mr. Bergasse, a French gentleman, to grant him two leagues square of land in that province, for the express purpose of cultivating sugar by 600 European emigrants (part of 2000 offered). We shall then be importing free-grown and slave-grown sugar from Brazil. Shall we receive the one and reject the other, or how establish such certificates as shall distinguish the one from the other?—*Globe.*

"PROTECTION" MANUFACTURERS OF PRESTON.—We find it reported in the *Sun* of last Wednesday that Lord Stanley presented a protection petition from Lancashire, which he stated was signed by 23 out of 47 of the principal manufacturers of Preston. Now, we are anxious that some gentleman should do suitable honours to these friends of dear food and little trade, by favouring the public with their names, and the amount they have subscribed in attestation of their zeal in the cause. We want this, first to remove our scepticism as to the truth of this report; and, secondly, that the reputation for sanity of those who have not signed it, may be fairly secured to them. The spinning lords and weaving lords in Preston signing petitions for the perpetuation of a system of robbery upon the people! Our faith refuses, upon a newspaper report, to believe that 23 of this class can be found in Preston to answer to such a charge. At present trade is good, but we fear the causes for it are not of a permanent character, and when the next cycle of little trade and no profit comes round, we want to be able to remind these champions of protection, be they few or many, of their supporting a system which has long aimed to ruin our trade and strangle our commerce.—*Preston Guardian.*

LEEDS PETITION IN FAVOUR OF THE CORN LAWS.—On the evening of Tuesday week, Mr. Wm. Beckett, one of the members for this borough, presented a petition to the House of Commons, just before Mr. Villiers's motion came on, "from the bankers and merchants of Leeds," in favour of the existing Corn Laws, or, as it is more plausibly called, "in favour of protection to agriculture." Of this petition we can safely say that nine-tenths at least of the honourable gentleman's constituents never heard of its existence till they read of its presentation, and that, though it might be signed by certain bankers and merchants in Leeds, it was not the petition of the bankers and merchants in Leeds, as the affair was so carefully smuggled that a majority of those classes, so far from signing the petition, were never consulted upon the subject. In short, the whole affair was a disreputable sham, and forms a very fair standard whereby to estimate Pro-Corn-Law petitions from other places.—*Leeds Mercury.* To open letters is esteemed the greatest breach of honour. Even to look into them already opened, or accidentally dropped, is held an ungenerous, if not an immoral act.—*Pope.*

NOTICES TO CORRESPONDENTS.

"John Dent, a Free-Trader, Greenwich," having only entered into possession of his cottage on the 5th of July, is not qualified to vote for it this year, unless he has happened to move from premises within the same borough which would have given him a vote. Let him, however, not lose a moment in being rated, because he must be rated for twelve months to enable him to be registered next year. Does he pay his own rates? Or if not, will he pay all the poor-rates and assessed taxes due for the cottage for a year? Remember the premises must be of the clear yearly value of £10. By applying at 66, Chancery-lane, all further information will be furnished.

"J. Eggleston, West-end, Tring."—A copyhold worth £10 and upwards, clear annual value, possessed for six months prior to the 31st of July, entitles the holder to a vote for the county in which it is situated, provided he send in a claim to the overseer of the parish prior to the 30th of July.

"R. C. Todmorden."—A lease, the original term of which is only twenty years, will not confer a county qualification unless it be of the yearly value of at least £50. An annual value of £10 would do only if the original term of the lease were for sixty years.

"An Enemy to Monopoly (G. P.)." Is informed that even at 5 per cent. purchase money to the amount of only £17 would not yield 40s. interest; and as the return for land is calculated at only about 3 per cent., the qualification is not sufficient. He may bring up his freehold to the value by building or other improvements. Probably £10 or £12 more expended would raise the freehold to the required value.

"A Non-electors" from Newcastle-upon-Tyne, renting a ten pound case, can claim to be put on the register and have a vote. His lodger cannot.

We have received a copy of a hand bill, issued by Mr. Goodliffe, a grocer, of Nottingham, which, in addition to the usual form of advertisement, contains the following table, showing the comparative amount of a week's consumption of the principal grocery articles in a working man's family, at the present duties and duty free.

PAYING PRESENT DUTY.		IF DUTY FREE.	
s.	d.	s.	d.
3 oz. tea	1 0	3 oz. tea	0 7
1 lb. coffee	0 6	1 lb. coffee	0 4
1 lb. sugar	1 9	1 lb. sugar	0 9
1 lb. lump ditto ..	0 9	1 lb. lump ditto ..	0 8
2 oz. tobacco	0 6	2 oz. tobacco	0 1
	4 6		2 2

Being a tax of 2s. 4d. per week, besides that upon bread and many other articles of daily consumption.

"C. P."—The hint is under consideration. The author of "National Regeneration" must excuse us for declining to enter into any discussion of the probable events of future war; we believe that the extension of commerce consequent on Free Trade will knit nations together in bonds of fellowship too strong to be broken for the gratification of the selfish ambition of warriors, or the sordid avarice of contractors.

"S. P."—The conversation was interesting, but it would not do for publication.

"An Elector."—The League will not be found wanting, should the crisis which he anticipates arrive.

"Balsbury Craig."—Not quite up to the mark.

"T. T."—When two members on opposite sides agree to withhold their votes they are said "to pair off."

"A Free-Trader."—We shall not lose sight of his hints.

"A Poor Man."—We regret that his verses do not suit.

"A Country Subscriber."—Mr. Spencer's admirable address has been printed in a cheap form.

"A Correspondent" wishes to know whether his Grace of Richmond is a whisky-dealer as well as a fishmonger, and calls our attention to the following extracts from an advertisement of Glenlivet whisky:—"This whisky, produced in the district of Glenlivet, upon the estate of his Grace the Duke of Richmond, in the Northern Highlands, and pronounced by all connoisseurs to be by far the finest and purest spirit made in any part of these dominions, is now for the first time publicly introduced into London, under the patronage of his grace. By his grace's permission, the dual arms upon the seal or label will distinguish the real Glenlivet from all others."

We regret the error committed by the trustees of the Anne-street Schools. The League has no connexion with any political party: it exists by the people and for the people only. "Free Trade" is no cry of party warfare; it is as purely a principle of science as the law of gravitation. We believe that the trustees acted under mistaken views, and, instead of censuring them, we only request our friends to enlighten their ignorance.

"A Leaguer" sends the following lines: they have some obvious imperfections, but their merits in substance may atone for their defects in form:—

BEES AND DRONES.

When I reflect upon my country's woes,
And see her noble sons her greatest foes—
Whene'er I hear the wailings of the poor,
And view the deep privations they endure—
When I perceive such vast extremes of state
Betwixt the many and the few estate—
My conscience boldly asks, "Can this be just?"
But reason turns away in sad disgust!
Who frame the ships that waft our produce far,
And build the great leviathans of war?
Who weave the cloth that sails to every shore
In ocean's calm and in its wildest roar?
Who reap and sow and cultivate the land,
And its unknown productive power expand?
Who the proud palace and the hall construct,
And excavate the mighty aqueduct?
Who cut the quarry and explore the mine,
And make all things—ingenuous, rare, or fine?
If Reason the unsullied truth may tell,
She answers thus the simple questions well:—
The bees who daily gather wealth for others,
While left to starve their children, wives, and mothers!

Who dwell within the splendid princely domes,
And desolate the people's cheerless homes?
Who feed on lucious and abundant meat,
While millions ask the privilege to eat
Unlax'd the common food of other lands,
And yet refuse to grant their just demands?
Who in the richest manufactures shine
That art and skill or fancy can design,
While toiling thousands, robb'd and starv'd by law,
Are cloth'd in rags and sleep on beds of straw?
Oh, who deny the labourers their right,
And industry with poverty requite?
The silly drones, who, in their careless sloth,
Now hover round the candle like a moth.
The bees may rise in intellectual might,
For justice soon a moral battle fight,
And clip their golden law-created wings,
And leave them powerless as dethroned kings!
Then, then shall plenty sail with every breeze
In each direction on the boundless seas,
And base Monopoly's gigantic form
For ever sink beneath the peaceful storm.
Then shall mankind in bonds of love be bound,
And reciprocity with olive-branches crown'd.
June 24, 1844. J. C. C.

"Dr. E. J. B."—We take some extracts from his printed letter on "Class Legislation," which are well worthy of attention:—"Oppression has its limit, and a knowledge of the evils which have so long oppressed the industrious classes, is developing, and, consequently, a severe struggle by the aristocracy to maintain their undue and unjust power. The artificial high price of corn, as a boon to the landed interest and the clergy, and other monopoly laws, have pressed on the mental and physical exertions of the people, so as to shorten life, and render that abridged life miserable. The artificial high price of food also induces delinquent adulterations, a serious evil, which can only be removed by a free trade in all articles necessary for man's subsistence."

It is imprudent, under the present state of our monopoly laws, for any man to embark his property on an improved or scientific system of agriculture, without a sufficient term of lease to ensure him a fair return for the capital he employs. Monopoly laws, and no leases, have kept the English farmer in ignorance. How many farmers of the present age can say what are the saline or metallic properties of the land on which they are severally employed? Until this knowledge is acquired, how can they apply the necessary manures to reduce the redundancy in one field, or benefit the sterility of another? The increase of population requires the elements of mineralogy, botany, and chemistry, to be taught, as being as necessary for those engaged in scientific agriculture as a knowledge of numbers, and as easily acquired. Free Trade is the great stimulus to all improvement, but, under prohibitory laws, no nation can continue prosperous or happy.

The artificial state in which this country has been kept since the close of the last ruinous war is expatriating the most valuable portion of our labouring classes, when Free Trade, scientific agriculture, and manufactures would employ more than twice our population. When the various and infinite properties of the earth come to be studied by men of education, in behalf of agriculture, the extent of employment in the preparation of manures will be as great an astonishment as the improvements in steam and manufacturing machinery."

"T. W."—The controversy is happily at rest, and it would be unwise to revive it. There are some valuable suggestions in the pamphlet on "Free Votes," to which we shall perhaps take an opportunity of directing attention.

"A Radnorshire Farmer."—The matter is under consideration.

"A Friend to the League."—His proposal will be laid before the Council.

"Sigma" has been anticipated.

"Rusticus."—The reports on the state of the agricultural poor, published in the *Times* newspaper, furnish an edifying commentary on the honesty of that philanthropy which overlooks the misery of the farm-labourers at its own door, and seeks objects of sympathy in "the region of tall chimneys."

Rusticus, in the main fact, agrees with the correspondent of the *Times*. He says:—"It is, unquestionably, a fact that the labouring population in this part of the country have, for several years past, been the subjects of deep distress; and it is also true that this long-continued and increasing suffering has engendered in the minds of many of them a sullen spirit of dissatisfaction, if not of absolute revenge; but it is the opinion of many enlightened men, who are thoroughly acquainted with their wrongs and their woes, that to charge the labourers with the perpetration of the odious crime of incendiarism is a gross calumny. Perhaps a few of the fires may have been lighted up by some 'low fellows of the baser sort,' but it is our opinion, that, as a class, they are cruelly maltreated when it is even insinuated that they are the authors of the infernal deed." Now, we are not of those who ascribe rick-burning to any class of men, but we have the experience of all ages, from the days of the Jacquerie down to those of Rock, Irving, Rebecca, and Terry Alt, to prove that the invariable causes of agricultural outrage are, to use the words of Lord Charles Montagu, "misery, oppression, famine." The sources of the rick-burner's crime are sufficiently legible in "The Home of the Rick-burner."

There is much energy in the following stanzas sent by "A Leaguer," which redeems their occasional offences against good taste:—

STANZAS.

"The farmers believe they have put down the League,"—
Mr. Bankes—late debate.—*Times*.

At the squire's command, throughout the land,
And into their mud below;
By the horse's neigh, and donkey's bray,
And the mighty Bull we know,
That dwelleth alone in Tamworth Park,
The League is crushed low!
And a chorus of aquires 'gan out to-shout,
"We have killed the monster now!"

"Hurrah," shout the aquires, who claim the shires,
And the votes that in them dwell,
And gather the bread from the famine-fed,
To fat their lapdogs well;
And make, while the labourer leaner grows,
Their bellies sleekly swell!

"Hurrah!" shout the aquires, whose *feeling* aires
This jolly Corn Law gave;
They could not bear that the belly's share
Should fall to the toiling slave!
So they builded this den of want and pain
Over the hideous grave.

"Hurrah!" shout the aquires, while Suffolk fires
Redden the midnight sky;
"Hurrah for our law!" while Famine's claw
Is ground in the labourer's eye.
"Hurrah for the aquires!" and speed them well,
When the hour of doom is nigh!

But while in the mind of humankind
A love of right shall be,
The hero will make his life the stake,
That nations may be free!
And we will stand with a dauntless front,
Though our wrath were a burning sea!

Several correspondents of the Jewish persuasion have requested the writer of the review of "Coningsby" to direct his attention to the social condition of Judaism in England, with especial reference to the dispute between the Spharim congregation and the seceders from that body. It appears to us that the controversy turns on points with which Christians, who directly reject the whole body of Jewish tradition, in or out of the Talmud, have no business to interfere. Chardin's virulent attack on Judaism is based on the anti-social character of the oral law; and while we unhesitatingly reject his libel, we feel that there is some difficulty in reconciling the requirements of the Mishna, and still more of the Gemara, with the ordinances of European states. The present division in the Spharim congregation appears to arise from a difference of opinion as to the best mode of solving these difficulties. We can only recommend moderation to the disputants; the penalty of *Cherem* is one not to be wielded lightly; those in past ages who launched bolts of excommunication too lightly have found them return upon their own heads.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 8s. 3d. by Post-office order, to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the *LEAGUE* forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadsby, Newall's-buildings, Manchester; and the *LEAGUE* may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

* See Cobden's speech on the committee for inquiry.

POSTSCRIPT.

LONDON, Saturday Morning, July 13, 1844.

The Birmingham, like the Kilmarlock election, offers the strange spectacle of rival candidates standing on the common ground of Free Trade, and risking by their disunion the return of a monopolist. However gratifying it may be, as a proof of the progress of sound opinion, that the Free-Traders of Birmingham feel themselves so strong as to be able to afford a division of their forces, it is far from pleasing to find that other considerations, beside the great question which now almost exclusively occupies the attention of the country, have been set forth to influence the decision of the electors. Not the least of the reasons that induce us to call for the total and immediate abolition of the Corn Laws is, that, so long as they exist, the struggle for their removal will prevent the attention of the public from being directed to the ameliorations necessary in other parts of our social system. Even those who deem such reforms more important than the abolition of the Corn Laws, should, under present circumstances, make the latter their primary object, because these laws are the greatest obstacle to the consideration of all other reforms. Skillful engineers clear the ground before they begin to erect their batteries; so long as the Corn Laws stand between monopolists and the advocates of free representation, all the shot directed against restricted franchise must fall short of the mark.

However the members of the League may feel grieved at a contest between two Free-Traders, they cannot interfere in the strife. Those who adhere to Sturge and those who support Scholefield equally give their votes in favour of the principles of the League, and the strength of our cause must be measured by the aggregate of the votes given for both candidates. Should this unhappy division give an opportunity to the monopolists for obtaining a temporary triumph by the return of Spooner, such an event will be far from proving that the cause of monopoly has made any progress in Birmingham: it will only show that the supporters of truth and justice have not known how to use their strength aright. In such a case the Free-Traders will have learned a lesson which a child may read; they will have had an opportunity of discovering which of the rival sections has been most in favour with the monopolists, and, consequently, of knowing which has displayed such imbecility of intellect, or infirmity of purpose, as to play the enemy's game. The borough of Marylebone, under similar circumstances, set an example which deserves to be imitated by every enlightened constituency. Means were taken to ascertain by a fair ballot the relative strength of Sir Charles Napier and Mr. Young in the electoral body, and when the latter found himself decidedly in a minority, he not only gave way, but zealously supported the Commodore at the election. This is a precedent which immediately suggests the moral, "Go and do thou likewise."

EPITOME OF NEWS.

The Thames steamer, which arrived on Saturday last at Southampton with the West India and Mexican mails, had on board one of the richest freights ever known from that quarter of the world. In addition to 81 passengers, she brings 1,419,203 dollars, £317 10s. British coin, 883 ounces of gold dust, 2228 ounces of silver, 2404 ounces of platina bent, pearls valued at 20,000 dollars, 203 serons of cochineal, 9 boxes of vanilla, and 91 serons of indigo.

The whole of the West India papers are filled with articles against the Government measure for the reduction of the duty on foreign coffee and free-labour sugar; and in all the islands meetings were being held to memorialize the Queen on the subject. Upon the calculation that the alteration in the duty of sugar will cause a reduction of 5s. per cwt. on the produce of the West India, the planters of Demerara alone, it is said, will annually lose £140,000.

Of the sugar crop the *Jamaica Times* says:—"The rains, which we had hoped would have been general, have unfortunately not proved so; for the entire of Vere and St. Dorothy, and the greater part of Manchester and Clarendon, are suffering from drought, and great fears are entertained that if we be not favoured very shortly with a change of weather, the sugar crop for the next year will still be ruinously short."

The Great Liverpool steamer has brought the Indian correspondence and passengers coming by way of Southampton. The serious fall here in the value of Ceylon coffee necessarily invests the accounts as to the future supplies from the island with some interest. The crop was expected to be an average one, and early, although there had been an unusual absence of rain; labour was abundant and cheap, and estates were still changing hands in this rising colony at an enormous profit, while new ones were opening. The shipping season for coffee was over, and prices were nominal, but cinnamon had further advanced.—*Globe*.

Rio de Janeiro papers to the 12th of May have arrived. The Emperor of Brazil opened the Legislature on the 3rd, but no allusion is made to a treaty with England. He expresses himself well satisfied with the situation he stands in with all foreign powers. Papers received from Domitiana state that a revolt had occurred in that island, in order to quell which it had proved necessary to exercise martial law. The affray seems to have originated from the taking of the census, some of the black population declaring that sooner than submit they would rise and fight for it. The parties employed had been obliged to

fly for their lives, as the negroes had turned out with out-lashes and bludgeons, evidently determined to put their threat into execution. It was not before the militia were called out, and one of the blacks shot, that anything like order and peace could be secured. Upwards of 200 prisoners were lodged in confinement, and the Privy Council had been sitting daily as a court of inquiry.

TREATY OF THE UNITED STATES WITH THE ZOLLVEREIN.—To our infinite surprise we learn from Washington that there is danger of the rejection of the reciprocal treaty lately formed with the German Customs Union, for the extension of our markets for cotton, rice, and tobacco among the thriving population of Germany. The treaty, as now signed, offers to take rice and tobacco at low duties, and cotton duty free, provided we will receive in exchange the articles of German industry most useful to us, or, in fact, to annex Europe, in a commercial point of view, to the United States. Yet this treaty is to be laid over until the next session before being ratified, if not altogether rejected.—*From the New York Republican of June 7.*

By advices from her Majesty's Consul at New Orleans, it appears that the yellow fever has been singularly destructive of life amongst emigrants arriving from Europe during the sickly season of the autumn of the year. The commissioners of emigration have issued a notice warning persons of the danger, and apprising them that in order to avoid it they ought not to be induced to start from this country during the months of June, July, August, and September.

The *Swabian Mercury*, June 28, contains a letter from Vienna, which says:—"It is stated that the change of tariff, determined on in favour of a free trade with foreign countries, is to be put in force on November 1 of the present year. Eighteen articles will, it is said, undergo a reduction in the entrance dues. Coffee, amongst the rest, which at present pays 21 florins the quintal, will be admitted at 12 fl.; but the duty on refined sugar will be augmented. Raw cotton is to enter freely. Foreign linens will pay 12 fl. in place of 15. Watches to be admitted on payment of a florin each."

Several modifications of the Austrian customs tariff came into operation on the 1st instant. The chief reductions are on cotton, thread, and coffee.

The Spanish Government is seriously preparing to make war on Morocco. An army of 6000 men is under orders for Ceuta. The plan of operations is stated to be the taking possession of Tangiers, which, with Ceuta, is called the key of the Mediterranean. In the debate in the Chamber of Peers in Paris on Tuesday, M. Guizot stated that of the three things demanded of the Emperor of Morocco, the second demand, that of the punishment of those Moorish officers who had first ordered the violation of French territory, had been already granted.

THE IRISH STATE TRIALS.—The arguments before the House of Lords on the writ of error, in the case of O'Connell and his fellow-prisoners, were begun on Thursday, the 6th instant, and concluded on Wednesday last. A number of legal questions growing out of the case, drawn up by the Lord Chancellor, were agreed to by their lordships, and have been submitted to the judges for their opinions.

It was generally expected that judgment would have been given on Thursday in the House of Lords, in the writ of error case of the Queen and O'Connell and others. It appears, however, that the reply of the judges to the eleven queries have not yet been received. The Chief Justice of the Common Pleas (Tindal) remained in town on Thursday to prepare draft answers to the queries, to be forwarded to the other judges on circuit who attended the argument in the Lords. As some days must elapse before the replies of the judges, expressing either their acquiescence in or their dissent from the draft answers, can be received, the judgment is of course deferred.—*Chronicle.*

On Saturday last a public meeting was held in Freemasons' Hall, for the purpose of forming a society for promoting social and intellectual intercourse amongst Irishmen resident in London, irrespective of religious and political differences. The Marquis of Clanricarde presided. Resolutions in support of the objects of the meeting were moved and seconded by Mr. E. Tennent, M.P., General Caulfield, Lord Castlereagh, Sir D. Norreys, M.P., Lord Trimlestown, Captain Taylor, M.P., &c. In the course of his speech Mr. Tennent stated that one important feature of the society would be, in addition to social meetings, the holding of at least one or two *conversations* during the season, and at which an opportunity would be afforded of exhibiting the works of Irish artists of every branch—of Irish painters and Irish sculptors—and which, enlivened as they would be by Irish music, would present no ordinary attraction to their own countrymen, and from which it would by no means be their object or their wish to exclude their English friends.—The Irish Municipal Repeal Declaration has received the signatures of 334 civic officers of towns in Ireland.—At the Lawes quarter sessions, on Wednesday, James Shimmonds, of Maresfield, shoemaker, aged 75, was indicted for unlawfully attempting to hang himself by the neck to a tree. The prisoner pleaded guilty, and was sentenced to six months' imprisonment.—On Saturday a young man, of respectable appearance, 22 years of age, who gave the name of the Hon. Wm. R. Touchett, brother to Lord Audley, was charged at Bow-street with shooting Thos. Smith, a gunsmith, at 288, High Holborn, with intent to murder him. It appeared that the prisoner went on the same day to a shooting gallery in Holborn, kept by Smith, when he requested to have pistols to shoot at a target; and that, while the latter was loading a pistol, the prisoner discharged the contents of one he held in his hand into Smith's back. Smith was taken in a dangerous state to Bartholomew's Hospital. The prisoner assigned as his sole reason for the act that he was unhappy, and wished to be hanged.—An inquest was held on Friday last before the coroner for Herts, on the body of a child of tender age named James Dyce, son of a chimney-sweeper, who was suffocated in one of the kitchen flues at Goldings, the seat of Lord Reay. Verdict, "Accidental death."—Very numerous applications have been made to the Home-office for a remission of the sentence on Barber, who is now on board a convict-ship about to sail for New South Wales; but we can state that they have all been unsuccessful, and we believe there is no intention whatever to remit any part of the sentence of transportation for life.—A stable and shed, containing various implements, the property of Mr. Suff, a brickmaker, at Shrubs-hill, near Virginia Water, were

fired in the day time, a few days since, and wholly consumed. This destruction of property, to the amount of upwards of £100, was no doubt the act of an incendiary.

—The ship *Leo* has arrived at the port of Berwick with a complete cargo of guano from China, or the Bug Islands. The captain states that he loaded his vessel (about 426 tons) in 48 hours, the guano lying as thick as 300 feet; and that, had it not been for the trouble of stowing, it might have been done in four or five hours.

—About half-past twelve o'clock on Saturday night last, a stack of oats, supposed to contain about fifty quarters, the property of Lord Wharnclyffe, was fired in five places in the stackyard at Wortley-hall. The fire-engines from Sheffield, with a body of the Sheffield police, arrived about two o'clock, and prevented the flames from communicating with the stacks adjoining. A strong suspicion exists in the neighbourhood that it was the act of some misguided collier, while others attribute it to political animosity against the noble owner. Lord Wharnclyffe was insured.—It is stated in a French newspaper that ninety-five parricides have been committed in France within the last ten years.—The *Lime-riek Reporter* announces that the proprietor and printer of that journal were held to bail upon an indictment for a portion of an article which appeared in the *Reporter* about a month since, calling upon the people to arm.

The article was written under the excitement produced by the imprisonment of Mr. O'Connell and the other traversers.—The ball which killed Lord Nelson has been presented by Captain Vincent Beatty, in whose possession it had long been, to her Majesty.—The *Observer* states that the reprieve in the case of Dalmus, the murderer, has been granted solely on the ground of insanity. The report of Doctors Monro and Sutherland, who were appointed to examine the state of the convict's mind, was so positive on this point as to leave no alternative to the Home Secretary.—A few days ago two men descending to their work in Thornley colliery were killed by the fracture of the rope.—Several men employed in the Beaufort mines have lost their lives from having inhaled a quantity of carbonic acid gas, produced in the mines by subterranean combustion. The whole of the men employed in these mines have abandoned their work in consequence.—Monday afternoon a special train on the South-Western Railway arrived at the terminus, Nine Elms, containing nine tons and a half of Sycee silver, which had been brought from Portsmouth, under convoy of a detachment of the 47th Regiment of Foot. The above specie is part of the money agreed upon by the Chinese Government to be paid to this country for the ransom of Canton.—The Royal Naval School at Deptford is nearly built, and will cost the country £10,000.—Prince Albert has accepted the office of President of the Society for the Improvement of the Condition of the Labouring Classes.—The Queen has presented £50 to the Association for the Aid and Benefit of Dressmakers and Milliners.—The Duke de Bordeaux has notified to the Courts of Europe his determination to retain the title of Count de Chambord. This is said to be for the purpose of avoiding the alternative of accepting or refusing the title of the King of France, which his party has given to him since the death of the Duke d'Angoulême.—The London committee announce that they have received £3500, in sums of from one penny to ten guineas, in aid of the national testimonial to Mr. Rowland Hill.

The sum of one hundred guineas, offered by a liberal churchman of Manchester, through the Rev. Dr. Vaughan, for the best Essay on Popular Education, has been awarded by the adjudicators to an essay from the pen of the Rev. Dr. Hamilton, of Leeds.—The number of petitions for repeal of the Legislative Union, presented up to the 21st of June, was, according to the 33rd report of the public petitions' committee, 415, and the number of signatures attached 875,489!—According to *La Gazette de France* there are at present twenty-seven editors and conductors of newspapers suffering imprisonment in France. Since 1830 journalism has paid in fines alone the enormous sum of 7,500,000 francs (£300,000.) The united amount of imprisonment suffered by journalists during the same period is equal to 184 years and 10 months.—A company has just been formed in Devon, the object of which is "to afford to the landowners and agriculturists of the western counties increased facilities for the thorough draining of their land, by advancing the necessary capital, repayable by instalments, and by furnishing the requisite materials at less cost than they can at present be procured.—At the present time passengers are actually being conveyed from Newcastle to London, by steam-boat, at the rate of two shillings per head.—The pitmen of Cramlington, Bedlington, and Radeliffe collieries, have passed resolutions at public meetings to continue the present strike.—The progress of building steam-vessels of iron, instead of timber, is making way in the most influential quarters. Among these may be mentioned the Peninsular and Oriental Steam Company. This company have finally resolved on laying down a series of iron steamers of the first class for their Mediterranean service.—Almost every succeeding day adds to the resources of practical science, and multiplies the developments of human skill. Paper is now, it seems, to be made from *wheat straw*; and it is affirmed that both the finest and coarsest qualities can be produced by the new method. The experiment, we hear, is about to be tried on a large scale, mills having been lately taken at Chalford, near Stroud, for that purpose.—It appears from a parliamentary return, just printed, that the amount of duty on patent medicines for the ten years ending the 5th of January, 1844, was, on an average, nearly £50,000 a year.—The amount of rent received during the first five weeks of the imprisonment of Mr. O'Connell is £14,523.—By Lloyd's returns it appears that the annual loss to this country by shipwreck is 610 ships, £2,500,000 of property and 1500 lives.—The value of the copper raised annually in Cornwall is £897,558; of tin and lead, £501,709; in addition to which are 800 tons of arsenic.—The salmon fisheries in Scotland and in the north of England, this season, are unusually full of fish, large quantities of which have, during the last fortnight, been taken, as may be inferred from the fact that in the markets fine large salmon are selling at the reasonable price of 7d. and 8d. per lb., and salmon trout as low as 4d. and 4½d. per lb., of 14 ounces.—*Newcastle paper.*—A field of rye was cut at Marsons Laffitte, in the neighbourhood of Paris, on Tuesday week. The Paris papers say that there is no instance of so early a harvest for upwards of 25 years.—The Repeal Association held its usual weekly meeting at Dublin on Monday last; Mr. Edward B. Roche, M.P.,

presided. Mr. J. B. O'Neill moved the adoption of a resolution recommending that the 30th of May in every succeeding year be set apart for meetings of all classes of Irishmen to commemorate the imprisonment of Mr. O'Connell and the other traversers. The resolution was seconded by Mr. Grattan, M.P., and agreed to. The amount of the week's rent was announced to amount to £2100.—A meeting of the Catholics of London was held on Tuesday last at the Music Hall, Store-street, for the purpose of adopting an address of sympathy to Mr. O'Connell and his fellow-sufferers. Resolutions to that effect were passed, and a deputation was appointed to wait on Mr. O'Connell with the address.—A young girl, 12 years old, named Elizabeth Warrington, drowned herself in the Ouse, at York, in the sight of several persons who were unable to rescue her. Her only motive appeared to be a fear of being scolded or beaten for staying out. Verdict, "Temporary insanity."—Several agricultural meetings have been held against Sir Robert Peel's Currency Bill.—The Agincourt convict ship, with Barber and Fletcher on board, and upwards of 300 other convicts, left Woolwich for Norfolk Island on Monday.—The Waverley ball, devised for the purpose of raising a fund in aid of the general subscription for the completion of the monument in course of erection at Edinburgh to the memory of Scott, took place at Willis's Rooms on Tuesday night last. Between 1200 and 1300 of the nobility and gentry were present. It is expected that £1000, the proceeds of the ball, after deducting expenses, will pass into the exchequer of the committee.—The will of the poet, Mr. Thomas Campbell, was proved on Tuesday by the executors, Dr. Beattie and Mr. Moxon. The personal property is sworn under £2000. The will and a codicil are dated 1842.—Tuesday the half-yearly general court of the members of the Royal Humane Society was held at the office, Trafalgar-square; Sir Edward Codrington presided. The secretary, Mr. J. Charlier, read the reports of the several committee meetings held since the last general meeting, and at which the several cases had been considered. The total numbers had been 42 on the general list; 39 had been successfully treated; seven men attempted suicide; five had been referred to the general court. In addition to those there were 22 Hyde-park cases, which came under the society's officers; 18 were successfully treated; six were attempted suicides.—On Monday night the fine barque *Madras*, 931 tons register, lying off Deptford Dockyard, caught fire, and it became necessary to scuttle her in order to save the hull and a portion of the cargo; the rest of the vessel was destroyed.—On Wednesday se'nnight an extensive fire broke out in a large three-story tenement at the foot of East Quay-lane, belonging to the Greenock Railway Company, which was reduced to ruins.—Of twenty-one prisoners in the gaols for trial at the Essex summer assize, seven are charged with arson.—A dreadful murder was committed on Sunday night at Salford, by a man named Stew, an excavator, on a poor girl named Alice Nolan, who was employed in a factory. They had kept company for the last few months, and Stew had repeatedly pressed her to marry him, but without gaining her consent. On the Sunday evening he persuaded her to take a walk with him, and on reaching an unfrequented spot cut her throat from ear to ear. He instantly fled, and afterwards cut his own throat. He has been removed to the Manchester Infirmary, where he remains in a dangerous state.—In the new burlesque of "Aladdin," produced at the Princess's Theatre last week, advantage is taken of the popular feeling on the subject of the State Paul Pryism. When the Princess is in the custody of the Magician, after he possesses himself of the lamp, she threatens to communicate her situation to *Aladdin*—

"Princess. I'll write a private letter in my need—
Magician. You'll find that difficult, just now, indeed."

This was received with repeated plaudits, mingled with hisses for Sir James Graham.

"Princess. I'll write in black and white—
Magician. In black and white—instead
Your letter in the post will sure be red (read)."
(Renewed applause.)

"Besides, I have a warrant to delay 'em—
Princess. That would be black, indeed—
Magician. Not black but grey—hem! (Graham.)"

(Renewed and prolonged applause.)—*Atlas.*—The "O'Connell tribute" for 1844 amounts to a figure (£30,000 has been named) that this national impost never before reached.—Mr. Warner, an ingenious watch-maker and jeweller in the Polytechnic Institution, has just completed the model of a high-pressure steam-engine—so small that it stands upon a fourpenny piece, with ground to spare! It is the most curious specimen of minute workmanship ever seen, each part being made according to scale. It is not simply a model outwardly, it works with the greatest activity by means of atmospheric pressure (in lieu of steam), and the motion of the little thing as its parts are seen labouring and heaving under the first influence is indescribably curious and beautiful.—A foreign paper says that in Germany the seeds of the grape are fast coming into use as a substitute for coffee.—A discovery was made at Buckingham Palace on Thursday morning that a man employed in the upholstery department of the Lord Chamberlain's office had committed suicide in one of the store rooms. The deceased was of regular and sober habits, and the cause which has led to the sad catastrophe was unknown.—By an arrangement with the Post-office, the down day-mail train between London and Birmingham will accomplish the journey in four hours, and the up in four and a half.

POPULATION OF LANARKSHIRE.—The following statistics are some of the results of the last government census of this county. They have not hitherto been made public; and we are indebted for the information to a friend in England who has had exclusive access to the source from which it has been derived:—

OCCUPATIONS OF THE PEOPLE IN THE COUNTY OF LANARK.	
Farmers	2,537
Agricultural labourers	9,933
Agricultural occupations	12,470
Not in agricultural occupations	173,262
Total in occupations	185,732
Persons of independent means	8,679
Almspeople, beggars, and pensioners	3,606
Other persons not described	1,496
Residue of population, women and children	236,245
Total population of Lanarkshire	421,977

—*Glasgow Guardian.*

REVIEW.

Commercial Statistics: a Digest of the Resources, Legislation, and Tariffs of all Nations. By John Macgregor, Esq. London: C. Knight.

We have received a copy of the two first volumes of this inestimable work, which is unrivalled both for the extent and accuracy of its commercial information. It is our purpose to devote a series of articles to the vast variety of subjects which it contains, acting the part of compilers rather than commentators, and to reserve, until the appearance of the third volume, the collection of the important lessons in political economy and commercial legislation which are deducible by easy induction from this assemblage of authenticated facts. We cannot more worthily commence the series than by quoting entire Mr. Macgregor's admirable chapter on the Interchange of Commodities.

"When the interchange of commodities, either raw or manufactured, between the inhabitants of a town or district, is subjected to no other restriction than its just proportion of the tax purely necessary to maintain its security, and its municipal order, and to defray the expense of erecting and supporting indispensable public buildings and institutions, we find, in that case, practical Free Trade existing, within such town or district, based upon a common interest, which each individual will, from personal interest, struggle to maintain in its peaceful course.

"A great nation is a great community, and all the nations of the earth, if the intercourse and trade between them were as free as between the individuals of a municipality, would then actually enjoy a peaceful and profitable system of common intercourse, based upon common interests, which it would be ruinous to any one of the nations concerned to disturb. The greater the commercial relations between the nations, the more disastrous would be the consequences of a war which would interrupt their reciprocity of interests. In proportion as this commercial and reciprocal interest has been of long standing and of great extent, the greater would be the securities for the maintenance of peace, and the more disastrous would be the calamity of continuing a war between two or more countries so circumstanced.

"All wars are more or less detrimental to the production of wealth, but a suspension of intercourse with a nation in which England finds but a trifling demand for her manufactures, would be of minor consequence, provided such war did not interrupt our intercourse with countries whose trade was of important value. A suspension of intercourse, for example, between England and America, could only with great loss to both, from the long duration and enormous extent of the intercourse, be possibly maintained.

"The sound principle of unrestricted international trade, although laid down long since by Adam Smith, in opposition to the more specious theory of Colbert, has in British legislation only been practically attempted by the Government during the first four years of Mr. Pitt's administration, and during the time Mr. Huskisson was in power, and, afterwards, to a limited extent, by Lord Sydenham. The most extensive and liberal reform in the British Customs duties since Mr. Pitt's Tariff in 1787, is the Tariff of 1842.

"In France neither the Government nor the Legislature have admitted even the principle of Free Trade. Hence the limited commerce of that country with others nations, which, in regard to imports, is restricted, except by smuggling, nearly altogether to raw materials of the first necessity to her manufactures, as cotton, wool, raw silk, dyestuffs, &c. There was one remarkable, but brief, exception to the generally unsound commercial legislation of France. That exception consisted of the moderate duties on imports into France from England, as embodied in Mr. Pitt's celebrated treaty signed at Versailles on the 26th of September, 1786.*

"A WAR OF MATERIAL INTERESTS, or, more properly speaking, of MATERIAL INJURIES—that is, a war of custom-houses or fiscal forts, with their garrisons of revenue officers and servants, has long been declared and carried on between most European nations. This warfare of interests, or injuries, has not ceased with the wars of bloodshed; and if we may ever expect security against a recurrence of the calamities attendant on, and consequent to the latter, it will be in destroying the elements of the former—in short, by the extension of Free Trade between all nations.

"Prohibitions and high duties on imports were, as is well known, from an early period common to most countries. England and France, so often and so long at armed warfare, were, however, the first, always excepting Spain, who, on a great scale, held up to Europe the example of a perniciously maintained war of material injuries against the reciprocal prosperity of both countries. England had her navigation laws, prohibitions, and restrictions on importations and bounties, before France had extensively

* The revolution annulled, at the same time, this treaty and its liberal principles of commerce and navigation. It is by far the most remarkable commercial treaty on record. According to its stipulations, "the subjects and inhabitants of the respective dominions of the two sovereigns shall have liberty freely and securely, without licence or passport, general or special, by land or by sea, or in any other way, to enter into the kingdoms, dominions, provinces, counties, islands, cities, villages, towns, walled or unwalled, fortified or unfortified, ports or territories whatsoever, situated in Europe, of the two sovereigns, and to return from thence, remain there, or pass through the same, and therein to buy and purchase all things necessary for their subsistence or use, and they shall mutually be treated with all kindness and favour; provided, however, that in all these matters they conform themselves to the laws and statutes." The same freedom was extended to ships and merchandise. The duties to be paid on French commodities in England were rated as follows:—Wines, no higher duties than on those of Portugal. (In Ireland no more than the nominal duties then paid on foreign wines.) Vinegar less than half the previous duty. Olive oil, the lowest duty paid by the most favoured nation. Brandy, 7s. per gallon. The following duties were to be levied reciprocally in both kingdoms:—viz., Hardwares and cutlery of all kinds, and of whatever metals, cabinet wares, furniture, turnery, &c., not higher than 10 per cent. *ad valorem*. Cotton and woollen manufactures of all kinds (except mixed with silk), 15 per cent. Gauzes of all sorts, 10 per cent. Linens, same duties as linens from Holland. Saddlery, 15 per cent. Millinery, 15 per cent. Plate and glassware, porcelain and earthenware, 15 per cent.

established those pernicious regulations. In 1664, France, in order to engage builders and merchants to construct French vessels, imposed a duty of fifty sous (two shillings) per ton on all foreign vessels. In 1687, the war of material injuries—that directed against the importation of foreign commodities, including all manufactures—was, as a principle, fully established by France. Austria, but not until one hundred years afterwards, followed the example, and on the same specious grounds, viz., to force the creation and prosperity of home manufactures, by excluding those of foreign states.

"In the history of Europe we cannot discover a sovereignty, great or insignificant, that has not maintained its war of material injuries against its neighbours, during the usually considered state of peace, as well as when engaged in armed hostilities.

"Germany, in her history, exhibits amply, from its most early period, until within the last few years, the ruinous modes of levying taxes. There is scarcely an old castle in the empire that can be viewed, in the choice of its position, otherwise than as a toll-house and prison, as well as a place of defence.

"The capital of Bavaria owes the origin of its detestable situation, and worse climate, to a quarrel between a duke of Suabia and a neighbouring prince-bishop, respecting the toll on, and monopoly of, salt claimed by the former. The duke, to put an end to the chief business of the bishop, that of smuggling salt, built a strong castle on the banks of the Isar. This protection occasioned a town to grow up around the castle; and the consequence has been, that one of the most classically built cities of Europe is cursed with a climate and situation worse than that of St. Petersburg.

"Afterwards each petty German sovereign established a line of customs-officers around his frontiers, to levy taxes upon commodities. Intercourse between one state and another was consequently subjected to great expense and inconvenience—industry was crippled—competition smothered—and the revenue itself gained but little, owing to the expense and the corruption of collection.

"The war of material injuries between one German state and another has now, however, nearly ceased. 'The great Germanic Union of Customs,' says Mr. Loehr, 'which for ten years appeared impracticable, was at last accomplished by means of that constant persevering German spirit which pervades and rules over our country—found as well in her enlightened ministers as in the known gratitude of her faithful people. Thus, within themselves, free-trading interest now unites twenty-eight millions from the Baltic Sea to the Alps.' So much for the tariff and regulations of this extraordinary union of material interests, which has destroyed all the barriers to commercial intercourse from the frontiers of France and Belgium to those of Russia and Austria.

"There is no theory probably more flattering to princes and statesmen, or to a whole nation, than to institute measures which hold out independence of all other nations, by producing and manufacturing at home all that is considered necessary and luxurious. It was easy to win a prince and people to adopt the application of so very plausible a theory. Louis XIV. authorized M. Colbert to establish those fabrics which that monarch afterwards, by his *dragonades* and by revoking the edict of Nantes, nearly ruined; while he, at the same time, by his persecutions, drove the most skillful artisans from France into England, Holland, and Germany. M. Colbert was one of the most honest and patriotic ministers of whom France can boast; but, unfortunately for his country, he became dazzled with the fallacious principle of forcing home manufactures by *premiums*, and by imposing duties on those of other countries. He encouraged, by large bounties, manufacturers to settle in France; he protected them by the most despotic laws, without ever considering that he was taxing the many for the benefit of the few—that he was destroying that competition which creates cheapness and perfection in manufactures,—and that his bounties and duties* were taxes on the whole community, and especially on the agriculturists. To encourage the French West Indian trade he paid a premium out of the national treasury of 30 francs per ton upon goods exported to, and 50 per cent. upon every ton imported from, those colonies. He also established large bounties, which were imitated by England, on the fisheries. His system became exceedingly popular; its promised grandeur flattered national vanity; and neither the prince, nor the people, nor M. Colbert himself, understood its fallacy. We shall hereafter show how fully it has been persevered in down to this day, notwithstanding the changes towards liberal principles of commercial legislation, which have been boasted of both by the French and English press.

"England, under William III., who brought over and bequeathed to us the funding system, declared the French trade a nuisance, and laid a discriminating duty of thirty-three and a half per cent. higher duty on French silks and cambrics than the duty imposed on those of Holland. This was naturally pleaded by the French economists as a full justification of the war of prohibition declared against English fabrics. The latter, it is true, continued to thrive, and it soon became a favourite argument, urged until this day, among the continental advocates of high duties on, or the prohibition of, foreign manufactures, that England, in manufactures, commerce, and wealth, owed her prosperity to her legislation restricting or prohibiting the importation of foreign manufactures.

"They either did not understand, or would not admit, that England attained her prosperity, not by the aid, but in defiance, of her illiberal commercial system, that England owed her wealth and power, and even her liberty, to her geographical position,—to her many commanding harbours,—to the vast power of production yielded by her mines of coal and iron *interstratified*, and conveniently disposed for cheap use and transport, and to the enterprising and industrious character of her people. England also escaped, on her own soil, the perpetual wars which devastated and prevented the manufacturing industry of the continental states of Europe; and although her taxation and her public debt have been carried to an incredible height, and her people compelled to pay far higher for maintaining existence than those of any other country, yet her earlier invention of more perfect machinery, especially of the steam-engine and spinning-jenny, and other circumstances which existed during war, enabled her, in defiance of Napoleon's wars and decrees—in spite of high taxation

* M. Colbert, however, did not establish the system of prohibition, and the duties he imposed on imports never reached the maximum of 10 per cent. *ad valorem*. He gave way to national prejudice, says Voltaire, in agreeing to discontinue the free trade in foreign corn.

and dear food—to enrich herself so far as to bear all her war burdens. Her people were enabled to do all this, and to pay those high prices for bread and potatoes—meat, which served to yield high rents to the landlords of the United Kingdom; not by restrictive legislation, but by a most profitable carrying-trade, and by throwing her manufactures with great gain into all the markets of the world, while the industry of other countries was paralysed by the insecurity occasioned by desolating invasions.

"In time of war, the harbours of England gave her military and commercial fleets an incalculable advantage over those of continental Europe. Lying west of the Continent, the prevailing winds, which prevented foreign ships from putting to sea, enabled those of the east coasts of Britain and Ireland to leave their ports; those of the west coasts being at the same time safe, from their position, as well as from the protection of our ships of war cruising in and off the entrance of the English and Irish Channels. Thus, while the nations of the Continent were disturbed in all their industrious pursuits, Great Britain enjoyed, from her geographical situation and commanding harbours, peace at home, and the opportunity of supplying the rest of the world with her domestic fabrics and the produce of her colonies. In defiance of the Berlin and Milan decrees, our manufactures found their way into the heart of Germany and Italy; while, even in France, we clothed the soldiers of Napoleon! Thus, although taxed beyond all possible calculation of endurance, the natural advantages of England, and the enterprise of her people, enabled her to withstand, in magnificent splendour, the convulsions that shook the Continent to its foundation.

"Peace for nearly thirty years has, however, transformed the destructive pursuits of most of the continental nations into occupations of productive industry. The great bulk of their population have, since the year 1814, been engaged generally in agriculture and grazing. Those employed in manufactures have therefore been enabled to maintain life at a lower cost than in a country circumstanced like England. The commercial laws of England, France, and, somewhat later, of Austria, have been the most unsound that the spirit and principle of restriction could well devise. Those of Germany, formerly liberal, are now highly restrictive. Those of Spain were tyrannical, and at the same time unsound and absurd. Those of Portugal inconsistent and capricious. Russia much later adopted the restrictive system; Sweden and Denmark followed the example. The Italian States, with the exception of Rome and Naples, have generally imposed moderate duties. Holland has, since the peace of 1814, and while connected with Belgium, departed from a more free system than that of any other European country, with the exception of Turkey, in regard to the import trade. The present tariff of import duties in Holland, notwithstanding the high taxation in other respects of that kingdom, is the most liberal in all Europe. The United States of America have lately agreed to a most restrictive tariff, which cannot, if persevered in, but be ruinous to their fiscal, agricultural, and commercial interests. The South American States appear to be governed by the same spirit as that which dictated the commercial policy of Spain."

Knight's Weekly Volume for all Readers.—William Caxton, a Biography. By Charles Knight. London: Knight and Co.

Few persons have effected more for the general instruction of the country than Mr. Charles Knight; his "Pictorial Bible," his "Penny Cyclopædia," and the four first volumes of his "Pictorial History of England," are unexampled specimens of the combination of cheapness with real excellence; his edition of the "Arabian Nights" will long remain unparalleled for the exquisite beauty of its illustrations and the extensive learning with which the manners and customs of the Mohammedan nations are elucidated in the notes; and his pictorial edition of Shakspeare not only explains every difficulty in the text, but, in addition, affords some of the finest specimens of intellectual criticism to be found in our language. He comes before us now in the double character of a publisher and an author; we but echo the general wish of all true lovers of humanity and national progress when we express a sincere anxiety for the success of the great enterprise which he has commenced; its conception is worthy of the mind that originated the "Penny Magazine" and the "Penny Cyclopædia;" and, so far as the first number may be taken as a test of execution, it promises to surpass the most ardent expectations which its friends could have formed.

A new enterprise for the diffusion of sound literature at a cheap rate is appropriately commenced with the life of William Caxton, our first English printer. As in his beautiful biography of Shakspeare, so here, Mr. Knight, instead of confining himself to a collection of the few meagre facts discovered by the grubbing industry of antiquarians, takes a wide range over all the circumstances of the age which were likely to have a formative effect on the character of his hero; he not only brings Caxton before us in his proper person, but he groups round him all the adjuncts among which he lived and moved; he at once revives the man and restores the time in all its form and pressure.

No portion of English history is more fraught with instruction, though none is more disgraceful to the nation and its rulers than that which records the course pursued in our commercial legislation. The chapters devoted to this subject in the "Pictorial History of England" are among the most valuable parts of that valuable work. Caxton's employment in Brabant and Holland, as an agent of the Mercers' Company, has brought the subject of the commercial policy of his age under Mr. Knight's review, and he discusses it with equal learning, acuteness, and high moral purpose:—

"William Caxton was, in truth, an accredited smuggler for lawmakers who attempted to limit the wants, and the

means of satisfying the wants, of the people they governed, in defiance to the prejudices of those who thought that trade could only exist under a system of the most stringent prohibition. It may unfold to us a few notions, and not unprofitable ones, of what the commerce of England was four hundred years ago, if we open the statute-book, and see how a merchant was then hemmed round by a triple wall of obstructions—raised, no doubt, in many instances, by his own cupidity—against carrying out the great commercial principle of buying in the cheapest market and selling in the dearest.

"The whole course of early modern legislation, and the course, indeed, of much modern legislation, is to make laws for the attainment of some good which, if there be any principle of good in the thing itself, will be attained without the laws. The statute of the 8th of Henry VI., 1429, says that the price of wool and tin sold at Calais shall 'not be abated, but augmented and put to greater increase and advantage'; and further, for these commodities, 'the whole payment be made in hand.' What could any noble English merchant desire better from a law? High prices—ready money! One little year is quite enough to test the power of the lawmakers; for in the 9th of the same king it is found out that by this law of high prices and ready money 'the English merchants have not sold, or cannot sell, nor utter their cloths to merchants aliens, whereby the king has lost his customs which he ought to have had if the said cloths had been sold as they were, and were wont heretofore.' And so, says the considerate law, the merchants may sell, if they can, for six months' credit. Year after year the law goes on enacting that no goods shall leave England but for the staple at Calais. 'All the wools,' say the trade regulators, 'wool-fells, hides, lead, and tin, and divers other merchandises passing out of the realm of England, the lands of Ireland, Wales, and Berwick-upon-Tweed, ought to repair to the staple at Calais, and to none other place beyond the sea.' But, good luck, according to the same statute, 'a great substance of the merchandises which ought to repair to the said staple do repair into Flanders, Holland, Zealand, and Brabant, without custom or other charge; and, moreover, the same wools and merchandises be sold in the same parts at so low price that the merchants aliens be so greatly enticed of the same, that they come not to Calais to buy their merchandises.' What is the remedy? That the goods shall be forfeit whenever the exporters are detected. But they are not detected. Penalties are useless; the contraband trade goes on and flourishes; and then, eight years afterwards, the king, 'considering how divers persons, by divers imaginations of deceit, carry and bear away wool and wool-fells out of this realm, to other places than to the staple of Calais,' declares that every person so offending shall be adjudged to be a felon. Will this do? The fear of the halter stops no more the course of trade than the fear of the fine. The laws begin to relax. Those who sent their merchandise to the staple of Calais were not to get the money for it themselves, but there was to be a sort of partition according to the laws of the staple, in which no doubt the governors of the staple got a lion's share. And so two years afterwards the merchants were to be allowed to receive the price of what they sold, by themselves or by their attorneys. But Calais itself, of course, flourishes amongst all these privileges and prohibitions? The statute of the 27th of Henry VI. most piteously recites its complete decay. It says that King Edward III., by great deliberation, ordered his whole staple of merchandise to be at Calais; that great revenues came to him therefrom, even to the extent of £68,000 a year; that now the annual revenue from Calais was only £12,000; and so, continues the statute with most ludicrous solemnity, because the wool has been sold in Brabant and other places to such men as were wont to be accustomed to buy their wool at the staple at Calais (the said men preferring to buy their wool at their own doors to going a hundred miles to fetch it overland), the commons of England are not enriched by their wools and other merchandises as they were wont to be, and the merchants greatly diminished in number as well as in goods. On the other hand, the Duke of Burgundy, seeing this pouring of English goods by a shorter road than the staple of Calais into his dominions of Brabant, Holland, and Zealand, makes an ordinance, in 1448, that no woollen cloths at all shall come in. The King of England is naturally very indignant at this, although he has done all in his power to prevent the subjects of the Duke of Burgundy receiving the English goods by the shortest road and at the cheapest rate. And so, he says, that this ordinance is 'to the intolerable damage of all the commons of this realm; damages the weavers, fullers, and dyers, the websters, carders, and spinners; causeth them to live idly, and provoketh them to sin and evil life. And what doth the King of England do for remedy or mitigation of the evil? He does what we have been accustomed to do up to this hour; he will not let our people buy, because another potentate will not let our people sell: no manner of merchandise or goods of the growing or workmanship of the lands and parts which the said duke holdeth or occupieth shall come in the said realm of England, upon pain of the forfeiture of the merchandises so brought in."

Change wool for corn, and we have the faithful picture of the follies of the fifteenth century, revived after a lapse of about 400 years, embodied in our statute-book, and advocated not only by our Ferrands and Sibthorps, but by our Peels and Gladstones. Having shown that the effect of this perverse and restrictive legislation was to produce bad weaving in the fifteenth as it does bad farming in the nineteenth century, Mr. Knight continues:—

"The whole tendency of legislation was, under some pretence or other of the people's good, to prevent them from trading at all. We open these old statutes, and see how little the course of the world has altered during four hundred years. We there are told in the fifteenth century, as we are told in the nineteenth, that 'the labourers and occupiers of husbandry within this realm be daily grievously endangered by bringing of corn out of other lands and parts into this realm, when corn of the growing of this realm is at a low price.' We are told that 'it was showed in the Parliament by the spinsters of silk, within the city of London, that divers Lombards and other alien strangers, imagining to destroy their crafts and all such virtuous occupations for women within this land, to the intent to enrich themselves and to put such occupations into other lands, bring now daily into this realm wrought silk, thrown ribbons, and

laces, falsely and deceitfully wrought.' And lastly, we are told, 'Whereas to the said Parliament, by the artificers of manual occupations, men and women, inhabiting and resident in the city of London, and other cities, towns, boroughs, and villages within this realm of England and Wales, it hath been piteously showed and complained, how that they all in general, and every of them, be greatly impoverished, and much hindered and prejudiced of their worldly increase and daily living, by the great multitude of divers commodities and wares pertaining to their mysteries and occupations being fully wrought, and ready made to sale, as well by the hands of strangers being the king's enemies as other, in this realm, and Wales, fetched and brought from beyond the sea, as well by merchants strangers as denizens and other persons, whereof the greatest part in substance is deceitful, and nothing worth in regard of any man's occupation or profit; by which occasion the said artificers cannot live by their mysteries and occupations, as they have done in times past, but divers of them, as well householders as hirelings, and other servants and apprentices in great number, be at this day unoccupied, and do hardly live, in great idleness, poverty, and ruin.' The penalty against bringing these divers commodities and wares into the realm, was an absolute forfeiture of one-half to the king, and one-half to him who first seized the same; and we may well believe that, when the hand of every man was thus armed against his neighbour, a pretty scuffling must have been daily going forward to vindicate the laws of commercial restriction. The catalogue of prohibited wares in this statute is exceedingly curious, as showing the progress which had been made in the social demand for articles of secondary necessity and of positive luxury. In addition to woollen cloth and caps, laces, ribbons, and fringes, there are saddles, stirrups, spurs, bridles, andirons, gridirons, locks, hammers, fire-tongs, dripping-pans, dice, tennis-balls, purses, gloves, girdles, leather, buskins, shoes, goloshes, corks, knives, daggers, bodkins, shears, scissors, razors, sheaths, playing-cards, pins, pattens, pack-needles, painted ware, caskets, chaffing-dishes, sacring-bells, candlesticks, curtain-rings, ladles, skimmers, basins, ewers, hats, brushes, cards for wool, and blanch iron thread, commonly called white wire. This is a considerable list of things with which England now supplies the world; and the question would naturally arise whether the absolute prohibition of foreign goods did give such an impulse to the native manufacture, as prohibitions in all ages have contended, and still contend, is the good of prohibition. One thing is quite certain, that the prohibition at home engendered prohibition abroad, and that we were consequently obliged, laboriously and painfully, to produce many things for native consumption which we could more readily have obtained by exchange, and that there was a reciprocal barring out of those things which we did produce easily and abundantly from the use of the people of other countries who could not produce them. The inconsistency of such regulations was never more clearly exhibited than in the preambles of these ancient statutes, which have not the cunning to conceal the false principle under a veil of expediency. The Duke of Burgundy, as we have said, had gone on prohibiting the cloths of England to come into the Low Countries; and England had gone on in the same way prohibiting the wares of the Low Countries coming into England. Within a year of this prodigious enactment of Edward IV., beginning with wool, and ending with white wire, the Duke of Burgundy puts out a declaration, 'evermore to endure, and never to be repealed,' that all English cloth and wool that came into his lands should be banished and burnt, banished (or banned), meaning that the yarn and the cloth were accursed things. Our tender-hearted King Edward, who had been in the same way legislating against the foreign makers of every article, from a hat to a shoe, from a hammer to a pin, is amazingly surprised at the cruelty of the Duke of Burgundy, 'whereby, by all likelihood, the makers of woollen cloths within this realm of England, as weavers, fullers, dyers, spinners, carders, and winders of yarn, and other persons exercising the cloth-making, and also the buyers and sellers of the same, should be destitute of occupations and become so idle, that it should provoke them to sin and evil life, which God defend.' And so the merciful King Edward spreads the same destitution through the lands of the Duke of Burgundy, by ordaining that any manner of merchandises of the duke brought into England shall be seized and forfeited, 'one-half thereof to him that first shall seize the same goods and merchandise, in whose hands soever they shall be found.'

It is gratifying to find that William Caxton had some share in putting an end to this war of impolitic restrictions and iniquitous reprisals between the states of Burgundy and England.

"While Edward IV. and Charles the Good, Duke of Burgundy, were launching against each other ordinance and enactment to prevent their subjects becoming exchangers for the better supply of their respective wants, some politic understanding between these princes led them eventually to adopt a wiser system. It is pretty clear that William Caxton was one of the agents, and a principal one, in putting an end to a policy which the Duke of Burgundy said was 'evermore to endure.' In 1464 Edward IV. issued a commission to his trusty and well-beloved Richard Whitehill and William Caxton, to be his especial ambassadors, procurators, nuncios, and deputies to his most dear cousin the Duke of Burgundy, for the purpose of confirming an existing treaty of commerce, or, if necessary, for making a new one. In 1466, this commission being dated in October, 1464, a treaty was concluded with the Duke of Burgundy, by which the commerce between his dominions and England, which had been interrupted for twenty years, was restored; and a part of Flanders was subsequently appointed to be a part of the English staple, as well as Calais. It is pleasant to us to believe that this extension of a principle which must eventually bind all nations in a common brotherhood was effected by the good sense of a mercer of London, who was afterwards to bestow upon his country the blessings of an art which has been the great instrument of that country's progress in real greatness and prosperity, and before which all impediments to the continued course of that prosperity—all prejudices amongst her own children, or amongst other people's, that make the great family of mankind aliens and enemies, and keep them from the enjoyment of the advantages which each might bestow upon the other—will utterly perish."

The progress of the art of printing in England is lightly but ably sketched by Caxton's biographer, and its details are varied by snatches of verse from our older poets, not less creditable to the taste than to the research of Mr. Charles Knight. We have never in the same number of pages found more valuable information combined with so much pleasant anecdote and eloquent discussion as in this little volume; and when we reflect that it is sold for the low price of a shilling, we cannot but feel that, both as publisher and author, Mr. Knight has established a strong claim to the gratitude of this and of many succeeding generations.

Hyperion: a Romance. By H. W. Longfellow. London, Clarke and Co.

This romance is an idealized version of the author's thoughts and impressions during his tour in Germany; it reads like a new edition of "Wilhelm Meister's Apprenticeship," with new adaptations from Jean Paul Richter, and some dashes of the fantastic imaginings of Hoffman. Like the odes of Pindar, this romance, however intelligible to the initiated, will need an interpreter to the multitude; for it is in design and execution removed as far as possible from the realities of practical life, and fixed in the region of clouds, and dreams, and shadows. The character which Mr. Longfellow gives of Jean Paul is a pretty accurate description of his own Hyperion:—

"Most undoubtedly his wild imagination and his playfulness. He throws over all things a strange and magic colouring. You are startled at the boldness and beauty of his figures and illustrations, which are scattered everywhere with a reckless prodigality; multitudinous, like the blossoms of early summer, and as fragrant and beautiful. With a thousand extravagancies are mingled ten thousand beauties of thought and expression, which kindle the reader's imagination, and lead it onward in a bold flight, through the glow of sunrise and sunset, and the dewy coldness and starlight of summer nights. He is difficult to understand,—intricate,—strange,—drawing his illustrations from every by-corner of science, art, and nature,—a comet among the bright stars of German literature. When you read his works, it is as if you were climbing a high mountain, in merry company, to see the sun rise. At times you are enveloped in mist—the morning wind sweeps by you with a shout—you hear the far-off muttering thunders. Wide beneath you spreads the landscape—field, meadow, town, and winding river. The ringing of distant church bells, or the sound of solemn village clock, reaches you; then arises the sweet and manifold fragrance of flowers—the birds begin to sing—the vapours roll away—up comes the glorious sun—you revel like the lark in the sunshine and bright blue heaven, and all is a delicious dream of soul and sense—when suddenly a friend at your elbow laughs aloud, and offers you a piece of Bologna sausage. As in real life, so in his writings—the serious and the comic, the sublime and the grotesque, the pathetic and the ludicrous, are mingled together. At times he is sententious, energetic, simple; then, again, obscure and diffuse. His thoughts are like mummies embalmed in spices, and wrapped about with curious envelopments; but within these the thoughts themselves are kings. At times glad, beautiful images, airy forms, move by you, graceful, harmonious;—at times, the glaring, wild-looking fancies, chained together by hyphens, brackets, and dashes, brave and base, high and low, all in their motley dresses, go sweeping down the dusty page, like the galley-slaves that sweep the streets of Rome, where you may chance to see the nobleman and the peasant manacled together."

To grave statisticians and political economists like ourselves, it may be supposed that this romance would offer few attractions; but the ideal is not so far removed from the real as the world is prone to imagine. The "cloud landscapes" are, in themselves, realities, like the Mirage of Arabia or the Fata Morgana of Naples. Dreams belong to our existence not less than the objects which are palpable as well as visible, and fancy is as much a positive faculty as reason. There are, however, too many urgent demands on our limited space for us to dwell at such length as we could desire on this sublime prose-poem; but the beautiful edition before us is so cheap and so excellent that we hope most of our readers will get the book for themselves. In the meantime we shall quote some of the snatches of song scattered through the volume, which, like the gems on a regal diadem, or the stars that gird the galaxy of the sky, seem neither to increase the pomp or beauty of the main object, but merely to flash their light over its loveliness. The following Alpine ode may challenge comparison with Coleridge's "Hymn in the Vale of Chamouni":—

"Come golden Evening! In the west
Enthroned the storm-dispelling sun,
And let the triple rainbow rest
O'er all the mountain tops:—'tis done;
The tempest ceases. Bold and bright
The rainbow shoots from hill to hill;
Down sinks the sun—on presses night—
Mont Blanc is lovely still!

"There take thy stand, my spirit;—spread
The world of shadows at thy feet;
And mark how calmly overhead
The star-like saints in glory, meet.
While hid in solitude sublime,
Methink I muse on Nature's tomb,
And hear the passing foot of Time
Step through the silent gloom.

"All in a moment crash on crash,
From precipice to precipice,
An avalanche's ruins dash
Down to the nethermost abyss,

As a

Wha
Critica
be as idle

Invisible; the ear alone
Pursues the uproar till it dies;
Echo to echo, groan for groan,
From deep to deep replies.

"Silence again the darkness seals.
Darkness that may be felt. But soon
The silver-clouded east reveals
The midnight spectre of the moon:
In half-eclipse she lifts her horn,
Yet o'er the host of Heaven supreme,
Brings the faint semblance of a morn,
With her awakening beam.

"Ah! at her touch these Alpine heights
Unreal mockeries appear;
With blacker shadows, ghastlier lights,
Emerging as she climbs the sphere;
A crowd of apparitions pale!
I hold my breath in chill suspense,
They seem so exquisitely frail,
Lest they should vanish hence.

"I breathe again, I freely breathe;
Thee, Leman's Lake, once more I trace,
Like Dian's crescent far beneath,
As beautiful as Dian's face.
Pride of the land that gave me birth;
All that thy waves reflect I love,
Where Heaven itself, brought down to earth,
Looks fairer than above.

"Safe on thy banks again I stray;
The trance of poetry is o'er,
And I am here at dawn of day,
Gazing on mountains as before,
Where all the strange mutations wrought,
Were magic feats of my own mind;
For, in that fairy-land of thought,
Whate'er I seek I find."

As a fit companion, though in a very different
style of excellence, we quote an exquisite transla-
tion of one of Uhland's undefinable lyrics:—

"Many a year is in its grave,
Since I crossed this restless wave;
And the evening, fair as ever,
Shines on ruin, rock, and river.

"Then, in this same boat, beside,
Sat two comrades old and tried:
One with all a father's truth,
One with all the fire of youth.

"One on earth in silence wrought,
And his grave in silence sought;
But the younger, brighter form,
Passed in battle and in storm!

"So, when'er I turn my eye
Back upon the days gone by,
Saddening thoughts of friends come o'er me,
Friends who closed their course before me.

"Yet what binds us, friend to friend,
But that soul with soul can blend?
Soul-like were those hours of yore;
Let us walk in soul once more!

"Take, O boatman, thrice thy fee;
Take, I give it willingly;
For, invisibly to thee,
Spirits twain have crossed with me!"

Of the prose-poetry, if we may be allowed such
an expression, it is not easy to find a passage which
can safely be detached from its connexion without
having its beauty materially injured. We quote,
however, part of the episode of the Fountain of Ob-
livion, an exquisite allegory, in which the poet-
lover first reveals his feelings to the mistress of his
affections. The student has just found the foun-
tain:—

"Upon its brink the student paused, and gazed into
the dark waters with a steadfast look. They were limpid
waters, dark with shadows only. And as he gazed, he
beheld, far down in their silent depths, dim, and ill-de-
fined outlines, wavering to and fro, like the folds of a
white garment in the twilight. Then more distinct and
permanent shapes arose;—shapes familiar to his mind,
yet forgotten and remembered again, as the fragments of
a dream; till at length, far, far below him he beheld the
great city of the Past, with silent marble streets, and
moss-grown walls, and spires uprising with a wave-like,
flickering motion. And amid the crowd that thronged
those streets he beheld faces once familiar and dear to
him; and heard sorrowful, sweet voices singing—'O,
forget us not! O, forget us not!' and then the distant
mournful sound of funeral bells, that were tolling below,
in the city of the Past. But in the gardens of that city
there were children playing, and among them one who
was like his features as they had been in childhood. He was
leading a little girl by the hand, and caressed her often,
and adorned her with flowers. Then, like a dream, the
scene changed, and the boy had grown older, and stood
alone, gazing into the sky; and, as he gazed, his counte-
nance changed again, and Hieronymus beheld him, as if
it had been his own image in the clear water; and before
him stood a beautiful maiden, whose face was like the
face of Hermione, and he feared lest the scroll had fallen
into the water as he bent over it. Starting as from a
dream, he put his hand into his bosom and breathed freely
again, when he found the scroll still there. He drew it
forth and read the blessed name of Hermione, and the
city beneath him vanished away, and the air grew fragrant
as with the breath of May-flowers, and a light streamed
through the shadowy forest, and gleamed upon the lake;
and the student Hieronymus pressed the dear name to his
lips and exclaimed with streaming eyes—'O, scorn me as
thou wilt, still, still will I love thee; and thy name shall
irradiate the gloom of my life, and make the waters of
Oblivion smile!' And the name was no longer Her-
mione, but was changed to Mary; and the student Hier-
onymus—*is lying at your feet!* O, gentle lady!

"I did hear you talk
Far above singing; after you were gone
I grew acquainted with my heart, and searched
What stirred it so! Alas! I found it love."

Criticism on such a work as is before us would
be as idle as an attempt to give a scientific analysis

of the colourings of the sky when a summer's day
draws to its close, and the sun seems to linger in its
setting as if anxious to give a farewell glance at the
landscape ere it is shrouded in darkness. At such a
moment—

"When we can almost think we gaze
Through golden vistas into heaven,"

the thoughts that crowd upon the soul have a mys-
terious holiness, a solemn beauty, and an indefinable
sublimity which it taxes the utmost power of mind
to grasp, and which language dares not even try to
express. At such a time the soul feels its immor-
tality, and seems eager to burst the elements by
which it is restrained and confined. Feelings pre-
cisely similar are suggested by this little volume; we
read it as something belonging to a state beyond
and above our actual existence; a revelation from
the world of shadows which forms the misty bound-
ary of our limited horizon; a glimpse of what lies
behind the mystic veil which hides from our limited
faculties the wondrous secrets of spiritual life.
"We are of the earth, earthy;" but there is within
us a power which can break the walls of this clay
prison, and enable us to conceive affections purified,
emotions ennobled, and the free spirit investing itself
with creative attributes, and moulding the world into
an image of its own purity. Let those who would
see some of the workings of this wondrous power
read and read again Longfellow's "Hyperion."

THE MAGNETIC TELEGRAPH.—The magnetic tele-
graph is now in full operation between the cities of Wash-
ington and Baltimore. The following examples will show
the manner in which this instrument annihilates both time
and space:—"On Saturday morning the batteries were
charged, and the regular transmission of intelligence be-
tween Washington and Baltimore commenced, as we
learn from the *Baltimore Patriot*. A large number of
gentlemen were present to see the operations of this truly
astonishing contrivance. Many admitted to the room
had their names sent down, and, in less than a second, the
apparatus in Baltimore was put in operation by the at-
tendant in Washington, and before the lapse of a half-
minute the same names were returned plainly written.
At half past 11 o'clock a.m., the question being asked,
'What the news was at Washington?' the answer was
almost instantaneously returned, 'Van Buren stock is
rising'—meaning, of course, that his chances were
strengthening to receive the nomination on Monday next.
The time of day was also inquired for, when the response
was given from the capital, '49 minutes past 11.' At this
period it was also asked how many persons were specu-
lators to the telegraphic experiments in Washington!
The answer was '16,' after which a variety of names
were sent up from Washington, some with their com-
pliments to their friends in Baltimore, whose names had just
been transmitted to them. Several items of private in-
telligence were also transmitted backwards and forwards;
one of them was an order to an agent in Baltimore not to
pay a certain bill. The electric fluid proved too slow, for
it had been paid a few minutes before. At half-past 12
o'clock the following was sent to Washington:—'Ask a
reporter in Congress to send a despatch to the *Baltimore
Patriot* at 2 o'clock p.m.' In about a minute the answer
came back thus:—'It will be attended to.' Two o'clock
p.m.—The despatch has arrived, and is as follows:—'One
o'clock—There has just been a motion in the house to go
into committee of the whole on the Oregon territory. Re-
jected. Ayes, 79; noes, 86.' 'Half-past one o'clock—
The house is now engaged on private bills.' 'Quarter to
2 o'clock—Mr. Atherton is now speaking in the Senate.
Mr. S. will not be in Baltimore to-night.' So that Bal-
timore papers are thus enabled to give their readers in-
formation from Washington up to the very hour of going
to press. This is indeed the annihilation of space."—
New York Daily Sun. [The distance between Baltimore
and Washington is 34 miles.]

THE REAL METHOD OF SEAL-BREAKING.—Public
attention has been of late very properly directed to the
odious system of espionage which has been long prac-
tised at the Post-office, under the authority of the British
Secretary of State; and many of the journals have pre-
tended to describe the agency by which the operation
of taking *facsimiles* of seals has been accomplished,
but evidently with little knowledge of the subject. Some
of them have stated that the imitation seal was produced
by placing a plate of lead on the wax impression, which,
when smartly struck, presented a perfect *facsimile* of the
original; but this is a palpable absurdity. The opera-
tion is much simpler; and by the process adopted at the
Post-office a score of spurious seals can be produced in a
few minutes, and with the utmost precision and certainty.
The spurious seal by which it is intended to reseal the
opened letters is taken in plaster of Paris, and with so
much accuracy as to defy detection. It is, in fact, the
process by which our beautiful casts of medals and coins
are taken, as well as that by which the lower gangs of
coiners are enabled to cast exact *facsimiles* of our silver
coinage in base metal. It appears that in the secret or
inner bureau of the Post-office the appropriate apparatus
for casting is always in readiness. It simply consists of a
small cylindrical, annular brass mould, about an inch in
height, which opens and shuts like a bullet-mould. After
the seal has been oiled, to prevent the plaster adhering,
this mould is placed upon it, and the plaster of Paris,
mixed in the usual way, is poured upon it. In about five
minutes it hardens, or sets, as it is technically called; and
in about as many minutes more is fit for resealing the
letter, which has been opened by the application of a hot
iron to the seal, and a copy of its contents duly taken.
If a wafer should have been used, a little hot water or
steam will soon remove the obstruction.—*Atlas*.

OPENING OF LETTERS.—On Thursday last, at Cupar,
before Mr. Sheriff Jamieson, a young woman was
charged, at the instance of the Joint Procurators Fiscal,
with contravening the statute of 1 Victoria, cap. 36, sec.
25, in having, while in charge of the post-office in a village
in the country, on the 6th day of May last, opened a post
letter which had been put in there. She pleaded guilty,
and her agent, Mr. McGlashan, stated several circum-
stances in mitigation of punishment, and produced cer-

tificates of her good character. The sheriff in pro-
nouncing sentence stated, that he believed she had opened
the letter out of thoughtless curiosity; but that there was
nothing more sacred than letters put into the Post-office;
that the arrangements of our Post-office were guarded by
act of Parliament, which made severe punishment appli-
cable to offenders against its laws, and hence its present
efficiency. He therefore sentenced her to pay a fine of
£5 or to be imprisoned for 60 days. The fine was imme-
diately paid.—*Scottish Record*.

WHY FARMERS DO NOT THRIVE.—So far as I have
seen in my travels over southern, western, and midland
England, with very rare exceptions I may say eastern and
northern England as well, the farmers have nothing to
say but that they are not thriving. Of the means which
would make them thrive they are either wholly ignorant,
or have but a shapeless and dreamy conception. Agricul-
tural societies, scientific publications, and after-dinner
speeches of noble dukes and earls, who, while the wine
circulates, condescend to speak familiarly to men who pay
rent, may shadow forth what agriculture will at some pe-
riod become, and for the time being is well pleased with
what he reads or hears. But he lays down the book, or
rises from the table where wine, drunk to toasts given by
noble lords, who smile and declare themselves never so
happy as when sitting at dinner with honest yeomen—ho,
the farmer, rises from the table where for the time he was
so happy, and where he applauded so loudly, and goes
home to his farm and his family, where, I'll warrant, he
has time enough to cool before he can see how it is possi-
ble for him to carry any one of the improvements into
operation so liberally suggested and earnestly recom-
mended. In short, it is utterly impossible for him to im-
prove his farm without capital; utterly impossible to bor-
row capital without security of tenure; and madness to
lay it out without that security if he had the capital.
Crippled in means by reason of inaction, fettered in action
by reason of political bondage, as the tenant-farmers in
England generally are, these agricultural societies, shows,
dinners, healths, thanks, sentiments of kindness, farmers'
newspapers, magazines, and quarterly journals, however
honest in purpose, are in reality no better than a cruel
mockery of men who cannot help themselves: the most
that can be said in favour of those who mock being this,
that they retain grave countenances, and do not laugh at the
sufferer's misery.—*One who has Whistled at the Plough*.

AN AGRICULTURAL PROTECTIONIST.—John Cobley,
an idle vagabond, and at all times a noisy agitator against
the poor-law, has been committed for trial at Leicester
assizes on a charge of stealing a letter from the post-
office, and forging a receipt to a money-order. Cobley
had concocted a "Leicester Agricultural Society for the
Protection of British Industry," which appears to have
been a "corporation sole," for he alone was the soul and
body of the society, and he contrived to victimize the
Duke of Rutland, Lord Charles Manners, and other
monopolists, by plausible applications, expressing the
indomitable determination of the institution to give no
quarter to the Leaguers. Cobley sent the letters, signed
"R. Ward, secretary," and "W. Preston, chairman,"
and he obtained the answer from the letter-carrier, and
got all money-orders cashed at the post-office. His
rascality, of course, was at length detected; and he is now
laid by the heels in Leicester gaol.—*Manchester Guardian*.

GREAT TOWNS NOT NECESSARILY WICKED.—I have
none of that instinctive abhorrence of great towns or
cities which many of our poetical sentimentalists affect,
as if the country were necessarily an Arcadia, and the
country people all Arcadian swains living in artless in-
nocence, and every town were a many-tongued Babel
of confusion and a mystery of iniquity. I believe that
man in town and country is by nature the same; and,
being left to himself, would put forth every form of sel-
fish, and solitary, and savage disposition, as we find him
in all places where religion, and law, and civil society
are little known. History also teacheth me that towns
were generally associations of the wisest and best ordered
part of men, in order to enjoy the blessings of religion,
and law, and civil society; and to protect themselves,
their wives, and their little ones from the inroads and
invasions, the violences and plunderings, of insolent and
savage men. And I cannot forget that in the towns the
Christian religion first planted its churches of faithful
believers, and from the towns the truth radiated as a
centre into the country round; and that the apostles
went from town to town and from city to city, and have
addressed the greater number of their epistles to the
churches there planted. Nor am I ignorant that the
Reformation made its way upon the Continent chiefly
through the free towns of Augsburg, Magdeburgh,
Smalcald, Geneva, and others, who formed their first
league for the protection of commerce.—*Rev. E. Irving*.

THE FORCE OF RIDICULE.—It is stated that the late
riot at Breslau, when most threatening, was brought to a
close by an unexpected circumstance, which excited the
mirth of the crowd. The following proclamation sud-
denly appeared in various parts of the town:—"The re-
volution cannot be continued, in consequence of the sud-
den hoarseness of the journeymen bootmakers!" This
pleasantry immediately put a stop to the proceedings.—
German paper.

The man is not the discoverer of any art who first says
the thing; but he who says it so long, and so loud, and so
clearly, that he compels mankind to hear him—the man
who is so deeply impressed with the importance of the
discovery that he will take no denial, but, at the risk of
fortune and fame, pushes through all opposition, and is
determined that what he thinks he has discovered shall
not perish for want of a fair trial.—*Sidney Smith*.

Extract of a letter from a farmer in the West High-
lands, "Farmer's Magazine," 1809, page 346:—"In
this part of the island we are improving fast in our ac-
commodations, but chiefly in forming and constructing
new roads and bridges, which are the groundwork of all
improvement. In the executive part of operations we
have mended considerably, for in place of turning our
land with an instrument not to be compared to a plough
but by the name, drawn by six oxen, or four horses and
a driver, with another man keeping pace to the plough-
man, whose sole work was to watch the furrow with his
foot, lest it returned to its place again, and one or two
men to adjust with a crooked spade any baulks or errors
committed by those who preceded him or them, all is now
performed by one man and two horses, with Small's
plough. We have also exchanged our creels and sledges
for single-horse carts, and even got our wooden harrow
teeth exchanged for iron ones, which harrow, I conceive,
enables us to afford 20 per cent. more for our farms."

THE LEAGUE.

No. 43.]

SATURDAY, JULY 20, 1844.

[3d.

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive a copy, weekly, of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND, are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

REGISTER, REGISTER, REGISTER!

The Free-Traders qualified to vote must everywhere prepare to enrol themselves and their friends on the register for the NEXT year.

To entitle a voter to be registered, he must have occupied during the twelve months previous to the 31st of July, premises of the value of £10 a year. He must have been rated for twelve months to the relief of the poor.

He must have paid, on or before the 20th of July, all poor-rates and assessed taxes due to the 6th of April preceding.

Further information and directions will be furnished on application, personally or by letter, to the Local Registration Societies; to Mr. Sidney Smith, 68, Cheapside, London; or to Mr. Hickin, League Offices, Newall's Buildings, Manchester.

For the convenience of individuals whose avocations render it difficult for them to call at the Registration Office, 68, Cheapside, during business hours, arrangements have been made by which attendance will be given every evening at that office until eight o'clock, to fill up and serve claims, and to supply every information relative to Parliamentary registration for counties, cities, and boroughs.

FREE-TRADERS, REMEMBER THAT THIS DAY, JULY 20, IS THE LAST DAY FOR THE PAYMENT OF RATES FOR BOROUGH VOTES—AND ALSO THE LAST DAY FOR MAKING CLAIMS TO BE REGISTERED AS COUNTY VOTERS. ALL CLAIMS FOR COUNTY VOTES MUST BE SERVED UPON THE OVERSEERS BEFORE SIX O'CLOCK IN THE EVENING.

COUNTY REGISTRATION.

The 20th instant is the last day a valid claim can be made, which should be in the following form:—

To the overseers of the parish of —
I hereby give you notice, that I claim to be inserted in the list of voters for the county [riding or division] of —, and that the particulars of my place of abode and qualification are stated in the columns below, Dated the day of —, in the year —
(Signed)

Christian name and surname of the claimant at full length.	Place of abode.	Nature of Qualification.	Street, lane, or other like place in this parish (or township), and number of house (if any) where the property is situated, or name of the property, or name of the occupying tenant, or if the qualification consist of a rent-charge, then the names of the owners of the property out of which such rent is issuing, or some of them, and the situation of the property.

Taking care to sign their christian names (if more than one) and surname in full, their true place of abode, nature of qualification, and locality, conformable with

the heading of the notice, so that it may be identified. In the third column state, if the qualification is freehold, say "Freehold house," or "land," or "rent-charge," (if for life, only £10 value is required), giving the name of the owner and the situation of the property.

If copyhold, say "Copyhold house," or "land," as the case may be.

If leasehold, say "Original lease of twenty years," or "sixty years of house," or "land," as the case may be.

If a sub-lease, then "Sub-lease of sixty" or "twenty years," as the case may be.

If tenancy qualification, say "House" or "land occupied at a rental of £50 per annum."

QUALIFIED FREEHOLDERS

Are those possessed of an estate of inheritance of the yearly value of 40s., or an estate for life or lives of the yearly value of £10, or an estate possessed prior to June 7, 1832, or since. If by marriage, or will, or promotion to office, or if the freeholder is himself the actual occupier, 40s. value will be sufficient.

Parish clerks, sextons, schoolmasters, Dissenting ministers, and holders of office, if entitled to emoluments of 40s. out of land, but the appointment must be for life or during good behaviour. Six months' possession prior to the 31st of July will entitle the freeholder to be registered.

QUALIFIED COPYHOLDERS

Are those possessed of copyhold "houses or land of £10 value." The period of possession the same as for freehold.

QUALIFIED LEASEHOLDERS

Are those who possess an original lease or a sub-lease (if in occupation), originally created for sixty years, of the clear yearly value of £10, over and above all rents and charges, or for twenty years of the clear yearly value of £50, over and above all rents and charges, and in possession thereof twelve months previous to the 31st of July.

QUALIFIED OCCUPYING TENANTS

Are those who occupy as tenant any lands or tenements for which they are bona fide liable to a yearly rental of £50, and the period of occupation must be the same as the leaseholder.

Many electors during last year's revision lost their right of voting for twelve months, owing to their mistaking the tenancy qualification and leasehold qualification; but the reader will see they are totally different, and those who were struck off should reclaim.

The holding of a lease at a rental of £50 will not confer a leasehold qualification. The lease must be worth annually £50, over and above the rent, &c., and persons holding as described, when in occupation, should claim as occupying tenants at £50 rental. The claim, then, can be maintained, and costs demanded, if frivolously and vexatiously objected to. The notice, when filled up in duplicate, may be served on the overseer of the parish where the qualifying property is situated, by taking it to the post-office, where money orders are paid and received, and, on the payment of 3d., the postmaster will stamp the duplicate and forward it by post, or the notice may be left at the residence of the overseer or office for the transaction of the parochial business. It is to be observed that a redeemed land-tax of 40s., if purchased and entered under Schedule D, will confer a county vote; but neither freehold in occupation of owner, or a copyhold of £10 value, or a leasehold on which a tenement is built, will confer a county vote, if the property is situated in a city or borough. It has to be observed, however, that two or more copyhold or leasehold houses of less clear annual value than £10 each, but more together, will confer a county vote, even although situated in a parliamentary borough.

THE LOGIC AND RHETORIC OF MONOPOLY.

The even tenour of parliamentary debating has been recently interrupted by two strange episodes. In the Upper House Lord Wodehouse hazarded a fierce attack on the reporter of the Times for the graphic and accurate description of the state of the agricultural peasantry which he published in that journal, and within a few hours had to retract all his charges, and to make the humiliating confession that they were totally unfounded. In the Lower House the cousin of the noble lord, Mr. Edmund Wodehouse, member for East Norfolk, *regis ad exemplar*, made a still more gross attack on the personal character of Mr. Wakley, and afterwards with a very ill grace retracted his calumnious imputations and mumbled a curiosity of an apology. As neither the lord nor the squire had been previously known to the public save when their names appeared in divisional lists, the phenomenon of the double oratorical exhibition produced somewhat of the same astonishment as would the portent which Livy more than once records in the earlier portions of his history, "This year an ox spoke;" and we doubt not that public curiosity is on the stretch to discover the cause which has suddenly loosed the tongues of the Lord Lieutenant and the Deputy Lieutenant of the county of Norfolk, inducing them to break their prudent silence, and peril an experiment with the dangerous powers of eloquence. We owe both these scenes of imputations recklessly hazarded, and then compulsorily retracted, to the determination of the monopolists to prevent any inquiry into the condition of the agricultural labourers, feeling as they do

well assured that, if the nation once understood how grievously the peasantry are oppressed and ground to the earth by the policy of the oligarchy, an indignant cry would be raised from Caithness to Cornwall which no parliamentary majorities could resist.

There have been from five to six hundred incendiary fires in the agricultural districts within the last twelve months. Property has been destroyed, life endangered, and the bonds of society loosened, but neither the Government nor the Parliament have ventured to inquire into the subject; and the monopolist majority in Parliament evinces a rabid determination not only to refuse information, but to put down by absolute violence any attempt to investigate the cause of this fearful evidence of social disorganization. Most of our readers may probably have seen an effort made to catch donkeys in a field. The animals rush into a corner, hide their heads in the bushes, set up their loudest bray, and kick behind like furies. This is a lively emblem of the course pursued by monopolist lords and squires whenever an attempt is made to catch them in a discussion on the condition of the agricultural population. They feel that their policy towards the peasantry will not bear examination, and they attempt to drown discussion by clamour, and to daunt those who seek for information by browbeating and haughty repulse.

Now, let us contrast this offensive refusal of investigation, this resolute determination to keep the condition of the labouring poor a profound secret from the rest of the community, with the course of policy pursued by the manufacturers when distress assailed the operative population. So far from hiding that distress, they proclaimed it openly to the world; so far from courting concealment, they demanded inquiry; year after year they forced themselves into the presence of successive Ministers, and continued to make public in every possible way the distresses under which the manufacturing classes suffered. On the other hand, the monopolists of land use every means short of brute force to prevent the state of their peasants from being made known. Truly these were the words of Eternal Wisdom, "Men love darkness rather than light because their deeds are evil."

The conduct of the Government in these different cases deserves a word of remark. There was an outbreak produced by intensity of distress in the manufacturing districts; the suffering operatives adopted a course which, however unwise, was honourably distinguished by a total absence of violence, and by an inviolable respect for the security of person and property. An agent of the Government was immediately commissioned to make an inquiry; arts, with which recent discussions have made the country too well acquainted, were employed to procure information, until it was discovered that all their revelations, obtained by secret inquisition, differed in no material point from the evidence which the manufacturers had voluntarily and openly tendered long before. But what agent of Government has been commissioned to examine into the causes of the incendiary fires? The band of monopolists has openly declared that the Government must not meddle with their people, meaning thereby their serfs and vassals; they declare, without any disguise or circumlocution, that, should such an attempt be made, they would unmake the Cabinet which they have made.

There is no doubt that the oligarchy possesses this power—that it has the majority in the Parliament, and the mastery over the Government. But with this power the oligarchy must take the responsibilities of power; when the monopolist lords and squires demand, and enforce the demand, that they should control and direct all the movements of the Government, they render themselves answerable for all the consequences which the course of policy pursued by the Government has produced. Silence will not do; bullying will not do; a suspension of the ninth commandment in their favour will not do; the facts are too notorious to be denied, and too glaring to be hidden. The labouring poor have taken a course of policy as diabolical as it is insane; but they would not have done so had they been supplied with legitimate means of making known their sufferings. If the agricultural population had heard a voice promulgating their distress, and making known their misery, they would not in the blindness of despair have announced that their condition was intolerable, by destroying that property which it is their interest as well as their duty to protect. These incendiary fires were sought as the last desperate means of making known their grievances, when they found that the fact of their having any sufferings at all was denied by those

who mocked them with the delusive cry of protection. The peasants are answering the squires; and because that answer is sharp, stern, and conclusive—because it at once overthrows the hypocritical pretence that the Corn Laws afford advantage to the British labourer—the monopolists are eager to hide from the world this decisive refutation of the hollow excuses which they have made for fixing an onerous burden on every branch of industry in the country. Neither Lord Wodehouse nor Mr. Wodehouse could for a moment claim the notice of a public journalist if their conduct did not illustrate the course of policy adopted by their party. That policy is to meet argument by brute force, or by means still more unworthy, and to resist inquiry by raising a “mad-dog” cry against every one who attempts to perform his duties as a legislator by demanding an inquiry into the causes of the discontent making itself manifest by such fearful and ominous symptoms.

We make no comments on the nature of the attack which the Deputy-Lieutenant and representative of Norfolk made on the hon. member for Finsbury. Mr. Wakley has reason to be thankful to his assailant for having given him an opportunity of triumphantly vindicating his character from one of those odious imputations which are insidiously and studiously circulated to weaken the influence and damage the character of those who try to put an end to public jobbing, and reform public abuse. Mr. Wakley has gained by the issue; and the nation may profitably read the moral, that nothing but a desperate cause could have led to such a desperate resource as violence and calumny, in reply to a plain statement of notorious facts.

THE BIRMINGHAM ELECTION.

The result of the Birmingham election, and the causes of that result, are already known to our readers. Two candidates, equally advocating the total and immediate repeal of the Corn Laws, and thus rendering it impossible for the League to interfere, divided the anti-monopolist constituency, and opened the way for the return of a supporter of monopoly. However we may deplore the result, it is still valuable as a convincing proof of the wisdom of the policy which the League has pursued in all its appeals to the constituency of Great Britain. It shows that all attempts to combine other projects with the main question which at present occupies the attention of the country serve only to divide the ranks of the Free-Traders, and to waste their strength. It is one of the few elections which has recently taken place in which the League was represented by no candidate, and where there was, consequently, no League contest. Mr. Sturge withdrew from the League because he believed that Free Trade could not be attained except through the medium of complete suffrage. The public at large can now have little difficulty in estimating the comparative prudence of the course to which the League has adhered, and of that which Mr. Sturge had seceded from the body in order to adopt. In Birmingham, the very centre and stronghold of the complete-suffrage movement, its author and advocate could obtain the support of little more than five per cent. of the entire constituency. It may fairly be presumed that this is above the average of support which that movement would at present command in the entire electoral body of Great Britain; and we put it to any rational man whether, for the sake of parading such strength, or rather such weakness, it can serve any useful end to divide the Free-Trade constituencies. Those *geminis* of the press, the *Herald* and *Standard*, with their usual regard to truth and consistency, proclaimed after the election was over that Mr. Sturge was the League candidate, though previously to the election they had put forth urgent exhortations that Mr. Sturge should not give way to the League, and allow the question of Free Trade to be put fairly in issue before the electors of Birmingham. Mr. Sturge adopted the insidious recommendation of these twin-monopolists, and they now turn round upon him to describe him as the creature of that very confederacy against which they invited him to stand. None know better than the editors of these papers that the question of Free Trade was unfortunately cushioned in the election; on that principle we should have no doubt of the result of a contest in Birmingham or in any other large manufacturing constituency. The failure of the Free-Traders was caused by their great principle being kept out of view,—pushed aside, we fear, to make room for petty squabbles and personal differences, and for the discussion of other measures with which it is very remotely, if at all connected.

A similar mismanagement opened the borough of Marylebone to Lord Tegmouth, but the constituency at once profited by the lesson and laid aside their local animosities. They decided that for the future the choice of a candidate should be left to the electoral body, and that popular candidates should abide by the uninfluenced decision of those to whom the Legislature has given the privilege of voting.

The very week after their defeat they organized a registration society, and took care to secure a majority on the electoral roll. The consequence was that at the next election the Free-Trade candidates came in by the largest majority that had ever been obtained in that borough.

Birmingham has unfortunately imitated the error of Marylebone: we trust that it will adopt the same prudent means to retrieve its lost position. Throughout the country there is a feeling of sorrowful disappointment at the return of an enemy to reform by the people who took the most prominent part in supporting the Reform Bill. We share this grief, but at the same time we confidently believe that the error will soon be redeemed, and that this great capital of industry will be restored to its proper place as a guardian of industry from the withering effects of monopoly.

Since the above was written, our attention has been directed to a paragraph in Mr. Sturge's speech to the electors, professing to explain the reasons of his separation from the League. In this paragraph there are some remarkable misstatements, which, if they have arisen from the inaccuracy of the reporter, Mr. Sturge ought to have immediately corrected. It is insinuated that the declaration for “total and immediate repeal of the Corn Laws” was adopted at the suggestion of Mr. Sturge, and in consequence, to some extent, of his proffered co-operation. The fact is, that this declaration was adopted by the Manchester Chamber of Commerce several months before Mr. Sturge took any part in the League movement, and that his co-operation was tendered as a consequence instead of as a cause of the adoption of this principle. It is true that Mr. Sturge then proffered his support so long as the League would adhere steadily to the demand for “total and immediate repeal”; now, on this point, the League has never wavered. It is, indeed, insinuated that some of the Council were disposed to accept the compromise of a fixed duty. We distinctly deny the assertion, and we call upon Mr. Sturge to name those waverers whom he has thought fit to describe as “bad company.” We regret that Mr. Sturge should abandon the League, but we still more regret his attempting to excuse his secession by groundless imputations, and by indirect insinuations which have not the slightest foundation in truth.

CONDITION-OF-ENGLAND QUESTION.

“Labour is cheap and Bread is dear.” The double curse falls heavily on our land; but its crushing weight is most severely felt by the agricultural labourers, whose condition is one of frightful and rapid deterioration. All classes of the community are equally interested in the preservation of the peasantry; even Lord Ashley would confess their national importance, though he has not yet found leisure to devote any share of his consideration to their wrongs. The farm-labourers are unfortunately too poor to pay agitators to proclaim their grievances; they have too little political importance to remunerate parliamentary advocates by valuable assistance at an election, and there are too many interested in concealing or denying their sufferings, to render it worth the while of pretenders to philanthropy to propose measures of relief with any chance of obtaining a cheap character for humanity. Still the reports presented to a reluctant Government, which issued a Commission of Inquiry with strict rules to prevent the acquisition of information, and still more the descriptions of the state of the agricultural labourers which have appeared in the *Times* and *Chronicle*, exhibit an increasing and appalling amount of misery, which menaces indescribable dangers not merely to our political institutions, but to the entire system of society. It is worse than idle to shut our eyes to this growing evil; we must look our dangers full in the face, in order to devise the means by which their consequences may be averted. We are menaced with the revolutionary spirit of sheer desperation; insurrection is preached by no demagogue, recommended by no journal, planned by no conspirator, and yet it is taught by what is more powerful than eloquence, more insidious than sophistry, and more systematic than the most crafty plot which the ingenuity of man ever devised; the whole argument is stated in the old proverb,

“Hungry belly, empty purse;
May be better, can't be worse.”

The low price of labour arises from insufficiency of employment; the supply of labourers in the market far exceeds the demand, and their competition for means of support has lowered the rate of agricultural wages to very nearly the starving point, and menaces still further reductions. It is utterly absurd to speak of redundant population so long as the industrial resources of the country are sufficient to occupy more than three times the amount of persons to whom they already afford employment; and it is mischievous to assert that the Divine law which commanded man “to increase and multiply and replenish the earth,” should be the source of the misery which we see around us. It has, how-

ever, been the common artifice of those who profit by abuses to take only one side of the difficulty which is presented to us; they proffer as a remedy what they know to be impracticable—a check on the increase of population; and so long as they can keep the world amused by this discussion, they divert attention from the real and practicable remedy—the enlargement of the sphere of employment.

Employment in agriculture is restricted, because property in land is a monopoly, and because in addition to that there is a further monopoly in what the land produces. Improved systems of agriculture, like improved systems of manufacture, would find employment for a far larger number of labourers than farmers have at present engaged. But, so long as there is no security of tenure, men will not invest capital in permanently improving their lands; and the withholding of such investment is in fact a withholding of the employment which the capital would give to the labourers. Even where there are leases, they are encumbered with a multitude of clauses and conditions which seem perversely designed to put a stop to all improvements. The great body of the landlords act as if they had entered into a confederacy to prevent the farmers from rising to a condition of wealth and independence which might confer political freedom; and though they thus in no slight degree injure themselves, they are willing to sacrifice positive good in order to maintain relative superiority. The farmer is prevented from adopting those modes of culture which would give employment to most labourers, and at the same time be most profitable to himself; he is cramped and fettered in all his operations, and menaced with ejection if he ventures on any course of independent action. His landlord's game is deemed of more importance than his own crops; and while thus deliberately and of set design continually impoverished, he is driven to the necessity of employing as little labour as possible, and selecting the form of tillage which gives least occupation to human hands.

There would be no surplus of labour in the market had not the field of employment been artificially contracted; but those who have thus diminished the amount of employment have logically followed out their principle, and attempted to limit the amount of population by prohibiting the erection of cottages on their estates, and, in many instances, by destroying the hamlets of the poor. This barbarous system does not prevent the growth of the population; it only demoralizes and brutalizes the peasantry, rendering all the moral laws of restraint utterly inoperative, and preparing for our agricultural population a degraded and a dangerous future. On this subject we can quote the testimony of a clergyman who is an honour to his sacred profession—the Rev. Sidney Godolphin Osborne: in a letter to the Editor of the *Times*, published in that journal of July 12, he says:—

“All legislation will be in vain so long, as at present is the case, the majority of the lower orders cannot rear their children, except under circumstances which defy the giving to them that sense of decency on which, in after life, so much of their moral safety depends. So long as the married and single persons of both sexes, and all ages, are forced to lie down to rest night after night in the same room, and many of them in the same bed, it is folly to expect that mere legal or educational restraints will avail in this matter. I know at this moment, within a few miles of where I am writing, one case in which a family is lodged in a parish house of a nature not fit to put a human being into, and there are five bastards to two daughters: am I surprised? Only, that men could be found to go near such people into such a place. Bring every power of religion and of law to bear against the crimes which result from man being ill-fed and vilely lodged, when he is willing to give the sweat of his every hour for the opportunity of rearing his family as the poor man's family in a Christian country should be reared, and you will do next to nothing. Neither law nor gospel can avail, when hopeless indigence has made a man hate the power that checks him in getting the food he needs, but cannot earn; when he sees, in a land of churches, the poor left to struggle how they may against circumstances that keep them down in the very lowest stage of civilized existence, a stage in which they find much in the condition of the brutes about them to envy.”

The misery which the reverend gentleman has thus described is obviously the result of the monopoly which first restricts the amount of employment, and attempts to compensate for this monstrous injustice by an act of injustice still more atrocious—an attempt to limit the population, by keeping down the peasantry “in the very lowest stage of physical existence,” and driving them to crowd in hovels where “they find much in the condition of the brutes about them to envy.” And yet there are men making glowing pretensions to humanity who see this frightful misery every day before them and around them, who take an active part in maintaining the system from which all this corruption flows, and who reserve their philanthropy for some distant objects, the relief of whom will not compel them to sacrifice a particle of their darling privileges of oppression.

We ask for relief, for large remedial measures, to prevent the further degradation of the agricultural labourers; we do not merely request it in the name of common humanity, we demand it in the name of

eternal justice. Such philanthropists as Lord Ashley, indeed, tell us that this is a case where the feelings of humanity must be restrained by the rights of property. We deny it. The first and the most sacred of all properties is that which a man has in the sweat of his brow and the toil of his hands; labour is the only property to which God and nature have assigned perfect rights; and those who prevent man from exchanging the products of his labour for the means of subsistence are guilty of a more glaring and iniquitous violation of the rights of property than ever crossed the imagination of the most frenzied leveller that ever advocated a disruption of the social system.

Labour is cheap, because monopoly cuts off a multitude of sources for its employment; and the consequence of this cheapness is, the degradation of the labouring class socially, physically, and morally. Those who profit by this degradation, while they enjoy the pomp and luxury of their lordly halls, forget that the peasants are conscious of their condition; and though like the cook in the story, who excused herself for skinning eels alive by declaring "they were used to it," they may believe that the wretchedness which has been endured hitherto will be borne for ever, they ought to remember that, while the suffering is increasing in its intensity, the number of the sufferers is also increasing in amount. Much of the evil that has been wrought is irreparable; we may lament it, but we cannot raise the dead; but it is yet in our power to raise the living, and we had better set about it speedily; for what will be the condition of England in a few years, when exposed to the double action of diminishing employment and increasing population?

"Bread is dear." We are told that it should be so for the sake of the agricultural labourer, for that the farmer could not give him employment unless the price of corn was sustained. We have more than once exposed the absurdity of the assertion that there is any connexion between the price of food and the price of corn: its falsehood, however, is most palpable in the case of the agricultural labourer. According to Barton's tables, the rate of wages for farm labourers in 1772, when wheat averaged thirty shillings a quarter, was from seven to eight shillings per week in the southern counties of England: wheat is now more than fifty shillings per quarter, and wages are lower than they were in 1772. We have said enough to show that dear bread is a serious aggravation of the evil of cheap labour; and we have traced both to their source, the iniquitous monopoly of food. To affect sympathy for the condition of the English labourers, and to maintain the system which has produced that condition, and which is continually rendering it worse, may be regarded, and will be regarded, as one of the most flagrant examples of cruelty aggravated by hypocrisy. To raise the labourer we must begin with raising labour; we must remove the burdens by which it is crushed, and the restrictions by which the exchange of its products is forbidden. There is no other solution to the great question, and the longer it is delayed the more decisive will be its final result.

IMPERIAL PARLIAMENT.

THE FREE-TRADE MIRROR OF PARLIAMENT FOR THE SESSION 1844.

Twenty-third Week, ending Saturday, July 20.

Parliament begins to exhibit unequivocal symptoms of sessional exhaustion. Members come down tardily; debates drag languidly, even Irish ones, for two relative to Ireland, raised within the past eight days, all but expired of inanition; and what work is yet positively to be done is getting on, not, indeed, with rapidity, but at least with signs of movement. The Poor-law Amendment Bill has been got through Committee in the House of Commons, and its future stages will probably be rapidly accelerated; the only other important measure which has to undergo the ordeal of a Committee is the Railways Regulation Bill; there are but one or two votes of supply to be granted; and though debates are still impending on different questions, and a mass of business details is still to be got through, there is nothing to prevent an early closing of the doors of Parliament. The prorogation will probably take place, if not in the first, at least (in all likelihood) in the second week of August.

Our peculiar function as a reflector of whatever in Parliament bears for or against FREE TRADE, may now be considered as virtually at an end for the present session. Not but something may yet arise which will call for notice; but at present we do not anticipate it. If our anticipation prove correct, and next week be as barren of Free-Trade matter as the past, it will be our business, as impartially as we can, to review the entire session, and, without exaggeration or extenuation, to look at parties and politics, as exhibited in Parliament, and as bearing on the real interests of the public out of doors. To use a familiar illustration, and one not unaimed to the question of FREE TRADE, the time has now arrived when there must be a taking of POLITICAL STOCK, in order that we may fairly, calmly, quietly, ascertain precisely what has been our past progress—what our present position—and what our future prospects. Of this, however, more hereafter.

MEETINGS.

WELLINGBOROUGH.—An Anti-Corn-Law meeting was held on Tuesday at Wellingborough, in the White Hart Assembly-room, which had for its object the formation of a Free-Trade Association. J. Marriott, Esq., was called to the chair, who, after some very excellent and appropriate remarks, put the following resolutions, which were carried unanimously:—

1st, "That a Free-Trade Association be formed in Wellingborough, and a permanent committee appointed to govern the same."

2nd, "That the first object of the association be to get up a requisition to invite Mr. Cobden, Mr. Bright, and others, to hold a county meeting; and at the same time to send a similar requisition to Stafford O'Brien, Esq., to attend the said meeting."

ST. ALBAN'S.—A meeting was held on Friday, the 12th inst., at St. Alban's, which was numerously attended. Mr. C. H. Lattimore presided. Mr. Robert R. Moore attended as a deputation from the Anti-Corn-Law League, and delivered an eloquent address.

GRAVESEND.—A Free-Trade meeting was held in the Town Hall of Gravesend on Wednesday night, which was filled to suffocation by a highly respectable assemblage of the inhabitants of the town and neighbourhood. The chair was taken shortly after seven o'clock by Henry Oaks, Esq., who briefly introduced Mr. Bright, M.P., to the meeting. Mr. Bright spoke for upward of an hour and three quarters in a strain of earnest eloquence which riveted the attention of the audience, and was only interrupted by frequent bursts of acclamation. The meeting separated shortly before ten o'clock, after the most enthusiastic demonstrations of their determination to promote by subscriptions and personal exertion the cause of Free Trade.

SALISBURY.—On Wednesday last, the Free-Traders of Salisbury held a demonstration in support of the principles they so nobly upheld at the last election for that city. An open-air meeting was to have taken place at three o'clock in the afternoon, and a tea-party in the evening. Mr. Robert R. Moore and Mr. George Thompson attended both meetings, but, as we have not yet received any report of either, we must postpone any more lengthened notice of the proceedings until next week.

TYLDESLEY.—On Tuesday evening, the 9th inst., Mr. J. J. Finnigan delivered a lecture on the principles of Free Trade, in the school room in connexion with Lady Huntingdon's chapel, Tyldesley; the Rev. J. Stewart in the chair. The school room was crowded to suffocation, and a great number were content to remain outside, the doors being kept open to give them an opportunity of hearing the lecture. The lecturer, in a clear and argumentative style, forcibly depicted the evil of the corn, sugar, and coffee monopolies; and by his calculations, which were alike plain and forcible, he succeeded in convincing all present of the enormous amount of evil inflicted on the people of these countries by those monopolies, and he concluded a most instructive address of an hour and three quarters, in a soul-stirring appeal to the moral and religious feelings of the people; calling upon them to exercise their influence to create an enlightened public opinion that would at once and for ever erase from the statute-book of the land those blasphemous protests against the bounties of Heaven, the corn and provision monopolies. The lecturer sat down amidst the enthusiastic applause of the assembly. A vote of thanks was passed to the lecturer, and the meeting separated. Many have expressed a desire that Mr. Finnigan would visit Tyldesley again.—*Bolton Free Press.*

BOLTON.—Mr. Falvey delivered his second lecture on Free Trade, in the Temperance Hall, Little Bolton, on Tuesday evening, the 9th inst. The audience listened attentively to the arguments of the lecturer, and at the close manifested their approbation of Free-Trade doctrines by the most enthusiastic applause. An attempt was made by a few of the usual disturbers to introduce extraneous subjects into a discussion, but the lecturer would not submit to it, and the meeting separated without being compelled to listen to the thousand times refuted fallacies of the anti-machinery mongers.—*Ibid.*

Mr. Falvey lectured at Harwood on Wednesday, Astley-bridge on Thursday, and Farnworth on Friday evenings, the 10th, 11th, and 12th inst.

PORTSMOUTH.—On Monday night an important meeting of the inhabitants of Portsmouth took place in the Town-hall, for the purpose of receiving a deputation from the League. — Bachelor, Esq., in the chair. The admission was by tickets, and the Town-hall was crowded by a numerous and respectable assemblage of the inhabitants. The meeting was addressed at great length by Mr. Bright, M.P., who was followed by Mr. Moore in an eloquent and earnest speech. The enthusiasm was intense. The speeches throughout were received with great acclamation, and the most cordial spirit of co-operation manifested on behalf of the objects of the League.

BIRMINGHAM ELECTION.

The nomination took place on Friday, at the Town Hall, which was densely crowded. After the mayor had briefly opened the proceedings, Alderman Matthews, seconded by Alderman Phillips, proposed Mr. Scholefield; Mr. W. C. Alston, seconded by Mr. Winfield, high bailiff of Birmingham, proposed Mr. Spooner; Mr. Barlow, seconded by Mr. Baldwin (both members of the town-council), proposed Mr. Joseph Sturge.—Mr. Grach addressed the meeting on behalf of Mr. Scholefield; after which, Mr. Spooner and Mr. Sturge respectively harangued the meeting. Upon a show of hands, the numbers were declared to be in favour of Mr. Sturge. A poll was demanded. The election took place on Saturday; and resulted in the return of Mr. Spooner. The following was the final return:—

Spooner	2095
Scholefield	1735
Sturge	346

VALUE OF REAL PROPERTY.—In 1801, the annual value of the real property of England and Wales was considerably short of £40,000,000. From a return which has been recently laid before the House of Commons, we learn that the annual value of real property is now £83,901,957. In the face of these facts, it is rather too bad to speak of the landed interest as having been injured by the progress of manufactures.

NOTES TAKEN BY A TRAVELLER IN THE SUMMER OF 1844.

No. III.

Belgium, June 27, 1844.

After the deserted harbour and empty storehouses of Ostend, the railway is the object that most attracts the attention of the inquiring traveller. There could be nothing happier suggested than covering this small country with a net of railways; the interests of all parties clearly coincided with the project. For the manufacturer, who lost the Java market that he had long monopolised, the only hope of maintaining his position amidst competing rivals lay in the possibility of his obtaining the raw material, and all that was necessary to fabrication, cheaper than others. To the merchant, who had also lost the open field of the Dutch colonies, the prospect of supplying the countries at the back with the exotic products of both hemispheres was alluring. The landowner's co-operation was not only secured, but the sharpest spur was applied to his cupidity by the prices that he was likely to obtain for his land when it lay upon the lines traced out, or by the expectation of raising the price of produce in parts at some distance from the stations.

This last description of influence, which was paramount in the Chambers, decided the lot of the project; and nothing was wanted but a consistent adherence to the system, of which the railroads made a part, to ensure complete success. We have seen that the system was not adhered to, and we cannot wonder that success was not obtained, at least to an extent that fulfilled the hopes of the sanguine.

Building railroads, and keeping out by prohibitive duties the goods that should travel along them, is not unlike the present project of establishing a navy by the aid of navigation laws. It was easy to foresee that, if France and England were so simple as to continue their restrictions on trade in the face of a liberal policy on the part of Belgium, they would not be rendered disposed to abolish them by seeing them adopted in the last-named country. But the turn of the landowner having been served, that of the manufacturer came next. Those discovered, like their neighbours, that it was easier to spin and weave in small quantities, and badly, under the protection of high import duties, than to compete with foreign manufacturers. Accordingly, three revisions of the tariff of import duties have taken place since the Revolution, at each of which articles of manufacture that were not highly taxed by the tariff of 1822 were subjected to additional duties. Thus the duty on woollen goods has been raised:—

TARIFF OF 1838.				
	Rate of duty.	Value per cwt.	Duty amounts	
Cloths of wool and mixtures	250f. 0c. per 100 kil.	£16	30	percent to
Woollen yarn	60 0	100	0	0
TARIFF OF 1828.				
Calicoes (plain)	180 20	100	8	95
Prints	212 0	100	16	55
Velvets	212 0	100	18	45
TARIFF OF 1838.				
Silks and ribbons	5 0	1	0	0
TARIFF OF 1834.				
Linen cloths (twelve threads)	97 0	100	0 at 6d. per yd.	10
Increasing progressively to the breadth of twenty threads.	360 0	100	0 at 1s. per yd.	33
TARIFF OF 1838.				
Cambrics	5 0	1	0	0
TARIFF OF 1841.				
Linen yarn (brown)	16 0	100	0	0
According to fineness	70 0	100	0	0
Bleached, to	95 0	100	0	0
Twist, 84f. to	140 0	100	0	0
TARIFF OF 1822.				
Iron castings	13.35	100	0 at 28 per ton	80
Iron bar	12 72	100	6	100

The only step of importance taken towards an extension of trade was the convention with France of 1840, by which the duty on French wines was reduced in Belgium, and the duty on Belgian coals in France.

But these augmentations did not yet satisfy the manufacturers, who, finding the demand for flax from England increase with the progress of machine-spinning, insisted upon the imposition of an export duty, to keep the flax at home. It was granted, and the result is a most useful lesson to all friends to restrictions. The value of flax exported to England, which in 1839 amounted to 11,900,000 francs, fell in 1842 to 3,339,656 francs, while the export of linens fell from 23,687,620 francs in 1839 to 20,865,094 francs in 1842. The total export of linen wares and flax, therefore, declined considerably, although the value of the yarn sent to France increased by about 500,000 francs. And there was an increase on the total of Belgian yarn exported to the value of 1,170,000 francs.

The railway station at Ostend thus suggests considerations not differing much from those which the condition of the harbour awakened. Trade fettered by restrictions paralyses every other branch of industrial exertion, and this truth is sure to be felt first by the carrier, whether by land or by water. But the carrier is here the Government, with whom nobody sympathises, and who does not even complain as long as taxpayers are ready to cover deficiencies. Of course the statement here given does not exhaust the subject of the trade of the country. It, however, explains why the cheapest railroads in Europe, on which rich and populous cities are thickly planted, while the rural population of the districts which they traverse is also unusually dense, have hitherto yielded no return for the outlay they demanded.

But the state of the country between Ostend and Bruges, even traversed at the rapid rate of a railroad pace, bears evidence to the fact that no great prosperity has attended the speculation of the farmer and landowner, when the landed interest joined the manufacturers in their outcry for protecting duties. Vast tracts of sandy wold forming very poor pasturage present themselves in the first portion of the way. The soil is indeed wretched, and the sea blasts sweep unintercepted over the boundless flat. But no chain of hills of any importance marks the transition into the richly-cultivated portion of the province of West Flanders, which commences before the train reaches Bruges. Rich and well-kept pastures and meadow lands, heavy crops of grain alternating with flax, confess the diligence of the cultivators, and the effects of

enclosures thickly studded with trees that screen the young seed from the cutting blasts of the early spring. The improvement in the soil of the northern portion of West Flanders is the result of a steady adherence to a sound method of treating the land, which simply consists in manuring it as richly as it will bear, and drawing the heaviest crops from it that, with the present state of agricultural knowledge, it will produce. Amongst the articles on which it was proposed to lower the duty on the late revision of the English tariff, butter was to have been included. But, as our supplies are drawn from three countries that have most steadily persevered in an illiberal commercial policy towards us, the boon was denied them. The reduction to any figure approaching to a reasonable tax on an article of such general demand would have been sensibly felt in Flanders, and would speedily have converted the *landes* and *bruyères* near the sea into regulated pastures and meadows. If we may credit the reports of statisticians, the consumption of fresh butter in England is more limited than in the countries of central Europe. Notwithstanding our wealth, there are evidently luxuries that our population at large cannot so well command as the denizens of what are esteemed poorer countries, and fresh butter is one of these luxuries. West Flanders, of which Bruges is the capital, produces the butter that is sent to us by way of Ostend; but with our present duty it does not answer to take waste land into cultivation to produce it, any more than it offers inducements to turn arable into meadow land. The export of butter to England in 1842 did not amount to one-third of the value exported to France, nor did it much exceed the importations into Belgium from Holland. The value of the butter drawn from that country was 781,622 francs: it was consumed in the eastern and southern provinces. The export to England was valued at but 264,303 francs, and to France, Belgium sent the value of 617,033 francs.

We have now attained the interesting point whence it is possible to follow the operation of restrictions on trade to the landowner's door; and, as I have said, Belgium is the country that offers the greatest facilities for the calculation. Here, in Bruges, begins the remarkable cultivation of the soil, which has obtained much celebrity, and which has been often described and admired, but has never been strictly criticised by a political economist. Bruges is the centre of the meadow and pasture land of West Flanders. To the south, towards Tournay and Ypres, is the seat of the flax cultivation. From Ghent onwards to the Scheldt mouth lies the corn land, with the district of Waes, renowned for its spade husbandry. The valley of the Meuse, besides feeding its industrious population of miners and forgers, has little superfluous produce for exportation; but the districts of Limburg that belong to Belgium are renowned for a kind of cheese that rivals the produce of the Italian meadows on the tables of the rich in Paris as at Petersburg. So great a variety is now here presented in agriculture within so circumscribed a compass. The picture, although a miniature, is worth studying in detail.

An indistinct idea seems to prevail amongst landowners in many parts that the value of land increases with the number of hands employed in agriculture. This opinion arises from the want of a due distinction between the value which a dense population (however employed) imparts to land, and that which is given to it by multiplying the actual cultivators of the soil. Impediments offered to trade and manufactures have the effect of multiplying the agricultural labourers. This has taken place in Flanders, where land is so divided that it would appear impossible to parcel it out more minutely. West Flanders contains, in a superficies of 799,422 acres, no less than 656,604 registered properties, which consequently average but 1½ acre each. The division of the cultivated lands differs, however. In the neighbourhood of the coast farms and possessions are larger than in the interior. The commune of Furnes counts 2½ acres to an inhabitant; the commune of Ostend has one inhabitant on 1½ acre. In the commune of Bruges there is one inhabitant to 1½ acre, and in that of Courtray one to 7-10ths of an acre. By so dense a population every check that the other branches of industry experience naturally throws the inhabitants upon the land; and if the landlord's interest really lay in having the land thus morcelled out, matters must stand better with the Belgian landlords than with any others.

The renting system, which is general in Flanders, as in the whole of Belgium, allows of an elasticity in agricultural industry that is unknown both in France and Germany. The size of the properties does not, in Belgium, anywhere show the size of farms; but in Flanders, where property is most subdivided, farms are also smallest. As the other branches of industry are at this moment at the lowest ebb, the chances are apparently now better for landlords than they have ever been.

But what is the result, in fact? I visited several small farms, varying from one to five hectares—that is to say, from 2½ to 12 acres in extent—and found on the smallest the spade in constant use. In the leases of large parcels it is usual to prescribe in a clause that the ground shall be dug round once in six years. Still, with all these precautions, I could neither see nor hear of such crops as are common on good farms in England. The average produce of wheat is, in Flanders, about 25 bushels per acre (20 to 22 hectolitres per hectare). Rye seldom yields so much. In the best tilled part of Flanders some fields in 1840 produced 32 to 35 bushels of red wheat; but the round, full, clean grain of an English market is not found there. Barley averages about 35 bushels per acre on carefully-tilled lands of West Flanders. And yet rents equalling £2 and £3 per acre are general in Flanders, notwithstanding the price of wheat has in the last three years not exceeded 30s. per quarter.

The secret of these high rents for corn and meadow land lies evidently in the good practical system of treatment which the land undergoes. The farmer studies his soil, and cultivates what suits it best. He keeps the ground, too, in constant activity. Fallows are unknown in Flanders.

But this good system of managing the land is a legacy from former times, when the population could not have been as dense as it now is, which alone (if the experience of England did not confirm the fact,) might have led to the supposition that skilful farming did not stand in any indispensable connexion with the subdivision of the soil amongst small cultivators. The source whence the profit must be derived out of which rent can be paid, lies first in the return that the land yields in produce; and secondly, in the difference of the cost of cultivation between one soil and another. In the return of grain, the Scotch are undoubtedly beyond the rest of Europe, and

are not equalled by the Flemings, as indeed the latter confess. With regard to economy of cultivation, when it is considered that to break up a farm of 250 acres into 10 farms of 25 acres each, supposes a tenfold investment of capital in buildings, wells, dung-pits, and other appurtenances of the homestead, there is evidently no small abstraction of capital from the means of enriching or draining the land.

According to a calculation that was shown me of the cost of spade cultivation, a farmer required the aid of three men and two women, with a cow-boy, and a horse to draw manure and go to market, to cultivate 17 acres of light soil. Now, as on a well-proportioned and carefully-managed farm in England, the same number of hands, with the addition of one horse, would certainly suffice for four times the surface, the economy of the spade cultivation, where a greater produce is not extracted than can be done by scientific farming, is not apparent.

The important thing to bear in mind is, that, at all events, it cannot be to the interest of the landlord to force occupants upon his land. If the population is there to consume the farmer's produce, the land will have its value for both owner and cultivator, whatever may be the proportion in which it is subdivided.

I think it is impossible to spend any time amongst these Flemish farmers without attaining the conviction that the value which they draw from the land is in no way dependent on the size of their farms, but is the result of a diligence, a knowledge of their business, a sobriety and economical mode of living that, if exerted on a large scale, would prove more profitable than on a small one.

On all sides I hear, too, the confession that the high rents demanded here are very uncertain. In bad years, allowances are not only necessary, but the landowner has even to aid the farmer, who is unable to save any thing to meet reverses. The farm-buildings are, for the same reason, commonly dilapidated and untidy. The cowhouse is usually so contrived that the window opens upon the dungpit, into which its drains run, and which emits effluvia in summer that cannot but be prejudicial to the health of the beasts within. To this cause, in a great measure, the epidemic of the present year may be ascribed, which, without apparent cause, attacks the lungs of the cows, and carries them off rapidly. Owing to this epidemic disorder, of which the farmers are very much afraid, I was refused admittance into the stables of several farms that I was anxious to inspect.

But if the value of the corn land is not only enhanced by an economical mode of cultivation, but depends in an equal measure upon the general prosperity of the consuming classes, the flax lands, for which the highest rent is paid, owes its value entirely to the skill of the dresser and the spinner. In dressing flax, the routine of the Belgians is excellent. Their system has often been described, but has been found so difficult to rival that many have supposed there were some favourable chemical properties in the water of the river Lys, along whose valley the finest flax is produced. The traveller who has been accustomed to hear magical properties ascribed to many streams and soils where skill and industry have proved successful, listens with some incredulity to such a reason, and fancies that when the flax unpulled sells in the valley of the Lys for 600 francs per hectare (£9 per acre), while in the "Campina" it only brings 240 francs per hectare, the skill of the dresser has the greatest share in the difference of value. To pursue the calculation, it would follow that, if a cheaper and a better mode of dressing could be invented, the landlord would be benefited by it. Consequently the improvements in spinning must have the same effect, and the little mystification by which the Belgian landlords were brought to fear that the spinning machines in England would lower the price of flax in Flanders, was, at the least, amusing. Their opinion has changed recently, at least as far as regards machine-spinning at home, which has rapidly increased of late. But this portion of Flemish industry belongs more particularly to Ghent, which has long formed the central flax and linen market of Flanders, and which deserves to be specially described.

I will merely add that persons well acquainted with the state of the country assured me that the increased demand for flax arising from the growing use of machinery was preparing a great change in the flax country, as it would eventually throw the production into the hands of farmers on a large scale. At present a family relies upon its earnings by handspinning and weaving, and finds employment through the winter in working up the flax that grows upon a single acre. Hence not only the great subdivision of the farms in the valley of the Lys (which may be traced on the map from Menin and Courtray to Ghent), but also the great rents paid for these diminutive holdings, and which occasionally amount to £4 or £5 per acre. If such a change were allowed to take place unconsciously, and without due precautions, the loss to the country might be severe. But, if the landlords carefully distinguish between the advantages they derive from the dressers and spinners and those which may properly be ascribed to soil and climate, they will, by adopting judicious means of instruction and encouragement, preserve the aid of the dressers and spinners when their occupation shall, by the force of circumstances, be separated from the tillage of the soil.

The case is here an inverse one to that which occurred with the Dacca muslins in the East Indies, where the introduction of machine-made wares caused the extinction of that branch of industry, and with it the cultivation of that particular description of cotton of which the finest thread was spun was also abandoned, and is now said to be lost. This was the result of the apathy and want of caution in the Government of Bengal, which neither remarked the change nor sought to adopt the measures it demanded. The local taxation, which is the crying grievance of India, prevented the inhabitants from suiting their cultivation to the changed nature of the demand, as it made it impossible for them to compete with the untaxed Americans. With due precautions the demand for cotton would have indemnified the people of Dacca for the loss of their weaving. Without such there has been a loss for all parties; and the effects of negligence in observing the inevitable laws that the course of industry obeys has made unthinking people attribute evil effects to Free Trade that can only result from restrictions or grogious fiscal regulations.

Our accounts of the fires are diminishing. We have but one incendiary fire to record in this county since the date of our last publication.—*Bury Herald*.

COMMITTEE ON SHIPPING.

(From the Economist.)

There are few branches of British industry, or of British enterprise, more important to the general well-being and prosperity of the country than that connected with our shipping and navigation; whether viewed in relation to the amount of labour and capital for which it affords employment, or to the facilities which it gives for the exercise of all other branches of industry, or to the political importance and influence with which it invests this country. Unfortunately, however, notwithstanding the fact that this interest has engaged in an especial manner the fostering care of the Legislature, there are few that have so frequently complained of extreme depression, or urged more often their claims on the aid of the Government from time to time. We believe, however, that the parties immediately interested, as well as the Legislature, have been influenced in the course and policy which have been pursued by a mistaken notion of the actual facts connected with the shipping of this country. We are the more anxious to correct many of the common fallacies and misconceptions on this subject at the present moment, as a committee of the House of Commons has recently been appointed, and is now sitting, to inquire into the state and condition of our foreign shipping trade.

Among the oldest and firmest prejudices connected with our commerce is to be ranked the favour with which a general restrictive policy has been regarded by our shipowners—a favour which but little consideration will show it difficult to reconcile with any just estimate of their own interests. It is true, that from a very early period great efforts were made by the State to secure a monopoly of the carrying trade of this country to our own ships, and the law known under the name of the Navigation Act, as completed by the 12th Charles II., remained in operation till 1815, when, as sooner or later must be the case with every restrictive law in an increasing community, the force of circumstances compelled a partial relinquishment of its principles.

By that law it was enacted that no produce should be imported from Asia, Africa, or America, except in British ships; and that any goods imported from other parts of Europe in foreign ships should pay a higher rate of duty than the same would be chargeable with if imported in British ships. As long as our chief foreign trade was with our own colonies and dependencies, or as long as foreign countries did not possess an important mercantile navy to compete with us, that restrictive system might be maintained; but it should have been plain to the commonest mind, that, as soon as we sought to trade with great and powerful states, having themselves a large commercial marine, it would be utterly impossible, and equally impolitic, to maintain such restrictions.

Accordingly, soon after the United States had established their independence, that Government, feeling the loss to which its mercantile interests were subjected, by being permitted only to carry cargoes from this country, but not to bring cargoes, thereby being obliged to perform the voyage one way in ballast, and giving the British shipowner a great advantage in competing with the American, passed a law similar to that in force here; which, though it did not remove the necessity of performing the voyage one way empty, yet imposed the same necessity on their rival English shipowners. Thus, then, for some years English vessels went in ballast to the United States, and returned with cargoes of cotton, or other produce; while American ships came to England empty, and returned with cargoes of our manufactures, minerals, &c.: on the one hand our goods being loaded with a charge for freight to the American consumer sufficiently high to pay the expense of navigation outward and homeward, and enhancing the cost of such goods as much as if the American Government had placed an additional import duty on our goods; and on the other hand American cotton being loaded with a charge for freight to the manufacturer here sufficiently high to pay the expenses of both voyages, and enhancing the cost as much as if the American Government had placed an export duty, or our Government an additional import duty on such produce, equal to the difference. And this additional cost was a gain to no one, being on the one hand a mere waste of an empty voyage one way to the American, and the other way to the English shipowner. This reciprocal folly lasted till 1815, when we entered into a treaty with the United States, by which each country ceded to the other all the privileges enjoyed by its own ships. This cannot be said to have been any concession to the principles of Free Trade, or made with any understanding of its doctrines, but one forced by the practical inconvenience and mischief arising from a protective policy. The best interests of either country rightly understood would have induced it to have abandoned such folly without any regard to the acts of the other.

The next great inroad on the Navigation Act arose in 1823, from retaliatory duties imposed in that year by Prussia, on our ships trading to the ports of that country, which excited much clamour on the part of our shipowners. It then became obvious that we could no longer maintain the Navigation Act; that to have negotiated with Prussia alone, as we had done with America, would have left us the same work to do at a very early period with every other country affected by that act. The clamour raised against the Prussian acts of retaliation led the Government, in 1823, to propose the Reciprocity Acts of 4th and 5th George IV., authorising his Majesty by order in council to repeal all discriminating duties chargeable in English ports on the vessels of such foreign countries as were willing to admit our ships to enter their ports on like equal terms. In pursuance of that power, since that time reciprocity treaties have been concluded with

Prussia	Hamburg	Sweden and Norway
Hanover	Lubeck	Mexico
Denmark	States of La Plata	Brazil
Oldenburg	Columbia	Austria
Mecklenburg	Holland	Russia
Greece	France	Portugal
Bremen		

It cannot be denied that, since the passing of these acts (as well as before), the shipping interest of this country has suffered severely at intervals from depression and want of employment, and that a great reduction has taken place in its value since that period. But that on the whole shipping and shipowning have not been profitable trades, or that the depressions which have been experienced have arisen from those acts, as recently revolved by the shipowners' meeting at Sunderland, we utterly deny. If, on the contrary, capable of proof, in every way by which such proof can be indicated, that shipowning has been a

profitable trade, and that the result of the reciprocity acts have been more beneficial to this country than to any other; and that when depression has been experienced by the shipping interest, it has arisen entirely from the evil effects of the restrictions on our general commerce, to the prosperity of which alone our shipowners can with any reasonableness look for support.

One of the worst consequences which peculiar privileges inflict on any trade is, that such trade is necessarily called upon to support the protective system enjoyed by other occupations, however detrimental to itself. Hence we have found that that leaning for protection on the Government to which the shipping interest has been so long habituated, has led them to support other monopolies and restrictions of all kinds, however prejudicial to themselves;—hence we have found shipowners among the greatest advocates of the exclusion of foreign corn, sugar, coffee, and other produce, the increased introduction of which could only tend to increase the demand for, and the use of, their ships. And another evil consequence has been, that, relying on legislative protection against foreign competitors, attention has not been sufficiently directed to the real disadvantages under which our shipbuilders labour, by being obliged to work with dearer materials and dearer labour. If shipowners would exercise ordinary sagacity, they would see that, circumstanced as they now are, no act of restriction which it is in the power of the law to impose could benefit them, but, on the contrary, would only be productive of mischief; and that the only possibility of permanent improvement must be looked for by pursuing a liberal Free-Trade policy, so as to increase the extent of our intercourse. At the present moment, not only do the British shipowners compete with foreign ships in the home trade, over which our law could exercise some influence to protect them; but, startling as it will appear to most, they follow these foreign ships into the neutral markets of the world, and successfully compete with them there. To hear the advocates of protection dilating on the advantages of restricting foreign shipping, one would fancy that the great bulk of our ships were employed in the home and colonial trade, whereas nearly two-thirds of the British ships which leave our ports are engaged in a foreign neutral trade, beyond any power of our law to protect, while little more than one-third are engaged in the trade of our colonies and dependencies. It would, therefore, be as idle for the cotton manufacturers of Manchester, who have to compete with all the world in neutral markets, to besiege St. Stephen's with a call for protection, as it is for the shipowners of this country to do so. Competition with the whole shipowning world must decide the freights obtainable by the two-thirds of our shipping employed in the neutral trade of the world; competition between that portion of our ships so employed, and the smaller portion employed in our colonial trade, must ever reduce the freight obtainable by the latter to the same rate. And yet it is for this delusive and impracticable advantage that shipowners are found advocating interests and principles of commercial restriction which lessen the trade of the country—a policy on their part as consistent with reason as it would be for the London and Birmingham Railway Company to advocate a restriction on the intercourse between those two places.

In 1820, before the Reciprocity Acts were passed, to which shipowners refer all their misfortunes, the tonnage of shipping belonging to the British empire amounted to 2,648,593 tons; and in 1842, to 3,311,538 tons. In 1820 the total quantity of British shipping, which cleared outwards on foreign voyages, was 1,549,508 tons; while in 1842 it amounted to 3,375,270 tons, having more than doubled during the 22 years. These facts afford no evidence of a declining trade, or, on the whole, an unprofitable one. But what we think of the greatest consequence to call the attention of shipowners to is, the distribution of our shipping in the trade of the world, apparently so little understood.

In 1820, the 1,549,508 tons of British shipping which left our ports were thus distributed:—

BRITISH POSSESSIONS:—		
	Tons.	Men.
Gibraltar	14,375	820
Malta	5,171	300
Ionian Islands	7,898	436
Cape of Good Hope and Coast of Africa	27,559	1,240
St. Helena	1,835	94
Mauritius	753	44
East Indies	51,133	4,028
New South Wales	2,823	181
British North America	341,650	17,616
British West Indies	233,486	12,900
Guernsey and Jersey	66,139	5,161
Foreign Trade to Neutral Countries ..	746,822	42,820
	802,686	53,029
Total	1,549,508	95,849

thus showing, that even in those days, so little were men aware of the actual facts connected with our shipping, nearly 52 per cent. of all our foreign trade was carried on with countries over which we could exercise no control, and only 48 per cent. with our whole possessions throughout the whole world.

Let us now examine how this comparison stands in 1842, after twenty-two years' experience of the Reciprocity Acts, which shipowners say, sacrificed them to foreign competition.

In 1842 the 3,375,270 tons of British shipping which left our ports were thus distributed:—

BRITISH POSSESSIONS:—		
	Tons.	Men.
Gibraltar	43,508	3,609
Malta	40,141	2,043
Ionian Islands	7,055	398
Cape of Good Hope and Coast of Africa	34,022	1,931
St. Helena	3,977	218
Mauritius	18,397	808
East Indies	202,101	10,070
New South Wales	51,234	2,878
British North America	446,842	19,429
British West Indies	201,344	14,839
Guernsey and Jersey	144,366	12,625
Foreign trade to neutral countries ..	1,250,937	68,809
	2,124,333	118,007
Total	3,375,270	186,816

which shows that now we are dependent on a trade carried on with foreign neutral countries for the employment of about 63 per cent. of all our shipping and sailors, while our own possessions, much as they have increased, afford employment for only 37 per cent. of our shipping and sailors.

The increase since 1820 in the shipping to our own possessions throughout the world, which alone we have attempted to control and regulate, has been 504,115 tons, or 67 per cent., while the increase to foreign countries, over which we can exercise no control, under the greater freedom of the acts of 1823 so much complained of, has been 1,321,647 tons, or 164 per cent.

With these facts before us, it is not difficult to estimate how great is the advantage which has been reaped by the shipowners of this country by the Free-Trade policy of Mr. Huskisson. We ask them to consider what would now have been their position had the Navigation Act been continued in force, and their trade, by a series of retaliatory measures, had been chiefly confined to British possessions; and we ask them again to reflect that no Government regulation can in any way avail them when so large a portion of their dependence is on the trade of foreign countries. It is with the whole and entire expansion of our trade with the world that their interests are inseparably bound. It is to the removal of all restrictions to which they as shipbuilders, and by which our commerce, are at present fettered, that they must look for permanent and lasting relief, and not to the delusive and miserable policy of restriction and legislative interference. Re-enact your fondly-remembered navigation laws to-morrow, and in less than a month two-thirds of your present trade is placed in hazard, if not immediate suspension; on the contrary, press forward for a full application of free and unrestricted trade, and you will eminently share in the general advantages which could not fail to arise from such policy.

Every approach to that principle has proved already specially advantageous to the shipping interest. In 1820, with a high protective duty on wool, the quantity consumed from which freight was derived, was 7,691,000 lbs.; Mr. Huskisson removed that duty, and in the year ending January, 1842, it was 53,350,000 lbs.; an increase of more than six times. In 1820 a high protective, almost prohibitory, duty existed on foreign coffee. The quantity then consumed in this country was 7,100,000 lbs. Mr. Huskisson, and after him other governments, have from time to time reduced that protection, and the quantity of coffee consumed in 1842 increased to 28,580,000 lbs., or four times. On the contrary, the high prohibitory duty on foreign sugar has been strictly maintained till now; in 1820, the quantity of all kinds imported, contributing to freight, was 4,209,000 cwt.; in 1842 (the same restrictions being continued), it was 4,699,261 cwt., showing an increase of only 10 per cent.; while in the two cases to which Free-Trade principles had been applied, the increase on the one was 400 per cent., and on the other upwards of 600 per cent. To which of these lines of policy—whether to restriction or freedom—have our shipowners been indebted for the employment of 3,375,270 tons in 1842, in place of 1,549,508 tons in 1820? To what line of policy—whether to restriction or freedom—have they been indebted for an increase of 164 per cent. in our shipping to foreign neutral countries during that period, while that to our own possessions, where alone they have been protected, has increased only 67 per cent? If there is one man more than another in this country who, from the experience of the past or the promise of the future, ought to eschew every approach to a Government office, or the precincts of St. Stephen's, except to beg and petition these intermeddlers with what they do not, and never can understand, to withdraw all their care and protection—to withdraw all the interferences which bind and limit the commerce on which alone he can thrive—to let him go free on the ocean as the waters which he sweeps—that man is the BRITISH SHIP-OWNER.

CORRESPONDENCE.

Henllan, near Denbigh, North Wales,
July 15, 1844.

SIR,—I find by the LEAGUE paper that you are so kind as to answer questions respecting registration of votes, and as the following cases have come under my observation, I shall be very much obliged for your advice.

Has a person who pays £10 rent a borough vote when he is not rated to the full annual value? A neighbour of mine pays £10 rent, but is rated only at £8; are the overseers bound to insert his name in the list on being informed that he pays £10 rent?

Another case is where a person occupies his own freehold house, when he is rated in the assessment only at £5, when the house might be let to a tenant for £10 or more, but the said house has always been occupied by the owner and never let to a tenant. Is the rating the criterion by which to judge the qualification, or the rent that might be had for the house? And are the overseers bound to insert his name in the borough list? The owner is more anxious to have a borough vote for the said house, as he has a county vote for other houses?

I remain, Sir, yours respectfully,

JOHN ROBERTS.

[The questions put by Mr. Roberts it may be useful to answer in the LEAGUE for general information:—

The amount at which premises are rated is no criterion of the value, and it is the value alone which determines the qualification. A tenant may be rated at only 20s., and yet be entitled to be registered if his premises are *bona fide* of the annual value of £10.

If a tenant exhibits to the overseers evidence, such as the landlord's receipt, that he pays £10 a year rent, they are bound to put him on the list of voters. So in the case of the freeholder, if he exhibit a valuation by a competent builder or architect, of the annual value of the freehold being above £10, they will be bound to insert his name on the list. In the absence of good evidence, the overseers would be entitled to look to the gross estimated rental entered in the rate-book, as their guide in making out the list; and then the tenant and freeholder will have to give in a claim (after the list of persons entitled to vote is published on the church doors) to the overseers to be registered in the usual form. If good evidence of value is furnished to the overseers, and they still omit the claimants from the list, they may, on complaint to the revising barrister, be fined.]

