It also appears that between 1805 and 1843 the rent of Castle Acre, the focus of all this moral degradation and physical suffering, has increased 696 per cent. Mr. Denison's explanation throws light upon this rise as regards Castle Acre itself, showing that it is in part owing to the exorbitant cottage rents. He says:—"The competition caused by these new comers raises the house-rent throughout the parish; and, as they are at the mercy of those who have land at Castle Acre, they are forced to pay exorbitant rents for very wretched dwellings;"* and Mr. Bloom informs us that "the increasing population of the place, and the frequent transfer of copyhold from seller to purchaser, render the manorial privileges of the parish of some importance to their owners."† No doubt they do; but in this instance, unfortunately, the lucre partakes not a little of the nature of that which arises from the rent of houses of such a description that the proprietors of them do not usually boast of their gains, though they do not pocket them the less on that account.

By the statute 53 Geo. III., c. 40 (1813), the power of the justices of the peace or magistrates of cities or boroughs in England and Scotland to settle wages is taken away: so that the labour market may be now said to be by law free in Great Britain. But, though free from the interference of laws made for the express purpose of interference with it, the agricultural labour market is still not free from the vexatious operation of other laws, which, though not made expressly for that object, exercise a vast influence on the welfare of the labourer.

CONCLUSION.

We must now take a short review of the ground we have gone over, and endeavour to learn what results we have obtained. It appears, from the large body of evidence stated in the preceding pages:—

1. That in the 13th, 14th, and 15th centuries, the wages of the agricultural labourer in England were such as to procure for him more than double the quantity of food which his wages between 1740 and 1794 procured; and that the wages obtained by him from 1834 to the present time, as measured by the quantity of produce, are considerably less than in the period between 1740 and 1794.

2. That from about the middle of the 14th till towards the middle of the 18th century, the wages of the agricultural labourer were fixed, or regulated by successive statutes, or by the justices of the peace acting under the authority of the statutes; the preamble to the statute 12 Richard II., c. 4, assigning as a reason for this "regulation" of wages, that the labourers would not work without "outrageous and excessive hire, by reason of which high price of labour the tenants of the land could not pay their rents."

3. That in consequence of the great fall in the value of money in the course of the 16th century (caused partly by the degradation of the coin, partly by the fall in the real value of the precious metals), and the corresponding rise in the price of all other commodities except labour, the wages of labour being violently kept down by act of Parliament, towards the end of the 16th and about the beginning of the 17th century, the wages of the agricultural labourer did not procure him above a third of the quantity of food which they procured him in the 15th century. That during the 18th century, until 1794, a progressive increase took place in the wages of the agricultural labourer, without a corresponding rise in the cost of subsistence. That after 1794 a considerable rise took place in the cost of subsistence, without a corresponding rise in the wages of the agricultural labourer.

4. That, after the extraordinary rise in the price of pro-

visions which took place in the 16th century, the Legislature, as the labourer could not support a family on the wages they allowed him, made up the difference by a tax called a poor-rate. That, part of this tax in aid of wages being levied on persons who were neither employers of labour nor receivers of rent, the farmer, having to pay less in wages, could and did pay more in rent. That, therefore, such increase of rent was nothing but a tax paid by the rest of the community, not to the state, but to the receivers of rent. That a similar operation, to a still greater extent, was repeated towards the end of the 18th century, when, in 1795, upon the extraordinary rise in the price of food, the county magistrates again exercised their authority under the statute 5 Elizabeth, c. 4, to fix the rate of wages; which they did in such a manner that a practice was established throughout the greater part of England (sanctioned by the statute 36 Geo. III., c. 23) of paying the labourers, not according to the value of their labour, but according to their necessities, whereby they were reduced to the condition of paupers. That under this system, a large portion of the wages of agricultural labour being paid out of the poor-rates, persons who were neither employers of labour nor receivers of rent were taxed to a much greater extent than they had been before, that the farmer might be enabled to pay more than the natural rent of the land.

5. That, from 1795 to 1834, in pursuance of the above system, the farmers, particularly in the midland and southern counties, refusing to employ the labourers as long as they possessed any property; the class of small proprietors was almost wholly swept away in the purely agricultural districts.

6. That, under the combined operation of the Poor Law of 1796 and the Corn Law of 1815, the wages of agricultural labour were lower, and the condition of the agricultural labourer was worse, than at any former period, except that in which the poor law of Elizabeth was passed. That the temporary rise in the wages of agricultural labour which took place in 1832, 1833, being caused by the agricultural riots and burnings of 1830 and 1831, cannot be assumed as a correct index of an improvement in the condition of the agricultural labourer.

7. That, under the combined operation of the poor law of 1834 and the present Corn Law, the wages of the agricultural labourer have not risen, and his physical condition, at least, has not improved. That, therefore, the poor law of 1796 was not, as has been alleged, the sole cause of the wretched condition of the English agricultural labourers.

8. That in the thirteenth century the rent of land in England did not amount to much more than one-thirteenth of the gross produce; that in the sixteenth century it amounted to one-tenth; in the eighteenth century to one-fifth; and that in the nineteenth century it amounts to nearly one-third of the gross, or to nearly one-half of the disposable produce. That, while such is the proportion of the share of the produce set apart for rent, the actual value of that share has increased nearly tenfold within the last two centuries, or a little more.

9. That from 1695, or rather from 1770, to 1815, rents increased in a very great degree; that from 1815 to 1843 there has been, upon the whole, an average increase; and that the average rise has been the greatest in those districts where the condition of the labourer is the worst.

10. That under the Corn Law of 1815 and the subsequent Corn Laws, all professedly made for the benefit of the farmer, the profits of the farmer have been greatly reduced, and his capital has been and is rapidly wasting away. That the capital of the farmer, or the fund from which the farm-labourers are to be paid, being diminished, the wages or share of each labourer must likewise be diminished.

THE LEAGUE AND THE LANDLORDS.—Dread of the League is at the bottom of all the solicitude shown by landlords for the welfare of their tenants during the year—dread of the League impels landlords to turn their attention to allotments—and nothing but dread of the League has caused all England to be now agitated with plans for the relief of the agricultural poor.—*Hull Advertiser*.

THE LEAGUE BAZAAR.—The Council of the League have announced that the Bazaar, which was intended to be held last summer, and which it was found necessary to postpone, is to be held in Covent Garden Theatre, London, next May. It cannot be necessary, at this time of day, to explain the object of this undertaking; and its claims, on the support especially of the ladies, are so forcibly and succinctly stated in the prospectus as to leave nothing to be said. The scheme is, we understand, the suggestion of the ladies of Manchester, and on the co-operation of the ladies of other districts its success must mainly depend. We earnestly hope that the ladies of Scotland who approve of the object will not be found wanting on this occasion, and sure we are that in no cause could their aid be more gracefully or appropriately given. The warm and active zeal which, on a former occasion, many of the ladies of Edinburgh displayed in this cause, has, we doubt not, neither evaporated nor cooled; and the ladies of Glasgow, of Paisley, of Dundee, and of other towns and districts where Free-Trade principles are understood and cherished (and there are few districts which that description does not now include) will, it may be hoped, not be behind in the good work.—*Edinburgh Weekly Chronicle*.—Our readers will see that the postponed Bazaar on behalf of the League is now revived. No town can contribute manufactures more suitable or more valuable to the Bazaar than Sheffield; and we trust our townspeople, both male and female, will do themselves honour by their contributions to this national Bazaar.—*Sheffield Independent*.

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, November 27, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the LEAGUE of the Saturday immediately succeeding, but are included in the list of the week following.

THE NEXT ELECTION.

(From the Wesleyan Chronicle.)

"I think our landlords made a great mistake when they retained the forty-shilling freehold qualification: and, mark my words, it is a rod in pickle for them."—*Cobden.*

By an un repealed statute every man who possesses a freehold, of the clear annual value of forty shillings, is entitled to a county vote. This fact, so important in its consequences to public liberty, has remained unnoticed. An earnest cry has been raised in the country for an extension of the suffrage; but no one took notice of the fact that, by this statute, it is in the power of thousands to enfranchise themselves. Thanks to the energetic and faithful, though quiet, labours of the League, the fact is now published through the length and breadth of the land. The League has shown the people of England in what way they may most legally make a key which will open the locks of their prison-house. British citizens may now be free: ay, and may free themselves, and thereby not be under the disagreeable necessity of thanking their oppressors for relaxing their tyranny. Britons may have the franchise extended whether class legislators will it or not it.

How is it to be done? Purchase a freehold of £50 value, and you are immediately entitled to a vote. And this vote will go as far as the vote of the country squire or of the landed legislator who owns 100,000 acres. The votes of the 30,000 landed proprietors must be swamped. They do as they will with their own: and it is their will to legislate for the few at the expense of the many. Again, we say, these votes must be swamped by the people's votes; and this plan will swamp them.

How can it be done? Thousands of the masses. Many who already have a vote in one county, may, by purchasing a freehold of this trifling value, in another county, have an additional vote at an election. The superior classes of operatives have it in their power thus to emancipate themselves and their children. Not a few of these are laying by money from year to year, against a rainy day in savings' banks or elsewhere. Can they do better than make the purchase of such a freehold, which will return them good interest, which they can at any time dispose of, and which will give them, in addition, a vote at the county election? We cannot think of a safer or more advantageous investment than a mechanic and operative, or a tradesman, can make.

How soon an election may take place, none, in the present state of parties, can tell. The people should be prepared; their arms should be ready piled. God, in his providence, has given us great power. Let us then use it. "To him that knoweth to do good, and doeth it not, to him it is sin." Let no man sin against his God and his country, by despising his birthright. Let each that can, make use of this 40s. freehold qualification without delay. Let it be done before January 31st. And let no man who purposely omits availing himself of this power, secretly curse the monopolists for the wrongs they inflict upon the nation; but let him reproach himself as one who would be likely to sell his dearest privileges for "a morsel of pottage."

LETTERS ON THE CORN LAWS, No. IX.

TO SIR E. L. BULWER-LITTON, BART.

SIR.—Is apology necessary for addressing to you a letter on the Anti-Corn-Law agitation? If so, I find it in your political career, ere long, I trust, to be resumed with the spirit unchanged by which it was animated; I find it in your literary position, a commanding and princely one, and made unrivalled by the degree in which your works blend the pursuit of the good with the enjoyment of the beautiful; and I find it in the fact that you are the author of "England and the English," and of "The Last of the Barons"—one, the most striking delineation which has been produced of our present condition, and the other, a masterly tracing to its source the conflict between the new and old, by which that condition is characterised. To whom can a Free-Trade, pleading for the enfranchisement of national industry, address himself with greater fitness than to the writer of the following passage, in the first book of "England and the English?"—

"I think, however, that I need take no pains to prove the next characteristic of the English people—a characteristic that I shall but just touch upon—viz., their wonderful spirit of industry. This has been the saving principle of the nation, counteracting the errors of our laws, and the imperfections of our constitution. We have been a great people, because we have been always active; and a moral people, because we have not left ourselves time to be vicious. Industry is, in a word, the distinguishing quality of our nation—the pervading genius of our riches, our grandeur, and our power!"

"Every great people has its main principle of greatness—some one quality—the developing, and tracing, and feeding, and watching of which has made it great. * * * With France that principle is the love of glory; with America it is the love of liberty; with England it is the love of action—the safest and most comprehensive principle of the three, for it gains glory without seeking it too madly, and it requires liberty in order to exist. * * *

"When we have once discovered the national quality which has chiefly made a nation great, we cannot too warmly foster, and too largely encourage it; we should break down all barriers that oppose it; foresee, and sometimes destroy, all principles that are likely to check or prevent it. It is the Vestal Fire, which daily and nightly we must keep alive; and we should consider all our prosperity to be coupled with its existence. Thus, then, if industry be the principle of our power, we cannot too zealously guard it from all obstacle, or too extensively widen the sphere for its exertions: a truth which our statesmen have, to be sure, diligently cultivated by poor laws that encourage idleness; and bounties, prohibitions, and monopolies, that cut away the sinews of action."

This is only one out of many admirable passages in a work so full of political philosophy and precision that every year which has elapsed from the date of its publication has increased its interest. If more be required as a reason for the use of your name at this particular juncture of the Anti-Corn-Law agitation, I may refer to an expression of yours when the Whig Cabinet made the question of the Corn Laws an open one: "By that move they have lost the counties." It is the recovery of these same lost counties that is now in question: not their restoration to the ranks of party, but their redemption from the grasp of class monopoly.

The county suffrage is capable of an extension not easily calculated. Every annual forty shillings' worth of freehold land or building is a vote in posse. The little shopkeeper, or the frugal and thriving artisan, may become a county voter. No organic change is required, nor any manufacture of forged votes, to create county constituencies that will acknowledge no allegiance to the present county dictators. An immense mass of property, entitled by law to representation, has hitherto, from ignorance, indolence, or indifference, been left without that sort of legal protection implied in the suffrage. To stimulate those who have the means to become purchasers of the qualification, and those who possess it to claim their right, are the present objects of the Anti-Corn-Law League. In the towns they seek the independent spirit that will counteract the abuses of territorial influence. Already is it apparent that registration lists, enlarged and purged as the law warrants, are tantamount to a representative revolution. The process is completed in Lancashire, progressing in Yorkshire, commencing in Middlesex, and contemplated in Surrey. Rapidly will it spread, even for the next registration, into other counties—all counties in which there is much of a town population; and everywhere must the magnates of the bread-taxing prepare themselves for electoral strife, frequently for signal defeat, on their hitherto undisputed territory. They have counted about agricultural protection until the portent of agricultural democracy is in course of generation.

There is every probability, if the plans of the League continue—as assuredly they will continue—to be vigorously pursued, that the next Parliament will exhibit an array of the members for many of the largest counties and most of the great towns, on the side of Free Trade. The main strength of monopoly will consist of members for the small and venal constituencies, the pocket boroughs. Can a contest between such parties be long protracted? Any attempt to prolong so flagrant an outrage on public decency would raise a tempest which Free-Trade reform must fail to appease unless accompanied by

organic changes, in the representative system, to prevent the recurrence of so shameful an anomaly.

By this move, then, the counties are won. Won for the Whigs, if the Whigs please to accept the counties and Free Trade together; and if not, not. Won for Sir Robert Peel should he be sufficiently tired of his thralldom to throw off the yoke which evidently frets his spirit, and follow the suggestion of his true path to the honours of statesmanship marked out for him in "England and the English." The opportunity you have there described is now far more easily within his grasp:—

"It is one of the phenomena of our aristocratic customs, that a man especially marked out by birth and circumstance to be the leader of the popular, should be the defender of the oligarchical party. Sprung from the people, he identifies himself with the patricians. His pure and cold moral character, untinctured by the vices, unseduced by the pursuits, of an aristocracy, seems to ally him naturally to the decorous respectabilities of the great middle class to which his connexions attach him; and even ambition might suggest that his wealth would have made him the first of the one class, though it elevates him to no distinction in the other. Had he placed himself in his natural position among the ranks of the people, he would have been undeniably what he now just fails of being—a GREAT MAN. He would not have been Secretary for Ireland at so early an age, but he would now have been Prime Minister, or what is a higher position, the leader and centre of the moral power of England. As it is, he has knitted himself to a cause which requires passion in its defenders, and is regarded with suspicion by his allies, because he supports it with discretion."

The "suspicious" of 1835 have become the reproaches of 1844. And in the interval a new power has arisen, independent of Whig or Tory politics, and capable of honourable junction with any honest political elements. Nay more: capable of absorbing and obliterating all existing party demarcations, and of marshalling the battle, compared with which all others are but sham fights, between the one great public interest and the mightiest of class interests.

The commercial towns, the great trading communities of the empire, are in a position analogous to that of the period so graphically portrayed in your "Last of the Barons." Industry and Invention working out their original question with Feudalism. Again flies the serf of the fields for shelter to the city. Again is growing wealth at war with noble blood. Tactics have changed. "The age of chivalry is gone." And so is that of the importance of civic charters. Knights and barons have become traders in land; but still their aim is to make the artisan of the towns work for them without due remuneration. Parliamentary parchment is their banner; the broad seal their shield; and the Custom-house their fortress. It is truly an ignoble warfare, but they wage it as of yore, and the citizens again cry "clubs," to the rescue. Our modern clubs, if the League may be so called, strike harder blows than those of old London. Legislation, like military aggression, has advanced to the point of reaction. The invasion of the towns is retorted upon the counties. Free Trade will send forth its trainbands of freeholders to repel baronial retainers; even the tenantry, that have been scourged to the poll like droves of oxen to market, will learn the lesson of independence. Ownership of the soil will be taught that it does not convey the lordship over political conscience.

The "national party" which you desiderated is arising. Should opposing leaders in Parliament continue to stand aloof, to temporize and compromise, and to coquet with the unconvinced and unmanageable champions of monopoly in food, then that party must find and mature its own leaders. Its objects are national interests. Its indomitable strength consists in being the embodiment of what you justly describe as constituting national character. It cannot fail for want of leaders. It will make them. Substance never perishes for lack of form.

You are isolated from active politics, and have taken leave of fictitious composition. But the world will not believe that you have broken the wand or buried the book whose magic has so often proved its fascination. Should the analysis of national character, or the philosophy of national history, again occupy your pen, what materials have been furnished, by this continued struggle, since last you speculated on "England and the English." You may then describe how this agitation was conceived, not in the passionate assembly of the populous, or in the secret haunt of the demagogue, but in the counting-house, the factory, and the exchange: how men of business, in their peaceful calling, were driven by events to philosophize on the operation of laws and the mischief of commercial prohibitions: how they devoted themselves, their wealth largely, their time and toil unsparringly, to the redress of the evil: how the subject expanded in their minds, until from complaints of a partial injury they became the champions of a universal principle, assertors of the sacred rights of industry: how their crusade proceeded with no violence, but throughout the land they and their coadjutors and agents wrought by instruction, winning the listening ear of crowds to a science which had failed of fixing due attention in the most highly educated; how, their petitions to Parliament disregarded, though signed by unprecedented numbers, they appealed to

the creators of Parliament, and especially to those constituencies which are most identical with the intelligence and moral power of the community: and at last, how the augmentative victory was crowned by the legislative triumph, and the giant Industry (of your own apologue), freed from his bonds, fed all his children to the full, and won for them that peaceful empire over the world which consists in receiving the good that any nation can supply, and dispensing the good that any nation may require. Free Trade is the indestructible "Eureka" of the Anti-Corn-Law League.

A NORWICH WEAVER BOY.

CORRESPONDENCE.

To the Editor of the LEAGUE.
Great Houghton, near Barnesley,
Nov. 19, 1844.

SIR,—An unknown correspondent advises me to write words to the tune of the "Marseillaise Hymn," and send them to you. I have taken his advice, not thinking it a device of the enemy, likely to deprive you of one subscriber, however weak, by tempting you to publish the bans of marriage between the revolutionary air and politico-economical sedition. The result is failure—verses too abstract to be popular; but the notes might, even now, be useful, if the monopolists would read them. Pray forgive me for troubling you with an abortion. I have done my best; but doing one's best does not always succeed in poetry: "It must be as God pleases!" said the miracle-monger who bit off his own nose.

I am, dear Sir, yours very truly,
BERNEZER ELLIOTT.

A BRITISH MARSEILLAISE.

BY BERNEZER ELLIOTT.

Tune—"The Marseillaise Hymn."

Men! not allow'd to earn your bread;
Or feeding all the basely fed!
Why ask for work in vain?
Or toil for death and pain?
Or toil for death and pain?

Shall brutal things, in human form,
Feed on your souls, like rat and worm?
Bid son with sire for graves compete?
And tell your wives they shall not eat?

No! cry aloud to all, "By good, for good, men live!
By good, for good, men live!"
Build not on broken hearts! nor take, unless ye give!
Nor take, unless ye give!"

How long shall drones, in baseness blind,
Breathe plagues, beneath the light of mind? (1)
And curse your skill and toil,
Because they curse the soil?

Where grows the vine, the thistle dies;
From cultur'd man the savage dies;
Then, peasant, merchant, artisan,
Transform the biped brute to man!

Did truth, did knowledge turn his mindless night to day!
Did love and mercy drive the human wolf away!

Tool-making man! whose foodful mind
With harvest freights the wave and wind,
And thoughtfully creates
The bread and life of states!

Say to the fed on tears and blood,
"Production is the root of good!"
And scorn at thou them who all produce,
Thou costliest thing of smallest use!

Mend! or the mill, the rail, the wing of land and sea,
Will teach thy sons to read, and find a book in thee."

The feeble girl, who works to aid
Parents, death-doom'd by fetter'd trade;
The sire, whose hopeless son
Lives, but to be undone;

The husband, slaying child and wife,
In flight from lawless law and life;
The peasant—spurn'd, starv'd, hunted, jail'd,
Because his law-made doom prevail'd;

Will not for ever feed the Moloch of the land,
Nor hapless always drive his stolen four-in-hand.

Destroyers, No! in vain ye strive
To keep a world's despair alive!
Your baseness is our might,
Your smitten darkness light:

Our sons shall wed, their babies be fed;
It is no crime to love and wed!
Our daughters shall not bring forth slaves;
Nor childless sons seek workhouse graves;

Too oft have idlers said to Toll, "Thou shalt not love,
or live!"
Too long have robbers said to Skill, "We take, and
thou shalt give!"

Men! ye who sow the earth with good;
Men! ye who earn the price of food; (2)
Toll! strong for good and ill;
And thou, more mighty, Skill!

Arise, and save man's deadliest foe,
Ere Ruin paint his overthrow!
His life of wrong! his death of shame!
His shroud and grave of blood and flame!

Arise, ere viceroy-slaves, by tyrants' crimes set free,
Cry, "Servants of the damned! are ye, too, weak as we?"

NOTES.

1. I say not that man's hand is his mind, but, had he not possessed that thumb'd implement, I doubt whether his mind, with his power of communistic and accumulative ideas, would have raised him to his present intellectual eminence. Given a jack-plane, he might have stuck it in his mouth, and worked with it; but what sort of a jack-plane could he have made with his teeth? To his hand principally he is indebted for his success in tool-making; and it is as a tool-maker or manufacturer of such things as spades, ploughs, steam-engines, and railways, that he has wrought all his wonders. One of our most revered doctors calls the population of such towns as Sheffield extensive; not seeming to know that, till there was a manufacturer, there could be no agriculture, unless finger-grubbing for piglets deserve that name. The first tool-maker was the first farmer; he put an end to finger-grubbing for piglets, and called agriculture into

existence. He, and subsequent tool-makers, may be truly said to have created every ounce of food which industrial science has since produced. If any population deserves to be called intrinsic, it is that which can enable a hundred acres of land, cultivated commercially, to maintain more people than any ten thousand acres, cultivated agriculturally, ever yet did. About eight hundred acres of land at Leeds, cultivated commercially, maintain a hundred and forty thousand persons; where shall we find a hundred thousand acres, cultivated agriculturally, maintaining an equal number? Had there never been a tool-maker, a few hordes of savages, fighting with the bears for roots, would now have constituted the world's intrinsic population.

2. Are the philosophers of the Gun and Standard, who pray for the destruction of trade, aware that six adults are sufficient for the cultivation of one hundred arable acres, and that, if the profits of trade failed to furnish other consumers with an equivalent for the produce, the only cultivated portion of every cultivable hundred acres in Britain, would be that alone which is required for the maintenance of six adults and their families? It is of small import to us what becomes of Messrs. Gun and Standard, but it might be well for them to take into their sapient consideration the possibility, in such a case, of the surplus of victims seizing the land, and the certainty that, without capital, they could not cultivate it. What, then, would happen, Oh, sages of the Gun and Standard? Before the inventions of Watt and Arkwright, the people depended on the land for subsistence; they have since depended on the profits of those and other inventions—the landlords pocketing the surplus profits both of trade and agriculture. Destroy the profits of trade, and the landlords must perish, with two-thirds of the people—unless the displaced population, seizing the land, can also appropriate capital previously amassed.

To the Editor of the LEAGUE.

Hull, Nov. 25, 1844.

SIR,—In the LEAGUE of last Saturday, under the head of "Registration Appeals," in the case of *Gadsby appellant, Harrows respondent*, Mr. Justice Coltman is reported as giving as one reason why a party holding under two landlords, one at £40 and the other at £40, cannot be entitled to vote—"he," the tenant, "might not know which of them to oblige, or to whom he owes allegiance." Now, Sir, what has voting to do with obliging a landlord? Surely, Mr. Justice Coltman does not mean, at any rate on the bench, to recognise the right of landlords to interfere with the tenants' voting. I have always understood it to be the undeniable right of every voter to use the same irrespective of either allegiance to landlord or any other party.

I think, if I have not mistaken Mr. Justice Coltman's meaning, such language from a judge is at least indiscreet.

I am, Sir, yours respectfully,

C. T. F.

To the Editor of the LEAGUE.

Uxbridge, Wednesday, 10m. past 11 o'clock, p.m.

SIR,—Having been much gratified by the perusal of the "Norwich Weaver Boy's" truly excellent letter, contained in your last impression, I read it to the members of my large family; whereupon I instantly obtained from three of the ladies present the voluntary promise to work for the forthcoming Bazaar. I was much gratified by this unexpected result of my reading; and cannot retire to rest to-night before I communicate the fact to you, with a view of urging your numerous readers to the adoption of the same course of action. Wishing prayerfully a speedy and propitious issue to your righteous efforts,

I am, in haste, yours truly,

AMOUS.

N.B.—Would it not be desirable to re-insert the letter in question?—it will bear reiteration.

Gloucester-place, Portman-square,
Nov. 25, 1844.

DEAR SIR,—In answer to your letter, I beg leave to inform you, that I have a vote for Middlesex, as well as for the counties of Bedford, Cambridge, and Huntingdon; and I rejoice to hear that the League are stimulating Free-Traders to purchase *bona fide* votes in the counties, as no arguments will persuade the farmers to vote against their powerful landlords.—Yours, truly,

A. W. Paulton, Esq.

WELWYN, HERTFORDSHIRE.—FORMATION OF A FREE-TRADE ASSOCIATION.

An important meeting was held on the 22nd inst., at the Wellington Inn, Welwyn, for the purpose of forming a Free-Trade Association in connexion with the Anti-Corn-Law League. A requisition, signed by 23 freeholders and inhabitants of the locality, was presented to William Blake, Esq.—an extensive landowner and a magistrate of the county—requesting him to preside at the meeting. A reply was received from that gentleman, expressing his cordial concurrence with the objects of the requisitionists and the inhabitants of the district, but regretting his inability from previous engagements to be present. By the hour appointed for commencing the proceedings the large room of the Wellington Inn, together with the avenues leading to it, were completely filled, and crowds, who were unable to obtain admittance, assembled under the windows in the street, where the proceedings could be distinctly heard. A great number of the farmers of the neighbourhood were present, and, although the district is purely agricultural, not one hand or voice was raised in favour of the Corn Laws. Mr. C. Lattimore and the Rev. T. Gilbert, of Wheathampstead, attended by special invitation, and were received with loud cheers upon their entrance.

The Rev. JOHN ROWS (of Welwyn) having been voted to the chair, briefly addressed the meeting.

Mr. LATTIMORE then rose and delivered an eloquent and argumentative speech, pointing out the injurious influence of the corn and sugar monopolies upon the whole community, but more especially upon the interests of the tenant-farmer and labourer. Mr. Lattimore also forcibly depicted the evils resulting from the game laws, and pointed out the probability, without some extensive alteration, of their producing an injurious effect upon the rights of property. (A full report of this important speech (which occupied an hour and a half in the delivery) will be given in the *Hertford Mercury* of the present week, of

which we shall endeavour to avail ourselves in our next number.]

The Rev. T. GILBERT then delivered an impressive address. The rev. gentleman stated that he was not himself an agriculturist, but he had nevertheless been an attentive observer of the pernicious working of that system of which Mr. Lattimore had spoken. Ever since the present Corn Law had been palmed upon the country, our national prosperity had been upon the wane, and, if it were suffered to continue much longer, it must prostrate the whole community in the dust. With an annual increase in the population of 400,000, a mere temporary revival of trade would not suffice to prevent those evils under which we had heretofore laboured. He had received a statement of the condition of one agricultural town at the present moment, showing the declining state of its trade, and the consequent pauperization of its inhabitants. The poor rates had increased to 22s. on the pound. Out of the whole number of the manufacturers in the place, there was but one who had not either become bankrupt or compounded with his creditors. Within a circle of three miles, twelve farms had recently changed hands, most of the tenants of which had retired from their holdings greatly impoverished. This was a living picture of the results of the Corn Laws; and who would lift up their voices in favour of a system branded with such foul injustice? It had been said that Joseph was a lively type of the monopolists; but in truth he was not, for in the time of famine the son of Jacob opened the storehouses, and saved the Egyptians. But, so far from the monopolists being saviours of their country, they bound the people with burdens too grievous to be borne, and did not touch themselves with so much as the tip of their finger. He was, however, happy to add his testimony to that of Mr. Lattimore, that there were many honourable exceptions to this rule among the landlords. He had been accused of meddling with politics; but he contended that the present distressed state of those among whom he resided rendered it incumbent upon him so to do. He had that day rebuked a poor woman for her neglect of the ordinances of religion, and remaining, together with her family, week after week, and month after month, without entering the doors of a place of worship. But what was her answer? "My husband has no work; my children are destitute of clothes; our furniture is nearly gone, and our hearts are well-nigh broken. We have very little inclination to go and hear the gospel when we are so weak for want of food that we can hardly stand." Her emaciated countenance attested the truth of her story, and spoke volumes as to the results of the Corn Laws upon the agricultural population of this land. And yet this country by some was still called "happy, prosperous, free-born England." His (Mr. Gilbert's) office continually brought him in contact with those who were literally perishing for lack of the common necessities of life. In Wheathampstead a large number of labourers were out of employment at the present time, and there was every reason to fear that that number would be fearfully increased, for the farmer's capital was swallowed up by rent and tithe, and those means were taken from him which he would gladly expend upon bettering the condition of his farm. The blame rested, not on the head of the farmer, but upon the men at the head of public affairs, whose ears were impregnable to the cry of the many Lazaruses lying at their gates. It had been said that the Anti-Corn-Law League wished to interfere with vested interests; but he

had too high an opinion of that body to believe any such statement. That association was composed of men not only of the greatest talent, but who were the best friends of their country—who sought to unbind those heavy burdens which now pressed so heavily upon the people, to raise the labourer in the scale of intellect, while it taught him that in the sweat of his brow he must earn his bread. He knew from experience that the labourer would much rather work for his living than eat the bread of idleness. He would not accuse any party of being the cause of the late incendiary fires; but every effect must have its cause; and the labourers now said that even the prison itself was much better than starvation and liberty, and transportation preferable to their present condition; for in the former case they would know the worst, which they did not now. He believed that the only prospect of the removal of these evils was in the unrestricted exercise of the elective franchise, which the people did not possess at present. He himself had seen, during an election, a letter addressed to a tenant who had promised to vote for a Free-Trade candidate, concluding in the following terms:—"Sir, I shall vote for so and so. I expect you to do the same." Unless the man had complied he would have been turned out of his farm and ruined. He called upon them, in conclusion, to get rid of those difficulties by repealing the Corn Law. Let them not cry to Hercules any longer, but determine, in God's strength, to kindle such a flame in Welwyn that night as by the grace of God should never be extinguished. (The rev. gentleman was loudly cheered during the delivery of his eloquent address.)

Mr. CANNON then moved, and Mr. T. ENNEVER seconded, a resolution for the formation of a Free-Trade Association, which was carried unanimously amidst loud cheering.

Mr. THOMAS then announced that a meeting would be held on the Monday week following, for the appointment of a committee to carry out the object of the association, which was the dissemination of the principles of the Anti-Corn-Law League.

Mr. LATTIMORE, in moving a vote of thanks to the Chairman, strongly urged as many as were able to qualify themselves as county voters, and explained the nature of such qualification. If they neglected so to do, the poorer classes of their fellow-countrymen would have just cause to blame them.

The CHAIRMAN having returned thanks, the meeting separated.

THE REGISTRATION.

NORWICH.—Free-Trade objections sustained, 210; claims allowed, 131=341. Monopolist objections sustained, 163; claims allowed, 72=235. Free-Trade gain on the revision, 106.

TIVERTON, Nov. 20. — (From a Correspondent.)—I have the satisfaction of informing you that we increased our majority at the last registration; in fact, we have done so every year since our last contested election, when the numbers were as annexed; and although our members may not at present vote for total and immediate repeal, we thank them for approximating towards it, and I hope,

ere long, they may be found in our ranks. Mr. Heathcoat has great claims on the borough: he is idolized here, being considered one of the best masters and kindest landlords in the west of England. Lord Palmerston is totally unconnected with the borough, and is returned as the colleague of our excellent friend from the high ground his lordship has taken, and the very important services he has rendered the kingdom as a diplomatist. We have only two recognised Chartists who are electors, and one of them invariably supports us.

Tiverton contested Election, 1836.

John Heathcoat, Esq. ..	323
Lord Viscount Palmerston ..	246
B. B. Dickinson ..	180

THE COUNCIL-CHAMBER OF THE LEAGUE.

To the Editor of the Sun.

SIR,—I have recently spent a few days in Manchester, having visited that town partly on business, and partly that I might see anything that was worth seeing in it. During this visit I have been greatly interested with many things pointed out to me, and particularly with the wonderful manufactures, and with the skill and energy with which they are carried on. But, however strange it may seem, I have arrived at the conclusion, that the most remarkable sight in Manchester is to be found in the offices of the great Free-Trade Association, or, as it is more commonly called, the Anti-Corn-Law League.

The gentleman at whose house I was staying is a member of that association, and pretty regularly attends the meetings of the Council, and knowing that, from a recent thorough examination of the question of Free Trade, I had become a convert to its doctrines, he introduced me to some of its prominent members, and I spent some portion of almost every day in their society, at the Council-room of the League.

I need not describe the offices of the League further than to say, that they are situate in Market-street, within 100 yards of the Exchange, and consist of extensive and commodious apartments, fitted up in a manner suitable to the importance of the work for which they are engaged. That which struck me as most notable about the whole place, is the regularity and frequency of the meetings of the Council, and the efficient and business-like manner in which its affairs are transacted.

The first time I went with my friend and host to the League offices was on a Monday morning; it was a little after ten o'clock. Mr. Wilson, the Chairman of the Council, had already taken the chair. The Secretary of the League, Mr. Hickin, was upon his left hand, and on each side of the long table sat several gentlemen, who were members of the Council. I was introduced to most of them. Mr. Cobden was there; Mr. Woolley and Mr. Lees, both of whom are manufacturers; Mr. Rawson, a gentleman formerly in the Nottingham trade, but now, I believe, retired from business, and who is treasurer of the League; Mr. Bickham, who is a calico-printer; Mr. Prentice, the proprietor and editor of the *Manchester Times*, a paper which has long laboured zealously in the cause; and Mr. John Brooks, also an extensive calico-printer and merchant, and one or two others whose names at this moment I don't remember. On the desk

before the chairman were a number of letters from agents and friends of the League in various parts of the kingdom, which were read aloud to the Council, and the needful replies were agreed upon and noted down by the secretary, to be attended to during the day. Many of these letters had reference to the progress of the registration in different boroughs, and some requested a supply of Free-Trade tracts; others applied for lecturers to be sent into certain districts, or contained reports of their progress from lecturers who were holding meetings in distant parts of the country. Of the last-mentioned, one I remember was from Wiltshire, and informed the Council of the particulars of some meetings recently held in that county. I need not assure you that I felt deeply interested in these proceedings, and that I gladly accepted an invitation to come again the following day. Tuesday is the principal market-day in Manchester, and is also an important day at the offices of the League. At ten o'clock Mr. Wilson was again in his place, and most of the gentlemen I have before named were there. I saw some who were not present on the Monday, among whom were Mr. Bazley, of the firm of Gardner and Bazley, through whose fine spinning-mill I was politely shown; and Mr. J. B. Smith, who, I was informed, contested the borough of Walsall in the year 1841, and is represented to be a gentleman of great experience in all matters of trade, and in questions of political economy. The letters of the day were again read, and the replies dictated to the secretary. During the morning many gentlemen from the neighbouring towns called in and united in the proceedings. Several were pointed out to me:—Mr. Henry Ashworth, from Bolton; Mr. Whitehead, from Rawtenstall; Mr. Bright, M.P., from Rochdale; Mr. Robert Muir, from Bacup; Mr. Whittaker, from Ashton, and several others, came in and stayed for some time. After the regular business was transacted, there was a good deal of conversation on various matters connected with the progress of the Free-Trade cause, but turning chiefly on the recent registration results, and the proceedings for attending to it in future. It is easy to perceive how important such meetings as this must become. The gentlemen who called in were in some degree representatives from the towns from which they came, and reports of what was doing in the different localities would doubtless stimulate each other to continued exertions.

I learned that, besides the daily morning meeting of the Council, which began at ten and generally lasted till half-past eleven or twelve o'clock, there was also an evening meeting at five o'clock, which was often for the discussion and arrangement of some points left over for further consideration from the morning, and which partook also of a social character. On this Tuesday evening the meeting was to receive further reports on the registration for the southern division of the county of Lancashire. Tea was served in the Council-room. The most active members of the Council were present, and many whose engagements prevented their regular attendance by the early part of the day. The London morning papers were in, and their contents formed the subject of conversation during tea. The abuse of the *Herald*, or some filly of the *Post*, afforded amusement, whilst satisfaction was expressed that the independent press was laying bare the sufferings of the agricultural labourers. About

six o'clock the chairman resumed his place, and business commenced. The result of the late registration in South Lancashire, I had learned from the public-papers, had been greatly in favour of the Free-Traders, and this meeting was to take steps for securing the position they had gained. Tuesday and Friday evenings were set apart for this purpose. Mr. Wilson briefly stated what had been done at the previous meetings, and requested reports of their progress since they last met. One gentleman stated that he had the names of five persons to give in for qualifications for South Lancashire, three of whom would also qualify for North Cheshire, and two for the West Riding of Yorkshire. Another handed in the names of five young men employed in a large wholesale warehouse, who were anxious to qualify for South Lancashire. Another gave in the names of himself, his brother, and three of his sons, for South Lancashire. A large number of names were thus handed in, and entered by the secretary in a book kept for the purpose, with the address and occupation of the parties. Mr. Bright was present at this meeting, and reported what was doing in Rochdale, from which it appeared that such was the determination of the Free-Traders in that district to qualify for the county, that they had hopes of making a large increase to their present large majority on the register. One striking part of his report was, that many of the best paid and most intelligent of the working men were making great exertions to obtain a county qualification, and were purchasing freehold cottages with such funds as they had saved, and many were saving, with a view to obtain qualifications. Mr. Cobden informed the meeting that a deputation from the Council had already been appointed to visit all the towns in the county, and also in the West Riding, to have interviews with the Free-Traders, to confer with them on the important duty of enlisting the suffrages of the merchants, manufacturers, shopkeepers, and working men in the contest which must now be resolutely carried on against the infatuated monopolist proprietors of the soil, whose policy, if not counteracted, would shortly bring ruin upon themselves and the country. If it were necessary to come to that, they must have another and a final struggle between the towns and the great proprietors, from whose legislation every truly national interest had suffered so deeply.

At this meeting the Council-room was most uncomfortably crowded, and a spirit and determination were manifested such as I have rarely seen. And, indeed, what has already been done in South Lancashire is most important and decisive, and would seem to have opened a way by which the monopolists can be fairly grappled with.

Before coming to Manchester, I had, of course often heard of the League, and I had read some particulars of its managements and organization in a letter once published in the *Morning Chronicle*, from the pen of a stranger who had visited its head-quarters; but what I have seen has nevertheless very much surprised me. The members of the Council, whose names have been mentioned, attend, I was told, almost invariably every day. Every morning for six days in the week Mr. Wilson is at his post, and several other members are his constant companions in his labours; no one is more regular in his attendance than Mr. Cobden during the parliamentary recess, except when he is engaged in holding meetings throughout the country; and Mr. Bright, who resides at Rochdale, ten or twelve miles distant, is generally present three times a week. Like other persons living at a distance from Manchester, I had heard of few of the Manchester Council, excepting Mr. Wilson as chairman, and Mr. Cobden and Mr. Bright, who had both spoken at a meeting, at which I was present, in the town in which I reside; but I found out whilst in Manchester that there were others, and not a few, whose services, if not so much before the public, are to the full as important to sustain the position of the League as the well-known labours of those gentlemen. And it is the one distinguishing feature of this movement, and which elevates it in my view above almost every other, that the *ecclat* of public meetings and public applause is not needed as a stimulus to those who are engaged in it. The men whose names the public never hear of, and who are strangers even to the most assiduous readers of the newspapers, are at least as untiring in their labours and as devoted to the cause as those to whom its service has given prominence and position in society. And I may also remark on the singular harmony which has prevailed amongst them. My friend, who has been more or less with them now for five or six years, told me, that during the whole of that period he had never known anything approaching to a serious difference of opinion; and from his account, and from what I saw, they appear to have one heart, and a truly great heart it is, to permit nothing to interfere with the object before them.

I have been induced to ask for the insertion of this letter in your columns, in the hope that it may meet the eyes of the Free-Traders throughout the kingdom. If in half the towns of Great Britain a committee could be formed, whose members would work zealously in unison with the Council in Manchester, what great things might be done! A few intelligent and active men might meet and take tea together in an evening, discuss their progress and prospects, organize a system against which no wrong could long be maintained, and gather round them an influence which would speedily accomplish the deliverance of their country from the evils which an ignorant and very selfish policy is daily lulling upon it. Why should not Glasgow, Newcastle-on-Tyne, Leeds, Sheffield, Liverpool, Birmingham, Bristol, Plymouth, and the metropolitan boroughs adopt this plan, which has proved so successful in Manchester? Are there not some good, some real men in each of these populous places who are ready for the work which the country is looking for at their hands? From what I have seen in Manchester I am satisfied the foolish system of the monopolists has nearly run its course. The best of causes is in the hands of men who seem never to be weary, to whom a feeling of hopelessness is unknown, and whose disinterested labours are destined, I feel assured, to work a great and peaceful revolution in this country.

I hope this letter may not be too long for your space, and be on that account rejected; it contains only a very meagre sketch of the impressions left on my mind by my visit to Manchester, but I shall take it as a great favour if it be placed before the readers of your widely-circulated journal.

I am yours, &c.,

November 18, 1844.

A. TAYLOR.

REVIEW.

The Life and Rebellion of James Duke of Monmouth (natural son of Charles II.). By — Roberts, Esq., Author of a "History of Lyme Regis." London: Longman and Co.

There is no period of English history which can be studied with less satisfaction than the interval between the Restoration and the Revolution; shame and indignation alternately fill the mind at seeing a civilized nation "bribed by paupers, bullied by cowards, and duped by idiots." The unfortunate individual whose biography has led us to look back at this disgraceful epoch was, through his entire life, a mere puppet in the hands of others—a person designed to give check to a king until more powerful pieces could be brought into play. Mr. Roberts has gone lightly over the early part of Monmouth's life, and has directed his researches for the most part to the history of the close of his career, when his insane rebellion brought calamities on the west of England which have not yet faded from local memory. The causes of this frantic attempt must be traced farther back, and it will be found not the mere result of individual ambition, but part of a system of wicked policy which had for its object the establishment of an oligarchical government.

James Duke of Monmouth was the son of Lucy Waters, one of the many mistresses of Charles II., who helped to keep up the numbers of the British peerage. Some doubts were entertained on the question of his paternity, for Lucy Waters was notoriously very miscellaneous in her affections; and James II. has recorded his belief that the duke was the son of a Colonel Rivers. Still Charles, the reputed father, was fondly attached to the duke: he loaded him with honours, raised him to the first rank in the peerage, and gave him as a wife the heiress of the ancient and powerful family of Buccleuch. The duke was graceful in person, engaging in manners, dissipated in habits, and his mediocrity of intellect was quite overpowered by his vanity. These circumstances rendered him the willing dupe of the most crafty plotter in a plotting age, Anthony Ashley Cooper, afterwards Lord Ashly and Earl of Shaftesbury.

Ashley, as he was generally called, had been an active member in the Presbyterian party, by which the restoration of Charles II. was effected. His affected zeal for religion, and his high pretensions to philanthropy, gave him greater influence than his learning and talents (both of which were of the highest rank) could have obtained. The celebrated John Locke ascribes to Ashley a considerable share in the intrigues which led General Monk to abandon his professed design of establishing a Presbyterian commonwealth, and adopting the royal cause in a few weeks after his solemn protest against royalty. There is little doubt that Monk had some idea of reviving the protectorate in his own person, and it is not improbable that Ashley had a considerable share in defeating the project. But, whatever may have been his conduct on this point, he certainly took the lead in resisting those restrictions on the royal power which Sir Matthew Hale and Prynne proposed—restrictions which would have prevented a generation of misgovernment, and two generations of conspiracies and civil wars. On the restoration of Charles II. Ashley, like several other leading republicans, became a flaming royalist, and, as the union of these converts with the Stuarts could only be cemented by blood, he presided with Annesley, Montague, and others at the trial of the regicides, with most of whom their judges had been associated as friends or colleagues. In another more important though less noted transaction he had a conspicuous share. The overthrow of Charles I. had been in a great degree effected by the smaller landed proprietors in conjunction with the burgesses of the towns. To separate the interests of these classes it was resolved to abolish tenures by knight's service, and the feudal payments to the sovereign as ultimate lord of the soil which they involved, and to give the king an equivalent charged on the excise; industry was thus taxed for the relief of property, and labour was compelled to pay the debts of land.

The influence of Lord Chancellor Hyde was a severe check on the ambition of Ashley. Hyde was zealously supported by the high church party on account of his opposition to the toleration of Dissenters; but he had given great offence to the King by remonstrating against the ostentatious prodigality of the court, and it was resolved to have a less severe censor than Clarendon as keeper of the King's conscience. Soon after the dismissal of the Earl of Clarendon Ashley appears to have canvassed for his place. The Duke of York, who had married the earl's daughter, appears to have taken part with his father-in-law on this occasion; and this was, probably, the first source of inveterate hatred between him and Lord Ashly.

In 1670 the profligate Ministry called the Cabal, from the initial letters of the names of its members, was formed. It consisted of Lords Clifford and Ashly, the Duke of Buckingham, Lord Arlington, and the Earl of Lauderdale. The history of this Administration opens two wide a field to be satisfactorily in-

vestigated in our limited space this week, but we shall return to it at the earliest opportunity.

Essays on the Principles of Morality. By Jonathan Dymond. London: Gilpin.

Morals (*mores*) originally signify the same thing as manners, usages, and customs; but the term is generally used in a more restricted sense, to signify such usages as are approved by the general community. A moral action, primarily considered, is nothing more than an action conformable to the rule of right which has received the sanction of the age or nation in which it is performed; and a moral obligation is nothing more than the obligation of conformity which every body takes upon himself as a member of society. Dymond assumes what is apparently a very different standard: he makes morality to be conformity to "the will of God;" but it is notorious that the Divine will has been differently interpreted in different times and countries, so that while men professed to derive their rules from the Divine direction they really set themselves up as the standard. Those who maintain, in opposition to Dymond, that social opinion is the only real and practical measure of morality, do not by such an assertion discard Divine guidance: for God created not only the individual man but the social man; He endowed him with faculties, appetencies, affections, and emotions, all of which would rest in cold obstruction if he had not companionship; and the intelligence with which man was thus endowed had its first exercise in devising those rules of right and wrong which hold society together.

Morals have no place in the philosophy of individuality: they are purely and completely a social science; there are no morals where there is no society. Alexander Selkirk, on the island of Juan Fernandez, could have no morality; his moral existence was suspended by his shipwreck, and was only restored when he was brought into companionship with his fellow-men. Yet Selkirk in his isolation could have conformed to the will of God, for he might have obeyed the great behest—"My son, give me thy heart."

The object of the Christian revelation was not "to teach man a moral law;" its object was to instruct man in his individual relations to the great Author of his being. That many moral laws or rules are derived from the knowledge of these relations is undeniable, because whatever enlarges the amount of general information must extend the range of moral law; and that the moral rules derived from revelation are among the most important, simply results from the fact that revealed knowledge is the most important of all knowledge. Dymond continually confounds man in his individuality with man in his social capacity, and is thus led to attribute inconsistencies to Paley and other writers on ethics, which really exist only in his own conceptions. The question whether there be a moral sense, independent of our intellectual faculties, could never have been raised if men had accustomed themselves to regard morals as rules of social life, and of nothing else. There is as little need for a new science to discover our moral relations to society as there is for a separate faculty for each class of our physical relations. The direct responsibility involved in moral agency is to society; and the responsibility to Deity as the author of social existence is indirect, because it is personal and individual. We are responsible to God in ourselves and for ourselves, and not in a corporate and collective capacity. This is no evasion of responsibility; it, in fact, increases our accountability, for it makes us answerable for the individual use of the moral information which society has accumulated. In the parable of the talents we find neglect punished as well as misappropriation; and he who is immoral from voluntary ignorance cannot escape the penalty.

Though we think that Dymond has fallen into a grievous error by confounding religion with morality, and making the obligations of both identical in their foundation, we must do him the justice to add that he has for the most part avoided a sectarian view of the subject, and that it is only from the disproportionate space he has given to some favourite discussion that we should have known him to be a member of the Society of Friends. In his application of moral principle to the practical purposes of life, he gives evidence of an earnestness and sincerity which could only result from conscious integrity. Many of the lessons he gives are worthy of the highest praise, and he deserves to be particularly noted as an advocate of Free Trade on the simple ground of justice, at a time when the cause had little popularity and few followers. It is, therefore, with some reluctance that we find ourselves obliged to deny him the title of a moral philosopher, though we admit him to be a good moral instructor. There have been good pilots who never understood the Copernican system, and there have been good moralists who were no philosophers.

FALLACIES.—Fallacies are as plenty as blackberries, on any subject where men's passions are engaged. The question, therefore, in any instance, is not how many reasons can be urged, but how many of them can stand the test of a reply.—*Col. T. P. Thompson.*

AGRICULTURE.

LARGE FARMS, SMALL FARMS, AND ALLOTMENTS.

How various and conflicting are the opinions we see put forth upon these topics! Every agricultural newspaper teems with discussions on the comparative merits of large or small farms. One correspondent expends every term of vituperation his imagination can suggest on those who "add farm to farm," and declares that "large farms are large evils;" while another asserts with no less energy that large farms "benefit the landlord, the tenant, the artisan, and the labourer." Then, again, as to allotments, equal diversities of opinion are promulgated. Thus amongst a party of landed gentlemen, met together to benefit the agricultural labourers by the introduction or extension of the "allotment system," we find Squire This declaring that if any more than a rood of land be given to each man the "system" can't succeed; and Sir John That immediately averring that, unless from two to five acres of land are let to every labouring family, the "system" must fail. Yet both benevolent gentlemen try to delude themselves into the belief that their philanthropy is assuming the most practical and effective form.

Now, all this bespeaks the most crude and undefined notions with respect to the state of those classes and those interests with which the writers and speakers ought to be most thoroughly acquainted. The lack-land or non-agricultural observer of these inconsistencies may perhaps be inclined to give up in despair the attempt to reconcile them; but in so doing he will be no less in error than are the farmers and the squires. The solution of these knotty questions is easy enough if the whole subject be examined.

Let us see what is the state of the classes whose condition is on all hands admitted to be most unsatisfactory. The farmers as a body are seen to be carrying on an unequal struggle in the attempt to pay high rents with small produce and low prices. Small farmers are scarcely obtaining the comforts and decencies of day-labourers, while their holdings are neither stocked nor cultivated. Their land is in very many instances almost in a state of nature, and their crops mainly depend upon the inherent unimproved qualities of the soil. Many large farmers also, men with from 500 to 1500 acres of land and some capital, are plainly got out of their depth: they sow large breadths of grain upon land most imperfectly prepared for such crops; their live stock is scanty; they indulge as a part of their system in the slovenly practice of naked fallows; their arable land if wet is undrained, and their pastures full of rushes; and then they obtain only half-crops, and look to artificial scarcity and Corn-Law-created famines for the means of meeting their engagements or making a profit. And the state of the labourers is still worse: many of them are but partially employed, perhaps for half the year only, or for a few months in the year; many in every parish go jobbing about, getting a week's work from one farmer and two or three days from another, but who are invariably without employment in bad weather and short days. And even those who are constantly employed receive the miserable pittance of 7s., 8s., and 9s. a week.

The prospect during the coming winter of heavy poor-rates pressing the already weak and over-rented farmers to the earth, and the more fearful forms of rural discontent threaten the owners of land with serious diminutions of rent. And this is the origin of the "allotment-system" benevolence just now so rife.

As is commonly the case, the suggestions and discussions of the farmers have a more practical and useful tendency than those of the landlords; and hence the question of large or small farms, which is chiefly a farmers' topic, is entitled to more attention than the jejune stuff we hear about allotments. The merits of this question are, however, few and simple. It matters not so much what is the absolute size of a farm, as whether the occupier has or has not sufficient capital to cultivate his farm advantageously. In general, farmers hold farms too large for their capital: the man who has £1000, and could well manage one hundred acres, or perhaps, if intelligent and in good credit, one hundred and fifty acres, takes a farm of two or three times that size; while the farmer with £3000, instead of contenting himself with three hundred or three hundred and fifty acres, takes five or six hundred, or more; and the same thing happens with men of larger capitals. The truth of this statement will be admitted by all intelligent farmers, even by those who have themselves fallen into the same error; and it seems, at first sight, strange that a whole body of industrious capitalists should be so prone to a course avowedly unprofitable.

The fault, however, lies more in the system than with individual farmers. It is produced by several causes, which are to be traced directly to the Corn Laws. Of these amongst the most important are the expectation of high prices for corn, and the prevalence of yearly tenancies, both of which induce men

to prefer to half-cultivate a larger tract of land, to farming a smaller one more highly. Upon a great part of the land of this country, in its present state, a certain quantity of corn can be grown without high farming, that is, without a large stock, or very extensive green crops, and when the price of grain happens to be high the farmer may, perhaps, do a little better than make both ends meet. Thus a farm being kept moderately clean by means of summer fallows, from 16 to 25 bushels of wheat to the acre can be grown by means of low farming—that is, farming with small capital—on land that with high farming would produce nearly or quite double those quantities; yet after the first outlay, which is simply the investment of a competent capital, high farming is year by year absolutely less expensive than low farming. The high farmer produces his larger crop at less cost than the low farmer produces his smaller crop. Nor is this so unknown to farmers as might be supposed, from the admonitions to improve their husbandry which landlords plentifully bestow on their tenants. All moderately intelligent farmers are aware that they might advantageously expend more capital in the cultivation of their farms. But then such an expenditure requires more security than is possessed by a yearly tenant. It won't do for him to make an outlay which may require five, six, or seven years to get back; although if he had made it, and continued in his farm for the period required to recover his capital, he might have actually got it back with a handsome profit besides. He has no assurance of gathering more than one crop. He may disoblige a Whig landlord by voting for a Tory candidate, or a Tory proprietor's bile may be aroused should his tenant coquette with Whiggery; he may offend the steward, or quarrel with the gamekeeper; he may not take sufficient care to cherish the partridges, or he may not bow down with sufficient reverence at the "Altar of the Hare;" these or any of these contingent events may deprive an improving yearly tenant not merely of his expected profit, but of a great portion of his actual capital. Consequently, he farms in such a way as to get the most he can in one year: he is always, by possibility, a going-off tenant. Now, if we were going to farm land for one year only, we should sow every acre with corn on which there was any probability of obtaining even an inferior crop, and our outlay would be confined, as nearly as possible, to ploughing, sowing, and reaping. And this is what the great majority of yearly tenants in effect do year after year.

It is not necessary here to dwell on the direct influence of the Corn Laws in upholding the system of yearly tenancies; and the fatal effect of that system upon the prosperity of farmers is indubitable. As a practical instance of the way in which good farmers would cultivate their land, were agriculture freed from its law-made trammels, we may remind the reader of the statement made by Mr. Huttley, at Witham, in Essex, not long since, that under the safeguard of a long lease he had just expended £2600 in the bringing into good tillage a farm of 160 acres, and that he expected to reap a good profit upon his outlay. So, at a very recent agricultural meeting at Great Oakley, Mr. Fisher Hobbs, a well-known and excellent practical farmer, said:—"Looking through the country they would find that almost the only good farmers were either those who held their own land, or who were blessed (for it undoubtedly was a blessing) with long leases. So much, then, does good farming depend upon fixity of tenure."

As to the proper size of farms, scarcely any general proposition can be stated; for the farm is too large for the tenant if he has not a sufficient capital, whether it consist of 100, 500, or 1500 acres. It is certain, however, that a large farm, in the hands of a farmer of sufficient capital and of competent skill, will be more productive, will return a larger proportional profit, and will afford more employment to the working classes than a smaller farm. On a large farm employments are more divided and labour better combined, and economy is effected in horse labour, that great stumbling-block of most farmers. A correspondent of the *Mark-lane Express* has rather aptly stated some of the disadvantages of small farms. He says:—

"My experience in farming matters—which is 20 years—gives me ample scope for saying that the small farmer is cut up and his capital dwindled away until his situation is reduced to a farm-labourer, and ultimately he becomes one. Likewise, in my neighbourhood, he is the worst of farmers: neither horses, implements, or men sufficient, or rather not efficient; the small farmer's man is wagger, ploughman, cowman, pigman, shepherd, thrasher—in short, doing something of everything every day, and doing nothing well. Not so the large farmer: he has a separate man or men to all the above-named occupations, consequently from regular practice the different occupations are better performed; and it is my opinion, which is one of experience, that farms ought to be of the size to allow of this division of labour as much as possible. Only think if you put one man to make a watch, what would be the price. You may depend upon it the small farmer cannot compete with his larger rival in the markets. I find the small farmer invariably producing at market an inferior sample of grain and a worse description of stock than the larger farmer."

The agriculturist will have readily suggested to his mind, by the above passage, the innumerable

disadvantages of very small farms—that is, of less than two hundred acres; still, looking at farmers as they are, we believe that very many who now hold five hundred acres would have been in a far better position than they are had they employed the same capital on a farm of half that size. On less than two hundred acres, if a man is only a farmer, he cannot expect to make a decent livelihood. It is only because agriculture has been "protected" into helplessness that all these questions in relation to husbandry arise. Let the trade be set free from restriction—let there be no longer a premium, real or ideal, on half cultivation—and the mutual interests of tenants and owners will soon settle what, according to the circumstances of each locality, is the best size for farms. Who ever thought of discussing what is the proper size of a cotton-mill or a merchant-ship? Everybody knows that that must depend on the capital and purposes of the users; then, why are farmers to be subject to any other rule?

Then, as to the allotment system: of what floods of nonsense it has formed the occasion! To a half-employed labourer, a rood of land, let at a low rate, becomes an assistance, by enabling him to grow potatoes, and occasionally a bit of wheat, and so just to keep himself and his family from starving or going to the union workhouse. It is simply a form of out-door relief; comparatively comfortable to the labourer by saving him from the confinement of a workhouse, and comfortable to the landlord by easing his pocket from the drain of heavy poor-rates. All that has been said of the orthodox "allotment system,"—that which is not to withdraw agricultural labourers from dependence on farm-labour,—as a remedy for rural destitution, is fraudulent or delusive.

Call the "allotment system" parish relief by means of potato patches, and in a sentence its whole scope and objects have been expressed. We do not blame those who really believe they can improve the condition of the labourers by such means: we only lament the existence—the unnecessary, Corn-Law created existence—of so great a state of habitual destitution amongst the rural working people as to render such a scheme of relief even plausible. The advocates of larger allotments of two, five, or ten acres each, are few and far between. It is obvious that the cultivation of plots of that size, if properly attended to, must take the labourer out of the class dependent upon wages. Such holdings, however, have rarely proved beneficial to the occupiers, for they can only afford them a livelihood by high cultivation, which implies the possession of capital, or as subsidiary to some other avocation, as a jobber, dealer, carrier for hire, and so forth. Now such tenants are usually behind, not in advance, of the general mass of tenant-farmers, and their plan of husbandry is often slovenly in the extreme.

Whether, if agriculture had assumed the position it will occupy when all trade is free, a certain number of little holdings, of less than twenty acres each, might not furnish objects of hope and desire to the most frugal and industrious farm servants, is a question into which landlords would do well to inquire. Our own opinion is that the effects of such little farms might be beneficial. Their tenants might—assuming them to be able to cultivate their land well—be able to supply the poor of populous rural districts with vegetables, milk, and eggs, now more especially milk, practically unattainable by the poor. They might rear pigs and poultry, and perhaps a few calves, with more chance of profit than larger farmers; and all this they could do after their day of vigour as labourers had passed away. This, however, is somewhat speculative, for after all the best labourers often turn out but sorry managers on their own account. The question is mainly interesting from the difficulty the farming labourer who would seek to rise from the condition of a mere servant finds in taking the first steps as an independent man. Such a man might occasionally be benefited by the chance of rearing ten or fifteen acres of land. But as a remedy for the existing depression of the peasantry large allotments are worse than useless: they are, moreover, more impracticable than the potato-patch plan.

WARNING TO MONOPOLISTS.

If there be any farmers who still pin their faith upon the Corn Laws, and stake their fortunes upon the rise and fall of the sliding scale, they would do well to remark the conclusions to which men who do exercise their faculties of observation are coming. Thus, the Marquis of Londonderry, at a dinner to his Irish tenants a few days since, told them, in substance, to continue their efforts for increasing the productiveness of their land, because they must soon compete in the world's market with all other growers of grain; that it is not reasonable to expect corn to be prohibited when the trade in all else is free; and that freedom of trade is now the avowed principle of our Government. This announcement from so influential a member of the landed aristocracy, and so strict an adherent of the Ministry, is significant.