3, Prince's-row, Victoria-road, Pimlico,
July 16, 1844.

SIR,—On consulting the catalogue of the Royal Academy, I found No. 1358 (in the Sculpture Room) marked as the number for a "Bust of R. Cobden, Esq." I, as a loyal and true Free-Trader and member of the League,

was very desirous of ascertaining how far the artist had succeeded. What was my surprise, then, in beholding a bust in plaster, about as unlike "our own Cobden," as you can well imagine. Instead of the bland, open, and candid expression which so distinguishes the countenance of the hon. member for Stockport, a stern, gloomy sort of face presented itself, which must have anything but prepossessed strangers who might happen to have been physiognomists.

Now, will you, in your next number, correct the error, and state that No. 1351, and not 1358, is the bust of our leader, as no doubt the mistake has deceived many who would be glad to be undeceived. By the way, whoever has the management of placing busts and pictures in the Royal Academy must be about as ignorant of their business as the most unlettered Ojibbeway. In the catalogue, No. 1358, "Bust of the late Wilson," although marked Cobden, is placed close to a Roman subject on one side ("Caractacus before Claudius"), and "Patent Look Bramah," on the other. Surely this is vandalism with a vengeance, of which no schoolboy would be guilty.

May I also request the favour of knowing, in your next number of the LEAGUE, whether a lodger of 4s. per week, or £10 per annum, who has occupied twelve months, can demand of his landlord to deduct from his rent his amount of poor's rates and taxes (if the lodger pays his quota) for the said tenement, and thus become an eligible voter?

I am, Sir, your obedient servant,

HENRY FEILDE.

[Mr. Henry Feilde, Pimlico, is informed that 4s. per week will not entitle a tenant to vote if that rent include rates and taxes. The qualifying premises must be, not of the clear yearly rent, but of the clear yearly value of £10. As a general rule, where the landlord pays the rates and taxes, it will take 5s. a week rent to give a vote. A tenant is quite entitled to be rated, and ultimately to be registered, although the landlord compounds for and pays the rates. In the event of the landlord neglecting to pay the rates due up to the 6th of April before the 20th of July, the tenant will be entitled to pay them, and deduct the amount from the rent, by 59 Geo. III., cap. 12, s. 20. A tenant's name must be on all rates made for twelve months prior to the 31st of July. Nothing can dispense with that.]

Robert Allen, of Bristol, is informed that the freehold property mentioned in his letter does give a vote to the owner of that property for the county, or division of the county, in which it is situate.

FOREIGN CORRESPONDENCE.

PETER PLAYFAIR'S LETTERS.—No. V.

Amsterdam, June 20, 1844.

Amsterdam, the capital of Holland, is situated at the confluence of the river Amstel, with an arm of the Zuyder Zee, called the Y, and which forms the port. It contains 200,000 inhabitants, and is surrounded by a semi-circular canal or wide foss, with four other great canals running in curves parallel with the outer one. One of these canals, the Kaisergracht, is 140 feet wide. They are lined with handsome houses, planted with full-grown trees, and average in length two miles each. Various small canals intersect the town in all directions, and are said to divide it into ninety-five islands. The canals are traversed by no less than 290 bridges, and but for the numerous sluices and dykes and their skilful management, Amsterdam being 25 or 30 feet below the level of the sea, might at any moment be submerged. Taken as a whole, it is one of the most remarkable capitals of Europe. The houses, bridges, and dykes are all built upon piles, which gave occasion to Erasmus to remark, that he had reached a city whose inhabitants, like crows, lived upon the tops of trees. The upper stratum upon which the town is built is literally nothing more than marsh or bog, and loose sand; and until the piles are driven through this into the firm deposits below, no structure can be erected with a chance of stability. A stranger who has never seen a Dutch town before, will be struck by the novel and picturesque combination which it presents of water, bridges, trees, and shipping in the very heart of a city. He will remark the quaint buildings with gables facing the street, often overhanging the footpath, or lying back from the subsidence of the foundation—the canals traversed by massive drawbridges, opening and shutting to allow the passage of ships—the carts running upon sledges instead of wheels, with barrels of water placed in front, which is jerked out under the sledges to diminish the friction—the shoes of the horses, which are not unlike pattens—the wooden sabots of the peasants—the brass milkpail glistening like polished armour, or the wooden pail painted a sky-blue colour—the little mirror fastened before the window of every house, to show the inmates the passers-by—the marble halls of the merchants' dwellings—and the footways paved with clinker bricks instead of stone—all combine to show the English traveller that he is in another land. The prosperity of Amsterdam always depended upon her shipping. At one period she engrossed the carrying trade of the world, and thus reared a bold race of sailors, ever ready to fight the battles of their country, and to brave storms and tempests in every sea. The trade of Holland has now greatly decreased, and it is thought by many that the kingdom is in a rapid state of decadence. The manufactures of Amsterdam include a few cotton and woollen stuffs, and some things peculiar to itself. The refineries of borax, a salt which is produced from the mud of large lakes in Persia, Thibet, and South America; of camphor, the coagulated sap of a tree found principally in China, and, when refined, extensively used in medicine; of smalt, a blue glossy substance, produced from cobalt, and which the artificers of Amsterdam alone know how to refine in the best manner by grinding it minutely, and by other methods which are kept secret. Smalt is chiefly used in painting china, and is made to present a variety of shades by the mode of preparation. Other articles are manufactured here by methods said to be known only to the Dutch: such as cinnamon, vermilion, rouge, a great variety of scents, perfumed oils, and cosmetics. The art of cutting diamonds was also first practised by the Jews of Amsterdam, and was not discovered till the fifteenth century. The diamond mills at Amsterdam are still numerous, and are exclusively the property of the Jews, who number 50,000 souls, or one-fourth of the population of Amsterdam. Four horses turn a wheel in this mill, setting in motion a number of smaller wheels in a room above, whose cogs, acting on regular metal

plates, keep them constantly in motion. Pulverized diamond is placed upon these, and the diamond to be polished fastened at the end of a piece of wood by means of an amalgam of zinc and quicksilver, and submitted to the friction of the adamantine particles. This is the only mode of acting upon diamonds, which may be ground and even cut by particles of the same substance. These transactions, however, are comparatively small and unimportant; and it is a melancholy fact to reflect upon, and a melancholy sight to see the harbours of this enterprising and commercial people filled with unemployed shipping, and to know that the decay of their trade has been occasioned chiefly by the oppressions and restrictions of other nations. The greatest blow struck at the prosperity of Holland was under the Continental system of Napoleon, who deprived the Dutch of their trade as carriers for other nations, and closed their ports which had heretofore served as entrepôts for the commerce of continental Europe, and more especially of Northern Germany. But the Dutch are a persevering, patient, sober, and enduring people, and may recover some of their trade. The greater part of Holland is a delta formed of mud, deposited by the Rhine and other rivers, in the same manner as the Delta of Egypt has been formed by the river Nile. Old Andrew Marvel says:—

"What by the water's slow alluvion fell,
With shipwrecked cockle and with mussel shell,
This indigested vomit of the sea
Fell to the Dutch by just propriety.

"Glad, then, as miners who have found the ore,
They with much labour fished the land to shore,
And dived in desperately for each piece
Of earth, as if 't been of ambergris.
Collecting anxiously small loads of clay,
Less than what building swallows bear away.

"Next did they rivet with gigantic piles,
Right through the centre their new-cached miles;
And to the stake a struggling country bound,
Where barking waves still bait the forced ground;
Building their watery habel far more high
To reach the sea, than those that scale the sky."

The land thus perseveringly rescued from the water, to whose dominion it may be said to have belonged, would again be covered by the waves if human agency was removed for a short space of time, or would be reduced to the state of those vast wastes composed of sand and mud-banks, quite unfit for human habitations, which now lie at the mouths of the Nile and Mississippi. And yet these fields, gained with so much labour from the sea, and preserved with such constant watchfulness, have been in more instances than one inundated by their owners during their contests with foreign foes, and Dutch patriotism has not hesitated to expose the land to temporary ruin for the preservation of liberty. The cutting of the dykes, and opening of the sluice-gates, which was resorted to in order to free Holland from Spanish tyranny, and, at a subsequent period, from French domination, was a desperate resource, and in itself a national calamity, entailing immediate beggary upon a large portion of the population, with great expense in the subsequent recovery of the land. The glorious sacrifice, however, serves to show that bravery is not peculiar to the natives of mountain lands, and that it needs neither hills nor fastnesses to enable a free people to defend their native land.

The Dutchman may also be said to have made the wind as well as the water his slave. Scarcely a breath of wind is allowed to pass without, as it were, paying toll, by turning a windmill. These erections are so numerous that they are never out of sight in a Dutch landscape. They are constructed of much larger dimensions than with us, and are generally neatly thatched over both the top and the sides. It is not uncommon even to see a painting in the centre representing the sign of the proprietor, such as the figure of the Lamb, Ceres, the Adoration of the Shepherds, &c., and these paintings are generally elaborately and well executed. In the suburbs of great cities, windmills are still more numerous; there they congregate like armies of giants, spreading out their broad arms as if to protect the streets and houses which they overlook. With us windmills are rarely used except to grind corn. In Holland they are employed almost as variously as steam-engines: they saw timber, crush rapeseed for oil, grind snuff, beat hemp, and perform many other acts of labour. But the principal service they perform is in draining the lands; and here the Dutch have most ingeniously set the wind to counteract the water. At least one-half of the windmills have water-wheels attached to them, which act as pumps, and, by constantly raising the water into the canals, alone keep the low land dry and fit for cultivation, and for the habitation of man. I measured the sail of one of these mills, which was 120 feet long. The usual length is 80 feet. Don Quixote would have found himself quite in his element in such a country.

Leyden, June 21, 1844.

The railroad from Amsterdam to Leyden, the Athens of the West, passes through level sandy plains, with occasional *dunes* or sandhills, similar to those which are seen at a distance lining the coast, but covered with vegetation, or with clumps of firs, or she-oaks. The railroad is exceedingly well constructed; the engines generally bear the name of George Stephenson, one of those strong spirits of the age, who is called the "Hengist of Railways." The canal and the carriage-road run parallel with the railroad, fringed with a monotonous row of uniform willow-trees. The causeway, elevated above the surrounding country, is carried along the summit of a dyke, or water-wall, whose prodigious strength alone restrains the waters of the Haarlem Sea, which press upon it, and which, unrestrained, would unite with the waters of the Zuyder Sea. To the right and left of the road in approaching Haarlem is a lake 11 feet deep, six of which are water, and the other eight slime or mud, which is used to make the valuable and durable Dutch bricks called *clinkers*. The lake is 30 miles in circumference, and the effect of the wind acting upon so large a surface, quite unsheltered from its fury, is appalling; for though the depth is slight, its waters are heaped up against the land by a storm to such a height that nothing but the strength and perfection of the dykes prevent the bordering districts, with the towns and villages they contain, from being swallowed up in ruin. The States-General of Holland have adopted the plan of an enterprising Englishman for pumping out the water with steam-engines, and converting the bed of the lake into arable and pasture land. The undertaking was commenced in 1840. It is expected that the drainage will be completed in two or three years, and then 20,000 acres of land, at present

beneath the surface of the water, will be rendered serviceable to man. A steam-engine of 500 horse power, and another of 300 horse power, are employed in this labour.

The winter is the season when accidents most frequently happen to the dykes. Long-prevailing S.W. winds, acting on the surface of the Atlantic, drive an accumulation of water round the north of Scotland into the German Ocean. If these are succeeded by violent tempests blowing from the N.W., the effect is to propel the sea with great violence southward through the British Channel; but the Straits of Dover are too narrow to admit the augmented body readily to pass, and in consequence it falls back upon the low lands of Holland. At such moments the tall ocean may be truly said "to lean against the land," and the strength of the dykes alone preserves the country from submersion. To guard against such assaults, the utmost skill, energy, and activity are required. A special corps of engineers, called *waterslaaf*, including men well skilled in the science of hydrostatics, are employed entirely in watching the state of the waters, and guarding against an irruption. If the water surmounts the dyke, its ruin is inevitable; and when such a calamity is apprehended the alarm-bell is rung, and every man in the neighbourhood hastens to his post. An upper rampart is erected on the top of the dyke in an incredibly short space of time, with stakes driven into the ground, willow faggots, or baskets and earth. If the strength or solidity of the dyke be doubtful, and a breach is apprehended or begins to appear, mats of woven straw and rushes, or large sheets of sailcloth, are laid on the outside in the same manner as a leak is sometimes stopped in a ship. This prevents the earth being washed away by the action of the waves; and when the danger is past, the temporary works are removed, and permanent repairs effected. The Zuyder Zee in the thirteenth century was all dry land; when the ground which it covers was inundated, 80,000 people lost their lives. About the same period 44 villages were swallowed up in the province of Groningen. In 1717 no less than 1560 habitations disappeared beneath the waters of the ocean, which had broken their bounds. It is clear, therefore, that the existence of Holland depends upon the preservation of her dykes to restrain the sea, and the management of her sluices to permit the egress of her rivers and internal waters. The term "der dronken land" (drowned land) is applied to more than one district which has been submerged, and subsequently recovered.

Leyden is situated on a small branch of the mighty Rhine, which passes through the town in the form of a canal, and ultimately through a set of flood-gates at Katwyk into the sea. It is the only part of the river which retains its name from the place of its rising, under the glaciers of Mount Adula, till its flood forms a barrier between many nations in its descent through the craggy rocks and vine-clad slopes of the Rhinegau, and is ultimately checked by the sands of Holland, and passes with a feeble current into the ocean. The University of Leyden is remarkable for having been one of the most distinguished schools of learning in Europe, for the interesting museums attached to it, and for the mode of its origin and foundation. After the celebrated defence of Leyden against the Spaniards, the Prince of Orange, desirous of rewarding the citizens for the bravery they had displayed, gave them the choice of two privileges—either an exemption from taxes, or the foundation of a university. Much to their credit they chose the latter. Leyden at one time attained so high a reputation, that most of the distinguished scholars of Europe flocked to its schools. Our countrymen Goldsmith, Evelyn, and other celebrated Englishmen studied there. Grotius, Arminius, Descartes, Scaliger, Boerhaave, and a host of brilliant names adorned the schools. The house of Boerhaave is a noble mansion outside the town. The history of its presentation to Boerhaave is remarkable. An English nobleman, suffering from a disease hitherto found incurable, visited Leyden, and placed himself under the care of this distinguished professor of medicine. To be near his physician, he purchased a large mansion in the neighbourhood, and when, to his gratification and surprise, he was eventually cured, he, on quitting the country, presented his house and grounds to the professor, whose skill had restored him to health. Leyden still affords excellent opportunities of study to the student of medicine or natural history. The senate-hall contains more than 100 portraits of distinguished professors, from Scaliger downwards. The Museum of Natural History is the richest, if not the most extensive, in Europe. It contains all the productions of the Dutch colonies in the East—Java, Japan, the Cape, Surinam, and the West Indies, as well as those of other lands. The department of birds, by M. Temminck, is said to be the finest in Europe. The Egyptian Museum is also full of objects of interest, including mummies and sarcophagi from the land of the Pharaohs, jewellery and trinkets from Ancient Thebes; papyri, musical instruments, and stone tablets of a very early period. The museum also contains many objects of Roman and Carthaginian art, highly honourable to the collectors, and which serve to show that the Dutch, in their early commercial explorations, did not forget the finer objects of art and of history, and that they do not deserve the sweeping satire of Voltaire, on his quitting the country—"Adieu! canaux, canards, canaille."

BURDEN OF POOR-RATES.—We are told by Mr. Cochrane that the chief burden of the increase of poor-rates falls on the land; but he is quite wrong in that assertion, as he is in most of his other statements. In 1801, of the £1,077,891 required for the relief of the poor, the land contributed about £3,000,000; in 1841, of the £5,500,000 expended for the same purpose, the land still contributed only about £3,000,000, the additional amount being assessed on dwelling houses, factories, and other kinds of property.

THE LAW.—It is a melancholy fact, that there are, at the present moment, no less than 1540 statutes in force. Of 376 which are repealed, or supposed to be repealed by implication, or said to be obsolete—that is, never acted upon—there are 112 which it is doubtful whether they are repealed or in force! This comprises the statute law only, but the unwritten or common law regulates at least three-fourths of our jurisprudence. And it is out of this huge chaos, which has been growing year by year for centuries, that, at the present moment, each citizen of the state is bound to find out what is the law! About as difficult a matter as finding out the philosopher's stone.

PROVINCIAL PRESS.

THE LEAGUE.—We sincerely hope that the conduct of the League members on the West India question will have a tendency to establish better and more honest rules of action for members of Parliament than those of party or personal aggrandizement:—to make men vote according to their consciences, and when they have done so, to treat with scorn any attempt by a political leader to make them rescind their votes. By-and-by we trust that the crack of the Premier's whip will be deemed an insult to the House; and that the whippers-in will be turned off from their disgraceful situations. It is the honest, independent, conscientious conduct of the League members which has turned many professing Liberals against them, and which has given strength to the cry that their influence has declined. The cry is a false one. We believe they never were more powerful than at this period. When we say so, we take no account of the number of boroughs which they may be able to command—no note of how they may stand in "a division." We estimate neither their patronage nor their rank in the House of Commons; but we look to the spread and the increasing popularity of their doctrines as the tests of their ultimate success, and as the chief success which they ever wished or anticipated. They never attempted to obtain what is commonly called political power—place, patronage, and title. They never expected to be called on to form a Cabinet, or to take a lead in her Majesty's council. All they pretended to do was to instruct the people—the people and the electors—to show them how they were cheated, pillaged, and abused by an unscrupulous and insatiable class; and to show them at the same time the way to redress themselves, and to get fair play. Are the League, indeed, relaxing their activity in instructing the people in these things? And are the people, indeed, averse to the instruction? Have men renounced their belief in the evils of monopoly, and have they repented of having made their just demands? Are constituencies anxious to maintain class burdens, and to foster protection to overgrown interests? If so, the League have indeed declined, and their "occupation's gone." But we are not convinced that such things have happened; and it will take a great deal more to convince us than the assertion of any arrogant party oracle. The League have had a great triumph already; they have roused the whole country to a sense of its shameful oppressions; and made the doctrines of Free Trade the principal considerations both of the Government and the people. The Prime Minister is gradually yielding to their irresistible pressure. He sees that no legislative power can withstand them. He has acknowledged their justness, and gone a small way in their direction. He asks for time to put things in order; and then he must let the fabrics of the monopolists be swept from the ground which they have so long disgraced. Then will be the ultimate triumph of the League—a triumph which, we believe, no interested combination, however wealthy or powerful, can prevent. —*Dundee Advertiser.*

EXCESSIVE COMPETITION AND LOW PROFITS.—To us it appears self-evident that an enlargement of the field of commerce would remove the chief cause of over-competition; and that then the maxim of "Live and let live" would be more generally acted on than it is, or can be at present. The system of dealing extensively at microscopic profits becomes a necessity when the supply exceeds the demand—a necessity, at least to all who, in such circumstances, are determined to keep their ground. They persevere with their eyes open to the chances before them; they play a hazardous game with much danger of ruin and possibilities of enormous gain. But few would enter into such a game if they had a choice of following a more safe and easy course. In a struggling crowd the strong drive the weak aside or trample them under foot; but the confining walls once broken down, both weak and strong find room and cease to squeeze their neighbours. The trade of this country, foreign and domestic, though absolutely great, is small compared with the productive powers of the people. It is, in fact,

"A dwarf shrub pining where a tree should grow."

Our manufactures are already cheap enough, and too cheap. They are not wanted at lower prices. They are not wanted in such quantities as we produce them at any price, in the present state of our commercial relations. They are out of proportion to the produce against which they must be exchanged—the produce of our own country and the niggardly supplies which are admitted from abroad. To reduce the case to a simple view, we may consider it thus. Suppose that every bale of goods ought to exchange against a quarter of corn, but that for every four quarters of corn in the market there are five bales of goods. The goods being in such excess, the holders of them naturally strive against each other to effect sales. A quarter of corn for a bale of goods would afford the manufacturer an easy living profit, but to give at the rate of five bales for four quarters would allow him scarcely a shade of profit. No man can live by doing a small trade at such a rate, and a cautious or timid man will not go into it extensively if he can get anything else to do. A poor man cannot, whether he may get anything else to do or not. It is then left to those who cannot escape from the contest, and to the venturesome and speculative, to drive away and try to raise themselves by beating others down. Those who can command the greatest capital can deal most extensively at a low rate of profit, and this again secures to them the greatest stroke of business; and thus the process goes on, every extension furnishing to the great trader the means for extending still further, and still more effectually excluding the small dealer from the trade. In this desperate struggle, the workman's wages are reduced to the barest minimum on which existence can be supported, and machinery is perfected with almost supernatural rapidity, to increase the powers of production. But wages can only be so depressed because the products of labour are in excess and the workmen compete against each other for employment: and the application of mechanical contrivances to every process of manufacturing labour goes on with more than natural rapidity because human invention is kept on the rack by the pressure of unnatural competition. But all this would be changed by Free Trade. The supply of raw produce—including provisions of all sorts—would mount at once to an equality, and more than an equality, with the manufactured goods brought to market, for the industry of the world as yet is much more directed to agriculture than to manufactures. There would be enough of elbow-room for every trader to move at ease; and, in the absence of harassing competition, few or none would, as a matter of choice, be undersellers. Wages would rise; for the

mechanical competition rise and fall about Corn. Chro. Ho MAN conta or le rents by the to Sto suit ti are th mana husba nufact handi cipall suppli carrie still r whom in get pation lous d neigh beside one ir Manc gross round labour latter nishin before our ru doubt wicker ing to an ov cles o Mr. N cultur cost o probat that o the di robors of the return in the cent. agricu only, found that ti into ti they a in agri landow Maccl Tai be rept to den reform words death. mistak If so, had pa who b Corn: that w povert their tectiv all tea far bet either cidedl in tow costly, to be inseph ers. now t produc for for million Yes! the har debat The as jority hearte and m shadow way— tion al MA Lond exciters of in fav to brir much that w public a petit it is in think; this at ing let whole "Si paper: those the pet by Lon on the amidat amaz all per

mechanic would find his labour required. The competition among labourers for work, being succeeded by a competition among employers to obtain their services, a rise of wages would inevitably take place. Did we not anticipate these results from the liberation of trade as confidently as we expect the sun to rise to-morrow, we should not so earnestly contend, as we do, against the Corn Laws and all other monopolies.—*Edinburgh Weekly Chronicle*.

HOW AGRICULTURISTS ARE BENEFITED BY THE MANUFACTURING COMMUNITY.—Chapel-en-le-Frith contains about 268 farmers, or persons who occupy more or less of land. The first class are those who make their rents out of the produce of the land they occupy, that is, by the sale of butter, cheese, pork, &c., which they carry to Stockport, or other manufacturing towns, as may best suit their convenience. The second and most numerous are those who occupy small farms, which are principally managed by the wives and children of the occupants, the husbands being either engaged in carting lime to the manufacturing towns, or employed at some sort of labour or handicraft, by which the rent of the land he holds is principally raised, while the produce (exceeding the scanty supply of the family) in the shape of butter and cheese, is carried to the before-mentioned markets. The third, and still more numerous class, are the labourers, about 200 of whom are employed by the Peak Forest Canal Company, in getting limestone, paving stones, and in various occupations, in and about, conveying the same into the populous districts. Then there are about 20 limekilns in the neighbourhood, at which about 150 hands are employed; besides two cotton mills, one paper mill, two forges, and one iron foundry, all of which send their productions to Manchester and other manufacturing towns. Now the gross population of the parish of Chapel-en-le-Frith is, in round numbers, about 5000; one-fourth of whom have to labour for their bread, and more than three-fourths of the latter number are directly or indirectly employed in furnishing food, or other material, for the commercial towns before mentioned. If this hasty glance at the situation of our rural district be faithfully drawn (and there can be no doubt upon that point), how wilfully blind, or desperately wicked, must those persons be who are incessantly labouring to depreciate the value of trade and manufactures to an over-populated country; the annual value of ten articles of its manufactured productions being estimated by Mr. McCulloch at £116,650,000, while that of the agricultural produce he estimates at £112,000,000! Now, the cost of the labour employed in the first-named sum will probably exceed two-thirds of the whole amount, while that of the latter will not exceed one-fourth. Then, again, the distribution of the increased population strongly corroborates the argument already advanced in affirmation of the question propounded. According to the last census return, the gross population of the country had increased, in the ten years from 1831 to 1841, between 14 and 15 per cent.; but the increased population, found in the purely agricultural counties, ranges from about 4 to 7 per cent. only, while in the manufacturing counties the increase is found to be 18, 27, and 36 per cent. This clearly shows that the people have fled from the rural districts, and gone into the manufacturing towns to get employment, where they are better fed and better paid than those employed in agriculture, notwithstanding the farmers (or rather, the landowners) are protected by an infamous Corn Law.—*Macclesfield Chronicle*.

THE CORN LAWS.—That the present Corn Law must be repealed—and that very soon—hardly anybody attempts to deny. The only difference existing among Corn-Law reformers is as to the process of abolition; or, in other words, whether the law shall die a sudden or a lingering death. For our parts, we should be glad to see it, and its mistaken adherents along with it, put out of pain at once. If so, the latter, we are quite sure, before a single season had passed over their heads, would be thankful to those who had ridded them of their profitless "protection." Corn-growers and cattle-growers are fast finding out, that when they help themselves they thrive, and that their poverty and ill luck have always been in exact ratio to their deceptive dependence upon the falsely-called protective system. They begin to learn, from the best of all teachers—Experience—that agricultural committees are far better friends to them than agricultural committees of either Lords or Commons—and that customers are decidedly preferable to Corn Laws. Like the shopkeepers in towns, they see that stocks of goods, however large and costly, are really only valuable so long as purchasers are to be found—and that their own prosperity is not only inseparable from, but identical with that of their customers. Landlords, too (at least many of them), require not now to be told, that unless their tenants can sell their produce they cannot pay their rent—and that the demand for food must always depend on the employment of the millions, and their consequent means of obtaining it. Yes! these simple truths are beginning to penetrate even the hazy atmosphere of the House of Commons. The debate on Mr. Villiers's motion was evidence of this. The argument was all on one side; and although the majority was on the opposite one, there was nothing disheartening in the circumstance, inasmuch as the wisest and most beneficial reforms have generally "cast their shadows before" in as nearly as possible the very same way—argument sliding on the one hand, and opposition sliding down on the other.—*Gateshead Observer*.

MANUFACTURERS' PRO-CORN-LAW PETITION.—In London, as elsewhere, a considerable curiosity has been excited to see the names of the spinners and manufacturers of Preston who are said to have signed the petition in favour of the Corn Laws. We have done all we could to bring out these, but hitherto without effect. Why so much reserve? Is there no secretary, writer, or editor that will honour the parties' names with publication. No public notice was given in Preston of the existence of such a petition, and when and where these names were obtained it is impossible for us to say. The Londoners probably think that Lord Stanley has been tampering a little in this statement. However that may be, we give the following letter as a proof that an anxiety exists to get at the whole truth.

"London, July 4, 1844.

"Sir,—I have looked into your columns—the only Preston paper to which I have access—in hopes of seeing the names of those spinners and manufacturers in your borough who signed the petition in favour of the Corn Laws, which was presented by Lord Stanley to the House of Commons, with so much pomp, on the evening of Mr. Villiers's motion. I heard him declare, amidst the mingled cheers of the monopolist squires, and the amazed and incredulous looks of the more intelligent men of all parties, that the petition was signed by the owners of nearly

one half of the horse-power of Preston. Sir, is this true?—can it be true? If so, pray solve the doubts of the London Free-Traders by publishing the names of the petitioners. Doubtless they will be proud to see their names recorded for the wonder and admiration of future generations alongside of his Grace of Buckingham; and why should he monopolise all the glory of upholding a system which dooms the people of England to the evils of scarcity for the benefit of the landowners of England?

"I am, Sir, your obedient servant,"

"M. P."

If it be possible to suppose that so many have written their names against Free Trade as is stated, the only charitable construction we can put upon it, is that they did so as a compliment to the party with whom they generally act. We are the more inclined to this solution, because we are not told that their signatures were backed by the only test of earnestness and sincerity, we mean subscriptions. Although a great puff was made in the London papers and in a Preston pamphlet about the paucity of subscriptions to the League among the spinners and manufacturers of Preston, amounting to about £550, yet we have never been able to trace out more than £25 from the proprietors of the 1306 horse-power, said to be attached to the Anti-League! And this trifle we have no doubt was given just as a man gives a sixpence to an importuning begging case, merely to get rid of it. We have no doubt but some of our cotton spinners would sign anything to support Toryism; yet even these have their seasons of misgiving. Like profligates on their deathbeds, some two or three years ago, when business was without profit, they showed strong symptoms of conversion to Free Trade; but like the same characters, now that more health and vigour are temporarily restored to the manufacturing system, they are ready to relapse into their old sins. To us, however, it is a matter of small moment whether the majority of the manufacturers are for or against Free Trade. We never view the Corn-Law controversy as a mere manufacturers' question; and if it were not for the well-being of the masses, whose interests are vitally affected by it, we should have spared ourselves many exertions to bring about a repeal. And though confident of its being ultimately carried, we believe it must be by the pressure from without, chiefly effected by the working classes. While the Corn Laws lessen the production of the country, they still more seriously interfere with that equitable distribution of wealth from which the operatives constantly suffer; but such is now the national enlightenment upon this subject, that let another embarrassing season of bad trade come round, and we shall see the masses firmly arrayed for the overthrow of monopoly, whether their employers unite with them or not.—*Preston Guardian*.

CORN-LAW PROTECTION PETITIONS.—One of these notable documents was handed about at Hailsham market on Wednesday last, for the purpose of obtaining signatures. It contained the usual statements and the regular amount of worn-out fallacies that have been refuted, till both assertion and refutation have alike become stale. We never see or read these petitions without being forcibly reminded of the fable of "Hercules and the Carter." Upon the present occasion this idea was amusingly recalled, by the offer of a gentleman present to sign the document, on condition that he might affix his name and a motto to the head of the petition. The offer was, however, rejected; and it appeared that the motto so volunteered was as follows:—"God helps those who help themselves." This biting satire upon "protection" caused some little amusement. In the afternoon a meeting of the Protection Society was held at the George Inn. Whether to conceal the paucity of attendance or the wisdom of the proceedings it is not for us to conjecture, but reporters were excluded; we are, therefore, unable to enlighten the public as to the doings on the occasion; but we have no doubt, in the language recently applied to one of these meetings, that "the greatest enthusiasm prevailed." We believe the meeting barely mustered half-a-score attendants.—*Sussex Advertiser*.

WIGAN.—The following reply to a memorial from the majority of the electors of Wigan, dispatched on the 21st ult. to Mr. Greenall, one of the borough members, was received on Friday evening last by Mr. Cook, one of the borough magistrates.

"45, Pall-mall, July 11, 1844.

"DEAR SIR,—On my return to town this day, I find the request of a large body of the electors of Wigan for me to vote with the Hon. Mr. Villiers, for a total repeal of the Corn Laws. In the first place, I must beg to apologise for not replying to the request sooner: this was alone owing to my absence from town. In the next place, to say, that I shall at all times be glad to have the opinions of any portion of the electors, though I may not think it consistent with my own views, or for the public good, to support those particular opinions. He assured, Sir, that I have no other object in view but the general welfare of all classes, though you and I may differ as to the way of its attainment. Your name being attached first to this document, I take the liberty of troubling you with this communication.

"I am, Sir, your very obedient servant,

"Thomas Cook, Esq. "PETER GREENALL."

We beg the electors to contrast this letter with the open, candid reply of Mr. Standish. Mr. Greenall's answer to the request of his constituents is worthy of his master, Sir Robert Peel; whether he has an opinion at all on the question, the memorialists are at a loss to discover; but there is little doubt, had his vote been wanted, it would have been recorded in favour of Ministers.—*Manchester Guardian*.

THE WORKING MAN AND FREE TRADE.—There is often a jealousy betwixt masters and men in almost every trade, but it is a pity that this should divide the efforts for accomplishing a good in which both are to participate. What hope have you for the continuance of good trade but in the principles of commercial freedom? Let the effects of a series of bad harvests come over us again, and no party can point to any other source of relief. I will be neither the defender nor the apologist of masters when they do wrong; and I am aware that a few might do well to remember their humble origin, and put themselves in the place of the workmen, in order to learn their duty towards them. But still, when I look at our rapidly-increasing population—when I see that the owners of land do not find employment even for those born in the country, but send them to seek work in the towns—I think that, if you will compare the merits of the two, you will easily perceive where the least amount of censure is deserved. But the Corn-Law question is independent of the merit of any man or order of men whatsoever. Some of the masters are opposed to repeal, a good many are indifferent, and none of those who join, I am sure, do so to injure you. They have no hostility to you; and the same changes that would benefit them could not fail to confer a benefit upon yourselves. The monopolists' clap-trap cry

of cheap bread reducing wages has almost spent itself, or else for a time was a stumbling-block to some. But so many facts have contradicted the assertion, that few of you now regard it as anything but a pure invention. What an anomaly would be presented by the operatives of England crying out for dear bread to keep up wages! If this notion had ever been seriously entertained, we should now have had the table of the House of Commons covered with petitions, praying that the sugar duties might not be reduced. The monopolists' argument is this, that the price paid by the manufacturers will be the minimum amount upon which a person can live; so that every saving, not only in bread, but in sugar, coffee, soap, rent, fire, clothing, &c., will be marked by the master, and followed by a reduction in wages. What you feel has a greater effect upon you than what you hear; and hence your receiving more wages and more employment, along with cheaper food, has settled your minds as to the fallacy of this assertion. Now, look at the matter seriously. It is not so much your own welfare as that of your children for which you should be concerned. How often in your day have you been almost at your wit's end as to how you should get a living! How many political struggles have you been mixed up with which have only ended in disappointment! I am sure you must feel anxious that your children may have an easier path to tread. You have had all along to carry not only the dead weight of taxation, but the still heavier weight of monopoly. You have had all your food taxed for the benefit of an idle aristocracy; and you have had one labour market closed after another against you by a restrictive policy. And though many tradesmen have been embarrassed, and not a few gone to the wall, yet you have been the greatest sufferers. And, most assuredly, if a just and rational system had been introduced, you would have been the greatest gainers. What an advantage to have plenty of food, and to have it cheap! To those who live by wages, it is a great gain to find money compassing more and more food on a Saturday night; and to the greater number, who have no wages, to find the first article of life plentiful must be a great blessing. If you could live as they do in other countries, you might work as they do in other countries; and leisure and holidays would not be such strange things as they are at present. Whatever other measure it may be advisable to carry, sure I am that this question involves the greatest practical good.—*The Struggle*.

THE SUGAR BILL.—If Ministers could have contemplated the difficulties which their new principle of legislation, of picking and choosing from moral considerations, from whence they should apply the common everyday wants of wholesome nutriment to the population of this country, they certainly would not have ventured on the Sugar Bill of this session. It has unsettled the trade for months back; it has diminished the sales by upwards of 10,000 tons this year as compared with last; it has exposed all the sugar importers to more serious injury from the uncertainty of its operation than had the change proposed been instantaneous, without excepting any country from its operation; it has already provoked retaliation from Brazil, and, after doing all this mischief, it appears at the eleventh hour doubtful whether any sugar whatever will or can come from the chief quarter contemplated by the bill—Java; not that the Dutch have not sugar in abundance to spare; not that they are unwilling to sell it to us; but that the regulations of a political kind which we think needful to secure a safe carrying out of the new commercial principle conceived by our Ministers are such as they deem to. We are told in all the papers of the last week, that a consul has been appointed for Manilla, to certify sugar as the produce of that country; but we have no such intelligence as to Java. Now, on this subject, and it is a very important one, considering the effects which this bill has already had, we possess important intelligence from the Hague—the Dutch Government absolutely refuses to sanction or permit our appointment of any consul or government agent in Java—they are deaf to all entreaties on the subject; it is a subject on which they have always shown the greatest determination—not to permit any government agent, or official of any kind, from any country, to be established in their colonies. It is needless for us now to discuss the reasons, or show how very anti-social these Dutch people are, in insisting on such a policy; it is all-important practically that we know the fact: trade with our colonies, say they, if you please—sell as much as you can, and buy as much as you will—all your transactions shall be protected by the common law and officers of the island—but we will not permit the establishment of your government agents or consuls, or recognise any regulations for shipping produce to England different from those already established. There may be in all this narrowminded, foolish jealousy; but so it is, and the Dutch are people not easily cajoled into new views; and we do not think that our pretence of protecting the consumers of sugar in this country from the contamination of slave produce would appear to them a very sound reason for our wishing to make an official appointment in their colonies. Unless some more pressing or softening influences can be applied at the Hague than have yet been tried, Mr. Gladstone will, before the termination of the session, have the humiliating duty to perform of coming down to Parliament and admitting that all his plans have failed from this cause; that all the mischief has been done to existing interests, but that the main part of the anticipated good must be foregone, because we cannot secure CERTIFICATES OF ORIGIN!!—*Economist*.

OUR SURPLUS PRODUCE.—Our friends at a distance may form some idea of the extent of our surplus produce, when we tell them that one farmer, discouraged by the present low prices of wheat and the want of a market for the coming harvest, has removed part of the fence from a large enclosure for growing wheat, in order that his bullocks may eat off his standing corn; another (yclept *Swing*) seriously proposes to burn one half of the unthrashed corn of last year's harvest, that a better price may be made of the remainder; a third is propounding a plan for turning the surplus wheat into fat bacon; and a fourth, M. J. W. Bull, whose letter we have inserted, proposes to convert corn into mutton tallow that will rival the best Russian Y. C., by fattening sheep on the ears of wheat, for the melting pot. Mr. Bull has amply stated his views, and backed his statement by figures. The practicability of his scheme, however, remains to be proved; and probably his letter may call forth some expression of opinion from others.—*Adelaide Observer*.

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, July 17, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the LEAGUE of the Saturday immediately succeeding, but are included in the list of the week following.

AGRICULTURE.

HIGH RENTS AND NO LEASES.

If there be one class of men who, above all others, have reason to be grateful to the League, the tenant-farmers constitute that class. In their names landlords professed to speak when they passed laws to keep up rents, and whilst they were in fact providing for their own mortgages and marriage settlements, they invested themselves, and that with something more than the tacit assent of the farmers, with the style and title of "Farmers' Friends." The investigations and inquiries which the League, and those who think with the League, have instituted into the true history and actual state of English agriculture, and of the condition of English tenant-farmers during the operation of the Corn Laws, have produced disclosures which have induced all intelligent farmers to exclaim, "Oh! save us from our friends." The borrowed plumes have been stripped from these self-styled protectors, and they now stalk naked before the world in their true characters of monopolist harpies. Every intelligent person acquainted with agriculture now bears testimony that it is to the landlords alone tenant-farmers must look for that relief from evils admitted to press them sorely, which no positive legislation can give. Ask a well-informed land-agent, or a good practical farmer, come from whatever district he may, what are the remedies for the present agricultural distress, and but one universal answer will be given, that rents must be lowered and farmers be enabled to increase their produce by having secure tenures. These are the remedies, and the only remedies, for pauperism and incendiarism, for the distress and despair of the peasantry are only occasioned by the previous distress and despondency of the tenantry; yet these remedies are the very last the landowners think of considering. They clamour, and lie, and talk foolishness about "protection;" they bring bills into Parliament, to give tenants a right to be paid for improvements which they may have effected after notice to their landlords! or to compel the letting field gardens to the labouring poor, and similar measures, which show that our landed legislators are about as well prepared to meet the actual wants of agriculture as the young French Princess, who, when the people were starved for want of bread, asked "Why they did not buy buns," was to stay a revolution. All such measures

are mere delusions; nothing short of an entire change of the whole system upon which English landlords have managed their properties for the last thirty years can place English agriculture upon a safe footing, and that change cannot take place until the Corn-Law question is settled.

And let us ask the most rabid protectionist whether there can be any settlement of that question except TOTAL AND UNCONDITIONAL REPEAL?

We have said that permanent tenures are indispensable to good farming, and every man whose opinion on agricultural affairs is worth a farthing, says the same thing; but what farmer dares to take a lease now?

The *Morning Post* of last Thursday tells us that "three-fourths of the wheat grown in England last year have been sold by our farmers for less than 48s. The price of 56s. was the price which Sir Robert Peel indicated as that which his Corn Bill of 1842 was designed, as far as possible, to establish. Except during the two months which preceded the introduction of new wheat into our markets—a period at which farmers hold no wheat—the price has scarcely ever exceeded 50s."

Here we have the delusive effect of monopoly described by a monopolist. Does any one doubt the strict accuracy of the description? If so, let him go to any market-table in England and ask the farmers! But how are the rents? Do rents slide down in the same proportion as prices? Let him who asserts or imagines they do, go again to the market-tables and seek for information!!

We distinctly tell the landlords of England that, whether they succeed in maintaining the Corn Laws a year or two longer or not, *rents must come down*, and that considerably, unless they consent to grant, and can get tenants to accept long and rational leases. And we verily believe that the longer the repeal of the Corn Law is postponed the greater will be the fall of rents. What leases have been, and what they ought to be, we intend shortly to discuss in some detail, availing ourselves of the opinions of other agriculturists on the subject; but a letter by "An Essex Freeholder," which has recently appeared in the *Essex Standard*, a fierce monopolist newspaper, contains some passages so strongly corroborative of the preceding observations that we must conclude with extracting a few of them. The object of the writer is to vindicate the tenant-farmers of Suffolk and Essex from the imputation of harshness towards their labourers, which he believes to have been thrown upon them by the *Times* correspondent. And after making some sensible remarks upon the causes which have deteriorated the condition of the rural working classes,—to which, on another occasion, we may again refer,—he says, "there is one cause operating to produce distress amongst the poor to which too much importance cannot be given—that is, want of fixity of tenure." And he adds:—

"I know, and it is admitted by all practical men, that no single cause is operating so much to create distress amongst the poor, and deterring the improvement and produce of our soil, as a want of fixity of tenure."

And he says that at a recent farmers' club meeting in Essex, on the subject of leases being discussed, an opinion was expressed that "there was at least a difference of a bushel of wheat an acre, and other produce in proportion, between land held on leases and without or on short ones." Now, our own observations, as well as the information of some of the shrewdest farmers in different districts, have led us to believe that the difference of produce between land held on lease and that held from year to year is often nearer a quarter of wheat than a bushel to the acre; and the writer we have been quoting gives an example of what takes place under the present system, even where leases are granted. He says:—

"We will take for example a lease of twelve years—the usual time corn leases are granted: the farm has been occupied the preceding four years on an uncertainty, and in consequence all improvements and good farming have been at a stand-still; a new lease is granted; the first six years good farming is adopted, and five men at least to the hundred acres will be employed; the next three years, four; and the last three, three men will be made to do, except during harvest and at short intervals of the year. This I know is the ordinary operation of the present system, and one operating more severely on the produce and the poor of the country can hardly be conceived."

Such are some of the modes in which uncertainty of tenures cause distress to the agricultural labourers. The writer then refers to the existing competition for farms, which "enables an owner of land to make a larger rent than the land is worth," and he and to my certain knowledge, "the vast majority of farms are so let." Now, this "undue" competition he attributes to several causes. First, prudent farmers, who, during the high prices of the war with the long leases then in their possession, acquired considerable property, usually divided it amongst two or three sons whom they had made farmers, each of whom was thus enabled to occupy as much land as their father had done. In a more natural state of things one son would have been bred to farming and the others would have gone into other businesses; and here we find two or three farmers created, who, of course, become competitors

for existing farms, for there was no increase of farms. Secondly, men of all classes and callings, possessed of capital, have a general desire to undertake the cultivation of the soil. To these two causes he traces the present competition, which enables landlords to let their land according to Corn-Law prices, while their tenants often, for years together, get nothing like such prices: and the very natural question occurs, why does this continue? And that question is so well answered in this letter that we give the reply at length:—

"Simply for the reason I have before stated: that there is a large class of men calculated for no other pursuit, that there is still a large amount of capital accumulated during more prosperous times, and the parties holding this capital are induced from various causes to compete with each other, and give more for farms than their judgment tells them they ought. Young men, anxious to settle in life, are buoyed up by the hope that things will go better, that seasons will be favourable, or that they shall be enabled to manage with greater judgment or more economy than others, and are led to contend with each other against the better judgment of their advisers."

And there is another, and, we fear, more numerous class peculiarly deluded by the mirage of "protection," which the writer thus describes:—

"And there is another class, more to be pitied than these: a man, often beyond the middle age of life, with a family dependent on him, has to leave his farm; one offers itself; he knows, by past experience, the rent is too much, but there are others who will take it if he declines, in the same situation as himself, and why?—because, with habits unsuitable for anything else but farming, their capital all invested in it, they must consent, or submit to have their stock sold off at all risks, themselves thrown out of business, perhaps never to enter it again. Can we wonder, then, at the competition that exists? If the evil ended here it would be well; but mark the consequences. The farmer, with fixed payments over which he has no control, to save himself from sinking, what does he do?—not by choice, for he knows the path he is treading leads to ruin—but to delay it, he by compulsion saves all he can out of the only expense on the farm over which he has control—the labour of the farm; and the poor dependent labourer is thus thrown out of employ. This may be considered by many a harsh and exaggerated picture. I wish all could say so; but too many, I am sure, feel the sad truth of it."

Farms are now letting at double and treble rents as compared with those of 1792, while prices of produce are often no higher than at that time, and all the farmers' burdens are enormously increased. It is true that the improvements of the last fifty years have caused increased production; but every shilling of that increase, and more, has gone into the landlords' pockets. Tenant-farmers cannot now make nearly as good a living, in proportion to their capitals, as they could in 1792. The truth is that, by one contrivance or another, the landlords have managed to get their own shares and three-fourths of the tenants' as well; and until all the illusions and frauds caused by the attempt to protect agriculture by restrictions on the import of grain have been got rid of, the same state of things will continue. There are, therefore, no men so deeply interested in obtaining an immediate free trade in corn as the tenant-farmers, and the landlords know it. Hence the late protection society nonsense.

THE LABOURERS SPEAKING FOR THEMSELVES.

It has long been a favourite device of the monopolist landowners to shelter their own sinister objects behind the pretended interests of some other and more esteemed class. First the farmers' interests were made the plea for the monopoly of corn, until an examination of the history and condition of English agriculture had shown to demonstration that the farmers have been the greatest sufferers from the Corn Laws. When prices are high they become the mere conduit-pipes by which all the extra cost of food paid by the consumers is conveyed into the landlords' pockets; and when prices are low the farmers are themselves robbed of their capital to "make up the rent." The ingenious device that the monopolists are the "farmers' friends" is beginning to look in the eyes of farmers, notwithstanding the "protection societies'" humbug, like a very stale trick.

Next the monopolists were all anxiety for the welfare of the agricultural labourers, and though 7s. a week and a hovel, which no man who desired to keep his pigs decently would use for swine, did not seem to be very grand results from all this aristocratic care, yet for a time those who had no personal knowledge of rural districts, and the doings of monopolist landlords there, did not believe that the Duke of This, my Lord That, and Sir John T'other—all, all honourable men—would get up and in the face of day assert that to be fact which was directly the reverse of fact; and so for a time the farm-labourers were supposed by some people to have an interest in monopoly. Now, however, the farm-labourers have begun to speak for themselves, and with one voice they declare that they are oppressed and borne down by monopoly. These meetings commenced in one of the most landlord-ridden counties of England, Wiltshire, with that at Lyneham we have before adverted to, which has been followed by others; and one at Stratton St. Margaret's, near Swindon, in North Wilts, is so well worthy of remark that we shall give some passages from the report of it as recorded in the *Wiltshire Independent*:—

"A meeting was lately held in the village of Stratton St. Margaret's, near Swindon, to take into consideration the condition of the working people, and to adopt a petition to Parliament for their immediate relief by a total repeal of the taxes on corn and all other necessaries." At the hour of meeting (seven o'clock) a large assemblage was gathered in a field, consisting of men of every class—the farmer, the tradesman, the industrious artisan, the toiling labourer, the hopeless pauper—all ready to bear testimony to the severity of the distress which presses on them, and all anxious to hear of or to devise some means for their relief. We should suppose 700 or 800 persons were present. The

meeting was conducted in the most orderly and quiet manner, and the speakers were listened to with the greatest earnestness and attention; and every statement they made was fully confirmed by men who knew them from experience to be too true. We have only to add that we have in our possession a list of the names of those individuals alluded to by Mr. Arkell as having been working during the winter for the miserable pittance of 3s., 4s., and 5s. per week; together with those of others—lads of the ages of fifteen and sixteen—who have been working for 3s.!!

To those who know this thinly-peopled and ill-cultivated district, the assembling together of so many persons must be a matter almost of wonder. A chairman having been appointed, Mr. Arkell proposed the first resolution, and in so doing having said "he believed that nine-tenths of the farmers and tradesmen were daily sinking their property, and that nine-tenths of the labourers were in circumstances of great distress," he was interrupted by a person who made this fearful statement:—

"A person here stated that nearly forty persons had on this and the preceding day been apprehended at Wanborough on charges of felony, brought to light by the confession of accomplices. Most of them were young men, who had been without work during the winter, and who had, probably, been led by the pressure of want to the commission of crime."

What an awful illustration of the "benefits" "protection for agriculture" has bestowed upon agricultural labourers!

Mr. Arkell having resumed, said:—

"In a neighbouring parish there had been twenty-three men employed on the roads, receiving from 4s. to 6s. per week. He had that day seen two men working on the roads, one of them, with a wife and six children, received 6s. a week; the other had a wife, and received only 4s. When the hay-making season approached they had been taken off the roads; but so little employment could be obtained that they had been obliged to employ many of them again on the roads, even in the summer season. At Bishopstoke the labourers only received 7s. a week, and at Ashbury many men were employed on the roads at 1s. a day. At Woolstone many men were out of employ. He had the names of seven or eight men above twenty years of age who had been working on the roads in that parish at the rate of 3s. per week; others with wives and families had been receiving 5s. per week; so they would see it was not their labour but their families they were paid for. At Shrivensham, a parish where the land was as good as any in England, there were twenty-six men out of employ last week. This was close to the mansion of Lord Barrington; and yet that nobleman upheld the present Corn Laws on the ground that they made the farmers and labourers well off! He was far from wishing by these statements to set the labourers against their masters; they could not help it. The fact was the farmers were sinking fast; want of money prevented their undertaking this and that improvement, and so the labourers could not be employed, for money was required to pay them every Saturday night."

Mr. Arkell then called on the labourers present to speak for themselves, when

"Wm. Spackman, a labourer, living at Highworth, stood up and said, he had a hard family, and should wish to labour for their support as far as lay in his power. But the price the farmers could afford to give was not sufficient to keep his family, and he had, therefore, been obliged to go into the union-house. He had neither desired nor wished to do so. He would remind them that when a man goes into the union he costs three times as much as when he and his family were out. He and his family had been nine months in the house; perhaps their maintenance had cost £250; while if he had been engaged in labour, out of the house, probably £20 would have kept them. There, too, the man and his wife and family were separated; that was an unlawful practice, and it was against flesh and blood to bear it. Should you like it, gentlemen? Again, he could not leave the house in search of work without taking his wife and family with him; and if he failed in getting work, what was there before them but starvation, or thieving, and at last the gallows? Could any of them, he asked, endure this? He repeated that he liked work as well as any man; but he could not support his family on 8s. a week, and if no other remedy were provided, stay in the workhouse he must, cost what it might."

And let it be remembered that they are the fortunate only amongst the farming men, who can get 8s. a week in this district. The next passage which we extract from some observations of Mr. Arkell on Spackman's statement show that it will not be the Corn Law only which the labourers, thus forced by distress to meet, will call in question, for he said:—

"Is there, then, any distress among the labouring men? (Cries of 'Yes, yes.') What do you get a day? (A voice, 'A pretty many of us nothing at all.') I believe that many of you get nothing, and except something be done by Parliament you will still get nothing. They sent men as their representatives to Parliament; but their representation seemed to consist in getting the money out of their pockets. The labouring classes were indeed borne down, and he believed they would be so long as the farmers were so grievously oppressed with taxation."

Next:—

"Mr. Pierce, a glazier, living at Stratton, moved the second resolution, 'That in consequence of the loss of capital amongst the farmers and tradesmen, and the poverty of the working people, it is expedient and necessary that a great reduction in the national burdens shall quickly take place, and to the advancement of our wishes we recommend the total repeal of the duties on corn, and all other necessary things used by the working people.' In speaking of the distressed condition of the labourers, he called on all those in full employ to hold up their hands. (Not more than twenty were held up.) He then by questions elicited from one man, and the statement is applicable to numbers more, that he received when in full employ 8s. a week. He had seven children; his wife sometimes earned 3s. 6d. a week; they now consumed nine gallons of bread in a week at 14d. a gallon—10s. 6d. a week for bread! Then, said Mr. Pierce, I need not ask you how much meat you get? (Laughter, and cries of 'None at all.') How much tea and sugar, fuel and clothing—how many blankets you buy for the winter? How then were those to live who had only partial employ, and those with none at all? This was not a right state of things."

Yet the monopolist members for North Wilts strenuously maintain "this state of things."

Mr. Pierce concluded by saying:—

"He did not look for such large results from a repeal of the Corn Laws as some people expected. The bringing into cultivation of the millions of acres of waste land would, he thought, effect much both in the way of employing labourers, and increasing the supply of food."

But it is a condition precedent to this extended cultivation and increased employment that the Corn Laws should be totally abolished. Nothing but the obstinacy of the landlords, and the fallacious hopes of farmers who cling to the Corn Laws, prevent such an improvement in farming as would give constant employment at better rates of wages than now prevail to every agricultural labourer in the kingdom.

In connexion with this part of the subject, it is curious to observe how every incidental reference to the state of the labourers shows that where the best farming is, most labourers are employed; and that where wages are highest, there employment is most constant.

Thus, in one of the recent letters of the Times correspondent from Norfolk and Suffolk, he enumerates several parishes, stating the rate of wages paid, and the number of men out of employment in each; and wherever wages are said to be 8s. a week, more men are reported as unemployed than in parishes where 9s. a week are given; and in the only parish in which 10s. a week is the rate of wages, the remark made is, "not many are out of work."

Again, in the same letter, there is an example of the greater amount of employment given by the good farmer than by inferior cultivators, when the reporter says:—

"A large farmer told me, he occupied half a parish; there were several small farmers in the other half. He employed half the labourers; the small farmers did not employ their proportion. He said, 'I have often met men out of work, and said to them, Now, I know you are starving, why don't you go to the union. If you go there, my share of supporting you and your family will be about 9s. a week, and I should have to pay you that in wages if I employed you; but I do not want your work. The other farmers in the parish do want your work, and they will soon find you a job if they have to keep you.'"

Now, this evidence is the more valuable, inasmuch as it is entirely incidental, being intended as a mere attack upon the poor-law, into which the Times' letters have lately degenerated.

THE EFFECT OF MONOPOLY ON AGRICULTURE.

The most gratifying evidence of the progress of Free-Trade opinions is to be found in the fact that in every district there are some few intelligent agriculturists who come forth from their retirement to declare that the Corn Laws have injured, not benefited, agriculture. Our attention has been called to an admirable lecture on the thesis by which we have headed this notice, recently delivered in Whitehaven by Richard Barker, Esq. Having stated that possibly the first effect of a free trade in corn would be to lower prices here and advance them on the Continent, after which the trade in corn would, like other untrammelled trades, become steady and natural, he said:—

"I have admitted we should have agricultural produce at lower prices. Then arises the question, 'How are these prices to be met, and the present rental of the country kept up?' Either rents must be reduced in proportion to the reduction in the price of corn, or the produce of the land must be increased. The former would be a national loss, as well as an individual injury; and, my belief is, the latter result may be accomplished."

This we believe to be true. If the tenant had a secure tenure, and game-law and other semi-feudal customs were abolished, we believe farmers would gladly give their present rents. But, where the landlord should still insist on political subservience and barbarian practices, of course Free Trade would reduce his rent. Mr. Barker said:—

"There are fair grounds for believing that by improved husbandry an average price of 45s. per quarter for wheat, with other products in proportion, would enable the farmer to pay his present rent, and be better off than he now is with a price of 55s. by applying the same skill and enterprise to land that is applied to manufactures."

And this is, in brief, the whole remedy for the lower prices the monopolists apprehend, and forms a complete answer to all the fallacies of the monopolists.

After referring in detail to various agricultural writers of authority, to show that by mere economy of manures and other means within the farmer's own power, or at all events within the power of the farmer and the landlord, and after alluding to Flemish husbandry, Mr. Barker says:—

"As I was passing through the country from Brussels to Bruges in the month of October, I saw carrots and cabbages growing whence crops had been taken, which very clearly shows that by growing more hay under a five course rotation, our cattle would always be in good condition, our manure rich, and a large farm could be almost as easily managed as a small one. The small farmer might adopt the five course rotation after his land was in good heart, and thereby increase his profit. It appears from the returns of nine farms in this neighbourhood, that a stock of 12 to 14 cows and three or four horses are kept for every 100 acres, requiring from 30 to 40 acres for pasture for their support during the summer, and generally shows from eight to twelve acres lying in fallow. This quantity of land Mr. Barker considered to be altogether lost to the country, and that their system of farming showed only half the breadth of corn land which such farms ought to produce, and maintained that by adopting the Flemish system of husbandry a stock of 30 cows could be maintained on each farm of 100 acres, and the following crops of corn be grown in addition. Mr. Barker's rotation would give the following:—

1st year.. 20 acres turnips, mangold, and carrots, ground well prepared in autumn.
2nd year.. 20 acres wheat.
3rd year.. 20 acres clover and rye grass.
4th year.. 20 acres do. with liquid manure, followed by winter vetches and rape.
5th year.. 20 acres oats do. do.
Producing 120 acres of crop, and keeping a stock of 30 to 33 milk cows."

After Mr. Barker had concluded his lecture,

"The Rev. Edward Hawkes, of Kendal, presented himself to the meeting, and was welcomed with applause. He said he might justly ask, to what cause were we to attribute the great inferiority of the agriculture of this country? Why was it that our farmers exhibited so little practical skill and intelligence? He thought it was owing to their leaning upon the broken reed of protection (hear, hear); that they relied on the Corn Laws to secure advantages to them which could be maintained by their own increased skill, diligence, and care alone. He was convinced that the Corn Laws had been of no service, but the contrary, to the agricultural population. By the agricultural population he meant those who were actually engaged in the cultivation of the soil as their means of livelihood, and those farmers who had just sufficient capital to enable them to stock and manage their farms, but who were unable to hold their produce at their will until the time should arrive most favourable for the disposal of it. There was another class of farmers to whom the Corn Laws might have been of some apparent benefit, those who, in addition to the capital necessary for stocking and managing their farms, had a surplus which enabled them to wait until the market was in the most favourable state for selling their produce, when prices were highest, and when corn, owing to its growing scarcity, reached the average proposed by the law, or even rose above it. But to the great body of the farmers, who were compelled to go early to market after harvest in order to provide for WENT-DAY, the Corn Laws had been a constant source of injury and deception."

This was caused by the fact that, upon the long run, farmers never obtained the prices promised them by their landlords and their landlords' law.

"The price had been uniformly much less for a considerable period after harvest, and therefore it was upon the poorest, most industrious, and most numerous class of farmers that the ruinous effects of the Corn Law invariably fell, while the advantage, such as it was, was reaped by the comparatively

wealthy and independent few. (Hear, hear.) The consequence was that the majority of farmers were in continual distress, and too frequently reduced to ruin. They were either unable to pay a rent, which had been calculated upon a deceptive standard, and received as a gift from the landlord an allowance from their rent, which placed them in a situation of obligation and dependence, for which, had their rent been just, there would have been no occasion; or they sunk altogether into a state of poverty and ruin. (Hear, hear.) And, as such was the continual operation of the law upon farmers, it was not surprising to find that, in purely agricultural counties, the condition of farm-labourers and their families was truly deplorable."

Mr. Hawkes then detailed with much force and feeling some of the fearful disclosures with respect to the state of the peasantry in the southern and western counties of England, which have recently been made, and concluded an excellent speech by fully explaining the monopolist "dodge" on the sugar duties, attempted by Mr. Miles's notorious motion; when Mr. Ainsworth, the chairman, closed the proceedings with the following remarks:—

"He must confess that the statements of Mr. Barker were too true; and that as a practical farmer, to some extent, he must plead guilty to his charges. He could however say, that during the short time that he had been engaged in agricultural pursuits, he had succeeded in increasing his crops three-fold. (Hear, hear.) In reference to Mr. Barker's allusion to gas liquor, he could state in corroboration that he had himself been employing sulphate of ammonia obtained from gas liquor this year, and the results had been most favourable. He then alluded to the difference of farming in Flanders and England; and particularly to the fact that in Flanders the boundaries of fields were marked by stones placed at certain points, and that they lost no land in high banks and broad ditches; whereas in England a fence between two fields often occupied the breadth of a road."

Meetings such as this are the true "agricultural protection" meetings. Why should husbandmen alone forget the proverb that "fortune helps those only who can help themselves?"

THE COST OF GAME PRESERVES.

When the landowners of this country passed a law which decreed that from the land of these islands alone should the people be fed, they thereby gave the people a right to see that all the land is made to produce as much as possible. Yet what is the fact? Though the landowners have restricted importation, they have at the same time prevented, for the sake of their own amusements, the production at home of much corn, which, but for their feudal interference, would naturally be produced. Instances of the cost to the public of game preserves crowd in upon us from every quarter; we last week gave some strong cases of the sort, and during the past week we find the following passage upon the subject in the letter of the Suffolk correspondent of the Times newspaper:—

"The farmers, I think with much justice, complain of the enormous quantity of game. They say they are quite eaten up with it. I quote Mr. Neave, by his permission, as my authority for saying that the game in several parishes destroys more food, and deprives the farmer of more means, than would keep all the poor of the parish. Mr. Neave instanced one farm to me of 400 acres, on which last year upwards of 2000 rabbits were killed. It is said that five hares consume as much food as a sheep (and this is too low an estimate, inasmuch as a hare destroys more than it consumes); suppose seven rabbits do this, and you have on this farm the rabbits consuming as much food as 300 sheep would do. The farmers dare not destroy them, they would forfeit their leases if they did; they dare not even complain, or they would be looked upon as dissatisfied characters, and he got rid of at the termination of their leases. They cannot crop and trim their hedges and clean out the ditches, and give this work to do to the labourers to the benefit of their farms, because they would be found fault with if they did, as destroying the cover for the hares and rabbits. A rural police is kept up by the gentry, the farmers say, for the sole use of watching game and fighting poachers, for which formerly they had to pay watchers. And all this for what? For sport? Oh dear no; that cartload of hares may be sent into Norwich market, knocked on the head and sold to the game dealers and fishmongers at 9d. apiece, to the landowners' profit, every one of which has done half-a-crown's worth of damage to his tenant's farm on which it was reared. It is delusive to talk of this being considered in the rent; it is not so. I say nothing of the temptation to a poor half-starved labourer to knock one of these poor animals, eating his food, on the head, which if he does he risks—only transportation. The farmers say they do not mind winged game being left for sport, but hares and rabbits positively eat their produce up."

And very much the same story will be told by every farmer throughout England, except that it is a great mistake to suppose that pheasants and partridges do no harm. They do a great deal of mischief, and it is only because so much more is done by hares and rabbits that farmers are sometimes inclined to offer a kind of negative testimony in favour of "winged game." They believe landlords will have game of some sort, and of two evils they would choose the least. But the most remarkable feature of this practice of game preserving is, that generally it is not sport but pelf—sordid ill-gotten money—which the majority of game preservers seek to extract from their tenants over and above a full rent. It is this base sentiment which renders the monopolists so thoroughly despised. They seek power by the meanest arts, to use it for the most sordid ends. They seek money by the most oppressive means, to spend it in the most idle and frivolous pursuits. Indeed, so fully sensible of this are the more intelligent of the English landlords, that all of them who are not deeply mortgaged—who, however, form the vast majority—would gladly give up the Corn Laws to be quit of the odium which now rests upon their class. Nor can we leave this subject without alluding to another murder which has been caused by the game laws. This is the report as extracted from a daily paper:—

"FATAL AFFRAY WITH POACHERS AT BRICKHILL, BUCKS.—On Monday night week, as Howe, the head keeper of Mr. Thomas Curtis, was going round a part of the manor in the parish of Little Brickhill, he discovered some snares. He immediately went and called Joseph Leech, one of the under keepers, and another of his assistants, and desired them to watch. About three on Tuesday morning the keepers fell in with a party of poachers, one of whom had a gun, which afterwards proved to be heavily loaded. The keepers demanded the gun; the poachers refused to give it up, but, after a desperate struggle, the keepers succeeded in taking it. The poachers then went on in the direction for the woods of Mr. P. Duncombe, of Great Brickhill manor, followed by the keepers. When crossing the land of Mr. Goodman, of Buttermill Farm, the keepers came up with the poachers, who were three in number, and walked side by side some considerable distance. One of the poachers then threw away a bludgeon he had, and picked up a fold-stake, which he brandished about the heads of the keepers. Shortly after this the party came to a fence. The poachers got over first, followed by the keepers. Joseph Leech was first of the keepers, and, in getting over the hedge, the man who had possession of the fold-stake turned round and struck Leech a blow on the head,

which immediately felled him to the ground. The other keeper then went and called a labouring man named Francis Collyer, and with his assistance removed the poor fellow to the house of Mr. Howe, the head keeper, in Brickhill Woods, where he lingered in the most excruciating pain till the Thursday following, when he died. Leech has left a wife and eight children, the youngest only three months old. Mr. Curtis, who was in London, was sent for, and as soon as possible was down at Brickhill. William Chandler was soon after apprehended, and identified as the person who had struck the fatal blow. On Saturday an inquest was held on the body, and a verdict returned of wilful murder against Chandler, who was committed for trial. A man named Keen has also been committed as an accessory."

How long will the public consent that such crimes shall be committed to maintain the game laws? Why does not some resolute member of Parliament move for an inquiry into the whole subject? The restrictions on foreign importation, and the destruction of human food caused by game, render the game laws peculiarly the question of some Free-Trade member.

NOTICES TO CORRESPONDENTS.

Several answers to correspondents deferred till next week.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order, to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the LEAGUE forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadby, Newall's-buildings, Manchester; and the LEAGUE may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

POSTSCRIPT.

LONDON, Saturday Morning, July 20, 1844.

On Thursday evening Mr. Thomas Duncombe brought before the notice of the House of Commons some of the proceedings of the committee nominated by Sir James Graham, to investigate the charges which had been brought against Sir James Graham himself. When a dependant was allowed to select and pick a jury for his own trial, the result might have been so easily anticipated that we bestowed no farther thought on the matter; our confidence was in the public and not in the committee. Mr. Duncombe, however, was not daunted by his first failure to obtain a satisfactory investigation: he appeared before the committee and stated the charges which he was prepared to substantiate by evidence, should an opportunity be afforded him. In pursuance of the policy of suppressing everything which would render the results of the inquiry worth one straw, this opportunity was denied, and nothing remained for Mr. Duncombe but to reiterate his charges in the House of Commons. To one of the articles of accusation we beg leave to direct the attention of our readers. Mr. Duncombe stated—

"That unscrupulous use had been made during the two last years of the secret power which was conferred on the Government of opening letters under peculiar circumstances; that a roving commission had been sent into the country in 1842, for the purpose of opening letters; that letters of certain individuals had been opened, and he believed he was in a condition to prove that his own letters had been opened. He also stated that 50 or 60 of Mr. Mazzini's letters had been opened since Christmas last; that the letters of Stolberg, the Pole, had been opened, and that those letters, as well as other letters of foreigners, had been opened at the instigation of foreign powers. He described to the committee the mode in which he believed the process of opening letters was carried on at the Post-office; and he also said he could prove the existence of 'the secret or inner office,' where these deeds were going on."

Our readers are aware that this "roving commission" was formed in consequence of the disturbances that had just taken place, and that simultaneously with the issue of this commission the *Morning Herald* and the *Standard*, the twin-organs of the Government, declared that the outbreak had been instigated by the League, and boldly hazarded a prophecy that the inquiry which the Government had instituted would prove the complicity of our body. Heaven, it appears, has no monopoly of prediction. Sidmouth's spies were in the habit of foretelling outbreaks, and of organizing the fulfilment of their prophecies; it is far from improbable that one who had been trained in the school of Castles and Edwards was the author of this "foregone conclusion," and that his premises were the knowledge that the Peel Cabinet, having employed the Sidmouth arts, would be able to obtain Sidmouth results.

We have now evidence tendered that letters were opened, and we have before us presumptive proof that efforts were made to entrap persons into correspondence for the purpose of laying hold of some unguarded phrase which might be turned to a mischievous and injurious purpose. We appeal to the recollection of the Earl of Derby, and of Sir James Graham himself, for corroboration of the fact, that a letter was written to a magistrate of the county, in the name of his brother-magistrates, which they never authorized; and that an effort was made to get up a case on the reply made to this false and forged communication. If they deny it, we are prepared to publish the entire correspondence,

with the dates of the letters and the names of the parties.

Now, we ask our readers to bear in mind the nature of the ordeal to which the League was subjected: spies were set on the actions of its leaders; their private correspondence was violated, and false pretences were devised to extort letters from them in unguarded moments. Against such a system innocence itself, even when guarded by more than ordinary prudence, might have been of little avail. The League passed unscathed through the ordeal; the spy was baffled, the opener of letters disappointed, and the deviser of false pretences left to the mortifying consciousness of having practised treachery in vain. All that the commission could collect was, a stock of materials for the veteran libeller of the "Quarterly," to compose a Rigby article, in which the venom of antiquated spite was neutralized by an exhibition of ignorance which would disgrace a schoolboy.

But the country has no right to be satisfied with the simple vindication of the League; it is now called upon to sanction or to denounce a system worse than that which has condemned the worst tyrant of old to eternal infamy. "The ear of Dionysius" was not so dangerous an instrument of despotism in Sicily as "the secret cabinet of the Post-office" is in England. That cabinet may be made the instrument not merely of the most atrocious cruelty in public life, but of the meanest injustice in private affairs. It is very possible for a high functionary of the Post-office, involved in a lawsuit as executor to the will of some eccentric or depraved nobleman, to get at the secrets of his opponent by opening his confidential letters, and thus to anticipate his case before the matter can be brought to trial. Post-office espionage can be applied to fraud on the Stock-exchange, to the baffling of one mercantile speculation and the securing the success of another. Letters may be detained as well as opened, and there is more than suspicion that they have been detained. A fair investigation into the workings of this secret and perilous system has been virtually refused; it remains to be seen whether the nation will ratify the course pursued by its so-called representatives.

EPITOME OF NEWS.

A skirmish took place on the 3rd instant between the French and the Moors, in which several of the latter were killed and wounded. It appears that Abd-el-Kader, the Arab chief, was present during the engagement. Marshal Bugeaud commanded the French. This news is considered important as showing that the expectations formed of a peaceful termination of the differences between the Governments of France and Morocco have not been realized.

The accounts from Athens of the 30th ult. describe Greece as on the eve of becoming again the theatre of party strife. A few days previously some rioting took place in that capital. Cries of "Down with the Ministry?" and "Viva the Constitution!" were vociferated under the King's windows, and Callergis was obliged to order a body of cavalry to disperse the mob. Several persons were wounded in the affray, two of whom subsequently died. By letters of a subsequent date it appears that tranquillity has been re-established.

The Brussels journals remark with bitterness that Belgium is not fortunate in her foreign commercial relations. Struck by the Zollverein, she is about to be still more injured by measures of reprisal, the Belgian Government not having continued the favour conferred upon the wines and silks of Germany in the month of August, 1842.

Among the papers received from New York is one published at that city in the Spanish language, and called the *Noticiero de Ambos Mundos*. This contains an official communication from the Mexican Government to Senor Almonte, the representative of Mexico in the United States, stating the return of Mr. Thompson with the definite answer that Mexico will never consent to the annexation of Texas.

We learn from Dresden, July 9, that although apparent tranquillity has been restored at Prague, there is great agitation still among the labouring classes in other parts of Bohemia. At Reutchenberg the weavers have destroyed all the machinery and several factories.

Malta letters of the 5th inst., received by the Levant mail, give some details of the landing of the Italian refugees in Calabria. Some of them appear from these to have joined the Calabrian bands; and at Malta hopes were entertained that among them were all the leaders of the enterprise, with the exception of Moro, who was known to be mortally wounded.

The official statement of the modified Austrian tariff contains several very important alterations in the tariff of colonial goods, coffee, sugar, spices, &c., besides a considerable reduction of the duty laid upon cotton yarn, which hitherto paid about 15 Austrian gulden (about 30s.) per cwt., and which in future is fixed at the amount of one guinea per cwt. This is, doubtless, the most important of those alterations with respect to British manufacture, which, by this reduction of the Austrian duties, may be compensated in some degree for the losses by which it is menaced on the part of the Zollverein.

German manufacturers, who have sent a considerable quantity of goods (cotton and linen cloth, &c.) to China, have received news of the result of this new enterprise of commerce; they are most satisfied with this intelligence, especially the many-coloured cotton cloths (calicoes, &c.), of Saxonian origin, which met with an appreciation above similar goods of English manufacture. It has been suggested to appoint a German consul at Canton, and this suggestion will doubtless come to reality.

The *Arctia*, Royal Mail steamer, arrived at Liverpool last Saturday from the United States. The treaty between the United States and France, for the mutual surrender of criminals other than political, escaping from one country to the other, has received the approval of the President and Senate, and the Government of France.

The report of the committee on foreign relations upon the Zollverein treaty has found its way into the newspapers, and it appears that the Senate, in rejecting it, has acted upon the recommendation of that committee, made upon the ground that the Legislature is the department of Government by which commerce should be regulated, and laws of revenue be passed; and that the committee is not prepared to sanction so large an innovation upon ancient and uniform practice, by adopting this measure of the Executive.

A serious conflagration had taken place at Boston, which resulted in the total destruction of upwards of a dozen houses. The loss is estimated at 100,000 dollars. The Halifax papers contain accounts of a great fire at Harbour Grace, Newfoundland, which commenced on the evening of the 5th ult., and was not subdued until half-past two o'clock on the following day. The loss on this occasion is stated to be £30,000, and but little of the property destroyed was insured. We have yet to chronicle a further disaster—a steamboat explosion at Detroit, on the 25th ult., by which several lives were lost.

On the 6th ult., the British bark *Dominican*, Captain Salter, from London, was wrecked on the Folle, a coral reef in the vicinity of Aux Cayes, about 20 miles distant from that port, and was found to be totally abandoned. It is supposed that her crew and passengers took to their boats, and attempted to proceed to Jamaica, being afraid to land at Aux Cayes, as they knew the island to be in a state of insurrection. Nothing had been heard of them when the *Preble* left. The *Dominican* had a valuable cargo of dry goods, liquors, &c. Among her passengers was a Mr. Field, lieutenant of Royal Artillery.

The commerce of Oporto and Lisbon was never in a state of greater depression than it is at present. Outrages against property are now of daily occurrence throughout the wine districts of the north of Portugal, and the robbery of churches is again resorted to. There are likewise numerous commercial failures.

The following important notification had been issued at the Havannah, just before the last advices from thence were despatched:—"Our intendent, on consideration of the calamitous consequences of the drought, which, until lately, has been experienced throughout the island, has decreed:—Firstly, That, from the 10th of July until the end of the present year, the following articles shall be admitted upon paying half the present rate of duties, viz., maize, corn-meal, beans, potatoes, and rice; and that sweet potatoes, yams, and plantains shall be free of duty. Secondly, That the ports of Cardenas, Mariel, and Sagua la Grande shall be open for the importation of the above articles; also that junk beef and salt fish may be imported at said ports upon paying duties specified in our tariff. Further, that Batabano, upon the south coast, directly south of Havannah, at the termination of the Havannah railroad, shall be open for the importation of yams and plantains."

The state of Maryland, it is said, will soon be in a position to realize considerable revenues from two or three of the public works in which she has a large pecuniary interest, but which have heretofore paid little or nothing into the treasury. Pennsylvania, it is now hoped and believed, will restore herself speedily to the rank of solvent states.

The new bill regarding savings' banks is to be considerably altered. The most important concession towards depositors is that touching the interest. It will be now £2 15s. per cent., and not £2 13s. 2½d. as at first proposed.—The scheme of an agricultural college at Cirencester receives very influential support. A farm of about 400 acres, near Cirencester, is to be the example or experimental farm of the college.—The grand festival in honour of the poet Burns, which is to take place near Alloway Kirk, is fixed for the 1st of August. The Earl of Eglinton will preside. Two days afterwards the Highland and Agricultural Society's grand show, at Glasgow, will take place, so that both places may be easily visited.—The Earl of Lincoln has given notice that, on Tuesday, the 30th of July, he will move for leave to bring in a bill "for the embankment of the Thames."—The riots which took place in the early part of June, in Silesia, have been followed by others in Prague; and commissions are sitting in both districts, to explore the real cause of these excesses. From the various accounts from those districts, these causes are pretty plainly excessive lowness of the price of labour, and, to a great extent, utter want of work.—On Saturday a fire broke out on board the barque *Hand*, 150 tons burden, Captain Chambers, laden with guano, and lying in the South Dock of the West India Docks, Poplar, and before it was subdued destroyed a portion of the vessel and cargo.—It appears, from returns ordered on the motion of Mr. Hume, that the gross total number of persons who are or were imprisoned for debt in the United Kingdom, for a period of more than five years, amount to 3352. The total number imprisoned for debts (exclusive of costs) under £1 amounted to 210; under £5, to 794; under £10, to 483; under £50, to 922; under £100, to 249; under £500, to 298; above £500, to 104; and 36 for amounts not stated in the returns. Nearly one-half of the prisoners, or 1469, were (exclusive of costs) confined for debts under £10. One prisoner is mentioned as having been imprisoned within the Queen's Prison for 32 years, at an annual expense to the county of £9 2s. 6d.—We announce with much pleasure the abolition of slavery in the British settlement of Hong-Kong. The ordinance issued for this purpose has appeared in the *Hong-Kong Gazette*.—*Anti-Slavery Reporter*.—The Commissioners of Fine Arts, after considering the merits of the respective artists contributing to the exhibition of fresco paintings now on view in Westminster-hall, decided on selecting six from among their number, whom it has been determined to commission to execute works on given subjects for the decoration of the new Houses of Parliament. The names of the successful competitors were declared as follows:—Charles West Cope, John Calcott Horsley, William Dyce, Daniel Maclise, Richard Redgrave, and Wm. Cave Thomas.—On Sunday last a coiner, who gave his name Henry Brown, was arrested, after a desperate resistance, by Inspector Penny and a party of police at a house in Half-moon-alley, St. Luke's; two females were also apprehended. The prisoners were engaged in the very act of making base coin when the police forced their way into the room.—On Saturday last a gentleman named Rawlings, and two daughters of a Mr. and Mrs. Bentley, from Preston, aged respectively eight and ten years, were drowned by the upsetting of a small pleasure boat off

Dover. Lewisham same t' noon, broke park, the ext ascendi of the a plant totally gutted, unders £3000. Dover. Mrs. Bentley and two men named Fox and Lewis, who were also in the boat, were upset at the same time, but were fortunately saved.—Monday afternoon, shortly after two o'clock, a very destructive fire broke out in the recently-erected mansions at Upton-park, near Slough, the property of Mr. J. T. Bedborough, the extensive builder, of New Windsor; but such was the ascendancy that the flames had obtained before the arrival of the fire-engines, that all attempts (although there was a plentiful supply of water) to preserve the property were totally ineffectual, and three houses were completely gutted, forming the west end of Victoria-terrace. We understand the property is insured to the amount of £3000.—On Monday night week, a gamekeeper named Leech lost his life in an affray with a gang of poachers near the manor of Brickhill, Bucks. The unfortunate man was struck on the head with a fold-stake by a poacher named Chandler, who has since been apprehended, and against whom a verdict of "Wilful murder" has been returned. Leech, who may be reckoned amongst the numerous victims of the game laws, has left a wife and eight children.—The schooner *Isabella* arrived at Plymouth, July 9, from Corunna with 32 head of Spanish cattle; and the *Camilla* (s), from Jersey, has brought over sixteen more. These are the first import of foreign cattle this season.—In consequence of the high price of hay in Liverpool, the Irish boats are bringing it over in large quantities.—The Wesleyan Methodists of the Bingham circuit have erected a moveable wooden meeting-house upon wheels, capable of seating about 120 persons, at a cost of about £60, for the accommodation of several villagers where no site could be obtained.—Deputations have been sent from Sunderland and the neighbouring ports, for the purpose of giving evidence before the Committee of the House of Commons, lately appointed on the motion of Mr. Lyall, as to the state of the shipping interest at the respective ports which they represent, as well as to state their views generally on the subject, in answer to questions from the Committee.—The imprisonment of O'Connell has revived the repeal meetings in the United States. Probably, since the last steamer brought the news, about 5000 dollars or more have been collected from the Irish to help to pay the fine. In two nights, in New York, about 1500 dollars were collected and accounted for—the amount unaccounted for uncertain.—An exceedingly destructive fire, involving loss of property to the amount of several thousand pounds, broke out a little before four o'clock on Sunday morning, upon the premises of Messrs. George Wilson and Co., engineers, millwrights, and screw-bolt-manufacturers, Garden-lane, Salford, which, together with the extensive sizing works of Messrs. J. G. Lavino and Co. adjoining, were quickly destroyed. Messrs. Wilson are insured to the amount of £3500 in the *Globe Assurance-office*, and Messrs. Lavino to the amount of £5250 in the *Imperial and Atlas offices*.—A bill to repeal a number of acts for regulating the trade in butter and cheese has been brought into the House of Commons.—Thomas Rust, who has undergone several examinations at Halesstead, charged with setting fire to Mr. Nott's premises at Peabmarsh on the 6th of April, and Mr. Ball's premises, in the same parish, on the 6th of June, by which property to a considerable amount was destroyed, has confessed himself guilty of the several charges.—On Wednesday week Mr. Wm. E. Ryan, brother of Alderman E. F. Ryan, of Limerick, fell over the taffrail of the steamer at Lough Dergh, near Killaloe, and was drowned. The deceased, when a mere lad, was blown up in his bed, at the awful gunpowder explosion at George's-street, in this city, on the night of the 3rd of January, 1837, and most providentially escaped.—During a severe storm which blew at Liverpool on Saturday night, a fine large packet-ship, the *Russell*, Glover, laden with a costly cargo, was driven back into Bootle-bay, where it was expected she would have gone on shore, but two steam tug-boats having been sent to her assistance, she was brought into the river on Sunday, at noon, without having received any damage. The tide in the river rose several feet higher than it otherwise would have done, and the dead body of a man was washed ashore by the violence of the waves.—On Monday a novel sale of 3000 pine apples took place at the sale-rooms of Messrs. Keeling and Hunt, 2, Monument-yard. They were all in excellent condition, and landed and arrived in London within a month of their shipment from Eleuthera and Nassau, in the Bahama Islands. The price at which they sold were from 2s. to 5s. each; and there was a brisk competition from fruit salesmen from all parts of the metropolis.—An unhappy woman, a widow, named Mary Ryan, forty years of age, who has, it appears, been an itinerant vendor of fruit, attempted self-destruction on Monday morning by precipitating herself from the attic window of the house, No. 10, Short's-gardens, Drury-lane, where she resided. She has suffered severe injury, and is now in a dangerous state at Charing-cross Hospital. She assigned distress as the cause of the rash act.—There has been a very large importation of new potatoes this season from Holland, one salesman alone in Spitalfields Market having received as many as 2103 baskets during the present month.—The Paris and Lyons Railway Bill passed the House of Peers on Saturday with a majority of 75.—At Worship-street, on Tuesday, four finely-grown but exceedingly sunburnt young Lancashire women, very neatly and picturesquely attired, were placed at the bar before Mr. Broughton, charged with singing some dolorous ditty, collecting crowds, and begging in the streets. They stated that they had been employed in the coalmines, but were thrown out of bread by an act of Parliament. The clerk, by direction of the magistrate, had written to their last employer, to know whether their statement was true, and received an answer stating that a great number of young women have within these last few months been deprived of employment by the operation of Lord Ashley's act for excluding females from coalmines, and that the statement of the girls was likely to be true. On reading the letter, Mr. Broughton expressed his conviction of the truth of the prisoners' statement, and ordered a sufficient sum of money to be given to each of the girls from the office poor-box to carry them comfortably to their native place.—The usual quarterly meetings of ironmasters were held during the past week. During the last quarter the trade has been in a healthy state, the demand steady, and the prices for all descriptions of iron fair and remunerating.—The Earl of Bradford has given a piece of land at Bolton for the erection of public baths.—No accounts of the weather and crops in the north, and particularly in Scotland, are highly favourable. The weather, says the *Fifehire Journal*, is still delightfully dry and warm, and

is pushing forward the crops rapidly. Should the present weather continue, barley would be out by the middle of August, if not sooner. Better weather for the hay crop was never known: the yield is light, but the best hopes are entertained of a heavy after crop.—On Sunday afternoon a man was killed on the Croydon Railway, having accidentally fallen over the side of the carriage in which he was while the train was in rapid motion.—The commission for the county of Essex was opened on Monday by Mr. Baron Gurney. The calendar is heavy, and some of the offences are of a very serious character, there being no less than eight charges of arson, and in five of the cases the respective ages of the accused are 16, 9, 11, 12, and 8 years.—The 12th of July has passed off in Ireland without those disturbances which usually result from the Orange celebrations on that day.—Since the early closing of warehouses and offices in Leicester, upwards of fifty new names have been added to the list of members of the Mechanics' Institute, in consequence of the greater amount of leisure that is now afforded the young men in the evening.—The Duchess of Nemours was safely delivered of a son on Friday week, to whom the King has given the name of Duke d'Alençon. When the last accounts came away the royal patient was as well as could be expected.—At Dublin, on Thursday week, a man named Michael Hogan, a shoemaker, while labouring under delirium induced by drink, attempted to murder his three brothers, by cutting their throats with a razor, as they lay asleep in the same apartment with him. He was happily prevented from fully executing his horrible purpose by the brothers awaking, but not before he had inflicted several severe wounds upon them.—On the 25th ult. the steam-boat *General Vance* left the wharf at Detroit, and went over to Sandwich, on the Canada side, to take in passengers. Immediately after leaving the wharf the boiler burst, killing four persons, and the vessel immediately sunk.—Sir John Guest stated in the House of Commons, the other evening, that he paid in poor-rates more than £1000 per quarter. Every mill, every piece of machinery, every steam-engine, was assessed to the poor.—A letter from Gibraltar says, that no doubt existed that matters would be settled between Spain and Morocco without the former having to proceed to extremities, as the mediation of the British Consul would have its weight with the Emperor, notwithstanding the reports which had been propagated to the contrary.—All the hay about Brussels has been got in. During many years past there has not been so great an abundance of it as there is this season. In consequence of the anticipated scarcity of hay in England, we understand that some extensive farmers near Ghent and Brussels are fully prepared, in case of need, to supply our home market.—*Brussels (British) Gazette.*—O'Connell, according to a statement made at the Repeal Association on Monday, is joyous and buoyant, and occupies himself with "practising gymnastics;" so that, it was added, when he comes out of prison he will have acquired not only additional strength, "but more grace of attitude."—Another bridge across the metropolitan portion of the Thames is proposed. Among the speculations of the day is a plan of a metropolitan junction railway, one of the most conspicuous schemes of which is the formation of a railway bridge across the river Thames at Battersea.—Wednesday forenoon an inquiry took place before J. J. Mills, deputy coroner for Middlesex, and a most respectable jury, at the Strand Union work-house, Cleveland-street, on the body of William Edward Carson, aged 32, who died from the effects of starvation and destitution. A witness stated that whilst deceased was at the hospital he was questioned, and stated himself to have been a barrister's clerk in the Temple. He had not tasted food for three days. He had some bread in his pocket, but he said his destitution had become so great that his stomach could not take it. He was in the most deplorable condition, and on being searched, all that was found on him was a piece of bread and an old pocket-book, containing his certificate of baptism, extracted from the register of the church of St. George's, Bloomsbury. The jury returned a verdict—"That the deceased died from extreme exhaustion, produced and imbibed from destitution, and the want of the common necessities of life."—Mr. Bally, the Academician, has just completed a colossal cast of the late Duke of Sussex, of which a private view was given on Wednesday in the artist's studio, Percy-street. Among the visitors was the Duke of Cambridge, who stated that the figure was the finest likeness extant of his late illustrious brother.—Intelligence has arrived by the way of Trichinopoly (from whence the dates are to the 24th of June), announcing the safe arrival at Bokhara of the Rev. Doctor Wolf, and that he had been kindly received by the Bokharees. No mention, however, is made as to whether he had found the objects of his journey, and therefore the next accounts are looked forward to with great anxiety.—From a return, moved for by Mr. Hindley, the member for Ashton-under-Lyne, of all children who have been removed from union houses into the army and into the navy, &c., it appears that, in England, the total number of children so removed into the army, amounts to 132, and into the navy, 139; making altogether 271. Of these 137 were from 10 to 15, and 134 from 15 to 20 years of age.—The Secret Committee on the Post-office has held a meeting, Lord Sandon chairman. The Earl of Aberdeen was the first witness examined.—A new telescope comet was discovered at Paris, on the 7th inst., by M. Victor Maury.—The Wesleyan conference will be held this year in Birmingham. It will commence its sittings on Wednesday, the 31st inst.—Petitions to both Houses of Parliament, emanating from the Pro-Corn-Law Society, are now being hawked about Horsham for signature by an ex-Liberal lawyer, praying protection against any further diminution of the landlords' monopoly.—The present possessions of France in Africa cost her from two to three millions sterling a year, and require an army of 100,000 men.—The number of vessels which have gone to the African coast in search of guano is not less than 600, at the lowest estimate, a great number of them being very large ships.—It appears, by a tabular statement in the *New York Herald* of June 24th, that the arrivals of emigrants from the 1st to the 24th of that month amounted to the extraordinary number of 13,683! Of these about 3000 are from this country, and the remainder chiefly from Germany.—At the Devonshire quarter sessions, last week, there were 100 prisoners for trial. The Earl of Devon, in charging the grand jury, expressed himself at a loss to account for the largeness of the number. "Every session," said his lordship, "we have from 80 to 100 prisoners for trial. So to what a state we have come!

I cannot account for it, nor can I discover a remedy."—It appears by the recent accounts from the United States that, down to the latest dates received at New York on the 29th ult., just before the sailing of the *Acadia*, the receipts at the cotton ports of the United States amounted to 1,964,248 bales, against 2,310,726 bales at the corresponding period of last year.—At the meeting of the Repeal Association, at the Conciliation-hall on Monday, the rent for the week was announced to be £1688 14s. 3d. The hall was crowded to excess; among those present were Mr. H. Grattan, M.P., Mr. E. B. Roche, M.P., and Sir Valentine Blake.—The Irish Judges on the circuits have, in almost every instance, congratulated the grand juries on the peaceable state of the counties, as set forth on the face of the calendars.—Mr. Smith, of Holborn, who was wounded by the Hon. Mr. Touchett, is progressing favourably, and strong hopes are entertained that he will ultimately recover. On Monday, the piece of coat which was carried into the wound by the bullet forced itself out. The bullet has not yet been discovered, but it is supposed by the medical gentlemen who attend him that it is lodged between the fangs of the vertebra, having been stopped there in its progress, and prevented from injuring the spinal chord.—The convict *Dalmas*, whose sentence has been commuted to transportation, will be shortly placed on board the *Agincourt* convict ship, now lying off Deptford, which will soon sail for her ultimate destination.—The new Governor-General of India reached Alexandria in the *Geyser*, from Marseilles, on the 22nd of June, and after having had one public and several private audiences with the Pacha, left on the 25th for Cairo.—A committee, upon a general meeting, has been formed for the purpose of watching the progress of the Savings' Banks Bill when it is introduced into Parliament.—The great extent of the growth of potatoes for the London market is shown by the circumstance of one gentleman in Essex having received from a London dealer for his crop on the ground the sum of £2230.—The public petition on behalf of a repeal of the Legislative Act of Union between Ireland and Great Britain, laid down for signature in Glasgow during the last week, was signed, in four days, by no fewer than 40,000 inhabitants.—At the Chelmsford assizes, a boy, nine years of age, was convicted of setting fire to a barn, by which property to the value of £400 had been destroyed. Sentence deferred.—From almost all parts of the country where recently wool fairs have been held, the results have been most satisfactory. In some instances the improvement is asserted to have been from 7½ to 10, and in a few instances 15 per cent.—Earl de Grey and suite took his final departure from Dublin on Tuesday.

THE HEAVY DUTY ON SUGAR.—Large quantities of green rhubarb lately brought to the London market being unsaleable, were carted to the dunghill. The true reason of this waste appears to be that, through the heavy duty levied on sugar, it is very much out of the reach of the poor, and rhubarb, we know, cannot be eaten without sugar. The high price of sugar also prevents cottagers from using the produce of their little gardens, gooseberries and currants, which induces them to offer these fruits in the neighbouring towns, and here again there is the same disappointment—after toiling through the streets for many hours in search of customers, these poor people are often compelled almost to give away their fruit, the oppressive duty on sugar depriving them of purchasers. In the recent debate on the sugar duties, the Earl of Radnor stated that the allowance of sugar to each seaman in the Queen's navy was double the quantity consumed by the cottager at home; and the Marquis of Lansdowne also stated that the convict transported to New Holland could obtain three times as much sugar as the honest labourer in England!—*Sun.*

BRITISH SHIPPING.—We mentioned last week that the opening of the guano trade had greatly relieved British shipping, and put an end, for a time, to the ruinous competition for freights, which had for some time existed, but we had not, at that time, any idea of the number of vessels which have gone to the African coast in search of this new manure. We have since learnt that it is not less than 600, at the lowest estimate, and that some persons even estimate it as high as 800, a great number of them being very large ships. It is, therefore, no wonder that the taking up so many vessels, at good freights, and the withdrawing them from the usual trade, has had a good effect on freights, and on the demand for shipping everywhere.—*Liverpool Times.*

CONDITION OF THE WORKING CLASSES.—In one of his lectures delivered to the working classes of Edinburgh, Mr. Simpson thus refers to the Corn Laws as a cause of their depression:—"As his lectures were to be, at their own request, addressed to the improvement of the character and condition of the working classes, his first inquiry was what that condition and character really were. He showed that they suffered in part from causes not, at present at least, within their own control. He told them plainly that neither the intellectual nor moral character of the masses of the people was yet brought to a satisfactory elevation. A general system of enlightened education alone would work out that important result. That at present is denied them, but it will come. The food of the country is not adequate to the population. (Hear, hear.) By yet prevailing ignorance and prejudice, agriculture, in four-fifths at least of these islands, is so low as to reap from the land scarcely one-half of its proper production. The sea teems with nutritious food, sufficient itself to feed the people; but we are not yet so far civilised as to command these vast supplies. Fleets should be engaged in the fisheries. Edinburgh is supplied by what a few fishermen can carry on their backs! The food produced in foreign countries is a prohibited supply. He could not avoid alluding to that as one cause of the depressed condition of the working classes, although circumstances had rendered it a vexed political question. That such restrictions are suicidal, was his conviction long before they became the subject of political controversy (cheers), and although he abjured party politics in his addresses, he could not pass over this great evil, which stands prominent in his way. (Renewed cheering.) The same restrictions recoiled and produced another cause of depressed condition—want of work. This was too obvious to require to be dwelt upon. Long before, he repeated, these points had become political, he (Mr. S.) had hoped to see the day when, as long ago counselled by Adam Smith, all restrictions on trade should be removed, and our country rise like a giant unswathed, and command the wealth of the world. (Cheers.)"

REVIEW.

A Guide to the Blackwater. By J. R. O'Flanagan, Esq. London: How.

There is no river scenery in Europe, not even that of the Rhine, which exhibits, within the same number of miles, such an extent and variety of picturesque beauty as the Blackwater in its course from the town of Mallow to the bay of Youghal; and yet to the generality of British tourists it is as little known as the steppes of Tartary or the wilds of Siberia. The line of country through which the river flows is not only productive but luxuriant; and yet there is probably no district within the seas of Britain in which the natural productiveness of the soil has been less fostered by art, and where the physical resources, above and below the surface, have been more signally neglected. The blight of the protective system, which, like the hug of the bear, destroys those it was intended to cherish, is everywhere apparent; landowners and tenants have been taught to rely upon acts of Parliament for results which could only be produced by their own skill and industry; they have looked for miracles from legislation, while greater blessings than even such miracles could have effected might easily have been wrought out by their own exertions.

A river, which might be easily made navigable for sixty miles of its course,—affording to the farmers a market and port for their produce, enabling them to obtain coal and culm to burn their lime, and abundant supplies of the sea-sand, which is their best manure,—has not merely been neglected, but has been artificially obstructed. Two hundred years ago, as we learn from the "Boyle Papers," boats freely sailed up and down the full course of sixty miles, from Youghal to Mallow; they do not now traverse one fourth of the distance, the river being only open from Youghal to Cappoquin. The writer of the work before us justly observes:—

"There is nothing can confer greater benefit on any country than a cheap and ready mode of conveying her agricultural produce to her seaports; or, as the commissioners of public works report, what Ireland stands most in need of at present is, a cheap and expeditious means of having her agricultural produce conveyed from the heart of the country to the extremities. The worst crimes of the people are produced through poverty, and its concomitant idleness, and not through any innate depravity of the population. Remove the cause, and the result is certain of being gratifying to the lover of order and peace. Give but a good line of water-carriage along the Blackwater, and it will be the means of inducing capitalists to establish factories, for they will find every facility for trade: cheap labour, cheap and plentiful provisions, and a ready mode of shipping their goods to the mart for the produce of their industry. Again; see the great blessing to the population who reside in the vicinity of this navigable river. It runs along a country of 75 miles, which, doubling the length of coast, gives 150 miles. For about 50 miles it has a depth of water sufficient for all purposes of internal intercourse. We have, then, 100 miles which would be clearly benefited by the navigation. The greater portion of this line has a substratum of limestone, rendering it dry, and yields an abundant harvest of grain, and other produce. There is, however, much deep loam, strong tenacious soil, requiring manure and labour. Some farms along the banks yield wheat and potatoes, and others lighter crops, while miles of fertile meadow land afford pasturage for droves of sheep and black cattle. Now, it requires but little argument to show how so great a tract of thickly-populated country would be benefited by interchange of products. Sand, so excellent for manure, might be had reasonably. Coal and culm to burn lime might be brought in a lighter of from 50 to 60 tons to Cappoquin or Lismore, and then transferred to flat-bottomed boats for the more shallow waters. Building materials, stone, sand, flags, bricks, slates, &c., could be easily brought from those districts in which they abound, and readily disposed of where they do not exist, and are only to be procured now at a great expense. The towns would derive much benefit also from the intercourse of passengers and strangers. Possessing the attractions of exquisite scenery, it is more than probable that thousands of our fellow-subjects of this and the sister countries, hitherto ignorant of the lovely landscapes on every side of the river, will gladly avail themselves of the means afforded to permit their enjoying them, and resort to our hotels and places of entertainment. The Rhine has become familiar as a high road, and even Switzerland is now well known: any novelty is sure to have an influx of visitors; and I feel proud to say the banks of the Blackwater from Youghal to Mallow, and for miles higher, may fairly rival those of any European river for the same distance."

Sir Richard Musgrave, one of those intelligent landed proprietors who, like the Marquis of Westminster, the Earls Ducie, Radnor, Spencer, and Fitzwilliam, has long seen the suicidal influence of the Corn Laws, and the evils which arise from a dependence on legislative protection, has honourably exerted himself to restore the ancient free navigation of the Blackwater river. As there never was an abuse that was not profitable to somebody, his patriotic efforts have encountered some opposition. A pamphlet has been sent us written by a gentleman bearing the sounding name of Nelson Trafalgar Foley, the perusal of which would justify the substitution of Folly for Foley in the title-page. This gentleman declares that the upper Blackwater is innavigable, though he has seen it navigated with his own eyes, and this, too, in a very hot season, when the supply of water was more than usually scanty. Mr. Foley's opposition to Sir Richard Musgrave's project whimsically resembles the Duke

of Richmond's hostility to Sir Robert Peel's tariff. "There is salmon in both." So far as we can comprehend his not very intelligible reasoning, he fears that the opening of the river navigation might interfere with some salmon fisheries which he rents from the Duke of Devonshire, and of course he thinks that the agriculture of the entire valley of the river, and the comfort of the thousands of families dependent on that agriculture for support, should weigh but as dust in the balance against the salmon to be caught in the weirs of Mr. Nelson Trafalgar Foley. But it is useless to waste words on this "Triton of the Minnows," and we turn with pleasure to the beautiful volume before us.

This work is chiefly designed as a guide to tourists, and we trust that its publication will lead many to visit the beautiful scenery which it describes. The bay of Youghal, into which the river Blackwater disembogues itself, is full of attractions not only to the lovers of the picturesque, but also to the students of geology and natural history. Its submarine forest, from which large quantities of peat

are annually dug, contains the bones of several indigenous animals now extinct in Ireland; and the

trees that are sometimes dug up near low water retain their leaves and fruit, little injured by the lapse of centuries. Few bathing-places in Great Britain possess such a convenient beach, and such

complete seclusion for those who dislike exposure while enjoying the healthful luxury of a dip in the ocean; and still fewer have more romantic scenery surrounding it in every direction. To the antiquarian its old collegiate church, the ruins of its monasteries, and the remains of the preceptory of the Knights Templars above the town,

furnish many objects of attraction, and suggest interesting themes of historic reflection. Nor should Sir Walter Raleigh's house escape notice; it was for some time his favourite residence, and in its gardens he planted the first potatoes ever introduced into Ireland. In the engraving which we give, the ruined choir of the old collegiate

church is seen in the distance, with part of its stone window, which is fully equal to that in the cathedral of Rouen in its richness of work, and far more harmonious in its proportions. We should also mention the chapel of the Boyles, forming one

of the transepts of the church, which contains the monuments of the first Earls of Cork and Orrery.

The navigation of the river is now open nearly to Lismore, and the tourist ascending the river in the steam-boat, which plies daily, will meet a continued

series of picturesque panoramic views, one of which, near the ruined castle of Strancally, we give as a specimen. The remains of the magnificent abbey founded by Strongbow's favourite companion, Raymond le Gros, are between Strancally and Youghal; they are well worthy of a long visit, and the proprietor, R. Smith, Esq., is remarkable for the cour-

tesy which he exhibits to strangers. In the parts of the river about to be opened for the purposes of internal navigation there are so many interesting objects that we must refer our readers to Mr. O'Flanagan's work; but, among modern edifices, we must notice Castle Hyde, the beauties of which have been celebrated by many rustic bards, and

versal justice, still it will have done good service by relieving the dreariness of political life by the cheering light of literature and philosophy. It is something that, amid the managers of red tape and the feeders of cattle, amid the routine of officials and the sluggishness of country squires, there should appear a burst of energy and vitality which gives hope of some improvement. Hitherto the Conservative party has been like some inert mass of brute matter, powerful only in its weight and magnitude, and possessing no better claims to respect than unwieldiness and immobility; but now a part at least of it is instinct with life:—

"Infusa per artus

"Mens agitat molem et magno se corpore miscet."

Mr. Smythe's first lyric is devoted to the ancient aristocracy of France, and the historic recollections connected with that brilliant nobility now little better than

"Dream of a dream, and shadow of a shade."

He has read a part, at least, of the moral to be deduced from this wreck of feudalism's proudest chivalry:—

"Why deplore the excesses of an oppressed population? It is the tendency of misery to brutalise. Why regret the perfidy of nobles? It is the tendency of prosperity to harden. Their education and pursuits alike prepare and exact the condition which is essential to their existence. It is the very nature of an aristocracy to be sycophantic during the stability of monarchy, and perfidious during its decline. Woe to the sovereign who confided in,—Woe to the people who submitted to them!"

"I have thus endeavoured to show, while the French aristocracy was attired in her robes of state, and decked out with all those golden presents which the Bourbons delighted to lavish on her, that she was unsound, and rotten to the core. Brilliant as was her illustration, I have not been blind to her defects. With reign after reign, which I have been considering but a succession of glory, and renown, and panegyric for the same names, I have not repeated this without referring to the vice which detracted from them. But the aristocracy of France is now presented to our view in a far different attitude and aspect. They have undergone a great and terrible vengeance. They have been doomed to a shameful and bitter penance. Emigration and Death with the Revolution,—Exile and Proscription with the Empire,—Slight and Disappointment with the Restoration,—Disqualification and Disgrace with the July dynasty! From the moment when their fathers rode out of Paris, with the flames still smouldering beneath the ruins of the Bastille, down to this our own time, their career has been one long mortification. The sternest of moralists will admit that the retribution has been more than ample. The severest of republicans might be moved at the recollection of some among its earlier passages. It is little more than half a century ago when fair ladies and princesses—the most winning in their manner, the most tender in their love and friendship, the most beautiful in grace and form that ever shone through a crowded drawing-room—were dragged by their hair into the street—were flung by one butcher to another with unseemly and ribald jesting—were tossed upwards to the nearest lantern, there to hang—were mocked and taunted in their dying agonies—were mutilated even before life had departed, while pieces of their delicate flesh were displayed as trophies by savages, with wild dancing and ferocious song. Or, perhaps, a more lingering fate awaited them. There was many a daughter of a patrician race, whose whole life had been one of charity and good, the only changes of which had been from a father's house into a convent, and from a convent to a prison, and whose sole consolation there was laid in the fresh arrivals which informed her that the hour of her death and liberation must be near. Imagine the scenes before her eyes, the prayers and the oaths, the blasphemies and the tears—the contrast of vice and virtue. Here the meeting of a father and a son, who had each hoped that the other might survive. There the reproaches and the curses of some victim to his Judge of the week before, now become himself a victim. Upon this side, the terrible earnestness of irony, with which men acted their own judgment and execution. Upon that side, the blindfold game, which was to show who was to be the next to die. And these were the daily spectacles which a young maiden had to look upon, whose only ideas of mankind had been derived from the holy men to whom she had confessed, or the poor whom she had relieved."

The whole truth is not, however, told in this clever essay; the ancient aristocracy of France perished because it sacrificed the interests of the entire community to the aggrandisement of its class so recklessly and so ostentatiously that the entire body of the people became convinced that the existence of the order was inconsistent with national prosperity. It is forgotten that the mad excesses of the Parisian populace were retributive; and it is not generally known that the most sanguinary excesses were perpetrated by the parties of the populace which, from various circumstances, had been brought into closest connexion with the families of the nobles. It is not necessary to enlarge on this theme, and we shall merely quote Mr. Smythe's portraiture of the present condition of Gaul's old nobility:—

"Oh never yet was theme so meet for roundel or romance
As the ancient aristocracy and chivalry of France.

As now they lie in poverty; and dark is their decline;
For the sun that shone so long on them, it now hath ceased to shine.

And the mighty house of Bourbon, that made them what they were,
Kneels humbly at the Austrian's feet, beneath the Austrian's care.

And the nineteenth Louis knows not France, and his queen she never sees
Her soft St. Cloud, her Rambouillet, her solemn Tuilleries;

especially by one whose singular lays first suggested the well-known "Groves of Blarney." Among other natural curiosities, the poet mentioned

"The trout and salmon
A-playing backgammon,
To charm the ladies by the water side."

And not less singular was his account of

"The bees perfuming
The air with music,
All to adorn sweet Castle Hyde."

Among the objects of antiquity, we shall only mention the castles of Lismore and Mallow; and the engraving which we give of the latter precludes the necessity of description.

Historic Fancies. By the Hon. G. S. Smythe, M.P.
London: Colburn.

This delightful volume, the production of a thoughtful, cultivated, and ingenuous mind, has many claims upon our attention, but none greater than its manifestation of sympathies with all that is excellent, all that is noble, and all that is true, irrespective of sect, party, or faction. There are no doubt traces of that immaturity of opinion which in some degree is characteristic of the party designated "Young England;" for though that party is honourably distinguished by having a principle and a purpose, it shrinks from following that principle into all its consequences, and evolving that purpose into its necessary results. But, were the short-comings of "Young England" even greater than they are, still its members would be entitled to respect, because they have made their appeal to the intelligence of the country: they have taken their stand on literature, philosophy, and historic lore in preference to the brute force of feudalism and the meaner arts of intimidation and corruption. It is a party that seems to have arisen for the express purpose of falsifying the proverb, *Noscitur a sociis*; for the section of Young England is wholly unlike every other division of the great party with which it is usually, though loosely, connected. It is equally removed from the trickery and artifice of the Tapers and Tadpoles on the one side, and from the stolid obstinacy of the country squires on the other; it may accompany these allies for a certain distance, but "it will not march with them through Coventry, that's flat." As a party, it is yet in its early youth, and has not gained sufficient confidence in itself to venture on independent action: it has indicated rather the courses it will avoid than those that it will pursue. The volume before us, whether viewed in its relation to the author or to the party with which he is connected, replete as it is with literary promise, is still richer in its promise of political integrity. It

is impossible that a mind so highly endowed and so sedulously trained should submit to the fellowship of obstinate stupidity and hereditary dulness; it must revolt against the Mezentian policy which would thus unite vivid genius with inert stolidity; it cannot be "cribbed, cabined, and confined" by mere conventionalisms and traditional phrases, which, by the progress of time, have lost the little meaning they ever had; the genius that produced the "Historic Fancies" is one that cannot be trammelled by party:—

"The captive thrush may brook the cage;
The prison'd eagle dies for rage."

After having read this volume it is impossible to avoid feeling an affectionate respect for the author, and a sincere anxiety for his pursuing the right course, which he shows that he can both perceive and appreciate. But, at the same time, we know too well the difficulties which a man must encounter when he steps out from his order and his party to advance the general good of mankind. He will have to bear up against the calumnies of the envious, the sneers of the thoughtless, the reproaches of the prejudiced, and the artifices of the designing; but, what is infinitely more difficult, he will have to steel himself against the remonstrances of old friends, and the whispered fears of near connexions; he must look for at least a temporary life of isolation, and a long career of labour, to win back by repeated triumphs the respect which his associates now accord him almost as a birthright. It is for this reason that we look forward to the author's future career, and to the course generally which Young England will pursue, with some anxiety; hope, however, predominating over fear:—

"Si qua fata aspera rumpas,
Tu Marcellus eris."

But even should the trammels of party and hereditary association prevent Young England from asserting the manly and generous principles of uni-

And the revel, and the pageant, and the feast that were of yore,
And courtly wit and compliment—these things are now no more,
Save in some old man's memory, who loves to ponder yet
On Lamoignon's playful jesting, and the smile of Antoinette.
And bids his son remember how the middle classes reign
In the Basille of Monarchs, and the nobles' old domain!"

In one of the most powerful ballad lyrics which we have seen for many years Mr. Smythe has portrayed the feelings with which the ancient aristocracy of France was viewed by the frenzied populace at the time of the Revolution. He shows us that there was method in the Jacobin's madness, and retribution in his ferocious excesses. We shall quote the entire poem. It exhibits an extraordinary power in the writer of entering into the feelings and seizing on the motives of parties the most opposed to his own principles:—

"THE JACOBIN OF PARIS.

"Ho, St. Antoine! ho, St. Antoine! thou quarter of the poor,
Arise with all thy households, and pour them from their door;
Rouse thy attics, and thy garrets,—rouse cellar, cell, and cave,—
Rouse overworked and overtaxed,—the starving and the slave.

"'Canaille'—ay, we remember it, that word of dainty scorn,
They flung us from their chariots, the high and haughty born.
Canaille—canaille—ay, here we throng, and we will show to-night
How ungloved hand, with pike and brand, can help itself to right.

"It was a July evening, and the summer moon shone fair,
When first the people rose, in the grandeur of despair.
But not for greed, or gain, or gold, to plunder or to steal;
We spared the gorgeous Taileries,—we levelled the Bastille.

"A little year, we met once more, yea 'Canaille' met that day,
In the very heart of his Versailles, to beard the man Capet;
And we brought him back to Paris, in a measured train and slow,
And we shouted to his face for Barnave and Mirabeau.

"Ho, Condé, wert thou coming, with thy truant Cavaliers,
Didst thou swear they should avenge the Austrian wanton's tears?
Ho, Artois, art thou arming, for England's ceaseless pay,
Thy Brunswickers, and Hessians, and Brigands of Vendée.

"Come, then, with every hireling, Slave, Croat, and Cossack,
We dare your war, beware of our's—we fling you freedom back.
What, Tyrants, did you menace us,—now tremble for your own!
You have heard the glorious tidings of Valmy and Arbonne!

"How like the Greek of olden time, who in the selfsame hour,
At Platœa, and at Mycæ, twice crushed the invader's power,
So we had each our victory, and each our double fray,
Dumouriez with the stranger, and we at the Abbaye.

"O but it was a glorious hour, that ne'er again may be,
It was a night of fierce delight we never more shall see.
That blood-stained floor, that foes' red gore, the rich and ruddy wine,
And the strong sense, all felt within,—our work it was divine!

"They knew that men were brothers, but in their lust they trod
On the lessons of their priests, and the warnings of their God.
They knew that men were brothers, but they heeded not the Lord;
So we taught them the great Truth, anew, with fire and with sword.

"O but it was a glorious hour, that vengeance that we wreaked,
When the mighty knelt for pardon; and the great in anguish shrieked!
But we feared them for their little hearts, and mocked their selfish fears,
For we thought the while of all their crimes, of twice five hundred years.

"He used to laugh at justice, that gay aristocrat;
He used to scoff at mercy, but he knelt to us for that.
But, with untiring hate, we struck, and, as our victim fell,
He heard,—to hear them echo soon,—the cries and jests of hell.

"Ho, St. Antoine, arouse thee now,—Ho, brave Septemberists all,
The tocsin rings, as then it rung! Arise unto its call.
For the true friend of the people, and our own Père Duchêne;
Have told us they have need of the people's arms again.

"For the Gironde hath turned traitor, and the Moderates have sold
The hard-earned rights of Hoche's fights for promise of Pitt's gold.
And the pedant, and the upstart, as upstart only can,
Have dared deride, in lettered pride, the plain and working man.

"What we, who burst the bondage our fathers bore so long,
That oppression had seemed sacred in its venerable wrong,—
What we, who have outspoken, and the whole world obeyed,
With its princes and its monarchs on their high thrones afraid.

"What we, who broke that mighty yoke, shall we quail before Brissot?
And shall we bow to him as lowly as he would have us low?
And shall we learn the courtier's lisp, and shall we cringe and sue
To the lily hand of fair Roland, like love-sick Barbaroux?

"No, by great Heaven, we have not riven—the mighty chains of old,
The state-craft, and the priest-craft, and the grandeur and the gold,—
To be ground down by doctrines, to be crushed by forms and schools,
To starve upon their Corn Laws, but to live upon their rules.

"No, if we must have leaders, they like ourselves shall be,
Who have struggled and have conquered with single hearts and free;
Who do not ape the noble, nor affect the noble's air,
With Tallien for a Richelieu, and Louvet for Voltaire.

"No, we will have such leaders as the Roman tribunes were,
Couthon, and young St. Just, and simple Robespierre,
Now glory to their garrets, it is nobler far to own,
Than the fair half-hundred palaces, and the Carolingian throne.

"And glory to the thousand proofs that day by day they give
Of some great end to which they tend, those solemn lives they live.
When the Monarch and the Anarch alike shall pass away,
And morn shall break, and man awake, in the light of a fairer day."

Passing over some very powerful sketches of the leaders in the French Revolution, we turn to the ballad lyric on "The Merchants of Old England," never more worthily celebrated than they have been by this aristocratic poet. In this spirit-stirring song the appreciation is earnest and sincere, the feelings are the genuine emanations of the soul, and evince a mind trained to investigate the real causes of moral greatness. The lines describing the origin of the United States will find an echo beyond the Atlantic:—

"Then, when long years had glided by, in those colonies they made,
The same free spirit, which was theirs, in those plantations stayed.
As refuge here and shelter full many an exile found,
When the Old World grew in dotage, and by priests and kings was bound,
And in some far savannah, where man had never been,
They came with thoughts as simple as was that savage scene;

Or in the lonely prairie they kept their solemn trust,
When Sacred Word and Hymn were heard, and the equal laws of Christ.

"And the young and strong Republic was by these in virtue bred,
She was cradled in adventure, she was nursed in good men's dread;
The young and strong Republic that has filled the world with fame,
And with great praise and marvel of the Anglo-Saxon name.
And well she shows her origin in the deeds that she has done,
With her Franklin, and her Whitney, and her hero Washington.
Then glory to the fathers who had such sons as these,
The merchants of Old England, the seigneurs of the seas!"

The concluding description of English commerce at the present day is bold and striking:—

"The land it boasts its titled hosts—they cannot vie with these,
The merchants of Old England—the seigneurs of the seas,
In the days of Queen Victoria, for they have borne her sway

From the far Atlantic islands, to the islands of Cathay,
And o'er one-sixth of all the earth, and over all the main,
Like some good fairy, freedom marks and blesses her domain.
And of the mighty empires that arose, and ruled, and died,
Since on the sea, his heritage, the Tyrian looked in pride,
Not Carthage, with her Hannibal, not Athens when she bore

Her bravest and her boldest to the Syracusan shore.
While the words of Alcibiades yet echoed wide and far,
'Where are corn fields, and are olive grounds, the Athenian's limits are.'

And in each trireme was many a dream of the West, and its unknown bliss

Of the maidens of Iberia, and the feasts of Sybaris—
Not in those younger ages, when St. Mark's fair city ran
Her race of fame and frailty,—each monarch's courtesan,
Not Lusia in her palmier hour, in those commercial days,
When Vasco sailed for Calicut, and Camoëns sang his praise,

Not Spain with all her Indies, the while she seemed to fling

Her fetters on the waters, like the oriental king,
Not one among the conquerors that are or ever were,
In wealth, or fame, or grandeur with England may compare.

But not of this our Sovereign thought, when from her solemn throne
She spoke of the poor, and what they endure, in her low thrilling tone,

And offered a prayer that trade might bear relief through the starving land,
To the strong man's weakened arm, and his wan and workless hand.
And by the power, that was her dower, might commerce once more be
The helper of the helpless, and the saviour of the free.
Then glory to the merchants, who shall do such deeds as these,
The merchants of Old England, the seigneurs of the seas."

It is with grief we add that the name of this powerful advocate for the extension of commerce was found in the list of the monopolist majority that rejected Mr. Villiers's motion, and that the same list contains the name of the author of "Coningsby," to whose eloquent denunciations of commercial restriction we recently directed the attention of our readers. This is a sad anomaly; it proves that men of the highest intellectual endowments shrink from following out right principles to all their consequences—a proof that their faith in those principles is as yet hesitating and wavering. Neither of these authors, however, belongs to the class of minds that can rest satisfied with an imperfect creed. In this volume Mr. Smythe has given abundant proof of his power to burst through the prejudices of position and the conventional trammels of mere party: there is a universality in his sympathy which is freely accorded to every phase of intellectual and moral might. He will not long be found among those whose vision is limited by their own acres, and who can go no farther in calculation than examining the coarsest means of swelling a rent-roll. He must soon discover that the wealth of an aristocracy will be secured and extended by its taking the lead in all measures that will promote the general prosperity of the country. He cannot help despising the selfish envy which grudges their gains to the merchant and the manufacturer; and he must detest the servile degradation of those who have harnessed themselves to the chariot of a minister, content to endure whip, curb, and rein, provided that they are allowed the privilege of trampling upon others. A Richmond mourning over his fisheries, a Mountcashel requiring the operatives to bear the burden of his mortgages, and a Knatchbull demanding that artificers and tradesmen should be taxed in their bread and stinted in their food to provide settlements for his younger children, are examples of aristocratic meanness from which a mind so richly gifted as that of our author must revolt with disgust. "The instruments of the churl are evil; he deviseth wicked devices to destroy the poor with lying words, even when the needy speaketh right; but the liberal deviseth liberal things, and by liberal things shall he stand."—(Isaiah xxxii., 7, 8.)

Blackstone's Commentaries on the Laws of England.
Edited by J. Stewart, Esq. London, Spettigue.

This is far the best edition of Blackstone's admirable work with which we are acquainted. The changes which have recently been made in our code of law have made but little change in the great principles of our common law, but have nevertheless led to such important alterations in many of their forms that the usefulness of the "Commentaries" was greatly impaired, both as an elementary guide for students and a book of reference in practice. Under these circumstances Mr. Stewart has performed good service to the legal profession and the public at large by adding continuously in the text all the changes that have been made in the law since the days of Sir William Blackstone, preserving, however, in the past tense the portions that have been so altered. The task was one which required a rare union of ability, integrity, and industry, qualifications possessed by Mr. Stewart in an eminent degree, combined with a clearness both in conception and expression which often reminds us of the best parts of Fearn's "Contingent Remainders." To the young student about to enter on the preliminaries of his very difficult profession this edition is peculiarly valuable: it will solve many doubts and remove many of his most formidable difficulties. But the value of the work is not limited to professional purposes: it is the best summary of our constitutional codes which can be placed in the hands of those who desire to obtain that knowledge of the English constitution and English law which ought to form an indispensable part of the education of every English gentleman.

The Poetical Works of Ebenezer Elliott. London, Steill.

We have so recently and at such length noticed the works of this eminent poet that we shall not now dwell upon their merits. The cheap and beautiful form in which they are now brought before us places them within the reach of persons of the most moderate means; and we sincerely hope that this great poet of the people will find his way into the house and heart of all who suffer by monopoly, until his brilliant denunciations of the injustice of all class legislation be rendered as "familiar in all mouths as household words." We should gladly

and the following brief song made the rallying cry for all honest voters in a contested election:—

"What is bad government, thou slave
Whom robbers represent?
What is bad government, thou knave
Who lov'st bad government?"

"It is the deadly Will that takes
What labour ought to keep;
It is the deadly power that makes
Bread dear and labour cheap."

Elliott is not so well known in the south of England as he deserves to be. There is a notion abroad that he has written for the operative rather than the farm-labourer. This is a great error. He could not advocate for the one without pleading for the other. The burdens imposed by class legislation fall on all classes of the industrious: they are badges of slavery but slightly disguised. The Corn Laws enable the oligarchy to wrest a portion of his earnings from every one who lives by toil, whether he works beneath a shed or under the open sky, whether his days be spent in the factories or in the fields. We should, however, be glad to find Elliott addressing himself directly at the present moment to the unfortunate cultivators of the soil: on them the tyranny of the Corn Laws falls with crushing weight, and they sink in despair because they believe themselves placed beyond the range of intelligent sympathy. Words of consolation from Elliott's muse would cheer their wretchedness:—

"Like moonlight on a troubled sea,
Brightening the storm it cannot calm."

ON THE EFFECTS OF RAIN.—The benefit derived from rain is not, as many persons imagine, so much from the actual contact of water to plants, as from the presence of certain matters which it contains, and are obtained by its dissolving them out of the atmosphere as it passes through it on its way from the clouds to the earth. The fact that rain-water acts differently to ordinary spring-water, is, I may say, known to all; how very much better plants thrive when watered by "Nature's fountain" to those that are supplied from below, is equally admitted: but the reason of this superiority is not, I believe, generally known; it is, therefore, my intention to state in what the difference consists, though in as brief a manner as possible. Rain-water is commonly known under the name of "soft," while spring water is called "hard:" the one is soft from containing a peculiar matter, that is, ammonia; while the other is hard from containing lime. It is not within the precincts of these observations to explain how it is that ammonia finds its way into the atmosphere—it is sufficient to state that it does so, and that the rain in coming to the earth brings it down, just as we may imagine how the dust in a flour-mill would be brought to the floor by a shower of water, with this difference—that the ammonia is a gas, or invisible matter, and therefore its presence cannot be seen. Now, the ammonia which occasionally exists in the air is a necessary ingredient in the formation of plants, and consequently it becomes essential to their existence, and forms, in fact, a part of their food; therefore, during a dry season, though plants may be dying for want of water, they are also starving for want of ammonia. Any persons having a grass plot may illustrate this themselves, by watering one half with spring-water, while the other half is sprinkled with water that has had some ammonia* put into it. In a short time the luxuriance of that which has had the ammonia will be developed. The presence of water, either hard or soft, is doubtless of the greatest value to plants: without it they could not exist, because a certain amount of liquid is absolutely necessary to cause their juices, sap, or blood, to flow. A well-manured field contains sufficient ammonia for the crop that is to come off it; but plants cannot take up or eat ammonia without it is first dissolved in water. There are other salts which are equally necessary for plants, and may be in contact with them; but they cannot absorb them (the salts) but through the medium of water. By a singular provision of nature, water containing a minute quantity of ammonia, as rain-water, possesses the power of dissolving certain salts which ordinary spring-water does not; hence, again, for this reason, rain-water for plants is preferable to spring. Plants take up an enormous quantity more water than is absolutely necessary for their composition, but the excess evaporates or dries up from the surface of the leaves, leaving the saline ingredients which it contained in them. As an article of food, "spring-water" to man is preferable to rain-water, because the lime which it contains is a necessary ingredient in the formation of his bones. He also takes more liquid than is requisite to the proper formation of his blood; but the excess is always passed off, carrying with it certain salts which are obnoxious to the system. Although a certain amount of water enters into the composition of the tissue or frame-work of plants and animals, yet its chief use is to act as a more medium of other food, a sort of bearer or carrier which, immediately it has done its work, is cast off by the plant or animal, as the case may be; by animals it is made further subservient in carrying off useless substances. The effects of manures are stopped when there is a want of water to dissolve the saline ingredients they contain. Much of the guano which has been used this year remains in the same state as when first applied, for the same reason. Rain also dissolves other compounds besides ammonia, which it meets with in passing through the air, as "sulphureted hydrogen," which, in many cases, becomes subservient to the plants.—*Shrewsbury Chronicle*.

NEXT EASTER.—The following curious article regarding "Easter Day, 1845," is by Professor de Morgan, and appeared in the *Athenæum* of Saturday last:—"In an article which I have prepared for the next number of the 'Companion to the Almanac,' I have discussed the reasons why Easter-day will next year fall, in apparent defiance of the act of Parliament, upon the very day of the full moon. But, as an accidental application which I

have received (and I know that the superintendent of the 'Nautical Almanac' has received another from a different quarter) makes me think that the computers of almanacs will be puzzled, and that the useless discussion of 1818 (when the discrepancy last occurred) will be revived, unless some one will forthwith state the reason of the difficulty, I request that you will publish some of the conclusions of the paper to which I refer, which will in due time appear in the work cited. And I hope that the daily papers will give additional currency to the same conclusions; and I should recommend that the same thing should be done in the almanacs. The rule adopted in this country for finding Easter is that of the Roman Catholic Church, as established at what is called the reformation of the calendar by Pope Gregory XIII. in 1582. The authority for this rule is contained in the Papal brief of March 1, 1582, in which reference is made, for all explanations to the then forthcoming work of the Jesuit Clavius, to whom both the adjustment and explanation of the calendar had been intrusted. The British Parliament, in adopting the rule of Clavius, made two mistakes in the explanation of that rule. Their explanation is, that Easter Sunday is the Sunday after the full moon which comes on or next after the 21st of March, and that if the full moon fall on a Sunday, Easter Sunday is the next Sunday. The two mistakes are as follow:—1. Instead of 'full moon,' they should have said, 'fourteenth day of the moon, the day of new moon being reckoned as the first.' That Easter, as well as the Passover, was always regulated, not by the full moon, but by the fourteenth day of the moon, is of the utmost historical notoriety. And Clavius says, that 'none but a few who fancy themselves sharpshotted ever imagined that the fourteenth of the moon and the full moon were the same in the Church of God.' 2. Instead of the 'moon' of the heavens, they ought to have said the 'moon of the calendar,' which is a very different thing. The moon of the calendar is not even a mean, or uniformly moving moon to which astronomers refer the real moon; but differs from it intentionally and avowedly, by two classes of arbitrary alterations—the first class intended for simplicity of calculation, the second for avoiding the possibility of the Christian Easter falling on the actual day of the Jewish Passover. In the year 1815, the fourteenth day of the calendar moon falls on Saturday, the 22nd of March, whence Easter* is rightly made to be Sunday, the 23rd, according to the law both of the Roman and English churches, though the English statute does not well explain its own method. With regard to this country, it should be noticed that this statute enacts that Easter shall be kept by the 'calendar, tables, and rules,' annexed to the act: and these agree with Clavius. Of course any one is at liberty, as many did in 1818, to think that the statute should be altered; and certainly it would be worth while to avoid misconception by repealing the faulty definition, and substituting a better one, in the prayer books of the Established Church. But if any one should wish to advocate the repeal of the rules, and the construction of new ones agreeable to the existing definition, and astronomically true, he will perhaps pause when he finds that his own system would sometimes cause it to happen that St. Paul's Cathedral must keep Easter a week after Westminster Abbey, and would very frequently make a week's difference between the festivals of the colonies and the mother country. I remain, Sir, yours faithfully, "A. DE MORGAN."

* University College, London, July 11, 1844.

THE YEARS OF A HOUSE OF COMMONS.—A young horse, wild and skittish at first, is put into the hands of the breaker, and gradually, as it grows older, becomes docile and tractable under its master's guidance. But a young Parliament is of exactly an opposite nature. It exhibits all its docility, and, if ever, is without trick and vice in its early years. This is the golden age, the *Saturnia regna*, in which Ministers of State so much delight. Analyze the thing. As the result of our own observation, we should say, that for the two first years after a general election, the majority of the House of Commons are as submissive as so many negroes and coolies to the voice of their leader. They seem for such a period to be totally dependent upon him; to live only to do his will, and for such a portion of the leaves and fishes as he may choose to cast among them. In the third year, however, they evince symptoms of a more refractory and ungovernable spirit. Many of them by this time have met with either political or personal disappointments at the hands of the Minister. With regard to the one point, they have found out that the imaginary god of their devotions was only a fallible man like themselves. With reference to the other, either they have been able to get nothing in the general scramble, or nothing equal to their hopes and expectations. Murmurs of discontent, therefore, begin to be heard on the benches where all was peace and acquiescence before. Measures which a year ago would have been passed with acclamation, now proceed *sub silentio*, or, it may be, are questioned, opposed, thrown out. In short, the session now expiring, being the third year's session of the present Parliament, will thoroughly illustrate our opinions of the doings of a House of Commons in this era of its existence. But let us proceed. The difficulties of a third year to a Minister are awfully enhanced when a fourth year comes. Visions of the future, as well as thoughts of the present and the past, then begin to flit before the minds of members of Parliament. They have lived two years for the Minister, and one for themselves. They must now look to their responsibility to those horrid, monstrous nuisances, the electors and the people at large. In a fourth session, then, patriots increase in untold numbers in the House of Commons. They are as thick as blackberries on a hedge. The wishes of the people are taken into consideration. Ministers are snubbed and thwarted by the very drudges on the Treasury benches. A fifth year's Parliament becomes more desperately liberal still. A sixth year's even more outrageous in its bids for popularity, and thus the thing goes on increasing so in its ratio, that, if not saved by a dissolution from its legislative attempts, there is small doubt that a House of Commons, allowed to die a natural death, would play such antics in the last moments of its seventh year, that it would give, if the people wished it, a new Ministry and a new Reform Bill twice a week, set up a model republic, or perpetrate anything else which would win favour at the hustings now in view.—*Liverpool Albion*.

WAR.—It appears from authentic documents which Mr. Alison has collected, that, from the commencement to the close of the revolutionary wars, the levies of soldiers in France exceeded four millions, and that not less than three millions of these, on the lowest calculation,

perished in the field, the hospital, or the bivouac. If to these we add, as we unquestionably must, at least an equal number out of the ranks of their antagonists, it is clear that not less than six millions of human beings perished in warfare in the course of twenty years, in the very heart of civilized Europe, at the commencement of the nineteenth century of the Christian era. But even these stupendous numbers give us no adequate conception of the destruction of human life directly consequent on the wars of the revolution and the empire. We must add the thousands who perished from want, outrage, and exposure, and the hundreds of thousands who were subsequently swept away by the ravages of that pestilence which took its rise amid the retreat from Russia, and the crowded garrisons of the campaign of 1813, and for several years afterwards desolated, in succession, every country of Europe. And even when we have summed up and laid before us, in all the magnitude of figures, the appalling destruction of life here exhibited, we can still gather only a faint and remote conception of the sufferings and evils inflicted by this awful scourge. Death in the field is among the smallest of the miseries of war; the burned villages—the devastated harvests—the ruined commerce—the towns carried by assault—the feeble and the lovely massacred and outraged—grief, despair, and desolation, carried into innumerable families—these are among the more terrific visitations of military conflicts, and the blackest of the crimes for which a fearful retribution will one day be exacted at the hands of those who have provoked, originated, or compelled them. * * * Historians rarely tell us of the privations suffered—the diseases engendered—the tortures undergone during a campaign; still less of the vices ripened, the selfishness confirmed, the hearts hardened, by this "temporary repeal of all the principles of virtue." They do not speak of the ties broken—of the peasants ruined—of the hearths made desolate—of grief never to be comforted—of shame never to be wiped away—of the burden of abiding affliction brought upon many a happy household—of all the nameless atrocities, one of which in peaceful times would make our blood run cold, but which in war are committed daily by thousands, with impunity.—*Westminster Review*.

CHINESE SKILL.—During the recent expedition, instances of the readiness and skill with which the Chinese take advantage of any improvement noticed in our mode of warfare or machinery, were constantly meeting the observation of the officers. The most remarkable is related by Commander Hall, in his narrative of the voyage of the *Nemesis* steamer. Finding their war-junks unable to compete with our vessels, they constructed not only gun-boats, but, in imitation of our paddles, wheeled vessels, which were brought forward against us with great confidence at the engagement at Woosung, the last naval affair of the war; and were each commanded by a mandarin of rank, showing the importance they attached to these new vessels! The wheels were of wood, very like an undershot mill-wheel, and were moved by machinery inside. The vessel was worked by a sort of capstan by manual labour, the crew walking it round and round, just like walking up an anchor on board a man-of-war; the horizontal revolution was turned into the upright one by strong wooden cog-wheels upon regular mechanical principles.—*Chambers's Journal*.

THE UPRIGHT MAN OF BUSINESS.—There is no being in the world for whom I feel a higher moral respect and admiration than for the upright man of business. No, not for the philanthropist, the missionary, or the martyr. I feel that I could more easily be a martyr, than a man of that lofty moral uprightness. And let me say, yet more distinctly, that it is not for the generous man I feel this kind of respect. Generosity seems to me a lower quality, a mere impulse, compared with the lofty virtue I speak of. It is not for the man who distributes extensive charities, who bestows magnificent donations: that may be all very well; I speak not to disparage it, I wish there were more of it, and yet it may all consist with a want of the true lofty unbending uprightness. That is not the man, then, of whom I speak; but it is he who stands amidst all the swaying interests and perilous exigencies of trade, firm, calm, disinterested, and upright. It is the man who can see another man's distress as well as his own. It is the man whose mind his own advantage does not blind or cloud for an instant—who could sit as a judge upon a question between himself and his neighbour just as safely as the purest magistrate upon the bench of justice! Ah! how much richer than crime—how far nobler than the train of magisterial authority—how more awful than the guarded bench of majesty, is that simple, magnanimous, and majestic truth! Yes, it is the man who is true—true to himself, his neighbour, and his God; true to his right, true to his conscience—and who feels that the slightest suggestion of that conscience is more to him than the chance of acquiring a hundred estates.—*Dr. Dewey*.

PROVISIONING THE NAVY.—Some idea may be formed of the vast expense of provisioning the navy, from the annexed statement of the stores taken by the *Albion*, 90 guns, when proceeding on her voyage to Gibraltar:—3385 gallons of rum, 1000 lb. tea, 8008 lb. sugar, 4998 lb. chocolate, 1900 lb. peas, 4800 lb. pork, 2290 lb. beef, 10,080 lb. flour, 900 bags of bread, 89 gallons of vinegar, and 619 lb. soap. The quantity of live stock and fresh provisions, poultry, &c., was large in proportion.—*Cork Examiner*.

FARM BUILDINGS BILL.—The Government have just introduced a short bill, to amend the law as to burning farm buildings. It is prepared and brought in by Sir J. Graham and the Solicitor-General (Sir Frederick Thesiger), and contains four clauses only. They enact that whoever shall unlawfully and maliciously set fire to any hovel, shed, or fold, or to any farm building, or any building or erection used in farming land (whether the same shall then be in the possession of the offender, or in that of any other person), with intent thereby to defraud any person, shall be guilty of felony, and on conviction shall be liable, at the discretion of the court, to be transported beyond the seas for the term of the natural life of such offender, or for any term not less than fifteen years, or to be imprisoned for a term not exceeding three years. Persons setting fire to any hay, straw, wood, or other vegetable produce, in any farmhouse or farm building, or to any implement of husbandry therein, with intent to injure or to defraud thereby, will be deemed equally guilty of firing the said farmhouse or farm building. This act is to be deemed a part of the 7th William IV. and 1st Victoria, cap. 89, the provisions of which it merely proposes to extend.

* Persons trying this experiment may purchase a little rough "carbonate of ammonia" of any druggist, about an ounce to a gallon will be enough; have it well powdered previous to putting it in the water.

OCCUPATIONS OF THE PEOPLE IN EVERY COUNTY OF SCOTLAND.

In our publication of Wednesday last we gave the official summary of the various occupations of the people in the whole of Scotland, but without particularising any county. We are now enabled, we believe exclusively, to present our readers with the classification of the population of every county of Scotland into the several great divisions of occupation, in which we have stated, from official documents, those of the entire population of England, Wales, and the islands of the British seas. The following table exhibits the relative numbers of agriculturists and of those engaged in trade, manufactures, and other occupations not agricultural, in each of the thirty-two counties of Scotland:—

Counties.	Farmers, graziers, and yeomen.	Agricultural labourers.	Total in agricultural occupations.	Not in agricultural occupations.
Aberdeen	6,590	15,923	22,513	58,430
Argyll	2,481	3,285	5,766	18,966
Ayr	8,024	7,618	15,642	50,512
Banff	1,958	4,912	6,870	10,842
Berwick	556	5,481	6,037	7,284
Bute	611	755	1,366	3,771
Caithness	1,814	3,164	4,978	6,820
Clackmannan	126	762	888	5,428
Dumfries	571	1,696	2,417	17,526
Dumfriesshire	1,849	8,847	10,696	18,664
Edinburgh	650	5,809	6,459	85,246
Elgin	1,435	3,448	4,883	8,293
Fife	1,181	8,433	9,614	43,603
Forfar	1,718	7,851	9,569	61,339
Glasgow	320	5,708	6,028	7,370
Inverness	2,932	9,727	12,659	16,616
Kincardine	1,160	4,369	5,529	8,453
Kirkcaldy	152	852	1,004	2,457
Kirkcubright	1,123	3,944	5,067	8,522
Lanark	2,527	9,933	12,460	173,262
Linlithgow	369	1,987	2,356	8,586
Nairn	393	1,179	1,572	1,934
Orkney and Shetland	3,959	2,228	6,187	12,224
Peebles	252	1,363	1,615	2,454
Perth	3,734	11,672	15,406	38,213
Renfrew	1,111	4,880	5,991	58,561
Rose and Cromarty	1,659	7,784	9,443	18,209
Roxburgh	688	5,607	6,295	1,1831
Selkirk	86	775	861	2,184
Stirling	1,260	4,905	6,165	25,572
Sutherland	450	2,901	3,351	5,530
Wigtown	1,202	3,684	5,086	7,116
	47,931	166,726	214,657	790,955

As we have already stated, these totals show that the agricultural population of Scotland does not reach one-twelfth of the entire population of that country; while that engaged in trade, manufactures, and other occupations not agricultural, is not very far short of four-twelfths of the whole population! In other words, the agriculturists form only 8.16 per cent. of the entire population; while the great trading and non-agricultural class form 30.46 per cent. of the entire population of Scotland! The following are the other classes, which, with those already given, constitute the aggregate population of that country:—

Counties.	Persons of independent means.	Almspeople, beggars, and pensioners.	Other persons not described.	Residue of population: women and children.	Total population.
Aberdeen	6,837	1,633	377	107,597	192,387
Argyll	1,401	1,019	214	65,017	97,371
Ayr	2,510	680	197	99,885	161,356
Banff	1,581	550	43	29,782	49,079

	68,291	17,799	7,080	1,531,402	2,629,184

The following would be the centesimal proportions of each class of persons to the entire population of Scotland in the year 1841:—

	Per cent.
Agricultural occupations	8.16
Trade, manufactures, &c.	30.46
Independent	2.21
Almspeople, &c.	0.67
Others, not described	0.26
Residue of population: women and children	58.24
	100.00

It may be interesting to contrast Scotland with England in some of these proportions. These are the only two portions of the United Kingdom which can be fairly compared. The returns of the occupations of the people of Ireland are in so different a shape, that it is impossible to ascertain from them, for instance, the number of persons of independent means in the country. Again, no one would think of comparing Scotland and Wales. The following, then, are the centesimal proportions of the people in the various classes of occupations specified in England and Scotland:—

	England.	Scotland.
	per cent.	per cent.
Agricultural occupations	7.40	8.16
Trade, manufactures, &c.	29.56	30.46
Independent	2.81	2.21
Almspeople	0.90	0.67
Others, not described	0.42	0.26
Residue: women and children	58.91	58.24
	100.00	100.00

The differences in the occupations may be thus denoted. The proportion of the people of Scotland en-

gaged in agriculture exceeds that of England by 0.76, and that in trade and manufactures, &c., by 0.90 per cent.; in other words, Scotland has 1.66 more per cent. of her population engaged in various occupations than England. This industrial surplus is caused by the excess of England over Scotland in the following divisions:—England has more persons of independent means by 0.60 per cent.; more paupers, &c., by 0.23 per cent.; more whose occupations are undescribed in the census by 0.16 per cent.; and more unemployed residue of the population (women and children) by 0.67 per cent. These several items just make up the 1.66 per cent. of the excess of Scotland over England in the items above specified. We think this state of facts is calculated to surprise many persons; especially those who regard Scotland as so poor a country, and who will now see that in England there is not one per cent. more of persons of independent means than in Scotland (while there are 0.23 per cent. more almspeople and paupers in England); and those who imagine the industrial classes to be more numerous in England than in any other country in the world; for we find that in this respect Scotland exceeds England by 1.66 per cent. or nearly 1 1/2 out of every 100 individuals! It is possible, however, as the residue of the population in Scotland (after all the previous classification) is smaller than that of England by 0.67 per cent. that part of the difference is due to this source, and part (0.16 per cent.) to the less careful returns of occupations, in taking the census. On the whole, however, it is remarkable how nearly the same proportion of the whole population of each country is maintained in one great class or branch of occupation. This general coincidence, with the slight variations noticed, is a strong presumption in favour of the accuracy of the returns on the whole.—*Manchester Guardian*.

MARKETS.

CORN MARKET.

MARK-LANE, Monday, July 15.—The supply of English Wheat this morning was rather large for the season, the sales made were at a decline of 2s. from this day week, and a considerable quantity remained unsold at the close of the day. There was a slow demand for Foreign at 1s. decline. Barley, Beans, and Peas met a very dull sale at rather lower prices. The quantity of Irish Oats in the return is very large, and in addition about 20 vessels arrived in time for this morning's market, making altogether the largest supply we have had for some months; prices must be quoted 6d. to 1s. lower than this day week, and even at this decline the sale was not very extensive. S. H. LUCAS and SON.

Oats	15338	21s. 11d.	Peas	916 38s. 1d.

FRIDAY, July 19.—The supplies of all grain since Monday are moderate; the largest proportion of the Irish Oats which

appear in the return were in time for Monday's market. There is a slow trade for both English and Foreign Wheat at Monday's rates. There is so little doing in either Barley, Beans, or Peas, that we cannot report any alteration in prices. There is rather a better sale for Oats at Monday's prices. The duty on Beans fell to 5s. 6d., on Barley to 5s., and on Peas to 7s. 6d. yesterday. S. H. LUCAS and SON.

Account of CORN, &c., arrived in the Port of London, from the 15th of July to the 19th of July, both days inclusive.

THE LEAGUE.

No. 44.]

SATURDAY, JULY 27, 1844.

[3d.]

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive a copy, weekly, of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND, are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

REGISTER, REGISTER, REGISTER!

Particulars to be attended to up to the 25th of August.

The overseers must, on or before the 31st of July in each year, make out an alphabetical list of all £10 occupiers, within their respective parishes, entitled to a vote for the borough, including such as occupy the adjoining precincts and liberties, if any. They are entitled to have access to the books of assessed taxes, to ascertain whether the claimant is liable for, or has not paid his assessed taxes "in respect," only, "of the premises."

They must make a separate similar list of all parishioners, other than freemen and liverymen, qualified to vote in respect of ancient rights.

These lists, signed by the overseers, must be affixed on the doors of every place of worship, established and dissenting, within the parish, on the first two Sundays in August—and copies are to be kept for public inspection, without fee, in the overseers' custody.

Persons omitted from these lists will send claims to be registered to the overseers, on or before the 25th of August.

Persons on the first list may be objected to by any one, whose name is on any list of voters for the borough, serving notice of objection on the overseers, on or before the 25th of August.

DUTIES OF CLAIMANTS AND ELECTORS.—Every person should see for himself that his name is inserted in the list of that class of voters to which he belongs. If he have a twofold qualification, he should see that his name is on both lists. This is of great importance, as the voter may lose one qualification between the registration and election, and may still vote for the other.

Any person whose qualification consists of a successive occupation of different premises, should be careful to observe that each set of premises is inserted in the list. He must also be very careful to see that the place for which he claims, and his own place of residence, are very correctly described in these lists. If this should not have been done, he must send in a claim to the overseers, as below, describing all the premises, and also (if he have changed his residence) his new place of abode.

CLAIMS BY PERSONS OMITTED FROM THE LISTS.—Persons omitted from the overseers' lists, should give notice, on or before the 25th of August, to the said overseers, in the following form. If the claim be for a successive occupation of different premises, each of such separate premises must be described:—

To the Overseers of the parish [or township] of —
I hereby give you notice, that I claim to have my name inserted in the list made by you of persons entitled to vote in the election of a Member [or Members] for the City [or Borough] of —, and that the particulars of my qualification are stated in the columns below.

Dated this — day of —, one thousand eight hundred and —

Christian name and surname of the claimant at full length.	Place of abode.	Nature of Qualification.	Street, lane, or other place in the parish [or township], where the property is situate, and number of the houses, if any (when the right depends on property).

(Signed) A.B.

Persons, omitted from the List of Freemen, should give notice to the town clerk in the following form:—

To the Town Clerk of the City [or Borough] of —
I hereby give you notice, that I claim to have my name inserted in the list made by you of persons entitled as Freemen to vote in the election of a Member [or Members] to serve in Parliament for the City [or Borough] of —, and that my qualification is as Freeman of —, and that I reside in — Street, in this City [or Borough].

Dated this — day of —, one thousand eight hundred and —
(Signed) A.B.

And of course, also, as a preliminary, in the rate-book relating to each occupation.

Lists of these claims are to be made out and published, in the manner already described, by the overseers, and the claimant should inspect them, and, if incorrectly inserted in any of the essential particulars, he must attend the Revising Barrister's Court, and get them altered. If, notwithstanding of his making his claim, he is omitted from the list of claimants, he upon attending the Revising Barrister's Court, and proving the serving of his claim on the overseers, will be placed on the register.

Notices of claims must be delivered on or before the 25th of August.

OBJECTIONS TO PERSONS ON THE LISTS.—It is of importance that every voter should carefully examine the lists made by the overseers and town-clerk, to ascertain if the name of any person has been inserted who is not entitled to vote. If there be any such, he is to give to the overseers, or to the town-clerk, a notice of objection, in the following form:—

To the Overseers of the Parish [or Township] of [or to the Town Clerk of the City [or Borough] of] —

I hereby give you notice, that I object to the name of — being retained in the List of Persons entitled to vote in the Election of a Member [or Members] for the City [or Borough] of —

Dated this — day of —, one thousand eight hundred and —
(Signed) A. B. of [Place of Abode]

On the list of Voters for the Parish of —

The notice must also be given to the person objected to, as follows:—

To Mr. —

I hereby give you notice, that I object to your name being retained on the list of persons entitled to vote in the Election of Members [or a Member] for the City [or Borough] of —

Dated this — day of —, one thousand eight hundred and —
(Signed) A. B. of [Place of Abode]

On the list of Voters for the Parish of —

In all notices of objection, the christian name and surname of the person objected to, exactly as it appears in the list, should be written at full length. The christian name and surname, and place of abode of the objector must also be written at length, or the notice will be void.

If there be more than one list of voters, the notice should specify the list to which the objection refers; and if the list contains two or more persons of the same name, the notice should distinguish the person intended to be objected to.

These notices must be given on or before the 25th of August. Copies of the notices should be kept by the person objecting.

Notices of objection may now be sent by post; but care must be taken to have a duplicate copy of such notice stamped by the postmaster. Such duplicate will be good evidence of the service of the notice. The notice must be posted so that the person objected to may get it on or before the 25th of August, or the objection will fall to the ground.

It is of importance that none but well-founded objections should be made, as the Revising Barrister has now the power, in cases of frivolous objections, of awarding the payment of costs to the amount of not more than twenty shillings in each such case.

PURITY OF ELECTION.

Last Monday, on occasion of the second reading of the Sudbury Disfranchisement Bill, Lord Lyndhurst edited the House of Lords and the country by a homily upon Purity of Election, to which Lord Brougham, *more suo*, said Amen; having "never admired his noble and learned friend more than in the delivery of that perfect model of a clear and conspicuous, and, at the same time, convincing statement of facts." His lordship further reinforced the morality of the Lord Chancellor by denouncing "the guilt of bribery, either by taking or by giving, or countenancing the gift of sums of money, to swerve for the lucre of gain, from sordid, base, and venal motives—to swerve from the discharge of a duty—to forfeit a trust—to violate a responsibility which the constitution of their country—of their free country—invested in the hands of the voter, and to make a mere means of traffic that which ought to be an exercise of conscience—to sell that conscience, and to make it liable to the dictates of fear in some instances, and of corruption in others," &c. &c. We have read something like all this before—in his lordship's prize Preface for the sixth volume of *Punch*, and elsewhere,—except that the tying this tassel of words to the tail of Lord Lyndhurst's kite was one of those finishing touches in which Lord Brougham is not to be anticipated. And now that it is done, and the great moral lesson from the woolpack is sent forth into the country with his lordship's emphatic sanction, what will happen beyond the disfranchisement of Sudbury, and the enfranchisement of some other borough or district, of which, in no long time, station will command, or money purchase, the nominal representation?

Lord Lyndhurst stated many indubitable and important truths. He remarked upon the equal criminality of the two great parties, Whig and Tory. He spoke of the election following the greatest outlay, as a matter of course. He noticed the knowledge and countenance of what was going on in the borough, by "the wealthy and respectable inhabitants." And he portrayed the difficulty of procuring evidence, from these wealthy and respect-

able persons declining to answer questions which might criminate themselves. That is to say, his lordship described a very corrupt condition of the middle classes, in the borough of Sudbury, as to electioneering matters. To the generality of this phenomenon, or to its causes and remedies, he did not advert. His lordship held a brief for the bill to disfranchise Sudbury, but not for exposing and putting down the sinister influences by which, all the country over, elections are perverted from their legitimate and constitutional object. To remedy this evil, the disfranchisement of Sudbury is about as hopeful an undertaking as the cure of consumption in its last stage by a single box of Morrison's pills.

The corrupt freemen of Sudbury and other places have been brought into their present degradation, and kept in it by superiors in station with whom they come into contact. But these superiors are not the eventual paymasters, nor the parties whose ambition, or other craving, is gratified by electoral corruption. This moral pollution descends in society. Do not Lords-Lyndhurst and Brougham know the way to its fountain? Who lead the "respectable" inhabitants of a county town into temptation? Who profit by the demolition of electoral conscientiousness? Who enjoy the ultimate fruits, and originate the first impulse? Who put the aristocracy—the owners of land, and the traders in legislation? Could these moralizing brethren of the Upper House preach so as to reach the consciences of that class, they would, indeed, do something towards a reformation. As it is, the solemn truths they enunciate pass by like idle wind: they are a decent form, which is gravely discharged, and there an end.

How far the Lord Chancellor applies his intellectual vigour to eradicating the evil, may be inferred from his shock that canvassing had become obsolete in Sudbury as an "unnecessary and idle" practice. The canvass is the stronghold of the enemies to freedom and purity of election. The extent of direct bribery had rendered it "unnecessary" in Sudbury; but generally it is the channel of bribery, both direct and indirect. And it is also necessary for that system of intimidation which is yet more extensive and more pernicious than bribery itself. The negative bribery, as it may be called, of threatening loss of custom or patronage, is by far the most formidable weapon of the corruptionists. This is the great power of the higher over the middle and trading classes. Every body knows how unsparingly it is exercised. Thousands submit to it who would spurn the direct offer of cash for their votes; and yet the crime is, in essence, the same. It must be a purblind moral sense that does not pierce through the flimsy veil of distinction. While this system is left untouched by the Legislature, all local disfranchisements, for some want of external decorum in the management, are mere smoothings of the surface, leaving the disease within unabated. They are a whitewashing of the sepulchre, leaving it as full of rottenness as ever.

What, then, is to be done? Nothing, unless we can rouse the sounder portion of the middle classes to a deep sense of the enormity of the case, and a determination to do their utmost, at all hazards, for its correction. They are the natural guardians of local morals. The decencies of society are under their charge, and when they awake to a sense of the virulence of electioneering vices, the power of the tempter will be checked in its exercise. Let them treat this species of iniquity as they do other kinds: without fear or favour. Let them show, in daily intercourse, that they regard the briber and intimidator, and the bribed and intimidated, as all of tainted character: the former the most deeply. Let them cease to palliate sinfulness, not less foul for involving public injury, because it is common; or because it implicates the adherents of their own political party. Morality is above party. The class that generally aspires to legislative honours has a seared conscience. So have the wretched vendors of their votes. Those of intermediate station palter with their own minds, and are content with one or two removes of the guilt. These facts only render more imperative the duty of those who know the right, and who usually are not satisfied merely to know it. Enough is not done by washing their own hands of the offence. There is a testimony to be borne: it is due to their own consciences, to their country, and to the sacred cause of religion and morality. They are called to deliver society from this cleaving sin, this foul demoralization.

We ask their co-operation for the League whenever it is possible to bring this offence before a legal tribunal. There must be examples made, to arrest its course; and the screening of neighbours, or poli-

tial associates, is as great a deviation from rectitude as compromising offences against individuals. No opportunity should be lost of showing that such is the light in which electoral corruption is regarded. It is guilty, sinful, wicked; and as such let it be treated, or we may as well say no more about the matter.

In one borough, where there has been abundance of corruption, we understand that the preachers of all religious denominations have been requested, and have most or all of them assented, to make the violation of electoral duty a theme of pulpit admonition at an appropriate season. Few localities are there in which this example may not be followed beneficially. If preachers ought not to bring politics into the pulpit, assuredly they ought not to shut morals out of the pulpit. To a branch of morals so important, an occasional admonition may be well devoted. When the wrongs and sufferings which flow from corruption in the first duty of a citizen are rightly considered, it will scarcely appear that lying, swearing, and drinking are worthy of denunciation. We would recommend similar applications to the clergy and to Dissenting ministers generally. Let them be urged to help in this godly necessary work; let them interpose between the bad and the living to stay this plague. It will worthily magnify their office, and add to their sacred functions the duty of being national benefactors, if they become instrumental to the abatement of this moral pestilence.

CONDITION-OF-ENGLAND QUESTION.

Manufactures give higher wages and steadier employment to the operative than agriculture can afford to the farm-labourer; and one of the chief reasons for the insane hostility of the monopolists of land to manufactures is their dread that their establishment and extension would lead to the necessity of raising the wages of the miserable serfs whom they employ in the cultivation of their estates. In the late struggle to force restriction of labour by a "ten-hours bill" on the mills and factories, the wages of the operatives were secretly more the object of hostility than the profits of the manufacturer. From the time that the difference between the rate of wages in Lancashire and in the agricultural counties was made known, the monopolists of land have set themselves to work devising plans to diminish that difference, not by raising the remuneration of the agricultural labourer, but by lowering that of the manufacturing operative. Every man in his senses knows that the amount of wages would fall when the number of hours of work was diminished, if all other things remained as they are. Now, we do not deny that the hours of labour are too long for the factory operative; for though they are not longer, and not indeed so long as the time during which operatives engaged in far more toilsome and unwholesome occupations are compelled to work, we are thoroughly convinced that all our operatives and labourers work too hard and too long. They are compelled to do so by the difficulty of procuring food, and the obvious remedy is to remove that difficulty, and enable them to obtain the necessities of life by a smaller amount of toil. The able and benevolent author of the "Song of the Shirt" has stated the case in a single sentence—

"Alas! that bread should be so dear,
And flesh and blood so cheap."

The dearness of the bread is the cause of the cheapness of human life; and it is nothing better than arrogant hypocrisy to affect sympathy for the condition of the labouring classes, and at the same time to maintain the Corn Laws by which this misery is produced. It was painful to see a nobleman of such good intentions as Lord Ashley, stealing in at the end of the debate on Mr. Villiers's motion, and giving his vote for monopoly, and to find him a few days after heading a deputation to Sir James Graham, to solicit the commiseration of Government for the victims of that very monopoly which his vote had contributed to maintain. We cannot comprehend the philanthropy which affords sympathy to the overworked operative and refuses it to the underfed farm-labourer, which has a tear for the starving sempstress and a dry eye for the perishing cottager: it comes too close to the sentimentality of him who was said to bestow on a dead ass the compassion which he refused to a living mother. We demand that attention should be given to the degraded condition of all the working classes. Too truly has Ebenezer Elliott declared—

"Like a rootless rose or lily;
Like a sad and lifelong sigh;
Like a bird pursued and weary,
Doom'd to flutter till it die:
Landless, restless, joyless, hopeless,
Gasping still for bread and breath,
To their graves by trouble hunted,
Albion's helots toil for death."

But the worst feature of the case is, the desperate determination manifested by the landed oligarchy to keep the condition of the suffering poor concealed, and to prevent, by force, an investigation into their wrongs. We last week directed attention to the discreditable exhibitions of false charges hastily

made against those who have sought to ascertain the causes of that discontent among the agricultural peasantry, which, for want of any other means of making itself known, proclaims its existence by the incendiary fire. The ink with which we wrote was scarcely dry ere the House of Commons witnessed another and still more irrelevant attack on private character. Sir James Graham, who seems to have a perverse desire for enhancing the amount of unpopularity which he has dearly earned, is declared by the reporters to have stigmatized the Honourable and Reverend Sidney Godolphin Osborne as "a popularity-hunting parson," simply because in his published letters he had with equal force and truth depicted the condition of the agricultural peasantry as far worse than that of the brute animals by which they are surrounded. The character of the accused, and still more that of the accuser, renders it unnecessary for us to say one word in defence of the reverend gentleman. But we point to the speech of the Home Secretary, and to the accompaniment supplied by Sir John Tyrell, for further proof of the determination that has been adopted to shroud the condition of the agricultural peasantry from the ken and from the sympathy of the rest of the country. Such policy can only be very partially successful; men may be bribed or browbeaten into silence in England, but the voice of reprobation will be raised against us in other lands, until the proud boast that "Britons never will be slaves" comes to be regarded as the most degrading mockery and the most monstrous delusion ever played off upon an infatuated and ruined people. Already the slave-owners of the United States boast, and not without reason, that their negroes are better off than the free peasantry of England. We take, as a specimen of their vindication at our expense, the following paragraph from a New York paper:—

"We regard the whole subject of the abolition of slavery as one of the greatest popular absurdities of the age. And nothing can so speedily satisfy any practical man of the absurdity of the notions entertained by the abolitionists of all complexions and names about the slavery of the South, than to see and examine for themselves the social system in England and Ireland, and contrast it with the social system of this country, both North and South.

"Let us come to facts. Any person who will take a ramble through England, Scotland, and Ireland—who will look at the condition of the lower classes there, or read the reports and speeches of their public men—will admit that a more degraded system of permanent slavery has never existed on the face of the globe. Nominally the masses of the people in the British islands are free. But what is their freedom? They are free to starve and rot. They are free to grovel in the most abject penury and wretchedness. That is their freedom. In consequence of the social condition of the British empire—the unrighteous distribution of wealth and power, the laws of primogeniture, and other civil institutions—the lower classes, both agricultural and manufacturing, of that empire are in a state of slavery so abject, distressing, and miserable, that no parallel can be found for it in the world throughout. Now, let us turn to the southern institutions, and look at the condition of the black races there, over whose position so many tears are shed and so much sympathy bursts forth, and what do we find? We find a happy, contented, well-fed, well-clad race, possessing, from the peculiar nature of the State laws of that region of the country, a lien upon the soil. They are absolutely part proprietors of the very acres on which they live, although they may be nominally known as slaves, and are subject to the orders of their masters."

We dissent altogether from this reasoning; we believe that "the existence of slavery in America is an atrocious crime;—a crime with which no measures should be kept, which makes the name of liberty itself suspected, and the boast of it disgusting." But we fear that the Americans have the power of retort.

"Pudet hæc opprobria, nobis
Et dici potuisse et non potuisse refelli;"

or, as it may be translated,

"We feel the charges grating to our pride,
But Oh! we feel they cannot be denied."

Is slavish subjection and some of its most revolting incidents quite unknown in England? We have seen the President of her Majesty's Council contending that one of the favoured race of squires should be allowed the luxury of horse-whipping the children of the peasantry; we have beheld a magistrate restored to his office after having been dismissed for alleged acts of greater oppressiveness than a Mohammedan would have practised on a rayah in the worst days of Turkish tyranny. We have that badge of servitude, the system of the game laws, maintained in all its iniquitous strength, which allows to a hireling keeper a power not possessed by the American slave-driver, the power of hanging up the poor man's dog, however valuable the animal may be, whenever it follows its natural instincts and pursues a hare or partridge. Look at the statute-book, and compare the number of laws for the protection of the labouring poor with those for the preservation of game, and you will have no difficulty in determining whether a peasantry or a pheasantry is most valuable in the eyes of our legislators. Our game-preservers seem to have parodied the brilliant lines of Goldsmith; instead of—

"Princes or lords may flourish or may fade,
A breath can make them, for a breath has made;
But a bold peasantry, their country's pride,
When once destroy'd can never be supplied!"—

the game-preservers read

"Peasants and serfs may flourish or may fade,
We've slaves enough to use the plough and spade;
But a fine peasantry, the landlord's pride,
If poach'd upon costs much to be supplied."

And in the midst of this oppression, with this palpable badge of slavery worn in the presence of all nations, England boasts of freedom, and taunts other nations with the imperfections of their institutions. Would that the country heard the still small voice which whispers—

"Yet scorners say thy hills and vales
Are curs'd from sea to sea;
The land of palaces and jails
Derision nameth thee."

It is time for the country to wake from its lethargy and fairly examine its condition. A Lord Wodehouse may bluster, a Mr. Wodehouse may calumniate, a Sir James Graham may covertly insinuate what he fears to charge directly, or a Sir John Tyrell may aim a shaft, though with less effect than his ancestor of old, but the condition of the labouring classes is a matter of too much urgency and importance to be neglected through fear of an oligarchy. That oligarchy itself is perilled by the accumulation of explosive forces at its foundation. Our restrictive and monopolist laws have produced an unnatural state of society, which, if not righted by legislative foresight and wisdom, will right itself with a vengeance by some terrible reaction:—

"To fall'n humanity our Father said,
That food and bliss should not be found unsought;
That man should labour for his daily bread,
But not that man should toil and sweat for nought.
Not that the best should live a living death,
To give the worst a beastly sense of life;
And waste in servitude their fleeting breath,
Waging with care and want a hopeless strife."

IMPERIAL PARLIAMENT.

THE FREE-TRADE MIRROR OF PARLIAMENT FOR THE
SESSION 1844.

Twenty-fourth Week, ending Saturday, July 27.

A very interesting discussion arose incidentally on Friday night, the 19th, in the House of Commons. On the question being put that the SPEAKER leave the chair, to go into Committee of Supply, Mr. MILNER GIBSON rose, and, in a most admirable and telling speech, called attention to the subject of the causes and the cure of incendiarism in the eastern agricultural counties of England. This raised a discussion, far more animated, earnest, and sincere than any of the recent debates on clap-trap motions, brought forward for the mere purpose of personal display or party spite. Sir JAMES GRAHAM tried to evade the real question by an insolent tone and manner, and still more insolent insinuations; but, though the country gentlemen connected with the eastern counties endeavoured to mimic his example, they were too fluttering, too anxious, too uneasy, to be able to do it with effect, and yet conceal their real feelings. The Home Secretary was taken to task by Mr. VILLIERS, in a way which made him feel (at least so far as a look of annoyance could express internal mortification) that bullying insinuations are not always creditable substitutes for honest arguments.

Mr. Milner Gibson having made his speech, Sir James Graham rose, insinuating motives, deprecating discussion, and attacking so honest and benevolent a clergyman as the Hon. and Rev. Godolphin Osborne as being "a popularity-hunting parson!" He was followed by two country gentlemen, Mr. Wodehouse (Norfolk), and Mr. Darby (Sussex), and then Mr. BRIGHT rose, and made a speech which we consider to have been the most effective which he has yet delivered in the House of Commons. It fell with very great power on those who heard it; the country gentlemen could not and did not listen to it with apathy; and the peroration, in which he expressed his hope that, in the coming day of retribution, Heaven would be more merciful to the landowners than they had been to their unfortunate peasantry, startled his auditors, causing, it is to be hoped, that pausing and meditating thoughtfulness which precedes repentance and a new life.

Colonel Rushbrooke, Mr. Bramston, and Lord Heniker all followed, speaking in subdued phrase and tone; and then Mr. VILLIERS, as we have said, rebuked Sir James Graham, and, in a speech which, though short, was worthy of his reputation and of the subject in hand, recalled the House to the real question before it, which the country gentlemen were trying to evade. One of those whom Lord John Russell characterised as the "heavy clays" of Essex—the redoubtable Sir John Tyrell—closed the debate, of which we here give a report. The three speeches, of Mr. Milner Gibson, Mr. Bright, and Mr. Villiers, will be found worthy of attentive and deliberate perusal.

HOUSE OF COMMONS, FRIDAY, JULY 19.

On the motion that the Speaker do leave the chair, Mr. M. GIBSON said it was now his intention to bring forward the motion of which he had given notice relative to the incendiarism now prevalent in the counties of Norfolk, Suffolk, Essex, and Cambridge. He did so because he felt a question of this importance did not stand in that position in which it ought to do, inasmuch as the explanations given on the subject in that House had not produced the impression on the public mind that a full inquiry had

been made into the subject, or that there might not be on the part of the Government considerable misapprehension as to the causes of these atrocities. He was aware that during the last week or two, and at the present moment, these awful crimes had somewhat subsided; but so short an interval could scarcely be relied on, and he thought this ought to be an additional reason for inquiring into the condition of the peasantry, and endeavouring to trace, as far as they could, into the causes of discontent which had given rise to them. The extent of the crime of incendiary had been very great during the last six or eight months; so much so that he believed he spoke within the mark when he stated, on information which he had received, that considerably more than one hundred separate offences of this kind had been committed in the county of Suffolk alone, and he believed upwards of two hundred in the two adjoining counties. He had it also from good authority, that insurance-offices which insured something like £4,000,000 of agricultural property had lost more than four times the amount of all the premiums paid to them on insurances of this description. If, therefore, these incendiary practices continued, the insurance-offices must either increase their rate of insurance to such a degree as materially to restrict the insurance of agricultural property, which it was very desirable should be insured, or they must exclude from the insurance contract the risk of incendiary fires, just as they did that by civil commotion, foreign invasion, or other contingencies not within the ordinary calculation of chances. But although he had thus alluded to the pecuniary loss and the effects of these crimes on the insurance system, he still conceived it was a much more serious consideration to reflect, that during this short period they had seen in these counties so much malignant feeling, and such disregard for the rights of property, as had been evinced by these incendiary fires. They knew that various causes had been assigned for the discontent which it was alleged had originated incendiary; and the motion he meant to make was for an address to the Crown to send into these counties trustworthy, discreet, and careful men, for the purpose of inquiring into the general condition of the agricultural labourers there, and to ascertain what were the grievances under which they were supposed to suffer. He had hinted to the right hon. baronet a few nights ago, that he thought it would be desirable to issue a commission for the purpose of inquiring into these matters; and the reply of the right hon. baronet was not such as gave him to understand that he (the right hon. baronet) was averse to such an inquiry, though he was not prepared to give his assent to it without further consideration. He trusted, however, that the further consideration which the right honourable baronet had been able to give to the subject would induce him to assent to sending down some discreet persons to make this inquiry. He would not suggest that it should be made through the poor-law commissioners—not but that he should have the greatest confidence in them, and in any report which they might make to the House,—but that it was said a feeling with reference to the poor-law itself, amounting to a "detestation" of it, had given rise to the discontent, and, consequently, he feared that any report made by the poor-law commissioners on this subject would not be satisfactory to the public, but would be regarded rather as an attempt to make out the good working of the poor-law than to show the actual condition of the agricultural labourer. The right honourable gentleman, the other night, said that trials were about to take place of many persons who were in custody charged with offences of incendiary, and he suggested that it would be better to wait the result of those trials. Now he (Mr. Gibson) called on the right honourable baronet rather to take a statesman's view of the question than that of a police-officer or administrator of the criminal law. He called upon him not to take what had been designated "a chief-constable's view" of this question. They wanted to go beyond the mere detection of particular offenders, and to ascertain what were the exciting causes of this crime, that, if possible, they might guard against it for the future. It might be said it was too much to assume that distress and misery were the causes of this incendiary, since many persons were charged with the crime who were not in those distressed circumstances which could have urged them to commit it. But it was well known, nothing more so, that when considerable discontent prevailed among the labouring population, individuals were always to be found to gratify malignant passions, by doing the work of violence for those who deemed themselves suffering under oppression. He was induced on the best authority to think that in the eastern counties this incendiary must be regarded as a symptom and a proof that a dangerous and deep-rooted discontent was smouldering amongst the labouring population. He was using the expression of a gentleman whose name would carry great weight in that House, and who was the best authority on this subject in the county of Suffolk—he meant Sir H. Bunbury—who, in a letter recently published in the public papers, said, "I must avow my conviction that these incendiary crimes are symptoms of smouldering and dangerous discontent." He (Mr. M. Gibson) thought it right, therefore, to call upon the Government to send some persons, in whom they could confide, to investigate the truth of the different allegations respecting the causes of these outrages. He thought it peculiarly right to call upon the Government to do so, considering that they upheld, in reference to the rest of the people, laws and restrictions which they only attempted to justify on the ground of the well-being and happiness of the rural districts. They avowed that it was their first duty to maintain order, morality, happiness, and prosperity among the rural population. Other classes were called on to make sacrifices for this express purpose—trade was interfered with, and restrictions were upheld, to maintain those scenes of rural felicity which the right hon. gentleman once said would cease if the Corn Laws were abolished. He considered, therefore, that this gave him a peculiar claim to call upon those who took upon themselves to sacrifice other interests to maintain the good order and happiness of a particular class, to institute an inquiry, when they were informed on so high an authority as Sir H. Bunbury that the incendiary which prevailed was symptomatic of deep and dangerous discontent among the rural population. He knew it had been alleged, and Sir H. Bunbury mentioned it, that the new poor-law was the cause. But he (Mr. M. Gibson) wanted to know if it were the new poor-law? It was said that under the old poor-law and the old system, and when the amount of out-door relief given to the poor was considerable, incendiary prevailed

to as great an extent as it did at present. It had existed under the old poor-law; it now existed under the new; and, therefore, he concluded that something beside the mere mode in which relief was administered had given rise to those feelings among the rural population. Considering the great number in this country who were driven, from want of employment, to parochial relief for their support, he much doubted whether any system could be adopted by which they could avoid complaints against the administration of the poor-law. He himself had witnessed even the distribution of coals, raised by subscription for the poor, give rise to a much bickering, bad feeling, and charges of favoritism, as the administration of legal relief. No doubt similar cases would occur to hon. gentlemen opposite. In these counties there were many charitable subscriptions to relieve distress; but all these were temporary expedients, resembling that of the charitable sermons which the Government appointed to relieve the manufacturing population, and were not likely to be permanently effectual for the relief of the agricultural labourer. With regard to the other statements of the operation of the new poor-law, without going into the question, he could not help feeling that there might be some truth in saying that the labouring classes were prejudiced against it. But he did not think it was the main cause of the present alienation of the peasantry from the landowners and occupiers in those counties. He believed that no class in this country comprised men better disposed, more industrious, more willing to bear up cheerfully against the pressure of distress, than the agricultural population of the counties he had mentioned. He believed that no class in this kingdom—and he spoke from his own personal knowledge of them—could be so well brought forward as instancing general good conduct and industry as the agricultural population of the eastern counties. He could not help thinking, therefore, that the pressure must be strong indeed, and the discontent very deeply rooted, which could induce men, naturally so well disposed, to give almost direct encouragement to the commission of so awful and horrible a crime as that of incendiary. He saw the honourable member for West Norfolk in his place, and he could not help regretting the remarks he made to the Secretary of State for the Home Department, when alluding to the conduct of the Lord Lieutenant of Norfolk. The honourable member seemed to him (Mr. Gibson) to overlook altogether the pressure of distress and the effect of want and despair upon men's moral perceptions. He seemed to take the old view which had been so long relied on, and with so little effect, that nothing could be done but through the instrumentality of the dungeon and the gibbet. The honourable member had not used these words, but still he (Mr. Gibson) inferred from the question he put, that he found fault with that exercise of mercy which the Secretary of State had felt it his duty to recommend to the Crown, in the case of two persons convicted of incendiary. He would not say the honourable member actually made such a remark, but any one who heard his question would infer that in those cases he impugned the judgment of the right honourable gentleman the Secretary for the Home Department. In his opinion crime had thriven under severe penalties, and never would be put down by an increase of capital punishments. Before the honourable member ventured to question the exercise of the royal prerogative of mercy, he ought to have recollected for how many crimes the state was answerable. (Cheers.) By bad legislation the wants of the lower orders had been augmented; they saw themselves neglected, and that nothing was done to mitigate the evils under which they suffered. Such a course could not conciliate the lower orders or tend to diminish crime. There certainly was a growing feeling among the labouring classes, that all legislation was in favour of the middling and upper ranks of society, and that as long as the wealth of the rich was swelled, the poverty of the poor did not merit consideration. Even the clergy had contributed to nourish this feeling, and a distinguished divine had very recently printed a letter to the Duke of Richmond, which having appeared in the London papers, was soon transferred to the weekly journals circulating among the labourers of the country. He would take the liberty of reading an extract from it:—"At a meeting lately held in London, a deputation of landowners and tenant-farmers waited upon you, and of course did all in their power to apprise you of the dangers that threaten and the difficulties that now beset them; but I do not find that any one appeared at that meeting to represent the agricultural labourer. . . . And now I will only add, that if your Grace will kindly accept this assistance—if you and your colleagues will only give to the labourers' condition one half the attention you have given to the condition of the landlord and tenant, and the improvement of the condition of your cattle—I have no doubt but that you will arrive at the conclusion at which I have arrived—that there is no one creature belonging to the farm, there is not an animal you rear, to use or to sell, that has been the subject of so much neglect, in everything that tends to his improvement, as the labourer. Compare the way he is housed, fed, clothed, and valued, with the way in which the animals he tends are treated in these particulars, and then answer to the public and to yourself—why in the present agitation is he overlooked?" Such was the language of the Rev. Godolphin Osborne, a gentleman of unquestionable authority, and possessing great local influence, and thus it was seen that the pastors of the people themselves propagated the notion that the welfare and interests of the lower orders were disregarded by the higher. When, in answer to this, augmented penalties were asked for, could it be wondered that alienation was increased? It had been urged that, in some of the manufacturing districts, disorder had been produced by the want of pastoral care—by the absence of a sufficient number of clergymen; but, in the district to which he was now alluding, it could not be said that there was any deficiency of spiritual instruction, if the abundance of the clergy might be taken as a test. The true deficiency was a deficiency of physical comforts; and what did the Rev. Godolphin Osborne state upon that point? "Neither law nor gospel can avail, when hopeless indigence has made a man hate the power that checks him in getting the food he needs, but cannot earn; when he sits, in a land of churches, the poor left to struggle how they may against circumstances that keep them down to the very lowest stage of civilized existence—a stage in which they find much in the condition of the brutes about them to envy." He (Mr. M. Gibson) entirely concurred in these expressions, and did not think

that any extension of church accommodation, any increase in the number of clergymen, any attempt to keep up the price of corn by legislation, would conciliate the working classes, or would ward off at some future day the serious disorganization that might be anticipated, looking at the limited surface of our island, and at the rapid growth of population. Increased population had been assigned by some as the cause of distress; and the honourable member for East Norfolk, some time ago, attended a meeting where he recommended the production of flax as a means of giving employment to the poor. He had to charge gentlemen opposite, though he was sorry to make a charge on a matter of this nature, because he wished to say nothing the least intemperate, and most sincerely desired that the right honourable baronet would agree to his motion, and send down commissioners to inquire; but he must complain of gentlemen opposite for strengthening prejudices among the labouring classes—prejudices upon subjects which were very likely to lead to acts of violence and incendiary. There was no doubt that machinery had lately been much applied to the purposes of agriculture—there were threshing machines, machines for hoeing wheat, and for other purposes; in fact, the peasantry saw machinery supplying the place of manual labour, and the argument on this subject, applied to the manufacturing districts, might, to a certain extent, be applied to the agricultural. At public meetings on the Corn Laws, landed gentlemen had not hesitated to revile the manufacturers, and to utter tirades against the use of machinery. No argument was more in vogue than that the use of machinery in manufacturing districts was the cause of distress; and agricultural labourers finding that such an argument had been employed against others, would not fail to apply it to their own cases. The labourers were aware that the indifference shown to the manufacturing operatives existed as regarded themselves. He (Mr. Milner Gibson) charged landed gentlemen with augmenting these prejudices—and he farther charged them with doing it for party purposes (cheers)—to excite a feeling against the manufacturing interest; and now it recoiled upon themselves. Then, again, on the question of wages, a similar attempt had been made to delude the poor labourers, and it was said that the farmers gave too low wages. The fact was that the farmers could not give what wages they liked, for they must be regulated by circumstances over which they had no control. Nevertheless landed gentlemen endeavoured to produce a prejudice against the farmers, that they were screwing their labourers down to the lowest amount of wages, and not doing them justice. This was a most improper statement to make.

A MEMBER: Who made it?

Mr. M. GIBSON: It had been made repeatedly. Great incredulity was affected whenever the statements of the *Times* on the poor-laws were mentioned; but he (Mr. M. Gibson) believed that what was said by its correspondent on the question of wages was true. A farmer who held only a small quantity of land, as he could not increase that quantity, and was required to increase his rent, being afraid of being outbid, was driven to save where he could, and that saving must come out of the pockets of the labourers. But rendering the barrier between the manufacturing and agricultural classes more impassable, was to augment the difficulty, and to promote emigration to the manufacturing districts. Labourers were redundant, farmers were obliged to pay higher rents, and the money saved out of the wages of the labourer found its way into the pocket of the landlord. He would also direct attention to the promises of protection held out up to a recent period, promises that the price of grain should be maintained by act of Parliament. He was happy to say that confidence in the durability of that protection was not so great as it had been. He had been lately in the country for change of air, and had made it his business to inquire into the subject, and he found that even the last declaration of the head of the Government was considered somewhat equivocal. He had felt it his duty to increase that opinion (cheers), and he would continue to do so while he saw the present uncertainty, and felt that there was no real intention to maintain the Corn Laws for any lengthened period. Interested as he was in the prosperity of the occupying tenantry, he had thought it his duty to caution them not to build on a rotten foundation—not to trust to a broken reed. Such, he believed, was the opinion of the agricultural tenantry, and, as far as it went, it was conducive to good. The more the farmers were disposed to rely upon natural instead of artificial prices, the more profitable would be their business, and they would thus be enabled to employ agricultural labourers at fair wages, and to carry out the various improvements in agriculture. Agricultural labourers were deeply interested in the prosperity of the farmer, and the prosperity of the farmer depended upon his belief that Parliament would do nothing for him. (Cheers.) He called upon the right honourable baronet (Sir James Graham) to meet him fairly upon this motion, and he trusted that he would pardon him for having said one word which might indispose some gentlemen to concur in a proposal for inquiry. It was not unprecedented: not long ago an inquiry had been instituted into the condition of the aborigines, the Hottentots, and the Esquimaux; and why should not an inquiry be undertaken into the state of persons severely suffering at our own doors? Some might urge that there was no distress, but there could be no doubt that the most grievous distress existed. Magistrates had stated, that where labourers did not perpetrate the crimes themselves, they looked on with a sort of satisfaction while the flames were destroying their neighbours' barns and stacks. The chairman of the Bury sessions, Mr. Bevan, was reported to have used these words:—"At the occasion of the late calamitous fire at Tuddenham, while the populace did all they could to extinguish the flames, others of the Mildenhall people did all they could to promote the fire by casting fuel upon it. A certain magistrate who was present had said he had seen fuel placed on the fire, and could not prevent it." More important evidence than even this had recently been obtained, and Professor Henslow had published a pamphlet containing the following:—"Notwithstanding any assurances that I have heard to the contrary, I feel convinced that it is want of employment among the labourers which must be considered as the proximate cause of those motive causes to the incendiary which has lately prevailed. The labourers themselves refer the fire to this cause; and although the great majority of them heretofore acknowledge the folly and wickedness of incendiary, some of the worst disposed refer to them too significantly not to have it understood that they are

rejoicing in their exhibitions of infatuation and cruelty. Although he (Mr. Gibson) would not for one moment assert that the whole body of the labouring population or any large proportion of it, viewed incendiarism with any other feelings than those of abhorrence; yet, when he found some of them talking with apparent satisfaction of what had occurred, it could not fail to increase his conviction that not only discontent but bitter hatred existed among them. He had put his notion into writing, but he did not wish to condemn the right hon. baronet to particular words, if he would consent to send down a commission, consisting of persons unconnected with the poor-law, and likely to give an unbiased opinion after an impartial investigation. His proposal would be in the form of an address to the Crown for a commission to inquire into the discontents in the counties of Suffolk, Essex, and Cambridge, with a view to ascertain the causes of grievances under which the working classes there suffered. It might be said that he limited the investigation to two or three counties, but after that part of the subject had been gone through, if it were thought desirable to extend it, he should be most happy to do so. The result, he believed, would be to show that the condition of agricultural labourers was deplorable; and if the investigation were deferred much longer, the country would have to rue the delay. (Cheers.)

The motion was then put from the chair, and, on the question that it be agreed to,

Sir J. GARRHAM said, that, after the speech just delivered, the House would presume that it was imperative upon him to make a few observations. During the time of the delivery of that speech, he could not help asking himself what could be the object of the honourable member in giving utterance to such sentiments? (Cheers.) He recollected that the honourable member was a Suffolk gentleman, and that he must have a kindly feeling towards his native county. He could not therefore desire to fix public attention on the crimes which disgraced it. To advert to them must to him have been a very painful task. Some deep sense of duty must, he presumed, have prompted the honourable member at such a moment, and in relation to his own county, to make such a speech. (Hear, hear.) He had said in the outset what was quite true, what the House must have heard with great satisfaction, and what, if the honourable member had not mentioned it, it would have been his (Sir J. Garrham's) duty to communicate, viz., that the crime of incendiarism, so disgraceful in itself and of such a contagious nature, was diminishing in the district to which the motion applied. (Cheers.) Having made that admission, and knowing it to be the fact, it seemed extraordinary that the honourable gentleman had felt it his duty to address to the House the speech just concluded. (Hear, hear.) The honourable member had told him (Sir J. Garrham) not to take a chief-constable's view of the question. Whatever the honourable member might consider a chief-constable's view of the question, he (Sir J. Garrham) was bound to tell him and the House, that discussions of this nature forced on the attention of Parliament had a direct tendency to increase the evil. (Much cheering.) There was such a thing as fanning a slumbering flame. (Cheers.) The honourable gentleman had quoted the statement of the chairman of the Bury sessions, that in certain cases it had been proved that fuel had been cast on an incendiary fire. It was quite possible by such discussions as that of to-night to cast fuel upon a fire that happily was almost extinct. (Loud cheers.) What could be the purpose of the hon. member in introducing various topics? Why had it been his duty to state that the labouring classes were neglected by Parliament? What had been the chief occupation of the House of Commons during the last four or five years? Late and early, morning and evening, it had been discussing, with the most intense desire, the best means of promoting the interests, and adding to the comforts of the labouring classes by the amendment of the law for their relief. (Cheers.) While the House had been so employed, this great advocate of the rights and happiness of the lower orders had been seeking elsewhere that gratification which, had they consulted their own pleasure, those who toiled in legislation would have sought also. While others discharged their duty as legislators, with much pain and anxiety, searching how best to alleviate the misfortunes of the poor, the hon. member had been disporting himself in the country. What was the meaning of his comparison about the aborigines, the Hottentots, and the Esquimaux? (Hear, hear.) What was the meaning of the passage of his speech, in which he dwelt upon the selfishness and cold-heartedness of landlords?

Mr. M. GIBSON: I did not use any such words.

Sir JAMES GARRHAM: I do not mean that he used those words.

Mr. M. GIBSON: I quoted a passage from the letter of a reverend clergyman.

Sir JAMES GARRHAM: I have the greatest respect for the clergy, but even among the most sane of that body there are some indiscreet individuals. There is such a thing as a popularity-hunting parson, as well as an agitating member of Parliament. (Cheers.) Such communications as the honourable member quoted are not well calculated to promote that peace, harmony, and order, which it was the great object of the religion of which the writer is a minister to enforce and inculcate. (Cheers.) But permit me to tell the honourable member that there is no need of the commission he proposes. (On a former occasion I said that the assizes now in progress could not fail to throw distinct light on the causes of the crime to which the honourable member had alluded. I have received communications from the judges now employed in trying criminals in the district embraced by the motion, and I have the satisfaction and gratification of stating that there is no difficulty whatever in administering the law there. The greatest willingness is evinced by witnesses in deposing to the truth—the greatest elasticity by the jury in dispensing the law, and the greatest discrimination in their verdicts: the guilty are convicted, and where a doubt arises upon the proof, the prisoner has the benefit of the doubt. (Hear.) I am told, moreover, on the highest authority, that no symptom has been displayed of a generally diseased state of society, and that the crimes may equally either be traced to personal malignity, or have been committed by very young offenders. (Cheers.) I grieve to state the fact, but at Chelmsford, I think, three children were sent to trial, two of whom were convicted, one being aged eight years, another nine years, and the third not twelve years. Another learned judge at Huntingdon informs me that the same charge had been made there against a child of eleven years old. (Hear.) I have, in

consequence, received a suggestion to insert in the bill on this subject, now sent to the other House, a clause inflicting the punishment of whipping in the same way that it has been awarded to other juvenile offenders for a different description of crime, to which they seem to have been incited by a love of notoriety. I am bound to state that in the instances now under consideration the juvenile offenders appear to have been urged on by bad example, and by a similar love of notoriety. I repeat, however, that there has been no proof whatever of a generally diseased state among the labouring classes in the district comprehended by the motion. (Cheers.) If I could believe a commission necessary, I would not hesitate to advise the Crown to appoint it; but at the present moment the crime is decreasing, and the law has been carried into execution without difficulty. The perpetrators of these crimes have been committed and convicted, or are now about to be tried. Under such circumstances I should not think it expedient to advise the Crown to depart from the usual course in the administration of the law, by the appointment of a commission to institute a special inquiry. As to other topics which the hon. gentleman has thought fit to introduce, it may be enough for me to say, that I do not think the course he has taken, the language he has employed, or the train of argument (if argument it can be called) which he has followed, are likely to lead any large portion of the House to concur in his motion. I am satisfied that neither his speech nor his motion would have the effect of lessening the evil the honourable member declares it to be his intention to diminish; on the contrary, I am quite satisfied, though it does not become me to impute motives to the honourable member, that the course he has taken is precisely that which might have been adopted by a person who was desirous of producing a serious increase of the deprecated evils. (Hear.) On these grounds I shall give my decided opposition to the motion.

Mr. WODEHOUSE would take another opportunity of replying to the greater part of the speech of the hon. member for Manchester, and would only now advert to points demanding immediate notice. He denied that he had any intention to apply to the Secretary of State, in order to impede the exercise of the prerogative of mercy. The case was of a peculiar nature, and two persons having been convicted of incendiarism, were sentenced to fifteen years' transportation. In a few weeks they received a pardon, and it was impossible to deny that the circumstance was calculated to excite surprise. To what the hon. member had said about his (Mr. Wodehouse) being in favour of the dungeon and the gibbet, all he should reply was, that the charge was the offspring of a heated mind. There were several cases pending, to which he would not advert; but he might mention that of a boy employed on a farm belonging to Lord Stafford, who was no doubt guilty, but with whom nothing could be done, he was such a favourite with his master and mistress. Another case was that of a dumb man on a farm the property of Lord Leicester, and an unfortunate woman was burnt in effigy because of the testimony she had given. He could refer upon the point to the member for Sussex, when he said that eight fires in that county had been all committed by one person, who was in no wise connected with the agricultural districts, but was a cooper by trade. As he would enter upon the question on the first opportunity, he would not say more now, except to assert distinctly, that the discontent prevailing was materially attributable to the nonsense—for he could call it by no other name—which had been circulated by gentlemen opposite on the subject of wages; but as the subject was a large one, he would not then pursue it. But when the hon. gentleman said that he complained of the extension of the royal mercy, he gave the assertion the most unqualified and the most decided contradiction.

Mr. DARBY would not have risen but for the quotation which had been made of a part of a letter of the Rev. Mr. Osborn, and the portion of the speech which attributed to gentlemen connected with agriculture that they were exciting the people. He could only say that the honourable gentleman was one of the last who ought to attribute to others what had been done on that ground, or to say that it had been done for party purposes. He must say that the late visit of the honourable member to the county of Suffolk to persuade the farmers that the Government would alter the Corn Laws in spite of their declaration, did somewhat savour of partisanship. The honourable gentleman had spoken of the Duke of Richmond as not allowing labourers to attend the agricultural meetings, and as paying no attention to the agricultural labourers. Of all persons such observations ought not to be addressed to his noble friend. (Cheers.) In this very session his noble friend the Duke of Richmond had gone down to attend a large meeting, at which labourers' rewards were given. There was no man in his county who paid more—few paid so much—attention to the labourers; there was no man who was more beloved by the labourers than the Duke of Richmond, and there was no one in his neighbourhood who was not aware of this. Therefore the indiscretion displayed in the letter was not only shown, but also the extreme ignorance of the character of his noble friend. (Hear, hear.) As to the motion itself, it came at a most inconvenient time, because it was well known that there were particular times when, if such questions began to be discussed even in courts of justice, crimes had a run. Men of morbid mind were induced, by the mere discussion, to commit like crimes. Not knowing the state of the county of Suffolk, he would not enter upon the cause of the particular crime there; but in his own county, in the neighbourhood of Battle, there had been eight fires successively; the farmers were under great apprehension; but one man was convicted of the offence, and it turned out that this one man caused the whole eight fires, and was not connected with the agricultural labourers, but was a cooper (hear, hear); and with regard to one of the more recent fires elsewhere, it had been shown that the stacks had only been burnt by a boy, in the belief that if the straw were burnt, the house in which he himself lived would be destroyed, and that he would then live in the town, which he much preferred. He thought that this motion would produce mischief, and that the honourable gentleman had shown a want of discretion and fairness in the discussion of these matters.

Mr. BAIGUT said: I have observed ever since I have had a seat in this House, and also from what I had previously read of its proceedings, that there is a very strong disinclination to inquire into anything connected with the agriculture of the country, and that the convenient time for such an inquiry never arrives. Why is all this extreme sensibility, except from the fear that

inquiry might lead to some explanations on a subject which I deem all important, but which hon. gentlemen opposite seem to think it intrusive to trouble the House with? The right hon. gentleman refuses to grant the inquiry now proposed by my hon. friend the member for Manchester, and has thought it right to taunt him with the fact of his having been enjoying himself in the country, whilst the right hon. gentleman was engaged in looking after the interests of the poor, in legislating on the amended poor-law. It was an excellent occupation, and some legislation is, doubtless, much needed; but it may be just as useful that some members of this House should be endeavouring to discover the causes of pauperism with a view to its prevention, as that others should be engaged in devising schemes for its temporary relief. The right hon. baronet has also thought fit to apply the term "popularity-hunting parson" to an authority quoted by my hon. friend. Nothing is more easy than to use epithets of this kind, and nothing is more common than for persons in a debate to attempt to ride off upon some such phrase, rather than grapple with the facts and arguments brought forward. And who is this popularity-hunting parson? He is a man of aristocratic family, and has the prefix "honourable" to his name; he is a clergyman of the Established Church, and men of such a class are not generally chargeable with a dangerous amount of sympathy for the poor. No one connected with the county of Dorset can fail to know that Mr. Osborn is a man indefatigable in the discharge of the duties of his office, and anxious to mitigate the sufferings and to better the condition of the poor around him; and he may well afford to despise the taunts and insinuations of the right hon. gentleman. (Hear, hear.) The right hon. gentleman has alluded to the information he has received from the judges now on circuit, as a reason why the inquiry is unnecessary. Doubtless, witnesses may be found to give evidence and juries to give honest verdicts; and it is also true that for some days past the fires have been less frequent than before; but are we to suppose from this that the cause of these dreadful outrages is removed, and that we may not again be startled by the recurrence of them? Many threatening letters have been received in various parts of the county of Suffolk; and I suppose it is only because my honourable friend the member for Manchester did not wish to add to the alarm which already exists, that he did not mention some facts which have recently come to his knowledge, and which go to prove that the destructive and vindictive spirit still prevails, and that there is great risk of its assuming even a more dangerous character. (Hear, hear.) Honourable gentlemen opposite have spoken of the question of wages, so little understood by the labourers generally. Now, I can truly say that among all the meetings held by my honourable friend the member for Stockport, and myself, in the rural districts, there is not one at which we have not endeavoured to elucidate the question of wages, and to show to the farmers and labourers that the amount of wages did not depend so much upon the will of either party as upon the number of labourers in relation to the amount of work to be done; and if the gentlemen opposite, in this House and at their meetings in the country, had taken the same course, much of the ill feeling which now exists between the employed and the employers in the manufacturing and agricultural districts would have been spared. But hon. gentlemen opposite are unwilling to inquire; we can never catch them in the right mood. One of the earliest questions of the present session was a motion of my honourable friend the member for Stockport, for inquiry into "the effect of protective duties on the interests of the tenant-farmers and farm-labourers." The President of the Board of Trade did not strongly object to it on any ground of apprehension in his own mind, but there was a sensibility which recoiled not only from touch but from sight among the country gentlemen, and in order that he might not alarm them he decided to refuse the inquiry. Then, again, the honourable member for Manchester suggested an inquiry into the produce of the agriculture of the country. You know how much cotton is imported, manufactured, retained for home consumption, or exported, and these statistical returns are deemed very important; and why should we be kept in total ignorance about the produce of the soil? The Government admitted that the proposition was an important one, and promised some attention to it; but there was evidently a great timidity on the part of many of their supporters. Surely there must be something very rotten and hideous beneath the surface to create all this jealousy and this fear lest any investigation take place. But why is the motion of to-night refused? The right honourable baronet says the fires are less frequent, and nobody in the disturbed districts wishes an investigation. Now, at a meeting of the farmers and inhabitants of the parish of Rattlesden, to take into consideration some statements in the Times paper, there was great anxiety expressed that an inquiry should be made; here is one of their resolutions:—

"We are anxious and desirous that her Majesty's Government should immediately issue a commission to inquire into the true condition of the poor in the agricultural districts, and into the causes of the alarming and increasing spirit of incendiarism which unhappily prevails."

This is the opinion of persons who do not agree with the Times or with us, but who see the necessity of the case; and I do think that the Government fail in their duty if they allow these desperate outrages to continue without endeavouring to discover the true cause of them, that the true remedy, if there be one, may be applied. I am sure the taunts of the right honourable baronet, and of my honourable members opposite, will fall harmless upon my honourable friend who has brought this motion forward. He is a Suffolk landowner and a member of this House, and as such has performed his duty in bringing on this question. For nine months at least have the incendiary fires been raging; some hundreds of fires have taken place, and yet not one of the members for the counties in which they have chiefly prevailed has thought it his duty publicly to ask the attention of the Government to a state of things so alarming. Why, Sir, if Lancashire or Yorkshire had been thus troubled, if not 250 fires in nine months, but if one fire in each month had occurred, how great would have been the interest taken in the state of the manufacturing districts by members opposite, and how loud their condemnation of the conduct of the manufacturers to those they employed! (Hear, hear.) I ask the Government if they consider this subject of incendiarism alarming or not? Is it nothing that insurance-offices should be at their wits' end, and be losers of some so large as to make it doubtful if they will continue to insure farms

stock? Is it nothing that farmers are in a state of constant alarm, having a watchman to guard every homestead from the torch of the incendiary? Is it nothing that the demoralization of the unhappy peasantry should be completed? Is it possible that one of the worst crimes human nature can commit should be going on over several counties for many months, and that Government should have no concern about it? If, however, the Government refuse to appoint a commission, the *Times* and the *Chronicle* have not forgotten their office. Their reporters differ greatly in one point, but on the truly important one they are perfectly agreed. The *Times* says the new poor-law is the main cause of incendiarism, and the *Chronicle* asserts that this is not the fact, because the crime existed under the old poor-law; but both reports come to the conclusion that security to property is not compatible with the terrible distress which exists among the labouring population of those counties. It may be true that the new poor-law is harsh in its operation. Only yesterday I passed through a part of the county of Kent, and met one of the supporters of the right hon. gentleman the Paymaster of the Forces (Sir E. Knatchbull); I asked him if the poor-law has worked harshly to the poor? His answer was, that the clause making £25 a year of rent the qualification for a guardian was very unfair and injurious. In many unions none but farmers could be guardians under this clause; and thus the labourer when seeking relief had to apply to the very men from whom the only employment was to be had, and was subjected to every description of hardship which farmers and guardians chose to inflict upon him. But if it be granted that the poor-law is a harsh measure, and I willingly grant that it is, we must never forget that a man has other evils of no light character before he feels the poor-law. Distress and poverty have attacked and overcome him before the poor-law finds him, and he must be a miserable legislator indeed who fancies that any change in the poor-law could secure permanent comfort to the people. The great and all-present evil of the rural districts is this,—you have too many people for the work to be done, and you, the landed proprietors, are alone responsible for this state of things; and, to speak honestly, I believe many of you know it. I have been charged with saying out of doors that this House is a club of landowners legislating for landowners. If I had not said it, the public must long ago have found out that fact. My hon. friend the member for Stockport on one occasion proposed that, before you passed a law to raise the price of bread, you should consider how far you had the power to raise the rate of wages. What did you say to that? You said that the labourers did not understand political economy, or they would not apply to Parliament to raise wages; that Parliament could not raise wages; and yet the very next thing you did was to pass a law to raise the price of the produce of your own land at the expense of the very class whose wages you confessed your inability to increase. (Hear, hear.) What is the condition of the county of Suffolk? Is it not notorious that rents are as high as they were fifty years ago, and probably much higher? But the return for the farmers' capital is much lower, and the condition of the labourer is very much worse. The farmers are subject to the law of competition, and rents are thereby raised from time to time so as to keep their profits down at the lowest point, and the labourers by the competition amongst them are reduced to the point below which life cannot be maintained. Your tenants and labourers are being devoured by this excessive competition, whilst you, their magnanimous landlords, shelter yourselves from all competition by the Corn Law yourselves have passed, and make the competition of all other classes serve still more to swell your rentals. It is for this object the Corn Law was passed, and yet in the face of your countrymen you dare to call it a law for the protection of native industry. The hon. member for East Norfolk smiles, and probably pities the ignorance which can make statements like these, so contrary to the rules of his political economy. The hon. gentleman has probably asserted at farmers' meetings that this law is for the protection of native industry. How have you protected it? You have limited the supply of food and the field of employment, but you have not prevented the increase of the population or of the number of labourers. You have protected yourselves only by your legislation. Take the county of Suffolk as an example. I find that in that county for the quarter ending Ladyday, 1843, out of a population of 314,722 persons, there were 39,489 receiving parish relief, being 13 per cent., or more than one in eight of the whole population. In the county of Essex, out of a population of 320,818, there were 44,694 receiving relief, or 14 per cent., or about one in seven of the whole population. In the county of Norfolk, out of a population of 343,277, there were 37,666 receiving relief, or 11 per cent., or about one in nine of the whole inhabitants of the county. Is this not a proof that you do not find employment and wages for all your population? And other evidence is not wanting. From the late census it appears that the increase of the population throughout the country has been 14 per cent. during the ten years, from 1831 to 1841. There is no reason to suppose the number of births above deaths to be smaller in Suffolk than in other counties. Now, of this increase of 14 per cent. in ten years how much was maintained upon its own soil? Not more than 6 per cent. of increase, and the remaining 8 per cent. have been driven away to other counties by the necessities of their position. If we look to the chief agricultural counties, we shall find they do not on the average retain half the real increase of their population. The increase of population during the ten years has been, in Buckingham, 6·4 per cent.; in Cumberland, 4·9; Hereford, 2·4; Norfolk, 5·7; Oxford, 6·2; Westmorland, 2·5. These are purely agricultural counties, and, although so many have left them, yet they are the counties which complain most of a surplus population. The following counties have found room for about half their natural increase:—Devonshire, 7·8; Salop, 7·2; Somerset, 7·8; Wilts, 7·7; North Riding of Yorkshire, 7·0; and Essex, 8·6. As it is evident these counties have got rid of some portion of their natural offspring, let us see where the outcasts have found a home. The increase in Monmouth has been 36·9 per cent.—railroads and steam-engines, and the increased consumption of iron, of course, account for that; Lancashire shows an increase of 24·7; Durham, with its mines, 27·7; Staffordshire, 24·3; Cheshire, north division, with its manufactures, 18·3; Warwickshire (Birmingham and its district), 19·3; and the West Riding of Yorkshire, 18·2. These are manufacturing counties; and they provide for their own increase of population, and

and a home for those you cannot support in the agricultural counties. If these statements be correct, how dangerous must be a system of protection which diminishes the demand for labour. The free competition under Free Trade would stimulate a better cultivation of the soil, and find increased and steady employment, whilst extended and prosperous manufactures would give great additional employment and wages to the people. You mistake altogether if you fancy you have got rid of this question. If the League would even cease to trouble you, there is a more formidable and more unrelenting foe coming upon you. The increase of population will force a settlement of this question; and so long as it remains unsettled, you will have to sustain a constant return of the difficulties which now embarrass you. This House is responsible for the state of things in Norfolk, Suffolk, Essex, and Cambridge-shire; it springs from your legislation; and nothing can permanently heal it but a change in your policy, and a common-sense course of proceeding with respect to the trade of farming. Honourable gentlemen opposite seem wholly to forget that property has duties as well as rights. I would not greatly complain if *quod tuum tene* were your motto and your rule. But you are not content with your own. Your acres are yours, but the labour of the people is not; and you have no right to enhance the value of your estates by a system of spoliation on the estates of all other men. Do you want proof of your disregard of all rights, but your own? You have a law to raise the price of the produce of your land, and great fluctuations in the price occur. The farmers are often ruined in great numbers. In one Suffolk paper last year, I saw ninety-eight advertisements of the sale of farming stock, showing how many changes of tenancy were taking place. Prosperous farmers do not change much. Are these changes hurtful to the landlord? To some small extent they may be so; but you have cunningly devised another law, by which, when your tenant can go on no longer, you sweep off everything he has left to satisfy your demand for rent, and often and almost always leave the other creditors without a farthing. Your tenant probably owes money to his wheelwright, his grocer, or his draper; but the landlords' law of distraint for rent sweeps all away, and no dividend is left for them. You shelter yourselves thus from the consequences of the farmer's ruin. He leaves his farm; you see him take himself off along the high road; another tenant succeeds him; a fierce competition makes him give even a higher rent than his predecessor, and he runs the same career of hopeless struggle, and at last sinks into the same ruin. Again, see how you treat the tenantry in respect of preserving game. Have you nothing to answer for on this score? A noble lord, a relative, I believe, of the honourable member for East Norfolk, lately spoke of or quoted, in another place, a Mr. Neave, whom he described as a very respectable man. What says Mr. Neave about the game? A letter in the *Times* says, "The farmers, with much justice, complain of the enormous quantity of game. They say they are quite eaten up by it. I quote Mr. Neave, by his permission, as my authority for saying, that the game in several parishes destroy more food, and deprive the farmer of more means, than would keep all the poor of the parish. Mr. Neave instanced one farm to me of 400 acres, on which last year upwards of 2000 rabbits were killed. It is said that five hares consume as much as a sheep (and this is too low an estimate, as a hare destroys more than it consumes); suppose seven rabbits do this, and you have on this farm the rabbits consuming as much food as 300 sheep would. The farmers dare not destroy them; they would forfeit their leases if they did; they dare not even complain, or they would be looked upon as dissatisfied characters, and be got rid of at the termination of their leases." Again, "a rural police is kept up by the gentry, the farmers say, for the sole use of watching game and frightening poachers, for which formerly they had to pay watchers." Is this true, or is it not? If not, let some honourable gentleman get up and deny it, and prove it to be false, and I for one will never again repeat these charges either here or elsewhere. I say, then, you care everything for the rights, and for something beyond the rights, of your own property, but you are oblivious of its duties. How many lives have been sacrificed during the past year to the childish infatuation of preserving game? The noble lord the member for North Lancashire, were he present, could tell of a gamekeeper killed in an affray on his father's estate in that county. For that offence one man was hanged, and four men are now on their way to the penal colonies. Six families are thus deprived of husbands and fathers that this wretched system of game-preserving may be continued in a country densely peopled as this is. (Hear, hear.) The Marquis of Normanby's gamekeeper has been murdered also, and the poacher who shot him only escaped death by the intervention of the Home Secretary. At Godalming, in Surrey, also a gamekeeper has been murdered; and at Brickhill, in Buckinghamshire, a person has recently been killed in a poaching affray. This insane system is the cause of a fearful loss of life; it tends to the ruin of your tenantry, and is the fruitful cause of the demoralization of the peasantry. But you are caring for the rights of property;—for its most obvious duties you have no concern. With such a policy what can you expect but that which is now passing before you? It is the remark of a beautiful writer, that "to have known nothing but misery is the most portentous condition under which human nature can start on its course." Has your agricultural labourer ever known anything but misery? He is born in a miserable hovel, which in mockery is termed a house or a home; he is reared in penury, he passes a life of hopeless and unrequited toil, and the goal of the union-house is before him as the only asylum on this side the pauper's grave. Is this the result of your protection to native industry? Have you cared for the labourer till, from a home of comfort, he has but a hovel for a shelter, and have you cherished him into starvation and rage? I tell you what your boasted protection is—it is a protection of native idleness at the expense of the impoverishment of native industry. (Cheers.) The honourable member for West Suffolk (Colonel Rushbrooke) has been understood to advocate a resort to the punishment of hanging for the crime of arson. I confess I am surprised that any man at this time of day should make such a proposition. Is there is one thing more clearly proved than another it is this, that capital punishments fail to prevent crime. I have here a return of the number of committals, convictions, and executions for incendiarism, during the six years from 1831 to 1836, and for the six years from 1837

to 1843. In the former period there were 403 committals, 119 convictions, and 38 executions. Imagine, for a moment, the state of things in which not less than 58 human beings had been put to death, and 32 of them in the space of two years, for the single crime of burning. This horrible and most unchristian punishment has since been abolished for this crime. It is the proudest boast of the late Ministry that they did so much to mitigate the severity of our criminal code, and I trust the present Administration may hereafter be entitled to equal praise for similar changes during their tenure of office. From this return it appears that from 1837 to 1843 the number of committals was 344, of convictions 117, and of executions none. It will be observed that the convictions are more in proportion to the committals in the latter than in the former period, owing, doubtless, to the repugnance of juries to convict when death was to be the penalty; thus opposing the side of mercy rather than give a verdict according to evidence, which would consign a fellow-creature to death. (Hear, hear.) I believe there are many persons in the counties where incendiarism prevails who are anxious for the restoration of capital punishments. Honourable gentlemen opposite may not wish it, but some of those they represent do so. This wish arises from the apprehensions under which they live; cruelty and fear generally go together. They see no remedy; and probably many of them make no efforts to discover one; they therefore turn to this desperate and inhuman punishment as a means of suppressing this appalling crime. The hanging of incendiaries will do no good; their crimes cannot be put down by halter and penal colonies. These have been tried before and they have failed, and they will fail now if tried. You know that your peasantry are poor, helpless, hopeless and despairing, and yet not one of you has ever proclaimed the sad condition of your labouring population; no, you have left that task to others, to my hon. friend here, whilst you have done all you could to conceal it. (Hear, hear.) You taunt us with a wish to produce discord in the rural districts; I throw back the imputation with the scorn it deserves. You have laboured long and hard to provoke discord in the north of England; your newspapers, and your hired agents have done their worst; whilst, on the other hand, we have had no meeting in your counties at which we have not explained the true principle of wages, endeavouring to soothe the minds of the labourers and to soften their feelings towards the farmers. But what has been your conduct to your tenantry? Instead of showing them how worthless is the policy of protection, and how rotten and precarious as a resource for their prosperity, you have taught them wholly to rely upon it. Instead of showing them how certainly Free Trade was approaching, you bade them rely on the dictum of the right honourable baronet. You have magnified the difficulties which Free Trade presents to them. As foolish nurses frighten children with tales of hobgoblins, so you have worked upon the ignorance and the fears of your tenantry, and your conduct in these respects has been as absurd as it will prove itself injurious. Surely your policy has had a sufficient trial; your farmers are not prosperous—"protection to native industry" has placed your labourers in hovels, gaols, and union-houses. Try something else: it is not the halter and the convict-ship, but a little justice, a little fair dealing, a little common humanity, a little common sense, that your peasantry require at your hands. (Cheers.) Your labourers are every day increasing in numbers—you have no employment for them—what are you to do? The time is coming when you will know what to do: it may then be too late. (Hear, hear, hear.) Your ancestors four hundred years ago were as wise as you, and you are as benighted as they were. From a law passed in 1441, it appears the landowners of that day thought and said that, "the people engaged in husbandry were greatly endangered by reason of bringing grain from beyond the seas to sell in this country, to keep down the price of the grain of this country." Our ancestors 400 years ago were barbarians compared with our present population, and yet you have not abandoned one of their most childish follies. They had some excuse, you have none; with their restriction was the rule in almost every case, with us it is the rule in almost no case but your own; for them Adam Smith had not written, and political economy was unknown; they had no leaders, as you have in the present Administration, from whom you receive lessons on common sense and common justice as fast as you are able to bear them; and yet, with all your advantages, you have not made a step in advance for 400 years. (Cheers and laughter.) But here you sit, representatives of the people, legislators of this great commercial empire, making laws for your own exclusive gain, and denying the most natural and incontestable right of all men, the right to live by their industry, to the great mass of those for whom you profess to legislate. You, the magnanimous aristocracy of Britain, you own the soil, you boast of ancestry, you amuse yourselves with much painting on the panels of your coaches, and yet you make laws in this House to enrich your own class at the expense of millions, to whom you deny all political power, and to whom you give no protection whatever. For all this you must one day answer, and the worst I wish you is, that, when the time of retribution shall come upon the landed proprietors, it may please Heaven to visit them with more of mercy than they have ever shown to the poor of this country. (Cheers.)

Colonel Rushbrooke said he would not imitate the excusiveness and prolixity of the hon. member who had just sat down, but would trouble the House with only one or two remarks. He had been charged with advocating the punishment of death with respect to this crime. He certainly did echo the expression contained in a petition which he presented in consequence of the great number of fires, thinking that it would have a good effect if capital punishment were allowed to hang over the heads of old offenders, and were to be exercised in some extreme cases. With respect to the lowness of wages being the cause of these fires, that certainly was not always the case, because in one district where the wages were highest a greater number of fires had taken place than in others where wages were lower. As the right honourable baronet had stated, many of these fires were the work of boys, and had nothing whatever to do with agricultural distress.

Mr. Beaumont said, that if a commission were to be issued in the case, character, and temper of the speeches of the two honourable gentlemen opposite, he was sure that the result of it would be, that we should have a general confession. But the reason, and the only reason why he rose, was to state the opinion of the judge who presided in the criminal side in the county of Essex—Mr.

Baron Parke—and no man was more able or more respected in his judicial character throughout the country. In his address to the grand jury, Mr. Baron Parke said, that "he regretted to find that the calendar contained many cases of a crime which was so common, not only in that but the adjoining counties, that of the destruction of barns, stacks of corn, and so forth; it was, however, some satisfaction to find, that, amongst the numerous instances of that description of crime, the great majority were not committed by agricultural labourers, on the ground that they might be supposed to be discontented with their masters or with the law, but the great bulk of such crimes were committed by children, by boys and girls of tender age." Such was the statement of Mr. Baron Parke. (Hear, hear.) The persons charged with the crime of incendiarism in the county of Essex were all in employment. (Hear, hear.) The honourable gentleman opposite supposed that the greater part of the fires had arisen from distress and poverty, but these children were living comfortably with their masters and mistresses. As he thought the commission proposed would be productive of more harm than good, as he believed it would rather create mischief than tend to calm and quiet the feelings of incendiarism which existed, he for one begged to thank the right honourable gentleman for having refused to grant such commission. (Hear, hear.)

Lord HENNIKER trusted, as one interested in this question, residing, as he did, in that part of the country where the incendiary conflagrations most prevailed, that he should be allowed to address a few observations to the House on the subject. He would not go into all the irrelevant questions adverted to by the honourable member for Manchester and the honourable member for Durham, but he would endeavour to keep the attention of the House to the question before it. It had been his duty to apply to the right honourable gentleman the Secretary for the Home Department on more than one occasion, and he begged to bear testimony to his willingness—his earnest desire—to promote an investigation, to ascertain the causes of, and apply a remedy to, this unfortunate spirit of incendiarism. (Hear, hear.) He did not feel it his duty to make any motion on the subject in that House, because he had confidence in the right honourable gentleman, and for the same reason he should vote against the motion of the honourable gentleman opposite. He did expect, after the speeches which he had heard the honourable member for Manchester, on more than one occasion, make in the county which he had the honour to represent, speeches made at Conservative meetings in the county of Suffolk, when they were in the habit of promoting that which they thought would in any way benefit agriculture—whether they considered the interests of landlord, tenant, or labourer—he did expect that the honourable gentleman would now have expressed similar sentiments. (Hear, hear.) Time was when the honourable gentleman would have joined in the praise which he must know to be due to the gentlemen of Suffolk for their anxiety to promote the welfare of the lower classes. (Hear, hear.) He must know that the same feeling and the same efforts had continued, and been exercised in the same way as when he had been loud in their praise in former times. (Hear, hear.) He (Lord Heniker) could make the House ring with applause, were he to read—but time would fail him—the number of institutions which had been established in the county of Suffolk for the benefit of the labouring class. The honourable member for Durham could know but little of the county of Suffolk, from the observations which he had made and the tone which he had assumed. A letter which had come into his hands, written by a person connected with one of the fire-offices in the county of Suffolk, stated that, so far as the information of the writer went, no man had a right to say that the fires had been frequent in proportion as the wages had been low, for in most places where they had happened he found the wages of agricultural labourers to be 9s. per week, and where the wages had been 7s. and 8s. per week, there had been a much less number of fires. (Hear, hear.) The honourable member for Manchester had not, he believed, overstated the number of fires, but he thought he had made statements that could not be borne out by the facts. (Hear, hear.)

Mr. VILLIERS said, that he thought that if the right honourable baronet had not before regretted the tone and manner in which he had met the motion of his honourable friend, when he charged him with calling for a needless and mischievous inquiry, he must feel that he had reason then for doing so, for the noble lord who sat behind him, and who represented the county of Suffolk, had just disclosed to the House, that such was his apprehension of the state of his county, such was the necessity which he considered the extent of the crime in question had caused for instant inquiry, that he had himself, in the discharge of his duty as a proprietor and a member of that county, gone to the right hon. gentleman to request him to institute some inquiry into the causes of its present condition (hear, hear); and he had further told them that the only reason why he had not made the motion of the honourable member for Manchester himself, was that he had implicit confidence in the right honourable baronet the Secretary for the Home Department. This was the calm, deliberate, Conservative feeling of the noble lord who represented that county. (Hear, hear.) Why then, he asked, was his honourable friend (the member for Manchester)—who, in the absence of any investigation having been made, in the absence of any confidence in the right hon. baronet, a proprietor in the county himself, sharing in the same feeling with the noble lord, desirous of inquiry—to be precluded from making a motion to that effect in the House by the fear of the charge or imputation of deliberately promoting crime? (Hear, hear.) The right honourable gentleman certainly said that it did not become him to impute motives to his honourable friend. He wished he had thought it as little becoming in him to insinuate motives (hear, hear), for that was what he did: there could be no mistake as to the purpose of what he said; and, considering the character of his honourable friend's speech, a more unworthy insinuation he had never heard; for he ventured to say, that a speech more moderate, more confined to the points in question, or more careful in steering clear of those objections charged upon it, he had never heard. (Hear, hear.) His honourable friend had a right as a proprietor, wishing to live well with his neighbours, as the right honourable baronet admitted he did, wishing that the truth should be elicited as to the cause of the odious crime that prevails in his county, with a view to its prevention in future—he had a right to ask the Government to attend to it, to set the public mind at ease on the subject—to ascertain its extent, and at least determine, if

possible, what was or was not the cause of it. (Hear, hear.) Where would the objection of the right honourable baronet end if it was good in this case—that to mention a grievance tended to create discontent? It would go to stop agitation on any question which was always said to disturb the public mind; if so, what chance was there of a single evil or grievance ever being removed? Where was the single instance of this House volunteering any measure of public good that did not spring out of agitation, almost amounting to violence? (Hear, hear.) The right honourable gentleman had taken credit to himself for amending the poor law. Why had he done it? Why, he admitted he did it reluctantly, and why? because what he called the evils of the law had been so frequently pressed upon him (hear, hear); and whenever there had been any inquiry into the condition of any portion of the people, or any concessions of any good made by the Government, it had usually been introduced with an apology, that resistance was no longer possible. (Hear, hear.) Every body had been charged in the same way as his honourable friend had that night. Was his honourable friend, moreover, the only person by whom, or was this House the only place in which these matters were discussed? Was there not in the two leading journals—the *Times* and *Chronicle*—at least a column and a half every other day referring to the state of these counties, and speculating upon the causes? (Hear, hear.) If the discussion of the state of the poor was so mischievous, why did the right hon. gentleman not reprove his friends on his own side of the House, who, in their addresses against the poor laws, made speeches far more inflammatory and violent, more calculated to excite discontent among the poor, than any that the member for Manchester had ever made. (Hear, hear.) The hon. member for Durham had just explained that, by referring to this peculiar sensitiveness on the score of mischief, whenever the Corn Law is mentioned: touch and attack what else you please, and how you please, and nothing will be said; but allude to the evils of the Corn Law, and there is no crime that will not be imputed to you. Now, the fact was the Corn Laws made the application of his hon. friend to the Government peculiarly in season, for he and all those who complained of the impediments thrown in the way of trade, thereby depriving thousands of their bread, had a right at all times to invite public attention to the condition of the agricultural districts, seeing that the enormous mischiefs which were occasioned by these monopolies were defended, and defended solely on the ground of the great advantages they conferred on the labourers of the country. (Hear, hear, hear.) It was not him and his friends on that side who introduced irrelevant subjects into a discussion of this kind, if that law which makes food scarce is to be called irrelevant to an inquiry into the state of the poor. (Hear, hear.) It was those who defended this law, who invariably intruded upon a discussion of the Corn Law, the blessings it entailed on the agricultural population (hear, hear); and when the whole country was roused by the unceasing and shocking distresses of these people, they had a right to remind gentlemen opposite of their plea for upholding a law so obviously maintained for their own interest (hear, hear), on the ground of its profit to the poor. (Hear, hear.) Such a plea required to be supported by the strongest evidence to gain the slightest credit, and might well deserve the character it obtained when it was rebutted by every day's and every hour's experience. (Hear, hear.) But the motion is proper at any time that it may be made, for the condition of the agricultural people in these counties is not new. (Hear, hear.) It is one of the grounds for inquiry that it is traced to causes which have had existence subsequent to the distress in question. It is a common notion that the discontent of the people is referable to the new poor-law alone, which is not the whole truth. There was abundant evidence to show that the people were precisely in the condition they then were a few years before the new poor-law, and that then the evil was traced to the maladministration of the old poor-law. (Hear, hear, hear.) He would read a letter addressed from the county of Suffolk to the *Times* newspaper, in the year 1830, complaining of distress, and alluding especially to the cruelty and hardships of the old law. (Hear, hear.) The letter purported to be from a day labourer, and it seems made a great sensation in the county at the time. The letter says, "Sir,—As I hear that you always put into the paper anything likely to do good to poor people, I make bold to write to you. I am told that the great people talk of nothing but the riches, the happiness, and the flourishing state of the country; but, Sir, I see nothing but famine, misery, and distress; and I think that, if our Parliament men knew the real situation of myself and thousands of my fellow-labourers, they would do something for our relief. I am an industrious labourer, about thirty years of age, with a wife and three young children. I have regular work, which is more than half my poor neighbours can say. How then, it may be asked, come you to be distressed? Why, Sir, because my wages are not enough to put bread into the mouths of myself and family. The wages have been for a long time 7s. a week; and, as it is impossible to live upon this, I am obliged to beg every week at the vestry." He then proceeds to show the way in which his wages are made up out of the parish fund, and how the whole is applied for his maintenance, and says, "Thus, Sir, after having provided myself and family with a cottage to live in, and about one pound of bread for us to eat, I have 6d. a week left to supply us with clothes, cheese, potatoes, candles, and firing. Think, Sir, on the miserable, hopeless, half-starved condition of myself and family; and then, Sir, think of the far worse condition of nine-tenths of my neighbours, who have not such good health and regular work, or who have larger families than myself. Don't you think (he farther says) that for the employers to pay their labourers half their just wages, and to send them to the parish to beg a wretched pittance, is like defrauding them of their hire, and is what is called in the Bible 'grinding the faces of the poor';" and after dwelling upon the effect on strength and health of the inadequate requital for their labour, and saying that half of them are supported in beggary, he says "he does not understand much about law making, but that he has heard that a law has been passed to keep up the price of corn for the good of the farmers, and that surely it would be but just that another law should be passed to make those who employed the labourer to give him wages in proportion to the rise in the price of food." (Hear, hear.) Now, the *Times* of the day in which that letter was inserted invites general attention to its contents in a leading article, and says:—"We know that the statements which it contains are true, and that they apply to a very large district in a quarter from which

the letter comes, and to some thousands of parishes in England." (Hear, hear.) He (Mr. Villiers) referred to it to show that this bad condition of the people in these districts was not new, and that, however angry the people might feel with the mode in which relief is given to them now, yet it could not be considered to be the cause of their distress. (Hear, hear.) The *Times* is right, and does much good in pointing to the wretched state of the rural population; but it points too exclusively to the new poor-law as the cause of that condition. (Hear, hear.) There was a deeper cause of their deterioration, and one which punishment—which the honourable member seemed to believe was the cure—will be far from removing. It would seem, when the gentlemen connected with the county hear that magistrates dare to commit, and juries dare to convict, that all is done that is required (hear), but that is far from satisfying the question. It is clear that the evil was not mending; for upwards of twenty years before the new poor-law, the people of these and other agricultural counties had been deteriorating; and unless the great fact of increasing numbers and diminishing employment was met boldly in the face, no amount of punishment, or no amount of caution in refusing inquiries of this kind, would stop the evil. (Hear, hear, hear.) In the year 1824 there was a committee in this House to inquire into the operation of the old poor-law, and persons the most competent to describe the real state of the rural population—clergymen, proprietors, overseers—all agreed in depicting the people as fearfully distressed, immoral, and discontented (hear, hear); the evil, then, existed at that time, continued still, and was getting worse; and it could not be otherwise while a law to impede trade and check the supply of food, and thus lessen the demand for labour, continued. (Hear, hear.) Since the prices became first so high, since it was attempted to continue them so by legislation, without making adequate provision for the wants of increasing numbers, so long have the people been sinking, and so long would the people sink (hear, hear, hear); and honourable gentlemen opposite should really reflect upon the fact they cannot dispute—that it was just at those intervals when the Corn Law fails in its purpose and there is abundance of food that those very people, those labourers whom they profess to care for, were well off. That the people were ill off in these counties was not disputed, he believed, out of this House, but he had heard it denied this evening. Well, grant it that they were not distressed; was it not ground for inquiry that the contrary was very generally believed; and was there any fear of inquiry, or of increased incendiarism, if they were well off? (Hear, hear.) It was said that these fires were caused by others, and not by the people of the county. Well, then, the people would be thankful to have the elicited, and there was no fear of exciting them to the commission of crime by inquiry. (Hear, hear.) He knew that divers reasons had been assigned for this offence in those counties, and he believed that in the insurance offices there was an idea that some of the persons insured were not so careful as they might be, for being fully insured offered a great temptation to their not being so; but the more conflict of opinion there was, the more doubt as to whether it was an act of despair on the part of the people in the hopelessness of their condition, surely the more reason was there for inquiry. In short, as coming from his honourable friend the member for Manchester, as a proprietor in that county, he could conceive no motion more appropriate, more called for, or more likely to be useful, and presented as it was in a very careful speech as he thought, he should give it his cordial support. (Hear, hear.)

Sir J. TYRELL said that the speeches on the other side had all the characteristics of incendiary speeches. Mr. Bright was just come up from an agitating tour in Kent; and the present discussion was only an adjourned debate upon the Corn Laws. He believed that much of the existing uneasiness was owing to the agitation of the Corn Laws by the late Government.—The House then divided upon Mr. Gibson's motion—

Against it	130
For it	41
Majority against it	89

[Mr. BRIGHT, on Thursday evening, gave notice that early in the next session of Parliament he will move for a "select committee to inquire into the operation of the game laws; especially with reference to the consumption of agricultural produce by game, and to the effect of these laws upon the interests of the tenant-farmers, and the morality and well-being of the peasantry."]

ARSON.—Mr. Ewart, M.P., has procured, at the expense of the House of Commons, a statement of the number of persons committed, convicted, and executed in England and Wales for the crime of arson since the year 1837, and for the six years preceding 1837. In the six years since 1837 (from 1838 to 1843 inclusive) the actual number of persons committed amounted to 344, of whom 117 were convicted, but not one executed. The punishment was, we believe, mitigated in the year 1837. In the six years preceding 1837 (that is, from 1831 to 1836 inclusive) the total number of persons committed for arson amounted to 493, of whom 119 were convicted, and 58 forfeited their existence on the scaffold. Thus it appears, on calculation, that from 1838 to 1843, after the mitigation of the penalty annexed to this offence, the centesimal proportion of convictions to commitments was 34.01, whilst from 1831 to 1836, when the extreme penalty remained in full force, the centesimal proportion was only 24.14. Of course it is Mr. Ewart's object to show, by statistical facts, that more convictions are likely to be obtained under the mitigated than under the old law, and so to advance another argument against the infliction of capital punishments.

HOME-MADE SUGAR.—It may not be generally known, that a small but certainly an increasing quantity of sugar is made in this country, from the farina of potatoes and other similar substances. By a recent parliamentary return we find, that in 1841, upwards of 2358 cwt. were made and charged with duty; in 1842, more than 3478 cwt.; and in 1843, 3843 cwt. 3 quarters. These amounts paid an excise duty respectively of £2971, £4382, and £4823; and the accountant-general adds a note, to the effect that this sugar was principally manufactured from potato farina, but sago, Indian wheat, and barley have been used to a very limited extent; the sugar made therefrom, however, could not be stated, as no separate account was taken at the time of charging the duty.—*Manchester Guardian*.

MEETINGS.

SALISBURY.

It having been announced that a deputation from the Anti-Corn-Law League would visit Salisbury on Wednesday, the 17th inst., preparations were made by the Free-Traders of the city to give them an honourable reception. A great number of the inhabitants accordingly repaired to meet the deputation on the London-road, and welcome them on their arrival. Messrs. George Thompson and Moore arrived about half-past three o'clock, and were received with loud cheers. A procession was immediately formed, preceded by music and various gay banners, which moved through the principal streets of the city, and proceeded to a meadow in the occupation of Mrs. Naisb, of East Harnham, in the immediate vicinity of the Close, where a convenient hustings had been erected, and every accommodation had been made for the reception of the meeting. Mr. Cobden had been announced as one of the deputation, but that gentleman was prevented from attending by a domestic calamity. The proceedings of the meeting commenced a little before four o'clock.

Mr. SQUAREY, who was received with loud cheers, in proposing that Mr. John Lambert should take the chair, said he was happy to see so numerous and respectable an assembly met together on that occasion. He wished prosperity to the cause they had met to support, and trusted that they would agree together in their discussion of a question in which they were all deeply interested. Unless that question was repeatedly agitated, they must succumb to the monopolists: let them, however, do their duty to themselves and to their country, and stick together, and they were as certain to beat the monopolists as that the sun would rise on the morrow. (Cheers.)

Mr. FAWCETT seconded the motion, which was carried by acclamation.

Mr. LAMBERT, in coming forward to open the proceedings, was received with loud cheering. He said he feared they had made an improper choice in selecting him as their chairman, since it was scarcely possible for an individual who had taken so active a part as he had done in the attempt to obtain a repeal of the Corn Laws, to act with that strict impartiality which the situation demanded. He was, however, resolved to discharge the duties of the office to the best of his ability. (Cheers.) The question they were met to determine was, whether the great principle of Free Trade should be carried into effect—whether the labouring, industrious man should be enabled to exchange his labour for the commodities he wanted, or whether he should be barred from the enjoyment of that privilege by the landed proprietors. (Cheers.) The case of the Corn Laws came under discussion in 1815, when these laws were first proposed. At that period the freeholders of the county of Wilts met together in the Council Chamber (they could then obtain the use of that building for their public meetings), when 14,000 names were appended to a petition, praying that so infamous a bill might not be passed into a law. (Cheers.) In that remarkable petition it was stated that, at a period when they expected to enjoy the blessings of peace, attempts were making to inflict upon them the sufferings of war, by raising the price of corn. (Cheers.) This petition was signed by George Eyre, high sheriff of the county, he (Mr. Lambert) believed the father of the present Mr. Eyre, of Warrena. At this meeting it was decided that the landowners ought to reduce their rents one-third. (Cheers.) At the same period, too, able letters on the subject of the Corn Laws appeared in the *Salisbury and Winchester Journal*, signed by J. Bleock, of Warminster—whether the same gentleman who spoke at a recent meeting in the Assembly-rooms of that city in support of the Corn Laws, he was unable to determine. (A laugh.) In these letters the Corn Laws were strongly opposed, as calculated in their effect to oppress the poor, and their supporters were described as actuated no doubt by good motives, but as suffering under the errors of self-delusion. (Cheers and laughter.) After some further remarks, Mr. Lambert expressed his regret at the unavoidable absence of Mr. Cobden—a gentleman whom, whether viewed in his public or his private character, he regarded as a truly good and honest man—which absence had been occasioned by his having to attend the funeral of a near and dear relative—and concluded, amid great applause, by introducing Mr. Moore to the meeting.

Mr. ROBT. R. MOORE and Mr. G. THOMPSON then severally addressed the meeting in able and eloquent speeches, which were heard with every mark of attention, and warmly and repeatedly applauded.

Mr. FAWCETT moved the following resolution, which was seconded, and carried by acclamation:—

"That it is the opinion of this meeting, that all prohibitory duties and restrictions on commerce ought to be totally and immediately abolished; and that, with the view of accomplishing this just object, this meeting pledges itself to promote, by all peaceable and constitutional means, the return of men to Parliament who will zealously labour to promote the principles of Free Trade, not in the abstract, but in practical operation."

Thanks were then voted to the Chairman; and the meeting separated with three hearty cheers for Free Trade.

The party then repaired in procession to the pleasure-grounds attached to the Rose and Crown Inn, at Harnham, where ample provision had been made for a tea-meeting, at which 600 persons sat down. The viands were unexceptionable, the speeches delivered were eloquent and appropriate, and the events of the day terminated with a cheerful dance on the green, which was kept up with much spirit and animation.—*Abridged from the Salisbury Journal.*

YORK.—On Monday last, a deputation from the National Anti-Corn-Law League, consisting of George Thompson, Esq., the popular advocate for the extinction of slavery; Thomas Plint, Esq., of Leeds; and Robert R. Moore, Esq., delivered addresses on Free Trade, in the Concert-room in this city, to a numerous audience. On the motion of Mr. Henry Lyons (the Secretary of the York Anti-Corn-Law Association), seconded by Mr. Joseph Swale, the chair was taken by Mr. Caleb Fletcher. Mr. Plint, Mr. Moore, and Mr. Thompson then severally addressed the meeting in able and argumentative speeches. Votes of thanks were passed to the deputation, and also to the chairman, after which the meeting dispersed about ten o'clock.

HULL.—On Wednesday evening last, the Town-hall, Hull, was crowded to excess, to hear addresses in favour of Free Trade by George Thompson, Esq. (the celebrated

anti-slavery advocate), Robt. R. Moore, Esq., of London, and Thomas Plint, Esq., of Leeds. Never was a more respectable, enthusiastic, and unanimous meeting held in this town on any public question. The side galleries were filled with ladies, for whom tickets had been reserved; and we observed on the platform, and in the body of the hall, Mr. Alderman Thompson, Mr. Alderman Cookman, Mr. Alderman Atkinson, Mr. Alderman Brownlow; Counsellors Herbert Seaton, John Foster, T. Watson, H. Blundell, Jesse Malcolm, B. Tapp, W. Bettison, John Lovitt, Jos. Jones, Gunnell, Sisson; Dr. Gordon, J. Petchell, Esq. (sheriff); Messrs. W. E. Jalland, Barrick, Gill, W. Blenkin, Gibson, Hodgson, W. Mitchell, T. N. Jarratt, Robert Liddell, W. Ayre, jun., John Ostler, T. Meggitt, W. H. Bell, Viocars, Rockitt, Jones, jun., Waterworth Hall, Stanforth, Mitton, Meyer, J. Richardson, James Bowden, J. Tapp, B. L. Johnson, Carvill, R. Thorp, E. Thompson, P. Lowther, D. Thorpe, W. Dales, Rev. G. Lee, Dr. Firth, Captain Meggitt, Captain Ash, &c. &c. The speakers came on the platform at seven o'clock, and were greeted on their appearance with loud cheers from the vast assembly. After silence had been obtained, Mr. Alderman Cookman moved that Mr. Alderman Thompson should take the chair. Dr. Gordon seconded the motion, which was carried by acclamation. Mr. Alderman Thompson, after some introductory remarks, said—"I have been lately examined before a committee of the House of Commons with reference to the depressed state of the shipping interest. I was there asked what remedy I proposed in order to remove the existing depression. I proposed what I have just now told you, to let the working-classes have the means of purchasing all the articles they required as cheap as the labourers of other countries can do. (Cheers.) That can only be done by taking the duty off those articles of import which at present are liable to duty. (Cheers.) One of the members of the committee asked me how then I would pay the revenue? I answered, 'Let those who have property to protect pay for its protection (cheers); let those who have property to watch pay the watch-rate' (applause); and until this is done the trade and commerce of this country will never be placed on a sound footing, will never be in a healthy state." (Loud cheers.)—Messrs. Moore, Plint, and Thompson then addressed the meeting in eloquent and powerful speeches.—*Abridged from the Hull Advertiser.*

Our contemporary, the *Kentish Independent*, gives a full and excellent report of Mr. Bright's speech at the Gravesend meeting, held last week, and which we have already noticed.

DEMORALIZED CONDITION OF THE PEASANTRY.

We do not hear quite so much now-a-days about the misery and vice generated and fostered in mills and factories, and other commercial establishments, as we were wont. There is somewhat less talk about the ignorance of the manufacturing population, and less sympathy expressed for their deplorable condition. The public begin to suspect that they have been rather gulled in these matters; and that the crusade against ignorance and hard labour which was declared chiefly against the territories of the "cotton lords" might, with equal if not greater propriety, have been directed to those districts which were believed to be the envied abodes of rural felicity, where the rule of the patriarchal aristocrat was believed to be distinguished and blessed by the peace, plenty, and orderly conduct of his happy and contented dependents. The fabrics of the manufacturers were wont to draw forth the indignant denunciations of the lords of the soil, who delighted to paint vivid and melancholy pictures of the horrid effects resulting from crowded flats, and indiscriminate mingling of sexes in the pursuit of the same employments. So great was the pious wrath of what has generally been considered the upper classes at the scenes of suffering and immorality which these great establishments were supposed to contain and encourage, that they solicited and obtained from the Legislature power to enter into any of them where they chose to push their discoveries; and having zealously ransacked every corner where they supposed a crime, or a misery, or an abuse might lurk, they have arranged and paraded before Parliament what in their wisdom they deemed to be such, and Parliament, with equal wisdom and humanity, have passed a bill for their prevention and cure. We think Parliament did their duty by halves. While they were at it they might have abolished labour and its consequent hardships, then and in all time coming. This would have been little less correct in principle than the bill which they have passed, or any one where, in legislating for grievances, effects are taken for their causes, and where symptoms are misunderstood for a radical disease.

A few years ago, when a great portion of the manufacturing population struck, and the cry was a fair day's wages for a fair day's work, there were not wanting rabid politicians who put the blame on the masters, and who averred that the use of machinery robbed the working man of the natural market for his labour. There were others of the agricultural interest who scrupled not to aver that the ambition of capitalists had, by overproduction, glutted the markets of the world, and caused a reaction at home, which cheated the labourer of his hire. We mean not to entertain for a moment any of these absurd and mischievous propositions. We wish to know what the agriculturists say now, to the scenes which are enacted in their districts,—what they assume to be the cause, and what they propose to be the cure.

Has machinery lighted the torch of the incendiary? Has overproduction fed the flames in Kent and Sussex? Does agricultural speculation fill the poor-houses with starving labourers? The factory-owners were compelled to educate their working people: who is to enlighten the ignorant—the brutally ignorant agricultural population? We were bad enough some years ago in the factory districts—and we vindicate not the insane strikes of the labouring classes; but we have never had conduct so diabolical as that now exhibited in the districts of the "Corn Lords"—the systematic deadly hatred which the servant bears to his master—the fiendish rejoicings of all the lower classes at the destruction of property, which are to be read of in every English journal. A correspondent of the *Morning Chronicle* writes as follows:—"Of the behaviour of the people who crowded to the fire from all parts of Walter Belschamp and adjoining parishes, nothing was complained of as regarded the apparent anxiety of the men at first to save all that could be saved. The women who crowded about behaved differently; they looted and

laughed at the men who worked at the engines or otherwise exerted themselves, and testified their delight in loud shouts of laughter when any part of the buildings fell in and blazed up. Considerable damage was done to the growing crops of barley and wheat by the crowds, who for several hours amused themselves, men chasing women and women chasing men, all rolling together, and shouting, in the smoke and red glare of the ruins. At this period one or more of those men who had been first at the fire, and had carried away gates, palings, &c., in apparent eagerness to save them, attracted notice by their conduct in obstructing those who were still working at the ruins."

Misery among the lower classes springs from the same source whether in town or country—whether in the cotton-mill or in the corn-field; and the radical cause of it in this country is the fact that labour cannot command a sufficient price. The population is daily increasing, and a corresponding increase to the field of their employment is denied by the Legislature. So long as this denial is persisted in, we expect to hear not only of a continuation of the dreadful conflagrations which at present are disgracing England, but of greater sufferings among the starving people, and of greater enormities committed in their despair. Judge, jury, and hangman may "do their duty," but they will not extinguish the torch of the incendiary until he himself and his family are allowed to earn their bread.

Are the people in England to be demoralised like the people of Ireland? Are midnight meetings and midnight murders to become the offspring of unjust legislation on this side of the Channel, as they have already on the other? Will our Legislature indeed persist in their hardened policy, until indignation and revenge are systematized; and until the hatred of the lower classes, already fearfully excited, become inextinguishable? These things have been gravely put to the House of Commons by one of the most dignified of its order. Lord Howick said that, "when once the persuasion shall become general that those in whose hands political power is now placed shall pervert that power to their own benefit—to the injury of others—when once that persuasion gets possession of the mind of the great body of the people, THE DAYS OF OUR EXISTING INSTITUTIONS ARE NUMBERED."

Colonel Sibthorp said, "WHEN IT DOES."

Some time ago Sir Edward Knatchbull blundered out an unfortunate piece of intelligence for his party. We think the gallant colonel even more indiscreet. He admits, by his emphatic remark, that his party hold their present tenure only by the ignorance of the people, and he relies upon its continuance. Let him look round about him and consider how long they are likely to remain passive.—*Dundee Advertiser.*

ADVANCE OF WAGES IN BOLTON.—The operative cotton-spinners of Bolton, considering the revival of trade sufficiently established to warrant an application on their part for an advance of 10 per cent. upon their wages, being the amount to which they were reduced in consequence of the depression, that body gave notice to their employers a month ago, that, unless the advance was given, they would leave their work on the 13th of July. Up to Friday night no arrangement had been made, though the masters that day had made a proposal to meet the men half-way, by making an advance of 5 per cent. On Friday, the 12th, thirty-five delegates from the various mills in the town and neighbourhood, met at Mr. Suttle's, the Crown Inn, Deansgate, to take the proposal of the masters into consideration. It was then decided by 24 to 11, that the offer should be rejected, unless the masters would include the price of gas in the advance. The delegates were instructed to acquaint their masters with this resolution, and to ask for their concurrence. This was done on Saturday morning, when the masters expressed their determination not to go beyond an advance of 5 per cent., especially as they had no assurance that the country masters would make any advance at all. This objection was urged upon the delegates by several masters who are very popular with their workpeople, and its force was felt and acknowledged by the spinners. The question remaining thus unsettled, and the week in several of the mills being completed on Friday night, the spinners in these establishments struck on Saturday morning, and remained out that day. On Saturday night, however, a meeting of delegates and others was held at the Crown Inn, to determine upon what course should be pursued. There were 69 spinners present; and, after a protracted discussion, the question was decided by a show of hands. For adhering to the original demand of 10 per cent., 6; for an advance of 5 per cent. and gas free, 30; for accepting the proposal of the masters of 5 per cent., 33. It was, therefore, decided to go to work on Monday morning, at the advance offered by the masters, and thus, to the credit of both parties, the dispute was amicably settled.

ODD FELLOWS.—The growing importance of this body is not generally understood. At the Selby anniversary last week, where Dr. Hook, of Leeds, preached, himself a brother and warm friend of the order, it was stated after dinner, in his presence and with his concurrence, that the funds of the order consisted of upwards of one million of money!—the supposed income £230,000. The increase of members for the last year had been 25,000!

SALE OF SPANISH BULLOCKS.—The sale of the oxen brought from Corunna took place on Friday last. The company was numerous, the buyers many, and the bidding of a very spirited character. We are sorry to find that the result of this sale will not operate as an immediate inducement for the importation of another such lot of cattle, the cost of bringing them from the country sales to the water side, and shipping them in Spain, and the attendant expense of freight, warehouses, and keep, on this side of the water, with the duty, having considerably lessened the speculator's profit. Though it was admitted by many competent judges that the bullocks were not of an inferior description, they have fallen very short in appearance of the sleek, finely-grown Devonshire cattle. They had evidently been deteriorated in apparent worth by the voyage, though short (only five days), and having remained in cellars for five or six days on dry food—the fields in our neighbourhood not affording sufficient pasturage to renovate them. Forty-seven (the whole) were sold, realizing cash to the amount of £590 1s. 6d. or \$12 11s. per head, or at about 50s. per cwt. As a proof of the determination of butchers to buy, the 47 bullocks were sold in two hours and a half. The bullocks averaged in weight about five cwt. each.—*Plymouth Journal.*

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, July 24, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the LEAGUE of the Saturday immediately succeeding, but are included in the list of the week following.

ERRATUM.

In the Subscription List in the LEAGUE, No. 43, for "Joseph Jasper, Birmingham, 5s.," read "Mrs. Stokes, Birmingham, 5s."

THE COMPOUND VOTERS QUESTION.

The Brighton Free-Trade Association having determined to take measures for obtaining a legal decision as to whether occupiers of premises of the annual value of £10 or more, whose rates are compounded for by their landlords, have a right to be inserted in the list of voters, the initiatory step was taken when the last rate was laid of serving a notice upon Mr. Alger, one of the churchwardens, signed by Henry Cowley, whose rates were compounded for, requiring his name to be inserted in the column of occupiers in the rate-book. This not being done, an information was laid against Mr. Alger for refusing to obey an order of the poor-law commissioners, and he was summoned to answer the charge before the magistrates on Saturday last. The magistrates on the bench were Major Allen, Captain Heavyside, J. Borrer, Esq., and J. C. Stode, Esq. Mr. Creasy, the barrister, was engaged in support of the information, and Mr. Somers Clarke, the solicitor to the parish officers, appeared on their behalf.

Mr. Upperton, the clerk, read the information of Henry Cowley, which stated that William Alger did, on the 11th of May, being then one of the overseers, wilfully disobey a certain order of the poor-law commissioners dated 22nd June, 1837, which order directs that every rate made for the relief of the poor shall be made in the form set forth in the schedule thereunder written, and which said schedule contains the name of the occupier of the premises rated; that he, Cowley, caused a notice to be served upon Alger that he occupied a certain house in Spring-garden, and thereupon claimed to have his name inserted in the list of occupiers; and that in a rate made on the 11th May the said William Alger had disobeyed such order by neglecting to insert the name of the said Henry Cowley as the occupier of the said house, whereby he had forfeited a penalty not exceeding £5. After a good deal of fencing Mr. Alger admitted that he had received the notice, and had refused to put Mr. Cowley's name on the rates. Mr. Alger was fined in the mitigated penalty of 1s. with costs; the latter he refused to pay, but was warned by one of the presiding magistrates that if he did not, a distress warrant would be issued against him.—*Abridged from the Brighton Guardian.*

NOTES TAKEN BY A TRAVELLER IN THE SUMMER OF 1844.

No. IV.

Ghent, July 1.

Ostend is too insignificant in extent, and Bruges too retired and tranquil, to make the impression upon a stranger's mind that is expected from a Belgian city. The antique appearance of the streets of Bruges, deserted as they are, might lead one to fancy that the old citizens with their short cloaks and rapiers, together with their dames of high-crowned hats and formidable ruffs, were pent up still within them, and must appear with every opening door. The city stands like the scene of a play long since acted, and all but the real *dramatis personæ* seem out of place within its walls. Ghent presents a very different appearance. The greater part of the town is new, and is built either in the modern French style, or in the Italian fashion. The dark brick walls with large windows are rarely met with that form the standing type in Holland, and but a few buildings of ancient date have any pretensions to picturesque effect. Amongst these is the well-known house of the *Bateliers*, or boatmen, which has outlived the craft that erected it. The Town-house preserves something of the rich Gothic exterior, but it looks somewhat displaced amidst the white fronts and modern ornaments that surround it. Ghent belongs evidently to the present age; and the feelings and tendency of the exertions of its inhabitants are to go with the times, and share in their fortunes. The difference in this respect between Ghent and Bruges is mainly to be attributed to the circumstance that Ghent has long been a manufacturing centre. Bruges in the middle ages depended on its trade—the richest source of profit. The manufactures that grew up in and around it were luxurious in their nature, such as could only be indulged in by the wealthy. The tapestry of Arras, of which a great deal was made at Bruges; rich dyes for cloths, that were left to be spun and woven in England; works of art, lace;—these were the products of the capital of West Flanders. Its domestic industry would become again of a luxurious nature if another Philip of Burgundy were now to open the harbours of Flanders to all the civilized world with the same hospitality

that gave the towns wealth in the fifteenth and sixteenth centuries. Ghent was at all times renowned for its linen cloths. The weavers were the mightiest guild of its corporation, and they often sent numerous armies into the field under their own banner. And yet Ghent, in the thirteenth and fourteenth centuries, was less important than Louvain as a manufacturing town. Louvain, however, declined in importance more rapidly than Ghent, which place, from its position between the waters of the Scheldt and the Lys, was almost impregnable, and could only be reduced by famine. A city in those early days consisted of an agglomeration of corporations, civil or religious, not merely boasting of an existence in parchment records, or in meetings in guildhalls, but each shut up in a little enclosure of its own, whose limits were carefully watched by guards against intruders by night. It frequently happened that one guild would declare a feud against another in the same city; and the power of the chief magistrate was null, unless he was able to secure the support of each of these little communities. A last monument of this state of things is shown in the great *Béguinage* of Ghent, which is situated on an island in the Lys. A single bridge communicates with the town across the narrow stream that surrounds the island, which contains eighteen conventional houses, a hospital, and a church. The buildings are of brick, and are not very ancient. But thus were all the trades and clerical establishments formerly shut up. In this manner the houses belonging to the Hanseatic League and the factories of other tolerated merchants were enclosed, each forming a little *imperium in imperio*, governed by its own laws, and mixing but little with the inhabitants of the town. In this manner we must represent to ourselves the wards of London originally to have been, near which the Tower, and afterwards the Temple, several religious communities, and the Steelyard, or place of deposit for the Hanseatic merchants, protected the interests of the several tolerated or associated interests. Such little fortresses or factories were held especially by the Hanseatic traders at Lisbon, Bergen, and in many Baltic cities, as well as in England and in Flanders. Whoever joined a town—and many adventurous nobles entered into the citizens' bond in Belgium, Italy, and Germany—was obliged to enter one of these corporations, which had always full employment for those who were fond of fighting either in their domestic feuds or in escorting their wares by sea or by land. It is remarkable that, as late as the celebrated *Joyeuse Entrée*, or recognition of the privileges of the people of Flanders and Brabant by Wenceslaus, of Luxembourg, in 1356, no mention is made of the nobles as forming a separate class in either land. The right of the cities and of the country to control the acts of the sovereign, even in family arrangements, is by this document specially acknowledged. The towns of the Low Countries were then in their most flourishing condition; and their sovereignty was of such importance that Wenzel's brother, Charles IV., had been chosen by the electors of the empire to fill the throne of the Caesars, to the exclusion of the house of Hapsburg, in which dignity Wenceslaus followed him. The respect for trade which these dukes carried with them into Bohemia, the sovereignty of which they inherited, and their tact in dealing with rich and independent burghers, whose thriving condition was their boast, raised Prague, within a short period, to be the capital of the German empire, and caused it to rival these western cities, although situated so far inland.

Ghent long owed its wealth and consequence to the linen manufacture, of which it formed the centre, and which did not depend upon the whims of sovereigns at home, or on the progress of rivals abroad, so much as trade necessarily does. The revocation of the Edict of Nantes added the superiority in woollen manufactures to the linen trade, and the more easily that wool had always been a staple manufacture of the Belgian cities. Finally, when cotton was introduced as an article of general demand in Europe, the manufacturers of Ghent, who had a population prepared by habit for factory undertakings, found no difficulty in imitating the processes invented in England, and in making their city an indispensable source of supply for the continent of Europe. The long interruption of all direct communication with England under the reign of Napoleon prolonged the palmy days of spinning and weaving by hand; and the fostering protection of the Dutch King encouraged the introduction of machinery after the peace had restored the communication with England, but had opened new markets in the East for the products of Flemish industry.

Amidst all the political and industrial changes, it is easy to trace the spirit that I alluded to in a former letter, and which affords a valuable clue to the history of these cities. Nothing could destroy the commercial spirit (if the French *esprit de commune* may be so translated) that has ever predominated amongst them. Ghent is for its citizens what Rome or Hamburg is for the inhabitants of the banks of the Elbe and the Tiber—a centre of affections and calculations that have scarcely yet learned to stray as far as Bruges on the west, or Antwerp on the east. Napoleon, although an Italian, could not understand, or would not enter into such sympathies, or his gigantic plans would have met with valuable aid in this part of Europe. But, even in a French empire, Ghent, Bruges, Brussels, Mechlin, and Antwerp were not to be sunk in the departments of the Lys or the Scheldt, just as they claimed an independent existence in the days of the German empire, under Maria Theresa and Joseph II. These Belgian cities may see their trade ruined, their political lot may transfer them from one rule to another, and they will prove rebellious or remain passive; but, to ensure the co-operation that they still can give, the independence of their corporations must be respected—the citizens must be acknowledged to be capable and free agents. They have from the earliest time been educated in feelings of distrust of continental rule, and the homely standard of local advantage has, as yet, found no other to supersede it in the minds of practical Flemings.

At the moment of my arrival at Ghent, an unusual degree of animation could be traced amongst all classes. In this week an event of no small importance for the commercial portion of this little world is to take place. The King is coming to lay the first stone of a large bonding warehouse near the basin in which the Canal of Terneuse, the shortest communication to the sea, terminates. Next week is to be one of fêtes, in which it is hoped that the manufacturers and traders will condescend to join. On Leopold's last visit he could persuade none of the manufacturers to meet him, and an original *manœuvre plaisanterie* amounted almost to an insult in the theatre of the town. The rich citizens all took boxes

for the night when the King declared his intention of going to the play; but all staid at home with their families, and left him with his aides-du-camp to enjoy the performance in solitude.

Still the King is too well aware of the importance of securing the co-operation of the manufacturers, if any thing is to be made of his new kingdom; and, as their resentment may be supposed to be mollified by the reflection that the old state of things cannot easily be restored, it is supposed that they will lend their aid to the improvement of the present circumstances. Ghent was the city that lost most by the separation of Belgium from Holland; and the sturdy manner in which its citizens of the higher classes expressed their loyalty to the King contrasts remarkably with the impression that has unaccountably obtained in many countries, and even in England, that the manufacturers are not conservative in their inclinations. The manufacturing interest is one that bears less a vacillating policy than the landed interest. It demands a higher grade of security of property, because its investments are more exposed to destruction. For this reason landowners are not fit judges of the interests of manufacturers; and the citizens of Ghent appeal from the decisions of the Cabinet, and even of the Legislature of Brussels. Their protest consists in inactivity whenever it is called forth; but as this inactivity is a dangerous thing where a dense population is demanding employment, and in a small country its effects are immediately visible in the revenue, kings and councillors are obliged to recognise the position which the manufacturer is politically called to occupy, and to meet him on the ground he has the power to choose.

The establishment of the great entrepôt at Ghent holds out the prospect of adding maritime commerce to the present sources of industry in this important city. It is practically a confession that an indemnification for the loss of a monopoly must be sought and may be found in an extension of trade. That the festivities and even the presence of the Monarch will not induce these mistrustful citizens to embark in wild shipping speculations, whose success or failure lies in the hands of priests and nobles at Brussels, may be anticipated. The entrepôt at Ghent may therefore, in the present spirit of the Chambers in the capital, be expected to remain as empty as the splendid canal on which it stands, and the completion of which was effected by the personal interference of the King of Holland. It is a real triumph on the part of the present Monarch that his personal qualities, his moderation, and his tact in conciliating rival parties have made it possible for him to appear on the banks of this canal, and assume the office of inaugurator on this occasion. It must strike the least reflecting observer that this appearance of his ought to be significant of a new system. If the canal reminds the "Gantois" of the monopoly of the Dutch colonial market, to which it was intended to facilitate their access, the entrepôt should proclaim the larger view of trade, from which the manufacturers would not shrink if they were only assured of its continuance. But how would the proclamation tally with the recent vote of the Chambers at Brussels? Can we wonder that these citizens shut themselves up within the circle of their local interests, and remain passive in debates that nearly affect their natural occupations, when every schoolboy who has interest enough in a village to be elected to a seat in the Chambers, and every descendant of a privileged family assumes the right of prescribing in matters that can only be understood by those who have inherited the wisdom of experience, and whose studies have been practical as well as theoretical. The King's visit to Ghent cannot be otherwise than productive of good. He will see that a powerful interest in the country demands consideration, and can only be aided by a liberal policy, both foreign and domestic. He cannot give them back what they sacrificed to place him on the throne. They have, therefore, the strongest claim on his care, and he will find that he is securing by far the steadiest supports of his crown in restoring his manufacturing cities to their former prosperity.

It will, perhaps, be said that these observations are uncalled for; that the Belgian manufactures are flourishing, and are even rivalling our own upon the Continent. That the limited markets which are opened to the manufacturer under the present duties are crowded with Belgian as well as English wares is an undoubted fact, but one which in no way invalidates what has been said. But were the present restrictions that now impede trade removed—were the markets even of Europe opened—the demand would be so great that all that Belgium, England, and the other manufacturing states could send would be insufficient to supply them. Instead, then, of measuring the improvement of manufactures by the establishment of single companies and solitary steam-engines, Belgium would count its progress by the rise of new cities, as in the middle ages, and as England did before the close of the first quarter of the present century. Russia, with its sixty millions—Austria, with its forty millions of rich and unsupplied inhabitants, now kept in a state of artificial privation—these countries present the field to open which Belgium would have done well to persevere in the freest communication with every country of Europe, and to have resisted the return to the principle of monopoly, from which the Belgian manufacturers, like our own, are suffering.

I have already noticed the apparent error in the measures adopted to secure a monopoly of the supply of flax to the Belgian weavers. The first effect has been to diminish the cultivation of the plant, to which the landlords are most indebted for their high rents. The true mode of keeping the flax at home is the systematic cultivation and extension of the mode of dressing it, in which the Belgians are now superior, but are in danger of losing the art by having their attention directed to a factitious protection, which is to supersede the necessity of this further exertion. Free trade in this, as in every other case, is the spur to improvement. Instead of robbing Ghent of its linen mart, it would convert its coarse cloths into lawns and cambrics, by the force of the principle that the more abundant and cheaper the coarse wares are furnished, the greater will be the demand for fine stuffs. The housewife who has to pay dear for sheets and towels will spend the less in handkerchiefs and body linen. In the same course of deduction the farmer arrives at the important result which has so long been overlooked by political economists, that the value of a crop of flax must be in an inverse ratio to that of a crop of corn, and must rise in price as the other declines. No decrease in the consumption of linen can be proved since the introduction of cotton, that has relieved so many wants, and proved a source of health and comfort to millions. rivalry in this their peculiar branch of industry, if no mischief be done by those measures that are so falsely called protective.

It is so important that the true movement of Free Trade should be fully comprehended by every one, that I must dwell a little upon the official statement published here as the result of a long and minute parliamentary inquiry into the state of the linen trade. It was calculated that, in 1840, there were employed in the linen manufacture:—

	In towns.	The country.	Total.
Families	1861	33,989	35,850
Individuals .. .	9325	171,732	181,257
Persons preparing flax ..	3522	43,083	46,605
spinning (at once) 2546	..	66,035	68,580
weaving (do.) 785	..	20,300	21,085
Spun annually 328,636 lbs.	7,647,506 lbs.	7,976,152 lbs.	
Wove annually 898,903 metres	9,088,151 m.	9,987,054 m.	
Flax annually steeped 1,492,600 lbs.	32,256,356 lbs.	33,748,956 lbs.	
Flax annually dressed 1,137,722 lbs.	13,324,980 lbs.	14,462,702 lbs.	

It is clear that, between all these numbers, there must exist a connexion; that if weaving could be cheapened and facilitated there would be more demand for spinning; that when spinning is moved there would be more to do in growing and preparing the flax. The first condition of an improved sale must be a reduction in price; the second is, then, an increased supply. Thus the increased demand in every antecedent grade of the industrial chain is the cheapening of the labour of that which follows it. Another process, however, runs parallel to this augmentation of supply, which is the improvement of quality. The wages of all parties employed depend very much upon the quality of the work. We have seen that the value of flax upon the field is highest in those districts where the dressing is best understood. For the wages of the dresser there is a margin between £60 per ton, which is often paid in England, and £200, which is sometimes obtained in Belgium. In the same manner the yarn for fine lawns and cambrics brings a very different price from the coarse qualities. But the condition of an increased demand for these fine articles is the abundance and cheapness of the coarse goods. Hence the true receipt for improving the condition of the linen trade in Belgium is the abundance of machine-spun and machine-woven wares, whether produced at home or imported from abroad. The exclusion of cheap goods will keep the linen manufacture in a backward state, in which not only there is no improvement in profits and wages, but the competition of machinery is most felt. The truth of this is exhibited by the markets of Flanders. The number of pieces inspected was, in

	West Flanders, in 1839.	1840.	1841.	1842.
Pieces of linen 135,122	..	112,225	..	121,508
Pieces of linen 117,361	..	102,315	..	97,086

Thus in every year there was a perceptible diminution in the quantity of linen sold, notwithstanding the increase that took place in the spinning mills worked by machinery, of which Belgium now has twelve that move 64,000,000 spindles. The number of wheels worked by hand average, it seems, 68,581, in constant employment. Thus the spinning power had multiplied twofold, and yet both the production of flax and of linen has declined. How are we to solve this problem otherwise than by supposing that weaving has remained too dear to allow of increased consumption proportioned to the increased power of spinning, or that cotton goods are not sufficiently cheap and abundant to allow of an increased consumption of the dearer article.

This seeming paradox is confirmed by the condition of the cotton factories at Ghent, of which several are in full activity, but produce only coarse articles for the consumption of the peasantry. The finer goods that are displayed in the shop windows are all of French or of English manufacture. Since 1836 this manufacture may be said to be stationary. In 1833 the weight of raw cotton imported was 6,171,231 kilogrammes of two lbs. each; in 1842 the importation was but 6,148,237 kilogrammes. Supposing the protecting duties to secure to the Belgian manufacturer the supply of the home market for coarse goods, he does not yet furnish more than 3lbs. per head for the consumption of his fellow-citizens annually.

In the closest juxtaposition with these protected and not improving manufactures, Belgium affords the most valuable instance that the history of industry presents of the triumph of one branch that by its nature defies protection. I mean, of course, its thread lace, of which more in my next letter from Brussels.

I must, however, remark that the little progress which manufactures are making in these their ancient seats is in no way to be ascribed to want either of activity or of capital. Whenever a plan is started for the embellishment of the town, or the construction of necessary buildings, the money is immediately forthcoming. The recent expenses of the private clubs, in building and gardens, are on the most liberal scale, and the new Palais de Justice is one of the finest buildings in Belgium. The immense hall in this building contains too characteristic a trait to be omitted. An exhibition of modern pictures has been prepared to celebrate the King's arrival. Amongst these the most conspicuous in size, though not in merit, represents the people assembling to accompany Philip van Artevelde in his well-known expedition to Bruges, in which the latter city was plundered, and 9000 citizens were massacred by the people of Ghent. I asked one of the magistracy what he thought his neighbours of Bruges would say to this strange picture. "Indeed," he replied "I never thought of them." So long has the exclusive spirit of local interest and attachment been preserved in these towns. And to what can we ascribe it but to the ill success of all the centralising governments they have been under, in reconciling their views of private interest and fame with those of a larger circle of their fellow-creatures. The "Gantois," as a citizen, has traditions, has wealth, has a social, and even a political system. What has he as a Spaniard, as an Austrian, as a Frenchman, that he can boast of? What will he have to show one day as a Belgian?

COMPARATIVE INCOME FROM REAL PROPERTY IN ENGLAND—1815 AND 1843.

(From the Economist.)

One of the interesting and instructive results connected with the imposition of the Property and Income Tax is to be collected from an examination of the progress of the value of real property in the kingdom. Since the income-tax was repealed in 1815 we have had no certain data on which to form any accurate estimate. Among the press and the public generally this subject has created much speculation and interest; and we feel happy now to have it in our power to lay before our readers, from official documents, an accurate comparison of the value of all the real property in England assessed to the income-tax in 1815 and 1843, and the same for each separate county, which will enable us to draw many interesting and instructive conclusions as to the main cause and source of the increasing wealth of this country.

The comparison shows, as all were prepared to expect, a great increase of the value of property. But there are two circumstances needful to be borne in mind, which show the actual increase to be even greater than appears by this comparison: the first is, that in 1815 all property was chargeable with the income-tax, except such as was under a clear net produce of £50 a year, whereas by the present law this exemption is extended to proprietors whose incomes are less than £150 a year. There is, therefore, a considerable amount of property exempt under the present law, which would not have been under that of 1815. Again, the returns in 1815 were made in a depreciated currency as compared with those of 1843; and to whatever extent the value of our currency was increased by the resumption of cash payments in 1819, little or much, that difference again indicates even a greater increase of value at the present time, when compared with the former period. We are not aware of any circumstance whatever that can affect the comparison in an opposite direction. The following is

Amount of Real Property (including Tithes) assessed to the Income Tax in the Years ending April, 1815, and April, 1843, respectively; showing the percentage increase between the two periods, in each County of England.

	Year ending 5th April, 1815.	Year ending 5th April, 1843.	Increase per Cent.
Bedford ..	343,683	502,728	46.27
Berks ..	643,781	955,270	48.38

Worcester ..	790,025	1,337,497	67.39
York, West Riding ..	2,385,826	4,343,238	82.04
N. Riding ..	1,144,849	1,387,205	21.17
East Riding ..	1,186,509	1,523,735	28.42
Total ..	£49,660,728	£80,519,084	62.14

Thus showing that during that period the annual net income derived from real property in England has increased £30,858,356, or 62.14 per cent., being at the rate of £1,102,084 per annum. On examining the above table it will be observed that the increase of value varies very materially in the different counties—the lowest being the county of Rutland, which is only 14.07 per cent.; the highest being the county of Lancaster, which is 186.05 per cent.; the former being the county in which the largest proportion of the population is engaged in agriculture, the latter (with the single exception of Middlesex) being that in which the smallest proportion of the population is so engaged. This marked distinction leads us naturally to institute a comparison throughout the whole country between the various counties, according to their different characters of pursuits, whether agricultural or otherwise; and, in so doing, we emphatically repudiate any desire to place particular classes in an invidious comparison with others, but only to indicate the source of our greatest national wealth, a knowledge and due appreciation of which must be equally important to all classes. For ourselves, we cannot recognise either wisdom or justice in the commonly-conceived notion that a class is to be favoured in a community against the rest, because it can be proved to be either the most numerous or the most wealthy. There is no justice or sense in the notion that the minority, whether in number or wealth, is to be sacrificed to the majority; but we do recognise and insist on this great and important principle, that, in a country like this, rapidly increasing in population, pent up in comparatively narrow and confined limits, with great national burdens to maintain, it is of the utmost consequence to all classes that we should have a just appreciation of the means by which those burdens may be maintained or lightened in their effect; by which that increasing population may find profitable employment, and be made a source of increased wealth, in place of an increased burden, which it can only be if unemployed; and by which the capital, enterprise, and intelligence of a growing community can find a profitable application.

The following is the order in which, by the latest accounts, the counties of England stood according to the proportion of the population employed in agriculture, &c.

giving with the county in which the largest number were so employed:—

21 Counties most agricultural.	Increase per cent. of value of property.	21 Counties least agricultural.	Increase per cent. of value of property.
1 Rutland ..	14.07	21 Devon ..	37.38
2 Bedford ..	46.27	22 Somerset ..	53.67
3 Lincoln ..	37.52	23 Southampton ..	50.71
4 Huntingdon ..	25.62	24 Worcester ..	67.39
5 Suffolk ..	55.02	25 Cornwall ..	51.35
6 Buckingham ..	26.43	26 Kent ..	69.03
7 Cambridge ..	72.08	27 Cumberland ..	20.81
8 Essex ..	25.64	28 Leicester ..	51.58
9 Hereford ..	34.05	29 Nottingham ..	54.47
10 Northampton ..	30.53	30 Gloucester ..	35.69
11 Wiltshire ..	23.65	31 Dorset ..	29.62
12 Norfolk ..	48.33	32 Derby ..	56.64
13 Hertford ..	50.39	33 Chester ..	50.97
14 Oxford ..	43.00	34 Northumberland ..	19.60
15 York, N. R. ..	21.17	35 Warwick ..	83.33
16 Sussex ..	76.38	36 Stafford ..	111.52
17 Berks ..	48.38	37 Monmouth ..	72.99
18 Dorset ..	29.62	38 York, W. R. ..	82.04
19 Westmorland ..	13.96	39 Durham ..	116.07
20 York, E. R. ..	28.42	40 Surrey ..	84.65
21 Salop ..	42.01	41 Lancaster ..	186.05
		42 Middlesex ..	97.84

In which the real property assessed to the income-tax was, in

	1815.	1843.	Increase.	Incr. p. cent.
21 most agricultural counties & ridings	18,266,685	25,332,337	7,065,652	38.68
21 least agricultural counties & ridings	31,394,043	55,186,527	23,792,484	75.88

Total of England £49,660,728 £80,519,084 30,858,356 62.14
Increase in 28 years of 38.68 per cent. is equal to a mean yearly increase of 1.38 per cent.
Increase in 28 years of 75.78 per cent., is equal to a mean yearly increase of 2.70 per cent.

Thus showing that the real property in the least agricultural half of the kingdom has increased in value during the last twenty-eight years at double the rate experienced in the most agricultural half. An examination into the subject will also show that the greatest increase of population has been in those counties in which the greatest increase of wealth has occurred.

So many of the counties are of a mixed character in their pursuits—agricultural, manufacturing, and commercial—that, in order to show the comparison of the results of the different pursuits on the increase of wealth, and as affording means of subsistence to increased numbers, we propose to make a comparison between the six counties which are most purely agricultural, and the six which are least so, as indicated by the proportion of the inhabitants so employed.

The following are the six most agricultural counties, with the yearly value of the real property therein, in 1815 and 1843, also the population by the census of 1811 and 1841, showing the increase of both:—

	Yearly Value of Property.		Population.	
	1815.	1843.	1811.	1841.
Rutland ..	132,760	151,445	16,380	21,802
Bedford ..	343,683	502,728	70,213	107,986
Lincoln ..	2,059,710	2,832,480	237,891	362,602
Huntingdon ..	321,963	404,441	42,208	58,549
Suffolk ..	1,127,404	1,747,768	234,211	315,073
Buckingham..	648,492	813,611	117,650	155,983
Total ..	4,629,012	6,452,473	718,553	1,021,445
	Increase 39 per ct.		Increase 42 per ct.	

The following are the six least agricultural counties, with similar comparisons of property and population:—

Yearly Value of Property.		Population.			
	1815.	1843.		1811.	1841.
Middlesex ..	5,595,537	11,059,131	..	953,276	1,576,636
Lancaster ..	3,087,774	7,307,109	..	828,309	1,667,054
Surrey ..	1,579,173	2,915,874	..	323,811	642,678
Durham ..	789,697	1,706,262	..	177,625	324,284
York, W. R. ..	2,385,826	4,343,238	..	655,142	1,154,101
Monmouth ..	295,097	510,410	..	62,127	134,355
Total ..	13,733,104	27,842,094		3,000,230	6,439,108
Increase 102 per ct.		Increase 81 per ct.			

The result being:—

	Increase Value of Property.	Increase Population.
In the six most agricultural counties ..	39 per cent.	42 per cent.
In the six least ..	102 per cent.	81 per cent.

Which shows that not only has the increase been enormously greater in the latter than the former, but that, in the latter case, the income from real property has increased at the rate of 21 per cent. more than the increase of population; showing that the community, individually, has become more wealthy; while, in the former case, the population, though increased only at one-half the rate of the latter case, has done so at a greater rate than the property, and that the community, individually, has, consequently, being grower poorer.

As we before stated, we have no wish to make any invidious distinctions or comparisons of the importance of different classes, but we wish to indicate the course of policy by which the true interest of all classes is best to be advanced; for it would be the blindest folly to suppose that the particular parts of the country which evince the most rapid increase of wealth and power of sustaining population are alone, or even most, benefited thereby. An increase of wealth, or of employment for the population in any part of the kingdom, cannot fail to be beneficial to all other parts, and especially in three prominent and distinct ways:—first, by creating a greater demand for the natural products of the country; secondly, by absorbing the surplus population of other parts of the country, and converting into valuable consumers and customers masses of people who would otherwise constitute a heavy charge on districts to which they naturally belong; and thirdly, by lightening and diminishing the general burdens of taxation payable by the whole country, and especially by the districts of slower growth.

First, by creating a greater demand for the natural products of the country. Can there be the slightest doubt that while Essex has only increased in value of income 25 per cent.—while Middlesex has increased 97 per cent.—that the former county has not been much benefited, and even owes a considerable portion of that increase to its proximity to Middlesex, and the consequent increased demand for its produce to sustain the increased population and consumption of the latter county? Can there be the slightest doubt of the great advantages which the increased wealth and employment apparent in the county of Lancaster and the West Riding of Yorkshire have plentifully and liberally showered over the counties

THE LANDOWNERS AND RAILWAYS.—It was given in evidence before the Select Committee, that no less a sum than £8,500,000 has been expended by railway companies in England and Scotland, on land and "compensation." This is about an average of £5000 a mile. On the Paris and Rouen Railway, the item was £2500 a mile. The average in Belgium is £2750 a mile.—*Railway Record.*

AGRICULTURE.

THE COST OF PRODUCING GRAIN.

There is no topic upon which greater diversities of opinion exist, or on which more paradoxical statements are made by persons professing to be practical agriculturists, than upon the cost at which grain, especially wheat, can be grown in this country. And upon the mystification of this question the last remnant of argument in favour of protective duties on corn mainly depends. There are many reasons which prevent a complete exposition of a subject which, when fairly examined, is sufficiently simple and intelligible. The principal one appears to be an unwillingness on the part of those farmers who cultivate their farms well to admit the real amount of their returns, from an apprehension—by no means altogether unfounded—that, should their landlords become aware that they are making considerable profits, an advance of rent would be the certain consequence.

It was with such feelings that very many farmers regarded Lord Ducie's statement of the cost at which wheat is produced upon his Whitfield Farm, and on other well-cultivated farms in Gloucestershire. Then the whole band of monopolists saw that, if the statements of his lordship were borne out and became generally understood, their cherished monopoly, their artificial, law-made scarcity would receive a death-blow. Hence all manner of contradictions have been hazarded. First, a trio of land-agents *asserted* that the produce given as that of a farm on the Cotswold Hills was too high, and that 25s. a ton was more than the value of straw taken at a spending price. Now, as these gentlemen did not condescend to reason—land-agents, seldom do—but relied each on his own *ipse dixit*, their contradiction might have been fairly disregarded as worth nothing, for every farmer's experience would have told that, when men farm *under favourable circumstances*, the produce stated by Lord Ducie is by no means high; and no farmer can doubt that these very agents would themselves set the value of the straw at as high a figure as his lordship had done. However, in a letter to the *Mark-lane Express*, Lord Ducie has effectually disposed of the objection to the price of the straw, by showing that by so much as the straw is overcharged will the allowance for manure become too high. The balance is, therefore, the same. But to show that the value of the straw is really that at which Lord Ducie stated it, we would refer to the report of a paper lately read at the *Burton-upon-Trent Farmers' Club* by Mr. Lathbury, which is reported in the *Farmer's Journal*. The subject of his paper was the economy of the "application of steam to agricultural purposes;" and amongst the objects that gentleman had effected upon his own farm by the erection of a steam-engine was the steaming his cut hay and *straw* as provender for neat cattle. This enabled him to substitute a large quantity of straw instead of hay, and he thus states the saving effected thereby:—

"The difference between the *consuming price* of 30 tons of hay and the 30 tons of straw which supplied its place, reckoning hay at £3 10s. and straw at £1 5s., would amount to £67 10s., while the expense of cutting and steaming amounted to less than £5."

And let us remark in passing, that the chaff-cutter used was stated to be Lord Ducie's improved implement, for which the Royal Agricultural Society awarded a prize at their Bristol meeting.

Here we have a farmer mentioning incidentally the value of the straw to consume on the farm, and that on an occasion when he wished rather to understate than overstate such value, and in so doing he completely confirms Lord Ducie's estimate. *Ex uno disce omnes*, to such worthlessness are all the monopolist calculations reduced whenever they are really examined.

Then we have a second letter from Mr. Samuel Jonas, on whose former letter we lately made some remarks, and we find him attacking Lord Ducie's accuracy by quoting calculations taken from Mr. Morton's appendix to his work "on soils," and showing that the cost of producing wheat there set down considerably exceeded the cost as stated by Lord Ducie, and thereupon fondly anticipates that his lordship must be waiting to acknowledge that he had "committed an error." It so happened that a Mr. Townsend had discovered this selfsame mare's nest, and began, like Mr. Jonas, to cackle with delight at what they both believed to be a discovery of the way to make food scarce. Neither of these astute monopolists seems to have thought of consulting Mr. Morton's supplement, which brings down the account of the operations on Whitfield to (we believe) 1842, which would to some extent have shown them their "error." However, Mr. Townsend's letter came under Lord Ducie's notice, and has drawn from him a letter to the *Mark-lane Express* (inserted, by-the-by, in a most obscure corner of that journal), wherein he has fully shown the misapprehensions under which his monopolist assailants have written. After saying that Mr. Townsend's style is after the "best protection patterns," Lord Ducie adds:—

" As regards the substance, I must say that it proves

its author to be either most carelessly or most wilfully ignorant. He quotes from a work by Mr. John Morton, published in 1843, thereby leading the public to suppose that it was Mr. Morton's *Whitfield Farm* report for 1843. He quotes from page 290 of the Appendix to 'Morton on Soils.' Now, if he had taken the trouble to look at that which was before him, he would have found that he was looking at a reprint of the report originally made to my father and myself in the year 1839, as is the probable results of the meditated improvements on *Whitfield Farm*, in which, as was right, Mr. Morton stated the probable expenses as high, and the probable returns as low, as possible."

The comparative statements made by Mr. Town-
end will be found in another column. Mr. Jonas's
are nearly or quite identical.

Thus, instead of the figures of Mr. Morton being contradictory of Lord Ducie's statement, they prove to be the estimate of a farmer who really does know the capacity for production of our soils, giving to his employers a statement—a carefully subduced statement—of the probable results of an expensive experiment he was leading them to undertake. Thus, like all the attempted reasons by the monopolists, the evidence in favor of Free Trade which Whitfield Example Farm furnishes becomes corroborated by the discussion they have induced. Lord Ducie subsequently says :—

"Now, at the time of the prophecy, we were not aware of the valuable properties of the Uley cultivator. We have since found that, by twice working the land that has borne roots with that implement, we are able to dispense with the plough, and the work is done at one-half the expense of one ploughing. This, added to the unexpected and increasing friability of the soil, is sufficient to account for the difference between the fact and the prophecy. The next point of difference is the charge for seed-wheat, amounting to about £44. The prophecy charged for the amount usually sown at that time; but experience has taught not only myself, but every intelligent agriculturist, that a smaller quantity of seed will produce a better crop on all soils, and that an enormous annual loss has accrued to the country from the erroneous use of too much seed-wheat. If Mr. Townsend will take the trouble to travel to Whitfield, I will undertake to show him a better crop of wheat than is often produced at the expense of a double quantity of seed."