Then, at the *Sittingbourne Agricultural Association*, Mr. Pemberton Leigh, the eminent Chancery barrister, but who has lately retired from the bar upon his accession to

a very large landed property, held, somewhat more cautiously, the same strain. Now, Mr. Leigh is the last man to be suspected of any Free-Trade or non-aristocratic leaning, yet having passed his life in a profession which compels the examination of evidence, and the looking at realities, he goes at once to the points to which the genuine squires are being slowly and reluctantly driven. In regard to the employment of labourers he said:—

"It was absurd to expect farmers to make labour if the labour was not profitable; but it might, perhaps, sometimes happen that the owners of land, who might have more wealth than was necessary for comfortable enjoyment—gentlemen of high standing, felt more pleasure in seeing a large number of labourers employed in improving their estates than in seeing themselves surrounded by a large number of menial servants and horses, which were kept for personal gratification, or, in some degree, perhaps, in conformity with feelings of ancient pride. He could not help thinking, from what he had seen, that those persons who looked to the land for a livelihood were as charitable, if not more so, than those who possessed much larger resources; and it might be deserving of consideration whether a large amount of labour might not be employed by the landowners with advantage both to themselves and the farmers. Whether employment could be found in this way for all the labourers must depend on the number of labourers requiring it. When he spoke of that part of the hills, however, with which he was best acquainted, he could not help thinking that a great many might be employed profitably. Were all their fields as well cultivated as they ought to be? Had they no thistles or weeds to be seen? He recollected once asking a very intelligent man, the late Mr. Lake of Bapchild, whether it would not pay to eradicate their weeds and thistles, when his reply was, that he did not know whether the land would pay to grow corn, but that he was sure it could not pay to grow thistles. He could not help thinking that, if much of the land now growing weeds and thistles were to be brought under tillage, it would prove beneficial both to the farmer and the labourer, and give employment to much of their surplus population, who would thus be maintained in industry, morality, and good order, instead of falling into habits of idleness and demoralization."

And he mentioned his own practice of allowing ten per cent. on his rents to his tenants to be laid out in permanent improvements on the condition of the tenants contributing an equal sum; and he added:—

"He did not do this as a matter of favour, but as a matter of profit; and, as an accurate account would be kept of the expenditure of this money, it would be seen the next year whether the outlay had been profitable or not. He believed that such a sum might not only be profitably expended, but that it would also cause a great diminution in the poor-rates, by the employment of those who must otherwise be kept in idleness. Another great source of employment for the labourers was the improvement of their roads. He had taken a portion of the roads in his neighbourhood into his own hands, receiving the rates, and by employing the best labourers at fair wages, and seeing that they did their work fairly, these roads had been much improved."

All this bespeaks an application of common sense to the management of landed property, which the less-instructed owners of acres would do well to imitate.

At the same meeting Mr. Knight, a farmer, said:

"He believed that every farmer could employ four men profitably for every 100 acres, but the great evil was that too many farmers occupied farms which required double their amount of capital, half of which land, if well cultivated, would return double the profit which could be got from it half cultivated."

Than this nothing can be more true. And the origin of all this mismanagement and miscalculation is the unfounded expectation of permanently high prices from the Corn Laws. No man ever advanced so far in the investigation of the wants and difficulties of English agriculture, as our more intelligent landowners and farmers show they have done, without becoming desirous of relieving British husbandry from the blight of monopoly. We have no doubt the influence of such opinions will become obvious in the ensuing session of Parliament.

DESTRUCTION OF GAME.

The Earl of Essex has addressed a letter to a local paper, intended to justify game-preserving, and to show that the complaints of the farmers upon that head are all moonshine; but though the monopolist Earl's letter does not make out the case he intended to prove, it proves a great deal he did not mean to show. We have not space to deal with that production this week; in the meantime let us gather a few of the passages which occur in the journals illustrative of the injury caused by game. A Hampshire correspondent of the *Mark-lane Express*—no League authority, be it observed—in a long letter on the subject, says:—

"The waste of the thing is monstrous; the more it is inquired into, the more it will be seen that the actual loss of valuable produce in this one county is enormous, and would make credulity itself stand aghast. The writer was conversing with an intelligent, industrious, and truth-speaking farmer as any one he knows, and it being about evening time, 'Now,' said he, 'I will answer for it that I am at this moment feeding five hundred hares, devouring enough to sustain 100 or 120 sheep, if it was huddled off for them, and they did not consume it indiscriminately. It was said the other day, that of a farm situated in an adjoining county, on which there is a very great deal of cover, that the farmer has now actually standing to protect his young wheat three miles of hurdles, with the bushes on the tops; the hurdles, if six feet long, would be about 208 dozen—at 7s. 6d. a dozen, would cost about eighty pounds! This is a heavy tax to a farmer, in addition to all the rest of the expenses of getting a crop of wheat, and not entirely effectual after all.'"

And the same correspondent tells us, that

"There is one not very large estate in this county, con-

sisting of perhaps ten farms, seven of which are in the proprietor's own occupation; and why? because the land is so overrun with game that no tenant can occupy. A very competent judge says, there are one hundred thousand rabbits, besides hares and other game in abundance, and the other sorts of game. On these farms, devoured as they now are, it is quite as much as is expected if the land produces three sacks of wheat to the acre. Here is a loss of labour, and consequently produce."

Another correspondent of the same paper, who writes from Lancashire and signs himself "A SURVEYOR," after observing on the paragraph relating to the Duke of Rutland's late letter which has gone the round of the papers, observes:—

"Noblemen and gentlemen do not hesitate to send to prison parties found guilty of trespassing on the property of others. Do they never consider what ought to be the fate of those who eat up the bread of poor and industrious tenants by ruining their crops? I have been told that every hare and rabbit living one year consumes ten times its value. Is not this a momentous consideration for game-preserving gentlemen, and can they rest contented whilst such an infliction is to be submitted to by their tenants?"

These are merely specimens of the notices which are constantly presented, and they entirely accord with our own observation and experience. And here we must record another instance of the fearful secondary effects of game-preserving:—

"ANOTHER GAME-LAW TRAGEDY.—We have received a letter from Watlington, describing a painful event which has caused deep feeling in Pryton and the neighbourhood. Under terror of a conviction and imprisonment for an offence against the game laws, a youth named Henry Prideheat committed suicide on Wednesday last, by hanging himself on a gate. The poor boy, it seems, was employed to drive sparrows from the newly-sown wheat of his master, Mr. Dickens, of Pryton, in this county, by whom he was armed with a gun. In an evil hour a licensed plunderer in the form of a pleasant lighted on the field, and the boy yielded to the natural impulse, took aim, and kill the petted and protected marauder. But at this moment Clark, one of Lord Parker's gamekeepers, came up, saw the fact, took the gun, and threatened prosecution. The youth was afraid to return to his master without the gun, and wandered about in great agony of mind, and tried to obtain poison; and on the following afternoon he was found in a kneeling posture, partly suspended from a gate by his pocket handkerchief! Here, as at Oakley, the poor labourers are in a reduced and sad condition. No less than thirty-three able-bodied labourers are employed, at wretchedly low wages, by the surveyors in repairing the roads."—*Oxford Chronicle*.

THE UNKINDEST CUT.

The cry against the game laws has now become almost universal, for, in a late leading article upon the subject, the squire's own journal, the *Morning Post*, has this passage:

"It is hard that a man should have to pay several guineas for leave to shoot the game which may be eating the crops from his gun fields. But almost every one feels that the system of preserving game has grown into a folly in this country. The keenest sportsmen are the most convinced of this. What sport would there be in going into a farmyard, with dogs and keepers, and shooting all the fowl as they flew about the yard. Yet shooting in many of our great preserves differs not much from this. For the sake of good sporting, then, as well as for the avoidance of much popular complaint, we should be glad to see a reform in the preserving system."—*Morning Post*.

This looks fair; but those members of the Legislature who are aware of the mischief of the game laws must take care that, under this seeming acquiescence in the general reprobation, there may not lurk an intention to defeat any real amendment of the law. Let it be remembered that nothing short of the abrogation of all game laws will meet the necessity of the case. Every man must be entitled to destroy at all times, and in any way, upon his own land, the creatures called game, just as he may kill, if he can, blackbirds and cockroaches.

THE GAME LAWS A SOURCE OF CRIME AND MISERY.—It is more as a source of crime and misery among the peasantry in the rural districts than as a remnant of feudal bondage, that we regard the Game Laws with so much abhorrence. They engender suspicion, fear, and hatred between the rich and poor—they hold forth perpetual temptations to the committing of the most violent outrages—and they lead hundreds of idle young men into a career of dissolute and reckless ruffianism. The existence of the Game Laws is a foul blot upon the civilized, free, and Christian character of England.—*Hull Advertiser*.

PUBLIC BATHS.—In many of the principal towns in Britain meetings have been held to take the necessary steps for erecting baths for the working classes, and by-and-by, we presume, that dignified body named "The Great Unwashed," like many other great bodies that have figured in the world, must cease to exist. A meeting for this purpose, over which the Duke of Buccleuch presided, was held this week in Edinburgh, and the movement may be regarded as important on more than one account. It indicates a growing sympathy in the minds of the wealthier classes with their poorer brethren, and a disposition which they had not, erewhile, manifested to promote their comfort. Physicians and moralists, for thousands of years, have eloquently decanted on the benefits of habits of cleanliness, not only to the outward but also to the inward man. The erection of baths, therefore, in large towns, and on terms as cheap as to render them accessible to the poor, cannot be too highly commended. But it would be far better still if the aristocracy and proprietors of land would combine to procure the abolition of the tax on food, and allow the people to eat, as well as wash, at the lowest rate. Palliatives are all well enough in their place, and when better cannot be had; but they should not be substituted for specifics when these can be obtained.—*Berwick Advertiser*.

GREAT LEAGUE MEETING.

THE FIRST AGGREGATE MEETING of the LEAGUE, in the THEATRE ROYAL COVENT GARDEN, will be held on WEDNESDAY SE'NNIGHT, the 11th of DECEMBER.

GEORGE WILSON, Esq., in the Chair.

The Meeting will be addressed by RICHARD CORDEN, Esq., M.P., and JOHN BRIGHT, Esq., M.P.

NOTICES TO CORRESPONDENTS.

"H. L. M."—Our correspondent cannot register next July for the property, unless it be in such a state on the 31st of January next that it would thenceforward produce him 40s. a year, above all charges.

"J. H., Wandsworth-road."—Having a redeemed land-tax exceeding the sum of 40s. a year, assessed on a copyhold estate situated in Lambeth, will it confer a vote for Surrey? [Redeemed land-tax, purchased AFTER the year 1802, will give a county vote. There are many freehold properties which are registered for sale, and the particulars may be seen by application at the Office, Fleet-street.]

"A Subscriber."—You may qualify two persons by granting them each a 40s. rent-charge in one deed, if they are content that it should be so.

"D. B., Islington."—We think if he had attended before the barrister he would have got his vote. Overseers are not bound to give notice; we recommend him to claim again.

We are obliged by the communication from Great Yarmouth, Norfolk.

We are obliged by the politeness of the Editor of the *Sheffield Iris*, but his communication reached us too late to avail ourselves of it this week.

Mr. Livesey and other Correspondents' letters received.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the LEAGUE forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadsby, Newell's-buildings, Manchester; and the LEAGUE may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

METROPOLITAN MEETINGS FIXED FOR THE ENSUING WEEK.

To be addressed by George Thompson, Esq., and Robert R. Moore, Esq.

Tuesday, Dec. 3.—Eastern Institution, Commercial-road.

Thursday, 4.—Theatre, Kensington.

Friday, 5.—Albion Hall, Hammersmith.

The chair to be taken at each of the above meetings at half-past seven, precisely.

POSTSCRIPT.

LONDON, Saturday Morning, November 30, 1844.

The first Great League Meeting in Covent Garden, for opening a new campaign against monopoly, will be held on Wednesday the 11th of December, when the Chairman will detail the measures that have been taken and the progress that has been made during the Parliamentary recess. It will then be seen that the death of the League, so often announced by the "Goose and Shadow," is still a very remote contingency, and that at no period of the agitation has the Council exhibited more energy, vigour, and determination. The resolution to meet the enemies of the cause of truth and justice on their own chosen ground, the county constituencies, has been eagerly adopted by the Free-Traders throughout the country; and the preparations for future registration will be conducted with the same skill, perseverance, and prudence which have been characteristic of all the movements of the Council. In purifying the county constituency it is necessary not only to increase the number of legal and independent voters, but also to remove from the registry those names which have been illegally and surreptitiously put on for a corrupt purpose; every dishonest vote neutralizes an honest vote, and the pretended freeholders from the coach-houses, stables, kitchens, and pantries of the monopolists, largely manufactured during the last seven years, must be swept away in order to give room for the fair working of an independent constituency. Insidious efforts may be made by avowed enemies, and still more by pretended friends, to represent this purification of the constituencies as an attempt to limit the exercise of the suffrage; it would be just as honest to describe the arrest of pickpockets as an interference with the liberty of the subject. The object of the League is to secure a sound and practicable extension of the suffrage, by obtaining the right of voting for those who are willing to become *bona fide* freeholders, and by removing from the registry those who have been thrust upon it by fraudulent means to swamp the honest voters. Guardians of fictitious freeholders are supporters of the virtual disfranchisement of independent electors: they raise the cry for "no revision" just as the swill mob does that for "no police." The answer to them is, there shall be no revision when there is no fraud, as there would be no police if there were no thievery.

But it is scarcely necessary to take notice of such patent and palpable artifices; it is a far more pleasing duty to record that the committee formed for strengthening the Free-Trade constituency in the county of Middlesex has received such assurances of sympathy and support as render their prospects of

success at a future election more favourable than the most sanguine could have anticipated.

In consequence of the continued indisposition of Mr. Fox, he will be unable to attend the Free-Trade Meeting fixed for Tuesday, the 3rd of December, at the Eastern Institution. Mr. George Thompson has, however, kindly consented to take his place.

EPITOME OF NEWS.

FOREIGN.

FRANCE.—The *Moniteur* of Sunday contains a royal ordinance, granting to the Minister of the Interior an extraordinary credit of 240,000*fr.*, for the purpose of making an experiment on the advantages of the electrical system of telegraphs. The experiment is to be tried on the Paris and Rouen Railway.

It would seem that every year, at the approach of winter, the Parisian operatives suffer severely. The withdrawal of so large a proportion of the deposits lodged in the savings' banks—the state of the hospitals, which are encumbered with sick—the extraordinary number of children, women, and even operatives, seeking for employment, who are found begging in the streets of Paris—all these facts demonstrate the existence of distress. According to the *Moniteur*, the receipts of the Paris Savings' Bank, on Sunday and Monday last, the 24th and 25th inst., amounted to the sum of 689,208*fr.*, whilst the deposits withdrawn during the same period amounted to the sum of 740,000*fr.*

At a dinner given at Marseilles to Marshal Bugeaud, on his return from Algiers, he made a speech in which he stated that the conquest of Algiers was now completed, and that an immense progress and improvement had been made in the colony. He also informed the company that Abd-el-Kader had recently dismissed the few followers that had remained with him, and had retired into the interior of the country.

SPAIN.—Accounts from Madrid of the 19th inst., state that the Queen's fête was celebrated on that day by a grand levee in the Palace, and a splendid entertainment given by General Narvaez.

By a royal decree, signed by General Narvaez, Zurbarano and his followers are declared outlaws, and as such are to be shot, "without any other delay than what is necessary to enable them to die like Christians."

The accounts of Zurbarano's movements are contradictory. The military authorities at Vittoria had received an official report announcing that Cayo Muro, his brother-in-law, and one of his servants, had fallen into the hands of the Queen's troops on the 20th inst., when endeavouring to gain the Ebro. One of Zurbarano's sons was also made prisoner on the night of the 20th. Intelligence up to the 24th states that the insurrection is suppressed.

PORTUGAL.—The trade of this country every day declines more and more—in fact, its existence now is entirely fictitious, and dependent on the fortuitous regulations of a fiscal kind in Spain. One of the great evils in this country is the smallness of the circulating medium. It is so limited that in the country mercantile transactions are carried on in many places by exchange of agricultural commodities against manufactures. A large portion of the money in circulation comes from Spain, to the extent of upwards of half a million sterling, for contraband goods. It is calculated that one-third of the value of British goods imported into this country is the amount of the contraband introduction of British goods into Spain. The price of every description of native produce has wonderfully diminished. Common wine has descended from 10 milreis to 2 or 3 milreis the pipe; olive oil from 3600 reis to 1700 reis the almuda; and wheat from 650 to 320 reis the alquiere. In every instance the reduction is more than 50 per cent. The arguments for a tariff convention with England were never so irresistible as now.

BRUSSELS, Nov. 23.—After a long discussion on the Corn-Law Bill, the Chamber of Representatives adopted the propositions of the Government; but, on the motion of M. Dumortier, it was determined that the provisions of the law of the 29th of December, 1843, shall be applicable to rye only until the 31st of December, 1845, but that they shall continue applicable to barley until the 31st of December, 1846. The Chamber adopted successively the different provisions of the bill, and fixed its duration for the space of two years.

POLISH FRONTIER, Nov. 11.—The cause of temperance societies has received a severe blow in the kingdom of Poland. They had been particularly successful in those parts of the kingdom which border on the republic of Cracow, and in Upper Silesia, where the country people, following the exhortation of the clergy, renounced in a body the use of brandy. But the Government has lately interfered to check the temperance societies, and has published a circular prohibiting them, and forbidding the clergy to promote by addresses from the pulpit an object which is so beneficial to the country people.

DUSSELDORF, Nov. 13.—M. Buddeus, bookseller, is printing a work, which gives a most detailed account of the *eighteen coats* of Jesus Christ, which are preserved in different places in Christendom, with engravings of the coats, and the several medals and documents relating to them, and also reports of the miracles which each of these coats, every one alleged to be genuine, has performed in its own sphere.—*Hamburg papers.*

AMSTERDAM, Nov. 20.—A private letter from Batavia, of the 18th of July, says:—"Several pirate vessels have lately again appeared on the coast of Macassar. His Majesty's steamer, the *Phoenix*, pursued them, and had an engagement with them. The pirates fired chiefly at the chimney of the steamer, but did little damage. After an obstinate combat, three pirate vessels were captured. The *Phoenix* had seven or eight wounded."

SLAVERY IN THE DANISH COLONIES.—In one of the last sittings of the States of Denmark, a motion was brought in, in order to request the King that he would be pleased to abolish slavery in the Danish colonies. The Assembly decided unanimously, that in a next sitting it would nominate a commission, charged to propose the best means of removing the serious and numerous obstacles which still prevent the realization of this step.

DR. WOLFF.—Dr. Wolff is still at Mehad, from which place he was unwilling to proceed till he had received an escort from Colonel Shiel at Teheran.

TASSIZONDE.—Letters from Trebizonde describe a very curious occurrence which took place there last month. A Mussulman Cadi having been murdered while on a journey, the assassins were seized by the Pasha, and

instead of being punished according to the usual forms of justice, were delivered to the kindred of the murdered man, by one of whom their throats were deliberately cut in the market-place. According to existing regulations, the power of life and death has been reserved to the Sultan; but Abdallah Pasha having represented to the Porte that the unsettled state of his pashalic rendered a reference to Constantinople inexpedient for the ends of order and justice, he received a summary power of inflicting capital punishment.—*Times Correspondent.*

UNITED STATES.—The *Great Western*, which arrived at Liverpool on Saturday last, brought the intelligence that the presidential election might be considered as virtually decided in favour of the democratic candidate, Mr. Polk; foremost in whose policy are the annexation of Texas to the United States, the support of the institution of slavery, and, to use his own words, "such a tariff for revenue as will yield a sufficient amount to the Treasury as will defray the expenses of government, economically administered." Other questions are likewise involved in this decision given by the citizens of the United States—the bank question, the distribution of the surplus revenue, affecting the repudiating States, Native Americanism, &c. More troubles amongst the Mormons were anticipated; and it is said that two hundred of the sect were encamped within a few miles of Carthage, but for what purpose is as yet a matter of conjecture. Much excitement prevailed at Carthage in consequence. It is estimated that the recent Mormon war will cost the State of Illinois 20,000 dollars, and that the aggregate expense incurred during the year on account of the Mormons would not fall short of 50,000 dollars. The people of New Hampshire, to whom at the late election was referred the question of abolishing capital punishment, have decided against the measure. James K. Polk was 49 years of age on the 2nd inst. Francis Quenisset, the bravo, who, as our readers will recollect, attempted to assassinate King Louis Philippe, was arrested on the 22nd ult., in New Orleans, for a similar attempt on a citizen of that city. Mr. Jones had been elected President of Texas in opposition to the annexation candidate.

CANADA.—Montreal advices of the 4th inst. give the total returns in favour of the Governor-General at 42, against 27 Radicals, with 4 doubtful, making a total of decided elections of 73, and the whole number is 84. This, we think, is decisive.

BRAZIL.—The *Swift*, packet ship, arrived at Falmouth on Saturday last, having left Rio Janeiro on the 13th ultimo. The Brazilian Government, in reference to the expiration of the treaty, has published a decree, dated the 9th of October, addressed to the president of each of the provinces, declaring that, although the treaty with Great Britain would expire on the 10th of November, yet the persons and property of British subjects will continue to be protected as carefully as those of any other nation, and calling on the presidents to see that such is the case.

TAHITI.—The intelligence from Tahiti, by way of the United States, is to the 15th of July. On the 20th of June, a body of natives having assembled at Point Venus, Governor Bruat had marched against them at the head of 400 French. The natives having received intelligence of their approach, placed themselves in ambush, and allowed the main body to pass; but, as the rear-guard were passing in front of the English mission-house, they opened their fire upon them in a direct line with the house, and Mr. M'Kean, one of the missionaries, who was walking on his verandah, was struck by a ball, and instantly

killed. His death is universally regretted. He was one of those who had lately arrived from England, well educated, and one of the most respected men upon the group. The native loss is unknown. The French loss amounted to three killed and five wounded. At the same time, on the south side, another action took place, in which the natives were routed. In this action, five French were killed and seven wounded. The native loss on this occasion is also unknown; but the day following the natives again advanced upon the town, and succeeded in burning the French mission-house, chapel, &c. The natives had seized three Frenchmen, whom they put to death with great torture. The *L. C. Richmond*, which left Tahiti on the 15th of July, reported, that a few days previous to sailing an action took place between the French troops and natives, in which a large number of lives were lost, principally on the part of the natives. The French were strongly fortifying the island, the English missionaries were leaving, and confusion reigned among the inhabitants. There were at Tahiti one English steamer, one French steamer, and one French frigate. The French ship *Bourbonnaise* was lost at Tahiti by striking upon the Middle Ground; she was got off by the assistance of the Government war steamer, but in so doing tore out the keel and sunk in fifteen fathoms water; vessel and cargo a total loss, and nothing was saved by the crew except what they had on.

PORT PHILLIP.—Papers from Port Phillip of the 20th of July state that business was improving. A gentleman of the name of Allan, who had made researches in the interior, reported the discovery of the death of two travellers named Gellibrand and Hesse. Gellibrand, it seemed, from the accounts given by the natives, had been murdered, and in the spot where they alleged he was buried, a skeleton was exhumed in the position described, and the remains of a beaver hat and a pair of trousers were found in the grave. Hesse, the natives say, died of exhaustion before he could reach, with his unfortunate companion, the tribe with whom he (Gellibrand) remained for a long time in friendly intercourse before he was surprised and murdered by hostile parties, who effected their designs in the absence of those affording protection.

DOMESTIC.

A member of the Society of Friends, in Yorkshire, has forwarded the sum of £500 to the Mathew relief fund. The Duke of Devonshire has subscribed £100. Sir B. Codrington, in forwarding a sum of £5, through the hands of Mr. J. S. Buckingham, says:—"But for the vice of drunkenness, we should scarcely ever be called upon to use the lash in the navy, a duty which is always performed with disgust."

Early on Monday morning, a most extensive robbery was discovered to have been committed in the banking-house of Messrs. Rogers, Towgood, and Co., of Clement's-lane, Lombard-street. It is supposed the burglars must have entered by means of skeleton or false keys. During the day some of the swill-mob were observed prowling about Lombard-street, in the vicinity of Clement's-lane, but as yet there is no clue as to the direction they have taken.

Upwards of £40,000 in notes were carried off. The numbers of the notes are advertised, and, of course stopped at the Bank of England; and a reward of £3000 has been offered for their recovery. The house of Rogers and Co. has always been considered one of decided property, though doing a very private business; and the head of the firm, now advanced in age, is well known as the author of the "Pleasures of Memory."

At the last rent audit Mr. Byng, M.P., made a reduction of £10, £20, and £30 per cent., according to the exigencies of his tenantry.

Sir James Williams, of Edwinstow, has set the liberal example in this county, of giving his tenants permission to kill game on their lands, or of inviting any qualified persons they think proper to do so.—*W. & A. M.*

On Monday some schools were opened in Chequer-alley, Bunhill-row, St. Luke's, for about 300 boys and girls, and which are situated adjoining an open space of ground the property of the Society of Friends. Attached to the school are baths. The foundation-stone of them was laid by Lord John Russell in the course of last summer.

A most affecting suicide occurred on Monday, at a very early hour, at the dwelling of a Mr. Duckett, an accountant, No. 9, Raven-row, Mile-end, viz., the self-destruction of Charles William Duckett, aged 21, his son, and Elizabeth Williams, aged 22, lovers, from the effects of prussic acid. The parties, who were betrothed to each other, left home on Sunday evening as if to go to church, and, as it afterwards appeared, returned secretly to Mr. Duckett's house, where they locked themselves up in a sleeping apartment and then drank the deadly poison. As the bodies lay, it appears that they must have sat on the edge of the bed when they committed the act, and fallen back. The girl was respectably connected, her father being a surgeon in Cannon-street-road. The young man was a clerk in the Tower Hamlets Court of Requests, Whitechapel. From letters of the former addressed to a Miss Chapman, it appears that he had persuaded the girl to terminate her existence with his, and that they had for some time meditated the act of suicide. An inquest was held on Wednesday, when the jury returned a verdict—"That the deceased persons, Charles William Duckett and Elizabeth Williams, died from imbibing a certain quantity of prussic acid, but by whom or how administered there was not sufficient evidence before the jury."

In addition to the frightful collision, attended with such fatal results, which took place last week, on the Midland Counties Railway, near Beeston, three other fatal accidents occurred, owing, it is supposed, to the dense fog: the first, on this railway between Leicester and Rugby, by which a driver, Edward Jowett, lost his life; the second on the Great Western, on the morning of the same day (Thursday), by which two men, Samuel Brooke and William Tuckwell, lost their lives; and the third, on the Birmingham and Gloucester, on Thursday night, when a fireman named Maywood was killed, his head coming unawares in contact with one of the iron pillars which support Cleave Bridge, under which the train was passing. A second fatal accident on the Midland Counties Railway occurred on Wednesday, the 27th; a guard, named Woodford, having been also killed by his head coming into contact with the bridge which crosses the line between Syston and Silesby. These and similar fatal occurrences have called forth comments from some of the leading metropolitan journals, and a demand for the exercise of stricter vigilance, and the employment of a better system of signalling the starting and approach of trains, on the part of railway directors.

During the dense fog which prevailed on Thursday night week, not only in London but over a great part of the country, a collision took place on the river Mersey between the James, steamer, and the Royalist, a timber vessel, when several of the passengers, fearing the steamer would go down, jumped into the boat of the Royalist; but, unfortunately, the boat was stove in between the two vessels, and all were precipitated into the water: in the darkness and confusion four persons perished.

Saturday night last, Mr. Green, gamekeeper to J. S. Lecher, Esq., of South Weald, Essex, was wounded by a gun-shot in an attempt to apprehend a poacher, who escaped. Mr. Green lies in a dangerous state.

Typhus fever is prevalent in Liverpool; great numbers during the past and beginning of the present week having fallen victims to it.

On Tuesday night, shortly after 12 o'clock, the warehouse of Messrs. Wilson, Hawksworth, and Moss, of Arandel-lane, Sheffield, merchants and manufacturers, was discovered to be on fire. About two o'clock the roof of the building, which is about forty yards in length by fourteen or fifteen in breadth, fell in with a tremendous crash, the sparks and flames again rising high in air, to the increased terror of the owners and occupiers of the contiguous property. The roof was composed of stone slate of ordinary thickness. It was with great difficulty, and only by the unceasing exertions of the firemen, police, and others, that the buildings, with the property they contained, could be saved. The warehouse contained an immense stock of saws, edge-tools, files, and indeed a good general stock of cutlery of every description.—*Sheffield Iris*.

The Repeal Association met on Tuesday at Conciliation Hall, Dublin. On the motion of Lord Fitzgibbon, Mr. M. O'Connell, M.P., was called to the chair. Mr. O'Connell, who was present, was rapturously received, and made a long speech, in the course of which he combated some of the French newspapers which had attacked him for abandoning repeal, and "hurled defiance" at the *Débats*, Louis Philippe's paper, and stated that he would not accept of a repeal of the union at the hands of France:—"He could not forget their immorality and their want of religion, and he detested their base submission to such a crafty and miserable usurper as Louis Philippe. Repeal or no repeal, the Irish people held him and them in the utmost abhorrence." At the close of his speech Mr. O'Connell said he would postpone his motion for the appointment of a preservative society of 300, as he found there were more legal difficulties in the way than he had at first anticipated. The rent for the week was announced to be £341. 2s. 8d.

The Dublin municipal elections took place on Monday, and went almost entirely in favour of the Repealers. Two of the traversers, Doctor Gray and Mr. C. G. Duffy (editor of the *Nation*) were returned to serve as town councillors.

On Wednesday last, R. M. Bacon, Esq., one of the proprietors and the able editor of the *Norwich Mercury*, died somewhat suddenly. It is a remarkable coincidence

that Jonathan Matchett, Esq., the senior proprietor of the *Norfolk Chronicle*, the Conservative journal, and Mr. David Irwin, who for many years filled a confidential situation in the office of the latter paper, also died suddenly, within a few days previous to the decease of Mr. Bacon. The three gentlemen were greatly esteemed. Mr. Bacon was distinguished for his literary attainments, and a comprehensive and vigorous mind, which he embodied in a lucid, eloquent, and polished style.

MISCELLANEOUS.

ENGLISH AGITATION.—Mr. Cobden and the Anti-Corn-Law League have had a great meeting at Rochdale. We regret that we cannot find room even for an outline of the speech of the honourable gentleman. It is one of great interest, certainly. Mr. Cobden contends that North Lancashire may be recovered—nay, if an election occurred at present, he asserts, unhesitatingly, that the great landlords could be dead beaten. But, to make surety doubly sure, he recommends the people of the towns to purchase freeholds in the counties—an operation, it seems, perfectly easy. Fifty pounds will give the proprietor of a cottage an electoral right of voting as a 40s. freeholder. He maintains that it would be wiser, on the part of the operative who has amassed this sum, to lay it out in the purchase of a cottage, than invest it in a savings' bank. He asserts that the system is progressing in Yorkshire, and that already the county of Middlesex is secured from any Tory attempts. On this side the water these statements will appear extraordinary enough. Nevertheless, we learn from other quarters that this movement of the League has produced a very startling sensation in the counties of Lancaster, York, and the parts therabouts. If followed out—that is to say, if trade and manufactures continue prosperous—the system may effect a greater change than the repeal of the Corn Laws. What is rather remarkable, we find that the London Tory journals have given the *go-by* to this movement. The *Morning Post* passes it over as it did, most shamefully, we must say, the speech of Lord Londonderry to his tenantry, at Newtownards, in which speech his lordship, it will be remembered, declaimed on the virtues of high rents, and the necessity of repealing the Corn Laws. As to "the agriculturists" of the sister country, they confine their agitation to guano, draining, and allotments. The landlords do not speak of lowering the rents; and the farmers say they cannot pay them, with wheat (in the country markets) at 42s. per quarter. We opine, without assuming prophetic airs, that this state of things cannot continue much longer than the commencement of the next session of Parliament.—*Dublin Evening Post*.

THE REGISTRATION.—It is remarkable, although we do not know that it has been remarked, how little has been said upon the subject of the registration, either by the Government or Opposition newspapers. They have by mutual consent, as it were, kept a dead silence about it, and "buried" the whole business, almost as much as if nothing of consequence had been going on. The truth is, neither party at all likes the results as they are believed to stand. It is generally understood that the Tory party have lost, and have been losing ground. The great exertions of 1840 could not be maintained. Apathy, and what is worse, open discontent, have since that time become rife in their camp; and hence they have gone back upon the registers as a party. But, if the Tories have lost, as little can it be said that the Whigs have gained, in the Whig sense of the word. The "Liberal" party (so called) has no doubt advanced much; but that step (and a great one it will be found to be) has been made by the "League." Their unseen exertions are far beyond those that are more public. They are "sappers and miners" of especial science; and this is a state of things that pleases neither Whig nor Tory. The truth is, a new power—a third power—has arisen, which neither faction can control, and hence all this sullen silence. In South Lancashire we learn that "Free Trade" has carried all before it; and so it has in various other places we cannot particularize. The League make no "call" for money this year. It is well. In 1845 it will all be wanted, and then it will be forthcoming with a witness.—*Tyne Mercury*.

SHERSTON, WILTSHIRE.—A public lecture on the evils of the Corn and Provision Laws was delivered on Tuesday evening the 19th inst., in the New School room, Sherston, by Mr. Falvey from the Anti-Corn-Law League. Great interest was excited by the announcement of the lecture, as there never had been a meeting on the subject of the Corn Laws previously at Sherston. The room—a very commodious one—was quite full, and Mr. Pritchard, of Easton-Grey, was, on the motion of Mr. Joseph Reynolds, miller, of Malmesbury, seconded by H. Gale, Esq., unanimously called to the chair. Mr. Gale, in the course of his remarks, said it was most gratifying to see a gentleman like Mr. Pritchard—who was not only a considerable owner but also an extensive renter of land, taking a leading part in the Free Trade movement. It indicated an advance in the direction of Free Trade, even among the farmers of this country, which could not possibly be mistaken by our rulers.—The Chairman said he had great pleasure in taking the chair that evening. As a farmer he had the most solemn conviction—a conviction which every year for the last ten years, had strengthened—that the Corn Laws had not only been of no advantage, but had been a positive injury to the tenant-farmers and farm-labourers. Those laws might have increased rents and tithes—and he had no doubt such had been the case—but no portion of the difference between natural and artificial prices had gone into the pockets of the tenant-farmers. He had heard Mr. Falvey with great pleasure at Malmesbury, and he had no doubt that gentleman would prove to the satisfaction of the meeting that the Corn and Provision Laws had been most mischievous to the people of England.—Mr. Falvey then addressed the meeting, and traced the Corn Laws through their various changes and modifications from 1815 to the present period; proving that those laws were unjust in principle and injurious in effect, and ought to be abolished.—The lecturer was loudly cheered at the close of his address. Votes of thanks were carried by acclamation to the Rev. Mr. Sheriff, for the use of the school-room; to the chairman, and lecturer; together with three cheers for the Anti-Corn-Law League.—*Wiltshire Independent*.

THE POWER OF THE LEAGUE SUSTAINED BY THE TRUTH OF ITS PRINCIPLES.—That the League has made

itself felt throughout the length and breadth of the land, no man who studies the manifold signs of the times can for a moment hesitate to believe. In the efforts to establish the allotment system—to find employment for the labourer—in the advice so bountifully dealt out by landowners, to drain, manure, and improve—in the incipient reactivity evinced by tenant-farmers under such advice—in the efforts now taken to obtain a reduction of the malt-tax—in each and all of these projects the League is plainly visible. Each and all are a tribute to the energy—the all-pervading power—of this extraordinary body. But were the power of the League—were its energy and unceasing perseverance ten times that which it has exercised—it could have availed little but for the unassailable truth of its principles, for the promotion of which it moves, breathes, and has its being. It is in the truth of the great principles which the League asserts that its wide and all-powerful influence resides. That truth makes itself felt every where, and no stronger exemplification of this fact can be found than in the universal "bit by bit" adoption of its principles in all that does not relate to corn, by all classes, and all shades and denominations of politicians. The truth of the principles which has given life, vigour, and power to the League will never expire. The League itself may die out, but it will be when the breath of monopoly shall no longer furnish forth the aliment that contributes to its great opponent's vitality.—*Sussex Advertiser*.

ALGIERA AND ITS EUROPEAN POPULATION.—The *Times* correspondent, writing from Algiers, says:—"It is necessary, however, to explain the circumstance of there being two-thirds of the European population of Algeria strangers, or not French. There are several reasons. A Frenchman cannot toil in Africa like a Spaniard or a Maltese. It is also for this reason that the greater part of the strangers are Spaniards or Maltese, who labour in Africa, in the city or in the country, with less difficulty than even the Moors, and are as hardy as the Bedouins. It is impossible for the French labourer or colonist to compete with these men. The Irish labourers who came here 200 strong could not compete with these hardy Spaniards and Maltese, who really live in the sun, and are baked dry, and purified from all distempers in African heat. *Apres* of the Irish, there are of the 200 three left. A third perished, and the rest got away as they could. The French agents who inveigled them here showed their accustomed inhumanity and improvidence in all such cases.

GAME LAWS.—Yet from this root (forest laws) has sprung a bastard slip, known by the name of the game laws, now arrived to and wantoning in its highest vigour; both founded upon the same unreasonable notions of permanent property in wild creatures, and both productive of the same tyranny to the commons, but with this difference—that the forest laws established only one mighty hunter through the land; the game laws have raised a little Nimrod in every manor.—*Blackstone*.

LAW-MADE WAGES.—We often observe in this country an inclination manifested to regulate by law the rate of wages, not with the view of instituting any such naturally equitable partition, but of establishing a minimum below which life cannot be comfortably supported. These reasons proceed, it will at once be admitted, not on the rights of man, but on the claims of humanity. To such a project there is but one objection: it will assuredly fail of its humane intention. It is presumed that the competition amongst the workmen to obtain employment has so far advanced, that these cease to obtain a sufficient remuneration for their labour. The thousand men whom a great capitalist employs are inadequately paid. The Legislature requires that they should be paid more liberally. But the amount which the capitalist has to expend in wages is limited. The same amount which sustained a thousand men, can, under the new scale of remuneration, sustain only nine hundred. The nine hundred are better fed, but there is one hundred without any food whatever. Our well-intentioned Humanity looks round aghast at the confusion she is making.—*Blackwood*.

TRUTH.—To discover truth is to do good on a grand scale. The detection of an error, the establishment of a fact, the determination of a doubtful principle, may spread its benefits over large portions of the human race, and be the means of lessening the misery or increasing the happiness of unborn generations.—*Dailey*.

CORN AND SUGAR MONOPOLIES.—On Tuesday and Wednesday evening, the 19th and 20th inst., two lectures were delivered at Rainton, in the large room at the Eagle and Child Inn, by Mr. Finnigan, of Manchester. On the first evening Mr. Thomas Rimmer was unanimously called to the chair; and at the second lecture Mr. Thomas Penketh, farmer, and one of the guardians of the township, readily consented to preside over the meeting. Both lectures were very numerously attended, and all present appeared unanimously in favour of the principles propounded by Mr. Finnigan in opposition to the monopolies in corn and sugar. At the close of the second meeting three cheers were respectively given for the chairman, the lecturer, and Free Trade.—*Manchester Times*.

THE QUESTION OF FREE TRADE.—The question of Free Trade is becoming more and more narrowed every hour—becoming, indeed, merely a question of time, to be settled by the barometer and thermometer. With the exception of the trade with China, which is the result of Lord Palmerston's policy, so much ruled at by the Tories, the home market is now almost all upon which our manufacturers have to depend. This is not seen and felt at present, when the weather is propitious, the seasons favourable, and the harvests abundant. Egypt rejoined in the seven years of plenty. But, when the seven years of famine came, her people were sunk in misery and penury. And just so. All is smiling and sunshine with us at present. We are in our years of plenty. But, let there be a change; let there be a falling harvest, an export of gold, a tightening of the money market, a disarrangement of mercantile engagements, a stoppage in the smooth and easy flow of trade, and a people out of work and out of bread, and what then? Nothing, only a trifle. The pang will be a sharp one. But when it is over, it will be found that the Corn Laws have been swept away with it.—*Liverpool Advertiser*.

PUBLIC PARKS, WALKS, AND PLAYGROUNDS.—The committee have laid before the public the outlines of their scheme for giving to the people of Manchester the means of recreation by the opening of parks and walks. They propose the formation of four places of recreation, of about thirty acres each; that a gymnasium, on a large scale, be erected in each, free of charge; that, where possible,

spaces be obtained for ball alleys, quoits, skittles, archery, and other active sports, and available to players at a charge merely to cover the implements of play that may be used; that each park contain one or more fountains of pure water; that numerous seats be erected in proper situations for general accommodation; that buildings be erected where tea, coffee, and other refreshments may be obtained, but where no intoxicating liquors of any kind shall be allowed; that such parks be open to the public on all days of the week; and that the gymnasium, ball alley, quoit, skittle, or archery grounds shall be closed on Sundays. The committee add that they have every reason to expect that public baths, wash-houses, &c., free, or at a merely nominal charge, will be erected simultaneously with the promotion of the parks and playgrounds.—*Manchester Times*.

INCENDIARISM.—A fire broke out about four in the morning of the 16th inst., in a shed on the New House Farm, in the occupation of James Aylwin, Trebyford, which, there is every reason to believe, was the work of an incendiary. A cow-stall adjoining the shed, and part of a barn and cart-house, were destroyed.—On Wednesday evening a fire broke out on the farm of Mr. F. Lilley, Grantchester, Cambridgeshire, which destroyed the farm-buildings and a quantity of farming property, the whole estimated at the value of nearly £2000. It is suspected to have been the work of an incendiary; but some think it may have been accidental.

WIGAN—HAND-LOOM WEAVERS' STRIKE.—We are happy to inform our readers that the strike which took place about a week ago, among the hand-loom weavers employed by Messrs. Pilkington and Son, Mr. T. Howarth, and Messrs. Chappel and Marsden, is finally arranged, the master having consented to abide by the terms offered by their workpeople, viz., to make all kinds of goods that they manufacture into fifty yards of cloth. If the strike had continued, the distress which must inevitably have taken place would have been great.—*Preston Guardian*.

CORN DUTIES.—The following appears in the *Cork Southern Reporter*, a journal often having access to correct information on commercial matters:—"There are commercial letters in town from highly respectable houses, stating that the belief is strongly entertained in London that Sir Robert Peel, in the ensuing session, contemplates making extensive alterations in the duties on the importation to the United Kingdom of the principal articles of consumption. It is confidently asserted that a further reduction of the sugar duties will take place; that 50 per cent., that is 10s. per cwt., will be taken off foreign butter, and that relaxations in the corn duties will be made in favour of those corn-growing countries who will reciprocally reduce their import duties on British manufactured goods."—*Chronicle*.

HIMING FAIR.—Servants of both sexes and all ages were numerous in the market,—men and women, boys and girls. Good men might have been hired for the half-year for £5 to £6; women, of known character and usefulness, were in better request, and at fair wages; but few of the younger fry found masters—they went away unhired. The farmers must have as few mouths as possible—they cannot afford it. How cheering must be the agricultural prospects of England, when the tillers of the soil cannot pay for labour to cultivate their land, and the peasantry cannot obtain labour to buy them bread! Ye monopolisers and high-rate men, look ahead—"coming events cast their shadows before."—*Kendal Mercury*.

FIRE INSURANCE.—The great comparative extent to which the business of insurance is carried in Great Britain affords one of the least equivocal tests of our superior progress in civilization, and of the greater diffusion amongst us of habits of providence and foresight. It appears, from the official returns, that the gross duty received on policies of insurance against fire in the United Kingdom, in 1843, amounted, in round numbers, to one million sterling, independent of farming-stock, which is exempt from duty. As the duty is 3s. per cent., the property insured, subject to duty, was valued at the immense sum of nearly £367,000,000. But, vast as this sum certainly is, it is still true that most buildings, with their contents, are not insured at near their full value. Even in towns, many are not insured at all; and in the country the insurance of farm-buildings is comparatively rare. It is difficult to imagine that this disinclination to insure can be owing to any cause other than the exorbitance of the tax.—*Globe*.

NIL DEVIKRAMUM.—It is a duty not to allow ourselves to think ill of any living man, still less to treat him, as if your hopes of his amendment were utterly gone.—*The Claims of Labour*.

MERCANTILE NAVY OF PRUSSIA.—It is stated that the mercantile navy of Prussia numbers a very respectable force, having greatly increased of late years, and including, as far back as 1839, no less than 619 ships. The accession of Hamburg, Lubbeck, an Bremen, would add, it is reckoned, 409 more.

IMPORTS OF FRENCH APPLES.—French apples, of delicious quality, are being brought in large quantities from Ostend and other ports into Hull, from whence they are despatched, by sloop-louche, to Leeds, Halifax, &c. During the past week, the Hiram, Capt. Foster, of Gooke, and an Ostend vessel, together have discharged about 5000 bushels. Sailing vessels have been regularly plying from Dunkirk, Rotterdam, &c., with similar cargoes.—*Hull Advertiser*.

THE IRISH POOR LAW.—It appears by the last report of the Irish Poor-law Commissioners that on the 1st of January, 1844, there were in the ninety-two workhouses then open 31,981 paupers, and the charge for their support was £221,000, exclusive of a million and a half expended in the erection of workhouses. Yet beggars are as numerous as ever, so that those who pay the rate gain no relief from the importunity of the miserable.—*Sun*.

THE CHINESE CHARACTER.—The more the Chinese come to mix with us, and to be acquainted with our character, the more they seem to fall into our ways; and we cannot but think that, at no distant period, amicable relations will be established without difficulty upon an intimate footing. It has often been remarked that in many respects they resemble Englishmen in their mercantile, industrious habits, their ingenuity, and their readiness to combine together for useful purposes; their independent spirit, and their love of argument. They differ materially from all other eastern nations with which we have hitherto come in contact.—*Voyage of the Nemesis*.

MARKETS.

CORN MARKET.

MARK-LANE, Monday, Nov. 25.—The supply of English Wheat last week was large, chiefly from Lincolnshire, and direct to the millers, and there was a good show of land-carriage samples at market this morning. The condition of most of it was very inferior, and is, to 2s. cheaper than this day week; the best samples were no cheaper, and were taken off readily. The damp condition of the English Wheat caused a better demand for Foreign, for which there was a fair sale at last week's rates. There was a good supply of English Barley, and all but the very finest qualities were 1s. cheaper; Grinding and Distilling qualities of Foreign maintained former rates, but the demand was scarcely so active as last week. There was a better supply of Beans and Grey Peas, both Old and New, and prices were 1s. lower than last week; Old White Peas were no cheaper, and in rather better demand. The addition to last week's supply of Oats was trifling; there was an improved demand from the country at rather better prices than on this day week.

FRIDAY, Nov. 29.—The supply of English Wheat has been liberal again this week. The small proportion of it which is in good condition has been readily taken off at former prices; but the rest is disposed of with great difficulty at some abatement. Though the trade in Foreign Wheat is not brisk, the demand for it, for mixing with the damp English, is sufficient to enable holders to obtain fully former rates. The supply of English Barley has been again fully equal to the demand, and for all descriptions but the very finest qualities, rather lower prices must be accepted. Foreign Malting Barley partakes the dullness of English; but for grinding qualities though the demand is not active, former prices are maintained. Only one vessel, partly laden with Irish Oats, is reported during the week. A large proportion of the recent supply has been taken off; and what remains is held at such high rates as to induce buyers to hold off as long as possible, in expectation of further arrivals. There is, in consequence, but little activity in the trade. Beans and Peas remain the same as on Monday. The duty on Barley fell to 2s., and advanced on Rye to 7s. 6d., yesterday.

J. HALL, Wallsend, Northumberland, cowkeeper. [Wilson, Sunderland; Bell, Broderick, and Bell, Bow Churchyard.]
R. ROBINSON and W. ROBINSON, Swilford, Leicestershire, bakers. [Mash, Lutterworth; Smith, Bedford-row; Mottram, Birmingham.]
J. BROWN, Newcastle-under-Lyme, painter. [Harriison and Smith, Birmingham; Jackson, Field-court, Gray's-inn.]

DIVIDENDS.

Dec. 19. J. Nutter, Cambridge, miller—Dec. 18. G. Field, Bond-court, Walbrook, packer—Dec. 18. G. Deane, Southampton, coach builder—Dec. 17. W. F. Mills, Hart-street, Mank-lane, gun maker—Dec. 19. J. Dixon, Sheffield, acylis manufacturer—Dec. 19. J. Dixon, Sheffield, linen draper—Dec. 30. J. Prior and H. Brady, Kingston-upon-Hull, brush manufacturers—Dec. 18. J. Naylor, junior, Kingston-upon-Hull, boat builder—Dec. 19. W. Hall, Tredington, Worcestershire, and M. Ralabow, Stratford-upon-Avon, Warwickshire, corn merchants—Dec. 20. W. Wadnell, Liverpool, merchant—Dec. 20. J. Murray and W. Brown, Liverpool, millwrights—Dec. 20. A. Leighton, Liverpool, merchant—Dec. 19. S. Boulton and T. Addison, Liverpool, stockbrokers—Dec. 20. R. Warren, Liverpool, druggist—Dec. 27. T. Ledard, Cirencester, money scrivener—Dec. 19. T. Bulmer and R. Bulmer, South Shields, rope manufacturers.

CERTIFICATES.

Dec. 10. H. C. York, Cheltenham-place, Westminster-road, lodging housekeeper—Dec. 19. W. Annfield, Northampton, draper—Dec. 17. E. Edwards, City-road, draper and hatter—Dec. 17. E. T. Crauford, Piccadilly, wine merchant—Dec. 17. J. Pim, Clapham-common, linen draper—Dec. 17. W. Yulk, Cornhill, tailor—Dec. 19. T. and J. Bailey, King's-cliffe, Northampton, toy dealers—Dec. 19. W. R. Head, Winchester-street, King's-cross, builder—Dec. 19. P. G. Flight, Adam-street, Adelphi, publisher—Dec. 19. G. Mosler, Bridgegate, Somerset, jeweller—Dec. 19. F. H. West, White Horse Tavern, High-street, Shoreditch.

London: Printed by MURRAY PATERSON (of Providence-place, Upper Kensington-lane, Lambeth, in the County of Surrey) and JOSEPH CLAYTON (of Number 57, Strand, in the County of Middlesex), at their Printing Office, Number 10, Crown-court, in the Parish of St. Dunstons in the West, in the City of London, and published by ARTHUR WATSON PATERSON (of Number 57, Norfolk-street, Strand, in the County of Middlesex) at the Office of THE LEAGUE, Number 67, Fleet-street, in the Parish of St. Dunstons in the West.—Saturday, November 24, 1844.

THE LEAGUE.

No. 63.]

SATURDAY, DECEMBER 7, 1844.

[3d.

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All Subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive, a copy weekly of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newell's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

The League Bazaar will be held during the month of May next, in the Theatre Royal Covent Garden.

We beg to inform our subscribers that bound volumes of the LEAGUE newspaper, containing the whole of the first year's numbers, may be had on application at the Offices either in London or Manchester.

Persons wishing to be on the Register next year, as Freeholders for County votes, must be in possession of the property before the 31st of January.

QUALIFY, QUALIFY, QUALIFY.

PRACTICAL INSTRUCTIONS FOR ELECTORAL QUALIFICATION.

The electors for counties are as follows:—Freeholders, copyholders, leaseholders, occupying tenants.

FREEHOLDERS.—The following persons are entitled to vote as freeholders:—1. Any person possessed of a freehold estate for himself and his heirs, or, as it is called, an estate of inheritance, of the yearly value of 40s. 2. Any person possessed of a freehold estate for life or lives of the yearly value of £10. 3. Any person possessed of such an estate for life or lives of the yearly value of 40s., under any one of the following circumstances:—If the estate was acquired on or before the 7th of June, 1832; or since, if by marriage or marriage settlement, by devise (i.e., by will), or by promotion to any benefice or office, or if the freeholder, is himself the actual occupier of the property. In any of these cases it is sufficient if the property be of the yearly value of 40s. Parish clerks, sextons, schoolmasters, Dissenting ministers, and holders of offices have a right to vote if entitled to emoluments of 40s. per annum, arising out of, or charged upon, land, and may be registered as voters in the parish wherein the land is situated. The appointment must, however, be for life, not for a temporary purpose, or at the pleasure of any other party; but an appointment during good behaviour is considered to be an appointment for life. If the freeholder occupy his own freehold property in a borough, of such a nature and value as would confer upon him the right to vote for the borough, he will not be entitled, in respect of that property, to vote for the county. But if the freehold will not confer the right of voting for the borough, that is, if it be not of the annual value of £10, or if it be land without building, the freeholder may vote for the county, though he occupy it himself. And if the freeholder do not occupy his freehold estate within a borough, he may then vote in respect of it for the county, and his tenant may also vote for the borough. Six months' possession prior to the 31st of July will entitle a freeholder to be registered. And if the freehold lands or tenements should have come to him by descent, succession, marriage, marriage-settlement, will, or promotion to any benefice in a church, or to any office, no definite period of previous possession will be necessary.

COPYHOLDERS.—Any person possessed of any lands or tenements of the clear yearly value of £10, whether of copyhold or any other tenure than freehold, is entitled to vote. Tenants in ancient demesne may in general vote as freeholders, if they do not hold by copy of court-roll, but otherwise they will be entitled as copyholders. As freeholders, 4s. per annum will be sufficient; but as copyholders, £10 a year is required. The same period of possession previous to registration is required, in respect to copyholders, as in respect to freeholders. Copyhold property within a borough, if of such a nature as would qualify any person to vote for the borough, will not, under any circumstances, give a right to vote for the county.

LEASEHOLDERS.—The right of voting in respect of leasehold property extends to—1. Any person who is entitled by virtue of a lease made or assigned to him of any lands or tenements for the unexpired residue of any term originally granted for a period of not less than 20 years, if

the property is of the clear yearly value of £10 above all rents and charges. 2. Any person who is in like manner entitled to the unexpired residue of a term originally of 20 years, if the lands and tenements are of the clear yearly value of £50. The party to whom the lease was originally made, or a party to whom such lease may have assigned the original lease, may vote, though not in occupation of the premises. Any sub-lessee or assignee of an under-lease may also vote, but only when in occupation of the premises. Lessees or assignees must have been in actual possession for 12 months previous to the 31st of July, unless the qualification is acquired by any of the modes before mentioned as excepted; that is to say, by the death of a relative, by marriage, by will, or by promotion to any benefice or office. Leasehold property in a borough, if of such nature and value as will give any person a vote for the borough, will not give a vote for the county.

OCCUPYING TENANT.—Any person occupying lands or tenements for which he is liable to pay a yearly rent of £50 is entitled to vote, if not within a borough, and not of such nature as would qualify a person to vote for the borough. In respect of the period of previous possession required, occupying tenants are placed on the same footing as leaseholders; but it is not requisite that the occupation be of the same lands or tenements: different lands and tenements occupied in immediate succession for twelve months previous to the 31st of July in each year will give the qualification.

GENERAL OBSERVATIONS.—Besides lands, houses, buildings, and the like, property and interests of the following description will entitle the owner to be registered and to vote, viz.—tithes, an annuity charged on land, a rent-charge,* fee-farm rents issuing out of an estate in fee; shares in navigable rivers, canals, &c., where the shareholders possess an interest in the soil; tolls of bridges, tolls of fairs and markets, purchases of unredeemed land-tax. Persons who have entered into an agreement of purchase of property, or who have paid any part of the purchase-money, or done any other act in part performance of the agreement, are considered to have equitable estates, and are entitled to vote and to be registered. Joint tenants and tenants in common have each a right to vote, provided the property be of sufficient amount to give to the share of each the value required. Mortgagees may vote, if in actual possession or in receipt of the rents and profits, but not otherwise. Trustees are expressly excluded from voting for any trust estate; the right of voting in respect of trust property is reserved for the *c'estui que trust*. In estimating the value of freehold or copyhold property, the marketable value of the property to let is the criterion to be attended to. If, owing to accidental circumstances, the rent should be less than might be obtained, the property will still give a right to vote. As regards leaseholds, the value required does not depend on the amount of rent. It is to be estimated by the profit which the tenant can make of the property, over and above the amount of rent reserved and any encumbrances charged on the property. The value required is to be "above all rents and charges." Under these words are included all encumbrances affecting the property, but not any public or parliamentary taxes.

BOROUGH FRANCHISE FOR 1845.

In order to secure a borough vote next year, those who occupy premises giving a qualification should immediately see that their names are placed on the poor's rate-book.

A claimant must be rated, or have claimed to be rated, to all rates made during the year ending the 31st of July. If, therefore, his name is omitted from any rate made during that time, he should immediately claim to be rated. The overseers are required to put the name of a person so claiming on the rate last made; consequently, if the claimant suffers two rates to be made before he claims, he will be unable to get upon the former one, and will thereby lose his vote for one year.

No particular form of claim to be rated is prescribed by the Reform or Registration Acts; but the following form may be adopted:—

CLAIM TO BE RATED.

"To the Overseers of the Parish of _____
"I hereby give you notice that I occupy a _____ at No. _____ in _____ Street, in your parish, and I claim to be rated to the relief of the poor in respect of such premises, in order that I may be entitled to vote in the election of a member (or members) of Parliament for the city (or borough) of _____.
"Dated this _____ day of _____, 1844.
"(Signed) _____
of _____"

Insert the name of the parish, the nature of the premises, as *House, Shop, room*, or as the case may be, and the name of the street, &c., and of the city or borough, also the date. The christian and surname and place of residence of the claimant should be inserted at full length. Give the claim to an overseer, keeping a correct copy, on which should be written the date when, and the name of the overseer on whom, it was served. If any poor's rates are due for the premises at the time of making the claim they must be paid, or the amount due tendered. Should the overseer refuse to accept the money, or omit to enter the claimant's name in the rate-book, he will be deemed to be rated notwithstanding; but, if the claimant's name be omitted from any future rate, he should again claim to be rated.

WHICH COUNTIES FIRST?

We have elsewhere inserted a circular which has been sent by post to all the subscribers to the League in England and Wales (Manchester excepted), calling upon them to qualify for the

* No registration of annuities or rent-charges with the clerk of the peace is requisite. The 3rd Geo. III. c. 24, is repealed.

counties. The following, amongst other communications, has been elicited, in reply, from a correspondent at Luton, Bedfordshire:—

"Allow me to observe that I highly approve of the means you are pursuing to accomplish that most desirable object—Free Trade. The whole assistance which it is in my power to render, shall be at your disposal. I shall feel much pleasure in purchasing two or three freeholds in counties likely to be of service at the next election. I think it would have been much better if the Council had stated in their circular which counties they would wish us to qualify for. For instance: I find the Council are very anxious to carry Middlesex at the next election; now, would it not be better for the Free-Traders of Bedfordshire and Hertfordshire to qualify for the above county? There 100 votes might assist the cause very materially, while the same number would be thrown away for Buckinghamshire. Take care we do not divide our strength, and thereby injure the cause. You should select a county, and then let all Free-Traders qualify for that. I care very little as to Buckinghamshire or Bedfordshire, if we can only point to Middlesex; Lancashire, Yorkshire, Cheshire, and other counties possessing large manufactures in them. We must have the manufacturing counties first, those counties being represented by Tories or monopolists, is the weapon the landlords fight us with; and we must deprive our opponents of so powerful an argument."

These judicious suggestions have induced us to look into the state of the English counties with the view of laying before our readers a list of those which seem, upon a hasty examination, to afford the best prospects to the Free-Traders. In forming our opinion we have had an eye to the town population in each, to the present representation, to the contests since 1832, and to other data, for judging of the state of parties. We look to the extent of town population as the first point for consideration, because, whatever may be the present state of the register, if there be a numerous middle class in the county, not qualified to vote, the Free-Traders may, by purchasing 40s. freeholds, possess themselves of the representation. The following list of thirty-three English counties, and divisions of counties, comprises those which appear to us at once the most important and the most vulnerable: in fact, just in proportion to the importance which they derive from the extent of their population is the power which that population possesses to carry out our plan:—

West Riding of Yorkshire,	West Worcestershire,
South Lancashire,	South Cheshire,
Middlesex,	North Staffordshire,
North Lancashire,	South Leicestershire,
North Cheshire,	South Derbyshire,
East Surrey,	North Nottinghamshire,
North Derbyshire,	Rutlandshire,
North Durham,	South Northumberland,
South Stafford,	West Cumberland,
East Gloucester,	North Warwickshire,
West Gloucester,	East Kent,
East Cumberland,	West Kent,
West Surrey,	South Hants,
East Somerset,	Cornwall,
South Durham,	East Sussex,
North Wiltshire,	East Norfolk.
East Worcestershire,	

There may be local circumstances, with which we are unacquainted, affecting some of these counties; but looking at them from a distance, with a map and the last census tables in hand, we should say there is not one in which the landed monopolists might not be easily beaten by the 40s. freeholders. There are many other counties where our plan might be carried out with success. We do not despair of any of them, not even Buckinghamshire itself; for the time is evidently coming when the Chaudos clause will fail to give the landlords their present power in the polling booth. The tenants-at-will have for some time been sulky; they are at last beginning to speak out; and by-and-by they will be in open revolt. We therefore advise our friends everywhere to qualify themselves for their own county, if convenient, in the first place; and, next, they cannot do better than carry out the views of our Luton correspondent by purchasing qualifications in those counties which, by their population and wealth, will exercise the greatest influence at a general election. For instance, let every opulent Free-Trader within fifty miles of London purchase a qualification in Middlesex and East Surrey; let those who are within an easy journey from Lancashire or West Yorkshire—and this includes in these railway times everybody within 100 miles—qualify for those important counties, which, in their turn, may, after they are secure, easily rescue the smaller counties, within the same distance, from the hands of the monopolists.

MEETINGS OF THE AGRICULTURAL LABOURERS.