And his lordship afterwards invites his assailant to inspect the Whitfield accounts, and adds, "If he, and I am correct, he can have no alternative but to withdraw his attack on me as publicly as it has been made." But Mr. Townsend appears not to belong to the class of disputants who seek for truth, for he does not "consider it at all necessary to accept his lordship's invitation to Whitfield Farm for the purpose of inspecting his farm books;" and upon what plea does the reader think this redoubtable monopolist declines the opportunity of being convinced that he, and not Lord Ducie, is in error? Why, this is his sneaking withdrawal from his assertions:—

"I am not a practical farmer, and, therefore, not competent to enter into any discussion with Mr. Morton upon the subject of the charges entered in his lordship's accounts. The only remark I shall, therefore, offer upon the subject of Lord Ducie's statement at Covent-garden is, that it materially differs from whatever I have either read or heard upon the subject of agriculture."

And this is the sort of opponents with whom the Free-Traders and the public have to deal! They invariably refuse to inquire or investigate; in Parliament or in the press they are alike afraid to submit their assertions or opinions to the test of examination: and thus other men's nonsense is adopted by them as their nonsense, and they are content. As Mr. Townsend's agricultural reading has probably been confined to the leading articles of the *Morning Post* and the Protection Society's tracts, we advise him to extend his studies on rural affairs before he again attempts to impugn the experience of those who do know practically of what land is capable.

Mr. Morton, in a letter of the 10th inst., also confirms the accuracy of his lordship's statement of the expense of wheat-growing on Whitfield Farm, but adds that his lordship has "put the produce too low, whether we judge by the crops of past years, or the prospects of the present." The same statement completely disposes of Mr. Jonas's objection, who, if he doubts the facts, may also be satisfied by inspecting the Whitfield Farm accounts. But Mr. Jonas, we opine, is not one who seeks conviction, and we may venture to say he will not go to inspect the accounts at Whitfield. But Mr. Jonas, unlike his co-assailant, Mr. Townsend, is a practical agriculturist, and offers us some partial glimpses of his own farming affairs to rebut the conclusions of Lord Ducie and the Free-Traders, and he therefore makes his business a public question. Let us examine his statements, or rather his hints, for they have neither the coherence nor explicitness of statements. He says:—

"I consider that we tenant-farmers can grow wheat so as to be fairly remunerated for our skill and capital at 7s. per bushel, but at not less than that sum."

It is not many years since that men like Mr. Jonas, and probably Mr. Jonas himself, stoutly maintained that the price to be remunerating must be 10s. a bushel. We have no doubt they will hereafter find they can grow wheat, and with more profit than at present, at 6s. a bushel or less. Mr. Jonas, then, in order to prove that he "is not a very bad poor farmer," states that "he last year expended

1849 7s. 8d. in the purchase of artificial manures, and for corn and cake for sheep and cattle." This is by no means conclusive. It is by no means uncommon to find a large proportion of a farmer's capital employed on one particular branch of his business, while other parts of it are comparatively neglected. Success in farming is only to be attained by applying the farmer's best skill and sufficient capital to every part of the farm; and we have a shrewd suspicion, notwithstanding his big words, that Mr. Jonas farms upon a system which renders him very dependent upon high prices, in other words, that his acreable produce is low compared with his expenses.

As an instance of the way in which farmers often expend large sums in manure, and yet neglect all else that is necessary to render the use of that manure profitable, we may mention a case within our own observation. A farmer—of the protectionist school—who occupies 400 acres of strong land within sixteen miles of London, is in the habit of sending two or three three-horse teams into London three and four times a week for ten months of the year for manure, by which means, at a very great expense, he accumulates a large quantity. He also buys artificial manures, guano, and so forth, to a considerable extent. We have no doubt that, in proportion to the size of his farm, his yearly expenditure for manure is higher in proportion than Mr. Jonas's. Yet, strange as it may seem to Mr. Jonas, this gentleman—who is a man of property—is "a bad, poor farmer." If we desired to exhibit a specimen of the worst husbandry practised in a not very highly cultivated district, we should certainly point out this gentleman's farm. And why is this? Simply because he follows a system of slovenly culture, by which his father, during the high prices of the war, realized a considerable fortune. He is remarkable for the deficient supply of manual labour, and consequently his land is so foul that the grain and the weeds seem to be struggling for mastery in every field. His land is undrained, or drained partially with bushes laid at the depth of twenty inches only; his ditches have not been dug out for twelve or fourteen years; and whilst he sends his sheep out to winter, at a considerable cost, he has perhaps one-fourth of his land yearly under a naked fallow, every acre of which, if properly cultivated, would bear an abundant crop of turnips and other roots! The result of such a system is, that on land which might easily be made to grow 45 bushels of wheat to the acre, the average produce barely reaches 20 bushels per acre. Of course, this gentleman is a strenuous protectionist, and considers the maintenance of the Corn Laws as essential to the very existence of the farmer!!

Our readers will recollect that Mr. Jonas stated, in his former letter, that he occupies 1700 acres of land; and as he lives in an arable district, and he said nothing to the contrary, we must presume that it is all cultivated land, and that there is no considerable portion of the farm which consists of mere sheepwalk, rented at a shilling or eighteenpence an acre. Now, if any novice will turn to any agricultural work of authority—take Loudon's "Encyclopædia of Agriculture," for instance—he will find that the lowest estimate of the capital required for the proper cultivation of a farm chiefly arable, is £10 per acre; and thus, unless Mr. Jonas has a capital of £17,000 engaged on his 1700 acres, he is not in a position to cultivate his land most advantageously. That he is, in fact, however disagreeable it may be to him to know it, a farmer without capital sufficient to adopt high farming, which alone can be profitable farming. That such is Mr. Jonas's condition is clear from the circumstance of his calling our former reference to the amount of his capital "an attempt to gag him." We believe that the mistake he has made in taking too much land for his capital is by no means uncommon; in fact, that it is the rule amongst farmers, and that the contrary is the exception. But this, as we have often shown, is one of the direct consequences of the Corn Laws, which have taught agriculturists to rely on high prices rather than large acreable produce. We are glad, however, to see farmers make any reference to their own circumstances, even when they do it with such one-sided objects, and on such imperfect data, as in the case before us; but to pretend to bring forward their own practices and their individual businesses as evidence for monopoly, without fully and fairly stating the amount of capital they employ, their produce per acre, and similar real information, so as to enable those acquainted with husbandry to judge of the value of their testimony, is mere trifling.

In farming, perhaps more than in any business, there are endless diversities of skill, knowledge, and industry, of security and insecurity of tenure, and of other advantages or disadvantages; but there is one rule to which no exception exists, namely, that, all other things being equal, the man who farms with the largest amount of capital will obtain the highest rate of profit. He who has £25 per acre would probably farm at a loss the same land which another man, no more skilful or industrious than himself, but possessing a capital equal to £10 to the acre, would farm with a profit; while the man with £10 per acre will

assuredly make a far less rate of profit than he who employs £15 to each acre of his farm. The obvious consequence is, that no mistake a farmer may make can be so grievous as that of taking a farm too large for his capital. All our best farmers admit this; and it is only the delusive hope of an occasionally high price held out by the Corn Laws which prevents farmers from acting upon the sound views of the more intelligent of their body.

THE AGRICULTURAL SOCIETY'S MEETING.

At the dinner of the Royal Agricultural Society, held at Southampton, on Thursday, at which 1200 farmers were present, several hints were dropped which are sufficiently significant of the approaching fate of monopoly. Thus, Lord Carnarvon said, "The time was now arrived when the farmers must help themselves by applying, so far as they could, all the resources of science to the work;" and that intimation was received with marked approval.

Again, when Lord Palmerston proposed the toast of "Prosperity to Agriculture, Commerce, and Manufactures," and, in the course of an admirable speech, enlarged upon their mutual dependence in allusive terms, which could not be misunderstood, he was warmly applauded; and none more so than the following truthful sentences:—"In the infancy of states, agriculture was the first employment which the industry of man pursued. Agriculture gave employment to commerce, commerce gave encouragement to manufactures; and thus both commerce and manufactures repaid with ample interest the obligation they owed to their mutual parent." But the most decided expression of the feelings of the farmers was called forth by a brief speech of Lord Portman, in which he said, "He (the farmer) must apply patiently to his work. It was not to be done in a day. He must try to improve his stock, his method of cultivation, and the tenure of his land." Here he was interrupted with a tumult of applause and reiterated cheering; and so strongly had this sentiment been expressed that the Duke of Richmond, who appears to have considered himself the representative of bad husbandry and dependent tenants, thought it necessary to say "he had heard something said about the tenure of land. He would not then pursue the subject; but he would refer to any of his tenants for information as to his conduct in this most important matter. Let them have no legislative enactment about the matter, but let them all consider the interest of the landlord and tenant as one and the same." This is mere evasion. Why did not the Duke boldly say, "I give leases (if he does so) and recommend others to do likewise;" but the fact is he does nothing of the sort. The interest of the landlord and tenant being one and the same in the mouths of monopolists like the Duke of Richmond is as ominous to the tenant-farmer as the promise of the brass pot to the earthen pot, when, as recorded in AEsop's fables, both were floating in the stream together.

MONOPOLIST TESTIMONY AGAINST THE GAME LAWS.

It is only under cover of the delusions and uncertainties caused by the Corn Laws that game laws and game preserves could have existed in this country down to the present time; and amongst the many benefits the tenant-farmers owe to the exertions of the League, not the least is the universal condemnation with which game-preserving is now visited. Thus, in the *Herts County Press*, one of the most object tools of the monopolists, a paper which in fact owes its lingering existence to the occasional assistance of Lords Salisbury, Verulam, and other monopolist landowners of Hertfordshire, we meet with a fierce article against game-preserving. This must, undoubtedly, have received the sanction of the editor's patrons, and, though it looks very like West Indian diatribes against slavery, it forms important evidence of the impression which this part of the landlords' semi-feudal system has made upon the public. Thus speaks the Hertfordshire monopolist-editor:—

"THE DESTRUCTIVENESS OF GAME.—We have long been anxious to call the attention of game preservers to the serious mischief arising from the preservation of hares and rabbits in many of the districts in this and other counties; and we do not know that we can avail ourselves of any more favourable opportunity for alluding to the subject than the present, now that the Anti-Corn-Law agitation is suppressed, and the minds of men are calmed down to a point best calculated to induce a careful consideration of all matters relating to the general welfare of the farming interests."

It is wonderful how carefully this writer and his fellow-monopolists contrived to restrain their anxiety about the mischief done by game, until the Free-Trade agitation had dragged into the light of day all the damnable facts. Do not the writer and his patrons feel that what he calls the suppressed Anti-Corn-Law agitation to be very like suppressed gout, which has got hold of the vitals of monopoly? We know the monopolist landlords well enough to understand their tactics in abandoning the game nuisance: their object is merely to throw a tub to the whale, and they fancy that by throwing overboard the game they can preserve monopoly rents and a dependent tenantry. We tell them the move will not serve their turn, though it furnishes "confirmation strong" of the truth of the Free-Trade view of the wants and burdens of agriculture. But to the question:—

"To those of our readers who are spared the ravages their less-favoured neighbours are subjected to it may appear somewhat immaterial; but we are quite sure that others of our friends, particularly in many parts of Bedfordshire, will not fail to agree with us that the time has arrived for inquiry how far the suggestions thrown out on this subject by Sir Robert Peel, in his celebrated speech to his tenants at Tamworth, can be adopted with mutual advantage to landlords and tenants. The question involves many considerations, which of them-

selves are worthy of discussion separately. The point, however, we desire to establish first is, that large districts are over-run and wasted, to an extent almost incredible to those who are ignorant of the fact, and that the occupiers of land are thereby injured to a proportionate extent, without the power, under the present operation of the Game Laws, of destroying them, or indeed, of remedying the evil in any corresponding degree."

All this will be nothing new to the readers of the *LEAGUE*, though we suspect some of the squireens of Hertfordshire who read the *County Press* must have rubbed their eyes and mentally exclaimed, "What's in the wind now?" But the monopolist writer stops not here; for he goes into an estimate of the pecuniary damage sustained from game, saying,

"In order to arrive at the truth, we have made patient inquiries in several districts, and we have found to our amazement, that many farmers are injured to an extent equal to an additional rental of 10s. per acre, on the whole of their holdings, by hares alone, pulling altogether out of view the damage done by rabbits, which may be fairly estimated at a similar sum."

This is a higher estimate than we have ever thought it right to give, as we prefer stating the losses from game, as they are the most generally sustained; but we have no doubt that in many cases this estimate of our monopolist contemporary is not too high. Of course, under such circumstances, the farm must be occupied at a loss, and the landlord who exacts any rent from a tenant so game-ridden can scarcely deem himself an honest man. That hundreds of tenants have been ruined during the last thirty years by game alone is a fact notorious to all who are much acquainted with rural affairs. Hear how the monopolist comments upon the, to him, newly admitted, if not newly discovered, fact:—

"This of itself is surely a 'great fact'; and the question naturally arises, whether there is not something radically wrong in the system which compels a tenant to submit to have his farm overrun, and his produce consumed, without the power to destroy or to obtain compensation, except by a tedious and most wasteful process. This is a question for consideration by all well-disposed landlords; and we doubt not that it only requires to be put plainly before them to ensure a more equitable state of things."

That there is "something radically wrong in the system" most readers of the *LEAGUE* understand, nor will they, or any one who honestly approaches the question, be able to resist the conclusion that the root of the "wrong" is the *Corn Law*. The writer next gives a particular instance:—

"The necessity for this is so palpable, that one instance of grievous injury sustained by the system alone requires to be mentioned. A tenant occupying 500 acres has to keep no less than 1000 hares, the average being ascertained to be two hares to an acre; in many parts of Bedfordshire the average is far higher. No stipulation for these is made on his entering the farm: in course of time his landlord (perhaps a new one) finds that hares are a useful marketable commodity at 1s. 6d. each, and he has them strictly preserved, at his tenant's expense—not, mind, for the sake of showing sport to his friends and neighbours, but for slaughter by his keepers, who, by it observed, are paid by the proceeds of the sales effected at Lenden-hall! This, we are assured, is the true state of the case; and we mention it for the purpose of inviting discussion and inquiry on a subject of so much importance."

After this, which is really as much a monopolist landlords' article as if it bore the imprimatur of Hatfield-nouse we wonder whether the squire in the House of Commons will next year refuse a committee to inquire into the effect of the game laws and game preserving upon the condition of agriculture, tenant-farmers, and agricultural labourers? Here we find a statement of the loss caused to the tenant by game for the sake of a small advantage to the landlord; the account should be carefully read and remembered by every tenant-farmer in England:—

"We subjoin a statement of the profit and loss to landlord and tenant in the instance above referred to, and we court investigation as to its accuracy, and any authentic information from our numerous readers in Bedfordshire, which can be of service:—

Loss to tenants by the consumption of 1000 hares, £. s. d.	
on a farm of 500 acres, per annum, as estimated by an old observer and sufferer, is equal to 200 sheep at 17s. 6d. each, i.e., 1 sheep to 5 acres, at 3s. 6d.	175 0 0
Waste caused by hares in feeding, equal to one-fourth	43 15 0
	£218 15 0

Gain to landlord by sale of 1000 hares at Lenden-hall-market, at 1s. 6d. each £75 0 0

"N.B. Every hare on a farm costs or wastes annually to the value of 4s. 6d. at least. Rabbits 2s. each."—*Herts and Beds County Press*.

Thus the tenant is robbed of £218 15s. of his own money in order that his landlord may pocket £75 over and above his full rent; a sum to which he has no more right than he has to the purse or pocket-handkerchief of any person he meets on the highway.

And precisely this kind of calculation is applicable to the Corn Laws, which, for the sake of giving the landlords a short cut to high rents, occasion losses to tenants exceeding the landlords' gains by monopoly even when those gains are multiplied by five or six!

MONOPOLIST FALLACIES.

The following letter is that we have referred to in our agricultural leading article, in which we have embodied the substance of Lord Ducie's reply to his shallow assailant. The Free-Traders owe the monopolist their thanks for eliciting the explanation so decisively confirmatory of the views of the Free-Traders.

"To the Editor of the Gloucestershire Chronicle.

"Sir,—I am much concerned to find I made two mistakes in the statement of Mr. T. Morton (p. 290) which I sent you last week. I perceive I charged for the carting to market twice over, and only charged £31 for hoeing instead of £36. T. is will cause a reduction of £34 2s. from the difference (viz., £129 13s.). but will in no wise affect my arguments. I lose not a moment in correcting the error, and beg to hand you an amended and, I believe, correct account of the statements both of his lordship and of Mr. Morton, but more at length and more in detail than in my former letter. As I before stated, the items in Mr. Morton's book (p. 290) must be multiplied by 8 to correspond with Lord Ducie's 120 acres."

"From whence could his lordship obtain his figures? See the difference in his account and Mr. Morton's in the items of hoeing and thrashing. Surely gentlemen are not beginning to reduce wages in anticipation of Free Trade?"

"N.B. Mr. Morton (p. 290) has omitted to charge for the half bushel of seed wheat, which, multiplied by 8, will give

four bushels; this at 7s. per bushel, will make £1. 10s.; add that sum to his figures, and you will get £100.

"I am, Sir, yours respectfully,
"H. L. TOWNSEND."

LORD DUCIE.

MR. MORTON (page 290.)

£ s. d.	£ s. d.
To 1861 days of a man and 2 horses ploughing, cultivating (i.e., working with cultivator), drilling, and harrowing, 120 acres, at 10s. per diem.....	03 2 6

To the Editor of the Bury Post.

Sir,—Permit me to offer to Lord Thurlow's communicant a problem, which, though parallel to his own, appears to have escaped his notice.

"In these old countries," he says, "where profitable employment is limited, as long as uneducated men multiply their species without thought of the future, labour will be superabundant and wages low." But there is the question, why should employment be limited because a country is old? If the land is all occupied, we have still plenty of coal and iron, and men to work them up, and plenty of people on the other side of the water to exchange these with us for food. The antiquity of our laws, and not the antiquity of our soil, alone forbids it.

"Uneducated men" may multiply their species faster than educated men, but while they are undergoing the process of education it is rather hard to limit their field for employment because they are ignorant, and it is after all a great truth that comfortable circumstances will do much to prevent early marriages even among uneducated people.

That labour is abundant, and wages low, is unfortunately true; and that farmers alone have it not in their power to raise wages is also true; but open the trade of the country, and let our surplus population find itself employment in towns, if the country will not afford it, and it will be out of the power of any class of men to keep wages down if employment is plentiful, for the wages of agricultural labourers do not depend on themselves alone, but on the quantity of labour in the country generally.

The reward of labour, Lord Thurlow's communicant says, depends on the quantity of labour, and the quantity of capital in a country that can be profitably employed; and then he goes on to say that the problem is to "regulate the supply of labour." Let me suggest, that it is part of the question to increase the capital of the country, and that, as Free Trade would increase both corn and capital, it has a great deal more to do with the question of wages than is generally supposed. Increasing the capital has the same effect as diminishing the number of labourers, and is at any rate the most humane, if not the most politic, of the two measures.

Your obedient servant,

ARTHUR MORSE.

Swaffham, July 12, 1844.

Wool.—At the recent wool fairs held in the agricultural districts in this country the prices realized by the growers for their produce were far greater than those obtained in 1843.

THE "STRIKE" AND THE EXPORT TRADE.—The following extract of a letter from a highly respectable house in Rotterdam, to a correspondent in Newcastle, speaks volumes of the sad effects of the "strike." The letter is dated the 12th instant:—"A bad thing, indeed, is the long-continued strike of your pitmen. Very few colliers come here now; and we are much afraid that the coal-trade from Newcastle and Sunderland—which once was a very good and brisk one, but which was partially spoiled through the embargo in 1832—will be greatly diminished again by the strike, as the German and Belgian coal is more and more being introduced; and the prices of these coals being lower, our coal-merchants will not be able to pay the prices charged on your side." With Peel on the one side with his duty, and the pitmen on the other with their strike, the poor coal trade, we fear, will have a hard struggle for its life.—*Gateshead Observer.*

NOTICES TO CORRESPONDENTS.

We have received a letter from Mr. Joseph Sturge after our paper was made up for press; it states that "the condensed report of his speech at Birmingham, which we commented upon in our last paper, does not convey a correct account of what he said." We are, of course, bound to accept Mr. Sturge's disavowal, and to withdraw such parts of our comment as were inapplicable to what he really did say. "Samuel," of Tynemouth, does not say whether the premises occupied in partnership with his father are situated within a parliamentary borough or not. If they be, they give no vote for the county, even although they should be freehold, because they are occupied by the proprietors, and are capable of giving a borough vote. At the same time, the partners, as freeholders, might let the premises to one of them as tenant, and then one would have a vote as freeholder, and the other as tenant would have a borough, but not a county vote. If the premises are freehold, and not within the borough, then both would be entitled to be registered as freeholders, and they might put all their sons or brothers on by giving them a freehold interest worth 40s. a year, the property being capable of qualifying twenty-five persons. No tenant of premises within a parliamentary borough, worth £10 a year, can register for those premises for the county, nor any freeholder if he occupy them himself.

We have received several important communications which we are reluctantly compelled to defer until next week.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order, to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the LEAGUE forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadaby, Newall's-buildings, Manchester; and the LEAGUE may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

POSTSCRIPT.

LONDON, Saturday Morning, July 27, 1844.

The rules and regulations of the proposed "Free-Trade Club" have been printed, and seem well adapted to carry out the objects for which it is instituted. There is no doubt of the success of this very useful project. The good results which may reasonably be expected from such an association should lead the friends of Free Trade generally throughout the country to seek an early connexion with it, that the capital thus realized by the entrance-money may enable the Club to start with a proportionately larger extent of accommodation for its members.

Care is taken by the rules that only real Free-Traders, those who are so on principle, and who pledge themselves to the principle by the fact of becoming candidates, shall be eligible. The usual conveniences of a club will be obtained; but they will be the secondary, and not the primary object. With the cookery and architecture of the Reform Club, it may not be found practicable to compete; but something more will, it is hoped, be effected for the cause of Free Trade than has been achieved for the cause of political reform by that splendid establishment. The one great public object will not be postponed to party interests, nor absolute inertness enforced by difficulty of combination amongst different and mutually hostile sections. The new Club will be an union of like-minded men, thoroughly in sympathy, and disposed for efficient co-operation. Even the simple fact of putting them into communication with each other will be a benefit of no little moment. It is impossible for the League to provide facility for this to any considerable extent. But here will be a place of common resort for our friends from distant parts of the country, and those resident in the Metropolis, which can scarcely fail to draw closer those bonds of union that afford the League so much of its strength, and are the condition of its energetic and successful progress.

The establishment of the Club will also be a pledge of the continuous application of the Free-Trade principle to all points and branches of commercial legislation. Should the League obtain the object for which chiefly it was formed—the repeal of the Corn Laws—it is scarcely likely that any efforts, should such efforts be made, will be able to prolong its existence. Whenever the monster evil is destroyed, its power must also pass away. No less oppression than that of taxation upon the people's food can sustain this great antagonist agitation. In victory it is fated to expire. But much will remain to be done in abating and removing those minor mischiefs of monopoly which impair, in various ways, the prospects of industry and enterprise, although they are not of such flagrancy as to stimulate the zeal of congregated multitudes. To watch these, and take appropriate and well-timed measures for their extinction, will, we hope, then become the business of the Free-Trade Club. The League, now in full vigour, may nevertheless make its will, and bequeath to the Club this legacy of usefulness. For itself, sufficient is the work of grappling with the evil principle, and achieving its overthrow. And during that contest, whatever its duration, we anticipate most hearty and important co-operation from the new Club, to which we wish all success.

The Earl of Ducie, "the farmers' enemy," as the monopolists designate him, has carried off four silver medals, besides more substantial rewards, for the best agricultural machines exhibited at the Southampton meeting of the Royal Agricultural Society.

LAUNCH OF THE IRON BARQUE "RICHARD COBDEN."

On Thursday, the 18th inst., a beautiful barque, constructed of iron, was launched from the building-yard of Messrs. J. Hodgson and Co., North Shore. She has been designated "The Richard Cobden," after the distinguished gentleman of that name, who is the acknowledged champion of the principles of Free Trade. Her owners are the Coalbrookdale Iron Company. Her extreme length is 147 feet; her breadth is 28 feet 8 inches, her depth 19 feet 6 inches; and the thickness of the iron plate at bottom is three-fourths of an inch. She is about 400 tons register and 800 tons burden, and will sail under the command of Captain Jeffrey Scales. She is intended for the China trade; and we believe her first voyage will be to Chusan. The launch took place about one o'clock, when an immense concourse, including a majority of ladies, had assembled to witness the interesting ceremony. The christening was performed by Mrs. Abraham Darby, of Coalbrookdale, and the gallant vessel glided into her native element amid the cheers of the assembled hundreds. The scene was heightened by the display of colours and the firing of cannon; and when the vessel, which is one of half a dozen to be constructed on similar principles by the same firm, had been towed into dock, about two hundred ladies and gentlemen were conducted into another iron vessel, now on the stocks, where a splendid *déjeuner*, furnished by Mr. Skanes, of the Rotunda, was laid out. Among the company present were Sir Arnold Knight, Henry Ashworth, Esq., T. Bagnall Esq., of Staffordshire, the Messrs. Darby and their families, &c. &c. Mr. Blain, one of the firm of Messrs. Hodgson and Co., the hosts, presided at the head-table.

Immediately after the cloth had been drawn, Mr. WILLIAM BLAIN rose amid loud cheers, and after thanking the numerous company for their presence, assured them that the name of Richard Cobden had not been given to the newly-launched barque with any view of offending those who differed from them in opinion, but merely with the design of embodying those principles which were dear to many hearts in the name of that distinguished man who was the champion of the cause. (Applause.) He then said that Mr. John Smith had kindly consented to act as toastmaster on the occasion, and that he was quite sure that gentleman would not utter a single expression which could give the slightest offence to any gentleman present, whether his sentiments were in favour of or in opposition to the cause of Free Trade. (Applause.)

The toast of "The Queen" having been given from the chair and enthusiastically drunk by the company,

Mr. SMITH said he was quite sure they had been very much gratified by the launch of one vessel, and, in a great degree, with the *lunch* in the other. (Laughter and applause.) They were met on an occasion on which it was their happy privilege to celebrate the progress of the town of Liverpool in commercial affairs. They lived amongst a community who were giving constant proofs of human industry and intelligence; and they had just witnessed what was produced by skill and labour, and what was designed to carry a worthy name across the seas, and to bring, as he trusted she would, successful issues to her owners at home. He begged to propose success to the Richard Cobden, and may she be soon followed by another, the Henry Ashworth, whose name they regarded, and by another equally good vessel, the John Bright. (Cheers.) The gentlemen were the A Band C of the Free-Trade movement: they therefore wished well to a vessel bearing the name of Richard Cobden; they hoped she would justify the expectations of her owners, and of those who ventured their capital in her foreign voyages. He concluded by giving "Success to the Richard Cobden." The toast was most enthusiastically received.

Mr. ABRAHAM DARBY briefly returned thanks. He thought their worthy chairman would have addressed them in reply to the toast; but that gentleman had not only slipped the vessel into the water, but he had also contrived to slip out of his speech. ("Hear," and a laugh.) He (Mr. Darby), as one interested in the iron trade, hoped the Richard Cobden might prove a successful voyager—profitable to her owners, and profitable also to those gentlemen who had found a cargo for her to take to the extreme point of the globe. The voyage was generally one of five months; he hoped she would make it in three. (Hear, hear.) He thought they had to thank Mr. Blain and Mr. James Hodgson for the able manner in which those gentlemen had executed their task. He could assure the company that a great deal of care had been taken in the way the lines of the vessel were formed, and in the manner she had been constructed throughout. He concluded by thanking the company for having so kindly and promptly accepted of Mr. Blain's hospitality, and sat down amid applause.

Mr. SMITH next gave the healths of Messrs. James Hodgson and Co., the builders of the Richard Cobden, and may they always prove themselves good tradesmen, and have their names carried throughout the world by dint of the excellency of the vessels they produce. (Drunk amid loud cheers.)

Mr. BLAIN was in hopes that Mr. James Hodgson, his partner, would have responded to the sentiment. He could assure them that the building of the Richard Cobden had been matter of much anxious consideration; and that, in order to avail themselves of the first talent in the country, they had obtained an introduction to Mr. Duffy, of Bristol, upon whose lines the vessel had been formed. Mr. Duffy's health ought, therefore, to have preceded that of Hodgson and Co.; for the latter were the mere workmen who had endeavoured in the construction of this, their first essay, to do all they could by themselves, and where they felt themselves deficient they had not hesitated to consult the talent and experience of others. ("Hear" and applause.) At the same time, he thought they had within their own establishment talent of no inferior order; and they should always endeavour, when executing any works intrusted to them, to do them faithfully and to the best of the ability they could command. (Cheers.)

Mr. SMITH next proposed "Success to the manufactures of Great Britain, and their best respects to Mr. Henry Ashworth, of Bolton." (Cheers.)

Mr. ASHWORTH returned thanks, and, in doing so, hailed the occasion upon which Richard Cobden's name was mentioned, and expressed a hope that they would not only honour that gentleman's name, but carry out those great and enlightened views of which he was the distinguished advocate and champion. (Great applause.)

Mr. Smith next says, "Success to the Iron Trade of Great Britain." Mr. B. then returned thanks. "The Ladies," "Prosperity to the town and trade of Liverpool," and "The health of the Captain of the Richard Cobden," were next given in succession, and the company separated at three o'clock, highly delighted with the interesting sight they had witnessed, and the handsome *déjeuner* they had enjoyed. — *Liverpool Journal*.

CAPTAIN WARNER'S EXPERIMENT OFF BRIGHTON.

The experiment illustrative of the powers of Captain Warner's invention, which we announced on Saturday morning as fixed for the afternoon of that day, was exhibited between five and six o'clock. The proposition which Captain Warner undertook to illustrate by the exhibition of this experiment was, that no ship could chase a vessel furnished with his implements of warfare, without herself being certainly destroyed.

On the morning of Saturday crowds of visitors from all parts of the county of Sussex flocked into Brighton, and the first railway train brought down upwards of 500 passengers from London, a majority of whom were attracted to Brighton solely by a curiosity to witness the proposed exhibition of Captain Warner's much-discussed, but much-doubted, powers. The experiment was originally appointed for Saturday, the 13th inst., but a gale of wind drove back the vessel to be operated upon on her passage from London to Brighton. This delay, however, seems to have sharpened rather than destroyed curiosity, for the visitors on this second were much more numerous than on the former occasion. We think there must have been from 30,000 to 40,000 spectators congregated to witness the scene. The ship to be operated upon was a stout bark of 300 tons measurement, but capable of carrying 450. She was a perfectly seaworthy ship, and generously presented to Captain Warner by Mr. Somes, the eminent shipowner, for the purpose of testing the powers of his alleged destructive invention.

Shortly before four o'clock we repaired to the platform of the battery, from the signal-staff of which we had learned that a flag was to be hoisted by the command of Lord Ingestre and Captains Dickenson and Henderson, to indicate to Captain Warner when the ship, the subject of his operations, was to be destroyed. The reason of this arrangement was to remove any doubt as to the *bond fide* nature of Captain Warner's power of destroying a pursuing vessel without having any communication with that vessel at the moment of her destruction.

At last, about a quarter to five the John o'Gaunt began visibly to move towards the destined spot of operations, abreast the battery. She was towed by the Sir William Wallace, and attended by a small Shoreham steam-tug, the Tees, to take off the crew of the John o'Gaunt previous to her destruction, and to render other services. When the John o'Gaunt came abreast the battery, being at a distance of about a mile and a half from shore, a union jack, the signal agreed upon, was hoisted on the flagstaff, to intimate to Captain Warner that he was now to destroy the ship in the wake of the Sir William Wallace, on board of which he himself was, with his implements of destruction. A short delay took place, and the union jack on the steamer's mast, which it was arranged should be hoisted down previous to the destruction of the pursuing ship, was rehoisted half-mast high, to indicate, as we understood, that some obstacle was in Captain Warner's way. We have been since informed that a cutter kept hovering in the John o'Gaunt's track, in a direction very dangerous to herself, and this prevented Captain Warner's immediate operation. At last the union jack was fairly lowered, the steamer's head was turned somewhat towards the shore, and the devoted John o'Gaunt followed in her wake. We may say without exaggeration, that the suspense of all present was painful, the silence was deep and unbroken. A smoke seemed suddenly to envelop the John o'Gaunt, her mainmast shot up perpendicular from her deck, no noise save that of the rending of timbers was heard, and on the apparent smoke's clearing away, the smitten ship heeled over to port and sank. We say apparent smoke, because we have since ascertained that what we, and a majority of those present, apprehended to be smoke, was in reality displaced water sent up in a huge column into the air. When the John o'Gaunt heeled over on her larboard side, we saw through a powerful telescope, and Captain Dickenson stated to us that he saw the same, through the main hatchway, the sea on the starboard side—a plain proof that the ship's starboard bilge was carried away. The decks, however, were not blown up, but remained entire when the ship sank—a clear proof that the force, whatever it was, and from whatever quarter it proceeded, was external, and not from within the cavity of the ship.

We notice this as a fact from which important conclusions may be drawn; but we will not imitate the example of many around us in this scene of excitement, and hazard conjectures of our own. To this fact we can bear testimony—the swift, and sudden, and complete destruction of the ship; and we are authorized by Lord Ingestre and Captains Dickenson and Henderson to give their decided opinion, founded upon an examination of the vessel and the facts displayed in the course of the experiment, that the cause of destruction was exterior, and not intrinsic.—*Times*.

Another account says:—"The instrument of destruction, whatever it was, seemed to strike the vessel midships, for, from that point a huge column of water, in which was intermingled some of the shingle of which her ballast was composed, shot up perpendicularly into the air higher than her highest topmast; her mizen went by the board, her mainmast, a new one, was shot clean out of her like a rocket; she heeled over to port to an angle of 45 degrees, and her main hatchway being open, daylight was visible through her bottom timbers on her starboard side, and probably her larboard also, having been blown away, and she seemed to part asunder as she went down, leaving nothing perceptible but the top of her foremast. The time which passed from her being struck and her sinking could not have exceeded two minutes and a half. Some few of the more enthusiastic spectators, chiefly professional men, raised a cheer, but with the mass all was mute astonishment. The eyes were rivetted on the last observable fragment of the large object that but the moment before floated gallantly on the waters 'like a thing of life.' The expression on the countenances of the multitude generally seemed to say—'What was it? An

illusion? A dream? A magical trick? A work of destruction so sudden, so frightful, so stupendous, appeared impossible for a moment even to the thousands and tens of thousands that witnessed it. It was like an awful mystery. There were none of the ordinary circumstances which accompany similar catastrophes. There was no smoke, there was no fire, there was no noise, save the low groan of the rending timbers, and the succeeding hush of the waters as they rolled over the instantaneous wreck; and then arose a melancholy feeling, for it was impossible to prevent the imagination depicting the terrible effects of such an explosion upon a peopled ship, thus silently and suddenly perishing. To convey the effect in words is difficult—extremely difficult. Language is inadequate for the description, it cannot flow fast enough, and a single sentence is too long to tell the tale. It was like a dissolving view. At one instant you see the tall ship riding proudly on the waves; at the next she is enveloped in the elements of her perdition; another moment only, and her shattered limbs are engulfed in the deep!"

On Monday night this extraordinary matter was brought under the notice of the House of Commons. In answer to a question put by Captain Plumridge, Lord Ingestre read the certificate signed by himself, Captain Henderson, R.N., and Captain Dickenson, to the effect that the experiment was performed, Captain Warner being at a distance of 300 yards; that the explosion took place at a signal given by them at a time unknown to Captain Warner, who had not been on board the destroyed vessel. The noble lord concluded by strongly expressing his belief that Captain Warner had proved himself to be in possession of a power of immense importance to the country.—Sir C. Napier asked the gallant officer if he was sure there was no torpedo on board the John o'Gaunt?—Lord Ingestre said he had just read a certificate to the House, and he was ready to make oath to the truth of its contents.

MELANCHOLY OCCURRENCE AT BLACK-FRIARS BRIDGE.

On Monday night a most melancholy accident, attended with the loss of several lives, happened, by the breaking down of the floating pier belonging to the Watermen's steam-boats, moored upon the east side of Blackfriars-bridge. A crowd of men, women, and children had congregated upon the pier, for the purpose of witnessing the grand heat of the Bankside boat-race, when suddenly the temporary bridge gave way, and precipitated not less than twenty persons into the water, which was then about ten feet deep, on the Middlesex side. The confusion was at once indescribable, a dense mass of human beings struggling together, each clasping the other, and many of them sinking to rise no more. With all possible speed drags were procured, and four persons were, after much difficulty, rescued, and, after most careful attention on the part of Dr. Hutchinson, they were restored to their families and friends. About eight o'clock the bodies of two children, whose names we have since ascertained to be Benjamin Breadent, aged four years, and Rhoda, his sister, about fourteen years of age, were brought ashore quite dead. The bodies were taken at once on stretchers by the police to the Glaziers' Arms, in Water-lane, and every possible attempt made to resuscitate them, but without effect. About half-past eight the body of a young female, about eighteen years of age, was found close by the bow of one of the coal-barges lying alongside the floating pier. She was dressed in a black drawn bonnet, a lavender print dress, had on an apron, but no ring upon her finger. She was quite dead when taken to the above public-house, where she was laid by a large fire, and wrapped up in flannel. Up to nine o'clock no one had appeared to identify the body; nor up to that hour had any other person been found.

By ten o'clock two other bodies had been picked up at St. Paul's Wharf, but the parties were restored. Just before that hour another female body was found; and, as all the bodies are identified, we are enabled to furnish a correct list of those discovered, who now lie dead at the Royal Humane Society's house, the Glaziers' Arms:—

Mary Ann Breadent, aged eighteen years, living with her father in Newgate-market.

Rhoda, aged fourteen, her sister.

Benjamin, aged about four years.

Also Maria Hulstead, twenty-three years of age, a fringe-maker, who was residing at 8, Jerusalem-passage, St. John's-square.

A fifth body was discovered near the bridge on the following morning (Tuesday), and proved to be a little girl, about ten years of age, the daughter of Alfred Mundy, a publican, in Printing-house-lane.

On Tuesday an inquest was held by Mr. Payne on the body of the little girl, Aurelia Mundy, when, after the examination of a great number of witnesses, who proved the principal facts as detailed above, the jury returned a verdict of "Accidental death."

Mr. Under-Sheriff Anderton waited upon the Lord Mayor on Tuesday at the Mansion-house, for the purpose of particularly calling his lordship's attention to the dreadful accident which occurred at the temporary pier at Blackfriars-bridge on Monday evening. The Lord Mayor expressed his satisfaction at the manner in which the Under-sheriff had publicly called his attention to the melancholy disaster which had occurred, and to the practice of overcrowding the steam-vessels—a subject which had frequently occupied his mind. He regretted that delays arising from the nature of the difficulties which pressed upon the subject had taken place, but the committee, together with the Watermen's Company, were, with the aid of the City solicitor, at the present moment engaged in framing rules which would now be acted upon, and were calculated to remedy the hazardous evil of overcrowding.

ROYAL AGRICULTURAL SOCIETY.—The meetings of this society is now being held at Southampton, which is thronged with visitors. The chief attraction and the great influx of company were on Thursday, when the cattle show took place. Amongst the prizes for implements we perceive the following:—£10 and a silver medal to Earl Ducie, for the Uley cultivator; £10 and a silver medal to Earl Ducie for a patent chaff-cutter; and a silver medal to Earl Ducie for a Richmond cart.—On Wednesday a meeting of the members of the society and others was held at the Freemasons' hall, Southampton, for the purpose of establishing the Cirencester Agricultural College. The chair was taken by Mr. Pusey, who briefly stated the objects of the meeting. Lord Bathurst had,

in addition to providing a suitable farm of 400 acres on which the college and other buildings were to be erected, advanced £2000 in furtherance of the object. Resolutions were then moved and seconded in accordance with the object of the meeting. The dinner of the council and members took place in the evening at the Victoria Rooms, when about 400 sat down to table. Earl Spencer presided.

EPITOME OF NEWS.

FOREIGN.

A telegraphic despatch, of which the following is the substance, was received by the French Government on Wednesday:—"A telegraphic despatch, dated from the bivouac of Sidi Zaer, the 16th, announces that Marshal Bugeaud, having been provoked by a fresh attack on the part of the Moors, completely overthrew and pursued them as far as three days' march beyond Ouchda. He returned on the 15th to the camp of Lalla Magnia. All the tribes are offering to submit, even those within the Moorish territory."

By the last courier from Africa despatches from Marshal Bugeaud, dated Lalla Magnia, the 6th July. These despatches contain an account of a great razzia executed by General Tempouri's column upon the Ouled Belagh, the Ouled-el-Mahr, the Beni Muthar, and the Ouled-Sidilabla fraction of the Djafra. These tribes were come up to at 15 leagues to the south of Sebbon, and made a stubborn resistance, and had 30 of their horsemen killed; 100 prisoners taken, with 20,000 sheep, 600 oxen, 150 camels, besides many horses and mules.

The Madrid journals of the 17th announce that preparations were actively commencing for the approaching electoral struggle.

According to the last accounts received from Ceuta, that place was exactly in the same state as in a war. The passage of French ships of war along the Spanish coast had caused great sensation.

The Madrid Gazette of the 15th contains a decree, forbidding the use of arms throughout Spain except by special authority, and subjecting the offending parties to a fine of 160 ducats and an imprisonment of thirty days. The decree is founded upon laws already existing, but the publication of it at this moment is an indication of the apprehension of danger on the part of the Government.

On the 10th inst. three citizens of Saragossa were shot in one of the public squares. They were said to have been implicated in the death of General Esteller during a popular tumult in 1838.

General San Miguel and his brother have been imprisoned (without accusation or trial), the one in Bilbao, the other in Majorca.

Letters received from Havannah state that fresh ramifications of the conspiracy of Matazens had been discovered.

BOHEMIA.—The Nuremberg Correspondent states that the working classes of Brönn, in Bohemia, had risen en masse, and destroyed several factories. Troops had arrived, however, from the neighbouring garrisons, and no doubt was entertained of the restoration of order.

The Universal German Gazette states that twenty-four persons lost their lives in the riots at Prague on the 19th.

THE GERMAN LEAGUE.—The Augsburg Gazette states that the receipts of the import, export, and transit duties by the Zollverein, during the first quarter of the present year, amounted to 4,700,000 crowns, of which 74,400 were for exports, 94,000 for transits, and 4,535,600 for imports.

THE AUSTRIAN TARIFF.—There is a letter in Liverpool which states that the Austrian Government is about to reduce the duty on cotton twist 1d. a pound.

BRUSSELS, July 22.—We learn from Berlin that the Prussian Government has just introduced into its tariff of customs a measure which affects Belgium exclusively. Dating from the 1st of September next, our east iron will be subject to an extraordinary duty of 30 per cent. more than that of other countries. At present it is subject to a duty which English iron cannot bear. Prussia thinks it has reason to complain of Belgium for not receiving some concession which was made to it by a decree of August 28, 1842.

AMSTERDAM, July 20.—It appears from the annual report of the affairs of the several provinces of the kingdom, that the population on the 1st of January, 1844, was 2,953,618; on the 1st January, 1843, 2,927,343; increase, 26,275. There were in 1843, 21,212 marriages and 36 divorces; of the divorces, 29 were in North and South Holland, the population of which is about a million.

HANOVER, July 16.—We were alarmed yesterday by a report that the town of Gelas was almost entirely burnt to the ground. To-day, however, we learn that there has been a great fire, which destroyed a church, with a celebrated organ, and two houses. It is stated that to the indefatigable and judicious exertions of the military in directing the fire-engines may be ascribed the preservation of the remainder of the town, the wind being very stormy, and the roofs of the adjoining houses being often in great danger.

A dreadful fire took place on the 1st inst. at Drontheim, in Norway. Several streets and twelve public edifices are stated to have been burnt to the ground. A similar disaster occurred at Cronstadt, in Transylvania, on the night of the 30th ult.; more than ninety buildings were destroyed. It is stated, also, in a German paper, that the fine market-place of Marienburg has been burnt down.

An explosion of gas, the consequences of which were frightful, took place on Monday evening, at the porter's lodge of No. 25, Rue Neuve St. Jean, Faubourg St. Denis, Paris. A vent having opened in the pipe supplying the wine-shop in the same house, the porter, whose lodge is very dark, took a lighted candle too near to it, and the gas caught fire. Two children of the unfortunate man were killed, and his wife so severely wounded in the leg that she was necessarily carried to the hospital.

GAME LAWS ON THE CONTINENT.—The Correctional Tribunal of Lille has recently decided that larks are game, and that it is unlawful to carry them about even when alive!

DOMESTIC.

Dr. Charles Locock, first physician accoucheur to her Majesty, has arrived at Windsor, and taken up his residence at the house of the Rev. D. F. Markham, one of the canons of Windsor, and within the precincts of the Castle. Dr. Ferguson, second physician accoucheur, and Sir James Clark, Bart., one of the physicians in ordinary to the Queen, have also arrived. Mrs. Lilley, who has been again engaged as her Majesty's monthly nurse, has been staying at the Castle during the past week.—On Saturday morning, a Russian frigate, reported to be the

Aurora, and having a Vice-Admiral on board, was riding at anchor at the Nore. She is reported to have gold specie, and some very valuable presents on board for her most gracious Majesty. One of the inmates of the Metropolitan Benevolent Societies' Asylum at Ball's-pond, Dalston, has given birth to no fewer than 32 children. On one occasion she was confined with four, on two with three children at a birth, besides at other times having given birth to twins. The crops in Lancashire are in much better condition than it was anticipated they would be, previous to the recent showers. The whole country appears greatly refreshed, and the crops much improved. The wheat, which has looked well all the season, now presents a beautiful appearance; and there is every prospect of our having a very early harvest, and a first-rate crop both in point of quantity and quality. In some districts the harvest has partially commenced; about 40 quarters of new oats were sold last week in the Wakefield market. The quality was very fine and sold at 13d. per stone. Prime Severn salmon is now on sale at Bristol at 6d. and 7d. per lb.; and other fish, brought by railway and steam-vessels from the coasts of Devon, is also exceedingly cheap. A police force is about to be established by Government at Hong-Kong. Mr. May, the son of the active chief superintendent of metropolitan police, and who is himself the inspector of the K division, is appointed to the command of the whole force, with a salary of £500 per annum. He will be assisted by two sergeants, at present also in the K division, who will have £250 per annum each. We believe it is not intended to take out any constables, as the force will easily be organised at Hong-Kong. It appears that the sum of £12,000 and upwards is yet required for the completion of the Nelson monument, which the Lords of the Treasury have recommended Parliament to supply, a vote of £8000 being proposed to be taken for the expenses of the present year. Before Baron Richards, at Waterford assizes, all the weirs in the river Suir were indicted as a nuisance, as obstructing the navigation, and a verdict to that effect returned. On Sunday last no less than four accidents took place on the Thames, by which seven lives were lost by drowning. A deputation from the Society for the Employment of the Distressed Needlewomen in London, consisting of Lord Ashley, M.P., Mr. Alderman Farebrother, and other gentlemen, attended by Mr. Roper, the hon. secretary, had an interview with Sir James Graham, at the Home Office, on Saturday last, upon the subject of the low prices at which work is taken in at the various prisons and other establishments, to the great detriment of the industrious poor; when the Home Secretary was pleased to express his anxious desire to afford all possible attention and assistance to remedy the evil complained of. On Tuesday week, within the higher ward of the barracks at Chester Castle, one of the privates of the 6th Regiment of Foot, having been charged with some offence against the Mutiny Act, was sentenced to be flogged. The regiment was formed in the upper ward, the doors were closed, and the punishment was inflicted to the extent of 150 stripes. Now, as the cat contains nine lashes, this unfortunate defender of his country received no less than 1350 lashes, each cutting into the muscle, and lacerating his frame! On Thursday an explosion of fire-damp occurred in Mr. Jeremiah Rawson's colliery, at Swan Bank, Southwam, by which James Barstow and Joseph Holmes, the stewards, were severely burnt. *Halifax Guardian.* On Monday week Captain Postle, and other officers of her Majesty's steamer Flamer, preferred informations before Alderman Watson and Alderman Boyce, of Limerick, for breaches of the Admiralty statute, by vessels in this harbour, decorated with (repel) flags not national. The legal penalty is £500, and not less than £50. It is hoped the law proceedings will not be followed up, for the offence we believe to have been purely unintentional; but the navy officer unquestionably did only his duty, and nothing more. However, in a commercial port so seldom visited by ships of war, it is not surprising that neglect of the Admiralty regulations should be apparent. *Limerick Chronicle.* About three o'clock in the afternoon of Saturday, while there were several persons in the shop of Mr. Rawo, woollen-draper, &c., of Skinner-street, Snow-hill, corner of Farrington-street, beside himself and his assistants, a bullet suddenly struck one of the pieces of cloth, and fell upon the floor of the shop, narrowly missing the parties purchasing there. Shortly afterwards, another bullet was driven with great violence through the plate-glass of the folding-door leading into the shop. Fortunately this fell harmless at the feet of the parties employed. The ball perforated the plate-glass very cleanly, the hole through which it passed not being much larger than its own diameter. Finding he was not safe in his own house from the hand of some villain who either sought his life, or was endeavouring to destroy some one else, the principal immediately gave information of the double attempt to Inspector Martin, at the Southfield station of the City police, who made immediate arrangements for strictly watching the premises, by having two men constantly on duty in the immediate neighbourhood. Just at the time that the nine o'clock change of the constables was taking place, another ball was fired, which made a deep indentation in the shutters; but this bullet having rebounded, was not picked up. It is believed the shots were fired from an air-gun. Inquiries are being made as to the perpetrator of these diabolical attempts. On Monday week Sir Robert J. Paul, high sheriff of Carlow county, had two of his fingers dreadfully shattered by the explosion of a gun, while amusing himself shooting rabbits at Brown's Hill. It has been communicated to us, from a respectable and well-informed source, that Mr. O'Connell is to be examined as a witness in an important Record case connected with the property of the O'Sullivan family in the west of this county, to be tried in Cork, at the approaching assizes, his testimony being considered indispensable by counsel in the case. *Cork Reporter.* At the Limerick assizes James O'Regan, Mary O'Regan, Mary Burns, and Thomas Looney were indicted for setting fire to the out-offices of the Earl of Dunraven, at Adare, on the 18th of April. The singularity of the case is, that the four prisoners were Crown witnesses on former occasions, and, having tasted and partaken of the benefits derivable to such a class of persons, they actually planned this, more for the purpose of again getting into the pay of Government than from any malicious motives towards the nobleman whose property was consumed. Without leaving the box the jury found a verdict of guilty against all but Mary O'Regan. On Thursday, at Tullamore, Peter Dolan was tried, charged with the murder of the

late Lord Norbury. The principal evidence was that of an approver and his wife, whose statements were denied in some important particulars by the approver's brother. The jury acquitted the prisoner. During a storm of thunder and lightning, which passed over the neighbourhood of Gloucester on Thursday, the 18th inst., a poor old labouring man named John Lane, 71 years of age, who was working in a potato field at Churchdown, between that city and Cheltenham, was struck by the lightning and instantly killed. The animated appearance of commercial activity still pervades our docks, and at no time since 1839 has there been, we believe, anything like so much business doing as during the last few weeks. The arrivals of every description of grain from foreign ports have during the last fortnight formed a prominent feature in the imports, and at the present moment every warehouse has got a tenant. *Gloucester Journal.* So cheering are the prospects of the harvest at this moment, that prime wheat was sold in Bristol market last week at the low price of 6s. 3d. to 6s. 9d. per bushel. Tuesday afternoon an alarming fire broke out in the scutching-room, at the Coronation-mill belonging to Messrs. Bolling, Bolton. A quantity of cotton has been destroyed, but the damage will not be heavy. The exertions of the workpeople to extinguish the fire were most praiseworthy; they appeared to stop at no danger, and to their persevering efforts the safety of the whole building is, in a great measure, attributable. In the quarter ending March, 1842, a friendly society in the district of Blackburn expended £47 4s. in the relief of members in search of employment. In the quarter ending March, 1844, the amount expended for the same purpose was only £3 1s. 6d. According to a statement made by Mr. Bright, in the House of Commons, the other evening, the London and Birmingham Railway Company employ from 1500 to 2000 persons, at salaries from £70 to £100 each, and pay about £200,000 a year to their servants and tradesmen. About a thousand claims have already been prepared by the Working Men's Committee in Birmingham, and will be put on the parliamentary registration list, under the four shillings-a-week rent decision, before the 20th of August. The House of Commons has voted for England £40,000, and for Ireland £75,000, instead of, as before, £50,000, for education. Baron Alderson, in passing sentence at Buckingham on James Holbrook, who was convicted of setting fire to a rick of wheat, the property of his wife's uncle, said that in all cases of arson, where the evidence was clear and satisfactory, it was his intention to transport for life. At the Cambridge assizes, Mr. Justice Williams, in his charge to the Grand Jury, directed their attention particularly to the crime of arson, an impartial and faithful report to the Government of the peculiar causes of the crime in this district would be a most valuable communication. The *Bury Post*, a Suffolk paper, states that the incendiary fires for the past week "have been fully equal to the average of the year, viz., five or six burnings in seven days." A most important post-office arrangement is said to be in progress, by which it is anticipated that, by steamers, letters will reach China in fifty days! A regular agency for the sale of American ice has been established in Liverpool. It is brought from Wenham Lake, a sheet of pure spring water, situated near Boston, and is about two feet in thickness. For the Taunton Theatre, which was offered for sale by auction last week, there was not a single bidder. On Thursday evening Oxford was visited by a thunder storm of an alarming character. The electric fluid struck the south-east pinnacle of Magdalen College Tower, throwing the whole of the upper portion of it, weighing three or four hundred weight, upon the pavement below, fortunately without doing any material injury. The bodies of eleven of those who were drowned by the wreck of the Manchester steamer, at the mouth of the Elbe, including all the passengers and Captain Dudley, have been cast on shore, and recovered. One of the bodies is that of an unknown gentleman, round whose neck was fastened a sum of money amounting to £3900. The Repeal Association held their usual weekly meeting at Conciliation Hall, Dublin, on Monday. Among the sums of money announced was £200 from the Repealers of Halifax. The total rent for the week amounted to nearly £1600. The wounded men from the army of Gwalior disembarked from the ship Windsor on the morning of the 22nd inst., and proceeded forthwith to Chatham. On Wednesday Mr. Bright presented a petition to the House of Commons, from Durham, complaining of the practice of opening letters at the Post-office as unmanly, unconstitutional, and unworthy the character of Englishmen: the petition, therefore, prayed that the practice might be made illegal. There was no convict left under sentence of death at Clonmel assizes. Kildare, Carlow, and Queen's County assizes occupied only a day each! *Dublin paper.* At the Lincoln assizes, Eliza Joyce pleaded guilty to the charge of having administered poison to and caused the death of two female children, one her own, the other her step-child. Mr. Justice Colman sentenced the wretched woman to be executed. A considerable reduction of the fares between Liverpool and London is about to be made, the directors of the Grand Junction and the London and Birmingham Railway Companies having both decided in favour of such a step. A delegate meeting of the operatives of Lancashire was held at Manchester on Monday, for the purpose of devising means to promote the further progress of the Ten Hours Bill. There were delegates present from Manchester, Bury, Preston, Wigan, Ashton-under-Lyne, Chawbent, Hindley, Oldham, Stockport, Horwich, &c. Each delegate was requested to give a report as to how far the working classes were prepared, by organisation amongst themselves, to give effect to the declaration of the House of Commons—namely, that the factory day shall commence at six o'clock in the morning and cease at six o'clock in the evening. The Ipswich assizes commenced on the 23rd. The calendar is very heavy, and contains the names of fifty prisoners, the majority of whom are charged with arson; of these 11 can neither write nor read, 9 can read and write imperfectly, and 8 are under 17 years of age, two of them being mere children. A new asylum, called the New Asylum for Infant Orphans, has been established in the City on the most extensive and liberal principles. There is to be no religious distinction. The children of misfortune, of whatever creed, are to be received into the same asy-

lum, and the hand of charity is held out to the Churchman and the Dissenter alike. The annual distribution of prizes at the Government School of Design took place on Thursday, in the Great Room, Somerset House. The Hon. W. Gladstone presided, and distributed the several prizes. It is expected that the regular business of Parliament will have been disposed of by the end of the first week in August. The Parliament will not, however, be then prorogued; but the session will be continued by adjournment to the 25th of August. The purpose of this arrangement is to afford time for receiving the reports of the judges, and making up the judgment of the House of Lords upon the writ of error brought by Mr. O'Connell and his fellow-prisoners. *Herald.* On Monday evening last Mr. Hampton, the aeronaut, who, it will be recollected, about five years since made perilous descents in a parachute at Chelsea and Cheltenham, ascended from the Vauxhall-gardens, Birmingham, in a stupendous new balloon. The atmosphere being very clear, the ascent was beautiful in the extreme, and after the aeronaut had gained an altitude of two miles, he effected an easy and safe descent at Shear's hill, near Wolverhampton. It is well known that King Louis Philippe has promised to pay her Majesty a visit this autumn. It is now understood that his Majesty will embark at Treport, in the month of September, for this country. His Majesty will be accompanied by two ships of 74 guns, and four or five steamers, and will land at Portsmouth, whence he will proceed by railway to the station nearest to Windsor. His Majesty will remain eight days at Windsor, and will not visit London. *Herald.* We understand that his Royal Highness Prince Frederic William Louis of Prussia, brother of the King, and heir-apparent to the Prussian throne, is expected on a visit to her Majesty in the early next week.

DEATH OF THE LEAGUE.—The *Morning Herald* of Thursday contains the last of thirteen leading articles, all demonstrating the sudden death of the League, from as many different causes. We recommend its next funeral dirge to the notice of the inimitable artist of *Punch*. The "Wake of the League," with Grandmamma as chief mourner, is a subject for our modern Hogarth.

"PUNCH'S" POLITICAL LEADER.—The public has lately been startled by an extraordinary glut of pine-apples, and it has been found impossible to turn either to the right or to the left without being, as it were, stared out of countenance by this salubrious luxury. Everybody is asking what can be the meaning of such a sudden influx of this hitherto almost unobtainable delicacy. Pines are now thrust under our very noses, and ticketed at the most tempting figures, so that every man may sport his pine-apple on Sunday, for dessert, as reasonably as he could luxuriate in his threepenny pottle of hautboys. Superficial observers see nothing in all this but a fall in the luscious fruit we have alluded to. We, however, take a deeper view of the subject, and look upon these pine-apples as the legitimate fruits of the tariff. The insane and selfish policy which, for a long time, crippled currents, and kept figs at a feverish price; which prevented the Brazilians from a friendly interchange of their nuts for our manufactures; which debarred the merry sons of Naples from sending us their macaroni, and taking our Birmingham cutlery in return;—this insane and selfish policy no longer prevails, and we may hope that Sir R. Peel will, ere long, give us a cheap loaf, since he has ventured on the experiment of giving us a cheap pine-apple. We trust that the cry of "pine-apples for the people" will henceforth be the watchword of Free Trade; and it is very possible that "melons for the million" will hereafter find an echo in the policy of future Governments. *Punch.*

THE REGISTRATION.—In consequence of the recent decision of Lord Chief Justice Tindal, that lodgers, paying a yearly rent of £10, were entitled under the Reform Act to the privilege of voting at elections, there is every probability that the constituencies of the metropolitan boroughs will this year be greatly increased. In the Tower Hamlets about 1000 claims have been sent in to the overseers; in the ward of Cripplegate notices have been served for 700; and in the borough of Lambeth there are no fewer than 1000 new claimants, the great majority of whom are lodgers. From this, it is evident that the revision of the lists of voters will this year last much longer than usual. *Advertiser.*

ADULTERATION OF BREAD.—Another of the thousand ways in which our food is adulterated has been brought to light. So long ago as April last, the commissioner of police in this town, Mr. Dowling, received an anonymous letter from Cumberland, stating that gypsum, that is, primitive alabaster, was ground in large quantities at a mill near Carlisle, and forwarded to Liverpool under such circumstances as rendered the suspicion reasonable that it was used in the adulteration of flour, which it strongly resembles in appearance. Due vigilance being exercised, it was found that quantities of it arrived from Carlisle, consigned to a person here whose name is known, and who received it as gypsum, but afterwards shipped it to Runcorn as flour. It was consigned to a miller in that neighbourhood. The authorities there were put on the alert by Mr. Dowling, and some rumours having transpired, it was observed that the sacks of gypsum lay unclaimed for many weeks. At length, however, and immediately afterwards, we learn that Mr. —, of —, near Weaverham, was fined £10 by the Cheshire magistrates, for having gypsum in his possession. The officers detected him in the act of mixing it, and flour which was purchased from him was found adulterated with gypsum. They found and seized 23 bags of that article, and some at further charges for mixing and selling it are to come on at another meeting of the magistrates. Thus is our "daily bread" adulterated; thus is the craft of the mason carried on in our very stomachs, and mortar there produced which is of mortal effect; and thus a family wishing to purchase a stone of flour is literally furnished with a flour of stone. Three years ago we recorded the dreadful sufferings of a gentleman who had eaten of bread adulterated with plaster of Paris, from a mill in Staffordshire, and with plaster of Paris, from a mill in Staffordshire, and we then said, what we now repeat, that all parties engaged in such diabolical deeds—such deadly assaults on their fellow-creatures, as those we are exposing—ought to be condemned to live, or rather to die, on the food they prepare, and no other. Gypsum is solid rock; it is altogether indigestible; and the deterioration of health, and the destruction of life itself, must be the consequence of using it mixed in food. *Liverpool Mercury.*

REVIEW.

Murray's Colonial and Home Library, No. IX. Western Barbary, its Wild Tribes and Savage Animals. By J. H. D. Hay, Esq. London: Murray.

Although the preliminary flourish of trumpets with which Murray's new series of cheap books was introduced to the world savoured a little too much of self-sufficiency and arrogance, especially as the "Colonial and Home Library" was far inferior to Knight's series of the British classics, in cheapness, in value of the works produced, and in typographical execution, we took from the beginning a lively interest in the success of the project, which even the incivility of its proprietor, notorious as it is, could not diminish. We were glad to see works of such interest as Borrow's "Bible in Spain," and Heber's "Indian Journals," reprinted in so cheap a form as to be brought within the reach of persons of moderate means; and we are now gratified by being able to purchase an original work of merit at about the tenth of the price which would have been charged for it some years ago. Public attention has been recently directed to Morocco and Western Barbary, by the alleged probability of a war arising between England and France, in the event of the latter attempting the conquest of the country. War, however, is so easily a game, that it is well before commencing it to make an estimate of the cost. Of a French expedition to Morocco the leader may say with the Norwegian captain in "Hamlet":—

"Truly to speak, sir, and with no addition,
We go to gain a torrid patch of ground
That hath in it no profit but the name."

And it might be added,

"Two thousand souls, and twenty thousand ducats,
Will not debate the question of this straw:
This is the imposthume of much wealth and peace,
That inward breaks and shows no cause without
Why the man dies."

Reserving for the present the discussion of the political questions connected with the disputes between France and Morocco, we turn without any further preface to Mr. Hay's admirable sketches of the pictures of Arab life, which he met during his travels among the wild tribes of Barbary, and his well-selected anecdotes illustrative of their customs and manners. Of the little regard paid to life or limb, the following description of "firing at the egg," related by an Arab chief, may serve as a specimen:—

"I remember, some years ago, when I was at the holy city of Wazan during the feast of the lamb, Bengeloon and other marksmen of fame from distant parts had assembled to shoot at the target. Bengeloon and I were the only two who had fired at the egg. Then Kaid Absalam, he who had been governor of Alcasar, whose heart was black with envy, swore by the beard of our prophet that he could do what others had done before him: so he called one of his slaves and told him to take his place with the egg, about thirty paces from where he was sitting. It was the same distance at which we had fired."

"The gun was levelled, and Bengeloon—may God profit us through him!—looking over the kaid's shoulder, exclaimed, 'Allah! unless you keep your gun steady, O kaid, you will hit his left leg.' Bang went the gun, and the slave fell with a groan, for the ball had passed through his left ankle."

"There go a hundred dollars," said Kaid Absalam; "but the next shot shall hit the egg. Abd-el-Habeeb, said he, calling on another of his slaves, 'take another egg, and stand where Embarek stood. Coward! what do you tremble for? Stand steady, or I will put a ball through your heart.'"

"Again the gun was levelled.
"All wrong," said Bengeloon, who remained at his shoulder. Bang it went, and the ball passed through the fleshy part of the leg, but the slave kept his position."

"That is a fine fellow," said Bengeloon to the kaid, who was again loading his gun: "Be merciful, as you expect mercy in the world to come."

"True," said the kaid, "but I must have another shot, for all that." He fired for the third time, and broke the egg."

The love of the Arabs for their horses has been frequently celebrated, and we find it signally illustrated by Mr. Hay's personal experience.

"It is not always that the Arab is ready to part with his horse, if a good beast, whatever price may be offered; though money amongst the degraded people of Morocco will work miracles. A circumstance which proved this occurred to me about four years ago when accompanying poor John Davidson some few days' journey into the interior."

"As we were proceeding between Mehedea and Rabat we were joined by a troop of mounted Arabs, one of whom was riding a mottled grey, the handsomest barb I ever saw. Riding up to the man, I entered into conversation with him, and having put him in good humour by praising his steed, I told him I would make him rich if he would sell me the mottled grey."

"What is your price?" said the Arab.
"I offered a hundred and fifty *misakel*, about twenty pounds sterling, a large sum in the interior."

"It is a good price," said the Arab; "but look," said he, and he brought his horse on the other side of me,—"look at this side of him,—you must offer more."

"Well, come," I said, "you are a poor man, and fond of your horse; we won't dispute about the matter; so, give me your hand;—What say you? two hundred?"

"That is a large price truly," said the Arab, his eyes glistening, and I thought the horse was mine. But my eagerness, I suppose, had been too apparent, so the Arab

"The Moorish manner of striking a bargain."

thought I might go still further; and shaking the bridle off he went at full speed. The mottled grey curled its tail in the air and vanished to a speck in no time;—I turned to speak to Davidson, and the next moment the Arab was at my side; and patting the neck of his grey, he said, "Look at him—see—not a hair is turned! What will you give me now?"

"Davidson prompted me to offer even four hundred ducats rather than let the animal go. Again I began bargaining, and offered three hundred. On this the Arab gave his hand, and thanking me, said, 'Christian, I now can boast of the price you have offered, but it is in vain that you seek to tempt me, for I would not sell my horse for all the gold you, or any other man, possess.' Having said this, he joined his companions."

"Calling the kaid, or chief of our escort, I asked him if he knew the rider of the grey,—adding, that I supposed he must be rich, as he had refused so large a sum. The kaid said, 'All I know is, that he is a great fool; for he possesses nothing in the world but that horse, which he bought when a colt, selling his tent, flocks, and even his wife, to buy it.'"

We next turn, as suddenly as the author himself, to the exciting incidents of a boar-hunt:—

"We were slowly winding up the hill, and I had just requested our new ally to resume his story, when we heard the well-known tongue of a boar-hound. 'Hark!' said the Hadj—'Hark, to old Zeltsoon!' I gave spurs to my horse, and was soon at the top of the hill, just in time to see a huge boar dash across the path some fifty yards in front. Pell-mell at his heels came a motley pack of curs in full cry; and at a distance I heard the usual shouts of the beaters—'Get out, you Jew!' 'At him, Zeltsoon!' 'Hide yourself, Jawan!' 'No other but the one God!'—and then many a long gun glistened through the bushes. I stood still until they came up, and soon recognised many old friends and fellow-hunters. They were half stripped, their legs well protected by palmetto buskins, formed exactly like the greaves of ancient Greece, with a leather apron to defend the body from the thorny thicket. Some with long guns, others with bill-hooks, to be used either to cut their way through the jungle, or, if need be, to defend themselves from the boar's onset, were following the dogs in ardent pursuit. A shot was heard upon our right, in the valley below, and in the direction that the boar had taken. They paused. By the note of the dogs they knew that the beast was at bay; so on dashed the whole hunt, shouting to their dogs to keep clear of the boar, and expressing their feelings in the most endearing terms. Such as 'My children—My dearest—Take care, he sees you—He is an infidel, a Nazarene—He will have his revenge—None but the one God!'"

"The soldier with the baggage animals now joined me, and desiring him to go on to a well about a quarter of a mile off, where there was shade; and the Hadj and Sharky, both old hunters, also giving their animals to his care, we all rushed on into the thicket, and soon reached the spot where the shot had been fired: there we found a hale, though hoary hunter, who could not have weathered less than eighty winters, reloading his gun. He it was who had struck the boar."

"The beast was at bay in a thicket of brambles, surrounded by the dogs and hunters: he showed great fight, but we soon despatched him. He was a huge monster, and proved the truth of the poet's description:—

"On his bow back he hath a battle set
Of bristly pikes, that ever threat his foes:
His eyes like glowworms shine when he doth fret,
His snout digs sepulchres where'er he goes.
Being moved, he strikes what'er be in his way;
And whom he strikes, his crooked tusks slay."

"Three of the dogs are wounded—one of them fatally. The poor animal had just life enough to wag his tail and raise his head as his owner, a fine young mountaineer, came up, and took him in his lap."

"Alas! my poor dog," he said; "did I not warn you not to go near the infidel? But God's will be done." The tears started in his eyes as his dog expired."

"The bill-hooks were set to work, and a grave was dug to bury the poor animal; each man put a stone upon it, as a tribute of his affectionate regret, and I, on my part, added one to the number."

"The wounds of the other two dogs were now sewn up—the thorn or point of the aloe leaf and its fibres being substituted for a surgeon's needle and silk thread."

"A fire was lit, and the boar put on to roast for their dogs, they having first offered me the lion's portion, whilst a little sly joking amongst them at my expense, such as—'Let Jan (the author) have a larger portion than the other dogs.'"

As a companion-picture to this we give a sporting anecdote of a boar and two lions, which is singularly illustrative of the Arab superstitions respecting the language of animals. It was related by a venerable sheikh, who ought not to be suspected of the western tendencies to romance:—

"Now this is a story of the boar and two lions."

"In the days of my youth, when a black moustache curled where now you see the hoary beard of my winter's age, I seldom passed a night without my father's hut; but sallying out with my gun, laid wait for the wild animals which frequented a neighbouring forest."

"One moonlight night I had taken my position on a high rock, which overhung a fountain and a small marsh, a favourable spot with our hunters to watch for boars, who resorted thither to drink and root."

"The moon had traversed half the heavens, and I, tired with waiting, had fallen into a dose, when I was roused by a rustling in the wood, as on the approach of some large animal. I raised myself with caution, and examined the priming of my gun, ere the animal entered the marsh. He paused and seemed to be listening, when a half growl, half bark, announced him to be a boar, and a huge beast he was, and with stately step he entered the marsh."

"I could now see by the bright moon, as he neared my station, that his bristles were white with age, and his tusks gleamed like polished steel among the dark objects round him. I cocked my gun, and waited his approach to the fountain."

"Having whetted his ivory tusks, he began to root; but he appeared to be restless, as if he knew some enemy was at hand; for every now and then raising his snout, he snuffed the air."

"I marvelled at these movements, for as the breeze

came from a quarter opposite to my position, I knew I could not be the object of the boar's suspicions."

"Now, however, I distinctly heard a slight noise near the edge of the marsh: the boar became evidently uneasy; and I heard him say with a clear voice, for you must know they were formerly men, 'I hope there is no treachery.'"

"This he repeated once or twice, and again began to root."

"Keeping a sharp look-out on the spot, whence I heard the strange noise, I fancied I could distinguish the grim and shaggy head of a lion crouching upon his fore paws, and, with eyes that glared like lighted charcoal through the bushes, he seemed peering at the movements of the boar. I looked again, and now I could see plainly a lion creeping, cat-like, on his belly, as he neared the boar, who was busy rooting, but with bristles erect, and now and then muttering something that I could not understand."

"The lion had crept within about twenty feet of the boar, but was hidden in part by some rushes. I waited breathless for the result; and, although myself out of danger, I trembled with anxiety at the terrible scene."

"The boar again raised his snout, and half turned his side towards the lion, and I fancied I could see his twinkling eye watching the enemy. Another moment, and the lion made a spring, and was received by the boar, who reared up on his hind legs. I thought I could hear the blow of his tusks as the combatants rolled on the ground. Leaning over the rock, I strained my eyes to see the result. To my surprise the boar was again on his legs, and going back a few paces, rushed at his fallen foe: a loud yell was given by the lion, which was answered by the distant howlings of the jackals. Again and again the ferocious boar charged, till he buried his very snout in the body of the lion, who was kicking in the agony of death. Blood, indeed, flowed from the sides of the boar, but his bristles still stood erect as he triumphed over the sultan of the forest, and now he seemed to be getting bigger and bigger. 'God is great!' said I, as I trembled with dread: 'He will soon reach me on the rock.' I threw myself flat on my face, and cried out, 'There is no other God but God, and Mahomet is his prophet!' I soon recovered my courage, and looked again. The boar had returned to his natural size, and was slaking his thirst in the fountain. I seized my gun, but, reflecting, said within myself, 'Why should I kill him? He will not be of any use to me; he has fought bravely, and left me the skin of a lion, and perhaps he may be a Jin; so I laid down the gun, contenting myself with thoughts of the morrow."

"The boar had left the fountain, and was again busied rooting in the marsh, when another slight noise, as of a rustling in the wood, attracted my notice, and I could perceive the smooth head of a lioness looking with surprise and horror at the body of her dead mate.
"What! treachery again!" said the boar in a low tone.
"God is great!" said the lioness: 'he shall pay for this! What! a pig! an infidel! to kill a lion! One spring, and I will do for him.' Having said these words, she advanced boldly. The boar stood prepared, grinding his teeth with rage. She paused, and again retreated to the wood, and I could hear her say, 'O God! all-merciful Creator! What an immense boar! what an infidel! what a Christian of a pig!'"

"May God burn your great great grandmother," said the boar.

"On hearing the creature curse her parent, she again stopped, and, lashing her tail, roared with a voice that the whole wood re-echoed, and she said, 'There is no conqueror but God.'"
"The boar stamped his hoofs, and gnashed his tusks again with rage; his grisly bristles, red with the blood of her mate, stood on end; then, lowering his snout, he rushed headlong against the lioness, who, springing aside, avoided the dread blow. A cloud came over the moon; I could not see distinctly, but I heard every blow of the paw and every rip of the tusk. There was a dead silence; again the cloud had passed, and the heavens were clear, and I saw the lioness with her fore paws on the body of the boar."

"I seized my gun, and aimed at her head; that was her last moment."

"The morning dawned. I descended from the rock. The claw of the lioness still grasped in death the body of the boar. Many severe wounds showed that the boar had again fought bravely."

An amusing proof of the general belief that animals understand human language is found in the account which an Arab gives of the artful flattery by which he deceived a hyena:—

"I have often been amused by the difference of tone in which the Arab sportsmen express themselves when speaking of the different animals or chase. When they talk of the lion, it is always as if they considered him a particularly gentlemanly personage; and they treat panthers and boars civilly enough. But their contempt of the cowardice and stupidity of the hyena has no limit; indeed its Arabic name, 'dhua,' means addle-headed or stupid."

"On the present occasion the Hadj was very severe upon them.
"The dull-witted knaves," he said, 'fancy that if they can hide their head in a hole, all the rest of their body will be invisible; and be assured, O Nazarene! that the Arab huntsmen are not slow to take advantage of their folly. I remember, continued the Hadj, 'accompanying a friend of mine to a cavern which he had marked down as the abode of one of these rapacious. We took with us no other weapons than our daggers and a long rope. Having reached the mouth of the cavern, which was situated in a thicket, my companion, stooping down, peered within, and could perceive the hyena nestled in a corner, with its head thrust into a cavity of the rock. Turning to me, he said—and he took care to speak loud enough for the beast to hear him—'Did you say that the hyena was here? You must be mistaken, for he is not here now. O no! they call him a stupid fellow; but he is no fool: if he was, he would be here.' Then, entering the mouth of the cavern with his eye upon the beast, my companion continued: 'O what folly to suppose the hyena would be here! It is quite light; I can see every thing; but the dhua, poor fellow, he is gone. O no, he is not such a fool as we call him!' Then, cautiously approaching the animal, with his dagger in one hand and the rope in the other, talking loud all the time, 'Yes, yes,' he said, 'it would be very different with me if the hyena was here."

"An evil genius or spirit."

THE LEAGUE.

No. 45.]

SATURDAY, AUGUST 3, 1844.

[3d.]

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive a copy, weekly, of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND, are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

REGISTER, REGISTER, REGISTER!

Particulars to be attended to up to the 25th of August.

The overseers must, on or before the 31st of July in each year, make out an alphabetical list of all £10 occupiers, within their respective parishes, entitled to a vote for the borough, including such as occupy the adjoining precincts and liberties, if any. They are entitled to have access to the books of assessed taxes, to ascertain whether the claimant is liable for, or has not paid his assessed taxes "in respect," only, "of the premises."

They must make a separate similar list of all parishioners, other than freemen and liverymen, qualified to vote in respect of ancient rights.

These lists, signed by the overseers, must be affixed on the doors of every place of worship, established and dissenting, within the parish, on the first two Sundays in August—and copies are to be kept for public inspection, without fee, in the overseers' custody.

Persons omitted from these lists will send claims to be registered to the overseers, on or before the 25th of August.

Persons on the first list may be objected to by any one, whose name is on any list of voters for the borough, serving notice of objection on the overseers, on or before the 25th of August.

DUTIES OF CLAIMANTS AND ELECTORS.—Every person should see for himself that his name is inserted in the list of that class of voters to which he belongs. If he have a twofold qualification, he should see that his name is on both lists. This is of great importance, as the voter may be objected to and lose one qualification, and retain the other and vote for it.

Any person whose qualification consists of a successive occupation of different premises, should be careful to observe that each set of premises is inserted in the list.* He must also be very careful to see that the place for which he claims, and his own place of residence, are very correctly described in these lists. If this should not have been done, he must send in a claim to the overseers, as below, describing all the premises, and also (if he have changed his residence) his new place of abode.

CLAIMS BY PERSONS OMITTED FROM THE LISTS.—Persons omitted from the overseers' lists, should give notice, on or before the 25th of August, to the said overseers, in the following form. If the claim be for a successive occupation of different premises, each of such separate premises must be described:—

To the Overseers of the parish [or township] of —
I hereby give you notice, that I claim to have my name inserted in the list made by you of persons entitled to vote in the election of a Member [or Members] for the City [or Borough] of —, and that the particulars of my qualification are stated in the columns below.

Dated the — day of —, one thousand eight hundred and —
(Signed) A. B.

Christian name and surname of the claimant at full length.	Place of abode.	Nature of Qualification.	Street, lane, or other place in the parish (or township), where the property is situate, and number of the houses, if any (when the right depends on property).

Persons, omitted from the List of Freemen, should give notice to the town clerk in the following form:—
To the Town Clerk of the City [or Borough] of —
I hereby give you notice, that I claim to have my name inserted in the List made by you of persons entitled as Freemen to vote in the Election of a Member [or Members] to serve in Parliament for the City [or Borough] of —, and that my qualification is as Freeman of —, and that I reside in — Street, in this City [or Borough].

Dated this — day of —, one thousand eight hundred and —
(Signed) A. B.

* And of course, also, as a preliminary, in the rate-book relating to each occupation.

Lists of these claims are to be made out and published, in the manner already described, by the overseers, and the claimant should inspect them, and, if incorrectly inserted in any of the essential particulars, he must attend the Revising Barrister's Court, and get them altered. If, notwithstanding of his making his claim, he is omitted from the list of claimants, he upon attending the Revising Barrister's Court, and proving the serving of his claim on the overseers, will be placed on the register.

Notices of claims must be delivered on or before the 25th of August.

OBJECTIONS TO PERSONS ON THE LISTS.—It is of importance that every voter should carefully examine the lists made by the overseers and town-clerk, to ascertain if the name of any person has been inserted who is not entitled to vote. If there be any such, he is to give to the overseers, or to the town-clerk, a notice of objection, in the following form:—

To the Overseers of the Parish [or Township] of (or to the Town Clerk of the City [or Borough] of) —
I hereby give you notice, that I object to the name of — being retained in the List of Persons entitled to vote in the Election of a Member [or Members] for the City [or Borough] of —

Dated this — day of —, one thousand eight hundred and —
(Signed) A. B., of [Place of Abode]

On the list of Voters for the Parish of —
The notice must also be given to the person objected to, as follows:—

To Mr. —
I hereby give you notice, that I object to your name being retained on the list of persons entitled to vote in the Election of Members [or a Member] for the City [or Borough] of —

Dated this — day of —, one thousand eight hundred and —
(Signed) A. B., of [Place of Abode]

On the list of Voters for the Parish of —
In all notices of objection, the christian name and surname of the person objected to, exactly as it appears in the list, should be written at full length. The christian name and surname, and place of abode of the objector must also be written at length, or the notice will be void.

If there be more than one list of voters, the notice should specify the list to which the objection refers; and if the list contains two or more persons of the same name, the notice should distinguish the person intended to be objected to.

These notices must be given on or before the 25th of August. Copies of the notices should be kept by the person objecting.

Notices of objection may now be sent by post; but care must be taken to have a duplicate copy of such notice stamped by the postmaster. Such duplicate will be good evidence of the service of the notice. The notice must be posted so that the person objected to may get it on or before the 25th of August, or the objection will fall to the ground.

It is of importance that none but well-founded objections should be made, as the Revising Barrister has now the power, in cases of frivolous objections, of awarding the payment of costs to the amount of not more than twenty shillings in each such case.

GROUND OF OBJECTION TO TEN POUND OCCUPIERS.

—That the person does not occupy as owner or tenant; in other words, that he occupies by permission only. That the property is not of the required value. That the person has not occupied for twelve months before the 31st of July. That he had not been rated twelve months before the 31st of July. That he had not, on the 20th of July, paid all poor-rates or assessed taxes payable before the 6th of April. That he has not resided six months, before the 31st of July, within seven miles of the borough.

GROUND OF OBJECTION TO A SCOT AND LOT VOTER.

—That he has not been rated to all rates made for six months before the 31st of July, or has not paid any of such rates demanded from him. That he has not resided during the time or within the distance required.

GROUND OF OBJECTION TO A FREEMAN OR BURGESS.

—That he was not duly admitted by the 31st of July; or, if the freedom is in right of birth, that it has not been derived from or through a freeman admitted before the 1st of March, 1831, or admitted since that period in respect of servitude. That he has not resided during the time or within the distance required.

DISQUALIFIED ON ACCOUNT OF PERSONAL INCAPACITY.

—Persons under twenty-one years of age; persons of unsound mind; persons convicted of felony, perjury, or bribery; commissioners and officers of excise, customs, and stamps; collectors of house and window duties, unless appointed by commissioners of the land-tax; all persons employed by the Post-office; police magistrates, police officers, and all persons employed in the Thames and Metropolitan Police. Also all persons who have received parochial relief within twelve months previous to the 31st of July.

COUNTY REGISTRATION.

The register of voters, and also the lists of claimants for counties, should now be carefully examined, and where there is reason to believe that a party has not a sufficient qualification, or that he is disqualified to vote, a notice of objection should be given on or before the 25th of August, to the overseers, or any one of them, and another should be given to the person objected to, or left at his place of abode, as described in the list. Any person whose name is on the register, may object to any person on the list, or to any claimant. The notice must be signed by the party objecting, and in the following form:—

To the Overseers of the Parish [or Township] of —
I hereby give you notice, that I object to the name of the person mentioned and described below being retained in the List of

Voters for the County of —, (or for the — Riding, Parts, or Division of the County of —, as the case may be).

Christian and Surname of the Voter objected to, as described in the List or Register.	Place of Abode, as described.	Nature of Qualification, as described.	Street, Lane, or other like place, where the qualifying Property is situate, &c., as described in the List or Register.

Dated the — day of —, in the year —
(Signed) A. B. [Place of Abode.]

The following notice must likewise be given to the person objected to:—

To Mr. —, of — (as described in the List.)
Take notice, that I object to your name being retained in the [here insert the name of the Parish] List of Voters for the County of —, [or for the — Riding, Parts, or Division of the County of —.]

Dated this — day of —, one thousand eight hundred and —
(Signed) A. B., of [Place of Abode], on the Register of Voters for the Parish of —

When the person objected to resides out of the parish or township to which the list relates, and the name of the occupying tenant of any portion of the property is stated in the list, the following notice must be given to tenant so named, besides the notice to the person so objected to:—

To Mr. —, of — (as described in List.)
Take notice, that I object to the name of A. B. (as described in the list) being retained in the [name of Parish] List of Voters for the County of —, [or for the — Riding, Parts, or Division of the County of —.]

Dated this — day of —, one thousand eight hundred and —
(Signed) A. B., of [Place of Abode], on the Register of Voters for the Parish of —

It is necessary that the notices of objection should specify the place of abode of the objector, and the notices to the voters and tenants, also the parish in which the objector is registered, otherwise they will be void.

Duplicate copies of each notice of objection should be kept by the objector.

Notices of objection may now be sent by post, but care must be taken to have the duplicate copy stamped by the postmaster; the production of such duplicate, in proof of their having been so sent, will be taken by the revising barrister as proof of service.

The principal grounds of objection are:—

First, the insufficient value of the property, reference being had to the tenure by which it is held.

Secondly, the insufficiency of the title of the party to the property in respect of which he claims.

Thirdly, that the party has not been in possession during the period required by law.

Fourthly, that he has omitted to set forth any of the particulars required in his notice of claim.

Change of residence, since registration, is a good ground of objection, although the barrister, upon proof of the qualification, will not expunge the name, but correct the place of abode, if supplied at the revision.

Persons who are disqualified to be registered, in respect of personal incapacity, are as follows:—

Women; persons under twenty-one years of age; peers; Irish peers, except members of the House of Commons; aliens, unless made denizens by the King's letters patent, or naturalised by act of Parliament; persons of unsound mind, such as idiots, lunatics; persons convicted of felony, bribery, perjury, or petit larceny; commissioners and officers of excise, customs, stamps, and taxes; all persons in the employ of the Post-office; police magistrates or police officers; and all persons in the Thames and Metropolitan Police in the counties of Hertford, Essex, Kent, Surrey, and Middlesex. All these are legally incapacitated, and may be objected to.

A collector of taxes who is not appointed by the Tax-office, and a sub-deputy in the Post-office not appointed by the Postmaster General, are not disqualified.

The receipt of parochial relief will not disqualify a freeholder who claims to vote for a county.

The revising barrister has power to adjudge costs, to be paid by objectors to persons objected to upon groundless or frivolous objections. The barrister is the sole judge of the nature of the objection, and may make such order as he shall think fit for the payment of the costs of any person in resisting it; such costs not to exceed twenty shillings.

SPECIAL NOTICE TO CLAIMANTS. THE IMPORTANCE OF EXAMINATION OF THE LISTS.

Under the Reform Act one list for each parish, of the old and new claims, was sufficient. The 6 Vic., c. 18, s. 5, directs that lists of all new claims shall be printed; also a copy of the register for the parish then in force; such lists shall be published by placing them on the church and chapel doors on the first and second Sunday in August. (Sec. 22.) It is most important that the lists be printed separate, and that the new claims be not inserted in the copy of the register, for this obvious reason: The 40th section requires the revising barrister to correct the list; and if he finds more names in the copy of the register than on the list, he must strike out those names. The effect will be, that, unless a list of the new claims are made out, the barrister has no list to revise; and the voter loses his vote, unless he is prepared with a duplicate claim, and is prepared also to prove his qualification, as directed by the 37th section, as it must be treated as if no list of new claimants had been made.

readers, has brought into juxtaposition with this case one of those frank admissions which people are apt to make when they are not arguing for a selfish purpose, nor thinking of the future effect of their language. On such occasions truth slips out; and it should be put on record. We extract it, together with the writer's commentary:—

"Nor do the farmers pay high wages to their work-people, commensurate with a rise in the price of corn. Many of the pretended friends of agriculture say they do. The county members for Suffolk have said they do. Colonel Rushbrooke, if I mistake not, has used this argument in favour of monopoly to agriculture during the present session of Parliament. At all events, he is one of that party who support the monopoly. Now, I happened to be in a house in the parish of Stowupland a few days ago, and in that house I saw a document, framed and hung up against the wall, partly printed and partly written, and signed by Colonel Rushbrooke, which throws some light on this disputed law of the wages of agricultural labourers. The document read thus:—

"West Suffolk Agricultural Association, established 1833, for the advancement of agriculture, and the encouragement of industry and skill, and good conduct among labourers and servants in husbandry.

"President, the Duke of Grafton, lord-lieutenant of the county.

"This is to certify that a prize of £2 was awarded to William Burch, aged 82, labourer, of the parish of Stowupland, in West Suffolk, September 25, 1840, for having brought up nine children, without relief, except when flour was very dear, and for having worked on the same farm twenty-eight years.

(Signed) — RUSHBROOKE, Chairman.

"— PHILIP RAY, Secretary."

"Except when flour was very dear! If this certificate proves anything, it proves that one of the best labourers of Stowupland, instead of deriving a benefit from the high prices of wheat, was reduced to pauperism by high prices. It proves beyond all question that his wages did not rise with the price of wheat; and we may safely infer that every other labourer in the parish and in the county was in the same position. William Burch, as Colonel Rushbrooke certifies, was an independent labourer when flour was moderate in price; but he was a pauper, seeking and obtaining parish relief when flour was very dear; and yet he is such a rare specimen of an independent labourer that he gets a prize for his independence."

This is a tolerably plain case. It shows, moreover, that landowners understand the matter very well when they have no inducement to mystify. The exceptive clause must have been "when flour was very cheap," if there be a word of truth in monopolist speeches, tracts, and leading articles on this subject. William Burch would have stared at such a certificate; and we suspect that Colonel Rushbrooke would have demurred to affixing his signature, unless, indeed, the prospect of a Parliamentary debate, and the possibility of the production of the document, had been present to his mind. As, however, dear flour does sometimes tend to pauperize the best agricultural labourers in Suffolk, although the general effect is maintained to be the reverse, this only strengthens the case for inquiry.

The Times lays all the mischief at the door of the new Poor Law. The grand jury avoid that inference, and Sir James Graham deems it a prejudice. Why not make clear what it is, which the Government can do so easily, by acceding, though late, to Mr. Gibson's proposition. Their acquiescence would, even now, be as manly and becoming to themselves as it would be useful to the country.

THE TABLES TURNED—MONOPOLY IN AMERICA.

We have often thought that if the landowners of this country could, by any possible contrivance, be put in the same circumstances with reference to the manufacturers in which the latter are now placed in relation to them, they would in one year become sufficiently satisfied of the injustice of their protective policy. They would in such a case find themselves in the predicament of producing every year more corn than the people of this country could consume; whilst the manufacturers, who were unable to fabricate a sufficient supply of clothing, interdicted them from exchanging the surplus of their agricultural produce for the manufactures of other countries. Now, this is precisely the situation in which the landowners of the United States are placed by their protective tariff. The Americans raise more of agricultural produce of every kind than can find a market at home, but less of manufactures than suffice to clothe their population; and the manufacturers have contrived to pass laws to prevent the agriculturists from exchanging freely their cotton, tobacco, wheat, rice, &c., for the clothing of other countries. The opinions and feelings of the landowners of America, under such circumstances, may fairly be assumed to be such as would be produced in the minds of Englishmen if similarly treated; and they are, as we shall show, precisely the opinions and feelings of the manufacturers of England, whose case is an exact parallel to that of the landowners of the United States.

By the late arrivals we have received a copy of a speech delivered by Mr. M'Duffie upon the subject of the American tariff. Mr. M'Duffie, who represents the purely agricultural state of South Carolina in the United States Senate, and is one of the most distinguished advocates of Free Trade in

America, appears to have been invited, on his way home at the close of the session, to address a public meeting at Richmond in Virginia. Let our readers imagine Mr. Cobden or Mr. Bright intercepted by a meeting of Free-Traders midway between London and Manchester; and what more probable than that they would begin their speech in precisely the words of Mr. M'Duffie's exordium:—

"1st. Free Trade or prohibitory duties, and I will not let this question pass without letting you understand it. We contend for Free Trade precisely as we contend for liberty itself. Free Trade and freedom are identically the same thing. What, then, do we understand by Free Trade? We do not mean, as some senators and representatives have contended, by Free Trade, that the custom-houses are to be abolished and the general government supported by means of direct taxation. This is known by those who say differently, and by others who are totally unfit for the places they occupy if they don't know differently."

Mr. M'Duffie explains, as we have done again and again, that Free Trade means the abolition of protective duties, and not the removal of duties for revenue; that duties for protection are duties for exclusion, and, therefore, not intended to promote the prosperity of the revenue. He then proceeds to deal with the arguments of the monopolists, taking care, however, to reiterate emphatically that they can have no right to interfere with the freedom of industry:—

"We have as much right to exchange our products with foreigners as one man has a right to trade with another—as much right as there is to exchange a horse, or any other article, without the intervention of a police, exacting a severe taxation. But forty or fifty men from the North, principally from New England, have devised a system that shuts us out from our foreign markets."

We had the impression that our own *Morning Post* and its followers monopolised the phrase "protection to native industry;" but the manufacturers of America have been improving upon it by adding a clap-net of their own, the "American system." Let us suppose that the manufacturers of England had had the upper hand, and had used their power as the landlords have done, in protecting "native industry" in cotton-mills, what would the Duke of Richmond have said? Why, doubtless, that which Mr. M'Duffie says under precisely similar circumstances:—

"The friends of the so-called 'American system' come before us for our favour, with many soft words, and as many delusive names. There is a patriotic devotion in them when they speak of protection to 'home industry'; and when they lay the flattering unction to their souls, that by putting these heavy duties upon us they are protecting 'domestic industry.' Domestic industry! What is it? When I produce 100 bales of cotton, and feed and clothe the men that raise it, is not that home industry? And is not protection as much, nay more, needed for that than for in-doors, in-wrought machine-working industry? Yet the delusive idea is got up, that there is no home industry but that of the manufacturers. The work of men and the work of women in the southern states is no home industry; but the work of machines, of tools, of iron, and steam, and water, that, forsooth, is home industry, that needs must be protected and supported by the south."

Surely our protectionists, who babble about corn-fields as the only scene of "native industry" in England, will be somewhat ashamed of an argument which can be turned to manufacturing purposes in America. But there are Colonel Torrenses, it seems, on both sides of the Atlantic. Let us see how Mr. M'Duffie disposes of their arguments:—

"You are often called upon, because foreign countries impose heavy duties upon your tobacco, to revenge yourselves by imposing a heavy duty upon their productions. This is a great appeal in our tobacco-growing states. Now, there is nothing in which more delusion prevails than in this. Surely it matters not to the tobacco-planter whether his crop is sold in London or New York, if he gets as good a price for it in one place as in the other, but it does matter much to him whether he is taxed heavily or taxed lightly upon what he receives in return. Let us look into this. The Hon. Nathaniel Macon, of North Carolina, for example, say, raised five hogheads of tobacco. This he sold in London, where he got as high a price as in New York, notwithstanding the heavy duty; and the proceeds he invested in supplies for his family, say five bales of merchandise. He comes to the custom-house in the United States with those five bales of merchandise, where he is met by a duty of 40 per cent., which he must pay. Now, here are two bales of his merchandise gone at once to pay for being allowed to use them in the United States. Three only are his, but two are taken by the United States. What I say of the tobacco-planter is just as true of the cotton-planter or the rice-planter. The annual income of all is diminished to two bales out of five."

When the British Corn Law was passed in 1815, there were not a few legislators to be found who maintained that their object in supporting the law was to secure a cheap supply of corn. To do our *Morning Post* and its party justice, we must allow that they have boldly repudiated this low-priced doctrine. Poor Mr. M'Duffie seems to have a less candid adversary to deal with:—

"But we are told, gravely told on the authority of members of Congress, and of the creators of the tariff of 1842, that that tariff reduced prices! There is no knowing what reasons men may assign for a thing done, or to be done; but this reason, of reducing a thing by the levying a tax upon it, is the last I should have thought human ingenuity would have ever hit upon. What, too, is as surprising as the reason, is, that it should have been adopted in a southern city. I saw a manifesto from the city of Richmond, setting forth, ay, gravely setting forth,

that the tariff of 1842, which has laid an average duty of 50 per cent. upon dutiable articles, effected a reduction in price. Now, in the name of all that is good, are the people to be thus deluded? Is it expected that full-grown people, sensible, reflecting, thinking people, are to be duped by such assertions, or such sophistry as this? What estimation, indeed, what low estimation is put upon their understandings by submitting to them such arguments? Is it supposed that men engaged in the cause of self-government cannot see through the falsity of an assertion that a common schoolboy would detect? If I had a son fifteen years of age, and fresh from his classics, and he were to gravely tell me that a tax of 50 per cent. made cheaper a thing thus highly taxed, I would make him throw by his books, and tie him to the plough tail. (Cheers.) Yet this is the staple argument fluently, commonly uttered!"

The League is sometimes urged by those who advocate organic reforms in our Constitution to "abandon its narrow ground," and espouse the cause of universal suffrage as the only means of carrying the repeal of the Corn Law. We hold that the practical teachings of the League are necessary to obtain Free Trade, whatever the form of government may be; and if there be one country where more than elsewhere a similar organization is required to put down commercial monopolies, it is in that great republic where all and more than all the constitutional changes which the most ultra-reformers of England seek to accomplish have been for more than half a century realized. We do not say this unadvisedly; for we find in Mr. M'Duffie's speech repeated exhortations to the Free-Traders of America, to unite for the purpose of disseminating their principles and bringing public opinion to bear upon the Legislature. He tells his hearers plainly that in the session just closed, "all is lost to the Free-Traders save honour and conscience;" and he throws upon the people out of doors the responsibility of retrieving the disasters of the Senate. In America, as here, the lease of monopoly is for the term of years during which ignorance sways the minds of the people, and for no longer. From the moment that the plain and simple truths of Adam Smith shall be understood by a nation, its commerce will be free; and no matter what the form of government, whether British, Russian, or American, its policy will be in the main enlightened or otherwise, according to the intelligence of its people. It is gratifying to find that able champions of Free Trade, like Mr. M'Duffie, are actively engaged in preparing the public mind in America to reciprocate with England the diversified blessings which Providence has placed at the disposal of both countries for the obvious purpose of enabling them to minister to each other's necessities. Let us meet their exertions in a spirit of amicable rivalry; and we trust we shall not be accused of a leaning to monopoly, if we indulge the patriotic hope that England may be the leader amongst nations in the path of Free Trade,—that in addition to her glorious achievements in giving to the world the institutions of a representative government, trial by jury, and a free press, she may have the still nobler destiny in store of exhibiting for the imitation of other nations the first example of perfect commercial freedom.

IMPERIAL PARLIAMENT.

THE FREE-TRADE MIRROR OF PARLIAMENT FOR THE SESSION 1844.

Twenty-fifth Week, ending Saturday, August 3.

The legislative history of great questions is exceedingly instructive. Take three of the most important and prominent which have agitated British society during the past half century. WILBERFORCE laboured for twenty years before he obtained the abolition of the slave trade, and frequently had he to struggle with "hope against hope." The excesses of the French Revolution, and of the negroes in St. Domingo, threw his question back for seven years; and, even when he was approaching his triumph, he had occasionally to endure the mortification of diminishing minorities and considerable apathy in the House of Commons. Yet he still abated not one jot of FAITH in his principles; and at last, with streaming eyes, and heartfelt thankfulness, listened to Sir Samuel Romilly congratulating him that his labour was accomplished, and his work was done; an act of Parliament declared that the British slave trade was a crime, and inflicted on it the penalty of extinction. His work, however, was not altogether complete. Twenty-seven years of labour still lay before him, in order to carry out the consequences of the abolition of the British slave trade. His death, too, was marked by an affecting closing characteristic. The bill for granting twenty millions for the emancipation of our colonial slaves was read a second time on a Friday; the heart of the good old man was swelled with exulting joy by the tidings; and as if he had prayed, "Now let thy servant depart in peace," he died on the Monday following.

Catholic Emancipation furnishes another example. From Burke's time, the question struggled on, through every alternation of parliamentary triumph, apathy, neglect, obstruction, hope, fear, defeat; and as it approached realization, there were occasions when the barriers in the way appeared higher, stronger, and more formidable than ever. So also of Parliamentary Reform. It was a ques-

tion growing for sixty years; and yet, in 1829, 401 to 118 members of the House of Commons opposed resolutions condemning "rotten boroughs," and Lord John Russell was only supported by 140 in the very moderate proposition of giving representatives to Leeds, Manchester, and Birmingham.

The truth is, that a great question, arising out of a great REALITY, constitutes, in sober earnest and in sober truth, a "great fact," which is imbued with a vitality that nothing but concession can extinguish. The slave trade was a horrid fact; penal restrictions on Dissenters and Roman Catholics were monstrous facts; and the green mound of Old Sarum returning members to the House of Commons, while Leeds, Manchester, Birmingham, and Glasgow had none, was also a fact combining the extreme of the ludicrous with the height of wrong. These facts grew stronger from day to day; and every child born in the country added to their power. And this may be considered as the history of their progress, if we round off all the circumstances, and take an "average" view. The question is mooted when PUBLIC OPINION is encumbered over with prejudices, and neither thinks nor feels, nor understands about it. At the first sound nobody hears, nobody listens, nobody cares. The sound is repeated, and the "vested interests," pricking up their ears, look at one another, and then at the public, and burst into fits of contemptuous laughter. By-and-by, a deeper and a more earnest call is heard; and FALLACY, like Goliath, starts to his feet, girds on his "triple brass," and advances to swallow up the little David coming to meet him with but a stone and a sling. But Fallacy has nine lives; and every time he falls, Monopoly, his mother earth, reconstitutes his shattered frame. Onwards goes the strife, the combatants in earnest, the battle furious, the interest great. Slowly, by iteration and reiteration, great truths drop into the public mind, and become "part and parcel" of public opinion. But a legislative triumph, like a Chancery suit, has to wait the sluggish process of "bill and answer." The public mind is made up, and while waiting on the judicial decision, falls into apparent apathy. Like Captain Warner's Brighton experiment, the day seems wearing away, and the thousands looking on, with their curiosity abating and their patience exhausting, think that nothing will come of it. But the invisible power is applied at last; and the hulk that seemed floating in solid security, is suddenly shattered into ten thousand fragments.

The session just expiring testifies that this is the position of MONOPOLY—that of FREE TRADE. The ANTI-CORN-LAW LEAGUE began the session with an open avowal of its determination to care little for what might pass within the House of Commons, and to direct its energies to action on public opinion out of doors. In this, we think they were to a certain extent wrong: for however much of dulness, prejudice, and self-interest there may be to struggle against in the Legislature, the House of Commons constitutes a national fermenting vat, by means of which, and aided by other appliances, great changes in public opinion are effected. Yet, even if the League had wholly abstained from raising discussion in Parliament, such is now the position of the question that the session could not pass away without some sharp conflicts between Monopoly and Free Trade. The League did not abstain; it brought on some of the most interesting debates which the question has yet raised within the House of Commons: but, apart from these more direct and legitimate exertions, the question, by the force of its own momentum, compelled financial changes and commercial reforms, extorted the pledge of still greater yet to come, hurling, at the same time, the two political parties of Whig and Tory into a state of chaotic confusion, antagonistic parties being seen in strange agglomeration without conglomeration, and in the giddy whirl a strong administration twice knocked down, and all but trampled into dust. In truth, it is this struggle between Monopoly and Free Trade which has weakened the Government without strengthening the Opposition; which has effaced those conventional lines of demarcation by which political parties have been hitherto divided; and until the struggle terminates in the triumph of Free Trade, there will be no subsiding of the waters, no reappearing of the old political landmarks.

The session opened on Thursday, the 1st of February; and on that night the doubting, half-despairing country gentlemen were somewhat reassured by the declaration of Sir Robert Peel, that he contemplated no *present* change in the Corn Law of 1812. Yet he accompanied the announcement with nothing to inspire confidence or enthusiasm. There stood the law, "a naked, intelligible fact," with no old constitutional associations to embalm it, with no virtue to give it vitality, no logic or reason on which to base its duration. It stood, but it stood alone; Sir Robert Peel would not touch it; but he left it to be inferred, that, when the time came, he would be more joyful than sorrowful to see the rotten planks kicked down by a powerful foot. Good service, too, did Sir Robert Peel do, on that opening night of the session, to the cause of Free Trade. Lord John Russell clung, with melancholy fatuity, to his "fixed duty;" whereupon the Prime Minister, taking a leaf out of Mr. Cobden's book, exclaimed, that if you laid a fixed duty on foreign grain at the Custom-House, common justice required that you should also levy a fixed duty on home-grown grain when ground at the mill! Mr. Villiers closed that night with one of his truth-telling speeches; and thus the session was opened with the sliding scale all but tottering, the fixed duty destroyed, and nothing but an additional pressure from the public without to compel the concession of Free Trade within.

Wonderful, too (yet not surprising), was it to hear the upholder of the sliding scale, the half-bold half-timid meddler with monopoly, Sir Robert Peel, shouting out in the House of Commons, on the 3th of February, "Is NOT WELFARE INTEREST THE VIVIFYING SOUL OF ALL COMMERCE?" But, though this "abstract" question all but passed unnoticed, its tendencies were seen when the Chancellor of the Exchequer, in making his financial statement, pleaded the paramount interest of the consumer as the reason, the right, and the apology for reductions of Import Duties on Wool, Currants, Vinegar, &c., and on SUGAR. Nor can it be forgotten that, later in the session, the President of the Board of Trade pronounced "A HIGH PRICE OF BREAD A GREAT PUBLIC MISFORTUNE!" it being the object of the Corn Law, which he affected to

be defending, to maintain a high price for bread! As little can we forget that the sole reason, throughout the entire session, assigned by Sir Robert Peel and Mr. Gladstone for the maintenance of the sliding scale was simply that, so long as, by the bounty of Providence, the price of bread was moderate, it was not convenient or expedient to encounter hostility by proposing a change, as if a low price of bread were all that a repeal of the Corn Laws would produce; forgetful of extended commerce, increased employment, with all their accompanying blessings of poverty mitigated, crime reduced, disease averted, and a better fed, better lodged population, standing up in the manliness of self-dependence, instead of cringing like paupers, or standing aloof in the sullen, hopeless, reckless feeling of despair.

The first regular Free-Trade discussion of the session was raised by Mr. Labouchere, on the 7th of March, in an elaborate speech, introducing a motion on the subject of our trade with Brazil. It was on this occasion that the first hint was thrown out, vaguely and obscurely, of those contemplated changes in the SUGAR DUTIES which, at a later period of the session, raised such a commotion. The Opposition tried to pump the cautious administration, but Mr. Gladstone told them that, if they guessed, the chances were even that they might guess wrong. Nevertheless, enough was thrown out to enable sagacious guessers to anticipate at least the *idea* of the Government, and thereby to prepare the public for the coming change; and it was on this occasion that Lord Sandon declared that 63s. of duty on foreign sugars was "perfectly absurd."

Shortly afterwards, namely, on Tuesday, March 12, occurred the debate on the celebrated motion by Mr. Cobden, for a select committee to inquire into the effects of protective duties on the interests of farmers and farm-labourers. That was a memorable night, one of those occasions on which men can look back with natural and legitimate pride, and from it draw solace for the toils of the past, and fresh courage for the labours of the future. It was pre-eminently a legislative triumph. During the entire night, a crowded House manifested an unabated and excited interest; and not a solitary member, be he monopolist or anti-monopolist, who did not feel constrained to do homage to the intellectual power which invaded the very homestead of the Corn Law—which beleaguered the citadel of Monopoly with accumulative argumentation based on facts, and with logic, wit, reason, and common sense, struck down, in succession, every prop on which Protection leans. What was the reply of the Government? Let the sceptic search the book of *Hansard*, and there will he find that speeches were spoken, of which the condensation is—"No answer." Nor was it one of the least signal evidences of the advance made by the question, that the House literally put down—both sides of it—a juvenile protectionist, who endeavoured to revive those trumpery charges against the Anti-Corn-Law League, which, a short year previous, had been hailed with "tumultuous applause." It is hardly worth while to notice the numbers that voted at the close of the debate, for that is the least feature of such a debate; but we may recall the fact, that after a very animated discussion, in which Mr. Cobden was aided by Messrs. Villiers, Bright, Brotherton, Hawes, &c., there appeared 133 for his motion, and 244 against it.

Lord Ashley, who had paid marked attention to Mr. Cobden's speech, especially his descriptions of the condition of the rural population, had his own turn in a few days afterwards. He brought on his "Ten Hours" amendment on the Factories Bill; and was himself not a little amazed to learn that he had a chance of carrying it, and of defeating the Government. The debate began on a Friday, and the great opponent of the noble lord was Mr. Bright, who encountered his statements, tested his authorities, and disproved his allegations. An adjournment took place; and the interval, from Friday till Monday, was an anxious one for the Government. It was currently reported, that the "whipper-in" went about in the clubs, warning the country gentlemen of the danger of intermeddling with the hours of labour, so long as the Corn Law existed; and on the Monday, Sir James Graham told them that the protective system was a "HOUSE OF CARDS," which the slightest displacement might tumble about their ears. Sir Robert Peel, too, pictured the horrors of Paisley in 1842, and plainly intimated that the Corn Laws imperiously forbade the reduction of the hours of labour in factories to a lower point than twelve hours per diem. In vain; the public learned with astonishment that the Government had been defeated; and in their amazement they severely scrutinized the motives of those who joined the majority. Amongst the supporters of Lord Ashley they found, with a surprise not unmixt with indignation, the names of Lord John Russell, Lord Howick, and other Whigs, who thus wheeled about, with sharp abruptness, on past policy and professed principles. The triumph of Lord Ashley was a sad damage to party morality; the conversion of the Whigs was attributed to collusion; Lord John Russell lost caste with those who had hitherto regarded him as a statesman whose adherence to principles was proof against party manoeuvres or personal interest; and though the Government were damaged by their defeat, the Opposition only gained a loss by their victory.

We need not here recal how Lord Ashley, staggered by his success, shrank from following it up; how a new Factories Bill was brought in; and how, by waiting till after Easter, time was allowed for the return of members to town, and the "Ten Hours" was ultimately rejected by a majority of 138—one so large as to surprise the Government itself.

During the interval between the success and the defeat of Lord Ashley, there were several Free-Trade discussions—that raised by Mr. Ricardo on reciprocity, by Mr. Ewart on import duties, and by Mr. Hutt, on giving similar facilities to all our colonies as to Canada, in the introduction of their grain at a low fixed duty. Mr. Ricardo's motion was a very important one, and was supported by Lord Howick in a clear, powerful, and convincing speech. But the mind both of the House of Commons and of the public was engrossed with the causes and the consequences of "JACK CADE legislation," and comparatively little attention was paid to the different motions we have named, with the exception of Mr. Ricardo's. The Government, however, through Mr. Gladstone, promised to devote attention to the collection of AGRICULTURAL STATISTICS, pressed on their attention by Mr. MILNER GIBSON; and the opening of the Budget on the 29th of April, by the Chancellor of the Exchequer, was another practical evidence of the pro-

gress of Free-Trade principles, however slowly or tortuously the Government might adopt or apply them.

Passing over the important BANK CHARTER, the introduction of which argues a foregone conclusion in the mind of Sir Robert Peel, that FREE TRADE must follow it, we come to the serious, and, as it was likely to prove, solemn subject of SUGAR. Lord John Russell, in moving that the differential duty be the same on ALL foreign sugars, made an excellent Free-Trade speech, ridiculing the attempt to erect a pulpit in every custom-house, and to convert landing-waiters into preachers of morality. Then came the Free-Trade debate on sugar, raised by Mr. Ewart, and the discussion on which was enlivened by the apt citations by Mr. Cobden, from the journals of the House of Commons, respecting sundry monopolists formally expelled two centuries ago. Last, not least, came the awful "white-slaved" debate, ending in a Government defeated, restored, votes affirmed and rescinded, political power revolutionized, and executive power weakened. The whole history of that "crisis" is still fresh in the recollection of our readers. An advocate and representative of West India monopoly, indignant with the Free-Trade tendencies of the Government, and at last roused into action when his craft is touched, proposes an amendment on the Government proposition, the effect of which, by lowering the duties on colonial produce, would raise the protection to the West India interest to a higher point than the Government think sufficient. He is persuaded to amend his amendment, so as to enable all who advocate the lowering of import duties to join him and his friends, however dissimilar the motives of the coalition. Almost at the last moment, the Free-Traders, on principle, in the House of Commons, discover that the amendment is a trap, and that the Government proposition is better for the consumer; they therefore refuse to support it. The Government, notwithstanding, are defeated; wild rumours fly about, cabinet councils are held, fear and hope strain their eyes towards Downing-street; the clubs are in a flutter; and at last, down comes the Prime Minister, on the Monday, to the House of Commons, and bids it rescind its vote of the previous Friday, or else he resigns!

Suppose that Sir Robert Peel had been again defeated—that he had resigned—that his resignation had been accepted. What then? The Duke of Richmond "went for," to declare the utter hopelessness of forming an ultra-protection administration; an attempt made to patch up a coalition between the STANLEYITES and the RUSSELLITES; perhaps an administration formed, from which Sir R. Peel would have been excluded, and by which an attempt would have been made to extinguish the Free-Trade question by compromising it; and, perhaps, a dissolution of Parliament!

The effect of all this would have been undoubtedly disastrous, and might have thrown back Free Trade for several years. No special pleading could have disguised from the public the fact, that the motion by which the Government had been thrown out was a sinister one; that the coalition by which it was supported was most unnatural, and could only have been the result of a party movement, the leaders of which availed themselves of it, on the old see-saw of the *Ins* and the *Outs*, with no reference to high principles, either of party morality, or of public advantage; and that commencement of the breaking-down of the SUGAR MONOPOLY, out of which the whole arose (and which has now been effected), would have been postponed to another period, and probably to a worse settlement than now awaits it. A general election, too, would have been a mere scramble of petty interests, without a particle of that generous enthusiasm which wins a national victory. Though Sir Robert Peel has lost some of the confidence of his rural friends, a considerable portion of the middle and moneyed classes have come to consider him as good as the Whigs, and much safer, and they would have resented a movement which disturbed both him and them. Though the Whigs voted for the "Ten Hours," they have not recovered either the affections or the confidence of the working classes, while, at the same time, they damaged themselves most seriously with that portion of the trading and commercial community which hitherto confided in them, because they had foolishly turned round on their own professed principles, and had fatally pledged themselves to a legislative interference with the employment of capital and labour, adverse to the recognised axioms of commercial freedom. In such a state of things, had those members of the House of Commons who are usually identified with the Anti-Corn-Law League voted, without inquiry, and without consideration, for the amendment of Mr. Philip Miles, and thus lent their aid to overthrow the existing Government, and bring about a general election, the LEAGUE would have gone to the country as one of the lowest joints in the tail of the most unnatural and (as the country would have believed) the most unprincipled Parliamentary COALITION of modern times; the constituency of the empire, divided, distracted, and disheartened, would have marched in clans to battle, each under the banner of its leader; Richmond or Peel, Stanley or Russell, would have been rallying cries, not for parties but for sections; and the League, shorn of that moral strength which straightforward honesty of purpose always confers, would have seen the question of Free Trade indefinitely postponed, until the chaos settled into order, and some Government appeared in Downing-street that could stand against the most ordinary ebb and flow of the tide.

We have omitted many debates which occurred, some bearing directly, others indirectly, on the question of Free Trade. Of the latter class was the coal-duties debate; of the former, several interesting discussions, raised by the Earl of RADNOR in the House of Lords. In the Upper House, too, there was, on the 13th of June, Lord Montague's motion for a select committee on Import Duties, with the view of investigating their effects on foreign commerce, home industry, the revenue, and the general prosperity of the empire. This, of course, raised the entire question, which was discussed with statesman-like breadth and ability, and brought out the Earl of Dalhousie, Vice-President of the Board of Trade, claiming credit for the Government on account of its going as far in the direction of Free Trade as was practicable. Besides all this, we had the Duke of Richmond weeping over the fall in his salmon; and the Earl of Winchelsea calling out for National Granaries, in order to keep the price of corn steady! We now come, however, to the debate on the motion by Mr. VILLIERS in the House of Commons, which suggests considerations too important to be summarily dismissed, and therefore must be held over till next week.

MEETINGS.

NEWCASTLE.

In consequence of the intimation that George Thompson, Esq., the eloquent advocate of Free Trade, and Robert R. Moore, Esq., of the Anti-Corn-Law League, would address the public of Newcastle, the Lecture-room in Nelson-street (the place engaged for the meeting) was crowded to excess on Monday night by a most respectable and inconsiderable number of persons were unable to gain admission. The front seats were filled with ladies, who appeared to take great interest in the ritual topics which were brought under discussion. The body of the room was so crowded that many parties were compelled to stand, and the chairman (Sir John Fife) more than once appealed to the company to put themselves in as small a compass as possible.

Shortly before eight o'clock, George Thompson, Esq., and Robert R. Moore, Esq., accompanied by Sir John Fife, the Mayor, and several of the leading members of the Committee of the Newcastle Free-Trade Association, entered the room, and were received with loud cheering. On the motion of J. WATSON, Esq., Sir John Fife was unanimously called to the chair.

The CHAIRMAN said he had great satisfaction in seeing so numerous and respectable a meeting. Since last they assembled here, great progress had been made in public opinion upon this question. It was of importance that public attention be directed to Free Trade—it was of great importance that the restrictions on it should no longer be continued. (Applause.) He would detain them no further, but make room for the gentlemen who were to address them that evening.

Mr. MOORE, in a most effective speech, pointed out the effect of our existing monopolies on the shipping interest, so important to the port of Newcastle, and proved by documents of unquestionable authority, that the depression of the shipping interest was not owing to the approaches to Free Trade which have been made in our navigation laws, but to the continuance of monopolies in timber and provisions, by which our ships have been made artificially costly, and have been expensively worked, whilst the same monopolies have greatly narrowed the amount of foreign trade in which our commercial navy has found employment.

Mr. THOMPSON took a larger view of the subject, treating it as a great question of morals. He dwelt upon the palpable and monstrous injustice and wickedness of restraining the inhabitants of a realm so densely peopled, and the population of which is increasing at the rate of nearly a thousand per day, from purchasing food freely in the world's market. He showed how the denial of the natural right to freedom of exchange was an invasion of the rights of the most sacred of all property, the labour of the industrious artisan; and he pointed out how dangerous was such a policy, leading by rapid steps to an overturning of all the principles upon which society is based.

At the close of Mr. Thompson's speech, which was followed with great cheering, Mr. LOCKEY HARRIS rose to move a vote of thanks to the two gentlemen who had addressed the meeting, and in the course of his speech arraigned anew the vote given by Mr. Cobden and others on the Sugar-duties question, which he affirmed was wrong, as it kept in the Tories, and kept out the Whigs. This led to a very clever and effective reply from Mr. Moore, who ended by calling for "a show of hands," when a forest of hands was held up in approval of the course taken by Mr. Cobden, while there was not one dissentient.—*Abridged from the Tyne Mercury.*

The question of Free Trade has gained much in Newcastle by this meeting, and we feel no small confidence that the electors of that borough will give a more decided vote for the good cause at the next election.

KIRKBURTON ANTI-CORN LAW ASSOCIATION.—This association held their annual meeting at the George Inn, Kirkburton, yesterday week, and sat down to a sumptuous repast, provided by the host and hostess; a more harmonious meeting was never held. The members have made great progress in the principles of Free Trade, and were unanimous in their condemnation of the Corn Laws, but they agreed to differ a little on the question of machinery. The chief speakers were Messrs. D. Sugden, Midgley, Parker, Gainer, Lockwood, and others; Mr. T. Beaumont in the chair. Thanks to the great champions of Free Trade in Parliament, who have so gallantly done their duty, were not forgot, and vows never to relax in their endeavours to accomplish the great end in view were renewed.—*Leeds Mercury.*

CIRENCESTER ELECTION.

(From our own Reporter.)

Cirencester, July 30, 1844.

This borough, legally speaking, sends two members to Parliament, but virtually it sends but one, for the Earl of Bathurst, who owns most of the property in the neighbourhood, assumes to himself the right of nominating one of the two members who, by a constitutional fiction, are supposed to sit for Cirencester. Thus it is a fact (and one which no one attempts to disguise) that one of the members is the nominee and representative of his lordship, the other is supposed to be the choice of the electors and the representative of the borough. But whilst his lordship permits the electors of the town to indulge in the idea that they nominate one of the two members, no one who knows anything of the working of aristocratic influence in its far-extending and subtle ramifications, can for a moment suppose that the electors, overawed and watched as they are by a power which openly arrogates to itself the right of nominating one of the members, will be left free in the exercise of their right in choosing the other. The constitution confers upon the electors of Cirencester the right of sending two members to serve in Parliament, but a noble earl steps in and deprives them of one half of their privilege. After this, is it to be expected that the same nobleman will be very scrupulous in leaving them unshackled in the enjoyment of the remaining moiety of their political rights? And the truth is, that whilst Mr. Master, whose resignation has caused the present vacancy, was avowedly his lordship's nominee, Mr. Cripps, the other member, is, to all intents and purposes, his very obedient and very humble servant.

There is a rumour afloat here that Mr. Master has been compelled to resign in consequence of having displayed

somewhat of a refractory spirit. Whether the report be true or not, it is quite certain that some of his recent votes have not been of a character to give satisfaction in certain quarters, and it is equally true that, in his address announcing his resignation, he has not assigned any reason for the step he has taken. These facts give the report a colouring of truth.

Last evening (Monday, the 29th), a select number of the most influential Free-Traders were convened to meet a gentleman from the League who had arrived from London, to take such measures as might be expedient in reference to the election. The result of the meeting, however, was the following resolution:—

"Resolved—That, in the present circumstances of the borough of Cirencester, and especially considering the aristocratic and undue influence which can be brought to bear on the electors, this meeting is of opinion, that for the Anti-Corn-Law League to send a candidate at the present vacancy would be an expenditure of energy and means, without any prospect of success.

(Signed) "JOHN R. SMITH, Chairman."

To-day (Tuesday), the canvass commenced for Lord Villiers, and it is reported that the canvassing party received more rebuffs than they expected.

There is one circumstance connected with this election which deserves to be specially noted, as displaying both the tactics and morality of the monopolists. It has been customary for the monopolists to give the electors who voted with them 10s. in money, or a ticket to a dinner, which was considered to be worth that sum. On this occasion one of the leading townsmen of the Liberal interest declared his intention, if this practice were persevered in, to petition against the return of the member on the score of bribery. This threat has caused the monopolists to resolve on giving no head-money this election; and they have issued a placard, in which they gently designate their former bribery and corruption as the "trifling civilities of past times," and express their regret that they are not permitted to continue them. They glory in their past misdoings, and by implication cast a slur on the law which condemns and interferes with their "civilities." They also take very ungenerous means to throw the whole of the odium of this "stopping of the supplies" on the Liberal alluded to, and represent that he has robbed the poor voter of his customary ten shillings. Men who can tempt the poor man in his poverty to sell his vote—who can sneer at a law which forbids the practice, and can unblushingly blazon their own shame by issuing a placard in which they avow that if they abstain from bribery it is not because they are too conscientious, not that they have any scruples about buying and selling men's consciences, but because the law will not allow such "civilities"—are men who will sell their own votes when occasion serves.

NOTES TAKEN BY A TRAVELLER IN THE SUMMER OF 1844.

No. V.

Brussels, July 10, 1844.

During my stay at Ghent I visited several of the numerous factories in that city. In some everything was shown with a cordial politeness that testified to the liberal disposition of the owners; in others the entrance was obtained with more difficulty, and in one it was altogether refused. A jovial and well-informed friend, who was in other respects indefatigable in procuring me opportunities of turning my time to the best account, when I requested him to use his personal influence to remove in one instance a difficulty of this kind, assured me that he would rather do anything else I required of him than interfere; adding jocularly, "You make no secret of your intention to criticise us; but you do not return to bear the brunt of the ill humour you may raise, and which I do not like to run the risk of feeling." The fact is, that the number of travellers who are running about with note-books, and who put forward opinions without being fully informed as to the true value of the figures they note down, have frightened the manufacturers, who do not know in what parliamentary report they may be quoted, or in what tourist's journal they may be held up to the civilized world as responsible for all the evils that are now traced to a faulty industrial organization. I believe the manufacturers would care less about the perorations of our travellers, if they felt themselves secure against legislative interference from the capital, in imitation of our English proceedings, by which they are anything but edified.

Ghent had to stand a dangerous crisis when the first effects of the restricted market to which the sale of its cottons was reduced on the loss of the colonial trade became perceptible. The labourers, dissatisfied at the prospect of reduced wages and changed work, assembled riotously and destroyed machinery which they had not been taught rightly to value. On such occasions the dragoons and police commissaries of the Government are insufficient aid to help the sufferers on either side. The elasticity of trade alone enables the trader to right himself; and so it was on this occasion. The labourers turned eventually to the new sources of industry which the necessities of the masters obliged them to open. The cotton manufacture shrunk within the limits that I described in my former letter, and now produces only coarse stuffs for home consumption. In 1843, the importation of cotton stuffs was 334,038 kilogrammes, and the exports were 451,745 kilogrammes, leaving, according to the official reports, a balance of £40,000 in favour of the national industry. This is the enormous production against which Paris, Berlin, Vienna, and, I may add, London, think it necessary to shut up their ports, and to arm thousands of frontier guards—a production that would hardly stock one set of shelves in one of Morrison's shops in London!

In this formidable seat, then, of cotton manufacture, where the men who have embarked large capitals in useful establishments are so much afraid of ill-judged interference on the part of agriculturists and others who can know nothing about their wants and arrangements, there is now little to be seen but exertions conducted with strict economy and extraordinary diligence. The factories are on a moderate (perhaps a small) scale. The most expensive part—the pattern designing—in which the French have rendered it so difficult to compete against them, has, in most factories, been given up, and common patterns in fast colours suit both the wants and pockets of the peasants, who are the chief consumers. As there is but little room for an extension of enterprise in this field, capital will henceforward probably seek employment in direct importations of the raw material, and the new en-

trepreneur at Ghent may now be fairly welcomed as an useful gift.

The factories are subject to no official inspection, excepting with regard to the state of the steam-engines, for which peculiar safety-valves are prescribed; and all such interference is deprecated by the masters, whose profits are so small that any additional burdens would extinguish them. They have too, perhaps, no very high opinion of their Chambers, which, considering the influence that they are able to exert over them when they chime in with the prejudices of the ruling caste, afford no very edifying proof of the intellectual powers of either Deputies or Senators. Were the Legislature to insist upon regulations similar to those that have been forced on the manufacturers in England, the people of Ghent would, no doubt, act like their neighbours at Bruges, and retire into inactivity rather than expose themselves to the peril of uncertain votes, and still more formidable ministers, emboldened of fame in fields that they have not practically studied.

The elasticity of trade, as I have said, has furnished, as it never fails to do, a remedy for the stagnation which the protective duties have brought upon the cotton manufacture. The country which was best supplied with cotton, and before whose cheap linens the Belgians trembled, came to their aid with a demand that the Belgians were both willing and able to turn to good account. England—saturated, if I may use the term, with bobbinet—became desirous of returning to thread lace; and so great has been the demand within the few last years, that its influence is visible here in every town. The fine quality and good dressing of the flax give the Flemings a great advantage; and the habits of the people suit this kind of manufacture, which was invented in the Low Countries, and has been there brought to the greatest perfection. The circumstance that our ladies, young and old, were ready to pay enormous prices for fragments of priestly epiphany, and for the hounds of old housekeepers, in no way tended to lower the value of these curious productions of art in the eyes of their possessors. Our sovereigns, indeed, tempted many to part with the rich point of former days, but it was mostly replaced with the more humble production of our own time. It is certain that the fabrication of lace now employs thousands of hands, young and old, in every town in Flanders, Brabant, and Antwerp, and probably yields a better return than the factory, under the most favourable circumstances of the present times, could afford for labour.

This resource is however, at present, one that is available only for rather a superior class of working people. It is for many reasons inaccessible to the poor. The price of thread lace consequently remains high, and its consumption is limited; while the profits are too low to content such as have a wider field of exertion open to them, from the education they have received or the skill they have acquired. M. Briavoine states the cost of producing an ell of lace that sells for 16 francs to amount to 13 francs:—

Price of thread	fr. 1 70
12 to 15 days' work ..	11 30
Salesman's profit, &c. ..	3 0
	fr. 16 0

This, if twelve days are assumed for work, leaves less than tenpence per day for wages, a price that the lower kind of labour is worth in Belgium. If lace-making were to be sought as a general employment for females of the lowest class, their education would have to be improved, and the mode of treating the flax and preparing it for spinning would have to be ameliorated. At present the quantity of the fine flax suited to lace-making is very limited, and it is bought up at high prices by the established factories at Brussels and in the large towns. It is the want of flax suitably prepared that precludes the manufacture of cambric in Belgium; for although the flax is grown near Soignies and Tournay, from which the cambric is made, yet it is sent into France to be dressed and spun; and the efforts of a society established for the improvement of the linen manufacture in Belgium have as yet been unsuccessful in their endeavours to rival the French in this article.

The fiscal regulations of the two countries meet here in a point that forms one of those curious *reductions ad absurdum* which what we call the civilized world presents to the political economist. The present state of the trade shows that, if the Belgian weaver could obtain more of the fine thread of Valenciennes and Cambrai than he now can, he would probably weave cambrics instead of coarse linens. The demand for fine thread would then cause an increased demand for that fine kind of flax which the Belgian farmer is able to produce, and would draw attention to the processes of dressing and spinning, which, as we have seen, have so much influence on the value of the raw material. The perfect agreement of the manufacturers' and landowners' interests is here easy to trace; but a link is wanting in the reasoning *cyclus*, the absence of which has all along occasioned the confused views that have been so long acted upon by those who call themselves statesmen. The French are afraid of the cheap but coarser productions of the Belgian linen weavers; while the Belgians, desirous to introduce the finer manufacture, impose prohibitive duties on the French cambrics. On both sides the economical law on which I have so much insisted has been overlooked, according to which the demand for fine goods is proportioned to the supply of coarse wares, and would grow in France if the French took cheap ordinary linens from Belgium, and if the people of the latter country supplied themselves with coarse stuffs cheaper from abroad than they now do at home. In short, the condition of a demand for cambrics is an abundant supply of coarse and cheap cottons and linens; the condition of producing fine thread is an abundant supply of coarse and cheap yarn. Thus, also, the condition of an improved agriculture is the same with that on which improved manufactures depend.

We thus meet in the linen manufacture the phenomena that presented themselves in the cotton manufacture; and from this point of view much hearburning and bad feeling appear removable on a candid examination of facts. These are the general reflections which a survey of the linen in connexion with the lace manufacture suggests; and such investigations ought always to embrace as many parallel cases as possible.

But the lace manufacture, in this its original seat, has a great deal to recommend it, as it gives employment to the fancy, and includes the art of designing arabesques. It has begun to form a subject of public instruction, and in many large towns there are schools for training girls

to this branch of industry. The most celebrated of these schools is at Antwerp. But at Brussels, where the finest lace is made, the art is studied not in schools, but in the workshop.

For lace Brussels is still unrivalled. The *réseau*, or network ground, on which the pattern is worked, is here made of very superior quality. For this finest lace the Brussels lacemakers are dependent on the French spinners, as these are upon the Flemish farmers for the flax which bears such fine spinning. The manufacture, so peculiarly their own, cannot be conducted without foreign aid; nor would any minister venture to interrupt this commerce by adopting with respect to it the principles which he advocates regarding iron, wool, or ships.

The lace trade is one that bids defiance to amateurs of statistics. The portability of the article adapts it especially to the hand of the smuggler; while the delicate nature of the product, and the exercise of taste which it demands, rather invite than repel many who are disposed to be industrious, but who find themselves precluded from ordinary labour by their position in society. In the windows of a great number of shops the little mystical word on a card, *Dentelles*, points out to those who are concerned that the lady of the house, or perhaps her daughters, has established a traffic in addition to that carried on by her husband, to which a woman's tact and quickness is well suited. In these little depôts the industrious of the town and its neighbourhood can place their handiwork, and there it is sought by inland or foreign dealers, and distributed thence to all the countries of Europe. On the history of this curious monument of European ingenuity we are but sparingly informed. It seems to date from the period of those minute details in architecture, for which the Flemish buildings are famous, and to admit of little improvement either in design or in texture. As it sprung up at a time when the Belgian cities were the resort of traders from all the world, and these countries were the richest of Europe, it seems to remonstrate here more forcibly than elsewhere on the theme I have been discussing, and to point out that, when abundance in articles of primary necessity is secured, we need be under no fear that human ingenuity will be at a loss for employment. It shows, moreover, that the occupations which succeed when hard labour is rendered dispensable are of a refined and artistic character, that tend both to improve the faculties of the mind and the feelings.

At present the freedom of trade, which would lead to such vast material as well as moral improvement, is proscribed by the united efforts of ignorant and selfish members of both the classes who are thus sacrificed under the pretence of protection.

But we know that Belgium does not stand alone in this false position. In every capital in Europe we may cry, "*mutata nomine de le fabula narratur*." The present mode of levying duties by weight, which prevails in all continental states, causes coarse goods to be charged most unreasonably in comparison with the tax that the same duty imposes on fine wares. Thus the duty that admits hobbins and muslins into France and Belgium is prohibitive on coarse cottons. This effect is well known in all countries that have adopted the system; and the evence is, that they find the greatest difficulty in producing coarse things at a cheap rate. Without stopping to inquire whether the profit on coarse things is greater than on fine, it is tacitly assumed that such is the case; and thus the consumer is deprived both of the fine and the coarse in sufficient quantities, and the labourer of the benefit of a healthy market that would find him constant employment at a constantly improving rate of remuneration. The implication that is at present wanting to improve the state of the labourer is not one of factories, which the labourer himself can control as soon as his aid is felt to be necessary to the success of an establishment, but an inspection of the capacities and knowledge of ministers and members of Parliament, whose votes and motions, held in *terrorum* over the heads of the industrious classes, paralyze exertion and distort the phenomena of industry, which the political economist would fain seize in their natural form.

The worst tariff that could be devised, if it were but unchangeable, would, like a poor soil or rude climate, prove, at least, positive disadvantages that could be measured, and perhaps even overcome, by the exertions of the industrious. But an unstable set of duties, liable to be raised one year and lowered another, according to the whims of influential individuals or corporations, forms an obstacle to progress that cannot be got over.

Nor is there any mode of escape from this difficulty but by the adoption of an industrial creed. The first article in this belief must be, that, as God sends man naked into the world to provide himself with all necessities by his own exertions, any impediment offered to an innocent exertion of his faculties in so doing is a contravention of the will of the Creator, and a crime against society. This creed, embraced in the words "Freedom of Trade," it is the glory of the League to have propounded in its undiminished purity. The fact constitutes an epoch in morals as in literature, not only for Great Britain but for Christendom; and its history will one day be appealed to, when the views of its opponents shall be displayed as immoral and reprobate, to vindicate the fame of having originated this grand movement for the country of its birth.

Brussels, the seat of the government of this remarkable country, in which the interests of two cities not fifty miles asunder have given matter for such lengthened remarks, bears all the tokens of having been a focus of luxury and of proud aspirations. The quarter of the Park with its palaces would as little arise under the influence of the present aristocracy, as the magnificent cathedral of St. Gudule or the splendid Town-house would be constructed by the church or civic corporation in their present condition. Our age labours under the oppression of a weight that keeps it down, and destroys all faith in its own energies. It is in vain to proclaim freedom of debate and of the press in political matters, and freedom of instruction. When the mass of any nation is so far advanced as to be able to feel the value of these privileges, no government will be able to deprive them of their benefits. But in our time the mass of the people are not given to political debating unless they are forced to it; nor do they dispute about forms of education provided they get education. The ruling classes use these fields of dispute, as the knights of old did their enclosed fields and tourneying places to exercise their prowess, not thinking that a dark old man in the German heaths was cooking a mixture that had the mission to overturn the whole system by which they swore, and to transform, as by magic, the whole fabric of society from a gloomy, narrow, and dark structure, to one of cheerful aspect, and bolder in all its proportions. Thus it is with the parties and partial interests who deem their struggles the only important events in history. Unless they involve some grand beneficial principle for mankind, and their leaders conscientiously and bravely avow this principle to form the motive that actuates them, they will pass as the Spaniard, the Austrian, the French, and the Dutch have passed from this land, on which each has left but a slight impression that recalls their reign. Brussels, as I explained, from its geographical position, does not belong to the flat and broken land in which commerce first prospered on the north side of the Alps, but it owes all its former importance and its present position to its connexion with those countries who with wealth brought civilization into central Europe. Its prosperity is now altogether dependent upon that of the cities around it, with which, instead of being in a state of rivalry, it is included in a brotherly bond. And yet, as I have hinted, the influence that prevails at Brussels is a different one from that which is popular in the great manufacturing and trading cities. The old mistake that nations can in the nineteenth century be governed by cliques, and that courts and capitals are not amenable to the bar of public opinion, is here not eradicated; the idea that high and low church parties—dynastical or antidynastical clubs and cabals, because they possess a majority in the Legislature—will inspire confidence or awaken respect amongst the people is here taking fresh root. But we may hope that the recent lesson taught by the interference of Antwerp, Liege, and the southern towns, when their right of trade was about to be sacrificed to the party advocating restrictions, will not be lost on the Chamber, or if so, that it will not be forgotten by those who gave it.

The present Ministry in Belgium is the result of a coalition, whose history is highly valuable from the experience it affords of the little use that results from any compromise in matters of high principle. M. Nothomb, the present Minister of Home Affairs, and the most active member of the present Cabinet, after long adhering to the liberal party in the State, entered office in conjunction with the agricultural and high-church party just as they were reduced to the necessity of laying down the helm which they had shown themselves unable to guide. The popularity and known personal acquirements of the new ally promised at first to ensure unanimity by uniting the moderate men on both sides of the Chamber to support the Cabinet. But when principles differ so radically as they everywhere do between these two parties, it was impossible that their representatives should go on long together without a sacrifice on one part or the other. In the present session the adoption of the avowed principle of restriction in trade will not easily be forgiven by the numerous and ardent friends of progress throughout the country; and in the elections of the provincial councils (that represent our grand juries, but of which the members are chosen by the inhabitants of each district,) the candidates who were known to be opposed to the Minister have everywhere been preferred. These elections took place during the discussion of the tariff. The same party, however, in the Chambers, to whom the limitation of trade was desirable, refused to support a proposal for an excise duty on tobacco, which threatened to deprive them of a profitable crop. The effect that such undisguised selfishness in the votes of the legislative body must have upon public opinion may easily be divined. They must increase the disgust with which those who find their exertions paralyzed by arbitrary interference feel at such proceedings in proportion as the suffering of the lower classes is gradually and more clearly seen to originate in these restrictions, and in proportion as this state of suffering is seen to be a growing and fearfully threatening evil in every state. M. Nothomb has thus sacrificed his position as one of the champions of the popular rights, and can never be more than a tool in the hands of the intolerant and narrow-minded faction that he has joined. Our Free-Traders did better on a recent occasion.

Our correspondent in his last letter omitted to insert the average price of wheat in Belgium, which for the last three years has been 52s. per quarter.

INCENDIARISM IN SUFFOLK.

A DOCTRINE IN POLITICAL ECONOMY, SLIGHTLY VARIED FROM THE SLIDING-SCALE ACT OF PARLIAMENT, BY AN INCENDIARY.

[From the Correspondent of the Morning Chronicle.]

The case of James Lankester, who was tried and found guilty on Friday, is well worth public notice, public comment, and public study. It is replete with instruction. It led the judge, Baron Alderson, to deliver a brief lecture to the jury, who were chiefly farmers and millers, on those principles of political economy involved in the Corn Laws.

James Lankester, a labourer, aged 30, who is stated to be able to read but not to write, and who was committed for trial on the 17th of July by the Rev. T. Anderson, was charged with "having maliciously set fire to a stack of wheat, the property of Frederick Paine, of Great Barton."

He did not reside in the neighbourhood of Great Barton, but he was a native of Suffolk, and had been in the habit of associating with other persons who tramped from village to village, and from one gentleman's house to another, complaining of what they had suffered by the use of machinery. Sometimes they professed to be natives of Bradford, in York-shire, and sometimes of certain towns in Lancashire, who had been cruelly deprived of employment by the use of steam-engines. This did very well in the villages, and at the gentlemen's and farmers' houses; but in some of the towns, among the shopkeepers, they, in perambulating the streets in a band, professed themselves to be agricultural labourers, thrown out of work by the use of threshing-mills and other mechanical inventions. Some of them were apprehended and committed to gaol on a charge of vagrancy. While on the treadmill, Lankester made such disclosures to some new friends whom he met there as led to his being accused of incendiarism. The superintendent of the treadmill was sitting, as they thought, fast asleep; but, if his eyes were shut, his ears were open, and he heard the jokes which were perpetrated at his expense, together with the doctrines of political economy promulgated by Lankester, as also an account of the practical application of those doctrines.

Lankester had not only been able to trace much of the misery of the present times to the introduction of machinery; he was convinced, and tried to convince others, that cheap corn was the greatest of curses to the English labourers. He knew of no means, he said, of raising the

wages of the labourers but by raising the price of corn; he knew of no way of raising the price of corn but by making it scarce; and he knew of no way of making it scarce so readily as to burn the stack-yards. He was therefore in favour of burning stacks, though greatly opposed to those who set fire to barns and houses; and, if the witnesses and jury are right in what they have said and done, he, to carry out his principles of "encouragement to native industry," and thorough out-and-out "protection to agriculture," set fire to at least one stack with his own hand.

The grand jury, headed by Sir William Middleton, in their presentment to the court, allude to this prisoner as a "vagrant," which doubtless he was; yet he was a Suffolk man, and not a stranger; they also speak of his act of incendiarism as "malicious." In this they are wrong; they cannot, or are not willing to account for it on other grounds, and therefore it is put down as springing from malicious motives. But, according to the evidence on which Lankester is convicted, he had no dislike to the farmers, he harboured no malice. He was full of a patriotic love of the British farmer and his interests, as those interests are advocated by the "agricultural protection societies." For the good of the farmers and the farm-labourers he wanted to make corn scarce and dear, and therefore he burned some of it. If this was not Lankester's motive, then Lankester is not guilty of the act. The evidence which proved the act proved the motive. The one part was inseparable from the other. The jury on that evidence found him guilty, and virtually declared by their verdict that this incendiary did the act out of friendship, not out of malice, as the grand jury says, to the farmers and labourers of Suffolk.

The judge deemed it necessary, in his summary to the jury, to explain to them, that though a high price for corn would give them the means of paying better wages, that end could not be secured by burning the corn stacks to make the corn scarce and dear. It is not probable that the jury needed to be told this; nor did the judge thus address them as if he supposed they needed such instruction. His intention seemed to be to warn them against being led astray by certain abstract propositions. He said there was much danger to be apprehended from ignorant persons, or minds with little power of reflection, getting hold of certain theories and adopting them without qualification. Whether on the one side of the question or the other (meaning whether for or against the Corn Laws), the danger was equal to the ignorant when they could not qualify abstract propositions by practical knowledge.

He did not say whether on such subjects it was best to instruct the ignorant, or to let them rest in their darkness. I presume that, from his own explanatory remarks on the doctrines of political economy, he was in favour of instructing the ignorant. At the same time he seemed to intimate (so I understood him) his belief, that dear corn, so as its dearth did not arise from its wanton destruction, would improve the farmer's ability to pay wages. He thus supported the favourite but most false doctrine, of "protection to agriculture," that wages rise and fall with the prices of food. Mr. Prendergast, the barrister, does not, however, hold this view; at least, in speaking from the instructions in his brief, he does not. Yesterday he conducted the prosecution of Samuel Jacob, the shepherd of Mr. Boby, of Stowupland, who was found guilty, not on clear evidence, of having burned down his master's premises on the 25th of June. Mr. Prendergast, to show some probable motive for this act, stated that Samuel Jacob was only paid 6s. a week; and to justify the paying of only 6s. a week to a man twenty-eight years of age, he said to the jury, "Gentlemen, the prisoner is not a man capable of doing a day's work worth first-rate men; and I need not tell you, gentlemen, that a day's work in that state of society in which we live commands in the market, like any other commodity, just that price which it is worth." This is the true law of wages where masters and men are properly or nearly balanced; but it is not the law of wages in such a country as Suffolk, where the supply of men so far exceeds the demand. The law of wages in a community where the masters have only places for two men, and three men are seeking places, falls to this and nothing more; that the men must take what the employers offer; and the employers offer nothing more than what bare sustains life. Hence they pay a married man with a family 9s. a week, because if they only paid 6s., the man and his family would have to be maintained in the workhouse, at an expense of 20s. or 25s. a week. But they know that the single man may keep himself in existence on 6s. a week, and that if he does go into the workhouse he will cost much less than the married man and family. Hence he only gets 6s. And this was the law of Samuel Jacob's wages; there were plenty more men to take Samuel Jacob's place even at 6s. a week, and therefore he was told, when he asked for higher wages, that Mr. Boby did not care whether he staid in his service or not.

Mr. Prendergast, in saying that a day's work, like any other commodity, brought that price which it was worth, stated what is true, in Lancashire or Yorkshire, where there is full employment; but not what is true in Suffolk, where there is not full employment.

Nor did the judge speak more correctly in intimating that wages depended on the price of corn. In trade and manufactures, wages, and profits from which wages are paid, are always lowest when corn is dearest. The reason is obvious: when seven and twenty millions of people must pay a double price for their food, they must not only have less money left to buy clothes and furniture, but they must have less of clothes and furniture to provide for others, and therefore lower profits and lower wages.

Nor do the farmers pay high wages to their workpeople. Nor do the farmers pay a rise in the price of corn. Many of the pretended friends of agriculture say they do. The county members for Suffolk have said they do. Colonel county members for Suffolk have said they do. Colonel Rushbrooke, if I mistake not, has used this argument in favour of monopoly to agriculture during the present session of Parliament. At all events, he is one of that party who support the monopoly. Now, I happened to be in a house in the parish of Stowupland a few days ago, and in that house I saw a document, framed and hung up against the wall, partly printed and partly written, and signed by Colonel Rushbrooke, which throws some light on this disputed law of the wages of agricultural labourers. The document read thus:—

"West Suffolk Agricultural Association, established 1838, for the advancement of agriculture, and the encouragement of la-

and skill, and good conduct among labourers and servants in husbandry.
President, the Duke of Grafton, lord-lieutenant of the county.
This is to certify that a prize of £25 was awarded to William Burch, aged 63, labourer, of the parish of Stowupland, in West Suffolk, September 25, 1840, for having brought up nine children, without relief, except when flour was very dear, and for having worked on the same farm twenty-eight years.
(Signed) — RUSHBROOKE, Chairman.
— PHILIP RAY, Secretary.

Except when flour was very dear! If this certificate proves anything, it proves that one of the best labourers of Stowupland, instead of deriving a benefit from the high prices of wheat, was reduced to pauperism by high prices. It proves beyond all question that his wages did not rise with the price of wheat; and we may safely enough infer that every other labourer in the parish and in the county was in the same position. William Burch, so Colonel Rushbrooke certifies, was an independent labourer when flour was moderate in price; but he was a pauper, seeking and obtaining parish relief when flour was very dear; and yet he is such a rare specimen of an independent labourer that he gets a prize for his independence.

Do we not see in this that as corn advanced in price he became less and less able to get new shoes, and shirts, and frocks, and caps, and smocks for his wife and children and himself; until, having to pay all his wages for bread, he could not get these articles at all, nor even enough of bread, but had to apply to the parish? Need we be told that the shoemakers of Stowmarket and the tailors would have a hard job to get their money from such labourers at such times? That the drapers would sell less clothing, and buy less from the merchants and manufacturers, who in their turn would make less and employ fewer hands and pay lower wages; and that their workpeople would do nothing for trade by reason of the corn being so dear? What have the two hundred and fifty thousand tenant-farmers of the kingdom and the thirty thousand owners of land gained by these high prices? They and their families are but a fraction of the population. Everybody else paid a dear price to them and received no corresponding benefit. Even their own immediate work people received no corresponding benefit. But if they had been benefited, even they are only a small portion of the population. It has been customary to claim every one, save the traders and manufacturers of large towns, as dependent on agriculture and the high prices of farm produce. This is not correct. The shoemaker who furnished shoes for William Burch and his family, though he might live in that most rural of parishes, Stowupland itself, was as really a manufacturer as are the Birleys and Houldsworths of Manchester; so was the tailor who made their clothes; and these manufacturers of Stowmarket and of Stowupland had not only less work to do in those dear times, but having less work to do, and greater difficulty in getting paid for what they did, they had also to pay an excessive price for their own food. Could they get new clothes for themselves, and dresses for their wives and daughters, and use in their families the same quantities of sugar, and tea, and butcher's meat? Certainly not. The grocer sold less tea and sugar, and less of everything he dealt in; he paid less to carriers for carrying, and less to merchants. He had, with bad trade, to pay dearer for his own and his family's bread; and, as a matter of course, fewer new clothes were got than in years of better trade.

Young men and lads, the sons of grocers and linen-drappers, and also of millers and farmers, were obliged to stay at home, because in the large towns and the manufacturing districts, shopmen and clerks, overseers and apprentices in trade were not required. All over the kingdom, in all departments of industry, people had to pay exorbitantly for food, the same as William Burch did, according to Colonel Rushbrooke's certificate, at Stowupland; and the great majority of the industrious population of the kingdom, being directly dependent on trade, were thrown out of work or reduced in income at the very time they had to pay dear for food.

Trade being thus paralyzed, traders could not meet their engagements. Merchants failed—bills were protested—banks broke—and panics destroyed credit. There being no credit and no speculation, employment for the multitude became still scarcer, and wages still lower. Clothes and furniture were pawned and sold, and worn out, and not replaced; and at last, when an abundant harvest came, the farmers found themselves obliged to sell at very low prices, not because of the great abundance, but because of the great poverty of the mass of the population, who were too poor to buy a sufficiency of food when it was cheap.

The farmers having been led to expect that the Parliament could maintain high prices, contracted to pay rents accordingly. Consequently, they fell into distress when prices were low; and they are now frightened lest there should be a return to very low prices, and a continuance of them, which those who profess to be exclusively their friends tell them will be the case if the Corn Law is repealed.

But the surest protection which the farmer can obtain is that of a steady market. The surest way of keeping up prices is to maintain, in the great body of consumers, the ability to buy and consume. This can never be secured to the farmer when such men as William Burch, independent at other times, have to get parish relief when "flour is very dear," as Colonel Rushbrooke certifies.

But the farmer has another disadvantage to contend against, arising out of that corn monopoly, commonly, but most inappropriately, called "protection to agriculture." The farmer is not only induced to look to what the Corn Law will do for him to pay his rent, instead of devoting himself exclusively to the resources of his farm; he must support his landlord, and all of the landlord's class, by his votes, that they may support his "protection." That there may be no mistake about him, the landlords and the agents give the farmer only such a hold of his land as will secure his vote, not his good cultivation. To be thoroughly secured as a voter, and kept under lock and key, as it were, is utterly incompatible with good farming. There is no kind of protection which is so indispensable to a farmer as protection from insecurity of tenure, and from political agents.

Mr. Baron Alderson, when he heard that the prisoner Lancaster, who stood before him at the bar, charged with burning a stack of wheat, had justified such an act by saying it would make corn dearer and wages higher, remarked that "this is certainly a new and very strange application of the doctrines of political economy." And

he subsequently, in addressing the jury, reprobated such an absurd opinion as this, and said it could only coexist with the meanest intellect or the grossest ignorance.

But this opinion is very little removed from that held by those who uphold the corn monopoly. There is less corn produced from the soil, not designedly that it may be scarce and dear, but because the monopoly is maintained, and because the means by which it is maintained render good agriculture impracticable. The only difference between James Lancaster, the convicted incendiary, and the majority of the members of Parliament, is, that James professes to raise wages through a scarcity and dearth of corn produced by his burning the stacks; while the M.P.'s, asserting also that good wages depend on the scarcity and dearth of corn, prevent it from becoming plentiful by not producing by one-third what they might produce if they were not afraid of competition, and if they did not depend on something else than good agriculture and good trade for good rents and good prices.

THE REGISTRATION.

LEEDS.—THE REGISTRATION.—A meeting of the Reform Association for promoting the Registration of Parliamentary Voters took place in the rotunda of the Coloured Cloth-hall, in Leeds, on Thursday week, Sir Edward Vavasour, Bart., in the chair. From statements made to the meeting, it appears that not a few Whig landlords who used to contribute to the fund for registration purposes have ceased to do so, and in some instances have become subscribers to the Agricultural Protective Society! The deficiency occasioned by these defaulters was promptly supplied by the delegates from the large towns, who agreed to contribute in proportion to their extent as much as was needed. It was also reported that the state of the registration in the different polling districts was satisfactory, and arrangements were made for carrying the business through the Revision Courts with energy and effect. [The Whig landlords who have withdrawn their aid from the Reform Registration Society cannot surely be aware that they are doing their best to cut the throat of their own party; for the funds they give to the Protective Society are appropriated to the expenses of the Tory registration—at least, so it is said, by persons not unlikely to be well acquainted with the fact: they are, therefore, weakening with one hand their own political party, and with the other they are strengthening the party of their opponents. To us, who belong to no party, this equivocal behaviour is highly amusing.] —Bradford Observer.

THORNTON.—There are in this township this year 18 amended and 15 new claims, all of which belong to the Anti-Monopoly party, excepting two.—*Ibid.*

SOUTH LANCASHIRE REGISTRATION.—The number of claims sent in to the overseer, for the Manchester district, rather exceed 1100, and, for the town, there are about 600; whilst the claims for the town, from the party of the Corn-Law advocates, do not quite reach 250. The entire of the claims throughout South Lancashire are about 2500; so that, if an election should take place after the present registration, the return of the present members would be somewhat doubtful. When it is considered what great efforts have been made in the two last years to increase the register, it will, in some measure, show the extraordinary exertions that must have been made by the League in the present year; for to the League must be attributed whatever increase the Liberal list of voters may exhibit.—*Preston Chronicle.*

The registration accounts from Liverpool, Bury, Oldham, Ashton, &c., are most favourable; and even in the farming districts the Free-Traders have succeeded in sending in claims quite as numerous as the landlords.

DEBATE ON MR. VILLIERS'S MOTION.

(From *Tait's Magazine*.)

The Corn-Law debate this year is generally felt to have gone off flatly; for the simple reason, we conceive, that all debating whatever about the matter is understood to be, at this time of day, useless and needless—useless in the House, and needless out of it. That the weakened interest in parliamentary Anti-Corn-Law speeches is any symptom of the increased strength of the Corn Law, is an opinion confined, probably, to that class of politicians who hold that the Irish Protestant Church is stronger and safer just now, when no one seems to care about it, than it was in the days when ministries went out and in on the appropriation clause. These annual motions on questions where argument is worn out and defeat foreknown, are valuable chiefly as testing and measuring progress. In this view, the late division on Mr. Villiers's motion shows that the League has not been at work among the constituencies in vain. Reminding the reader that the first of these annual motions, which went on the principle of total and immediate repeal, was made in 1842, we may point to the statistics of the divisions as evidencing that, however powerless argument may be, as argument, the action of the Free-Traders on the opinions of the constituencies is not without its reaction on the votes of the representatives. Since the question, in its present shape, was first mooted, its progress has been as follows:—

	Ayes.	Noes.	Majority against.
In 1842, 92	395	303	
1843, 127	383	256	
1844, 126	330	294	

From which it appears that some fifty of last year's monopolists are neutralized and silenced. The doubtfuls, the men who decline placing themselves in "an unenviable position," by recording votes adverse to the known or presumed opinions of registered or registerable electors, are an increasing class; the rate of whose growth does credit to the shrewd and business-like plan of the League—exchanging miscellaneous petitions to the House collectively, for electoral memorials to individual members.

We regret that we cannot, while on this subject, report any "philanthropic" conversions to the cause of Free Trade. Nothing would have been pleasant to our feelings than to have added our humble voice to the general chorus of eulogy which hymns Lord Ashley, and his "motives," and his friends, and his friends' "motives." But, alas! we have no clue to men's motive, except that afforded by their actions. "By their fruits ye shall know them." The philanthropy which made loud speeches in March, April, and May, against too much work, gives silent votes, in June, for too little bread; keeps the screw down tight on the victims over whose wrongs and woes it

whines and blubbers; maintains the scarcity of food and work, that necessitates the competition, that causes the miseries, that draw forth the eloquence, at which people are expected to wipe their eyes, and ejaculate, "What a good man!" We have nothing to say about "motives" of which we know nothing; and altogether disclaim any imputation of "hypocrisy;" but never was a clearer case of eagerness to pull the mote out of one's brother's eye, while blind to the beam in one's own eye, than the ten-hours' philanthropy of the corn monopolists. If Lord Ashley and his followers do not know that their monopoly of the bread market makes it harder than it need be for men to live; that it is the cause of that fearful struggle for existence, that competition for life, which makes female and infant factory slavery a physical necessity; what is his and their opinion worth on any question of legislation whatever? The Tory Ministers know this; and, as they will not touch the Corn Law, dare not touch the social evils which it necessitates. The Free-Traders know this; and, as they cannot get the Corn Law abolished, decline the responsibility of making bad worse. The Whigs and Radicals know this; and see, in the straitening of manufacturing industry, chiefly a short and sharp passage to Corn-Law repeal. Lord Ashley and his adherents are the only people in the country who seem not to know that their monopoly makes food dear, and man cheap; that the scarcer bread is, the more labour must be given to purchase a sufficiency of it. To credit these bread-taxing philanthropists with "sincerity" and "good motives," is to debit them with an almost preternatural stupidity. Still, it is possible, for aught we know, that when the Spanish friar gave the beggar his blessing, and picked his pocket, the holy man performed the latter part of the operation in sheer absence of mind. We must not leave this topic without adding that, with such ten-hour philanthropists as Lord Howick, who evince the sincerity of their zeal for the protection of industry by an equal zeal for its emancipation, and, in abridging labour, would increase its remunerative value, our difference is one of time and degree, rather than of principle. Though we believe their sympathies to be in part misdirected, and their efforts decidedly mistimed, there can, at all events, be no question about their integrity and consistency.

THE CORN MONOPOLY.—These lords of the soil, then, are a congeries of land-capitalists closely knit together for one purpose, and that purpose a bad one—the maintenance of the most extraordinary monopoly that reckless and inhuman selfishness ever created for its own advantage. They are invested, or rather they invested themselves, with the monopoly of bread. Not a morsel of bread is consumed by the whole people of the United Kingdom but is purchased of them at the price they choose to put upon it. This is virtually the case; for the sliding scale waits no foreign corn into an English port till our native loaf is far, very far above its natural and equitable level of price. When Sir Thomas Robinson was urging upon Dr. Johnson the expediency of putting some restriction upon the importation of foreign corn, the stanch old Tory replied, "Sir Thomas, you talk the language of a savage. Would you tell me that a nation has not the right to get its bread as cheaply as it can?" Nothing can be more reasonable, or more in accordance with the first principles of human nature, than the proposition involved in the doctor's reply. Every nation has that right; for bread is the *pabulum vite*—the necessary of life. All doctrines turned into fiscal laws, which affect or interfere with other importations, are inapplicable to the importation of corn. Say what men will, at whatever length, about the necessity of protective duties upon foreign produce, they never can bring the sense and reason of mankind to admit that a tax should be levied upon corn. To make the iniquity of the Corn Laws, if possible, more apparent, let us suppose them repealed, and then let us imagine a ministry levying an excise tax upon bread of 80 or 100 per cent. Now this, monstrous though it appear, is not half so bad as the Corn Laws, for the revenue thus raised would go to the public service—whereas, the Corn Laws put vast sums into the pockets of those who are of no service whatever. And now let us hear what the landlords have to say why judgment should not be passed upon them. They tell us, then, that assuredly they are not quite disinterested; for that upon the maintenance of the Corn Laws depend the marriage settlements of their daughters. "Ought marriage settlements to be disturbed?" The appeal is solemn. No. That revolution must never be. Up with the quarter loaf, and let the well-jointed Lady Sarah make Lord Tom Noddy supremely blest. "*Honourage our dames.*" We must give and bear it. But if the landlords are not quite disinterested, still they are not selfish. Far from it. Some fiery scion of a noble stock starts up to charge you with any, the most atrocious crime, if you presume to hint at selfishness. No. They have a sacred duty to perform. They tell us so. They love the labourer. Their interests are identical. He must be protected. And now let us cast a moment's glance at this highly-favoured being, for whose welfare the people of this country are so heavily taxed in the article of bread. But wherefore cast a further glance upon him? He is the William Sparkman of last week: he is any one of the Wiltshire men working upon the roads at 3s. a week: he is the wretched inmate of the workhouse—he is the desperate incendiary of Suffolk. He is the man of whom the Rev. Godolphin Osborne thus speaks in his letter to the Duke of Richmond. He says, "there is no one creature belonging to the farm, there is not an animal you rear, to use or to sell, that has been the subject of so much neglect, in everything that tend to his improvement, as the labourer. Compare the way he is housed, fed, clothed, and valued, with the way in which the animals he tends are treated in these particulars, and then answer to the public and to yourself—why in the present agitation is he overlooked?" And this is landlords' protection! "Defend me from my friends," is a Spanish proverb. "Protect me from my protectors" is likely to be an English one.—*Lloyd's Weekly London Newspaper.*

Died, on the 24th of July, after many Parliamentary attacks, the Franchise of Sudbury. Owing to internal corruption, the Franchise was obliged to undergo the amputation of two of its members, which, mortification having ensued, hastened its death. The pockets of 440 voters have been left to deplore the loss of the Franchise. The deceased, in its lifetime, was not much respected, though its death will certainly leave a large void in the annals of bribery and corruption, which will require the united ability of Parliament properly to fill up.—*Punch.*

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, July 31, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the LEAGUE of the Saturday immediately succeeding, but are included in the list of the week following.

Southwark, 2nd Remittance.

"THE CUSTOM OF THE COUNTRY."—At Buckingham Assizes, an action was tried in which Mr. Abel Smith, M.P. for Hertfordshire, claimed to recover damages from a yearly tenant at a farm at Wendover for bad husbandry. It appeared from the evidence that Wendover was badly pre-eminently for its husbandry; and the verdict was given for the defendant, not because he was free from the charge of bad cultivation, but because his practice of growing a succession of white crops had been pursued by other farmers in the neighbourhood. Mr. Justice Williams told the jury, that in these cases the custom of the neighbourhood constitutes the law between a landlord and tenant.

VOTE ON THE SUGAR DUTIES.—The vote of Mr. Cobden, and the other League leaders who supported Sir Robert Peel on the Sugar Duties, against the West Indians and the Whigs, we regard as both an honest vote and an expedient one. On the honesty of it, we have no need to say much now. The question at issue, divested of its technicalities, was simply one of a little more or a little less of monopoly; and they voted for a little less, having previously divided the House, a few days before, for the abolition of the whole. What else could they do? It has been said, that, in this sticking for Free-Trade dogmas, when the existence of the Tory Ministry was at stake, they acted as Leaguers, not as representatives of the people. It would be more to the purpose to say, that in this adherence to principle the principle on the strength of which they exist as public men—they acted as representatives of the people, not as Whigs. The assurance with which the Whig newspapers took Mr. Cobden and his friends to task for their conduct in this matter, and seemed to expect Free-Traders to ignore their principles for a night or two, by particular desire of Lord John Russell, is amusing in the extreme, and shows a hungering and thirsting after office, which must be strong indeed to have come out so powerfully on so slight an occasion. If the Whigs think proper to quarrel with the League for this, and leave their seats ostentatiously empty during Corn-Law debates, the Whigs, we apprehend, not the League, will be the ultimate losers, and will have to make the first overtures of amity. The respective positions and mutual relations of the two parties are sufficiently plain to show which must yield first. The Whigs want office; the Free-Traders do not. The Whigs are not nice to a shade of principle and character, on Free-Trade questions; the Free-Traders are,—have nothing but principle and character to live upon as public men, and not only can afford to be consistent, but cannot afford to be anything else. It is a good thing well done, to have informed the Whig aspirants for office, once for all, that the strength which the Free-Traders possess in Parliament and in the country, and the strength which they are quietly gathering up on the registry for the next electoral struggle, is neither to be bought nor had on loan for Whig party uses.—*Tait's Magazine*.

REVIEW.

Report on the Exposition of the Industrial Arts of France in the Museum-Palace in Paris. Art-Union, No. 70. London: How.

The exhibition of the products of French industry, which has just closed in Paris, is of such interest to all classes of manufacturers in this country that we take the opportunity afforded us by this seasonable publication of directing the attention of our readers to the subject. Reserving for a future article an examination of the question how far a similar exposition would be practicable and desirable in England, we shall at present only give our readers some extracts from the report of the "Art-Union," and the first passage we quote contains sentiments in which we are sure that our readers will heartily concur:—

"Periodical exhibitions of the products of industry were first commenced by the French Government in 1798, and every successive Exposition has displayed a marked improvement over that by which it was preceded. This progress has been particularly remarkable since the Restoration; the arts of peace were regarded as the means of affording triumphs not less brilliant and far less costly than those of war, and a party was formed in France, which continually, though silently, increases in strength, having for its object the development of the material and industrial resources of the nation, and the preservation of both from the ruin with which they were menaced by the popular passion for military glory. "Young France," as the hot-headed youths of the schools and universities have denominated themselves, has not forgotten the ambitious passions of the revolutionary age; such traditions are the inheritance of every generation, from fifteen to five and twenty, that comes upon the stage of Parisian life; but, as each generation ripens into maturity, the ardour for war fades away and gives place to an honourable desire to raise the national character by the cultivation of the arts and sciences, and the development of all the means which can tend to the physical or intellectual advancement of mankind. We look upon the French Exposition of this year as a manifesto in favour of peace, published by the middle classes of France, showing that their interests are essentially connected with the preservation of public tranquillity externally and internally—appealing to their countrymen against a course of policy which would close foreign markets against such results of French industry, and protesting against wars which would effectually destroy production by putting an end to consumption. Some of the journalists most conspicuous for their devotion to the cause of war and tumult have assailed the Exposition on this very ground: they declare that it is likely to damp the warlike spirit of the nation by exhibiting the great amount and importance of the interests which are all but absolutely dependent on the conservation of peace. The value of such a lesson cannot easily be over-estimated; it will be well not only for France, but for the world, if the energies which were long directed to the desolation of the Continent be henceforth applied to internal improvements, and the triumphs of peaceful industry be henceforth preferred to the empty glories of useless conquests and barren victories."

The economic result of the Exposition is described to be highly gratifying, and we trust that its influence will be permanent and extensive.

"This is a point on which the Exposition has served to disabuse the people of France of a common and mischievous error, which had long tended to check the progress of industry. We have said that the true test of progress is the amount of cost saved to the consumer; it was thence falsely inferred that the producer lost all that the consumer gained; but as every increase in cheapness is followed by an equal increase in the extent of consumption, the producer found that small profits on large sales more than compensated for large profits on small sales; and he had this further advantage that a large market must necessarily be more steady and less liable to fluctuations than one of limited extent. Further, though in one specific relation a man may be viewed as a producer, yet in all the rest he is simply a consumer, and therefore, if he should apparently lose a little on his own article, he is more than compensated by what he gains in the diminished cost of all other articles. This beautiful illustration of the great principle of self-adjustment, which regulates every branch of commerce and industry when left free from interference and external perturbations, was strikingly manifested at the Exposition; and it was gratifying to find how generally and how readily its truth was admitted, and its importance appreciated."

Without further preface, we shall now proceed to select a description of some of the most striking objects in the Exposition:—

"The richest part of the exhibition, artistically considered, was the portion devoted to glass, porcelain, and earthenware. Reserving for another place the consideration of the objects of luxury, such as vases, wine-coolers, and ornaments for splendid rooms, we shall first direct our attention to that which was at once the most novel and the most gratifying portion of the exhibition—the improvements in the coarse kind of earthenware (*grès*)—and the efforts made to improve the public taste by introducing elegance of design into articles of common and ordinary use. Some very beautiful designs were executed in the common ware, or the material that is rarely used in England for any other purpose than the manufacture of jars and the coarsest bottles. Our attention was first directed to this part of the subject by a curious coincidence. In an article already published in the "Art-Union," we suggested the propriety of introducing a new design for handles into vases and other articles covered with raised flowers, suggesting that the handles might be very appropriately formed by intertwining the stems. Passing the stall where the productions of M. Langlois were exhibited, we saw this hint very tastefully realized in a set of coffee-cups, covered with a pattern of raised vine-leaves, and having the handles formed by an intertwining of the stems, such as commonly occurs in

the natural growth. The price, in consequence of the material used, was so low as to place the set within reach

of the means of the humblest artisan, and the design, particularly as displayed in the sugar-bowl, rendered it worthy of a place at the table of every man of taste.

"We subsequently visited two of the dépôts for the sale of these articles, and found that the specimens displayed at the Exposition were fair samples of the perfection,

and, what is not less important, of the cheapness to which this process of manufacture has been brought. The dépôt in the Rue Richelieu was richer in articles of fine material than that of M. Bovay, No. 39, Rue Montmartre; but the latter seemed to us preferable, both for the cheapness of the articles produced and for the purity of the designs. The best patterns were those derived from the vine; and where the effect was increased, as in the accompanying jug, by giving the natural colour to the raised fruit and leaves, a result was produced highly creditable to the taste and skill of the inventor."

We quote the following description of a new process, which is of great importance to the sanitary condition of the persons employed in the potteries:—

"The glazed ware of France appeared to us for the most part deficient in permanency. In many of the articles which we examined it was obvious that the glaze had not so amalgamated with the ware as to adhere to it as a part of the body: there appeared an obvious probability that it would soon scale off. The cause of this appears to have been some imperfection in the firing, a process in which we believe the English manufacturers to be superior to their rivals at the other side of the Channel. On the other hand, the French have devised a process, which, we believe, has not been yet tried in England, but which, if its success be complete, is likely to produce a revolution in the fictile art. This is the electro-plating of earthenware instead of glazing it. Every one knows that the glazing process is most injurious to the health of the workmen, on account of the great quantity of the oxide of lead employed in the composition, being about 60 per cent. of the entire glazing mixture. Now, if electro-plating succeeds, this insalubrious process will be set aside, and, if we may judge from the specimens exhibited, art will gain in beauty as much as the workmen in health. The new productions in this novel art have received the affected name of galvano-ceramics, according to the modern fashion of baptizing everything in barbarous Greek. The articles are said to be perfectly impermeable to water, to resist the fire better than the ordinary glazed ware, not to scale off any portion of their metallic covering, and to be very easily kept clean. So far as our limited experiments have enabled us to judge, these qualifications have not been exaggerated. The galvanic plating resisted a very strong heat, and did not tarnish when exposed to vapour, smoke, and gas. But these articles are unfortunately dear; a little vase which unglazed would have cost about 2s. was charged at 5s. when electro-plated. The cost of the metallic coating, which is of microscopic tenacity, could only be the fraction of a farthing, and we cannot believe that the process by which it

is laid on is one that involves much labour or expense. We trust that this new art will be found extensively available, for by removing the necessity for using deleterious glasses it will render a real service to humanity.

"The specimens of electro-bronzing on the Beauvals were may be noticed as a new art, which promises great decorative effect at a very moderate cost. We annex the en-

graving of a vase, of which there were several copies in the Exposition, some plain, some with the raised pattern coloured, and some bronzed by the electro-galvanic process. In one the bronzing was confined to the body of the vase, and the raised pattern was coloured, but, from some failure in the manipulation, the design was not completely carried out. The vase itself is very graceful and effective."

The subject of ecclesiastical decoration has of late raised so much discussion, that we believe that most persons will be anxious to learn how the subject is viewed in France. We must not, however, be held responsible for the reporter's sentiments; we think that his censure of the interior of *La Madeleine* is unnecessarily severe, and that he has given a little too much praise to the design for a high altar in the Cathedral of Notre Dame:—

"Tapers form a part of the splendid ceremonials of the Catholic Church, and we saw several designs of candelabra destined for ecclesiastical purposes. Many of these were wrought in a florid meretricious style, and might be deemed specimens of the same perverted taste which has turned the interior of *La Madeleine* into an overgrown toyshop, and made Notre Dame de Lorette something like a gigantic baby-house of gilt gingerbread. There were, however, several of much purer design, calculated to suggest religious thought; one of these we have engraved, for we think it a happy conception to re-

present the prayer of angelic purity ascending to the source of light. The various ecclesiastical ornaments exhibited, not less than the candelabra, seem to show that the taste for exaggerated theatrical display in religious ceremonials is on the decline in France, and that public worship is becoming a matter more of inward feeling than ostentatious show. There were several *bénitiers* and *oratoires* in the Exposition which had nothing to offend a severe Protestant taste; and we may mention as a further proof of this gratifying change that the design which has been selected for the high altar of Notre Dame is one which perfectly harmonizes with the severe Gothic style of that very ancient cathedral. It may also be remarked here that copies of Gothic windows are made in France of burned clay (*terre cuite*), in which the tracery of the most florid Gothic is as sharp and well-defined as in the original stone. This is a matter of some importance to the ecclesiastical architects of England, for the windows of many of our new churches sadly disfigure the general effect of the edifices."

We must now turn to a specimen of domestic furniture:—

"The French have always been distinguished for excellence of taste in the arrangement of drapery, and bedrooms are reckoned among the show apartments in most houses of the upper classes. Indeed, at both the Tri-annons the furniture of the bedchambers is more likely to attract the attention and excite the admiration of visitors than the furniture of the other apartments. To some

extent this exposure of the bedchamber is not very consistent with our English notions of delicacy and privacy; but even at this side of the Channel greater attention is

paid to the tasteful arrangement of the sleeping apartments than was usual some years ago. We insert an engraving of a French bedstead and canopy, which struck

us as equally remarkable for its simplicity and its beauty. We recommend the pattern to our manufacturers of brass and iron bedsteads, most of whose articles, however laudable on the score of cleanliness and comfort, have hitherto displayed a lamentable deficiency in elegance and taste. The cornice might easily be obtained in Bielefeld's *carton-pierre*, which we believe could be most extensively and cheaply applied to the decoration of works in metal."

Here we must pause for the present, but we shall again return to the subject.

Western Barbary, its Wild Tribes and Savage Animals. By J. H. Drummond Hay, Esq. London: Murray.

We return to this very interesting work, and our first extract, though a little long, shall be the account of a public execution:—

"I had arisen at break of day, and, accompanied by a friend, had set out to shoot near the town, in ignorance of the execution which was about to take place. On reaching the principal gate of the town, we found it shut, which surprised us much, knowing old Ben Khajir, the porter, to be an early riser.

"Well," said the old gatekeeper, as I slipped into his hand a small silver key, 'you and your friend may pass, but no Moor can.'

"We sallied forth, wondering what could be the cause of such a novel order. This, however, was soon explained; for the first object that caught our eye was a party of soldiers moving slowly down the road adjoining the old ditch, on the south-western side of the town wall.

"As we hastened towards the party, we perceived they had two prisoners, who were secured with ropes fastened round their arms and waists. I recognised one of them to be a native of Reef, who had formerly been a gardener in the service of one of my friends at Tangier. He was a fine, tall, handsome youth, and his countenance was far from indicating anything vicious and depraved. Having joined them, I inquired of the kaid of the soldiers what was the cause of these men being led as prisoners.

"The Sultan—may God prolong his life!" said he, 'has ordered that their heads be cut off; they have been carrying on a contraband trade in oxen on the coast of Reef with the infidel Spaniard.'

"Some wrangling now ensued between the kaid's soldiers and the executioner as to the reward which the latter was to receive for decapitating the poor wretches; who, all the time, were standing by, compelled to listen to this bartering for their blood. The butcher insisted that four dollars had been offered him for one head alone, and that he must have a second four for the other. The kaid unwillingly yielded the point, and immediately the first victim, who was already half dead with terror, was thrown down on the ground by the executioner, who, kneeling on his breast, put the knife to his throat. I turned away, a violent struggle ensued, and I heard the executioner say, 'Give me another knife; mine won't cut.' I looked round; the wretched man was lying with his throat half cut, his breast heaving, and every limb writhing! My companion now loudly reproached the party for their cold-blooded atrocity, and called upon them to put the suffering man out of his misery. After a time another knife was handed by a soldier to the executioner, and the head was severed.

"The soldiers shouted feebly, 'May God prolong the life of our Sultan!' though I observed that many of them were as much horrified as ourselves.

"I remained riveted on the spot, where yet another victim awaited his fate. This was the fine-looking fellow of whom I have spoken; again there took place a bartering for his blood; the kaid denying his late promise, and declaring that he would not give even the four dollars unless the head of the second criminal was cut off. To this

the executioner was at length forced to consent. The culprit now begged to be untied. This request being acceded to, he took off his gelab, and giving it to the soldier who had performed this last act of kindness towards him, said, 'Accept this; we shall yet meet in another world.' His turban he threw to another, who had uttered a word of pity, instead of joining in the insulting shout of the soldiery; and walking steadily to the spot where his companion lay, he cried out with a distinct voice, 'There is no God but God, and Mahomed is his prophet.' Then turning to the executioner, he loosened his girdle, and gave it to him, saying, 'For the love of God, sever my head with better despatch than you did that of my brother.' He laid himself flat on the ground, yet moist with blood; and the knee of the ruffian, for so he deserved to be called, was placed on the Reefian's breast. A horseman was now seen galloping towards the party.

"A reprieve!" shouted my friend. 'Stop! stop!' The executioner withheld his knife.

"It is only the son of the governor," exclaimed a soldier; 'he is coming to see the execution. Wait for him!'

A very amusing instance is given of the results of the Moorish bigotry which excludes Jews and Christians from entering the mosques, under the penalty of death, or embracing Islam.

"The clock of the '*Jamaa Kebeer*,' the great mosque at Tangier, being much out of order, needed some skilful craftsman to repair it. None, however, of the '*Faithful*' were competent to the task, nor could they even discover what part of the machinery was deranged, though many put forth their opinions with great pomp and authority, amongst the rest one man gravely declared that a *Jin*, or evil genius, had in all probability taken up its abode within the clock. Various exorcisms were accordingly essayed, sufficient, as every true believer supposed, to have expelled a legion of devils—yet all in vain: the clock continued dumb.

"A Christian clockmaker, 'a cursed Nazarene,' was now their sole resource; and such an one fortunately was sojourning in Tangier—the city protected of the Lord. He was from Genoa, and of course a most pious Christian; how then were they, the faithful followers of the Prophet, to manage to employ him! The clock was fixed in the wall of the tower, and it was, of course, a thing impossible to allow the Kaffer to defile God's house of prayer by his sacrilegious steps.

"The time-keeper *Moakkeed* reported the difficulty to the kady (judge); and so perplexed the grey-bearded dealer in law and justice by the intricacy of the case, that, after several hours of deep thought, the judge confessed he could not come to a decision, and proposed to report upon the subject to the kaid, advising that a meeting of the local authorities should be called. 'For, in truth,' said the kady, 'I perceive that the urgency of this matter is great. Yes! I myself will expound our dilemma to the kaid.'

"The kaid entered feelingly into all the difficulty of the case, and forthwith summoned the other authorities to his porch, where various propositions were put forward by the learned members of the council.

"One proposed to abandon the clock altogether; another would lay down boards over which the infidel might pass without touching the sacred floor; but this was held not to be a sufficient safeguard; and it was finally decided to pull up that part of the pavement on which the Kaffer trod, and whitewash the walls near which he passed.

"The Christian was now sent for, and told what was required of him; and he was expressly commanded to take off his shoes and stockings on entering the *Jamaa*. 'That I won't,' said the stout little watchmaker; 'I never took them off when I entered the chapel of the most Holy Virgin, and here he crossed himself devoutly, and I won't take them off in the house of your Prophet.'

"They cursed in their hearts the watchmaker and all his race, and were in a state of vast perplexity. The wis-

Oolama (learned men) had met early in the morning; it was already noon, and yet, so far from having got over their difficulty, they were in fact exactly where they had been before breakfast; when a grey-bearded Mueddin, who had hitherto been silent, craved permission to speak. The kaid and the kady nodded their assent.

"If," said the venerable priest, "the mosque be out of repair, and lime and bricks have to be conveyed into the interior for the use of the masons, do not asses carry those loads, and do not they enter with their shoes on?"

"You speak truly," was the general reply.

"And does the donkey," resumed the Mueddin, "believe in the One God, or in Mahomed the prophet of God?"

"No, in truth," all replied.

"Then," said the Mueddin, "let the Christian go in shod as a donkey would do, and come out like a donkey."

"The argument of the Mueddin was unanimously applauded. In the character of a donkey, therefore, did the Christian enter the Mahomedan temple, mended the clock—not indeed at all like a donkey—but as such, in the opinion of 'The Faithful,' came out again; and the great mosque of Tangier has never since needed another visit of the donkey to its clock."

The bigotry of some of the Arabs is not insurmountable, as the following very interesting anecdote proves:—

"I remember, on one occasion, travelling in this country with a companion who possessed some knowledge of medicine: we had arrived at a dooar, near which we were about to pitch our tents, when a crowd of Arabs surrounded us, cursing and swearing at the 'rebels against God.' My friend, who spoke a little Arabic, turning round to an elderly person, whose garb bespoke him a priest, said, 'Who taught you that we are disbelievers? Hear my daily prayer, and judge for yourselves.' He then repeated the Lord's prayer. All stood amazed and silent, till the priest exclaimed:—

"May God curse me, if ever I curse again those who hold such belief; may more, that prayer shall be my prayer till my hour be come. I pray thee, O Nazarene, repeat the prayer, that it may be remembered and written amongst us in letters of gold."

In the mountainous country of the Berbers we find that a statute fair is held annually for the sale of wives. To escape the palpable ignominy of such a procedure the affair is thus delicately and dexterously managed:—

"Each lady desiring to enter into wedlock dresses herself in her best and most becoming attire, and taking with her a piece of cloth of her own weaving, sits down unveiled in the market-place. The men, both young and old, who are candidates for matrimony, parade about the market examining the texture of the cloth displayed by the ladies, and scrutinizing at the same time their looks and behaviour. Should the customer be pleased with the maiden, he inquires the price of the cloth; she replies by naming what she would expect as a dowry, and the amount of this she raises or depresses according as the candidate for her heart may please her, resorting to the demand of an exorbitant sum should she be averse to the purchaser. During this barter, the enamoured swain is able, in some degree, to judge of her temper and character. If they come to an agreement, the parents of the girl are appealed to; and they have the right to assent or not, as they please. Should they assent, the parties adjourn to a public notary, the contract is made, and the purchased bride is carried off to her new home.

"In this traffic, widows are at a low price in general, and divorced ladies sell their cloths very cheap. The wife thus purchased cannot be resold, however much the purchaser may repent of his bargain. She is his *lawful wedded wife*, and retains the purchase-money, which is her jointure or dowry.

"It is evident that this curious system of barter has been resorted to by these Mahomedan mountaineers as a means of evading the law of the Prophet, which interdicts all courtship before marriage."

An interview between a pilgrim and a lion is too amusing to be omitted:—

"He had hardly finished his prayers when he heard a rustling in the wood, as of some large animal; and presently, some thirty yards in front of him, a huge lion appeared in his path, fixing upon him his angry glance. Mohamed stopped short, and trembled from head to foot; but he soon took courage, and thus addressed the lion:—

"O dread sultan of the forest, I am a poor man, and on a pilgrimage to Seedy Boaza—May God have mercy on his soul! Prithier, let me pass! They tell me lions are generous and brave—I believe it; and I am indeed a harmless and inoffensive man."

"On hearing this the lion shook his mane, as if he was satisfied; and, turning round on the path, walked away from the man."

"Thank God!" said Mohamed; "most true it is that the lion is a noble and sagacious animal."

"But he had scarcely uttered these words, when again the lion halted, and, turning round, looked at Mohamed full in the face, and began to lash his tail. Then Mohamed thus again addressed the beast:—

"O yellow-haired Sherreef, think not that I have spoken aught against thee, I was only praising thee because thou hast pity upon God's creature. I never thought or said that thou wast running away. I know thee to be brave: I know that thou fearest no living creature."

"Upon this the lion left off lashing his tail, and turned away again; but still he kept upon the path along which Mohamed was journeying; and the young man, walking on with caution and as slowly as possible, ejaculated a prayer or two; but speaking very low, for fear of making the lion angry."

"However, his prayers were soon put an end to, for all on a sudden the lion stopped for the third time, crouching with his head towards him, and his eyes glancing with fire, lashing his tail against his sides fiercely and fiercely."

"What!" said Mohamed, cocking his gun and holding it ready, "must we then meet at last? Know, O lion, that I have spoken to thee fair words; but know also that I am a man; and, being a man, above all the beasts of the earth."

"The lion roared defiance, and sprang towards him. Mohamed took a steady aim and fired; and the huge

yellow monster rolled at his feet. The ball had entered the centre of the forehead, and gone through his brain."

"My father told me," exclaimed Mohamed, "that in a good cause this gun would never fail. Seedy Boaza has given me a sharp trial, but has not forgotten the family of Bileewy."

"Mohamed now continued his journey; and at every rustle of the leaves he expected another encounter with some dread animal; but God befriended him; and he arrived without further harm in sight of the shrine of his patron saint: and, taking off his shoes, he approached the holy ground. As he drew near, he perceived a numerous party of huntmen, whose long guns bristled in the neighbourhood of the sanctuary; and the oldest man of the party, stepping forward, thus addressed him:—

"O stranger, I see that thou comest from afar! Where are thy followers?"

"Mohamed pointed to his gun."

"What!" exclaimed the old hunter, dost thou mean that thou earnest hither alone? Impossible! Lions infest the forest; dangers beset the sons of men. We are numerous; we have killed lions ere we reached Seedy Boaza's tomb. Speak then the truth, O stranger, that we may hear and understand."

"I am from Tangier," said Mohamed; "I am alone. I have met a lion; I have slain him. I have come to worship at this shrine; and to-morrow I return to the house of my fathers."

"If thou speakest the truth," said one of the hunters, "conduct us to the lion thou hast slain."

"Mohamed made no reply; but led the way to the spot where the sultan of the forest lay dead. The hunters examined the lion's head for a good while; and then they embraced Mohamed, and called him Shikhi; and each hunter parted with some portion of his raiment and gave it to him; and some gave him money. And they loaded the young pilgrim with their favours; and they made him accompany them to their village, which was distant some two days' journey from the tomb of the saint."

Here we must pause for the present; but there is still an abundance of amusing matter from which we intend to make further selections.

CORRESPONDENCE.

To the Editor of the LEAGUE.

My attention has been called to an article in the LEAGUE of last week. The writers of editorial articles obviously possess such an advantage over ordinary correspondents, that I seldom take any more notice of their aspersions than of other anonymous attacks; yet as I see, on reference to the paragraph alluded to, that the condensed report does not convey a correct account of what I said, I may, perhaps, claim the insertion of the following brief statement:—

I did not accuse any member of the Council of the League of advocating a fixed duty upon corn; and every candid reader will admit that, even as the paragraph is worded by the reporter, there is not an imputation of the kind.

Although I did not claim that credit to myself which would appear from the report, yet those members of the League best acquainted with its early proceedings know the "impracticable" part I took in their more private as well as public meetings respecting total and immediate repeal, when many of them honestly thought I was standing by this principle too tenaciously.

Had it not been for the observation of a previous speaker, who, on the day of nomination at the Birmingham election, greatly but unintentionally exaggerated my aid to its funds, I should not have referred to the League at all. I made an allusion to the Anti-Corn-Law cause having come under the patronage of men who ridiculed the idea of total and immediate repeal, whilst it was unpopular with their class; and although I might have used an expression better adapted to convey my meaning than "bad company," yet I believe few will say that it is misapplied in designating such Reformers and anti-monopolists as claim to be the "country" and the "public," to the exclusion of the millions, who are deprived, by unjust laws, of their inalienable rights. The writer of the article in the LEAGUE cannot surely be sincere in his expressions of regret that one to whom he imputes such motives and conduct as he charges upon me should have withdrawn from their ranks. So far from regretting the course I have taken at the recent election in this town, there is not a public act of my life that I regard with more unmingled satisfaction; and I wish that at all future elections in the United Kingdom the people would carry to the poll the men whom a majority have selected as fit and proper persons to represent them, though with the certainty of a still smaller relative number of votes than were recorded here. It is one of the best means of ascertaining who are their *real friends* amongst the electors, an important if not an essential step towards their obtaining justice.

The working classes naturally conclude that they who oppose monopoly in trade, and support monopoly in legislation, have small claim to their confidence; and they plainly see that their wishes are treated with equal indifference, contempt, and insult by each of the two parties who are contending for political power.

I am respectfully,

JOSEPH STURGE.

Birmingham, 7th mo., 18th, 1844.

[At the earnest request of Mr. Sturge we insert his letter, although, from the irrelevancy of a large portion of it, we have abundant grounds for omitting it. The letter has much of insinuation without explicit charges against the Anti-Corn-Law League; and, whilst affecting to defend the writer from reflections made upon him, it seeks the publicity our columns afford for a justification of the policy pursued by him at the Birmingham election. We leave our readers to judge how far that policy is either wise in principle or capable of adoption, with any rational prospect of beneficial result. There is such a thing as venturing on a prophecy, and then working to bring about its fulfilment. Some have foretold the failure of the League, and that their prophecy may not fail, are now labouring to retard its progress, and, if possible, to prevent its triumph. Feargus O'Connor is one of this class. We hope Mr. Sturge is not treading in his steps.]

AGRICULTURE.

THE WOOL FAIRS' PARCE.

The trade in wool is now released from all fiscal and legislative protections and regulations, and it is to be hoped that those absurd meetings designated "wool fairs" will now be speedily abandoned. They have long been the laughing-stock of real men of business, whether growers or buyers of wool. The mode in which these fairs are conducted betrays an ignorance of the principles of trade, which is perfectly puerile. Some landed gentleman, a lord or squire of high degree, is usually the chief promoter of the farce, and he gravely takes the chair at an after-dinner meeting of a small section of the farmers of a district, and proposes to become a sort of mediator between the farmers and the woolstaplers, for the purpose of inducing the latter tradesmen to give higher prices than without his interference and the conjolery of a dinner-table they might have been inclined to do. For this purpose, first, there is usually a subscription for a bit of plate to be presented to the buyer of the greatest number of fleeces. Thus, at the Bedford wool-fair dinner, the chairman, Mr. Francis Pym, said, that "in order to keep up the character of the Bedford fair, and to tempt the buyers, a subscription had been entered into to provide a silver cup to be presented to the largest purchaser of above 2000 fleeces." Then the wine is pushed round with a view to create an artificial stimulus in the minds of the wool-buyers. But can anything be so ridiculous as the notion that these cautious capitalists, who are amongst the most shrewd and calculating men of business we have in the country, will be induced to buy a fleece more than they want, or to give a farthing more than the market price, for the sake of a silver plaything, or under the influence of a glass of wine?

None but men whose intellects and habits of thought never outgrew their boyhood could indulge in such silly expectations. And such is the case with the great mass of landlords, the only active promoters of wool fairs, who live in an atmosphere of illusion, and imagine that their patronage and their influence can affect men who deal with the realities of life.

And every report of these fairs shows their forced and unnatural existence. We have now before us nearly a score of such reports, and there is scarcely one in which complaints of want of support by the farmers and the wool-buyers are not heard. The wool-buyers universally dislike them, and usually transact their real business with the farmers either before or after the fair. Thus, in the report of the Bedford wool fair, to which we have alluded, it is observed that "the system of after-dinner public bidding appears to give much umbrage to the buyers, and certainly the opinions of those gentlemen are entitled to some weight."

To be sure they are, especially as most farmers have an urgent demand for the money for which their wool is sold. This sort of feeling on the part of wool-buyers was pretty plainly exhibited at two of the recent wool fairs, namely, at Chelmsford and Croydon. For instance, at the former place, Mr. Morren, a buyer, said that—

"At those sales some said there was an advance and some said there was none; and those in the trade could scarcely tell whether there was an advance or not from six weeks ago, though there was an advance from last year's prices of 20 per cent., and the growers were receiving that to-day. As to a high price, he thought they would not get it, for the chairman had let out that the farmers wanted money, which would bring a large quantity into the market, and that would lower the price."

Then as to the pretence upon which the squires profess to be delighted with a free trade in wool, which they could not avoid, while they are frantic at the idea of a free trade in corn, which they may possibly stave off for a few months, Mr. Morren said:—

"As to the measure lately passed for taking off the duty on wool, he thought there was a mistake at head-quarters when it was said that a large quantity of English wool would be required to mix with the foreign; if they inquired of the manufacturers they would find this was all judge. There was little mixing of wools; it was like sowing beans and wheat together, which the farmers would not be likely to do. The quantity used for mixing was only a few bags in a year."

So at Croydon. Mr. Lewis, who is stated to have been long known as the principal wool-buyer in that part of the country, when called upon by the chairman to give the meeting some intelligence on the state of the wool market, "seemed very unwilling to afford the slightest real information on the subject;" and said:—

"Very recently he had purchased 20 flocks of wool; that farmers wanted money to enable them to keep their wool till the annual fair, but they could not help themselves, they were so sadly off. He would not take £600 for his profits on the purchases that he had lately made."

And the chairman, subsequently referring to the want of support afforded by farmers to the wool fair, said, "He was desirous of impressing on the minds of his agricultural friends the vast importance of annual wool fairs; he feared that they were not suf-

ficiently alive to their own interest." And he added that there had been a "larger company" and considerable business transacted at some neighbouring fair. "Here (said he) we have three samples and two buyers." Could he have uttered a more complete condemnation of the scheme of a wool fair? And then various farmers present were induced to sign a paper, agreeing to keep their wool until this fair!!

The pretence for all this nonsense is, that by after-dinner biddings the farmers become acquainted with the state of prices, and thus get more for their wool than they would obtain at home. Nothing can be more absurd. Let the farmer who wants to judge whether he ought to keep (if he is able) his wool, or to sell it forthwith, take the only rational means of ascertaining the state of the markets in which his wool is ultimately disposed of. Let him consult the newspapers as to the state of trade in the woollen manufacturing districts, or, better still, let him establish a correspondence with some person resident in, and acquainted with the trade of those districts, upon whose information, communicated from time to time, he can rely to guide his discretion as to the disposal of his produce. This will be of far more use to him than the squire's silver prize pipkin, or the bad port wine of a village public-house. Let him thoroughly inform himself of the real state of the trade, and he will then be in a situation to obtain on his own farm the best price the quality of his wool will warrant. Of this he may be sure, it is always the wool-dealer's interest to buy if possible, because it is by the number and rapidity of his purchases from the farmers, and sales to the manufacturers, that his profits are chiefly produced.

The wool trade is now placed upon the firm basis of a free trade, and the result has been to contradict entirely all the desponding and sinister predictions of the monopolist Duke of Richmond. We quote a few passages from the speeches at these wool fairs, to show how greatly free trade in wool has benefited the British wool-growers. Thus, at Chelmsford, Mr. Unwin, a wool-buyer, said—

"That they met there, though not in such large numbers, on very good terms; perhaps on better terms, and more comfortable relations as buyers and sellers, than they had for many years past. It was not necessary to tell them that the last year was a more favourable one for the wool-buyers than many former years; they had a revival of prosperity in the manufacturing districts throughout the year, which enabled the wool-buyers to heal some of their old sores, and they now met them in better spirits, and bid as fair prices as the times would warrant."

At the same meeting Mr. John Ellman, of Sussex, one of the monopolist followers of the Duke of Richmond, and a "short-wool master," also, said:—

"He must congratulate them on the revival of the old prices they used to receive some ten or twelve years ago, and he also sincerely congratulated them on the circumstance that it was likely, from what they had heard from the buyers, that these good prices would continue."

And the same Mr. Unwin afterwards observed, "he was convinced that the reduction of duty on wool would enhance the price rather than lower it. In 1826, when the duty of 6d. per lb. was laid on, it fell in value, and when it was taken off, wool rose, and had borne a better price since, than it had ever done previously." And in answer to the croak of the chairman, a deeply-mortgaged monopolist squire, that "though it [the abolition of the duty] might be beneficial at the present time, hereafter it might be viewed with considerable doubt," Mr. Unwin said, "If there was any evil it was immediate, and not distant, because it operated to alarm the British grower, who might this year sell more freely; but the remote effect would be to enhance the price of wool."

Let us see, then, what are the immediate effects upon the British grower. In the *Mark-lane Express* of the present week, we find that at Leeds "there had been a larger number of buyers in the market last week than for a long time past, and their purchases had been in heavy low-priced goods. The shipping houses had been busier than usual at this period."

So again at Huddersfield: "The demand for broad and narrow cloths was much better than ordinary, and prices generally ruled with an upward tendency. This extraordinary impulse to business was chiefly attributable to correspondence received from parties visiting the sales of colonial wool in London, where prices are considerably on the advance of late sales. This circumstance had the effect of giving an unusual zest to the wool market, and holders of the raw material evinced a disposition of firmness." Now, our readers will remember, that, according to the Duke of Richmond, the prophet and champion of monopoly, the colonial wool-growers were to have been totally ruined by Free Trade! This shows the real value of monopolist prophecies.

There is also a report of the Inverness wool fair in the same paper, which is recorded as having "proved a very brisk one, and more numerous attended than for many years."

A Mr. Lockwood, an old buyer, said:—

"That he had attended the market with much pleasure for a number of years, and found, by a note in his posses-

sion, that his first purchase of wool was made in 1788, when he was the age of 15 years, at Oxenham, near Berwick, at which time the price of wool was 14s. 6d., and he would not state it as an offer, but he would this year be willing to give as much."

And prices were quoted from 20 to 25 per cent. higher than those of last year.

So at the *Lewes wool fair*, in the heart of the Southdowns and the short-wool masters, who, according to the veracious Duke of Richmond, were to have been all destroyed by free trade in wool, Mr. Blackman said:—

"The trade was now in this position; the duty had been taken off wool, and the moment that took place—an event which appeared to have come like a sort of thunder-clap upon the market—it gave a check to prices, and a very great check. He had always thought that as soon as that check was over prices would revive again; and so it was. It appeared now prices were about the same as when the duty was laid on; and he gave the Minister very great credit for having put the trade on a sound footing."

So Mr. John Ellman refused to take less than 42s. per tod for his wool, which is 2s. per tod more than had hitherto been obtained. This looks like a rising market.

And the chairman of the meeting, the Earl of Chichester, distinctly stated, "that the solid ground on which the agriculturists of this country could rest their hopes of increased profits was from an increase of the trade and commerce of the country." This sentiment was received with applause as applicable to wool; and from wool to wheat the transition is easy and natural. The editor of the *Brighton Guardian* puts this well when, after referring to Mr. Ellman's high demand for wool, he says,

"In fact, he is said to have obtained a higher figure, and that his wool was bought for exportation to France. Before that could take place, it is clear that the value of such wool and its price must be greater abroad than at home. The reduction of the duties therefore, putting an end to the artificial rise of prices here, permits exportation. If this be the case as to wool, why not as to corn? It may be doubted whether prices can be permanently maintained higher in one country than in another by artificial means. As the price of wool has been so equalized as to permit export, so may the price of corn; but when it falls to that level under the present laws, which increase all the burdens of the farmers, they will be about ruined. Free trade in corn, which would reduce their charges and permit in favourable seasons exportation with advantage, would prepare for that equalization of price which must take place in corn as in wool. The abolition of protecting duties cannot be ruinous to the farmer, since the protecting duty on wool can be abolished; and instead of the price falling by the influx of foreign wool, it rises a full fifth, having fallen previously under the duty, and is expected to rise a third or a fourth. The *Lewes wool-sellers* must begin to see, we apprehend, that those are not their worst enemies who advocate the abolition of protecting duties."

The case of wool is quite analogous to that of wheat, and when Free Trade has been forced upon the landed interest—as in a very short time it will be—farmers will find that the ridiculous exaggerations the monopolist landlords have indulged in with respect to the price at which wheat can be imported from abroad, have no more foundation in fact than the Duke of Richmond's interested but mistaken outcry about wool.

WHO ARE THE "FARMERS' FRIENDS?"

We last week noticed some of the most striking expressions used by the principal speakers at the dinner of the Royal Agricultural Society, at Southampton, on the 25th of July; but the meeting itself as well as the tone and temper of the speakers at the dinner invite some further comment. The meeting itself was sufficiently remarkable, thousands upon thousands of spectators, chiefly persons interested in land or agriculture, thronged the show ground, in which some of the most perfect stock and specimens of the most complete agricultural implements this country can produce were exhibited. No one could witness the gathering without feeling that husbandry has become fashionable, and that rural affairs are just now the rage. Peers, landowners, and ladies, farmers and agricultural labourers, appeared to take equal interest in the show. All classes alike admired the symmetry of the animals, and the ingenious simplicity of the most improved machinery; nor was that admiration misplaced, for the exhibition was well worthy the skill and judgment of our best mechanicians and agriculturists. No one could have gone to this meeting without becoming sensible that a high degree of agricultural knowledge exists in this country; yet, whether he had travelled to the show from the north, east, south, or west of England, he could not but have observed that nine-tenths of the land by which he passed on his journey is cultivated in a way which bespeaks a very low degree of agricultural skill amongst the majority of farmers. Whence arises this anomaly? It is not because the agricultural classes have been neglected by the Government and the Legislature, for during the last thirty years the main business of Parliament has been to pass laws to render agriculture prosperous. Let any one who travelled to Southampton, with an eye to the husbandry of the different districts through which he passed, say with what result. Truly has the Legislature laboured for agriculture in vain.

And this brings us to the origin of the English Agricultural Society, which really is spreading a knowledge of

some of the best practices of husbandry. The society was formed in May, 1838, just after the report of the Parliamentary Committee of 1836 had satisfied every sane man that legislation and protective laws might cause, but could never cure or prevent agricultural distress; and it was founded upon the principle of excluding all political questions from its consideration: in other words, it was the public recognition of the fact that agriculture, to be successful, must be self-dependent; that the only protection on which the husbandman can rely is his own intelligent industry. Increased production from our soil is the avowed object of the society, and the means by which it seeks to attain that object are implied in its motto of "SCIENCE WITH PRACTICE." And this principle of the society was pointedly brought into notice at the dinner by Lord Hardwicke, who, in allusion to some silly attacks which were made last autumn upon Lord Spencer, by a few noisy monopolists, said, "We are under the deepest obligation to our noble president, Earl Spencer, for having come to the manly resolution of refusing to yield to the demands of those, who could have but little understood the nature and constitution of this society, when they called upon him to resign his present position because he differed from them on a political question." And this sentiment was received with unanimous applause, as was the following:— "We are deeply obliged to Lord Spencer for having had the manliness to enforce, by his determination, the spirit of the laws of this society; thus settling the question at rest for ever, and sealing the destination of the society as a lasting and enduring institution for the public good."

This is a distinct declaration that into a society really meant to advance and improve the art of husbandry the question of legislative protection must not be introduced. Yet what is the course pursued by the majority of the lords and squires who applauded Lord Hardwicke's speech, when they reach their own districts? Do they not invariably convert all the local agricultural societies into political clubs and Pro-Corn-Law meetings? Why is that which is admitted to be just and true when applied to the Royal Agricultural Society of England, false and erroneous of the local societies which profess to follow in its wake?

Let the success and utility of the Royal Society, where the sound principle of upholding agriculture by promoting agricultural skill prevails, be placed in contrast with the forced and lingering existence of the local monopolist clubs, misnamed agricultural societies.

We have on several occasions borne testimony to the usefulness of the Agricultural Society, and to the value of many of the papers which have appeared on its journals; and it is impossible to watch its proceedings, or to witness its shows, without being conscious that its most effective supporters are those clear-sighted men who understand the wants and burdens of English agriculture and the capacity for production of British soils: in other words, the Free-Trade members of the society are those who best promote its objects. Who has been from the first the most efficient of its conductors, or rather, who was its actual founder, but Earl Spencer? Who, by the admission of the monopolist Earl of Hardwicke, has recently, by his sense and firmness, prevented the society from speedy extinction, by being converted for a brief space into a "protection association"? Why, again, Earl Spencer. Then look at the members who have distinguished themselves by skill in practical husbandry, and we find Earl Ducie setting an example of improvements in tillage which will form an era in the agriculture of this country. Then the same noble member stands foremost amongst the improvers in agricultural mechanics, as is proved by the prizes and medals he obtains at every meeting of the society for improvement in the implements of husbandry, and still more by the extensive use amongst farmers which the Uley implements obtain.

Then the owner of the second-best—and if fat rather than form, bulk instead of symmetry, had not prevailed, it should have been adjudged the best—short-horn beast shown at the Southampton meeting is Mr. Hayter, member for Wells, a steady and consistent advocate, both in Parliament and out of doors, of an immediate and unconditional free trade in corn. And Mr. Hayter is not merely a successful breeder of cattle, for he is one of the most energetic practical farmers of the day, and one who has done as much as any member of the society to demonstrate the advantages which landowners, by well-devised management of their own estates, may confer upon the labourers.

It is by deeds like these, and not by such self-glorification and sentimental silliness about dining at the same table with farm-servants, in which the monopolist Duke of Richmond indulged, that the farmers may judge their "friends."

LANDLORD PROMISES.

THE DISTRESS OF THE PROTECTED!

We last week prepared an abstract of a monopolist landlords' meeting at Devizes, where statements relating to the condition of the Wiltshire peasantry, so entirely the reverse of true, were made by Mr. John Bennett, one of the county members, that it is perfectly surprising how any sane man could have ventured to make them. That report was excluded from last week's *LEAGUE* by the pressure of other matter, and we have now the means of contradicting those statements out of the mouths of the Wiltshire farm-labourers themselves. At Brinkworth, adjoining the estates of Lord Suffolk, a Whig, whose son voted in support of monopoly, another of those meetings of agricultural labourers took place which will

render Wiltshire memorable as the rural county in which the serfs of the sacred monopolists first publicly met to protest against monopoly. The *Wiltshire Independent* says:—

"A large meeting, the fourth held within the last two months in North Wilts, having the same object in view, was held on Tuesday last, at Brinkworth. Labourers and mechanics flocked into the village from all quarters, not less than 1200 persons were present. Waggoners were placed on the green, as a platform; and the most earnest attention was paid to the speakers."

Mr. John Kdridge, a staunch Free-Trader, took the chair, and, in his opening speech, said:—

"Although some of the farmers were wealthy, yet many others had as much as they could do to make out for themselves; let them not therefore lay their lack of employment at their door as a wilful act. To the unjust and oppressive taxation with which they were burdened, especially those taxes which pressed on the first necessities of life, and to the neglect of those whose duty it was to remove the distress of the labouring classes, must they attribute all their privations and miseries. If the landlords only paid attention to their land, levelled some of their fences, grubbed up some of their waste boundaries, giving the corn more room to grow, they would be able to employ a far greater number of labourers without making any sacrifice themselves. If there was any competition in their trade they would be obliged to do it. If foreign corn was allowed to enter, then they would level fences, drain their lands, and make many improvements which would afford a constant supply of labour; but the present system of shutting out all foreign competition was a mere premium on idleness, by which the labourers were the sufferers."

And he concluded by showing how the system of taxation in this country pressed unfairly upon the industrious classes, in exoneration of the landlord class.

The Rev. Mr. Read, a Dissenting minister, then addressed the meeting, and elicited from those present complete contradictions of Mr. John Benett's statements:—

"Were there not many in this parish not fully employed? (Several voices—'Hundreds.') What amount of wages would they receive when in full work? (Voices—'7s., 8s.') Now, if a man with his wife and four children were placed in the work-house their food alone would cost 2s. per week, and the guardians obtain it 10 per cent. cheaper than private individuals can. How, then, could the labourer, with 2s. less to provide food and every other necessary, be said to be in a prosperous condition? He would not live too well in the house, therefore his fare out must be scanty indeed."

The remedy was, the release of industry, especially rural industry, from the depressing influence of the Corn Laws:—

"Had they not been taught to say 'give us this day our daily bread?' and yet their legislators made laws to keep it from them. Had those laws benefited the farmers? they acknowledged that they were not prosperous. Had they benefited the tradesman? Did they assist the labourer? Had his wages risen in consequence? ('No, no.') What then have these laws done for you—the labourers? Do they get you bacon with your potatoes? (A voice—'Tis as much as we can do to get salt, say nothing of bacon.') He believed that was true; but if the Corn Laws were repealed they would have free trade too in labour, wages for all who were willing to work, they would be able to sell their labour in the best market."

And he added:—

"He had been censured as a preacher of the gospel for taking part in these meetings; but when he saw the labourers living on potatoes and salt, burnt crust tea, and such fare ('tis true, that's what we get')—when he saw the misery and wretchedness which existed, he said the Corn Laws mainly produced that state of things, and whatever others might say, he would not cease to lift up his voice against them."

This is worthy of the high office of a Christian teacher.

Mr. Arkell adduced another instance of the distress of the labourers, saying:—

"Passing through Hook, this morning (a little place with about twenty houses), he asked a man whether many people would be at the meeting at Brinkworth. 'We want a meeting here,' was the reply, 'for the people are half starving.' Afterwards he saw a man by the roadside fagging, and asked him how times were with him. He said he had never been so badly off in his life, and that he and his family had been often through the winter living on boiled 'collets.' Can anybody contradict this? ('No, no.') A voice, 'There are many about here that would often be glad to get even collets.' It was evident to him that numbers had little work and less food, and their distress was increased by the dry season causing their potatoes to fail. The farmers made the dryness of the season their excuse for not employing more labourers. But why did they not grub banks and make other improvements? If they were to do this, labourers need not be out of employ."

This, let it be remembered, is from one of the best practical farmers in the county. Mr. Arkell then proceeds to deal with the county member's facts:—

"Mr. Benett, at Devizes, last week, said that the farmers had no cause for despair; and that so long as population increased they might defy the foreigner to depreciate the value of the land. Why, then, should they desire to keep out foreign corn? Further, he said prices were dependent on the seasons; and he added that the object of the present law was to keep prices steady. Now, he asked, could they do that if prices were, as Mr. Benett before remarked, dependent on the seasons? But the law had not kept prices steady. He had himself sold wheat at 20 guineas and at 10 guineas the load. What should cause these ups and downs? Mr. Benett said the variations in the currency. So here he acknowledged that prices had varied. Who believed Mr. Benett when he said prices would be at 52s. for the next twenty years?"

Then Mr. Benett's scheme of repelling the malt-tax, to give the labourers more beer, whilst he refused them bread, was treated by the hard-handed labourers as the just contempt it merits.

Mr. Arkell said:—

"Another idea of Mr. Benett's was, that the labourer ought to have his luxuries as well as the rich man, and he therefore wished to apply the proceeds of the tax on bread to the removal of the malt-tax; so that, according to Mr. Benett, the best thing they could do would be to petition for a repeal of the malt-tax, and thus obtain cheap beer if they could not get cheap bread. (Cries of 'Let's have some food to eat first,' and 'That's what we want.') Mr. Benett further stated, that in this county the labourers were always in full employ, whether in wet or in dry weather. (Cries of 'That's wrong.') So he would have you believe that there was no distress or want of employment among you! Is that the case? ('No, no.')

Mr. Pearce gave the following detail of the income and expenditure of a Wiltshire labourer:—

"Supposing the man to earn 9s. per week, and to expend it in the following way:—

	s.	d.
4 gallons bread	4	4
3 oz. tea	1	0
4 lb. sugar	0	4
3 lb. meat	1	6
Soap and candles	0	6
Flour	0	3 3/4
Bundries	1	0
	8	11 3/4

and remarked that, "if the above articles were free from duty they might be bought for about half that sum."

After the meeting had agreed to a petition for removal of all restrictions on trade and commerce, and for relief from excessive taxation, it was addressed by several agricultural labourers in the following terms:—

"AMBROSE LEWIS, a labourer, living in Hillmarton, then came forward to speak. He said he had walked for miles without obtaining a day's work. He went to his own parish, Broad Somerford, but the farmers all said 'No.' He then went to the guardian as the fittest person to apply to, but he had no work, and would not so much as give him a bit of victuals, and he was that day indebted to a poor man named Jacob Miles for a meal. He had now passed nine months without earning 2s. 6d. a week, and had sometimes two or three children to maintain. When he was employed he often toiled all day with nothing but a bit of bread once in the day and a few potatoes at night. No one could say he was a lazy fellow ('No, you're not'); he had cut his forty acres of grass every year for the last twenty-five years, and sometimes more. Potatoes and salt was his general food, and as for meat, he scarcely ever saw any except at the butcher's shop, and sometimes smelling it at the farm-houses. A parson gave him a bit to eat the other day—more than had been in his house for months before. If it had not been for the piece of land let to him by the Marquis of Lansdowne he should have been starved or have been in the union seven months ago."

So again:—

"ABRAHAM RIVERS, of Bremhill, said he had a wife and six children. He had been obliged to apply to the parish for work, and had 7s. a week to maintain his family, out of which it cost him 6d. per week for tools. It was not enough to keep them in bread, and he had no potatoes. He was sure one reason why labour was so scarce and so many labourers out of employ in his parish was because the farmers used drill machines and threshing machines so much instead of employing men. When the farmers' rent becomes nearly due they send for one of these machines to get their corn threshed out quickly to turn it into money. But for Lord Lansdowne's land his family would have been in a state of starvation. For miles round there was scarcely any work to do and no likelihood of any."

Now, this poor man's error in attributing to agricultural machinery that which is caused by deficiency of agricultural capital is not surprising; though, every one who understands husbandry is aware that the farmer who employs most machinery invariably employs the most manual labour also. It is the necessity of meeting the rent, the monopoly-enhanced rent, which causes the farmers to employ too little labour, too little we mean for the profitable cultivation of their land. The effect on the labourers of the present system has now been made fearfully apparent.

"Subsequently another labouring man, WALTER MATHEWS, said that several hundred people held allotments of land under the Marquis of Lansdowne, without which many of them would be starved."

Dare the Government, creature as it is of the landed monopolists, venture to maintain the Corn Laws for another session in the face of such things, thus spoken?

POLITICS IN DISGUISE.

How long will the farmers be gulled into serving as tools to their political landlords, by assembling under the pretence of showing cattle, and then be dosed with monopolist politics and high-rent schemes? We have been led to put this question by the report of the meeting of the "Wilts Agricultural Society," lately held at Devizes, at which all the principal monopolists of that county assembled, and, under the pretence of aiding agriculture, tried to bolster up their own rent-raising monopoly of food.

"The president of the society, John Benett, Esq., M.P., was in the chair, and was supported by Mr. Sotherton, M.P., Mr. Heneage, M.P., Mr. Bruges, M.P., the Rev. R. Ashe, the Rev. Mr. Marsh, Mr. Stephen Mills, Mr. Colston, Mr. Compton, the mayor of Devizes, Mr. Lewis, Mr. John Hayward, Mr. G. E. Sloper, and from seventy to eighty of the most respectable agriculturists of the county."

And after the usual adjudication of rewards to meritorious bulls, cows, sheep, pigs, and labourers,—and, judging by the scale of prizes, the squires of Wiltshire deem one bull equivalent in value to six and one pig equal to four labourers,—the business of the evening commenced by the monopolist member for North Wilts, Mr. Sotherton, proposing the health of his co-monopolist of South Wilts, Mr. John Benett, commonly known amongst the labouring classes of Wiltshire as "barley bannock" Benett; so well do these poor fellows understand the effect and objects of the high price of food Mr. Benett and his co-monopolists are so eager to obtain. In returning thanks, this veteran monopolist was eloquent on the "light of chemistry" as recently applied to agriculture, though he maintained a complete silence on security of tenure, game, and high rents. He, however, seems to be setting his house in order for a free trade in corn, for he said,

"With respect to the prospects of the agriculturists he would say a few words. He had repeatedly said the agriculturists had no cause for despair; and he now repeated, that so long as population increased—and with the increase of population there would be an increased demand for the produce of the land,—they might defy foreigners to depreciate the value of the land, because the British farmer had on his side the costs of importation, which protected him in a certain degree."

Now, this looks like a lucid interval; but how widely it differs from the insane nonsense this same gentleman uttered at the last "protection meeting!" Does this gentleman fear a dissolution, and that even the patronage of Mr. Sidney Herbert may not secure him a seat in the next Parliament (and it is notorious that Mr. Benett would not be so comfortable without parliamentary privileges as with them)? However, having done homage to the Free-Trade principles of his patron, Peel, he followed it up with this, for a monopolist, new version of the Corn-Law question:—

"With reference to the prices of agricultural produce, he would recommend them not to be too sanguine. No law could keep up prices to any certain sum. So far he agreed with the Anti-Corn-Law League; but he differed from them when they declared that any fixed prices had ever been promised by the Corn Law. The law could not regulate prices. Prices depended on the seasons, which were under the direction of Providence. In plentiful seasons low prices necessarily followed, and, not being the effect of importation, did no harm; at other times they had a deficiency, and high prices were the inevitable result. But for a minister to promise a certain price was impossible, and it had never been done. The object of the present law was to keep prices steady; and he maintained that the present sliding scale was calculated to regulate prices, and it was proved that it had done so, for the prices of grain in England had been more regular than in any other country."

Now, let the reader mark this man's inconsistency: first he says law cannot regulate prices, and afterwards "that the present sliding scale was calculated to regulate

prices, and had done so." Who can have any reliance upon such politicians? and yet this foolish old man is a great light amongst the Wiltshire monopolists. Next we have a contradiction of his assertion that no certain price had been promised by the promoters of the Corn Laws:—

"Sir R. Peel was wrong when he first introduced the present Corn bill in saying that prices would probably remain at 52s. He believed they would be somewhere about 52s. for the next twenty years, provided the law remained stationary; and those who calculated on more deceived themselves."

Now, if the present harvest is well got in, it is probable that within six months the price of wheat will be down to 42s. a quarter, in spite of Peel's promises, or restrictions on import. How will the monopolists deal with that state of things?

Next he makes this important admission with respect to the labourers:—

"He thought the time would come when gentlemen would see the importance of looking more to the labouring classes. He congratulated them on the exertions which had been made in their favour. He thought they were entitled to their luxuries as well as the higher classes; and the principal and most important luxury to them was beer; and, in order that they should be enabled to obtain it at a cheaper rate, he thought that the money received from the duty on corn should be applied to the repeal of the malt-tax. (Hear, hear.) That would enable the poor man to drink beer instead of water, and he thought they were bound to endeavour to obtain it for him. It would signify little to the farmers whether they derived their return from wheat or barley."

This is one word for the labourers and two for the owners of barley-land; and it is impossible not to admire the philanthropy and disinterestedness of the proposal to increase the drink of the labourers, whilst they are denied food. We do not think fiscal measures should be used either to encourage or discourage the use of any commodity; but if there be one greater benefit than another (increasing the supply of food only excepted), which could be conferred upon the peasantry, it would be to induce them to abandon the use of beer and intoxicating drink altogether. And let the following lucid exhortation to look to the interests of the labourers serve as a specimen of landlord appreciation of the great and pressing difficulty of the day:—

"It remained then in their (the agriculturists') hands to look to the interests of the poor. It was exceedingly gratifying to him to see such a spirit stirred up in favour of the labouring classes, and on that account he rejoiced in the agitation which had been got up. No one felt more anxious for their welfare than the agriculturist. Wages, of course, were governed by the proportion of the supply to the demand; and he was sure there were no farmers in the county who were not as anxious to improve the condition of the labourer as those persons who wrote puffing letters in the papers, finding out grievances, and making a clamour, but pointing out no remedy. Now, nothing was so difficult as to remedy grievances;"

and he might have added, especially where those in whose hand the remedy was had an interest in maintaining the system which caused those grievances. And, in the face of the recent exposures of the sufferings of the labourers, Mr. Benett ventured to say:—

"One thing that greatly surprised him was, that in Norfolk and Suffolk a great number of industrious labourers were out of employ; he was assured that in those counties the labourers did not get work nine months in the year; the farmers, being in distress, only employing the men just as long as they had full work for them. In his neighbourhood no man lost a day, and he believed it was the case throughout this county that the farmer paid wages whether he had any work to do or not. In Norfolk and Suffolk when a job was finished men were often at once discharged and suffered to stand idle till more work was ready for them. He was astonished at this. Were there any farmers who acted thus in this county? There were none in this neighbourhood who did so, and he believed there were none in the county. The wages paid here were 8s., in some places 9s. a week; and he believed in no case, in this county, would it be found that the labouring man, whether in wet or dry weather, was not constantly employed every day in the week."

Now, what said the labourers at Lyneham and elsewhere in Wiltshire on this point? The public will not fail to remember it, though the monopolist M.P.'s find it convenient to forget it.

On the same topic Mr. Sotherton found it necessary to descant, though in the following vague style:—

"He would say to every class that it was their duty to make the best of existing circumstances. In their endeavours to raise the social condition of the labourers it was a bad thing to look for legislative interference, while they had in their own possession so many means of doing them good; and if they would only consider their own responsibility as masters, and regard their servants as fellow creatures—a duty which he thought farmers in this neighbourhood conscientiously performed,—he believed the condition of the labourers might be greatly improved. This would be a work of time. Many delusive plans had been put forth; but his experience went to prove that a good landlord could do but little excepting he had a good tenant; and that the farmer could do nothing unless he had good labourers."

What childish twaddle! And yet, for its sins, by such twaddlers is this country misgoverned.

Mr. Heneage, one of the monopolist members for Devizes, kept the convenient ground of local compliment; while his co-bread taxer, Mr. Bruges, was heavily statistical, and made a long speech, which might be aptly described as much ado about nothing. He made, however, one statement which should be noticed. In reference to allotments of land to labourers he said:—

"He had himself adopted the plan with perfect success since 1830. He did not then select men merely with reference to character. He had not deemed poaching a ground for excluding an individual from the benefit of these allotments; and he might add, that, although he had included some persons who had been convicted of offences against the game laws, not one of them had, since that time, been guilty of any such offences."

Does not this prove that sheer distress is the great cause of the labourers falling into the temptation the landlords game preserves offer?

We must conclude these extracts with the following passages, which show that the monopolists themselves are of necessity taking, in some degree and partially, that course of improvement which a free trade in corn would render general:—

"Mr. W. R. Brown said, he was anxious to ascertain the reason why the poor-rates in this county were 3s. in the pound, while the average of all the other counties was only 2s. He had accordingly made some calculations on the subject. He had first ascertained that the area of the county was 868,000 acres. He found that in Wilts the proportion of uncultivated land was one-tenth, or 87,000 acres. [By uncultivated land he meant downs, commons, &c.] The cultivated land was thus reduced to 781,000 acres. By the last census, in 1841, the number of males was computed at 128,000; by the returns of 1851 the labourers in husbandry were set down at 24,000. According to his calculation they were now nearer 30,000, giving about 30 acres to each man. He had also ascertained that on tillage farms the cost of labour

was from 16s. to 20s. an acre; on pasture, about 10s.; he had taken the average at 16s. This would show a yearly income of £22 10s.; or, deducting £3 for wages paid to women and children, of £20 per head for each man, not much more than 7s. per week. That proved that the market for labour was not sufficient for the population. He would suggest a remedy: (1) a portion of the uncultivated land was thrown into the market to increase the demand for labour. [And the same effect would be produced by improved husbandry on the half-farmed lands already in cultivation.] He was glad to see that in the southern part of the county much uncultivated down land had been brought into cultivation; and he found that where that was the case the demand for labour had increased. Mr. Brown, of Winterbourne, and Mr. Mills, of Elston, had in this way greatly increased the labour market. He should be glad to see that principle carried out throughout the county.

"The President remarked that thirty years ago it would have been thought madness to break up Salisbury Plain; but he had little doubt but that it would in the course of years be entirely cultivated."

This is precisely the same kind of land on which in Lincolnshire the best farming in the kingdom exists. Nothing but monopoly and its consequences have prevented the cultivation of the west country downs long ago. And Mr. S. Mills, to whom Mr. Brown referred, thus spoke of the results of his own improvements:—

"They would perhaps allow him to say a few words on the employment of the agricultural labourers. Having converted a great deal of unprofitable soil to a profitable purpose, he was enabled to state that it had greatly promoted the benefit of the labourers, because they received the first profit, while it had been of great advantage to himself. Last year he had a large number of applications for work, and this year a still larger number, but he was happy to say he had been able to afford employment to the greater part of the applicants. Mr. Mills then stated the profitable results he had found from 'stiff burning.' He had taken that course with 80 acres of land previously considered by an eminent surveyor dear at 1s. 6d. an acre, and he had since grown on it an excellent crop of turnips, and afterwards one of oats. He lamented that the spirit of improvement in agriculture did not show itself in the employment of more manual labour. Men might plough well and manure well, but their success would be more sure if their plans involved the use of more manual labour."

True, perfectly true. But high monopoly rents and fluctuating prices, caused by monopoly, to say nothing of insecure tenures, make the farmers dread Saturday night; and hence the labourers are the most immediate sufferers by the Corn Laws.

THE HARVEST.—Owing to the great number of agriculturists from all parts of the two western counties who have, during the last few days, embarked at this place for Southampton to attend the meeting of the Royal Agricultural Society, we have been able to make very extensive inquiries relative to the harvest. "One and all" are exhilarated by the fine prospects which are presented. The white crops will all be good, but wheat especially; which will be far beyond the average in straw as well as grain; while even the green crops, which it was thought were damaged, and in some instances destroyed, by the long drought, have been surprisingly invigorated by the late rains. This is good news for the poor and the country at large.—*West of England Conservative.*

BIRMINGHAM ELECTION.—The disagreeable event of the past month is the Birmingham election. That Mr. Sturge is not at this moment member for Birmingham we sincerely regret. We heartily desired his success, and should have thought his claims superior to those of his rival; but as it appears that the Liberal electors, in the proportion of about five to one, thought differently, there is on this point no more to be said. That the Birmingham Liberals have so managed matters as to disfranchise themselves for the remaining months, or years, of the present Parliament, we regret still more. One might have hoped that the men whose sagacious and energetic common sense originated political unions, would have found means of adjusting a quarrel, which seems to have had as much of personality as of principle in it, before going to the poll, to be beaten and disgraced altogether. The mode of effecting an adjustment in such cases—when men are in earnest about their common principles, and not intolerant bigots to their special opinions—is obvious enough. The example was set by Marylebone at the last general election. The Liberal electors, divided by the conflicting and nicely-balanced claims of two Liberal candidates, chose their man by ballot before the day of nomination, under the compact (which was honourably kept) that the minority, however large, should support the candidate of the majority, however small. The result was, a tolerably good sort of representative for Marylebone, instead of a very bad one. The commodore can scarcely be called a model legislator—perhaps he is as much below Mr. Young in political aptitude as Mr. Scholefield is below Mr. Sturge—still, it is better for Marylebone to be saying "Ay," than "No" on Free Trade and inquiry into Post-office infamies. Why, in the name of common sense, could not the Liberals of Birmingham transact their business in the same good-tempered and business-like way? Is the question which Reformers are everywhere asking, and answering, very naturally, to the disadvantage of that candidate whom the result shows not to have had the shadow of a chance of success from the beginning. But what we most lament in this business is the mischief which such experiments do to the cause of free and extended suffrage. We find no fault with Mr. Sturge or any other man for postponing the Free-Trade question to the complete-suffrage question, though the policy seems to us a mistaken one; but this Birmingham election is bad for both—worst for complete suffrage, as the younger and weaker of the two. With a very sincere respect towards men whose ultimate views and objects are our own, who number among them not a few of the truest and honestest politicians we have, who are working a difficult question, of first-class importance, in discouraging times, we beg to represent to the Complete-Suffragists that, if they have taken up the policy of division and repulsion deliberately, and as a policy, they may regard the cause of complete suffrage (an awkward name, by the way) as adjourned to somewhere within the next century. The true way to test the principles of such a policy is to suppose it carried out universally. Suppose the Complete-Suffragists to do everywhere what they have done in Birmingham; suppose them everywhere to be a minority on the registries—everywhere to use their minority so as to let in the candidate of another and Tory majority; suppose them to succeed in silencing all the Liberal constituencies of the empire, and to get for us a whole Parliament of Mr. Spooners, how much nearer should we be to our new Reform Act in *posse*? A grosser practical solecism—a bolder defiance of the laws which connect means with ends—could not be.—*Tail's Mag.*

NOTICES TO CORRESPONDENTS.

The verses of J—s C—r are pretty, but as they are somewhat deficient of originality, we are reluctantly compelled to decline publishing them.

Our reply to the communication of Henry Turner is, that it is our duty fearlessly to enunciate the general principles of truth and justice, so far as relates to the great question we have in hand; but we do not assume to ourselves the office of becoming "judges or dividers" in particular cases, such as the one he alludes to. We have not leisure to examine carefully the clauses to which reference is made, we can only say briefly, that if, as Mr. Turner appears to believe, they infringe any principles of right or policy we have at any time expressed, the fault must rest on the head of the transgressor himself.

The following suggestion has been sent to us:—

"C. B. would suggest to us that the best way of carrying out the recommendation in the League to distribute that paper after subscribers have read it, would be by the officers of local societies furnishing the names of parties to send it to, or the papers might be left with the secretary for him to post. As it is probable that several papers might find their way to one individual if no arrangement previously took place of this sort, the latter plan C. B. thinks would answer best."

"A Member and a Farmer's Son" proposes that on some given day all the clergymen and ministers of the gospel should preach from the text, "Give us this day our daily bread." It may be said that, whenever and wherever the gospel is preached, and from whatever text, the withholding of bread is directly or indirectly condemned.

"A Subscriber from Patricroft" writes:—"I have thought if some detailed account of the rental from coal-mines, paid always to landowners, could be ascertained, it would show a startling amount. I know one estate, of about 100 acres, the rental from coal amounts to from £2000 to £3000 per annum, and nearly all paid by the manufacturers, for we know the farmers use very little coal."

We thank the "Hawick Stocking-maker" for his intelligent letter. We regret that we have not room to insert it.

"Philip M—" complains that his friends jeer him on our account. We can only say, that, if his communication to us be a fair sample of his intelligence and modesty, no wonder that his friends make sport of him. He lectures us about our editorial duties, and threatens that, if we do not follow his suggestions, he shall send a philippic on the subject to the *Times*. It is hard that the *Times* should suffer such an infliction for our faults. We should recommend "Philip M—" to read "Mason on Self-knowledge," a work he is evidently yet unacquainted with.

"A Farmer" writes to us, stating that he knows of two married men, one having four children, who are working for food only. "Vilem" very feelingly and very forcibly describes the miserable condition of himself and fellow "rustics," and winds up his harrowing tale with, "Physician, give us a balm." This request should be made to the *State Doctor*. Our "balm" is *Free Trade*, and we give the prescription without fee or reward.

"Josh. Martin" inquires upon what footing we would put game, and "whether we would continue it as property, and how we would deal with it legally?" We should deal with it as with rats, crows, and sparrows.

"Peter the Rhymester's" verses are not sufficiently spirited for publication.

We thank M. Waltham for his suggestions relative to the Free-Trade Club. His letter, however, is too long for insertion.

"On reading the account of Captain Warner's experiment in the LEAGUE of last week, I was struck with the nearly similar method of destroying ships proposed by the Marquis of Worcester in his 'Century of Inventions,' articles 9 and 10, which, for the information of some of your readers who may not be in the possession of the work alluded to, I have transcribed:—

"9. An engine, portable in one's pocket, which may be carried and fastened on the inside of the greatest ship, *Tanquam aliud agens*, and at any appointed minute, though a week after, either of a day or night, it shall irreversibly sink that ship.

"10. A way, from a mile off, to drive and fasten a like engine to any ship, so as it may punctually work the same effect, either for time or execution."—R. G. G."

The letter of Edward Whyte is forcible, but we have not room for it on account of its length.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order, to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the LEAGUE forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadsby, Newall's-buildings, Manchester; and the LEAGUE may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

GREAT LEAGUE MEETING.—The LAST MEETING of the LEAGUE for this SEASON in the THEATRE ROYAL COVENT-GARDEN, will be held on WEDNESDAY EVENING NEXT, the 7th instant.

GEORGE WILSON, Esq., will take the Chair at HALF-PAST SEVEN O'CLOCK precisely.

The Meeting will be addressed by Thomas Milner Gibson, Esq., M.P., George Thompson, Esq., and W. J. Fox, Esq.

Cards of admission may be had on application at the Offices of the League, on Monday and Tuesday, between the hours of eleven and four o'clock.

Applications for Private Boxes to be made personally or by letter on Monday.

The cards of registered Members will admit, as heretofore, to Pit and Galleries.—DOORS TO BE OPENED AT SEVEN O'CLOCK.

POSTSCRIPT.

LONDON, Saturday Morning, August 3, 1844.

To-morrow, and to-morrow week, being the first and second Sundays in August, the overseers are required to have lists, both of borough and county voters, affixed to the doors of every church and chapel in their respective parishes. Let Free-Traders look sharp, both in town and country. Every one who has claimed should see with his own eyes whether his name be there. If it be omitted, he should forthwith send his claim to the overseers to be placed on the list. The 25th of August is the last day on which such claim will be received. And there should also be a sharp look out for the names of unqualified voters, who may have been placed on the lists to serve the cause of monopoly. "Working the registration" has been practised as a trade by the sinister interests. Every name placed fraudulently on the list has the effect, if not objected to and expunged, of neutralizing that of an honest man. It is good service to defeat such tricks. Immediate information should be given to

the Registration Committee, of any cases in which there is reason to suspect they have been played. Any voter on the list is qualified to object; but care should be taken that the objection is supported before the revising barrister. The various forms of claim and objection have already been printed in the LEAGUE; and we again refer for information on every needful point, to the excellent manual entitled a "Guide to the Elective Franchise," issued by the Metropolitan Registration Association, at 68, Cheapside. The secretary of that institution, Mr. Sidney Smith; or Mr. Hickin, the secretary of the Anti-Corn-Law League, Manchester, will, we have no doubt, promptly attend to any communications on difficulties that may arise. And now that we have briefly indicated the work of the day, let every man do his duty.

EPITOME OF NEWS.

FOREIGN.

FRANCE.—The anniversary *fetes* in celebration of the "Three Days of July," commenced at Paris on Saturday. Low masses were performed in all the churches, and a special service took place in the church of St. Paul, which is nearest to the Bastille monument. The Prefect of the Seine, M. de Rambuteau, General Jacqueminot, commandant of the National Guards, and all the officers of his staff, were present at that service. At noon the posts were doubled, says the *Courrier Français*, and entrusted to the command of staff officers. In the barracks of the Municipal Guard the men were ready to mount their horses, or to rush to arms. The rounds of the superior officers were unceasing, the Prefecture de Police was crowded with Municipal Guards and policemen. At Neuilly, the garrison of the palace was tripled as early as nine in the morning.

The Duke of Bordeaux has addressed a notice to the European courts, stating that as he has become head of the house of Bourbon by the death of the Duke d'Angoulême, he protests against the change in the order of succession to the crown of France, and declares that he will never renounce his rights.

SPAIN.—The state of siege was raised at Saragossa on the 19th ultimo.

Lisbon papers state that the affairs of the Portuguese Government are so embarrassed that it has been obliged to suspend its payments. A paltry bill for £120 has been protested.

ATTEMPT TO ASSASSINATE THE KING OF PRUSSIA.—The 26th of July, at the moment when the King of Prussia was about to set out on a journey, an assassin, named Tscheck, burgomaster at a little village some leagues from Berlin, fired a pistol. The ball glanced off the King's breast, without doing him any mischief. Her Majesty the Queen escaped the imminent danger by just at the moment accidentally leaning forward, and in this way the ball, which otherwise inevitably would have hit the Queen, passed behind her. The King continued his journey. The assassin is arrested.

The *Gazette des Tribunaux* states, on the authority of a letter from Berlin, that the Prussian Government has come to a resolution to abolish imprisonment for debt in all cases.

BOLOGNA, July 19.—Another execution has taken place in Bologna, in conformity with the finding of the military commission, and which was forwarded to Rome and received the Pope's ratification. Giuseppe Gardenghi was executed on the morning of the 16th inst., by shooting through the back. Another individual, Raffaele Minelli, has been condemned to the galleys for ten years. A long list of persons moving in the better classes of society is expected to appear in a few days; it is feared that some of the sentences will be capital.

We learn from Prague that on the 16th of July notices were posted up in the city that, as tranquillity was completely restored, the ordinance directing all public-houses to be closed at nine o'clock was no longer in force, and that they might, as before, be kept open till twelve.

LANDSHUT, IN SILERIA, July 20.—This morning, at ten o'clock, a fire broke out in the inner town, consisting of narrow streets, with lofty wooden houses, and, though there was no wind, spread with such rapidity, that in three hours fifty houses, besides the outbuildings, and the two large inns, were reduced to ashes. Nearly 200 families are houseless, and have partly lost, not only their property, but the means of gaining their livelihood.

The *Helvetie* complains of a new violation of the Swiss territory by French custom-house officers, who, it says, have crossed the Doubs, and seized a citizen of the canton of Berne, bound him, and carried him into France. The *Helvetie* adds, that this is the third instance of invasion for which the canton has had to demand reparation within the last three years.

INDIA AND CHINA.—The Indian mail arrived at Marseilles the 29th of July, bringing news from Bombay to the 19th of June, and from China to the 1st of May. The fact of Lord Ellenborough's recall was known at Bombay the 6th of June, on which an express was immediately despatched to Calcutta. His lordship would have known his recall, it was expected, by the 15th. The assembly of the Belooches chiefs passed off most orderly, but the result came to us not yet known. The revolution in the Punjab has as yet had no further consequences than the defeat and murder of Itur Singh. The district of Boorhampore has been taken possession of without resistance, and has, it appears, been restored to the Maharattas.—The populace of Canton rose against the quarter where the factories are situated, but the tumult was promptly put down.

We regret to learn from the *Hong-Kong Gazette*, of the 23rd of April, that Commander the Hon. Erskine Murray, who had proceeded with a couple of vessels to Borneo, to form a settlement there, and to establish friendly relations, was betrayed and treacherously murdered, with several of his party, by the Sultan of Coit.

The Rev. Doctor Wolff has written from Bokhara to Captain Grover, stating that he had had an interview with the King, who informed him that he had caused Colonel Stoddart and Captain Conolly to be put to death in June, 1842. Stoddart had been put to death on three grounds: first, on account of his having treated royalty with disrespect; secondly, that he had turned Mussulman, and then returned to the Christian faith; and lastly, that he had promised to get letters from England in four months,

by which he would be acknowledged ambassador from England, and fourteen months had elapsed without receiving any answer. Captain Conolly had been put to death for having, as the King alleged, induced the Khans of Khiva and Kokan to wage war against him.

MOROCCO.—Marshal Bugeaud informs his Government that he had received despatches from the Emperor of Morocco, to the effect that he had ordered the Calipha who had attacked the French troops to be put into chains, and to be placed at the disposal of Marshal Bugeaud. Marshal Bugeaud, on the 22nd of July, had his headquarters at three leagues from Ouchda, and was continuing to burn the villages and destroy the crops on the Morocco territory. The same day (the 22nd) the Marshal sent despatches of a most pressing nature to the Prince de Joinville.

Intelligence has reached Constantinople of a signal defeat having been recently experienced by a corps of the Russian army, of 40,000 men, in Daghestan, by the Circassians, under the command of the famous Schamyl, in which it is said that the latter captured a great number of prisoners, including 200 officers and two general officers, besides all the guns and war materiel.

UNITED STATES.—The royal mail steam-ship *Britannia* arrived at Liverpool early on Monday morning, after a quick passage, having left Boston on the 16th, and Halifax on the 18th ult.

The riots between the native Americans and the Irish were renewed on the 5th of July, and issued in a serious conflict between the former and the military, in which numbers on both sides were killed and wounded. It appears that on the 5th instant a report prevailed that a number of muskets had been conveyed by the Irish Catholics to the church of St. Philip de Neri, in Queen-street, Southwark, Philadelphia. The report caused much excitement; the street was soon crowded with citizens, the sheriff and two aldermen were sent for, the building was entered, and ten or a dozen muskets were found. A committee of the citizens was subsequently appointed, and, after much consultation, the church was again entered to search for more arms. They subsequently found a quantity of arms, bullets, cartridges, gunpowder, and percussion caps. The excitement increased greatly after this. On Saturday the state of affairs before the church was so threatening that the military were marched to the spot. The crowd made a rush upon them, and forced them back. At length the soldiers were assailed by missiles of all descriptions, which having been borne for some time, the word was given to fire. A Mr. Nailor, an ex-member of the Congress, stepped forward, and exclaimed, if they would fire on their fellow-citizens, they had better commence with him. He was instantly arrested, and locked in a part of the church placed under guard. This exasperated the populace greatly. After twelve o'clock the crowd gradually and slowly diminished in numbers, until about nine o'clock on Sunday morning, when they began to increase, and threats, foul and deep, were proclaimed, that unless Mr. Nailor were released, the walls of the church should be battered down. The demand was resisted for some time, until at length two pieces of cannon were brought up near the church. During all this time the military had possession of the church. Several attempts were made to break open the church doors, and they at last succeeded. On the church being taken possession of, an alarm was given by the tolling of bells, and a large body of military was marched to the spot, when, some formidable demonstrations having been made by planting pieces of artillery against the doors, &c., the rioters were induced to evacuate the building. The military were shortly afterwards assailed by a body of men, upon whom they fired, when several persons were killed and wounded. The crowd soon rallied in various places, and obtained possession of three cannon, taken from on board two vessels lying in the river, as also a considerable number of muskets and other firearms. The cannon were loaded with various substances, one of them with a thirty-foot chain, which killed or wounded a number of the military. The firing with musketry was kept up briskly, and the rioters took shelter in, and fired from, the houses and alleys in the vicinity upon the military. A squadron of cavalry arrived on the ground about half-past ten, and succeeded in capturing one of the guns. As soon as the cavalry made their appearance the rioters one generally dispersed before they were charged; and by o'clock the military had entire possession of the ground. The city was placed under military rule, and by dint of vigorous measures tranquillity was restored; but the authorities continued to exercise the utmost vigilance, and were in perpetual alarm of a fresh outbreak. Several of the rioters had been arrested, and examined on charges of riot, high treason, and murder.

General Waddy Thompson, who was some time Minister for the United States at Mexico, has published a letter of considerable length against the project for the annexation of Texas. As General Thompson is a native of the south, largely interested in Texas, and familiarly acquainted with its concerns, his arguments have excited considerable attention.

MURDER OF THE MORMON LEADER.—The Mormons have for some time past been in insurrection. Their leader, however, Joe Smith, and some of his followers, had down their arms on the assurance of protection from outrage. Joe Smith, his brother Hiram, and some others were confined in goal at Warsaw, in the State of New York, awaiting their trial on a charge of treason. The goal was strongly guarded by soldiers and anti-Mormons, who had been placed there by the governor. A Mormon attempted to rush by the guard for the purpose of forcing his way into the goal. He was opposed by the guard, and fired a pistol at one of the guards, giving him a slight wound. The governor and his forces being absent, a general confusion ensued in the crowd around the goal. Joe and his Mormon fellow-prisoners, it seems, had provided themselves with pistols, and commenced firing upon the guard within. He then attempted to escape from the window, when a hundred balls entered his body, and he fell a lifeless corpse. His brother Hiram shared the same fate. Richards, a leading Mormon, was badly wounded. There our intelligence ends—what took place after this, God only knows. Mormons immediately left for Nauvoo to carry the news of the death of the prophet.

FLOODS IN THE WEST.—We have by this arrival fearful accounts of the overflow of the Mississippi. For a region of more than a thousand miles in extent, along the Missouri and Mississippi, above St. Louis, the inhabitants have been deprived of their cattle and crops, and, in many instances, their houses and barns also; while

the soil itself, for hundreds of thousands of acres, has been either seriously injured or totally destroyed. The loss of the cotton crop now growing is estimated at equal to 300,000 bales. The city of St. Louis, itself a severe sufferer by the flood, has naturally become the refuge of hundreds of houseless, destitute, and starving creatures, driven from their homes by the pursuing footsteps of the flood; and the scenes of want and suffering presented by them—gathered together in sheds and rude tents, and fed by the hand of public charity—is represented as heart-sickening in the extreme. We are yet to hear of the destructive course of the flood for thirteen hundred miles between St. Louis and New Orleans; and we anticipate disasters of the severest kind when the mighty torrent roars through the Louisiana plantations—the garden of the south.

CANADA.—Accounts from Canada represent the prospects of the agriculturists as highly favourable.

NEW SOUTH WALES.—A letter received at Monmouth, from Hobart Town, dated March 8, 1844, states, "I often see Frost, Williams, and Jones; the former lives a few doors from me, at a grocer's, he is in the counting-house; Williams is a constable; and Jones is a guard to the mail."

CUBA.—A letter from Havannah, dated the 23rd of June, published in a Philadelphia paper, announces that affairs in that island were in an awful state. The writer says:—"Executions are going on daily under sentences of the military commission at Matanzas. Eight negroes and one white man were shot there three days ago. Ten more are for execution next week, and among them the poet 'Placido.' Arrests are still numerous, principally of free people of colour, whose properties are immediately confiscated, and a wholesale system of robbery is thus established." The writer adds that General O'Donnell had positively refused the British Commissioners to liberate any of the "emancipados," or negroes captured long ago by English cruisers, and who, having served their probationary term, were entitled to their free papers, under the treaty with Great Britain. There were upwards of 5000 of these unfortunate people, all of them entitled to their freedom; but their condition is represented as far worse than that of the slave whose owner had some motive to treat him well, while, from the emancipados working for a term of years, the master exacts the greatest possible amount of labour, at the least possible outlay for food and clothing.

A frightful steam-boat accident occurred on the 25th of May last at Rio de Janeiro. About 200 persons had taken their passage in the *Esperadora* steam-boat for a village called Nitheropy, when, as the boat began to move off, the boiler burst and caused the death of about seventy persons, besides wounding thirty more.

By letters from Tahiti, dated March last, it appears that the French had taken military possession of Tahiti, and had imprisoned the British consul, Mr. Pritchard, and several of the chiefs of the island, whose property they had confiscated. Queen Pourié had taken refuge on board an English ship, the *Basilisk*. The island was declared to be under martial law; and the French commandant, D'Aubigny, had threatened, in case of any insurrection on the part of the natives, or any loss of property or injury to the French, to hold the consul responsible, both in person and property, as "the daily mover and instigator of the disturbance of the natives." Mr. Pritchard is now in London; and the whole matter has been brought by Lord Aberdeen under the notice of the French Government.

DOMESTIC.

At Nottingham, on Saturday last, William Saville, aged 29, was found guilty of the wilful murder, on the 21st of May last, at the parish of Colwick, of Ann Saville, his wife, and of his three children, being two daughters, aged respectively seven and five, and a little boy, aged about three years, and was sentenced to be executed. John Dickenson, Esq., of Abbot's-hill, Herts, has, with great liberality, given a plot of ground, of about three acres in extent, situated on his estate, between King's Langley and Abbot's Langley, to serve as a site for the Booksellers' Provident Retreat. The celebrated chemist and philosopher, the venerable Dr. Dalton, of Manchester, died suddenly at an early hour on Saturday morning. He had been in comparatively good health a few minutes previously. Dr. Dalton was in the 78th year of his age. A series of lectures on the subject of explosive compounds were commenced by Dr. Ryan, F.R.S., at the Polytechnic Institution, on Monday evening. The subject of this, the first lecture, tended to show the power the lecturer believed Captain Warner had probably used in blowing up the John o' Gaunt. He believed Captain Warner had used chlorate of nitrogen, a most dangerous compound; but, as a great many people believed, he did not suppose that Captain Warner used a lock or a trigger for the purpose of causing the explosion, for there were innumerable other means at the disposal of the chemist much easier of application, and several of which were more to be depended on. A parliamentary paper, on the subject of military savings' banks, has been printed. The total number of those banks (which have been established up to the 31st of March, 1844) amounts to 108; the total amount of cash deposited therein was £15,002, the amount withdrawn only £303; and the total number of depositors 1840. Mr. Master, M.P. for Gloucester, has accepted the Chiltern Hundreds, and Lord Villiers, son-in-law to Sir Robert Peel, has declared himself a candidate for the borough. Mr. J. R. Clark, ironmonger and tinner, of Beverley, has been the successful party in obtaining the contract for making the whole of the lamps for the intended new gas works in the city of Hamburg. About 3000 lamps will be required. **Leeds Times.**—A bill to legalise Art-Unions, brought in by Lord Montagu, has passed the House of Lords, and is now before the House of Commons. The brig *Grace*, of Newcastle, arrived at Shields on Saturday last, from Ichaboe, bringing 300 tons of prime guano. The *Grace* left the island on the 1st of May, and there were thirty-seven vessels then loading and waiting for cargoes, with others coming every day. The cities of Scotland are competing with each other in the excellent object of founding public baths. Dundee is to have this convenience for the people. Lord Kinaird has promised to give a hundred pounds towards the formation of a bath, and Mr. Duncan, the member for Dundee, five guineas. The first railway ever formed in the British colonies, is about to be constructed in the island of Jamaica, between Kingston and Spanish Town. The length is twelve miles. Dr. Vaughan, the historian, and the principal of the Independent College, Man-

chester, has consented to become the editor of a projected review, which it is proposed to publish under the title of the "British Quarterly Review," and which is intended to advocate the principles which have been held by the English Nonconformists for nearly three hundred years, as well as to serve the general purposes of literature and science. On Saturday, at the weekly meeting of the committee of aldermen, the members of the Navigation Committee and the Watermen's Company attended, and presented a copy of by-laws and rules for the future regulation of the numerous steam-boats on the river. The alterations proposed by these rules are, that in future no steam-boat is to carry beyond a certain number of passengers, according to its tonnage, and that proper persons are to be appointed to see that the regulation is not violated; and also that no boat is to be permitted to go beyond a certain rate of speed; and the places of embarkation are to be upon a secure and uniform footing.

On Sunday evening, the *Starlight*, iron Chelsea boat, on her passage down the river at nine o'clock, ran foul of Westminster Bridge, and received such damage as prevented her from making the pier by at least 10 feet, at which distance she sank and grounded, fortunately for all on board, at low water. She was crowded with passengers, male and female, who had to make their way to shore across two planks not 20 inches in width, supported in the middle by a small boat. With the assistance, however, of the captain and pier attendants, the affair was managed without any accident to the passengers. It is understood that, in consequence of the disfranchisement of the borough of Sudbury, attempts are being made by a large number of the influential electors of the county of Middlesex to obtain the consent of her Majesty's Government to Middlesex having two additional members. A prize-fight took place on Monday week, near Nottingham, between two men of the names of Fitzhugh and Cumberpatch, in which the former received such serious injury that he died. A coroner's inquest has been held, and a verdict of wilful murder returned against Daniel Cumberpatch, the principal, Samuel Braines, William Cooper, and Joseph Page, the seconds, and against John Fitzhugh (deceased's father), Charles Coles, Edward Lenton, and Henry King, as accessaries. Our reports from all parts of the country (Ireland), says the *Dublin Post*, are in the highest degree satisfactory. The harvest will be about a fortnight earlier than the average of years. Reaping of wheat, oats, and barley, has already commenced in some few places, and next month it will be very general. Lord Heytesbury, the new Irish Lord Lieutenant, made his public entry into Dublin on Friday, July 26. Intelligence was received on Saturday that the Irish steam-ship, *Robert Napier*, trading between Liverpool and Londonderry, had been totally destroyed by fire. The vessel was of 500 tons' burden, with two powerful engines of 180-horse power. The *Robert Napier* left Londonderry on the previous Wednesday forenoon, for Liverpool, with a heavy cargo on board and about thirty passengers. About half-past ten o'clock at night, when she arrived off a place called Woodson-town, between Portrush and Ballycastle, she was found to be on fire, and, notwithstanding every effort made to save her, was burnt to the water's edge. The crew and passengers escaped uninjured. William Stanley Warner, the clerk in the Birmingham District Banking Company charged with having stolen from that establishment notes and sovereigns to the amount of £1210, and subsequently absconded, was apprehended at Chester, on Saturday evening, with upwards of £1100 in his possession. An appalling murder was committed on Sunday last at Liverpool, by a tailor, named Owen Leonard, who cut his wife's throat with a razor, and otherwise mutilated her person with the same weapon, his son, a lad of twelve or thirteen, being present. He was immediately taken into custody. A bill to enable private partnerships to sue and be sued in the name of the firm, has been prepared and brought in by Mr. W. Gladstone and Sir George Clerk. The following are the pensions which have been granted during the year ending June 20th last:—Dame Maria Bell, £100 a year, in consideration of the services rendered to science by her late husband, Sir Charles Bell; Miss Ann Drummond, in consideration of the public services of her brother, the lamented Edward Drummond, Esq., assassinated by M'Naghten, £200 a year; Robert Brown, Esq., the botanist, £200 a year; Dame Florentia Sale, wife of the "hero of Jellalabad," £500 a year; and Sir William Rowan Hamilton, the astronomer royal for Ireland, £200 a year. Messrs. Hardman and Co., of Birmingham, recently applied in the proper quarter for leave to register a new pattern repeat button, but the application was refused on the ground that the act of Parliament precludes registering any work of art bearing on it words "contrary to order or public morality." The pitmen's strike still continues, the men appearing determined to hold out. The Rev. Mr. Brasbie, a Roman Catholic priest, read his recantation on Sunday week in Dingle church, Kerry. This act is said to have caused great excitement amongst the people, and to have induced the Hon. Captain Plunket, of her Majesty's steamer *Stromboli*, to march into the town from Ventry, with a force of about one hundred men, including the marine artillery and marines, with drums and colours, for the protection of the rev. gentleman from "Lynch law," with which it is alleged he was threatened. On Thursday the act of Parliament for abolishing the collection of tolls at the different gates in Newington, Camberwell, Kennington, and Lambeth, came into operation, and the above gates will soon be razed to the ground. Lord Morpeth laid the foundation-stone, on Thursday week, of a new church in the borough of Morpeth. His lordship delivered a suitable address on the occasion. Some workmen, while fishing off Preston-pans, July 25, caught a skate of the enormous weight of 1294 lbs., and measuring in length six feet three inches; in breadth, five feet nine inches. The subterranean fire in the Beaufort pit, which has for some time seriously alarmed every person interested in the welfare and prosperity of this and the adjoining mineral districts, has been at length, with much labour and difficulty, subdued, so that the men were enabled to resume their accustomed employment on Tuesday se'nnight. **Cambrian.**—The *Galway Vindicator* states, that the judges of assize arrived at Clifden without the usual escort of military or police, but in lieu thereof and "in compliment to the hon. visitors, the best and well-instructed Temperance band, all Repealers, accompanied their lordships, and played many of our national and soul-stirring airs, which the judges enjoyed in no small degree." The Rev. G. Harris, one of the Church ministers of Gravesend, committed suicide in that town on

Friday week, while labouring under temporary insanity.

Between 11 and 12 o'clock, on Sunday night, James Smith, a driver on the Great Western Railway, was killed near Iwer-bridge, West Drayton. It is supposed that the unfortunate man was going along the luggage to speak to the guard.—We think we do not exaggerate when we state that 4000 labourers from the counties of Mayo, Roscommon, and Leitrim passed through this town this week, on their route to England and Scotland, to reap the harvest.—*Longford Journal*.—The Repeal Association held its weekly meeting on Monday, in Conciliation Hall, Dublin. The Rev. Mr. Tierney presided. Mr. Daniel O'Connell, jun., announced that his father and the other prisoners were in excellent health. The week's rent amounted to £1000.—On Tuesday, seventeen public bills passed through a stage in rather more than half an hour, and without a single speech being made on either side of the House.—On Monday afternoon, a very handsome iron steamer, named the Elberfeldt, and intended for the Rhine, was launched from the yard of Messrs. Miller, Ravenhill, and Co., at Blackwall. She is upwards of 170 feet in length, but, being intended for river navigation, is narrow in comparison with her length, and draws very little water.—A pier for the landing and embarking of passengers by the steam-boats above bridge, is in progress of formation at Vauxhall Bridge.—In the course of the last year, 7337 indigent sick persons were admitted on the books of the Charing-cross Hospital for relief, at a cost of £2531 17s. 6d. Of these, 1120 were in, and 6217 were out-patients, many of whom were visited at their own homes, and the greater part were restored to the blessings of health, and to their occupations for the support of their families.—The Liverpool and Manchester Railway Company propose to form a new tunnel under the town of Liverpool. The company will thus be able to receive and discharge goods and merchandise with ease at both ends of the docks, and merchants and shippers will be able to effect great savings in cartage.—The trials for arson at Ipswich terminated on the 24th ult. There were 21 cases for trial, in which 28 persons were charged with the crime, and of these 15 were convicted, 12 acquitted, and 3 returned Queen's evidence.—The Committee of the House of Commons has given in a report against pulling down Westminster-bridge and building a new one.—On Tuesday morning, about three o'clock, a stack of oats, belonging to Thomas Collyer, Esq., and standing in a field of his on the road side, nearly opposite Milton old Church, Gravesend, was set on fire and completely consumed. Mr. Collyer is insured.—On Wednesday night Lord Ingestre introduced the subject of Captain Warner's experiment in the House of Commons, and concluded a speech on the subject by moving for the correspondence which had taken place between her Majesty's Government and Captain Warner, on the subject of Captain Warner's invention. Sir R. Peel seconded the motion, and entered at considerable length into the communications which had taken place between Captain Warner and the official authorities, and also as to the experiments already made. After some discussion the motion was agreed to.—The steward of the Vesper, Gravesend steam-boat, on Wednesday afternoon, lying off the Town Pier, while in a state of maddened intoxication, jumped from the vessel into the river, immediately sunk, and was drowned.—At a meeting of the General Shipowners' Society, held on Wednesday, in the Hall of Commerce, it was stated in the course of the proceedings, that not less than 200,000 tons of shipping were now engaged in the guano trade.—The number of deaths in the Metropolis, for the week ending last Saturday, as made up by the Registrar-General, was 1066, showing the somewhat considerable increase on the previous week's mortality of 170, and an excess over the weekly average for the last five years of 120—the number of that average being 946.—On Monday the foundation-stone of the new public baths for the working classes, at Edinburgh, was laid with much ceremony, and a public procession of the trades of the city.—A few days ago, as George Percy, Esq., younger brother of W. C. Percy, Esq., of Garradice, county of Leitrim, was amusing himself by shooting rabbits, the gun, owing to some mismanagement or a faulty lock, went off, lodging its contents under the unfortunate gentleman's arm, and inflicting a wound so dangerous in its nature that every means which medical skill could devise proved ineffectual, and he expired on Tuesday.—On Monday the Monarch sailed from Gravesend for Bengal, her first voyage, having been launched at Blackwall in June. The Monarch carries out 115 privates, a draft from the 39th Regiment, most of them recruits under 22.—The Lord Mayor has caused placards to be posted up along the river side, prohibiting bathing in the Thames. Persons offending are to be prosecuted with rigour.—A Mrs. Delacour died on Sunday last, at Mallow, of hydrophobia, being the second of the family who within the short space of five months has fallen a victim to this frightful malady.—The cricket match at Lord's, between "The Gentlemen" and "Players," was brought to a close on Wednesday afternoon after a contest of three days; the "Players" winning by 38 runs.—The Norwich assizes commenced on Tuesday. The cause list shows an entry of 16 cases, of which four are special juries; and the calendar contains 55 prisoners for the county alone, of which nine are charged with the crime of arson.—On the third reading of the Local Courts (Ireland) Bill, on Thursday night, the Lord Chancellor in supporting the bill drew forth loud cheers by the following remarkable words, so different from the memorable "aliens" speech:—"He did not know why Ireland should be put upon a different footing from England. (Very remarkable cheering.) For my part," said the noble and learned lord, "I cannot conceive anything more unwise—anything more mischievous—than a law which would place the people of Ireland in a more disadvantageous position, as regards the administration of the law, than the people of England. (Hear, hear.) I shall oppose this clause. I shall support the amendment of my noble and learned friend that it be omitted." (Hear, hear.)—Sir Robert Peel is to dine with the Worshipful Company of Clothworkers on Thursday, the 8th instant.—The notorious Joseph Ady has again been detected in one of his old tricks to obtain money under false pretences. He was brought up at the Mansion-house, on Thursday, on a charge of this nature, and, after receiving a sound rapping from Sir Peter Laurie (with whose name he had taken liberties), was permitted to go free, on promising the worthy magistrate not to use his name again.

TRADE AND COMMERCE.

From Sir Walter Raleigh's "Observations touching Trade and Commerce with the Hollanders and other Nations," as they were presented to King James." London, 1681.

May it please your Majesty,—I have the rather undergone the pains to look into their (the Hollanders') policies, because I have heard them profess, they hoped to get the whole trade and shipping of Christendom into their own hands, as well for transportation as otherwise for the command and mastery of the seas. I find that they do daily increase their traffic, augmenting their shipping, multiplying their mariners' strength and wealth in all kinds; whereas I have grieved the more, when I considered how God hath endowed this kingdom above any three kingdoms in Christendom with divers varieties of home-bred commodities which others have not and cannot want, and endowed us with sundry other means to continue and to maintain trade of merchandising and fishing beyond them all, whereby we might prevent the deceivers, engross the commodities of the engrossers, enrich ourselves, and increase our navigation, shipping, and mariners, so that it would make all nations vail the bonnet to England, if we would not be still wanting to ourselves in employment of our people. Which people being divided into three parts, two parts of them are mere spenders and consumers of a commonwealth, therefore, I am at these points following:—

To allure and encourage the people for their private gain, to be all workers and creators of a commonwealth.

To enrich and fill your Majesty's coffers by a continual coming in, and make your people wealthy by means of their great and profitable trading and employment.

To vend home-bred commodities to far more reputation, and much more profit to the king, the merchant, and the kingdom.

To return the merchandises of other countries at far cheaper rates than now they are, to the great good of the realm in general.

To make the land powerful by increasing of ships and mariners.

To make our people's takings, in general, to be much more every day than now they are, which by God's help, will grow continually more and more by the great course and commerce that will come by settled constitutions and convenient privileges, as in other parts they do by this their great Freedom of Trade.

All this, and much more, is done in other countries, where nothing groweth, so that of nothing they make great things.*

Then how much more mighty things might we make, where so great abundance and variety of home-bred commodities and rich materials grow, for your people to work upon, and other plentiful means to do that which other nations neither have nor cannot want, but of necessity must be furnished from hence?

And now, whereas our merchandising is wild, utterly confused, and out of frame, as at large appeareth, a state-merchant will roundly and effectually bring all the premises to pass: fill your havens with ships, those ships with mariners; your kingdom full of merchants, their houses full of outlandish commodities, and your coffers full of coin, as in other places they do; and your people shall have just cause to hold in happy memory, that your Majesty was the beginner of so profitable, praiseworthy, and renowned a work, being the true philosopher's stone to make your Majesty a rich and potent king, and your subjects happy people, only by settling of a state-merchant, whereby your people may have fulness of trade and manufactures, and yet hold both honourable and profitable government without breaking of companies.

These petty states finding truly, by experience, that small duties imposed upon merchandise draw all traffic unto them, and free liberty for strangers to buy and sell doth make continual mart; and, therefore, what exactions or impositions are laid upon the common people, yet they still ease, uphold, and maintain the merchants, by all possible means of purpose to draw the wealth and strength of Christendom to themselves, whereby it appeareth that, though the duties be but small, yet the customs for going out and coming in do so abound that they increase their revenues greatly, and make profit, plenty, and employment of all sorts, by sea and land, to serve themselves and other nations as is admirable to behold; and likewise the great commerce, which groweth by the same means, enableth the common people to bear their burden laid upon them, and thus they grow rich by reason of the great commerce and trade occasioned by their convenient privileges and commodious constitutions.

ADVANCE OF WAGES.—The principal portion of the cotton-spinners of Chorley have commenced working at an advance of 5 per cent. Messrs. Ashworth, of Torton, near this town, have, unsolicited, raised the wages paid to their operative cotton-spinners, 5 per cent.—*Bolton Free Press*.—The manufacturers of Carlisle have given the weavers an advance of 8d. per "cut," which will be about 10 per cent.

PRESERVATION OF GAME.—We notice in the accounts we receive from different parts of England that a feeling against the expenditure of the county-rate in prosecutions, and the demoralization attending the Game Laws, is developing itself every where. At the last General Quarter Sessions for Bedfordshire one magistrate drew attention to the heavy item of expenditure prosecutions under the Game Laws in Bedfordshire was to the county ratepayer, and gave notice of a motion for discussion at the next Quarter Sessions on the subject. The heir of a dukedom, the Earl of Euston, whose benevolence has made him be beloved by all classes that have had the good fortune to live under his sphere of influence, has brought the matter before the magistracy of the county of Suffolk. When we bear in mind the relation borne by the noble lord to the first magistrate of the county, the Lord Lieutenant, we feel surprise that the magistracy of Suffolk should let slip in silence the opportunity offered to them to be the first to move in so noble a design. They have lost the honour of being the first to direct the attention of the Legislature to a measure that must become law or the Game Laws be abolished altogether as burdensome to the tenantry of England, and immoral in their tendency.—*Bedford Mercury*, Monopoliist paper.

* "Amsterdam is never without 700,000 quarters of corn, besides the plenty they daily vend, and none of this groweth in their own country." "The abundance of corn groweth in the east kingdoms; but the great storehouse for grain to serve Christendom and the heathen countries in time of dearth is in the Low Countries."

COTTAGE ALLOTMENTS.—It is a remarkable and highly gratifying testimony to the value and moral tendency of the allotment system in the agricultural districts, that where the practice of allotments to labourers has been generally acted upon, no incendiary fires have taken place. Such a fact ought to have a constraining influence on landlords and statesmen in the extension and encouragement of the allotment system.—*Leeds Mercury*.

RISE IN VALUE OF GROUND NEAR GLASGOW.—On Thursday week the lands of Stobcross, to the west of Finnieston, and extending from the Clyde northward to near the Dumbarton-road, were sold by public roup at the price of 3s. per square yard, imperial measure. These lands extend to about 63 Scotch or about 80 Imperial acres, which, being about 387,000 square yards, makes the price amount to somewhere about £58,000; but as the purchaser pays the auction duty, which will be about £1770, as well as the half of the conveyance stamp, the price will actually amount to upwards of £60,000. We understand that these lands were purchased by the late Mr. Phillips (by whose trustees they have been sold), in the year 1817, for about £3700, making a rise in value of upwards of £56,000.—*Scotch Reformer's Gazette*.—[This is another of the many proofs which show how greatly the value of land is increased by the proximity of a manufacturing town.]

INCENDIARISM.—This evil has spread so much in the counties of Essex, Suffolk, Norfolk, and Cambridge, that frequent attempts are made to draw the attention of Parliament to the subject, but they are always met by the Ministry with the uniform answer, that the forthcoming trials will bring the whole subject to light. In short, the question is purposely delayed, as if it were a matter of no moment whether the property of individuals or the food of the country became the prey of the incendiary. Perhaps the consoling idea is indulged in by the Ministry and their besotted followers that the more that is burned the higher will be the price the remainder will bring; or that, by persuading the farmer to insure, a blow may in this manner be struck at the capitalists, without injuring the landlords, who will get their rents, not from the grain which grew upon their ground—the only legitimate source of rent—but from the pockets of the money-holders. Let them try this game a little longer, and they will not be long in discovering that the capitalists are as sharp-sighted as they are themselves. If they once discover that nothing but loss is obtained by insuring crops and farm-stock, they will shut their pockets, and leave the landowners, and the farmers too, to the tender mercies of a discontented peasantry. To us, who remember what was passing in England from twelve to fourteen years ago, the discontent of the rural population is assuming the same appearance, and is breaking out in the very same form as it did then, betokening a very unhappy and dissatisfied condition of the agricultural population, indicative alike of debased ignorance, and wickedness, its concomitant, and oppressions urging them to the perpetration of crimes so barbarous and appalling, and so wholly irrational.—*Stirling Obs.*

LANCASHIRE v. ELEVEN COUNTIES.—Recent statistical returns, for the census, the income-tax, and other purposes, are doing much to place Lancashire in its true relative position amongst the counties of England. Let us take, for the purposes of comparison, the following eleven:—Bedford, Berks, Buckingham, Camberland, Dorset, Hereford, Hertford, Huntingdon, Monmouth, Rutland, and Westmorland. Of course the aggregate area of these eleven counties is vastly greater than that of the single county of Lancaster; indeed, more than four times as great; the total area of the eleven counties being 4,926,342 statute acres, that of Lancashire 1,117,260 acres. But, although it might be the only means, at one period of our history, of estimating the importance of a district, to enumerate its "broad acres," that is no longer the only or even the principal test of its wealth or value as an integral part of the kingdom. We apprehend few statisticians would now rest satisfied with the acreage as a measure of either value or relative consequence in the state. Their first inquiries would rather be directed to the population and the estimated real value of property in the two districts to be compared; and it is only when subjected to these tests that the real position and rank of Lancashire, amongst English counties, is clearly perceived. The aggregate population of the eleven counties named is 1,319,892; that of Lancashire alone, 1,667,054 persons; so that this county maintains 347,162 more persons than the cluster of eleven counties named, and that upon an area smaller by 3,809,082 acres than that of the eleven counties! We have recently shown that a larger per centage of its population is employed in industrial occupations of all kinds (agricultural, manufacturing, and commercial) than that of any other county in England. How does it stand with respect to real property? A recent parliamentary return of the amount of real property (including tithes) assessed to the income-tax in the year 1843, in every county in England, enables us to make this comparison also. The same eleven counties had an aggregate real value of property assessed to the income-tax in 1843 of £7,099,664. Lancashire alone, possessing not one-fourth of their area in "broad acres" or square miles, had in the same year real property so assessed to the amount of £7,307,109; more by £207,445 than that of all the eleven counties together! These are facts which ought to be known to, and remembered by, every member of Parliament, and especially the county members, many of whom are but too much disposed to treat lightly the claims of this great, populous, industrious, and wealthy county to justice at the hands of the Legislature. Let these honourable gentlemen bear in mind for the future that Lancashire represents one-eleventh of the total real property of England, as assessed to the income-tax, and then we shall hear less nonsense in Parliament and elsewhere about the unequal burdens which are pressing so much more heavily on the agriculturists than on any other class of the community.—*Manchester Guardian*.

In Norway there are 72,624 full owners of land, to 30,568 farmers and 42,974 labourers. In France there are 10,296,682 owners. In Ireland only 10,000.

The *Morning Post* exclaims—"Alas! beyond the walls of the House—beyond the few who are interested in the down-sittings and up-risings of its members—who is there not perfectly indifferent to what becomes of the House of Commons? Is there one thinking man in the whole community who does not ridicule its forms of mock debate—who does not feel that the whole spirit of legislation is sacrificed to barren forms and empty sounds—that he who talks of the representation of the people is countenancing a deception and uttering a lie?"

OCCUPATIONS OF THE PEOPLE IN GREAT BRITAIN.

In the *Guardian* of Wednesday week we gave a summary of the occupations of the people of Great Britain; the result of separate returns in each county of England, Scotland, and Wales, and the islands of Wight, Guernsey, Jersey, &c., and Man. We have since received a copy of the summary of the official returns, as to the "Occupations of persons in Great Britain (including its islands, but exclusive of Ireland); including the army, navy, merchant seamen, &c.," and as this is altogether in a different form, and includes several heads or classes of employment not hitherto published, we give it as to some extent corroborating and verifying the accuracy of our previous statements, and also furnishing much additional information on a subject of great national importance. The following is the official summary; and it will be seen that we did right in deducting "the army at home" from the total numbers engaged in trade, manufactures, and other occupations not agricultural.

Total number of persons whose occupations are returned in Great Britain, including army at home, and navy and merchant seamen, &c., on shore ..	Total.
Army abroad and in Ireland ..	89,230
Navy and merchant seamen afloat ..	95,799
Other persons employed in trade (branch not specified) ..	57,112

Total occupations ..	7,094,185
Number of persons returned as of independent means ..	511,440
Almspeople, paupers, pensioners, and beggars ..	164,886
Other persons (including 957 convicts on board the hulks) not hereinbefore accounted for ..	76,057

Total number of persons returned as above ..	7,846,669
Residue of population ..	10,997,805

Grand total of Great Britain .. 18,844,474

We have no means at present of ascertaining the numbers of navy and merchant seamen on shore; but it will be seen that those afloat are not far short of 100,000 (viz., navy, 31,067; merchant-seamen, 89,230). The army abroad and in Ireland being 89,230, if we add to this amount the number in barracks in Great Britain on the night the census was taken, 33,075, we have a total of 122,305 for the whole army. The total number of persons engaged in industrial occupations is upwards of seven millions out of 18½ millions of people, or nearly 37.7 per cent. of the entire population. The residue of the population, including all children of tender years and unemployed, all unemployed females of all classes, &c., forms 58.76 per cent. of the entire population, leaving only 3.54 per cent. for the persons of independent means, the paupers, beggars, &c., and the other persons whose occupations are not accounted for in the census.

It appears that the persons of independent means in Great Britain form 2.71 per cent. of the entire population; and that the alms-people, paupers, pensioners, and beggars form only 0.87, or considerably short of 9-10ths per cent. of the whole population.

As in some measure connected with the subject, we may add the total population of Great Britain and islands in the British seas, as divided into those under 20 years of age, and those above that age, distinguishing the sexes:—

	Males.	Females.	Total.
Under 20 years ..	4,301,081	4,301,566	8,602,647
30 years and upwards ..	4,961,045	5,280,742	10,241,787
Total ..	9,262,126	9,582,308	18,844,434

The principal points worthy of observation in these figures are, 1st, the close approximation of the numbers of males and females in Great Britain under 20 years of age—there being an excess of only 485 females on upwards of 4½ millions. In adults there is an excess of 319,697 females—making the total excess of that sex 320,182. It has usually been supposed, and with some degree of correctness, that the age of 20 years divides the whole population of Great Britain more equally than any other given age, without using fractional parts of a year. Thus it would seem there were in 1841 more than 8½ millions of young people and children, and nearly 10½ millions of adults in Great Britain. The excess of adults over juvenile population, is 1,639,140.—*Manchester Guardian*.

IMMIGRATION INTO THE MANUFACTURING FROM THE AGRICULTURAL DISTRICTS.

It has been constantly assumed that, in large and manufacturing towns, the demand for labour, by encouraging early and more numerous marriages, produces so excessive a number of births to the total population as to lead to a natural increase of numbers much greater than occurs in other places. That such is not the only, or by any means the principal, cause of the great increase in numbers in the more flourishing manufacturing towns, the commissioners themselves point out in their comments upon the information offered with respect to the place of birth, showing that the cause which has the greatest influence is the enormous extent of immigration into those places where capital and enterprise hold out temptations to the industrious classes from other parts of the kingdom. We cannot find room for the interesting tables by which they show that the proportionate numbers, not natives of the places in which they are enumerated, are always greatest in those counties in which the rate of increase is most remarkable.

The extent and influence of immigration, however, may be exhibited in another mode, viz., by comparing in certain localities the natural increase, that is, the numbers added in every ten years by mere excess of births over deaths, with the actual ascertained increase exhibited by the census returns.

We shall find that the ten counties in which the population returns exhibit the least increase (giving an average of only five and a half per cent. in the last ten years) have, within the same period, added to their number by natural increase at the average rate of ten per cent., thus showing that they have increased their population by nearly twice as much as they have demands for or means of maintaining it.

On the other hand, if we take the five counties in which there is the greatest ascertained increase, viz., at an average of something over twenty-six per cent. in the decennial period, we shall find that their natural increase within the same time has been only at the average rate of eleven per cent., or very little more than those of the first set of counties. We see, too, that they have not only been able to support the whole of their natural increase, but to give employment and support to an additional population, from

overburdened and less fortunate localities, to the extent of fifteen per cent. on their own original population.

We must add, that the ten counties of the first set are all agricultural, viz., Buckingham, Cumberland, Devon, Hereford, Norfolk, Suffolk, Oxford, Westmoreland, Wiltshire, and the North Riding of York; and that the other five are the principal seats of manufacturing and mining industry, viz., Lancaster, Stafford, Monmouth, Durham, and Warwick.

If it is thus made clear that the large additional population exhibited by these returns for some of the towns, and for the manufacturing counties generally, is produced, not by a natural increase from excess of births over deaths to an extent much above the general average of England, but by receiving within their limits, and supporting, the surplus population of less flourishing districts, and especially that of the agricultural counties;—if it can be shown that these latter have almost universally an accession to their numbers, by natural causes, much greater than the increase returned by the population tables, what is the natural inference, and what the obvious course to follow? The natural inference would be, that the agricultural counties have not the means of supporting the population they raise—of providing labour or food for the additions they annually make to the disposable hands, and the craving mouths within their limits. And what would be the reasonable conduct to follow under such a state of things? We might answer simply,—Let things take their own course; let industry flow in its natural channels, and receive, with gratitude, the benefits it confers upon you. As that is, however, just what the agricultural interest, as it is called, will not do, we must say more distinctly, give free course to that commerce which is your preservative against poverty and ruin; make no suicidal attempts to continue, still less to tighten, those bonds which have already restrained the saving powers it might have exercised for you. Stop not up the natural channel for that stream of population which, if not allowed to escape, will inundate, and ultimately overwhelm you!

We are confident that, if either landed proprietors or honest yeomen could realize, in idea (for we would not wish them to experience in fact), all the evils that would follow—nay, we might almost say, *must* and *will* follow—the depression of our manufacturing towns, from the further or even continued restriction of foreign markets, they would soon change their tone. Let them but have returned upon their own hands the surplus population of their own raising, who have wandered forth from the pinching want and cold hearths which a limited demand for labour and miserable wages afforded, in their much-vaunted rural homes, to seek the rewards held out in the manufacturing districts to capital and enterprise; let but all these be forced back to swell the number of labourers that already exceed the demand,—let but the burden of all these be thrown upon the poor-rates, and thrown it must be, and we will venture to say, that a combination of ruin for the landed proprietor, and misery to the death for the labourers, will be presented, such as they dream not of.—*From the last number of the Edinburgh Review*.

MARKETS.

CORN MARKET.

MARK-LANE, Monday, July 29.—The supply of English Wheat this morning was not large, but sellers were obliged to submit to a decline of 3s. to 4s. per quarter, and much remained unsold at the close of the market. The trade in Foreign Wheat was very limited, and 2s. to 3s. lower. There was no alteration in the value of Barley, Beans, or Peas. There were only two or three vessels fresh up with Oats since Friday. The trade was very inanimate, and sales could not be made to any extent; except however in those cases where vessels were on demurrage a decline was not submitted to. S. H. LUCAS and SON.

FRIDAY, Aug. 2.—The arrivals of Grain of all descriptions from abroad during this week have been large, but the supplies of English Wheat and of Irish Oats are moderate. On Tuesday and yesterday we had some heavy showers of rain, and the weather still appears unsettled; this has given a little increase of firmness to the holders of Wheat, but the millers do not exhibit much greater anxiety to purchase. About 47,000 quarters of Wheat were released from bond in this port previous to the duty rising yesterday to 18s. There is a moderate demand for Barley, at about Monday's rates. No alteration in Beans and Peas. The buyers of Oats appear rather more disposed to stock themselves with Foreign Oats at the present low rates, but the quantity left over from former supplies, added to the fresh arrivals of this week, is too large for the sellers to obtain any improvement on Monday's prices. The duty on Barley fell to 4s. yesterday. S. H. LUCAS and SON.