Another of those meetings of the Wiltshire labourers—several of which we have already noticed

in the course of the summer—has been held at Goutacre. It was convened by the spontaneous movement of the agricultural labourers themselves, was presided over by a chairman of their own selection, and was chiefly, if not wholly, addressed by members of their own class. It is not easy to overstate the importance of such meetings; they are the safety-valves of national distress; our rulers should be glad to find the agricultural labourers stating their grievances in a peaceful and constitutional form, because it shows that the hope of redress is still alive in their bosoms, and that they are indisposed to lend themselves to the frantic suggestions of despair. That such a hope is felt was proved by the multitude which thronged to the meeting; it was held in the Independent chapel at Goutacre, and long before the appointed time for assembling, every part of the building was closely packed by the labourers, their wives and their children, while crowds, unable to obtain an entrance, hung round the doors and windows. The monstrous delusion, that the Corn Laws gives protection to the agricultural labourer, was indignantly denounced by these assembled labourers, for the necessary results of monopoly were undeniably manifested in their own miserable condition. The hypocritical pretext of shielding the farm-labourer from foreign competition was answered, by showing that the system has produced a home competition which daily aggravates the difficulties of their struggle for mere existence. Monopolists can no longer hide from themselves the ominous fact that the peasants have discovered the artifices which have been practised upon them; that the thin veil, framed to conceal landlord selfishness, has been rent away; and that the starvation-mongering of the Corn Laws stands revealed to the labourers in all its naked deformity.

Poets have told us of "the short and simple annals of the poor;" whatever they may have been in the days of Gray, those annals have now become a long complication of distress and suffering, carried to an extent which has tested to the utmost the powers of human endurance. But the cry of the agricultural labourer has been hitherto unheard; the benevolence of the lords of the soil seeks objects for its exercise in factories and in colonies, but closes its ears against the moan and shriek of starvation heard around its own doors. The labourers of the south of England are destitute, miserable, half-starved, exposed to every circumstance of physical and moral deterioration, and when they complain they are told that "they are protected." What a mockery is this! What an insult superadded to injury! "Protection" is the name given to high rents and low wages, to making food dear and labour cheap, to reducing the English peasant to a state which the serfs of Russia can afford to pity. We take an extract from a letter published in the *Oxford Chronicle* by the Rev. Mr. Ferguson, minister of the Independent chapel of Bicester, respecting the condition of the peasantry in Oxfordshire; it requires no comment:—

"A farmer told me, a few days ago, that a field-labourer, who planted a few potatoes in one of his fields, could not pay for the ground; and consequently he employed the poor man for a few days. The farmer said that the man began his work like one in earnest. But, alas! for him and for his family, he had nothing, either at home or in the field, which he could eat; no—not so much as a cold potato!"

"The same farmer informed me that many labourers in his neighbourhood are frequently in a poor and sickly state of health, and that the cause of it is the small quantity of food which they consume, and the damp and unhealthy cottages in which too many of them are doomed to live and die. The consequence of this state of things is, that the poor creatures cannot work a good day's work; and thus it is that so many of them are starving between food and want, hope and despair."

The same clergyman publishes a letter addressed by the son of a farm-labourer to his father, as a proof that the famishing and degraded peasants are conscious of their situation, and that some of them are in an unsafe state of mind. We give an extract in the original orthography, in the hope that it may prove a salutary warning:—

"I only ask you what mean the government Party. Shows our Redeemer it false in Luke that he said not to pay taxes to clear how you not no what taxes is for—is it not for to keep one half to live on the sweats of another man brow every poor man has to pay out of his hard earned shilling to the adulterers and extortioners, sinners, and moneychangers—I shake you wot would be the consequence if all the popple in England come to the truth the would do away with the—

"the earth belongs to every mouth and everything cometh out of the earth. When he (the Devil) went up to the top of the Church Pinkall, he showed the kings of the earth—I shake you how the are I should say, Duke of Kent—County of Kent—Duke of Bedford—Bedfordshire—Duke of York—Yorkshire—the Church is for the truth of the popple, but it is false with Adulterers, Extortioners, Sinners, and money changers. Everything can be done without money except a poor man. Now why should a poor man be taxed above everything of the creation. The shorts on your backs will make as much money as will by all England if that Society say the word why then should our brother be starved?"

It is perilous when such sentiments are allowed to be put in print, and therefore we rejoice that the labourers have found a safe and constitutional mode for their feelings in such meetings as that held

in Goutacre. They have stated their grievances in temperate and manly language, and they revealed tales of suffering which cannot be read without horror. Take as a specimen the speech of the first speaker after the address of the chairman:—

"Charles Gingell, of Preston, in the parish of Lyneham. He said he felt great distress and grievances, but could scarcely find words to express himself. For the last twelve months his wages had amounted to £19. 2s. He was thirty-four weeks working for 7s. a week, and eighteen weeks for 8s. per week. This gave an average of about 7s. 4d. a week. Out of these great wages he had to maintain himself, his wife, and six children. (Hear, hear.) If he could spend all that sum for food he would not grumble; but there were many other things to be paid for—£3 a year rent; the shoe bill of the family he could not put at less than 1s. per week; and 1s. a week for firing, reducing the sum to about 4s. a week, or 6d. per head, for food per week; to say nothing of tea, sugar, butter, soap, candles, &c. He wished to pay everybody their own, but he could not do it. (Hear.) It was high time some remedy was provided to alter the condition of the labourer; and he thought, if they could once get Free Trade, the condition of the people would altogether alter and improve. Eighteen years ago he married a wife from the manufacturing districts, and women at that time were earning 12s. a week. At that rate his family would earn 26s. a week, while his wages from the land would increase. Was not Free Trade, then, desirable? ('Yes, yes,' and cheers.)"

At most of these meetings women have come forward to tell their stories of domestic privations and family misery. This is a novelty in England, and it is a signal proof how severe the wretchedness of the agricultural labourers has become, and how bitterly it is felt. We were much struck by the report of Mrs. Ferris's address; we need not ask for it the attention which it is sure to command:—

"Mary Ferris, of Chalcut, then stood up to speak, and, in language such as only a woman and a mother could use, addressed the meeting. She said the fathers did not know all the distress which was endured. When her husband was at work, her children were frequently crying for food. Last year her husband earned 8s. a week. The rich knew nothing of the misery which they endured. They thought if they saw the labourers with a decent smock frock on that there was no distress among them. She had often gone to bed, and laid awake for hours with the stomach-ache for want of food. She had three children, one 13 years old, ought to earn 5d. a day; another, 10 years, ought to earn 4d. a day; and the third, 8 years old, ought to earn 3d. This would add 6s. a week to her income, and then they would not complain of being badly off. If the factories were now open, as they were thirty years ago, the elder children would have employment in them, leaving the younger to fill their places on the farm. Now her husband frequently had 'the trembles' so from want of food that he could hardly do his work. (Voices, 'I've often had the trembles too.') Her children were dirty and ragged; for she could neither buy soap nor firing to wash them or their clothes properly. This woman gave many other affecting details respecting their sufferings, and called earnestly on other mothers to follow her example in telling them. Her tale was received with the greatest interest by those present."

"She was followed by an elderly woman named Mary Hatt, whose opening words were sufficient to excite the sympathy and attention of all who heard her. 'I can say nothing of my income,' said she 'because it is nothing!' She went on to state that her husband and two grown-up sons were all out of work, and could not obtain any. If it were not for the little bit of ground they rented of the Marquis of Lansdowne they should be starved. Last year her husband broke his leg, and she then received relief from the parish for fifteen weeks. He had not done any work since. Her son went yesterday to a farmer to ask for work. He told him to go to America. (Voices, 'They'd drive us all there if they could.') We heard them say they wished they could 'pit up' the labourers like potatoes in the winter.' She was for Free Trade, and then there would be more work, and more food. (Loud cheers.)"

Similar details of woe and misery were given by the other speakers, and were confirmed by the assent and testimony of their neighbours. The time has gone by for asking the question, "Can such things be," because we have indisputable evidence that such things are; and the only question now remaining is, "Shall they be allowed to continue?" To the right solution of this question it is of some importance to bear in mind that the further deception of the labourer under the pretext of protection is utterly impossible. He has learned the true nature of monopolist protection from the most convincing, though the most painful of all teachers, bitter experience. He has felt the burden of the Corn Laws in his own person and in his own family, and has found it crushing him to the earth and grinding him to powder. "The iron has entered into his soul;" it would be little short of madness to tempt him again by the same arts, which he has found out to be the real cause of his sufferings. The resolutions unanimously adopted at the Goutacre meeting convey valuable instruction both to the advocates and the opponents of the Corn Laws.

"Resolved, 1st. That we, the labourers, at this meeting assembled, have met to make known our distress and our wants, trusting that our statements will meet the public eye, and reach the hearts of our legislators, to the end that they may pass such measures as shall secure to industry its full and fair reward, and thus improve the condition of ourselves and our fellow-countrymen."

"2nd. That we meet not to ask for charity but for justice, in the shape of profitable and independent labour, so that we may supply ourselves and our families with the comforts and necessities of life, which we find at present to be utterly impossible in consequence of the scarcity of employment and the lowness of wages."

"3rd. That we firmly believe the restrictions imposed

upon industry by the Corn and Provision Laws are a principal cause of our destitute condition, inasmuch as scarcity, dearth, and uncertainty are the results of tampering with the people's food; and that we further believe, if those laws were abolished, remunerative employment would be more abundant, competition for labour less severe, the farmer rendered more secure, by steadiness of price and fair rentals, and the happiness and prosperity of all classes of society materially and permanently advanced."

Monopolists themselves feel that the fate of the Corn Laws is sealed, and that the question of their repeal is merely a question of time. But time does not accommodate itself to the exigencies of monopolist or minister: every hour that these wicked laws continue is an hour of unmerited and protracted misery to our labouring population; and those by whom their repeal is protracted will be responsible for this misery to a righteous God, and maybe to an injured country.

COUNTY REGISTRATION.

We have the gratification of being able to say that the work of enfranchisement is proceeding at an accelerated speed in the four northern counties, to which the attention of the League has been more particularly directed. Within the last fourteen days meetings of the friends of Free Trade have been held in several of the manufacturing towns, including Preston, Halifax, Colne, Accrington, Blackburn, Hebden Bridge, Huddersfield, Leeds, and Stockport. All of these meetings have been attended by deputations from the Council of the League, and at all of them committees have been formed, which are now actively at work, canvassing their respective districts. In Manchester the subject has taken firm hold of the Free-Trade public. The Registration Committee meets on two evenings in the week, Tuesday and Friday, at the offices of the League, at which Mr. Wilson, the Chairman of the League, presides. At these meetings most interesting discussions have arisen, suggested by the reports of the canvassers, and the continual inquiries which are made as to the best mode of carrying on the work. Upwards of 200 names for new qualifications have been reported during the last week.

LETTERS FROM THE SOUTH-WEST.

(From a known Correspondent.)

FIRST LETTER.

Damerham, Wiltshire, Dec. 2, 1844.

This is a village peopled by labourers in agriculture, some of them at the present time workers in copsewoods. Several are unemployed. Those on some of the farms receive 8s. a week, subject to 1s. 6d. of house-rent; and on some of the other farms they receive only 7s. In neighbouring parishes the highest wages are 7s., and from that down to 6s. and to 5s.

On one estate in Damerham parish the high rate of 9s. is paid. This is on the property of Mrs. Currie, formerly Mrs. Coote. The Bishop of Salisbury is superior of this estate. The late General Sir Eyre Coote was a copyholder under the bishop; and his son's widow, now Mrs. Currie, holds it in trust for her son, a youth.

This lady is well spoken of here. Her land is better cultivated than some of the properties near it, and the workpeople are paid better wages—9s. a week. One of the workmen informed me that "ever since the mobs went about fourteen years ago" the wages on this property have been kept up to 9s. He said, "Wages was put up then for fear of the mobs; but the other gentry let them fall again as soon as the mobs was got under."

Another person says, "There was terrible fine work to do here. They set fire to the house; broke the windows and doors with sledge-hammers; broke every bit of the factory at Fordingbridge. And one of them were injured, and broke his poor father and mother's heart. That he did. A terrible sight of them were taken up for doing one thing and t'other."

There are several other landowners in this parish. The largest farm belongs to the Earl of Shaftesbury. This is a larger farm than most others in the district. It employs about ten pairs of horses to work it. The number of men I have not ascertained. The wages paid to them are 8s. a week; being 1s. above the rate paid on some other farms, and 1s. below what is paid on Mrs. Currie's estate. But this farmer is expected to reduce his men to 7s.; and then that reduction will be general. He rules the wages in the parish in a great measure, as he is the principal employer.

Women are paid 6d. a day at all kinds of out-field work, save harvesting and haymaking. At haymaking they have 1s. a day, and from one to two pluts of table ale. Some of the men complain that women are more sought after now than men for haymaking and harvesting, and for many things else in the fields. "A very little beer," they say, "makes a woman do a terrible sight of work. Unless it be mowing, or plucking the hay and corn, wot men do the work as fast as men; and give them a little beer—only a plut forenoon and a plut afternoon—and the farmers get a terrible sight of work out of them."

Women usually go out at eight in the morning. They have a dinner hour, and work, some until five o'clock; "and some farmers," they say, "make them stay until six o'clock." "It be a long day at hard work for 6d.," said one of them to me, "but we be glad to get it; wot we feel wot the want on them be's week enough to get out to at 6d. a day."

"At harvest work the men have 12s. a week for about a month, with an allowance of beer, but no victuals; and they complain that the farmers "be taking the beer from them now, as well as the victuals."

"When they reap by the piece they have 8s. for an acre of the best crops of wheat. At this work they take their wives, and every child they have older than infancy, to assist. They begin work by sunrise, and continue till dark. "We be at it," said one of them to me, who, with his family, had been harvesting on Lord Shaftesbury's estate this year, "sixteen hours a day, young and old on us, and I have myself been two hours more, when my wife has been knocked up so tired, and the young ones—that little chap there and his sisters—as not to be able hardly to crawl along home; and if be worse to get out in the morning, we be so doubled up. Ah! Sir, it be terrible hard work harvesting in these parts; we be paid so little for an acre, and have so hard a job to get victuals to give us strength to work. And," continued he, "what be it all for? It have all to go to pay for our shoes to the shoemaker; that be where our harvest wages go. We be n't no richer for working so many hours."

"Another man says, that having 1s. 6d. a week of rent to pay, and falling into arrear during the year, he has to give his extra harvest wages to pay his arrears of rent."

"Another who does not reap by the acre, but at 12s. a week for a month, says, that he works as hard and as many hours as those who work by the acre. He says, "The farmers know how much work a man can do by the acre, and they will have it out of him even though he work by the day."

"A farmer who rents land on the borders of this parish, in talking before some of his workmen on the wages question, spoke thus:—"I tell you, Sir, how it all comes; it all comes in this here way." Landlords press hard upon the farmers, and farmers press hard upon the labourers." The labourers listening to this cried out, "That be it, master; thou be right."

But a bricklayer present objected to this being right in all cases. "Look," said he, "at Rockburn parish. Do we not know of a farmer there who only pays 7s. a week at most; only pays 6s. a week to some men with families; and yet subscribes £100 to the pack of hounds?"

"That he do," replied a labourer. "My own brother has a wife and two children to maintain, and works for him for 6s. a week; and he must pay fifteen pence a week out of that for rent."

"That be the worst on it," observed the farmer who spoke before; "they do carry their heads so high, some of the farmers who get so many hundred acres into their hands, and ride such terrible fine horses, and wear scarlet coats riding after the hounds, and subscribe each their £50 or £100 to the pack, that landlords cannot believe there be any distress."

"That be right, master," said one of the men. Another added, "An they did as you, master, they wouldn't be driving in their four-wheeled traps."

SECOND LETTER.

Damerham, Wiltshire, Dec. 3.

My letter of yesterday mentioned that wages were 9s. a week on Mrs. Currie's property; 8s. a week on the Earl of Shaftesbury's property in this parish; and 7s. a week on two or three farms belonging to other proprietors. We shall take 8s. as the average of the parish; and I shall give you a specimen of a well-conducted family, that of Joseph Marbell, who is a thrasher, at 8s. a week.

Joseph Marbell and his wife are what are called "watchful people." They lay out their earnings with economy. They have four children, three girls and a boy: none of them earning anything; there are thus six in the family. And this is nothing unusual in this part of England. Six, eight, and even ten children are common in labouring families. They seem to make good Dr. Allison's axiom, that the poorest parents have the greatest number of children; that the worst conditioned people augment their numbers the fastest.

Joseph Marbell is paid once a fortnight. He brings home all the money to his wife, 16s. She provides flour for one week, five gallons at 4s. 2d. The second week she can only afford four gallons of flour; and this must be owed for, in most cases, until next pay day. She says she has no way of making the four gallons do the use of five, but by cutting thinner slices to the children and giving fewer of them. If they had always enough of bread, even the five gallons a week would not serve. The half of the wages thus goes for flour.

Potatoes are the next important article of expense; and the family diet consists almost entirely of potatoes and bread. The father rises before six in the morning, and lights a fire of turf and twigs. He puts in some potatoes to roast, and when these are roasted he eats them with a bit of salt; or sometimes the potatoes are boiled the night before, and, being cold, he slices them and warms them on the gridiron; to these also he adds a bit of salt, for as they say, "thank God salt be n't dear."

He then cuts a bit of bread and eats it as he goes to his work; and fills a bottle with water, which he takes with him to the barn; "for," say they, "threshing in the barn be terrible hard work and thirsty: it be so full of dust, and there be no'er a penny to spare to get beer." About as often as twice a week, but not oftener, he has a small bit of butter or cheese to his bread. At other times he eats it without any thing to it but a draught from his bottle of water. "For," says his wife, "he be such a one for the children; he be always afeard they want a bit

of bread or a potato; and he will go without butter or cheese, or even bread itself, rather than they should be without, poor dears."

At half-past eleven he "lays by" and comes home to his dinner. This again consists of potatoes and salt; or a bit of lard, or once a week a few ounces of bacon and a bit of bread. He again fills his bottle with water, and must be ready to begin work at the barn at half-past twelve; "for his master be terrible particular about time; he must not be a minute over the hour." He leaves off at five o'clock, and again comes home to a supper of potatoes or a bit of bread.

The children and their mother fare in the same way, and cannot afford a fire but when cooking their potatoes or boiling water to wash. The mother buys an ounce of tea at times, though seldom, and uses no sugar. She has had only one ounce of tea in two months. She lays out 2d. or 3d. a week for soap and soda, "for they must be kept clean." It costs her at this time of year 6d. a week for candles, excepting when they sit in the dark. She needs other small things for the house. They pay 10s. a year for a quarter of an acre of allotment ground; and they rent twenty-nine lug of potatoe ground besides at 10d. a lug: this last they pay to a farmer. They feed two pigs during the year, but always sell them to pay for shoes, and to get some clothes. They have no garden with their house. The rent of the house, however, I forgot to inquire; but rent was mentioned as one of the items of expense. They get no butcher's meat of any kind "unless," says the mother, "some one gives it to us for nothing; and there be few to do that." "No, Sir," she continued, "we must not think of no such thing as meat, and we never do think of it."

She gets fuel from a common laid down to her at 7s. a cart-load, and "bread and cheese and two quarts of drink" to the men who fetch it home. They buy a few fagots of wood, but can hardly afford to do so. She goes out "a wooding," and gathers some twigs in the wood; "but they be terrible particular not to let no one they sees lift even a twig that falls: they be all particular. But," she continues, "when the men come upon me in the wood I beg of them to let me carry my twigs home; for they know that I never touch a branch of a tree; and they mostly always turn away, or sometimes they do not come at all: they pretend not to see me. But were it known they would lose their situations for allowing us into the wood."

This family had all the fever last summer. At that time the husband's father was with them; and they all seven slept in one apartment, about ten feet square, without ventilation.

The husband came home from his work ill of fever, and a gentleman, Mr. R., who from what I hear on every side seems to be, most emphatically, the "Good Samaritan"

of the parish, went to him with medicine. He administered it, and told the patient to put on a clean shirt well-aired in the morning, as he would be thrown into a profuse perspiration during the night.

"Ah!" replied the poor man, Joseph Marbell the thrasher, "I have no other shirt but this on me."

"Save," said his wife, "one which is a rag, and it is both wet and dirty; I have had no soap, and no money to get it, since the children have been ill." At this time there was only one blanket among the seven of them.

This is a beautiful neighbourhood. The west wind sweeps over the Downs, and the south wind comes down the rich valley full of health. The sunshine and the light also are as generous here as in any valley of the luxuriant south of England; but seven of them had to sleep in one apartment ten feet square without a window, because they could not afford a better house.

They are now in a better house; and, that any who wishes to ascertain whether all this is true may know where to find this family, I shall state that their new house is on the left-hand side of the way, near the centre of the village, next door to that of Mr. Rhodes.

This being one of the careful, "watchful families," who make the best use of their earnings, we may easily suppose that those who are not in constant employment, and those who drink beer, of which there are a goodly number, are in a very low condition.

THIRD LETTER.

Martin, Wiltshire, Dec. 3.

I only write this as a kind of postscript to the last. Martin is a parish where wages are 1s. a week lower upon the average than Damerham. This lies west of Damerham, nearer Lord Shaftesbury's residence; and here his lordship also has property. He has also the great tithes of the parish. But of this I shall write in another letter. At present I must refer to what is said in my last about Damerham.

I mentioned where Joseph Marbell's house is situated, that any person wishing to learn what is the actual life of a labourer and his family who are "watchful people," and provident, live, may do so. Joseph Marbell threshes on the estate of the Earl of Shaftesbury, whose son, Lord Ashley, is eminent for his humanity in behalf of the working people who live at a great distance from that estate. Damerham is only about five miles from the family residence, and Martin is not quite so much. I have inquired at both places if any noblemen or gentlemen visit the labourers in these places, and have been answered, no. They add that Lord Ashley might have gone through the parishes, because they do not know him. Not one of the labourers to whom I have spoken ever saw

him to their knowledge; nor do they know what he is like.

I am the more surprised at this after reading his lordship's speech of last year at Sturminster, in his native county. A gentleman at the Sturminster agricultural dinner of 1843 gave a fearful account of the condition of the Dorsetshire labourers. So had the Hon. and Rev. Sidney Osborne done; so had Mr. Austin, the Government commissioner; and so had many local and other newspapers. Lord Ashley did not seem willing to believe in the truth of Dorsetshire poverty, as some of the passages marked in *italic* in the following quotations from his speech on that occasion will show; yet he promised to inquire. He said:—

"There seems to be, and is at the present time, a more serious demand for our single and combined efforts, a more pinching necessity to mitigate, nay, by God's blessing, altogether to remove, many sad and perilous evils that threaten to degrade and impoverish the labouring population. On these topics, gentlemen, I can speak to you with freedom, because I feel assured that no one here present is chargeable with any share in the mischiefs we so much deplore; nay, more than this, that every one of you will cheerfully lend his aid to remove every source of complaint *whenever it shall be proved*."

Do we admit the assertion that the wages of labour in these parts are scandalously low, painfully inadequate to the maintenance of the husbandman and his family, and in no proportion to the profits of the soil?"

(Then he says, *if it be not true* let us roll away the reproach.)

"I do not pretend to give advice as to the precise mode of doing these things. I am not sufficiently practical or conversant with the hiring and payment of labour."

Do we deny that the dwellings of the poor are oftentimes ruinous, filthy, contracted, ill-drained, ill-ventilated, and so situated as to be productive of many forms of disease and immorality? If we do, let us take the same course, and refute our accusers; but if not, let us hasten to wipe out the stain; *the remedy is within our reach*—it needs no deliberation, and, I must say, admits of no delay. Shall we suffer these hotbeds of misery and sin to afflict and devour their victims? Even where the life of the labourer is spared, his health is broken down, and he becomes incapable of toil to support either himself or his family."

What use is it to take a little child—a young female, for instance—and teach her for six hours a day the rules of decency and virtue, and then send her back to such abodes of filth and profligacy to unlearn, by the practice of an hour, the lessons of a year, to witness, and oftentimes to share, the abominations that have been recorded [alluding to males and females sleeping in one bed, brothers and sisters cohabiting together]? I ought not to be lynx-eyed to the misconduct of manufacturers, and blind to the faults of landowners; we have the means of a vast superiority in virtue and comfort over the thickly-crowded districts."

Then he recommends a mitigation of the poor law; to begin a more friendly intercourse with the working man; to respect his feelings and his rights; to pay him in solid money:—

"I say it again, emphatically, pay him in solid money; pay him in due time; but, above all, avoid that monstrous abomination which disgraces some other countries, but from which, I believe, we are altogether free—of closing your fields in the time of harvest. Give to the gleaner his ancient, his scriptural right: throw open your gates—throw them wide open—to the poor, the fatherless, and the widow."

He also speaks of restricting themselves from luxuries, nay, comforts if need be, for the good of the labourer; "but it must first be proved," says he, "that such is their condition."

Now, this speech is a good speech, but unfortunately it is nothing more. Lord Ashley has never been seen inquiring into the truth of the degradation of his father's farm-labourers in Wiltshire nor Hampshire, nor of those whose representative he is in Dorsetshire; but the newspapers informed us some time ago that his lordship was on a tour in Lancashire.

The Sturminster annual dinner is over, but he has not been at that. He spoke truly, that it is much easier to remedy the evils under which the labourers live in the rural districts than the evils of crowded dwellings in the thickly-populated districts; still nothing is done; the only change since last year is a reduction of wages.

He says, "I am not sufficiently practical or conversant with the hiring and payment of labour" to suggest a remedy, &c.

Surely nothing is easier than to go to Damerham or Martin. Half a day will learn him all that he needs to know. He needs only to ask his father's tenant, Mr. Selly, and he will be told how men, and women, and children are hired, how they are paid, and how they work; after which the labourers and their wives will soon tell him how they live, or, as they say, "hold on, and do not die quite."

He battles for an act of Parliament to regulate those who, as families, earn from £2 to £4 a week, and eat butcher's meat or bacon three times a day; who have five meals a day, with tea or coffee at two of them; while those who work, as families, for 6s., 7s., 8s., and from that to 12s. a week, and whose condition may be amended without an act of Parliament, seem to be wholly overlooked, save in a set speech.

NOTES OF A TRAVELLER IN THE SUMMER OF 1844.

No. XII.

Oldenburg, Sept. 24, 1844.

Since my last, two events of some importance in the commercial world have occurred, which confirm the ne-

cessity I have so often pointed out, of the traders' watching the political movements of the day. The active remonstrances of the manufacturing districts of Belgium obliged the Minister to enter into negotiations without loss of time with Prussia, in order to obtain the retraction of the reprisals which the Prussian Court had adopted. An understanding has in consequence been come to, by which reciprocity of treatment for the ships of both countries is established; and it has been reported that an exceptional tariff for Belgian iron was to be adopted by the Zollverein. This is, however, not likely, since Prussia is bound to avoid such exceptional agreements by her treaties with other powers; and the Germans are not likely to envy the fame of the Belgian Ministry for vacillation, and to alter their plans every three months. The clause introduced into our treaty with the Zollverein, by which all the harbours of the German Ocean are declared to be placed on a footing with those of the Baltic for Prussian vessels, is inserted in the new agreement with Belgium.

That the true motive which occasioned the aggressive movement of the Belgian Minister was well understood in the manufacturing districts of Belgium, has been shown by some tumultuous proceedings at Liege. It was to be expected that so unexpected a shock as confidence received in consequence of the new legislative proceedings would not pass off without a popular commotion; and the news that some Jesuits meditated a settlement at Verviers, and had demanded the restitution of a church long since desecrated and used as a factory, announced the presence of at least some of the party in the neighbourhood, from whose intrigues so much misery had threatened to result for the workmen of that neighbourhood. On the 17th instant, groups of workmen assembled in the streets of the town singing songs directed against the Jesuits, and a conflict with the police was the result. The tumult was appeased by a proclamation of the burgomaster, declaring that the correspondence relating to the church was broken off. When will Ministers begin to feel the responsibility that is entailed by disturbing the quiet industry of masses of men, and holding out prospects of advantage from sudden change which those most interested know to be fallacious?

The second event is the acceptance by the city of Hamburg of the agreement entered into by the powers through whose states the Elbe runs, respecting the tolls to be taken by each on that river, including a modification of the *Stade duen*. This resolution, although, like the whole treaty, practically negative, as it holds out no inducement to navigate the Elbe that at all corresponds with those which the daily increasing railroads will soon present, is important, as showing the difficult position which a small state holds between mighty neighbours. Hamburg has in this instance ceded to the clamour of the press, in the largest portion of Germany which constitutes "the Zollverein." The epithets, "selfish," "monopolizing," "un-German," &c., have for years been lavished on the citizens of the free towns for their adherence to the instinctive policy of Free Trade, on which they have over and over shown that their existence as trading marts depends. The state of the inland communications of Germany has long been such that the mere traffic through Hamburg with the interior, and the export of German products, would never have kept these cities in the position they have long held in Europe. The true source of their wealth and independence lies in their being secured from the political oppression of princes, parliaments, and corporations. Hamburg, which is more exempted from corporation restrictions than Bremen and Lubeck, is for that reason more flourishing than its sister republics.

The whole city bears the look of a seat of free industry. Before the fire the principal streets bore the most singular appearance that any northern city out of Russia presented. The best houses were interspersed with smaller dwellings, and with houses broken up into flats and small sets of apartments, at the windows of which the emblems of trade of all kinds were exhibited from the cellars to the garrets. The cellars, which were paved, and approached by an outer stair, like the kitchens of a London house, are still the chief repositories of fish, vegetables, and other eatables that require to be kept cool, and whose low price did not afford expensive fittings-up. In the first floors (or rather ground floors) the grocers, mercers, linendrapers, and other dealers who employ capital, and have to meet ardent competition, presented their wares often in as tasteful, and sometimes in as costly, a manner as a London shopkeeper. The upper stories were the abodes of those whose industrial reputation depended more on skill, connexions, and personal attributes, than on the stock of wares that they held. As, fortunately for the sick in Hamburg, medical reputation is something quite distinct from a large house with footman and chariot, and artists are rather sought in their attelers than at dinner tables, it is free for professional men to take up their abodes where they like, and to tread the path to reputation and to wealth without incurring debts or obligations in the outset of their career that hamper them through life. In a city where men find their abodes in a natural manner, amidst the unavoidable jumbling that attends the confluence of a dense population, and the conflict of interests actively pursued, there was something more intelligible for the stranger than he finds in more modern arrangements. The dwelling of a man let you at once into the secret of his position towards his fellow-citizens. A large and handsomely-furnished house was the inevitable token of rewarded industry, and

conveyed an impression of a claim to respect totally independent of the mere wealth it indicated. The residents on the Alster, and in the new parts of the city, or such as retained their family mansions in the more bustling streets, were either men—or the descendants of men—who had amassed property, amidst active competition, by their skill, perseverance, and good economy. Their fortunes, even after retirement from business, were not invested in unprofitable parks and preserves, but, when an elegant and comfortable villa at Blankenese, or in the neighbourhood, was secured, circulated through the hands of the successors, whether relations or not, of the retired tradesman, and contributed to promote the welfare of the republic. As a natural consequence, it is rare to find the tenant of a large house, unless health prevents him, without some influence on the government of the little state; and it is no small tribute to the wisdom of the senators that they have been able to preserve their country from hostile or too intimate contact with their more powerful neighbours, who are obliged to respect their prudence, while they scarcely repress the eagerness with which they would devour the prize. The proof to the political as well as to the Christian world, that a forbearing principle is compatible both with activity and with security, is not without its value.

The effects of the great fire threaten to change in no small degree the external characteristics of Hamburg. The handsomest part of the town was that which suffered most; but some of the great thoroughfares were also involved in destruction. Another year will, however, have effaced every symptom of ravage; and the city assuredly gains in symmetry what it loses in picturesque effect. This event has introduced a new element into the place, and one the test of which is difficult to bear. The fire was a great lottery, in which the manner of insuring houses gave their owners prizes or blanks. The houses that are now rapidly rising behind the rows of scaffolding through which you pass, no longer, therefore, tell the simple biography of the owners or their predecessors. They become gradually less intelligible as they are finished, and the work of Italian or other foreign architects and decorators contrasts the more strangely occasionally with the simple plan of some indigenous builder, that the fortunes of the proprietors are not often in an inverse ratio to the taste or splendour of the edifices. An English engineer of considerable activity and merit has inoculated some of the citizens with our taste for throwing houses together in order to secure an aristocratic appearance, even at the cost of individual comfort and inclination; and the construction of a considerable portion of the new town has been intrusted to him. Report has, indeed, said that he prefers the style of building usual on our ground leases of sixty years to that which the owners of the soil would find more permanently advantageous, and the falling in of some slim constructions seems to confirm the statement. On the whole, it may be regretted that the report of our Health of Towns Commission was not published before this new city was erected. The mass of valuable evidence which has been collected by that commission possibly exceeds in practical worth that published by any of our Parliamentary commissions. It would, too, have ensured to this report a due appreciation in England, if its suggestions had been at once carried out in any continental town; and this respect (to judge from my Lord Lincoln's new building and fire preventive bills) it very much wants. It is impossible, however, to pass through the rows of scaffolds before mentioned that front the large basin called the Alster, and branch off in a hundred directions towards the centre of the city, without feeling pleased at the confidence in the prospects of the republic which this new investment of capital in trade evinces. That in other trading places of the Continent there is rather a disposition to withdraw capital from trade than to increase the amount thus employed, has been already noticed. Let us hope that this Elbe negotiation will be the last that foreign diplomacy will force upon the citizens of Hamburg; otherwise this confidence, so invaluable for the town and for Germany, will speedily be undermined.

In Hamburg, too, it is easy to comprehend how a large trade is carried on. The sides of the innumerable canals with which the city is intersected are lined with rows of lofty warehouses, as in the trading part of London and at Liverpool. Ships of moderate burden can go up many of these canals, and load and unload at the merchant's door. It is usually so contrived that the warehouse, which fronts the canal, communicates with the dwelling-house that fronts a street, and thus convenience is combined with economy, and the merchant is near his goods without being incommoded by their vicinity. It must be acknowledged that the Hamburg merchant is a pattern for the class to which he belongs. His business is neither regarded by him as a degrading employment, to which he is only recourled by the large profits it yields, nor does traffic so absorb his thoughts as to leave him no time or inclination to attend to any thing else. Living in what may be called an expansive atmosphere of trade, he feels convinced of its utility, and is as well satisfied with the field that it opens for activity of mind and body as any lord or peasant farmer can be in any of our three kingdoms. Hospitality is at home, as it usually is in a seat of abundance, at Hamburg; but it is not the hospitality of the Pole, the Hungarian, or the Irishman. An air of easy elegance and comfort pervades the Hamburg merchant's house. You enter his drawing-

room before dinner, and find his wife and daughters conversant with the merits of the last novel (not of Albatross-street only, but also of Paris, Berlin, and Hamburg), and full of the beauties of the last opera, although no one takes any pains to conceal that the superintendence of the kitchen has been part of the morning's occupation, and that nearly all the garments worn by the family are made in the house. When the men join the party, the conversation is not turned upon the single theme that they are supposed to understand; nor, after dinner, when the sexes separate as in England, and the men adjourn to coffee and cigars, are you bored with lists of prices, or accounts of ships and cargoes, to the extent that noble farmers pester you with their crops and cattle after dinner. Literary and scientific subjects find a place in these hours of social relaxation. The mercantile correspondence from all parts of the world is not without its bearing on the general interests of nations, and the movements of parties are silently but cautiously watched in a state whose independence, which is synonymous with its prosperity, is only supported by the mutual jealousy of rivals that are subject to the lowest description of impulses. Hamburg has always been the abode of literary men who rank high in Germany. Without going back to the days of Klopstock, Voss, and their contemporaries, the city now reckons men of high standing among its residents. The schools are excellently managed; and the future burgher is brought up amongst those in the midst of whom he is to assert his place, without any sacrifice in point of scholastic aid or discipline. Would that we had the true essence of German schooling in England—not the external distinctions merely of lectures and cheapness, but those arrangements which keep a boy in his parent's house, and amongst his fellow-parishioners, and by which, the highest talent being secured to the public schools (really public), no private tuition can supply the place of the public class! I need not digress into the subject of schooling here. Such of your readers as are curious upon this interesting point will find the *real* excellencies, as well as the defects, of the German system pointed out in the *Hand-loom Weavers' Report*, in the "British and Foreign Review," No. XXV., where some suggestions are made that would have well deserved the attention of the Privy Council. From this good system of education, and from the good household spirit which it engenders and nourishes, arises the superior position in society occupied by Hamburg merchants of very moderate wealth, when compared with commercial men in England. We see that they are skilful diplomatic functionaries—we see that they appreciate literature and science. Some of the wisest financial principles are in daily practice in the mode of raising the public revenue. The laws are respected, and property is secure. Liberty of thought and speech is asserted, but not abused; and the liberty of the press is only restrained by the dictation of Austria and Prussia, at whose instance

alone prosecutions of authors or booksellers have been permitted. The people are hard-working, and not unnecessarily restrained, without being turbulent. Begging is almost unknown. To crown all, wealth is accumulated by many, and a competence is earned by the majority but under circumstances that would make our industrious artisans shudder to contemplate.

Let us for a moment suppose the mouths of the Thames, Severn, Mersey, or Humber closed by the guardship of a foreign power, which claimed a right not only to tax all imports and exports, but to inspect all ships' manifests, and at the arbitrary will of the officer to examine the cargo, and all this without any aid in the shape of lighting or deepening the bed of the river as a kind of compensation. Let us suppose our canal system annihilated, and the inland navigation confined to the rivers on which tolls are exacted by the Government heavy enough to figure in the budget, and let any Englishman ask how the chances would stand that London, Bristol, Liverpool, or Hull would do as much as Hamburg now does, with its home and foreign trade hampered as it now is. If I seem to have praised too much the school and domestic education of the city, the manner in which its inhabitants conquer these difficulties must be my justification. A few days back I dined and spent the evening with a merchant at his country-house at Blankenese. The party included some men of letters, and a Mecklenburg nobleman who farms his own extensive estates, and to whom the scientific world is indebted for the best exposition of the nature and the origin of the rent arising from agriculture. After the Wandsbeck races (at which my friend's son had run a horse) were discussed, and the possibility of taking part in public sports without the English accompaniment of betting had been pointed out, the conversation turned upon the position of the Hanse towns, Mecklenburg, and the Hanoverian League, to the Zollverein. It seemed to be generally admitted that the original object of Prussia in founding the Zollverein was rather of a political than a financial nature, and that the advantage to the revenue, as well as to the industrial classes, was found out by experience in process of time. It was well pointed out by one of the guests that the great advantage derived by the different German states from the Union being an increased facility of communication with their neighbours, this consideration had different sides for the maritime and inland states. Those states which have seaboard are more interested in foreign than in home trade, and the adoption of the Prussian tariff would take away more in depriving them of foreign traffic than the opening of the inland trade would make up for. Under these circumstances it seemed to be

the general opinion that the Prussian Government erred in two ways in adhering to the high tariff, which neither Mecklenburg, Hanover, nor Oldenburg can adopt without losing their foreign trade, while all foreign productions would be rendered dearer than at present to the consuming population. One of the guests, the editor of a popular periodical, remarked, as I thought well, that Prussia did not sufficiently distinguish between the increase of revenue that resulted from the liberty of traffic which the Union permitted, and that which arose from the figures at which the duties on many indispensable articles were fixed by the tariff. The constant increase that has for years been perceptible in the revenue of the Zollverein, he thought, was altogether owing to the freedom of internal trade, and that the present receipts might easily be raised one-half by reducing the rates of many duties. As it seemed not to be doubted that there were many men in office at Berlin capable of making such a calculation, which seemed both to offer improved financial resources to Prussia and the means of extending the Zollverein to the sea, I remarked that there was something enigmatical in the steadfast adherence of Prussia to the high tariff, which had all along impeded the progress of the Union. A gentleman, who had not before spoken, said that there was nothing more enigmatical in the conduct of Prussia than in Sir Robert Peel's rejecting the proposal of the British colonists to reduce the sugar duties in the last session Parliament. There would have resulted an undoubted increase of the revenue from such reduction, and probably such as to have rendered the property-tax superfluous; the trade with the English colonies would, besides, have received an impetus by the measure perfectly corresponding with the activity which the trade of Germany would acquire under similar circumstances: and yet the Minister refused to adopt the suggestion. There was no denying the truth of the parallel, although it conveyed no explanation of the mystery; and, as I was more anxious to hear them discuss points of general interest than to penetrate into such barren secrets of cabinets, I let the matter drop; I found that our parliamentary tactics were well understood by all, and that the reasoning on all prominent subjects put forward by the party organs at Paris and London was familiar to them, but was regarded with a cool scepticism that indicated great simplicity of views and sound practical judgment. There is something refreshing in hearing these subjects discussed by third persons on their own merits and irrespective of the influence of fashion and parties. Amongst other topics, O'Connell's trial was prominent. The reversal of the sentence was looked upon as a favourable symptom of an improved system of the treatment of Irish questions in England. The costs of the case, which fell upon the traversers notwithstanding their acquittal, were matter of universal deprecation, and even terror. The utility of drawing large revenues from industry, to have the pleasure of paying them away in lawyers' fees and taxation, was unanimously rejected as the acme of absurdity. The English papers have stated the costs to amount to £20,000. This sum was found by one to be equal to the whole judicial expenditure of one state; to the value of a picture gallery, in a second; and of a public library, in a third; and it was agreed that, were any Continental nation often mulcted to the same extent in the shape of state trials or otherwise, the question of repeal would be speedily decided. I brought forward the Corn-Law question and the League. It was the general opinion, in which even the Mecklenburg nobleman joined, that the high price of food was a great misfortune for a country, as, independently of its injurious effects upon manufactures, it induced an artificial standard of value, and augmented the dependence of one class upon another, which, amongst civilized men and Christians, must be deplored as a serious evil. This notion was not confined to the citizens who were present, but was warmly defended by the nobleman, who seemed to think that he should be deprived of a motive for exertion if he were himself allowed to control the market. The League seemed to them all to be the only school of political economy in England that was worthy of the attention of foreigners. I have been induced to dwell upon this conversation, because it seems most fitly to represent the opinions of the well-informed classes abroad. In the evening we returned to town, and concluded with an opera, respectably performed in the principal theatre, which is conducted without extravagance. The main feature of German life is the absence of that passion for excitement which is so general in England. The merchant's life is nowhere exempt from fluctuations of good and ill fortune; but the German evidently turns his whole attention, where it is practicable, to the reduction of this element of chance to one of ordinary calculation. Fortunes are, therefore, neither so numerous nor so rapidly made as in England; but there is, unquestionably, a greater share of domestic and refined enjoyment at the command of all classes, and the kindly feelings are not lessened. Were it not for the very serious economical effects committed by the Government, and their lucrative effects upon the opinions and pursuits of the people, a far greater share of material enjoyments would accompany the simple, dissipated life of the German so intelligent and so industrious. It is satisfactory to find that the absence of wealth, here as elsewhere, can be traced to good and sufficient causes, which may be the trouble of analyzing.

If we except the peculiar feature of the cellars that I mentioned, Hamburg bears more resemblance to

Liverpool than to any other English seaport. There are no public buildings of architectural merit, and the most ornamental parts of the city are the walks that have been laid out on the levelled ramparts. The travellers who now stroll through the shady bosquets and flowered parterres that cover them, can with difficulty conjure up scenes from the long and frightful siege of the city, under Davoust, and of the sufferings and heroic conduct of the inhabitants. If our Walcheren expedition had been got ready in time to be sent to Hamburg, its first destination, instead of to the Scheldt, the revolution of 1813 might have been effected four years sooner. But the political importance of Hamburg was then not better known than it is now.

The largest vessels lie in wet docks, the smaller ones go up the canal into the town; and you do not see more craft in the stream than the arrivals and departures of each tide. The banks of the Elbe, especially on the Hamburg side as you descend towards Altona, are prettily varied, and the hill of Blankenese, covered with the white villas and pretty gardens of the richest citizens, is an object that is not easily surpassed in pleasing effect. The great breadth of the river, which exceeds the Mersey near Liverpool, and the flatness of the Hanoverian bank, present no striking view from the town. The Germans have no passion for aquatic excursions, and no boats or yachts are seen gliding over the broad expanse. Merchant vessels and market boats alone enliven the stream, and these are not sufficiently numerous to produce a striking effect.

A peculiarity of Hamburg, and one which testifies to the desire of its neighbours to retain any possible excuse for meddling in the affairs of the city, is the circumstance that Prussia and Hanover keep their own post-offices there. You must go to three separate offices if you expect letters from different parts of Germany, and have to inquire to what Power each diligence belongs to which you intrust yourself. As the simple mode of taxation, which is a levy of a quarter per cent. duty on all imported goods, suffices to defray the general or government expenses, and the city expenditure is covered by rates charged on the inhabitants, the post-office ceases to be a source of profit, and is abandoned to the Powers who govern the adjacent territories. The Hanoverian post conveys you in the direction of Oldenburg and Bremen, and in one of its diligences I bade adieu to the hospitable banks of the Elbe. An hour's drive over a miserably jolting road brings you to the point of embarkation to pass the river, which is prettily studded at that part with islands. On landing, you are greeted by the Hanoverian *douaniers* in bright uniforms and fearful moustachios.

COUNTIES REGISTRATION MOVEMENT.

WEST RIDING REGISTRATION.

GREAT PUBLIC MEETING AT LEEDS.

One of the most splendid and enthusiastic meetings of Free-Trade electors ever held in Leeds, took place at the Music-hall on Wednesday evening last.

The object of the meeting was to hear addresses from RICHARD COBDEN, Esq., M.P., and JOHN BRIGHT, Esq., M.P., on the best means of adding to the strength of the Free-Trade party in the West Riding.

The meeting was convened by circular, signed by Hamer Stansfeld, Esq., (late Mayor), Chairman of the Free-Trade Committee; and, notwithstanding that only such persons as were most likely to qualify for the West Riding were invited, the extensive saloon (the largest public room in Leeds) was completely filled; and, judging from the almost incessant enthusiasm which prevailed during the enunciation of the plans of the League in the eloquent speeches of Mr. Cobden and Mr. Bright, we cannot but infer that a most important stimulus was given to the cause of Free Trade in this district.

Alderman STANSFELD occupied the chair.

Amongst the gentlemen present were Alderman LUCOCK, Alderman CARBUTT, H. H. STANSFELD, Esq., GEORGE WISE, Esq., W. W. PENNELL, Esq., — SMITH, Esq. (Sheffield), JOHN BEAUMONT, Esq. (Huddersfield), JOHN WILKINSON, Esq., JAMES AKROYD, Esq. (Otley), W. B. HOLDSWORTH, Esq.; Councillors BARRETT, BIRCHALL, MOORHOUSE, BROADHEAD, HEAPS, SHACKLETON, together with several other members of the corporation, Mr. PLINT, &c. &c. A number of ladies were also present in the orchestra.

THE CHAIRMAN, in commencing the proceedings, said, — Fellow-townsmen, it was said the League was dead: the wish was father to that thought. The League will never die so long as Cobden and Bright live, unless the foe has fallen. (Cheers.) Here they are again among us, crowned with the laurels which they have reaped in rescuing South Lancashire from the fangs of monopoly,—that is another "great fact," a "heavy blow and sore discouragement" to the opponents of Free Trade, a great encouragement to its friends. (Applause.) This is indeed the age of great facts in favour of Free Trade: not a day passes without one or more being added to its budget; the very theories of the League, sneered at as fallacies, now turn out to be founded on facts. Who denies now the fact that cheap food raises wages, increases trade, and diminishes disease and crime? Who disputes now that the agricultural labourers, for whose special benefit it is said the Corn Laws were enacted, are the most destitute class in the whole country? Be not satisfied with receiving our friends here with loud cheers, hearty as I know they will be, but which, after all, are mere empty sounds, if not supported by stirring deeds; but give them the most cheering reception of all, by pledging yourselves this night to become freeholders of the county of York. (Cheers.) The Chairman then explained the steps already taken by the committee, and resumed his seat amidst cheers.

Mr. COBDEN, M.P., rose amidst the most unbounded

applause to address the meeting. The applause having after a time subsided, he proceeded with his observations. He said—Mr. Chairman and gentlemen, When my friend Mr. Bright and I left home, we expected that we were coming to three or four towns in the West Riding, to have a little conversation in a business-like way with some thirty or forty gentlemen at each place, on the important subject which we wished to submit to their consideration. But we did not expect, nor were we prepared for such a splendid gathering of Free-Traders as I now see before me. (Applause.) This very warm reception is indeed most gratifying, and augurs well for the object which we have in view. (Hear, hear.) I was not prepared to come here to make a speech about the Corn Laws or about Free Trade. I do not know any new facts which have occurred since I last saw you, and I don't think you have changed your opinions on the subject, and mine remain precisely the same as they were. (Applause.) If nothing has happened, however, in this country, something has happened very lately in another land, which may well deserve a passing remark. I allude to the recent election that has taken place in the United States. Now that was a very important issue, and a very important decision, as it affects your interests. (Hear, hear.) You are aware of the election of Mr. Polk as the President of that great republic. There were two candidates, Mr. Polk, and Mr. Clay. Mr. Polk, besides being a Free-Trade, with many other things, had a notion about getting hold of Texas and the Oregon, as it is called, and some other matters. But there was one thing connected with Mr. Clay's name which makes his rejection of great importance in our cause. He was the author of the American protective system. (Hear, hear.) He took his stand, as a candidate in America, as the author of that system, and had all his banners inscribed with "Protection to Native Industry," and the speeches he made, and his supporter, Mr. Webster, might have done honour to the Duke of Buckingham or the *Morning Post*. (Laughter and applause.) We often hear it said in this country that Free Trade means low wages for the working man. But now let us hear what the Americans have decided. The working men there have all voted. About three millions of full-grown men delivered their votes into the ballot-box at the late election (for the question was Free Trade or protection), and a majority of the democracy of America decided in favour of Free Trade. This is the recorded opinion of the democrats of America; and I suspect that those people in England who set themselves up as democrats have not learnt their trade rightly, or else they would not advocate the Corn Laws. (Loud applause.) The American people have decided that protection, and all the speeches delivered by Mr. Webster and Mr. Clay, are all sheer delusion and humbug. (Renewed applause.) But if so, what good will it do us, if we do not do something on this side of the Atlantic. The Americans have decided that they will take our goods at revenue duties,—not for protection, but for revenue. But, if they take our goods, we shall expect them to pay for them, I suppose; and how in the world are they to pay for them, if we won't take in payment the things they have to give us? ("Hear, hear," and applause.) We have already trade with America for cotton, and tobacco, and rice; and for as many of these articles as we take from them they take our manufactures in payment; but, if we have more trade, we can only have it by taking something else in exchange for our manufactures. (Hear, hear.) There is one article they would supply us with which is of far greater consequence and amount than all the articles alluded to before, and that is the article of bread stuffs; and I do not think that there is anything more particularly required in the agricultural districts of this country at present than bread stuffs. (Laughter and applause.) There is one article in America used in large quantities called Indian corn, and it is eaten there as our corn is here. In the backwoods of some of the states they eat nothing but Indian corn, and of such benefit do they conceive it, that they have a notion that without it they could not bear to do the work which they customarily perform. The Americans are most ready to supply us with this article. (Hear, hear.) The duty on barley regulates the duty on American corn. The last season we had a deficiency, and the consequence was that barley rose in price and fell in duty. Indian corn could then be admitted at 4s. a quarter; and as soon as they learnt on the other side of the Channel that Indian corn could be brought in here, it came over the Atlantic as if by magic. People were giving their horses Indian corn, and they now find that they can fatten poultry with it. (Hear.) The people of Manchester have found it much more wholesome than oatmeal. Now, if Indian corn slips in here when the doors are open at a little reduced duty, only think what we should have if we had no duty at all. (Applause.) Take the article of wheat. Why, there is no limit to the quantity that would be produced in America if we only say we want it. We cannot conceive a limit to the produce of that fertile land, and the quantity of wheat that would come into this country if you would only let it. (Hear, hear.) But if you will not let it come in, whatever alteration the Americans may make in their tariff, it will make little difference to the trade which you may do with that country. Trade is nothing more than an exchange of equivalents, and if we will not take from the Americans the commodities they produce, they cannot take from us our articles of manufacture. (Applause.) Well, how are we to get Free Trade in this country? We must get it by votes in the same way as they have done in America. You may say, "We have not all got votes here!" and I am afraid we should not all make good use of them if we had them. (Laughter and applause.) There has been a great clamour for an extension of the suffrage. Now, there are two ways to get it: one way is to get Parliament to come down, and the other is to get the people to raise themselves up to the suffrage. (Great applause.) (Mr. Cobden here went on to show how the suffrage might be extended by every man who wished to possess the franchise purchasing a 40s. freehold. He referred, in proof of what might be done in increasing the number of voters, to the gain of the Free-Traders in South Lancashire, and which would be doubled next year. He pointed out the effect which the gain of this county, the West Riding of Yorkshire, North Cheshire, and Middlesex would have in influencing the mind of the Government; and ably met the objection that the monopolists could adopt a similar plan, by showing that they had carried it out already almost to the fullest extent in their power. He then continued:— We have now more particularly to deal with the West

Riding of Yorkshire, which is the most important of all places in the country. What is your division of the county? It is a little empire; it is larger than ancient Tyre or Sidon; greater than Venice and larger than Genoa; and larger than one half of the principalities of Europe. (Great applause.) Your intelligence, your wealth, and your power, all point you out as being the most important of all the constituencies in the country, and as one that must win this contest before ever it can be won in the country. Fortunately, while you are in this position of importance, you are also in a position the most certain of winning this battle of Free Trade, if you only determine to do it. No division of any county in England has the advantage you have, not even South Lancashire. Looking round at your boroughs, they are in a more healthy state than those of South Lancashire. At the last election here there was a little bit of a slip of one foot; but when I look round at Halifax, Bradford, Huddersfield, and Sheffield, I cannot but say that you are in a much better position for winning this county than was South Lancashire before it was won in the registration court. Why, then, have you not won it? It is because you have not pursued the same tactics in the county as you did in the boroughs. Your county registration has not been attended to with the same spirit as your borough registration has been; but I am quite satisfied that, if taken up with the like spirit, you will place the West Riding in the same position as the boroughs in the same division. (Applause.) Before I came into this room my friend Mr. Flint placed in my hands a little analysis, to show the strength of the different parts of this important county. The population of the manufacturing towns and villages of the riding is 780,448, of whom 17,084 are county voters. The remainder of the riding consists of agricultural towns and villages, containing a population of 373,653, of whom 17,538 are voters. Thus the agricultural districts of the riding, with one-half the population of the manufacturing districts, have more county voters. (Hear, hear.) Mr. Flint draws this conclusion, that, if the population of the manufacturing towns and villages were qualified as electors in the same ratio as the agricultural, they would have 36,690 voters, being 2070 more than the voters in the whole county. After some further remarks, strongly urging two matters of importance to be accomplished,—first, to look out for men who are willing to be put on the county list, and then for suitable property to qualify them,—he went on to urge the propriety of large employers taking every means in their power to qualify them. The other day, said he, I was talking to a large manufacturer in North Cheshire, employing from 1000 to 1500 hands. With a view of giving encouragement to his workpeople to qualify, I advised him to build fifty cottages upon a piece of land, to keep an account of what they cost him and of every thing he spent, that he might not be said to be making a speculation of it, and then announce that he would sell one of those fifty cottages to any of his men at cost price. I said to this man, you may have, in less than two years from this time, 100 freeholders in your employ with the greatest ease. (Hear, hear.) And what will be the answer of the monopolists when this man can say, "Here am I with 100 freeholders working in my employ." (Applause.) I should like to see his Grace of Buckingham point out an agricultural labourer that is a freeholder under him. (Laughter and applause.) Well, there is another class. There are the young men, the sons of their fathers (laughter), who have perhaps some little property to dispose of. Now, why should not the father give his son a neat egg at twenty-one, and say, "There is a freehold for you?" (Renewed laughter and applause.) Perhaps there is this impediment: the father may say, why, the lad knows he will have it when I am gone, but I do not like to be at the expense of a parchment transfer so long as I live. Well, what would it cost? I don't doubt a Free-Trade lawyer—and we must have none but Free-Trade lawyers—would do it at a moderate price, and take care that the title to the property shall be properly transferred. (Hear, hear.) If it be not so, instead of giving you a vote, he may just go and tell the lawyer of Messrs. Donnan and Wortley. (Laughter and applause.) I advise that we should have Free-Trade lawyers to transact this business, not in the spirit of monopoly, but in the pure spirit of Free Trade—that of buying in the best market. I may advise that the son shall pay the expense to the father; and, if he won't go to the expense of the title-deeds to a freehold, if the father will come to me, and make me the offer, I will. (Enthusiastic applause.) All you young men who have saved a little money ought to be qualified; and also the decent shopkeepers, every one of whom ought to be ashamed of himself if, six months hence, he cannot answer any inquiry as to his qualification in the affirmative. (Laughter.) You must have a vote, or you are of no use in this contest for Free Trade; and every man who has it in his power, and does not qualify, is a traitor to what he owes to himself and his posterity. (Applause.) The chances are a thousand to one that there will be a dissolution of Parliament in 1846, if not in 1845. You must have in Leeds, at the very least, 500 new qualifications, for we cannot let you off for anything less; but my friend John Bright says you must have 800. ("Hear, hear," and laughter.) Huddersfield has engaged to get 300, and we may expect 400. At Hebdon-Briggs and at Halifax the prospect is very good, and also at Sheffield. (Hear.) Let me call upon you at Leeds especially, to wipe off that stain which you received at the last election, before the 31st of January next. (Applause.) Looking at the importance of the district and the borough, looking at the importance of your position, I need not say another word to convince you that a great responsibility rests upon you, or to induce you to do your duty commensurate with that responsibility, as I am sure you will do. (The hon. gentleman here took his seat amidst loud and protracted applause.)

Mr. BATHURST, M.P., next rose to address the meeting. The hon. gentleman was most enthusiastically received. After a few introductory remarks, he said:—In this division of the county there has been an opinion amongst some, that, notwithstanding the signal defeat met with in 1841, if an election were to come now, you would be able to return Lord Morpeth, or some such man to Parliament for the West Riding. (Hear, hear.) I confess I believe that there is nothing more visionary than any such supposition, as far as the figures on your register show. You must not suppose because Lord Morpeth is a very popular and deservedly a very popular man—(loud

applause)—that, therefore, you can return him. (Cries of "Hear, hear.") You must not fancy that the influence which made the men, who ought to have known better, vote against him in 1841, would be withheld if you had an election in 1844 or 1845. (Hear, hear.) There does not appear upon the register of the West Riding any change from 1841 sufficient to give the smallest reason to hope that it would make any change in the representation, if an election were to take place on the present register. (Hear, hear.) You may as well look the matter in the face. I am an elector of the West Riding, and have therefore some right to speak of it. (Hear, hear.) You are just in the same position that we were in two years ago in South Lancashire. Our Registration Society said we were registered up, and nothing more could be done, and that it was hoped with the change of opinion, and some half dozen other things which did not exist at all, we might return Free-Traders if we had a contest. A contest came, and we found, although we made more vigorous efforts than have ever been made by what is termed the Liberal party in South Lancashire before, that we were defeated by only 600 votes. (Hear.) We began a new system, and started registration on our own account. We did not leave it to a few lawyers, who did not care a straw how the registration went (hear, hear); nor to a few quiet country gentlemen, who did not know anything of the spirit necessary for carrying on a registration or election under the operation of the Reform Bill. We succeeded in making such a change as not only brought down the 600 majority against us, but placed us in a majority of 1000 or 1200—a matter admitted by friends and foes throughout the country. (Great applause.) The West Riding must do as we have done, or our effort is useless. ("Hear, hear," and applause.) No one county can save this country. If it can, yours is acknowledged to be the county most likely to do it. (Applause.) You have force enough, and it must be brought into the field. There are but two ways of abolishing any great national evil and injustice. One is that practised by our forefathers,—the employment of force; and there is that to which all nations are tending, that is, the employment of argument, reason, and conviction. (Applause.) Men have at length found out that when a contest ensues—a contest of physical force—that although one party may have all right on its side, and a cause sacred and holy—(applause)—yet that moment you descend to physical force, that moment all the vantage ground a good cause possesses is lost. (Hear, hear.) But when you take the course which we are now taking in endeavouring to convince our countrymen, and then, by accepting the invitation of the law of the country, place ourselves in the electoral pale, every step we take is a sure step, and is sure to lead us to victory. (Applause.) (Mr. Bright then reminded the meeting that the present struggle was for a definite object, and not like that of 1841, when the one party hardly knew what it had gained by victory, or the other lost by defeat. He then dwelt with great power on the evils of monopoly, which he illustrated by facts and figures, showing that in years of scarcity, emigration, crime, and mortality fearfully increased; while in seasons of plenty they diminished, and general prosperity prevailed.) In the change (continued Mr. Bright) which has taken place within the last twelve months in these districts, there is a glorious confirmation of all we have said, and a stimulus for future exertions. In Lancashire, such a state of things exists as was never known before. I speak not now of high profits and high wages. There is a return of prosperity, of temporary prosperity, I believe, but one which has been followed by a social and moral development such as was never known before in that district. There is a feeling now amongst the working classes, that the manufacturers are not so wholly inclined to deny them justice as they have sometimes thought; and there is a feeling amongst the manufacturers and capitalists, that it is a noble thing for them to stretch out a brotherly and helping hand to those whom Providence has placed in less favourable circumstances than their own; and an effort is being made to educate and elevate the labouring classes of the population of that county, which, within the life of many a one now living, will entirely change the social and moral character of the county, and will make it more than it is now, the most prosperous and perhaps the most important and most extraordinary portion of this kingdom and of the world. (Applause.) Men's hearts are opening. Men who gave their £100 or their £500 to the League during the last two or three years, have found out that there is a pleasure in giving to a noble and generous object. (Applause.) Manchester subscribed during the last year, as you well know, £25,000 to the League fund; this year Manchester has subscribed £30,000 towards the opening of public walks and parks for the especial benefit of the poor. (Renewed applause.) (Mr. Bright then urged the carrying out of the plan propounded by the League, which was as though the constitution had come and laid hold of another and a larger class, and incorporated them in the effort now being made for obtaining the rights and liberties of the people.) In conclusion he said:—If I understand this meeting, and if I understand the meeting at Wakefield before the last session of Parliament, and if I know anything of what took place at Halifax, Huddersfield, and Hebdon-Briggs, I may say that it is determined that the question of Free Trade shall be fairly put before this riding, and fully carried out. We were asked three or four years ago what were our ulterior measures, by those who conceived those measures would not put down monopoly. Our ulterior measures are submitted to this meeting to-night. (Hear, hear.) I candidly confess, that if by this mode which we are now putting in operation for the redemption of this country from tyranny and monopoly,—if by such means that redemption cannot be carried out,—I confess I have little hope for the future. If by this weapon you will not liberate yourselves, posterity will say you deserved to be slaves. (Loud applause.) South country people say that the people of Lancashire and Yorkshire have great heads, and are ready for great deeds; and all that is wanting on the part of Leeds and the West Riding to emulate the people of Lancashire is a little more individual energy, a little more combination—determined, persevering combination—and there is nothing necessary to secure the county representation which you cannot very easily accomplish. (Hear, hear.) We invite you to co-operate with us in this work. There are hearts in Lancashire that would leap with joy if I could tell them when I go back that there exists a spirit here no less manful than the spirit by which they are actuated. (The hon. gentleman resumed his seat amidst often-repeated cheers.)