Account of Corn, &c., arrived in the Port of London, from the 29th of July to the 2nd of August, both inclusive.

LEAGUE FUND, £100,000.

REGISTER, REGISTER, REGISTER!

Particulars to be attended to up to the 25th of August.

Dated this — day of —, one thousand eight hundred and —
(Signed) A.B.

THE FOLLOWING ARE THE GROUNDS OF OBJECTION TO SCOT AND LOT VOTERS.—1. Not an inhabitant householder on the 31st of July next previous to the time of serving the objection. 2. Not an inhabitant householder on the 7th of June, 1832, and for six months previously. 3. Not having been rated, or not having paid all poor's-rates demanded, on or before those respective periods. 4. Not inhabiting (sleeping) in any

COUNTY REGISTRATION.

Christian and Surname of the Voter objected to, as described in the List or Register.	Place of Abode, as described.	Nature of Qualification, as described.	Street, Lane, or other like place, where the qualifying Property is situate, &c., as described in the List or Register.
---	-------------------------------	--	---

Dated the — day of —, in the year —
(Signed) A. B. [Place of Abode.]

The revising barrister has power to adjudge costs, to be

paid by objectors to persons objected to upon groundless or frivolous objections. The barrister is the sole judge of the nature of the objection, and may make such order as he shall think fit for the payment of the costs of any person in resisting it; such costs not to exceed twenty shillings.

SPECIAL NOTICE TO CLAIMANTS FOR COUNTIES.

THE IMPORTANCE OF EXAMINATION OF THE LISTS.

Under the Reform Act one list for each parish, of the old and new claims, was sufficient. The 6 Vic., c. 18, s. 5, directs that lists of all new claims shall be printed; also a copy of the register for the parish then in force; such lists shall be published by placing them on the church and chapel doors on the first and second Sunday in August. (Sec. 22.) It is most important that the lists be printed separately, and that the new claims be not inserted in the copy of the register, for this obvious reason: The 40th section requires the revising barrister to correct the list; and if he finds more names in the copy of the register than on the register, he must strike out those names. The effect will be, that, unless a list of the new claims is made out separately, the barrister has no list to revise; and the voter loses his vote, unless he is prepared with a duplicate claim, and is prepared also to prove his qualification in the Revising Barrister's Court, as directed by the 37th section.

The negligence of overseers (to speak in the mildest terms) is so great, that often three parts of the voters on a parish list stand a chance of being disqualified by the improper way in which the copy of the register is made. Example—St. Michael-le-Guerne, city of London, in the present year:—

Joseph Chapman ..	Ditto.	Ditto.	Ditto.
John Cowper ..	Starford-street.	Ditto.	4, Ditto.
Frederick Cowper ..	Russell-square.	Ditto.	Ditto.

The 40th section requires the revising barrister to expunge the name where the nature of the qualification shall, in the opinion of the barrister, be insufficiently described for the purpose of being identified. And it is a very common practice for the vestry clerks, instead of procuring a copy of the register, signed by the clerk of the peace, to copy, year after year, some old list of their own, the result of which is the omission frequently of many names.

Electorates must not, therefore, and those who are watching the Registration, be content with having claimed, or take the lists as a matter of course as being perfect, but should carefully see that their new claims are on the new-claim list (separately), and not on the copy of the register; and also that those who have claimed years back should see that their names, addresses, and qualifications are properly described on the list for the present year's revision, or the overseers, by their errors, may disfranchise them without their having any notice on the subject, which, if detected, may be rectified on application at the court at the time the list is revised.

"NATIONAL HONOUR."

We are particularly desirous of directing the attention of our readers to that part of Mr. Gibson's speech, at the League meeting on Wednesday, in which he comments upon the sensitiveness to "national honour" manifested of late by the landed interest. Many symptoms have appeared, confirmatory of the accurate observation of the member for Manchester. It is the misfortune of this country that its predominant class has an obvious interest in a state of warfare. The horrors of such a state must be much mitigated to the imaginations of those who associate war with high rents, large patronage, and, for some members of their families, with those immense prizes of fortune and title which await successful commanders. How the judgment may be biased by selfish considerations, is very evident in the inability of this class to perceive, or rightly to feel if they perceive, the multifarious miseries produced by their Corn Laws. Those who can find, as they declare they do, a pure and patriotic motive for upholding the food monopoly, will scarcely be at any loss for a pure and patriotic motive to plunge the nation into war with France, upon some pretext or other which is sure to occur. It is necessary to watch these people. Circumstances lead them into temptation. An influence is always over them most malignant in its aspect for the country.

The danger of a war party arising and prevailing is enhanced by several concurring tendencies at the present moment. War saves a Government a world of trouble. Such a plea as "the country's defence and glory" overrides all political discontent. The movement of agitators is superseded by that of battalions. The columns of contending armies occupy the columns of antagonist newspapers. Battles furnish more stimulative reading than meetings for discussion. The remote echo of the cannon's roar drowns the nearest cry for redress of grievances. Just involve us in active hostilities, and Ministers would care little about the Post-office question, the Suffrage question, Irish Repeal, the Tariff, or Anti-Corn-Lawism. Sir Robert Peel would be rid of a world of troubles and difficulties. All improvement would be in abeyance. The county members would discover that the Premier was truly British in spirit. Her Majesty, God bless her, would be advised to review the Guards on a white charger. Even the Bishops would not object to the Sunday drilling of volunteers to repel threatened invasion; and the Income-tax would, in a trice, be forced up to 10 per cent.

The worse than questionable foreign policy of the late Administration smooths the way for the present Administration, should it unhappily be so ill-disposed

as to consult its own convenience and the interest of its backers, by speculating on the diversion of a few years of bloodshed. Lord Palmerston brought us to the very verge of a rupture with France. There has been the studied appearance of contrast on the part of Lord Aberdeen, who gains thereby for the Government a division of responsibility with their predecessors. It might be pleaded that they were urged and goaded by their opponents, and yet held out to the longest possible moment consistent with "national honour." The Whigs have played the game of the Tories for them, up to the winning point. To make a peace party of the Opposition would be for a long time impracticable.

Nor are there wanting hostile elements in the public mind, which might, by a certain dexterity, be turned to account. John Bull is impatient of being bound to keep the peace by the amount of his debt. He is easily irritated by the notion of a foreign power, and of France especially, presuming upon his hands being tied, or his spirit cowed. He does not half like the settlement in Algiers, and the meddling with the Emperor of Morocco. He tinges to have a finger in the pie. It has never been his custom to look on quietly. And now fuel is added to the flame from a most unexpected quarter. Together with Queen Pomare of Tahiti, the Missionary Society is insulted and assaulted. The late extraordinary freaks of the French in the South Seas have occasioned angry demonstrations amongst those classes of religionists whom almost any other provocation would have left watchful guardians of the spirit and principles of peace. On many sides the Ministry is loudly called upon to take care of the "honour of the country."

Trusting that no such awful calamity as the return of warlike times is impending over us, we yet deem it needful to mark these threatening symptoms, and admonish to timely carefulness. The spread of pacific principles is no adequate security. It is nine-and-twenty years since the battle of Waterloo finished the last long war, and a new generation has arisen without any practical or lively conception of the attendant evils and horrors. National interest is no sufficient safeguard; for that interest is already and obstinately sacrificed to a sordid advantage by the very class that would reckon on being benefited by war. To all who have any concern for the progress of improvement, who have any feeling for the condition of humanity, ever doomed to suffer so bitterly by national hostilities; who have any regard for that social well-being to which war is deadly; we say—beware. Watch these indications attentively. Prepare to restrain the mad selfishness that would interrupt the peaceful and honourable occupations of commerce, sever entirely the ties, already damaged, of nations whose mutual friendship is the means of mutual prosperity, and throw back the civilization of Europe, perhaps, for centuries. In the name of humanity and religion, we repeat, be watchful.

A FEW WORDS TO THE WORKING CLASSES.

Our journal is so extensively read by the operatives in the principal manufacturing towns of the empire, that we trust our other readers will excuse us for addressing ourselves more especially to that very valuable class, particularly as there is no section of the community more deeply interested in the speedy success of the great cause of Free Trade. An attempt has been made to divert their attention from this object, and induce them to devote all their energies to obtain an extension of the suffrage;—some designing men have gone further, and tried to persuade the working men to play the game of the monopolists, by resisting the repeal of the iniquitous Corn Laws until the anomalies of the elective franchise are satisfactorily arranged. We shall not enter into any examination of the probable motives of such men: we need not inquire whether they are hired agents, or involuntary tools; we seek not to know whether they have been led astray by mortified vanity, disappointed ambition, or the paltry pride of being leaders in one movement, instead of followers in another. Let them have the benefit of the doubts which the most charitable interpretation of their proceedings can suggest; but let us confine ourselves to the practical point of the effect of such proceedings, and see how far the course of conduct which they recommend is likely to promote the general interests of the working classes, and to advance the great object which they profess to have in view.

The repeal of the Corn Laws and the extension of the suffrage are not incompatible objects; indeed it is difficult to comprehend by what perverse process of reasoning they have ever been brought into collision. All the members of the present Parliament who are favourable to the extension of the suffrage, and particularly Mr. T. S. Duncombe and Mr. Sharman Crawford, are also strenuous advocates for the repeal of the Corn Laws, and gave their hearty support to Mr. Villiers's motion. In this they but follow the course of those who, in the past generation, claimed and won the confidence of

the working classes. William Cobbett (who, with all his errors and eccentricities, effected more for the political education of the people, and their consequent elevation to the position of a recognised power in the state, than any other man, save O'Connell, ever attempted,) was one of the most steady enemies of the wicked and impolitic monopoly of food. When the system of Corn Laws was first proposed, he called a public meeting in Hampshire, and denounced their tendency with an eloquence which was only rivalled by the sagacity that enabled him to predict the consequences which the country has since so bitterly experienced. No sooner was Henry Hunt elected for Preston by the honourable and manly exertions of the independent working classes in that town, than he declared his hostility to the monopoly of food, and placed a notice for the total and immediate repeal of the Corn Laws on the journals the very first night that he entered the House of Commons. On Thursday, September 15, 1831, he brought forward the subject in a speech of distinguished ability, discussing it on the true ground of its being a working man's question.

"If the Corn Laws are repealed (he said), you will give an impulse to the commerce of the country that will completely compensate any class that may suffer from such a measure being carried into effect. It is probable that I shall have very few supporters in my present proposition; but, as I consider that I have pledged myself to bring the matter forward, I should have neglected my duty if I had not done so. I know that the removal of the Corn Laws will afford greater relief to the working classes than any other measure that could be adopted. I therefore call upon all those who have regard to the permanence of the institutions of this country to come forward and support me. I know that, in the first instance, the landlords must make a sacrifice; but I say that the nobility and gentry of England ought to be ready to come forward and do so in a case like this, where there are thousands perishing from want."

I have no wish to degrade or injure the agricultural interests; on the contrary, I think they are of the utmost importance, and that we ought to do everything in our power to support and uphold them, provided we do not injure the other interests of the country. I deny, however, that the farmers are benefited by the Corn Laws; on the contrary, I think they are as much interested as any class in having them repealed. I cannot, I think, be considered the enemy of the agriculturist, when it is remembered that nearly all that I possess in the world is in land. I am sure, however, that whether the Corn Laws are beneficial or injurious, a system cannot be carried on to uphold one class at the expense of all the others. I cannot think that the landowners are so selfish as to persist in the system from day to day, and from year to year, from which they alone derive a benefit. If, however, the system is unhappily persisted in, I know full well that the scenes of last winter will be renewed with redoubled horror, and violence and bloodshed will accompany the destruction of property. The burnings will not be confined to one district, but will extend throughout the country; and a line of demarcation will be drawn, so that the labouring classes will be induced to look upon the possessors of property as their enemies, and to treat them as such. Why, I would ask, is the yeomanry now being embodied throughout the country? Why is such an enormous standing army kept up in time of peace, and while, as I sincerely believe, there is no intention of involving the nation in a war? I will answer the question. It is because you fear that the labouring population are your enemies, and that this is the only means of preventing their breaking out into a state of insurrection. I say that the labouring classes are dissatisfied, and are ripe for rebellion."

And again in his reply he stated:—

"Now, however, to go to the serious part of the subject for one moment. It is written in the Bible, 'Cursed be he who grindeth the face of the poor.' Now, this would apply well to the supporters of the Corn Laws. Again, it is said by the clergymen in the Litany,—and I am ready to confess that I am not very fond of quoting from clergymen,—it is said in the Litany: 'That it may please thee to give and preserve to our use the kindly fruits of the earth, so as in due time we may enjoy them; to which the landlords and farmers respond, 'We beseech thee to hear us, good Lord.' Now, I would ask any person, capable of forming a judgment on the subject, whether the conduct of these persons conforms with their precepts? The noble lord has stated that I uttered no arguments on the subject. I certainly did not, because I thought the facts that I stated were stronger than any arguments. * * * I have brought my motion forward with a view to benefit the humbler classes of society; and I can only say, that, if it should unhappily be rejected, I cannot answer for the consequences of the feelings of dissatisfaction that will prevail. These laws are a disgrace to the statute-book, as they inflict much evil on the poor, and do very little service to the landlord, for whose benefit alone they were framed."

In a former number of this journal we quoted the eloquent denunciations of the Corn Laws pronounced by that steady and consistent friend of the people, Lord King, and, we might add, the respected authority of Lord Radnor, whom Providence still preserves amongst us. But it is sufficient to say that, with the single exception of Mr. Feargus O'Connor, there has been no person in either House of Parliament during the last thirty years professing himself a friend of the people who was not a zealous advocate for the repeal of the Corn Laws. Mr. O'Connor's recorded views on the subject will be found in another part of our paper: it will be edifying to contrast his sentiments with those of Mr. Hunt, for the purpose of seeing which are more in accordance with the interests and wishes of the working classes of Great Britain. The men of Northampton have declared this

question for themselves; Feargus and his followers, though supported by the whole strength of the monopolists in that agricultural district, were completely out-numbered and out-voted by the Free-Traders at the late meeting.

Viewing the question in another point of view, we cannot find any person distinguished as a supporter of the Corn Laws who is an advocate for an extension of the suffrage to the working classes. In everything the monopolists are consistently opposed to the claims of the operatives; and yet the course of policy recommended to the working classes by some of their professed friends is, to support monopoly. Their claims are repulsed with scorn and disdain, and the operatives are advised to take the attitude of Shylock, and say,

"Fair sirs, you spit on us on Wednesday last;
You spurn'd us such a day; another time
You call'd us dogs; and for these courtesies
We'll let you tax our food."

But we are told that our road to a repeal of the Corn Laws lies through the Extension of the Suffrage; let us as rational men examine how far such a road is practicable. The point is at once decided by comparing the parliamentary strength of the Free-Traders and the Suffragists. More than one hundred and sixty members of the House of Commons have voted with Mr. Villiers for the total and immediate repeal of the Corn Laws; less than forty voted with Mr. Sharman Crawford for simply taking the question of the suffrage into consideration. If we turn from Parliament to the constituencies, we shall find the same, if not a greater, disproportion between the strength of the Free-Traders and the Suffragists, as evidenced by the elections for Birmingham and Kilmarnock. We do not discuss which of the objects is the more desirable, for that is really a matter of little consequence; we wish to keep attention fixed on what is the only point worthy of consideration—which of the two is the more immediately attainable. So far as we know, all the Suffragists, except Mr. O'Connor and a few of his followers, agree with us in desiring a repeal of the Corn Laws; and we have, therefore, no controversy on the point with them; but as this repeal can only be obtained from Parliament, or from the constituencies that create the Parliament, we put it to them, whether is a measure so largely supported as Free Trade, or one so weak as Complete Suffrage, in parliamentary strength, the more likely to meet a speedy settlement and accomplishment?

O'Connell has been always as zealous an advocate for a repeal of the Union as for Catholic Emancipation; but every one knows that if he had made emancipation his secondary object in the interval between 1820 and 1829—if he had set it aside for the question of repeal as some Suffragists would set aside Free Trade for the extension of the franchise—that the great act of justice to our fellow-subjects in Ireland would not, in all human probability, have been consummated at the present hour. But O'Connell was too wise to encumber the movement for emancipation with an effort to obtain some other less practicable, though to him more desirable object, and he therefore succeeded in removing those chains which had been rivetted on the necks of the Catholics for centuries.

The monopolists rejoice, and not without reason, when they see the cause of Free Trade, the great strength of which consists in its simplicity, encumbered and perplexed by being mixed up with another question totally unconnected with a repeal of the Corn Laws. Those Suffragists who make this confusion so obviously play the enemy's game that they are cheered on by the monopolist journals, and patted on the back so long as they appear the willing tools of mischief;—when the mischief is done, however, they are unceremoniously dismissed with scorn and contempt.

But this policy of saying that one question ought not to be settled except in connexion with another, to which it has little or no relation, is one which may be retorted to the great disadvantage, if not discomfiture, of the Suffragists themselves. Why may not the Ministers quote the obstructive course taken by certain Suffragists as a precedent, and refuse to consider the question of the franchise except in connexion with education, or with a new system of taxation, or with a levying of soldiers by conscription, or with all these three changes together? They could do so on far more plausible grounds than the Suffragists can assign for insisting on introducing their plan of electing members of Parliament into the Free-Trade agitation; and should they do so, it would not be difficult to predict the result. They would take good care to protract the arrangement of the preliminaries until public attention was weary of the subject, and the question of the franchise would be left to be settled by a wiser and more practical generation. We wish our readers to think for themselves on this point; they cannot possibly err if they gave the question a fair consideration. It is now thirteen years since the *Times*, in a leading article on Mr. Jacob's report, thus justly reprobated the Corn Laws:—

"But admitting at once the accelerated growth of po-

pulation, and the dearth of demand for labour as affirmed by the notemaker on the tables to which we have been adverted; that is to say, granting that the power of buying food has not kept pace with the want of it, was ever madness so combined with inhumanity, as in the legislation of the British Parliament with reference to the supply of corn? As our people have become more numerous, as mouths have multiplied, while, according to these returns, the produce of the soil of England, for many years past, has been stationary, if not declining, our lawgivers have been straining every effort to make food more inaccessible, instead of more attainable to the poor. Far from inviting bread to the poor man's door, they have been expelling it, first, by open prohibition, next, to this moment, by severe and pinching duties. They have striven to check population by artificial famine. Why, such a system is no better than deliberate rebellion against Providence, and is, of itself, enough to draw down some signal visitation upon us, if instant means be not taken to retrace a course so indefensible."

This is the system which we are bound to overthrow, and we know of no grievance more widely felt and more generally understood; the question of Free Trade is ripe, that of the franchise is not; and is it wise, is it even rational, to continue an oppressive and injurious monopoly, until the question of extension of the suffrage shall reach a distant and precarious maturity?

IMPERIAL PARLIAMENT.

THE FREE-TRADE MIRROR OF PARLIAMENT FOR THE SESSION 1844.

Twenty-sixth Week, ending Saturday, August 10.

Since Mr. VILLIERS first began to raise annual Anti-Corn-Law debates in the House of Commons, he has entered on the third cycle in the history of the question. He commenced when counteracted by the effects of abundant harvests and the influence of abundant ignorance—when agriculturists were contemptuously indifferent, commercialists sufficiently supine, and, consequently, the House of Commons utterly apathetic. He continued, when winter had descended on our national affairs; when the wolf howled at the national door; when country gentlemen became alarmed, and the entire community interested. He perseveres, now that spring appears again, and there is the probability of a shortlived summer of prosperity; but he continues it with the knowledge that there is not a man within the compass of Great Britain capable of putting two ideas together, be he Cabinet minister, landed proprietor, merchant, manufacturer, or hand-worker, who does not feel that the Corn Law but waits the next "fall of the leaf," in order to be blown into the gulf of oblivion, there to rot with the things that were.

And this latter reason may tend to explain what some friends, as well as foes, have termed the comparative flatness of the last annual motion raised by Mr. VILLIERS. The country gentlemen are now reduced to the humble position of maintaining their monopoly "from hand to mouth;" and having been repeatedly assured that there was no immediate change in the contemplation of Sir Robert Peel and Mr. Gladstone, they were content to endure the discussion, knowing that another session would be shuffled over without any material change. The same may be said of the public; delivered from the pressure of immediate and alarming necessity, yet with their minds sufficiently made up, they waited for the discussion, not with any expectation of novelty, either in argument or effect; but with the desire to see paraded the positive amount of the effective force available in the hour of actual conflict.

Yet, so far from being "flat" in any fair sense of that word, the debate raised by Mr. VILLIERS on the 25th of June last, was as interesting and as striking as any that has yet taken place on the same question. It lasted two nights, and produced some speeches, which, for breadth, comprehensiveness, and boldness of enunciation, were never surpassed in any previous Corn-Law debate. Hitherto the question has been too much viewed in the light of being a mere "knife-and-fork" one, as it was termed by Lord Howick. So unquestionably it is; and hence the pressing urgency with which, according to circumstances, it appeals, through the feelings and the sympathies, to the understandings of men. But Mr. VILLIERS took the subject out of the exclusive domain of the kitchen and the baker's shop, raised it from a mere household and domestic level, and invested it with all the attributes of a primal and first-rate social and political question. From insufficient food and miserable lodging, the result of scanty remuneration for labour, he traced the spread of disease, the prevalence of ignorance and vice, the increase of crime, with all their concomitants of misery, recklessness, despair, indifference to the means of good, proneness to those mere sensual gratifications of the hour which reduce man to the beast, and make him fit, not for GOVERNMENT, but chains, the scourge, and the cage. Nor did he avoid that delicate ground which now constitutes the sole support of the Corn Law. The condition of the agricultural labourer, in all its appalling nakedness, was laid bare; the utter weakness of the arguments of the Corn-Law upholders was exposed with a terseness which gave to every bullet its commission; and the firm confidence expressed in the ultimate triumph of truth and justice could not abate one particle of that fear which haunts monopolists when they take the bandage from their eyes, and examine the props on which the whole system leans.

The speech of Mr. VILLIERS may be said to have exhausted the subject; yet it was followed by others worthy of the one by which the debate was raised. Lord Howick, in particular, closed the first night's discussion with a statesman-like exposition of the economics, as well as the politics, which are entwined together in every aspect

under which the case can be viewed; and with a manly boldness uttered warnings in the ears of unwilling listeners, which their neglect of them may yet change into bitter if not fearful realities. These were enforced by other speakers on the following night. Mr. MILNER GIBSON, himself a "country gentleman," told his peers that the question resolved itself simply into that on which Byron had rung the changes—"rent, rent, rent!" Mr. COMBES, though comparatively brief, was pithy, as well as felicitous, in proving that the price of corn was a barometer of revenue, and therefore an indication of the adverse or prosperous condition of the country; and Mr. BAILEY, taking up the old pretext of "special burdens," which had ventured for a moment to air its threadbare suit during the debate, once more flung out that challenge from which the landlords ever shrink, of establishing the allegation by deliberate investigation.

But though the motion of Mr. VILLIERS was supported by the admirable speech and the vote of Lord Howick, as well as by those of some other members who do not avow themselves as positively decided on the question of total repeal, the great body of the Whigs followed the example of Lord John Russell, and withheld, not alone their votes, but their presence. On the first night of the debate, Lord John avowed himself as still clinging to a fixed duty, and still indulging in the hope that the question will yet be settled by a compromise; and on the second night, the whole front bench on the Opposition side of the House was left purposely and ostentatiously empty, until, at a late period of the evening, members who do not usually sit there filled up the vacancy. Of course, every politician is aware, that there is a conventional rule in the House of Commons, by which the front benches, immediately on the right and left of the SPEAKER'S chair, are considered to be reserved for the leaders of what are supposed to be the two parties of the supporters and the opponents of her Majesty's Government. On the right is the "Treasury" bench—that is, the bench on which all the leading Ministers sit; on the left is the ex-Treasury bench, usually reserved for those leading men who have been in office, and expect, on any change of circumstances, to return to it; and sitting along with them may be occasionally seen members who have never been in office, but who are either considered, or who consider themselves, to be entitled from their activity, their position, or their abilities, to take "front seats" on the Opposition side of the House. It was this front bench, then, which was purposely deserted on the second night of the discussion on the motion of Mr. VILLIERS; and as vacant front seats give an air of greater emptiness to a place than vacancies in back rows, the ostentatious absence of the leading Whigs gave Sir Robert Peel an opportunity to chuckle, of which he did not neglect to avail himself, in order to try and put the country gentlemen into good heart. Common rumour attributed the absence of the Whigs to something more than a predilection for a fixed duty, and an aversion to a total repeal of the Corn Laws. They were said to be mortified that the effort to upset the Government by a junction with the extreme section of the Protective party on the Ministerial side had failed; and, if this were the case, a motive more petty and unworthy could scarcely be supposed to animate leading men in political life, whose guiding principle is—or ought to be—not so much the gratification of their own personal ambition, as the advantage of the community at large, secured by a devoted and just confidence reposed in them.

Nevertheless, the motion of Mr. VILLIERS, which was an honest, straightforward, resolute proposition, was supported by 124 members in a House of Commons returned almost for the express purpose of resisting all change in the Corn Laws. The numbers as well as the arguments of the opponents of the motion were a striking illustration of an advancing cause and a diminishing resistance. Assaults on the Anti-Corn-Law League, with some ponderous jokes from Sir Robert Peel, formed the whole staple of defence. Well was it put by Mr. Cobden, that the opposition resembled the brief once handed to counsel, "No case, but abuse plaintiff's attorney."

This debate—like a great pitched battle in the field—may be said to have closed the regular Anti-Corn-Law campaign in the House of Commons for the present session. There was, indeed, the debate on July 19, raised by Mr. MILNER GIBSON, on the causes and the cure of Incendiarism, and on which Mr. BAILEY made a very able speech. This, however, occurred so recently, and the speeches having been given at length in the *LEAGUE*, that we shall no farther advert to it than by reminding our readers that it was an earnest and an animated discussion, felt to be such by the country gentlemen themselves.

The session is now closed; and in reviewing it, none but the most purblind and superficial observer can deny that it has been a potent one for the cause of FREE TRADE. We pointed out last week that it was the struggle between Monopoly and Free Trade, which has rendered the Government insecure, and thrown political parties into a chaotic state, and which has brought about the strange spectacle we now witness, of her Majesty's Government and her Majesty's Opposition alike declining in strength, and from the same cause. Assuredly, there is much work, on the surface, to be done, before all obstructions can be cleared away: but skilful navigators take into account the action of the under current, as well as the direction of the wind; and feeble indeed must be his powers of perception, who does not see and feel, that whether local elections are gained or lost—whether majorities or minorities in the Legislature be large or small—nay, whether the Anti-Corn-Law League is in a flourishing or a fading condition—the great principles of that social and political economy, identified not alone with the material but the moral prosperity of a commercial people, have taken their place in the public opinion of the country.

The session just closed has exhibited the Government and the Opposition sides of the House of Commons not only in a chaotic but a pitiful condition. The conduct both of Ministers and ex-Ministers has reduced the popular branch of the Legislature to a kind of Holywell-street, with rival tradesmen on each side competing for business, and each puffing off his own wares. Be it the business of the *LEAGUE* to endeavour to infuse into what is called "Opposition" a higher purpose, and a directer aim—to banish that small huckstering spirit which would rest speeches, motions, divisions, and legislative triumphs, on mere personal claims—which would sink the House into a national Crookford's, in which the cleverest gambler is he who can dexterously break the Bank, and carry off Downing-street as a sweepstake. At

present, the Ins and the Outs rest on mere sufficiency; and the whole difference between them turns upon whether Lord Palmerston or the Earl of Aberdeen displays the best capacity for the Foreign Office—whether the Earl of Minto or the Earl of Haddington can manage the Navy best—or whether Sir Robert Peel or Lord John Russell is the best bit-by-bit Free-Trader. The time is gone by for these little controversies; and by keeping a straightforward course, public men will yet find out that they must bid higher for popular favour, and the power which that favour confers. Meantime, we close the FREE-TRADE MIRROR OF PARLIAMENT for the present session, not without a strong conviction that the Free-Trade concessions of next year will show, in a very powerful manner, the strength of Free-Trade principles, and the influence, within the Legislature, of that public opinion which has been created out of doors by the ANTI-CORN-LAW LEAGUE.

MEETINGS.

ANTI-CORN-LAW LEAGUE.

The last meeting of the Anti-Corn-Law League for this season took place at Covent-garden Theatre on Wednesday evening, when every part of the spacious building was literally thronged with the advocates of Free Trade of both sexes—the ladies by their animated countenances and repeated plaudits manifesting that the interest which they felt in the proceedings was at least equal to that of the other sex; and the spirit and character of the meeting was altogether of the most determined and enthusiastic description. These periodical gatherings of the enemies of monopoly have certainly proved that that portion of the people who most acutely “feel where the shoe pinches” are fully alive to the objects of the League, the majority of the audience having always been composed of those classes of the community who more directly and bitterly experience the social and physical evils which restrictions upon trade, and restraints upon industry, entail upon the victims of class legislation. And, notwithstanding the apparent absence of general popular excitement, the interest exhibited at these meetings has constantly increased rather than abated; affording, we presume, a palpable indication of the state of public feeling upon the subject of Free Trade, and shadowing forth the doom of those selfish and unwise laws which humanity and sound policy alike condemn. The necessity for discussing the merits of the Corn Laws is much less now than it was before the League commenced their systematic instruction of the people as to the wisdom and justice of such legislative enactments as impose a tax upon the first necessities of life, and restrain the efforts of industry; and we doubt not that their exertions during the recess, although less prominent, will not prove the less effectual in working out the great purposes which form the mainspring of their varied movements.

The chair was taken at half-past seven o'clock by George Wilson, Esq., Chairman of the Council of the League; and we observed upon the platform the following gentlemen, many of whom were loudly cheered as they entered the theatre:—

Richard Cobden, Esq., M.P., Hon. C. P. Villiers, M.P., Thomas Milner Gibson, Esq., M.P., Benjamin Smith, Esq., M.P., General Briggs, Arthur Pattison, Esq., W. J. Fox, Esq., R. G. Welford, Esq., Colonel Tucker, Rev. Dr. Louis, Dr. Epps, Dr. Howell, Rev. Robert Phillips, Rev. A. M. Walker, William May, Esq. (Mayor of Ipswich), Rogers Margaretting, Esq., T. B. Warren, Esq. (Bristol), Captain Whitehead (Nassau), Messrs. W. A. Wilkinson, P. A. Taylor, G. Poulter, B. Harrison, Fearon, J. P. Burnard, John Bickers, John Walker, H. Leavens, J. Faulkner, James Henry Lewis, T. B. Farren, Jarvis, J. P. Williams (Manchester), Mylis, Luke Eleanti, B. W. Cheshire, Owen (Manchester), Press Grainger, H. T. Stainton, A. Flordati, Joseph Lindley, W. P. Knox, Joseph Ralph, James Phillips, J. C. Worthington, H. Ashton, J. S. Thompson, J. Ridge, Delvine, Whitehead, Blunt, F. Oliver (Cambridge), W. J. Adams, Robert Bell (Leeds), W. C. Jay, Henry Hogard, C. W. Cobby, James Wilson, John Blakeway, Richard Ware Cole, Thomas Lalle, J. H. Conat, Benjamin Thorne, Robert Davison, Jones (Northampton), William Cooke, Joseph Lambert (Leeds), Henry Pritchard, John Chalmers, James Butterworth (Rochdale), Thomas Chadwick, John Poulton, Richard Trass, Edward Henman, J. P. Delafons, W. Gessin, J. Kingsford, N. Overbury (Westbury, Wilts), C. H. Lattimore (Wheatthamstead), John Macartney (Manchester), James Cropp, Henry R. Claypole (Liverpool), Henry L. Keeling, Robert V. Smith, David Price, Thomas Tebbutt, Joseph Phelps, J. P. Fitzpatrick, C. Pack, D. Miles, W. Miles, W. James, Philip Howard, A. Macdonald, P. Conat, N. Peacock, A. Nott, W. F. Miles, B. Dobson, S. Smith, D. Purday, George Ridge, D. Street, M. Hooker, G. Leigh, D. Aumier, W. Mackenzie, &c. &c.

Mr. SAUL having read the minutes of the previous meeting, upon the motion of Mr. JAMES WILSON, seconded by Mr. ARTHUR PATTISON, they were unanimously confirmed.

The CHAIRMAN then came forward and said—Ladies and gentlemen, after an interval of five weeks we resume, for one night more this season, the business of the proceedings of the League. It becomes my duty to state to you what are the operations in which the Council have been engaged since we last met together, in order that you and the public may judge, at least that portion of it which takes an interest in the abolition of the Corn Laws, how far those operations are likely to contribute to the settlement of that question which it is our duty here to dispose of; and I do this with the greater pleasure because many are apt to believe that, when the proceedings of the League occupy less space in the public journals, that there is a corresponding disposition on the part of its leaders and the more influential members to suspend for a time those labours which are most useful, and with which most of us here are familiarly acquainted. Our important business, as you well know, is not now so much to educate or instruct the people, as it is to act upon the electoral body generally. As was stated here at the last meeting by Mr. Villiers, although this question has made great progress in the House of Commons, still the House of Commons presents no reflection of the public mind on the question at the present period, and therefore it is for us to stimulate and excite the electors so that, when they may be called on to act hereafter, they may do so after due and timely preparation. Well, then, we have proceeded like men of business to the consideration of the best mode of attending to the registration throughout the kingdom of the electors residing in boroughs. We selected 140 boroughs, upon which we thought with reasonable exertions an impression might be made. We appointed for our visiting agents to those places men fully acquainted

with the subject of registration in all its parts, fully qualified to undertake the business in as workmanlike a manner as any men in the kingdom could be expected to do. We sent them to these boroughs; they visited them and reported to the Council the result of their inquiries. In some instances they found that the registration had been totally or altogether neglected; in many but partially attended to; and in not a few that it was entirely in the hands of agents, or rather that the election rested in the power of bribers: but in very few instances did they find in these 140 boroughs to which I have referred the subject properly attended to. Then they formed committees where none existed previously; they exacted a pledge from the Free-Traders in many places that the subject should be fully attended to hereafter; and although the work is a great one and not brought to perfection, nor can it be expected to be so in a single day, yet I believe that now the first stimulus, the first great impulse, has been given to put in fit array and order that constituent body which has in its hands the destinies of this country, and which can, whenever called on so to decide, determine the fate of this and all other monopolies. (Cheers.) Therefore, whenever you hear it asked, “What is the League doing? What is the Council now occupied with?” until after the revision court let it be clearly understood that the whole of their attention is being given to the subject of registration in all its branches and in every part. It is not now my purpose to enter into any details as to the progress which may reasonably be expected to be made, but I would simply observe, that in the city of London you have a Registration Association which has made most unparalleled efforts on this occasion, and which has fully, I believe, provided, even now, against the return hereafter of any monopolist to Parliament. (Loud cheers.) In South Lancashire, if I were to go into the interesting particulars, the result would be equally satisfactory; and I firmly believe, do what they will in the shape of objections hereafter in that county, that it has now been wrested from their hands, and, with ordinary attention, no monopolist will be again returned for that division. (Loud cheers.) But although the subject of registration has occupied the greater part of our attention, let it by no means be understood that we intend for one moment to discontinue the discussion of this subject at public meetings at the proper time. (Cheers.) Since we last met, meetings have been held at Gravesend, attended by Mr. Bright; at Portsmouth, attended by Mr. Moore and Mr. Thompson; at Salisbury, attended by the same gentlemen; and there have also been meetings at York, at Hull, at Newcastle, and at Carlisle, attended by Mr. Moore, Mr. Thompson, and Mr. Plint; and last, though not least, a meeting was held at Northampton on Monday (cheers)—which it will not do to pass over altogether unnoticed. We have heard constant complaints of the League, that they do not throw these doors open to the public, nor the doors of the Free-Trade Hall at Manchester. The answer is very simple. We never have yet been able to find sufficient accommodation for our own members at our own meetings; and when we have as much room as we want, then it will be time enough to decide who may be admitted hereafter. But do not let it be for one moment supposed that the League have ever wished to shun discussion on this subject. (Cheers.) Last year Mr. Cobden held thirty meetings in the open air, and which were open to the whole counties where they were held, in fact, to all the country. (Cheers.) On Monday last a similar meeting was convened upon the requisition of upwards of 1200 freeholders and others, who applied to Mr. Cobden and Mr. Bright to request them to address the freeholders and others in the open air at Northampton. A requisition was also sent to Mr. Stafford O'Brien, the member for that division of the county, by freeholders who supported him at the last election, requesting him to meet and discuss with Messrs. Bright and Cobden the question at issue. Another requisition was also presented to Mr. Feargus O'Connor (groans and hisses), signed by upwards of 1250 persons, asking his attendance also upon the occasion. Now, there could be no mystery there, or packing of the meeting. (Hear.) It was no secret; it was known to all the world; it was an open meeting, and, therefore, may be presumed to be a fair test of public opinion in that county. (Cheers.) Mr. Stafford O'Brien declined to attend, but Mr. Feargus O'Connor and his friends did attend the meeting, and the supporters of the monopolist county member gave their aid to Mr. Feargus O'Connor on that occasion. (Hisses, and cries of “Shame.”) The vote was taken, and in the open air, in Northampton, perhaps the least favourable district in the country for the discussion of such a subject; for it is well known that in that town the extreme suffrage principle has obtained the support of a number, perhaps beyond that of any other place in the kingdom. Notwithstanding this, however, Mr. Cobden carried his resolution by a considerable majority, the fact being attested by the chairman, a man of influence, but still a gentleman in whom the Chartists have the most unlimited confidence. (Hear, hear.) So much, then, for the charge against us of packing our meetings. Although we have made considerable progress since we last met, yet I regret to say that we have received some shocks in the loss of Mr. Scholefield, the member for Birmingham, and Mr. Travers, the excellent chairman of Mr. Pattison's committee upon the last election for the city of London. (Hear, hear.) I am sure that the loss of these two consistent supporters of our principles leaves a void which it will be difficult to fill up. (Hear, hear.) No men were more distinguished in private life for those virtues which invariably secure to their fortunate possessors the esteem and friendship of the respective circles in which they move, than were the two lamented gentlemen I have named. (Hear, hear.) But beyond this, they belonged to that class of men who can conduct great commercial operations, and at the same time feel a strong interest in every object which promotes, and in the discharge of every duty which is for the good of all other classes of the community; and the best wish we could offer to the inhabitants of Birmingham and the citizens of London is, that a double portion of the spirit of these two distinguished men may rest upon each, and that the memory of their virtues may be respected by as numerous a body as that by which the memories of these two gentlemen are venerated. (Applause.) This, then, ladies and gentlemen, is the twenty-fourth and last meeting of the League; and I venture to say that it is very differently estimated now to what it was at the time of our holding our first meeting in Drury-lane. (Cheers.) Where is the man now who will charge us with being the

abettors of assassination? and yet the Prime Minister and others then scrupled not to insinuate as much. (Groans and hisses.) Where are the men who would now dare do it? Where are the organs of public opinion that would support him in doing so now, and, above all, where are the people who would believe either him or the press if they so charged us? (Loud cheers.) It is true that this year we were threatened with an opposition which was to extinguish the League, in the shape of the protection societies. (Laughter.) We may fairly ask, where are those bodies now? (Renewed laughter.) Have they accomplished all for which they were established? Have they increased the wages of the labourer? Have they made him satisfied with his 8s. a week and “protection to agriculture?” (Cheers and laughter.) Do the incendiary fires of Suffolk show that he is so satisfied? If these societies possess the power which they profess to have, there never was a field yet in which the leading members of such societies had fairer grounds and better opportunities of occupying than the county of Suffolk at this time, in order that they might arrest the fearful spirit which is abroad in that county, and check the incendiarianism which has been lately exhibited there. (Cheers.) But they could not do it; they have no hold upon the affections of the working class. (Hear, hear.) The poor agricultural labourers know well enough that whatever protection may be afforded, that whatever marriage settlements and mortgages may be paid out of the proceeds of the Corn Laws, they have nothing to expect but the greatest penury and want. (Cheers.) It will require greater strength than the protection societies possess to put down the discontent which prevails among the working classes. We have gone on from day to day and from year to year gaining strength, sometimes in victory, at others in defeat, and we are proceeding now steadily, I believe, to that great point which must surely end in triumph. (Cheers.) This question, under the management of the League, has obtained a position which no other question ever did in the same length of time, and it occupies a position, too, which no other question ever did occupy in the public mind, without ultimately becoming successful and triumphant. (Cheers.) You will be addressed now, first by Mr. Milner Gibson, M.P. for Manchester. (Cheers.) Mr. George Thompson, who was advertised as one of the speakers for this evening, I regret to say is in Scotland; but I dare say you will be satisfied if Mr. Cobden supplies his place (vehement cheers), and that you will have much less regret at Mr. Thompson's absence than you otherwise would have had. The proceedings of the meeting will be closed by Mr. Fox. (Cheers.) Mr. Gibson will now address you.

MILNER GIBSON, Esq., M.P. for Manchester, then advanced to the table, and was received with loud and reiterated cheering. He said—It has been my good fortune to be present, Sir, at many meetings of the Anti-Corn-Law-League, but never have I witnessed a more splendid assemblage than is gathered within these walls this evening; and I do say, Sir, it is justly to be deemed a matter for congratulation that at this your farewell meeting for the season, you have received so signal a mark of public approbation. (Cheers.) It is impossible to conceive that a cause can be retrograding, it is impossible to imagine that a question can be losing ground in the public mind and estimation, when we see such a numerous, such a vast assemblage as is now gathered within this theatre. (Cheers.) Indeed, there are many who would lead us to suppose that because public meetings have not been quite so frequent, and that because there have not appeared so many speeches of late in the provincial and metropolitan papers, that therefore the cause of Free Trade is not occupying that place in the public mind which it did a short time since. There never was, Sir, a greater mistake than this. (Loud cheers.) It frequently happens that that work is the most telling which is the most quiet (hear, hear); and from your description, Sir, of the proceedings which are now being carried on by the Council of the League, it strikes me that they are taking a course which must ultimately lead to victory. (Continued cheering.) I am not one of those that are very confident as to the result of our present electoral constitution. I am aware that we cannot hope for those full, those generous fruits that we might have from a more liberal representation of the people (cheers); but this I do believe, that the great body of the electoral class in this country are an intelligent, that they are, when once awakened, an independent class; that they have within themselves the power, and that they can, if they please, return a majority to the House of Commons opposed to monopoly; and I trust in God that they will, by the next general election, see that by such a course they are promoting the happiness, the virtue, and the future welfare, both moral and physical, of this great community; I trust that they will throw aside all partial interests, and, standing forward in a spirit of independence, return a majority, not to support a particular set of partisans in Parliament, not to support a particular set of men, whether the ins or the outs (laughter), who may be looking merely to the sweets of office, but to support that great principle and it alone. (Long and loud cheering.) Our excellent chairman has alluded to the efforts of the Anti-Corn-Law League. He has also intimated to us the want of success on the part of the protection societies, and of that august body the Central Society for the Protection of British Agriculture. (Loud laughter.) And it does happen that there are some salient points that may be quoted in proof of the little success of these bodies. It may be shown to demonstration that their progress has indeed been backward if there be any truth in vulgar arithmetic. (Laughter and cheers.) Now, in 1839, when not half the effort was made by protection societies to petition Parliament that has been made during the past year, what was the number of signatures obtained by the landed interest? The number of signatures was 318,000. (Hear, hear, hear.) What is the number of signatures that has been obtained during the present year, after these great assemblages of distinguished and titled monopolists? (Hear, hear.) Why, only 287,000 signatures (cheers and laughter); 4000 petitions averaging 74 signatures a piece. (Renewed laughter.) The number of petitions is a clear proof that there has been no lack of diligence, no lack of zeal; but the number of signatures shows that there was a great deficiency of corresponding zeal on the part even of the agriculturists themselves, for it was from agricultural districts that the petitions principally came. (Loud cheers.) But it may be said the Anti-Corn-Law League has not petitioned the Legislature at all (hear, hear); and for a very good reason—it was given up as a useless and as a vain attempt. It was thought that the efforts of the

gentlemen connected with this association might be directed better, and petitioning was formally given up; but when the Anti-Corn-Law League—when the Free-Trade party of the country—did petition the Legislature, what was the result? Why, they began in the year 1839 with 500,000 signatures, and they left off petitioning last year with 1,700,000. (Tremendous cheers.) So that whilst our petitioning, while it lasted, showed a constant increase of signatures, the petitioning of the Central Society for the Protection of British Agriculture shows a constant diminution of signatures. (Loud laughter and cheers.) By all means give them rope. (Bursts of laughter and applause.) Now, I do really think that any impartial man who looks around him, and asks himself what are the wants of society, what are the cravings that manifest themselves not only throughout the British dominions, but I may say throughout the greater part of Europe, will find that they are all intimately connected with the existence of physical want; he will find that none of the great wants of society can be met until we first ameliorate the physical condition of the great body of the people. (Applause.) We hear a vast deal of a desire to educate the people. There are complaints of their ignorance, there are complaints of their want of moral training in early youth; but of what use is the attempt to educate, or sow seeds of virtue among a people who are cast down by deep distress, who are living in a state of hopeless penury, and who are not in a condition to receive either the admonition of the preacher or the teaching of the moralist? (Cheers.) Depend on it, if we wish virtue, if we wish knowledge, if we wish religion to take root among our labouring population, we must ameliorate their physical condition. We must endeavour to raise the agricultural labourer from the hopeless position in which he now seems to be placed; and we shall look in vain for any diminution of crime whilst the labouring population cannot look up to those who possess higher positions in the scale of society with any feeling of being of the same class or caste, who feel, as it were, that they are thrown aside as useless beings, and not treated better, nay, not so well, as the brute creation that are fed on the farms of our aristocracy. (Loud cheers.) We must not, when we read in the papers of the fine shows, the fine assemblages of agriculturists at Southampton and other places—when we read of the glitter and pageantry on those occasions, and hear tell of "oxen too fat to walk" or to be eaten (laughter)—we must not at all suppose that this is emblematic of the condition of the poor labourer in the districts from which these fat animals have been brought. (Laughter.) We must turn our thoughts from these fat beasts to the lean and neglected peasant—we must carry our minds from all this glittering pageantry to the incendiary, to the threatening letters, and to all those symptoms of deep and sullen discontent which now pervade the great body of the agricultural labouring population. (Cheers.) I ventured a few days since, Sir, to mention these things in the House of Commons, and I quoted a great authority (cheers); I ventured, thinking I could quote no higher authority in that assembly, to quote the authority of a clergyman of the Church of England in support of my position, that the agricultural labourer was neglected, and that he was suffering deep distress; but when I quoted the authority of a clergyman to that effect, notwithstanding that he is a gentleman of the highest character and of known fidelity in the discharge of his sacred functions, I was told by the Secretary of State (loud hisses)—I was told by the Secretary of State for the Home Department (renewed hisses and groans) that this was "a popularity-hunting parson." (Cries of "Shame," and hisses.) So when a clergyman does come forth, and does speak kindly as to the wants and sufferings of the labouring population, if he ventures to expound that text of Scripture, that "the labourer is worthy of his hire," he is told that he is a "popularity-hunting parson." (Hisses, and cries of "Shame.") I had sometimes thought that it was not intended the clergy should really be in earnest in these matters—that it was never meant that they should keep up more than a show, and be used merely as the political instruments of the great; and it convinces me very much that there was some truth in the conjecture I had ventured to form, when I was told that a clergyman who came forward in support of the religion he professes—to complain of the wretched want and penury of the labourers who surrounded him—and that the public also are told (and told before the British Senate by the Secretary of State) that such a man is a "popularity-hunting parson." (Cheers and hisses.) The gentleman I allude to is the Rev. Godolphin Osborne. (Loud applause.) I wish from my heart that there were more of these popularity-hunting parsons. (Loud cheers.) I wish our bishops would even condescend to such behaviour. I remember a celebrated writer said that he thought a very good society might be established, and indeed that it was very much wanted, for the purpose of converting the bishops to Christianity. (Loud and continued applause.) I am quite sure that it is perfectly consonant with the spirit of the Christian religion—that it is, in fact, in direct accordance with the teaching of the gospel—to advocate the cause of Free Trade. (Cheers.) I do verily believe that the adoption of general and unrestricted intercourse between nations, such as is meant by Free Trade, would be the means of spreading religion and civilization through all the nations of the earth; and I do not believe that any missionary efforts, however well intended they may be, or however well supported, can be completely successful while governments keep nations separated from each other by artificial barriers in the shape of hostile tariffs, and inculcate feelings of jealousy instead of feelings of mutual interests, such as must arise if Free Trade be adopted, and which are easily fanned into a flame that ends in open hostility. (Loud cheers.) It is extraordinary what extreme sensitiveness there is growing up all at once amongst gentlemen who deal in provisions (laughter) as to the importance of maintaining the national honour. They seem to be training themselves into fighting condition. (Laughter.) But what does all this mean? Why, it means this—that war signifies rent. (Cheers and laughter.) I don't know whether the idea at once goes home to gentlemen's minds, though it does to mine. The high price of corn is the consequence of this country being engaged in hostilities with foreign nations; and that a great deal of patronage flows into the hands of Ministers is another consequence. (Cheers.) Our landed friends, these victuallers—(laughter)—they have a very large slice of this patronage. However much the community may be impoverished by taxation—however great the woes may be of the nation at large—depend upon it, in case of hostilities with foreign

nations, the landed proprietors would be the party, if any body did, who would profit by it. Then there is another thing they say: they tell us we thus get rid of our surplus population. I believe in my conscience that there is a large party connected with the landed interest in this country represented by that well-known periodical the *Morning Post* (a laugh) which would give anything to stir up a sort of anti-French feeling in this country, for no other purpose whatever than to raise the price of corn. (Laughter.) What signifies to these gentlemen the country being engaged in hostilities: they don't fight. (Laughter.) They send others forth to battle, while they get a high price for their corn; and when the war is over they endeavour, as they have ever done, to maintain that price by a new Corn Law. (Cheers.) You'll have the old thing acted over again. Another of their reasons in favour of war is, that it would divert the public attention from the great popular movements which are now making them uneasy. "It is a very good diversion, a good war," say they: I have actually been told within the last few days by a distinguished gentleman, whose name I will not mention as I have not authority for doing so, that notwithstanding all that was said about the miseries of war, and all that moralists and philosophers had written as to the evils of nations being engaged in hostilities, he verily believed that it was a good war which this country wanted, and that it would relieve us from many difficulties. (Loud laughter.) This is the old doctrine. Most fortunately they will not have the means of goading the people of this country into those exhibitions of hostility which they are so anxious to bring about. I believe there is in the British nation a strong feeling of good sense upon this subject, which has taken very deep root since our late wars; and I believe it would take a great deal to convince the people of this country that it is worth their while to submit to excessive taxation, and all the evils incident to war, for the sake of enabling the already wealthy aristocracy to fatten still more on the woes of the community. (Great cheering.) The *Morning Post* has discovered that we can do without trade and commerce. (A laugh.) Now, who would believe that in the nineteenth century a metropolitan paper of some circulation should have a leading article telling us that England would be better if her manufacturing system were done away with altogether? (Ironical cheers.) There is one branch of commerce, indeed, which they do hold out to us, and that is the trade in guano. (A laugh.) They say we are to have enormous importations of guano, which is to be spread over our acres, and is to grow the food for our increasing population; and I have actually seen calculations within the last few days, of the number of ships and sailors that would be employed in order to bring this guano to our shores. (Great laughter.) It has struck my excellent friend Mr. Cobden, however, that the ships and men might be quite as well employed if they brought the corn and wheat itself instead of the guano. (Loud and protracted cheering.) Then there is to be another step taken (which I mention by way of digression), to make the application of this guano available. They say that guano contains elements that people are not aware of. (Laughter.) They say that chemists are at a loss to ascertain what are the elements that compose this guano; that it is necessary to know what these elements are in order to apply it successfully to the different kinds of lands, because what may suit one species of land may not suit another; what may be beneficial to heavy clay may be prejudicial to burning sand. So that the chemists have first to analyze this guano; but when they have analyzed it, the thing is not half finished; the most difficult part of the operation yet remains to be performed, for, having satisfied themselves, the chemists have still to teach the farmers. (Laughter.) Our worthy agriculturists have got to go to school and inform themselves of the mysteries of organic chemistry (cheers and laughter); for they, too, must know something of the elements of guano. When gentlemen talk of visionary theories they should look at home, and ask themselves whether this rising trade that we are promised of importing guano from the coast of Africa to this country is likely to be the beneficial thing for the population that it is represented to be. (Loud cheers.) No; let them try my excellent friend Mr. Cobden's experiment, and bring the wheat itself. (Great cheering.) Let the ships and the men be employed in bringing the produce of foreign climes to the shores of England that the population of this country may enjoy the greatest possible amount of the necessities and comforts of life that their industry can enable them to purchase. (Loud cheers.) That is the true policy. Away with guano (laughter), away with chemistry. Let industry take its own course; let us not attempt to direct capital into the particular channel into which interested men think it best that it should flow; but let us leave each and all to enjoy their own industry—that full reward which Providence may have placed within their reach. (Great cheering.) I will read you a little extract from the *Morning Post*, because it may have escaped your notice. The editor quotes Dr. Southey, whose opinions he adopts. "Dr. Southey," he says "always had the sense to see, and the courage to declare, that our manufacturing system was a monstrous evil for the people, and always wished that foreign countries might from some cause or another cease to buy manufactures from Great Britain." (A laugh.) Why, if foreign countries cease to buy manufactures from Great Britain, I should be very glad to know how Great Britain could purchase all the luxuries and the comforts which the people of this kingdom now enjoy. (Cheers.) I should like to know where the *Morning Post* proposes to find all the gold and silver, about which so much apprehension has been expressed of late lest it should go out of the country to pay for corn. (Loud cheers.) Will they find that gold in the cellars or the safe-boxes of the Central Society for the Protection of British Agriculture? Where does it come from? Why, from the mines of Brazil—from far distant regions—and why? Because it is purchased by your manufactures (applause); not by your wheat, or your barley, or your turnips—no, the assistance even of guano itself will not enable them to purchase it. (Cheers.) But it is our manufacturing system which enables the population of this country to be even as well off as they at present are. Look at the countries which are purely agricultural. Look at Poland—look at Ireland. (Cheers.) Why, what a wretched population, as far as the enjoyment of the comforts of life go, do we find in that island, though it is a population capable, as we know, of everything of which man is capable—a population inferior to none, and whose great leader, for endeavouring to have them relieved from some of those oppressive grievances under which for

centuries they have been suffering, is now suffering imprisonment. (Cheers.) Look at that country, and let us ask ourselves whether agriculture alone can bring about a happy and prosperous condition for the great body of the population. (Great cheering.) It is vain for me to dwell in this intelligent assembly upon such an absurdity. Who does not know that commerce and manufactures have led to civilization? Time was when every little baron was, as it were, a kind of bandit in the county in which he lived, when there was no law to protect the weak from the aggressions of the strong. Then was the time when commerce had not civilized, and when men were not knit together by ties of common interest—then was the time of the purely agricultural system; but it is too late in these days to endeavour to bring back what will soon be forgotten, or, at any rate, have passed away for ever—that is, the relics of feudal barbarism. (Great cheering.) The Corn Law is the last relic—no, not the last, but it involves the abolition of all the rest. It is the keystone, and when once removed the arch of monopoly, restriction, privileges, and unfair legislation must inevitably fall. (Loud and protracted cheers.) They profess, it is true, in the House of Commons to be taking great interest in the cause of the agricultural labourer, when they tell us they have been amending the new Poor Law. (A laugh.) The amendments may be beneficial, or they may not; but the great point at which the Anti-Corn-Law Association and the Free-Traders aim, is to prevent men from becoming paupers. (Cheers.) It is one thing to be charitable—it is a good thing to be charitable—but it is better to be just. (Great applause.) We wish justice to be the pervading principle of our laws; we believe if men had an opportunity of supporting themselves that we should not now have to look at the great amount of pauperism which alarms every thinking man who takes up any of the reports of the Poor Law Commissioners, and gives to them his calm consideration. And let us look at the condition of the labourer: why, notwithstanding the attempts of the Legislature to make the pauper "worse off," as they call it, than the agricultural labourer, they absolutely cannot do it—they cannot make the pauper worse unless they starve him—such is the condition of the independent labourer. (Great cheering.) If I am not trespassing too much on you (cheers, and cries of "Go on") I would show you what is the scale of living in this country amongst—I won't say the working population—but amongst different classes, who we may readily suppose do not enjoy much food or very good living. First in the list stands the transported thief; second, stands the convicted thief; third, stands the suspected thief; fourth, stands the soldier; fifth, stands the able-bodied pauper; and last of all comes the independent protected labourer. (Cheers, and cries of "Slave.") That is the scale of food. The transported thief has a greater number of ounces of substantial food than the convicted thief; the convicted thief has more than the suspected thief; the suspected thief more than the soldier; the soldier more than the able-bodied pauper; and the able-bodied pauper a great deal more than our protected independent labourer. (Cheers.) I think the calculation is, that the transported felon has 330 ounces per week of substantial food, and that the average quantity of the independent labourer is not more than 122 ounces. I am not quite sure of the figures, but I think that is the correct calculation. (Hear, hear.) Is it, then, I would ask, to be wondered at, when the labouring classes are informed of this fact, that they should begin to suspect that there is not much sympathy on the part of the more powerful classes of the community with their condition? (Cheers.) What must be the reflections of a hard-working diligent man, when he sees that with all his toil, and with all his willingness to earn a livelihood, he cannot place himself in as good a condition as the felon sent from this country for, perhaps, the worst of crimes? (Renewed cheers.) Yet such is the plain fact—it defies contradiction. (Cheers.) We are told, as I said before, that a great deal is being done for the poor; but how do they meet this startling fact? I was told when the subject of the Poor Law was before the House of Commons, that I had been enjoying myself in the country while others were working hard to benefit the labouring man by amending the new Poor Law. No doubt Ministers have hard work, especially when you reflect that their mornings are occupied in inspecting the correspondence at the Post-office. (Immense cheering, which lasted for a considerable period.) I dare say, when my hon. friend the member for Stockport told the Ministers of what successes he had met with at meetings in the country, that it was no news to them—they had read it all in the morning! (renewed cheers); and when the foreign Minister writes to the Foreign-office to communicate some important information to my Lord Aberdeen, it is no news to him—he reads the contents of the letter in the morning! (Great cheering.) So that, indeed, if such be the occupation of Ministers, and if such be the occupation which the people of England desire that Ministers should undertake and be employed in, all I can say is this, that they have a very great deal to do, and that they have some excuse for doing so little for the poorer classes by their legislation. (Cheers and laughter.) But I must say that I have observed, since I have had the honour of being in Parliament, that there is complete apathy whenever the subject of the distresses of the labouring class is brought under the consideration of Parliament. (Cheers.) Gentlemen have been so long in the habit of dinning it into the ears of the country that the Corn Law is maintained exclusively for the benefit of the agricultural labourer, that they do not know where they are when the alarming statement is made that, notwithstanding protection, the labourer is in as bad a condition as any human being can be in to exist at all. Now, I may be supposed to be exaggerating, but I say that such is the fact in many parts of this kingdom. I do not say it is so in every parish of the United Kingdom; but in Wiltshire, and in many counties which I could name, I believe that the wages of the labourer are insufficient to enable him to bring up his family, and to keep himself from the necessity of applying for parochial relief. (Cheers.) Sir, it appears to me that we have now got to that position in this question in which it is very important that we should direct our attention exclusively to the agriculturists. (Cheers.) They, of all parties, appear to me to be the most interested in the total abolition of the Corn Laws. Until the Corn Laws are entirely swept away, it appears to me that the farmer can never carry on business on a safe and stable footing. At the present moment, undoubtedly, the uncertainty which prevails is one reason why the farmer is necessarily prevented from making those investments

of capital and giving that employment to the labourer which he otherwise would do. (Great cheering.) So long as the Corn Laws exist, so long this Anti-Corn-Law agitation continues, so long will there be uncertainty. I do maintain, therefore, with reference to those vested interests of which we have heard so much, that the shortest road to a safe, permanent, and proper settlement of the question is by the total and immediate unconditional repeal of the Corn Laws. (Loud and continued cheering.) I believe it will be the least dangerous of any step that could be devised. Anything short of it will still leave something else to be agitated for; there will still remain uncertainty, and your agriculture will not rest on that safe foundation which can alone be obtained by letting prices depend upon the natural operations of supply and demand. (Applause.) And, if we look at what will be the moral effect of sweeping away this great injustice, can we regard it for a moment without feelings of the greatest gratification when we reflect that it does away with one of the most prolific sources of discontent that now exists in this country—that it brings agriculturists, manufacturers, and commercial men together—that, so long as the grievous interference with the rights of industry continues, those classes must be separated by an almost impassable barrier—that that barrier once swept away, you knit together all classes of this great community, and make them feel that your laws are based in justice—that you will unite this country more closely with foreign nations, and that you will thus spread throughout the whole of Europe the blessings of civilization, of religion, and good feeling? (Tremendous applause, amidst which the hon. gentleman, thanking the audience for the patience with which they had listened to him, resumed his seat.)

Mr. CORNEN on coming forward was received with vehement cheering, which was renewed again and again. Silence having been obtained, the honourable gentleman spoke as follows:—Mr. Chairman, ladies and gentlemen, you have heard much allusion to-night to a certain organ of the press which always excites a great deal of merriment when its name is mentioned here. I was reading this morning a leading article in another paper, the *Morning Herald* (laughter and hisses), where I saw it announced in distinct and leaded type, for the fourteenth time during the last six months, that the League is positively defunct. (Renewed laughter.) I wish Grandmamma was here to see this meeting. (Hear, hear.) I have known many instances since we began this agitation of papers which have announced our death having themselves expired very shortly afterwards; there was one journal of that description, I remember, in Manchester, which announced to its readers on one Saturday that the League was extinguished, and on the following Saturday it gave up the ghost itself. (Laughter.) I have heard that lately Grandmamma has changed hands, and been united with the *Standard*: perhaps on the principle which is acted on upon the coast of Africa, where they collect a very heavy description of wood which will not float; to carry it down to the ships they tie a log of this heavy wood to a log of lighter timber, in order that they may both swim together (renewed laughter); and if the light pinions of the *Standard* can keep Grandmamma above water, why, its vitality will be greater than I had given it credit for. No, the League is not defunct (cheers); it is living just for that length of time for which it was necessary such a body as this should exist in order to be able to accomplish the mighty object for which it was formed. (Cheers.) It is not in the nature of things that an association intended to accomplish a repeal of the Corn Laws should break down the greatest monopoly that ever was attempted on the face of the earth by a powerful aristocracy,—so powerful that it alone has had the effrontery of all the governments in the history of the world, to attempt the monopoly of the people's bread.—It is not, I say, in the nature of things that any association having for its object to put down such a monopoly could have possibly proposed to itself to effect this object unless after the lapse of a long period of time. We have to teach not merely a whole people, but nearly two generations—those who are passing away, and those who are rising up—in order that we may make them understand this question. We have to appeal to the experience of all classes, and we can only gain experience by time; and what is experience to one portion of the community—to show the evil of the Corn Law—is not experience to another, but it requires a second cycle of years, in order that all classes of the community may have an opportunity of perceiving by facts and experience that the Corn Law is an evil to every portion of the community. We began our organization five or six years ago, in the midst of unparalleled manufacturing distress, which we said arose from the sudden scarcity of food creating an artificial famine, raising the price of wheat 40 or 50 per cent. We were then told of joint-stock banks, of machinery, of speculations, of markets closed—I believe somewhere in Asia Minor,—and all sorts of things were alleged as the cause of the evil; but it was denied that this sudden scarcity of corn had anything to do with the manufacturing distress. What could we do then? Only wait until we came round again to a period when Providence by His beneficent bounty had repealed for a time this Corn Law, by giving us an abundant supply, and then seeing whether lower prices of corn had not the effect of abating manufacturing distress. We have come to that period; we have passed through two years of a comparatively natural price of corn,—not, probably, entirely so, but yet nearer to a natural price of food than for several years before. The consequence has been a revival in the prosperity of the manufacturing districts; and you have seen, just in proportion as the price of provisions and of the first necessities of life has diminished in this country, so has the condition of every man in the manufacturing, mercantile, and commercial portions of the community tended to rise in comfort and prosperity. (Cheers.) We are now coming to a time when, unless the elements at a most critical moment greatly disappoint us, we shall have an opportunity to appeal to the farmer whether the last three years of his experience has not been sufficient to satisfy him that "protection to agriculture," as it is called, is no benefit to him. I say, unless the elements greatly disappoint us, we have on this island such an abundant crop of wheat that, if it be all gathered in—mind, I make no prophecy of what weather we may have—but let us have that garnered in which is now upon the earth, and you will have wheat down in less than six months, in my firm conviction, lower than it would be if we had a perfectly free trade in that article. How, then, will the farmers be situated? Here is the rebound, the reaction, from the famine and distress of the manufacturers—the retribution brought home to the door of the farmer himself. How

will the political landlords deal with him in his new position? Will the landlord say to him, "Wait, wait for a year or two, and you will have prices up again"? Why, what will the farmer say to such a declaration? He will reply, "We had prices up before, but you put up rents when that advance took place; we have had those rents to pay when prices were low; but the very fact of our having high prices and scarcity for three years caused the distress and ruin of our customers; and, when now we are blessed with plenty, our customers are without the means of consuming that which we bring to market for them." If the farmer has the intelligence which I would fain give him credit for, he will say to the landlord, "The very remedy you propose for our distress—another scarcity and artificial famine—will only prepare the way for our future disasters, by ruining, as before, the customers on whom we most depend to sell our produce when again we are blessed with a bountiful harvest. (Cheers.) Now, ladies and gentlemen, a great deal has been said about the condition of the agricultural labourer at the present moment: he is said to be badly off; and we speak of that fact as if it were something new for an agricultural labourer to be badly off. I am prepared to maintain that when we in the manufacturing districts were in distress three years ago, in the midst of high prices caused by scarcity, the agricultural labourer then was as badly off as the manufacturing labourer; but, owing to the sudden calamity and distress which occurred in the north of England, the cry that was raised there by that densely populated mass stifled the cry which would have sprung from the agricultural districts if there had been no such agitation in the north. The records of our poor-rates show that in those dear years, when farming was prosperous, the poor-rates increased in the agricultural counties more in proportion in those dear years to their former amount than even in the county of Lancashire or the West Riding of Yorkshire themselves. The agricultural labourer never benefited by a scarcity of food. The farmer may be enabled when there is a scarcity, by selling his corn for a higher price than in proportion to the diminished quantity, to benefit for a year or two by that scarcity; but the agricultural labourer never can. No working population in any country can ever possibly benefit by an artificial scarcity of the first necessities of life. We are about to take our leave of you, ladies and gentlemen, and turn our backs upon this scene. The drop curtain will fall for at least six months. It may be well, before we leave, to anticipate a little what we may expect to occur during that period in the two sections of the community—the agricultural and manufacturing—in order that we may claim in the meanwhile the attention of the community at large to the facts that are going on; and if what we say be correct, and our principle be true, these facts will be working out our cause more in the next six months than anything we have done in any previous period of similar length. With respect to the manufacturing districts, if provisions remain at the moderate price at which they were even last year, but especially if the present harvest should be got in and wheat comes down to the price at which we may expect it, you will have great activity in all the seats of manufacture and commerce, in the iron districts, in the potteries, in the cotton, linen, and woollen businesses, and also in the shipping ports, and in the home trade generally. There will be strikes for advanced wages where, only three or four years ago, thousands and tens of thousands of labourers were seeking work upon the roads or finding subsistence from the parish. We have already had two strikes in Lancashire, and both have been successful. (Cheers.) The spinners have struck for an advance of wages, and they have got it. (A voice, "Bravo!") I say "Bravo!" too. (Loud cheers.) I have always given this advice to the operatives of the north: never strike when corn is up to 70s. a quarter, because you will not succeed; wait till it comes down to 45s. or 50s. The increased power and independence of the working class will be shown in many ways. You will hear of workmen brought up before magistrates because they will not finish their work, but put their arms akimbo and leave at a moment's notice; and, when convicted, they will pay down the money and say, "There is the fine; I shall go and get better work elsewhere." (A laugh.) You will hear less of pauperism, crime, disease, and mortality in the manufacturing districts than heretofore. You will find mechanics' institutions thriving and increasing in numbers, and lyceums and book-clubs also extending. I saw in a Lancashire paper the other day a statement, that in one town 100 fresh members were added to a mechanics' institution in one week. (Cheers.) To-morrow there will be a public meeting in Manchester, the mayor in the chair, to devise means to raise a public subscription to lay out parks and pleasure-grounds for the people of that town. (Cheers.) You will find the energy and activity of the masters and the middle classes in Manchester devoted to the extension of education, and the founding similar institutions to the Athenæum there; promoting religious and scientific establishments, and giving to moral objects that energy and exertion which, during three years past, they were obliged to devote exclusively to the miserable contest for bread. Now, that is what you will see in the manufacturing districts; and if they see that going on, even our enemies will say, "These Leaguers have been no false prophets; they told us, four years ago, the unnatural price of food caused their distress; they said a more natural price would cure the evil; they have proved true prophets." Let us turn to the agricultural districts. I assume that we have got in the crop, and that farmers are selling their wheat in their own country markets at from 40s. to 45s. per quarter. What will be going on there? The farmers will be rising up in all parts of the country, and proclaiming their unparalleled distress. Why are they now distressed? Because they have bargained to pay rents, calculating wheat at 64s. a quarter, and they are selling it at 40s. to 45s. (Hear.) And why have they made this mistake and this bad bargain? Simply because they have trusted to a law which can for a time cause an unnatural scarcity-price of corn, but which it is not in the nature of things to maintain permanently. What will the landlords say to them? That is a matter I should not like to turn prophet upon. (Laughter.) I should not like to venture to predict what the Central Agricultural Society for the Protection of British Agriculture will say in November and December next, when their members have to face the farmers, and explain what they have been doing in Parliament. Will they throw all the blame on Sir R. Peel, think you? Will they propose to set up Stanley in his place? They must find some new "dodge." (Loud laughter.) Some of them

may say, "I will go and shoot my rabbits," and others, "I make you a present of a bull." (Laughter.) But my dependence is in that sharpened intelligence of the farmer who have had their wit ground upon this stone of adversity. I believe the farmers will doubt the efficacy of this so-called protection. What is it for? To give the farmer higher prices for his corn than they, the landlords, may receive greater rents. But the farmers will, notwithstanding, have low prices for their corn; as low, probably, as with free trade in that article. What will be the excuse? What will political landlords say to them? "It is true we cannot by an act of Parliament secure you this high price." Then the farmer should turn round upon them and reply, "Then I cannot secure you your rent." (Laughter.) But the landlords most likely will tell the farmers, "Oh, rent forms so small a portion of your outgoings that if you had your land rent free you could not compete with foreigners." What do you think they have had the assurance to tell the farmers? The *Morning Post* tells the British farmer that he only pays 6s. a quarter rent on the wheat he sells. How do you think they arrive at that conclusion? Why, they say that every acre of land grows about three quarters and a half of wheat—say twenty-six bushels, and as the farmer only pays 1s. per acre for his rent, the rent is about 6s. a quarter. This calculation is founded upon an assumption that every acre of land that a farmer holds yields wheat every year. I am sorry, as a farmer's son, to think that nine-tenths of the farmers have believed this. I tell the farmers—and a good many of them are now rather inquisitive to hear what we say in this place—that for every quarter of wheat they take to market they pay 20s. at the very least to the landlord for rent. Why, under a good system of husbandry, it is only one acre out of four, and sometimes only one out of five, that is devoted to wheat in the year; yet the farmer pays rent every year on that which is growing turnips, upon that which is lying fallow, or in the greenward;—he pays rent on it all. It has been proved to demonstration that if a farmer paid no rent at all, he could sell his wheat at 27s. per quarter, and get as good a profit on his capital, and his labourers be as well paid or better than now, and every horse and all other cattle be fed just as well as they are at present; and yet the landlords think we can be bamboozled in this way, and that the world will go on believing because they choose to go on asserting that the farmer only pays 6s. a quarter rent on the wheat he grows. (Cheers.) I rely on one little incident to bring farmers to a favourable consideration of our question, and it is this—they have lately had free trade in wool, and while wheat is now tumbling down, wool is getting up in price. The manufacturers in Leeds do not complain of the high price of wool. They get work and give wages; and they are becoming saucy with their improved trade. (Laughter.) They are glad to pay 3d. a pound higher for their wool than they did before, because they get a higher price for their woollens in the market; they do not complain of the advance of wool, because while it has advanced here it has done so all over the world in the same proportion; and, so long as they have their wool at a natural price, it is no matter to them whether it is 1s. 3d. a pound, or 5d. Now, it is precisely the same with wheat. Allow the consumer to have it at its natural price, and whether the wheat rises, as Lord Spencer thinks it would on the Continent to meet our prices, or whether it falls here to meet prices there, if we have it at a natural price, and trade and manufactures can flourish, if every avenue on the surface of the earth is open to the people of this country to get an abundant supply of food, the population of England do not care what the money price of food is. (Loud cheers.) I do hope that this wool incident may become the means of opening the eyes of some farmers. I see that it has already enlightened certain county members. I have in my hand a Hertfordshire paper giving an account of a meeting called at Hemel Hempstead a few days ago, during the wool fair. It was attended by a Mr. Dudley Ryder. I never heard that gentleman speak in the House of Commons, but I am told he is exceedingly voluble in abusing the League in the country. Do not let us retort upon him; for I do not despair of seeing Mr. Ryder a capital Free-Trader yet. It seems that this gentleman, along with Lord Grimston, the other member for the county, attended the same wool fair last year, in 1843. It so happened that on that very day there was a motion of Mr. Charles Wood, the member for Halifax, coming on before the House of Commons, for the abolition of the duty on foreign wool. Mr. Ryder, in addressing these farmers at Hemel Hempstead, said—"This very evening there is to be brought forward in the House of Commons a proposition for lowering the duty on wool, and we (meaning himself and Lord Grimston) intend to go back to town by the six o'clock train in order to oppose that motion, for I do not think that with 45,000lbs. of wool in Hemel Hempstead, we want much from abroad." ("Hear" and cheers.) Well, back went the two distinguished senators (laughter) to oppose Mr. Wood's motion for a reduction of the duty on wool. They went by the six o'clock train, and arrived in time in the House of Commons, not to hear any arguments, which of course they did not want, but to vote against Mr. Wood's motion. This happened last year—1843. A few days ago there was another wool fair at Hemel Hempstead, and it was doubted by the farmers there whether these hon. members would attend on the occasion; for in the meantime the Government had brought forward a measure for the immediate and total abolition of the duty upon foreign wool, and these two consistent senators had supported the Ministers in that measure. However, they came; and Mr. Ryder seems to have primed himself for a long speech. His health having been drunk, he said, in returning thanks—"The question to which their attention was especially called on this occasion related to wool. At this moment it was rather an important question, because it was known that the Government had introduced a measure for the purpose of admitting, duty-free, foreign wool." (Hear, hear.) He then referred to some official returns relative to the trade, which showed that for many years past, when we had most foreign wool in the country, we obtained the highest prices for our own. The fact is, that he had, fortunately for himself, stumbled upon one of a number of admirable articles, the production of the pen of my friend Mr. James Wilson, in the *Economist* (cheers), in which by statistics he has beautifully worked out this question. He quotes these facts, and goes on to say:—"On a statement of these facts, then, he arrived at the conclusion, that they were interested in obtaining the finest wools from abroad at the lowest possible price; in fact, they could not dispense with the import of them, if they were to maintain their pre-eminence in

the manufactures of the country. (Hear, hear.) It appeared that in Hertfordshire they produced almost exclusively, if not entirely so, the short-stapled wool. (An exclamation of 'No.') Well, but he believed they did not produce much of any other kind. He (Mr. Ryder) had taken the liberty of stating these facts, because, after all, the question must be decided by facts, and by facts alone. (Hear, hear.) *Their theories might be very fine, and their prophecies thought to be very sound at the time; but in dealing with questions of this sort, experience, and not theory, must decide.* (Hear, hear.) *He had shown by incontrovertible facts, that in proportion as they had admitted foreign wool at a low rate of duty, to mix with English wools, British manufactures had prospered, and British wool had risen in price. He did not think that this happy union between English and foreign wool-growers ought to be dissolved, or that they should interpose a Doctor's-Commons fiat to destroy the matrimonial engagement.*" ("Hear, hear," and laughter.) Some people would call that a very odd sort of wool-gathering in the course of a year. (Laughter.) There is one little fact which is certainly rather striking to us men of business. It appears that this distinguished representative for the county of Hertford was sent up to Parliament in the year 1841 to protect agriculture; and yet it does not appear that Mr. Ryder knows whether long or short wool is grown in Hertfordshire. (Hear, hear.) It goes far to confirm me in an opinion I have formed, by quietly taking stock of the benches opposite to those upon which I sit in the House of Commons (laughter), that although there are exceptions, such as Mr. Pusey and others, yet that the majority of the county members who were sent up specially to protect agriculture are about as ignorant of that matter practically as any men I ever met with in the whole country. Mr. Ryder seems to be a choice specimen of that class of guardians of agriculture. He certainly does not quite equal a young gentleman I heard of in one of the northern counties, who was brought down just fresh from Oxford as a candidate for the county. He was walking with a farmer, and saw in the course of his rambles some spacious fields of turnips, of twenty or twenty-five acres in extent, laid down in the Scotch fashion. "Bless me!" said he, "I knew that turnips were always eaten with boiled mutton; but I had no idea that people consumed so many." (Laughter.) I have no doubt, ladies and gentlemen, that very great progress will be made in the right direction upon this question during the next six months in the agricultural districts. We must afford to wait whether we like it or not; we cannot make more rapid progress than circumstances will permit. (Hear.) I am sorry to say that a false doctrine has been promulgated by some of the monopolist newspapers, which seems to me to have had a very serious and dangerous tendency in the agricultural districts. I read a striking instance of the pernicious influence of this doctrine the other day in a trial which has recently occurred at the assizes for Suffolk. It appears that a poor man of the name of James Lancaster had been reading the *Morning Post*; for, mind you, it is stated in the calendar specifically that "James Lancaster, aged 30, can read, but cannot write." That is just the class of intellect which I should say would read the *Morning Post* regularly. (Laughter.) This man had been reading in the *Morning Post* an article which stated that wages rise as the price of corn rises, and fall as that is depressed, and that a great abundance of corn caused wages to be low. James Lancaster appears to have had a logical mind; that is, he seems to have had naturally a logical intellect, but it had been exclusively applied to the study of the *Morning Post*. (Loud laughter.) He was determined to carry out practically the principles laid down in this eminent print; and he reasoned in his own mind thus:—Wages are low; wages depend upon the price of corn; the price of corn is low because it is abundant; the only way of making corn dearer is to make it scarcer. The only way of getting higher wages is by making corn dear; and I will, therefore, go and set fire to Farmer Hobbs's stacks." (Laughter.) Pray do not suppose that I am making up this story. In the statement I have given you I have not added one single syllable to what appeared in the newspapers. (Hear, hear, hear.) Mr. Baron Alderson, who tried the case, having his gown and wig on, stated with all the gravity of a judge that "this was a most strange and extraordinary application of the doctrines of political economy." (Laughter.) Now, bear in mind that people who read but cannot write are readers of the *Morning Post*, and this was a logical deduction. James Lancaster had no malice against Farmer Hobbs, and would not have touched his house, saddle horses, or cows, or anything of the kind: corn was the thing by which alone wages were to be regulated, according to the notion he had imbibed from the *Morning Post*, and therefore he went, not to the dairy or cheesehouse, or even to the cellar where the beer was kept, but he took his torch and went to the farmer's stack, and fired it, in order that he might, upon the *Morning Post* principle, make corn scarce and dear, and thereby raise wages. (Hear.) I think the doctrines of the *Morning Post* may very properly be hereafter called "*the logic of the lucifer match.*" (Loud laughter.) It seems that James Lancaster is to be transported for terms of his natural life, to propagate the doctrines of the *Morning Post* in Australia. I will ask you seriously, what difference there is in principle—I know that the law has made a great difference—between creating a scarcity by restricting the supply of that corn which the Almighty has given to the nations of the world on the whole surface of the earth,—where is the difference of making a scarcity here by unnaturally obstructing the supply of corn from abroad, and making that scarcity by burning Farmer Hobbs's stack? (Loud cheers.) Their plea in both cases is the same: the lawmakers, who pass the law to keep out foreign corn, say they do it to keep up wages; James Lancaster, whose profession of faith while on the treadmill was heard by the gaoler of the prison, who pretended to be asleep, avowed the same object in the crime he committed. Where is the difference in effect of the two cases? There is no difference in fact. I very much fear that in the sight of Heaven one-half the men who support our Corn Laws will stand less acquitted of guilt than James Lancaster. (Vehement and prolonged cheering.) Yes, I repeat it, the men who, knowing what they are doing—and many who support this system are quite conscious what they are about (hear, hear)—who are aware of the consequences, and still do it for a selfish object, are more to blame for upholding this system for starving the whole nation than that poor wretch

was, if he was sincere in the avowal of his object in committing that crime, or than he will be in the eyes of Heaven for having burnt that stack. You have heard, ladies and gentlemen, from our worthy chairman, that though we are departing and taking our leave of you, and, like another class of performers on this stage, "going into the provinces," yet we do not intend to be idle during our absence from the metropolis. I hope we may leave with a conviction that those friends of our cause who have constantly attended our meetings here will not, in their capacities as politicians or citizens, fail to do what they can to advance this great cause by spreading information, looking after their own and their neighbours' registration (hear, hear), and by disseminating sound views in every possible way. You know that, as soon as this system is understood by all classes of the community, there will be no difference of opinion about it. We are coming to that time when men will be taking credit to themselves for always having been Free-Traders. We all know that Clarkson, who began the agitation for the abolition of the slave trade, commenced about the year 1786 to devote himself—his life, if needful—to the accomplishment of that holy object. I say it to the honour of the town where I live, that Manchester was the first place at which he held a public meeting. Joseph Lancaster was at work twenty years before he accomplished his object. When the slave trade was abolished, and the abolitionists renewed the conflict to put down the institution of slavery itself, it was twenty-six years more before that work was accomplished; but now, when the work is done, and there are no sinister interests to offend in declaring the principle of freedom to the negro, we see the men who, when those benevolent persons were labouring to accomplish their object, voted against them on every occasion, and even opposed the abolition of flogging of women, now going to Exeter Hall to sing psalms over the freedom of the negroes of the West Indies. (Hear.) May it not happen, perchance, that a few years hence, probably at no very distant period of time either, the very men who are now opposing us in a cause as holy in its nature, as beneficial in its consequences, as truly natural and heavenly in every property of it as the abolition of slavery itself—may it not be that the men who are now opposing us may ere long look back and say, "The League accomplished this great work of freedom of trade!" and then they will attend these meetings, take credit to themselves as being Free-Traders, and spread and disseminate Free-Trade principles by their diplomatists and envoys through all nations of the world. Well, may it be so: I wish it may. We will not deny them participation in the honour; we only want to succeed in this great object; and when we, who have taken a prominent part in the conflict, are forgotten (loud and general cries of "Never, never"): at all events, we are entitled to live in the belief that we shall have left some memorials on this earth by contributing to the prosperity, the peace, and the happiness of our fellow-creatures. (The honourable gentleman concluded amidst enthusiastic cheering, with which he had been repeatedly interrupted during the delivery of his eloquent address.)

The CHAIRMAN then came forward and announced that Mr. Fox would address the meeting.

Mr. Fox upon presenting himself at the table was received with loud applause, which having subsided he proceeded to address the meeting as follows:—Our excellent Chairman introduced the business of the evening by describing to you the operations carried on by the Council of the League, and extending through the length and breadth of the country; the object of which is to prepare a better registration, and to lead the way to such electoral efforts, upon the first opportunity to choose a new Parliament, as may secure the success of the cause of Free Trade. Those operations, quietly conducted, are as material to the advance of our cause as those which are most conspicuous; and although for a time these meetings are to cease, yet to-morrow, when you will have read in the *Post* and *Herald* for the twentieth time that the Anti-Corn-Law League is dead, those operations going on throughout the country will prepare for a season that shall show as obviously as now that the League is all alive; and that its supposed death has been so frequently proclaimed, that those who get their information from no other source than monopolist journals may well imagine that its ghost walks the earth, and works wondrous mischief. They will find that its alleged dissolution is as the seeming death of the seed which the farmer puts into the ground, which is covered up and buried there, but by the immutable laws of Divine Providence it is germinating too, and there in due time will spring up; and for us, as for that seed, harvest now is coming—a full ingathering of that glorious fruit for which so many have toiled and laboured in these years of struggle. (Loud cheers.) The League, however, does not require to be judged by operations carried on without the public observance, or by prophecies of the future relying on the certainty of principles—such a prophecy, for instance, as Mr. Cobden has uttered—for it can bear to be judged by the surest of all tests, that which it had done, and not that alone which is unseen or which is anticipated. (Hear.) My purpose in addressing you this evening is to advert to the memorials which already the League has created for itself, which need not to be explored like hieroglyphics by the antiquarian, but are written broadly on the face of the country, and form materials for the pages of its future historians. In every direction I find some impress of what the League has done. The few years which it has existed have been marked by two administrations in our Government; and both the great political parties show, in their policy, that they have been influenced by the Free-Trade agitation. It modified the policy of the late Ministry, although in its youth the then Minister was disposed to treat it as mere madness to talk of repealing the Corn Laws; yet at the close of his administration that which he scoffed at in the time of seeming power, he and his colleagues laid hold of as the most graceful thing by which to retire from office. They fell by it, and made their fall thereby more honourable than had been much of their existence during their power. They had their recompense too. It was the progress which the Free-Trade agitation had made at that period which caused Lord John Russell to be elected a member of Parliament for the city of London, and which now gives him his chance of returning to office provided he will carry out the principles on which he was returned, and by which he holds his seat and his prospects of office. A fixed duty might serve the Whigs to fall by; they can only rise by a total repeal. (Cheers.) The influence of the League on the policy of the Administration which

succeeded the Whigs has been more marked; for the men in office now are those who for ten long years were consolidating a party on the principle of no change, no surrender. They would give up nothing—no, not one jot nor tittle. It was for this that they rallied and strengthened their forces; for this it was that they resisted every attempt at a movement on the part of those who had then possession of office; for this it was that they moved a vote of want of confidence in that party, and effected their overthrow. What was the language of Sir Robert Peel on the first of those great divisions by which the Whigs were expelled from office? I mean when they introduced their budget in 1841, and when Lord Sandon's motion on the sugar duties gave the then Government a blow which it was never able to recover from. On that occasion, when they began to show symptoms of resigning, and of following their resignation by an appeal to the country, Sir R. Peel told Lord John Russell, it was an irregular thing to resign on a mere fiscal question. He said they need not do that, no Government need resign on a fiscal question; yet he lived within three years to be beaten by his own party on this afore-said sugar question, and to reduce that party to allegiance by his own threat to resign unless the vote was rescinded. (Loud cheers.) On Lord Sandon's motion in May, 1841, Sir Robert Peel spoke thus; he was then, as every body knew, looking forward to a change which had obviously become inevitable in the administration of affairs: "I am not," said he, "contemplating a recession in office from the principles, with regard to the Corn Laws, which I have hitherto maintained. (Opposition cheers.) You will ask me, then, how is it possible for me, who have consented to relaxations in commercial relations, to maintain the Corn Laws? You say now that this is the master interest, and that it is utterly impossible there can be a revision of the tariff, or a relaxation of the commercial code, without a revision of the Corn Laws. I utterly deny that proposition." "Mr. Huskisson," he says afterwards, "would have scouted the proposition that a liberal commercial policy was inconsistent with the maintenance of the present Corn Laws." Such was the language addressed to the monopolists in Parliament. The tone was modified in electioneering speeches to affect the choice of candidates for members at the election; and when the fresh Parliament was called, and the new Administration formed, why, within about fifteen months from this very declaration, from utterly denying the proposition that a revision of the tariff would involve any alteration of the Corn Laws, Sir Robert Peel revised the tariff and Corn Laws together, to the utter astonishment of those who had placed him in Downing-street. (Cheers.) And whence all this? Whence these unexpected measures? Whence this new tone, but from this cause, that public opinion has been so influenced by this agitation that Sir Robert Peel feels it prudent, notwithstanding his dependence on the great monopolist body at his back, to lay out some lines in another direction; to claim as much credit as he can for Free-Trade policy; to boast that within a year he relaxed commercial restrictions more than the opposite party had done in their whole ten years' tenure of office; and thus to make himself, too, a monument of the influence of this Anti-Corn-Law League agitation. (Loud cheers.) Why, Mr. Cobden, in that House, might adopt the language, in reference to his own success as the great leader of this movement, which is inscribed on the monument of Sir Christopher Wren in St. Paul's Cathedral, where the spectator is told, if he asks for a monument of the architect, to look around him. (Cheers.) A foreigner, whose taste was not exactly hit by the form of the dome of St. Paul's, remarked, "I do look around, and I only see one great fool's cap." (Laughter.) When Mr. Cobden looks round for a monument of the influence of this League in the House of Commons, he may see two great fools' caps—one for the Ministerial Leader, the other for the Opposition; fools' caps fitting the heads of those who have the perception of great, wise, and good principles, but who lack the consistency or moral courage to devote themselves to carrying out that principle in legislation, and throw themselves on the good sense and true interests of the country for their support. (Cheers.) On the state of parties the future commentator will have, I think, to observe that, in a very short period, and with immense difficulty to struggle with, Free Trade obtained in the House of Commons, a body of representatives sufficiently compacted, well-principled, and decided, to make it impossible for any monopolist faction—either Whig or Tory—to govern the destinies of this country. If the influence of this movement be visible on political parties in the Legislature, it may assuredly be traced distinctly and broadly on the public mind. No subject of a similar nature has ever yet in the world's history been so variously and ably illustrated, and I believe in consequence so generally understood and appreciated, as this Free-Trade question now is. I would put the meetings that have been held here in evidence; the kind of topics and arguments in which they have displayed the most lively interest; the quick responses which have been given to points which some few years ago would have been matter of hesitation and of thoughtfulness even to the great mass of highly-educated men. Political economy, as was said of philosophy of old, has been brought down from the clouds to human habitations, and mingles with the every-day thoughts of the great mass of the population—is the subject of their conversation. There is a political intelligence generated by this procedure, which must soon banish utterly from the world the prejudices, sophisms, and falsehoods by which mankind have hitherto been deluded. How short a time it is since two great statesmen, Pitt and Fox, made the world ring with their conflicts, and yet it was matter of discussion which of the two was most profoundly ignorant of the doctrines of political economy; whilst now there cannot be a lispng dandy sent down to the constituency of a pocket-borough, there to represent his relative's importance, who is not crammed from Adam Smith in Mr. Cayley's edition! (Laughter.) A people thus instructed are not to be trifled with. It is a proud boast for the League that, together with intellectual exertion and acquirements, they have been the means of diffusing through the country a spirit of intellectual independence. Wherever I find a disposition to break through that gross servility which has so long been a stain upon a large proportion of the people of this country—when I find a disposition to call things by their right names, however plausible the appellations by which they have been distinguished—when I see the same standard of right and wrong applied to the high and

the low, the poor being judged by the principles that are applied also to the peasant—when I find a desire to bear testimony to great and wise principles, and that lively sympathy in the wants and in the wrongs of the poor and helpless class—why, in all this I see the same influence exercised by the Anti-Corn-Law League. I behold the spread of that influence through the different classes of society, and recognise a determination to work out the right, and to put down the wrong, by peaceful, legal, but honourable and certain means of success, which it is the noble consolation and encouragement of the men who originated this institution that they have been instrumental in diffusing through the country. (Cheers.) I know that these best and noblest results are yet much more limited than the leaders of the League and all true-hearted persons must desire. We have evidence of that; facts which we need not shrink from looking fairly in the face. It is continually brought up about the League in certain journals, "Look how many elections they have lost; look at the places where they dare not show themselves for a contest;"—why, we have not been able to contest Horsham, Cirencester, and several other places I might mention;—"and they have been beaten in South Lancashire and Birmingham." And what of that? I hold it to be no evil, but I believe it to be a great good to a cause like this, comprising I apprehend a vast number of persons not hitherto connected with political agitation—not accustomed to the long toilsome process which must be gone through for the achieving of any great work of social or physical improvement—I hold it to be a great good that their minds are dispossessed of the notion that you have only to teach people what is true and right, and that then you may rely on the true and the right being forthwith triumphant. Why, if those elections had had a different result, what would the lesson have been—what the effect on a great portion of those who have been led, for the first time in their lives, in connexion with the Anti-Corn-Law League, into the struggle of an agitation? The lesson would apparently have been, that opinion and action were free in electors; that there was no intimidation, bribery, or active sinister interests to pervert the consciences of the voters, and turn them away in spite of their own thoughts and feelings. And that lesson would have been a gross falsehood. It would have seemed by such a result that monopoly was ready to give up the contest without making a vigorous and desperate effort, and would retire when the vanity and wickedness of its claims was demonstrated to the public; that there was not to be apprehended from it a tooth-and-nail resistance, a struggle to the death, and by most unscrupulous means. And that lesson would have been a falsehood too. It would have been judged, by such a result, that party spirit had subsided; that it had learned wisdom and rectitude; that people would not, for the sake of pragmatically asserting some point of political sectarianism, have suffered themselves to be beaten through division, when they might have conquered by unity. And that lesson would have been a falsehood also. It would have appeared, by such results, that the present arrangements are all-sufficient for maintaining the rights and the interests of people in elections; and everything connected with political machinery, and our institutions, as good as possibly can be imagined or desired. And this lesson, too, would have been a falsehood—a gross falsehood. I think we may well put up with disasters, defeat, and postponement of the time when we come to the great final decisive strife, for the effects which are thus produced in the minds of multitudes, for the training and discipline which is thus given for working the continuous—and eventually successful—assertion of the interests of the community. (Cheers.) To those who point with exultation and scorn to these results, I would say, Why, you are laughing at that which is training an antagonistic power—a might which nothing can resist. These are agencies of education in agitation. They have already given much instruction, and they will yet give more, until the whole community is wise enough to see, that in directing its energies towards a single point, and carrying triumphantly through one great principle, it is in reality achieving more than could be obtained by any other means, and laying the foundation of national character, greatness, and prosperity. (Cheers.) There is another thing which the League has done; and it was an object worthy of their exertions: it has unmarked the monopolist classes. (Hear, hear.) Their features are known to every one now, and they can never be disguised again. At a comparatively recent period there was a mystification about peers and men in station, as though a different blood ran in their veins from that which flows in the bodies of the great mass of the people; and it was only when Free-Trade principles came into that close, continuous, and animated discussion, which they have been recently doomed to undergo, that it was perceived that these feudal associations were all false, and that really those men were as much a trading class as though they had kept shops in Cheap-side; and the coronets which used to be thought emblems of a semi-regal dignity in their several districts, pass for nothing more than a sign of so many acres to let, and so much corn to be sold. (Cheers.) Why, they are traders—traders all! They deal in land as well as corn; and in food for all sorts of beings—from the loaf which the man eats to the seed which the canary-bird pecks in his cage. (Laughter.) They trade in fish and pheasants, in ground for gambling booths upon race-courses; nay, they also lose their money in the races themselves, and then bring in an act of Parliament to suspend the payment of their penalties. (Cheers.) They trade in stars, garters, and ribbons—especially blue ones; and, what is worse of all, they trade in that legislation by which their business is made more profitable: they are hucksters with the power of law-making for the enhancement of their prices. (Cheers.) A great outcry has been raised against the petty cheap huckster who teaches his apprentice boy to "shave the ladies" (loud laughter), while these noble legislators do infinitely worse than that, for they shave the nation, and the poor they shave the closest and hardest of all. Their fallacies have been exposed, and though they be not the original authors, yet are they the real patrons of the doctrines of the *Morning Post*—the connexion of which with incendiarism Mr. Cobden has so luminously traced—it is still their doctrine. *Rick-burning in practice is only Richmondism in theory.* (Prolonged and vehement cheering.) Nor was there ever a more complete parallel than that between the Richmondites and the rick-burners. If the one wantonly destroys property, so does the other; if the one endangers human life, why, human life has been more than endangered by the other, and that too by wholesale, by these abominable starva-

tion laws. If, in the rick-burner's case, the innocent suffer, who are they that are injured in the other case but the unoffending, poor, and helpless—their suffering being greater the more helpless their position in society? If the one destroys the good gifts of Heaven to man, so does the other. It is highly probable that a much larger quantity of corn than these fires in Suffolk and the adjoining counties have destroyed, has, in the course of years, been rotting under lock and key in bond, and has been at last shovelled out into rivers or harbours, as we know was recently the case at Hull, where a considerable quantity, even within a very few months, has been thus destroyed. (Hear.) And where, I pray, is the mighty difference in the element of destruction? Why should it be villainous to destroy corn by fire, and virtuous to destroy it by water? (Loud cheers.) Even without reference to that more awful tribunal which has been appealed to this evening, I believe the doers of this wickedness will not escape their punishment; if the incendiary be transported for his life, why, after the lives of the monopolists, it will go hard if the honest historian does not gibbet their memory in his pages to all posterity. (Renewed cheering.) The League has also exposed the monopolist class in another way: by eliciting their virtues, by stimulating their philanthropy. How charitable, provided their Corn Law can escape untouched, do the monopolists show themselves! Plans for the improvement of the condition of the poor are quite in request; and every political section must get up something of the kind. One party founds a society for the relief of the poor needlewomen, who, they contend, are very much injured indeed by people buying cheap shirts, and allege that every one ought to buy dear shirts for the encouragement of the sempstresses. There is a great charity excited for the needle and thread, but not much for those to whom a cheap shirt is the only chance they have of obtaining any at all. (Cheers.) They even had compassion on the poor for working too long, and they were desirous that the machinery in mills should not work too much, so that the workmen had time to go home and meditate on what they would do with more wages if they got it. (Laughter.) They even took care that the poor should be enabled to recreate themselves by travelling on the railways, and they proposed to have third-class trains for the purpose, and here the philanthropy of the bishops was brought into practice, for they could not think of the poor travelling on railways, unless their enjoyment was complete, and they proposed that they should be compelled to go in a first or second-class carriage when they travelled by the railway. They looked everywhere for a means of indicating their philanthropy, but to the poor man's cupboard, where they might see the reduced loaf, which they had sliced away by their monopoly. (Loud cheers.) In the meantime, while all this is going on, in 1843—only the last year—the people of this country paid in direct taxation upon wheat imported into England the sum of £800,000; that amount of bread-tax averaging 15s. 3d. on the quarter, which still, we are told, is not protection enough. Wheat in this country last year averaged 53s. per quarter, 9s. more than our fellow-subjects pay for it in Guernsey, where they are out of the boundary of this law; so that we have the pleasure of paying 9s. a quarter more for our wheat, we never having been conquered from the French, but living under our own glorious constitution. (Cheers.) This overflowing benevolence looks at the morals of the people as well as at their physical condition; and as they want bread it will give them stones. They shall have churches, thus rendering applicable the usurer's epitaph:—

"In pious as in impious works,
Like water, still he found his level:
For, having cheated all the world,
He built a church to cheat the devil." (Laughter.)

Such absurdities and enormities as these will never suffer an antagonistic movement to abate. It cannot do so, while they exist; and, during the cessation of these meetings, if you want to know where the League is, if you see a man looking sharply after the registration list, and see him marking an omission to be supplied by a claim, or a name which ought not to be there for objection, there you see the League. (Cheers.) If you want to find its leaders, you will only have to look to the papers; as it is this week, so it will be in future weeks. You will see Bright and Cobden there, as heretofore, sometimes fighting with physical-force men at Northampton (cheers), at other times with monopolist Tories at Dudley, and frequently with wild beasts at Ephesus. The *Morning Herald* says to-day that these leaders of the League want to back out of the agitation, and that they would if they could. I suspect, by these remarks, the *Morning Herald* does not exactly understand the nature of the impossibility of their "backing out." There is a moral as well as a physical impossibility that men of clear minds and true hearts, who have put their hands to the plough, should look back. It is not in their moral being to desist from the great work that they have undertaken so long as they have life, or until the great triumph of their cause shall, through their efforts, be achieved. (Enthusiastic cheering.) They talk of disunion in the League. "Disunion" and "dissolution" are terms of which here we know not the meaning. If ever a movement showed confidence, mutual reliance, amity, and decision, it has been this Anti-Corn-Law-League agitation. In fact, it used to be charged against us, that there was too much confidence; and the monopolists were endeavouring to spirit up people here to inquire after the funds, and ascertain what had become of the £50,000 last year, and the £100,000 this; and many wonderful and wise insinuations were made in relation to these topics. Assuredly this shows no want of confidence, coming, as a large portion of this fund did, from where the leaders of the League are best known in their personal character and history. I should like to see the Anti-League evince similar confidence, by the farmers of this country raising and intrusting £150,000 to his Grace the Duke of Buckingham, even if he gave them his bills, those bills bearing interest, and endorsed by his Grace the Duke of Richmond. (Cheers.) If, in this seeming cessation of the League from a discontinuance of these meetings, those of us who live in London should feel that a blank is left in our lives, let us, as citizens of this metropolis, remember that the League came to us, and we did not in the first instance go to the League. We have been recipients of the benefits, and not the originators of the League; it has called and held these meetings, and if we grow impatient of the suspension or delay, the best remedy for that is to call our meetings in turn, and invite the League to come and see us. (Cheers.)

I really think we owe them a response of hospitality for all which they have done for us. We owe them, in every way in which we can show it, our hearty, ready, and unremitting co-operation. (Hear, hear.) At the first meeting of the present season, I endeavoured to show that the triumph of this great cause rests mainly with the cities and large towns of the empire. I am sorry that such a town as Birmingham should have tarnished its fair fame by what has recently occurred there (hear, hear)—that any who have the means of information should give themselves the licence of employing their votes in any other way than in the assertion of the rights of labour, and the maintenance of the commercial interests of the nation. But such a circumstance as this is an admonition here and every where to do all that we can of the work of the day while the day lasts, ever preparing for that great future electoral struggle which is to come. (Cheers.) This is a cause of national interests; those interests are not decided by chance; they rest on no baseless theories. It is a science, and one which has been distinctly traced; its principles are laid broad and deep, and the testimony of all experience is against monopoly. But it is yet more strongly opposed to war under the pretence of national benefit. I trust that the warning which was thrown out by the hon. member for Manchester this evening will sink into your minds and hearts; for, when we see to what means monopoly has recourse, it is not chimerical that there should be found even that monstrous wickedness which would plunge a nation into war for the sordid interest of a class. Should such an emergency ever seem to be impending over us, I trust that the people of this country will, as one man, protest against the recurrence of those sanguinary doings of old which ought now to be matters of history, and of history alone. This agitation must continue and advance because it is founded in the extended perception of national interests, and is based on moral principles. It is indeed a moral question. We give our opponents all the advantage they boast of possessing: they have enormous property and influence; Houses of Lords and Commons; a large portion of the press; the use of the Post-office (cheers); the patronage of the army and navy; appointments in the church and its influence at their back;—they have all these, and the enumeration does not appal one: for we have against them all—what is stronger than the whole put together—the sense of justice in the human heart. (Cheers.) There is a power with which they know not how to deal, but which will teach others how to deal with them—a power more ancient than their oldest ancestry, which existed before castles and cathedrals, church and state—a power as old as, nay, older than creation—a sacred power which existed before the pillars of the earth were laid, or the mountains were brought forth; it dwelt with wisdom in the Eternal Mind; it was breathed into man with the first breath of life; it will not perish in him until our race shall have numbered its days upon earth. To contend with it is as vain as to strive with the stars of heaven. It will witness the extinction, nay, more—it will be the agency of destruction of all wrong in political and social institutions. Soon may Providence send that blessed consummation! (Mr. Fox concluded his speech amidst loud applause.)

The CHAIRMAN then came forward and said—Ladies and gentlemen, it now becomes my duty to express to each and every one of you, severally and collectively, the thanks of the Council for the constant and unwearied attention, and the great order and decorum, which have been manifested since we first commenced these meetings until the present time. We opened, in imitation of our betters, on the day upon which Parliament was opened, and our labours are brought to a close pretty nearly at the same time. During the meetings you have had opportunities afforded you of hearing every fallacy which has been from time to time developed or put before the world in defence of monopoly exposed; you have had opportunities of hearing some of the first men of England address you from this platform; you have had the means of becoming acquainted to the fullest extent with the sound principles of political economy, tending to the best exposition, and from the mouths of the best expositors living. Wherever the League has committed, or appeared to commit, an error, we have frankly stated to you the grounds on which certain steps which might appear to be disputable have been taken. The past has now become matter of history: that portion of our labours which has been wise and just will last for ever; and that which has been done in error, of course, will soon disappear. We separate, then, to-night for some time to come; when next we meet together I trust you will still find us engaged in our hostility to that monopoly which we have sworn together to put down. (Cheers.) We can never know, or have the opportunity of ascertaining, every individual who is here present to-night; but we can express to you our anxiety for your present and future welfare, and that we desire the blessing of Heaven may rest upon you in all your undertakings. Several enthusiastic rounds of cheering were then given for the League, and the last of these extraordinary and brilliant meetings—which have maintained to the last the same intense interest which they excited at first—terminated.

CARLISLE.—In compliance with public announcement, a meeting was held on Tuesday evening, the 30th ultimo, in the lecture-room, Athenaeum, Lowther-street, to hear an address on the Corn Laws from George Thompson, Esq. Soon after eight o'clock Mr. Thompson, accompanied by Mr. Robt. R. Moore, and Mr. E. Wright, an American, entered the lecture-room, and were received with loud applause. Mr. Carr moved that Mr. T. Sheffield take the chair. Mr. John Carrick seconded the motion, which was carried by acclamation. Mr. Sheffield then took the chair, and called upon Mr. Thompson, who was greeted with several hearty rounds of applause. After an able and eloquent speech, which elicited repeated cheers, Mr. Thompson introduced Mr. E. Wright, an American, who made some apposite remarks on the question of Free Trade as it affected America, showing the connexion between slavery and monopoly in that country, and pointing out how the abolition of the Corn Laws in England would lead to the cultivation of a large portion of American soil for the raising of grain instead of tobacco and other slave-grown produce. Mr. Moore addressed the meeting at considerable length and with his customary ability. Mr. Sheffield moved a vote of approbation to the speakers, which was passed with loud cheers. Mr. Thompson made an appropriate reply, and the meeting broke up.—Abridged from the *Carlisle Journal*.

SCARBOROUGH.—A deputation from the League, consisting of T. Pilat, Esq., and George Thompson, Esq., visited Scarborough on Friday week, when a meeting was held in the Town-hall, and addressed by the above gentlemen; Alderman Stickney in the chair. A person of the name of Kidd, a Chartist, interrupted one of the speakers, who the chairman gave him a quarter of an hour to address the meeting; but, wishing to exceed that time, he was stopped in his address, and a show of hands was taken whether he should be allowed to go on or not. A great majority being against him, he began to be very boisterous; but after a while the proceedings went on, and terminated quietly.

BOLTON.—Wednesday, the 30th ult., Mr. Falvey delivered an excellent lecture on Free Trade, in the Temperance-hall, Bolton, which was densely crowded on the occasion. Ralph Foster, Esq., presided. After the lecture a Chartist, named Brophy, addressed the meeting in support of the Charter, and proposed a resolution to that effect. He was replied to by Mr. Falvey, who proposed an amendment in favour of Free Trade, which was carried by a large majority. The meeting broke up after having given three cheers for Free Trade.

WELLINGBOROUGH.—On Thursday, August 1, Mr. John Murray delivered an excellent lecture on the Evils of Monopoly, and the benefits that would result from Free Trade. Although not more than three hours' notice was given of the meeting, the spacious Assembly-room at the White Hart was crowded to excess. Mr. Murray's lecture gave an additional stimulus to the excitement which already existed respecting the great meeting that has just been held at Northampton, hundreds having left Wellingborough on Monday last to witness the triumph of Free-Trade principles on that occasion.

NORTHAMPTON PROTECTION SOCIETY.—The first meeting of this magniloquent association was to have taken place on Friday, the 2nd inst. (ominous day), at noon, at the Queen's Head, in this town. We had made, we confess, some preparations for the grand event. We had stuffed our ears with cotton lest we should be deafened by the rattle of carriages setting down the titled and aristocratic members. We had dealt out to our reporters a double allowance of "prog and pencil" to sustain them under the infliction of eloquence without end. We had provided additional small diamond type, to condense into our columns all that the lead pencils should succeed in setting down! Alas! what are the hopes of man! "Parturient montes" was true enough; but so was the other half of the distich—"nascitur ridiculus mus!" When our reporter reached the scene of action, precisely at noon, three members alone were arrived, two being natives of Newcastle. "Lazily the minutes stole along. The 'golden number, three,' still remained that of the meeting! One o'clock arrived—still 'the fated three' stood stanch, but unaided, at their post! At last, at a quarter before two, making a virtue of necessity, they elected No. 1 chairman, and No. 2 secretary; No. 3 being the meeting; and adjourned the debate *sine die*!—*Tyne Mercury*.

TRIUMPH OF FREE TRADE OVER MONOPOLY AND CHARTISM.

On Monday last an important meeting of the inhabitants of the town and county of Northampton was held at that place, pursuant to advertisement.

Some short time back a requisition was forwarded to Messrs. Cobden and Bright, signed by 1200 agriculturists, manufacturers, and others, inviting them to attend a meeting at Northampton, for the purpose of discussing the great question of Free Trade, a request with which those hon. gentlemen immediately complied. A second requisition, signed by 91 supporters of the Corn Laws, was subsequently despatched to Mr. Stafford O'Brien, one of the members for the county, and chairman of the Publishing Committee of the Agricultural Protection Society, calling upon him to meet and refute the arguments of the members for Stockport and Durham. An answer was received from that gentleman declining to be present, on the ground that the requisitionists were quite able to form their own opinions without calling in the aid of strangers.

The Northampton branch of the Ishmaelite section of Chartists also despatched a third requisition, which was accepted, to Mr. Feargus O'Connor, who, it was intended, should act in concert with the hon. member for the county, whose presence was confidently anticipated, from the important situation he was known to hold in the great Central Society for the maintenance of the Corn Laws. Lord Fitzwilliam, the Mayor, and several of the most respectable inhabitants of Northampton, were severally proposed by the Free-Traders as chairman of the meeting, all of whom were successively objected to by the Chartists, who intimated their determination to allow no person to fill that office except Mr. Grundy, a retired tradesman of the town, who is held in great estimation by them. Notwithstanding the palpable unfairness of this dictation, the Free-Traders knowing Mr. Grundy to be a gentleman of integrity and high respectability, acceded to the proposition, and the meeting was accordingly presided over most impartially and honourably by that gentleman. Commemorative bustings were erected in the noble market-square—a space capable of accommodating with ease 50,000 persons. At the commencement of the proceedings the numbers present amounted to about 5000, which was soon augmented to 6000. A great number of the most influential tradesmen and gentlemen of the town and surrounding districts were present, including many farmers, several of whom held up their hands in favour of a repeal of the Corn Laws.

Mr. COBDEN, contrary to his usual practice, submitted to the meeting a resolution in favour of Free Trade, which having been seconded by Mr. Alderman Cotton, Mr. Feargus O'Connor came forward and proposed a long and deulatory amendment, recognising the great evils of the Corn Laws, but declaring their repeal to be inexpedient and injurious, unless preceded by the Charter. It is a singular fact, of which probably no parallel is to be found among the numerous and flagrant derelictions of principle too often met with in the history of political parties, that this amendment was supported by the votes of nearly all the Conservatives of Northampton, including most of their distinguished leaders, notwithstanding it recommended two propositions—the Charter and the ultimate repeal of the Corn Laws—to both of which measures they have repeatedly avowed hostility, in the hope that by the combination of these two extremes, and in principle utterly antagonistic

bodies, they should be enabled to overthrow the Free-Traders. Bodies of Chartists had been brought in from the surrounding districts, and every exertion was made to secure the defeat of the Anti-Corn-Law League.

Mr. GRUNDY having been voted to the chair, read the requisition convening the meeting, and called upon

Mr. COBDEN, who was received with loud cheers. The honourable gentleman called upon the meeting to discuss the question in the terms of the requisition, with reference to the interest of the farmers, the labourers, and the community in general. He then proceeded, in his usual lucid manner, to show that the Corn Law had been positively injurious to all those classes. With reference to the interests of the farmer in the Corn Law, as securing high prices, if the present harvest were well got in, wheat, which is now as low as 47s., would, before next Christmas, be down to 42s. Mr. Cobden then alluded to the efforts made by the working classes in 1815, to prevent the passing of the law, and in subsequent years to procure its repeal. It might be asked, why had not the masters then united with the men for that purpose? The reason was, that there was not that union which ought to have existed between the two bodies; but that was no argument against the present generation acting more wisely than their fathers then did, especially as we have had thirty years' experience of its injurious working. He (Mr. Cobden) was at school at that period, and therefore could not be blamed for any sins of omission or commission which were made at that time. Whenever bread had been low, wages had risen in the manufacturing districts, and poor-rates and deaths had diminished in an equal proportion. If the Corn Law had thus injured England, would any Irishman stand forward on that platform and maintain that it had benefited Ireland? If so, he would appeal to the highest authority with reference to that country—Mr. O'Connell himself, who always voted in Parliament for the repeal of the Corn Laws, and had attended all the League annual meetings at Manchester. The Corn Laws were only maintained for the benefit of the landlords. (A voice—"And the cotton lords.") It could not be for the "cotton lords," for there were only some fifteen of them in Parliament, out of the 658 members. After referring to the reduction of the duty on wool, Mr. Cobden reverted to the case of hides, leather being an article with which the inhabitants of Northampton were well acquainted. The effect of prohibiting the importation of hides would be the same as the prohibition upon wheat—there would not be half enough for general consumption. People would be compelled to wear wooden shoes, or go without, and the trade at Northampton would be ruined. It had been said that there were important interests connected with the Corn Law, and, therefore, that it should not be immediately abolished. That point had been well settled at a public meeting by a man in sustian, who asked, "Why do you dispute about doing away with the Corn Law all at once? Did they not put it on all of a ruck?" There was a certain duty imposed on French shoes; but the smugglers brought them into this country at half the money; but wheat was a more bulky article, and could not be so dealt with, and the landlords had, therefore, the best of the bargain. Let them, then, have free trade in corn, for they had already done their worst with shoes. There were other questions, no doubt, of very great importance to the country; but let them not endeavour to carry those important points by frustrating the achievement of that which they acknowledged to be a great good. The League would not go out of their way to interfere with any other agitation, but, in any work where the road was long and the journey arduous, a man would not be worse off by having plenty of bread procured for him by the way. He himself had voted for the motions of Mr. Duncombe and Mr. Sharman Crawford. With regard to the sugar question, his (Mr. Cobden's) object had always been to get the people as much as possible, and at as cheap a rate; and, for aught he cared for mere political parties, he would sell either Whig or Tory, provided he could gain for the people a reduction of 1d. per lb. in sugar. Mr. Cobden concluded by proposing the following resolution:—

"That the Corn Law and all other laws restricting trade for the benefit of a class are unjust, and ought to be forthwith abolished."

The hon. gentleman concluded amidst loud cheers.

Mr. Alderman COTTON seconded the resolution. Mr. FEARGUS O'CONNOR then came forward amidst loud cheers from the Chartists, and addressed the meeting for upwards of an hour, chiefly vituperating the manufacturers and the Anti-Corn-Law League. He said that the requisition, in pursuance of which he attended the meeting, contained 153 signatures more than that of Mr. Cobden. He denied in their presence, and that of the Great Ruler of events, upon his honour as a gentleman, and his oath as a man, that he had ever received a farthing, or the fraction of a farthing, from man, woman, or child, Whig, Tory, or Chartist, corporation, or individual, in the whole course of his existence, or had ever travelled one mile, or had eaten one meal, at the expense of anybody. When the poor men met at Peterloo to petition for the repeal of the Corn Laws, it was the Manchester manufacturers who came upon them and cut them down. What had caused the change in the spirit of their dream? They were then in political power, and now they wanted to gain their lost influence. Mr. O'Connor then proceeded to read extracts from the prize essays published by the Anti-Corn-Law League, which he alleged contained great contradictions, one set of arguments being for town and another for country—in the former representing that the manufacturers would get cheaper bread, and in the latter that the farmer would get higher prices. The League were only for pruning the rotten tree; he was for laying the mattock and the axe to its root. He was for Free Trade all over the world, but not for being monkeys or tame cats to any party; his object being to secure the poor man a share in the benefit which the manufacturers wanted to deprive him of. Mr. Cobden had spoken of the operatives being possibly reduced to wear wooden shoes, but they actually wear them at this time, and were glad to get them. Where was now (Mr. O'Connor asked) a working man's clock, feather bed, chest of drawers, and other things which he used to have? They had all gone; while the manufacturers boasted of possessing as much wealth as would pay the national debt. He did not charge the fault upon Mr. Cobden, but it was nevertheless true that a workman had been discharged from that gentleman's employ for reading the *Northern Star*.

Mr. COBDEN emphatically denied the assertion.

Mr. O'CONNOR proceeded to read some extracts from

"Almack's Character and Proceedings of the Anti-Corn-Law League," but the purport of them, save for abusing the League, and thereby avoiding the question of the expediency of the Corn Laws, no one could discover. After uttering a great quantity of irrelevant matter, he concluded by moving the following amendment:—

"Resolved, That we, the inhabitants of the county and town of Northampton, in public meeting assembled, are of opinion that the repeal of the Corn Laws, unaccompanied by a fair and equitable adjustment of the several interests that would be affected by the change, must lead to a confiscation of the properties of the most weak and unprotected, and to the centralization of all manufacturing operations in the hands of those who would be most capable, from the possession of large capital, and most ready, by the possession of a large amount of inanimate machinery, to take advantage of the change. That, while we declare ourselves hostile and opposed to the principle of restricting commerce by interfering with the rights of exchange, we nevertheless feel assured that the question of Free Trade is one which must be dealt with as a whole, and not upon mere party grounds. And as we feel convinced that the whole question cannot be justly, equitably, or satisfactorily discussed, arranged, and finally settled by any other tribunal than that constituted by the whole people, or by representatives fully, fairly, and freely elected by them; and inasmuch as such full, free, and fair representation cannot by possibility be accomplished through other principles than those contained in the document entitled 'The People's Charter,' we hereby pledge ourselves, in spite of all opposition, to continue our glorious struggle until the People's Charter is made the basis of the British constitution."

Mr. GRATH, the Chartist orator, then followed his leader in a similar style of incoherency, and concluded by seconding the amendment.

Mr. BRIGHT then came forward amidst loud cheers, and spoke as follows:—I have listened with the utmost attention to the two speeches that have been made by the mover and seconder of the amendment which is now before you; and I confess that, with respect to the speech of the mover of that amendment, I am unable at this moment to discover any very clear ground for forming an opinion as to his views on the question of the Corn Laws; he spoke against and for them in about an equal quantity; but, if I had been under any difficulty with respect to his speech, that of his seconder has wholly cleared up that difficulty, for I have perceived during the progress of that speech a repetition of the arguments in favour of the Corn Laws which are poured forth to a small portion of the readers of the public newspapers in the columns of the *Morning Post*, the *Herald*, and the *Standard*. (Cheers and laughter.) That gentleman might, without any impropriety, be the writer of those articles, so clear is the resemblance, so entire the identity between his views on this question and those of the high protectionist paper, the *Morning Post*. I address this meeting with the impression that if there be one class in this country more deeply interested than another in the discovery and adoption of truth, that class is the great mass of the people who live by their industry. (Hear.) It may be that the aristocracy and the clergy benefit by a law which is unjust in principle and injurious to the rest of the people; but there can be no injustice practised in this country by the Legislature under which we live which can be advantageous to the millions of the people, who have no property but their labour, and no income but their wages. Being, then, impressed with this opinion, I am conscious of no anxiety on the subject but that of discovering the truth. I am willing to and do assume that in your minds also there is an entire wish, to perceive the truth, and act upon it. I shall, therefore, go into no extraneous matter that I can possibly avoid. I shall not heap obloquy upon this or that man (hear, hear), but I will ask you as a class of intelligent men, the thousands here assembled to hear the arguments fairly on this momentous question, to judge impartially, and help by your voices to swell the cry which is hastening the glad time when the worst brand which ever tyranny inflicted on a people shall be swept away, and your industry and mine shall be free. (Cheers.) But, before I go to that, there is just one point with respect to Mr. O'Connor that I must be permitted to allude to, and I am sure he will not object to it. I said I was unable to discover from his speech what were his views on this question, and if I leave to-day out of consideration, and look back to former periods, I am equally unable to discover anything like a clear course which he has pursued on this question. Mr. O'Connor was a member of the House of Commons in the year 1834. In that year, immediately after the passing of the Reform Bill, Mr. Hume, a gentleman whom the last speaker has thought fit to place before you in terms neither fair nor complimentary, moved for a committee of the whole House, for the purpose of abolishing the then existing Corn Law, and substituting for a time a much lower fixed duty, with a view of ultimately coming to the principle of total Free Trade. Mr. O'Connor was in Parliament then, and what said he on that motion? Did he then say that he was in favour of Free Trade with all the world, but that he would not have Free Trade because the working people were not represented? No; he did nothing of the kind. Mr. O'Connor got up in his place in Parliament and there then defended the Corn Laws, and not upon any of those grounds which he has advanced here to-day, but upon grounds totally different. Mr. O'Connor may not be to blame in this matter, he may have changed his mind from conviction since.

Mr. O'CONNOR: Not a bit of it.

Mr. BRIGHT continued.—It will not be amiss if I give you a portion, or, if he please, and you have no objection, the whole, of his speech on that occasion. It is taken from Hansard's publication of the Debates: it has been before quoted in Mr. O'Connor's presence, and he has never disputed the accuracy of it:—

"Mr. Feargus O'Connor.—My hon. and gallant friend the member for Bolton has appealed to the Irish members upon this subject, and has called upon me more especially, as being the representative of the largest agricultural county in Ireland, to give him my support. Sir, I am going to give him my support, but it will be in the spirit of a guardian angel, to protect him from sacrificing his interest and his happiness upon the shrine of that block called political economy. The hon. member for Middlesex has said that this question is now at rest. I agree with him, and it is the only part of his speech with which I do agree. It is high time that this question, which, at present, not only agitates the manufacturing and agricultural interests of England, but also the agricultural interest of Ireland, should be set at rest. It is due to this House that I should point out certain fallacies into which those who support the present motion have fallen, and lay before it the different situation of Ireland, as contrasted with the situation of this country. The situation

of Ireland is this—we are a great agricultural country without manufactures, and we depend, as a vent for our produce, on the markets of England. If, then, you admit the importation of foreign corn, duty free, you will throw us completely out of the English market; agriculture in Ireland will be neglected; and not only will you sacrifice the only interest existing in that country, but also the landed interest of England, for the benefit of the Continental growers of corn. When we shall have ceased to cultivate our land at home, and when foreign nations find that we have so ceased, they will take advantage of our want of home production, and raise the price of their own corn at pleasure; and thus we should be left at the mercy of the whim and caprice of the foreign market. It has been said that the Irish members are unanimous in their determination to oppose it. I think I speak the sentiments of a large majority of those members, when I state that the agitation of this question will do considerable mischief in Ireland, and that mischief will be increased, if a determination to put it aside for some time is not manifested by a very large majority of this House. This is the only question, as it appears to me, in which the interests of the two countries are completely united and identical. The honourable member for Middlesex says that this is a question of justice against injustice—of the many against the few. But what is the reason that we have not heard of any manifestations of public opinion against the Corn Law? It is this—that while those persons who oppose the present system reside in large towns, and are easily called together in order to express their wishes to this House, the great agricultural population, who are interested in the continuance of the system, are spread thickly over the face of the country, and have not the same facilities for meeting together, to declare their opinions upon the subject. It is said that the repeal of the Corn Laws will make bread cheap without reducing the value of the land. This is a doctrine I cannot comprehend. If you reduce the price of the produce, rent must fall; if you keep up the standard of rent, you cannot reduce prices; and if not, how can you give the people cheap bread? I rose with a determination not to mix up any extraneous matter with the subject of this debate. I appeal again to the House not to allow itself to be led away by the absurdities or assertions of the honourable member for Middlesex. Without troubling the House any farther, I conclude by imploring the members from Ireland to consider this as a neutral question, threatening in its consequences, if carried, the annihilation of the liberty, rights, and protection of the poor man, and unanimously to resist the motion."

Mr. BRIGHT proceeded at considerable length, with great force and eloquence, to refute the calumnies and fallacies of Mr. O'Connor, and to demonstrate the benefits which would accrue to all classes from the adoption of Free-Trade principles.

The CHAIRMAN then took the sense of the meeting, when there appeared a decided majority in favour of the original resolution of Mr. Cobden.

Mr. O'CONNOR came forward and questioned the accuracy of the Chairman's conclusion, and requested a division.

The CHAIRMAN replied that there could be no possibility of a doubt upon the subject.

Notwithstanding the indecency of impugning the decision of a chairman appointed by themselves, the Chartists separated from the rest of the meeting, when their minority, had there been any previous doubt, became still more apparent.

Mr. COBDEN moved, and Mr. BRIGHT seconded, a vote of thanks to the Chairman.

The CHAIRMAN briefly returned thanks, and declared the meeting dissolved; notwithstanding which, after the departure of the Free-Trade party, Mr. O'Connor remained and harangued the meeting.

CLARKE, one of the colleagues of Mr. O'Connor, then proposed a vote of confidence in that gentleman, which, as a matter of course, was carried.

THE NORTHAMPTON MEETING.

The following advertisement appeared in the *Morning Post* of yesterday. Why the readers of the *Morning Post* should be specially invited to read the *Northern Star* is not very apparent to those acquainted with the character of both papers. Probably Mr. O'Connor is anxious to show the extent of his labours in return for the monopolist patronage with which he has been recently favoured:—

"O'Connor and Cobden.—Northampton.—The *Northern Star* of Saturday next, the 10th instant, will contain a full and true account of the defeat of the League at Northampton, when Cobden, Bright, and Grundy, the chairman, were hissed and scouted from the hustings, in consequence of Grundy refusing to divide the meeting, and declaring a resolution to be carried against which more than two-thirds of the meeting held up their hands.—N.B. There was no vote of thanks passed to the chairman; and he was not elected by the Chartists, as falsely stated by the League press.—Office, No. 1, Shoe-lane, London."

Judging from the accuracy with which facts are stated in the advertisement, the report is likely to be a curiosity in its way, and to afford the public additional evidence of that kind of veracity for which Mr. O'Connor's lucubrations are distinguished.

"Purchase a knave who senses and shame defies,
He'll pay the price back with enormous fees."
Bishop Hale's Satires.

FREE-TRADE RAZORS.—We have received from Mr. Middleton, of Sheffield, some beautiful specimens of razors, which, in addition to their useful qualities, have the advantage of being decorated with very tasteful symbols of Free Trade. The style of these decorations is very pleasing, and seems to show that the art of design may be applied with very happy effect to the ornamenting of steel; we have tried the useful qualities of these razors, and are bound to bestow upon them our warmest commendation. We may also mention that we have received Free-Trade pens, paper, seals, and sealing-wax, of excellent quality, and are glad to say that this is the only way in which our cause is stationary.

Lord Lyndhurst stated in the House of Lords, the other day, that the annual income from charitable trusts amounts to £300,000; that the sum invested for those purposes is thirteen millions sterling; and the number of trusts is upwards of twelve thousand; the whole management of which is vested in private persons.

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, August 7, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the *LEAGUE* of the Saturday immediately succeeding, but are included in the list of the week following.

DUDLEY ELECTION.

[From a Correspondent.]

However much to be regretted it may be that the result of this contest will not add to the number of Free-Trade in the House of Commons, it is certain that Free-Trade opinions will gain greatly in this locality from the discussion which has taken place on the most interesting question now before the public.

A deputation from the Council of the League arrived in Dudley on Sunday night or Monday morning, to consult with the Free-Trade electors as to the state of the borough, and the candidate to be proposed. No one connected with the town could be induced to stand, from the very prevalent feeling that the influence of Lord Ward, and of the iron-masters under his control, or actuated by a blind spirit of partisanship, was too potent to be successfully resisted. Several gentlemen were called upon and urged to offer themselves, but without obtaining the consent of any of them.

It then became a matter of discussion whether the election should be uncontested, or one of the League deputation should offer himself, to give the electors an opportunity of recording their votes. It was hoped that Mr. W. A. Smith, the brother of the hon. member for Norwich, and candidate at the last election, would arrive and offer himself. Mr. Smith was, unfortunately, in France, and could not return in time for the election; this hope was, therefore, at an end, and no resource was left but that one of the deputation should stand. Mr. Rawson, of Manchester, therefore, most reluctantly issued an address to the electors, and proceedings were immediately taken to canvass the borough.

We insert Mr. Rawson's address, and feel confident that every Free-Trade in the kingdom will approve the many sentiments and the just opinions it contains:—

"GENTLEMEN,—The resignation of Mr. Hawkes having caused a vacancy in the representation of your borough, I have, at the earnest request of the friends of Free Trade in Dudley, consented to offer myself as a candidate for your suffrages.

"Free Trade I believe to be essential to the prosperity and happiness of all classes in this country. In this district the iron, nail, and glass trades have, until very lately, been in a state of great depression; the most skilled and hard-working men have scarcely been able to live by their labour.

"Every recurrence of insufficient harvests, and seasons of scarcity, must inevitably bring about periods of suffering, similar to those which you have just experienced, unless you can secure for the fruits of your industry a free exchange for the commodities of other countries.

"The repeal of the Corn Laws would increase your trade, and so find room for your ever-increasing population, by enabling you to sell your glass, iron, nails, and other manufactures, for the corn and provisions of foreign countries. There need never be want in England. The industry and skill of the people are unequalled, and yet the working men do not get a fair day's wages for a fair day's work; and never can until they are at liberty to work for the whole world, and take in payment whatever the world can give.

"Should I be chosen to represent you in the House of Commons, my utmost efforts shall be used to carry the total repeal of the Corn Laws, and of all other laws made for the benefit of the few, to the injury of the great masses of the people.

"I have the honour to be,
Gentlemen, your faithful servant,
WILLIAM RAWSON.

"Manchester, August 3, 1844."

On Monday evening a very numerous public meeting was held in the large Lancasterian School-room, Stafford-street, which was addressed in a speech of much ability by Robert R. Moore, Esq., and by Mr. Rawson, the Free-Trade candidate. A very excellent spirit pervaded the meeting, and a resolution to do all that could be done was manifested by those present. During Monday and Tuesday the canvass was prosecuted with zeal, and in all quarters where independence existed there was a most gratifying result. On Tuesday, Mr. Bright, M.P., arrived, and attended a second meeting held on the evening of that day in the Lancasterian School-room, which was crowded to excess. Mr. Palmer was in the chair, and addressed some excellent observations to the meeting. Mr. Bright spoke for about two hours, on the great question of freedom of industry, and on the solemn responsibility of electors. We have rarely seen a greater effect produced upon an audience. The arguments carried conviction to every mind, and the enthusiasm of the meeting was extraordinary. Mr. Bright alluded to the fact that iron-masters and manufacturers were acting along with Lord Ward's agents in retarding the triumph of Free-Trade principles. He felt a deep commiseration for the electors, whose position and whose necessities almost compelled

them to submit to the dictation of the powerful monopolists. He was not surprised that Lord Ward and his order should work for "protection" whilst they believed that their interests and rents were involved in the question of its abolition; but he expressed the utter abhorrence he felt that men employing their capital in trade and manufactures, and dependent on the industry of the operative class, should combine with the lordly monopolist to ruin their own order. He compared them to the wretches who, whilst their town was surrounded by a hostile army panting for the spoliation of its inhabitants, should traitorously throw open the gates and invite the spoilers to come in and gorge themselves with their prey. He felt so deeply the conduct of such men that he knew hardly how to speak of them, but hoped they might be marked as traitors to their order, and as men unworthy of all confidence, and deserving of the scorn and contempt of every right-minded citizen of a free country.

The nomination took place this morning (Wednesday), when about 5000 persons assembled. Mr. Benbow, the monopolist candidate, was proposed by Mr. Badger, a glass and nail manufacturer, and seconded by Captain Bennett; Mr. Rawson was proposed by Charles Twamley, Esq., solicitor, and seconded by the Rev. J. Palmer. Mr. Benbow's speech was not heard beyond the few who surrounded him on the hustings, but he agreed that Free Trade was a good thing if other nations would become Free-Traders. Mr. Rawson spoke with great freedom and effect. He pointed out the hollowness of the plea that the Corn Law protected the industry of the people, for by it the price of their food was raised and the value of their labour depreciated. He drew a picture of the terrible sufferings which the population of this district have so recently endured, and proved its intimate connexion with the high price of food during the years 1839, 1840, and 1841; and tracing the matter still further, he clearly showed how reviving prosperity was the attendant on reduced prices of food, the consequence of more abundant harvests. These points were loudly cheered, and were evidently well understood by the auditory.

He then stated his conviction that two-thirds of the electors would vote for him if they dared; wherever he had gone they had wished him success, and declared that he should have their support if they could vote for him without the risk of losing their employment. He asked his honourable opponent on behalf of these voters to pledge himself before that meeting that no unfair conduct would be pursued towards those who voted according to their consciences at this election. After this appeal Mr. Rawson, turning towards his opponent, said, "I pause, Sir, for a reply;" but the monopolist candidate remained silent amidst the shouts of the people—"Let us vote as we like."

Mr. Bolton, the returning officer, then called for a show of hands, when certainly two-thirds of the immense multitude raised their hands in favour of Mr. Rawson. The decision of the returning officer was at once given in his favour, amidst the most deafening cheers from the assembled thousands, and the countenances of the poor colliers who had been brought against him bore evidences of no less pleasure from the decision than did those of the great majority of the assemblage.

After the nomination, Mr. Godson, M.P., addressed a crowd from a window of the hotel, and certainly a more disgraceful speech was never made by any man calling himself respectable. He denounced all the League deputation as paid to agitate the Free-Trade question. He heaped his filthy slanders upon the manufacturers of the north of England, and declared that in the best of times the cotton-spinners and millowners have never paid wages sufficient to buy good wheat bread for their workmen. He did not show how this, if it were true, could justify a law to make bread dear, whilst there was no law to raise the wages of the workmen. But Mr. Godson is very ignorant, or he knows that his charge is a direct and unblushing falsehood, as well as that which he brought against the Lancashire manufacturers, of being guilty of paying all their wages in goods, and often wholly in potatoes. If there be a county in England where the truck system is rarely practised, it is Lancashire; and if there be one trade more free from it than another, it is in the cotton trade itself. But Mr. Godson is a man whose chief merit is in a face of unsurpassable assurance, and whose political changes mark him a renegade of the very first water. As a lawyer he might, without undue modesty, say less about men being paid to advocate any particular opinions; and if he had been in the crowd, at the close of his speech, he would have heard the working men who had listened to him speculating upon how much he was paid for making a speech most abusive of better men than himself, and which a man less deeply sunk in political profligacy would have hesitated from uttering.

The whole discussion has turned on the question of Free Trade; not a single question on any other political subject has been asked during the week; and on that great question much progress has been made in the public mind of this locality.

Mr. W. A. Smith, the candidate at the last election, arrived very late on Tuesday evening, but unfortunately too late to make it possible for him to take the place of Mr. Rawson, who, had he arrived earlier, would most gladly have resigned in his favour. Mr. Smith is deservedly popular with the constituency of Dudley.

THURSDAY, THREE O'CLOCK.—The election has terminated in the return of the nominee of the old castle influence. No one expected anything else, and there is consequently, no disappointment experienced. The League came here merely to disseminate the principles of Free Trade, and not to win the election. That they knew they could not do, but they also well know that had they the ballot they would have won. There is not a man, woman, or child in Dudley, having arrived at the use of reason, and uninfluenced by the terror of their superiors, who would not vote for cheap bread and plenty of it. At present, however, the greater part of the people have no will, and were obliged to vote as they were compelled.—*Morning Chronicle*.

FOREIGN CORRESPONDENCE.

PETER PLAYFAIR'S LETTERS.—No. VI.

Leyden, July 15, 1844.

Leyden, as I before stated, has been rendered celebrated in the annals of the Low Countries, and, indeed, in the history of the world, by the siege which it endured from the Spaniards in 1573 and 1574. The military defence of the city was intrusted to John Vanderdoes. The burgomaster or mayor of the town—and every small village in Holland and Belgium has its burgomaster—was Peter Vanderwerf; and the example of heroism and endurance afforded by the citizens under the guidance of these two men has never been surpassed in any country. When Vanderdoes was urged by the Spanish general to surrender the town, he replied, in the name of the inhabitants, "that when provisions failed them they would devour their left hands, reserving their right to defend their liberties." For nearly four months the inhabitants held out, without murmuring; every individual, even to the women and children, taking a share in the defence. For the last seven weeks of the siege, bread had not been seen within the walls, provisions were exhausted, and the horrors of famine had driven the besieged to appease their hunger with the flesh of horses, dogs, cats, and other foul animals; roots and weeds were eagerly sought for. So strictly was the blockade maintained that every attempt of the friends of the besieged to throw in provisions had failed. Pestilence followed in the train of famine, and carried off at least 6000 of the inhabitants; so that the duty of burying the dead was almost too severe for those that remained, worn out as they were by fatigue and emaciation. At length two carrier pigeons flew into the town, bearing tidings that relief was at hand. The Prince of Orange had finally adopted the determination of cutting the dykes of the Maas and Yssel, to relieve the heroic town. As this fearful alternative could not be resorted to without involving in total ruin the whole province, it is not to be wondered at that it was only adopted after much hesitation and as a last resource. But the inundation, even when the water was admitted, did not produce the anticipated results. Although the entire country between Rotterdam, Gouda, Dordrecht, and Leyden was submerged, the water about Leyden only rose a few feet. The flotilla of 200 boats, built by the Prince of Orange at Rotterdam, and destined for the relief of the town, was prevented from approaching it from the insufficiency of the water, though the inhabitants could easily see it from their walls. Then it was that, driven frantic by disappointment as well as suffering, they approached in a tumultuous mob, and demanded of the burgomaster bread, or the surrender of the town. "I have sworn to defend this town," said the heroic citizen, "and, by God's help, I mean to keep the oath. Bread I have none for myself or for you, but if my body can afford you relief, and enable you to prolong the defence, take it and tear it to pieces, and let those who are most hungry amongst you share it." Such noble devotion was not without its effect; the most clamorous were abashed, and they all retired in silence. But, fortunately, the misery of the besieged was now nearly at an end, and another Power, above that of man, came to the relief of the town of Leyden. The wind, which for several weeks had been blowing off shore, suddenly veered round. A violent storm arose: the waters were driven in through the cuttings of the dykes in large quantity; the Dutch fleet was enabled to float up to the town: a sort of amphibious battle was fought on the causeways, and even among the branches of the trees. The Spaniards were repulsed and the city rescued. To reward the citizens of Leyden for this noble defence the Stadtholder offered them a choice—of exemption from taxes for a definite period, or the outlay of a sum of money on some public building or institution; they chose the latter, and were granted a charter of incorporation for the University, since so renowned throughout Europe. The university, like the city of Leyden, has seen its palmiest days; but its museums are still the finest in the world. The Museum of Natural History, though not one of the largest, is the most perfect for the beauty of its specimens in Europe; more especially in the productions of the East and of New Holland. The Botanical Garden, formerly under the care of the great Boerhaave, contains also a choice and perfect collection of living plants; and the dried herbarium is equally complete. Grotius, the most able expounder of international law, was a professor at Leyden, and our own Oliver Goldsmith was a pupil there. The pupils in the different faculties now amount to about eight hundred, and the schools of medicine and of law still maintain their ancient celebrity. Many foreign students resort to the University for instruction. The examinations for the doctorate in medicine are three in number; they are conducted in Latin, and the expense of becoming a doctor of medicine of the University of Leyden amounts to about 315 florins, or £27. Degrees in arts and in laws are obtained in the same way, and the fees amount to about the same sum; but no degrees whatever are granted by the University except after the ordeal of public examination. The University is, in all its departments, in a high state of efficiency; but the students, who formerly counted by thousands, now count by hundreds or by tens; and the city itself, which formerly contained a quarter of a million of inhabitants, now numbers little more than a tithe of its population. England, Ireland, and Scotland, France, Germany, and Italy, the kingdoms of the East, and the far West, all sent their contingents to swell the ranks of the aspirants for knowledge in the colleges of Leyden. No education was considered complete until a pilgrimage had been made to this ancient and hallowed shrine of learning. Evelyn, who was a student at Leyden, quaintly remarks, "I have now arrived at the top-gallant-mast and cross-trees of learning, and have ascended, with difficult steps and slow; into the clear atmosphere of knowledge and of truth. Honour to the men of Leyden who have piloted us on, and opened to future generations vast regions which the light of science alone can penetrate! Let men of other days remember what the pioneers of knowledge have done for them in those that are past." The Dutch, at this and at every period of their existence as an independent state, have been essentially a commercial nation. The country itself possessed few internal sources of wealth; but commerce came to their aid, supplying them with money, or with its equivalent in the rich and rare productions of Africa and Asia. Learning followed in the train of commerce; and the rich collections in natural history evidence the fact that the Dutch were not so absorbed in trading, trading,

tions as to be insensible to the higher and more ennobling pursuit of knowledge. Every town in Holland of any size has its botanical garden and its museum, open to the public from morning to night; and, to the credit of the Dutch be it spoken, they are too proud of these evidences of national taste to practise or permit any pillage or depredation, although the collections are so slightly guarded as to expose them greatly to this risk.

The Hague, July 20, 1844.

From Leyden to the Hague the land is thickly spread with cottages, villas, country seats, and gardens, and the scenery throughout presents the same rich but monotonous display of rural beauty. Although long the residence of the sovereign prince, and the seat of government, the Hague has only slowly risen from its condition of a village to that of a great town. Other Dutch cities owe their rise to commerce or to manufactures, or, as in the case of Leyden, to learning; but the Hague owes its rise and prosperity entirely to the presence of the court, the foreign ambassadors, and the native parliament or States General. Although the Hague is situated near to the sea, the canals and streams do not empty themselves into it, and they contain, in consequence, more stagnant water than any town in Holland. Fevers are common; and an Irishman, whom I saw at the hotel, insisted upon it that the *ague* was first met with at the *Hague*, from which he said it derived its name, with the omission of the first letter. Without stopping to question this opinion, we are bound to confess that the low fever arising from marsh miasm is very common in this district; and strangers who visit the country, and are incautious in exposing themselves to the night air, frequently suffer from its effects. If it were not for the windmills, by whose action the stagnant water is displaced and pushed out into the canal leading to Delft, the place would be unendurable as a residence. The principal promenade is the *Bosch*, or *wood*, a beautiful park nearly two miles long, and laid out in a style not unlike Kensington Gardens. It abounds in fine forest trees, and is one of the few places in Holland in which they are allowed to grow, as Nature designed, unclipped and untouched, and with all the luxuriance of their spreading foliage. The ground is diversified with fine sheets of water, and nothing can be more pleasant than the promenade through its delightful and refreshing groves. On Sunday the band of the Harmonic Society give an open-air concert, and the place is crowded with visitors. The Dutch, though a Protestant people, are by no means behind their neighbours, the Flemings, and the French, in their enjoyment of the Sunday; with the exception of dancing and theatricals, almost every other amusement is encouraged.

At the Hague I witnessed a public punishment which deserves to be mentioned. Seventeen criminals were brought on to the scaffold, which was built of wood, painted a red colour, and placed in the centre of the old square. Some of them were whipped; others, deemed incorrigible, were branded; but the chief criminal, whose crime was no less than that of murder, after witnessing the minor punishments, was brought forward in his turn. His story was as follows:—Ten years before he had quarrelled with his wife, and in a fit of passion had struck her a blow which proved fatal. He fled from justice and was sought for in vain; until after ten years, when the pursuit had ceased, he suddenly, goaded by conscience, determined upon delivering himself up to justice. He was tried and sentenced to death, and now stood on the scaffold. His appearance was that of a man about 45 years of age, but I was told that he was full 10 years younger. He had evidently been a person of powerful, athletic frame, but was now wasted and feeble: the gnawings of the "worm that dieth not" had brought him to his present state of emaciation. His appearance, and the fact of his having delivered himself up to punishment, excited commiseration in his favour, and an audible murmur was heard through the crowd when the executioners proceeded to strip him, and prepare the fatal block. Capital punishment is executed in Holland not with the guillotine, but with the sword; and the neck and shoulders of the criminal being bared, and the religious services finished, the head was placed upon the block, with a heap of sand beneath it to catch the blood. The executioner then took his place, with the sword of justice in his hand, to the left and behind the criminal; the sword was uplifted, but descended, not as I expected, with the full force of the arm, but was drawn three times lightly over the neck without cutting or breaking the skin. The criminal was then told that, in consequence of the mitigating circumstances of his case, the royal prerogative of mercy had been put in force, and his sentence commuted to hard labour for life in the galleys. I do not know whether he was prepared for this result; but if otherwise the sudden transition from the very "valley of the shadow of death" to the region of life, even though a life in the galleys, must have been startling and terrible. The criminal, however, betrayed but little emotion, and probably knew, which I as a spectator did not, what would be the result. To suppose otherwise would be to imagine a refinement of cruelty foreign to the character of the nation. I was also confirmed in this supposition by being informed afterwards, that, in all cases in which the capital sentence is pronounced in Holland, the form must be gone through, and the letter of the law complied with. The King can alter the final sentence, but the form of the sentence, as pronounced by the tribunal, is invariably adhered to. It is a curious fact, that, when the result became apparent to the spectators, a revulsion of feeling towards the prisoner seemed to occur, and the murmur which would have checked the execution, swelled at once into an expression of disapprobation at the loss of the tragedy which they had wound themselves up to witness. The assembly consisted of the same class of persons who attend such sights in our own country; but, though the square was nearly filled with men, I could only count about a dozen women among the spectators; and the windows of the square were generally closed, instead of being filled with persons eager to see the sight. I did not see a single instance of drunkenness during the day, and but little misplaced levity. I understood that no capital execution had taken place before for many years, except one of a double murderer at Utrecht; and I believe that the Dutch, in common with other civilized nations, are coming rapidly to the conclusion that judicial murders do not operate as warnings to prevent other murders, and that there are better uses to put even criminals to than that of taking their lives. P. P.

REVIEW.

Report on the Exposition of the Industrial Arts of France in the Museum-Palace in Paris. Art-Union, No. 70. London: How. Second notice.

We continue our extracts from this Report, which the publishers have judiciously produced at a moderate price, to as to place it within

the reach of every artisan who is willing to spend a shilling on his own improvement, because we feel convinced that the present superiority of the French in the arts of design is the result of training and education, not of any natural or exclusive pre-eminence of intellect. As our journal circulates very extensively among the operative classes, we are glad to be able to afford them an opportunity of comparing their own productions with those of the operatives of France, recommending those who wish for further information to expend a shilling on the purchase of the Report itself. We now proceed

with our extracts.

"In 1834 most of the articles of domestic furniture sent to the Exposition by the cabinet-makers of Paris, who engrave almost exclusively the trade of France, were imitations of the worst English style. We have already mentioned that the Revolution brought in its train a complete change in the domestic furniture of France, compelling the artisans to abandon those massive designs for articles on a large scale, and to seek forms more in harmony with apartments of moderate size. Comfort, a word, by the way, which has now become thoroughly naturalized in the French language, began to be preferred to luxury. Under these circumstances it was natural that the French artisans should have recourse to Great Britain for the forms which their altered circumstances required, as in our country commercial and manufacturing enterprise had created a number of moderate fortunes, such as did not

exist in France until after the Revolution, and the consequent wars had run their course. The first essays of imitation were miserably bad; but the French artisans have now struck out a new style, in which they have combined the old forms of decoration with the English shapes of comfort. The chair which we give, as an example of this new style, is also a specimen of an art which has made great advances in France within the last few years, that is the art of sculpturing wood by mechanical processes. The principle of one of those processes, and that which we believe to be the most successful, may be described in general terms as a combination of the lathe and the pantograph; the latter principle in its application enabling the artisan to enlarge or diminish the size of his copy of the pattern at his discretion.

The arm-chairs (*fauteuils*) are generally more per-

fectly modelled in the style of Louis XIV. than the other articles of furniture, and they are upholstered more richly than has been the fashion for the last century. Satin, figured velvet, and embossed leather, were the favourite materials for covering the soft backs and cushions; but it appeared to us that the embossed leather did not harmonize with the general effect. All the square-backed chairs had an awkward stiffness and rigidity in their appearance, which was rendered more striking by the flowing curvilinear outline of such *fauteuils* as that which we have copied. In couches there were several patterns which might be given as examples of simple elegance; we have engraved the design of one which was particularly pleasing

in its effect. But there were some others overlaid with such a profusion of inconsistent ornaments, that they re-

sembled rather a chance assemblage of specimens than a union of harmonious parts in a single design. We noticed out one specimen of the recumbent chair; its mechanism was very perfect and easily managed. The ornaments sculptured upon it were executed by Grunpre's mechanical process, and were among the finest specimens of

wood-carving in the Exposition. It may, however, be desirable to see the difference of effect between the mechanical carving and that produced by the ordinary process; and for this purpose we shall insert the framework of a *fauteuil*, which was described as entirely the work of

the hand, without any assistance from the mechanical processes. We did not think the hand-carving at all superior to that produced by mechanical means, while the latter had the obvious advantage of being attainable at less cost. It is said that some upholsterers have tried the experiment of getting chairs in plain wooden frames, and encrusting them with ornaments in *papier-mâché* and the *chauvre-impermeable*; but we saw no specimens in the Exposition.

Several articles were suggestive of designs extending to a wider range than the material on which they appeared; as, for instance, the decoration of letter-paper placed at the beginning of this article. On this subject we find the following remarks in the report:—

"While discussing these minor matters, we may take this opportunity of noticing the beauty of the *papeterie de luxe*, which was abundantly displayed at the Exposition, not merely for its own sake, but for the suggestiveness of the designs, which are applicable to a very wide range of manufacturing production. The scroll, in that which we have delineated, may, for instance, be reproduced in textile fabrics, in paper-hangings, and in metallic ornaments, with great advantage. The graceful grouping of the flowers, and the management of the pendent festoons, may also convey useful hints, for in nothing do the English designers for calico-printers more signally fail than in their management of pendent flowers and festoons. We may take in connexion with this a specimen of damasking on steel, which forms the cover of a

sewepir, and is equally remarkable for the beauty of its scroll-work, because it gives us an opportunity of again

directing attention to what we regard as an excellence in the French artists, their making each design accurately fit the space it is intended to cover. We examined some scores of specimens of damasked steel, and did not find a single instance of a pattern broken off by a corner. The style in both these patterns is not new in its main features; but we wish to call attention to the boldness and decision manifested by the designers in their treatment of the subject. We subjoin a design for a border which we deem equally meritorious."

The following judicious remarks are made on the designs for paper-hanging, displayed at the Exposition:—

"Although we shall have occasion to dwell at more length than we can now afford on the subject of the paper-hangings displayed in the Exhibition, we must say a few words on the subject here in connexion with our more immediate topic, house decoration. We select two patterns; one of which illustrates the small panel, and the other the running pattern. The first of these exhibits a happy combination of the minor elements of *la Renaissance* with the more elaborate, and, at the same time, the bolder forms of the style of Louis XIV. It will be seen that the sweeping outlines of the larger portions of the pattern exhibit a complete harmony of curved forms, the diversities of the minor parts being all strictly subordinate to the grand unity of the centre. A

great portion of the excellence of this pattern is necessarily lost in our engraving, which cannot, of course, give the exquisite relief and blending of its colours. The flowers in the centre were really as fine as some of the ordinary flower-pieces painted in oil, and the ground-work had at a distance the effect of the richest satin. The

running pattern was more elaborate in its design, and more purely in the style of Louis XIV. Where the design for running pattern is composed of purely fanciful forms, and not a reproduction of flowers, scenery, &c., we should recommend the adoption of a design, which, however apparently simple, should have sufficient complication not to be easily taken in at a glance. The running pattern is designed to extend over a wide space, through which it is to be continuous; and the skill of the artist must be exercised to hide as much as possible the facts of reproduction and repetition. Now, this fact of repetition becomes almost painfully apparent when the pattern is too definite, and its forms brought too obviously into mathematical relations; the style of Louis XIV. errs generally in the opposite extreme, for it frequently discards not merely mathematical but even artistic relations between its parts, reminding us of Gray's old manor-house, full of

"Long passages that lead to nothing."

"In the design which we have copied, it will be seen that the artist has kept the notion of continuity steadily in view, so as to hide very cleverly where the process of reproduction and repetition commence, and to convey the impression that the pattern, to whatever extent carried, has an unbroken and perfect unity. We saw some specimens of paper in which the fact of continuity was disguised by breaking up the pattern to some extent, and baffling the eye by fragments and interruptions; this artifice of design was, however, best shown in a figured silk, an engraving of which is annexed. The use of re-

ning patterns in paper-hangings is very forcibly felt when we compare them with panel-patterns. The latter look far best in the piece, and are perhaps the most pleasing when casually examined; but for a room, in which the same parties constantly assemble with the same objects before their eyes, we think that the sameness of the panelings, however well each might be executed, would produce a heavy and very wearisome effect.

"The French designers, acting on the principle which we have enunciated and endeavoured to develop in the last paragraph, have laboured very strenuously of late to conquer the effect of reproduction and repetition in their flower-patterns. We take as an example a pattern of a figured silk, in which the idea of continuity has been

very artistically made to predominate over the idea of reproduction. But artists should bear in mind that this disguise is much easier attained in textile fabrics than in a stiff material to cover a flat surface, like paper-hangings; the folds of the drapery give great assistance in hiding the fact of continuity.

"There were a few specimens of paper imitations of fresco-paintings which possessed considerable merit, but we believe that the style to which they belong is not very popular in France. We saw very few arabesques, and none that deserved special notice; and we saw no designs for the decoration of ceilings, a branch of domestic ornament which we are glad to find making great progress in England. Borderings, mouldings, and other minor decorative ornaments were exhibited in great abundance, but they were so crowded upon each other as to defy all possibility of close and minute examination."

In conclusion, we have to express our thanks to the proprietors of the "Art-Union" for their liberality in giving us the use of their cuts; they have done so because they knew that this journal circulates largely among the operatives, and therefore was a good medium for showing them the progress of design amongst their brethren in France, and raising in their breasts feelings of generous emulation. The only rivalry between two such nations as England and France should be a struggle for elevating and benefiting humanity.

MR. DAY'S "CELEBRATED" SPEECH.—Mr. Hill, of Peterborough, has addressed a clever letter to the *Cambridge Independent*, exposing a statement which recently appeared in that paper, to the effect that Mr. Day's "celebrated" protection speech at Huntingdon had reached a forty-sixth edition. Mr. Hill says:—"The circumstance should be known (in order to prevent the unnecessary suspense and anxiety of those readers to whom the forty-sixth edition may be inadequate to furnish a supply; and who, therefore, may be kept in painful suspense waiting for the forty-seventh edition), that numerous copies of the early editions are yet on sale. They are to be met with at many booksellers' in town and country. As recently as last week, in passing a shop in Chancery-lane, where Mr. Day's publications are sold, I was rather amused to see copies of the second edition, and the fourth edition, of the same speech of Mr. Day, exhibited in the same window; and it occurred to me rather forcibly, 'Why should it be necessary to publish a fourth edition when the second is yet unsold?' But, of course, if it was necessary to publish a fourth edition before the second was sold, it might, in like manner, and for the same reason, become necessary to publish a forty-sixth, or a one hundred and forty-sixth; and how greatly must this increase the celebrity of the 'celebrated speech!'"

The Maidstone Farmers' Club have resolved, after discussion, "That it appears to the members of this club that in this district it is most beneficial to the community at large that arable farms should not exceed 500 acres in extent, nor be less than 250 acres."—*Maidstone Express*.

AGRICULTURE.

A POLITICAL HARLEQUINADE.

The tricks and transformations which the political landlords, who are the most vehement supporters of monopoly, have performed before the faces of the farmers of England must, we should think, have given to those farmers a pretty accurate measure of the value of the opinions and consistency of that class of politicians. In fact, none have more loudly complained of this than the farmers themselves. But it was reserved for the Honourable Dudley Ryder and Lord Grimston, two of the members for the county of Hertford, to offer a practical instance of the lengths to which this sort of political gyration may be carried with impunity, or, at all events, without instant and summary punishment.

Not long since one of those catch-penny farces called wool fairs was exhibited at Hemel Hempstead, in Hertfordshire, and of course, as in duty bound, two of the county members were there to help to keep up the delusion that squires can coax wool-buyers to give to farmers something more than the market price of wool, for the sake of winning a silver spoon or plated pap-dish. Well, poor Lord Grimston cannot say much for himself anywhere, and probably the less he says the better for his own credit; and therefore Mr. Ryder, who is volubly violent where he is sure he cannot be answered, did the speech for the occasion. Being met at the wool fair, and wool being the article with which their heads were filled, wool naturally welled out of their mouths; and accordingly we find Mr. Ryder, after alluding to the recent measure of free trade in wool passed by Sir Robert Peel and his Parliament, and after referring to some official returns which proved that we have always sold our wool at the highest price when most foreign wool has been imported, thus eloquently defended the ministerial measure:—

"It was clear, therefore," said the monopolist member, "that, when they had taxed foreign wool the highest, they had taxed English wool higher at the same time; and the reason was perfectly obvious, because it turned out, in the competition with foreign nations, that every one was endeavouring to make use of the produce within its own boundary. (Hear.) On a statement of these facts, then, he arrived at the conclusion, that they were interested in obtaining the finest wools from abroad at the lowest possible price; in fact, they could not dispense with the use of them if they were to maintain their pre-eminence in the manufactures of the country."

And here some symptom of dissent and uneasiness having been manifested amongst the no longer "wool-protected" auditors, Mr. Ryder, with all the dignity and energy of injured innocence, added:—

"He had taken the liberty of stating these facts, because, after all, the question must be decided by facts, and by facts alone. (Hear, hear.) Their theories might be very fine, and their prophecies thought to be very sound at the time, but in dealing with questions of this sort, experience and not theory must decide. (Hear, hear.) He had shown by incontrovertible facts that, in proportion as they had admitted foreign wool at a low rate of duty, to mix with English wools, British manufactures had prospered, and British wool had risen in price. He did not think that this happy union between English and foreign wool-growers ought to be dissolved, or that they should interpose a Doctors' Commons fiat to destroy the matrimonial engagement. ('Hear, hear,' and laughter.) If they did so, they would not only damage the manufacturer, but they would damage themselves."

This is all true enough, and it shows that Mr. Ryder is undergoing a not unpromising novitiate in the doctrines of Free Trade. But he should have been neither surprised nor angry that the farmers exhibited some impatience at hearing, in 1844, such doctrines from him upon the subject of a free trade in wool, who, at the very same place, and on a precisely similar occasion—no longer ago than June, 1843—made the following decisive speech:—

"This very evening there is to be brought forward in the House of Commons a proposition for lowering the duty on wool, and we (meaning himself and Lord Grimston) intend to go back to town by the six o'clock train in order to oppose that motion, for I do not think that, with 45,000 lbs. of wool in Hemel Hempstead, we want much from abroad." ("HEAR" AND CHEERS.)

Of course this speech of 1843 was received with "hear" and "cheers," but we do not observe any "hear" or "cheers" appended to that of 1844.

Now, what must a person who had not acquired some knowledge of the "reciprocal confidence between English landlords and tenants" have thought of the face of the man who could make, and the sanity of the audience who could listen to, two such speeches in two consecutive years?

This is not simply Jim-Crowism, it is not merely the case of a public man "turning his back upon himself," it is complete political Jack-Puddingism. If the Honourable Dudley Ryder had gone to the Hemel Hempstead wool fair and stood upon his head for the amusement of the rustics, he could not have excited the surprise of the farmers more than he did by his actual exhibition;—and, if he had any real friends there, they could not have grieved more over such an act of Merry-Andrewism than they must have done at his political Harlequinade.

But though Mr. Ryder—and Lord Grimston

went through his clumsy tumble in imitation of his colleague—offers a palpable and ludicrous instance of effrontery, in first obtaining his seat at the hands of the farmers to oppose Free Trade in everything or anything, and then coming back to them and telling them, in despicable and contemptuous language, such as has never been addressed to them by the Free-Traders, that "all their theories and prophecies might be very fine," but that, whether they knew it or not, free trade in wool was the best thing which could happen for them, he does not stand alone. Has not Sir Robert Peel done precisely the same thing upon a larger scale, and perhaps with a little more dexterity? And has not the same farce—peradventure not quite so broadly—been played upon this very wool question by every monopolist county member who has ventured to meet his constituents?

And let us call to the attention of farmers the false pretence upon which free trade in wool is justified by the monopolists of corn, and which Mr. Ryder, following his political leaders, used at Hemel Hempstead. He said "that in proportion as they admitted foreign wool at a low rate of duty, to mix with English wools, British manufactures had prospered, and British wool had risen in price." Now, this often-told tale about the mixture of foreign wool with British wool is a pure fiction. Nothing of the kind takes place to any extent in manufactures. Foreign wool is used for making some woollen articles and British wool for others, but there is no fabric of woollen manufacture made in this country in which the two kinds of wool are mixed together. This was distinctly stated by a wool-buyer, Mr. Morren, at the Chelmsford wool fair, in a speech to which we referred last week, who remarked, "There was a mistake at head-quarters, when it was said that a large quantity of English wool would be required to mix with foreign; if they inquired of the manufacturers, they would find that was all FUDGE. There was little mixing of wools; it was like sowing beans and wheat together. The quantity used for mixing was only a few bags a year." Now, this is testimony of far more value to farmers than the statement of Mr. Ryder, who evinced at the last Hemel Hempstead wool fair such profound knowledge of the agriculture of the county he professes to represent, that he did not know whether long or short wool was the staple growth of Hertfordshire!

Yet such men as these proclaim themselves the special protectors of British farmers and of British agriculture!! Well may the agricultural interests exclaim, "Save us from our friends!!"

But all this political charlatany is not without a motive. The wool duty was abandoned by the Government and its monopolist adherents in the hope of saving the greater monopoly of corn. Yet, the deed having been done, the result is telling immensely in favour of the principle of Free Trade; and hence the monopolists of food are anxiously seeking to draw a distinction between the principles which govern the trade in wool and those applicable to the trade in corn. No such distinction, however, has any existence, except in the speeches of monopolist members of Parliament; and the day is not very far distant when that which has been found to occur with regard to wool will happen in the case of corn; large foreign importations will take place, and with each additional importation the market for home-grown corn will become more buoyant and active. Then, probably, the farmers will have lots of county members telling them that the more foreign corn they admit the more English corn will be required to mix with it. Such are the puerilities by which the political landlords imagine they can retain their influence over the farmers of England!

THE COST OF WHEAT-GROWING.

We have received a somewhat irate letter from Mr. R. L. Townsend, who vehemently attacked Earl Ducie for showing that wheat could, by means of improved husbandry and full capital, be grown at a cost so moderate that all foreign competition must be a mere bugbear to a good farmer. It seems that we have incurred the displeasure of this doughty monopolist by not reprinting all his letter, that which did not, as well as that which did relate to the matter in question. The whole of this omitted letter consists of a rather lame attempt at sharpness in making it appear that we were in error in referring to Mr. Morton's book, and that Mr. Morton's book is no authority; all of which is founded on pure misapprehension on the part of this writer, whose trustworthiness may be judged of by the circumstance we before mentioned, and which, for the benefit of those who put faith in these self-constituted monopolist authorities, we now repeat. After Earl Ducie had shown that Mr. Townsend's grand discovery was a simple misapprehension, his lordship invited him to inspect the accounts at Whitfield Farm; and this gentleman to that invitation magnanimously replied, "I do not consider it at all necessary to accept his lordship's invitation to Whitfield Farm for the purpose of inspecting his farm-books; I am not a practical farmer, and therefore not competent to enter into any discussion with Mr. Morton upon the subject of the charges entered in his lordship's accounts. The only remark I shall therefore offer upon the subject of Lord Ducie's statement at Covent-garden is, that it materially differs from whatever I have either read or heard upon the subject of agriculture."

Now, what direction Mr. Townsend's agricultural reading may have taken, or to what sources he may have gone for oral information, we do not pretend to know; but it has been our fate to hear and see, from the protectionists, so much that is false in letter and in spirit, and so inconclusive in point of reasoning upon the subject of agriculture, that we can easily believe him to have had some industry both in reading and in personal inquiry, and that his knowledge of the subject may still be exceedingly small. But that a man, who now comes out "not" to be "a practical agriculturist," should make a violent and public charge against a nobleman admitted to be the best arable-land farmer in England, and then, when called upon to contradict or substantiate his charge, and for that purpose is invited to inspect the Whitfield accounts, should "not consider it at all necessary to accept the invitation," really does lead to a more unfavourable inference as to the writer's motives than can be accounted for on the ground of mere ignorance. Let the reader imagine how such an admission would be dealt with in a chancery suit! Or what sort of a figure a witness giving such an answer would make before a jury!

But the richest part of Mr. Townsend's letter to ourselves is its conclusion: having set out at length Lord Ducie's letter respecting his charge, and the ingenious rejoinder we have mentioned, Mr. Townsend says:—

"I was directed to Mr. Morton's book by reading your article headed 'How to get the best of an argument.'—LEAGUE paper, No. 39, June 22nd, p. 631. I observed the unfair advantage you were endeavouring to obtain by referring to Mr. Morton's book, and was determined to turn the tables upon you. This, I contend, I have accomplished. I defy you to shift your reference to Mr. Morton's book, which I gave in my letters, to Mr. Samuel Jonas, or any other person. I hold the LEAGUE paper, and can produce it. To those who have read your paper as regularly and attentively as myself, this dishonest effrontery will not appear remarkable, and by the majority of your readers I doubt not it will be highly applauded as a very clever trick; but to those who are gentlemen I should imagine it will afford subject for considerable doubt, whether they should longer encourage a paper thus proved to be so utterly regardless of fair play and of truth. Pray do not for one moment imagine I have been sufficiently silly to PAY for your paper. It has been forwarded to me by a friend."

"I am, Sir, your obedient servant,
"July 30, 1844."
"R. L. TOWNSEND."

Now, how Mr. Townsend has turned the tables upon us because he has misunderstood an estimate made in 1838 to be a present statement of actual results, or what unfair advantage we could gain by referring to Mr. Morton's supplement—not his appendix to his book on soils—published in 1843, which is his report of Whitfield Farm operations to July, 1842, it passeth our imagination to conceive.

Indeed, the monopolists give us so many fair advantages in argument over them, that we could not in conscience take an unfair one, did we conceive it possible that the truth—which is our object—could be made manifest by misrepresentation. We have no doubt that our readers will, with us, laugh at poor Mr. Townsend's compliment to "the majority" of them, and be glad to find that, though he has in this matter of the cost of wheat-growing shown himself silly enough for anything, he has enough of saving knowledge to read our paper at his "friend's" expense. It is our duty to sow the seed of sound information, and we hope that even such of it as falls by the way side and on the stony ground may not ultimately be altogether without fruit.

A FARMER ON FREE TRADE.

When a farmer of education and intelligence applies himself to understand the real merits of the Corn-Law question, he invariably becomes a most strenuous Free-Trader; for it only requires a calm and careful consideration of the events of the last thirty years as connected with agriculture to convince any rational person that no one has suffered by the restrictive system in anything like the same degree as the tenant-farmers—unless we must except the agricultural labourers. The welfare, however, of these two classes is so strictly identical, that suffering by the one is sure to be the cause or consequence of suffering to the other.

It is the instant perception of these truths, arising from his knowledge of husbandry, which always renders the Free-Trade farmer one of the most earnest Free-Traders. Now, few names are better known than that of Mr. C. H. Lattimore, who is a first-rate farmer, and a most sincere and effective advocate of an unrestricted trade in corn; and the following passages from his speech at the recent Anti-Corn-Law meeting at St. Alban's show how the left-handed Free Trade of Sir Robert Peel, which is anything but Free Trade in practice, affects the farmer injuriously. He said:—

"The passing of the tariff without a free trade in corn, was the greatest act of injustice which could have been committed against the agriculturists. (Hear.) The best means the farmer had of keeping his labourers employed, and providing means for the efficient cultivation of his land, was by keeping stock. He did not care how cheap beef and mutton were, but he would say, let them have Free Trade, in order that they might be enabled to produce it as cheaply as the foreigner, and not be obliged, as they had been by the ministerial measure to produce meat at great cost by using Corn-Law enhanced food, and to sell it at cheapened tariff prices. (Cheers.) Did they believe that any minister would have dared to direct all his measures exclusively against the farmers, if he was not convinced of their political prostration to the landowners' will? (Hear.) Sir Robert Peel had got the votes of the farmers' friends by promising that they should not be injured by any of his measures. To the landowner he said—your rents are secure; to the tithe owner—your tithes are fixed; and I want to lower the price of mutton and beef, in order that you may be able to purchase them cheaper, and that will compensate you for the income-tax. He (Mr. Lattimore) contended that they ought to have free trade in corn, in order to enable them to meet the foreigner in the market with stock. He was last week in company with an extensive agriculturist and producer of stock, a thoroughly respectable and practical man, Mr. Hudson, of Castle Acre, Norfolk, and such was that gentleman's opinion of the operation of the tariff and existing system, that although, as he stated, he failed two hundred bullocks for Smithfield last year, he said to him, Mr. Lattimore, 'How many do think I shall fat this?' He replied, 'Perhaps half that number.' 'No,' said Mr. Hudson, 'I shall only fatten one, and that one for the Smithfield show, and not one head

of the ruin which may be brought upon them, provided they were to make any attempt to break the monopoly of the landowners in the country villages, unless they could show how the land would be used to the greatest benefit at the same time. To such persons of the labouring classes Earl Radnor's letter would give great confidence, and it would strengthen the voice of the poor hard-working artisans and little tradesmen in all the villages throughout the country, a class of persons who, I firmly believe, are suffering nearly as much as the labourers themselves."

When the labourers suffer, those who live chiefly by their custom must suffer in nearly the same degree; and that is pretty much the case with the tradesmen and mechanics in the Wiltshire villages.

NOTICES TO CORRESPONDENTS.

We have received a long communication from Birmingham, signed "A Radical Reformer," in reply to Mr. Sturge's letter. The following extract, consisting mainly of facts, is all that we can find room for; and we beg to decline further correspondence on a question with which the League shall not, with our consent, be mixed up. "Mr. Sturge tries insidiously to make it appear to the public, that in opposing Mr. Wm. Scholefield he was fighting against 'the two parties who are contending for political power.' These are his words as given in his letter in your paper; and in justice to Mr. Scholefield, to those who nominated him, and those who voted for him, I trust you will allow me to show who and what Mr. Scholefield is. He is an advocate for the total and immediate repeal of the Corn Law, and for free Trade; and, like his respected father, favourable to relieving his poorer fellow-countrymen from those taxes which press upon their comforts, and substituting, if necessary, direct taxation upon property. He is in favour of the ballot, short parliaments, and, I venture to say, there are not thirty men in the House of Commons who would go further in extending the suffrage than Mr. Wm. Scholefield. So far from being connected with the aristocracy, he is in all his interests identified with the unprivileged classes of his countrymen, and a thoroughly honest and honourable man. Mr. Sturge knows all this; and yet he tries to screen himself by insinuating that he was opposing a candidate who belonged to one of the two aristocratic parties who are contending for political power." Several reviews, notices to correspondents, and other articles are unavoidably postponed.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order, to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the LEAGUE forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadsby, Newall's-buildings, Manchester; and the LEAGUE may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

POSTSCRIPT.

LONDON, Saturday Morning, August 10, 1844

The election at Dudley has terminated as we anticipated. The farce of representation is nowhere to be seen in greater perfection. There are about 720 voters on the register; of this number there are probably not 200 who can give independent votes; the whole of the remainder are under the direct or indirect influence of Lord Ward. Mr. Benbow, the successful candidate, was the opponent of Mr. Villiers at Wolverhampton, and is the agent of Lord Ward: it is understood that he is put in to keep the seat for Lord Ward's brother, a young gentleman who is just of age.

Dudley is a manufacturing town containing about 30,000 inhabitants, who are chiefly employed in iron, glass, and nail manufactures. A part of the town and the principal part of the surrounding mining district belongs to Lord Ward. From the possession of this immense property, great numbers of the voters are in his employ; and it always a condition that they vote for his nominee. At every election a note is sent to each elector under the direct influence of his lordship, couched in the most courteous terms, respectfully requesting the vote and influence of such elector in favour of his lordship's candidate. This request is understood; and if not complied with, the offender is visited with the summary punishment of discharge from employment, or notice to quit land or premises, as the case may be.

His lordship, in addition to his direct, exercises perhaps a still more powerful influence indirectly; the mines chiefly belong to him, and are let on leases to the ironmasters. These leases, however, afford no security for independence on their part: there are so many conditions attached to them that they are exposed to constant loss and annoyance from an ill-natured and unfriendly agent, and therefore, on occasions of election contests, it is always the interest of the ironmasters not to offend his lordship by opposing his nominee. The ironmasters give employment to large numbers of the electors, and many of the shopkeepers are dependent on them. The same influences which are exercised by Lord Ward over his dependents are exercised by the ironmasters over theirs, and these influences are united to return whomsoever Lord Ward pleases to appoint. It is, therefore, surprising to see so great an amount of independence as exists.

It would be injustice to the people to say they do not feel the galling yoke of bondage—they do feel it, and on every occasion manifest the greatest impatience to break their bonds asunder. Their oppressors know the feelings of the people; but though they knew that they could carry the election by an overwhelming majority, they knew also that they could not carry the show of hands at the nomination, and therefore the collieries were stopped, and from Tipton alone 500 were marched early in the

morning, walking 12 abreast, headed by their gang-leaders, or butty-men. Notwithstanding all these efforts, however, the show of hands at the nomination was carried by two to one in favour of Mr. Rawson.

There could be no better exemplification of the feelings of the people and the influences at work, than the fact that Mr. Rawson was more warmly received in the district of Netherton, belonging to Lord Ward, than in any part of the borough. Everywhere the electors said, "God bless you, we wish you success; and we wish we could vote for you!" But mark how they polled—110 voted for Benbow, and 5 voted for Rawson!

In the Shambles (B district), where the electors are shopkeepers, publicans, and independent working men, there were 54 voted for Rawson, and only 49 for Benbow.

Perhaps the best evidence of the meanness and insolence with which the monopolists have exercised their power at this election is the fact that the screw was put on members of the League, who have been unfortunately placed in such circumstances that their refusal to comply with degrading demands would have caused their ruin.

Here is a sad example of a town containing twenty-five thousand inhabitants, nearly all of whom are deeply interested in the prosperity of manufactures, as completely reduced to the condition of a pocket-borough as ever were Gatton and Old Sarum. The "free and independent electors" voted for Lord Ward's agent, and would have voted for his black footman, if he so pleased, though aware that they were thus sending to Parliament a decided enemy of their dearest interests:—

"Can such things be,
And overcome us like a summer cloud,
Without our special wonder?"

ACCOUCHEMENT OF HER MAJESTY.

WINDSOR CASTLE, Aug. 6.—This morning, at ten minutes before eight, the Queen was happily delivered of a prince. His Royal Highness Prince Albert, several Lords of her Majesty's Most Honourable Privy Council, and the Ladies of her Majesty's Bedchamber, being present.

The news was immediately made known to the town by the firing of the Park and Tower guns, and the Privy Council being assembled as soon as possible thereupon, at the Council Chamber, Whitehall, it was ordered that a form of thanksgiving for the Queen's safe delivery of a prince be prepared by his Grace the Archbishop of Canterbury, to be used in all churches and chapels on Sunday, the 11th of August, or the Sunday after the respective ministers shall receive the same.

In the House of Lords, on Tuesday night, the Duke of Wellington moved an address of congratulation to her Majesty on the joyful event which had taken place that day. Lord Melbourne seconded the motion. A similar address was adopted in the House of Commons, on the motion of Sir R. Peel.

A daily bulletin of her Majesty's health has since been issued: the last states that "Her Majesty and the infant Prince are going on favourably."

EPITOME OF NEWS.

FOREIGN.

The *Morning Chronicle* states that M. Guizot has written to the French embassy at London, acknowledging that the French commandant at Tahiti had acted hastily towards Mr. Pritchard; but he considers that he was perfectly justified in sending him out of the Society Islands. The strong language of Sir Robert Peel and Lord Aberdeen with reference to the outrage on the person of Mr. Pritchard, has raised quite a storm in the French newspapers, all of which speak as if France not England was the party aggrieved.

The French Chambers were prorogued on Monday. Louis Philippe has sent an autograph letter to the King of Prussia, congratulating him on his late escape from assassination.

By telegraphic accounts received from all parts of France, the *fêtes* of July have been celebrated with the most perfect order.

The large worsted-spinning manufactory of M. L. Gouvy, near Verviers, was totally destroyed by fire on the 28th ult. The damage is estimated at more than 100,000*l.*, but the building was insured. Two brothers employed on the premises, and who were asleep in the garret, were burnt to death.

The great fair of Beaucaire has this year been extremely brisk in all branches of trade, more foreign dealers having attended than in former years. The most numerous have been Spaniards, who came to purchase goods of mixed silk and wool, and silk and cotton, which are now admitted into Spain on payment of moderate duties, instead of being, as formerly, absolutely prohibited. Larger purchases were made for Nice, Genoa, and Leghorn, which are free ports. There was a complete dearth of Americans, who, in former years, before the great augmentation of their tariff, frequented the fair, and did considerable business.

During the month of November last there were eight fires in two communes of the department of the Creuse, which, no doubt was entertained, were caused by incendiaries.

Morocco.—The *Journal des Débats* states.—"According to our last intelligence from Cadix, which is the morning of the 28th, we have every reason to believe that the French squadron was still in the bay at that period, but expecting orders to sail. All the French subjects at Tangiers had obtained permission to embark, and all the consuls, with the exception of the English consul, had quitted the city. Upwards of 200 persons of all nations had arrived at Gibraltar, where the English squadron still was on the 27th."

SPAIN.—The Government alleges that they have discovered a conspiracy to set fire to the barracks and the

Now, this is the evidence of two practical farmers of great experience and enterprise; and it is impossible for the monopolists to resist its force. This season will render it even more obvious; for while cattle food is scarce at home, and made dear by the Corn Laws, wheat, the protected article, being abundant in this country, will, in spite of protection, probably be exceedingly cheap. The measures of the "Protection" Ministry, therefore, contrive to do harm to the farmer at every turn.

Mr. Lattimore then referred to the relations—the most unsatisfactory relations—which exist between landlord and tenant, and asked—

"Were the landlords so confident of the good feeling of their tenants as they said they were? Dare they trust them with liberty? If they were so confident, why not give their tenants land, and thus enable them to lay out money on the cultivation of their farms? But there was no proof that the landlords had confidence in their tenants; why, they did not go amongst them, but sent their agents. (Hear.) He would not be so great a hypocrite as to tell the labourer that he was benefited by the present system; he could not be benefited by laws which decreased the quantity of corn in the country, of labour, and of food."

And he thus truly described that egregious delusion, protection:—

"What they [the landlords] meant by protection was protection to themselves. What he asked was, that the farmers should be protected in the exercise of their consciences, that he and other men should never be placed in a situation in which they could not act as freemen, and that they might be enabled to love and respect the country they lived in, on account of the advantages they derived from its laws and institutions. He asked for the total abolition of the embargo which they laid upon the produce of the soil, and in that claim he was fortified by truth, justice, and humanity. Hundreds of good farmers had recently been out of employ. Was it because farmers were unwilling to employ them? No; it was because farmers had not the protection of leases, and could not, therefore, employ them with safety to themselves; nor had they the means. He appealed to the most experienced farmers then present whether they ever recollected so many good and honest labourers out of employ in the month of June as they had recently seen? And, further, did not they fully accord with him that ample room existed for the profitable employment of one-third more labour upon the land of this country, provided means and security were available for that purpose? (CHEERS.) THIS WAS TRULY AN AUCTIONEERING AGE. FARMING STOCK AND PRODUCE WAS LITERALLY GOING BY AUCTION. The buildings in our towns and villages were placarded with such repeated announcements of sale that they resembled backgammon-boards. All this showed change. The Corn-Law system prevented the land from being properly cultivated, and the labourers from being employed. Now, the labourer had as much right to have his industry protected as the nobleman his estate; but what both the labourer and the farmer really wanted was, not laws to protect them, but to be let alone." ("HEAR" AND CHEERS.)

Now, all this coming from a farmer surely deserves more attention from his brother farmers than the absurdities of political monopolists such as Mr. Ryder, one of the members for Hertfordshire, upon whose political harlequinade we have remarked elsewhere.

THE BLINDNESS OF MONOPOLISTS.

Nothing is more extraordinary than the way in which landlord-monopolists venture on assertions with reference to agricultural matters, known to be untrue by every man who hears them. Assertions of this sort are really most injurious to the cause of "protection," if anything can be injurious to that system which only requires to be understood to be disavowed by every disinterested and intelligent person.

We last week drew the attention of our readers to a statement of this kind made by Mr. John Benett, M.P., at Devizes, together with the prompt contradiction the labourers assembled in public meeting at Stratton gave to that statement. In the local paper of last week we find various direct contradictions, by different correspondents, showing the contrary of Mr. Benett's statement, that the Wiltshire labourers have been constantly employed at good wages, to be the truth. But the most striking evidence of the prevalence of distress, and of the new and decisive means the Wiltshire labourers are taking to make it known, will be found in their intention to continue such meetings as they have held at Lynham, Hillmorton, Stratton, and elsewhere. And they have called upon that excellent nobleman, Lord Radnor, to aid them in their rational purpose; who, in reply to a memorial addressed to him by two hundred working men, has written the following letter, every way worthy of an English peer and statesman.

Grosvenor-street, July 25, 1844.

"To James Maslin,
"I have this day received a paper signed by yourself first, and by a great number of other persons, working men of the town of Highworth, requesting me to call a public meeting to inquire into their grievances, and investigate the causes thereof."

"I can assure you that I shall at all times be not only ready, but well pleased to assist the requisitionists in forwarding the object they have in view; and I am very much encouraged to lead myself to promote this object by the report which I have received of the mode in which the meetings lately held at Lynham and Stratton were conducted."

"Unluckily I am prevented by different causes from being resident at the present time at Colehill; but I hope to be there in a few weeks, and, while there, will not miss the first opportunity of calling such a meeting as you desire. And probably, as harvest is now coming on, it will be most convenient to you and the other requisitionists that it should be postponed for a short time."

"If, however, any such meeting should be likely to take place in the meantime, and I am informed of it, I will, if possible, attend; I have little doubt that I shall be able to do so, and, if in my power, it will give me great pleasure to take the opportunity of explaining my views of the real cause of the difficulties under which the labouring classes are suffering, and of pointing out to them what I consider to be the remedy."

"With hearty good will towards you and the other requisitionists, and with great feeling of pride and satisfaction at the confidence you are inclining to place in me,

"I am, yours faithfully,

"RADNOR."

And it is well observed by Mr. Arkell, who forwarded this letter to the *Wiltshire Independent*, that it ought to be published, because it is desirable that the suffering poor should be made aware that all the noblemen and landowners do not mock their sufferings in the way Mr. John Benett thought proper to do. Those who know anything of the rural districts, will also fully understand how much the countenance of Lord Radnor will tend to elicit the whole truth; for, as Mr. Arkell says,

the officers. Some of the opposition papers, however, boldly deny its existence. It has been made the excuse for several arrests.

A letter dated 14th of June has been received from Lloyd's agency at Santa Cruz, Tenerife, in which it is stated that in consequence of the differential duty in favour of the Spanish flag, the whole of the extensive importations of British cotton goods into the Canary Islands are made in Spanish vessels to the absolute exclusion of British. The duty is 7½ per cent. in Spanish and 15 per cent. in British vessels on a low valuation of cotton goods. The Spanish vessels making good freights to the islands became also the carriers of their produce to Great Britain.

The Medway arrived from the West Indies on Tuesday. The Jamaica colonists were all in arms against the Ministerial sugar plans, and still more at the prospect of further changes taking place next session.

GERMANY.—Letters from Vienna state, that much excitement continues to be felt in the public mind in Bohemia; the people being, it was supposed, secretly worked upon by certain manufacturers, who dreaded their interests being affected by Austria joining the German Customs Union.

It is announced at Hanover, that Brunswick withdraws from the German Customs Union in the ensuing year.

THE SUGAR DUTIES ACT.—UTRECHT, July 29.—The Netherlands Government positively refuses to admit English agents into Java. The new English law on the sugar duties allows the importation of sugar the produce of free labour at a reduced duty; but in order to enjoy this privilege an English agent residing on the spot must sign a certificate of origin. The Netherlands will rather lose the advantage of this reduction than admit English agents into its colonies.

The *Journal de Commerce* of Antwerp, of the 7th, has an article calling upon Belgium to unite strenuously in support of the Belgic Government, in their attempt to prevent the imposition by the Zollverein of increased duties upon Belgian wrought and cast iron. The decree to this effect, of the court of Berlin, appears to have excited very considerable sensation, and of course some disapprobation, in Belgium. The states of Bavaria and Wurtemberg are those which have demanded the increase of the duty in question. Prussia is understood to have been unfavourable to the proposition; but the two first-named states, having little need of colonial produce, seem determined to insist upon the increased duty, in order to swell their revenues from that source.

TAHITI.—Accounts from Tahiti to the 21st of March state that a considerable body of the Tahitians (some say 4000) had risen against the French. They were joined, it is further said, by about 200 of the crews of the English, American, and Dutch whalers in the bay, and had, on the 21st, attacked the French camp at Tairaboo. A skirmish ensued, in which a party of French sailors were defeated, two being killed and seven wounded. The Phaeton steamer was despatched to the relief of this party. "As it was returning to Papeiti," says the same French account, "the vessel kept near the shore, to throw shells at the native huts which were within the reach of her mortars, when we discovered, with surprise, in a bay two intrenchments large enough to shelter 200 combatants apiece, whose heads were seen over the parapet. The more we examined this fortification, the more regular we found it. The flag of Queen Pomare was flying over it. Some Europeans, who seemed to have the command, came on the beach to provoke us to disembark. Prudence commanded us to do no such thing; we contented ourselves with sending them a few cannon shot, which did not seem to frighten them."

The civil war in Buenos Ayres between the parties of Oribe and Rosas still continues, without any appearance of coming to a termination.

UNITED STATES.—The steam ship *Great Western* arrived at Liverpool on Sunday morning, having left New York on the 20th ultimo.

Up to the 19th ultimo all was quiet in Philadelphia, but the military still continued to parade the streets. Active inquiries were being made concerning the late outrages. Arrests were daily taking place, and large rewards were offered for the apprehension of every person concerned. About 7000 dollars had been raised for the families of those soldiers who were killed or wounded during the disturbances.

With regard to the Mormons, a correspondent of the *New York Express*, writing from Nauvoo, June 30, says, "The Mormons, greatly to their credit, submit to the loss of their leaders in silence. Not the slightest disturbance has occurred. The prophet and his brother were buried, yesterday, without parade and in secrecy. Many of them believe that the prophet will rise again on the third day (to-morrow). A new prophet, it is whispered, has been selected, a Dr. Richards, formerly of Berkshire county, in Massachusetts. He is said to be a man of considerable talent, with a good deal of shrewdness and tact. The announcement would be made in a few days."

DOMESTIC.

The Railway Bill has passed the House of Lords, after an unsuccessful attempt on the part of the Bishop of London to prevent the running of third-class carriages on Sundays.—Count Nesselrode arrived in London on Monday. The principal object of the count's visit to this country is to enjoy the benefit of sea-bathing, and it is reported that he will leave town for Brighton early next week.—At the close of this present protracted session, Parliament will nearly have entered its fourth year of existence, having already lasted about three years, viz., from August, 1841 (on the 19th of which month it first assembled), to August, 1844. In order "to die a natural death," the actual Parliament must, of course, linger until the expiration of the session of 1848, four years in prospective.—A lad, the son of a respectable hatter residing in Union-street, Borough, named Harrison, was drowned on Sunday evening by the upsetting of a boat on the river at Bankside.—On Tuesday week, while a company of the 44th Regiment was on drill in George's-square Barracks, a private, named Richard Brooks, advanced from the ranks and stabbed Sergeant McKenzie in the arm with his bayonet. He was immediately placed under confinement, and awaits the order of a court-martial.—*Devonport Telegraph*.—Her Majesty's Attorney-General, Sir W. Webb Follett, and family, embarked at the Blackwall Pier on Saturday morning for Rotterdam.—At Guildford, on Monday, an action for breach of promise of marriage, brought by Miss Melville Roberts against Captain Frank Denham was tried,

and a verdict given for the plaintiff—damages \$800.—The increased consumption of plate-glass in Manchester is astonishing. There are at present no fewer than fifteen shop fronts, in various parts of Manchester and Salford, which are undergoing a course of modernizing, which mainly consists in the substitution of plate-glass for that of the ordinary description.—Two prize premiums, one of £36 and the other of £24, have been offered by Sir J. H. Lowther, Bart., M.P., to the members of the York Institute of Popular Science and Literature, for the best and second-best essays on the best means of preserving health, especially as adapted to the circumstances of York.—On Wednesday week five soldiers of the 70th Regiment were brought to Leeds, to undergo the punishment to which they had been sentenced by a detachment court-martial, at Sheffield, and two of them, on that day, received 150 lashes each, in the Riding-school, at the Cavalry Barracks; two were sent to Wakefield House of Correction for four months; and one for three months. The offence of which they were guilty is that of disobedience.—On Wednesday, 31st ult., the Wesleyan Conference commenced its hundred and first annual sitting, in Cherry-street Chapel, Birmingham, when the Rev. James Bunting, D.D., was elected president by a very large majority. The Rev. R. Newton, D.D., was called to the secretaryship by 197 votes.—On Thursday evening (the memorable first of August), the tenth anniversary meeting of the friends of slave emancipation was held in Glasgow. The Rev. William Anderson officiated as chairman, and was surrounded on the platform by Mr. George Thompson, Dr. Burns of Paisley, Dr. Ritchie of Edinburgh, Rev. George Jeffrey of Glasgow, Rev. Mr. Kennedy of Paisley, Professor Wright of America, and other leading supporters of the anti-slavery cause. The meeting was one of the largest and most respectable description, and included a number of the fair sex.—The committee appointed to carry into effect the resolutions recently passed for the establishment of an Agricultural College at Cirencester, state that the application for a charter has been so favourably received by Government as to leave no doubt that one will be granted, in case the society consent that any surplus of income, after paying four per cent. on the subscribed capital, shall be applied to increase the efficiency of the institution.—On Friday, the 2nd inst., Lord Villiers was returned member for Cirencester.—The average stock of bullion held by the Bank of England for the four weeks ending the 20th of July is stated to be £15,485,000, showing an increase of £413,000 as compared with the preceding month, and an increase of £3,613,000 as compared with the same period last year.—A very extensive fire took place at Exeter on Friday, the 2nd inst. It originated in the stores and melting-rooms of Mr. Fuskett; and, before it was extinguished, consumed about twenty houses, besides injuring other buildings. The loss is estimated at about £10,000.—On Sunday night, the 28th ult., a police-constable, named James M'Faddon, stationed at Kensingham, was mortally wounded by a gun-shot, fired at him by one of a gang of men whom he detected in the act of stealing some sacks of corn from the barn of a Mrs. Button. The policeman died the following day. An inquest has been held on his body, and a verdict of wilful murder returned against William Howell, who has been committed for trial.—A pony and car were got this morning on the strand at Doran's Island. The pony was dead; and there is every reason to fear that Mr. Cuffe Martin and his lady, who had a sea-lodge in the island, and who left this town at about ten o'clock last night, have been lost in the tide. Indeed, it is very generally reported that their bodies have been found at the Point, clasped in each other's arms.—*Sligo Journal*.—A man, named John Weaver, attempted, on Wednesday the 31st ult., to murder his daughter, Charlotte Weaver, aged 22, at Erdington. He has since committed suicide by strangling himself. There is every reason to think that the wretched man laboured under insanity.—On Monday afternoon a most alarming fire broke out in the extensive sheds connected with the rope, marquee, tarpawling, and rick-cloth manufactory of Messrs. Staff and Son, 2, Lawson-street, Great Dover-road, Borough, and resulted in the destruction of property estimated by the proprietors at £2000.—Two incendiary fires took place in Bedfordshire last week. One occurred on the premises of Mr. J. Kingdon, of Chalton, in the parish of Toddington, near Woburn. The property consumed comprised two large barns, cart-sheds, hovels, a dovecot, a large hayrick, several carts, waggons, and various agricultural implements. There were also a large number of lambs in the yard, 49 of which were destroyed. The second fire took place in an outhouse on a farm in the occupation of Mr. J. Whitworth, of Turney. The property destroyed was of no great value.—The weekly meeting of the Repeal Association was held on Monday, and the same degree of enthusiasm was manifested as at all the Conciliation Hall gatherings since the incarceration of Mr. O'Connell and his fellow prisoners. Every portion of the building was much crowded. Mr. W. S. O'Brien announced the Repeal rent for the eleventh week of the captivity to be £1396 9s. 7d.—A circular has been issued by the committee of the national testimonial to Rowland Hill, expressing their wish to bring the subscription to a close in the ensuing month. When the subscription is closed it is intended to convene a public meeting to determine in what way the amount shall be presented to Mr. Hill.—On Sunday night week, between ten and eleven o'clock, a haulin stack was maliciously set on fire, at Foxearth-hall, near Melford, in the occupation of Mr. Richard Aldham, farmer.—The saving between driving a sheep to the London market from Lincolnshire and conveying by steam-boat or railway, is proved to be no less than ten per cent. This has been ascertained by repeated trials made this year by a grazier in the neighbourhood of Wainfleet.—*Essex Herald*.—Information was received on Monday at Lloyd's and the various maritime insurance-offices in the City, of a dreadful hurricane having visited the different ports on Saturday and Sunday last, which was attended with a frightful sacrifice of human life, as well as great loss of property. At Tenby it commenced blowing fearfully from one o'clock in the morning from the south-east. About five o'clock A.M., the Richard, Captain Cooke, of Sunderland, from Cardiff, was driven upon the South Tenby Sand. The preventive men, as well as a great number of the inhabitants, rendered all the assistance in their power, and were instrumental in saving three of the crew. Captain Cooke, however, was drowned, and also three of his crew. A fishing smack called the *Four Brothers*, during the gale, lost two hands. At Llanelli, on Satur-

day morning, the *Friends*, a fish vessel, belonging to Ilfracombe, was totally lost on the Gwyns Sands, in Carmarthen Bay. The captain, his wife, and the whole of the crew were drowned. The Briton steam-tug parted from her moorings, and sank near the harbour.—A terrific gale commenced on the coast of Devonport, on Friday night. Three fishing boats were lost in Whitland Bay, from this place, and five men drowned; four of them were pensioners, and have left 14 children destitute. Portions of the wrecks have been picked up.—On Monday there was another sale of 5000 pines in Monument-yard, making a total number of 36,000 of this fruit which have this season been brought to the hammer by Messrs. Keeling and Hunt. These last were brought from the Bahamas, by the *Fear-Not*, in twenty-six days, and the competition was very spirited, the best quality averaging from 3s. to 5s. 6d. each, whilst those of the inferior quality sold at 6d. to 10d. A quantity of live turtle which were sent over by the same vessel, and were the first imported duty-free under the new tariff, were sold by private contract at 1s. 6d. per lb. in the shell, it being hazardous to keep them, owing to the sudden transition from a hot to a cold climate, of which they appeared particularly sensitive.—We understand that the third-class passengers on the Brandling Junction Railway are carried at less than one halfpenny per mile.—*Railway Record*.—At a special court of the directors of the Caledonian Asylum, held on Monday at the Freemasons' Tavern, Mr. P. M. Stewart moved that the schoolmaster to the Institution be an "orthodox Presbyterian, and ready to sign the Confession of Faith." The Marquis of Bute moved as an amendment that he be a member of the Established Church of Scotland. The amendment was carried by a majority of 24 to 19, so that the Free-church men had the worst of it.—Some sensation has been occasioned by the discovery of two strangely-constructed houses (said to have been once the residence of Jonathan Wild), in West-street, Smithfield, on the west side of Fleet-ditch, which buildings have, it appears, been long occupied by a gang of thieves and receivers of stolen goods. One of these houses, it seems, was fitted up as a shop, but there are trap-doors behind the counter, cellars for the reception of property, in one of which was found a skull and human bones, nooks and recesses of all descriptions, as well as the means of conveying goods "up the spout," and of facilitating the escape of persons over the adjoining houses.—The heavens in the east over the German Ocean, and from Hornsrad, on Monday last, which was an unusually hot and cloudless day, presented the appearance of a mirror, in which were reflected a number of vessels with their sails set, and a tower, supposed to be some lighthouse. A portion of the vessels were inverted—that is to say, all their masts and sails pointed downward to the sea.—*Eastern Counties Herald*.—A public meeting was held in Finsbury Chapel, Moorfields, on Tuesday, for the purpose of considering the recent aggressions of the French in the island of Otaheite, and passing resolutions upon the subject. Among others, the following resolution was passed:—"That the meeting felt that the good fame and honour of Great Britain was compromised by the denial to Queen Pomare of the repeatedly solicited pledge of protection given by Mr. Canning in 1827, and by the withdrawal of the English naval force from Otaheite."—The polling in the parish of St. Saviour's, Southwark, for a church-rate, closed on Tuesday, when it was found that the numbers were equal, there being for the 8d. rate 152, and for the 6d. rate 152, on which the warden gave the casting vote for the 8d. rate.—It is understood that the judges will meet, upon their return from the several circuits, on Monday, the 26th inst., to consider of their judgment on the writ of error in the state trials. The judgment will probably be delivered in the House of Lords on the following Wednesday or Thursday.—On Wednesday afternoon, shortly after one o'clock, the town of Gravesend was again excited by the outbreak of a fire at Lower Shorne, near Chalk, a few miles distant, which terminated in the all but complete destruction of what formed that secluded village.—On Wednesday morning the sentence of the law was carried into effect, in front of the county gaol, Nottingham, upon William Saville, aged twenty-nine, who was convicted at the late assizes of the wilful murder of his wife and three children. Just after the prisoner was turned off, a rush of the crowd took place, and a number of persons were forced down a narrow avenue, which leads to the street in which the execution had taken place. This avenue is a very steep descent, called Garner's-hill, and at the top are three or four steps. The persons who were forced down fell on the ground, and the others were pushed over them. Those who had fallen were trampled upon, and thirty persons were taken up more or less injured. Twelve were quite dead, and the rest were taken to the hospital, the dispensary, and to the residence of the medical men in the vicinity.—On Monday night last the Catherine and Mary brig, from Port Madoc in South Wales, laden with slates, and bound for Ipswich, was run down off Dungeness by a large ship, name unknown, which sailed on without the slightest assistance being offered to the foundering vessel. Two men were killed by the concussion, and the brig went down in deep water in about ten minutes. The remainder of the crew were saved by a coaster called the *Dispatch*.—During the month of July in the present year, 5180 Irish reapers arrived at Liverpool by the City of Dublin Company's boats. In the corresponding month of last year there came 3800.—A serious calamity by fire occurred in Manchester on Monday night, by which a large new pile of warehouses and their valuable contents have been entirely destroyed. The property in question, known as the Irwell Buildings, comprised the warehouses of Messrs. Robert Charlton and Sons, calenderers and packers, and Mr. Richard Roston, merchant; also those of Mr. Garser, Mr. Henri Jacquet, Mr. M. Ralli, Mr. H. Feather, Mr. J. Hejsted, and Mr. Mendel, all foreign merchants. The loss is estimated at £20,000.—On the night of the 29th ult., a barn, in the occupation of Mr. George Alpass, situate at Morton, in the parish of Thornbury, near Chipping Sodbury, was wilfully set on fire and destroyed, with a large quantity of wheat straw which it contained.—Sir R. Peel has given notice of a motion early next session to extend the repeal of the penal acts affecting Roman Catholics to those acts of the defunct Irish Parliament, which impose similar penalties to those which have been already repealed in England.—Prince Albert has kindly consented to send over a specimen of his stock to the show of the Royal Irish Agricultural Society about to be held in Dublin.

MR. GLADSTONE'S RAILWAYS BILL.

To the Right Hon. Sir Robert Peel, Bart.

Sir,—The invention of railways is a discovery of the greatest national importance. Their beneficial effect in promoting the prosperity of this great commercial country is universally acknowledged.

The universal benefit derivable to all constitutes the only moral right which Parliament has to delegate to parties engaged in the formation of any public work the power of interfering with private property, and of compelling the sale of such lands to them as may be required for its construction. The earth which sustains these works is common property—the plenary, impartial, and inalienable gift of the Creator to man, individually and collectively. It is this irrefutable fact which justifies Parliament in resuming, on behalf of the public, the equal claim of all to the material world; and in diverting its application from a less to a more general useful occupation, on the equitable condition, always, that for such compulsory transferences of private property an equivalent be paid to the previous possessors, of the full value of their cultivated fields, beautiful parks, buildings, mansions, cottages, gardens, or other useful works, which labour has incorporated with the soil, or erected, or otherwise conferred upon it. It is not the individuals who have devoted their energies and funds to the construction of railways, and who have paid to the previous possessor the full value of the property they have superseded, who are the obliged party; but the party on whose account, and for whose advantage solely, the transference of private property has been, or ever can be justly legalized, is the public. Had the Legislature granted such power to benefit, exclusively, railway proprietors, or any other section of the community, even the poorest, or for any partial purpose whatever, it would have been a gross abuse of their delegated authority, and a monstrous invasion and outrage on the rights of private property.

A bill is now before Parliament to authorize Government to interfere with the management of railways, to limit the amount of dividends accruing from them to the proprietors, and, finally, to dispossess those proprietors of their property. If Parliament can transfer from individuals into the hands of Government one great interest in the State, might not a similar dominant power justly look with an evil eye upon the manufacturers and landholders, and seek to dispossess the former of their mills, and the latter of their estates; or to interfere with, or take from them, the management of their concerns, or regulate the prices at which they shall be allowed to sell their productions to the poor? The appropriation to, and management by the Government, of all the estates, mills, and manufacturing in the country, might be advocated on the plea of supplying the poor with cheaper and better food, and more comfortable clothing; and the reduction of profits and of high rents, legislatively enforced, might be proposed as the alternative means of obtaining that result, with as much parallel propriety as is the argument in the Government Railways Bill, viz., that the poor will be provided with cheaper and more comfortable modes of travelling, if the remuneration arising from railway enterprises be curtailed, which are reasons advanced in support of the proposed bill, to justify, in case of non-compliance with its clauses, the seizure by Government of railway property. Strange as the anomaly may seem, the suggestion of this proposed law is, to plunder the proprietors of railways under the pretext of benefiting the public; whilst the operation of the Sugar Duties and Corn Law is to plunder the public for the supposed benefit of the West India planters and of the landowners; in this last instance the effect is robbing all the poor of the necessities of their existence, and plunging them into still deeper and more general poverty, by enhancing the prices for the profit of the affluent; and in the first it will be despoiling the railway proprietors to advantage a few travelling poor by lowering the fares. This insatiable profligacy of principle, which is equalled only by the absurdity of its inconsistency, exists either through the utter ignorance or reckless disregard of the axiom, that "honesty in the affairs of a nation, as well as in individual transactions, is the best policy." Such perverse legislation implies judicial blindness to the fact, that a departure from this sound axiom incurs national guilt; and that the inevitable punishment of want and scarcity, where otherwise plenty would abound, must follow, consequent on the infraction of the divine law, "Thou shalt not steal," the very and only thing which this law is instituted purposely to protect, namely, the fruits or produce of another man's labour.

I am, most respectfully,

Your obedient servant,

LAWRENCE HEYWORTH.

DAMAGING LIST OF VOTERS.—As some instances have occurred in which persons have mischievously destroyed the overseers' lists of voters, when exposed at the doors of chapels and churches, we may state, as a caution to such offenders, that the law imposes a fine, not exceeding 40s., upon every person wilfully destroying, effacing, or removing any notice, list, or register, so exposed for the inspection of the inhabitants.—*Leeds Mercury.*

REGISTERED ELECTORS IN IRELAND.—The gross total number of county electors in Ireland now entitled to vote amounts to 57,169, and the number registered after the passing of the Reform Bill was 63,437. The total number of registered county electors on the 1st of February, 1844, amounted to 67,136, and the total number of registered city and borough electors 50,312, making altogether a grand total of 117,448 electors, which is as nearly as possible 17-16ths per cent. in proportion to the population. In Great Britain the proportion of electors to the population is about 5 per cent., or 39-16ths per cent. greater than in Ireland.

TOWN AND COUNTRY.—The five largest commercial towns in England, viz., the Metropolis, Manchester, Liverpool, Birmingham, and Leeds, with their suburbs, contain within an area of 96,000 acres—or as nearly as possible the area of Rutlandshire—a population equal to the total numbers of the following seventeen purely agricultural counties:—Bedfordshire, Huntingdonshire, Suffolk, Sussex, Berkshire, Buckingham, Cambridge, Cumberland, Hertford, North Riding of Yorkshire, East Riding of Yorkshire, Dorset, Rutland, Hereford, Oxford, Westmorland, and Northampton—with all the country towns within them—counties which occupy an area of more than 10,000,000 of acres, or about a third of the whole extent of England. Further, that the population of the same five towns is equal to that of the whole of Scotland, with its 19,000,000 acres.—*Edinburgh Review.*

EXPORTS AND IMPORTS.—THE EAST INDIA TRADE.

—We have received a parliamentary return of the amount of our import and export trade, with several of the principal colonies of the Crown, with the possessions of the East India Company, the United States of America, and with Mexico and South America, in the year ending January, 1844. The following are some of the principal facts which it exhibits:—The value of the British and Irish goods exported in 1843, to the British West Indies, was £2,882,441; to the United States of America, £5,013,504; to the East India Company's territories and the Island of Ceylon, £6,404,519; to the Mauritius, £258,014; to China, £1,456,180; to the British North American colonies, £1,751,211; to the Island of Cuba, £624,871; and to Mexico and South America (exclusive of the Brazil), £3,286,327. The most remarkable fact shown in the above list, is the wonderful increase in the India and China trades, which, though both of them still comparatively in their infancy (the former having sprung up since 1815, and the latter since 1832), now surpass the trade with the United States, and supply a vent for goods to the value of nearly eight millions sterling a year. For this increased trade the country is chiefly indebted to the East India Committees of Liverpool and Glasgow, which spent years in battling against the commercial monopoly of the East India Company before they could open the vast regions of India and China to the British Empire. Of the exports to India, in 1843, £3,937,414 worth consisted of cotton goods and yarn, and of those to China £871,939 worth. Amongst the imports from the latter country, were 42,779,265 pounds of tea, and from the former 1,099,562 cwt. of sugar.—*Liverpool Times.*

MARKETS.

CORN MARKET.

MARK-LANE, Monday, Aug. 5.—The weather in this neighbourhood on Saturday was very boisterous; yesterday and to-day it has been fine, but it still appears rather unsettled. The supply of English Wheat this morning was much smaller than it has been lately, and it was sold readily at fully last week's rates. Foreign Wheat was held more firmly than last week, but the sales were not extensive. We did not hear of any New Wheat at market. There is no alteration to notice in the value of Barley or Beans; there was rather more inquiry for the latter. Peas were rather cheaper; there were several samples of New. We had again large supplies of Oats from Ireland, in addition to the large arrivals of Foreign we reported on Friday. There was a larger attendance of buyers from the country, and a fair amount of business was done at last week's rates.

S. H. LUGAS and SON.

Barley	759	36s. 11d.	Beans	1849 30s. 8d.
Oats	23533	10s. 10d.	Peas	371 38s. 3d.

FRIDAY, Aug. 9.—The supplies of English Wheat since Monday have been short; Foreign continues to arrive in considerable quantities. A good deal of rain fell in the early part of the week, but yesterday and to-day the weather has been fine, and appears more settled. The accounts from the country of the harvest operations being generally delayed by the rain, causes factors to hold more firmly, but there is a very limited amount of business doing. The supplies of Barley this week are not large, but the trade is exceedingly heavy. During the week we have had fair supplies of Irish Oats, but small of Foreign. On Wednesday buyers were induced by the present low prices to take off a large quantity of Foreign, by which the market is much relieved. In some cases an advance of 6d. per quarter was obtained on Wednesday over Monday's prices; and though there is less doing to-day, that improvement is maintained. No alteration in Beans and Peas.

S. H. LUGAS and SON.

Vanderplaat, Abchurch-lane, bill brokers—Aug. 27. W. B. Edridge, Long-acre, coachmaker—Aug. 27. J. R. de Alzedo, Bank-buildings, City, merchant.

CERTIFICATES.

Aug. 29. J. Carpenter, Rothwell, Northamptonshire, surgeon—Aug. 30. P. J. Papillon, Leeds, wine merchant—Aug. 29. N. Procter, Meanwood, Yorkshire, tanner—Aug. 29. G. Parker, Sheffield, spade manufacturer—Aug. 29. J. Mayn, Finsbury, Cornwall, merchant—Aug. 29. T. Westren, Braintree, Devonshire, maltster—Aug. 29. T. Kearsley and T. Watt, Lancashire, bone merchants—Aug. 27. J. Falkingham, Bradford, Yorkshire, bacon factor—Aug. 27. J. Taylor, Wiltshire, Cumberland, miller—Aug. 27. T. Newton, Holbeck, Lancashire, cattle dealer—Aug. 27. W. Parson, Southampton, grocer—Aug. 27. J. S. Tolson, Huddersfield, Yorkshire, fancy cloth manufacturer—Aug. 27. C. Nichols, Wakefield, Yorkshire, bookseller—Aug. 27. W. Chamberlaine, Peckham, linendraper.

SCOTCH SEQUESTRATION.

J. RANSON, Perth, glass merchant.

London: Printed by ROBERT PALMER (of Providence-place, Upper Kensington-lane, Lambeth, in the County of Surrey) and JOSEPH COOKE (of Number 320, Strand, in the County of Middlesex), at their Presses, Number 10, Crane-court, in the Parish of St. Martin-in-the-Fields, in the City of London, and published by ANNEAS WATSON, at the Office of THE LEAGUE, Number 27, Fleet-street, in the City of London. Dr. DUNSTON-in-the-West.—Saturday, August 10, 1844.

paid by objectors to persons objected to upon groundless or frivolous objections. The barrister is the sole judge of the nature of the objection, and may make such order as he shall think fit for the payment of the costs of any person in resisting it; such costs not to exceed twenty shillings.

SPECIAL NOTICE TO CLAIMANTS FOR COUNTIES.

THE IMPORTANCE OF EXAMINATION OF THE LISTS.

Under the Reform Act one list for each parish, of the old and new claims, was sufficient. The 6th Vic., c. 18, s. 8, directs that lists of all new claims shall be printed; also a copy of the register for the parish then in force; such lists shall be published by placing them on the church and chapel doors on the first and second Sunday in August. (Sec. 22.) It is most important that the lists be printed separately, and that the new claims be not inserted in the copy of the register, for this obvious reason: The 40th section requires the revising barrister to correct the list, and if he finds more names in the copy of the register than on the register, he must strike out those names. The effect will be, that, unless a list of the new claims is made out separately, the barrister has no list to revise; and the voter loses his vote, unless he is prepared with a duplicate claim, and is prepared also to prove his qualification in the Revising Barrister's Court, as directed by the 37th section.

The negligence of overseers (to speak in the mildest terms) is so great, that often three parts of the voters on a parish list stand a chance of being disqualified by the improper way in which the copy of the register is made. Example—St. Michael-le-Guerne, city of London, in the present year:—

Joseph Chapman ..	Ditto.	Ditto.	Ditto.
John Cowper ..	Starford-street.	Ditto.	4, Ditto.
Frederick Cowper ..	Russell-square.	Ditto.	

The 40th section requires the revising barrister to expunge the name where the nature of the qualification shall, in the opinion of the barrister, be insufficiently described for the purpose of being identified. And it is a very common practice for the vestry clerks, instead of procuring a copy of the register, signed by the clerk of the peace, to copy, year after year, some old list of their own; the result of which is the omission frequently of many names.

Elector must not, therefore, and those who are watching the Registration, be content with having claimed, or take the lists as a matter of course as being perfect, but should carefully see that their new claims are on the new-claim list (separately), and not on the copy of the register; and also that those who have claimed years back should see that their names, addresses, and qualifications are properly described on the list for the present year's revision, or the overseers, by their errors, may disfranchise them without their having any notice on the subject, which, if detected, may be rectified on application at the court at the time the list is revised.

THE LEAGUE AND ITS ADVISERS.

Sundry parties have been seized with a mania for giving counsel to the Anti-Corn-Law League. This is very courteous of them, especially as no advice has been called in, and no fee been tendered. The great Peel principle is thus violated; for we all remember the Tamworth doctrine, that for the physician to prescribe before he is feed, amounts to arrant "quackery." Nor is the League convinced, by such testimony as has been offered, of its own failing health and energy. We believe ourselves to be as vigorous as ever, and moving onwards, with firm and steady pace, to the accomplishment of our object. The volunteer doctors of the League must first demonstrate its disease. The pilots of party should have waited for the signal flag of distress before they put out so hastily, some from a Whig, and others from a Tory port, to assume the guidance of the good ship, and tow her like a wreck out of the reach of storms. We will not, however, be so unthankful to our admonishers as utterly to neglect their counsels. They shall each be heard in turn; and, first, the *Morning Chronicle*, as hoisting, in its professions, the broadest flag of friendliness.

The leading article of the *Chronicle*, on Saturday, the 10th inst., commences with what it terms a frank confession of inability to comprehend the policy of the League "in sending candidates for the mere purpose of experiencing a certain defeat at elections." The Dudley contest only served, as our contemporary thinks, to expose the nakedness of the land, and make apparent the fact, which might not otherwise have been so clear, how "completely in a minority" were the conscientious Free-Traders of that constituency.

Now, if the leaders of the League had any particular apprehension about being "completely in a minority," the Anti-Corn-Law agitation would never have been commenced and continued; nor any other movement for obtaining justice from a predominant class interest. It was the very fact of being in a minority that rendered agitation necessary, and that requires its continuance. To transform an electoral and, through that, a representative minority into a majority is the very end and aim of our exertions. We shall not accomplish that by false appearances. To acquire a fictitious prestige by only fighting when sure of winning may be clever tactics for a faction, but is not the simple course of honest men working out an honest purpose. Our defeats are the seeds of future victory. They excite local discussion. They leave increased knowledge of the subject, more enlightened principle, and stimulated zeal, to germinate in men's minds. They

leave the conviction of truth and justice, which, with deference to our counsellor, we hold to be a more efficient thing than "the reputation of power" founded upon the despicable avoidance of collision.

To ascertain, by actual experiment, the fact, as to such a constituency as that of Dudley, is a portion of the pledge under which the League has laid itself to the public. Its course of operation, distinctly marked out, and not that we remember condemned by the *Chronicle* when promulgated, is to appeal to the constituencies of the kingdom on the Free-Trade question. Into that court the cause was carried, when petitions to Parliament were abandoned. Now, such a town as Dudley, by the occupations of its inhabitants, the amount of its population (which is about 30,000), and the number (600) of its registered electors, is fairly marked out for a voice in the verdict asked for by the League from the electors. We cannot pass it by. We desire not to blink the truth. Is Dudley for trade or for monopoly? Let the world know its answer. The League is bound to put the question. For the character of the reply the Dudley constituency is responsible. That reply may not accord with public opinion; it may have nullified the voices and crushed the wishes of their non-voting neighbours, as expressed on the day of nomination; but that is the business of the Dudley electors. They have their consolation—they have pleased Lord Ward; and we wish them joy of their bargain.

Those who are toiling for truth and justice throughout the country, should see what they have to contend with. The full extent of difficulty and obstacle should be before them. Not only should they be aware of the sixty or seventy close boroughs, completely under aristocratical and monopolist control; as entirely nomination boroughs as any that existed in the days of Gattin and Old Sarum; but they must also be made to perceive the amount of undue influence over the larger constituencies, the wide-spreading malignity of corruption and intimidation, the gross ignorance in some cases, and the base unprincipledness and spontaneous servility in others, of the electoral system; and the ever-disturbing power of party spirit. Instead of forgetting, palliating, or glossing over such elections as those of Dudley, and yet more, of Birmingham and South Lancashire, we would fix the gaze of the public upon them; just as we lead a startled horse up to the object that annoyed him, and walk him round and round, till he recovers the alarm. In these chapters of defeat, Free-Traders find the texts of their work and duties. It has long been understood and proclaimed that our agitation involves an electoral purification, the raising of voters' minds to a better conception of the sacredness of their trust, a diffusion of knowledge and principle amongst those with whom political power is deposited; and who could ever dream of achieving this task without encountering, again and again, the risk of being left at the poll "completely in the minority"? And who would not brave this while the corrective fact remains unquestionable, that we never are so left in a minority at a fair open meeting of the people, whether of a borough or of a county?

The obvious truth is, that the *Chronicle* fears we are damaging the Whigs by these contests. It wants to sink the League into a section of the Whig party, not "inclined to pursue its own particular object, without co-operation with others." But the League is so inclined. It exists for that very purpose. A Whig may be "an open enemy of our cause," not less than a Tory. Whether a ministry is to be "turned out of, or maintained in, office on one single question," is no concern of ours. The adoption, by whomsoever the country may be governed, of a distinct principle and policy, in commercial matters, is our object. In causing the defeat, should we chance to cause it, of that curious animal, a monopolist Liberal, we lose no friend. Nor is it true, as the *Chronicle* insinuates, that the League has thrust candidates forward to the injury of those who were partially with us, as opposed to candidates who were entirely against us. Neither at Hastings, nor at Exeter, did the Free-Trade candidate prevent "any other kind of Liberal candidate" from offering himself, and ascertaining his better chance of success, if such chance existed. The field was perfectly open. The Whigs ran away, and we fought. It is rather too much for them now to cry out that their glorious victory was obstructed by our not running away also.

The article on which we are commenting is not very erroneously estimated in the assurance of another of our counsellors, the *Morning Herald*, that "the *Chronicle* backs its friends of the League in a style more hostile than we (to abuse whom meetings have been expressly called,) have ever adopted." When and where these meetings were held is not specified by our venerable contemporary. Of course they have been reported in the journal interested; but that ensures no very large publicity. How large, or how limited, the friends of "the speculation" in office seem averse to letting the world know, as we are not to be favoured in future with the usual stamp returns, indicating the number of stamps bought (whether used or not) by the differ-

ent newspapers. However, the fact certainly is, as the *Herald* confesses, that the mere "mention" of itself, and such newspapers, is generally very "productive of marriage in the intelligent audience at Covent-garden," and we may add, in any other intelligent audience throughout the country.

But our most solicitous counsellor is—who would believe it?—the Agricultural Protection Society, "Richmond, President." A circular from this formidable body, with the above august signature, describes the League to be in "a fearful state, and one requiring the greatest skill to remedy." Such kindness, from such a quarter, quite melts us. We must take till next week to show our gratitude. We trust we are not beyond the skill which can grace the Duke's name with a prize for a thoroughbred stallion from the judges of the Royal Agricultural Society by a "roarer" to which his steward afterwards confesses ownership.

To return to the *Morning Chronicle*. The writer wishes us to be one with the Whigs, both in our object and in the means adopted for its attainment. That object would then become such as he states it; the practical result to be, "the transferring political power from the aristocratic faction now predominant to more liberal statesmen," i.e., Lord J. Russell and his colleagues. Now, for making this the object of the League, the writer has no better warrant than his own wishes, in defiance of repeated declarations to the contrary. On such ground we should confess the League at fault most grievously. And the admission would establish a charge of unprincipledness and deception against its leaders which the whole history of the agitation rebukes and repels. The writer knows better. He is aware that what he assumes to be our end is only his own. He complains of the "erroneous impression" of the leaders of the League "that they are going to carry all before them, merely by the strength of their own great principle." Why, then, should he affect to try their conduct by his own little principle? Why urge the objection that might equally have been made to Clarkson in his warfare against the slave trade, and to the Parliamentary Reformers anterior to 1829? Why treat the assertion of a principle, as if it were only a trick of party policy? And why misstate some facts, and suppress others, to drive Free-Traders into the ranks of Whiggery by the penalty of being deemed impracticables? A writer who assumes to be so well informed about Hastings and Exeter should also be aware of the mode in which most of the late vacancies have occurred, and of the previous arrangements between the retiring and succeeding parties. The monopolists, as at Devizes, Cirencester, Dudley, &c., have chosen their own opportunity. Yet our "friend" makes the most of defeat, just to substantiate the charge of wrongheadedness if we do not consult the policy of the Whigs. And there is also a practical misrepresentation in his mode of isolating the League from the constituencies in which these gallant though unsuccessful efforts were made. Why, they, these minorities, are the League too, as much as those of us who, being its members, live and vote in London or in Manchester. They profess its principles, aid its funds, and teach its doctrines. Where has the League fought an electoral battle but as the ally of its own members upon the spot? Where has it not left them the initiative? Where has it not deferred to their opinion, when decidedly opposed to putting a candidate in nomination? Is it then for the *Chronicle*, or for any party journal, whether Whig or Tory, to revive the calumny and cant of last October, and talk of "strangers whose homes are in Lancashire?" We thought the citizens of London had abolished that nonsense for ever. The *Chronicle* professes to desire our "complete success." Let it help, then, not by striving to link us to the fallen fortunes of a beaten party, but by advocating principle paramount to all party; and secure of eventual success, not by dexterity and mystification, but by the inevitable though progressive enlightenment and determination of public opinion.

LORD JOHN RUSSELL'S SPEECH AT THE CLOSE OF THE PARLIAMENTARY CAMPAIGN.

The pacific interchange of compliments between the leaders of the two great Parliamentary parties at the close of the session was an edifying spectacle, from which many profitable lessons may be deduced. To the Free-Traders it shows the wisdom of the course which they have hitherto pursued in avoiding all combination with party, and refusing to make their cause subservient to any policy connected with a change in the Cabinet. To some extent both the head of the Ministry and the leader of the Opposition adopted the same portion of monopolist cant, and talked of the "peculiar burdens on the land."

"For some affirm no enemies they are,
But meet just like prize-fighters at a fair:
Who first shake hands before they box,
Then give each other heavy knocks
With all the love and kindness of a brother;
And so 'tis thought that Peel and Russell,
Although they sometimes have a tussle,
In secret understand each other."

At all events, as Sir Fretful Plagiarist has it, "what

the both that of Hou subj mem pval sibe their Br appee while not durin said
words temio elapse You obser adequ ply ti tress under agriou at inte view be the classes portion compa centur imposi advanc availat of life, look: curing the qu the in luxury —if we men w we looi would which: which been ex forth, i preent particip civiliza upon u

"It the supp hear, how obtain, t declare to object, a In couns to revise gentilema perfect m the imp bon. gen respect to the princ of the wa what was said ap

they do agree, their unanimity is wonderful." They both conveniently forgot the repeated challenges that have been given them to point out the nature of these peculiar burdens, and the refusal of the House of Commons to allow of any inquiry into the subject. Mr. Villiers, however, refreshed their memory a little, and we are much mistaken if the loyal leaders will not find themselves compelled either to point out these burdens, or to recognise their non-existence early in the next session.

But there is a portion of Lord John Russell's speech which demands very warm approbation, and which suggests reflections that we trust will occupy not only his mind but that of every reflecting man during the Parliamentary recess. The Noble Lord said:—

"There is another topic upon which I wish to say a few words, because I think it must force itself upon our attention, in some shape or other, before a very long period elapses—I mean the condition of the people of England. You cannot help, from day to day and from time to time, observing the state of the people of this country—the inadequate means which the labouring people have to supply their families with the comforts of life, with the extreme labour, which in the manufacturing districts is undergone, and with the discontent which, both in our agricultural counties and our manufacturing districts, is, at intervals, excited; and I think, if we take a general view of this subject, it is impossible not to see whether it be the fault of our Legislature or not, that the labouring classes have not advanced in comfort and welfare in proportion to the other orders of the community. 'If we compare the condition of this country with what it was a century ago, with what it was in 1740, for instance, it is impossible not to see that, while the higher classes have advanced in luxury, beyond measure—while the means available for the diffusion of comfort, and the enjoyment of life, have prodigiously increased—that while, if we look again at the middle classes, and their means of procuring comfort, of travelling from one place to another, the quickness with which intelligence is conveyed, and the increase in the consumption of foreign articles of luxury, that these classes have made a very great advance—if we look to the labouring classes—if we look to the men who either till the soil or labour in the factories—if we look to the quantity of necessaries which their wages would buy in the middle of the last century, and that which they can buy now—if we go into the details, with which I shall not now trouble the House, but which have been exhibited in the reports of the Commissioners sent forth, some by the late Government, and some by the present—I think we must be convinced that they have not participated, in an equal degree, in the advantages which civilization and improved knowledge have conferred upon us."

In plain terms, his lordship's assertion is, that the industrious have not reaped the benefit of the progress of industry, but that the drones have contrived to secure all the advantages resulting from the labour of the working bees. There can be no doubt about the fact: the labouring classes are doubly sufferers, because our commercial system, as at present constituted, unnaturally lowers the price of what they have to sell, and unnaturally raises the price of what they have to buy. "Labour is cheap and bread is dear." Now, it has been the policy of the English landholders, for many centuries, to keep down the price of labour, and reduce the remuneration of the working man to the lowest possible point; the well-known Statute of Labourers was actually passed to prevent wages from rising beyond a certain amount, and there can be little doubt that one of the principal reasons for the maintenance of the Corn Laws by the monopolists of land, is to secure to the proprietor a disproportionate share of the profits of the soil at the expense of the cultivator. This, indeed, is the only respect in which the Corn Laws have corresponded with the intentions of the projectors; for, while rents have risen three and four-fold, the wages of the farm-labourers have not only been stationary, but have actually retrograded in several localities. Lord John Russell, instead of showing that there were any peculiar burdens on land, has unwittingly let out that land has contrived to shift its burdens on labour, of which he gives conclusive proof when he declares that the comforts and luxuries of the landowning classes have been greatly multiplied, while those of the working and labouring classes have been deteriorated. It is to prevent the progress of this deterioration that the League has been established; its great and leading object has been to secure "a fair day's wages for a fair day's work," by enlarging the field of employment, and producing that competition among employers which gives to the employed the command and the regulation of the labour-market. Lord John Russell himself, but with some hesitation, points to the same remedy:—

"It is not to State charity that we ought to look for the support of the people of England (cries of 'Hear, hear, hear,' and cheers); but it is to enabling them to obtain, by honest labour, that which some of themselves declare to be their object; and there can be no more just object, a fair day's wages for a fair day's work. (Cheers.) In considering the question, I think it will be necessary to revise the whole of the subject which the right hon. gentleman brought before the House, I think, in an imperfect manner, two years ago—I mean the subject of the import duties. (Hear, hear.) I think the right hon. gentleman has, this year, proposed a plan with respect to the currency which tends to bring us back to the principles which obtained before the commencement of the war of 1793. I think it is worth our while to see what were the duties upon the importation of articles of food and other general commodities of consumption."

(Hear.) I think, together with an improved and stable currency, those great articles of consumption should be admitted, with as small a duty as can well be laid upon them; and, in regard to what is due to the mitigation of burdens imposed upon the consumers of this country, I think we should likewise consider what is due to the agricultural interest of this country. I think you should consider, with respect to many subjects, whether that unequal taxation which now presses upon us cannot be remedied. I remember, at the commencement of the session, that some expressions I used on this subject were misunderstood by some members of the House, when I declared, that I thought it would not be wise at once to abolish all laws restricting the importation of corn, without taking into consideration the increase of duties and taxes to which the producers of corn had been subjected since the commencement of the present century. I will mention but two of them. One, the very great increase in the county rates, since the beginning of the war of 1793—another, the very large augmentation of the malt-tax. It appears to me that now, when the Government have the leisure of the recess before them, they might very well consider whether some relief might not be given to the agricultural interest—(hear, hear, hear)—and whether, in giving that relief, they might not frame measures more in accordance with those principles of trade which the present Government, as well as the late, uphold."

To these principles Sir Robert Peel gave a general assent; and thus we have it on the authority of the two great leaders of parliamentary parties, that the future administrative movements of the Government, by whatever hands directed, will be towards the establishment of the principles of Free Trade. On the exertions of the League, and on the amount of national support those exertions will rally around the good cause, must depend, at least to a considerable extent, the amount of justice which will be conceded to the industrious classes. The monopolists will cling to their system with desperate tenacity, and the Minister will succumb to their mandates, unless he be assured that he can fall back on the nation. Renewed exertions and fresh combinations of energies are necessary to our final success; we have won a position in advance, and must rally our forces upon the new ground in order to prepare for a fresh campaign.

AN INQUIRY INTO THE EFFECTS OF ENGLISH LEGISLATION UPON AGRICULTURAL WAGES, PROFITS, AND RENT.

By A BARRISTER.

CHAPTER I.

1st Period.—From the Emancipation of the Labourer to the first Legislative Interference with the Labour Market in 1349.

In attempting to obtain a correct view of the various stages and fluctuations in the history of agricultural wages in England, the inquirer will, it is apprehended, be aided by bearing in mind that, originally, agricultural labour was not free—that the agricultural labouring population of this country consisted, at least in a considerable proportion, of bondmen, of slaves, whose labour consequently, like that which existed very recently in some of our colonies, was slave labour. The resemblance, indeed, between the two, viz., slave labour recently in our colonies, and slave labour as it existed in England for some centuries after the Conquest, is not merely fanciful and theoretical, but substantial and practical. Formerly, by the English law, both *villeins regardant* (that is, agricultural labourers annexed to the manor or land) and *villeins in gross* (that is, annexed to the person of the lord, and transferable by deed from one owner to another) were considered as real property; consequently, all the incidents of real property attached to them. One or two examples of these feudal incidents, taken from the old law books, will help to convey an idea of their actual condition at that time. Thus even *villeins in gross* were subject to dower—that is, the wife of their owner after the death of her husband was entitled to an estate for life in a third part of them.* And the very limits prescribed by law to the dominion of the tenant for life over the villein, being precisely the same as the limits prescribed to his power over houses, parks, timber, &c., show what was the nature of the dominion of the tenant in fee. As there may at the present day be waste in houses, gardens, parks, fish-ponds, timber, &c., so formerly there might be waste in villeins. Thus:—"If tenant in dower of a manor to which villeins are regardant, manumits the villeins, this is not any waste, because it is not any manumission, but against herself; for he in reversion may seize them after her death. (2 Hen. VI. 11, *Curia*.) But if she had beat the villeins, or constrained them to do other services which they did not before, by which they go out of the seignior, it is waste." (2 Hen. VI. 11.)†

It was natural that, when in the process of time the manumission of many of these villeins had taken place, and their labour consequently had along with their persons become their own property, they should desire to sell it as dear as possible. It was also natural that their former lords should desire to purchase their labour as cheap as possible. But for this purpose they were not content to seek out the cheapest market for the commodity they wanted, and avail themselves of whatever natural advantages might be thus afforded. But they sought to force a cheap market, and they exercised their

legislative power to obtain labour at a price below the natural market price; thereby robbing the labourer of the only property he possessed. In the following inquiry this fact ought never to be lost sight of. It furnishes a key to many of the social evils that have afflicted England for centuries.

There were circumstances in the history of Europe during the period under review which made the legislation above referred to on the subject of the labour market press with particular hardship on the labourers. Among the principal of these were the degradation of the coin by the Government, and, still more, the fall in the real value of the precious metals. The extraordinary rise of the prices of all other commodities thereby produced rendered a corresponding rise in the price of labour absolutely necessary for the subsistence of the labourer. And such a rise would have taken place, if the labourer had been allowed to sell his labour in a free and open market. But positive enactments were framed by the purchasers of labour to prevent the increase of wages, that is, to prevent the sellers of labour from obtaining an equitable price for their property; so that, while the prices of everything else were advancing rapidly, the wages of the labourer were violently kept down nearly to their former level.* These general observations will, it is believed, be borne out by the most minute examination of the details, which we now proceed to give.

The period during which the English agricultural labourer appears to have been best off is that between his emancipation from slavery and the interference of the Legislature with the price of his labour. In the fourteenth century, Sir John Cullum observes, "A harvestman had 4d. a day, which enabled him in a week to buy a coomb of wheat; but to buy a coomb of wheat, a man must now (1784) work ten or twelve days."† To buy a coomb of wheat how many days must he work now (1844)? On the average rather more than ten or twelve days. Sir J. Cullum thus continues:—"A man had formerly 6d. for mowing an acre of meadow, which, if he worked hard, he might finish in a day, and purchase for himself a bushel of wheat, which must now be earned by five days' labour. 2d. a day for weeding corn, 4d. for threshing a quarter of wheat, and 2d. for other grain, were better wages than those now given, and enabled the laziest lubber to earn more than the most industrious workman can at present." Mr. Hallam, after alluding to the uncertainty of employment, and the frequent dearth which prevailed in those times, comes to the following conclusions:—"But, after every allowance of this kind, I should find it difficult to resist the conclusion, that however the labourer has derived benefit from the cheapness of manufactured commodities, and from many inventions of common utility, he is much inferior in ability to support a family to his ancestors three or four centuries ago. I know not why some have supposed that meat was a luxury seldom obtained by the labourer. Doubtless he could not have procured as much as he pleased; but, from the greater cheapness of cattle as compared with corn, it seems to follow that a more considerable portion of his ordinary diet consisted of animal food than at present. It was remarked by Sir John Fortescue that the English lived far more upon animal diet than their rivals the French; and it was natural to ascribe their superior strength and courage to this cause."‡ Fuel was also cheaper then. There is also another point of superiority belonging to those early times which might not at first sight be supposed—we mean lodging. It might be supposed that the result of so many centuries of progress would, at least, be more healthy and commodious lodging. But the only change has been from wood and wattled houses to brick and stone, with little, if any, improvement in cleanliness, warmth, and ventilation. In Mr. Chadwick's "Report on the Sanitary Condition of the Labouring Population of Great Britain," a gentleman who had attentively observed the condition of the working classes in the north of Lancashire and the north of Cheshire, states that the general health of the labourers in the north of Lancashire is decidedly inferior. He ascribes the inferiority to the Cheshire people's having been used to wooden cottages, and adds:—"Wood and wattled houses, such as our forefathers built, are the driest and warmest of all; brick is inferior in both these requisites of a comfortable house; but stone, especially the unheated stone, as it is necessarily employed for cottages, is the very worst material possible for the purpose. I prefer the Irish mud cottages. The evil arises from two causes: the stone is not impervious

* See a valuable note on this subject at p. 335 of the article "Corn Laws and Corn Trade," in the "Encyclopædia Britannica," 7th ed.

† "History of Hawated," p. 238. 2nd ed.

‡ Middle Ages. Ibid. In the ballad's accounts, quoted by Sir John Cullum, there appears to be an ambiguity. Under date 1359, Sir J. Cullum says:—"Though, from the increased quantity of grass grounds, the consumption of flesh meat was probably increased, yet the poor landholders, who were obliged by their tenures to work for the lord so many days in hay time and harvest, had at this time no other allowance of animal food than two harrings a day each, and some milk from the manor dairy to make them cheese; they had, besides, each man a loaf, of which fifteen made a bushel, and an allowance of drink, not specified."—"History of Hawated," p. 216.

But, if the customary tenants had harrings only, the other labourers seem to have had flesh. In the list of harvest expenses for 1369, we find the following items:—"Meat bought, 10s. 10d.; five sheep from the stock."—"History of Hawated," p. 220. Sir F. Eden, however ("State of the Poor," vol. 1, p. 15), considers that "a few fish, principally harrings, a loaf of bread, and some beer constituted the meal of the poorer and the reaper;" and that the mutton, &c., was provided for the harvest-home, and consequently might be taken as evidence that meat and cheese were considered more as luxuries than the ordinary articles of consumption of the labourer.

to water, especially when the rain is accompanied by high winds; and it sucks up the moisture of the ground, and gives it out into the rooms; but, principally, stone is a good conductor of heat and cold, so that the walls cooled down by the outer air are continually condensing the moisture contained in the warmer air of the cottage, just as the windows steam on a frosty morning; besides, the abstraction of heat in stone houses must be a serious inconvenience. The effect of this condensation must be, and is, to make clothes, bedding, &c., damp whenever they are placed near the wall, and therefore extremely prejudicial to those who wear the clothes or sleep in the beds."

Here, indeed, we are met with a remark of Sir Frederick Eden, that the price of wheat is "no criterion of the ability of a man to subsist by his labour, unless it can be shown that this grain is wholly and entirely his ordinary food."† He infers, from the "Household Book" of Sir Edward Coke, that, in 1596, rye-bread and oatmeal formed a considerable portion of the diet of servants in great families; and he adds that, in 1626, barley-bread is stated in a grant of a monopoly from King Charles I. to have been the usual food of the ordinary sort of people. But the price of wheat may undoubtedly be considered as a criterion of the ability of a man to subsist by his labour, not only where wheat is wholly his ordinary food, or forms a considerable portion of it, but where, though forming no portion of his ordinary food, it forms a considerable portion of the inhabitants of the same country. For the high price of wheat will drive some from wheat to other sorts of grain, and will consequently raise the price of those other sorts of grain, independently of the same causes (such as the seasons, &c.) producing the same effect on them as on wheat, and consequently making them always bear a certain proportion in the rise and fall of price to wheat. Moreover, we think it is evident from the words of the first chapter of the statute 25 Edward III., stat. 2, 1350-1, that, by the middle of the fourteenth century, wheat formed a considerable portion of the usual food of the agricultural labourers in many (we think we are authorized, from its being the only sort of food specified by the Legislature as a measure of value, to say in a majority) of the counties of England. The words of the statute are these:—"1st, That carters, ploughmen, drivers of the plough, shepherds, swineherds, deies, and all other servants, shall take liveries and wages, accustomed the said twentieth year, or four years before; so that in the country where wheat was wont to be given, they shall take for the bushel ten pence, or wheat at the will of the giver, till it be otherwise ordained."‡ What is apparent from this passage is not only that wheat was at that time an ordinary food, but that it was not unusual to pay the agricultural labourers' wages in kind;§ in other words, that a species of truck system prevailed, but a very different truck system from that which oppresses and robs the labourer, by giving him what he does not want, and cannot exchange for what he does want without sustaining a loss. On the contrary, the system of paying the labourer in the first necessary of life, bread-corn, has some of the same advantages as the plan of guarding against the changes in the value of money, by reserving in college leases part of the annual payment in the shape of a corn-rent.

Of the nature and effects of this mode of paying labourers a very clear and interesting account is contained in the evidence of John Grey, Esq., given before the Committee of the House of Lords on the state of the poor laws, in February, 1831. Speaking of the agricultural labourers in Northumberland, he says:—"The hinds are exempt from the uncertainties of high and low prices, because, although of course their earnings are not of equal value in money when corn is very low, yet the quantum of meal which the grain produces is the same, and when the corn is very high they are exempt from the poverty which would otherwise accompany a money rate of wages. There is another remark which it may be proper to make, that in receiving as wages a quantum of grain (which they get ground at a very cheap rate), besides the temptation of spending money in public-houses when they go to purchase their weekly food, they are saved all the intermediate profits of the meal-dealer and baker; and I apprehend the quantity of grain given to those people, though it may cost the farmer £15 or £16, would probably cost the labourer £20 if he purchased it in small quantities of meal, or in loaves."

* Report, pp. 267-8.

† "State of the Poor," vol. i., pp. 560-1.

‡ 25 Edward III., stat. 2, c. 1. Record Commissioners' edit.

§ Sir J. Cullum says ("History of Hawstead," p. 214), "In 1381, a carter had four bushels of siligo (a kind of light and fine wheat), for six weeks' work of various kinds; and a girl for winnowing corn, and keeping the young heifers, geese, and poultry of the manor, for fourteen weeks, one quarter of the same grain." In Hawstead, in the farm which the lady of the manor held in her own hands, wheat bore to other kinds of grain the following proportions:—"In 1396, the produce was, according to the balliffs' accounts (which were always from Michaelmas to Michaelmas), 69 quarters 54 bushels of wheat, 54 quarters 4 bushels of barley, 11 quarters 7 bushels of peas, 29 quarters of haras (a horse-corn), 24 quarters of oats."—"History of Hawstead," p. 216. In 1397, 25 acres were sown with wheat, allowing 2 bushels to an acre; 25 acres with barley, allowing 4 bushels to an acre; 25 acres with peas; 25 acres with haras, 62 acres with oats, allowing 2 bushels of each to an acre."—*Ibid.*, p. 216. In 1398, the produce of the farm was 69 quarters 2 bushels of wheat, 43 quarters 3 bushels of barley, 23 quarters 3 bushels of peas, 24 quarters of haras, 40 quarters 4 bushels of oats. In 1399, 57 acres were sown with wheat, 24 acres with barley, 23 acres with peas, 24 acres with haras, 54 acres with oats."—*Ibid.*, p. 216.

"Is it generally in grain or in meal?—Generally in grain."

"In the allowance given to labourers in articles of subsistence, is there a certain quantum given without regard to its price?—There is a certain quantum given, without reference to the price."

"It is the same in Scotland, is it not?—In Scotland they give it in meal; generally it amounts to the same thing, the calculation being the same."

"Is it not better for them to have it in meal, as it saves the expense of grinding it?—The master makes his calculation, and if he incurs the expense, he will give somewhat less; but they generally prefer having it ground among themselves. There is a great competition among the very small mills: a man takes a mill, and buys a horse and cart, and he goes round and collects the grain from those people, and takes it back to them when ground; and the number of those mills keeps them on pretty good terms; they can get it ground according to their own fancy and taste. Of course the grain delivered to the servant is always the best which the farm produces; and that has one salutary effect, that it gives the servant an interest in the working of this grain, and in the preserving it in good condition; and instead of grumbling in bad weather at working extra hours in harvest, they have all an interest in preserving it in good order."

"If the grain is damaged in harvest, are they satisfied with that, such as it is?—I should not say that; but I never heard an instance in which they did not get the very best grain that the farm would produce. I never knew a farmer feel himself called upon to go and purchase better, or that he has done so. I have known where the grain has been sprouted, that they have given a larger quantity to make up for the deficiency, though that is not the bargain."

"If there is any surplus left, does the master take it back?—It is in the option of the servant to make the best he can of it. If a man has only a wife and daughter at home, his grain is greater than he can consume; this stands to his credit at the half-year's end, and it goes to his account at the market price of the day with his master."

"Has he the option to take either the grain or the market price of the grain?—The master is bound to deliver him his grain, but he is not bound to buy it back of him. It often happens that the servants will prefer selling to the miller; but in my own case I am in the habit, and I believe it is a very general thing, if they have any surplus grain, to give them an allowance for it at the end of the half-year."—*Minutes of Evidence*, p. 132.

Another witness before the same committee, Robert Aglionby Slaney, Esq., M.P., thus further illustrates the effects of payment of wages in corn:—"Do you not think this has been an evil of long standing, that labour has been very ill paid in the south, comparatively to the payment for it in the north?—No. I am of opinion it may be traced distinctly to the period when the price of wheat fluctuated extremely, from the beginning of the French war down to 1815; and I could show that the wheat fluctuated 100 per cent. in one year, then went down 50, and then went up 150. Wages could not fluctuate in the same way as wheat; and the magistrates, from the necessity of the case, in consequence took up this mode of relieving the men. In the south that became permanent; whereas, in the north, they used it only as a transitory measure."—*Minutes of Evidence*, p. 147.

But, as we shall see presently, we must go much further back than the French war alluded to, for the source of this difference in the recompense of labour. The effects of paying the labourer in money, and in an amount of money fixed by law, at a time when the real value of money was sinking rapidly, were felt most strongly in the course of the sixteenth century, and led to a train of consequences of which we have not yet seen the termination. (To be continued.)

THE EDINBURGH ANTI-CORN-LAW ASSOCIATION.—On the 1st instant a meeting was held, in the hall of the Chamber of Commerce, of the Executive Committee of the Anti-Corn-Law Association, Baillie Gray in the chair, in the absence of Mr. Wigham. The meeting was specially called to consider the correspondence with Mr. Gibson Craig, M.P. for the city. The *Edinburgh Weekly Chronicle* publishes the correspondence, by which it appears that, after repeated attempts on the part of the secretary, Mr. Howison, to bring the honourable member to a distinct avowal of his adherence to the principle of a total and immediate repeal of the Corn Laws, he had written a reply, in which he reserved to himself the right of preferring any modification or compromise which might be proposed. "The Association, in these circumstances," says the *Chronicle*, "sent him a calm remonstrance, written in a very friendly spirit, of date 26th June, in explanation of their real principles, and what they expected from Free-Trade members of Parliament. Its defence of the principles and policy of the Association, in reply to the letter of Mr. Gibson Craig, is unanswerable. He appears to have felt this, for he did not attempt to answer it. After waiting for twenty days, they applied a second time for an answer, but with no better success, the honourable member having resolutely maintained a dogged silence. The members present having fully considered the correspondence, and expressed their opinions regarding the same, the meeting unanimously passed a resolution, in which they regret being obliged to state that the result of the correspondence with Mr. Gibson Craig has not been satisfactory; and they further regret being obliged to express their opinion that the fact of his not having returned any answer to either of the last two letters addressed to him is not respectful to the Committee, who, as is admitted in his letter of 23rd December last, represent a large body of his constituents."

NOTES TAKEN BY A TRAVELLER IN THE SUMMER OF 1844.

No. VI.

Brussels, July 15, 1844.

From the details I have furnished, an involuntary parallel suggests itself between the position of England and Belgium. In both countries a stagnation of several years has been the result of the want of courage or of inaction on the part of the most influential men frankly to adopt a system of fair and free industrial organization, while in both countries public opinion is rapidly progressing to unanimity on this important point. In both countries we have seen, in the present year, the minister arrogating the dangerous privilege of prejudging so solemn a question by the weight which a majority lends him in the legislative assemblies, regardless of the protests raised on the part of the bodies most interested and best informed on the subject. Arbitrary interference with the right of the trader in Belgium, by restrictions on the shipping that he is to use, runs parallel with our arbitrary interference in the concerns of manufacturers, by prescribing the number of hours of labour, and with the use of credit, which it is the merchant's pride that he alone can effectually create, although others may destroy it. The parallel is curiously completed by the attempt of the Belgian Government to raise the duties and introduce an excise on tobacco in the face of a surplus revenue, just as our oppressive duties on sugar, with their differential augmentation on foreign produce, are continued, notwithstanding the increase perceptible in every quarter's returns, and the property-tax. The attempt to impose an excise duty on home-grown tobacco was foiled, as I mentioned in my last, by the instinctive feeling of the landowners. They felt that it would be impolitic to deprive themselves of the chances offered by a valuable crop, which their corn duties do not encourage them to despise.

At Brussels, as in London, the working men in the public offices—the men whose countenance is needed even by the heads of parties—are, with few exceptions, liberal in their views; and amongst these, and the leading members of the commercial and manufacturing ranks, the best society must be sought by those who take interest in other matters than genealogical disquisitions and lamentations over the tendency of the times. In this class the hope of the country rests; and a selection from the most intelligent official men has been formed into a bureau of statistical inquiry, which is independent of ministerial support and influence, and by the names of its members possesses confidence with the public. M. Quetelet, so well known to the scientific world as royal astronomer, is the president. Messrs. Duquetiaux, Smits, Vischer, and others of known character and acquirements, are his coadjutors. The two first volumes of their transactions are deserving of more than common attention, from the superior tone of the essays they contain; and contrast remarkably in this respect with many of the blue volumes issued as reports of parliamentary inquiries, which, under our present Ministry, are not improving in character. Men of standing in foreign countries have been invited to communicate with this body, and many have accepted the honourable correspondence. It is evident that such a body must eventually prove a mere tool in the hands of a minister, or a means of control invaluable for the nation, but odious, perhaps, to those who are subjected to criticism of so searching a character. That a Minister in Belgium would, however, scarcely venture to suppress such an institution when it possessed the confidence of the public, may be supposed from the means which the constitution affords of giving weight to public opinion, and which are well deserving of attention. Every province has an administrative council, the members of which are not named, as our magistrates are, by the Crown, nor taken, like our grand juries, from a particular class of the inhabitants. The members of these *Conseils Généraux* are elected by the ratepayers, and I have already noticed that the elections of the present year have turned out unfavourably for the Ministry. If the Minister adopts a course of conduct displeasing to the really informed and enlightened class of the nation, the resolutions of these councils give an importance to the wish of the majority that the Chamber cannot treat with contempt. Thus, in addition to every freedom in the right of petition which is sanctioned by law, a means of enforcing the view entertained out of doors on the notice of the Legislative Assembly is provided, to which it is evident, from the interest taken in the late elections, resort will often be made. In the large towns the Chambers of Commerce form consultative bodies, to whom projects affecting trade and manufactures are referred, and who have equally on commercial points the means of giving expression to public opinion. Travellers who are desirous of collecting authentic accounts of this interesting country will find themselves in safe hands in the members of these councils. On the other hand, they must treat with considerable distrust the statements and complaints of those friends of the antiquated system, who, finding it not so easy to work in the company of serious and independent men, and seeing that with such mental superiority was the only rank that would be tolerated, have withdrawn to the estates which they possess, and on which they vegetate in hostility to their industrious and intelligent neighbours. The influence of these councils may be expected to be traced as increasing in every successive election of the members of the Chamber; and as the high church and agricultural party was forced to accept the aid of M. Nothomb and his friends, the Cabinet will, under their influence, undoubtedly experience many liberal modifications.

The increase of the population is so rapid that without a corresponding development of the resources of industry, its growth will soon become oppressive. I have already alluded to the great subdivision of the land in Flanders, as a result both of the growing mass of the people and the stagnation of trade and manufactures. M. Heuschling, in a recent statistical treatise, states the augmentation that took place in the population during the two years 1841 and 1842, to amount to 5 per cent. Within the same period the imports increased 10 per cent., but the exports declined equally. It is not unlikely indeed that the latter are underrated in consequence of the great extent to which smuggling is carried on under the encouragement offered by the high tariff of adjacent lands. During the recent debate in the Chambers on the tobacco duties it was stated that no less than 60,000 dogs were kept on the French frontier, who were trained to carry goods into France. Lace, it may be presumed, cannot possibly be excluded from our count-

Within this rio of this sandy gr greater part of towards the ha

long as it is subjected to a duty. Now, from the increase that has been noticed in the lace manufacture, we are induced to conclude that any increased activity that may within this period be observed is traceable to the encouragement held out by smuggling. And with this unsatisfactory state of the national prospects a party like that now at the head of affairs thinks it possible to carry on the government, on the sole plea that the constant partitioning of the land increases the revenue of the landowner. We see that here this party, by insisting on so erroneous an economical view, is turning the dispute from one regarding general principles into one embittered by all the acrimony of private interest; and those who bring things to this dangerous pass are, forsooth, here as elsewhere called "Conservatives."

The King's visit to Ghent shows, however, that in influential quarters the present state of things is looked upon as too serious to be regarded with apathy. Under all circumstances, a ceremony of general interest in a considerable manufacturing town would be deemed a proper occasion for the Sovereign to testify his sympathy with that important interest. On the present occasion we have seen that King Leopold holds it to be his duty to seek personally to do away with the remnant of ill feeling that lingered at Ghent; and it is expected that he will be successful. But his greatest triumph will be, if, by encouraging free inquiry and discussion, he prepares the minds of his subjects to study and meet the great changes that industry in every country is exposed to; which can only prove innocuous by their being foreseen and provided against, and can only be modified when they arrive unexpectedly by a rapid acquiescence in the required alteration.

The result of prolonged peace will doubtless be to substitute the influence of the general councils and chambers of commerce for the old local corporation feeling which at present, as I have before remarked, is strongest. But this enlarged domestic policy is only attainable under the conviction that those who are most interested in the success of industrial undertakings will be secured from unnecessary interference on the part of ministers and legislators, without which it is clear there is even no security of property.

The view that I have taken will, perhaps, not readily be seized by some readers; but, as in the course of my tour numerous illustrations will force themselves upon our attention, I am content to wait until a larger range of observations present themselves, and shall only remark, that at all times the working classes of high and low degree, to whom nations are indebted for wealth and power, have willingly resigned themselves to the guidance of those who were supposed to have opportunities of taking theoretical and connected views of their pursuits. This confidence has, to say the least, been as often ill as well reposed; and the views of statesmen and divines have as often destroyed as preserved the prosperity of their fellow-citizens. The legislative power delegated to a representative government transfers the responsibility that feudal lords once incurred. A knight of the tribe can do as much mischief as any robber-knight of the olden time, and can endanger confidence quite as much as his predecessor. If our parliamentary protectors wish merchants and manufacturers to work, they must interfere less with the right of free passage on the high roads than they have of late years been inclined to do.

The land of WAES, or of spade husbandry, is the most interesting spot in the north of Europe for the political economist; since, as I before observed, the problem of raising the value of land by concentrating on it a numerous agricultural population is there exemplified. We can return to it after our survey of the state of manufactures and of trade, because the stagnation in those branches of industry accounts for the growing accumulation of small farmers in an agricultural district. A curious traveller will find himself repaid by leaving the line of the railroad at Ghent and passing at leisure through the district that lies between the left bank of the Scheldt and the sea. If his first excursion is along the new canal of Terneuse to Sas de Gand and the coast, he will find that the description of the soil of Flanders given by Mr. Radcliffe is geographically incorrect. Inside the belt of sandy downs that defines the coast a zone of heavy land runs parallel to the sea-line, and to the eastward of Terneuse stretches to the tide-mark. The level of this marsh or polder land is low, and the right of property in it, both in Holland and Belgium, was originally a spade right, which means that he, who by erecting a dam protected it from the waves, became its owner. This belt, which stretches in varying breadth from near Ostend through the Zealand islands, Friesland, Oldenburg, and Hanover to Holstein, is some of the richest land, and at the same time, generally speaking, the best cultivated in Europe. But this land, intersected with the *deeps* and *fleets*, of which I have spoken as having first afforded security (and, consequently, wealth) to the traders, enabled its cultivators to free themselves from the interference of the barons at an early period. Behind their dykes and dams the peasants of the marsh lands—Belgians, Batavians, Frisians, and Ditmarsers—made an early stand for freedom, and, under democratic and patriarchal forms, tolerated a nominal duke or governor, who was in no way allowed to interfere with their customs and rights. Wherever circumstances allowed him to do so, the consequence was assuredly the refusal of the peasants to cultivate a soil that demanded great sacrifices of labour and capital. The early importance of the Earls of Holland and of Flanders may account for the fact that these western polders are less carefully cultivated than those of Holland and Hanover, and on which the heaviest crops and the finest breeds of horses and horned cattle have for centuries been found.

Of course this difference need not be traced to any personal qualities in these rulers; but their political importance involved these earls in the warlike turmoil of their times, in which the interest of the peasant was sacrificed or overlooked, and the success or brilliancy of the court was alone considered. Holland did not make the same mistake; that afterwards raised it so high until the establishment of its freedom. In the separation from Belgium, the coast, including the polder land, from Ecluse, at the mouth of the Canal of Bruges, to near Antwerp, was retained by Holland, who thus not only commands all the commercial approaches to Belgium, but is the owner of the greater portion by far of this rich polder land.

Within this rich belt the soil again becomes sandy; and of this sandy ground, partially mixed with peat, the greater part of the soil of East Flanders is composed. Towards the bank of the Scheldt (Escaut) clay land gets

again abundant, and meadows run along the course of that river, which are watered by its floods. Between these and the polders lies the remarkable tract whose high state of cultivation has been so much admired, and which affords such useful experience. Let us examine it somewhat in detail.

The meadows on the river banks require no manure where sluices are so arranged as to allow of their being watered at pleasure. But this has taken place only on a very limited scale, and is by no means the general rule as in Italy. The winter floods furnish sufficient moisture for the spring crop; and the occasional summer showers, with the heavy dews, are what the farmer depends upon for after-grass. In a good year three tons of hay per acre are usual. In a dry season the owners of irrigated meadows are immense gainers. All crops are here sold standing; and I was told of a landlord to whom the difference between a moist and a dry season was worth more than double his usual receipts. In 1819, when the drought ruined all his neighbours, his grass brought him in £26 per acre standing. The general adoption of sluices, where the level of the water allows of it, would, both in England and in Belgium, form a considerable addition to the wealth of the country. The meadows that are not watered receive manure, and thus share with the light sandy soil of which the Waes country consists the immense quantity of manure that I am about to describe.

For two reasons the Flemish farmer feels himself dependent on manure. It corrects the generally-prevailing damp of the climate, and brings his crops early to maturity; and in the sandy soil of the Waes country there lies no natural principle of fertility. Hence the Flemish proverb—"Poor in stall, poor in all;" and the efforts made to create this indispensable requisite are really curious. According to last statistical returns, East Flanders, on a surface of 740,000 acres, nourishes 140,000 head of horned cattle, or about one to five acres, and 30,000 horses; the latter being in the same proportion with the estimate given by Mr. McCulloch for England and Wales; whilst the former kind of stock is twofold greater in number in Belgium than is estimated by the same author for England. Sheep, in number 44,700, and pigs, 76,400, testify to the higher value set by the Fleming on the dung of the latter. But this, and the refuse of densely-peopled towns and villages, which is carefully turned to account, does not suffice in a country where two crops at least are extracted from the ground annually, and the land is heavily manured every second year. A regular importation of manure, and of turf-ashes, takes place annually from Holland, where the rich soil of the polders does not bear any artificial stimulus, and the dense population and well-nourished stock furnish dung and refuse in abundance.

One of the most curious objects in Belgium is a magazine on the Upper Scheldt, where these importations are deposited until the farmers send for what they want; and their extent, as well as the routine established in this trade, testify to demand that the dealers can reckon upon. In this manner a most unusual quantity of the richest manure is applied, generally by the aid of the spade, to this light soil; and even where the plough is used the ground is dug up and trenched once in six years. And yet I could not find that a greater return than from 20 to 30 hectolitres per hectare, or from 25 to 35 bushels per acre. But if we consider that this land has for centuries been cultivated in a similar manner—that is to say, with the concentration of an unusual expenditure of labour and manure on small spots—it cannot excite wonder that it should be in a high state of cultivation; it rather demands inquiry why, with no extraordinary returns from the land, rents are so high as we find them, while the cost of cultivation is so great. One reason is, that the Flemish farmer, not being by any especial protection tied down to the cultivation of a particular crop, selects carefully such as are best suited to his ground. Flax, tobacco, madder, hops, carrots, clover, and artificial grasses, are to be found all in the right place, and affording remunerating crops. The produce in rapeseed alone keeps 200 oil-mills in activity, of which 24 are moved by steam power. Brewing and distilling combine with the produce of rich meadows and artificial grasses in supporting the large amount of stock that has been noticed. But the grand occupation, especially of the southern portion of East Flanders, has hitherto been the growth and preparation of the flax, and the working up into linen of such yarn as was not fine enough to be sold at a high price for exportation. The cultivation of flax is perhaps the only excuse that can be alleged for persevering in the practice of spade husbandry in this country, since the care which the finer sorts of flax require, and the high value that they bear in the market, make it profitable to devote manual labour to this description of tillage. It is generally known that the finest flax is the produce of the Riga seed in the second year of its sowing in Belgium. The first year produces comparatively coarse flax, of which the seed is saved; and this seed is what yields, in the following year, the finest flax. Of this, however, no seed can be procured, because it is pulled long before the seed ripens, and the whole treatment is intended to prevent its seeding. By sowing it very thick, the stalk is made slender; and formerly it is said that the stalk was supported by twigs, that prevented it from being laid by the rain. This practice is, however, not general; and, throughout my whole tour, I saw no instance of the practice, by which twigs are laid across the beds for the flax to rest upon.

The high price that the fine flax brings has already been alluded to. The buyer examines the green plant to see whether it is fine or coarse, which is usually determined according to the number of its seed-pods. If, in consequence of its growing thick and long, the stalk has thrown out but few branches, and bears but few pods, it is esteemed fit for the finest yarn. But the highest price obtained in the field is not to be compared with the value of the prepared flax, which demands an unusual share of skill and attention in all the successive manipulations. The water in which it is steeped is the first object of care. Pits are usually formed for this purpose, that are filled from some adjacent stream or canal, and are hired in succession by the small farmers. The water of the Lys, in West Flanders, and of the Durme, in East Flanders, are famous for steeping; but the good quality of the latter has been occasionally ascribed to the brackish water that ascends its bed with the rising tide, an occurrence that is not met with in the Lys. It would appear that attention, and a practical tact in judging when the flax is sufficiently ripe to be drawn from the pit, is more important than the nature of the water. But, before steeping, the finest flax sorted from the coarser sorts. This is done in the pulling, when every blade that has more than four seed-balls is

reckoned coarse. Fine flax must have no more than two or three; and one or two, without any side-sprouts, is all that must hang upon the finest.

After the steeping, the second and third qualities are cleaned and hackled, and their value for the spinner again depends very much on the skill with which these operations are performed. But the finest sort is not hackled. When cleaned the fibres are loosened with a kind of brush, and so much attention is paid to the skill of those who are able to dress this quality that a story circulates of a landowner in the Waes country who used in the season to send a woman that he had hired from the southern districts home in his carriage once or twice in a month, to keep her in good humour, by allowing her to visit her relations. The finest flax is of considerable length and brilliancy. This article of trade is important enough to have its own weight, and a pound of cambric yarn weighs but 11702 kilogrammes, or little more than one-fifth of a lb. avoirdupois. It is divided into 24 salsins. The warp of a piece of cambric is a quarter of one of these pounds, or 6 salsins, and runs nearly 3600 yards. An English lb. weight of this yarn yields, therefore, nearly 75,000 yards in length. The yarn for the finest cambric is, however, spun in France, and I have already alluded to the pains taken to introduce this branch of industry into Belgium, and the little success that has attended the effort. About this result the Belgians, who possess the art of growing and dressing the flax, need be but little concerned. Provided there is sale for this costly manufacture in a constantly extending market, they need care little where it is woven or spun, and there is evidently room for a great extension of the half-manufactured material.

With the exception of this peculiar product, there is nothing else in the agriculture of Flanders that justifies the spade industry. The great subdivision of the soil admits of, and even renders, a vast number of ditches necessary as boundaries, which, being dug very deep, often as much as seven feet below the surface of the field, appear to me to supply the place of our underdrains. Where the soil is at all moist the patches belonging to the same cultivator, that have frequently not more than a few square yards in extent, are divided in the same manner by deep trenches or ditches. The screens, which are innumerable, and are valuable from the firewood their clearings afford, are said to be useful in protecting the young seed from the cutting winds in spring. There cannot, however, but be a loss on the whole from the quantity of land thus sacrificed in ditches, and the dearthness of fuel would suggest the advantage of importing coals for the use of the inhabitants. Thus the economical calculation in comparing Scotch with Belgian farming clearly reduces itself to the inquiry whether it is more advantageous to do that by dint of human labour which can be as well or better effected by an investment of capital. The answer must depend upon the employment that can be found for the hands that the capitalist replaces by machinery.

Here we are again upon the old ground. Where freedom of exertion is allowed, and education attended to, people will never be at a loss for employment. All that I wish in the course of this investigation into the state of agriculture in Flanders is to record a protest against the supposition that any system of tillage or any division of land for cultivation can indemnify a country for the neglect or rejection of trade and manufactures; further against the supposition that what is called protection extended to any one branch of industry can indemnify for the mischief done by restrictions in favour of another. When the whole cycle of restriction is run through, a momentary interval of quiet under a repression of exertion may occur. Land under such circumstances may increase momentarily in value for the owner in consequence of the numbers who resort to it. But the nation in such a case is like a volcano on the eve of an eruption. The repressed elements of power work out in silence until the superincumbent weight is unable longer to restrain them, and the explosion may bring ruin in its train. I may remark that rents are at least 50 per cent. higher now than Mr. Radcliffe states, so that I cannot help regarding Belgium as far advanced on this dangerous path which England has also long trodden. The high value of land which would be a legitimate state if it depended upon the production to any extent of so fine an article as the best flax, or other scarce objects, is unnatural when it depends on the necessity of wasting labour on processes than can be performed by machinery. This is an error of observation, for the slightest calculation in the mode that I have attempted must show that the value of land depends on what is drawn from it, and on the demand for that produce. How this produce is extracted can only indirectly affect its value, and must diminish it if it impoverishes the mass of the people.

The third great branch of manufacture which this remarkable country possesses affords a proof of the inutility of protecting manufactures as remarkable as that which the flax and linen trade presents. Woollen stuffs, that find a sale in all parts of the Continent, are the staple of the southern part of the province of Liege. The romantic little river Vesdre, which joins the Meuse at Liege, is studded along its course out of the bosom of the Ardennes with cloth factories that date from the period of the banishment of the Protestants from France, under the revocation of the Edict of Nantes, by Louis XIV. Although these factories have been long dependent on foreign supplies of the raw material, and their products must compete in markets where they stand on an equality with the productions of the looms of England, France, and Saxony, yet the spirit of industry and perseverance that pervades this portion of the population enables them to triumph over every difficulty; and this manufacture has flourished and increased, while the cotton manufacture has dwindled away. The mixed cotton and wool wares that are now in fashion are made with great success at Verviers, and the taste of the patterns is much admired. For this, more than for any other species of manufacture, Belgium needs a liberal system on the part of her neighbours, and would be most likely to obtain it by setting a good example. It is this branch which forms the difficulty in the tedious negotiations that the Cabinet of Brussels has been carrying on both with France and Prussia. These two countries dread the power in machinery and capital that Belgium possesses. Belgium, again, trembles at the supposed advantages of England. Until the Belgians confess their belief that competition stimulates instead of repressing industry, her neighbours are not likely to embark in the same speculation. The positive good is thus postponed from dread of an imaginary evil. But the

utility of a growing manufacturing interest is most visible in all the country through which this woollen fabrication is scattered. Here we find a division of agricultural holdings, not, indeed, approximating to those of England, but which is a great improvement on the state of Flanders. Farms of from 20 to 50 acres are common, in the centre of which the farm-house stands, as in England and in Lombardy. The mountainous nature of the effects of the Ardennes prescribe dairy farming in the provinces of Luxembourg and Limburg, in the latter of which the delicate Limburg cheese is made. In this remote and bleak district good farming allows a rent to be paid of 100 francs the hectare, or 35s. per acre; and the proprietors are wise enough to trust to the excited activity of their tenants, and favour the migration of the superfluous population into towns and factories by discouraging the subdivision of farms. The neighbourhood of Limburg, as presenting the converse of the economical problem of Flanders, is equally deserving of the notice of the traveller. The cheese, which is here the farmer's staple production, and which is sought by the luxurious in all countries, from France to St. Petersburg, is made by the simple process of running the new milk while it is warm. No artificial heat is used, and the cheese, after salting and washing, is simply let lie to ripen. This is, again, a product that may be expected to die out under the repression of foreign tariffs and the increase of the population. The district, now laid out in beautiful little dairy farms that wear a character of cheerful romance, is very limited in extent, and the sale of fresh milk and butter affords the farmer a quicker return than cheese. But the high Prussian and French duties have curtailed the gains of the farmers of Limburg before the natural period of the change that may be anticipated has arrived. May the increasing population, if it brings wealth in its train, spare the simple and hospitable manners that still linger amongst these mountain farmers, and form a refreshing change from the egotistic struggles on the grand highway of Europe, from which they are separated but by a short and delightful walk. From Limburg the frontier of Germany is perceptible.

THE FARMERS AND THE CORN LAWS.

To the Editor of the Economist.

DEAR SIR,—The accompanying letter comes from a gentleman who has had many and good opportunities of ascertaining the facts which he mentions. If you think it worth publishing in the *Economist*, it is at your service. —I am, yours truly,

C. P. VILLIERS.

Oxford, August 5, 1844.

DEAR SIR,—I shall now tell you, in as few words as possible, the result of my own observation and inquiry as to the state of the public mind in this county respecting the repeal of the Corn Laws. You will recollect that it is almost wholly an agricultural county.

"Peel's measure, however intended, has been a great help to the Free-Trade cause here. The farmers were led to expect that, under that measure, corn would average 56s. a quarter. It has not averaged 50s. (if that), except at a period when, unfortunately, farmers have little or no corn on hand. Yet that measure was passed as Peel's ultimatum. They see, therefore, that they receive 6s. a quarter less under that measure, and are to receive it, than they were promised. Peel may stand by his bill as steadily as he pleases, but the Oxfordshire farmers are quite willing to let it go, if they can get a better one elsewhere.

"Not a farmer in the county but feels that the present system is a bad one. Some of them publicly confessed this to Mr. Cobden when he was here last September. Year after year rent remains the same, poor rates increase, prices diminish. The fall of prices, and the maintenance of rent, force the farmer either to reduce the amount of wages, or to put up with a loss of money. When it comes to this, down fall the labourer's wages. Want ensues; want often creates improvidence and visits to the beer-shop; the workhouse or arson ends all; and the farmer, in the end, has to pay through the nose (as *rates*) a great deal more than the reduction he had made in wages. For example, A pays B 12s. a week for farm-labour, on the pledge that Peel's bill would ensure 56s. a quarter. A only gets 50s.; therefore, to save himself (as he is next door to a rack-rent), he reduces the 12s. wages to 8s. He does not get 6s. worth of work out of the labourer, and thus he loses. The labourer cannot support a family on two-thirds of his usual wages, and flies to the beer-shop. Labour so badly paid is neglected; the man and his family come on the parish; and A's rates are increased more than the difference between full wages and low wages, for the same happens to other rate-payers also.

"Now, the farmer knows all this; he attributes it to the right cause—Peel's bill—which may 'protect' the landlord, but injures the tenant-farmer. He sees the remedy. Free Trade? you ask. No; reduced rent. But that the landlord will not take.

"The farmers of Oxon are rational, thinking men as a body, well informed and sagacious. They have repeatedly told me that, if rent was reduced to suit prices, they would be for total repeal of the Corn Laws to-morrow. Nay, some have said, 'Rather than have these continual chops and changes of the law, put us out of pain at once—give us the very worst, and abolish all protection.' But all say, 'Remove protection, if you will, so that we have our land at that reasonable rent which will enable us to compete, on fair terms, with the foreigner.'

"I hope I don't fatigue you, but I am trying to make the case as clear to you as it is to me. Believe me, that if rents were honestly adjusted on the 'live and let live' principle, the Oxfordshire farmers would strongly support the League. But with corn at (and under) 50s., they pay almost as high rents as they did in the time of the war, when corn was 86s. to 120s. a quarter; and who can wonder if self-interest makes them cling to protection, as a drowning man in his desperation grasps at a straw.

"In Oxfordshire, take my word for it, every tenant-farmer would be with the League, if, when protection went to the dogs, rent were equitably adjusted. The landlords oppose free trade in corn, because, once it is granted, rents must tumble down. Scarcely an estate in the county but is mortgaged. If a man with an income of £3000 a year from land, pays £2000 out of it as interest on mortgage money, he has £1000 left. But few landlords can get the whole of their rent-roll. Take off £100 for run-away tenants, repairs, allowances for improvements, and other matters. Let rents be equitably adjusted, so as to put the English grain-grower on a

level of competition with the foreigner, and instead of £2500 balance a year (with a nominal income of £5000, and the strong and almost irresistible temptation to live up to it, rather than incur the accusation of meanness), the landlord will not have half that sum, or £1250, because the diminution would be on the whole rental—upon every acre—while the dead weight of £2000 interest would be an incubus which could not be reduced. Here, then, you have the Oxfordshire landlords disposed—(as it is with them a life-and-death struggle for existence)—you have them disposed to resist, by all means, the doctrines of the League. The tenant-farmers, I verily believe, would be glad of the repeal of all Corn Laws if the reduction of rent came with that repeal; but they are thumbed by the landlords, and dare not openly give in their adhesion to doctrines which, as I know, are approved of by the majority of them.

"I am writing of this county as I know it best. But my observations must generally apply to other counties. The landlords, and the landlords only, stand in the gap between the people and cheap bread.

"As for the farm-labourers, they are with you to a man. Repeal the Corn Laws, and they will have food at a cheaper rate. This they feel to be worth striving for. But the more sagacious of them know, as well as you or I do, that if those laws be repealed—if rents fall (as fall they must) so as to allow the British grain-grower to compete with the foreigner, labour would once more be in demand, and at higher wages too,—because then the farmer could afford to pay them, and it would be his interest to get every ear of corn from the land which he could get without impoverishing it. Be assured, therefore, that the farm-labourer, as well as the tenant-farmer, wishes success to the cause of which you are an advocate.

"I have thus endeavoured to shadow out what I think is the actual state of feeling in this county as regards the great principles advocated by Free-Traders, and conclude by repeating, that if the county of Oxford was polled throughout, eighty out of every hundred would say, equitably adjust the rent, and to the dogs with protection.

"I am, dear Sir, yours truly,

PEEL'S "PILOT BALLOON."

It was clear, on the evening when Sir Robert Peel, in the course of the debate brought on by Mr. Villiers's motion on the Corn Laws, pledged himself, in plainer terms than is his wont, to stand by the sliding-scale as it is at present constituted, that the country gentlemen were not altogether satisfied. Either there was something in the matter or the manner of the Minister which engendered doubts of his sincerity at the very time when he appeared to be most in earnest; and it is clear, from their organs of the press, that such feelings have been on the increase among them ever since. They have a strong conviction on their minds that their honest leader is busily at work preparing a mine beneath their feet, although it is still a problem to them when and how it may be sprung; and, for our part, we think that there is decidedly room for such doubts when we look at what is going forward at some of the agricultural meetings. Our readers will probably recollect the name of Mr. Christopher, once the too famous Mr. Dundas, of Ipswich, who earned for himself the soubriquet of Peel's "Pilot Balloon" immediately after the last election. The circumstances were these. Amongst the loudest of the hustings pledge-givers to stand by the then Corn Laws was this Mr. Christopher. He had even the calm effrontery—it was effrontery in a man who derives all his standing in society from having been lucky enough to marry a good fortune—to tell his constituents, that, if Sir Robert Peel dared even to breathe a hint against the Corn Laws, down he should go again into private life without ceremony. Well, this cool gentleman was elected by the farmers, who were taken in by his matchless intrepidity. He was sent to Parliament to watch over the Tory Ministry, and to put it out, like a farting rushlight, should it ever look treason at the corn monopoly. Not many months, however, elapsed before Mr. Christopher again made his appearance among the rural swains. What, in the meantime, had passed between him and the Premier, what he had said to Sir Robert, and what Sir Robert had said to him, no one knows; but, at all events, he astonished the farmers, at this second meeting, by prophesying of things to come, and assuring them, that they would not be so bad, after all, for the agricultural interest. Hence his name of "the Pilot Balloon," inasmuch as the event, when Parliament again met, amply justified the surmise, launched at the moment by the *Times* newspaper, that Mr. Christopher was commissioned by Sir Robert Peel, who, from the preferments showered upon his family, it is certain, had taken a strong liking to him, and had a very high opinion of his judgment, to prepare the way among the country gentlemen and their tenantry for the changes which he was proposing. But what of all this? Who is Mr. Christopher, that we should so long dwell upon the doings of such a nil in public estimation? Only this. When we see a shadow, we fancy that the substance to which it belongs cannot be far off. When we hear the howling of the jackal, we expect that the roaring of the lion will presently begin. Mr. Christopher has again been talking, and in a style which makes us believe that he is again the *avant courier* and "utensil" of his worthy master. He is reported to have made the following ominous remark at the Horncastle agricultural meeting, held last week:—"Improvements like those which this society promoted had reduced the price of wheat in forty years thirty per cent., leaving as good a profit to the cultivator as at the higher rate. This was the true way of promoting the welfare of all classes, which hurried and extravagant legislation could never do." This is to be "the ticket," good Mr. "Pilot Balloon," is it? Sir Robert is presently to tell the agriculturists, that the time for a further change is at last arrived; that, judging of the future by the past, and calculating what improvements in agriculture can do by a reference to what they have effected, the British cultivator will be able still, as Mr. Christopher says, with fair profits, to sell his corn at such reduced prices that he needs not fear the competition of foreigners. The wind points in that direction, we feel sure, and, before long, we shall see the great "monster balloon" borne along by the same current in which "the pilot" is now sailing. Mr. Christopher is not a very clever person, but he has just small cunning enough not to commit himself to such things as we have quoted without having somebody at his back to bear him through all scrapes into which his valorous marching in the van of Ministerial tergiversa-

tion and treachery might lead him. We cannot say of the parties now before us, that Ulysses spoke, but Minerva prompted. We must rather put it, Christopher found the words, but Peel inspired the thoughts.—*Liverpool Albion*.

MISCELLANEOUS.

HARVEST TIME.—There is, perhaps, scarcely a more anxious time to many and many a throbbing heart than is this said time of harvest. As the manufacturer, and those who are interested in his pursuits, look at the fields, bending with grain and waving with rich golden ears, they find that, between them and the bounty of the blue heavens above, there is the interposition of the dark cloud of monopoly. The farmer is thinking how prices will rise or fall, struggling on, as he is doomed, perhaps, to struggle as hardly as any of the most anxious and toilsome class of the community. The labourer finds what should be his harvest, as well as that of his master, cut away from him by competition. When he would earn a little overplus to meet his cottage rent, he has to compete with the poor Irishman who has come over here to earn the rent of his potato-patch, to carry back rather for his landlord's benefit than his own. The story of the boy at the harvest-home supper, who cried as the tables were being cleared, "There is all that pudding being carried out, and I cannot eat any more!" has now become absolutely a thing of mere fable and story. The landlord is looking about him to see how he can make what he calls his protective laws produce him the greatest profit from nature's common abundance. There is anxiety on every hand; and the interposition of human interests and human laws casts a gloom, blight, and darkness over what should be one of the most glad seasons of the year—the most delightful time for all.

"Who gather bliss to see their fellows bless'd."

And wherefore is this? Because a great public bounty of nature is transformed into a private and class interest. Thus everything is perverted, and the abundance which should flow freely to all is only a means of unduly filling the coffers of a few.—*Fox's Lectures to the Working Classes*.