Mr. FLINT dissented from Mr. Cobden, who said that the present move was the best the League had ever made. The present move would have been entirely and utterly valueless without the previous one, of enlightening the public mind. ("Hear, hear," from Mr. Cobden.) The League's first step, and its greatest step, inasmuch as all others could have only the foundation of opinion, was to form opinion. (Cheers.) He reminded them that 780,448 persons resident in the manufacturing towns and villages of the riding had 17,084 votes, whilst 373,653 persons resident in the agricultural towns, villages, and hamlets of the riding had 17,538 votes; the ratio of votes to population in the manufacturing districts being 1 in 45; in the agricultural, 1 in 21. He also stated nine agricultural polling districts, in which 8227 electors voted at the election of 1841, gave a majority of 2500 and upwards in favour of monopolist candidates; whilst sixteen manufacturing polling districts, in which 22,803 electors voted, gave a majority in favour of the Free-Trade candidate of upwards of 1500. The voice of a majority of 22,803 electors was therefore neutralized by the voice of a majority of 8227; and who were the 8227 electors? why, principally, the dependents of the landowners, who had no free choice, but voted as they were directed by the great man's steward. Was it to be borne that two-thirds of the riding, consisting of the most wealthy, independent, and intelligent of its population, should have their opinions over-ruled, overborne, and neutralized by the opinions, no not the opinions, but the constrained votes of the remaining third? (Cheers, and cries of "No, no.") Mr. Flint concluded by moving the appointment of the committee, and sat down amidst loud applause.

Mr. GEORGE WISE seconded the appointment of the committee, which was unanimously agreed to.

Mr. Alderman LUCOCK then, in brief but highly eulogistic terms, proposed the thanks of the meeting to Messrs. Cobden and Bright.

The motion was seconded by Alderman CARBUTT, in terms equally appropriate with the observations of the mover of the vote of thanks.

The motion was carried by the deafening acclamations of the meeting, with an addition of three cheers.

Mr. COBDEN returned thanks; after which, on the motion of Mr. BRIGHT, a vote of thanks was also given by acclamation to the chairman, and the meeting then separated.

[We are sorry that, owing to the hour at which our report was despatched, we are unable to insert the specifics of Alderman Luccock and Carbutt.]

MEETING AT HUDDERSFIELD.

On Tuesday last Mr. Cobden and Mr. Bright were present at a numerous meeting held in the Guildhall, Huddersfield, for the purpose of taking measures to secure a greater attention to the registration for the West Riding. The hall was quite full, and Wm. Brook, Esq., of Gledholt, was called to the chair.

Mr. COBDEN then addressed the meeting, entering fully into a consideration of the present position of the Free-Trade question; and pointing out the course of policy to be pursued for the future. The importance of the West Riding constituency was strongly dwelt on, and the practicability of winning it for Free Trade was demonstrated. That the great bulk of its population were Free-Traders no man doubted; and that the present electors did not truly represent the opinions of the population, arose entirely from the want of energy and skill and determination in attending to the register. Mr. Cobden alluded to the great defeat which the "protective" system had sustained in America by the rejection of Mr. Clay, and argued that the time was approaching when that mischievous delusion would be given up by the intelligent in every country. In conclusion, Mr. Cobden exhorted them to activity and perseverance; the other towns in the riding were on the alert; and, as Huddersfield had always been most zealous in the good cause, so now it should be in the foremost rank.

Mr. BRIGHT followed, and said that he thought all who were free to be convinced were now assured of the folly and wickedness of the Corn Law; the next thing was to place their forces in order of battle. However good their cause, and how jealous soever they might be, they could not win without the weapons the constitution had provided for them. He drew a picture of the monopolist aquires, and asked if they had made the West Riding what it is; and if the manufacturers and merchants of this great county would tolerate the dictation of a few landowners? The effects of high prices of food upon the condition of the people were evidenced in the returns of emigration, crime, and mortality: showing that in years of scarcity emigration is more extensive, offences are more numerous, and diseases more fatal than in years of abundance. The Free-Trade question was essentially the question of all who live by labour, and he strongly advised that as many working men as possible should obtain qualification for the county. The time for talk had gone by, the time for action had arrived. The monopolists must now be grappled with in earnest. Argument was lost upon men with their hands in other men's pockets; but justice might be had by a resolute combination of the honest and intelligent of the middle and working classes.

Mr. WILLIAM WILLIAMS then moved the appointment of a large committee to take the necessary steps for carrying out the proposition of the deputation from the Council of the League.

Mr. SCHWANN seconded the motion, and in a speech eloquent from its earnestness and simplicity, paid a very high compliment to Mr. Cobden and Mr. Bright, and declared himself ready to work heartily in their cause.

A vote of thanks was then passed to the deputation and the chairman, and the meeting separated. We have rarely seen more good will and enthusiasm than was shown on this interesting occasion.

METROPOLITAN DISTRICT MEETINGS.

TOWER HAMLETS.

The first of a series of League meetings, intended to be held throughout the metropolitan districts, took place on Tuesday evening last, at the Eastern Institute, Commercial-road, Stepney. A more numerous, respectable, and intelligent audience probably was never assembled.

within the boundaries of the Tower Hamlets; and the spirit manifested by the assemblage proves that in London, as in other parts of the kingdom, the advance of the League and its principles must continue until the object for which it was established—the complete emancipation of commerce and industry—is fully accomplished. The meeting was addressed in powerful speeches by George Thompson, Esq., and Robert R. R. Moore, Esq. The statements made by those gentlemen of the plan now being carried into operation for the redemption of the county representations from monopolist thralldom, was received with the greatest enthusiasm; and the eloquent appeal of Mr. Moore to the ladies, for their assistance in furtherance of the objects of the proposed Bazaar at Covent Garden Theatre, met with a cordial response. Long before the time appointed for the commencement of the proceedings the building was completely filled, nearly 2000 persons being present, and it was ultimately found necessary to close the doors to prevent the pressure of the hundreds assembled outside struggling to obtain admittance. A coarse and unmannerly attempt to interrupt the proceedings, by a brace of Chartists, was promptly suppressed by the meeting.

Among the gentlemen present were W. Coates, Esq., Captain Strahan, the Rev. Mr. Carlile, the Rev. Mr. Seaborn, Dr. White; Messrs. Press Grainger, Hubbock, Arundel, Allum, Crillin, Bunnit, J. Moore, Plumiston, Ashcroft, Gurling, Bishop, &c. &c. Messrs. Thompson and Moore were loudly cheered upon presenting themselves upon the platform.

Upon the motion of the Rev. Mr. Skaupne, seconded by Mr. Cwaling, W. Coates, Esq., was called to the chair.

The CHAIRMAN then came forward and said:—Ladies and gentlemen, I am proud and happy that we have opened our winter campaign against monopoly under such favourable auspices. Monopoly means the benefit of the few to the detriment of the many: existing in any trade it is an evil; but it is a most monstrous mischief when applied to the food of the people. (Hear.) The Corn Law is a device to render difficult the support of the people. It is a system opposed to nature and to God, which could only have been conceived in selfishness and carried out in ignorance. (Hear.) The Free-Traders of the Tower Hamlets have, by reason, argument, public lectures, pamphlets and discussions, conciliated opposition, won friends, and diminished the ranks of the monopolists in an extraordinary manner. A monopolist now is almost ashamed to avow himself such; and you can hardly find any who profess themselves enemies to Free Trade, unless in that hospital of incurables—the House of Lords. (Cheers and laughter.) But there also our friends are increasing, and our numbers are augmented even from the ranks of the peers. The last noble convert to Free Trade was my Lord of Londonderry, who has discovered that if Free Trade exists in every thing else he cannot see how the Premier can refuse it in corn. (Hear and laughter.) But his lordship has a little itch in his conviction, and has a knack of connecting together very large and very small things: he therefore makes it a condition of his adhesion to Sir Robert Peel and support of Free Trade, that a place shall be given to his son, a young gentleman of forty years of age, who has just returned from his travels. (Laughter.) The people must now take this great cause into their own hands, legally and constitutionally. (Hear.) How is it that such enormous assemblies are gathered together in favour of Free Trade, as that here assembled, and that thousands of persons are constantly collected for the same object in every part of the metropolis? Because the people have lost confidence in Parliament; and where they had the greatest right to obtain protection and find a spirit of justice, it has been denied them: and they now know well that if any great measure is to be carried it must come spontaneously from the people. (Hear.) The best members of the Legislature are already with us; and the rest will find it impossible to resist the force of public opinion. (Cheers.) The distinguished lecturers who have come down to address us this evening do not purpose going at all into the question of Free Trade, because that is a settled matter with the people of England (hear); but a larger consideration remains behind, and that is, how shall the measure be carried; and in what manner will you make Free Trade, as it must ultimately be, the law of the land? What is the great evil of the times in which we live? The miserable condition of the middling and lower classes of the people. What is the remedy for this state of things? Give them the suffrage. (Loud cheers.) Let industry be represented, and it will soon be seen that all it requires is a clear stage, and no favour. Attempts to extend the representation have been made by various individuals and parties. Some are in favour of "complete" and others for "universal" suffrage. I am very near, if not quite, in agreement with both these parties, and much regret that there should be any distinctions to keep people divided, instead of their being united for the obtaining of a great common object. (Cheers.) But we are not talking at present upon the delicate consideration of organic changes; but we say, if the advocates of complete and universal suffrage are both sincere, and find they cannot get all they desire under the present law, they ought to exert themselves to obtain a vote if possible; and we have the authority of Mr. Cobden, and other good and excellent men, that, even with the present imperfect law, such an extension of the suffrage might be obtained as would give the friends of Free Trade a majority in the House of Commons. (Cheers.) One of the great objects of the League has been to separate their cause from any party movement, and to raise a new and national party. I do not hesitate to say, from what I have seen of late years of the workings of both factions in the state, that when I look at the jaded backs of political corruption, whether Whig or Tory, the majority of them are utterly unfit to work well in the national team. (Cheers.) It will be for you, as you obtain and extend the franchise, to ask how you can best promote the interests of yourselves, your families, and common country. The efforts now making to extend the franchise will have the effect of bringing forth a new class of men into Parliament whose sympathies are with the people, such as Messrs. Cobden and Bright, who are the creation of the Anti-Corn-Law League, and specimens of the men who will be intrusted with the liberties of the people whenever they have the power of electing members to Parliament. (Loud cheers.)

Free-Traders I advise you never to be split up into parties: there may be twenty other objects very desirable, but let us hold to our foundation. I do not hesitate to say, as a matter of my deepest conviction, that Free Trade is sanctioned by public policy, favourable to national morals, and in every way beneficial to the interests of religion. (Cheers.) I regret the absence of that eloquent and extraordinary man, Mr. Fox, but his place will be amply supplied by that able and excellent gentleman, Mr. George Thompson, who will next address you.

Mr. GEORGE THOMPSON then came forward amidst loud applause, and addressed the meeting in a most eloquent speech. He regretted the illness of Mr. Fox, who was much better qualified to address them than himself. He perfectly agreed with the chairman in deprecating division among the friends of Free Trade. The justice or injustice of restrictions upon commerce had always been a matter open to debate in the League meetings; but extraneous questions were sometimes introduced which prevented unanimity of action upon the great and only question upon which the Anti-Corn-Law League had been brought into existence. If monopoly in food was hateful, it was equally so in political and ecclesiastical matters; and under all its aspects it was nothing but evil, and tended to the destruction of the best interests of the world. In past times the League had discovered that they could not carry the great question of Free Trade by the simple adoption or recommendation of principles, and were compelled to employ other means in addition. He would say to those who asserted that Free-Traders must bring about other changes before they could carry their object, that let them first come up to the point, and, if they did not find the breach wide enough for themselves and those to whom he alluded to enter, they could then make common cause, and go for the removal of that great impediment which they alleged was equally an obstruction in their way and that of the League. The reformation of all abuses must be wrung from those who are the great monopolists of the country in all matters. The League had laid down a principle upon which all men might unite. Some were labouring with those who professed to be good Conservatives, supporters of ancient institutions and opponents of the extension of political rights, who, finding themselves outvoted upon the most reasonable measures by their own party, abandoned it, and, without changing their names, have altered their views, and denounced the hollowess, bigotry, and tergiversation of their former political associates. Having begun upon this principle, they were bound to go on with it—to remain, as they always had been, no-party men—and to welcome to their platforms individuals of all shades of politics and of religion. (Cheers.) It was true that the principle of Free Trade was now a settled question; but how had it become so? Because a vast amount of preliminary agency had been employed, and the people had been taught upon the subject. This was a proof of the triumph of the mighty organization of the Anti-Corn-Law League. When he looked back at its condition upon its first establishment, and compared it with its present state, he stood astonished at the mighty progress. (Cheers.) Let all engaged in similar enterprises learn wisdom from the history of that body. From the hour of its birth to the present moment there had never been a division in its councils, a defection from its ranks,

or a change of opinion expressed upon any essential matter. They had grown wiser, and multiplied their facts and illustrations: having convinced the public mind upon the question of the corn monopoly, they had gone on to that of sugar and other articles in which the people were concerned. Let those who wished to drag other questions into the cause of Free Trade learn the advantage of finding a common principle upon which all might unite and stand together. Let them behold its course perpetually widening, and its progress marked with continued triumph; let them note the absence of the feuds and dissensions which had broken up other organizations, and scattered them to the winds. (Loud cheers.) Previously there had been a grand mistake in the efforts of the people of this country: they were spasmodic and occasional, made only at a certain election or a particular Parliament, conducted with incalculable expense, and attended with no small degree of corruption. (Hear.) Those who were the advocates of liberal opinions could neither afford to keep their own hands clean, nor recommend others to do so. It was a strife of purses; a dispute among bad men; and the most base and venal obtained the temporary triumph in elections. It was a season of demoralization and deep corruption; and some of the steps taken for the attainment of a good object were such as no honest man could sanction, and were even frowned on by the object itself. But such was not the way to carry a great cause. How had the League proceeded during the last five years? It had taught the people to understand the A B C of the question; reasoned with them not only about monopoly in corn, but in fisheries, mines, gloves, silks, stockings: showing them that Free-Trade was based upon the principles of justice, was good in itself, sanctioned by the universally recognized dispensations of Divine Providence, and the history of all legislation from the beginning of the world. (Cheers.) £100,000 spent in such a manner were infinitely more beneficial to the cause of humanity, the honour of the country, and the lasting good of mankind, than £100,000 expended in contesting such a county as that of York, between the houses of Harwood and Wentworth; or in half-a-dozen boroughs, bribing father, son, brother, and cousin, for the purpose of placing what was called a liberal man in Parliament. (Cheers.) After having put good and true principles into the minds of men, the League found they were still unable to subdue the enemy. Believing that, however good in itself the general enfranchisement of men by act of Parliament might be, until that time was come—and Heaven hasten it!—(loud cheers)—it was still for them to endeavour to enfranchise themselves under the existing defective system, the League was now showing the people how they might rescue the counties of this kingdom, and in what way the dwellers in towns might become the champions of the serfs of the agricultural districts. The Council of the League would take the trouble off their hands: let the people furnish the pecuniary means, and they would soon be put in the position of walking to the hustings and recording their votes—a position as lofty as that of the proudest landed aristocrat who hunts over the ploughed fields of his serf. (Cheers.) Why was it unnecessary now to discuss this question? Simply because (thanks to the Anti-Corn-Law League) the minds of the people had become enlightened. The time was when a small back room in

Manchester contained the whole of that body, who might then have all sat with their feet upon one fender, toasting their knees before a winter's fire, lamenting the ignorance, darkness, and apathy of the country upon this subject. (Laughter.) The principle upon which they had acted was the right of every honest man to the results of his own toil, and to exchange the products of his industry for the largest amount of the bounties of Divine Providence which he could obtain in the universal market of the world, and that no taxes should be imposed except for the purposes of revenue. What did Mr. Dendall Hume, a public servant of thirty years' standing, and a great authority with Sir Robert Peel when not opposed to him, prove with reference to the Corn Law? That it imposed a duty of 10s. a quarter upon all that was introduced into the British market from abroad; and, allowing a quarter of corn to each individual, taxed the country about £23,000,000 or £30,000,000 a year, and the inhabitants of the metropolis about £1,900,000. People were compelled to abandon their own country, and seek the distant prairies and unbroken wildernesses of America; and as they sailed down the Mersey they saw the barrels of flour, for want of which they were leaving home and going to a land uncoursed by a Corn Law, but that flour was not permitted to be used by them. (Loud cheers.) The Corn Law and corn trade had been held up as highly respectable; but the League had demonstrated that the law was a robbery, and the trade a system of gambling; that provisions had been maintained at an unnatural price, that landlords might keep carriages, boxes at the Opera, shooting-houses at Melton Mowbray, and packs of hounds at the expense of the impoverished and plundered people of this country. (Cheers.) Who were they that were now crying out against the trickery and injustice of the sliding scale? The manufacturers? No: the farmers, who had been periodically ruined by its operation; for when corn was high probably a million of quarters of foreign grain were introduced into the British market in competition with that of the farmer, and for which he had to pay a rack-rent. (Hear.) The farmers were no friends to the sliding scale or the recent alterations made by the House of Commons, all of which measures had paid homage to the principles of the Anti-Corn-Law League. The reduction of duty upon the 700 articles were only 700 paltry excuses for saving the life of Monopoly. Argument had been entirely given up. When an Anti-Corn-Law debate occurred in the House, the monopolists went into the lobby, waited there in torture, and at its termination strangled the measure by mute numbers. Sir Robert Peel now would not even trust Lord Stanley (or, as he was called, Lord Bickerstaffe) to speak upon the subject, lest he should be too honest. There was not a single monopoly in the country which was not attacked by monopolists themselves. If either the corn or sugar monopoly were destroyed, the other would immediately meet the same fate; the existence of one depending upon the maintenance of all. Hence the church monopolist was always found to vote with the corn and sugar monopolist. The refusal of the committee upon special burdens on agriculture was a proof to every honest mind that the monopolists could not make out their case. Mr. Thompson then touched upon the elections recently contested by the League, and the good which had resulted therefrom; and also the existing movement for the enfranchisement of county voters. He was led to believe that the people of London would not thereafter accept any declarations, accompanied with mental reservation or hesitation; for how could they expect a sincere opinion from a candidate who hesitated? If he could not declare himself in favour of unfettered trade, let them not commit their votes to him. (Cheers.) As the question of Free Trade was settled, it only remained for them to determine the length of time which should elapse before the goal was reached. The sooner they could work a universal apprehension of the nearness of that time, the quicker it would come. It had been somewhere said, "When men talk about a thing at the corner of the streets, something great is going to happen." The present Prime Minister, notwithstanding all his speeches in favour of the Corn Law, would not hesitate to abolish it immediately, when the nation willed it. As a wise man, a lover of power, and one who having obtained the lead was determined to keep it, he would do it. There was no friendship of party, old recollections, tender associations, fears of defection, or threats of retaliation, which would deter Sir Robert Peel from applying the axe to the root of this great evil when he found, by looking out of doors, that he could set the timorous, the intimidated, and the bigoted at defiance. (Hear and laughter.) Let them, then, put the alternative before him—Free Trade and power, or the loss of the Government and yet Free Trade? (Cheers.) They need not be afraid of his giving up office: he was not the man to say—"I have an oath in heaven." The right hon. broker had sworn to other duties beside protection, and violated his vow. (Hear.) He was trusted by none; but hoped in by a good many because of the pliability of his nature. It only required a strong pull and a pull all together, and the country would be delivered from the evils which had been inflicted upon it, and would set a noble example to the world. (Mr. Thompson was loudly cheered at the conclusion and during the delivery of his speech.)

Mr. MOORE (who was received with loud applause) then delivered a long and able address, in the course of which he remarked, that in 1841 and 1842, when League meetings were held in that room, the aspect of the country was gloomy. Industry had lost its reward; the manufacturing districts were in distress; people were out of work, and disease, crime, and death were spreading amongst them. These evils, it was then stated, were occasioned by a scarcity of food, of which the Corn Law had been the main cause; that that measure was bad, not merely by making food scarce and prices high, periodically, but that, by shutting England out from the markets of the world, people were deprived of the opportunity of exchanging their goods in return for corn. What was the state of the country in 1844? Universal revival and improvement throughout the manufacturing districts—people employed, and bread cheaper and more abundant. In 1841 the monopolist papers said that if bread was cheap wages would go down; but, now that corn was cheap, he would ask them whether they had not seen accounts from all the manufacturing towns, and nearly every factory throughout the country, of wages having risen from five to fifteen per cent.? It was then stated by the Free-Traders that, when provisions were low the people would be in a condition to purchase the various home manufactures, and thereby im-

ported articles: the progress of events had proved that they were right. The League had now come to a point when they might look to past times, and compare the results of scarcity and plenty of food. In 1843, in thirteen manufacturing towns the criminal tables showed a decrease of 8 per cent. In committals over the two preceding years, there having been in 1840, 1841, and 1842, an increase in the number of committals. Whenever food was high and bread scarce, temptation to crime was great: men who were industrious in times of good trade, were driven into theft by the door of pauperism, and starvation and crime increased as the result of want of employment and destitution of food. (Hear, hear.) They had also returns of the number of deaths from nine divisions of the north-western districts of Lancashire for the years 1840 to 1843. In the former years the number amounted to 26,196, while in the following year (1843) of abundant provision it had decreased to 23,334, notwithstanding the increase of population during that period. In the latter year the people were better fed, and clothed, and taught, and were not sent to their graves before their time by starvation. (Hear.) It was to prevent a recurrence of the dreadful scenes which had been witnessed in past times that they were called upon to become freeholders. When the Free-Traders spoke of manufacturing districts in 1840 and 1841, the monopolist press charged them with seeking to destroy the condition of the agricultural labourer, of whose happy state most poetic descriptions were given. Lord Ashley had descended into the mines and descended upon the horrors of the factory system, not saying one word upon the condition of the happy agricultural labourer. (Hear.) A commission had since been sent out to inquire into the matter, when it was found that the agricultural labourers worked as many hours as the factory operatives, and were paid a great deal less; that a larger number of women worked at more laborious employments than those in the north and west of England; and even the landlords were now compelled to admit the wretchedness of the labourers' condition. (Hear.) All this had been the work of the League; and the next step that body would take would be, having obtained this admission of the labourer's condition, to compel the landlords to mend it. (Loud cheers.) It was difficult to keep from laughing at the various after-dinner propositions for effecting this object. One talked of an annual dinner at which labourer and landlord, serf and farmer, should sit down together; others of bringing back the good old times of merry England, when the lord and the labourer played at cricket together; a third suggested allotments of land; and now the landlords were recommending the farmers to employ the labourers; but, through the operation of the sliding scale, the farmers had slid from independence to pauperism, and could not therefore do so. Three years ago Lord Stanley had stated at Liverpool, and had recently repeated the assertion, that no capital paid so well as that invested in land. Why, then, did not the landowners expend their money in improving their own estates? Because the Corn Law had protected the farmer and the labourer to ruin together. (Hear.) Another proposed means of alleviation was emigration. He (Mr. Moore) had no objection to emigration, but let all classes go down to the port together, and see who it was that ought to go. It could not be the industrious classes, for there was plenty of raw material to work upon, and the wide world waited for British goods. The men who ought to go were the Game and Corn Law supporting classes, who, living idly themselves, yet dared to tell the labourers and mechanics to quit their native land. (Prolonged cheering.) At the time they assembled there in 1841, the landlords were unblushingly stating that the agriculturists were the great class to be looked after, as they comprised seven-eighths of the population of the country; but the recent Government abstract of the occupations of the people, founded upon the last census, showed that the manufacturers, and those engaged in commerce, formed 16½ per cent. of the population, while the agriculturists were only 8 per cent., or but 1½ more than the domestic servants of the country. Ever since 1811 there had been a gradual decrease in the number of those engaged in agriculture, and a great increase in those employed in manufactures, arising from the emigration of a portion of the surplus labourers in the former to the latter, which would not have been the case had the treatment of the factory operatives been that which the monopolists represented. In Dorset the landlords allowed cottages to fall into ruin, and, when the labourer was compelled at length to leave, razed them to the ground. Through the exertions of the League it could not be doubted that next season something would be done to modify the game laws, and prevent a man from being prosecuted for looking at some wifes. (Hear.) Did not every man's heart tell him that the unemployed and starving labourer had more right to the hare or pheasant than the landlord himself? (Loud cheers.) These oppressors could not be indicted in any court of law, but the verdict of the people of England would inflict upon them the punishment they most dreaded—the deprivation of the power to do evil. (Cheers.) He (Mr. Moore) would not speak evil of any class; he did not refer to landlords, but to the system of landownership. If they had witnessed as he had done, during the recent contest in South Lancashire, the treatment of "the bold peasant" their country's pride, it would induce every man of them who could save £20 to purchase a freehold, and come to the rescue of the farmer from this state of degradation. (Cheers.) It was an old privilege, that every man who had a freehold yielding him 40s. should have a vote; that privilege remained still, and he urged them to avail themselves of it; in doing so every assistance would be rendered them by the League, at whose offices a committee sat daily for that purpose. The *Herald* and the *Standard*, which were now called the "Globe and the Shadow," asserted that this proceeding was unconstitutional; but the League never were more constitutional than in the present instance. Their great object was to procure industry its own; and if the people were resolved it might soon be done. They had now gained South Lancashire; before long they would have North Lancashire, and many other counties. Mr. Moore then appealed to the ladies for assistance in the approaching Bazaar, at Covent-garden Theatre, and recommended them not to make perishable articles, but such as combined utility and beauty; and concluded an eloquent and powerful speech amidst loud cheers.

The Rev. JAMES CAMPBELL, of Hackney, then moved, and the Rev. H. J. SHARROCK, of Limehouse, seconded, the following resolution, which was carried unanimously:—

"That this meeting have learned, with the highest satisfaction, the determination of the 'Anti-Corn-Law

League' to use every proper effort to purify the existing constituency of boroughs; and, by means in perfect accordance with the spirit of the British constitution, to extend the constituencies of the counties. That they congratulate the Council of the League on the signal success which has already crowned their efforts, for this purpose, in several places, and especially in the Southern Division of Lancashire; and would assure the Council of the League of their fixed determination to co-operate with them in extending the franchise of the county of Middlesex. And, further, they gladly embrace the opportunity of pledging themselves to give the most cordial and energetic help to the proposed League Bazaar, to be held in Covent-garden, in May next."

Mr. MOORE then moved a vote of thanks to the Chairman, which was carried, with three times three cheers for that gentleman and Free Trade.

The CHAIRMAN briefly returned thanks, and the meeting separated.

KENSINGTON.

The meeting at Kensington, announced in our last, was held in the Theatre on Thursday evening: pit, boxes, gallery, and stage were completely filled; the attendance of ladies was very numerous. Every meeting previously held in Kensington had been more or less disturbed by those hired noise-makers who, a year or two ago, were in the habit of intruding themselves into every meeting which had Free Trade for its object. That system of interruption failed of its object and has ceased; and the meeting at Kensington was crowded, attentive, earnest, and enthusiastic: all evidently were deeply interested in the present electoral movement in the counties. The meeting was presided over by Samuel Lucas, Esq., who briefly stated that the present was one of a series of meetings now being held throughout the metropolitan districts, with the view of inducing the Free-Traders to qualify themselves as electors for the county of Middlesex.

Mr. ROBERT R. MOORE stated that, taking the Hammersmith polling district, which consists of the parishes of Kensington, Chelsea, Hammersmith, Fulham, and Chiswick, there appear only 1913 persons registered for Middlesex, out of a male population of 48,942, of which number 30,317 are twenty-one years of age and upwards. There are 17,000 inhabited houses, so that one-half the freeholders do not appear to have registered; and, this district being out of a city or borough, every £50 occupier and leaseholder is entitled to a county vote. The majority in that district were Free-Traders; and, as they had no borough votes, it was their duty to become possessed of county votes, that they might help forward the Free-Trade cause. Mr. Moore urged the ladies to assist this registration movement by their contributions to the great League Bazaar.

G. THOMPSON, Esq., followed in a powerful speech, ridiculing the cowardice and absurdity of the monopolists in attacking a defunct League. If that body really were dead, its spirit remained behind. Homer was dead, but the "Iliad" and "Odyssey" still lived. Newton was no more, but his discoveries were immortal. Virgil had sung of the blessings of Free Trade, and the benefits it conferred upon the nations by the exchange of articles. He then most eloquently reviewed the effects of "protection" in the East, and the misery caused by the salt monopoly in India, which was similar in its results to the home monopoly.

S. BIRD, Esq., moved, and Mr. HUNT seconded, the following resolution, pledging the meeting to co-operate with the League in carrying out their views with reference to the Registration and Bazaar:—

"That this meeting has heard with pleasure the progress made by the League in the Registration Courts during this year, and is deeply interested in the present movement to increase the number of county freeholders; and pledges itself to the most strenuous exertions to increase the number of freeholders in the county of Middlesex. And this meeting further promises its most cordial support to the Great League Bazaar to be held in Covent-garden Theatre in May next."

Thanks having been voted by acclamation to the deputation and chairman, the meeting separated after giving three cheers for the success of the League objects.

ANTI-CORN-LAW LECTURES IN WILTSHIRE.

TROWBRIDGE.—Mr. Falvey delivered a second lecture in the Independent chapel, Trowbridge, on Wednesday evening last. The colonial monopolies in sugar, coffee and timber, constituted the subject of the lecture. The proceedings terminated with enthusiastic rounds of clapping in favour of Free Trade.

BRADFORD.—Mr. Falvey gave a lecture, on the advantages of Free Trade and the evils of the Corn Laws, in the large room of the Swan Inn, on Thursday evening week. The audience was numerous, respectable, and enthusiastic, and at the close a vote of thanks was given to Mr. Falvey, together with three cheers for Free Trade.

BOX.—A public lecture was delivered in this place on Friday evening, the 29th ult., by Mr. Falvey. On the motion of Mr. Veroy, John Eldridge, Esq., of Bath, was called to the chair. The chairman, on introducing the lecturer, made a clear and effective speech in favour of Free Trade. Mr. Falvey's lecture was received throughout with the most marked approbation; and we are informed several farmers who attended the meeting declared themselves converts to Free Trade.

COLERN.—Mr. Falvey delivered a lecture on the evils of the Corn Laws, in the Independent chapel, Colerne, on Monday evening, the 2nd inst. The chapel was crowded with farmers, labourers, and their wives and children, who took the greatest interest in the proceedings. John Eldridge, Esq., occupied the chair. The meeting separated by giving three rounds of cheering in favour of Free Trade.

HAMMURTON, Nov. 28.—PRICE OF CORN.—Wheat—Pollard, 82 to 120 marks; Anhalt and Magdeburg, red, 70 to 93; ditto, white, 80 to 111; Marks and Brunswick, 70 to 93; Silesian, yellow, 78 to 88; ditto, white, 85 to 108; Mecklenburg and Pomerania, 66 to 94; Holstein, 66 to 80; Elder and Huzum, 68 to 85; Lower Elbe, 68 to 80.

CONTRIBUTIONS TO THE £100,000 FUND,

Subscriptions received during the week ending Wednesday, December 4, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the LEAGUE of the Saturday immediately succeeding, but are included in the list of the week following.

ERRATUM.

In LEAGUE 61, for "G. E., 21," read G. E., 21.

THE LARK AND THE ROOK.

A FABLE.

(From Hood's Magazine.)

"Lo! bear the gentle lark!"—Shakespeare.

Once on a time—no matter where—
A Lark took such a fancy to the air,
That though he often gaz'd beneath,
Watching the breezy down, or heath,
Yet very, very seldom he was found
To perch upon the ground.

Hour after hour,
Through ev'ry change of weather hard or soft,
Through sun and shade, and wind and show'r,
Still fluttering aloft;
In silence now, and now in song,
Up, up in cloudland all day long,
On weary wing, yet with unceasing flight,
Like to those Birds of Paradise, so rare,
Fabled to live, and love, and feed in air,
But never to alight.

It caus'd, of course, much speculation
Among the feather'd generation;
Who tried to guess the riddle that was in it—
The robin puzzled at it, and the wren,
The swallows, cock and hen,
The wagtail, and the linnet,
The yellowhammer, and the finch as well—
The sparrow ask'd the tit, who couldn't tell,
The jay, the pie—but all were in the dark,
Till out of patience with the common doubt,
The Rook at last resolv'd to worm it out,
And thus accosted the mysterious Lark:—

"Friend, prithee, tell me why
You keep this constant hovering so high,
As if you had some castle in the air,
That you are always poisoning there,
A speck against the sky—
Neglectful of each old familiar feature
Of Earth that nurs'd you in your callow state—
You think you're only soaring at heaven's gate,
Whereas you're flying in the face of Nature!"

"Friend," said the Lark, with melancholy tones,
And in each little eye a dewdrop shone,
"No creature of my kind was ever fonder
Of that dear spot of earth
Which gave it birth—
And I was nestled in the furrow yonder I
Sweet in the twinkle of the dewy beath,
And sweet that thymy down I watch beneath,
Saluted often with a loving sonnet;
But Men, vile Men, have spread so thick a scurf
Of dirt and infamy about the Turf,
I do not like to settle on it!"

MORAL.

Alas! how Nobles of another race
Appointed to the bright and lofty way,
Too willingly descend to haunt a place
Polluted by the deeds of Birds of prey!

LETTERS ON THE CORN LAWS, No. X.

TO THE NON-ELECTORS OF GREAT BRITAIN.

I address myself to those of you who aspire to the possession of the suffrage, and whose purpose is to use it, when obtained, wisely and honestly. Doubtless there are some amongst you to whom it is matter of carelessness whether they continue members of a slave class, or gain the rights of citizenship; some who would traffic with a vote if they had it, and carry their consciences to the great mart of corruption; and some who have studied so little the true interests of the state and of individuals, that they would support the monopoly of food on the pledge of its advocates to uphold some peddling monopoly of theirs, not worth, perhaps, in the fee-simple of its profits, on the most favourable calculation, a six months' charge of bread-tax. I trust, however, that these are a small proportion of your number. In your multitudes, you are too sound of head and heart to be classed with either of these species of an infamous genus. Of Free Trade and the franchise I can write to you with the confidence of attention and response. I do so now, because you are materially concerned, as it is my purpose to explain, in the present movement of the Anti-Corn-Law League.

The agitation for commercial freedom, and that for political freedom, have been carefully, if not necessarily, kept distinct and independent. The causes which have kept them so are still in force and continue their operation. Yet independent orbits have points of contact: all truths and rights are connected. Justice is one and indivisible. It cannot be successfully claimed in any department without facilitating its attainment in other departments. Reformers the most absorbed and exclusive in their particular pursuit, are co-operating with other Reformers whether they will or no. They are manifestations of the same spirit—that divinely in-breathed spirit which teaches man to rise towards the true and good, though but partially apprehending the central orb towards which he tends. At times, glimpses occur of the relation between all modes of reform and improvement. There are occasional identifications of independent efforts. One such presents itself in the steps now taking by the Anti-Corn-Law League. The exertions of the Council are mainly directed to the revision, and the enlargement of the county registration lists. In other words, it aims, not by superseding the Reform Act, but through the provisions of the Reform Act, at an extension of the county suffrage. In this movement the League becomes practically a society for political enfranchisement.

Freeholds worth 40s. a year, and therefore entitling the owner to a vote for the county in which the property is situate, are purchasable at the rate of about £50 each. This well-known fact is the basis of the proposed operations. It is the germ of a power by which public opinion may be made to bear upon monopoly; a spirit of independence brought into successful collision with the influence of the squirearchy; the result of electors rendered no longer calculable by comparing Whig and Tory rent-rolls; and the Peerage be restricted within its legitimate place, the House of Lords, there, when opposing national interests, to be "girt" by the members of a popular House of Commons "beseeching or besieging."

Fifty pounds is the cost of enfranchisement. The price is not extravagant: it is rather above the valuation of a nigger in the West Indies, under the old system. But there was many a nigger who would have worked, means being allowed, for its accumulation. The industrious and careful operative need not be hopeless: he will find no better savings' bank. Many have in their lives paid much more towards benefit societies whose boxes were too near bankruptcy for the forty-shilling annuity that comes as interest for ever. The bridge between serf and citizen might have been more costly. Not much evidence of earnestness for political existence is afforded by him who will not scheme, and toil, and forbear, and save, that he may thus inscribe his name on the muster-roll of the free. The prize deserves some struggle.

Even the borough voter is but half a man for the public service if he aim not at adding a county vote to his privileges. The representation of towns is a specific provision for their peculiarity as towns: as aggregates of population, seats of manufacture, scenes of industry, and marts of commerce. Their portion of the House of Commons is a tribute to their distinct importance in the nation, as the House of Peers is to that of the great landowners. But the peer is, *de facto*, represented by the county members; and so should the city or town. It is part and parcel of the county. Its own representation is more than balanced by his hereditary seat in the Legislature; and the tradesmen's houses have equal right with the peer's fields to be included in the territorial representation. Parks and farms do not alone constitute a county. The land must be little and wretched if it does not grow villages and towns in addition. The American Senate is chosen by the States; but who ever dreamed of excluding the cities from the States? In England every man

has his county as well as his country. He belongs to it; and its representation belongs to him. No matter for his vote elsewhere, in another capacity; he has a right here; and if a right, then a duty; and, if the law taxes both the right and the duty, then he should endeavour to pay the tax and occupy his proper position. Freeholders are the shareholders—in the eye of the electoral laws, equal shareholders—of the county.

As an extension of the suffrage, this movement is open to no exception whatever from the most capacious opponent of organic changes. It only attempts to realize the ancient and existing constitution of the country. The rights of the 40s. freeholders date from the reign of Henry VII. by statute; and they were then only recognised, not originated. The League merely suggests that this great public right should be a living principle, not a dead letter. It only proposes to introduce on the county lists a class whose money qualification must be satisfactory to the constitutional alarmist. It is a strictly Conservative move, if any thing is to be conserved but corruption and monopoly.

The battle of commercial freedom must be fought by county votes. What stand can monopoly make, when a majority of the representatives of the land is arrayed under Free-Trade banners? What heavier blow can be dealt to the oligarchy, by which taxation has been perverted to the purposes of selfishness and oppression, than by wresting the county representation from its grasp? Here it is that you are most wanted. Here it is that your votes will most tell. They talk of allotments; buy your own allotments to assert the justice that will supersede occasion for charity. Form committees in the towns of every county to co-operate with the League in facilitating the purchase of sufficient freeholds. It was once said, that "every rood of ground maintains its man;" let every rood of ground that is comestable now make its man—its free man—to strike a triumphant blow in the cause of industry.

The rights of farmers, and of labourers, are in your hands. With you is that one thing needful, for redress, of which they are destitute, viz., *Independence*. Your 40s. field or tenement involves no subordination to a power that can ruin you by a word. Your lease is for everlasting. No steward can send you adrift. Lord Stanley himself will not dare to stand by and watch you at the poll, as he threatened to watch his tenants, and thus defeat the design of Parliament, should it concede the ballot for their security. He had better watch you at the poll; it may teach him a wholesome lesson. The landowning power, like other power when passing from the few to the many, must change its character and adapt itself to the spirit of the times. You will create a democratical landed interest. Thanks to the ancient law of our country, the very means by which industry and right have been overborne, under the forms of representation, are about to become those of their deliverance.

The people should everywhere prepare to push to the utmost the emancipating power which has so long been latent in the law. Let the monopolist landowners retaliate, if they will. Their retaliation will only be a further extension of the County Suffrage, and that, eventually, must tend to good. But how many of them can retaliate? Mortgaged lands are not good for vote-making. For that growth they must first be manured with the guano of redemption. "There's the rub." The foe is already crippled. The game is in the people's hands. Onwards—for Free Trade and Political Emancipation.

A NORWICH WEAVER BOY.

PROOFS OF POVERTY.—A Police Court may appear to be anything but a school for political economy, yet we find there, very frequently, justice showing where the shoe pinches, in so many practical lessons, and in such very plain language as not to be misunderstood. When deciding a case last week at the Woolwich Police Court, Mr. Jeremy is represented to have said, "That in two days he had signed no less than FIVE HUNDRED summonses to compel the payment of poor's rates, a thing he never knew before in his life;" and added, "It was truly dreadful to think of it." Here we have at once no less than five hundred proofs of the dreadful poverty of the poor, overtaking and overwhelming in ruin those who hitherto have cheerfully assented to support the less fortunate. These people would have preferred paying the rate, if they could pay it, than to suffer the disgrace of a summons from a Police Court. It is "dreadful" to see the numbers of the crushed poor increased by the disgrace of five hundred families, at one fell swoop, by the rapidly cankering, corroding, and crumbling away of the class next above them. The poor are not dreadful, though their poverty be so. Nor are the poor the cause of their own poverty; simply because they are not afforded the opportunity to work and earn the bread they stand in need of. Why are they not afforded the necessary work? Because the farmer cannot afford to employ more men: he wants all the money he can possibly get together for his landlord, and the men he does employ he pays so badly that they cannot live better than those in "the union," only they have their liberty, such as it is. Because the manufacturer may not take his goods where he could exchange them, but must offer his goods to those very men who received the five hundred summonses for poor's rates, or to those agricultural poor who are not permitted to earn enough money to buy bread.—*Devonport Independent*.

CORRESPONDENCE.

Gloucester, Nov. 30, 1844.

SIR,—I have lately read in the LEAGUE newspaper Mr. Cobden's recommendation to the Free-Traders of England to possess themselves of 40s. freeholds, and so qualify to vote in the election of members for counties. In some districts this may be almost impossible, but in others it is easily practicable, and in none more so than in East and West Gloucestershire, which have Cheltenham, Gloucester, and Stroud in the one and the Forest of Dean in the other division, and in both of which the property is much subdivided. The representation of both at present is neutralized, as of the four members two are Whigs and two are Tories, and I believe all voted last time against Mr. Villiers's motion. Now, you have many excellent Free-Traders in the county of Gloucester, men of talent and influence—I mean Lord Ducie, Edward Holland, Charles Hanford, and Wm. Philip Price, Esqrs.—and I would suggest to you the propriety of pressing this subject on the attention of those gentlemen, as I feel certain, if they would bestir themselves in the matter, they might increase the registration in both divisions by several hundreds. I am myself qualified to vote in both divisions, and shall be happy to render you as much assistance in carrying it out as my time will allow, as, unless this be done, we may, under the influence of Mr. Cobden's eloquence, carry a majority in favour of Free Trade in the County-hall, but shall be left in a minority on the poll-books on the day of election.

I remain, Sir, yours obediently,
George Wilson, Esq. W. V. E.

To the Editor of the LEAGUE.

SIR,—We are apt to look at the inhabitants of India as being in a comparative state of barbarism compared with ourselves. However that may be, we must confess that, with respect to the laws or customs that regulate the distribution of grain, their mode of acting is more consistent with the doctrine of Providence than those that proceed from the British Parliament. There is something very singular in the business, and you will, I dare say, see it conveys a severe satire on the Corn Laws. Perhaps you may think it worth a place in your paper. The account is taken from the "Family Library," No. 62, page 308.

I am, Sir, A. HERZBERG.

"The Brinjarrees pass their whole lives in carrying grain from one part of the country to the other, seldom on their own account, but as agents for others. They travel in large bodies, with their wives and children, dogs, and loaded bullocks. The men are all armed as a protection against petty thieves. From the sovereigns and armies of Hindoostan they have nothing to apprehend. Their calling is almost considered as sacred. Even contending armies allow them to pass and repass safely, never taking their goods without purchase, or even preventing them, if they choose, from victualling their enemy's camp, both sides wisely agreeing to respect and encourage a branch of industry, the interruption of which might be attended with fatal consequences to both. The punctuality of these grain-carriers is marvellous."

To the Editor of the LEAGUE.

Cirencester, Dec. 3, 1844.

SIR,—Allow me to hand you for publication a few facts connected with the subjects of the controversy resulting from the late meeting at Highworth.

The small strip of land at Blunston, situate between the turnpike road and an estate of Lord Radnor's, was enclosed some three or four years ago at the instance of the commissioners of roads, by their surveyor, Captain Bradstock, of Cirencester, at a heavy expense (borne by Lord Radnor), in fencing, ditching, &c. &c. The price of a log or a perch was fixed by him in order probably to repay the heavy outlay. The ground was eagerly competed for—as a matter of small farming business—by the opposite road-side squatters, and willingly taken by them at this price. Ever since it came under the management of Lord Radnor's steward, E. Moore, Esq., a good portion of the rent has been given back by him as premiums for the best cultivation, &c. &c.; and he had announced his intention of eventually lowering the rents by annual reductions to the rate paid by the neighbouring farmers, for which he received the thanks of the tenants, and among them those of the Jack Cade shoemaker who dined Lord Radnor in his famous 8d. a day speech at Highworth.

Let Lord Radnor's assailants take a ride through the village of Colehill, and see the more than comfortable, the neat and well-finished cottages, with sufficient gardens, let at easy rents; let them go a furlong further and view the many acres of rich land given up as allotments for villagers, at the same rate as the tenant-farmers pay; they will there learn that though in theory Lord Radnor honestly proclaimed the rigid requirements of the mercantile principle, yet in practice, as a farmer, he is apt to lose sight of it in his anxiety to furnish as much employment as possible to the greatest number of labourers in his own and the neighbouring parishes. A little further inquiry will force upon them the conviction that there are still noblemen who, in the words of the poet—are over willing to

"Do good by stealth, and blush to find it fame."

Yours very respectfully,
A CIRCUMSTANT FREE-TRADER.

To the Editor of the LEAGUE.

SIR,—During the summer months I visited various boroughs in the counties of Kent, Sussex, Hertford, Hants, and Essex, and uniformly found in every place the monopolists anxious to obtain a majority in the municipal elections and in the appointment of overseers of the poor. The least consideration will lead you to the conclusion why they do so. The overseers make out the borough and city lists, and also have power to object to any name they choose in the county lists; consequently these officers, when the majority are monopolists, have it in their power to make a great change in the number of the constituency to meet the views of their party; and while the Anti-Corn-Law League importunes Free-Traders to qualify, qualify, I think a hint or two given to them also to use strenuous exertions to obtain a majority in the municipal elections, and also to have Free-Trade overseers, deserves attention, or these officers may disfranchise as fast as Free-Traders enfranchise. In counties it is most important, as they have the power of compelling half of the constituency in their parish

to prove their qualification merely by the stroke of their pen. By law they are not compelled to state the grounds of their objection; and, if the party does not appear and prove his qualification, he is in this easy and secret manner disfranchised, as the overseer is not bound to give any other notice than to publish on the church and chapel doors a list of persons who are registered, and in the margin of the list a word, "objected;" and if the voter should reside out of the parish, or should neglect to examine the list, he probably will not be aware he is objected to: he loses his vote, and the overseer laughs with delight at the advantage his party has gained. They are not subject to costs, nor are they put to any expense or trouble like any other objector.

Again, in cities or boroughs they purposely leave out the occupiers' names for houses that are compounded for by their landlords, and thereby disfranchise hundreds and thousands of persons who would otherwise be enfranchised if their names were inserted conformable with the parochial assessment act of Parliament. I trust, after these remarks, the Council of the League will impress upon Free-Traders in all cases to seek a majority; not to use their privilege as the monopolists do, but to place themselves in a position to prevent monopolists exercising their bad practices against Free-Traders.

A LEAGUER.

To the Editor of the LEAGUE.

Preston, Nov. 27, 1844.

SIR,—I deem the circulation of the LEAGUE of such vast importance to the spread of truth, and to the rallying of the friends of Free Trade, that, although you may not call for a hundred thousand pounds subscription this year, I hope you will press your supporters in every part of the kingdom to canvass for pound subscribers to the paper, or for common subscribers of 3s. 3d. per quarter. It is impossible to read the LEAGUE without being a sound Free-Trader; and it is difficult to keep up our zeal to the proper pitch if we don't read it.—I am, yours truly,

J. LEWIS.

To the Editor of the LEAGUE.

Green Hat Cottage, Alnwick, Dec. 3, 1844.

SIR,—Mr. Cobden's opinion, last September, of the probable price of wheat in the event of the standing crops being well got in, is likely to be verified; the average price in our market last Saturday was 37s. per quarter. The farmers are now paying the penalty of assisting their landlords to rob the public; their sufferings, with the experience of Free Trade on the price of wool, will do more to open their eyes than any reasoning.

I am, Sir, yours respectfully, J. F.

REGISTRATION.

The following circular has been forwarded to the members of the League in all the counties of England and Wales:—

"National Anti-Corn-Law League,
Manchester, Nov. 30, 1844.

"DEAR SIR,—I beg leave to call your attention to the subject of the parliamentary representation for counties. From a careful inquiry into the state of parties in several counties, and from the experience we have had in the last registration for South Lancashire, I am satisfied that a wide field for successful exertion is open to the Free-Traders in all the populous counties of England and Wales. Hitherto the inhabitants of the boroughs and towns have taken little or no share in the parliamentary elections for counties, which have been left, almost exclusively, in the hands of a few landed proprietors, under the belief that it was useless to contend against the power conferred upon them by the 350 tenant-at-will clause of the Reform Act. There is another clause in the same act, conferring the county franchise upon every person possessing a freehold property of the yearly value of 40s., which has been almost overlooked, and which offers to the inhabitants of the towns, in all the populous districts, an easy means of securing the county representation from the grasp of the monopolist landowners.

"I trust you will be willing to co-operate in the effort to increase the county constituency in your neighbourhood, by qualifying yourself (if not already upon the register), and taking steps to induce your friends to qualify. If practicable, I hope you will assist in forming a committee for canvassing the Free-Traders of your polling district; bearing in mind, that to be entitled to be placed upon the next year's register, it is necessary to have possession of the qualification previous to the 31st of January.

"I would also suggest that there may be many persons friendly to Free Trade in your neighbourhood, already qualified to vote, who are not upon the register. A diligent inquiry should be instituted to discover all such parties, and to induce them to send in their claim to be registered next year. From the shortness of the time that intervenes between this and the 31st of January, it will be perceived that promptitude is of especial importance; and

"I remain, dear Sir, respectfully,
Your most obedient servant,
GEORGE WILSON, Chairman.

"By order of the Council."

FREE-TRADE MAJORITY .. 1751

THE GAME LAWS.—A petition to be presented to Parliament in the course of signature, at Nottingham, praying for a repeal of the game laws. It sets forth the serious injury done to the agriculturist, by destruction of his produce with "surplus" game, the very heavy cost to the public, and the serious loss to society. *Manchester Gazette.*

FREE-TRADERS THE TRUE FRIENDS OF THE FARMER AND FARM LABOURER.

(From the Sheffield Iris.)

Among the many good things which the Anti-Corn-Law League have well done, there is not one more valuable, both to their own cause and to the great social interests involved in that cause, than the fixing of public attention on the condition of farmers and farm-labourers as affected by the landlord monopoly. Five years ago Free Trade was a manufacturer's question; it is now a farmer's and labourer's question. That the Corn Laws delude the farmer to his ruin—tempting him by promises of high prices which are never kept, to make bad bargains to pay impossible rents;—that they are the root of the wretched tenant-at-will system, and of all the wastefulness, slothfulness, and degrading political slavery connected with it;—that they check agricultural improvement by superseding the necessity for it, and thus actually narrow instead of widening the field for the employment of farming capital: these are truths which at League meetings in Covent-garden Theatre, in manufacturing districts, at out-door assemblies among agriculturists, and in a monopolist House of Commons, have been brought before the public in general, and the landlords and farmers in particular, with a force of reasoning, a clearness of illustration, and an evident sincerity and earnestness which mark out Richard Cobden and his fellow-workers as the true "farmers' friends." That the friendship is as yet generally appreciated and reciprocated, would be too much to expect; but the respectful and patient attention with which these strange truths have been very frequently received at meetings held in the heart of the agricultural districts, and the responses they have met with from many of the most intelligent of the farmer class, afford sufficient indications that the bad law's last bulwark is fast crumbling away.

The Free-Trade agitation has also worked well for the peasant class. Thanks to the League again, the light of public attention and inquiry has at last been admitted to those paradises of rural felicity and innocence, as they had used to be considered—those miserable dens of equality and starvation, as they are now known to be—the homes of the English farm-labourers. The almost incredibly wretched condition of the ill-fed, ill-clad, ill-housed, but withal "protected" peasantry of England is now notorious to the whole civilized world, beyond any possibility of concealment or denial; and the notoriety of the evil is the first step towards its cure. The mission of "Reuben" and other League emissaries, to visit and report on the agricultural districts has done infinite good—revealing to public gaze a class of facts of which the public had previously no conception, and setting the best intellect and philanthropy of the community at work to devise means of amelioration.

The same with the subject of leases and the game laws. When the farmers of England get leases that will place them in a position of pecuniary and political independence of their landlords, and when they are relieved of the insulting nuisance of having to feed out of their crops swarms of greedy and mischievous vermin for their landlord's amusement, they will have to thank the Anti-Corn-Law League for it.

The farmers and peasants of England owe much to the mere agitation of the Free-Trade question. From its eventual and, as we think, not remote success, they will gain much more. The repeal of the Corn Laws will, directly or indirectly, be—to the farmer, sixty of tenure, political emancipation, self-respect, and self-reliance, "protection" to the capital which he invests in agricultural improvements, and the highest attainable degree of that certainty in his various operations which sliding scales falsely promise; and the repeal of the Corn Law will be—to the peasant, an extended demand and increased price for his labour, both in agriculture and out of it, higher wages and cheaper food, together with all the domestic comfort, social consideration, and moral improvement, summed up in the idea of 'A FAIR DAY'S WAGES FOR A FAIR DAY'S WORK.'

A DIALOGUE BETWEEN A FRENCHMAN AND A CHINAMAN.

Frenchman.—Pray, Mr. Chinaman, why do you permit John Bull to send his goods to you at the low ad valorem duty of five per cent., when he saddles your tax with 100 per cent.?

Chinaman.—Because we think it our interest.

French.—There is no reciprocity in this.

China.—It answers our purpose, and if John Bull is a fool it is no reason why Chinamen should be so too.

French.—These strange notions of yours puzzle me.

China.—There is no puzzle in it; it is quite clear, if we saddle John Bull's goods with 100 per cent. duty, they would cost us twice as much as they now do: would not that be punishing ourselves?

French.—I must admit this.

China.—We have the advantage of not only buying cheaper, but are benefited in other respects too; for if at the low duty we are able to buy twice as much of his ware as we would at the high duty, we must take twice as much of our tea to pay for them; and twice the demand raises their value, which is so much the better for us, as it takes less of our property to satisfy his claims.

French.—But, then, there is protection to your manufactures; you lose sight of that.

China.—No; we consider it very bad policy to force the labour of the people to make articles that we can buy cheaper elsewhere, and which would be better directed to make articles that we can furnish cheapest to us.

French.—But suppose other nations will not exchange with you?

China.—It punishes all parties, as it compels us to make articles at home at a higher cost than our neighbours could furnish them at, but this is not our fault.

French.—It just occurs to me that John Bull may demand your gold for his goods, in place of your tea.

China.—Well, suppose he does, we get double the quantity of goods under the low duties that we would under the high.

French.—But parting with your gold will ruin you.

China.—I want to part with it for something that is useful to me, for I can neither eat it, drink it, nor will it clothe me.

French.—John Bull is very knowing, and is easily afraid of parting with his gold; he says it distresses him.

China.—Pray, ask John Bull how he gets possession of his gold, as he produces more at home than he can use.

REVIEW.

Poems. By Elizabeth Barrett Barrett. London, Moxon.

Among the singularly wild fictions of the Eastern Rabbis there is one of a prophetess, to whom an angel proffered the choice between health with the loss of inspired powers; or a continuance of physical weakness and suffering, compensated by a double outpouring of the divine spirit into her soul. The prophetess unhesitatingly rejected the offer of physical restoration: mind triumphed over matter; and her communications with Heaven more than atoned for her exclusion from the enjoyments of earth. It could not be said of her, *Tristia vite solatur amanti*—"she relieves sorrow by song;" for sufferings were to her no sorrow, but rather the appointed means by which the fleshly fetters that bind the soul to earth were relaxed; and she was thus enabled to hold high converse with disembodied and beatified spirits. As we read Miss Barrett's poems we feel as if this singular legend had been realized in our own days, and as if the gifted and favoured prophetess wrote only to make her fellow-creatures partakers of her privileges. The talisman of FAITH by which Thakaba, in "the wild and wondrous song" of one who has received but scant justice from his contemporaries, triumphed over the dread sorcerers of the Domidaniel, has sustained Miss Barrett in the conflict with a disproportionate share of the ills that flesh is heir to; and its soothing influence has enlarged her sympathies, extended the range of her affections, and given to her philanthropy the fervour of devotion: in everything she has written "Glory to God in the Highest!" is united to "Pence on earth, good will towards men;" we receive her volumes not as works to criticise, but as lessons of holy wisdom which it is our duty not less than our delight to "read, mark, learn, and inwardly digest." We sometimes feel tempted to complain of strange words, uncouth rhymes, and archaic combinations of epithet; but there rises a suspicion that the imperfection is not in the authoress but in ourselves, as Pindar said of his odes, "They are speaking to the intelligent; they need interpreters to the multitude." We do not mean to say that Miss Barrett's genius has any resemblance to that of Pindar; she is far more nearly allied to *Aeschylus* in mental energy and daring imagination. The author of the "Prometheus" would have recognised the work of a kindred spirit in the "Drama of Exile," and have hailed as worthy of the highest prize of ancient tragedy the choral ode of the spirits of Eden bidding farewell to Adam and Eve:—

"Harken, oh harken! let your souls, behind you,
Lean, gently moved!
Our voices feel along the Dread to find you,
O lost, beloved!
Through the thick-shielded and strong-marched angels,
They press and pierce:
Our requiems follow fast on our evangels,—
Voice throbs in verse!
We are but orphaned Spirits left in Eden,
A time ago—
God gave us golden cups; and we were bidden
To feed you so!
But now our right hand hath no cup remaining,
No work to do;
The mystic hydromel is split, and staining
The whole earth through;
And all those stains lie clearly round for showing
(Not interlarded!)
That brighter colours were the world's foregoing,
Than shall be used.
Harken, oh harken! ye shall harken surely,
For years and years,
The noise beside you, dripping coldly, purely,
Of spirits' tears!
The yearning to a beautiful, denied you,
Shall strain your powers:—
Ideal sweetnesses shall over-glide you,
Resumed from ours!
In all your music, our pathetic minor
Your ears shall cross;
And all fair sights shall madd you of diviner,
With sense of loss!
We shall be near, in all your poet-languors
And wild extremes;
What time ye vex the desert with vain angers,
Or light with dreams!
And when upon you, weary after roaming,
Death's seal is put,
By the foregone ye shall discern the coming,
Through eyelids shut."

We prefer, however, to exhibit Miss Barrett as a philanthropist: there is an earnestness in her pleadings for the injured and the afflicted which goes directly to the heart because it comes directly from the heart. They are not to be envied who can read unmoved the following stanzas from "The Cry of the Children":—

"Do you question the young children in the sorrow,
Why their tears are falling so?
The old man may weep for his to-morrow
Which is lost in Long Ago—
The old tree is leafless in the forest—
The old year is ending in the frost—
The old wound, if stricken, is the sorest—
The old hope is hardest to be lost:
But the young, young children, O my brothers,
Do you ask them why they stand
Weeping sore before the bosoms of their mothers,
In our happy Fatherland?"

"They look up with their pale and sunken faces,
And their looks are sad to see,
For the man's grief abhorrent, draws and presses
Down the cheeks of infancy—
'Your old earth,' they say, 'is very dreary,'
'Our young feet,' they say, 'are very weak!'
Few paces have we taken, yet are weary—
Our grave-rest is very far to seek!
Ask the old why they weep, and not the children,
For the outside earth is cold,—
And we young ones stand without, in our bewildering,
And the graves are for the old!"

"'True,' say the young children, 'it may happen
That we die before our time!
Little Alice died last year—the grave is shapen
Like a snowball, in the rime.
We look into the pit prepared to take her—
Was no room for any work in the close day:
From the sleep wherein she lieth none will wake her,
Crying, 'Get up, little Alice! it is day.'
If you listen by that grave, in sun and shower,
With your ear down, little Alice never cries!—
Could we see her face, be sure we should not know her,
For the smile has time for growing in her eyes,—
And merry go her moments, lulled and stilled in
The shroud, by the kirk-obisue!
Is it good when it happens,' say the children,
'That we die before our time!'"

In part of this striking lyric Miss Barrett joins in the mistaken clamour which has been raised against the factory system; she never has visited one of those "hives of industry," and has taken their description on trust. The errors into which she has fallen are almost ludicrous, for no part of what she depicts exists in spinning-mills. It would be easy to show that the children employed in factories are better off than the children of the same rank in any other department of industry, whether manufacturing or agricultural: they are better fed, better clothed, better educated, more lightly worked, and less dependent on the caprice of masters and employers. Juvenile labour may be bad, but it is nevertheless much better than juvenile vagrancy or juvenile depravity. We cannot pass heavy censure upon Miss Barrett for having been misled by the factory cry, for never since the days of the Popish plot were such pains taken to raise a prejudice of popular delusion as were expended in getting up a storm against the manufacturers of the north of England. The benevolence of Miss Barrett is not, however, generally tinged by that cant of sentimentalism which is one of the greatest evils of the present day. With noble courage she denounces the monster plagues of the human race—War and Monopoly—in strains that bear the sure marks of predestination to immortality. The poem to which we allude is entitled the "Cry of the Human;" we quote the opening stanzas—

"There is no God," the foolish saith,—
But none, "There is no sorrow;"
And nature oft, the cry of faith,
In bitter need will borrow:
Eyes, which the preacher could not school,
By wayside graves are raised;
And lips say, "God be pitiful,"
Who ne'er said, "God be praised,"
Be pitiful, O God!

"The tempest stretches from the steep
The shadow of its coming—
The beata grow tame, and near the steep,
As help were in the human—
Yet, while the cloud-wheels roll and grind,
We spirits tremble under!—
The hills have echoes; but we find
No answer for the thunder.
Be pitiful, O God!

"The battle hurtles on the plains—
Earth feels now scythes upon her—
We say our brothers for the wains,
And call the harvest, honour—
Draw face to face, front line to line,
One image all inherit,—
Then kill, outse on, by that same sign,
Clay, clay,—and spirit, spirit.
Be pitiful, O God!

"The plague runs festering through the towns,—
And never a bell is tolling;
And corpses, jostled 'neath the moon,
Nod to the dead-cart's rolling!
The young child calleth for the cup—
The strong man brings it weeping;
The mother from her babe looks up,
And shrieks away its sleeping.
Be pitiful, O God!

"The plague of gold strikes far and near,—
And deep and strong it enters:
This purple chilmar which we wear,
Makes madder than the centaur's.
Our thoughts grow blank, our words grow strange:
We cheer the pale gold diggers—
Each soul is worth so much on 'Change,
And marked, like sheep, with figures.
Be pitiful, O God!

"The curse of gold upon the land,
The lack of bread enforces—
The rail-cars short from strand to strand,
Like more of Death's white horses!
The rich preach 'right' and future days,
And hear no angel scolding;
The poor die mute—with staring gaze
On corn-ships in the offing.
Be pitiful, O God."

There is a music of divine melancholy in the following little piece, entitled "Sleeping and Watching," relieved throughout by the hope that is called

from other countries in exchange for manufactures, produced by the capital and industry of his people, and does that distress him? and he is constantly bringing it home, and sending it out with advantage to himself.

French.—That is true, but will not the high duties imposed on your teas by John Bull very much abridge their consumption, and the comforts of his people?

China.—No doubt it will, and injure his revenue too; but we cannot prevent that, nor can we make fools wise men.

French.—Raise your duties, and coerce John Bull to lower his.

China.—John Bull is too obstinate to do that, and we will not punish ourselves in order that we may vex him.

French.—There is still a feeling in my mind that this is a one-sided business.

China.—It is a one-sided business, but the balance of gain is in our favour.

French.—Then, as you say the balance is in your favour, how does John Bull pay you?

China.—The balance of account is a very different thing from the balance of advantage. In money matters, nations never do a one-sided business. Fiscal regulations may stop business altogether, but the exchange of equivalents must be equal, directly or indirectly; they do not make each other a present of their property.

French.—Then, if I understand you, you think that nations deal with each other as individuals do, in exchanging their wares; each gets from the other what is more valuable than that which he parts with, and by that means they both get rich?

China.—Certainly; and the more extensive their trade, the richer they will get.

French.—Then you consider it a fallacy that a balance of trade can exist between nations trading with each other?

China.—There may be a debt due from one to the other or a time, as between merchants, but no permanent balance can exist, unless in such a case as John Bull lending Jonathan money, which he refuses to pay; this is the only one-sided business that can exist.

French.—I see you Chinamen are shrewd fellows. Do you let your emperor lay a duty on rice at the suggestion of the producers?

China.—Our celestial emperor knows better; he will not let the many starve for the benefit of the few; he gives a bounty on rice coming into the country to feed his loyal people.

French.—But John Bull has an eye to the cash; he wants revenue.

China.—Experience, by this time, ought to have taught him better; large consumption of imports, at low duties, produces the greatest revenue, as well as increases the comforts of the people.

French.—You have opened my eyes; it is but too clear that we Europeans deserve the name you give us, barbarian merchants. We must profit by your wisdom, and become wise.

TRADE IN MANCHESTER.—There are now no fewer than fifteen warehouses in course of erection in Manchester, and a dozen of them are what may be called the first class, and which, on an average, are deemed worth £300 each per annum. This is an extraordinary contrast to the state of things in 1841-2, when not a single building of the like description was in course of erection.

—Manchester Courier.

DESTRUCTION CAUSED BY GAME.—A tenant-farmer, writing to the *Salisbury Journal* on the evils of game-preserving, says:—"I have known upwards of 800 grains of sound wheat, besides a mass partly digested, taken from the stomach of one pheasant shot in a field newly sown. Now, let this be considered as the ordinary supply of food for one day, and suppose the wheat to lie in the ground thirty days, and it will give 24,000 grains. Let the probable produce of this amount in average land be considered, and it will give some idea of the devastation committed by one pheasant in one wheat-field." Further on he says:—"Partridges are far less injurious; but they pick up more corn than is generally supposed. As to hares, the injury they do the farmer is almost incalculable. I think that a farmer may keep 100 sheep with less expense than 100 hares. The sheep converts its food into a valuable manure, and thus partly repays us for its food; the hare does not. The sheep is confined to a particular spot, and consumes only the food purposely raised for it; but the hare ranges through every part, and especially the wheat, keeping it down as long as possible, and when nature forces it up, continuing to bite it off at the first knot of the straw, until harvest puts the remainder of the crop beyond its reach. It wanders among the swedes and turnips, gnawing as it goes, and thus causing them to rot under the influence of frost. Clover, barley, and, in fact, every part of the farmer's crop suffers from its ravages." Another farmer, writing in the same journal on the same subject, says:—"It is an acknowledged fact, that five hares or rabbits will consume as much as one sheep."

NOVEL MATERIAL FOR PAPER MAKING.—A young man living in Halifax has made a successful experiment of converting spruce wood into paper of the finest texture. He first reduces the wood to a pulp, and then operates upon it in the same way as upon rags; viz., by pressing and so forth. He is of opinion that, if proper means were taken, as good if not better paper might be made from wood than from the materials at present used. This, if it can be reduced to successful practice, is truly a valuable discovery. We have wood material enough in New Brunswick to supply us with paper for all time to come; and, what is of greater importance still, we shall have a most valuable resource in our spruce trees, and shall be able to supply almost every market on the globe with the means of producing the cheapest paper.—*St. John, New Brunswick, Weekly News*, Nov. 2, 1844.—[At a time like the present, when a growing conviction pervades almost every class of the necessity of education as a corrective of the evils of society, whatever tends to so desirable an end merits attention; and nothing can conduce more powerfully to this end than any discovery which promises to reduce the cost of paper, which may be regarded as the raw material of education. Hence the hint conveyed in the foregoing paragraph will, we trust, be acted upon by some of our scientific paper-manufacturers. Without having recourse to the forests of America, it is probable that timber applicable to the purpose may be found on our own shores; and of these the young branches of the elm (*ulmus campestris*) will not improbably be found to answer best.]

futurity, which wins its way to the soul, and finds its place in memory for ever—

"Sleep on, baby, on the floor,
Tired of all the playing,—
Sleep with smile the sweeter for
That, you dropped away in I
On your curls' full roundness, stand
Golden lights serenely—
One cheek, pushed out by the hand,
Folds the dimple inly;
Little head and little foot
Heavy laid for pleasure,
Underneath the lids half-shut,
Slants the shining azure;—
Open-souled in noonday sun,
So, you lie and slumber!
Nothing evil, having done,
Nothing can encumber.
I, who cannot sleep as well,
Shall I sigh to view you?
Or sigh further to foretell
All that may undo you?
Nay, keep smiling, little child,
Ere the sorrow neareth,—
I will smile too! Patience mild
Pleasure's token weareth.
Nay, keep sleeping, before loss;
I shall sleep though losing!
As by cradle, so by cross,
Sure is the reposing.

"And God knows, who sees us twain,
Child at childish leisure,
I am near as tired of pain
As you seem of pleasure;—
Very soon too, by His grace
Gently wrapt around me,
Shall I show as calm a face,
Shall I sleep as soundly!
Differing in this, that you
Clasp your playthings sleeping,
While my hand shall drop the fow
Given to my keeping;
Differing in this, that I
Sleeping, shall be colder,
And in waking presently,
Brighter to behold me!
Differing in this beside
(Sleepers, have you heard me?
Do you move, and open wide
Eyes of wonder toward me?)—
That while I, you, draw withal
From your slumber, solely,—
Me, from mine, an angel shall,
With reveille holy!"

We had marked many more passages for quotation, but our limited space sets bounds to our wishes. Enough has been extracted to commend the volumes to all lovers of genuine poetry, to all who sympathize with fervent devotion, and to all who rejoice to find a noble spirit advocating the claims of suffering humanity.

Sherwood and Bowyer's *Pocket English Classics*.
Sherwood and Bowyer's *Dramatic Library*.

Among the many creditable efforts which English publishers have made and are making to diffuse cheap literature, there is none deserving of more honourable mention than the series of "Pocket English Classics." It is intended to embrace the chief works of our best English writers, and to issue each work in a neat pocket volume, at the very low price of sixpence each. So far as the series has gone, the proprietors have more than redeemed their promise to the public; the selection of the works included in the series evinces great taste and judgment; a careful superintendence of the press has secured a correct text, and the typographical execution renders the volumes fit to become the travelling companions of the rich, as well as the permanent library of the less wealthy. Amusement and instruction are blended in the series; it includes the tales of Johnson, Goldsmith, and Mackenzie, which, by universal consent, have taken their permanent place in classic fiction; and it supplies for graver study Locke's invaluable "Essay on the Conduct of the Understanding." Among the poetical volumes we find the entire works of Goldsmith, Gray, Falconer, &c., with select pieces from Scott, Burns, Blair, and Pope. The success of such a series is certain, and all who feel an interest in the intellectual and moral elevation of their countrymen must wish it good speed.

The dramatic series, so far as it has gone, deserves similar praise; we would, however, suggest the expediency of so classifying the plays as to facilitate the binding of them in volumes at definite intervals.

"A Leaguer" has sent us a long letter on the subject of our review of "Dymond"—a work which we should not have noticed but for the urgency of some friends. The real grounds of the writer's objections are, that instead of taking morals in the strict philosophic sense given by Aristotle in the "Nicomachean Ethics," he gives to the term a wide indeterminate meaning, which would equally include duties and sanctions. If the writer will take the trouble of reading Paley, or any other great writer on the evidences of Christianity, he will find that he has stated as an objection what is really one of the strongest arguments for the truth of the gospel. No useful end would be gained by opening a controversy on the subject; but there is one point which we wish our correspondent to learn and appreciate, and that is, that "society is a divine institution;" man could no more civilize himself than he could create himself. In all the social sciences evils have arisen from confounding the conventional with the philosophic; we believe that Dymond made this mistake, and our correspondent has fallen into the same error.

AGRICULTURE.

MONOPOLY SPEAKING OUT.

That consistent organ of monopoly, the *Morning Post*, has always had the merit of candour in its advocacy of the Corn Laws. It has generally spoken out. There has been but little, if any, paltering with common sense. It avowedly seeks to perpetuate a great national wrong for the benefit of a class. Its purpose has ever been that of undisguised plunder; and the Free-Traders have reason to be thankful to the conductors of that journal for its manly course. Had the *Morning Post* not been, monopoly might have hidden its hideous and now cowed features behind the plausibilities of a Gladstone or the sophistries of a Peel. But, aided by the sages of the *Post*, it has stood forth unblushingly to display all its naked deformity. They have made it plain that the Corn Laws are wanted to create scarcity, thereby to force up rents, and render more easy the payment of the interest on the mortgages and marriage-settlements of our landowning legislators. For such service the *Post* deserves well of the public.

It is true that the editors have occasionally, in the mirthful spirit of a Nero or a Caligula, written articles to show in the most approved mode of logical formula, that the British community when put upon short commons, the intelligent capitalists whose profits have been turned into losses, and the industrious labourers whose wages have been reduced to starvation point by the Corn Laws, ought to entertain, and do in fact entertain, the greatest respect and affection for the monopolist lawgivers, who have so diligently striven (for their own personal gain) to bestow the pleasures of scarcity on the British community of capitalists and labourers. In a word, by reducing the Pro-Corn-Law arguments to an absurdity, the writers in the *Morning Post* deserve an ovation at the hands of the Free-Trade public.

The measure of obligation, however, which the public were to receive at the hands of the editors of the *Post* was not yet full. It has not been enough to prove the Corn Laws the result of undisguised class tyranny; or to show by a mockery of argument how much the class tyrants have wanted in their political power, since they could venture to use such arguments in favour of monopoly, as those which occasionally adorn the columns of the *Morning Post*. There was yet one more benefit to be conferred on the Free-Traders.

It has long been admitted that the effects of the Corn Laws have been to produce slovenly farming, and comparatively small production from our own soil; and that circumstance has caused so much dissatisfaction with the Corn Laws, that the more wary monopolist landowners have for several years past been preaching improvement to their tenants, and then saying to the public, "Only let us alone for a few years, and we will produce corn at as low a price as it can be produced in any part of the world." Now, if the public could have forgotten that during thirty years of "protection," more stringent in its character than that now existing, these nice-talking squires have done just the contrary of their plausible promises, this might have been listened to; but the *Post*, with true aristocratic disdain of subterfuge, exclaims, "Away with the idea of low prices, we may as well have low prices from foreign importation as from over-production; we want high prices, remunerating prices, famine prices; don't tell us about your scientific farming: high prices and short crops can alone save our patrons from the ignoble expedient of selling their estates to pay their debts."

Such, under various circumlocutory phrases, is the way in which the genuine monopolists of the *Post* disavow all connexion with the half-and-half, "scientific farming" monopolists of the Cabinet. Moreover, it has been demonstrated that nothing but such leases as will induce men of capital and intelligence to embark in farming can raise the occupation from its present depression; and that corn-rents are indispensable to guard the tenant-farmers and their labourers from being robbed by the landlords, through the fluctuation of prices which occur under a restrictive system. And here again the *Post*, with a daring which looks like desperation, rushes to the breach, and declares that leases and corn-rents will be destructive to the political and pecuniary interests of the landlords. The passage we allude to, which appeared in last Thursday's paper, is so remarkable that we must, in justice to monopoly and its advocates, give it in their own words.

After stating that the meeting of agricultural labourers at Hillmorton, in Wiltshire—where they made speeches and passed unanimous resolutions in favour of Free Trade—was "a sign of the times which it may be well if the landowners [that is, the monopolist landowners] do not disregard," proceeded thus:—

"This, we repeat, is one of the many ominous signs of the times. Let landowners [monopolist] endeavour to read these aright. Let them endeavour to calculate the precise amount of benefit which they have derived from supporting Sir Robert Peel in his schemes of Free-Trade policy. Farmers are falling into insolvency, while agri-

cultural labourers are rising up as incendiaries and agitators in favour of Free Trade. Farmers demand long leases, corn-rents, and large abatements from the amounts of their existing engagements. WITH CORN-RENTS LANDOWNERS WILL BE MADE TO FEEL THE EFFECTS OF LOW PRICES—WITH LONG LEASES WILL COME THE SUBVERSION OF THEIR POLITICAL POWER."

Now, here we have the open admission of the fact we and other advocates of Free Trade have so often stated, that the landowners have hitherto, by means of the Corn Laws, contrived to throw all the "effects" of low prices upon their tenants, while they have themselves pocketed all the "effects" of high prices; and that corn-rents WILL—for the first time—"make the owners of land feel the effects of low prices." Farmers, read and re-read that sentence of the monopolist landowners' organ, and then ask yourselves, whether you have or have not, when shouting at protection societies, been made the dupes of the most accomplished fraud ever perpetrated by class upon class. And, lastly, is there an independently minded tenant-farmer in the three kingdoms whose cheek will not tingle with indignation when he is openly told that leases must not be granted, because "WITH LONG LEASES WILL COME THE SUBVERSION OF THE LANDLORDS' POLITICAL POWER?" Every tenant-farmer who henceforward marches under the banner of monopoly, will do so with the sentiments of a slave, and the badge of serfdom on his person.

FREE TRADE IN THE RURAL DISTRICTS.

To the attentive observer there are no districts which offer such decisive evidence of the evils of the Corn Laws as the purely agricultural districts; yet, from the influence of landowners and the uninquiring habits of the mass of farmers, such districts have been the great seats of monopolist delusion. True, there are many persons in the agricultural counties who doubt the policy of our restrictive system, and some fully understand its multitudinous evils; but it has hitherto required some moral courage, and more of mental energy than falls to the lot of most people, to stem the current of rural ignorance and squirearchical sinister influence. Yet men are not wanting who do this; and, when at the same time they are practical farmers, the good they do in their vicinities is incalculable. Of this the meeting at Welwyn, in Hertfordshire, to form a Free-Trade association in connexion with the League, which we noticed last week, offers an instance. Perhaps few counties offer a more unpromising field for the dissemination of sound opinion in relation to Free Trade, and its real advantage to agriculture, than Hertfordshire; yet even there some of the most decisive evidences of the advance of Free-Trade opinion in the rural districts have occurred. And this is very much owing to the intelligent activity and eloquent advocacy of Mr. C. Lattimore.

Hisself a tenant-farmer, whose system of cultivation is allowed on all hands to be excellent; and possessing the advantage of education and power of expressing his sentiments, he has not been content with the mere exposition of farmers' grievances, such as game, want of fixed tenure, and so forth,—though nobody has urged those secondary topics with more effect,—he has publicly and actively taken up the advocacy of Free Trade upon its highest grounds. At the Welwyn meeting Mr. Lattimore spoke at great length, and in a manner which entitles him to take high rank as a public speaker. Indeed, we do hope the time will come when farmers, and the industrious classes in rural districts, will select such men as Mr. Lattimore for their representatives in Parliament in preference to the feeble nonentities who now sit for most of our counties. In fact, this sort of feeling is showing its existence amongst farmers, as is proved by the remark of a farmer in Somersetshire, who declared they did not want men of family or large fortune, as such, to represent them in Parliament, but men who would actively and intelligently advocate the real interests of the agricultural classes. It is impossible, in our present limits, to attempt to do justice to this speech, which contained at once a history of the Corn Laws and a practical demonstration of their evil operation; but we will give the following passage from that part of it which applies to the effect of an immediate Free Trade upon farmers:—

"Suppose you abolish monopoly, what will be the result? For, when you look at a cause, you should always take into estimation the consequences of it. Some say you will ruin all the present race of farmers; others assert that you will create such a panic in the country that you will paralyze all its trade, derange its circulation, and throw thousands out of employment and bread. I say, if you are upon a wrong track, get right as soon as you can. I have had the experience of these corn and other monopolies for the last thirty years; let that be the best answer as to the necessity of your getting right by their abolition. Some persons say that it will produce most disastrous effects; that has always been the prophecy upon every alteration of the law in this country. It was so when the modification of the duties on silk was proposed in 1824, and on all other similar occasions. I hypothesized, a short time ago, to have an interview with a member of a celebrated silk firm in London, and he informed me that that trade is increasing considerably. 'Then,' I said, 'the alteration of the duties did not ruin you?' 'No,' said he, 'we should have been ruined without it; we could not have competed with the continental manufacturers of silk, we should have been driven out of the market.' 'The object,' he remarked, 'of Government should be to get as large a supply of the raw material into this country as they possibly can, and then there is an opening for the industry of the manufacturers to work it up; take away the monopoly laws, and we will find a mar-

ket for it." Take away the Corn Law and the monopolies of the country—leave us Free Trade, and let our industry be unfettered—and we can compete with all the nations of the world. (Loud and long-continued cheers.) Another alteration in duties has been that which was recently taken off wool. *There are no farmers who are much alarmed off wool.* They begin to see that they have been badly bamboozled about it; for their country members told them in 1843 they would go by steam—ah! on the wings of the wind—to vote against the alteration; but, in the following year, they supported it. There never has been a measure of justice passed, whether relating to property or the conscience of man, that has not received the most bitter and vindictive opposition from parties interested in preventing it. *The fears respecting those measures to which I before alluded, have fallen to the ground, and there is no earthly reason whatever—because the abolition of the Corn Law is on the same basis and footing as the others—why that should not prove equally beneficial to the country at large.* Therefore, I say, your experience in these matters should certainly help to dissipate your fears on that point. I do not believe there is the slightest danger to be apprehended from a repeal of the Corn Law to the property of any class of men. Indeed, I believe that the abolition of these laws would even benefit the monopolists in spite of themselves. It would improve trade and commerce, and promote the social happiness of the people at large, whereby the property of the landowner would be increased in value. I do not ask you to take my word upon this subject: think and examine for yourselves. I may be in error, but I listen to every argument of our opponents, and find they have given abuse for arguments. When I look to the results of the past, and hear their statements with respect to the future, I begin to suspect their patriotism. One of the pretences for the passing of the Corn Law was, that we might always have a supply of corn in the country. Does any one really believe that such was their object? They tell us that monopoly is necessary for the interest of the land and the support of our colonies; but get rid of these unjust duties, and it will soon be found that competition will invigorate the energies of the growers of corn and sugar, and they will produce much more of those articles than they have hitherto done. If they want to increase the production, let the land be freed from the scourge of the vermin which are now destroying the farmer's produce. (Cheers.) Looking at the present aspect of things—knowing, as I do, the straitened circumstances of the middle classes, the increase of their fixed burdens, the depreciated price of their produce, and that rents must be paid from the capital and property on farms, instead of from profits (loud cries of "Hear")—I have listened with great attention to the arguments of those who have styled themselves "the farmers' friends" at the various agricultural meetings, and have endeavoured to discover some prospect of identity and union of feeling with the tenants on their part; but I have looked in vain. They say to the farmer, "These are serious times for the poor men; you farmers must employ them." They never told you where the means were to come from to pay them. (Hear.) Nothing but hollow sympathy has been expressed for the farmer and the poor man. From these facts, I regret to state, I have been compelled to come to the conclusion that the increase of the number and misery of the pauper population of this country has been much aggravated by these laws; and that, unless an alteration in the system takes place, the middle classes of this country will be "squeezed out" of their position. (Hear, hear.) There is something cruel, hard-hearted, and unnatural in the present state of things, which deprives the honest, skilful, and industrious of a decent maintenance, in a country said to be the richest in the world, with ample materials for prosperity scattered around us by the bounty of nature, with every facility for exporting and exchanging our produce with all the nations of the world, many of whom are anxious to take our goods, but are prevented by our restrictive system."

PREMONITORY SYMPTOMS.

The wise men of Wiltshire, whose industrious attempts to rake out of a pond the reflection of the harvest moon have earned for the inhabitants of that fertile but landlord-ridden county the sobriquet of "moon-rakers," were very Solomons in comparison with the monopolist landlord-legislators, who imagined they could keep up prices by acts of Parliament, and reverse the laws of political economy by means of "protection societies." And there exists signs not to be mistaken, that the farmers at all events, if not the landlords themselves, are discovering the delusive character of their occasional monopoly, their intermittent artificial-scarcity. The speeches which have recently been made at agricultural and "protection" societies, more especially in the south-western counties, prove that the squires are almost giving up monopoly as lost, and trying to console themselves and their tenants with the fact that, after all, natural and moderate prices of agricultural produce will neither throw land out of cultivation, nor annihilate rent. Having assured themselves upon this latter point, we may fairly calculate on finding the squires become less and less adverse to Free Trade. Their efforts are now mainly directed to plans for throwing the difficulties of a state of transition—if such difficulties there are to be—upon their tenants, and to save themselves from burdensome poor-rates by means of potato-patch out-door relief. The tactics of these gentry will be best understood by giving a selection from some of their latest sayings; and it is remarkable how much more of reality and practical sense appear in such speeches than were displayed during the flash-in-the-pan Pro-Corn-Law agitation of this time twelve months, when the speech of each monopolist squire and protectionist farmer seemed to be a stereotyped edition of a set of not very plausible fallacies.

Nor are the genuine monopolists now the only speakers. Men of independence, and of various shades of opinion, are speaking of facts and truths which the exertions of the League and the circumstances of the times have forced upon their attention. One of the latest meetings has been that of the *Sturminster Newton (Dorsetshire) Agricultural Association*; and we have now lying before us a very

full report of the proceedings on that occasion from the *Sherborne Journal*. The Hon. and Rev. S. G. Osborne, so well known for his intrepid exposition of the ills endured by the Dorsetshire peasantry, justified the utility of such societies, and their rewards to labourers, on the ground that such rewards were not intended as "a return" for their services, but as "encouragements," like "Waterloo medals" to soldiers. This may be termed the imaginative—we had almost said imaginary—uses of such rewards. He then said:—

"These were times when all of those connected with the land were placed as it were on their trial before their country, and he would venture to say, that they, in that country, were prepared not to flinch from that trial. * * * He hoped they would be found, masters kind to their men, landlords kind to their tenants, and tenants mindful of their duty to those above them as well as below them—thus gaining the esteem of that proud class which had been called 'the dependence of the country'—called so truly: for without their toil what would avail the landlords' possession of property, or the tenants' tenure under them. (Cheers.) He believed that there was a fast-growing spirit amongst proprietors of land in that country which was gradually developing itself, not only to the better calling forth of the resources of the land, but he trusted, also, to the improvement of those tenures which binds him who cultivated the land to him who owned it. (Loud cheering.)"

We believe this is true; and the community may thank the League and the growing certainty of Free Trade for that consummation. Lord Grosvenor, the chairman, after speaking of an instance of large produce of wheat in a bit of labourer's garden ground, said:—

"He would direct their attention to a subject that had been brought forward on occasions of that sort, but which required to be treated with calmness and discretion—it was that of the tenure of tenants under their landlords. Now he would venture to ask those who had travelled if, when they saw a house in a dilapidated condition, the rain battering against the roof, and the moisture injuring and destroying the walls, they would not venture to say that the house was held on a lease for lives—a tenancy that nobody could doubt the ineligibility of, or doubt that it was the most ruinous system that could possibly be followed. But he would go on to another which he thought was much more deserving of consideration—a tenure on life. That in many places might be desirable, but it had this main evil, that it at once fixed the term of intercourse between the landlord and his tenant. The landlord obtained as high a rent as he could; and the latter made the most of the time, and that time only, which he held. It might be desirable in some cases, as in a case at Cheshire, where the tenant was so well satisfied with the tenure on which he held his farm, that he left the farm to his son as if it had been personal property; but the evil of it was, that it put a stop to the intercourse between the parties, which he thought was much to be deplored. The third system of tenure was the annual one from year to year; now here the tenant at once says, 'I am ready to continue the tenure, perhaps from father to son, but you landlords must be aware that it is only a temporary holding, and what security is there if I lay out my capital?' He (Lord Grosvenor) determined it in this way, that he did not expect the tenant to make these outlays. He would especially refer to repairs of houses and tile-draining. He said it was necessary that the landlord should employ his capital in the gift to the tenant of this material. It would then be a question for the tenant how much he would lay out towards labour; and then both would find that the capital so employed by the richer person, and so practically used by the tenant, would produce satisfaction to both. He would even carry it to this extent—which was better than all the leases that were in existence—he would have an agreement, similar to the one he had in his pocket, drawn up, by which he would undertake that, if the tenant left his farm before he was remunerated for his outlay, that outlay should be returned. He believed that the capital expended would not be thrown away. He believed it would bind both parties together by links which they had not known before; and he could not in his own mind decide whether the landlord who thus placed, as it were, the fee-simple of the land in the hands of his tenant, or the tenant himself, was most benefited."

Now his lordship in the above passage admits the necessity of a secure tenure for the tenant, but seems to shrink from that which can alone give it, viz., a long lease. We have before adverted to the subject of these makeshift agreements, and shall have frequent occasion again to do so. We content ourselves here with protesting against the fallacy that any such "tenant-rights," as they are popularly called, can form substitutes for leases. He then protested against the allotment system being deemed a panacea for the ills of the country, and said that—

"If carried out to the extent that he had read of, to his mind, instead of being the salvation, it would be the ruin of the country. He believed that, carried to the extent that some would carry it to, they would place in this country a band of paupers, who would be raised just above the sphere of want, but who, with the slightest variation in the times, the slightest difficulties of circumstances, would bring on this country all the curses entailed upon—(Cheers prevented the close of the sentence being heard.)"

It is clear that the farmers, the men who really do know something of the actual wants and condition of the labourers, fully acceded to this just and true, though unsentimental, view of the "allotment system." The Rev. Mr. Huxtable, who was referred to by the chairman as possessing "stores of agricultural knowledge," said, in reference to some observations which had been made about increasing population and relief by emigration:—

"And could they not keep them (the agricultural labourers) at home? He thought improved modes of cultivation did solve the difficult problem. Where were these words spoken about our population? Why, in a country disgracefully undrained—where there were swampy fields and great disgusting ditches that the cattle fell into and broke their limbs. (Loud cheers and

laughter.) Couldn't they employ the labourer to put in drains? Every drain he put in he laid a perch apart, three feet deep, and he had forty men employed in one field. He had put down no less than twenty miles of drains, and the ground did not look like the same. Ground which his friend Mr. Aplin valued at 5s. an acre was producing at the rate of thirty tons to the acre, and the expense to him had been only £1 an acre. He did believe draining was the first principle of farming. Without it the crops were chilled, and the fruits never ripened; and thus it was that, whilst the farmer spent £2 or £3 an acre on manure, he was utterly unable to act, on account of the deadness and dampness of his ground. He did not know whether a quarter of the value of Blackmoor might not be improved in this way. But gentlemen who loved to ride across the country, and to see a wide expanse before them, did not like the downs broken up. Beauty was very nice and sentimental, but there was a cry for bread, and he said let them mount the hills. (Cheers.) There were thousands of acres that might be improved. He had cropped about 120 acres, which had been valued at 2s. 6d. an acre, and on this he had got not less than twenty tons an acre."

This, however, does not look like the "calling forth the resources of the land," which Mr. Osborne intimated was being effected by the Dorsetshire landowners. And the rev. gentleman then went on to describe, with much force and humour, the various agricultural improvements by which he had so increased production. His speech we have not space to introduce here, but we shall reprint it in our next, as a good specimen of wholesome truths humorously told.

The Rev. Mr. Yeatman made a rhetorical speech in favour of allotments, which he said had succeeded on his own property; and protested against emigration.

Next we light upon the meeting of the *Wincanton and Yeovil branch of the Somerset Protection Society*. There Sir Alexander Hood and Mr. Wm. Miles, M.P., monopolists of the first water, were the principal speakers: the thoughts of the latter are apparently turned towards preparations for Free Trade; while the former seems to belong to the class of animals the showmen designated "the untamable hyena," of which the human type is the untouchable monopolist. One sample of Sir Alexander's facts and reasoning will suffice. He said:—

"Hitherto agricultural protection has so kept in advance of population as to enable the agricultural community to become the mainstay of trade, as every shopkeeper daily experiences; any measures, therefore, that tend to clog the wheels of agriculture, retard labour and paralyse trade."

What a funny thing to say, considering the present state of the agricultural community! And this gentleman concluded a rambling discourse with an ardent thanksgiving to "the Maker of the universe," for, what Englishmen have been apt to deem one of the least of their blessings,—the national debt!!

Mr. Blandford, the vice-president, a sort of amphibious yeoman, half landowner and half farmer, gave the following hint to the absent county members, that the monopolists won't be satisfied with mere ministerial adherents:—

"Let it, then, be their determination to stand by their rights. (Hear.) The day might not be far distant when they would have to select another representative with Mr. Miles; and he would observe that they did not want a man of family, merely because he was so—they did not want a man of great fortune, who might think, because of his wealth, it was too much trouble to attend to their interests; and who, because he had a dinner party, would make that a plea, or adopt some other paltry excuse, for staying away from their meetings. (Loud and prolonged applause.) They wanted a man of honour, a man of principle, a man of talent, and a man of business, who would exert himself. (Cheers.)"

This comes of the squires teaching farmers to act, and talk as if for themselves; it is plain they are beginning to think for themselves.

Then came Mr. Miles, who talks so valiantly: Somersetshire, and roars such gentle opposition in the House of Commons. Yet even his speech seems like the foreboding of a coming Free Trade. He first of all said:—

"It had been thought by some that the banding together of classes, or of fractions of the community, might be dangerous; but it should be remembered that the agriculturists had no child's play to contend with at that time, for the League was in full power. (Hear, hear.)"

And, referring to the "noble efforts" of the "protection societies," proceeded to say:—

"That much good had been done by these societies; they might have to bear the sneers and gibes of the League, but they would not calumniate (cheers); they would not stoop to that, but leave such a course to their opponents; but they would defend, with just and fair statements and arguments, their own cause, whenever it might be necessary. (Cheers.) It had been said by some that the League was crushed, but such was not the case. (Hear, hear.) It might be crushed for the present, to a certain degree, because, from the revival of trade in the manufacturing districts, it was difficult to keep up the flame of agitation; but the League was still mischievous: its agents were continuing their endeavours to spread the poison of dissension abroad, insidiously, if not quite so openly, and, therefore, it became the agriculturists to be on their guard. (Hear, hear.) Their representatives would, he hoped, continue to support them—those who had seen the necessity of firmly upholding the protection to the agricultural interest had, at any rate, nailed their colours to the mast (cheers), and if they sunk they would sink with the Union Jack covering them. (Hear, hear.) Oh, no one among them could tell the difficulties a member had to contend with who felt it his duty to act against those he wished to support—the friends he must offend, the connections he must oppose—yet there was an inward satisfaction in the consciousness of having done his duty. (Cheers.)"

All this looks very like giving up the game, which is plainly lost. He then said:—

"Again he would say the protection societies had done great good; they had called forth from the Minister such a declaration, that he believed they would have their present protection for a very long period. But he would candidly tell them his opinion of the present state of things, formed after much consideration—he thought they would have steady but low prices."

Imagine a county member—and of all county members Mr. W. Miles—seriously telling a meeting of landowners, titheowners, and farmers to expect "protection for a very long time," because Sir R. Peel had been bullied into an oracular declaration upon the subject! Then, if they are to have steady and low prices with protection, the object of that protection being to give steady and high prices, the value of that declaration seems rather equivocal. He then said:—

"With respect to the condition of the British farmers (hear), if their rents were too high, let them look to their landlords. (Tremendous cheers from the large body of farmers present.) He knew the landlords tolerably well, and he believed that the landlords were ready to meet the tenants according to the times. (Hear.) He spoke of them only as a body. He knew it had been said to the tenants, make improvements, try new manures, procure better implements; but, with such an intelligent tenantry as the farmers of England, he would say, let them alone (cheers), for, if they made any profit, they would find out the best way of laying out their surplus money." (Hear.)

And be concluded by hoping some legislative means by which a fair day's wages for a fair day's work might be found for the agricultural labourer. We do not know how this could happen, except by a repeal of the Corn Laws.

BRITISH LOCUST-RY!

"The Duke de Guise and Viscount Canning are on a sporting visit to the Earl of Malmesbury, at Heron-court, dealing destruction by wholesale among the game" (*Dorset County Chronicle*); the said game having previously "dealt destruction by wholesale among" his lordship's tenants. It was upon this property, our readers will remember, that a tenant tested the actual amount of damage done to his wheat by game, proved that it exceeded the whole amount of rent of the land sown to wheat, and got a notice to quit for his pains. But what matters a mere farmer's interests, if they interfere with the power of gratifying the organs of destructiveness of a French duke and an English viscount!?

THE HISTORY OF THE GIANT MONOPOLY.

ACCOMMODATED TO THE RENOWNED STORY OF MAELKROOK.

(To be said or sung.)

Monopoly's going to battle

In defence of its corn and cattle,
And 'twill buy young England a rattle,
To amuse the whimsical child. (Ter.)

That is, in the coming session
If Peel sticks to his profession,
And avoids to repeat the transgression,
Which drove Lord Tamboff wild. (Ter.)

But when the session is over
They'll find Peel turn'd a rover,
And landlords from Berwick to Dover
At his treason will clamour and rail. (Ter.)

When Slithorp observes his defection
From plunder disguis'd as protection,
He'll tremble for his election,
And Lincoln's loss will bewail. (Ter.)

For he'll find each tenant and farmer
Growling deaf to the voice of the charmer,
And in vain will become an alarm,
When they ask him what is the news. (Ter.)

He must tell them, Free Trade is granted
Which is just what the farmers wanted,
And the nonsense that long has been cant,
No longer answers their views. (Ter.)

But Darby is weeping and wailing,
And Gally Knight's senses are falling,
And Knightley is snarling and railing,
And Knatchbull's as mute as a post. (Ter.)

For the news is not very pleasant,
That no longer will partridge and pheasant
Be worth more than the life of a peasant,
And the game laws are utterly lost. (Ter.)

The landed monopoly's ended,
And the labourer's fortune is mended,
And trade is going on splendid,
Since the tax upon bread was repeal'd. (Ter.)

And yet 'twas a sad display, sir,
When protection was thus swept away, sir,
And many a face that look'd gay, sir,
Its sorrow in secret conceal'd. (Ter.)

Peter Almsworth, at Bolton, miscarried;
Baby Constance, at Bridport, was harried;
In South Lancashire no longer carried
Lord Fraunce's and his nominee. (Ter.)

And the wooden bible of Sandon,
Was Liverpool forc'd to abandon,
And the ground was found dangerous to stand on
Through the whole of the dukedom. (Ter.)

In the Borough, and city of London,
Which Baring so lately was stunn'd on,
The Monopolists found themselves undone—
The Free-Traders carried the whole. (Ter.)

For Lord John, his fixed duty off flinging,
And no more to worn Whiggery clinging,
Was now like a nightingale singing,
When plac'd at the head of the poll. (Ter.)

As we saw monopoly broken,
No word of pity was spoken,
But every one hail'd the glad token
Of prosperous commerce and trade. (Ter.)

The bells were all set a pealing,
When the bread-taxers off were stealing,
Their sorrowful faces concealing,
Of just retribution afraid. (Ter.)

But all the Free-Traders were shouting,
While Fox, Moore, and Thompson were spouting,
And Cobden explain'd to those doubting
The victory we had just gained. (Ter.)

He show'd that increasing employment,
Which monopolists all to destroy meant,
To labour gave strength and enjoyment,
And a high rate of wages sustain'd. (Ter.)

That the surplus of population,
Which once so alarm'd the nation,
And gave all fair ladies vexation,
By frightening husbands away, (Ter.)

Was just like surplus production,
Stupidity's greatest eruption;
So to all he gave sweet instruction
To get married as fast as they may. (Ter.)

But the joy of the lads and the lasses,
When monopolists thus were proved asses,
So far all description surpasses,
That to tell it would take me too long. (Ter.)

Now, may this overthrow of the greedy,
And relief to the poor and the needy,
Be in its accomplishment speedy.
So here is an end to my song. (Ter.)

TAXATION.—Taxes on the necessities of life are a curse equal to the barrenness of the earth and the inclemency of the heavens.—*Adam Smith.*

CORN RENTS.—The principle of a corn-rent is that the tenant should pay according to the price of his produce: for instance, if wheat sold at 60s. a quarter, he would pay a rental calculated according to that price; and if wheat sold at 40s. a quarter, he would pay just so much less, in proportion, as the difference between 60s. and 40s. If the rent, when wheat averaged 60s. a quarter, were to be £600, it would fall, when the average of wheat sank to 40s. a quarter, to £400. Thus the farmer's rental would always be in proportion to the value of his produce, and the landlord would receive all that he is justly entitled to—a settled share of the produce of the soil, regulated by the value of money and the other circumstances which combine to fix prices. He would partake of the prosperity as well as share the depression of his tenant; and the burden, instead of falling, as it does under the present system, always on one set of shoulders, and those the least able to bear it, would be equitably adjusted between the two parties, and the stronger would have his due proportion. We trust this brief explanation will not be deemed superfluous, for, though the principle of corn-rents is well understood and appreciated by the political economist, it is to be feared that many, even of those whose interests are principally concerned in its adoption, are either ignorant of it or have but vague and indistinct notions of its operation.—*Worcestershire Chronicle.*

HOLYHEAD FARMING SOCIETY.—At the annual meeting of the Holyhead Farming Society, held on Friday week, the Hon. Lloyd Mostyn said it could not be expected that a tenant occupier should lay out his money in improvements, without a guarantee from his landlord; and therefore he was favourable to leases as the best security, and if a man of capital came to him and asked him for a lease he should have one. (Loud cheers.) Towards the end of his speech he alluded to the Canadian Corn Bill, of which he strongly disapproved, and said that "in his opinion it would have been more honest and manly for the Government to have given us a fixed duty, or even no duty at all, rather than that those growing corn should be kept in a state of doubt and uncertainty, into which recent legislation on the subject has plunged them." (Loud cries of "Hear.")—*Shrewsbury Chronicle.*

RESULTS OF THE LEAGUE POLICY.—The prudence of the League, in avoiding all participation in political squabbles, and in proving to the farmers no less than to the manufacturers that they have at heart the welfare of all who live by the sweat of their brow, has been productive of the best results. The farmers now feel—by all that has been done to expose the iniquity of the game laws, to obtain for them fixity of tenure, and to regulate their rents by the market price of corn—that the Leaguers are in truth their best friends. Nor is Sir Robert Peel an indifferent spectator of the labours of the League, with which he entirely sympathizes. The Premier is too enlightened not to know that Free Trade is inevitable; and we are much mistaken if one of his first movements, after the opening of Parliament, do not prove to be in a Free-Trade direction.—*Hull Advertiser.*

COTTAGES FOR THE LABOURING CLASSES.—Twenty cottages are in progress of erection by the Society for the Improvement of the Condition of the Labouring Classes, on the estate of Lord Calthorpe, within a few perches of the Clerkenwell police-court. They will be inhabited each by one labourer's family. They will be fitted up with the greatest regard to the comfort and cleanliness of the occupants, and will cost £3000. The main object the society has in view by the erection of these 20, is that they may serve as a model for such buildings to the aristocracy who may visit the metropolis.—*Globe.*

INCENDIARY FIRE.—On Saturday evening last, between five and six o'clock, a fire, which is supposed to have been the act of an incendiary, broke out on the farm of Mr. Jonathan Grant, at Coulston, and consumed a barn, stable, shed, and outhouses, containing about 700 bushels of root, a drill machine, a quantity of straw, &c.—*Wills Gazette.*—On Sunday last, a fire was discovered on the premises of Mr. Dicks, of Twyford. A barley-stack, the produce of six acres, was quite consumed. One of Mr. Dicks's labourers has been taken into custody on suspicion of being the incendiary.—*Norwich Mercury.*—On Sunday week, in the evening, a fire was discovered on the farm of Mr. William Cooper, of Whitfield-house, Drinkstone, when two barley-stacks, the produce of nine acres, standing some distance from the premises, were nearly destroyed—about two loads only being saved. The engine from Woolston quickly reached the spot, and with *Express.*

NOTICES TO CORRESPONDENTS.

We have many inquiries upon technical points connected with the conveyances of property for qualifying county voters. As a rule, there are legal questions upon which lawyers are the safest advisers. We advise our friends who are purchasing freeholds to employ Free-Traders as their solicitors in preference to monopolists. We do this not in the spirit of monopoly or exclusive dealing, but on the Free-Trade principle of buying in the best market. The lawyer whose heart is with us is more likely to take care that the property will give a vote as well as interest-money than the monopolist, who might consider his professional duty fulfilled when he had secured the title to the estate, leaving the vote to the chance of the revising barrister's court. To the lawyers, especially the young ones, we say, make yourselves thoroughly masters of the Reform and Registration Acts; there is work in store for you.

"A. W."—Medical relief has been held to disqualify; and, vaccination coming under that denomination, the question was set at rest by the statute 4 and 5 Victoria, chap. 32, which declares it shall not disqualify.

"H. K."—"An individual pays a monthly subscription to a building society, which advances him a sum of money, with which he purchases freehold property of the clear annual value of 40s.; the deeds of the property are deposited in the society's box as security for the monthly payments, until the dissolution of the society, when the deeds will be returned; is the individual entitled to a vote for the county?"

[Building societies lend their money with the understanding that the property purchased shall be vested in the name of the societies' trustees; at the end of the period stipulated, or of the dissolution of the society, the property is re-conveyed to the purchaser under the statute, without stamp. The fee-simple being vested in trustees, destroys the franchise for the term they hold it; but when the fee-simple is purchased and vested in the claimant, and only mortgaged, then when the mortgage and interest shall be reduced to that the purchaser has a surplus of 40s. clear from the freehold estate, it will give a qualification.]

"Z. N."—"My father has given me a freehold house, which will entitle me to a vote for the county, the rental being 40s. per annum. Can you oblige me by informing me, through the medium of your journal, if it is necessary that I should have it regularly conveyed, or if an agreement will be sufficient to entitle me to a vote?"

[The property should be conveyed by deed of some description.]

"W. K., Church-street, Manchester."—"You should claim to be rated, and pay all rates and taxes due up to the 5th of April next, and the overseer will then place your name on the register. Should they neglect, you must send in a claim to be registered in the month of August, and attend before the barrister at the holding of the court for the revision of the list, and be sworn in." insert your name.

"L. K."—"Persons claiming 'share in freehold houses,' upon proof before the revising barrister that they have a freehold interest of 40s., are usually admitted to vote.

"H. B."—"I occupy a house and land at Chislehurst, in Kent, of the yearly rental of sixty guineas. Pray inform me if it does not entitle me to a vote for that county; and also what steps it is proper to take to get myself enrolled on the register."

[Yes; and you must send in a claim to the overseer of the parish where the property is situated, on or before the 31st of July next.]

"A Convert to the League" cannot qualify as he proposes. "The continuation of the review of the 'Life and Rebellion of James, Duke of Monmouth,' is in type, and shall appear in our next.

"We have a mass of correspondence which we are compelled to leave unanswered for want of space; but we shall take the earliest opportunity to answer all communications in detail.

ERRATUM.—The sentence in the article headed "A Journey in Sussex," which in our last read "Colonel Wyndham has bought the houses, and has managed to turn them into freehold houses, over which he has complete control," should have been printed, "Colonel Wyndham has bought the houses, and he managed to turn them into franchises," &c.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the LEAGUE forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadsby, Newall's-buildings, Manchester; and the LEAGUE may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

GREAT LEAGUE MEETING.

THE FIRST AGGREGATE MEETING of the LEAGUE, in the THEATRE ROYAL COVENT GARDEN, will be held on WEDNESDAY NEXT, the 11th of DECEMBER.

GEORGE WILSON, Esq., will take the Chair at SEVEN O'CLOCK precisely.

The Meeting will be addressed by the Hon. C. P. VILLIERS, M.P.; RICHARD COBDEN, Esq., M.P.; and JOHN BAIGHT, Esq., M.P.

Cards of admission may be had on application at the Offices of the League, on Monday and Tuesday, between the hours of eleven and four o'clock.

Applications for Private Boxes to be made personally or by letter on Monday.

The cards of registered Members will admit, as heretofore, to the Pit and Galleries.—DOORS TO BE OPENED AT HALF-PAST SIX O'CLOCK.

POSTSCRIPT.

LONDON, Saturday Morning, December 7, 1844.

Lord Ashley has written a letter to the Short Time Committee in Manchester, announcing his intention to bring the condition of the operatives in the manufacturing districts under the consideration of Parliament early in the ensuing session. We believe that good must result from every exertion to direct inquiry into the disadvantages to which industry is subjected in this country, and we hope that every such investigation will be undertaken with an honest determination to ascertain the real nature of the grievance, and apply the appropriate

remedy. We are anxious that the case of the manufacturing population should not be employed as a blind to screen from public observation and discussion the miserable condition of the agricultural labourers; and that unjust attacks on the character of the manufacturers, as a class, should not be made part of the tactics to ward off the examination of the calamitous consequences which have resulted from the selfish legislation of another class. We have heard that Lord Ashley has visited the cottages of Lancashire—we have not heard of his having examined the hovels of Dorsetshire. Now the great question of the condition of industry in England must be examined as a whole: the real point to be determined is, why it is

"That bread should be so dear,
And flesh and blood so cheap?"

The overworking in the north, and the starvation for want of work in the south, are symptoms of the same national disease, and must be joined in the same issue when the great cause of the claims of the industrious to adequate remuneration for toil is brought to trial.

EPITOME OF NEWS.

FOREIGN.

FRANCE.—A heavy fall of snow took place in Paris and its vicinity on Sunday morning, and continued at intervals throughout the day.

The *Courrier du Havre* contains the following narrative, which reminds us somewhat of the wreckers in Cornwall. About nine o'clock on Saturday night about 100 people with baskets, sacks, bags, and shovels, assembled on the Place de l'Eure; and gathered up the coffee scattered along the shore from the wreck of the *Deux Paulines*, and even took possession of fragments of the vessel. Two officers of the customs endeavoured to stop the plunder, but were soon overpowered by numbers, and beaten off. They would have fared much worse, but for their own prudence in making a timely retreat. The pillage was continued throughout the night, and in the morning the predatory band was increased. One man took away, on a horse which he brought for that purpose, 1200 lbs. of coffee, but of this quantity 700 lbs. were found in his house, and taken away and lodged in a warehouse.

The *Journal des Débats* of Tuesday contains the details of the marriage of the Duke d'Angoulême to the Princess Maria Caroline, of Salerno, at Naples, on the 25th ult. **SPAIN, BAYONNE, Nov. 28.**—Accounts from Logrono announce the execution of Zurbano's son, of his brother-in-law, and of two other officers who had espoused Zurbano's cause. The mother-in-law of the younger Zurbano, on learning the news of his arrest, instantly set off for Madrid, for the purpose of imploring the royal clemency for her son. General Oribe is scouring the mountains of Soira in hopes of taking Zurbano. This sanguinary deed has called forth the most indignant censures of the French press of all shades of opinion.

LISBON.—A fire occurred late on Wednesday night, the 20th of November, in a house in the Rua da Magdalena, by which 13 persons were burnt alive. The police and authorities were present, but could render no assistance whatever, through the utter want in Lisbon—the disgraceful and scandalous want—of all the requisite means for saving life upon such occasions. A very few escaped by ladder borne by private individuals. The staircase was burnt at an early period, and the means of retreat being thus cut off, a whole family, consisting of nine persons, was reduced to a cinder on the second floor. Every one of these lives might have been readily saved, had there been but a fire-escape forthcoming: there is no such thing in all Lisbon—a city of 300,000 souls. Reeking from the smoke and flames of this barbarous holocaust—this modern *auto-da-fé*—the Minister had the hardihood, in the Chamber, to "eulogize the authorities."—*Times correspondent.*

THE SLAVE TRADE.—Official advices from Loanda received at Lisbon announce that, on the 27th of August last, a launch from the naval station there seized three boats on the beach to the south of Colubra laden with slaving provisions, and on the 8th of September another cruising launch, after a short engagement with the men belonging to a Brazilian slaver, the brig *Jupiter*, seized six boats, three of them with slaves on board to the number of ninety-three. About six times that number of slaves were carried off into the woods, but the attempt to ship them was frustrated, and the barracoons on shore destroyed.

AUSTRIA.—The *Mannheim Journal* announces as positive the intention of the Austrian Government to reduce considerably all the import duties upon articles of general consumption.

DEATH OF FELLEBERG.—Letters from Berne mention the death of the celebrated Fellenberg, at Hofwyl, on the 21st ult. Emmanuel von Fellenberg was born in 1771, of a patrician family of Berne. He was educated at Tübingen for the bar, but later took to the profession of teaching. He was professor at Pfäfers, near Colmar. He founded his agricultural school at Hofwyl in 1801.

GREECE.—The news from Greece is of the most disastrous kind, not so much from any new and extraordinary facts, as from the accumulation of proof that a plan is in full and vigorous operation for undermining the constitution. The only elucidation of the present state of things is this, and to this alone every step of the Ministry tends. The bonds of society are recklessly relaxed—confidence is lost in the courts of justice—nine murders had above 100 highway robberies are admitted to have occurred, crimes of late years almost unknown in Greece—numerous forests burned, no offenders apprehended, and, in fact, except at Athens and Nauplia, the inhabitants of towns afraid to travel far from their protection. The most serious part of the drama is, however, played in the Chamber of Representatives. —*Chronicle.*

INDIA AND CHINA.—The news brought from India by the mail of the 1st of November is not remarkable. The only place in which any disturbance of the general tranquillity exists, is at Kolapore, where, the Rajah being a minor, the government has been administered by various agents, who, by acts of despotism and oppression, drove the people into resistance. This Rajah being allowed by the treaties to maintain 1000 men, his forces were sent

into the provinces to put down the rebellion. The insurgents soon routed them, and then retired into the mountain fortresses. One of them, Samunghur, was taken by storm on the 13th of October, and a portion of the garrison who resisted were put to the sword by the British troops that were invited to aid the Rajah's agents in suppressing the insurrection. The garrison are said to have lost between 500 and 600 men killed and wounded, and as many prisoners. Two British officers died from wounds received. The intelligence from Scinde states that perfect tranquillity prevails there. Sir C. Napier had adopted the plan of marching the troops away from the rivers' banks during the time when the exhalations from the mud while drying rendered their residence there exceedingly dangerous. Sickness prevailed to any remarkable extent in only four regiments. The amount of sickness in those four corps was above 1100, being about half of all the cases in the whole of the Scinde army. The only public act of Sir H. Hardinge, hitherto, has been directed towards the extension of the blessings of education. From Bombay, the chief points are the conviction of the infamous Aloo Paroo, for being implicated in burning the merchant ship *Belvedere*, in Singapore harbour. He appears to have made a practice of burning ships which he had insured, and of which five or six were destroyed within four years.

CHINA.—From China the intelligence comes down to the end of August. The American Ambassador had negotiated a treaty such as that sanctioned by the British, with the addition of some clauses explanatory of it. The French Ambassador arrived at Macao on the 15th of August, in order to begin negotiations about his treaty. From Singapore we learn that an English expedition had been sent to attack the piratical tribes on the north-west coast of Borneo: it consisted chiefly of her Majesty's ship *Dido*, Captain Keppel, and the Hon. Company's steamer *Phlegathon*, which went up the river Sukarran. The boats were at first repulsed; but, being reinforced, they returned and demolished the fortifications, and took above 60 guns. Mr. Wade, first lieutenant of the *Dido*, was killed while leading his men to attack a fort, and Mr. Steward and several men belonging to the same ship were slain by the pirates. The Dutch had also sent an expedition to Borneo in search of a missing ship, the *Charles*. The King of Koti, who murdered the Hon. F. Murray, having refused all satisfaction, had his town destroyed. The ship *Ceylon*, D. Ferguson, master, from London to Bombay, was totally lost on the 1st of October, on the northernmost reef of the Laccadives, which even on the best charts are marked eighteen miles too much to the eastward. The captain and crew arrived safe in Bombay. No blame is attributable to them. The ship *Brilliant*, from Calcutta to Bombay, was lost on the 16th of October on the point of Saugur Sands: the crew were saved.

LOSS OF AN AMERICAN LINER.—By the *Hibernia* mail steamer, letters have come to hand with the melancholy intelligence of the shipwreck and total loss of the ship *Elizabeth*, Captain Paton, commander, belonging to Liverpool, with, it is much apprehended, the sacrifice of twenty-two persons, including the commander, the chief mate, several of the crew, and many passengers. The particulars received state that the vessel was on a passage to New Orleans, having on board for that port sixteen passengers, of whom there were a number of ladies.

DOMESTIC.

The Princess Sophia Matilda died on Friday, the 29th ultimo, of a disease of the chest, under which she had laboured for some time previously.

At the Central Criminal Court, on Monday, John Ogilvie, a rather well-dressed man, was found guilty of extorting money from Mr. Frederick Miville, a member of the Stock Exchange, by threatening to accuse him of abominable crimes, and sentenced to be transported for life.

The Roman Catholic members of the new board of Irish charitable bequests have all been appointed.

On Friday morning, at night, between six and seven, a lamentable accident took place in the drift-way, or guide mine, of the tunnel at present forming under the New Town, in connexion with the Edinburgh, Leith, and Granton Railway, which proved fatal to no fewer than four of the workmen. How the accident occurred is not known, as all who were in the tunnel at the moment have perished; but it is supposed that the water, which had accumulated in the upper mine, had suddenly broken in upon them, and swept them all away in the torrent.

On Monday a public meeting of the Association for the Relief of Distressed Needlewomen was held at Willis's Great Rooms. Lord Ashley presided. From the report read by the secretary, it appeared that 975 women of good character, whose earnings now averaged 9s. per week, had been recommended by the institution since it was established, independently of those to whom work had been furnished; but this number comprised only about one-third of those who had made applications for assistance. The total amount of donations received was £702, of which only £35 remained unexpended.

On Monday in the Court of Queen's Bench an action of trover was tried before Lord Denman and a special jury, between Alexander Beresford Hope, plaintiff, against Harmer and others, the executors of his uncle, to recover a cabinet of diamonds and other precious stones, estimated to be worth about £50,000, and which the plaintiff claimed under a deed of gift executed by the deceased in favour of the plaintiff in April, 1834. The jury found a verdict for the plaintiff—Damages £40,000, subject to an ulterior decision as to the actual value of the jewels.

Part of the Episcopal chapel-of-ease, Leamington, was seriously damaged by a fire, which broke out on Sunday evening last just as divine service was about to commence.

Saturday morning last the jury empanelled to inquire into the death caused by the Nottingham Railway accident returned a verdict of "manslaughter against Mr. Robert Lightfoot." The verdict embodied various suggestions for the rendering of travelling by railway more secure. There was no allusion to a deodand.

A meeting, convened by the Mayor of Bristol in compliance with a numerously signed requisition, will be held in that city next Thursday, to promote the establishment of public baths.

It was announced in the early part of this week that a frightful colliery explosion had taken place at the Cym Avon works, causing the loss of between fifty and sixty lives; it is satisfactory so far to be able to state that, though an explosion did take place, only four lives were lost. The accident was caused by the lighting of a lamp.

On Sunday last the Bishop of Chester consecrated a new church at Bolton, which had formerly been occupied by the Methodist New Connexion; but about four years ago the minister and congregation held several meetings, and at length finally agreed on conforming to the Established Church. The church in consequence has been reconsecrated for their use, and has also undergone several alterations.

The Repeal Association met at the Conciliation-hall, Dublin, on Monday. Mr. O'Connell, in the course of his speech, read a letter he had received from Mr. J. O'Neill, in which that gentleman defended the French people from the charges he (Mr. O'Connell) had made against them, of being immoral and irreligious. He said that he did not mean his observations to apply to the whole people, but only to an infidel party. "There were amongst Frenchmen as fine qualities as amongst any people on earth. Basely ungrateful should he be if he did not recollect how they treated the Irish Catholic gentry during the existence of the penal laws. (Hear, hear.) At the commencement of the French Revolution he had no less than thirty-two relatives officers in the French army, three of whom had risen without a friend to the rank of general. He was, therefore, grateful to the French people." The rent for the week was announced to be £493. 5s. 6d.

Two brothers, farmers, named Thomas and William Shepherd, were, on Friday night, the 29th ult., found to have been brutally murdered at Coolfin, in the King's County. The frightful crime is said to have been committed in consequence of their keeping possession of a farm of 24 acres, from which another party had been ejected, and which they had refused to leave in obedience to a threatening notice.

Nineteen individuals—ten of whom are resident in Glasgow—have subscribed towards the building of the projected college, in connexion with the Free Church, the magnificent sum of £19,000!

At Rochdale, on Monday last, there was not a single prisoner to be brought up; and, in consequence of it being the Salford quarter sessions, other business was postponed to Wednesday.

In answer to a letter from the secretary of the short, time committee, Lord Ashley states that it is his intention, on the opening of Parliament, to fix an early day for the consideration of the subject of the ten hours' bill.

During the last few days the river Thames has been crowded with shipping, arriving from nearly all parts of the world. On Saturday fifty, and on Monday forty-nine, were entered inwards at the Custom house, from Hong-Kong, Ceylon, Buenos Ayres, New York, Sierra Leone, Messina, Bahia, Cronstadt, Hamburg, &c. For some weeks past above two hundred vessels have arrived from foreign parts, these being exclusive of ships coming coastwise.

The number of deaths in the metropolis during the week ending Nov. 30, is considerably above the average, and exceeds that of the previous week by 161, the average for the last five autumns being 990, the number last week being 914, and for the week just ended 1075. The increase is chiefly in deaths caused by smallpox, scarlatina (which is on the decrease), sudden deaths, apoplexy, bronchitis, inflammation of the chest, and general diseases of the lungs. Smallpox is still very fatal as compared with former years. Last week, the number was 46, while the average is only 17.

On Wednesday last, two men named George Coveney and Edward Jackson, employed as labourers on the South Eastern Railway, were knocked down by a train at the Abbot's Cliff Tunnel, and killed.

Mrs. Tyrwhitt, the lady who stood charged with stealing a microscope from the Soho Bazaar, was tried at the Middlesex Sessions Court on Thursday, and acquitted by the jury amidst loud cheers from a crowded court. The prisoner, who was at that moment supported by her husband, appeared deeply affected on hearing the verdict, and said in a very faint voice, to the jury, "Gentlemen, you have acquitted me, and I here solemnly declare my innocence of the false charge that has been brought against me." She then sat down, evidently overcome by her feelings, and was shortly afterwards taken from the court by her friends.