THE ANTI-CORN-LAW RIOTS IN 1815.—When my house in Bedford-square was attacked by a mob, supposing that I had supported in Parliament the Corn Bill, upon which I had never uttered a word, or indeed had ever been called upon to form, and therefore never had expressed an opinion upon it, the fury of the mob was very great. The front windows and door of the house were demolished, some furniture destroyed, and many papers, including some judgments, thrown out of doors. The alarm in the house was excessive. I was obliged to remove my wife and children into the British Museum, and with some difficulty got a corporal and four soldiers through the museum gardens into the house while the mob were in it. I proposed to the corporal that we should proceed out of my study to the great room which adjoins it, and from that into the dining-room; and, the mob being in the hall and a little adjoining room, we should be able to surprise and secure them. He was a Scotchman, and said, "We are not strong enough to keep them in, but with good management we may drive them out. I won't let my men put powder and ball into their muskets, but they shall fix their bayonets, and if you will go with me, and, when we get out of your study into the hall, will give me your orders to charge them with the bayonets, I will, and my men shall obey those orders; but we must make the best appearance we can, and, as there are only four soldiers, they must follow one by one, and we must so manage the matter, that the mob may suppose that there will be no end of them who are coming." Accordingly we so advanced; and the corporal calling out to his soldiers to come, in language tending to make it believed that they were numerous, the mob fled with great precipitation. The front doors being demolished, two soldiers guarded the entrance, crossing their muskets. The mob held a consultation at the top of Keppel-street whether they should attack the house again; but, conceiving the military corps inside to be strong, they gave it up. I brought into the house by their collars two of the mob, and told them that they would be hanged. One of them bid me look to myself, and told me that the people were much more likely to hang me than I was to procure any of them to be hanged. They were sent before a justice of peace, but the soldiers said they would do their duty as soldiers, but they would not be witnesses. The Government sent us some soldiers, and increased their number till they were about fifty; and a very considerable part of that number remained about three weeks in the house, persons in the front of the house from time to time using menacing language and threats, whenever from the streets they saw any person in the house. During all that time I could only leave the house by going through the museum gardens, and into the streets from the museum, attended to Westminster on foot by Townsend of the police, through all the obscure streets and alleys in which we could find a passage. I thank God we got my wife and children safe from their retreat in the museum.—*Life of Lord Eldon*.

MANCHESTER.—No person, however casual a visitor, can for a moment mistake the character of the town. It is essentially a place of business, where pleasure is unknown as a pursuit, and amusements scarcely rank as secondary considerations. Every person who passes you in the street has the look of thought and the step of haste. Few private carriages are to be seen; there is only one street of handsome shops, and that is of modern date; there are some very stately public buildings, but only one of them is dedicated to recreation, the rest are devoted to religion, charity, science, or business. A modern author has started the theory, that, as certain insects assume the colours and marks of the leaves on which they feed, so the citizens of certain towns offer whimsical analogies to the character of the place in which they dwell. This is a considerable extent true, of Manchester. The town is business-like as the place, and in their character as religion, charity, and science is not less conspicuous than the buildings consecrated to these objects are in the town. Were I asked how a stranger could best form a notion of the character of the Manchester manufacturer, I should recommend him to visit the Exchange of Manchester on the period of "high change," that is, about noon on Tuesday. It is the Parliament of the lords of cotton, their legislative assembly, which extracts laws of importance as those of the Medes and Persians, but, unlike any other Parliament in the world, very much is done and very

little is said. Nowhere can there be found so practical a comment on the well-known line:—

"Silence that speaks, and eloquence of eyes."

Transactions of immense extent are conducted by nods, winks, shrugs, or brief phrases, compared to which the declamations of the ancient Spartans were specimens of indolence and verbosity. There is a kind of vague tradition, or rather remote recollection, that a man was once seen to gossip on the Exchange: it was mentioned in the terms one would use if he saw a saraband danced in St. Peter's, or Harlequin playing his antics at the Old Bailey. For my own part, I felt my loquacious tendencies so chilled by the genius of the place that I deemed myself qualified to become a candidate for La Roche. The characteristic feature of the assembly is talent and intelligence in high working order; genius and stupidity appear to be equally absent; but, if the average of intellect be not very high, it is evident that not a particle of it remains unemployed.—*Taylor's Tour through the Manufacturing Districts of Lancashire.*

THE CHANNEL ISLANDS.—The islanders are either farmers, sailors, or soldiers. Enjoying a delightful climate, a rich soil, an inexhaustible supply of manure from their rock-bound shore; blessed with mild laws, liberty of the subject, a free press, and extended commerce—privileged which Englishmen deeply cherish—the people have attained a degree of wealth and contentment almost unequalled. These advantages have not been unworthily gained. Descendants of that ancient Norman race who visited England with William the Conqueror, they have ever since continued connected with the Crown of England. King John granted them a jury and their charter some years previous to signing Magna Charta. On eleven occasions they have successfully resisted invasions from France, and on every such occasion, the sovereigns of England have granted them some new privilege. Among other institutions connected with these islands, an agricultural society has been of great benefit. It has been formed on the same basis as this society, viz., on a total exclusion of all politics from its meetings and proceedings; and a like result has attended its progress—entire harmony among its members, and a friendly rivalry for good. The improvement of wheat for seed, and the general cultivation of crops, have been among the objects of its attention; but the chief one has been to improve the admirable breed of cattle—admirable for the production of large quantities of rich and yellow butter. The chief defect was in the falling off of the hind-quarters; it has taken nine years of close attention to remedy this defect, and as I have personally kept a record of its progress of improvement, I would urge upon young farmers who seek to improve their stock, not to expect success in less than such a period; at the same time, roundness of barrel, a better handling, and a tendency to fatten when dried off from milk, were points which had been gained without injury to the milking qualities. The cream of the cows of the Channel Islands was so rich and yellow, that in dairy farms where creamer's milk is sold, one such good cow to every three or four ordinary English cows, would be found useful to impart richness to the cream or butter.—*Colonel Le Couteur at the meeting of the Royal Agricultural Society of England.*

"IT IS ALWAYS CIRCULATING MONEY."—It is very common to hear acts of unusual extravagance pilloried with the phrase, "It's always circulating money," there being a prevalent notion that money does good by being spent, more particularly if any of it goes into the hands of persons engaged in humble occupations. A young man newly come into the enjoyment of his fortune, who impoverishes himself by reckless expenditure on dogs, horses, and other over-costly means of amusement, is never for this reason a very unpopular character: "he is at least circulating money." A few thoughtless men about town meet at their club, and in a fit of ultra high spirits, resolve to have as good—that is, as expensive—a dinner as the steward can produce; it costs five pounds a head, which is as much as would have given a good meal to a hundred persons, and is, in fact, exactly the cost of the daily dinner of about one thousand poor people in a workhouse. This coarse and unenjoyed—quenched excess, is not of the class of things which the bulk of mankind condemn: "it is always circulating money." At an election, say each candidate spends two thousand pounds in beer to regale the populace; that is, to purchase their favour by gratifying one of their lowest appetites. All sober people see that the beer does harm, in as far as it produces idleness, and interrupts good habits; but the expenditure is never quite regretted: "it is always circulating money." On the other hand, men who husband their means carefully are generally not much liked by the multitude. "They blind up money, and thereby prevent it doing any good." Nobody is ever the better of it, not even themselves." It is really surprising what an amount of error there is here, and that the world should continue in ignorance on a matter of so much importance. There is, in reality, not the least public good in an expenditure of money upon objects foolish and worthless; on the contrary, it is a public evil. In the first place, to suppose that money which is taken due care of is not doing good is a complete fallacy. The accumulated funds of the merest miser—unless in the rare morbid instances where they are kept in a strong box—are as actively serviceable as the coin in a shopman's till, seeing that they are usually employed in bank business, joint-stock companies, the improvement of land, or some other such ways. And all the great operations of concentrated labour which make a country great, are the results of saved capital thus expended. How directly the poor are often intercepted in the accumulation of such capital, may be very well seen when it is employed in cutting a canal, or building a bridge, or forming a railway, in which operations hosts of workmen are necessarily employed. The savers of money are in fact amongst the greatest benefactors of a country, being those by whom its material, and even in many instances, its moral interests, are chiefly advanced. It is only an ignorant ingratitude which holds them up to ridicule or condemnation.—*Chambers's Journal.*

CUSTOM HOUSE FRAUDS.—Clock faces, the duty upon which is 20 per cent. ad valorem, were passed under entry at half the real numbers in the packages or cases, as 500, for instance, instead of 1,000. Foots, a landing-waiter, now dismissed, is accused of having, while on duty at St. Katharine's Docks, "parloured thousands of cigars, distributing them amongst his friends, and amongst the custom-house officers, with great liberality." Another delinquent got into the clutches of one of the fraudulent traders thus:—A bacon-dealer lent Grayson £70, and,

having him thus in his power, forthwith made arrangements with him for fraudulent importations through his connivance. A person was despatched to Hamburg, who sent over a large quantity of the drug, oculus indicus, in 49 packages, purporting to be, all of them flax. In reality seven only were flax; and all were successfully passed as flax, at the duty of 1d. per cwt. on flax, instead of 2s. 6d. per pound on the oculus indicus. The loss to the revenue by this little operation was £329. In 1841, barrels of snuff were passed by Grayson and Foote, in league, as barrels of pork. The loss to the revenue may be inferred from the fact that these two worthies received £120 between them from the importers—men, doubtless, claiming for themselves the character of "highly respectable" tradesmen. But Foote and Bulley (another landing-waiter) are said to have netted by a few similar operations, in part of 1842, in warehouses and on quays on the north side of the river, between £500 and £1,000. In most of these cases, it was pretty certain that, if the packages had been tested by the "spit," the fraud would have been detected. But the Austrian sentinel, in *Tekeli*, does not more carefully abstain from thrusting his bayonet into the miller's sack which contains the melo-dramatic hero, than the "weighers" seem to have eschewed the notion of passing the spit into bales and packages belonging to their friends. Harris, another officer, admits to have accomplished in six or eight months of 1840, frauds on the revenue to the amount of £500, by passing wines and spirits either short or under improper descriptions of quality—tobacco as marble, and silk as specimens of natural history! He received for his own services £80, and was enabled to carry on this system of deception through the remissness of the landing-surveyors; for in three months he was not visited by one of these functionaries more than twice! In 1841 and 1842, this same adroit gentleman "passed improperly to a large amount, and for ample remuneration, stained paper, damask curtains, silks, and wines, either by aid of the rough-book system, or by omission of entry of small boxes, either large ones or by short entries, or by omitting any examination whatever," of the packages passed.—*Sun.*

IRON MANUFACTURE.—The attention of the iron-masters has been attracted to a process of considerable importance lately introduced into their manufacture. The application of electricity, to supersede several of the expensive processes, has, it is stated, been tried in the Welsh and Derbyshire furnaces with satisfactory results. It appears that the costly fuel and labour required for the purification of the ore from sulphur, phosphorus, and such subtle elements, create its high market value; and these being all electro-negative, have induced the new process, whereby the impure stream of metal, after flowing from the blast, is in its moment of consolidation subjected to a powerful voltaic battery, which so disengages the impure components, that in the process of puddling they are readily extracted. The London blacksmiths, it is stated, have tested this iron after single reheating, and pronounce it equal to the best metal in the market. By the same process an experiment was tried by Dr. Ure, by whom a soft rod of iron was held in contact with a moderate red heat, and that gentleman is understood to have stated that in a few hours the metal was converted into steel. Should these facts prove what they seem, they are calculated to affect most seriously this important branch of our trade.—*Times.*

LANDLORDS AND TENANTS.—The "soft sawder" which landlords are everywhere just now heaping upon their tenants, at agricultural meetings, is enormously amusing. They are the best, the finest fellows in the world, loved, honoured, and respected by their landlords; and loving, honouring, and respecting them in return. And what is the meaning of all this? It just means, neither more nor less, than that the landlords want to beguile their tenants into investing capital in the improvement of their estates, without giving them the security of leases, that they may enjoy the advantages accruing from so doing. Now, one fact is worth ten thousand words, and we will state a fact which will in itself amply testify to the beautiful independence enjoyed by a tenant who only holds his land at the will of the owner of it. A farmer, in the East Riding of Yorkshire, we are assured, not long since, having occasion to insert an advertisement in a newspaper, sent it to a Liberal journal. His independence, or thoughtlessness, for we do not know the politics of the party, was so respected by his loving, affectionate, and all-the-rest-of-it landlord, that, in a very short time, some good-natured friend having informed against him for the heinous misdemeanour, he received a letter from the great man, expressing his serious displeasure at the offence, and forbidding its repetition under any circumstances; and yet the man who is said, for we can hardly believe it, thus insolently to have trampled upon the rights and feelings of his fellow-man, bears the reputation of being one of the best of his "order" being a respectable, *par excellence*, member of the House of Lords, with a son in the Commons, who, as Lord Byron said of the Record, is

"Too good for earth and only fit for heaven."

The story may be true or it may not. We would rather believe the negative. But, if it be correctly told, how is the independence of leaseless tenants likely to be respected by the main body of the landlords when such very excellent people have so small a regard for it? If "such things be done in the green tree, what may not happen in the dry?" But we say again, that we pass on the tale doubtfully, and in the hope that the circulation of it may elicit a prompt and decided contradiction from the party at whom it is levelled.—*Liverpool Albion.*

THE RECIPROCITY ACT AND THE SHIPPING INTEREST.—The following letter from Mr. Brown, the extensive merchant and shipowner (late candidate for South Lancashire) appeared in a recent number of the *Economist*:—"DEAR SIR,—The British shipowners feared that the Reciprocity Act, which passed in 1823, would ruin them; but let us see how the matter stands. In 1820 we had 746,822 tons of shipping cleared out for our colonies, of which we have the monopoly, and for countries totally independent of us, 802,686 tons—viz., 48 per cent. colonial, and 52 per cent. foreign. Now, in 1842, we have increased our tonnage to our colonies to 1,250,937, and to independent states to 2,124,383, which makes those relative trades stand thus:—Colonial, 37 per cent.; foreign, 63 per cent. In the twenty-two years' trial which we have had of the relaxation of our navigation laws, our foreign trade has increased 164 per cent.; but where we have a monopoly, we have gained but 67 per cent. The United States foreign tonnage in 1818, after the war had de-

stroyed a good deal of it, was 854,294 tons; in 1838, up to 1839 (the last returns in my possession), it had further decreased to 822,501. Of course, clearances would decrease in about the same ratio. These statements speak for themselves. Can we suppose that British shipowners do not know their own interest better than to continue building ships if they have, through a period of twenty-two years, been losing money by them? If we had the American returns down to this day, I think that, in the last five years of distress, we should find a further decrease in their shipping. It is impossible to draw any other inference from these figures, but that the relaxation of our navigation laws was unquestionably to our advantage; indeed, I can multiply cases without end, where a relaxation of our commercial code is a decided advantage to every interest in the country. I remain, yours respectfully, WILLIAM BROWN.—Richmond-hill, Liverpool, July 20, 1844."

THE DERRY ARBORETUM.—We visited the arboretum, an enclosure containing many acres, laid out as a landscape garden or shrubbery, and dedicated to the public by an eminent and successful silk manufacturer. The grounds have been thrown into artificial banks and lawns, and planted with many varieties of trees and flowers, and are a beautiful and favourite promenade; and the munificent donor, still in a green old age, is rewarded by the gratitude of his townsmen. A few days before our arrival the citizens celebrated his birthday. How much happier must he be in thus diffusing happiness, and promoting innocent recreation, than in accumulating wealth for heirs to circulate in a round of folly and frivolity.—*Two Months Abroad, by an American.*

FOREIGN CATTLE.—Yesterday our report of the Smithfield market announced the arrival of only 122 head of cattle, with a proportionate supply of sheep and pigs, from the countries which it was once prophesied would gorge all England with an unlimited quantity of cheap food. It now appears that the importation of foreign meat is, to our population, in a ratio of infinitesimal quantity, whilst the quality of such as is imported prevents it from competing with native produce. So much for panics and predictions.—*Times of Wednesday.*

WAR.—What—speaking in quite unofficial language—is the net purport of war? To my own knowledge, for example, there dwell and toil, in the British village of Dumdrudge, usually some five hundred souls. From these, by certain "natural enemies" of the French, there are successively selected during the French war, say thirty able-bodied men. Dumdrudge, at her own expense, has suckled and nursed them; she has, not without difficulty and sorrow, fed them up to manhood, and even trained them to crafts, so that one can weave, another build, another hammer, and the weakest can stand under thirty stone avoirdupois. Nevertheless, amid much weeping and swearing, they are selected; all dressed in red, and shipped away at the public charge, some 2000 miles, or say, only to the south of Spain, and fed there till wanted. And now, to that same spot in the south of Spain, are thirty similar French artisans, from a French Dumdrudge, in like manner wending; till at length, after infinite effort, the parties come into actual juxtaposition, and thirty stand fronting thirty, each with a gun in his hand. Straightway the word "Fire!" is given, and they blow the souls out of one another; and, instead of sixty brisk useful craftsmen, the world has sixty dead carcasses, which it has to bury, and anon shed tears for. Had these men any quarrel? Busy as the devil is, not the smallest. They lived far enough apart, were the strictest strangers, nay, in so wide a universe, there was even unconsciously, by commerce, some mutual helpfulness between them. How then? Simpleton! their governors had fallen out; and, instead of shooting one another, had the cunning to make these poor blockheads shoot.—*Carlyle's "Sartor Resartus."*

THE WAGES OF LABOUR.—We know that in this neighbourhood (Belfast) labourers are at this day paid, in several places, no higher sum than seven shillings weekly. This amount is paid, it will be recollected, not in an agricultural district, but in the neighbourhood of a large manufacturing town; and where, we suppose, there is a greater demand for labour than in any other part of Ireland. We are aware that higher wages are frequently given at this season; but we mention merely the sum which has been paid in certain cases that have come to our knowledge; and it is a matter of comparatively little importance for our purpose, whether six or eight shillings weekly are paid, because either the one or the other sum is too small. A class of persons who earn only this amount of wages are almost unapproachable to good influences. Men who are paid by a wretched pittance of this description become either broken-hearted, or have been almost all their days without a heart to break. It is utterly impossible to offer them knowledge, for they have neither time nor taste to learn. The offer of jewellery to a man starving in the wilderness would not be more tantalizing nor less satisfactory. Their physical condition prevents all hope of their intellectual improvement; and the same barrier prevents any system of education from producing an educated people.—*Banner of Ulster.*

LOW WAGES AND CRIME.—Whilst the case of Susan and Mary Smith, the wife and daughter of an agricultural labourer charged with obtaining goods under false pretences, was before Chief Baron Pollock on Tuesday, his lordship very wisely and humanely inquired the means of their natural protector, with the view of ascertaining whether the crime had arisen from poverty, and whether the father had the power, even if he possessed the inclination, of keeping his child out of the reach of temptation, and throwing around her the safeguards of virtue. The reply to the learned Judge's interrogatories is important. Smith is a farm labourer in the employment of Mr. Crofton, of Holywell, the celebrated breeder of short horns, and chairman of the great agricultural county meeting to petition Parliament to sustain the protection afforded to agriculture, especially for the benefit of the agricultural labourer. Smith is a second-rate man, and he has 8s. per week! This is his share of protection. His wages, we think, could scarcely be less if the worst fears of Mr. Crofton and his political friends were realized. With this scanty pittance, eked out occasionally by two or three shillings earned by his wife, he has to maintain a family of four. His lordship asked no more. Surely the temptations to vice were strong and many; and certainly a system which does no better than this for the labourer cannot be sustained, neither ought the nation to be befuddled longer by the false pretence that it is designed for his benefit.—*Sunderland Herald.*

LOW FARES ON RAILWAYS.—If any proof were requisite of the advantage of low fares to railway traffic, it has been satisfactorily furnished by the case of the Croydon Railway. Since the reduction in the fares on that line the traffic has increased in a remarkable manner, the amount received for passengers having been greater in the last week than in any week since that ending the 14th of September, 1841, and the number of passengers carried exceeding that of any one week since the Whitsun week in June, 1840, with one exception only, which occurred in the corresponding week of June, 1841. The Croydon fair weeks in every year are, of course, likewise excepted.—*Railway Record.*

COMPARATIVE TRAVELLING ON DIFFERENT RAILWAYS.—In Mr. Laing's paper, appended to the Evidence taken by the Select Committee on Railways, it is stated, "among other remarkable instances of the effects of high fares and limited accommodation in restricting the amount of travelling," that the London and Birmingham Company carry 130 per cent. fewer passengers per train, and 100 per cent. fewer passengers per mile, than the Glasgow and Ayr, and 85 per cent. fewer passengers per train, and 135 fewer per mile, than the Ulster; while the Liverpool and Manchester Railway carries 60 per cent. fewer passengers per train, and 50 per cent. fewer per mile, than the Glasgow and Greenock (although the latter is exposed to a sharp steam-bomb competition), and 50,000 passengers fewer per annum than are conveyed on the Newcastle and North Shields line.

HINTS FOR NEWSPAPER CORRESPONDENTS.—Correspondents would save a vast deal of trouble, and themselves much disappointment, occasionally, if they would only attend to the following rules:—I. As your copy must often be cut into many pieces, a sheet written on both sides is a plague and a sorrow, often delaying the article or the paper: write, therefore, only on one side of the paper. II. *Always keep a copy* of your article, unless it be very long. It will be apt to get lost or mislaid among the haystack of an editor's manuscripts if not used immediately, and it is better and safer for you to keep a copy than to rely on the editor to return the original. III. Never send an article to an editor *unfinished*. When he hears or reads that you have scrawled it off hastily, left it full of imperfections, &c., he mentally resolves to put it quietly in the fire the moment you are out of the way. IV. Never carry in an article, other than an advertisement, and demand that the editor read it *at once*, and say whether he will publish it or not. He cannot always spare the time at that moment, and he does not, at any rate, want to tell you that you are incapable of handling your subject, should such be the fact. But send in your manuscript, and give him a reasonable time to consider it. V. Never fall into the serious mistake of imagining that, because a man writes a sorry hand himself, he is partial to that sort of chirography. Remember that he is always writing, and generally at hand to correct any errors in his proofs, while you will not be. Write plainly, if possible; write decipherably, any how, or don't write at all.

CORRESPONDENCE.

To the EDITOR of the LEAGUE.

DEAR SIR,—Please print this poem, if you think good would come of it. Notice it in no other way. If you don't print it, I shall conclude that you ought not, believing you to understand your own business best.

The measure, I need not tell you, must be scanned as Greek and Latin dactyles are. It does not suit our language well, but its strangeness may, perhaps, cause it to be noticed by two or three great babies, playing on the precipice of national ruin, and they, possibly, may warn two or three more.

If some of your subscribers might think it requires an apology, print this letter with it, and oblige,

Houghton Common,
near Barnesley, Aug. 10, 1844.

ENGLAND IN 1844.

BY EBENEZER ELLIOTT.

1.
 Rascaldom ! Parsondom !
 Lazy big Beggardom,
 Playing the fool !
 Helping with less and less
 Fast-growing wretchedness !
 Catch'd Cayley creakingly,
 Young England sneakingly
 'Shearing calves' wool !

Capital profitless,—
Doing what? Can't you guess?
Eating his teeth!
Married life, dog and cat;
Palac'd thieves, scar'd and fat;
Sorrow and verity
Sobbing, "Prosperity
Dead, lies beneath."

III.
* * * *

IV.
Young Wodehouse crustily,
Old Wodehouse fustily,
Crying dear wares;
Want, with his tongue of fire,
Seen o'er the famine-spire!
Richmond to hawk his fish,
Knatchbull to beg a dish,
Damn'd—And who cares?

Y.
Bread-taxers stealing rates ;
John, thinking Church and State's
Hell is broke loose !
Brassface and Timberface
Half-fac'd by Doubleface !
Foul things, with mouths and " legs,"
Scolding o'er broken eggs !
Killing the goose !

VI.
Rushbrooke and Sotheron,
Kept loobies, duller none,
Not telling lies !
Benett's slaves full of cheer,
"Except when bread is dear !"
Benett, to keep it dear,
Talking of cheaper beer—
Juice, and no pies !

VII.
Famine their battle-blade,
Man against man array'd,
 Struggling for doom !
Starv'd Erin's Catholic
Mining in Bishoprick !
Brimless hat lacking crown,
Slaving the Saxon down,
 Till the end come !

VIII.
 Cobden, "our Man of men,"
 Doing the work of ten,
 Each worth a score;
 Bright, in the lion's den,
 Champion of honest men,
 Lion and dove of peace,
 Hampden of love and peace,
 Worth fifty more.

IX.
Gunpowder quenching flame ;
Jesus a hated name,
Worship a breath ;
Stanley sublime as Thom ;
Government Peeping Tom ;
Hunger, the only power !
Scowling round town and tower,
Darker than Death

X.

Peel, hardest task'd of all !
Gagg'd, kick'd, and mask'd for all,
Cooking his hash !
Slander'd man, wily man,
Bare back, and empty pan,
Gloomily waiting all
For the great general—
General Crash !

XI.
 Trade on her dying bed :
 Lifting her languid head,
 Smiles, with sad brow :
 Land-leeches, damning us,
 Cry, " She was bamming us !"
 Farmers, in luck again,
 Trying to suck again,
 Milk a dead cow !

COLERIDGE ON THE CORN QUESTION.—When I wrote a letter upon the scarcity, it was generally said that it was the production of an immense corn-factor, and a letter was addressed to me under that persuasion, beginning "Crafty monopolist."

REVIEW.

A Winter in Italy, in a Series of Letters to a Friend.
By Mrs. Ashton Yates. London: Colburn.

Although the classic shores of Italy have been described by so many travellers, that the whole of the country is better known to most readers than their own country, Mrs. Yates is a writer who is sure to tempt many into a new imaginative excursion to scenes of living beauty, tenanted by memories of the mighty dead. To the charms of a cultivated mind, a refined taste, and a playful imagination, she adds the more sterling qualities of warm sympathies, generous feelings, and independent judgment. She is obviously one of those who has adopted Lessing's advice, "think for yourself;" and hence she invests even the most hackneyed subjects with the interest of novelty, compensating for want of freshness in the subject by originality of treatment. There is great vigour of descriptive power in her account of the Coliseum; but we extract rather from the reflective portion, because the passage is clearly a transcript from the images actually mirrored in the mind.

“ The Coliseum is likely, as far as we can foresee, to remain in *statu quo* for many a long year. Thither a friar repairs, on a particular day in each week, to preach, exhort, and pray; he passes from one to another of the fourteen altars, followed by the crowd who assemble on such occasions. This is a striking sight. On the exact spot, which gladiators and wild beasts once rendered a hideous scene of lawless passions and of blood, and where tradition relates that early Christians were cast amongst them to expiate the crime of believing in His doctrines who taught ‘a more excellent way,’ now may be seen thronging crowds listening with rapt attention to the eloquent persuasions of the earnest old man, who inculcates peace and goodwill to all of humankind, as the injunction of that Saviour, who, by his death, set the seal to his precepts, and ‘opened for us the joyful gates of resurrection.’ ”

"At one of these meetings, surrounding a particular altar, every person we saw was kneeling. No accessories assuredly could so powerfully aid devotional feelings—not 'the long-drawn aisle'—'the fretted vault'—and 'dim religious light'—as the associations connected with the bare, dilapidated gigantic walls of the Coliseum, open to all the winds, and covered only by the canopy of heaven."

Some of the remarks on the differences between the Catholic and Protestant hierarchies are equally new and just.

“What a diversity of tastes are accommodated within the bosom of the church, for which in ours there is no provision! And, therefore, probably arise our different sects; and this it is that gives to us, who belong to the Reformed religion, the character of being divided, whilst the Roman Catholics lay claim to unity from having arrangements made within their own body, to suit many men of many minds. Some amongst us who abjure pomp, turn Quakers; others, who love it, even in holy orders, are candidates for rank and seats amongst our peers; again, those who are stubborn, and will not recognise episcopal authority, are Presbyterians, Independents, &c. &c.; whereas, amongst the Roman Catholics, diversity of opinion as to church government, and many other matters, I believe, is really as great (always allowing for agreement as to there being one infallible temporal head of the church); and yet Dominicans, Franciscans, and other denominations, though differing as widely perhaps from their parent-stock as do many of our sectaries from the established religion, are not considered Separatists, because more of human skill is to be found in the construction of the Roman Catholic than in that of the Reformed Church.

"In subordinate points, too, we are surprised in policy, that is to say, if we shrink from the taunts cast upon us for our apparent divisions. Our churches are kept inviolably for the use of our established clergy; none who has not subscribed to the Thirty-nine Articles can enter the pulpit of any parish church; whereas, in Rome, the churches are thrown open to all zealous preachers, and it is not uncommon to see a poorly clad friar holding forth under the splendid dome of the Jesuits, as well as in many others of the most magnificent churches. What would the Bishop of London's chaplain or secretary say to an itinerant Methodist proposing to preach from his lordship's pulpit? He would assuredly direct him to go by the shortest road to a lunatic asylum."

But, whatever wisdom the Papacy may have shown in its ecclesiastical policy, it is one of the worst civil governments in existence. Monopolies and discriminating duties continue to impoverish the Papal and Neopolitan states, rendering the fertility with which Heaven has blessed their soil worse than useless, productive chiefly of that rankness from which their bright sun extracts the malaria—the poisonous wind of death. In every part of Italy Mrs. Yates found physical loveliness and artistic beauty; but in Tuscany alone, the seat of Free Trade, did she witness an approach to human happiness:—

“The Grand Duke of Tuscany is an object of universal attachment to his subjects, who appear to be a fortunate class of people, treated well, and watched over by a mild, tolerant, and vigilant Government. It puzzles me to say why the papal dominions do not exhibit equal signs of prosperity. The Popes, who are elective sovereigns, have pretty generally enriched their respective families; and the wealth flowing into such constantly new channels might be supposed to become so many conduits for its diffusion over the country at large; which, however, is not fertilized by it, like Tuscany; in the Roman states it remains apparently stagnant, attached to some few great names. I suppose much of the evil lies in the immensely too great proportion of the clerical body, of monks especially, to the rest of the

population, for they are so many consumers of the fruits of the earth, without being producers. The great law of Providence, that man must live by the sweat of his brow, cannot be defeated with impunity; and it must also be taken into consideration that the malaria that prevails in so great a part of the Roman territory, acts with baleful influence on the pursuits of agriculture, as well as on those of general industry."

Monopoly is more blighting than the malaria, freedom of trade more vivifying than the better soil and climate. The Government of Tuscany has left trade to its natural course of unrestricted exchange. It has derived its commercial system from one of the most enlightened statesmen of modern times, the Count Fossombroni. We are indebted to Mr. Macgregor's "Commercial Statistics" for this statesman's eloquent vindication of Free-Trade policy. He asks—

"Whether the whole fortune of a healthy and flourishing state is to be diminished or regulated, in order to meet the infirm and diseased members who represent the interests which demand protection: whether the wise portion of the community are to be sacrificed in order to keep a certain minority in a state of backwardness and ignorance, and whether the standard of grace and beauty is to be lowered to please the ugly and the crippled; or whether it would not be more fitting a wise legislator to seek the general health, and the general instruction, and the general prosperity, by removing every encouragement which prohibitory and restricted laws offer to imperfection and inferiority? Were I a monarch I would choose a province where I could make an experiment on a large and liberal scale. Its inhabitants should trade with whom they pleased, buy and sell of and to whomsoever best suited their interests or their caprices, without a tax or impediment on export or import. Sure I am that in five years such a province would be the most prosperous of my states; its internal traffic and its external commerce would increase together; it would have more articles that others would be willing to purchase, and, as a necessary consequence, would be a buyer of a greater number of commodities than any of its neighbours. Its increased wealth would soon repay the temporary loss of revenue, supposing it had, during the period of probation, been freed from taxation; though this is not a necessary supposition, as the imposts might be levied by a direct tax on property. Calculate the effect of making all labour productive, of restoring to profitable occupations the numerous hands that our fiscal system condemns to inactivity and idleness, or, what is worse, to impeding the very creation and increase of wealth. If thus all the action of labour, capital, and knowledge were freed from the fetters of interference, it would be impossible to calculate the beneficial and immense results. There is no foundation for the two arguments which are usually put forward to justify the protecting system: first, that it encourages national manufactures, and, as a secondary consequence, provides labour for a greater number of hands; by the example of a capital adopting the prohibitory system, while Free Trade existed in the surrounding country, that the wealth of the capital would be speedily absorbed; and a nation must equally waste its wealth by persevering in a restrictive policy, and more rapidly so if other nations liberalized their own. The elevation of prices, without an increased demand for labour, must inevitably destroy capital; and the facts which Tuscany presents are the best justification of this reasoning. Twenty years of Free Trade have led to a vast extension of cultivation, and a great increase of buildings and inhabitants, both in town and country; to the establishment of new manufactories; to an enormous development of the growth of silk (a branch whose total destruction was foretold by the enemies of Free Trade); a very considerable augmentation in the consumption of both the necessaries and the luxuries of life, with all the enjoyments attached to them, a general rise of wages, and a universal sentiment of growing prosperity."

This independence of agriculture has been equally advantageous to the proprietor and the farmer. It has led to a great improvement in the moral relations between landlord and tenant. Mrs. Yates informs us:—

"We remarked some excellent, handsome, and quite modern houses, in the midst of these Italian highlands, many miles distant from Florence, from which it would appear that at least temporary residence on their estates is becoming more frequent than it was formerly amongst the great landed proprietors of Tuscany. We were told by an English gentleman, of large landed property, who has been settled in the neighbourhood of Florence for twenty years, that the most happy intercourse invariably subsists between the landlord and tenant, when a Fattore is not employed to oppress and pillage the one, and cheat and deceive the other. The arrangement between them is that they divide the fruits of the soil. He said that many of his acquaintances who used to employ Fattori or agents, now manage and superintend their own estates, and have thereby benefited themselves and their tenants so obviously, that the laudable practice is becoming more general than formerly."

An incident which occurred during Mrs. Yates's visit to the Foscari Palace at Venice has too great a hold on our feelings to be passed over. We shall conclude by extracting it, for it would be painful to record the emotions it suggests: and we are sure that our readers will sympathise too deeply with the narrative to desire any comment.

"We looked, *en passant*, into several rooms that are let to the poorest kind of tradespeople and artists, and were fast retreating, when our cicerone said there was a remarkable room that we had not seen. He opened a door, and we entered. All round it, in deep recesses, are half-length terra-cotta figures, representing certain members of the Foscari family. These could not, I suppose, be torn away without demolition, or they would not be left as they are, like mourners in their desolate house. Our guide also threw open another door of a large apartment, the further end of which I saw some decorations on the wall that caught my attention. Near to it was a small uncarpeted bed, which I concluded belonged to one of the many persons who, apparently for want of a better,

sought refuge in the decayed mansion. The cicerone now said, 'La Contessa Foscari.'

"I asked, 'Where?' and pointing to a picture on a chair, which I supposed him to refer to, I said, 'That is a Madonna.'

"The valet-de-place, who had accompanied us, in rather an audible manner, whispered 'That lady before you is la comtesse.'

"A feeble old woman, whom I had not till then observed, bowed significantly, as importing that she was the person alluded to. I made my very deepest courtesy, feeling awed by her poverty in a way that pomp or pageantry could not have effected. She offered me one of the few chairs, desiring me to sit near her. There was no sofa, nor any article besides the bed having comfort for its object. On hearing her speak, even a few words, no one could doubt that she is of gentle blood. Scanty, and almost tattered as was her dress, she had an air of dignity and grace that is not always found to accompany satins and velvets. A small table stood near with some books.

"I was endeavouring to collect my ideas, so as to say a few words, when another ancient lady of similar appearance entered; the countess said, 'That is my sister, the Countess Inasio; she is a widow, but I was never married.'

"This led to my saying the most *mal-a-propos* thing I could have stammered out (an unfortunate propensity that influences me on all critical occasions). I expressed a hope, notwithstanding her celibacy (single blessedness I could not call it), that there was some male heir of her illustrious house. She mournfully shook her head, implying thereby as much as Lord Burleigh in the play ever did by any such movement on his part; she said,

"I have a cousin, but our fallen fortunes constrain him to earn his bread; he is an actor of the drama, and I understand a good performer: he is called by another name, one that belonged to some of our connexions; he does right not to debase that of Foscari."

Western Barbary, its Wild Tribes and Savage Animals. By J. H. Drummond Hay, Esq. London: Murray. Third notice.

Mr. Hay creditably exerted himself to obtain some information respecting the fate of the enterprising Davidson, and the account which he gives of the circumstances that led to the murder of that enterprising traveller are full of instruction:—

"Davidson brought with him a letter of recommendation from his Majesty William IV. to the Sultan of Morocco,* stating that the object of his travels was purely scientific. The delivery of this letter to the Sultan was in itself an unwise measure, for it stamped the bearer as an agent of the British Government; and consequently Davidson was looked upon with a jealous and suspicious eye by the Moorish court. The Sultan of Morocco little knows or cares about scientific pursuits. It would never enter into the mind of a Moor, not even the most enlightened, that any man would expose his life by travelling through the wild tracts of West Barbary, or attempt to penetrate into the land of deserts and death, solely for the love of travel and science. Gain, the Moor would argue, must be his object, and for this alone, would he conclude, the Englishman was travelling in countries where he exposed his life.

"To a like course of reasoning among the wealthy merchants of Fas and Tâfilet may the death of the unfortunate traveller be attributed. These traders, and others of the principal towns of Morocco, have long held in their hands the monopoly of the trade of Northern Africa, consisting in gold-dust, ivory, ostrich feathers, &c. With what eyes must they then have viewed the man whom they considered the emissary of a great commercial nation, with whom these goods have long been an object of traffic! The natural inference of these Moors would be, this man is going into the interior to enter into an arrangement with agents there for sending the productions of the country to some more direct port of export than those of Morocco; and if he succeed in this object, he will destroy our trade.

"Impressed with views such as these, and callous in the commission of crime, it is easy to suppose that these traders would have endeavoured to prevent, either by fair means or foul, the return of such a traveller to his own country, as his success might ensure their ruin."

The following is the most correct account of the details of the murder:—

"Mr. Davidson and party were first met by some of the tribes of Howbet and Ait Atta, who took from him some money, and allowed the party to proceed. The party reached Swekeya, where they rested, to wait for the caravan to come up. On the third day, a party of fifteen or more of the tribe of El Harib arrived at the resting-place, and, after the usual salutations, inquired of Mohamed El Abd to show him the watering-place, who, leaving his musket behind, and the rest of the Harib sitting down, accompanied him over the sand-hills; and, when out of sight, hearing a report of a musket, Mohamed El Abd asked what had been done, when the Harib replied his party had shot the Christian. He complained bitterly, and said he would rather they had murdered him. It is stated that, when Mohamed El Abd went away, one of the Harib pretended to examine his gun, and seized the opportunity to take aim, and shot Mr. Davidson, who was sitting on the ground a short distance from the party, who immediately began to plunder and seize everything belonging to Mr. Davidson, allowing Mohamed El Abd to keep possession of what property belonged to him, obliging him first to make oath on the Koran that the caravan was not met by the Harib, but had gone on Timbuctoo, with which Abu, the companion of Mr. Davidson, travelled.

"In another account it is stated that when the Harib shot Davidson, they proceeded to plunder his baggage, tearing and destroying all his books and papers.

"From these statements it evidently appears that the Harib had other views than mere plunder, for those who made the first attack were satisfied with robbing the tra-

* "Davidson was sent from Gibraltar to Tangier in his Majesty's brig-of-war Jaseur, and was landed under a salute of eleven guns, as bearer of a royal letter. This mark of honour was thought, by those who had conferred it on the worthy traveller, to be rendering him a service by raising his importance in the eyes of the Moors; but I remember feeling, as I heard the roar of the cannon echoed back by the hills—over which he was so soon to pass, never to return—that these were the death-guns of the gallant traveller."

vellers; but the Harib, unprovoked by any resistance, murdered the unfortunate Christian, and then destroyed all his books and papers, whilst they allowed 'Mohamed El Abd to keep possession of what property belonged to him,' and I have little doubt that those who hired these ruffians had given them especial instructions not only to make away with the traveller, but to destroy all his papers, which they would fear might contain information likely to be injurious to their trade, should they reach the Nasarenes. This opinion is confirmed by the fact that most of his other property has been recovered; and very lately I had the melancholy satisfaction of receiving, through the kindness of the brother of the lamented traveller, a small silver pedometer which I had lent him."

We have extracted from Mr. Hay's work the passages which appeared the most likely to illustrate the social condition of a country to which a considerable share of public attention has been recently directed, in consequence of the alleged design of the French Government to extend its dominion over that part of Northern Africa, and the asserted interest of England to prevent any such attempt at occupation. War has often been declared between nations from trifling causes, but a war between England and France for the possession of Morocco would be about the most absurd of which history contains any record. In the first place, if any enemy was anxious to weaken the French power, he could devise no means more efficacious for the purpose than inducing the French people to prosecute schemes of conquest in Northern Africa. Algeria is only maintained at the annual expenditure of 10,000 lives of French soldiers, and an immense expenditure of money, all of which does not appear in the estimates. The empire of Morocco occupies a surface rather larger than Spain, and contains about seven millions of inhabitants; the greater part of the young men are trained from infancy to the use of the musket; they are excellent marksmen, capable of enduring great fatigue, implacable in their revengeful passions, and patient as the North American Indian in watching a favourable moment for bringing down their destined victim. A Moorish army would not perhaps be very formidable to the disciplined troops of Europe, if we may judge from the following description of their tactics given by an able writer in the *United Service* journal:—

"Their general plan of attack is that of riding up till within a couple of hundred yards of the enemy, when they level muskets, fire, wheel round their horses, and gallop away at full speed; after which, when beyond shot-range, they reload and return to the charge with loud yells. If the enemy gives way or exhibits signs of fear, they venture to push forwards; but if attacked, man to man, with the sabre, we may safely consider their resistance as likely to be very short, since they are obliged to hold both bridle and gun in one hand, if they use the sword with the other. The latter they avoid to the last moment, preferring to rely on the swiftness of the attack and retreat, and on a dexterous use of the musket. We are here speaking of the Moors; but the Berber tactics are, after the first fire, to rush in pell-mell among the enemy, with bayonets fixed to their long guns, which they manage with impetuosity and bravery, placing their dependence rather on steel than powder."

There can be little doubt that the attacks of the Moorish cavalry on the serried lines of European infantry would have the same result as the furious charges of the Beys on Napoleon's squares at the battle of the Pyramids: they would be swept down by the volleys of musketry, and the very fanaticism of their bravery would only add to the certainty of their destruction. But victory in the battle-field is a very different thing from the conquest of the country; the able writer, from whom we have quoted, justly says:—

"Should a powerful enemy succeed in occupying the plains of the country, with their towns and cities, it is still very far from completing the conquest of Morocco; and even to maintain such occupation it would require that the conquerors should be absolute in the maritime supremacy of the Mediterranean; a point which France can have no hope of ever attaining. Under this military cantonment, the fastnesses and elevated table-lands of the extensive Atlas range must remain independent *et inde die*, for they team with an unsubdued race, in command of difficult passes untraversed as yet but by themselves, and where even the footsteps of the stranger would be instantly traced by their keenness and sagacity. Full of fire, strength, and courage, they are suspicious, cruel, and implacable; and not at all remarkable for sparing those who fall into their clutches. They already view in Ab-del-Kader—who is descended from one of the most ancient of the Arabian families—the gallant defender of their faith, and the heroic chief of the holy war, in which light the present contest with the French is universally regarded. A cry against them has broken forth throughout North Africa, and given birth to a feeling which will interfere with colonization. Fanatically attached to the rights of their soil, their religion, and their race, the Amazirghis—whose very name signifies noble and free—live in a state of almost independence, under the administration of their Omzargh, Amzgar, and Amucran, elders and lords who are hereditary, and ever ready to lead. Their sheikhs are also active and intelligent in warlike affairs, as, indeed, they are expected to be: 'The want of courage in a chief, saith one of the proverb, is the standard of revolt.' They are at once very inclined and well calculated for hostilities, as the rulers of Morocco have frequently found; for the mutual jealousies of the mountain chiefs seem to be the only causes which preserve to those rulers the shadow of authority over the tribes."

When the Spanish armies were scattered like chaff

to the winds of heaven, Napoleon was just as far from the subjugation of the Spanish peninsula as when he first formed his treacherous plans in Bayonne. The guerillas in the various mountain ranges that divide the provinces of Spain were far more formidable than the followers of Cuesta, Ballesteros, or even Romans: every rock was a fortress, every valley a magazine, and every defile an ambuscade. The peasant ploughing in the field had his musket hidden in the furrow; if a straggling Frenchman passed by, he was shot down before he could suspect danger, and his body was buried before he was missed by his comrades. Sentries on advanced posts were picked off; convoys intercepted and detachments destroyed. Such a mode of warfare had all the waste of life belonging to the most sanguinary campaign, and not one particle of the compensating glory. But to this same destructive warfare the French have exposed themselves in Algiers, and there is scarcely a part of France where there are not widows and mothers bereaved who curse the ambition which led their rulers to occupy Algeria. It has been justly said:—

"Extended empire, like expanded gold,
Exchanges solid strength for feeble splendour;"

but the splendour in this instance has not been attained: all that France has yet gained by the expenditure of blood and treasure in Northern Africa, is the occupation of so much ground as is within range of her batteries and her sentries, and not one inch beyond. Were the English the real enemies of the French they would hound them on to the invasion of Morocco, where they would find scores of Abdel-Kaders in the heads of the wild tribes of the Atlas.

But if France should persevere in this insanity we are told that England ought to interfere. We should be glad to learn the why or wherefore. It is said that Gibraltar principally derives its supplies from Morocco,—be it so,—if Morocco were at this moment a province of France, its produce would be sent to the best market in spite of all the fiscal regulations of the conquerors. The smuggler would soon set at naught the statutes and edicts which a mixture of hatred and folly could alone dictate. It is notorious that in the very height of the war England drew large supplies of corn from France; and are we to be told that the French could maintain a more vigilant blockade of the coast of Barbary than they were able to establish on their own shores?

But it is said that the war-party in France is ambitious of turning the Mediterranean into a French lake? Supposing that the whole French nation adopted the same wild project, we might laugh at the delusion so long as we are convinced of its utter impracticability. There are other nations besides England and France which would claim a potential voice in the closing of that sea. An Irish youth was once anxious to wed a lady of fortune; he spoke to his uncle on the subject, who coolly said:—"This is all very well! but have you got consent?" "O yes, Sir, partly I have." "Partly, boy! what do you mean by partly?" "Why, Sir, I have got my own consent." Now, Young France may have its own consent to seizing on the commerce of the Mediterranean; but this only carries the hot-headed youth just so far, and no farther, as the Irishman had advanced in his courtship.

The true check to the progress of the real or supposed designs of France is equitable commerce between England and the southern nations of Europe. Each wants the other's produce; and mutual exchange on equal terms will bind them in bonds of amity far stronger and more enduring than all the parchments that have been tied with red tape during the last five centuries of diplomacy. It has unfortunately pleased a noisy party in France to enact the part of a froward child, and quarrel about every trifle which can afford the least ground for question; while England takes the more dignified character of a man of sense, who smiles at the whimsical pranks of the discontented urchin. None of the bystanders misinterpret this forbearance; and as yet the vaunting declamations of Young France have no other merit than that of being supremely ridiculous: they have, indeed, become tiresome to the great body of the French themselves. This dignified attitude it is the true policy of England to preserve; the French may amuse themselves by sacrificing hecatombs of their soldiers, or by warring against women and children in Tahiti; but neither Morocco nor the whole of Polynesia would be an equivalent to either nation for the consequences of a war between the two countries which are intrusted with the destinies of civilization and humanity.

FREE TRADE WITH ALL THE WORLD.—The following appears in the "Annual Register" for 1783:—"June 4. Count d'Adhemar, the French Ambassador, notified a proposal to the British Ministry on the part of his court, in conjunction with other European powers, mutually to abolish exclusive trade, and to leave it reciprocally open to every nation. In consequence of this extraordinary proposal, a courier was despatched to Petersburg, and the Ministry there declined returning an answer, or in any manner discussing the subject, until the sentiments of the Czarina should be known."

AGRICULTURE.

THE CAPACITY OF BRITISH HUSBANDRY.

The question into which all our most intelligent farmers are inquiring is, "what our soil is capable of producing under favourable circumstances, and at what cost?" And in the investigations they are instituting for the solution of this question they, day by day, find the falsehoods and fallacies of the monopolists disperse like mists before the sun. And none do more to dissipate the delusion of "protection" than the supporters of the Corn Laws themselves, whenever they can be pointed down to specific statements, to which it must be confessed they have a remarkable aversion. Of this the most recent instance which has come under our observation is a tract published by "the Agricultural Protection Society," entitled "An Answer from R. Baker, of Writtle, to Earl Ducie," and a more inconclusive answer it has not often been our fortune to meet with. In fact, we don't know that we could place any tract—for on a fly-leaf it contains Earl Ducie's statement—in the hands of a farmer which would carry more decisive evidence of the inherent weakness of protectionist reasoning.

Mr. Baker begins his "answer" after the most approved protectionist plan, by assuming that to be true which it is their business to prove if they can, and by asserting that to be false which it is their part to contradict if they are able; and then to argue from such premises so established as if they were incontrovertible axioms. This may do very well at "protectionist" meetings, where no adverse voice is permitted to be heard; but if the monopolists fancy that by such means they can satisfy the public of anything but the thorough rottenness of the system they uphold, they will find themselves most egregiously mistaken.

Accordingly, Mr. Baker begins by saying, "As the misstatement made by him [Earl Ducie] in reference to the capability of the British farmers to compete with the foreign producer is apparent to those only who are competent, from their practical experience, to judge rightly on the question," he feels it a duty "to show how unfairly and incorrectly those calculations have been deduced." Here Mr. Baker presupposes "misstatements," and assumes the existence of "unfair and incorrect calculations." Let us see how he proceeds to make good his assumptions. And he begins by attempting to create a mystification after this fashion, saying "I hope to be enabled to point out an error which is palpable, not only in this, but in all those calculations which are founded exclusively on the growth of wheat; for as the main—if not the whole—farm operations tend to the production of the wheat crop, and thus enter indirectly into its production, it is almost impossible to deduce a fair calculation of the expenses incurred in producing any given quantity of wheat, without entering into a wide field of calculation, extending over the course of cropping during those years when such land is not producing wheat." Now, if this means anything, and we are not at all certain that it has any meaning, it is that a system of preparation so expensive may be adopted that the wheat crop will not repay its cost. And let it be recollected that the worst farming is, in proportion to the produce, the most expensive farming. Lord Ducie's statement went to show that where sufficient capital was employed, and the land had been thoroughly improved by draining, subsoiling, and so forth, and with fields laid out in convenient divisions and a good home-stead, wheat might be profitably grown every other year. And how does Mr. Baker meet that statement? Why, by the most jejune and empty *ipse dixit*ism we have met with. He says, in substance, I have taken farms and valued much land in Essex, and I can't grow wheat so cheaply as it is stated to be grown on Whitfield Farm;—that an average produce of forty bushels per acre—though Earl Ducie only assumed an average of thirty-three bushels—will not "obtain credence with one practical agriculturist in the kingdom," for we don't grow so much in Essex! And then he makes an imaginary statement of the cost of cultivating 120 acres of land in Essex, founded on his own practice, which shows a result far less beneficial to the occupier than Lord Ducie's statement. It matters not that it has been proved to demonstration at Whitfield that wheat may be grown in alternate years, for Mr. Baker says, We can't grow it oftener than once in four years in Essex. Then as to the quantity of seed, he meets his lordship's fact, that he produces a very large crop of wheat from five and three quarters pecks of seed to the acre, with the single argument, "The quantity sown in Essex is double that amount!" Then he goes with much pains into minute details to show that he, the redoubtable Mr. Baker, produces smaller crops than Earl Ducie at greater cost, and that on land naturally more fertile. We do not doubt the fact, and we believe that Mr. Baker and such as he will never make their land produce all it is capable of producing, and that at the lowest cost, until they are relieved from their delusive reliance on protection. This it was the great object

of Earl Ducie to demonstrate by showing what had been done at Whitfield by permanent improvement, ample capital, and careful cultivation. To all of which Mr. Baker, under the shadow of the "Central Protection Society," replies with a shake of the head, and an oracular "We don't do so much in Essex." We know they don't, and with Earl Ducie we say the Corn Law is their great obstacle.

But there is one remarkable omission in Mr. Baker's statement of his own farming: he has not told us what amount of capital to the acre he employs. Had he done so we could have given a pretty accurate estimate of the results of his farming, and could have easily explained why his crops are less and his expenses higher than on Whitfield Farm.

When once a farm is got into a high state of cultivation, it is managed at actually less expense than when it is let down and brought up again after the fashion Mr. Baker seems to think perfection. Mr. Baker states that the land he occupies is "of a deep loamy staple, well adapted to the growth of wheat, and easily cultivated;" yet on such land his average produce of wheat does not "exceed, upon a series of years, twenty-eight bushels" to the acre. To attain this he employs—we might have said mis-employed—"about six able-bodied men to each 100 acres, with one boy, and five cart-horses." That statement is quite enough to render Mr. Baker's authority, with good farmers, exceedingly small, for we could not easily select a more complete example of misapplication of means than that he adduces at the perfection of Essex farming. We have reason to know, however, that such a statement is a libel upon the best farmers in Essex, and that they cultivate their land with far more advantageous results. We shall not speculate on the causes of the protectionist champion's inferior husbandry, whether he has got more land than he has capital to cultivate properly, or whether he adheres to a system which looks for high prices to countervail a low produce, but we have the facts from his own pen which serve to write him down an inferior farmer. There is only one other point made by Mr. Baker worth notice, which is, that he asserts that Whitfield Farm consists "principally of old grass land just brought into cultivation, which is capable of producing wheat and grain crops for several years in succession, until the mass of accumulated vegetable matter has become exhausted." This is a misrepresentation; grain crops are not produced in succession, but the great principle of the Whitfield system is, that a green crop shall always alternate with the grain crop; and from the second report of the Whitfield Farm, made in 1842, it appears that the old arable land is equally productive with that which has been more recently converted from pasture. Thus Mr. Morton says, "on an old arable field in 1841 we had of Shiraz wheat forty-five bushels an acre." This completely snatches that straw from the grasp of the sinking protectionist.

A MONOPOLIST MISTAKE.

With that singular infelicity by which most of the monopolists' efforts in defence of their wrong are characterized, the *Herts County Press*, a monopolist paper, lately thought fit to attack Mr. Chas. H. Lattimore for his efforts to diffuse Free-Trade knowledge in his own locality; and, of all things in the world, charged him with "screwing" down the wages of his labourers. That such a ground of attack was selected proves the absolute ignorance of the Pro-Corn-Law writer, for the charge is the very reverse of true. Indeed, if the Pro-Corn-Law advocate had taken the trouble to inquire in Hertford market-place, he would have found that there are few better farmers in the county than Mr. Lattimore; and a little additional inquiry would have led the organ of the Herts monopolists to a knowledge of the fact, that a good farmer invariably treats his labourers well. The attack has, however, drawn from Mr. Lattimore the following letter, addressed to the *County Press*, which shows how farmers who are not afraid of free trade in corn and foreign competition manage their farms:—

"To the Editor of the County Press.

"SIR,—My attention having been called to a paragraph in your paper of the 20th of July instant, headed, 'Free Trade Humbug,' in which you assert 'that it is pretty generally known in the parish of Wheathamsted, that few farmers exercise a larger share of pomposity over, or put the screw on the labourers more tightly than Mr. Lattimore, and that a working man asked what he paid his labourers?' Not knowing the source whence you derive your information, and not wishing to be misrepresented, and not having heard any such question proposed at the St. Alban's meeting, I beg to answer the question you have put into the mouth of a working man. And I request you will do me the justice to insert in your next publication the following authenticated statement relative to this point of founded insinuation. If you are sincere in wishing to increase the remuneration of agricultural labour, I beg you will call the attention of the practical and intelligent farmers, who are leading members of the 'Protection Society,' to this statement, and by their verdict I am content to abide.

Your obedient servant,

"BRIDEHALL, Aug. 6, 1844."

Expenditure upon the above quantity of land, solely for agricultural purposes, during the last three years, the accounts being made up to Michaelmas, 1843:—

From Michaelmas, 1840, to Michaelmas, 1843, including labour, wages, beer, smith's, wheelwright's, carpenter's bills, &c.	£4053	5	6½
Average for each year, for last three years	£1351	1	10

"We, the undersigned farmers, having duly and carefully examined the books and bills from whence the above accounts are extracted, vouch for their truth and correctness; and, from personal knowledge, we beg to state that no farmer in this neighbourhood employs so many labourers upon a similar extent of land, nor pays higher wages than Mr. Lattimore. No one is more respected by the labourers, nor looked up to by them. It is well known to us that 21 labourers, now in his employ, have been in his and his father's service the following terms, viz., 1 for 23½ years, 4 for 14 years, 1 for 13 years, 4 for 10 years, 2 for 9½ years, 3 for 9 years, 2 for 9 years, 2 for 7 years, 1 for 5½ years, 1 for 4 years. It appears that Mr. Lattimore adopts the system of piecework (whenever practicable), whereby the skill and energy of the labourer are encouraged and rewarded; and we find that labourers in his employ have thereby been enabled to earn upwards of 12s. and 13s. per week throughout the winter. The lowest rate of weekly wages (per day work) is, for able-bodied labourers, 9s. per week with beer, equal to 10s. per week; threshers, 10s. with beer, equal to 11s. per week; shepherds and others, from 13s. to 15s. per week. In conclusion, we find that the land occupied by Mr. Lattimore is held as tenant-at-will, part of which he is now leaving. Notwithstanding, if an equal quantity of labour were generally employed, there would not be sufficient labourers in this locality; and yet, during the winter of 1842, more than 100 were destitute of employment in Wheatthamsted parish. At that time Mr. Lattimore proved before a vestry that he employed eight men upon every 100 acres of arable land he held in that parish, winter and summer, and yet he took a portion of the unemployed hands. In confirmation of these facts, witness our hands, August 5, 1844.

"WM. HAWKINS, farmer, Kimpton.

"ED. BRUTON, sen., ditto, Wheatthamsted."

We shall recur to this subject next week, which is one of great importance and closely connected with the corn-monopoly; for, as we have repeatedly said, one grand effect of the Corn Law is to divert the fund properly applicable to the payment of the labourers into the landlords' pockets as RENT.

THE SLEEPERS ARE WAKING.

The following paragraph, extracted from a local newspaper, shows that the landlords are arousing from their thirty years' sleep under the cold shade of legislative protection:—

"At the last annual rent audit of Lord Hill, at Hawkestone, Shropshire, his lordship, through his agent, George Gill, Esq., stated that the time had now arrived when it was absolutely necessary to render every possible assistance to the farmer. With this view of attending to their welfare, he had offered his tenants a lease for eleven years, at a reduction of from seven to ten per cent., which would give them an opportunity of improving the cultivation of their farms, and of reaping the benefit of those improvements; and further added, that if at any period they found the system of granting leases was not beneficial to the full extent they calculated upon, he would at once cancel their leases, and receive them as yearly tenants as heretofore. This announcement was received with loud applause by his lordship's tenants.—Provincial paper.

Such an announcement is in many respects satisfactory. It proves that the owners of land have at length got a glimpse of the only means by which they can "render assistance to the farmer;" which is simply by abstaining from doing him active injury. But the paragraph contains several indications that his lordship and his agent are as yet only half awakened. For in the first place the term of eleven years is too short to enable a tenant to profit as he ought from extensive improvements. The farms having been in the hands of yearly tenants, as a matter of course, require a considerable preliminary outlay to bring them into a good state of cultivation. We know first-rate farmers who say this cannot be done in less than nine years. And we believe that, with the ordinary means and appliances of farmers, the first seven years of a lease must be regarded as a period of continuous outlay. We are satisfied that nothing less than terms of twenty-one years will induce farmers in general to adopt the best system of cultivation, and enable them to "reap the benefit of their improvements." Then a mere lease is not enough; it must be a rational lease, one which leaves the tenant full liberty to farm in the best manner. It must be weeded of that mass of absurd restrictions which even the best leases at present in use contain. There must be no reservation of game or timber, no prohibitions against grubbing up hedgerows, and laying out the farm in convenient fields and divisions. The nonsensical prejudices in favour of old pasture land must be abandoned, and proper buildings must be erected by the landlord, or proportionate allowances made to the tenant, to enable them to put the homestead in a state fit for the occupation of a good farmer. Now, the offer to grant leases for only eleven years necessarily excludes these reasonable provisions; and therefore, though Lord Hill's tenants applauded the announcement of his lordship's intention to grant such leases, we venture to predict that their farming will be but little improved by the concession, and possibly but few leases will be accepted, or, if accepted,

retained. And the very circumstances that his lordship offers to cancel the leases if, after a trial, his tenants prefer a yearly tenancy, shows that Lord Hill has no intention of surrendering the useless semi-feudal customs which prevail in the management of landed property, and of giving to his tenants that full and absolute possession and control over their farms, which are indispensable to good farming. It is something, however, to find landowners admitting they must grant leases; and let us tell them that they will soon discover that, if they mean to uphold anything like their present rentals, they must grant RATIONAL LEASES.

THE LABOURER'S COMMENT ON MONOPOLY.

In the last week's *Wiltshire Independent* a letter appears, signed by "A Labourer of Christian Malford," which gives another most direct and practical contradiction to Mr. John Bennett's monstrous misstatements as to the condition of the Wiltshire peasantry. Nobody can believe this originates in ignorance on the part of the monopolist senator, inasmuch as he professes to be a practical agriculturist, and a resident country gentleman; to what, then, must such gross misrepresentations be attributed? This is the most recent contradiction:—

"As Mr. Bennett, M.P. for South Wilts, lately stated at an agricultural meeting that the poor of Wiltshire were always employed regularly at the rate of 8s. and 9s. per week, and that they were well fed and well clothed, and as I know by experience that that statement is false, I will, if you will be so kind as to allow me to occupy a small space in your valuable paper, prove that it is so; and I will tell what I earned for thirty-nine weeks, ending the 10th of June, 1844, to maintain as large a family as almost any poor man has; the number of my family is eight. All of those thirty-nine weeks we wanted 7s. a week for bread, not having any potatoes a third part of the time, so that if I had been receiving 8s. a week during all that time it would not have been enough to buy bread and firing. And now, Sir, I will tell you the exact amount of what I did earn during those thirty-nine weeks—it was 25 19s. 8d., which is not quite 3s. 1d. a week! This report is almost enough to make you stagger to believe it, but it is no less strange than true; and I can say for a truth, if it had not been for a little land which I rent of the Honourable the Earl of Carnarvon, and the Rev. Mr. Law, and a few good friends amongst my neighbours, my family and myself must have died from starvation; it was not much better as it was. Now, I WILL ASK THE HON. GENTLEMAN IF HE THINKS HE IS JUSTIFIED IN STATING SUCH THINGS AT PUBLIC MEETINGS?"

Let the Devizes monopolists rebut that statement if they can.

But the truth seems to be, that these very falsehoods, intended to uphold monopoly, form one of the very means by which its speedy abolition will be accomplished, for in the same paper we find, from the letter of "A Tradesman of Hillmarion," that—

"The people of North Wilts having made an inquiry into the cause of their distress, are about to address the Commons of England and Ireland on the subject, by petitioning them to remove all restrictions on trade and commerce. The Brinkworth meeting petition has already received 1500 signatures, and will, in a few days, be forwarded to Parliament—with at least 2000! There is now but one opinion prevailing in the vale of the North Wilts, and that is that the removal of all restrictions on trade and commerce is the only means of raising the condition of the working classes; and in order to realize that object, they are about to form a society for promoting the principles of Free Trade, and for sending lecturers into every town and village in the country, in order to spread those principles."

This sort of thing will soon bring these monopolist squires to their senses.

A ROARER IN MORE SENSES THAN ONE.

We have all heard how the Duke of Richmond roared as president of the "Central Protection Society;" and all who have deemed that nearly-forgotten society worth a thought may have remarked how gentle and sucking-dove-like that roar has become of late. It does so happen that the noble Duke became tame about the same period that one of his younger brothers—detrimentals, as those unfortunate dependents have been designated by some fashionable novelist; encumbrances, as they are unquestionably deemed by the hereditary possessors of titles and estates—accepted a seat at the Treasury Board. Of course, there was no connexion between the two events, but the coincidence is odd, and people will talk. Now, though the Duke of Richmond has ceased to roar in his own person, he appears to have sent a deputy to roar for him at the late agricultural meeting at Southampton, in the person of a black thorough-bred stallion. We cannot do better than let the *Times* tell the story for us in its own racy way:—

"THE DUKE AND THE ROARER.—At the Agricultural Society's meeting, at Southampton, the Duke of Richmond won a prize of £15 for a stallion; and, after it was all over, it was found out that the animal did not belong to the Duke at all, but to a Mr. Rushbridge, his steward. Nor was this the only 'mistake' they made. Besides complimenting their president elect by giving him a prize for what turned out to be another man's horse, they also awarded one to the Hon. Mr. Nugent for a heifer, which heifer, although it was deliberately sent in according to the printed specification, turned out, after the prize had been given, to be eleven days too old! So, as the Duke of Buckingham had a heifer which has been 'commended' by the judges, they transferred Mr. Nugent's prize to his grace, thus clearly giving him a taste of the honour also. The two prizes were thus made to serve for four people. Very curious 'mistakes' these, particularly when they happen with vice-presidents and presidents elect. It is said that the animal for which the complainant judges awarded the £15 prize to their president elect, is nothing more nor less than a 'roarer.' Though their judgment could not detect a roarer from a sound-winded horse, their instinct told them the difference between a duke and a common exhibit. But how came the 'thorough-bred stallion' thus to be put off from one to the other? Of course, Mr. Rushbridge would not dare, of his own unencouraged assurance, to pass off his horse in the name of so very duke-ish a duke as his Grace of Richmond. How, then, did it happen? Was his Grace ashamed of his 'roarer'? Did Mr. Rushbridge—with that alacrity of patient panner-bearing and contented cropping of thistles of which the Duke so much boasts in his tenants—rush in to save Richmond, Lennox, and Aubigny from the titlers and sneers of the whole horse-loving, that is to say, the whole civilized world? This Mr. Rushbridge is not unknown to fame for much of his amiable assistance to the Duke."—*Times*.

Now, it does seem odd that the Duke should have sent his servant's horse to the show as a specimen of one of the best horses adapted for breeding purposes, and that such horse should prove to be unsound in a way peculiarly objectionable to breeders of horses. There is, perhaps, no defect more certainly hereditary in horses than that peculiar construction of the windpipe which renders them likely to become roarers. Then, was the Duke aware of the defect? His Grace is a horse-racing man, one who profits by the rest of gambling-booths at Goodwood races; and recent exposures of the doings on the turf

render it difficult for any man to touch racing matters without the suspicion of disloyalty. Again, when the Duke discovers the infirmity of his own title to the prize horse? Was it before or after the horse was found out to be a roarer? It is certain that at the Pavilion dinner on the 25th of July, the Duke took to himself all the credit and glory which the ownership of the best thorough-bred stallion shown at the meeting could confer upon him.

Farmers are apt to say they have no chance in competing at cattle shows with gentlemen, and the present incident is not likely to restore their confidence. We have far more serious regret for the way in which this "mistake" will affect the judges in the opinion of the public, than for the effect the strange complication may have upon the Duke's reputation. That any man should give a prize for a horse which is a roarer, when the animal is intended for breeding stock, betrays, to say the least, carelessness. The defect is one easily detected—unless the turf men have means of hiding it for a brief period, which, however, we do not believe to be the case—and forms a complete bar to the usefulness of the animal for breeding purposes. And when this mistake has been made in favour of the ducal president elect of the society, the consequences will be doubly inclined to censure.

We confess that we have always observed with considerable regret prizes offered by the society for thorough-bred horses. They are not strictly agricultural stock, and we do not wish to see the practices of the turf invade the Running Rein and the Bloodstock cases—introduced into the cattle-yard and the sheep-fold.

The Duke of Richmond, however, seems not a bit disconcerted by the Southampton occurrence, for at the recent exhibition of the Highland Agricultural Society, at Glasgow, he said:—"You know well that we require to cultivate honourable emulation, and you are aware that I am one of those who to-day fortunately gained two premiums. It was a long time, though, before I got to that honourable position. I had to work my way through as an unsuccessful candidate on many former occasions." And certainly the Duke has a curious method of "working his way through" to success, by the aid of Mr. Rushbridge and the black roarer. At all events it seems the Duke has now attained the summit of his ambition, though some ill-natured people might say that he has had the luck of another distinguished personage as well as his own in reaching that position.

WHITFIELD EXAMPLE FARM.

The following account of this farm has been sent to us by a correspondent, who, if we may judge from the tone of his letter, expected more of a slight—more of the pious and circumstance of an agricultural show—than a farm merely cultivated with a single view to the greatest and most profitable production:—

"Whitfield Example Farm, Gloucestershire, on Lord Ducie's estate, has been much spoken of and written of. It contains about 240 acres of cleared land, formerly under pasture; much under water, and destroyed with hedge-row trees; the whole of which were grubbed up and sold for £2400. Then the whole farm was thoroughly drained with stone and tile, and subsoiled with the Deanston plough; good roads made; all old fences demolished; the whole land at the rate of 120 bushels per acre, and laid out without divisions into 24 fields of 10 acres each; a good house and offices, with a steam-power thrashing machine, erected, and the whole put under a rotation of crops—in turnips, wheat, clover; wheat, roots; in turnips, carrots, potatoes, or mangel wurzel.

"This season, then under crop, 12 fields, or 120 acres wheat	2	20	carrots
" "	2	20	" mangel
" "	2	20	" turnips
" "	2	20	" potatoes
" "	4	40	" clover
	24	240	

"The wheat is all good, and should average about 40 bushels per acre; it is all drilled, some at 6, 9, 12, 16, and 18 inches apart, and sown respectively with 8, 7, 6, 1 and 3 pecks of seed. The nine inches apart is considered the most productive, although, had the season been finer, the fifteen or eighteen would have probably outdone it. The whole has been twice hoed, and not a weed is to be seen in it. Seeds have all been sown, but they have not appeared. The carrots, white Belgium, are not very regular; the mangel is patchy and inferior; the turnips sown, but not appearing; potatoes very poor, partly ploughed down; clover fine, and feeding off with sheep, with a full supply to horses and cattle within doors. The general management good, but not so very extraordinary as has been represented. The improvements were conducted by Mr. Morton, a Fifehire man, who, with his two sons, have now taken a lease of the farm, on certain conditions, from Lord Ducie. It was formerly rated for the poor-rate at 7s. per pound at £800, and it is supposed now to pay £800. The outlay has been very great, but the proprietor says he has been paid as a landlord, and now will be recompensed fully by the advanced rent. The improvements have been six or eight years in progress. The tenant disapproves of frequent lifting, or, indeed, of any lifting at all, and thinks that, by this rotation, and using all his straw and roots on the farm, he will be able to keep it in order without any extraneous aid—not even guano. This seems problematical to the writer, who has travelled thirty-six miles (seventy-two out and home) to see this far-famed Example Farm, and is now waiting the coach to take him up, and return on the whole satisfied—but no more—neither amused nor delighted beyond measure; there is not sufficient variety of management or stock to his taste, although certainly the wheat and clover crops are good for any year, and extraordinary for the present. He went thus far for the edification and amusement of his careful and kind correspondent and manager."

Now, here we have one half of a farm, consisting of land naturally poor, yearly under a crop of wheat, the other half being under root and green crops; and the occupier of the farm intends to maintain its fertility without extraneous aid; and an observer, who seems inclined to damn with faint praise, is obliged to say that "the wheat and clover crops are good for any year, and extraordinary for the present." The reader must recollect that this was written before the rains of June, which so materially improved the grain crops, had fallen.

ANOTHER GAME-LAW MURDER.

We have this week to record another of those appalling illustrations of the demoralization and crime caused by the game laws amongst our rural population, of which scarcely a week passes without producing an instance. In a sequestered spot called Halmerend, near Newnham, in Staffordshire, on the estate of Sir Thomas F. Boughay, a young man named Cooper, who was an assistant to his father, Sir Thos. Boughay's gamekeeper, was deliberately shot as he was entering his father's cottage on Sunday evening.

The poor fellow never spoke, and died in his father's arms within ten minutes after the shot was fired. No person was seen to leave the spot, but, by means of his

footsteps and the peculiar marks made by his shoes, the murderer was traced, and has been apprehended, and he proves to be a man named Downing, a notorious poacher, who had been four times sent to Stafford goal for poaching, upon informations laid by the father of the deceased. Two of the convictions have occurred in the present year; and the delinquent's last imprisonment, which had been for three months, was completed on Saturday, August the 3rd, on which day he returned home. Another man, also a poacher, has been apprehended on suspicion of having been present and aiding in the murder. Here, then, three human lives will probably be sacrificed to that monstrous caprice which endeavours to keep a stock of wild animals in a cultivated country, and amidst a population in a state of great destitution. What deepens this tragedy is the circumstance that the place where this fearful crime was committed is only about a mile and a half from the spot where a policeman named Beech was last year murdered by poachers while attending a gamekeeper. We do not understand from the report whether both murders occurred on the same estate; but how Sir Thomas Boughy can justify to his own conscience the crime—for in the actual condition of this country it is virtually original—of game-preserving, which has produced in this district such lamentable results, passes our comprehension.

Nor is there anything peculiar to this district in the operation of the game laws and game-preserving, for we find in the same daily paper in which the report of the apprehension of poor Cooper's suspected murderers appears, there is the trial at Wells in Somersetshire of two men apprehended for being in a game preserve at night, armed for the purpose of taking game. Though the prisoners were plainly proved to have been in the wood, and

"The learned judge summed up, telling the jury that there were two questions for them to determine—first, the identity of the prisoners with the party who had been seen in the preserve; and next, that they were there for the purpose of taking game; the identity of the party was clearly proved; and what object could men have in a preserve at eleven o'clock at night but to take game?—the jury, after a few minutes' consultation, returned their verdict, Not guilty."

Here we have the same state of things which leads to such murderous conflicts, though in this instance no actual bloodshed occurred. The jury seem to have been influenced by the now almost universal abhorrence of game-preserving and its consequential crimes, for they unquestionably acquitted the accused in spite of the evidence, and a strong charge for conviction by the judge. This is a symptom of public dissatisfaction our squires should not overlook.

Another case occurred at the Lancaster assizes, where a man, detected in poaching at night, was found guilty of shooting at the gamekeeper, who, in this case, was only wounded in the leg. And yet, in the face of these things, our game-preserving legislators have just passed a new game law, giving more stringent powers, and inflicting more severe penalties for the preservation of game than were before in existence.

EMPLOYMENT IN AGRICULTURE.—Employment in agriculture is restricted, because property in land is a monopoly, and because in addition to that there is a further monopoly in what the land produces. Improved systems of agriculture, like improved systems of manufacture, would find employment for a far larger number of labourers than farmers have at present engaged. But, so long as there is no security of tenure, men will not invest capital in permanently improving their lands; and the withholding of such investment is in fact a withholding of the employment which the capital would give to the labourers. Even where there are leases, they are encumbered with a multitude of clauses and conditions which seem perversely designed to put a stop to all improvements. The great body of the landlords act as if they had entered into a confederacy to prevent the farmers from rising to a condition of wealth and independence which might confer political freedom; and though they thus in no slight degree injure themselves, they are willing to sacrifice positive good in order to maintain relative superiority. The farmer is prevented from adopting those modes of culture which would give employment to most labourers. His landlord's game is deemed of more importance than his own crops.—*Hull Advertiser*.

CORN, &c., MARKETS IN IRELAND.—A measure has been recently introduced into Parliament (for the purpose only of being printed and circulated during the recess) by Mr. A. Stafford O'Brien, the Earl of Hillsborough, Mr. Morgan J. O'Connell, and the Hon. Mr. Vesey, entitled "A bill for the establishment and regulation of markets for the sale of corn and other agricultural produce in the cities and towns of Ireland." The number of clauses is 68. The preamble states that the sale and weighing of corn and other agricultural produce in Ireland are not sufficiently regulated by legal enactments, and that it would tend materially to the advantage of the several persons interested in buying and selling therein, and to the improvement of the quality of the grain brought to market by the farmer, to have one uniform system of dealing established under the authority of law. The bill then goes on to provide various and multitudinous enactments to meet the exigencies of the case.—*Times*.

GAMEKEEPERS AND THE GAME LAWS.—A bulky return of all inquests held by the coroners of England and Wales since the year 1833 upon the bodies of gamekeepers, and the number of persons convicted of offences against the game laws during the year 1843, &c., has been printed by order of the House of Commons—having been moved for by Mr. Mainwaring and Mr. Bright. A summary being given of the latter branch of the return, we are enabled to state, for the information of our readers, that the gross total number of culprits convicted of such offences, in the various counties of England during the year 1843 amounted to 4102, of whom 144 were convicted at the assizes, and 4258 at petty and quarter sessions. In Wales 127 were convicted—viz., 8 at the assizes, and 119 at quarter and petty sessions. It follows, therefore, that the grand total number of convictions both in England and Wales, during the past year, amounted to 4529, of whom as many as 4377 were convicted at courts of quarter and petty sessions.—*Times*.

Dr. Hunter says:—"If other causes have slain its thousands, scarcity of nutritious food alone has slain its tens of thousands. My experience justifies and warrants me in affirming, that where the people have not sufficient nourishment, there typhus fever manifests itself with all the horrors of a depopulating plague. Witness Ireland!"

NOTICES TO CORRESPONDENTS.

"R. C." will find that he has been anticipated.
"A Constant Reader."—The matter has not escaped notice.
"A. M."—The lines are rather defective, but we shall see if they will bear mending.
"Oscar Oppressionist."—The argument is perfect, but would be greatly improved by being condensed.
"A Free-Trader of Southwark."—What he desires is in the course of being accomplished.
At the request of "A Friend," we extract the following authenticated and affecting case of distress from the *Oxford Chronicle*, as an illustration of the protection which the Corn Laws afford to the agricultural labourer:—

"Headington, July 31, 1844.

"Sir,—The subjoined statement was made to me by the mother of four children, who, with the father, are living in the open air night and day, at Baldon. I do not ask you to insert it for the purpose of exposing any individual to censure, but that one fact more may be brought to light illustrative of the sufferings by which the poor of our country are alienated from the upper classes. There may be another side to Mary Claydon's statement, but I can vouch for its substantial truth. I have known this family for some length of time, and am not aware that their distress can be traced to any of the customary immoral causes. If Claydon's troubles were limited to the difficulty of feeding and clothing six persons on twopence each per day, I should not call your notice to what is so general; but here is a man whose only crime is poverty, and who is willing to give a part of his pittance for rent, compelled to see his wife and children exposed to the vicissitudes of weather by day and night, for three weeks, whilst the horses and dogs of his wealthier neighbours repose in comfort that he may well envy; and three cottages are actually untenanted in the parish, but belonging to a non-resident, are not obtainable. To burn property is a crime both useless and wicked; but that which injures the bodies of human beings, as our poor are injured by insufficiency of food and studied efforts to drive out the surplus population from each parish by making them homeless, is a crime, call it by what name you please, as much more heinous as human beings are superior to goods and chattels.

"Yours obediently, "HENRY LEAKE."

"MARY CLAYDON'S STATEMENT, JULY 26, 1844.

"We went into the union at Abingdon the day after Christmas-day. We went in because we had no work. My husband was earning 8s. a week before he went into the union. We stayed there ten weeks and three days. When we came out we came home to Baldon, but they would not find us any place to be in, so we rented a little place in Abingdon. My husband went backwards and forwards from Abingdon to Baldon to work. We got behind in our rent, because my husband was ill one fortnight; and one week he had no work; the farmer, whose turn it was to take him, said he had nothing for him to do; that week I pawned my husband's coat and my gown and shawl; I got 3s. 6d. on them; and we lived on it that week. I have been without bread two or three days together; and my children the same; I had none to give them. I got three weeks back in my rent; and left two chairs, one table, and a basket of crockery with the woman till I had got the money to pay. My husband has bad health, and can't earn so much as other men when he is in work. I left Abingdon for Baldon to go to look after a woman that was ill; and lived with her. When she got better she wished me to go out. I left her cottage three weeks come Monday morning. There is only one room in the cottage, and no window nor chimney; it is walled up with flukes and mud; there is a great hole in the wall to let the smoke out; the minister said it was too thick for us to be twelve of us in one room; there were six of one family and six of the other. When we went out we slept three nights under some trees without anything round us; then my husband cut some boughs off the trees; and now he has made it better with some bits of carpet that the minister gave us. My youngest child is ten months old. We have all been wet through to the skin three times. On Wednesday morning the constable came and pulled our tent down; and said he did not dare to let us stay in the open air. I went to Squire Peers; he seemed sorry for us, but said he could do nothing for us. I asked the constable to put us in a house, but he said he couldn't. There are three cottages empty in Baldon. All of them belong to Sir Henry Wiltouby; they don't dare let us have one of them without Sir Henry's leave; and they are looking for his coming down. We have slept out now three weeks on Monday. The neighbours are very kind, and leave their cloaks with us of a night when they come out of the field.

"We have only one rug and one sheet, and three old pieces of sacking of our own to cover us with. My husband has been ill this week and has only done two days work, but is gone to Clifton to reap to-day.

"I have heard the above read over, and it is all true.

"MARY CLAYDON'S MARK."

"G. I."—The shipping interest is so obviously injured by restriction of commerce, which is so obviously a restriction of freights, that it is not necessary to say a word on the subject; but this is no excuse for shipowners demanding protection in turn: that would be in effect to say, since Peter has robbed us, we ought to plunder Paul.

"A Friend to the Farmer."—The question has been already discussed in this paper.

"J. M." will soon find the matter thoroughly investigated.

"W. B." is thanked.

We have received from Dr. Gardner a proposal for establishing a College of Chemistry, and sincerely hope that the project may be carried into execution. The applications of chemical science, not only to arts and manufactures but also to agriculture, are so numerous and important, that the cultivation of the study has become identified with the progress of national prosperity.

The following lines have been sent us by an unknown correspondent:—

MONOPOLY THE BANK OF ENGLAND.

Ah! England! happy England once,
Home of the brave and free;
The fostering soil of human rights,
And glorious liberty.

Thy rugged hills were Freedom's shrines,
Where oft thy sons of yore,
When Europe slept in slavish chains,
Have worshipp'd in their gore.

Thou' stainless still thy banner waves,
Unmatch'd thy battle-brand,
Oppression on thy myriad sons
Hath laid his crushing hand.

And, tho' thou wieldest as of yore
The sceptre of the sea,
Yet gone the shield of England's heart,
A happy peasantry.

Such once were thine; for, as they met
At sainted holiday,
Thou' oft as coarse in speech as sport,
Joy's sunshine still had they.

Thou' rude their cots, yet health robust
And pleased content were there;
For plenty, as 't had nursed their youth,
'T would bless their silvery hair.

But now, where once a joyous crowd,
They came at closing eve:
With famished look and tatter'd garb
Their children meet to grieve.

They meet from furnace, loom, and forge,
From labour's countless spheres;
Youth, manhood, age, beneath the thrall
Of life-embittering fears.

Of fears not such as bondsmen feel,
Who, cowering, toil and pant;
But of ill-requited industry,
Of indigence and want.

No longer villains—they attend
No haughty lordling's call;
No boons nor serfs, yet bonds and chains
Are on the limbs of all.

Oppressive laws and grievous wrongs
The deeps of strife have stirr'd;
Revenge incites despairing hope,
And plaints and threats are heard.

And yet those plaints are all of one,
One despot-welded chain,
That pride and sateless avarice forged,
To guard unholy gain.

Needst thou be told its length or links,
Or name? Monopoly.
Ah! no, it circles every limb,
Damps every energy.

Vainly to 'scape its tyrant thrall,
Trade waves her nerveless wing;
Vigour, and enterprise, and skill,
In vain their succours bring.

Vain is the pale mechanic's toil—
Vain, vain the peasant's sweat;
Its shackles upon industry
Are too, too firmly set.

'Tis strange that those who toll the most,
Should be the scantiest fed;—
Stranger! that ever tax were laid
Upon the labourer's bread.

'Tis strange that sweat of industry,
Should pamper idleness;—
Stranger! that England's boasted law
Should Englishmen oppress.

Ah, pity 'tis so foul a blot
Our statute book should stain:
Yet more, ah! more, that we so long
Should wear the galling chain.

We have received the letter of "C.," and are reluctantly compelled to decline to publish it on account of its length.

An "Honorary Secretary" is informed that the commodity he mentions (which for some reason he does not wish to have specifically named) is an "unenumerated article," and we quote that portion of the Customs Act which will apply to it:—"Goods, wares, and merchandise, being either in part or wholly manufactured, and not being enumerated or described, nor otherwise charged with duty, and not prohibited to be imported into or used in Great Britain or Ireland, for every £100 value £20 duty;" and the duty is the same whether from foreign countries or from British possessions.

"A Leaguer" suggests to us the insertion of the following closing paragraphs of an able letter from the Rev. Godolphin Osborne, which appeared in the *Times* of Wednesday:—"From all that was said on the bringing in of the late amendments of the poor law, one was led to suppose that the Home-office was groaning in a sort of philanthropic travail; what has been the issue? That monstrous stretch of charity which allows a widow relief where her husband has died, and where, perhaps, they have lived together for years, instead of forcing her into the distant union to which she may belong, was carried by a majority of one! The cause of the poor, though it was well known that it would be advocated by a prelate of our Church, and one of the ablest men of the day, could not find in the House of Lords an audience exceeding twenty! London excitement had begun to flag; lady patronesses were packing up; the country beckoned our legislators to rally over the sheds of rams and bulls of matchless symmetry, to partake of the festivities of Goodwood, to prepare for the slaughter of the grouse; who could expect peers or commoners to remain in town to be bored with a poor-law bill?

"When Lord J. Russell, a few nights since, brought before the country some features in the present condition of the labouring classes, the Minister, in his usual style, talked of the increase of population as tending in all countries to produce the evils alluded to. This is Malthus again—the old story of 'Nature's mighty feast having no vacant cover (for the poor man)—she tells him to be gone.' Now, Sir, only yesterday was read in all our churches a prayer, composed by order of the Privy Council, in which I find these words—'O merciful and Heavenly Father, by whose gracious gift mankind is increased.' Perhaps Sir Robert reads 'Princekind' for 'mankind.' I am satisfied that so deep-seated and well-founded is the loyalty of the people of this country, so sincere their respect for the Sovereign and her Consort, that let princes and princesses become as numerous as they may, at this nation's mighty banquet they will ever find each a fitting cover and a hearty welcome; and I have yet to learn that we are so blinded by avarice to our duty as Christians, as to rest content that the masses should grovel in misery, want, and ignorance, because their increase may threaten to encroach somewhat on our daily enjoyments. He who marks the fall of a sparrow is not unmindful of the cry of the poorest hovel-born babe on earth. He knows the poor man's wants; He marks the use of the rich man's abundance; let us not tempt His wrath by complaints of the increase of our kind within a few hours of our solemn assertion that that increase is His gracious gift. Though the friends of the poor must be disheartened by the conduct of some from whom more sympathy might have been expected, and in whom it would have been most valuable, still we have plenty of encouragement to persevere; the cause progresses; it has the marks of God's blessing; evils once stoutly denied are now admitted; great efforts are being made to remedy them. Let us hope and act, regardless of what names we may be called, what motives may be imputed to us. Ready to meet our opponents, let us also be prompt to seek the friendly co-operation of all men, of every degree, of every party."

"A Subscriber" who is desirous to know the proportions employed in agriculture, and in manufactures and trade, is requested to refer to Nos. 35, 39, and 43 of the LEAGUE, where he will find ample information in detail on this subject; as, however, the question is an important one, we will here give a summary:—

	England	Scotland
	per cent.	per cent.
Agricultural occupations ..	7'40 ..	8'16
Trade, manufactures, &c. ..	29'56 ..	30'46
Independent	2'81 ..	2'21
Almspeople	0'90 ..	0'67
Others not described	0'42 ..	0'26
Residue: women and children	58'21 ..	58'24

100'00 100'00
"Subscriber" will also find this subject very fully discussed in an able speech of Mr. Plint, recently delivered at Scarborough, entitled, "The interests of Agriculture and Manufactures identical."

"D."—Yes.

"T. S." Manchester, is informed that he is not bound to pay one farthing of any taxes or rates whatsoever to entitle him to be registered, except the poor's rate and assessed taxes; and that, if the overseers have presumed to leave him off the list of voters for non-payment of any other rates or taxes, they may be fined £5 by the revising barrister. Let "T. S." give in a claim to be registered. All information will be given at our Manchester office.

POSTSCRIPT.

LONDON, Saturday Morning, August 17, 1844.

To judge by the savage tone of an article in the *Morning Herald* of yesterday, upon the Northampton meeting, there must have been very sanguine expectations of a triumph over Free Trade at that meeting, by the combined forces of Toryism and O'Connor Chartism. Only the smart of grievous disappointment could indite so much bitterness, or go to such an extent of falsification. The old calumny of the League fomenting the disturbances of 1842 is revived. It is presumed that people forget how it fared with Feargus O'Connor in the attempt, to which such ample latitude was afforded by the Attorney-General, to render his defence the means of producing some show of evidence for this imputation. There was "ample scope and verge enough," and never was failure more complete. Another circumstance should make the monopolists chary of reverting to this stale falsehood. The public has of late become fully aware of the means of detection possessed by the Government at the time; we need only whisper the words "Post-office." Those three syllables are full security for the unimpeachableness of the manufacturers, and for the knowledge of the *Herald's* masters, that the pen of their scribe transgresses all bounds, not merely of probability, but of plausible mendacity. The manufacturers have passed the ordeal.

As to the Northampton meeting, the fact that there was a meeting is about the only fact in the *Morning Herald's* account of the matter. The notorious combination of the Tories and O'Connorites is denied. The vote of the Tories for the resolution in favour of the Charter is denied. The invitation to Messrs. Cobden and Bright, signed by 1200 persons, including a large body of agriculturists, is denied, by the use of such language as "impertinent intrusion." The choice of the chairman by the Chartists is kept out of sight; and he is transformed from a friend of that body into an unfair antagonist. And not only the triumphant result for Free Trade, but even the fact of a division is first denied, and then the opposite assumption argued upon, or rather made the text of more vituperation. Hard driven, indeed, must a cause be which leads its advocates so deep into the mire, and induces such total forgetfulness of the common decencies of falsification.

The appropriate moral towards which all this tends, with our veracious and religious cotemporary, is a threat of riot and incendiarism against the manufacturing capitalists. "Their inflammatory tactics will, by a just retribution, be turned against them." "Let them beware, lest, in bearing the brand of discord through the country, a stray spark should ensure their own destruction." We leave the wickedness of such intimations to condemn itself. Happily they indicate the will only; not the power. We exhibit the *Morning Herald* to the public as the Spartans used to exhibit an intoxicated slave to their children. Perhaps some of the sucking advocates of monopoly may be impressed thereby, from contrast, with the becomingness of truth and decency.

EPITOME OF NEWS.

FOREIGN.

BOMBARDMENT OF TANGIERS.—(Second Edition of the *Morning Chronicle*).—The following appears in the *Journal des Débats* of Thursday morning:—"Paris, August 15. We are assured that the Government received last night the following important news from the coast of Africa. The answer to the ultimatum sent to the Emperor of Morocco by the Prince-Admiral, commanding the French fleet, not having appeared satisfactory, his Royal Highness the Prince of Joinville had commenced his fire against the advanced works which protect the place of Tangiers. The works had been destroyed. The European quarter of the town had been spared. The English consul, Mr. Drummond Hay, had found refuge on board the ship of the French admiral. We can add to the above that the bombardment commenced on the 6th, at seven o'clock in the evening. The telegraphic despatch which announces this fact was intercepted by the bad weather, but it appears as if Mr. Hay had been in some danger, as the despatch says—'Mr. Hay was saved.' The outer works were completely destroyed, and the bombardment of the town was still going on when the accounts came away."

ABDICATION OF MEHMET ALI.—The following official communication reached the French Government on Tuesday last:—"Alexandria, July 27. His Highness the Viceroy has just abruptly left Alexandria, declaring that he renounces, for ever, Egypt and public affairs, and that he retires to Mecca. Ibrahim is at Alexandria, which city is quiet."

The abdication of Mehmet Ali has created great astonishment in Paris, and some apprehension appears to be entertained that the event will lead to new difficulties in Eastern affairs, although it may not occasion any immediate outbreak in Egypt. The presence of Ibrahim Pacha at Alexandria was considered fortunate, as it ensured

public tranquillity. Nothing certain appears to be known of the motives which could have led Mehmet Ali to relinquish public life, but it is supposed that his object is to see the arrangement for the hereditary transmission of Egypt in his family peaceably carried into effect during his lifetime.—*Morning Chronicle*.

The promptitude with which a fleet of ships of the line was prepared at Toulon and sent out to sea, has attracted attention in France. The telegraphic despatch ordering four ships of the line to prepare for sea at once, and to set sail with all possible speed, arrived at Toulon in the afternoon of the 7th, and on the following afternoon at three o'clock, the Ocean, three-decker, bearing the flag of Admiral Parseval Descezes, the Inflexible, the Marengo, and the Neptune, had actually hoisted their anchors and set sail for Tunis. Another ship of war, the Alger, which has recently returned from the Levant, has also been ordered to return to her post without delay.

The Opposition journals continue their agitation on the subject of Tahiti. The *Sicile*, however, hints that the recel of M. d'Aubigny has already been decided on; and that it will be justified on the grounds, first, that he has by one of his decrees implicitly re-established confiscation, which is abolished by the charter; and, secondly, that Captain Bruat had, in one of his despatches, partly disavowed the conduct of his subordinate.

COMMERCIAL TREATY.—According to the *Presse*, the French and Belgian Governments have entered into new commercial arrangements for a mutual reduction of duty on certain articles of import. The following are said to be the proposed modifications:—France is willing to lower the duty on raw hides, imported from Belgium and of Belgian origin, from 1f. 20c. per 100 kilogrammes to 50c. per 100 kilogrammes. On dry hides the duty will be lowered from 5f. to 2f. 50c. The present duty on rough marble is 2f. 70c.; it will be reduced to 1f. The duty on hops would be lowered from 65f. 50c. to 45f. And the duty on pit coal will be also lowered from 10c. per 100 kilogrammes to 5c. per 100 kilogrammes. Belgium, which has hitherto exacted a duty of 83c. on French pit coal, will reduce it to 5c. The manufacturers of Ghent having to complain of the opposition they meet with in the printed cottons of England, the Belgian Government has resolved to raise by 50 per cent. the duties exacted at present on English printed cottons at their frontiers. It offers to France to except it from the ordinance upon that subject, and, as far as regards France alone, to maintain the present duties. Lastly, the resolution of the 14th of July, 1843, which raised the duties on woollen thread and cloths, and upon fancy articles and artificial flowers, will be withdrawn, as far as the provisions regard France; or, in other words, the resolution will hold good in regard to all other countries, but will be withdrawn as regards France.

The French Minister of Commerce has published the returns of the corn trade of France during the first six months of 1844, from which it appears that the imports have been—wheat, 943,109 metrical quintals; other grain, 73,408; flour, 5871. The exports:—wheat, 44,040 metrical quintals; other grain, 36,700; flour, 35,229; and the quantity lying in the Government bonding stores, on the 1st of July last, was—wheat, 145,928 metrical quintals; other grain, 13,527; and flour, 20,812.

PRESENTS TO THE QUEEN FROM LOUIS PHILIPPE.—The Sèvres, Gobelins, and Beauvais royal manufacturers, says the *Constitutionnel*, and several private artists and manufacturers, have received large and splendid orders from the civil list, destined, it is believed, for presents from the King during his visit to England.

A frightful accident occurred on Thursday, the 8th inst., at Montmartre, by the falling in of one of the quarries. One man was killed on the spot, another died before reaching the hospital, and three others were seriously injured, amongst whom is M. Richer, the proprietor of the quarry.

SPAIN.—The *Augsburg Gazette* of the 6th instant publishes a letter from the frontiers of Italy of the 31st ult., which would appear to indicate that M. Castillo, the Spanish agent, sent to arrange the religious differences that had arisen between Spain and the Holy See, was not likely to succeed in his mission. He had hitherto vainly solicited an audience of the Pope, and had been told that no reconciliation was possible, unless the nomination of the bishops was accorded to the court of Rome.

BERLIN, Aug. 1.—Accounts from Poland confirm the statement relative to the very rigorous measures adopted on the frontiers. A special order of Prince Paskewitch says—"The evil (in the smuggling) must be cut up by the roots, and especially the system of bribing be put an end to. That it is resolved to effect the object, though it is well known what obstacles are to be overcome." In addition to the frontiers inspector, a new officer has been created, that of a comptroller-general of the frontiers, with very extensive powers, and various inferior officers. He is constantly moving from place to place, and has authority to remove at his discretion the Russian officers on the frontier to other stations, or entirely dismiss them.

The *Augsburg Gazette* says that the Emperor of Russia has addressed an energetic note to the Porte, complaining that the Turkish Government allowed the sale of arms to the Circassians, through agents established at Constantinople.

The German papers state that the Governments of Austria and Prussia have made a convention, whereby, in case of any renewal of disturbances by the workmen on the frontiers of the two kingdoms, the armed forces of the two Sovereigns are reciprocally to obey the calls of the magistrates of the other country in re-establishing tranquillity.

THE CORN TRADE.—BERLIN, August 5.—We have very serious accounts from East Prussia respecting the overflowing of the Vistula and the Nogat. The harvest also begins to be looked forward to with apprehension in our neighbourhood, for the torrents of rain never cease, and the winter corn which has been out is threatened with destruction. At the same time the price of grain continues very low, for much exportation to England cannot be anticipated, as there is the prospect of a good harvest in that country.

The inhabitants of Storkow, of which the regicide Tschesch had once been the burgomaster, have forwarded a congratulatory address to the King of Prussia, in which they state that he was known there as an artful and dangerous man, that the town had considerably suffered from his administration, and that everybody carefully avoided coming in contact with him.

According to a late census, it appears that there are 80,000 labourers employed in the mines of Prussia. The

annual revenue arising from them amounts to about £5,000,000.

The *Cologne Gazette* quotes letters from Prague of the 28th ult., mentioning that the spirit of disorder was extending to the workmen of the manufactories in which no machines were used, and whose owners were Christians.

The accounts received from Poland give most deplorable descriptions of the damage done by the inundations of the Vistula and other rivers. The *Elbing Gazette* of July 29 says that there had been incessant rain for more than six weeks, and the damage already done was immense. The account from Kirlin says, that the Vistula had risen to a greater height than at any time during the last hundred years. It is impossible to say how many thousand villages may be inundated by the mighty river in its long course from Cracow to Dantzig. Above and below Calce 100 towns and villages are as in a sea, and the inhabitants have been forced to take refuge on the roofs, and in trees on some neighbouring hills.—*Hamburg papers*, Aug. 9.

The *Revue de Paris* announces the conversion to Catholicism of M. Chretien Snell, former consul of Switzerland in Rome. The new convert is sixty-seven, and had for his godfather the Count de Mombello, ambassador of Sardinia in Rome.

REVENUE OF HOLLAND.—The Hague, Aug. 12.—The official accounts of the revenue in the first six months of 1844 is now published, compared with that in the first six months of 1843. It was in 1843, 25,688,877fl.; ditto, 1844, 25,373,504fl. Less in 1844, 315,373fl. The diminution is chiefly in the duties on importation and exportation, amounting to 221,484fl., and in the taxes on registration stamps, 546,059fl. The diminution in the import duties is chiefly owing to the circumstance that a smaller quantity of foreign corn was disposed of for home consumption. With respect to the stamp, &c., duties, they are only 70,000fl. less than in the first six months of 1842. In the excise there is an increase of nearly half a million in 1844.

Accounts from Athens, of the 21st of July, state, that, in the course of the elections, forty lives had been lost. It was supposed that the Government would be in a minority of fifteen or twenty.

A letter from St. Petersburg, of the 27th ult., given in the *Journal de Francfort*, states that the rains which have fallen almost incessantly during the last month have done considerable damage to the harvest. The crops throughout the whole empire had been very promising, but since the month of May there appeared in some districts of the Transcaucasian provinces, and in the Crimea, swarms of locusts, which did much injury both to the meadows and to the corn-fields.

Accounts from Constantinople to the 17th ult. state, that information had been received of the defeat of the Russians by the Circassians in Daghestan.

The *Journal of the Two Sicilies*, of the 27th ult., publishes the second judgment of the military court, sitting at Cosenza, which was pronounced on the 24th. This sentence includes the foreign refugees who embarked in Calabria on the 16th of June last. Seventeen have been condemned to death. The King ordered the sentence to be put in execution regarding the most guilty parties; consequently nine were executed on the 28th. Fifteen executions have now taken place on account of the Calabrian revolt, several of whom belonged to the higher ranks in society. Three were Venetian noblemen. The two brothers, Bandeira and Moro, were lieutenants in the Austrian navy; M. Nardi was an advocate from Modena; and Ricciotti was an officer in the army, who had distinguished himself in the Peninsular war.

UNITED STATES.—The royal mail steam-ship Britannia arrived off the Rock at a quarter past eight on Tuesday morning. Her dates are New York, the 30th ult.; Boston, the 1st inst. Some fresh arrests had taken place at Philadelphia; but the city remained tranquil. Governor Ford, of Illinois, had applied to the United States Government for 500 troops to be stationed in the neighbourhood of Nauvoo, to prevent any fresh conflicts between the Mormons and their opponents. The *Boston Times* publishes an official statement from the President of the branch of the Mormons in that city, from which it appears that Samuel H. Smith, the oldest member of the family now living, and a brother of the murdered prophet, will take the office of his brother Hiram, as patriarch in the Church, according to the ancient custom of God's people. The electioneering was proceeding as actively as ever; and the general impression was, that Henry Clay would be elected, although the democrats were working hard for his opponent, Polke. A destructive conflagration took place on the 25th ult. at Brooklyn, New York, by which property was consumed to the amount of 120,000 dollars, and twenty-six houses wholly or partially destroyed.

HAVANNAH.—At the time of the last advices the health of the city was good; the insurrectionary excitement had considerably subsided; and the negroes, particularly on the plantations, were peaceable, and the whole island seemed to be in a state of quiet. The investigations into the origin and objects of the late conspiracy among the blacks to get possession of the island, have been published. The council, after noticing the history of the events, proceeded to pronounce the sentence of the law. Thirteen of the principal leaders were condemned to death, and shot; 36 were sentenced to transportation, and imprisonment for ten years and under.

HAYTI.—There has been another revolution. A negro chief, bearing the familiar name of Santa Anna, though himself unknown to fame, was appointed president on the 10th of July.

The accounts from Mexico state that the requisition of the President for 30,000 troops and 4,000,000 dollars, had been granted after some tardy but warm discussion in the Congress.

EXECUTION OF THE SALADIN PIRATES.—Four of these men, having been convicted of piracy and murder, were executed on the 29th ult. They at first pleaded not guilty, but afterwards altered their plea. Two of them made written confessions, in which they both denied all participation in the murder of Captain Fielding's son, and one of them in that of Captain Fielding also. The remaining two of the six prisoners were acquitted, partly from the testimony in their favour given by those who were convicted.

The Cape of Good Hope papers received on Thursday extend to the 2nd of June, but they give very little interesting intelligence. The missionaries are said to have exercised much influence upon the natives from the Namaqualand district to the interior, and it seems to be believed that, if properly carried out, commercial inter-

course could be established with them, and the soil made profitable and productive.

By advice from Dominies to the 23rd of June, we learn that the insurrection had been quelled, and the operation of martial law suspended. The Governor had issued a proclamation of amnesty to all, with the exception of the ringleaders, 90 of whom had been retained in prison to undergo the decision of the laws, several hundreds having been discharged under the admonitory advice of the Governor. The islands had been overwhelmed with rains and floods, with great damage to the roads, &c. A singular discovery had been made in taking a census of the Island of Trinidad, being that of "two encampments of the aboriginal Indians of the island, belonging to a race perfectly distinct from any hitherto known."

The crops throughout Canada are represented to be abundant.

DOMESTIC.

The bulletins issued this week announce that her Majesty and the infant prince are going on as well as possible. A public meeting of the inhabitants of Manchester and Salford and their vicinities took place on Thursday, the 8th inst., in the Town-hall, for the purpose of taking the necessary preliminary steps towards the purchase of land for public parks, playgrounds, baths, &c. The meeting was numerous and respectfully attended. The donations were of the most liberal kind, nearly £11,000 being subscribed in the room. Among the most munificent donations were the following:—Lord Francis Egerton, £1000; Sir B. Haywood, £1000; Mark Philips, Esq., M.P., £1000; ditto, for the firm, £500; Sir T. Potter, £500; James Kershaw, Esq., ex-Mayor, £500; Alex. Key, Esq., Mayor, £200. At the Wesleyan Conference, recently held at Birmingham, it was announced that the late Rev. H. Moore, the surviving executor of John Wesley, had bequeathed to the Conference the pocket Bible used by the founder of Methodism in field-preaching, and presented to him by Mr. Wesley. The average cost, or price paid, for land and "compensation" of the railways in England, up to the present time, is £3000 per mile! The land and compensation of the Lancaster and Carlisle will be under £1000 per mile. So much for the change of feeling towards railways in the landed gentry.—*Railway Record*.—The national tribute to the memory of Scotland's great poet took place, at Ayr, on the banks of the Doon, on Tuesday week. It was attended by persons from all parts of Scotland, and by not a few from England. There was a procession in the morning, and a dinner in the afternoon, in a grand pavilion erected for the occasion. The Earl of Eglinton presided, and was assisted by Professor Wilson, as croupier. Amongst the individuals present were R. Burns, Esq., the eldest son of the poet, Colonel Burns, his second, and Major Burns, his youngest son. The whole of the proceedings were well conducted, and passed off in a manner satisfactory to all concerned. In the splendid establishment of Messrs. Horrocks and Co., of Preston, there are upwards of 1500 power-looms now at work, which have during the last year turned off nine million yards of cloth! The lineal measurement of the cloth is 5113 miles and 120 yards, and, being 42 inches wide, would cover more than 2169 statute acres! The Bishop of Exeter has sentenced the Rev. James Frederick Todd, vicar of Liskeard, to be suspended from his clerical functions for fourteen days, and to the costs of a suit instituted against him, for omitting to repeat the words, "as our hope in this our brother doth," in the office of the burial of the dead, whilst reading it over the remains of Benjamin Hart Lynce. The *Times*, in a recent article, designated Mr. Pritchard the late Consul at Tahiti. Mr. Pritchard, of Birmingham, has since stated, in a letter to the *Times*, that his brother still holds his commission. Several of the Irish counties have established clubs for the purpose of attending to the registration of Repeaters at the quarter sessions.—Lieut. Jeays, her Majesty's ship Albion, having been suspended, attempted to commit suicide on the passage from Dublin to Cork. Providentially, however, the attempt was not successful, and he is now in hospital at Hawkbowl, and likely to do well.—On Saturday Mr. G. J. Mills, Deputy Coroner for West Middlesex, held an inquest at the Duke of York, Queen-street, Edgeware-road, on the body of Harriett Jones, aged 41, a widow, late resident at the above street. Verdict, "That deceased hanged herself from extreme poverty." On Saturday week, a man named George Woodhead sold his wife by public auction in the butter and poultry market, Leeds. The woman, who is aged 22, was brought into the market-place with a rope round her neck; and the husband, who officiated as auctioneer, then put her up and "knocked her down" for 5s. to a collier named Idle. The affair had been previously arranged between the parties. The husband was threatened with rough treatment by the spectators, and was soon after arrested and compelled to find security for good behaviour. The woman, who had contracted a second marriage with Idle, will be tried for bigamy.—The first anniversary of La Société Française de Bienfaisance, which was established somewhat more than two years ago, for the purpose of relieving as much as possible the wants of poor French subjects in London, was celebrated on Thursday evening at the London Coffee-house, when about 150 gentlemen of rank and standing, both in the literary and commercial world, sat down to an admirable dinner prepared by Mr. Lovegrove.—Mr. Villiers has placed a notice on the order book of the House of Commons, that he will next session move for a select committee to inquire into the influence of the price of provisions on the employment and wages of the labouring classes.—The annual great cattle show of the Highland and Agricultural Society of Scotland commenced on Wednesday, the 7th instant, in the great commercial capital of the west, Glasgow. Thursday, the 8th inst., Catherine Brien and Bridget Langan were executed in front of Roscommon gaol. There were not less than 7000 persons present, and of these one-half, at least, were women. Catherine Brien on her way to the chapel laughed, and saluted those she met on her way to the execution room, and appeared in good health and spirits; she protested that she had neither hand, act, nor part in the murder, but did not deny that she knew of it. Bridget Langan, who appeared rather weak and depressed, admitted her guilt, and stated that she murdered her brother-in-law.—The act for the abolition of imprisonment for debt, which received the royal assent on Friday, the 9th inst., by commission, came into operation on Saturday, when a number of debtors who had been

imprisoned in the different metropolitan prisons for debts under £20 were liberated.—On Saturday Thomas Williamson, one of the most expert begging-letter writers in the Metropolis, and from whom Horsford, one of the officers of the Mendicity Society, has taken upwards of 100 ready-manufactured tales of woe, addressed to the "wealthy and the benevolent," which were headed with most attractive titles, such as "Dreadful Affliction," "Calamitous Loss from Fire," "Afflicting Reverse of Fortune," "Unparalleled Distress," and "Horrid and Melancholy Shipwreck," &c., was brought up before Mr. Traill, at Union-hall, charged with obtaining a sum of money under false pretences from Mr. Charles Payne Miller, Lambeth, by pretending that he was a broken-down tradesman, and that his father had met with a great calamity, and had broken his leg, by which means his family, which were once in opulent circumstances, and well known to the trade, were plunged into the severest distress. The case having been fully proved, the prisoner was sentenced to three months' hard labour in the House of Correction. So extensive were the operations of the prisoner, that he had a circular prepared to suit all classes of society, and he generally reaped an abundant harvest. The prisoner has supported himself by these means for the last ten years, and at times lived in the greatest style and extravagance. The contributions of the prisoner and his associates which they reaped from various persons are known to have averaged more than £500 per annum for the last six years.—The Tipperary papers report a horrid murder committed on the person of a stone-mason named Grenville, near the village of Shinrone. The murderers are supposed to be the brothers of a girl named Cahill, with whom deceased had had an improper intimacy, which led to the birth of a child, which he refused to support, and, it is said, otherwise treated her with cruel neglect.—On Wednesday, the 7th inst., a shepherd named Blunt was stung to death in the village of Haddenham, by a hive of bees which fastened upon him while he was endeavouring to drive them from a horse which they had attacked.—The docks at Hull are excessively crowded, and many vessels are lying out in the roads. The greatest activity prevails at all the quays and wharfs.—The trustees of the poor of the parish of St. Leonard's, Shore-ditch, have just offered a reward of twenty guineas for the apprehension of twenty heads of families who have deserted their wives and children, thus leaving nearly one hundred individuals chargeable to that parish.—In England there are 1075 cotton factories, employing 183,243 hands; in Scotland 159 factories and 32,580 hands; in Ireland 28 factories and 4011 hands.—*Glasgow National*.—The union of Pitmen still continues, but the arrival of new hands and those who are leaving the union are fast filling up the places of those declining to work. A large meeting of pitmen took place in the neighbourhood of Pitlington on Friday last, when they again declared their determination to continue the strike.—The Low Moor Iron Works were never busier than now in providing instruments of death and destruction. Daily, and during almost every hour of the day, waggons and carts are engaged in conveying heavy artillery and shot to the railway station at Brighouse or the canal station at Bradford.—*Leeds Mercury*.—Patrick Larkin, a letter-carrier at the General Post-office, was brought up at Bow-street on Tuesday, charged with stealing several letters which had been received at the General Post-office. From the evidence of the inspector of water-closets, the prisoner was seen to go into a water-closet and take from his pocket a quantity of letters, which he opened, taking out the contents, bills, cheques, the total of which amounted to about £700, &c, which he cast into the water. Other evidence was adduced, from which it appeared that some of the letters were addressed to Messrs. Glyn, Halifax, and Co., and Messrs. Barclay and Co., the bankers. The prisoner was remanded.—The Chancellor of the Exchequer has intimated that it is the intention of Government in future not to furnish a return of the stamps issued to each individual paper, but to give the aggregate of those used by all of them.—The bill for legalizing Art-Unions having passed both Houses of Parliament, the general meeting of subscribers for the distribution of the funds was on Tuesday held in the Theatre Royal, Drury-lane. The Duke of Cambridge presided, and the distribution of prizes took place.—Lord Powerscourt, formerly member for Bath, died on Sunday morning last of consumption at the Crown Hotel, Rochester. The deceased was 29 years of age.—A train left Dover on Sunday, at 6 p.m., composed of four first-class, six second-class, and 30 third-class carriages, in all 40 carriages, which were quite full. It contained at least 1400 people. The greater portion of these were, of course, those who had availed themselves of the excursion tickets.—Mr. Lewis Duval, the eminent conveyancer, died suddenly on Sunday evening last at his residence, Bayswater. Death was caused by the rupture of one of the principal bloodvessels of the heart.—The traffic on the London and Birmingham Railway for the week ending Saturday last produced the enormous sum of £22,067 16s. 5d., of which no less than £17,890 were derived from passengers alone. This is the largest amount ever taken in the same space of time upon any railway in the world. It is at the rate of £185 per mile.—Intelligence reached Ipswich on Monday, the 12th inst., of the total wreck of a schooner called the *Whim*, with all hands on board, consisting of the captain, mate, two seamen, and a boy.—On the night of Friday last, while a fishing-boat belonging to Thurso was riding at her nets in Murkle Bay, a large whale came up to the side of the boat, and lifted his head over the gunwale. One of the crew, who was at the time sitting lighting his pipe, was considerably injured. Fortunately another boat was speedily rowed to their assistance, otherwise the men would, in all probability, have perished. The mast and four oars were broken, and the boat had to be towed ashore. There were immense shoals of whales in the bay that night.—*John o' Groat Journal*.—On Saturday last a young man named James Ashworth was accidentally caught by a fly-wheel in the fulling-mill of Mr. Rawstron, in Rossendale, and was so frightfully crushed that when he was extricated he was found to be quite dead.—Prince William of Prussia, the Prince Royal of that kingdom, arrived on Wednesday at Woolwich in the Princess Alice steamer from Ostend.—A public funeral was given at Manchester on Monday last to the remains of Dr. Dalton. The mayor and corporation joined with the scientific friends of the late doctor in giving this public testimonial to his worth, and no less than 100 private carriages, including that of the corporation, and the various societies in the town, formed a part of the procession to the Ardwick Cemetery, where his re-

mains were interred. The shops and warehouses in the line of road to the place of interment were closed, presenting a marked desire to pay every respect to the philosopher's memory.—The great influx of vessels into the port of Gloucester has somewhat subsided, still the basin is nearly full at the present moment, and large arrivals are said to be expected. The activity at the docks has not diminished, and, as the warehouses there are quite full, every available building is being secured by the merchants. The quantity of wheat in the bonded stores is estimated at 40,000 quarters, and duty at 17s. a quarter was paid a few days since on 7000 quarters.—The usual weekly meeting of the Repeal Association took place on Monday. Mr. D. O'Connell, jun., stated that his father and the other prisoners continued to enjoy excellent health and spirits. He also stated that his father disapproved of Mr. Sheil's recent attempt to induce the Government to mitigate the term of imprisonment. The rent for the week exceeded £900.—The *Stafford Mercury* reports at much length the particulars of the murder of a young man, named William Cooper, son of Thomas Cooper, the gamekeeper of Sir T. Fletcher Boughby. The young man was fired at on the night of the 27th of July, as he was just entering his residence at Halmerend, two miles from Audley. The shot took effect in his breast, and proved almost instantaneously fatal. Some poachers are in custody on suspicion of being concerned in the murder.—Dr. Pusey preached, on Sunday last, in the church of Ilfracombe, on behalf of the National Schools, the first sermon he has delivered since his academical suspension, preached by the express permission of the bishop of the diocese (Exeter), given at the conference lately held by him there.—On Monday the friends of the Printers' Pension Society took an excursion per railway to Anerley-gardens, on behalf of the funds of this laudable institution. The company were highly respectable; and, notwithstanding the unfavourable state of the weather, enjoyed themselves to the fullest extent.—At Queen's-square, on Monday, in the case of a recruit who refused to take the oath of allegiance, Mr. Burrell stated that the act of Parliament gave magistrates the power of discharging persons who had hastily enlisted, if they had not taken the oath of allegiance, and made application to him to be released from the obligations into which they had entered within four days from the date of their enlistment. The magistrate refused to detain the recruit.—On Monday afternoon there was a last sale for the season at Monument-yard, of 5000 pineapples from the Bahamas. The fruit was of excellent quality, and the prices averaged from 1s. 6d. to 5s. each.—On Monday an inquest was held before Mr. Higgins, at the Coach and Horses, Avery-row, as to the death of Miss Elizabeth Allen, aged twenty, a pupil of Madame Ebery, of Grosvenor-street, the fashionable milliner. Mr. Robert Druett, of No. 6, Bruton-street, surgeon, in the course of his evidence stated, "that he had no doubt the stooping posture and tight-laced stays had brought on congestion of the vessels of the head, which no doubt was the cause of death. He had measured her corset, which was one foot eleven inches round, and on her body it would not meet in the smallest part by two inches." Verdict, "Died by the visitation of God."—Reports from various parts of Ireland represent the crops as exhibiting the most promising appearance. Notwithstanding very heavy falls of rain in many parts of the country, no damage had been done to the crops. Reaping had commenced, and become general in many districts.—Father Mathew is pursuing his benevolent labours in Cork county. On Sunday last he preached a charity sermon at the town of Newmarket, after which he administered the pledge to about 2000 persons.—Mr. Smith, who was wounded by the Hon. W. R. Touchet, has been pronounced out of danger, the pistol-ball having been extracted, bringing with it a portion of the lumber vertebrae. He is not, however, in a state to be removed, and the offender has been remanded for another fortnight.—One of the gamekeepers upon the Downton Castle estate found a hawk's nest, and shot one of the old ones, but could not take the other in the same way. He then tried to entrap it by placing one of its young ones in a hole in a brake, and setting a trap in the only entrance to the young one, which was tried thrice. It was nearly a week before he could accomplish his purpose, and in that short time the hawk brought fifteen young pheasants and one young partridge to its offspring.—*Hereford Times*.—At Swansea and other places the lists of parliamentary voters have been torn down or removed from the church and chapel doors, and, in one or two instances, the parties have been convicted and fined. The penalty for this offence is £2.—The West India merchants residing in Bristol have unanimously agreed to a resolution, thanking Mr. P. W. S. Miles, member for that city, for his parliamentary exertions on their behalf.—The Artesian well at Southampton has been completely successful. The water rises to within forty feet of the surface, and, by the aid of powerful steam-engines, no less than 55,000 gallons a day are poured into the town.—The secretary of the London City Mission has lately received £100 from a party signing himself "One desirous to put away every possible obstacle to innocence and holiness by way of restitution for any undue gains during an ardent pursuit of business."—Messrs. T. and H. Smith, of Edinburgh, have discovered an antidote for prussic acid, the fundamental feature of which is the presentation of oxidized iron to the deadly acid.—From a daily report of the estimated number of bathers in the Serpentine River, London, it appears that they exceeded 270,000 during the last and the present month; and that, during this period, thirty-one cases have been rescued, and fifteen taken to the receiving-house, where they were successfully restored from apparent death.—The National Society's special fund for the establishment of schools in the manufacturing and mining districts has now reached £152,246.—The *Dublin Evening Post* states, on the authority of its London correspondent, that the Queen is certainly to visit Ireland early next summer.—Sir John Guest, Bart., M.P., has lately received an order from Russia for 50,000 tons of iron, for the purpose of being employed in the construction of railways.—On Wednesday a numerous meeting of the London Missionary Society took place at Exeter-hall, for the purpose of expressing the sympathy of the society with their missionaries and missionary churches at Otaheite, as also with the Queen and natives of that island. The chair was taken by Frederick Smith, Esq. Several speeches were made and resolutions passed of a condemnatory of the conduct of the French; and a hope was expressed that the French would abandon their protestations, and return the island to its original indigenous population.—The

case of O'Connell v. the Queen, in error, will be taken into further consideration on Monday, the 2nd of September, when judgment will be pronounced.—On Monday last one of the leading Quakers and Dissenters of Liverpool were summoned to appear before the borough magistrates, to answer the complaint of the churchwardens for their refusal to pay the church-rates demanded of them. On their continued refusal to pay, distress warrants were ordered for their recovery.—A Roman Catholic cathedral, on a larger and more magnificent scale than any built in England since the Reformation, has been recently erected in Nottingham, and will be opened on Wednesday, the 28th inst.—The number of deaths in the Metropolis during the week ending Saturday, the 10th inst., amounted to 934; the weekly average of the last five summers having been 900, and of the last five years 946. The number of males that died during the last week was 473, and of females 461. Under 15 years of age, 835 died; from 15 and under 60 years, 310; and from 60 upwards, 151.—On Wednesday evening the Court of Directors of the East India Company gave a grand entertainment to celebrate the return of Sir Robert Sale and Sir William Nott to their native land. The latter was unable from indisposition to be present. Among the ladies present were Lady Sale and her daughter Mrs. Sturt. Most of her Majesty's Ministers attended.—The following return of the average yearly number of vessels of commerce, belonging to different nations, which touch at Tahiti, is from a quarter on which implicit reliance as to its accuracy may be placed. It will also show that France has less interest of a commercial kind in Tahiti than any other civilized state:—English merchant vessels, 80; American ditto, 110; French, 20.—*Globe*.—We understand that Mr. Benbow, the newly-elected M.P. for Dudley, has given the "magnificent donation" of fifty pounds, to be divided amongst all the charities in the town.—*Worcester Herald*.—A horrid murder was committed at High Eighon, Durham, on Saturday last. A young man, named Robson, while with a companion watching a potato field belonging to a Mrs. Mitcalfe which has suffered much depredation, was shot through the heart by some person unknown.—On Monday morning the 15th inst., a little before nine o'clock, one of the most serious explosions took place at the canal pit of Messrs. Blundell and Sons, Mesnes, Wigan, that has occurred in the neighbourhood for a considerable number of years past, and which has been attended with the loss of the lives of Thomas Worthington and a boy named Michael Ashcroft. An inquest was held, and a verdict of "Accidental death" returned, with a deodand upon the boiler and other apparatus, of £60.—The guardians of the Ennis Union have appointed a Protestant chaplain, at a salary of £25 per annum, to administer spiritual consolation to one Protestant pauper.—Game in Hampshire is unusually abundant this season.—The national show of cattle, and exhibition of agricultural implements and articles of Irish manufacture, founded by the Royal Agricultural Society of Ireland, commenced at Dublin on Wednesday, in the Coburg Gardens, eight acres of which were set apart for the purpose. A great number of the nobility and gentry, and several eminent agriculturists from England, attended.—A convict, named Thomas Bentley, under sentence of transportation, committed suicide on Thursday last, in Millbank Prison, by hanging himself.—Jane Miller, the wife of a cotton operative, residing in Bradshaw-street, Hulme, Manchester, was found, on Wednesday, barbarously murdered at her own and husband's residence. There is little doubt that the horrid deed has been perpetrated by a dissolute operative of the name of Evans, and that his object was to rob the premises.—A considerable number of appointments will be placed at the disposal of the Government, in consequence of the new act establishing the borough of Manchester as a place for the housing of goods under the bonding system for home consumption.—The execution of the murderer Weeks took place at Bodmin on Tuesday, at noon, at the county gaol. The unhappy man was reported several times to have died since the passing of the sentence dooming him to his miserable fate, and chiefly in a state of unconsciousness the time has glided away with him from that period to his final hour.—The yarn market continues in a very healthy state, and some descriptions, which are relatively scarce, command rather higher prices. In goods there has not been quite so much doing as during the two or three previous weeks, and 40-inch shirtings have been, in some cases, sold at a small reduction on previous rates; but other descriptions of cloth, though not in such extensive demand as before, are perfectly firm in price.—*Manchester Guardian*, Wednesday.—By the new convention between the British and Belgian Post-offices, the postage of letters between England and Belgium is reduced to 1s. for the whole distance; of which sum Belgium will take 5d., and England 7d. This is a reduction of more than half of the present rate. The pre-payment will be optional.—From a balance-sheet of the public income and expenditure just published for the past year, it appears that the former was £52,547,508, and the latter £50,777,427, showing an excess of income over expenditure of £1,770,080.—Mr. Micklethwaite, of Wakefield, manufacturer, gave all the men and children employed in his factory and colliery a trip to Hull, by railway, on Monday last.—The grand sum total of the expenses incurred in printing all parliamentary papers, bills, and documents, during the session of 1842, amounted to £37,885 19s. 8d.—Fourteen out of eighteen persons who were gathering sea-weed at Jersey, last week, perished during a gale.

WHITEHAVEN.—In consequence of the universally great interest which was excited on Wednesday evening, the 30th ult., at the Temperance Hall, Mr. Falvey, the gifted Anti-Corn-Law advocate, gave a second lecture on Monday evening last, at the theatre, to a numerous and highly respectable audience, who listened to him with the most marked attention throughout. Ralph Forster, Esq., presided.—*Whitehaven Herald*.—INCOME AND RESOURCES OF MOROCCO.—A work by Don Serafin Calderon, giving a considerable amount of statistical information relative to the empire of Morocco, has lately appeared in Madrid. At the present moment public attention is so anxiously directed to that country, that any information relating to it will be read with interest. The annual revenues of the empire are stated to amount to 2,000,000 piastres, and the expenses not to exceed 900,000 piastres. This excess of more than a million of piastres goes to swell the amount of treasure deposited in Mequinez, or, as it is otherwise called "Mequinez," that is, the House of Treasure. This fund is stated to belong rather to the Emperor himself than to the public treasury. The annual expenses of the land and sea forces are put down as only 68,000 piastres. The comparative smallness of this sum is explained by the fact that a great portion of the army is formed of free and irregular troops, and paid, not out of the imperial, but out of different local revenues. The active army is stated to amount at present to about 16,000 men. Of these about one half are blacks, and there are about 2000 artillerymen in the empire. The maritime forces of Morocco, once so powerful, have dwindled down to three brigs and some gunboats, which are stationed at the mouths of the principal rivers along the coast. The number of officers and men employed in the maritime department does not exceed 1800. The riches of the pachas of the different provinces, principally amassed by extortion and the most despotical exercise of power, are described to be considerable.

FOREIGN CORN.—The *Gazette* of Friday night, the 9th inst., shows that the arrivals and clearances of wheat continue very large. In this week the imports amount to 83,769 quarters, of which upwards of 20,000 quarters are from Canada, and the large quantity of 225,944 quarters have paid duty. The duties received for corn in the week amount to £176,142. The duty will now rapidly rise to 20s., and it is supposed that a large quantity will pay the present duty of 18s. The prices are rapidly falling. The average for the week, which includes sales only up to Saturday, the 27th July, has fallen to 51s.; and next week's average will be much lower, as the great fall took place in the week from that day to August 3. The *Gazette*, even up to that date, contains returns as low as 43s., and several at 46s. per quarter; one return (Chester) is as high as 61s.

STATE OF AGRICULTURE ABOUT BRADFORD.—Within a very short distance of Bradford we observed the other day six or seven entrances to fields in which cows were grazing made up with cobble stones instead of gates; and in one instance we saw the herdsman pull one of these old-fashioned gates to pieces to let the cows out! This fact is surely worth mentioning at some of the agricultural meetings.—*Bradford Observer*.—HOW TO ARRIVE AT TRUTH.—Every one must at once see, that a simple and sincere desire to arrive at the truth, without any predilection in favour of any opinion whatever, and without any other disturbing feeling of affection or dislike, or hope or fear, is the moral state of mind most favourable to the success of inquiry. If a man is possessed with a desire to find a given opinion true, or to confirm himself in a doctrine which he already entertains, he will, in all probability, pay a partial attention to the arguments and evidence in its favour, to the neglect of opposite considerations; but if he is free from all wishes of this kind, if he has no predilection to gratify, if his desires are directed solely to the attainment of correct views, he will naturally search for information, wherever it is likely to present itself; he will be without motive for partiality, and susceptible of the full force of evidence.—*Essays on the Pursuit of Truth*.

DIGNITY OF LABOUR.—I have faith in labour, and I see the goodness of God in placing us in a world where labour alone can keep us alive. I would not change, if I could, our subjection to physical laws, our exposure to hunger and cold, and the necessity of constant conflicts with the material world. I would not, if I could, so temper the elements that they should infuse into us only grateful sensations, that they should make vegetation so exuberant as to anticipate every want, and the minerals so ductile as to offer no resistance to our strength or skill. Such a world would make a contemptible race. Man owes his growth, his energy, chiefly to that striving of the will, that conflict with difficulty, which we call effort. Easy, pleasant work does not make robust minds, does not give men such a consciousness of their powers, does not train to endurance, to perseverance, to steady force of will—that force without which all other acquisitions avail nothing.—*Channing*.

LABOUR A CONSOLER.—There is a perennial nobleness, and even sacredness, in work. Were he ever so benighted, forgetful of his high calling, there is always hope in a man that actually and earnestly works; in idleness alone is there perpetual despair. Doubt, desire, sorrow, remorse, indignation, despair itself—all these, like hell-dogs, lie beleaguering the soul of the poor day-labourer as of every man; but he bends himself with free valour against his task, and all these are stifled—all these shrink murmuring far off into their caves.—*Thomas Carlyle*.—FREE AND SLAVE LABOUR.—A statement before us gives the production of coffee throughout the world in the year 1843, and from which it appears that, in Brazil, the quantity was 170,000,000 lbs.; in Java, 140,000,000 lbs.; in Cuba, 45,000,000 lbs.; in St. Domingo, 38,000,000 lbs.; in Porto Rico and La Guayra, 36,000,000 lbs.; in the British West Indies, 10,000,000 lbs.; in Ceylon, 7,000,000 lbs.; in the East Indies and Mocha, 6,000,000 lbs.; in the French colonies, 4,000,000 lbs.; and in the Dutch West Indies, 3,000,000 lbs.; making the grand total 459,000,000 lbs. It is worthy of remark, that of this immense quantity we can scarcely estimate above 59,000,000 lbs. as being the produce of free labour; a striking proof of the fetters which we must impose upon our foreign trade, if we do not temper our valour with something like discretion in the just crusade against slavery.—*Globe*.—BLACKS IN OFFICE.—The Chief Justice of Dominica, Glanville, is a mulatto; Sharp, the Attorney-General for Barbadoes, is a mulatto; Garraway, Judge of the Court of Appeals in Barbadoes, is a mulatto; the Governor of Nevis is a mulatto; thirty-two editors of newspapers in the British West India colonies are negroes and mulattoes; twenty-one magistrates are mulattoes; in all the Legislative Councils and Houses of Representatives there are no less than seventy-two mulattoes and two negroes making laws for their former masters—the whites. Two-thirds of the army or garrison in those colonies are already composed of African soldiers, commanded by white officers. The Church is also abundantly supplied with black and mulatto clergymen; the jurymen are almost wholly composed of negroes and mulattoes.—*Da Costa's "Facts for the People"*.

MANUFACTURE OF WATCHES AT GENEVA.—The manufacture of watches, musical boxes, and jewellery, is that to which Geneva owes its present prosperity. Upwards of fifty workshops devoted to watchmaking, and seventy to the jeweller's trade, are kept in constant employment; and it has been calculated that in good years 75,000 ounces of gold, 5000 marks of silver, and precious stones to the value of a million of francs are used in them. One hundred thousand watches are said to be now annually manufactured in Geneva.

MACHINERY.—By the New Factory Act, which will come into operation on the 1st of October next, it is enacted that every fly wheel directly connected with the steam engine, water wheel, or other mechanical power, whether in the engine house or not, and every part of a steam engine and water wheel, and every hoist or tackle, near to which children or young persons are liable to pass or be employed, and every shaft, whether upright, oblique, or horizontal, and every wheel, drum, or pulley, by which the motion of the first moving power is communicated to any machine appertaining to the manufacturing process, shall be securely fenced; and every wheel race not otherwise secured shall be fenced close to the edge of the wheel race.

INSOLVENCY AND BANKRUPTCY ACT.—Among the most important provisions in the new act to amend the law of insolvency, bankruptcy, and execution, are those by which arrest upon final process upon any judgment obtained in any of her Majesty's superior courts, or in any county court, court of requests, or other inferior court, in any action for the recovery of any debt whereof the sum recovered shall not exceed the sum of £20, exclusive of the costs recovered by such judgment, is abolished; and persons now in execution upon any such judgment—that is, where the debt recovered does not exceed £20 exclusive of costs—may, by application to a judge of one of her Majesty's superior courts of law at Westminster, or to the court in which the judgment was obtained, be forthwith discharged out of custody as to such execution, by an order of such judge or court.—*Sun*.—THE WORKING MAN'S FRIENDS.—Little indeed is attempted to ameliorate the condition of the labourer; on the other hand, the manufacturers are becoming daily more anxious after the welfare of the artisan—a project to provide for them walks, parks, and playgrounds, at Manchester, at a cost of £50,000, has met with the support and approbation of all the leading men in that town, and £10,000 was subscribed in one day to carry the plan into effect. Ten thousand pounds, in a few hours, and by a few individuals!—a larger sum than would be subscribed by the agriculturists of any half dozen counties in England. This is sufficient to show that, whilst discontent and disaffection are fomenting amongst one class, in another the wealthy and the influential are doing all in their power to check it—to procure for those under them plenty, and to promote their happiness and comfort.—*Worcester Chronicle*.

REGISTRATION.—The number of borough electors for the township of Bradford on the overseers' list is 1174, and of county electors 771.

HALIFAX POLLING DISTRICT.—The Tories have made 40 new claims, and the Liberals 110. There are 3 at present doubtful, but giving the Tories the benefit of them, it leaves a preponderance of 67 to the Liberals. The above return is exclusive of the townships of Elland, Greetland, Fixby, and Rastrick, in which, too, there will be, on the whole, a gain to the Liberal cause.—*Leeds Mercury*.

PRICE OF BARLEY IN 1734-5.—In the diary of William Medley, of Plinton (in Holderness), gentleman, is the following curious entry:—"April 4 and 5, 1734. I did sow 5 lands over Pithill with one quarter and four bushels of barley, sowed about half a peck, and I had 113 stacks of barley and rakings of them all, besides which I had 15 quarters and three bushels. I sold my barley to Nicholas Foster, of Hull, at 14s. a quarter, Jan. 3, 1734-5."

A BAD HARVEST AND THE SLIDING SCALE.—Another great injustice, worked by the sliding scale, is, that a bad harvest is as expensive to the farmer as a good harvest, and the sliding scale throws the whole loss of a bad harvest on the farmer. In all other trades the cost of production varies with the quantity produced. Thus, two pairs of shoes cost the shoemaker twice as much as one. The farmer, however, pays quite as much, or nearly so, when his farm produces fifty quarters only as when it produces a hundred. To get his fair rate of profit, therefore, he must charge as much for the fifty quarters as for the hundred, and this he would naturally do; but the sliding scale steps in and says, "If you cannot produce cheap corn, you must, at least, sell it cheap; if the harvest be a bad one, you must bear the loss yourself; the price of your corn must be no higher than if it had been a good one." The sliding scale cannot survive a bad harvest.—*Baring Kemp on the Science of Trade*.

FREE-TRADE AND WAR.—Viewed in relation to war, the adoption of Free Trade thus becomes a question of vast magnitude. Bind the masses of the nations of the world together by the ties of mutual interest, and legislators and kings will find it both difficult and dangerous to commence the murderous conflicts which insatiable ambition or offended pride may urge them to undertake. To contend for peace on the ground of self-interest, some persons may believe, is a low consideration; but then people often comprehend what has relation to their interests, though they may not comprehend that which has relation to their duty; and after all, what does such an argument amount to, but that people's duty and interest invariably coincide.—*Bolton Free Press*.

WHERE IS THE OVER-PRODUCTION NOW?—The production of cotton cloth was never so large as at present, and yet the nonsensical cry about over-production has entirely ceased. This shows clearly that it was a deficient consumption, and not over-production, that ought to have been complained of.—*Struggle*.

HEALTH OF TOWNS.—Lord Normanby stated in his speech on this subject, that Mr. Chadwick had ascertained that upwards of 50,000 persons perished annually from diseases which could be removed by better sanitary regulations. It is also stated in the report issued by the commission of inquiry, that in fifty towns, whose population amounted to 2,051,709 in 1841, 21,000 deaths had occurred annually, caused by maladies induced from neglect of sanitary laws!

In the form of substantial food, Mr. Chadwick states, the transported thief receives in a week 330 oz.; the convicted thief, 231; the suspected thief, 181; the soldier, 168; the able-bodied pauper, 151; and the independent labourer, 122.

The present Parliament has this month completed its third year, and during that period there have been no fewer than 131 fresh elections, occasioned by deaths, resignations, elections to offices, &c.

WAR PRICES.

(From the Economist.)

There has always appeared to us to be a great fallacy involved in the notion so prevalent that high prices necessarily and naturally arise from the country being in a state of war. We are disposed to think that, in the absence of any other good cause for high prices, the tendency would rather be to lower prices. It is quite true that, from the end of the last century, for some years prices rapidly rose, but there were then many reasons in operation independent of war. The discovery of the steam engine began only at that time to produce a marked effect on the productive power of the country, which induced a more rapid increase of population than at any former period—a consequent increase in the demand for the productions of the soil, and of the value of property. Then, again, during the early part of the present century, the advance in the value of property and of prices was more nominal than real, in consequence of the depreciation in the value of the currency from 1800 to 1815. In 1800 the price of gold was at par, £3 17s. 10½d. per oz., but in 1814 it had risen to £5 4s. per oz.—showing a depreciation in our currency of more than 25 per cent.; and immediately after the peace it rapidly sunk, until, in 1817, it was only £4.—showing a depreciation of little more than 2½ per cent., long before Peel's bill of 1819 compelled a return to cash payments. There is much, therefore, in this element alone to account for the rapid rise of prices from 1800 to 1814, during the war, and for the sudden fall from 1815 to 1817. Another reason for unusually high prices during those years, was the frequent recurrence of bad harvests. Apart from all other disturbing causes, we believe it is capable of proof that the value of property has advanced much faster during the late years of peace than it did during the war. In a recent article on the progress of the value of the real property of the country, we showed that the annual income derived therefrom had increased from 1815 to 1843 upwards of £30,000,000, or 62 per cent.

Now, when it is considered that the value of property must in a great measure depend on the productive power and income of the country, it cannot but be that any material portion of that income, being withdrawn to other countries for the purpose of maintaining troops, or spent at home in the numerous unproductive ways which war necessarily entails, must not only lessen the aggregate value of the property of the country, but must also limit the expenditure at home, the amount of which has much to do in fixing prices. At first sight it may appear that a government might, by borrowing the funds required to conduct a war—at least for a time—sustain an expenditure and induce a consumption greater than would otherwise have taken place; but it must be borne in mind, that if such fund was borrowed in the country, it would be a withdrawal of so much capital from other employment or from that seeking other employment; that a corresponding check to production and industry would thus be given, and to that extent cause a contraction in the power of purchase and demand for commodities. The only conceivable way in which the expenditure of a war—and then only such part as might be spent at home—could increase the value of property, or really enhance prices, would be, if the fund were derived from another independent source.

A war could not fail to interrupt our foreign trade; an interruption to that could not fail to lessen the demand for labour in the manufacturing districts; and, with a lessened employment, the home consumption of every article, both of foreign and home products, must necessarily be lowered; but more particularly the latter. It is possible, nay probable, that with the interruption of trade the supply of foreign products would fall off proportionably to the diminished demand, and that prices would not be materially lowered; but we think it clear, beyond doubt, that the prices of products, wholly or very mainly produced at home, would rather fall. The home-producer would therefore be called upon to pay higher for the products of foreign countries which he required, while he would receive less for what he himself produced. We believe there are no classes that would, as this country is now constituted, suffer more from an interruption to peace than the agricultural classes. It would indeed be singular, if the lavish waste of labour and treasure attendant on war had any other than an injurious tendency on the wealth and condition of the productive classes of a country. The common notion attached to war prices is a dangerous and delusive dream.