At an orphan charity dinner held in Dublin on Wednesday, at which Mr. O'Connell presided, the Rev. Mr. Moriarty, who has recently returned from Philadelphia, said in the course of his speech, that "there were forty thousand Irishmen in America who were pledged, the moment that one drop of Repealers' blood was shed, to rush into Canada, and rescue it from British dominion." Mr. O'Connell dissented from this opinion, and deprecated physical force.

VENEZUELA SUGAR.—An order in council has been issued authorizing the admission, for consumption in the United Kingdom, of brown, muscovado, or clayed sugars, not being refined, the growth of Venezuela, at the rate of £1. 14s. per cwt. duty, and five per cent additional, pursuant to the act of last session.

FOX HUNTING IN WALES.—Notwithstanding the "distressed state of agriculture" there are in and about Carmarthenshire no less than nine packs of hounds. In the immediate neighbourhood of the town of Carmarthen alone, there are the Brenwydd, the Mawgwynne, the Tregih, the Pantykendy, and the Carmarthen pack of fox-hounds. —*Cambrian.*

"THOROUGH DRAINING."—At the recent agricultural dinner in Gloucestershire, a farmer named Matthews thus wittily retorted on the landlords their exhortations to tenant-farmers to "drain" and otherwise improve their lands:—Mr. Peter Matthews said, that if the landlords would drain the land as completely as the farmers had been drained during the past year or two, it would be most effectually done. (Great laughter and cheers.)—Captain Walters: Is that what you call thorough draining, Peter Matthews? (Bursts of laughter.)—Mr. Matthews: Thorough draining it is, and no mistake. (Continued laughter.)

THE CORN LAWS, THE COAL TAX, AND FREE TRADE.—Mr. Liddell delivered a lecture on the above subjects in his chapel, St. Edmund's-hill, on Monday evening, at eight, to a numerous and respectable audience. The lecture occupied nearly two hours in the delivery, and was heard with the greatest attention. The lecturer concluded amidst great applause; and various persons in the meeting declared their opinions in favour of Free Trade, and requested that another lecture should, as soon as convenient, be delivered in that place. —*Dorchester Chronicle.*

STATE OF TRADE IN IRELAND.

(From the *Dublin Mercantile Advertiser*.)

In manufacturing enterprises there is, unfortunately, no limited range in this country, that we have seldom to notice the fluctuations of the markets; and there are no regular reports of the state of trade, such as those furnished from the English manufacturing districts.

Occasionally, however, we have endeavoured to obtain the most correct information as to our staple manufacture, the linen trade, and we rejoice to be able to state that it is now in a healthy and prosperous condition. We have received from a Belfast correspondent the following very gratifying report:—

"The linen trade of Ulster is steadily progressing. For English as well as home consumption the demand is very good, and for cloth of sound and weighty fabric there is a very extensive demand from England. The spinning trade, in late years, so important a traffic, is now very brisk."

At the different Irish ports a manifest improvement has taken place in commercial matters, and at no period for many years have there been less complaints of distress amongst traders, shopkeepers, or farmers. This gratifying state of things is, in a great measure, owing to the late excellent harvest; and the improvement of trade in England has, no doubt, reacted favourably here.

The prospects for the future are, also, very encouraging. Some, at least, of the projected railway companies will obtain the sanction of Parliament, and a considerable amount of employment will be the result; thus affording a prospect of relief to the myriads of our people who have been sunk in almost hopeless destitution. No symptoms of improvement could be sound or permanent which failed to reach the mass of the population, amongst whom there is so little of remunerative employment, and with a total want of the means of obtaining even the necessities of life. We may hope, however, from the present indications of a better state of trade and commerce, that the poor man's industry will soon find a better market, and that he will participate in the general improvement of the country.

A contemporary, the *Belfast Mercantile Register*, gives the following very favourable report of that district:—

"Commercial prosperity still smiles on this part of the country; our farmers are comparatively well paid for their produce of the last season's bountiful harvest, and our weavers and other workmen have abundance of employment, with well-paid wages—who can purchase good food at very moderate prices. Under these circumstances all classes are emerging from their straitened condition, in which four or five seasons of agricultural scarcity and deranged commerce had involved them. All classes are now great consumers, not only of the necessities but of the luxuries of life—hence the increased demand for articles of food and clothing."

BRITISH TRADE.—The returns of Belgian commerce show that the Government of that country had no cause in the declaration of that commerce for the prohibitive duties which they have lately laid on British goods. In 1838 were 238 millions of francs, in 1843 294 millions. Exports, which in 1838 were 193 millions of francs, amounted in 1843 to 222 millions.

EXPORTS. From England, in 1843, worth 47 millions—1 million less than in 1842.

France ..	37	..	—1	..	less
Low Countries ..	34	..	—5	..	less
United States ..	21	..	—3	..	more

SUPERABUNDANCE IN THE AUSTRALIAN COLONIES.

—The existing depression in articles of food throughout all the well-established colonies of Australia, may be attributed to one cause—that of over-production, as compared with the wants of the united population. At the date of the last advices and returns from Van Diemen's Land, of which the accuracy cannot be doubted, the stock of wheat on hand amounted to upwards of a million bushels, affording a surplus of more than five hundred thousand bushels, after abundant provision for the wants of its entire population; whilst the clear surplus in this colony (which in 1842 did not export a single pound of wheat or flour), is stated at 200,000 bushels. We have thus an excess, and can afford to export 700,000 bushels of wheat from the south-eastern quarter of Australia, which was considered even at a late period as so little adapted to the purposes of agriculture that the pastoral capabilities were looked upon as the chief dependence, and the shores of the Pacific as the best market at which to obtain indispensable supplies. To these remarks we may properly append an official return of corn, meal, and flour, exported from the port of Adelaide, from the 1st of May, 1843, to April 30, 1844, and published in Thursday's *Gazette*:

52,266 bushels wheat ..	£7,679	8	6
929 tons, 18 cwt. flour ..	9,942	8	0
1 ton oatmeal ..	24	0	0
837 bushels oats ..	178	4	0
2026 bushels bran ..	96	3	6
988 bushels barley ..	168	8	0

MARKETS.

CORN MARKET.

MARK-LANE, Monday, Dec. 2.—There was a fair supply of English Wheat to this morning's market, in addition to considerable arrivals during last week from Lincolnshire and Cambridgeshire, most of which however, being direct to the millers, was not exhibited for sale. The best dry samples have been taken off at about last week's prices, but out-of-conditioned parcels are disposed of with great difficulty. There is a steady sale for Foreign Wheat at former rates. The supply of English Barley exceeds the demand, and Barley for malting, whether English or Foreign, is in consequence 1s. to 2s. cheaper. Grinding and Distilling qualities of Foreign meet a slow sale at former rates. The supply of Beans, both Old and New, and of New Mangel Peas was larger than of late, and prices are 1s. lower than this day week. White Peas fully maintain former prices, and in some instances a little advance has been obtained. The supplies of Oats are trifling. The high prices at which they are held cause the larger dealers to hold off for further arrivals. The trade is in consequence not brisk, but the sales made are at fully former rates.

Flour, 5901 sacks, 70 bars.

FRIDAY, Dec. 6.—We are liberally supplied this week with English Wheat and Foreign Barley. There is also a fair arrival of Irish Oats, several small cargoes of Foreign, and a few small parcels of Scotch; the latter in very inferior condition. The attendance of buyers during the week has been dull. We have no alteration to report in the value of Wheat: good Foreign and dry samples of English are taken off readily at former prices; but there is great difficulty in disposing of inferior qualities. The quantity of English Barley offering exceeds the demand, and lower prices for all but the finest samples for malting are accepted. Beans and Peas are not cheaper than on Monday. There is not much activity in the Oat trade, buyers still holding off for further supplies. The trade in just the same state as on Monday. The cold weather having set in with more than usual severity, induces the belief that we cannot continue to receive support from abroad much longer; and there is, in consequence, a disposition to hold old Foreign Oats at full prices. The duty on Rye advanced 1s. yesterday; and fell 1s. on Peas.

S. H. LUGAN and SON.

Account of CORN, &c., arrived in the Port of London, from the 4th of December to the 6th of December, both inclusive.

THE LEAGUE.

No. 64.]

SATURDAY, DECEMBER 14, 1844.

[3d.

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All Subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive, a copy weekly of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

The League Bazaar will be held during the month of May next, in the Theatre Royal Covent Garden.

We beg to inform our subscribers that bound volumes of the LEAGUE newspaper, containing the whole of the first year's numbers, may be had on application at the Offices either in London or Manchester.

Persons wishing to be on the Register next year, as Freeholders for County votes, must be in possession of the property before the 31st of January.

QUALIFY, QUALIFY, QUALIFY.

PRACTICAL INSTRUCTIONS FOR ELECTORAL QUALIFICATION.

The electors for counties are as follows:—Freeholders, copyholders, leaseholders, occupying tenants.

Freeholders.—The following persons are entitled to vote as freeholders:—1. Any person possessed of a freehold estate for himself and his heirs, or, as it is called, an estate of inheritance, of the yearly value of 40s. 2. Any person possessed of a freehold estate for life or lives of the yearly value of £10. 3. Any person possessed of such an estate for life or lives of the yearly value of 40s., under any one of the following circumstances:—If the estate was acquired on or before the 7th of June, 1832; or since, if by marriage or marriage settlement, by devise (i.e., by will), or by promotion to any benefice or office, or if the freeholder is himself the actual occupier of the property. In any of these cases it is sufficient if the property be of the yearly value of 40s. Parish clerks, sextons, schoolmasters, Dissenting ministers, and holders of offices have a right to vote if entitled to emoluments of 40s. per annum, arising out of, or charged upon, land, and may be registered as voters in the parish wherein the land is situated. The appointment must, however, be for life, not for a temporary purpose, or at the pleasure of any other party; but an appointment during good behaviour is considered to be an appointment for life. If the freeholder occupy his own freehold property in a borough, of such a nature and value as would confer upon him the right to vote for the borough, he will not be entitled, in respect of that property, to vote for the county. But if the freehold will not confer the right of voting for the borough, that is, if it be not of the annual value of £10, or if it be land without building, the freeholder may vote for the county, though he occupy it himself. And if the freeholder do not occupy his freehold estate within a borough, he may then vote in respect of it for the county, and his tenant may also vote for the borough. Six months' possession prior to the 31st of July will entitle a freeholder to be registered. And if the freehold lands or tenements should have come to him by descent, succession, marriage, marriage-settlement, will, or promotion to any benefice in a church, or to any office, no definite period of previous possession will be necessary.

Copyholders.—Any person possessed of any lands or tenements of the clear yearly value of £10, whether of copyhold or any other tenure than freehold, is entitled to vote. Tenants in ancient demesne may in general vote as freeholders, if they do not hold by copy of court-roll, but otherwise they will be entitled as copyholders. As freeholders, 40s. per annum will be sufficient; but as copyholders, £10 a year is required. The same period of possession previous to registration is required, in respect to copyholders, as in respect to freeholders. Copyhold property within a borough, if of such a nature as would qualify any person to vote for the borough, will not, under any circumstances, give a right to vote for the county.

Leaseholders.—The right of voting in respect of leasehold property extends to—1. Any person who is entitled by virtue of a lease made or assigned to him of any lands or tenements for the unexpired residue of any term originally created for a period of not less than 30 years, if

the property is of the clear yearly value of £10 above all rents and charges. 2. Any person who is in like manner entitled to the unexpired residue of a term originally of 20 years, if the lands and tenements are of the clear yearly value of £50. The party to whom the lease was originally made, or a party to whom such lease may have assigned the original lease, may vote, though not in occupation of the premises. Any sub-lessee or assignee of an under-lease may also vote, but only when in occupation of the premises. Lessees or assignees must have been in actual possession for 12 months previous to the 31st of July, unless the qualification is acquired by any of the modes before mentioned as excepted; that is to say, by the death of a relative, by marriage, by will, or by promotion to any benefice or office. Leasehold property in a borough, if of such nature and value as will give any person a vote for the borough, will not give a vote for the county.

OCCUPYING TENANT.—Any person occupying lands or tenements for which he is liable to pay a yearly rent of £50 is entitled to vote, if not within a borough, and not of such nature as would qualify a person to vote for the borough. In respect of the period of previous possession required, occupying tenants are placed on the same footing as leaseholders; but it is not requisite that the occupation be of the same lands or tenements: different lands and tenements occupied in immediate succession for twelve months previous to the 31st of July in each year will give the qualification.

GENERAL OBSERVATIONS.—Besides lands, houses, buildings, and the like, property and interests of the following description will entitle the owner to be registered and to vote, viz.—tithes, an annuity charged on land, a rent-charge, a fee-farm rents issuing out of an estate in fee; shares in navigable rivers, canals, &c., where the shareholders possess an interest in the soil; tolls of bridges, tolls of fairs and markets, purchases of unredeemed land-tax. Persons who have entered into an agreement of purchase of property, or who have paid any part of the purchase-money, or done any other act in part performance of the agreement, are considered to have equitable estates, and are entitled to vote and to be registered. Joint tenants and tenants in common have each a right to vote, provided the property be of sufficient amount to give to the share of each the value required. Mortgagees may vote, if in actual possession or in receipt of the rents and profits, but not otherwise. Trustees are expressly excluded from voting for any trust estate; the right of voting in respect of trust property is reserved for the *c'estui que trust*. In estimating the value of freehold or copyhold property, the marketable value of the property to let is the criterion to be attended to. If, owing to accidental circumstances, the rent should be less than might be obtained, the property will still give a right to vote. As regards leaseholds, the value required does not depend on the amount of rent; it is to be estimated by the profit which the tenant can derive from the property, over and above the amount of rent reserved, and any encumbrance charged on the property. The value required is to be "above all rents and charges." Under these words are included all encumbrances affecting the property, but not any public or parliamentary taxes.

BOROUGH FRANCHISE FOR 1845.

In order to secure a borough vote next year, those who occupy premises giving a qualification should immediately see that their names are placed on the poor's rate-book.

A claimant must be rated, or have claimed to be rated, to all rates made during the year ending the 31st of July. If, therefore, his name is omitted from any rate made during that time, he should immediately claim to be rated. The overseers are required to put the name of a person so claiming on the rate last made; consequently, if the claimant suffers two rates to be made before he claims, he will be unable to get upon the former one, and will thereby lose his vote for one year.

No particular form of claim to be rated is prescribed by the Reform or Registration Acts; but the following form may be adopted:—

"CLAIM TO BE RATED."

"To the Overseers of the Parish of _____
"I hereby give you notice that I occupy _____ at No. _____ in _____ Street, in your parish, and I claim to be rated to the relief of the poor in respect of such premises, in order that I may be entitled to vote in the election of a member (or members) of Parliament for the city (or borough) of _____.

Dated this _____ day of _____, 1844.

(Signed) _____

Insert the name of the parish, the nature of the premises, as house, shop, room, or as the case may be, and the name of the street, &c., and of the city or borough, also the date. The christian and surname and place of residence of the claimant should be inserted at full length. Give the claim to an overseer, keeping a correct copy, on which should be written the date when, and the name of the overseer on whom, it was served. If any poor's rates are due for the premises at the time of making the claim they must be paid, or the amount due tendered. Should the overseer refuse to accept the money, or omit to enter the claimant's name in the rate-book, he will be deemed to be rated notwithstanding; but, if the claimant's name be omitted from any future rate, he should again claim to be rated.

THE OPERATIVE CLASS AND THE COUNTY FRANCHISE.

The following letter, bearing intrinsic evidence of being the production of a working man, has been sent to us for publication:—

"Let wealthy Free-Trade masters in Lancashire and

* No registration of annuities or rent-charges with the clerk of the poor is requisite. *Quoted from THE LEAGUE, p. 10.*

Yorkshire, which employ many operatives, purchase plots of freehold land of one or more acres, near the works, if possible, where such operatives are employed; and, in addition to this, let such masters build quantities of small cottage houses, all of one description and size, and apportion a small plot of land to each house for convenience or as a garden, and the houses not to cost above from £50 to £60; but let a particular account be kept of the cost of erecting the whole of the houses, including the land, and then divide such expense according to the number of houses, and sell these houses with the gardens to the operatives, at the cost price of one house, to such as are able to purchase; and, in a concern where 400 or 500 are employed, there ought to be 30 or 40 who could purchase a house of this kind, by borrowing one-half of the money till they were able to pay the whole by stopping it out of their earnings; and in the same proportion where larger or fewer numbers are employed. And these houses, with the gardens, could be immediately conveyed to such operatives so as to qualify them for county votes. When such houses are got paid for, such operatives would be in the proud position of living in their own houses and being county voters.

"A FREE-TRADE OPERATIVE."

We heartily commend the above letter to the attention of the large millowners and manufacturers of Lancashire and Yorkshire. There are establishments within our own knowledge, employing upwards of a thousand persons, of whom at least one hundred might, with very little assistance from their employers, possess freehold qualifications. We think a better plan than that pointed out by a "Free-Trade Operative" could hardly be devised, inasmuch as it guards, very properly, against the suspicion that the master enters into the transaction with a view of making a profitable speculation. The object of the employers should be to stimulate the working class to acquire possession of small freehold properties, by showing them that it is not only the best mode of investing their savings, so far as profit goes, but that it is the only way in which they can, under the present state of the law, obtain the franchise. We have heard that the darling object of ambition with the operatives in the manufacturing districts is the suffrage—that they are willing to incur heavy sacrifices to obtain admission within the electoral pale—that they regard their more privileged neighbours with jealousy, and view themselves in the degraded light of a slave class. Well, here is a fair test of the earnestness of their feelings upon the subject. The sum of forty pounds will purchase a county qualification in most of the districts of the iron, cotton, and woollen manufacture. Thirty pounds, even, in some places, will secure the good privilege of a vote for knights of the shire; and give to that vote the same power in the polling booth as if it represented ten thousand a year. It is in the power of many thousands of our better-paid artisans and mechanics in the manufacturing districts and the metropolis to "take up their freedom" in this manner; and every man who, by provident industry, thus places himself, politically, upon a level with the richest and proudest in the land, at once adds dignity to the class to which he is an ornament, and places himself in the position of a champion of the rights of his unfranchised fellow-workmen.

A word to the employers of great numbers of operatives. We are told that yours is a demoralizing system—that the aggregation of large bodies of workmen around the mill, the forge, and the steam-engine, leads to vice, misery, and mental and physical degradation. We hear that the factory-owners are tyrants, and their labourers slaves; that the capitalist, like a huge ogre, preys upon helpless women and infants, and consigns the man to idleness or the poorhouse. Well, here is a plan by which you may confound your accusers. Put yourselves in a position to be able to say, in answer to the columns of the *Post* and the *Standard*, that you have individual establishments amongst you giving employment to a hundred freeholders, and challenge his Grace of Buckingham to say how many of the labourers on his estates are to be found upon the county register. There is a glorious field of rivalry open to our large manufacturers—who employ the greatest number of freeholders? We should not be surprised if, ere long, a new test of greatness were recognised in Lancashire: instead of a millowner's importance being measured by the height of his chimney, or the number of his horsepower, we may expect to hear the inquiry made as to how many of his "hands" are qualified to vote for the county.

OBJECTIONS MADE TO POLITICAL ECONOMY.

"That political economy should have been complained of as hostile to religion," says Archbishop

Whately, "will probably be regarded a century hence—should the fact then be on record—with the same wonder, almost approaching to incredulity, with which we of the present day hear of men's having sincerely opposed, on religious grounds, the Copernican system. But till the advocates of Christianity shall have become universally much better acquainted with the true character of their religion than, universally, they have ever yet been, we must always expect that every branch of study, every scientific theory, that is brought into notice will be assailed on religious grounds by those who either have not studied the subject, or who are incompetent judges of it: or again who, in addressing themselves to such persons as are so circumstanced, wish to excite and to take advantage of the passions of the ignorant. In the same manner, in Pagan and Romish countries, any one who is conscious of crime or of debt, flies at once to the altar, and shelters himself in the sanctuary."

The Rev. Dr. Chalmers, in an essay which has appeared in the third number of the "North British Review," also compares the attacks made on political economy by the author of "The Perils of the Nation" to the persecution of Galileo for having maintained the true system of astronomy. "There is something strongly analogous," he says, "in the religious horror which our author feels, and which he tries to awaken in the minds of his readers, against the science of political economy. He, making use of an expression in Holy Writ, stigmatises it as 'science falsely so called,' forgetting that, in these words, we have the virtual acknowledgment of a science truly so called; so that while there is undoubtedly a false, there may be also a true political economy, with the doctrines of which he would do well to acquaint himself. Another phrase, taken by him also from the inspired writings, is 'vain philosophy,'—a tolerably clear intimation, and that from the highest of all authority, that there is a philosophy which is not vain. The works of God, says the Psalmist—and these works must be recognised in the laws and phenomena of human society, as well as in the laws and phenomena of the material creation—the works of God are wonderful, sought out of them that have pleasure therein. They who would divorce theology from science, or science from theology, are in effect, if not intention, the enemies of both."

Scripture itself teaches us that what is called "a religious cry" has often been raised for the worst of purposes; when it was determined to rob Naboth of his vineyard, the ready accusation was, "Thou didst blaspheme God and the king;" and a false charge of blasphemy was the pretext for the murder of the proto-martyr Stephen. As, however, there are many good men who insist that every rule of human conduct must be viewed with suspicion which is not directly deduced from Scripture, it is desirable to show that political economy is in fact a legitimate application of principles inculcated in the Revealed Word. Archbishop Whately justly observes, "It is a Christian duty to do good to our fellow-creatures; and if so, it must be also a duty to study to the best of our ability, to understand in what their good consists, and how it is to be promoted. To represent, therefore, any branch of such study as inconsistent with Christianity, is to make Christianity inconsistent with itself."

Among the many sophisms employed to raise a prejudice against political economy, is the strange assertion that its professors place "science in the place of God." This is something more than a mere absurdity: it is a palpable contradiction in terms; for science, which means nothing more than knowledge, has itself, like every other good and perfect gift, come down from the Father of Lights. Science is simply the knowledge of the laws which the great Creator of the Universe of Matter and the Universe of Mind has impressed upon both. He is himself the centre and source of all knowledge—the Omniscient; and the refusal of respect to science involves manifest disrespect to Omniscience.

The science of political economy has the great misfortune of being new, and the still greater misfortune of having a name which conveys a very imperfect, or rather a totally erroneous, notion of its nature to the great majority of readers. Literally, "political" signifies "that which belongs to a state," and economy the judicious government of a household; those who devised the name, therefore, intended to describe a science which would produce the same advantages to a state that judicious management does to a private family. Unfortunately, in conventional use, "political" has received the limited sense of governmental, and "economy," in vulgar parlance, is identified with a saving of expenditure. Hence it has been easy to represent the science as nothing more than a system for saving money to the ruling powers, with more or less of a suspicion that this saving is effected at the expense of the governed. We need not say how gross is this misrepresentation both of the nature and objects of political economy; but every one knows how effective this misrepresentation has been in the appeals made by the ignorant to the prejudices and passions of the more ignorant.

Adam Smith's well-known designation of the science, "The Wealth of Nations," has been similarly misrepresented, and from a similar cause. "Wealth" primarily means, and the philosopher intended it to mean, everything which conduces to the well-being of society, a sense in which the word *weal* is still occasionally used; but in ordinary parlance *wealth* has come to signify nothing but money and other material possessions, and Adam Smith is stigmatised as if he had merely set himself to devise a system of money-making. Yet, even in its limited and vulgar sense, a science of wealth would not deserve condemnation. "The goods of this world," says Archbishop Whately, "are by no means a trifling consideration to Christians, considered as Christians. Whether, indeed, we ourselves shall have enjoyed a large or a small share of them will be of no importance to us a hundred years hence; but it will be of the greatest importance whether we shall have employed the faculties and opportunities granted to us, in the increase and diffusion of those benefits among others." A science of wealth would be obviously imperfect if it did not treat of distribution as well as of accumulation.

When the doctrines of Free Trade are recognised as the plainest lessons taught by political economy, it is confessed that they form part of that system of administering a state which ensures the greatest amount of comforts to its members, just as judicious management does to the members of a family; and when these same doctrines are declared to be in accordance with the wealth of nations they are confessed to be essential to the well-being of society. Viewed in his relations to this science, man has been happily defined to be "an animal that makes exchanges. Some of our superficial sentimentalists have chosen to cavil with this definition; but it rests on the highest of all authorities—on the primal declaration made after the Fall, "In the sweat of thy face shalt thou eat bread;" here the exchange of labour for food is directly enjoined, and the equivalent as directly promised. When political economy aims at discovering the laws which would secure to every man "a fair day's wages for a fair day's work," it acts in accordance with the spirit and letter of this primal injunction, seeking from reason the means of carrying out the behests of revelation. When labour is cheap and food dear, the economist says there is an inequality in the exchange, which he endeavours to rectify; the sentimentalist merely bestows pity upon the labourer, and leaves the evil as he found it. In this instance we need hardly ask whether science or no-science tends most to promote the object of the divine law.

We have used the phrase, "no-science;" but, in fact, such a thing is impossible: every man forms a kind of science that is a collection of real or supposed facts, moulded into formulae for guiding his conduct from the time that he has learned not to touch a candle through fear of burning his fingers. The man of true science is the man who extends as widely as possible his observation of facts, and makes his deductions, not from particular and isolated instances, but from a general survey of the entire. The man of false science is he who jumps to a conclusion from a few facts imperfectly observed, and still more imperfectly understood, either from natural incapacity for observation or from the obstinate and wilful blindness which is the certain companion of selfishness. Those persons who declaim most loudly against political economy altogether, have a pet political economy of their own: the difference is, that the true science is founded on induction from the collected experience of all ages and nations; but the false science is based merely on the crude guesses of the charlatan, the limited experience of the narrow-minded, or the conscious and unconscious misrepresentations of the interested. When these men denounce science, they tacitly confess that their own pet system is not true science: "they set themselves against reason, because they are conscious that reason is set against them." It is common with such men to say, "Free Trade is good in theory, but it will not do in practice," the blockheads being ignorant, and the knaves designedly concealing, that it could never have been good in theory if it had not been successful in practice. Theory is nothing more than a survey of ascertained facts, and practice would be nothing more than a repetition of the same facts; so that their objection simply comes to this, that what has been established by fact will be contradicted by fact.

There never was a greater blunder or grosser misrepresentation than the assertion that the advocates of any science, and more especially the science of political economy, set up human wisdom in opposition to divine. The man of genuine science recognises the wisdom of Divine Providence not less in the laws that regulate man's social existence than in those which direct the course of the material universe. It is not Free-Traders but monopolists who set themselves to rival the legislation of Providence, by interfering with restraints, and bounties, and artificial regulations, to substitute a system of their own devising for the system of free exchange of products which was granted to man in his primal charter from Heaven. The Free-Traders say that

He who ordained man to be "an animal making exchanges," and enjoined on him the pursuit of such a destiny, provided a mechanism, free in its course and certain in its operations, which would work out the great object both of reason and revelation—"Glory to God in the highest, on earth peace, good will towards men." "And so in the philosophy of Free Trade," says Dr. Chalmers, "the essence of which consists in leaving this mechanism to its own spontaneous evolutions, do we behold a striking testimony to the superior intelligence of Him who is the author both of human nature and human society—an impressive demonstration of how much the wisdom of man is outpeered by the wisdom of God."

GREAT LEAGUE MEETING AT COVENT GARDEN THEATRE.

The first great metropolitan meeting of the members of the Anti-Corn-Law League for the present season took place at Covent-garden Theatre on Wednesday evening. The doors were opened at six o'clock. The rush was tremendous, and within ten minutes from the time that the doors were opened, the house was crowded in every part, boxes, pit, and gallery. Every part of the private boxes was fully occupied; the stage was crowded; and such was the desire to obtain admittance, that a great number of persons, including several ladies, were accommodated in the orchestra portion of the house, which had hitherto been appropriated exclusively to the use of reporters. There were not, perhaps, so many ladies present as has been usual at these meetings; but the number of gentlemen was much greater, and the meeting was characterised by a degree of earnestness and general enthusiasm which showed that all present were actuated by a fixed determination to carry out the great principle of Free Trade, in support of which they were leagued together.

At a quarter past seven o'clock, GEORGE WILSON, Esq., Chairman of the League, took the chair, amidst the most enthusiastic cheers.

On his entrance into the theatre he was accompanied by several of the most active members of the League, who were loudly cheered as they made their appearance.

Among those present we observed—George Wilson, Esq., chairman; Messrs. the Hon. C. P. Villiers, M.P.; Richard Cobden, M.P.; John Bright, M.P.; Dr. Cooke Taylor, Francis Place, Robert Clark, D. Dwyer, H. J. Stainton, J. Baines, — Brooksbank, Rev. J. Walker, G. P. Fletcher, W. Wilson, W. Hickson, — Pearson, Alfred Novello, J. H. T. Lewis, Captain Cogan, A. Bauer, G. Thompson, Major-General Briggs, John A. Lyon, S. Lucas, W. A. Wilkinson, S. Harrison, Joseph Ivimey, P. A. Taylor, Cowden Clark, — Leavers, — Barker, W. Ellis, J. P. Burnard, J. A. Petrie, Rev. Dr. Lewis, Colonel Tucker, Colonel T. P. Thompson, W. Bourne, Isaac Sewell, Josiah Conder, Charles Lattimore (Wheatthampstead), Arthur Morse, J. Chalmers, Ralph Ricardo, Richard Sharpe, John Lowe, Thomas Ruston, W. Gee, Joseph Phelps, W. A. Brown, James Brotherton, J. Haver, E. Davy (Crediton), John Fish, L. W. Ash, Charles Constable, R. L. Tweedale, Robert R. R. Moore, W. Bower, J. Fowler, John Jee (Northampton), J. Cooke, J. Parry (Ilfracombe), John Butterworth (Manchester), Charles James Wilson, Henry Lloyd Morgan, James Wilson, John Smith, Professor Key, W. Thornborough, Adam Smith, &c.

The CHAIRMAN then came forward to address the meeting, and was received with loud cheering and waving of hats and handkerchiefs, which lasted for some minutes. The pit rose to welcome him. These congratulations were repeatedly acknowledged by Mr. Wilson. Silence was at length restored, and he was about to commence his address, when there was a call for "One cheer more, and a good one." This call having been most enthusiastically responded to,

The CHAIRMAN then said:—Ladies and gentlemen, if we had not been previously accustomed to see this theatre crammed—in the usual phraseology—"to suffocation," this large meeting would have excited surprise in our minds, occurring as it does at that particular season of the year which is generally supposed least favourable to political excitement; and when the avocations of our friends are generally of a very different character from that which has drawn us together this evening. Be that as it may, however, I look on this vast assembly as another evidence, if more were wanted, of the intense and increasing interest which is felt on the part of the inhabitants of this great city in favour of the abolition of those restrictions on trade which we all acknowledge to be so prejudicial; and also of the abrogation of those laws which interfere with the sustenance of the people. (Cheers.) We meet here to-night to renew our engagements with each other, to enter into a fresh bond of unity, to spare no exertions until we obtain, not the conditional, but the total repeal of the Corn Laws. (Cheers.) We meet here, I trust, having gathered experience from the past,—having served an apprenticeship to the work of agitation,—we meet here undaunted by any great obstacles with which we may still have to cope, and rejoicing over those through which we have already passed, having had good cause, as I hope to show you before this meeting closes, for rejoicing at the progress which has been made during the last three months. (Cheers.) We commence our seventh campaign under somewhat different and, I think, more favourable circumstances, than on any previous occasion. We are here to-night after having obtained information through every part of the Kingdom, having sent our missionaries into the remotest corners of the country, and having placed on the table of

almost every elector of this country the works and the study of some of the greatest men of the present day. I say we meet here to-night, 5000 or 6000 strong, and yet a very small proportion of the number which composes that vast organization of which we are at present the representatives; but which, I take upon myself to say, is at this moment the greatest organization of capitalists, middle-class men, and operatives which this country has ever yet seen. (Loud cheers.) When we last met together you were told that the League was going, in the fashionable phraseology of the day, "into retirement;" that, if you heard no more of the League, you might take it for granted that the Council were at work in the registration courts. I explained to you what had taken place previously to the last meeting. Then we had sent our experienced men into 140 boroughs of the country, with a view to their forming committees where no such organization existed, of their assisting and aiding the Free-Traders where committees did exist, and of obtaining the fullest and most complete information which they possibly could of the state of the registration of the country generally. They went, and they brought their reports; the revision courts have been opened since; the contest has been fought in the revision courts; and although at the present moment I have not in my possession the entire report of the 140 boroughs so visited—in consequence of some irregularity in the transmission of them, and in some instances owing to their having been sent back in order to be re-investigated and re-inquired into—yet, so far as we have at present received information on which we can depend (and I propose to give no information here to-night on which we cannot depend) from 108 of these boroughs, I find that in 98 or 100 of them we have obtained a majority in the revision courts. (Loud cheers.) In 98 there has been a gain in the registration in favour of the Free-Traders; whilst in only 6, 7, or at most 8, has there been a gain in the monopolists' favour; and in no one instance sufficient to affect the seat of a Free-Trader. (Cheers.) Then we have been told again and again that we may have gained some little in the registration courts, but, as every one knows, that by no means furnishes us with sufficient data whereby to judge of the actual state of the register. We admit it. The register is compiled by the several overseers; the revision courts only take cognizance of the objections or claims which may have been sent in upon the list of voters, as published by the overseers; but the revision courts take no cognizance of the vast changes which are taking place in the constituencies of the boroughs from deaths, removals, disfranchisements, or enfranchisements; and it is from actual knowledge of the changes which have taken place in boroughs in this respect, as well as in others, that I propose to speak to-night. Now, we frequently hear it said, that a borough is in what is called a "dead lock," that no gain or change can be taking place, or that the changes are so trifling that they never can affect an election. But there never was a greater mistake than this. I hold in my hand a list of 33 boroughs, which I shall not read, but from which I shall make a few extracts in order that you may perceive what immense changes are taking place in the constitution of the register and the constituency of each borough, and which are not shown in the revision courts, nor are tested till an election; and these changes amount, in all the boroughs I have yet examined, in none to less than 10 per cent., and in some to 15: so that, if the change merely affected the old voters on the register, you would have an entirely new constituency in England in the course of ten or twelve years at farthest. I mention this in order that you may see the immense changes which are constantly taking place in the register of the various boroughs in the country—in the constituency of every borough in the country. (Hear.) Now, we take the case of a borough in our own immediate neighbourhood—Ashton-under-Lyne. The number of old voters on the register there at the present time, and those who were on in 1843 and also in 1841, is 621; the number of new voters which were added in 1844 is 142; while the change which took place in the revision court was only some 20 or 30. You see this great alteration had been taking place during the whole twelvemonth previously, and had not been remarked upon by the registration agent of the district. Then, suppose we take one of the rural boroughs in the agricultural districts; for instance Boston, in Lincolnshire. There are 974 voters on the old register who were on previously; there are 129 new ones upon the present list. The monopolists had 14 majority at the last election. If we can only gain seven out of eleven of the new voters on that register, we shall have a majority at the next election. Then suppose we take one of the large boroughs, as furnishing another illustration of these changes. There is the town of Liverpool, in which there are 12,823 voters on the register, and 3135 new voters; there is the borough of Brighton, where there are 2162 old, and 461 new voters: all showing the great change which is constantly taking place in the register itself. In the list of 33 boroughs which I now have in my hand, I find the changes are to the following extent. There are 7649 new voters to 45,839 old ones, and the entire majority in each of these boroughs at the last election, where the monopolists had a majority, was 1145 only. I draw no conclusion as to our gain from this, but I mention the fact as showing that no borough can be in so hopeless a state as to be fixed and stationary, and one upon which no operations can be made successfully. (Cheers.) Then what is the description of the new voters? Men upon whom public opinion generally acts. These are individuals upon whose support we calculate at the next general election. (Hear.) They are the young men, not having the prejudices of their parents or of the old people, and are supposed generally to be awake and attentive to the various discussions which are taking place upon the subject of Free Trade. It is upon these voters, in their incipient state, that we must make our impression before we can expect the sympathy of the entire borough of the country. That there is such a list this paper shows, and it only requires the continued action of the members of the League, and the influence of that body on the minds of these electors, to change the entire face of the constituency of this country. Then, in addition to these changes, I come to the results. There are 4 boroughs which at the last election returned 4 monopolists; in which, from local causes, we could, were an election to take place to-morrow, return 4 Free-Traders along with their 4 monopolists. (Cheers.) There are 7 boroughs which, at the last election, returned 7 Free-Traders and 7 monopolists; they were divided boroughs, in which, were an election to take place to-morrow, we could return 14

Free-Traders. There are 14 boroughs, having 21 representatives entirely in the hands of the monopolists, which have been gained during this revision to the Free-Traders (loud cheers), making a total of 32 members gained from the monopolists in favour of Mr. Villiers's motion. (Renewed cheering.) And this has been done in the course of a single year; and the information I am furnishing by no means comprises the registration of the whole of these boroughs; but I believe that the remainder of the reports will show a gain pretty nearly in the same ratio as this which I have now read over, and which report you shall have at the next meeting. Then we have turned our attention also, in some little degree, to the counties. (Cheers.) We only took one county fairly in hand for this last revision, and I will give you the result in a very few words—I refer to South Lancashire. You all know that at the last election for that county Mr. Brown was defeated by Mr. Entwistle, by a majority of 578. There are 40 townships in the polling districts of South Lancashire in which there are upwards of 100 voters, and there are 152 rural or agricultural townships in each of which there are fewer than 100 voters. In the 40 townships, chiefly commercial, there are 11,800 voters in the aggregate, and there Mr. Brown had a majority on the poll of nearly 500; while in the 152 small townships situated in the rural districts, where the influence of the landlord is strongest and most easily brought to bear, the majority against that gentleman was two to one, or upwards of 1000. (Hear.) Now, we have taken this register; we commenced, as all men ought to do, by fortifying and strengthening our friends. (Hear.) We asked them to re-claim, and to amend their description where it was vague and imperfect; and in this manner nearly 3000 alterations were made in favour of our friends. We then objected to the monopolists; and on the objections, out of the 7571 who voted for Mr. Entwistle at the last election, we struck off 878 (cheers); while they removed from ours 422,—we gaining rather more than two to one upon the objections. Then we re-claimed and placed upon the register 2821 new votes, while they added only 1357. We have, therefore, upon the new claims alone, 1461, and upon the objections 456, making together a total of 1920. But, as there are still a few new claims unascertained, we give them the benefit of the whole of them, and then we have a majority on that revision of upwards of 1700. (Loud cheers.) This shows at once what can be done when the work is set about in earnest, and with a determination that it shall succeed. The registration courts are now closed; but it was discovered, during this revision, that new claimants could be introduced, whereby counties might be won previously to the next revision, and that easily. We look at South Lancashire, and see that, in the commercial districts, the voters are as 1 to 80 of the population; and we find that in the most rural districts they are as 1 to 23. We see that in the towns of Manchester and Liverpool the voters, as to the population, are as 1 to 120; while in the most rural districts of the north the voters are as 1 to 23 of the population. This rule holds good throughout the whole kingdom: the more manufacturing the population of the county, the fewer the voters in proportion to their numbers; and the more rural the district, the greater the number of voters in proportion to the inhabitants. Take Buckinghamshire, you have one voter to every 25 of the population; while for Middlesex there is only 1 voter for every 115. (Loud cries of "Shame.") In East Surrey there is 1 voter for every 78 of the population; but in the western division of that county there is 1 for every 26. Now, this rule holds good throughout the country, and proves that the monopolist landlords have qualified and enfranchised to nearly the fullest extent of their power in the rural districts, while there is an immense field in the commercial and manufacturing districts which has never yet been trenched upon for qualification. (Cheers.) We proposed, and at once set to work, to enfranchise, to induce our friends throughout the kingdom to become electors for the county. We formed committees for that purpose, we made no secret of it; we have no secrets even from the enemy. (Hear, hear.) We gave them due notice of what we were about to do, what we intended, and shall do. We intend to qualify for South Lancashire, before the 31st of January, 1000 voters more. (Loud cheers.) We look over the brook that separates us from North Cheshire: we see, at the last election, 500 was the majority against the Liberal candidate, and which would have been the same against a Free-Trade candidate. What is 500? What is such a number, to be obtained from parties residing in the populous towns of that district? Nothing. We set to work, and now there are nearly 500 qualifications already put down for that county. (Loud cheers.) We will look to the West Riding of Yorkshire—the next great county. Since 1841, notwithstanding their severe contest in the registration courts, the Free-Traders have gained in that county 250 votes towards meeting the monopolist majority of 1100; and yet we were told by many of the legal gentlemen in that district, that in that county nothing more could be done. What said the League? It shall be. (Cheers.) Mr. Cobden and Mr. Bright called out, passed to Halifax, and said, "Qualify: get 200 voters for your district before the 31st of January." They then proceeded to Leeds, where they will get 400 for that town qualified before the 31st of January. (Cheers.) They then went to Huddersfield, and said, "You have only 104 for this township; qualify—treble it!" We had a letter two days ago from that place, saying "We have done it already." (Loud and continued cheering.) "Do you want assistance in Yorkshire?"—"No," say they.—"Will you accept our assistance?"—"Yes."—"We will give you 500 votes from South Lancashire, for the West Riding of Yorkshire;" and we shall more than do it. Then we come to Middlesex (hear, hear); you will hear to-night how to win that county, and do it effectually. You have a population in Middlesex equal to that of 12 counties such as Bedford, Berks, Bucks, Hertford, Hereford, Cambridge, Huntingdon, Monmouth, Oxford, Rutland, Westmorland, and Cumberland. You have a larger population in Middlesex than there is in the whole of those counties, the total population of which, returning 36 members to Parliament, is fewer than that of Middlesex alone, which returns but 2. (Cries of "Shame.") Now, I am told that in the Hammersmith polling district of Middlesex there are only 1913 voters on the register, while the whole male population of the district is 48,042, and the males above 21 years of age are 30,317; you have 1900 voters for a population qualified to be on the register, with a little addition, to the number of

30,009. You have also 17,000 houses in that district. In South Lancashire, if a large manufacturing constituency registered in the same ratio as the small districts, we should have in the 40 townships I have previously mentioned, instead of 11,000 voters, 20,000 and odd. Why, in Middlesex you could have, instead of 13,500, 30,000 voters. (Hear.) If Middlesex was in the same position in which the West Riding of Yorkshire is at the present moment, you would have upwards of 20,000 voters for that county; if you were only in the same position in which we are in South Lancashire at this time, you would have 18,000 voters. I only mention this to show what a vast field there is in Middlesex untilled. We might go through the whole of the country, but we only propose to clear off these before the 31st of January. The League might at this moment have been preparing a petition to a hostile Legislature, and a House of Commons which sits to legislate for their own exclusive interest, to repeal the Corn Laws; but we have changed our tactics, we have altered our ground, and we now appeal to those who make Houses of Commons (cheers), and the League shall make the next for itself. (Renewed cheers.) We will send no more deputations to men who were indifferent to the cries of distress, and to the statements of the deputation who represented the condition of the manufacturing districts; but we will apply ourselves as men knowing the changes which are taking place in opinion, daily and hourly, of the constituency of this country, and will guide and regulate that constituency, and direct that public opinion till it shall effectually, and at no distant period, overthrow this and all other monopolies. (Loud and prolonged cheering.) The CHAIRMAN then called on Mr. Villiers, who proceeded to address the meeting amidst loud cheers.

Mr. VILLIERS: Ladies and gentlemen, if this is to be taken as the result of the League being dead, I think our opponents, if they were present, would think they might as well have allowed it to live ("hear, hear," and laughter); for if it is really the ghost of the League, it bids fair to trouble them more than the departed body. (Laughter.) Perhaps it may do what the body could not, but which ghosts are said sometimes to do; namely, cause bad men to repent. (Cheers and laughter.) However this may be, I think this noble assemblage must be taken as a sign, while they continue to sit against justice, by means of this monopoly, that, dead or alive, the League will be with them (cheers and laughter); and that, in my opinion is right, and as it ought to be. (Hear, hear.) It would be better, of course, if there were no injustice—better if it could be removed with less cost of time and toil; but assuredly it is better not patiently to submit to this wrong (cheers)—for wrong it is—grievance it is to the English people, or the whole world is in error. (Hear, hear.) I believe, in my conscience, that every just man, and every wise man, not lulled by interest, wishes success to this agitation (hear, hear); but I do not believe that any man can hope that those who enacted this law will scruple to continue it if left to themselves; or that while we may in vain search our history for one great, just, or generous measure conceded by Parliament without some pressure from without, that we can expect the most distant prospect of success, without some organization, some cordial co-operation, of all men united in opinion on this matter. (Cheers.) It is for this reason that I have acted, and shall readily continue to co-operate with the League. (Hear, hear.) Each year I am more confirmed in the wisdom of the end they have in view; and more than ever am I satisfied that there is no nearer way than by removing the obstacles to trade, to abolish what I must consider not only the misfortune, but the disgrace of this country, in the mass of beings, fellow-subjects, fellow-Christians, who, from year to year, continue in these islands, not only destitute of all the decencies and comforts, but of the essential of life, amidst and by the side of more wealth, more superfluity, more wasteful expenditure, than probably exists in any other country of Europe. (Cheers.) It is for this reason that I watch the progress of this cause, and of this great association, with anxiety and hope (hear, hear); and I have come here this night, as you have doubtless also come, to hear what the chairman had to say of his past proceedings, or of his prospects (hear, hear); and I own that I have been gratified with the statement which he has just made (hear, hear). It is cheering and satisfactory. (Hear, hear.) What has been done and what is intended, shows spirit, and perseverance, and determination; and these are the qualities that ensure success in this world. (Hear, hear.) With regard to the end, we are all agreed. It is to give force to the Free-Trade party. The means I presume, are most legitimate, for they are those of our first Ministers. (Laughter.) When Sir Robert was out, and wished to be in, he called his friends together, and explained to them the rights they possessed, and how they could use them for him (laughter), and told them to go, each man, and register a vote; and they went and did as he bid them, and Sir Robert came in in consequence (laughter); and if Sir Robert had not told them they would not have attended to the register, and he would not have come in. (Hear.) Well, then, is not this the advice which the League tenders to its friends, whom they advise to profit by the privilege which the constitution gives them, to register their votes; and with this difference only in the end, that the League does not want to turn anybody out or anybody in, but to compel whoever is there to do what is just to the people (cheers); and Sir Robert can hardly say—Register, register, to put me in power; but do not register, register, to make me use that power justly and wisely. (Hear.) I see no reason why the League should not succeed in adding greatly to the strength of their means; and one thing is sure, that nothing will be gained unless something is attempted. The League is trying what they have reason to believe will succeed; they are not standing still or, as our opponents say, dying, but they are trying something new, and which, from what I have heard my hon. friend the Chairman say, is not unlikely to succeed. (Cheers.) It is gratifying to hear what he has told us of the rescue of one important county, which has always heretofore been in the hands of the Monopolists, and would have remained so but for the efforts the League have made. (Cheers.) That is a proof that it is worth making some attempt to improve our position. We were beaten at the last election in that county, perhaps, from not having attended to the register. I believe that the monopolists of Lancashire have since that county now in consequence of their having attended

to it. (Hear.) I see no reason why that which has happened in Lancashire should not occur in Yorkshire; and if that which happened in Lancashire and will do so in Yorkshire is the result of the intelligence, numbers, and property of the commercial and productive classes, I ask why that should not happen in Middlesex which has been accomplished in the other two? (Hear.) I have seen it remarked that it is idle for the League to attempt to accomplish this purpose, because the soil belongs to the aristocracy. I believe, if it was announced as a fact that the soil belonged exclusively to the proprietors, it would alarm a good many people in this town. (Hear, hear, hear.) There is a class of persons called mortgagees. (Laughter.) There are particular people who possess title deeds, and if they were to be told that their securities and deeds were of no avail, because somebody else possessed the soil, it would create a panic among a large number in this metropolis. It is all a fancy to say that, because nominally they possess the soil, they have complete power over it. (Hear.) If our friends succeed in giving strength to their party I have no doubt we shall be as well or better satisfied with the result than, perhaps, Sir Robert Peel's friends are with the result of their efforts. (Laughter.) I think the League have chosen the time well, and have selected the proper moment for doing something. We have had a great deal of discussion, and the time for action is come. (Cheers.) It is quite right that men should reflect and think before they act; but they should be ready for action when they are decided; and that time, in my judgment, is come. The Free-Trade party is large and strong, and the moment for putting their strength to the test has arrived. The state in which our friends, the protection societies, are makes the moment good also. (Laughter.) This discussion and agitation have had a different effect upon them than they have had upon our friends; that which is of service to the advocates of a sound principle does little good to the supporters of a great injustice. (Cheers.) When the protection societies asserted that the League was no more, the wish was father to the thought; they did not suppose it to be true, but they hoped it might be so. From all I have heard, the same little disaster—of premature demise—which they had asserted to have befallen the League—has occurred to them. (Cheers and laughter.) Without wishing to be uncivil, I must think that when the landowners entered the field of agitation, they did so under false colours. They said they did not appear there for themselves, but that they represented somebody else; but when that "somebody else" came to be asked about it, he was found to be a very reluctant client, and not very grateful to his champion. (Hear.) The fact is the British farmer and the agricultural labourer are not romantic characters (a laugh); and it was drawing a little too much upon what there was of chivalry and fancy in their composition to suppose that the farmer would show much enthusiasm in the cause of high rents, tenancy-at-will, and the strict preservation of vermin (cheers); and rather too low an estimate of the understanding of the labourer to suppose that he would be very loud in the cause of low wages or no employment at all, which is commonly his lot. (Hear.) When the point came to be examined it was found that what they want us to believe is a happy family party—and call the agricultural interest was very much disagreed on the subject upon which it was most essential they should be united; and at this moment the labourer and the farmer are occupying themselves with the question which the landlord has not answered, What part of the benefit accrues to them from this system of protection? (Hear.) What advantage is ever likely to come to them from it? I ventured to predict in this place in the beginning of that year, that these protection societies would not endure long. (Hear.) I then said that I thought they would first disagree, and then disappear; and I believe that is pretty much the case. (Hear.) To be sure, in the report of the last agricultural meeting, I read that some gentlemen, I believe a member for a county, who spoke as to the prospects of protection in no very sanguine tone, said, "At all events, that if they were to sink, they should go down covered with the Union Jack." (Laughter.) I really did not quite understand what that meant when I read it; but I asked a gentleman connected with the county what it might happen to mean? He was rather indignant at the question, and said, of course, it meant that all the gentry were united in resisting Free-Trade. (Renewed laughter.) There is no doubt that the gentry are unanimous on that point; the gentry, of course, are agreed on the question of whether rents should be high or low; but the gentry are not "the agricultural interest." There is a wide distinction always to be taken between the landowner and the farmer,—one which has been happily illustrated by my friend Mr. Cobden in this place,—that there is no more connexion between landowning and farming than there is between a shipowner and a sailor. (Hear, hear.) I allude to this state of the protection societies in order to show that the present is a good moment for proceeding; and that we should not be inactive because we have gained hitherto, and because those who have been engaged in agitation for the opposite object have little prospect of advancing. (Cheers.) There is another reason why I think that the friends of Free-Trade should now feel encouraged. There is one ground of hope which our opponents have entertained—that the League would discontinue its efforts, and which I am very glad to find has been frustrated. It has been said that the League is chiefly supported by and composed of manufacturers and persons connected with trade, whose sufferings from the slackness of business during four or five recent years weakened their combination; but that, when any circumstance occasions a revival of that trade, they will cease to support the League, or care for the principles for which they have contended. It certainly is true that the persons engaged in the great businesses of the country, persons connected with manufactures, commerce, and trade, are those who sympathize most warmly in the progress and the objects of the League. (Hear.) It is also true that there is at this moment in the country a pause in all those distressing consequences that we have seen to result from stagnant trade; the occasion, therefore, does arise for testing the sincerity of those who have given attention and countenance in various ways to the proceedings of the League. But I say it is one of the most gratifying circumstances for any independent advocate of this great principle, to observe that wherever interest has been felt and manifested in this cause it remains unabated and unabated. (Hear.) I have been told that wherever my honourable friends have travelled

in the country lately, and this subject has been discussed, the same interest and excitement have been exhibited as were ever shown at a time when, from prevailing distress, there was the greatest reason for it. If any doubt existed upon this subject, I know nothing which ought to remove it more than the presence of so numerous, respectable, and striking an assemblage as that now collected within this building, at such an inclement season and under the present and peculiar circumstances of the country. (Loud cheers.) If this had been one of those ephemeral movements that spring out of occasional distress or from some party contention, that which was expected by our opponents might have occurred; but I do believe that this agitation is now connected with a deep conviction in the public mind that it is a contest for a principle intimately connected with the future well-being of the people of this country. There have been so many revolutions in trade—such periodical returns of the depression of trade—that it has led the men of business and men of sense in this country to reflect upon its cause. I do believe that thousands and tens of thousands have come to the conclusion, that, as long as there is a constant legislative interference with those principles of trade, which otherwise would be wisely and usefully acted upon, there will be neither steadiness nor stability in our commercial affairs. (Cheers.) I am satisfied that the persons who have given thought and attention to this subject are now convinced, that as long as the inhabitants of this country are made to depend on our own soil for the necessities of life, and are rendered so dependent by the instrumentality of an act of Parliament in order to protect the owner from competition, so long will the whole economy of the nation be made contingent upon the accident of a season. (Loud cheers.) It is for that reason that there is now a very large party in this country, composed of all classes—people not of this or that class, but some from every portion of the community—who now identify the success of this great association with the best interests of the whole nation. (Cheers.) The people of this country do not take up an idea or an opinion lightly; but when they do see a great truth, and embrace it, I know nothing more characteristic of the nation than the perseverance and determination which they show in carrying it out. (Hear.) I hope that my honourable friends the members for Stockport and Durham (loud cheers), to whom the country and the community at large are so deeply indebted for all their exertions (renewed cheers), feel encouraged by the impression which it is obvious their efforts and talents have made upon the country. (Hear.) This is a good moment for the advocates of Free-Trade to meet and discuss the subject; because there is something very gratifying in the confirmation of the justice of their views which the present state of the country now affords. I think I may venture to say that I am some little authority upon the difficulties which have been offered to us in discussing this subject, having so frequently brought the matter forward, and attended to its discussions. (Cheers.) I certainly know the points which our opponents have made with most effect. Questions have been raised in connexion with this subject which ought not to decide the matter in the breast of any man, but which have been artfully put forward by those who wished to divert attention from the principle itself; for the question of whether the Corn Law should exist ought to be decided at once upon principle. (Hear.) I say that no man has a right to have his fortune increased at the expense of the community, unless he can show some public advantage for it. (Hear, hear.) You are not justified in preventing any man from exchanging freely with those who wish to purchase the fruits of his industry, unless any public good can follow from the prohibition, which in this case no one can pretend. (Cheers.) I say, therefore, this question of the repeal of the Corn Laws is one of principle—one which ought to be decided upon that alone. But the aristocracy and the monopolists have artfully raised doubts as to the effects of now repealing the Corn Laws. Knowing that the people of this country are always cautious in effecting changes, they started notions and fancies with respect to the results of this measure which have alarmed the minds of some. They have been able to beguile a portion of the community into the support of this law by the fears they have excited in their minds with respect to its abolition. There are some things which they have iterated and repeated again on every occasion. They have addressed various parties in this country—the poor, the interested, and the timid—and that by the consequences they have said would result from the repeal of these laws. (Hear.) There are three things especially that they have always endeavoured to bring before the public, and there has never been any discussion without their being repeated. You may find them in all the organs of monopoly; in their recorded speeches, and in every thing that has been written and said upon the subject. They have said that three things are certain to follow a repeal of the Corn Laws: "It will lower the price of provisions," say they, "and from that will follow a reduction of wages, an injury to the home trade, and a decline of the revenue." Over and over again have these fallacies been repeated. To the poor man they have said, "Be careful how you suffer these laws to be repealed; they raise the price of provisions, it is true; but with it also your wages. Look to the men who are anxious to repeal these laws, and you will see they are your masters or employers, and it is for the purpose of lowering your wages that they want to reduce the price of provisions." To the tradesman they have said, "Maintain us in all our splendour; allow us to possess our grand establishments; let us live in all the wealth that proceeds from high rents and the fortune which comes from the Corn Laws, and we will be your customers; and you as shopkeepers shall supply us with all the luxuries we want." To the timid, and those who may, perhaps, live on the dividends which as creditors they receive, they have said, "Remember it is the national debt that makes it necessary to maintain this system; it is bad in itself undoubtedly, but it is rendered necessary by the unfortunate encumbrance of the debt. You cannot collect the revenue, which is necessary to pay the interest, if you now abolish these laws. The Corn Laws are injurious; but remember the wages of the labourer, and the maintenance of its faith with those who have lent it money, cannot be supported without them." These allegations have been made by the monopolists on every occasion, and it would be useless to deny it, with great success. I have seen with sorrow and with regret the effect

these absurd statements have produced, and regarded it as an indication of want of intelligence and independence in those whom they have influenced. (Hear, hear.) That these things have had great success there is no possibility of disputing. I have turned sometimes to friends whom I could name, and observed, if men will be influenced by such arguments as these, there is no chance of success at present; but we must wait till some happy combination of circumstances shall arise, when effects shall be produced without the repeal of these laws, which it is alleged would follow if they did not exist. There may be abundant seasons; importations of food; and such circumstances may arise when the price of provision will fall—when food shall be as abundant as if trade was free; and then we shall be able to put to the test the worth of these fallacies. (Hear.) The advantage, then, of the present moment is, that it is a time when these circumstances have occurred. (Hear, hear.) We have these facts now before us, by which we can test the truth or the falsehood of those statements. By the blessing of Heaven we have had two abundant seasons, especially the last one. We have had large importations at the expense of the merchant and importer, unfortunately, who gamble and speculate in trade, owing to the character of the law. But the fact is, that we have had abundance of food brought to our markets, and the price of provisions has fallen even below that which those who have given most attention to the subject have ever fixed as the price of food if the trade was free. We have now an opportunity of judging whether all those disastrous results are likely to follow, which the poor people of this country have been deluded into believing, and thereby have persuaded some to oppose themselves to Free-Trade rather than to become its advocates. (Hear, hear.) It is not necessary for me to enter into particulars of that which is notorious to the country, but I ask any man here if he has not become familiar, within the last three months, with the fact of wages having risen throughout the manufacturing districts? (Cheers, and cries of "Yes, yes.") Whether he has not seen with joy and satisfaction that there has been a successful effort made by the industrious people in almost every town to raise their wages? (Hear.) They have succeeded in almost every business. Nay, I was happy to see, a few weeks ago, that even the men upon the sea had succeeded as well as those upon the land—that the very fishermen had struck for wages, and had obtained their demand. (Cheers.) But what becomes of the statements by which these poor people were formerly cheated out of the truth; because if the fall of provisions causes a diminution of wages, how is it that the fall of wages has not taken place with the fall in the price of provisions, and that wages have risen? I ask if it is not equally notorious that where trade has improved it has been at home; that all branches of business, every thing dependent on the internal traffic in this country, have improved within this year, and since the time that provisions have fallen? (Hear.) Why, literally, it is labouring to prove that two and two are four, to question how it could be otherwise! If a man has money in his pocket after purchasing the common necessities of life, he spends it in manufactures, and this gives the producer of the various articles of clothing and other comforts the business and profit which he is now gaining; but if the man exhausts his means in supplying himself and family with food, there is nothing left for the manufacturer, and his occupation is gone. (Cheers.) But the revenue is said to decline if the price of provisions falls, and high rents are consequently not paid. Now the 6th of January, which is quarter day, is near at hand. Just remember this meeting when that day arrives. There is no mystery now, fortunately, about the income of the country; we have official documents to establish every fact connected with it. Just compare the revenue of the 6th of January, 1845, with the state of the Exchequer on the 6th of January, 1842, and look also at the price of provisions in those two years. (Hear.) I am speaking in the confidence that my views and opinions are just upon this matter, and I will rest my credit on what will occur on this same 6th of January. When you make the comparison of the price of wheat, you will find that in 1842 it was 67s. a quarter, and you will have it in 1845 at about 47s., probably less. Do not merely take the gross revenue, which may include the property and income taxes; but look to those sources which indicate the condition of the people. (Hear.) See, then, whether the income of this country does not vary with the circumstance of the price of food; and whether, if the condition of the people improved, the revenue does not rise and the public creditor is not much safer when the consumers are well off and the poor man gets employment, than when the people are obliged to exhaust their means for food, and cannot consume articles that are taxed. (Loud cheers.) Remember another thing, gentlemen; for it is a most important observation that you ought to make at this moment. When I say there is more abundance of food, and that provisions are cheaper, observe also whether there is not less misery, crime, pauperism, mortality, and disease. (Hear.) These are consequences we have always pointed out as springing from scarcity of food and the difficulty which people had in procuring it. The Free-Trade invariably said, that when food was abundant and prices fell there was less of these human calamities. I say, watch this year, and observe if all these misfortunes have not rather diminished, and these things become comparatively with former years, less in number. There is no difficulty in ascertaining these facts; there are official documents which give you accurate information upon them; and I say that every man is now bound to compare them, and see whether there is not always an intimate connexion between the price of provisions and the general state of the people. Prepare yourselves for a fallacy which may be urged, but which, if you are well informed, you can at once meet. Your opponents may say, "True, these misfortunes are diminished, and all these evils are less in the country than they were; but it does not follow that the price of provisions being low has caused this improvement." Put these questions to them, "What did you say was the cause of distress when all the manufacturers were suffering? Where are all those statements that you made when the country was in a generally bad condition three or four years ago? What were the things that you then pointed out as the cause of the wretchedness of the people, and that if they ceased they would be better off?" Machinery, over-production (laughter), agitation, hostile tariffs, poor law, the truck system, and God knows what else. Ask them if any one of these things has changed; whether there has been any alteration in these matters which they

then alleged caused the distress at the time when the prices of provisions were high? There is more machinery now than there was three years ago (hear, hear); there has been a greater amount of manufactures produced than there was at that period; and I do not think there has been any decline in agitation. (Loud cheers and laughter.) As to the hostile tariffs of other states, there is hardly one country with which it is necessary for us to have trade, that has not raised its tariffs against our commerce, owing to our own senseless regulations and bad example. (Hear, hear.) Then it is not foreign trade that has been the cause of the improvement; neither is it a diminution of machinery or production. I want our opponents to say what other cause they can assign, and what circumstances have occurred to cause a rise in wages, at a period when there has been a reduction in the price of provisions, and a much greater abundance of food than ever existed before. (Hear.) Why, I remember that notable gentleman whom the borough of Knaresborough has sent to Parliament (loud laughter and hisses)—he wished, like many people of his sort, to divert the attention of the public from the monopoly which his party are bound to support, and with whom he, as a partisan of the monopolists, is pledged to act. If you remember, at that time he came forward with all kinds of charges and personalities, accusing all the commercial and manufacturing classes of this country with every kind of crime and misdemeanour, and with all sorts of things, which he said accounted for the misery of the people. I want to know whether there has been the least change in any one of the things that he said caused the distress of the country. No, all remains unaltered; even he himself is just as he was. (Loud laughter.) He has been making a long speech, I believe, in which he has abused every body, and every thing, and praising himself exactly as he has always done before. (Renewed laughter.) The mare's nest that he was most proud of discovering, as the cause and not the result of distress, was that the truck system was practised in this country. (Laughter.) He had a committee granted him upon the subject, because he was to prove before Parliament that all the members of the League practised that system. Why, of course, he could not prove any such thing, and we have never since heard any more of his truck committee. The evidence of that committee was reported to the House; there it has slept for two sessions, and not a thing has that hon. member ever done about the subject since. (Loud laughter.) But what are we to think of those persons who, in spite of these facts, support this system of artificial scarcity; for it is the character of the Corn Law—it is not worth a straw unless it does that—its simple purpose is, to cause a scarcity of food; that is what raises its price, and makes its value to those who profit by it. I want to know—when these people support this law in the face of all the consequences that can follow from it, in the teeth of all the statements which they have made of consequences which they alleged would result from its repeal being positively refuted—how can they escape the charge of being the cause of all the misery, mortality, disease, and poverty which have happened when there is a scarcity? (Loud cheers.) A man who acts with his eyes open must look to the consequences of his acts, and for these he is responsible. Is it not a trick practised by the rich upon the poor—the educated upon the ignorant—to tell them, in defiance of all the experience and evidence that we have had to the contrary, that the higher the price of food is, the better will be their condition? What, in reality, is such conduct as this? Is it not a delusion palmed upon the poor, who do not know better? Is it not like a fraud practised by the rich upon the poor, for the purpose of enabling them to get richer at their expense? (Hear.) Does any educated man believe for one instant that, if you make food scarce, you can render the condition of the poor better? Is it anything less than deceit, to say that if bread rises the poor man will be better off, and that he will be injured when the price of provisions falls? And if so, is it not drawing rather too much upon the simplicity of the country to expect them to believe that those who support this system are more charitable and Christianlike than others, because they may alleviate some of the suffering they have caused? (Hear, hear.) They have produced this misery by maintaining the artificial scarcity, and by continuing this unjust law; and you are asked to believe them better than their neighbours, because they go about the country asking "What can the matter be?" inquiring what has caused a sighing over all this suffering, and recommending you to relieve it. (Hear.) I do not wish to use harsh terms, but upon my word this is all as like hypocrisy as anything can well be. (Hear.) We read in history that when Charles V. caused the Pope to be imprisoned, he desired prayers to be offered up in all the churches for a safe delivery for his Holiness; taking good care at the time to remind his gaolers to keep him close. (Laughter.) Why, really, the conduct of the monopolists is something like this: they fetter the industry of the people; they blind them hand and foot; they do not allow them to earn an independent living; they confine them to competition by this means, and find them miserable in consequence, and then say, "What can be the cause of all this suffering? Who has caused it? Let it be relieved quickly. For God's sake relieve it as quickly as you possibly can." (Cheers.) I do not wish to discredit their charity, or discourage them in their attempts to alleviate the sufferings they have occasioned; that is only some indemnity to the poor—a partial restitution of what the industrious have been deprived of by their system. The landlords may let out their parks, if they choose, to the labourers, contribute all their cash in charities, and thus endeavour to mitigate to a certain degree the enormity of this law, if they like. I do not discourage them in such a proceeding, but I say, to suppose for one instant that all this charity or almsgiving can be any substitute for independence, obtained by honest industry, is a mockery and a delusion. (Loud and continued cheering.) It is a calumny on the people of this country to suppose that they prefer charity to labour; it is quite against the spirit of the people. The very genius of the men of this country is to be industrious in order that they may become independent. (Renewed cheers.) I believe that what the poor men in Wiltshire stated in their petition the other day spoke the sentiment of their whole class: they said they did not want charity but justice (hear, hear); they wished to spare the great folks the expense, and themselves the humiliation of receiving alms; that they wanted to have their right to exchange their labour with those who would employ them, and to do so freely. They repudiated altogether the idea that they

could be benefited by a few persons in this country being protected. In that petition they speak only those sentiments which, I am glad to say, have been proclaimed by the whole democratic party of the United States. (Loud cheers.) In that country they have repudiated the principle of the monopoly of the few. They say, protection to all or none; you cannot protect a few except at the expense of the rest: that is not justice or wisdom. Therefore they repudiated the idea, and they have proved their sincerity by the manner in which they have acted. This, however, is of the highest importance from its bearing upon the great and all-absorbing question in this country, how the people are to be employed and how the great and increasing population of this land are to find work. If you look at all the meetings that take place, the various charities that are recommended, and the associations that are formed, they all go to this point—how this great and increasing population is to find employment for their industry? and that is now the question that ought to absorb the interest and attention of our statesmen. It is high time that something should be done. (Cheers.) The quantity of poor we have in this country has latterly become a scandal in Europe; it is notorious wherever England is known, and people abroad are unable to explain our condition in consequence. They say we have the wealthiest aristocracy and the wealthiest church in Christendom, and yet we have a larger mass of people morally and materially degraded in condition than is to be found in the same proportion in any other state. We know that there is much truth in this, and we are bound to improve. The issue as to the mode in which this can be done is now narrowed; the question now is, whether employment for the people can be found in restricting and impeding commerce, or by unfettering and letting it be free? That is literally the question which we have now to decide in this country. Productive employment and industry, is the comprehensive way of meeting the difficulty of our social condition. There are some who, by their manner of acting and mode of arguing, believe, or profess to do so, that, by impeding commerce, choking up channels of trade, and thus checking the industry of the people, you can ameliorate the condition of the poor more effectually than by setting trade free and allowing the foreign customers to come here and purchase the fruits of their labour. (Hear.) The question then is, whether commerce shall be free. (Hear.) If duties are imposed on the exports of this country, I suppose nobody would have a doubt that that would be prejudicial to the interests of this country. If there was any impediment or barrier imposed to the export of British industry, would not every one say that that was the cause why the people could not find employment? I say there is not the slightest difference between an obstacle thrown in the way of importation and a barrier imposed on exports. There can be no import to this country without an export; if you stop the import to this country you stop a customer for British industry; if you stop that customer for British labour you prevent the labourer from getting employment. That is our case. The plan is to give employment to the people. We say, allow the freedom of exchange; permit the foreign customer to come here; your labourer will get his custom, or will have the employment which you cannot give him yourself. (Hear, hear.) British labour will then be in request abroad, and that to any extent: I know no limit to it. (Cheers.) Let the English labourer obtain his food where he can best get it, and he will only get it by finding a market for his labour. (Hear.) But the Corn Law exists, not because that produce will not come into this country, but because it is known and believed it will do so. Does it not, then, depend upon the Legislature how long there shall be this mass of destitution and misery in these islands; it rests with them whether these restrictions on food and employment shall still continue. Instead of these benefits only applying to the manufacturing operative, I say that free commerce will improve the condition of the agricultural labourer, more obviously, almost, than that of the manufacturer. (Hear.) There are two things admitted by the agriculturists themselves; and I think their admissions may be taken as conclusive. What they state is this, that throughout this country agriculture is defective; that it is backward; that the soils of this land are not cultivated properly. They tell us another thing, that if the soil was properly cultivated there would not be one labourer too much here. (Hear.) Then it comes simply to this question: how is it, that in this great, enterprising, and wealthy country, the soil is not cultivated, and the labourers are not properly employed? It simply results from this, that there are arrangements made between the owner and the occupier which utterly preclude the proper culture of the soil. Why is that? Because the owner is protected by an act of Parliament, and his wits are not quickened by being thrown on his own resources, and by the spur of competition and commerce. If that was done, why, of course, he would act like every other human being—consider how he could turn his land to the best account; he would feel that he would not be able to maintain his position if he did not. But, while he is protected by an act of Parliament, can you wonder that he thinks more of his game than his tenants, or is more concerned for the continuance of the monopoly than the improvement of his property. (Hear, hear.) What would be the case if you threw open the trade? Why, one of two things would happen: either that you would have the land properly cultivated, and thereby the labourers employed for the profit of their labour, which would make them good consumers of manufactures; or, if you were to have your food from foreign countries, you would extend your manufactures, and absorb the surplus population, skilled and unskilled, by the additional demand for labour. So that, in either case, I say the agricultural labourer and the operative would be advantaged in having commerce free with the countries that grow food. (Hear, hear.) Nobody for one instant believes that we should have heard much about improvements in agriculture but for the agitation for Free Trade, and the fear of its success; or, if this was to subside that we should hear much more about it. (Hear.) But if the fear of competition has led to a talk about improvement, and the adoption of it to some extent, what may not be expected from this policy being practically in force? (Hear.) After thirty years' protection from competition we find the land neglected and the poor unemployed; and every experienced and independent man who has thought on the matter believes that, if agriculture was to receive the healthy stimulus of commercial competition, the produce of the soil and the employment of the poor would greatly increase. (Hear.) Where is there, then, a scheme that offers

anything to be called an adequately comprehensive remedy for the present state of our population, but that of opening our trade with the countries whose productions we require. And is this a moment to neglect? Are we to suffer the disgrace still to attach to our country of possessing more wretchedness with more wealth than any other civilized state? Is it not true that something should be attempted, at least, to mitigate the suffering which we daily read of as attaching to whole classes of persons? Is it wise to lie upon our oars at this moment of comparative quietude, awaiting, with the certainty with which we expect the rising sun, the recurrence of bad seasons? (Hear, hear.) Are we prepared again for a repetition of those scenes which occurred in some of the most popular places, where starving men broke into tradesmen's houses and devoured the food they found raw, in the streets, to prevent death? (Hear, hear.) Are we always to depend upon the strong arm of the law, and never upon the contentment and well-being of the people? And, if this is not prudent or right, would it not become us to profit by this precious moment which Providence has yet left us—each in his own sphere—to use every influence, to profit by every privilege, to leave no right unused, to procure for the community that act of justice which, while it will raise the moral and material condition of the poor, may permanently secure the prosperity and greatness of the country? (The hon. gentleman sat down amidst loud and prolonged cheering.)

The CHAIRMAN then came forward, and said—Mr. Cobden will now address the meeting.

Mr. COBDEN then advanced to the table, but was prevented for some minutes from proceeding by the enthusiastic and prolonged applause by which he was greeted. When the cheering had subsided, the hon. gentleman addressed the meeting as follows:—Ladies and gentlemen, I could not help thinking, as I sat here surveying this magnificent spectacle, how I wished that all our friends scattered over the length and the breadth of this land, could be present to-night, to feel their pulses beat quickly in unison with yours, to look you face to face, and join in that triumphant shout, which augurs prosperity to our good cause. (Hear, hear, hear.) Ladies and gentlemen, we meet here to-night for business. I am almost sorry for it; for we have had many statistics, which probably are not the most captivating to five thousand people assembled together on this occasion; and, besides, at this time I happen to know that we have a large number of visitors, whom I am especially anxious to see. I am aware that there are many farmers in this assembly, who have come to see the Smithfield Cattle Show, and have been tempted to smuggle themselves into this assembly. (Cheers and laughter.) I am sorry I cannot give them a farmer's view of our question to-night; but I ask them to look round on this assembly, and then let them, on the day after to-morrow, Friday—it is an ominous day (a laugh)—wend their way to Bond Street, and attend the meeting of the Duke of Richmond's Protection Society (laughter); let them remember the scene here—count the odd duke or so, the brace or two of earls and the half-dozen members of Parliament, and the score of land-agents and land-valuers—and then, with a vivid recollection of this scene, let them ask themselves which cause is likely ultimately to triumph? (Hear.) I beg of them to compare these two scenes, and to remember that these meetings of such a different character are but types of the comparative merits of our two causes; and let the tenant farmer then go home and attend to his own business, and not look to dukes or acts of Parliament to help him. Let him talk about corn-rents, such as the sagacity of the Scotch farmers has secured for themselves for nearly twenty years, when they found the operation of this sliding scale of corn duties. (Hear.) Let the English farmer put himself on the secure basis of a rent of that description—I mean rent calculated on a certain fixed quantity of corn per annum, fluctuating in price as the value of corn varies in the averages, and then he may bid defiance to all acts of Parliament. (Hear.) It makes no difference to him, then, what the price may be. He may talk to his landlord about a few other things, such as game and so on, and he will be better employed than in listening to speakers at protection societies, or going to dukes or members of Parliament. (Hear, hear.) I believe we have another visitor here to-night. I have had put into my hands a little tract, published by the enemy, and very carefully circulated. On the title-page of this tract—which is addressed to the working classes—there is a quotation from the republican authority, Henry Clay. I am glad they have put his name on the frontispiece, and quoted his sayings; for let the English operatives remember, as my friend Mr. Villiers has already told you, that since that tract was published, Mr. Henry Clay has been rejected as an aspirant for the presidency of America. (Hear, hear, hear.) He stood as candidate for that high honour at the hands of three millions of free citizens, on the ground of his being the author and father of the protective system in America. I have watched the progress of that contest with the greatest anxiety, and received their newspapers by every packet. There have I seen accounts of their speeches and processions. Why, the speeches of Henry Clay and Daniel Webster might have done credit to the Dukes of Buckingham and Richmond themselves. (Hear, hear, and laughter.) All the banners at their processions were inscribed with such mottoes as,—"Protection to native industry." "Protection against the pauper labour of Europe." "Stand by native manufactures." "Stand by the American system." "Henry Clay and protection to native industry." (Cheers and laughter.) Yes, all this was said to the American democracy, just as your protection societies are saying it to you in this pamphlet. And what said three millions of the American people voting in the ballot-box? Why, they rejected Henry Clay, and sent him back to his retirement. (Loud cheers.) I think this protection society, if they have got a large stock of this tract on hand, will be offering it cheap (laughter); it might do for lighting cigars, probably. (Renewed laughter.) Well, ladies and gentlemen, what have you seen in London? You have heard something of what we have been about down in the north; what is going on among you? I think I have seen some signs, not of opposition, but something very like what I call a diversion. You have had some great meetings here, protesting vast objects, to benefit large classes of people in

London. Mr. Villiers has slightly alluded to that subject, but I have a word or two additional to say about it. I call it a "diversion," but it is something more; it is rather an attack by monopolists against the victims of their own injustice. (Loud cries of "Hear, hear.") When the people in Turkey are suffering under the tyranny of a Grand Vizier, and are threatening to rise and revenge themselves upon him, and take his head, it is an old trick for that functionary to send emissaries among the populace, point them to the bakers' shops, and say, "The bakers are selling too high." The people are then told to go and nail the bakers' ears against the door-posts. (Laughter.) Now, our monopolists have taken a leaf out of the Turkish Vizier's book. When we were in great distress and trouble in Manchester and its neighbourhood, and the people were starving in the streets, then it was stated that the manufacturing capitalists were "grinding the faces of the poor," and depriving them of bread. Now, when the distress is in the agricultural districts, the landed squires meet the farmers at their agricultural societies' tables, and tell them to go and employ the labourer by laying out more capital upon their farms. (Laughter and cheers.) It is said that they must drain their land; they do not say a word about the farmer having had his pockets thoroughly drained. (Renewed laughter.) And, when the distress has lighted upon a large portion of the most defenceless sex of your community, I find that a large, a useful, a respectable class of that community, the shopkeepers and dealers in ready-made linen and articles of clothing, are selected by the monopolists as the objects of attack for "grinding the faces of the poor needle-women." Now, I stand here to vindicate the character of those traders, and to turn back the charge upon those who assail them. (Hear, hear.) I stand here to vindicate Moses and Son themselves against these attacks. ("Hear" and laughter.) Yes, I say Moses and Son themselves are Christianlike in their character, compared with the men who are now assailing them whilst they support this system of the Corn Laws. (Cheers.) For there is this difference between Moses and Son, and those who vote for Corn Laws and then affect to pity the poor needle-women: if the former buy cheap, they also sell cheap, and have not by unfair means obtained an act of Parliament to give them a monopoly; but what shall we say of your landlords of Dorsetshire, who, whilst they are paying 7s. a week for their labour, have passed an act of Parliament by which they are enabled to sell even the very bread that these poor wretches consume at an artificially enhanced and unnatural price? (Loud cheers.) And yet here is a great scheme of charity, forsooth, to atone for this mischief; and you are to have fifty thousand people kept, I suppose, in employment by a society, not of "middle women," but of middle-men, ay, very middling men indeed! (Laughter and cheers.) Now, I venture a prediction: that bubble will burst before the meeting of Parliament, and they will try and invent some other. They will not fail to charge us—or any portion of the unprivileged class of the community—with being the authors of their own misdoings. (Hear, hear.) They have set up themselves as being more benevolent than the rest of the community. My friend Mr. Villiers was talking of their being charitable, or settling everything by alms; I agree with him, that, even if they were charitable, and more so than other people, I object to seeing one large portion of the community dependent upon alms at the hands of another portion. (Hear, hear, hear.) But I deny that they are such philanthropists. I roll back the charge they make against us, and say that the Free-Traders—the much maligned political economists—are the most charitable people in the country. (Cheers.) We had a meeting two or three months ago in Suffolk—had not we? (Hear.) There was a great gathering there of landowners, noblemen, squires, and clergymen, met together in a great county assembly in order to—what? To provide for the distresses of the peasantry of that county by a philanthropic plan. They proposed to raise a subscription; I believe they entered into something like one on the ground; they separated then, and what has been done since? How much has been effected for charity? (Hear.) I will venture here to say, that there is one Leaguer in Manchester who has given more money for the parks and pleasure grounds connected with that town than all the landowners and gentry of the county of Suffolk have subscribed for the benefit of the peasantry. (Cheers.) You will not misunderstand me: we do not come here to boast, but merely to hurl back these charges which are made against the great body of the more intelligent portion of the middle classes of this country, who happen to take scientific and enlightened views upon what ought to be the conduct of the Government of this land. They call us "political economists" and "hard-hearted utilitarians." I say the political economists are the most charitable people in this country; the Free-Traders are the most liberal to the poor of this land. (Hear.) I call upon them, if they will have it that the people are to live on charity: at all events to give us a guarantee that they shall not starve, by really conferring that charity which they propose to bestow upon them. (Cheers.) Ay, it is a very convenient thing for them to try and give a bad name to a sort of police who are looking after their proceedings. (Laughter.) We avow ourselves to be political economists; and we are so on this ground, that we will not trust our fellow-creatures to the ebullient support of any class of the community, because we believe that if we do, we shall leave them in a very hopeless condition indeed. (Cheers.) We say, let the Government of the country be conducted on such a principle that men shall be enabled, by the labour of their own hands, to find a subsistence by independent wages. These gentlemen have had another meeting to-day; they are all in all directions upon every sort of subject except the right one. (Hear, hear.) A gathering took place this morning at Exeter Hall, at which all sorts of men assembled—what think you for? To devise means, and to raise a society, to look after "the health of towns." (Laughter.) They will give you ventilation—air—water—drainage—open courts and alleys—anything in the world but bread. (Loud cheers.) Now, so far as the Lancashire districts go, nothing is clearer, for we have it upon the authority of the Registrar-General's report of deaths in that district—than that the mortality of that locality rises and falls, year by year, with the price of food; that this connection may be clearly traced, as much so as though you had the evidence taken before a coroner's inquest. Upwards of three thousand people more per annum were swept off during the dear years than have died since corn has come down to a more na-

tural price, even in a very limited district of Lancashire. (Hear.) And yet these identical gentlemen, who meet together and form their benevolent societies, will talk to you of air and water, and everything in the world but bread, which is the staff and support of life. (Cheers.) I have no objection to charity—I advocate it strongly; but I say with my friend Mr. Villiers, do justice first, and then let charity follow in its wake. (Renewed cheers.) I have no doubt these individuals may be actuated by very benevolent motives—I will not charge them here with hypocrisy; but this I do say, that we shall expect them to meet this question, and not to shirk it. I am complaining of one section in particular of the landed aristocracy, who are setting up claims to a superior benevolence, who are conscience-stricken, I am sure, from what I know, on this question of the Corn Law, who yet vote in its support, and who refuse to discuss it, or record their opinions on the subject. I allude in particular to one nobleman who acted in this manner in the last session on Mr. Villiers's motion, notwithstanding he is one who professes great sympathy for the poor of this country. He did not attend on that debate, or take a part in the discussion, but came in at the last moment, at the time of the division, and voted against that motion. (Loud cries of "Shame," and "Name, name.") I will mention his name: I refer to Lord Ashley. (Hisses and groans.) Now, I say, let us at all events, whilst we admit their good intentions, stipulate that this question shall be discussed by them in the same way as those relating to washing and fresh air. (Hear, hear.) Do not let them blink this matter. What course do they pursue as regards ventilation? They call in scientific men to help them; they go straightway to Dr. Southwood Smith and others, and say, "What is your plan for remedying this admitted social evil?" and they take the opinion of scientific men, who have given great attention to the subject. We ask them, on this question of supplying the people with food and employment, to call to their counsels scientific men, who have devoted their lives to the investigation of this question, and who have left on record their opinions in a permanent form, which have been recognised as sound and indisputable philosophy all over the world. (Hear, hear.) We ask them to take Adam Smith, as they have on other questions taken Southwood Smith; and either prove that he is wrong in his principle for providing food and employment for the people, or vote in accordance with his opinions. (Cheers.) It will not be sufficient to wring their hands or wipe their eyes, and fancy that in this intelligent and intellectual age sentimentality will do in the senate; it may do very well in the boarding-school. (Laughter.) Now, what should we say of these same noblemen and gentlemen, who lament over the distress of the people, if they were to refuse to take science, knowledge, experience to their counsels, in remedying another class of evils—if they went into a hospital and found the patients writhing under their bandages after they had just gone through the ordeal of surgical aid from accidents, and these philanthropists were to drive out the surgeons and apothecaries, denouncing them as "cold-blooded and scientific utilitarians," and then, after wringing their hands, and turning up the whites of their eyes, set to work and treat these patients after their own fashion? (Cheers and laughter.) I like these Covent Garden meetings, and I will tell you why; we have a sort of intellectual police here. Byron said this was a canting age, and there is nothing so difficult to meet and grapple with as cant; but I think, if anything has produced a sound, wholesome, and intellectual tone in this metropolis, it has been our great gatherings and discussions within these walls. (Loud cheers.) There is another meeting to be held to-night, to present a testimonial to Sir Henry Pottinger; I wish to say one word to you about that. First of all, what has Sir Henry Pottinger been doing for these monopolists—I mean the great monopolist merchants and millionaires, including the house of Baring and Co., who have subscribed £50 in Liverpool towards the testimonial there, and I suppose have contributed here also? I ask, what has that baronet done to induce this determination on the part of the great merchant-princes in the City? I will tell you: he has been to China and extorted from the Government of that country (for the benefit of the Chinese people I admit) a tariff. But of what description is it? It is founded on three principles. The first is that there shall be no duties whatever laid upon corn, or provisions of any kind, imported into the Celestial Empire (hear, hear); nay, even if a ship comes in loaded with provisions, not only is there no duty upon the cargo, but the ship itself is exempted from port charges; and it is the only exemption of the kind in the world. The second principle is, there shall be no duties for protection. (Hear, hear.) The third is, there shall be moderate duties for revenue. (Hear, hear.) Why, that is the very tariff that we, the Anti-Corn-Law League, have been contending for these five years. The difference between us and Sir Henry Pottinger is this, that whilst he has succeeded by force of arms in conferring upon the Chinese people that beneficial tariff, we have failed hitherto by force of argument to extort a similar boon for the advantage of the English people from our aristocracy. (Cheers.) A further difference is this: that while these monopolist merchants are ready to offer a demonstration to Sir Henry Pottinger for his success in China, they have heaped obloquy, abuse, and opposition on us, for trying unsuccessfully to do the same thing here. And why have we not succeeded? Because we have been opposed and resisted by these very inconsistent men, who are now shouting and toasting Free Trade for China. (Cheers.) I would ask one question or two upon this point. Do these gentlemen believe that this tariff, which Sir Henry Pottinger has obtained for the Chinese people, will be beneficial to them or not? Judging by all they have said to us on former occasions, they cannot really believe it. They have said that low-priced provisions and free trade in corn would injure the working classes, and lower their wages. Do they positively imagine that the tariff will be beneficial to the Chinese? If they do, where is their consistency in refusing to grant the same advantages to their own fellow-countrymen? (Hear, hear.) But if not, if they suppose that tariff to be what they have asserted a similar tariff would be for Englishmen, then they are no Christians, because they do not do to the Chinese as they would be done by. (Loud cheers.) I will leave them on the horns of that dilemma, and let them take the choice which they will have. (Laughter.) There is some little delusion and fraud practised in the way in which they talk of this Chinese tariff as a commercial treaty; it is not a commer-

cial treaty. Sir Henry Pottinger imposed that tariff on the Chinese Government, not as applicable to us, but to the whole world. (Hear, hear.) What do these monopolists tell us? "We have no objection to Free Trade, if you will give us reciprocity from other countries." And here they are, "Hip, hip, hip, hurrah!" down at the Merchant Tailors' Hall (laughter and cheers), at this very moment shouting and glorifying Sir Henry Pottinger because he has given to the Chinese a tariff without reciprocity with any country on the face of the earth. (Hear.) Will Mr. Thomas Baring stand again for the city of London, think you? (Laughter, and cries of "No, no.") He said you were a very low set last year, after he had lost his election. (Hear, hear.) If he should come again, let me give you one word of advice: go and ask him if he will give you as good a tariff as Sir Henry Pottinger gave to the Chinese. (Hear, hear.) If not, let him tell you why he subscribed to this piece of plate to Sir Henry Pottinger, if he does not think such a measure would be a good thing for the English too, as well as for the Chinese. (Hear, hear.) In Manchester we have a good many of the same kind of monopolists, who have joined in this testimonial; they always do things on a large scale in that town, and while you have raised a thousand pounds or so here, pretty nearly three thousand pounds have been subscribed there, a large portion of it by our monopolist manufacturers, who are not the most intelligent, numerous, or wealthy class among us, although they say sometimes they are. They have joined in this demonstration to Sir Henry Pottinger. A friend of mine called to ask me to subscribe towards it. I said, "I believe Sir Henry Pottinger to be a most worthy man, a great deal better in every respect than many of those who are joining here in subscriptions for his testimonial; I have no doubt that he has done excellent service to the Chinese people; and if they will send over a Sir Henry Pottinger to England (cheers), and if that Chinese Pottinger can succeed by such force of argument (for we want no recourse to arms here)—by the power of logic, if there be any such in China—as will prevail to extract from the stony hearts of our land-lord monopolists the same tariff for England as that which our general has given to the Chinese, I will join with all my heart in subscribing for a piece of plate for him." (Loud cheers and laughter.) By the way, gentlemen, we must come to business notwithstanding. Our worthy Chairman has told you something of our late proceedings. Some of our cavilling friends—and there are a good many of that class: men who seem to be a little bilious at times, and are rather disposed to criticise; individuals who do not move on themselves, and, not being gregarious animals, are incapable of helping other people to move on, and, therefore, they have nothing to do but to sit by and quarrel with others—these men say, "This is a new move of the League, attacking the landlords in their counties; it is a change in their tactics." But we are altering nothing, and we have not changed a single thing. I believe every step we have taken has been necessary, in order to arrive at the present stage of our movement. (Hear.) We began by lecturing and distributing tracts, in order to create an enlightened public opinion; we did that for two or three years necessarily. We then commenced operations in the boroughs; and never at any time was there so much systematic attention, labour, and expense devoted to the boroughs of this country in the way of registration as at the present time. (Hear, hear.) As regards our lectures, why, we continue them still; only that instead of having small rooms up three pairs of stairs back, as we used to do, we have magnificent assemblies, as that now before us. (Cheers.) We distribute our tracts, but in another form; we have our own organ, the LEAGUE paper, twenty thousand copies of which have gone out every week for the last twelve months. I have no doubt that that journal penetrates into every parish in the United Kingdom, and goes the round of the district. Now, in addition to what we proposed before, we think we have had a new light; we rather expect that we can disturb the monopolists in their own counties. (Cheers.) The first objection that is made to that plan is, that it is a game which two can play at; that the monopolists can adopt the move as well as we can. I have answered that objection before, by saying that we are in the very fortunate predicament of sitting down to play a game at a table where our opponents have possession of all the stakes, and we have nothing to lose. (Hear, hear.) They have played at it for a long time, and won all the counties; my friend Mr. Villiers had not a single county voter the last time he brought forward his motion. There are 152 English and Welsh county members, and I really think it would baffle the arithmetic of my friend the member for Wolverhampton, to make out clearly that he could carry a majority of the House without having some of them. We are going to try if we cannot get him a few. We have obtained him one already—the largest county in the kingdom; we have secured South Lancashire, and that is the most populous district in the whole kingdom. Lord Francis Egerton sits for that county; he is very powerful, a man of vast property and possessions, and personally respected by all parties. But people are very unfortunate who attack the League. There seems to me something like a fatality hanging over everybody who makes an onslaught upon it. (Hear, hear.) I am going to mention an anecdote for the benefit of "Grandmother" of the *Morning Herald*; she is wearing a rather shadowy and attenuated form every morning, and yet she still cackles in a ghost-like tone at us. (Laughter.) About two years ago, in the House of Commons, on Mr. Villiers's motion, Lord Francis Egerton rose and spoke, and after saying some pretty little nothings, such as go down in the House of Commons from a lord, but would not be tolerated from anybody else, he wound up his speech by offering very kindly and gratuitously his advice to the gentlemen of the Anti-Corn-Law League; and it was to this effect: that they would be good enough to dissolve; that they could do nothing; and, therefore, had better disband themselves; and concluding by saying, that he offered that advice in all kindness to them. (Laughter.) Let an election again come for South Lancashire, and Lord Francis Egerton will see who will dissolve first. (Cheers and laughter.) Somebody has alluded to the member for Knaresborough; he was let loose upon us a long time back. When I first went into the House of Commons, in 1841, it appeared to me that he had been sent there on purpose that he might bait me. (Laughter.) What has been the fate of that worthy gentleman? Why, that same House of Commons—a large majority of whom hounded him upon me in 1841—has

session voted unanimously that his assertions were "unfounded and calumnious." (Hear, hear.) That means, in plain Knaresborough language, that he was a slanderer and a (—); I will not give you the other word. (Laughter, and great cheering.) There is one other case, which I mention also as a warning and an example to the *Morning Herald*. At the close of the last session, Sir Robert Peel, in speaking upon Mr. Villiers's motion, felt the very anxious indeed to retrieve his lost position with the monopolists behind the Treasury benches; and I think he would have stood upon his head, or performed any other feat, to accomplish it. (Laughter.) He thought he would have a sling at the League, and therefore he warned us, in his solemn and pompous tones, that we were retarding the progress of Free Trade, and setting the farmers of the country against us by the way in which we had attacked them. (Renewed laughter.) Now, mark what I say: it will not be the League that will fall at the hand of the farmers; but I predict it will be Sir Robert Peel, "the farmers' friend," whom they will sacrifice. (Loud cheering.) I have said that we have one county to present to Mr. Villiers; I should be glad to know if he would like to represent it himself. (Prolonged and vehement cheering, with waving of hats and handkerchiefs.) I have heard but one opinion in Lancashire,—that, as it is the first county we have to present him, he ought to have the refusal of it. (Cheers.) The monopolists have long played this game in the counties, and they have worked it out. They began immediately the Reform Bill was passed; and they have lynx-like eyes in finding flaws, or discovering the means of carrying out their own ends. They saw in this Reform Act the Chandos clause, and they set to work to qualify their tenant-farmers for the poll, by making brothers, sons, nephews, uncles—ay, down to the third generation, if they happened to live upon the farm—all qualify for the same holding, and swear, if need be, that they were partners in the farm, though they were no more partners than you are. This they did, and successfully, and by that means gained the counties. But there was another clause in the Reform Act, which we of the middle classes—the unprivileged, industrious men, who live by their capital and labour—never found out, namely, the 40s. freehold clause. I will set that against the Chandos clause, and we will beat them in the counties with it. (Loud cheers.) You have heard how disproportionately large the number of votes in the rural districts is to that in the towns. We will rectify the balance by bidding our friends qualify themselves for the counties. (Cheers.) They do not know how easy a thing it is to do. I see numbers of people here who have no borough vote at all—men in fustian jackets—young men living in lodgings. I will tell them how they may get a county vote, and far cheaper than a borough vote. It is not so easy for men in all positions to take a £10 house, occupy it, furnish it, and live up to it, with the taxes and expenses that accrue; but to qualify for the county you have only to invest £50 or £60 (and I have known it done for £35) in a freehold which will produce you 40s. a year, and you will have a vote for the county. It costs you nothing to keep, and nothing to buy; for you get interest for your money, and you may sell your property whenever you are sick of your vote. (Hear, hear.) Our opponents have been fond of telling us that this is a middle-class agitation. I do not like phrases, and therefore have said that we are the best of all classes; but this I believe, that we have enough of the middle class, and the propertied portion of the middle class, to beat the landlords at their own game in all the populous counties in England. (Cheers.) Mr. Wilson told you I had been into Yorkshire; before the 31st of January there will be 2000 new votes qualified for the West Riding of that county. I have a guarantee which I can rely upon, that that will be done. (Cheers.) Now, I want you to win Middlesex in like manner. I will tell you where you may gain as many votes in that county as by qualifying new voters. You have a thousand or two of good Free-Trade votes that are not on the register; I will be bound to say you have 2000. (Hear.) Look at the case of South Lancashire; you have heard that we have won that county, but we have obtained it without putting in forces that 40s. freehold clause. We actually won on the register by the votes that were already in existence, and that were drawn out by that intense contest in May between Mr. Brown and Mr. Entwistle. The revising barrister came round in October and November, and a majority of 1700 was gained by the men who were already entitled to be on the register, but had neglected to put their names on the list. We are going to work now in Lancashire, to induce our friends to qualify there as 40s. freeholders. Our opponents in that district tell us that, although they admit we have won upon the present register, we shall not do so for the future; now I will bet my cause to theirs—and it is the longest odds I know of—that we will make them a thousand worse in the next revision. (Cheers.) I will tell you how you can qualify a thousand or two voters in Middlesex. You have a most important district—Hammersmith, Kensington, Chelsea, and all the surrounding suburbs, which are not in the parliamentary boroughs; Marylebone and Westminster do not extend beyond Piccadilly. In all that district every house paying £50 of rent—mind, not £50 of rate, for a house rated upon an average at £40 will pay £50 rent—every one of the tenants of those houses is entitled to be put on the county list as a voter; for the £50 tenant-at-will clause does not confine itself to farmers, but extends to every dwelling-house within the county; and I have no doubt in the world that there are 500 or 600 Free-Trade votes in that district that might be on the register, and ought, and may be, next year. But, then, people must qualify who have not already done so. There are young men, clerks, who complain that they have not got the suffrage, and lodgers have been agitating for votes; I heard them once talk of forming a "Lodgers' League," in order to obtain the franchise. (Laughter.) Here is a more reasonable way of getting the suffrage; the cheapest both to obtain and keep. There is a large class of mechanics who save their £10 or £20; they have been accustomed, perhaps, to put it in the savings' bank. I will not say a word to undervalue that institution; but cottage property will pay twice as much interest as the savings' bank. (Hear.) Then, what a privilege it is for a working man to put his hands in his pockets and walk up and down opposite his own freehold, and say—"This is my own; I worked for it, and I have won it." (Cheers.) There are many fathers who have sons just ripening into maturity, and I know that parents are very apt to keep their property and the state of their affairs from their children. My

doctrine is, that you cannot give your son your confidence, or teach him to be intrusted safely with property, too early. (Hear.) When you have a son just coming to twenty-one years of age, the best thing you can do, if you have it in your power, is to give him a qualification for the county; it accustoms him to the use of property, and to the exercise of a vote, whilst you are living, and can have some little judicious control over it, if necessary. I know some fathers say, "I could give my son a qualification, but I do not like the expense of the conveyance." Why, go to a Free-Trade lawyer; you must employ none but professional men of that description in this business. (Laughter.) We have drawn out a good many legal patriots already; they have heard the rustling of parchment, and have been caught with the sound. I say, employ no monopolist lawyers; for if you do, they will leave some flaw, by which you will lose your vote, and make it so that it will not be a real *bona fide* qualification. They will secure your title to the estate, but it may not be one which will give you a vote; and they will not tell you, but go and inform the opponent's lawyers in the revision court, who will come and object to you. I tell the fathers of these deserving sons, to go to a Free-Trade lawyer, and employ him to make the conveyance. Now, I will give a bit of advice to the sons. Do you offer to your father to pay the expense of the conveyance yourself. (Hear, hear.) If you will not, and your father will come to me and make me the offer, I will. (Cheers.) Gentlemen, these are the classes that want the qualification; and, by these means, Middlesex may be made perfectly safe against all comers before the next election. (Hear.) For recollect, besides qualifying, you must take care that your opponents have no bad votes on the list. I have heard of some very wise men who have said that this is an odious plan, very like the Carlton Club proceedings, to disfranchise the people by striking them off the register. (Laughter.) If our opponents will play the game of leaving bad votes on, and will allow an extension of the suffrage in this way on both sides, we have no objection; but if they are to take the law into their hands, and strike off our bad votes, and we are not to do the same by theirs, I wonder when we shall win! (Hear, hear.) Now, when you go home, and begin talking over this with some of your neighbours, who affect to be wiser than other people, they will tell you, "Notwithstanding all that Cobden has said, the landlords will beat you at this movement." They will say, "See how they can split up their property, and let people have life-tenant charges upon it." As Mr. Villiers has stated, the estates are not theirs in a great many instances (hear); I believe four-fifths of the parchment are not at home (laughter); and if they were, whom would they trust with a *bona fide* life-tenant charge? Their tenant-farmers have got the vote already; will they give it to the agricultural labourers, think you? (Laughter, and cries of "No, no.") The labourer would like those allotments very much. The only difficulty I can foresee is this. Judging from the accounts I read of their condition in Dorsetshire and Wiltshire, I should think it is very likely, when the revising barristers come round, these voters would be disfranchised, one half of them being in the union workhouse, and the other half in gaol for poaching. (Cheers.) No; the landowners have done their worst. They want money, men, and zeal in their cause. I believe we have struck the right nail on the head. We have never yet proposed anything that has met with so unanimous a response from all parts of the kingdom upon this subject. It has taken two hours a day, in Manchester, to read the letters that have come from all parts of the country, unanimously applauding this plan. (Loud cheers.) I may tell you, that we have sent out circulars from Manchester to every body who has ever subscribed to the League Fund all over the kingdom; and I need not tell you how many thousands they amount to. Everywhere, in all parts of the country, has this question been taken up with the same enthusiastic spirit. Why, we have received a letter from Ipswich; we never thought, never dreamt of touching Suffolk; but we had a letter, saying, that it is perfectly easy for the towns of Suffolk to carry the two divisions of the county on this plan. We look to the more populous districts first; we say it will not be necessary to gain the whole of them; if we obtain North and South Lancashire, the West Riding of Yorkshire, and Middlesex, the landed monopolists will give up corn in order to save a great deal more. (Cheers and laughter.) There is one other point. Many people may say, "This is something not quite legitimate; you cannot go on manufacturing these votes." We reply, the law and the constitution prescribe it, and we have no alternative. It may be a very bad system, that men should be required to have £10 or £50 laid out on the surface of the earth, in order that they should be represented; but the law prescribes that plan, and there is no other. And we say, do not violate the law; conform to it in spirit and in fact; and do so by thousands and tens of thousands, if you can. (Cheers.) There is nothing savouring of trick or finesse of any kind in it; you must have a *bona fide* qualification. It will not do now, as it did under the old system, to create fictitious votes; there is now a register, there was none formerly. That is where we will stop them; we will put them through a fine sieve at the registration. No, no; under the old system, when the Lowthers contested Westmorland against Brougham—the Henry Brougham that was, you know (cheers and laughter)—the contest lasted for 14 days, and they went on manufacturing collusive and fictitious votes during the whole period, making them as fast as they could poll. The voters went up with their papers, and the day after the polling put them into the fire, or treated them as waste paper. (Hear.) But things are altered now; you must be twelve months on the register, and be hung up at the church doors for a certain period, before you can vote. (Laughter.) Therefore, we do not intend to win by tricks, for we are quite sure the enemy can beat us at that. Gentlemen, there is one other objection: they will say, you should not tell this; it is very bad tactics. I say, you have nothing to gain by secrecy. (Hear.) There are tens and hundreds of thousands in this country, whose hearts will beat when they see the report of this meeting, and who will read every word of it. Those are our friends. Our opponents will turn their heads away, and will not read what we say. We speak to the sympathising multitude, whose feelings and hearts are with us; and we make an appeal to them; not only to you in Middlesex, but to those who are unqualified throughout the length and breadth of the land. Scotland expects it of you; they say in that country—"Oh! that we had the 40s. franchise here; we could then clear them out of 18 counties in 12 months." (Hear.)

Ireland looks to you, with her £10 franchise, the same as Scotland. England, wealthy England, with nothing but her nominal franchise of 40s. a year, with such a weapon as this in her hand, and not to be able to beat down this miserable, unintelligent, incapable oligarchy, that is misgoverning her! (Loud cheers.) No, I will not believe it. We will cry aloud, not here only, but on every pedestal on which we can be placed throughout the country, though there is no pinnacle like this to speak from—we will raise our voice every where—"Qualify, qualify, qualify." Do it, not only for the sake of the toiling millions, and the good of the industrious middle classes, but for the benefit of the aristocracy themselves. Yes, do it especially for their sake, and for that of their dependent, miserable serfs—the agricultural labourers. Do it, I say, especially for the welfare of the landed interest, who, if left to their own thoughtless and misguided ignorance, will bring this country down to what Spain or Sicily is now; and with it they will reduce themselves to the same beggary that the Spanish grandees have been brought to. To avert this calamity from them, the ignorant and besotted few, I say again—"Qualify, qualify, qualify!" (The hon. gentleman resumed his seat amidst the most enthusiastic applause.)

The CHAIRMAN stated that Mr. Bright would then address the meeting.

Mr. BRIGHT, on coming forward to address the meeting, was received with loud cheers. When the applause had subsided the hon. gentleman said:—I have requested of our Chairman that this meeting might close at the usual hour, in which case I should be excused from addressing you; but he says, that as our assemblies are not now held weekly, and as my name was announced as a speaker for to-night, perhaps you would prefer that I should go on, at least for a short period. (Loud cries of "Go on, go on.") It is about twelve months since I took the liberty, on this platform, of expressing my opinion that the monopolists were greatly deceiving themselves if they fancied that a return of prosperity in the manufacturing districts would save them from the continued agitation of the Anti-Corn-Law League. I stated then that the distress in those localities aided us by the discontent which it occasioned, but that returning prosperity would aid us more by the subscriptions which would be poured into the League's exchequer. Now, the past year has proved the truth of this prediction, and a fund of more than £30,000, raised by the Free-Traders of this country, proves their zeal in this cause, and does something to demonstrate their confidence in the Council of the League. (Hear, hear.) The increasing zeal which is now found to exist in the manufacturing counties is precisely on a par with what we have every reason to believe exists in this metropolis. From this great fact I am led to the conclusion that this question, which has been raised and which we have advocated, is not merely a cry got up for a factious or a momentary purpose, but that it has sunk deep into the minds of the people, become a part of their existence, and almost of their religion. (Hear, hear.) It is a cause which seizes as fast hold of the feelings as it does of the reason of our countrymen. (Hear, hear.) I was a Corn-Law repealer before I had investigated the question; and I believe the same may be said of thousands of my countrymen. Our natural impulses and sympathies revolt against the barbarous proposition, that national prosperity can be increased by a scarcity of food, and that the great mass of the people amongst whom we live can feed better the scantier table at which they are supplied. (Hear.) But investigation has confirmed the opinion, which perhaps we first held from the force of ordinary feeling and sympathy. Examination has proved to us that the effect of the Corn Law upon the foreign trade of this country is most disastrous; that it raises up a hostile and vindictive feeling against us on the part of other nations; that it closes the ports of our foreign customers by hostile tariffs; that it diminishes the means of employment and curtails the wages and comforts of the working population. We found, too, that our home trade was affected to a still more serious extent; and in the district from which we come—for we are men who might formerly have been said to have had our homes in Lancashire, though our homes now are nearly as much in London—in that district we saw the industrious population prostrate and wretched, under the operation of the Corn Law. There is one good, however, which has arisen from that suffering. The sympathy which formerly existed between the employers and the employed has been greatly extended and strengthened. We have seen the men by whose labour the wonderful manufactures of this country are carried on, prostrate and almost destroyed under the pressure of a law passed by a powerful class—a class against whose invasions of the rights of property the working people were helpless to defend themselves; and we, the middle class—and really as powerful a body as they—did not stand forth as we ought to have done to defend them. We have seen our error; we have beheld these men struggling against the almost irresistible necessity that was driving them to pauperism and the workhouse. We have witnessed how nobly they have struggled, and how great has been their love of independence. Oh, we have seen heroism in some of these men, before which the fame of your warriors turns pale and becomes utterly worthless! (Cheers.) We came to London as the headquarters—the heart of the empire, the seat of Government—to explain the causes of these sufferings. We were met by the landowners with the statement, that if the Corn Law did destroy our operatives, it was necessary to protect their labourers. (Hear.) We were then led to inquire into this new allegation, and further examination brought out more of the truth; but the whole truth will, I fear, never be known. We found that the evidence of the Government commission, the testimony of all private and impartial statements, the information of all those whom the League sent into the agricultural districts, agreed most singularly in this particular, that, whatever distress had been felt in these localities, it was much exceeded by that which was endured by the labourers upon the protected estates. (Hear.) We discovered another fact—that the distress on these estates is not of a temporary character—it has existed for years; though the men who have trampled upon us never came forward to tell us how their labourers were suffering. In 1829 and 1830 the torch of the luddery frightened them, the monopolists, into the raising of wages, and some consideration for the state of the poor. In 1843 the same sad instructor was at work, and we found them then willing to admit that their

labourers were much depressed, and that something must be done for their relief. But in the cheap years, 1835 and 1836, the torch of the incendiary was extinguished. We have the evidence of 30 farmers, given before a parliamentary committee in 1836, that never, within their lifetime, had the condition of the agricultural labourer been so good as it was then, and never before had he been able to obtain so large a share of the comforts of life as during that period of low prices of food. (Hear, hear.) You have heard already that the effect of this law is to increase mortality. I could give you statistics to show, that precisely as the price of food increases, the rate of emigration augments from this country to foreign lands; that the number of committals before magistrates for offences increases in the same proportion; and that the number of deaths amongst the working classes increases in a similar ratio. We were aided by the manufacturing districts; we are now assisted by the agricultural. We are attacking the landlords in front, and their poor starving labourers are assailing them in the rear. Look at the meeting which has lately been held at Glaston, in the county of Wilts. Is there not something wrong when men with their wives and families assemble by hundreds—ay, and hundreds there were who could not get within the place of meeting—and when females, aged women, stand before hundreds of their neighbours to tell their sorrows and their sufferings? (Hear, hear.) Does it bode no evil to the landed proprietors that the persons amongst whom they live are in this desperate condition? (Hear, hear, hear.) Is it not time that we (who know something of the cause of this state of things, and have some influence and power amongst the middle and political classes) should work more than we have ever done for the deliverance of this country from a state of things so threatening and so likely to produce permanent and incalculable mischief? Attacked as the landlords are, both in front and rear, shall we not soon see their capitulation? (Cheers.) I believe we shall, but it will not be an honourable one. (Hear, hear.) No; for men who have thus basely betrayed their country, sold its dearest interests, and placed the iron hoof of monopoly upon the welfare of their fellow-men, there can be no honourable capitulation; but their surrender must be dishonourable as their past conduct has been disgraceful. (Loud cheers.) Now, the Anti-Corn-Law League ask will further the support and the confidence of the country; and you have a right to inquire what has been our past policy, and whether our course hitherto has been such as to make it likely that we shall succeed at some future time? Our past policy has been peaceful. Slanderrers and monopolists have said that we have incited to sedition and to rebellion. The statement is false, like all the grounds upon which they base the maintenance of their monopoly. We never did instigate to sedition or rebellion. (Hear.) We appealed to the reason of our countrymen, and to their sense of justice; and that appeal has been answered in a wonderful manner. Has our past policy accomplished anything? I say, much; and this vast meeting affords some proof of it. The interest which is now taken in our proceedings in the metropolis is a convincing proof of the same fact. Look to your City. You have two men returned by it who vote for the sliding scale; one who prefers a fixed duty, but who does not exactly see his way to vote on either side when the question of total repeal is brought forward; and you have another whose entrance into Parliament was said to have demonstrated the great fact that the city of London is against monopoly. Now, we intend, if the electors of the City are willing, that at the next election they should send four men to Parliament pledged to vote for Free Trade. (Cheers.) The men who, having property and station in your city, might be supposed likely to become leaders of the Free-Trade party, refuse the honour which you tender to them. Well, somebody, then, will have to lead, or we must all go on together. Now, I propose a plan, and that is, that the great middle class of the electors of the city of London should organise some mode of intercourse with each other, altogether overturning the efforts of the monopolists, and entirely repudiating the time-serving policy of the men who do not know which side to choose; I propose that they should take a decided course upon this question, and insist upon the Free-Trade opinion in the city of London being represented in the Commons' House of Parliament. It may be done easily. No man who goes through your streets, who rides day after day in your omnibuses, or passes along the river in your steam-boats, can fail to be convinced that five-sixths, ay, nine-tenths, of the opinion of the city of London is in favour of the measures of the Anti-Corn-Law League. (Loud cheers.) We will go on with moral means for the future. The assertions of great national rights should be the very last persons to commit wrong. We hold ourselves to be the advocates of such rights, and we will gain them, if possible, by the peaceful policy which we have hitherto adopted. Recollect that it is only by a peaceful course like that which we are pursuing that a good cause can have any vantage-ground. If you come to force in any matter of this description, why, then, it is decided by physical power, or by the chapter of accidents, and in the field both are upon a level; but keep to reason, to the sense of justice, and the consciences of men—appeal to this great and, in the long run, settling tribunal, and then your great and good cause is everything. Every blow you give tells; every speech you make, every article you print, and every fact you bring forward, is a blow which your opponents can neither parry nor return, and thus you go on conquering and to conquer, and nothing can prevent it. (Cheers.) We are winning now. Who doubts it? The foe yields at every point; the spoiler is abashed; and it will not be long before the rout will be complete. (Cheers.) There is no man whom I have met with who supposes it possible to maintain the Corn Law for any very long period. (Hear.) If things were far worse than they are we should not despair. We have never despaired yet. (Cheers.) If we had been men in whose breasts the feeling of despair ever found a home, we should not have been here in the seventh year of this work, yet prosecuting it with more determination and confidence by far than we ever felt at any former period. My hope is brighter than ever; my faith is undimmed by the smallest shadow of a doubt. There is everything throughout the whole country which betokens the speedy and final triumph of this great question. And why should it not triumph? We seek only that which the good and the just in all ages have sought: we are asking for freedom and justice. This is a struggle which has been going on upon the earth for thousands

of years. Our forefathers have carried it on, and they are gone to their rest; we are working out the same object in our day and generation. Many of us will live to see the accomplishment of this great work, and those who come after us will have something else to do. And I trust that in this labour we shall leave them an example of steady determination and unflinching perseverance on behalf of that which we believe to be right and just. (Loud applause.) In a great struggle, in the long run, the just always wins. He must have read very little of history who does not know that liberty is triumphing. There is more freedom and justice in the world now by far than there ever was at any former period. There are more men having a love of what is right and just: the oppressor is cowed and abashed; he does not come amongst us with force and violence, but he works insidiously and treacherously; he wraps his chain in chaplets of flowers, and thus he tyrannises over his countrymen. (Cheers.) Yes, freedom is Heaven's first gift to man. It is his heritage; he has it by charter from Heaven, and, although it has struggled so long, this principle is still living, breathing, growing, and every day increasing in strength. (Cheers.) The infant of our father's day has become the giant of our own time. An American poet, speaking of Liberty and its struggles, says:—

"Power at thee has launched
His bolts, and with his lightnings smitten thee;
They could not quench the life thou hast from Heaven.
Merciless Power has dug thy dungeon deep,
And his swart armourers, by a thousand fires,
Have forged thy chain."

But liberty still survives, is indestructible, and man shall yet enjoy its blessings. But, bear in mind that, precious and excellent as this liberty is, there are certain conditions upon which alone it can be obtained and secured. You must rely upon yourselves for it. Liberty is too precious and sacred a thing ever to be entrusted to the keeping of another man. Be the guardians of your own rights and liberties; if you be not, you will have no protectors but spoilers of all that you possess. (Hear.) You can only hold it on the condition of perpetual vigilance. You must work at it as though it were a matter of business; you must consider this question of defending your rights as a concern no less important than that of providing for your family. What is it but this, if we come to look narrowly into it? This freedom for which you struggle is the freedom to live; it is the right to "eat your bread by the sweat of your brow;" it is the freedom which was given to you even in the primal curse; and shall man make that curse more bitter to his fellow-man? (Immense applause.) No; instead of despairing, I have more confidence and faith than ever. I believe that those old delusions and superstitions which, like verminous and polluted rags, have disfigured the fair form of this country's greatness, are now fast dropping away. I think I behold the dawn of a brighter day; all around are the elements of a mighty movement. We stand as on the very threshold of a new career; and may we not say that this League—this great and growing confederacy of those who love justice and hate oppression—has scattered, broadcast throughout the land, seed from which shall spring forth ere long an abundant, a glorious harvest of true greatness for our country, and of permanent happiness for mankind. (The hon. gentleman sat down amid enthusiastic cheers.)

The CHAIRMAN then came forward and said:—Ladies and gentlemen, I will not detain this meeting one moment, except to make an announcement which ought to have been made at an earlier period of the evening. It is the intention of the Council of the League to hold a bazaar in this theatre at the commencement of the month of May next, for the augmentation of the funds of the League. We ask the ladies who are in the habit of attending here from week to week to promote the object in their respective circles. I now propose that we conclude this, the most gratifying, meeting which I ever recollect having seen in this building, by giving three cheers for the League.

Three hearty cheers having been given, the meeting then separated.

AGRICULTURAL PROSPECTS.

In the course of the present and ensuing months a large quantity of freehold landed property has been announced for sale in England, Scotland, and Ireland. The following are among the important estates to be disposed of:—In Surrey, the manor of Sutton, with numerous homesteads, farms, &c., 700 acres; in Hampshire, the freehold property of Titcher and Lockerby, with the manor of Lockerby, 1490 acres; in Devonshire, the parish of Sudbury, 350 acres; in Bedfordshire, the freehold manor of Pottenhill-Hoe, with quit-rent and manorial rights, 350 acres; in Hertfordshire, a freehold mansion, with 80 acres of land, and another of 300 acres, both a few miles from the Harrow railway station; in Kent, a few miles from Tonbridge, on the banks of the Medway, 2136 acres of rich hop lands, with fruit gardens; in Oxfordshire, three miles from Woodstock, the freehold estate of Tackley Park and mansion, 126 acres; in Middlesex, 106 acres, near Southgate; in Staffordshire, the township of Charlton and Chapel Charlton, 140 acres; in Essex, Warley, near Romford, 676 acres, also Motley Hall, with 63 acres; in Carmarthenshire, the property of the Trimsaran Anthracite-Iron Company, 1200 acres; in Monmouthshire, the freehold estate of Pencarth, with mansion, farms, and upwards of 4500 acres of meadow, pasture, and arable land, and sheep walks; in Scotland, the laud and barony of Echt, situated in the parish of Echt, in the county of Aberdeen, 8148 acres, bringing in an income of £4373 (this is divided into seven lots); in Ireland, in the county of Mayo, the demesne of Atharallie, 235 acres; in Carlow, the demesne of Rathmore Park, 85 acres; in Meath, the demesne of Gremansstown, 75 acres; in King's County, the town and land of Derrynagun, Pullagh, and Oughter, 60 arable, and 300 acres turf; in Galway, Streamstown, 290 acres arable and meadow; with a number of smaller estates.

A SLIGHT MISTAKE.—The Leeds Intelligencer of Saturday last stated that the Bingley meeting on the Corn Laws affirmed Mr. Harper's resolution. The chairman of the meeting, Mr. William Briggs, informs us that directly the contrary was the fact; and that "the decision of the meeting was against Mr. Harper's motion, and in favour of Free Trade."—Leeds Times.

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, December 11, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the LEAGUE of the Saturday immediately succeeding, but are included in the list of the week following.

Baker, James, Prospect House, Andover	£1 0 0

RAILWAY PROJECTS.—Some idea may be formed of the extent of labour imposed on the railway department of the Board of Trade, when we state that they have to examine into and report upon nearly 100 new railway projects.—*Irish Railway Gazette.*

SUNDERLAND, Dec. 6.—The revival of trade in this town since the fall of the year has been surprising, and shipbuilding is not only become very brisk, but in every department of trade increasing animation is felt. The coal trade is good, freights were never known better, and yesterday 10s. per ton for coals to London was offered but not accepted. Last year at this time 7s. per ton was considered a great freight. One ship at Seaham harbour, on Thursday, was offered 10s. 6d. per ton to London, but the master stood out "like bricks" for 11s. The prospect of a good coal trade for the winter is putting a little spirit into our shipowners, who for the last three years have suffered very seriously.—*Correspondent of the Post.*

THE AMERICAN ICE TRADE.—There are in Boston 16 companies engaged in transporting ice to the East and West Indies, New Orleans, and to other warm climates. In 1830 the quantity of ice shipped from Charlestown to distant ports amounted to 30,000 tons. No less than 50,000 tons were exported from Boston. The expense to shippers was 12,340 dollars, or about a quarter of a dollar a ton. The average receipts were 3,570,000 dollars; a single firm in Boston freighted 101 vessels, and a cargo was sent to the East Indies and exchanged, pound for pound, for cotton, which was sold at a handsome profit in England. Sawdust, for packing, sells at three dollars per cord. Formerly, ice sold in New Orleans for six cents per pound, and now sells for one cent; but more money is made from the increased consumption at one cent than was made at six cents. The ice is sawed into blocks by a machine, and is packed on board the vessel with straw and hay, in this timber-box, air-tight. One company expended 7000 dollars for hay alone. The annual crop of ice is good at 200,000 tons, and can be cut and housed in three weeks.—*New York Sun.*

LETTERS ON THE CORN LAWS, No. XI.

TO MESSRS. E. MOSES AND SON.

GENTLEMEN,—You are, unquestionably, the most renowned slopsellers in Europe. The eye always adverts to your advertisements. Your shop-mark is on the daily broad sheet of fame, as if it were only one of your own blankets. The poetry of your puffs, and the cheapness of your charges, are alike prodigious. Peel and Russell rise and set with the season; but you are always above the horizon—the Ursa Major of the Minorities. "Custom" cannot "stale your infinite variety." You are, indeed, a "commercial phenomenon."

But rivalry is threatened, and you must submit to a comparison of claims. You are an "establishment," but my Lord Ashley dissents, and erects a voluntary institution. His lordship is a philanthropist; and his love of man turns to hatred of Moses. He charges you with taking undue advantage of the need of needlewomen. Meetings are melted by his pictures of your oppressions. It is said that, although you rig the ragged, yet you starve the stitchers. The world cries out that you are too worldly. The Queen Dowager heads the hostile slopsshop; and the lists are up for contention of charity with cheapness.

Messrs. Moses, father and son, I know nothing of you, but the public notoriety that you keep a very cheap shop and pay very low wages. Doubtless you act on the principle of the Premier; and when he has a principle, it ought to be acted upon; and, if not by himself, there is the greater need that it should be acted upon by other people. Doubtless, I say, you act on the principle of the Premier, to "buy in the cheapest market, and sell in the dearest." But you do not, like Lord Ashley with his corn, legislate for rendering dearer the market in which you sell. You undersell your competitors, and pull down their prices. He oversells his competitors, and keeps their prices up, to the consumer, by a tax. You make a cheap market cheaper by competition, and he makes a dear market dearer by legislation. Thus far, Moses, your Judaism is more merciful than his Christianity.

No, replies his lordship, for cheapness is the root of all evil. At the Society for the Protection and Employment of Distressed Needlewomen, last week, his lordship "wished to impress upon the meeting, for he felt it very deeply himself, the very great evil arising in all directions from that constant and unceasing effort to get every single thing, not only the common trumperies of life, but even the greatest necessities, at the very minimum of remuneration."—(*Morning Herald* report.) The assembly cheered, ladies and all; and in the name of consistency let no one of them ever try for a bargain again, but always inquire after the highest price when they make their purchases. The mischief is, however, less, it seems, of bidding low for the "trumperies of life" than for its "greatest necessities." A curious distinction. The wealthy, if their wealth be in land, are the sellers of necessities and the buyers of trumperies. Pleasant doctrine for the fashionables of Willis's Rooms, but hard measure for those who forego the trumperies of life, and, with a minimum of money, are advised to be content with even less than a minimum of bread.

Moses, how does this bear upon your customers? Many of them must go with bare backs, did not you cover them at the aforesaid "minimum of remuneration." They must make shift without shirts, did not you supply them cheaper than his lordship's charity slopsshop. Yours is the emporium for poverty-stricken purchasers. It drives nakedness down a degree lower in society. Sir Peter Laurie backs Lord Ashley, and scolds people for buying cheap shirts. This is cold work when the only alternative is to remain unshirtd. That must they do, unless there were some such Refuge for the Destitute. Your shop is as good as a charity, with an association, and a secretary and reports and patrons. Much better, Moses. You clothe the naked without making beggars of them. They pinch their bellies for the sake of their backs; out of the daily bread which Lord Ashley helps to tax, they screw enough for two shillings' worth of the "common trumperies of life," foregoing a portion of its "greatest necessities," and walk away with an unobdured sense of independence, not less satisfied than if clothed in purple and fine linen, but less disposed to rate Lazarus for obtaining the rags that staunch his sores at a "minimum of remuneration."

But, then, you only pay 6d. for the making of these 2s. shirts. Your needlewomen furnish. They wear out eyes and fingers, brain and heart. Their privations are terrible. I will not blink that part of the case. God forbid. No, nor will I forget the fact that out of this fearfully earned 6d. a day Lord Ashley and the landowners take 2d. by their bread-tax. The broad-acred philanthropists exact the 2d., and you, whom they abuse, pay the 6d. It is "villainous low," but not so low as robbing them of the 3d. per cent. out of that miserable pittance. That is by far the dirtier trick of the two, and the most cold-hearted. They get little from you, those poor

needlewomen; but, were it not for you, would they get any thing? You have not cleared the country of cottages. You have not obstructed the progress of trade and commerce, and so diminished the amount of employment. You have not enhanced the price of food, and the terrors of the poorhouse. If you do but little in mitigation, and that little for the sake of business, still it is a mitigation. Lord Ashley says you should do more. Let him and the landlord legislators do less, and your mitigation will grow thereby. On what principle, and by what law, are Jewish slopsellers bound to feed the poor whom British landlords have impoverished for the benefit of their own rent-roll? Answer me that, ye aristocratical man-milliners of philanthropy, who talk of charity and vote for scarcity.

The professed object of Lord Ashley's society is to raise the needlewomen's wages to 9s. a week. If accomplished, the needlewoman may be thankful she is not a Dorsetshire man: a man, with a family, labouring on a farm. But let us see how this charity works. It promises to raise the cost of making a shirt to the price for which you are now selling the shirt. What, then, becomes of the poor purchaser who can afford no more? The society ought at least to tattoo him gratis. He is driven out of the market, victimized by benevolence, made an example of, for being an accomplice, after the fact, to the "minimum of remuneration." There is another sort of result likely to happen. The Ashley slopsshop only withdraws a third of the applicants from the general competition. That vacancy will soon be supplied by a rush from the hovels of starvation and the dungeons of the poorhouse. The numbers of the destitute will keep down wages. The Queen Dowager might as well be patroness of a society for suspending the law of gravitation. Not a voice less will the "Song of the Shirt" have in its dismal chorus. There will be quite as many to bear the burden. The ranks will be promptly filled up by remorseless necessity. Still will "most unwomanly rags" hang loose upon the wasted form; the insufficient pay tempt to fraud or prostitution; and famine or suicide close the dreary scene. More work is the want. Proportionate abundance of employment, and that alone, can ensure adequacy of remuneration. The valley of the Missouri would grow plenty of food for all the needlewomen of Great Britain; and the roughly clad growers have plenty of occasion for their services. My Lord Ashley cannot see his way to the repeal of the Corn Laws. He thinks Moses grinds the faces of the poor, and keeps his own booted heel upon their stomachs. Deliver us from our friends, and save us from the selfishness of sentimental benevolence.

One word more, not peculiarly for yourselves, but for the whole class of tradesmen to which you belong. There is no reason why any of that class should be dispensers of charity in the disguise of wages. Ignorant or hypocritical is the outcry against labour being purchased at its market price. Individually, you must so purchase it, or you may shut up shop. What good would that be to the poor needlewomen? But, Moses, remember you are men as well as slopsellers. Those whose fingers ache over your shirts are stitching their own shrouds. Misery toils in your cheap factory. You ought not to have done with it, when you have paid its wages. The employers of the poor are their natural protectors. Unfairly have the tables been turned against you; but not altogether without fault on your part. You should have been the foremost to expose and denounce this state of things, and the system by which it is produced. Your inactivity, your disregard of the wants and rights of the toiling poor, has allowed the authors of the wrong, the taxers of their food, the obstructers of employment, to come forward as their patrons, and point towards your heads the thunderbolt of public indignation for inhumanity which should have fallen on their own. You and they are thus juggled into the wrong places. They should be in the dock, and you in the witness-box. Why do you not tell Lord Ashley that he, and his class of monopolist legislators, have wrought this shame in the land? Why were you not first in the fold clamouring for justice? Why did you wait for the wretchedness, of which you had knowledge, to be found out and laid at your own door by its flinders and its makers? Why have you handed over the poor to the care of courtly Cades and daudy demagogues? Retrieve your blunder. Leave not this sore disease in the body politic to be tampered with by legislative empiricism. Demand of Lord Ashley that he helps to untax the needlewomen's bread. Claim emancipation for the giant Industry, who, when free, will feed all his sons and daughters. Beatir yourselves for such a demonstration of public opinion as will enforce a wiser policy on the Government. Come forward, though late, for the sake of those who depend on you, and make amends for past indifference, whether real or only seeming. Win the blessings of intelligent gratitude, instead of the curses of misguided ignorance and suffering. By your zeal, your votes, your remonstrances, be earnest for trade; more trade; and all whom trade feeds; the widow and the orphan whom

it supplies with work and shields from starvation. It is the duty which belongs to your position in society, between selfish lawmakers and injured millions. You who make the lawmakers can unmake the misery. Up to your duty, or both Jew and Gentile amongst you must bear the curse of Meroz.

A NORWICH WEAVER BOY.

METROPOLITAN DISTRICT MEETINGS.

HAMMERSMITH.

On Friday evening, the 6th instant, a meeting of the friends of Free Trade was held in the spacious and elegant building, Albion-hall, Hammersmith. The room, which is capable of containing upwards of 1000 persons, was well filled with an intelligent and enthusiastic audience, including a numerous assemblage of ladies. Mr. George Thompson and Mr. Moore were loudly cheered on their appearance upon the platform.

On the motion of Mr. SIMPSON, seconded by Mr. LAMAITRE, Captain COGAN was called to the chair.

The CHAIRMAN stated that the question they had met to discuss was one of great national importance, in the success of which not only every individual present, but the entire country and the whole world were deeply interested; there ought, therefore, to be the greatest unanimity in its support. He congratulated the meeting upon the presence of the two able and distinguished gentlemen by whom they were to be addressed, who would explain the particular object of the League in holding its present series of meetings.

Mr. G. THOMPSON then came forward amidst loud cheers, and stated that he appeared in conjunction with Mr. Moore, as representatives of the Council of the League—a body who had been sold by the monopolists to be dead, but in whose ashes lived its wanted fire. He hoped, indeed, that the League would some day die of inanition—for want of material upon which to work. A great public wrong had brought that body into existence, and the consciousness in the minds of the people of this national wrong had given it its present power. The success of the League had arisen from its having taken high ground at the outset. It could not be said that the present meeting was an assemblage of selfish mill-owners, or that they were presided over by a gentleman of that class. The writer of a protectionist tract, recently circulated in Kensington and Hammersmith, admitted that a quarter of corn was necessary for each individual upon the average; that the population was 27,000,000; that the growth of corn in this country was only 13,000,000 quarters, and that the actual consumption had never exceeded 15,000,000 quarters. It was obvious, therefore, upon the writer's own showing, that there was, under the present system a deficiency of 12,000,000 quarters. (Hear.) The right of property did not consist merely in paternalistic estates, the possession of which might be traced back to the days of Duke William of Normandy; but the most sacred right was that of the hard-working man to the disposal at the best advantage of whatever his labour and skill could produce. A piece of parchment gave the estate to the one, while the products of the other were made valuable by his own skill and industry. The landowner had no right or title to the land, except that which was in accordance with the welfare of all his countrymen. (Cheers.)

Mr. MOORE, who was received with great applause, then went into an able exposition of the statistics of the county constituencies. The learned gentleman stated that Middlesex was the most populous county in England, its inhabitants being greater in number than those of fifteen agricultural counties put together, which counties, however, returned 36 members to Parliament, while Middlesex returned but two, one of whom abstained from voting for the repeal of the Corn Laws, and the other voted against that measure. The number of registered electors in that county was 13,500, while in the immensely smaller district of the West Riding of Yorkshire the number was upwards of 30,000; proving that there had been some neglect on the part of the inhabitants of Middlesex, in looking after their qualifications. In a place like Hammersmith, not within the boundaries of a parliamentary borough, every individual paying a rent of £50 a year had a right to vote; but not one-third of those so qualified in that district were actually on the register. The League had been blamed for not mixing themselves up with other questions; but that body acted like the smith, who hammered at one piece of iron till he had got it into shape, instead of meddling with 50 pieces at the same time, doing no good to any one. (The learned gentleman requested his seat amidst loud cheers.)

Mr. BROWN then proposed, and Mr. JESSINOW seconded, a resolution warmly approving of the objects of the League in the county registration movement and the Covent Garden Bazaar, and pledging themselves to a cordial co-operation therewith.

Thanks having been voted to the Chairman by acclamation, the gallant gentleman strongly urged upon his fellow parishioners a vigorous course of action; and the meeting separated.

CAMBERWELL.

ROSEMARY BRANCH, SOUTHAMPTON-STREET.

A special meeting of the Chamberwell Anti-Corn Law Association was held on Tuesday, the 10th inst., for the purpose of taking into consideration the subject of the county registration. After much conversation it was resolved:—That it is the opinion of this association that the most effective way of drawing the public attention to the subject of county registration, is by holding public meetings in the different localities; that it is advisable to hold a meeting in Chamberwell at the earliest possible moment; and that the chairman (W. A. Wilkinson) and secretary (J. S. Lyon), with such other members of the association as can attend, be nominated as a deputation to attend the meetings of the League Registration Committee.

COUNTIES REGISTRATION MOVEMENT.

MEETING IN BRADFORD.

The "new idea" of the League, to win the counties to their side, has been heartily received by the Bradford Free-Traders; and at the request of the Anti-Corn Law

Association, Messrs. Cobden and Bright paid a visit to the town on Friday evening. Invitations to meet them were sent to about 700 persons—chiefly to those who are not county electors, but who are supposed to be in circumstances to become so. About two-thirds of the number invited attended, and a very agreeable and useful meeting was held. Among those present were Robert Milligan, Esq., the Rev. James Acworth (President of Horton College), Wm. Rind, Esq., and a very large number of the wealthiest and most influential manufacturers of the town and neighbourhood.

On the motion of Mr. RAND, Mr. GEORGE OXLEY, Chief Constable, was called upon to preside.

The CHAIRMAN made a few prefatory remarks. Referring to the official situation he held, he expressed a hope that the time was near when such meetings would be presided over, not by the creations of a court-leet, but by the chief magistrate of the borough, whose interests would be identified and identical with the burgesses at large. He concluded by introducing Mr. Cobden, who was received with great enthusiasm.

Mr. COBDEN and Mr. BRIGHT having successively addressed the meeting in able speeches, explanatory of the new League movement,

The CHAIRMAN introduced their excellent and Conservative friend, William Rand, Esq. He was not a member of Parliament, but no one knew how soon he might be.

Mr. RAND rose and said—Placed in the position of following in the wake of the hon. members for Stockport and Durham, he knew he stood in no very enviable position. In the hope, and under the well-founded impression, he trusted that their meeting was not one of any political party, but that it was a meeting of the Free-Traders, irrespective of party, he had great pleasure in finding himself among them, and, as far as laid in his power, promoting the object they had in view. The more he had reflected (and he had reflected deeply) on the question of what was called freedom of trade, the more he was convinced that the adoption of its principles was bound up with the permanent prosperity of this great kingdom. But, in order to advance these principles, and bring them into practical operation in this country, it was not sufficient to attend public meetings, to make enthusiastic speeches, to pass even the most decisive resolutions: they must put machinery to work, and bring it to bear on the question. It was not in order to counteract the efforts made elsewhere that he would counsel the Free-Traders of Bradford to enfranchise themselves; he thought it their duty, he thought that their country called on them to do it. It was not possible, as far as he could conceive, to advance one solid argument against the Free-Traders of this country endeavouring to obtain the franchise in the mode recommended and pointed out so clearly by the honourable member for Stockport. Nothing could be more honourable to the character of an Englishman than to obtain the elective franchise: it was to bring his own individual influence to bear on the character of the future legislation of the country. To seek for this by the purchase of a freehold, was to seek for it in the way the constitution of the country had recommended for ages and generations past. It was not, therefore, to be viewed with jealousy or contempt by any party whatever in the country, and especially, he marked the word emphatically,—it ought not to be viewed with jealousy by the great Conservative party of the country. It was an axiom in the Conservative camp, and there was nothing more true, that the acquisition of property tended to Conservatism; and he was proud to believe it, if the Conservatism was of the right sort. It identified a man with the interests of his country, it made him feel that he had some stake in it, it attached him to the soil, it gave him an interest in the preservation of its institutions, it elevated him in the scale of society, and begot within him a feeling of self-respect, which was not possessed by those who did not possess any. And all this was within the reach of scores, of hundreds, in the country. Nor would capital invested in the purchase of those freeholds be abstracted from those regular channels in which it added to the comforts or the character of the masses. Let them contemplate for a moment the result of the investment in this way of the money annually expended in Bradford in the dram-shops. He was told that no less than £40,000 a year found its way into such places, the interest on which, if judiciously laid out, would enfranchise 800 electors. What a tremendous waste of political power was there! It was of no use to entertain principles, unless they were prepared to carry them out; they must bring them into practical operation if they would make them tell on the people of the country. He hoped the visit of Mr. Bright and Mr. Cobden to Bradford would not be without its abundant fruit—that the voice of Bradford in support of the principles of Free-Trade would be heard in that place where they could be upheld with the best effect. These principles were making progress everywhere; they had to take courage and go forward; and he trusted, turning their backs for ever on party, they would take their stand on the broad principles of universal commerce. (Mr. Rand then quoted an eloquent passage from a speech in favour of freedom of commerce made by Lord Chatham, and concluded amidst loud applause.)

The Rev. JAMES ACWORTH next addressed the meeting, and ably supported the project for increasing the franchise by the purchase of freeholds.—Abridged from the Bradford Observer.

MEETING IN LIVERPOOL.

On Monday evening last a meeting (convened by circular) of the members of the National Anti-Corn Law League, residing in this town, was held in the Royal Assembly-room, Great George-street, for the purpose of meeting a deputation from Manchester to discuss the future plans of operation. The deputation consisted of George Wilson, Esq., and Richard Cobden, Esq., M.P. Shortly before eight o'clock these gentlemen entered the room, accompanied by a number of the leading Free-Traders of the town, amongst whom, and in various parts of the room, we noticed, Thomas Thornely, Esq., M.P., William Brown, Esq., William Rathbone, Esq., James Mellor, Esq., James Mullenau, Esq., Daniel Mather, Esq., Thomas Blackburn, Esq., William Watson, Esq., Samuel Thornely, Esq., R. W. Ronald, Esq., John Finch, jun., Esq., J. B. Smith, Esq. (Manchester), Chas. Robertson, Esq., Lawrence Heyworth, Esq., Samuel Bulley, Esq., Isaac B. Cooke, Esq., Richard Shell, Esq., C. J. Corbally, Esq., John T. Crook, Esq., — Tomkin-

son, Esq., W. H. Sims, Esq., C. B. Rawlins, jun., Esq., James Lewis, Esq., James Hodgson, Esq., Francis Bost, jun., Esq., J. M. Braga, Esq., — Hadfield, Esq., Timothy Jevons, Esq., John Clow, Esq., John Mather, Esq., C. E. Rawlins, jun., Esq., said, that, as the League was not confined to Manchester, but existed wherever there was a body of men subscribing to its funds, Mr. Wilson, who was Chairman of the League, would of course take the chair. (Cheers.)

The CHAIRMAN opened the business of the evening, and was followed by Mr. COBDEN, who, in an able speech, lucidly explained the League's new plan of operations.

WILLIAM BROWN, Esq., also spoke to the same effect. The chairman had told the meeting something of the comparative state of the agricultural, mercantile, and other interests; and he (the speaker) should say a few words in order to show, in a most simple and intelligible manner, the comparative strength of different classes. Taking the farmers, the yeomen, and the graziers of this county, their number is 16,000; farm-labourers 30,000, landlords estimated at 4000, about ten per cent. on the foregoing: together, 50,000. Now, the other interests are 640,000 against 50,000. That is, if there were 50,000 interested in maintaining high prices for agricultural produce, there were 640,000 interested in having it at a cheap rate. Mr. Brown then entered into details connected with the spread of Free-Trade principles amongst foreign nations, particularly the United States of America; and concluded by thanking the Free-Traders for the support given to him at the late election, and assuring them that upon whom ever their choice might fall at the next election—whether a Conservative Free-Trader, a Whig Free-Trader, or a Radical Free-Trader—if he were only a thorough-going Free-Trader, he would give him all the support he could. (Cheers.)

THOMAS THORNELY, Esq. M.P., in a short speech, proposed the following resolution:—"That we fully approve of the plan of operations, suggested by the Council of the League, for securing the election of Free-Trade candidates for this and the adjoining counties; and we pledge ourselves, by obtaining the qualification ourselves, and by actively canvassing amongst our friends, to secure its success." (Loud cheers.)

WILLIAM RATHBONE, Esq., seconded the motion. THOMAS BLACKBURN, Esq., supported the resolution in a brief speech; and the motion having been put from the chair, it was carried unanimously.

Mr. STEWART proposed a vote of thanks to Mr. Thornely for introducing the clause for third-class carriages into the Railway Bill.

Mr. THORNELY said he had great satisfaction in introducing that clause, and, if it met with the approbation of the public, he was satisfied.

Mr. WATSON proposed a vote of thanks to the Chairman and to Mr. Cobden, which was seconded by Mr. R. Mather, and carried by acclamation.

LAWRENCE HEYWORTH, Esq., having been called upon, made a few appropriate remarks; and the meeting then gave three cheers for Mr. Cobden and the League, and three cheers for the Anti-Monopoly Association.

Mr. C. E. RAWLINS, jun., stated that, if further information were wished as to the mode of obtaining the qualification, he should be very glad to afford it to any one who would call at the office of the Anti-Monopoly Association, or who would send his card with his name upon it.

The meeting broke up at ten o'clock.—(Abridged from the Liverpool Mercury.)

LETTERS FROM THE SOUTH-WEST.

(From a known Correspondent.)

FOURTH LETTER.

Sandhill Heath, Hampshire, Dec. 4.

About a quarter of a mile from this place, in a hollow, where runs a stream, the three counties of Wilts, Hants, and Dorset, meet. There is no difference on either side as regards the employers and employed. The same land-owners hold property here in all three counties.

There is a good common here. The soil is rather inclined to clay, but it is quick and fertile. The Earl of Shaftesbury enclosed some acres of it a few years ago, and let it in quarter acres to the working people living around at a low rent. I believe the intention was good, but his lordship usurped a power, it is said, which did not belong to him. The people who have got these allotments, are, doubtless, benefited by them. In short, wages are so low here and work so scarce, that they would die, actually die of want, if they did not get such pieces of ground to supply them with potatoes. So that, after all, the charity of a great landlord enclosing a piece of common which does not belong to him, to give it in potatoe ground at a low rent, to enable the labourers who work for his tenantry to work for very low wages, may be questioned, without doing him much injustice. It amounts to a kind of indirect payment by truck. I hold that every house should have a good garden to it, and, if an allotment can be given near the house to a large family, let it be so; but the inevitable consequence has been, and will be, a reduction of wages. Here, where more men seek work than can find it, the employers only pay sufficient wages to get the barest kinds of food. When they see a man getting potatoes and a few bushels of corn from an allotment, they say he can afford to work for lower wages. This is a fact. It is emphatically the result of the Wiltshire allotments down this way.

The land here is greatly in want of surface draining. This clay of the finest quality is here in great abundance, but the draining by tiles is not practised—mainly because the tenants have no capital. I have just come from a field which is being ploughed and sown with wheat. A crop of turnips has been on it, and ploughed down, as if for manure. This is customary in many parts of Dorset. In this case it was more from the inability of the tenant to get sharp to cut the turnips. There will be thus the root, and wages of work for two years to be paid out of next year's crop of wheat. It is but doubtful if it will be

a good crop. Yet the soil is capable of doing good things. In each of two fields next this one as much as ten sacks of wheat, five quarters, per acre have been reaped. "But," said my informant, an old man, born and ever since resident close by, "the land was terrible and well done to. It was in the hand of Lady Cootes then; no farmer here can do it so well; they be so poor." And he continued, "Yes; it be fine land most of it round here; it be terrible fine land; only wet."

It is certainly a matter of deep regret, that the means of fertilizing this land should be so near at hand, so well known, and yet so neglected. Labourers seek work on it, and many of them cannot find it; those who do are glad to work for 7s. a week; some few of them getting 8s. The farmers are only tenants-at-will, ready to be expelled from the land at the will of the landlord or his agent; or, worse still, on the private information of the gamekeepers. They cannot pay for labour to cultivate their land as it should be. They linger on, they are screwed down for rent, and they screw those below them in return.

The old man said, speaking of the good weather which has prevailed for some weeks, "They be making the most of it to sow wheat. But the horses be so poor and weak for want of feeding, they cannot make as much of the good weather as they should do; and the men be like the horses—worse; faith. The men be worse starved than even the poor horses. A farmer, let him be ever so badly put to it, will try to keep the horses from dying to save his having to go to market to buy more; but he be'n't obliged to buy another man when one dies; there be such a terrible sight of men, they would have enough an' half on us were dead."

This man may be seen and talked to digging the brick clay near Sandhill-gate, should any one doubt these assertions. From what I heard from himself, and from others, I know he is quite able to make good his words. But his observations as to the poverty of the farmers apply only to the small tenantry; and these the landowners are rooting out of the land as fast as they can get men of capital to supplant them. The men of capital take the land at a somewhat lower rent, yet even they depend on the impracticable promises of the Corn Law for their ability to pay. They are disappointed. They screw down wages lower even than the others; they work with fewer hands; they may pay their rents while the smaller tenantry would not pay, but very few of them can be said to do this through improved cultivation. Their workpeople live very meanly.

What I stated in a former letter of potatoes and salt and bread and water being the chief articles of diet in Damerham parish, in Wiltshire, is also true of the parish of Fordlingbridge, in Hampshire; at least this part of the parish. The working men put cold potatoes on the gridiron in the morning, and eat them with salt for breakfast; they may boil or roast them if they do not this. They take some of these potatoes with them, and a piece of dry bread, to the fields to their dinner. Those of them at plough eat their dinner of dry bread and cold potatoes, or a mixture of both, while their horses are baited in the middle of the day, or rather at from half-past eleven to half-past twelve o'clock. Water is their drink and their only drink, which may be a very good beverage for those who have the choice of beer and wine, and who do eat good beef and mutton, and confections. But for a ploughman, who is at his horses in the stable by six in the morning, with a breakfast of potatoes, warmed on the gridiron, in his stomach, and at the best a piece of dry bread a-top of them; and who sits down in the field at half-past eleven o'clock to some more cold potatoes, and another piece of dry bread; and who does not reach his own fireside until he has put up his horses, at least twelve hours after he had his potatoes on the gridiron in the morning,—to him, cold water is but a sorry substitute for a pot of beer. Yet such is the condition of the men who plough the land at and on each side of the place where I now write. They have bacon, or butter, or cheese (as for any other kind of animal food it is utterly out of the question): they can only afford such for two, or at most three, days a week; or rather for the first five or six days of a fortnight. If they be not very "watchful people," very economical and self-denying, they are even without bread in the last week of the fortnight. Let them indulge in the least degree when they are paid,—let them presume to eat bacon—to have tea and sugar—to have tobacco and beer,—and they must pay the penalty of being without bread. They must depend upon potatoes, and them only, for a week.

Some farmers only pay once a month. In such cases the labourers are compelled to run into debt at the village shops. Most of them do so as far as the shopkeepers will trust them, though paid every fortnight, or even every week. Few of them can write, or understand writing; and they complain bitterly of being wronged in the accounts kept at the shops. I am not of opinion that they are wilfully wronged; but when they go on getting everything on credit for a month, and everything they can get being less than what they really want, it need not excite surprise that they overstep their means of paying; and that when they come to pay, having no account of their own, and being unable to understand the figures and writing of the shopkeeper, they complain of being wronged. Let them just go on again—they have no choice of shops. Every article save bread is dearer than in the town. Groceries and clothes are from forty to fifty per cent. dearer. Common bacon is now 8d. per pound; the

best 10d. Common tea, which is sold in Salisbury at 4s. per pound, cannot be got below 6s. in the villages round here. The people who are having their house thatched at the gate opposite to where I am now writing, have assured me that the tea they have from Salisbury at 4s. is altogether equal to any they can get in this neighbourhood at 6s. Their son brings them a quarter of a pound when he goes to market. Sugar, which costs 6d. there, costs 8d. here. Cheese is also 1d. and 2d. per pound dearer. When a labourer buys bacon at all, it is mostly always Irish bacon, which, the inferior sorts of it being sold at 6d. and 7d. per pound, is the sole inducement to its use. When he has a hog to sell, the dealers do not give more than at the rate of 4d. and 5d. per pound. They send the bacon and pork off to London to the ready-money market. What is kept at home to be re-sold to the labourers is kept long, sold in very small quantities, and in most cases on credit, with indifferent security for payment. Thus the price is augmented. That which may be bought in the shops in London at 6d. is not to be got below 8d. at Damerham; that which is 8d. in London is 10d. in these rural parishes.

Thus we not only have wages very low here, but we have prices high; and, generally speaking, groceries are very inferior at their price. Mr. and Mrs. R., of Damerham, are quite sure that, if the labourers there could buy their provisions with ready money, they would save 1s. a week. As it is, they must take anything offered them, and are continually overstepping their means.

CORRESPONDENCE.

To the Editor of the LEAGUE.

Bicester, Dec. 11, 1844.

SIR,—I see that the editor of the *Herald* has condescended to publish my name in connexion with "Apollo," "quacks," "pills," "Catholic balm," "devil's dust," "Moore and Foxes," "Irish fellow-plunderer," "O'Connell," "Mr. John Bright," "Northern Star," "American field-preacher," "wandering vagabonds," "slandering clap-traps of the Covent-garden demagogues," "rick-burning," and "shedding blood."

These choice savings are, I doubt not, worthy of the "editor" of the *Herald*, as well as of the cause which he lives to advocate; and they demonstrate that their author is a "finished gentleman." "He presumes" that the picture is a true one. May the editor enjoy it. There is, however, one small error in the learned gentleman's choice bit. He "presumes" that the poor man, a part of whose letter is given in the *Herald* of December 9, is one of my people. Now, I must inform him that the individual in question is not one of my flock, neither does he live in our district. It is an easy thing to "presume." I might "presume" that the editor of the *Herald* is much more likely to become the occasion of "shedding blood" and "rick-burning" than any poor man in Oxfordshire. Wishing the League great success in the noble and hope-inspiring cause in which they are engaged,

I am, Sir,

Yours very respectfully,

W. FERGUSON.

GAME LAWS.

GAME IN BUCKS.—On Monday last, as a labourer of Quainton was crossing a field belonging to the Duke of Buckingham, he saw a great number of hares, and had the curiosity to count them. In this one field he counted no less than 270 hares, which was of course much less than the number he saw, as there were many he could not count. While labourers are starving for want of food and employment, here are vermin allowed to consume and waste this food, and by their depredations to lessen the farmer's means of employing the poor.—*Aylesbury News*.

A tenant (or gentleman) farmer, living near Luton, stated in the market room, last week, that he sowed six acres of land with wheat, which was destroyed in the winter by game; he broke up the ground and sowed it with barley; one-third of it was likewise devoured by his landlord's stock without any advantage to himself; this is only a part of the injury he annually experiences. The farmer cannot look on the poacher as an unwelcome intruder on his land, when his operation tends to protect his growing crops from such destructive ravages, and caused by those most solicitous to be considered his friends.—*Ibid*.

POACHING IN NORTHUMBERLAND.—On the night of the 29th ult., the preserves of Felton-park and Swarland were visited by a large gang of poachers, who got clear off with a heavy load of booty.—*Gateshead Observer*.

SERIOUS AFFRAY WITH POACHERS.—On Monday a sanguinary conflict took place in the preserves at Langley, near Lancaster, the property of the Earl of Durham, between six of the watchers and five poachers—the latter armed with bludgeons. Two of the watchers were most dreadfully beaten, so much so that their lives were considered in imminent danger. None of the poachers were captured.—*Ibid*.

LOW WAGES OF FARM LABOURERS.—In the Sherborne Union the general average for farm labourers is now seven shillings per week. At the Board of Guardians on Saturday last there were some cases of able-bodied labourers out of employment, and one struck us as being of great hardship. A man, with a wife and five children, applied for relief; his earnings, when the weather permitted him to work out all the week, were seven shillings, and two of his sons earned 2s. 6d., out of which his house rent cost him 1s. 9d.; his rent was considerably in arrear, his goods had been "taken account of," and he had notice to quit the dwelling; so that each member of his family had not much more than 8lbs. of bread per week, with cold water, and nothing to procure clothing nor fire, at this inclement season. Now this is the naked fact, and, as far as we could ascertain from the man, nothing was kept back—no man that he had no other privileges; the wheat that he had purchased of his master he had paid 6s. 9d. per bushel for.—*Sherborne Journal*.

REVIEW.

The Life, Progresses, and Rebellion of James Duke of Monmouth. By George Roberts, Esq. London, Longman and Co.

In our former notice of the period of history to which these volumes refer we broke off at the formation of the Cabal Ministry. Lord Ashley had previously held the office of Chancellor of the Exchequer, which was the reward given for his share in preventing the Parliament from making terms with Charles II. previous to the Restoration, and presiding at the trial of the regicides, his former associates. The great object of the Cabal was to render the King independent of Parliament, by entering into close alliance with Louis XIV. of France, who, in case of any popular outbreak, should assist Charles with men and money. The English Monarch, on the other hand, engaged to assist the French King in the war he was waging against the States of Holland; and to this was added a secret stipulation for the restoration of Popery in England. Large bribes were given by Louis to all the members of the Cabinet for this treachery to the interests of England; and Charles, in addition to a pension, obtained Mademoiselle Querville (afterwards created Duchess of Portsmouth) as a mistress. It is now known that Charles bound himself to make an effort to establish Popery and arbitrary power in England, and that this part of the negotiation was conducted by his sister, Henrietta Duchess of Orleans, who was soon after, on her return to France, poisoned by her husband in revenge for her too notorious infidelities; but it is open to question whether the Ministers, and particularly Lord Ashley, were aware of the King's secret stipulations. It is probable on the face of the documents that have been preserved that the whole of the Cabal was cognizant of the fact that some secret treaty had been concluded between the French and English Monarchs, but there is no evidence that they were all acquainted with the precise stipulations.

Charles II. required of his Ministers that they should pay respect to the ladies of his seraglio, and connive at his attachment to Romanism. The austerity of Clarendon's character, and his earnest zeal for the English Church, often led him to thwart the King in both particulars. Ashley was more compliant, at least on the first point, for he countenanced the royal vices by his own example, and was proverbial for his licentiousness, even in that licentious age. His apologetic biographers ascribe his profligacy to policy rather than passion; they tell us that he was not naturally of a warm constitution, and that he only sought the fame of adulterous amours to save the King from the mortification which the contrast of a virtuous Minister to a licentious court might have excited. Such an excuse appears to us a grievous aggravation of guilt. These biographers assert with great vehemence that Ashley was strongly attached to the Protestant interest, and was therefore unlikely to gratify the Popish inclinations of the King; but the truth is, that Ashley was an sceptical in religion as he was loose in morality. He is known to have declared that "all men of sense are of one religion;" and when asked by a lady who was present, "Pray, my lord, what is that religion?" he replied, "That, madam, is what men of sense never tell." It was said of him, sarcastically, that he was one of the best Protestants in England, because he protested not only against Popery, but against all forms of Christianity.

James Duke of York and Ashley headed opposite parties in the Cabinet; but the latter did not at first exhibit the courage and resolution which he displayed in his subsequent career; Charles II. described him to the French ambassador, Colbert, as "the weakest and most profligate of men." It was his belief in this weakness which induced James to consent to Ashley's being created Lord Chancellor with the title of Earl of Shaftesbury, which the wits of the day changed to *Shiftshury*. The Duke of York and the Chancellor soon became bitter enemies, and the latter formed the determination, from which he never swerved, of changing the succession to the crown. After having consented to all the infamous measures, such as the Dutch war and the shutting up of the Exchequer, which have immortalized the Cabal Administration, Shaftesbury affected scruples of conscience about tolerating Popish recusancy, and, resigning office, went into opposition. The general belief of his contemporaries was, that, having seen the King forced by the House of Commons to revoke his declaration of indulgence to Dissenters, Shaftesbury began to regard the popular party as the stronger, and, therefore, the more likely to gratify him with power, the great object of his ambition.

We have now reached a period of some import-

* The union of sectarian zeal with scepticism is not very uncommon. Infidels were the most violent persecutors of the early Christians; the strongest supporters of the Inquisition in Spain and Italy were more than suspected of Judaism; and in Ireland the most strenuous advocates of the penal laws were disciples of Hume and Voltaire. It was a proverb, that those who had least religion of their own buried themselves most about the religion of their neighbours.

ance in our annals, the age of the formation of the great Whig party, or, as Burke called it, "the old Whig party," which lasted down to the wars of the American Revolution, when it merged into that of the new or Fox's Whigs. The elements on which Shaftesbury relied for forming a strong party consisted chiefly of the class of landholders that had grown up in England since the Reformation. Protestantism in this age was largely connected with the tenure of property; two-thirds of Ireland had been divided amongst Cromwell's soldiers because the original proprietors had refused to abandon the Romish faith, and had taken arms to support Charles I., who promised toleration against the English Parliament, which had pronounced all Papists capital enemies of the state. In England the holders of monastic and other church lands under grants from the Tudors and the two first Stuarts, though they had the security of longer possession, were not free from the dread of a demand for restitution if the Papal party should gain the ascendancy. In fact a terrible precedent was before their eyes; during the Commonwealth, the crown lands, those of the bishops, deans and chapters, and of a few eminent Royalists, had, under the authority of Parliament, been granted away as rewards, or sold to the highest bidder. These were reclaimed immediately after the Revolution; forcible entries were made, and, as the purchasers were not allowed to plead a title derived from the Republican Government, the ecclesiastical authorities, the crown, and the dispossessed Royalists re-entered triumphantly on their ancient possessions. The bishops' and chapter lands had been sold at ten years' purchase, the rector and glebe lands at twelve, and those of the crown at thirteen years' purchase. It was only to the purchasers of the last that any favour was shown. The possessors of ecclesiastical lands were ejected with reckless severity; and when they alleged the equity of their contracts, it was contemptuously replied that "they had taken the risk with the benefit." If the Revolution which brought back royalty had led to such disturbance of property, that which would bring back Popery was likely to produce still larger demands for restitution. The very recklessness with which Henry VIII. had given away immense estates out of the monastic and other forfeited lands, rendered the new race of proprietors timid about their titles. When some of the Russell family boasted of the invariable support that the family had given to the Protestant interest, one who stood by read the long list of manors which their ancestor had obtained from Popish forfeitures, and sarcastically inquired, "Doth Job serve God for nought?"

The old Whig or "country party," as it was at first called, as formed by Shaftesbury, consisted of the nobles whom the Tudors had raised to the peerage and enriched at the expense of Popery; to these were added great numbers of the middle class of country gentlemen, who were more or less attached to Puritanism, and the most influential of the trading and manufacturing community, a body which the court disregarded, and had not unjustly offended by substituting the excise for the feudal taxes on land. Shaftesbury's plan (which was fully developed at the Revolution) was to form an oligarchy of the families which the Reformation had created, enriched, and invested with influence; under this oligarchy the King was to be reduced to the condition of a Venetian doge, and the people to be worked with a mere shadow of representation. To such an oligarchy James Duke of York was certain not to submit; and hence Shaftesbury turned his attention to the Duke of Monmouth as a more pliable sovereign. Monmouth, indeed, was illegitimate, but Shaftesbury was not without hope that Charles could be induced to recognise him as a lawful son; and bastardy in England had a royal precedent in William the Conqueror.

From the time that Charles's Queen, Catherine of Braganza, was pronounced hopelessly barren, the countless mistresses of the profligate Monarch seem to have more than once speculated on the chance of his selecting an heir from some of the children of the seraglio. Hence we find that these mistresses were treated with great reverence, not merely by the courtiers but by their opponent. Shaftesbury, in a characteristic speech, objects to them only on the ground of their religion. We quote one amusing passage from his oration:—

"My lords, this noble lord near me hath found fault with that precedent which he supposes I offered to your lordships concerning the *chargeable ladies* at court; but I remember no such thing I said. But, if I must speak of them, I shall say as the prophet did to King Saul, 'what meaneth this bleating of the cattle?' and I hope the King will make me the same answer, 'that he reserves them for sacrifice, and means to deliver them up to please his people'; for there must be, in plain English, my lords, a change; we must neither have Popish wife, nor Popish favourite, nor Popish mistress, nor Popish counsellor at court."

This exquisite specimen of what was then called Protestant feeling is a parallel to the story of Nell Gwynne, who, having been once mistaken for the Duchess of Portsmouth, was hooted by a zealous mob; putting her head out of her carriage window

she exclaimed, "Stop, boys, I am the Protestant —," upon which she was loudly cheered, and drawn home in triumph.

Monmouth was a favourite with the seraglio, having put himself forward as a champion for all the successors of Lucy Waters. Sir John Coventry having in his place in Parliament indulged in a joke at the expense of the King's mistresses, Monmouth engaged a party of young ruffians, who waylaid him in the street, treated him with the greatest brutality, cut his nose to the bone, and left him for dead. Monmouth not long after signalized his courage by joining with eight others in an attack on a parish beadle, who was cruelly murdered by the party. But all these crimes were expiated in Shaftesbury's opinion by Monmouth's quarrel with the Duke of York; and, to keep up the consistency of the history, this quarrel originated in a dispute about a worthless harlot who had deceived and deluded both.

Shaftesbury soon found that the King would not sacrifice his brother to his son; but he was also aware that Charles had resolved "not to press the pillow upon which his father died," and Shaftesbury resolved to create such a storm as would intimidate the Monarch. It was for this purpose "the Popish plot" was contrived; and the zeal with which the old Whig party supported this monstrous delusion, of which Shaftesbury was the principal concoctor, led to a series of judicial murders which have scarcely a parallel in history. In the cruel persecution of the victims of perjured witnesses those who since have been honoured as the purest of patriots took a prominent and disgraceful part. While, however, the names of the wretched subordinates, Oates, Bedloe, Tonge, Plance, &c., are universally execrated, it is not just that the parliamentary orators who hounded on these wretches should escape reproach. When Lord Stafford was convicted on evidence which no one now doubts to have been a compound of perjury and absurdity, we find the honoured name of Lord William Russell among the list of those who insisted that no part of the butchery of the sentence for high treason should be omitted at his execution. The plot at length broke down from the mere weight of its own extravagance; and the King took courage to dissolve the Parliament before the bill for excluding James Duke of York from the succession had passed the Lords. In the reaction which followed the madness of the Popish plot, Shaftesbury suddenly lost his popularity, and the whole scheme which he had contrived for raising Monmouth to the throne was irretrievably ruined. He died soon after in exile; but the Whig party did not abandon his policy, and the Rye-house plot was formed to force Charles to recognise Monmouth as his successor. The perplexed history of this plot is only explicable on the supposition that, however the chiefs engaged in it may

have agreed in a common object, they were not all prepared to use the same means. Some of them, undoubtedly, had resolved to kill the King; but Monmouth, Russell, Sydney, and some others seem only to have contemplated such duress as would have induced the Monarch to comply with their conditions. Monmouth's pusillanimous conduct, when the plot was discovered, and his libel on the memory of his associates in the shape of a confession, covered him with so much infamy that he lost all reasonable chance of ever wearing a crown.

The accession of James II. was viewed with great dissatisfaction by the Whigs; but the leaders generally resolved to bear his reign with patience, because they believed that his Queen, Mary of Modena, never would have children, and two of his daughters by his first wife, Anne Hyde, were married to Protestants: Mary, to the Prince of Orange, and Anne, to Prince George of Denmark. It was not deemed worth while to dethrone a Popish sovereign when there seemed a certainty of a Protestant successor. One great reason for this acquiescence was the thorough exposure of the "Popish plot," when Titus Oates was brought to trial and convicted of perjury. The evidence against him was so decisive, that when he tried to obtain a reversal of the judgment after the Revolution, the House of Lords confirmed the sentence of the courts below, and William III. had to grant him a formal pardon.

The Catholic noblemen and gentlemen convicted under the pretence of the Popish plot were clearly the victims of Shaftesbury's wicked policy. Those who suffered for the Rye-house plot equally owed their death to his artifices; for it was he who recommended them to make Monmouth king, and it was he who first thought of compelling Charles by force to acknowledge Monmouth as his heir. Another set of victims still remained—those who suffered for their share in Monmouth's rebellion—to which we shall direct attention in our next article.

Abrams, a gamekeeper of the Duke of Buckingham, has been fined £5 at the Buckingham Petty Sessions, for kicking and beating a boy who was throwing stones at birds (not game) in a hedge. When convicted, Abrams trumped up a charge against the lad, of taking a hare by means of a spring; but the boy's innocence was clearly proved. The gamekeeper has since been committed to take his trial for firing at three boys: he wounded one in the hand.

AGRICULTURE.

A CHAPTER ON LEASES.

Where is there a person really acquainted with agriculture, who does not declare security of tenure to be the first requisite to good farming? Yet, throughout England, not one farmer in every hundred has a lease. The result is, that a great part of the land of this country is indifferently cultivated. That fact is now universally admitted. At a late meeting of *Stowponey* (Worcestershire) *Farmers' Club*, Mr. Maughan, in the course of an excellent lecture upon leases and corn-rents, observed, "that it is impossible to travel through England and Wales, in any direction, without feeling a strong conviction that there must be some serious obstacles to the investment of capital in agriculture." The same thing is stated, under every possible variation of phrase, wherever a few farmers or landowners gather together. And let it be remembered that this occurs under a system of protection. Capital is superabundant, yet the only line of business which suffers, as the rule, from inadequate capital, is the trade of farming. Nor have we far to seek for the cause. That which was professed to be for the benefit of the farmer has proved to be his curse. Monopoly of the domestic market has been his bane, because it has deprived him of his self-reliance, and taught him to calculate on a scale of prices he never can permanently obtain. Neglecting the wealth that lies upon the surface of his own fields, he sighs for an unfair profit derived from a tax upon the food of the community; and, thus staking his success upon an artificial scarcity, the bounties of Providence bring upon him distress and ruin. Amongst the many evils the Corn Laws have inflicted upon agriculture, there is none greater than the introduction of the system of yearly tenancies. For let it be observed, that yearly tenancies are modern innovations, which date their commencement from the year 1815. Formerly all farmers had leases; but for the last thirty years the ordinary relations between landlord and tenant have been merely provisional. Both parties have always contemplated the possibility of a dissolution of their connexion at the end of the current year. Under such a system it is not natural that good farming should have been the exception, and inferior husbandry the rule?

Nor will there be any general amendment till the farming business has been placed on a safe and steady footing by the abrogation of the Corn Laws. It may answer the landowners' purpose to delude tenants with the unfounded belief that they will constantly obtain scarcity-prices, though the farmers can suffer nothing but loss therefrom. And of this farmers are becoming partially aware; and, as the first consequence of their grow-

ing knowledge of their real burdens and difficulties, they are universally demanding security of tenure. That security can only be found in long leases. But the practical obstacles to leases are greater and more numerous than those who have not looked closely at the state of landed property are aware. In the first place, the landowners have tasted the sweets of power, and have so long been accustomed to wield it, and domineer over a dependent tenantry, that they are reluctant to grant leases. Hence the many shifts we hear suggested, such as tenant-rights, agreements to pay for improvements of which the tenant has not had time to reap the benefit, and so forth. Next, tenants won't engage to pay existing rents. They know and have felt the fearful fluctuations prices have undergone since agriculture has been "protected;" and to a certain extent they have believed the buggaboo tales the monopolists have told them about the low prices for which grain might, but for prohibitory duties, be imported from abroad, and they very fairly require the landowners to embark in the same boat with themselves, by means of corn-rents. It is only common justice that the rent should fluctuate with the price of grain, especially whilst rent is calculated according to an artificial scale of prices. Corn-rents, however, are more advantageous to tenants than landlords, and therefore they will be adopted, if adopted at all, slowly and with reluctant hesitation.

Then the usual covenants and stipulations inserted in leases are entirely restrictive of good farming. A mass of old habits and associations have to be obliterated, especially from the minds of the landowners. They must cease to regard their tenants as little more than bailiffs, whose office is to work, with a bare subsistence, to pay rent, before men of capital and intelligence can be induced to embark in farming. We believe that at this moment agriculture offers a field for the employment of capital, in the hands of an educated man, not inferior to any other avocation, provided a farm can be obtained at a fair rent, and without objectionable restrictions. But where is such a farm to be found? Let us suppose the case of an intelligent man of good education, with a capital of from £5000 to £15,000, which he is prepared to embark in farming, where is he to seek a farm? The Duke of A, or the Earl of B, or Sir John C, have all and each of them farms

The R. Division made th

whereon he would gladly make his venture, and which he would not hesitate to hire at the present rentals. But on inquiry he finds that, if he becomes the tenant of any one of these grandees, he must do something more than enter into a business-like contract for an exchange of equivalents. It is not enough that he engages to give the full annual value of the farm in return for the use and possession of the land. He is required to give the full yearly value for the land, and to obtain in return only a partial use and restricted possession of it; and he is to become a sort of semi-feudal vassal besides. He is to protect the landlord's timber, scattered in picturesque but noxious profusion over the farm; and to preserve his huge and ill-arranged fences; he is to feed the landlord's game, and conduct his farming operations under the surveillance of the landlord's gamekeepers; he is not to break up pastures, because they have been bad pastures from time immemorial; he is to pursue some prescribed rotation of crops, or to give some defined number and description of ploughings, although his observations and inquiries have satisfied him that such a course of husbandry will render his chance of profit problematical; and lastly, he is to hold the farm from year to year, and support with his voice and vote his landlord's views on all public questions, without regard to his own political opinions or conscientious convictions. He finds that the payment of rent and the casualties of seasons form the smallest and probably the least burdensome portions of his liabilities as a farmer; that he is not about to embark in a business, but to become the retainer of some mock feudal superior. He must not only risk his capital and give up his time to the avocation, but he must surrender his personal independence and moral integrity as well. Is it surprising that such a man should turn from the business of farming with disgust, and that his place should be supplied by a person of less capital, education, and mental independence?

And even where landlords do not impose all such restrictions as we have mentioned, they seldom abandon them all. One may be willing to grant a lease, but requires the accustomed and practically obsolete covenants; another can't give up the game, or a third the timber and hedgerows, and so on; whereas, one and all of these and similar restrictions must be waived before good farming and leases can become general.

An incident lately occurred within our own knowledge, which illustrates how landowners seek to impose terms upon their tenants which, looking at the letting and hiring a farm as a transaction of business, seem to bear the character of caprice and whim. An extensive landowner, of deservedly high reputation for liberality in his views of the relation of landlord and tenant, and for his real knowledge of English agriculture, had offered to let to a farmer of skill and capital a farm which was expected to become vacant. The restrictions imposed were unusually few; the farm had been well drained, and was not much encumbered with timber; a long lease would have been granted, the game was not reserved, no course of cropping was prescribed; and there appeared every reason to believe that a contract mutually beneficial to both landlord and tenant would be entered into. These general arrangements having been made, some little delay occurred on the part of the landlord, arising from a doubt whether the actual tenant of the farm would give it up quite so soon as had been anticipated: in the meantime the farmer continued to make inquiries in other directions; and he had received an offer of another farm, which, failing the former negotiation, he determined to accept. Things were in this state when the farmer received a letter from the landowner to say that all had been arranged with the old tenant, and that the farm was then open upon the terms before proposed; but the landowner then, for the first time, said, that it was a necessary condition that the tenant should be a member of the Church of England! The farmer, though in fact a Churchman, felt that such a requirement was so foreign to the business of letting and hiring a farm, that he at once returned his thanks for the offer, but declined it upon the ground that, during the interval of uncertainty which had occurred, he had entered into another engagement. Such are the burdensome or fanciful services which landowners require from their tenants over and above the full value of their farms; and these, together with monopoly-caused fluctuations, will fully account for "the serious obstacles to the investment of capital in agriculture" which exist in England. We had intended to have made these remarks introductory to the form of a farming lease, which we propose, with all deference, to submit to our agricultural readers, as one calculated to do justice between the landlord and a tenant of competent capital and skill, and as suited to the present state of agricultural knowledge amongst good farmers; but to do so would cause our limits for the present week to be exceeded.

TRUTHS IN JEST.

The Rev. Mr. Huxtable, in describing, at Sturminster Newton Agricultural Dinner, his rural improvements, made the following humorous speech:—

"And how had he done it? Why, he kept a lot of pigs (laughter), and he took care to keep them in the warm and dark, and then they wouldn't eat so much. (Continued laughter.) He bought all the sawdust in the place, and bedded them with it. It made most splendid manure. It was put into a shed, where no air could come, and it was salted a little to keep in the moisture. He had a waggon into which he put this 'sawdust pigs' dung,' as he called it, and conveyed it to the field, where it was put into a large sailcloth, and a quantity of turnip seed mixed well up with it, the sawdust having been made tolerably dry with ashes. The seed and manure were then dibbled in together. In no one single instance in which he had followed this plan did the fly attack the turnips. The cost was 7s. an acre—no more; and, if these thousands of acres were dibbled, think what labour it would employ; they would have to send for the labourers back from Canada. (Loud cheering and laughter.) Then, instead of ploughing (for at the outside his men would not plough more than three-quarters of an acre a day), he put on Lord Ducie's scarifier—that would move five acres a day. He then put on the harrows and harrowed together the stubble; he then drilled in this 'pigs' dung manure' into vetches; those vetches would be cut by the second week in June, and that was the time when some of the farmers around him were sowing their turnips; he sowed his in April, and transplanted them after the vetches were cut. He thought growing hay was a barbarous invention. (Loud cheers and great laughter.) He would prove to them that they could do without it. When it was hay-making time and wet, he would recommend them to transplant their turnips or mangel wurzel roots. Those that they saw in the field that day were transplanted in June; he had them transplanted in ridges, and liquid manure poured on the ridges until a puddle was formed. He did not believe one in ten thousand of his transplanted roots had died; he would venture to say they could grow thirty tons an acre, and then grow wheat. He wanted to show that they could employ their labourers on the land, which was a far better investment than those miserable Three per Cents. that were above par. (Loud laughter and cheering.) How much did they suppose was sent out of this country every year for the flax imported? The amount was more than three-fourths of the entire capital employed in manual labour—no less than five or six millions a year. There was an idea that flax burns the land, taken from a line in Virgil's 'Georgics,' and therefore landlords put a clause into leases that flax must not be grown. A gentleman of experience, living at Gillingham, the other day told him that he cleared £10 an acre by the growth of it. He (Mr. Huxtable) went to Norfolk the other day on purpose to learn how to grow flax. They didn't know how to do it here. They spread it out to the daws of heaven to make it a good colour, and pretty sort of stuff it was. (Cheers and laughter.) People used to fancy that the seed was of no use. He had two cows at home, which he called his experimental cows; some might think, perhaps, they were much to be pitied. (Great merriment.) Their backs, when he took them in, were as rough as a board, and now, though they had never touched hay, they were like well-groomed horses. They got nothing but turnip-tops out up with straw, with ground linseed poured over it. He had never seen better cream or butter than they gave. These cows cost him 24d. a day, without turnips. He provided himself with a quantity of crushed flax-seed: it must be boiled every morning. Don't let them trust their bailiff, for he would not like the trouble. The animals would eat it dry, but it would purge them. It must be boiled in four or five times its bulk of water, and then it must be poured over a great bulk of chaff. He would make one other observation: he had spent the last two years and a half of his life in books—ten hours a day, and he was told that the idea was preposterous that such a man as he could farm—he would be ruined. He took in all the foreign journals he could get, giving an account of agriculture. He had read in a Swabian (German) journal, that carrot tops and mangel wurzel leaves could be made into valuable food for winter. He would not buy hay for £2 a ton now. (Loud laughter.) He learned from the work, that in Swabia they always pickle their mangel wurzel leaves. He had three pits dug, into which he put his carrot tops; he got eleven tons of tops and twenty-nine tons of carrots from an acre of ground. He sold some of these tops for £1. 10s. a ton; he sunk his pits about nine feet deep in the sand; he put some vetch haulm at the bottom, and then had the tops thrown in and pressed down, with four pounds of salt to every hundred weight of leaves. The pit was then made as nearly air-tight as possible. In a few days a violent fermentation came on, and a great subsidence of the material. The pit was roped and again filled, and pressed down tight as before. He had given this to his cows, and, though it smelt strong enough and was very black, yet the cows ate it. Certainly their faces were as black as if they had been rummaging a dung heap; but they ate it eagerly. He had covered up his pit again, feeling assured that, when the fermentation was over, he should have a large bulk of valuable winter fodder for his milk cows. Now, if they grew mangel wurzel, their tops would be fifteen tons an acre, and from these tops they might get a nutritious and wholesome food for their cows during the winter. If they were to improve farming in that neighbourhood, they must grow heavier green crops, and in doing that they would employ the labourer. He warned his brother farmers from looking at the labourers as an encumbrance to the land; they were the riches and the strength of this country, and, as had been so beautifully expressed, they were 'their country's dependences.' (Loud cheering.)

Now, though some of this is exaggerated and fanciful, the moral of it is, that farmers ought to apply their minds to the making the most of that which lies at their own doors, or is wasted on their own farms. And so they will, when no longer deluded by promises—unperformed promises—of protection; when the premium on agricultural indulgence, professed to be offered by the Corn Laws, is abolished.

AN EXAMPLE FOR LANDLORDS.—We hear that the Earl of Harwood, since his accession to the title and family estates, has had his several farms revalued by his agents, and has reduced the rentals of each to an extent amounting in the aggregate to several thousands of pounds per annum.—*Leeds paper.*

THE LANDLORD'S FRIEND SOCIETY.

(From Punch.)

Early in the present week, this body—newly constituted in imitation of the Labourer's Friend Society—held its first meeting; though, strangely enough, no report of the proceedings has as yet appeared in the papers.

The chair (a three-legged stool) was taken by JACOB THATCHER, a gaunt, sawn-faced labourer, looking sixty, though in reality but thirty-two. He briefly stated the objects of the society. He said, it was very kindly meant of many gentlemen to meet and talk so much—for they never spared talk—about the condition of the labourer. He himself had been at a good many of such meetings; but, somehow or the other, he always came away hungrier than he went. He now thought it was the duty of the labourers to return the kindness of landlords; and by meeting and talking over their destitute condition—moral condition he believed was the word—to see what could be done for them. (Cheers.) There could be no doubt that many of the landlords were in a desperate forlorn state, not knowing right from wrong; and it was the duty of labourers as Christians—if he wasn't going too far in calling them Christians—to teach them the proper path. It was only due to their peace in this world, and their happiness in the world to come. (Cheers.)

GILES ACORN proposed the first resolution. He said he didn't wish to brag, but he believed he was rather a goodish player at put and checkers. (Hear.) Well, he believed a good deal might be done among landlords by mixing oftener with them, and making more free like. To prove that he was in earnest, he had no objection to play a few games at put with the Duke of Marlborough, or any other such landlord; he thought it would do the duke good. There was no knowing how his heart might be opened at put, just as the gentlefolks did so much for the wants of the poor when they played at cricket with 'em.

HOBBS SOWTHISTLE seconded the resolution. He didn't know much about dice; that is, he didn't know the rigs of 'em; he had raffled once in better days for a goose, and won it. He wouldn't at all mind, however, playing at hap-hazard, that's what he believed gentlefolks called it—with any landlord in a destitute state of feeling for the labourer. He had heard a goodish deal of late of a little gentleman called Young England. Well, he wouldn't mind playing a game at ring-taw with the child, if he'd fairly knuckle down. The knuckling down, however, was what they wanted to catch the landlords at (cheers); whereas, with all their fine words, he believed there was a great deal of finking.

SIMON CLAY moved the second resolution. He said the whole of the fact was, they had too long neglected landlords as their fellow-creatures; they never went among 'em. Whereas—as having their good at heart, and showing 'em that they thought 'em only men, like themselves—they ought to go into their houses, to see what sorts of beds they slept upon—to see 'em at their dinners, and to teach 'em, what it's plain they didn't well understand, the blessings of a good appetite, and the curse of hunger with nothing to satisfy it. It was plain that many landlords believed the labourer couldn't eat at all. Now, they had only to undeceive 'em in their own larders to bring about a great blessing. Certain gentlefolks often came to the labourer's dwelling, and never seeing nothing in the cupboard, in course believed that the labourers and their wives and children never wanted food. They had only to dine at the landlords' houses to teach 'em the contrary. Although he'd rather have his bit of bacon at his own fireside—that is, where there ought to be a fire—he would, nevertheless, to assist the society, dine with as many landlords as was thought fit. Moreover, he had six children, and they should all go and dine along with him. (Cheers.)

ZACHARY CHAFF seconded the resolution. He said the last speaker had hit the nail upon the very head. It was as plain as the Union, that most of the landlords believed that labourers never wanted to eat at all. That they were like the thrashing-machines, that might go on beating out the corn without ever wanting to taste it. They ought—poor souls!—to be taught the truth. He was sure all they wanted to learn was that the labourer was flesh and blood—and, indeed, how few of 'em present at that meeting looked anything like it—to treat 'em as such. For himself, he didn't know what a dinner was; nevertheless, for the souls' sake of the landlords—and he feared a lot of 'em was very dark indeed—he'd dine with twenty of 'em if the society thought it right. (Cheers.)

These and other resolutions were unanimously passed, when the Chairman rose and said—The best part of the business was to come. They had to give out the prizes to certain landlords for their noble and feeling conduct towards the labourer.

Hereupon Lord Fitzwheedle was introduced, when the Chairman addressed him as follows:—

"Lord Fitzwheedle, you have shown yourself to be the labourer's friend. You play at cricket capital. For a lord, your bowling is special good. You have this season in the handsomest manner played three games with nothing better than as you call 'em the sons of the soil; and for this noble conduct, the society presents you with this piece of stick, upon which may be notched your future runs. We hope, my lord, that you will show this bit of stick to all the club folks in London. We hope that you will let this bit of stick go down, so that your sons' sons may have it—every one of 'em; and that the world may for ever know that Lord Fitzwheedle was a good cricket-player, and therefore the labourer's friend." (Cheers.)

His lordship endeavoured to address the meeting. His feelings were too much for him. He merely said, "Bless—bless—the labourer!" then burst into tears, and pressed the stick to his heart.

The Duke of Smallborough was next introduced, and received a bunch of dried dandelions for being—of all landlords—the very best to stop. The duke returned thanks in an affecting speech.

After certain minor formalities, the meeting separated.

REDUCED POOR RATES. CHEAP BREAD.—The number of persons in the Sunderland workhouse last week was 249, and those receiving out-door relief 4676; in the week ending the 29th of November, 1843, there were 267 persons in the workhouse, and 5435 received out-door relief. The average weekly reduction in out-relief is about £20, and there has been a considerable saving in the maintenance of the in-door poor arising from the present low price of bread.—*Sunderland Herald.*

THE ECONOMIST.—The extensive and increasing support which this Journal is receiving from the leading Mercantile, Banking, and Manufacturing Classes, without reference to political party, has induced a constantly increasing care to render the Commercial Department of the paper as complete and accurate as possible, and thus to combine, with the discussion of principles, a practical current usefulness, and work of future reference. To express more fully this growing characteristic, a slight addition will be made to the title with the beginning of the new year; and some important additions will also be made to its present contents of practical utility. It will be called

THE ECONOMIST, AND WEEKLY COMMERCIAL TIMES.

And will contain—
1st. Leading articles on Political, Economical, Financial, Commercial, and general subjects, discussed on strict economical and Free-Trade principles as heretofore.
2nd. A careful digest of the Proceedings and Debates in Parliament.
3rd. A careful abridgment of the News of the Week, with a notice of the Theatres and Public Amusements.
4th. Law Reports of cases particularly connected with Commerce.

5th. Literary Notices, and particularly of all Works on Economical, Financial, and Commercial subjects.
6th. Correspondence and Answers to Queries on subjects of Statistical and Commercial Interest.
7th. Review of the Current Commercial Questions of the day, and of the Markets abroad and at home.
8th. Weekly Statement of Imports, Exports, Consumption, and Stocks on hand, of the chief Articles of Foreign and Colonial Produce, and the Raw Materials of Manufactures.
9th. A notice of all public Sales of Produce announced to take place in London and Liverpool in the ensuing week.
10th. A Price Current of Finance, Commerce, Railways, and Corn Markets, &c., and the Gazette of the week.

Once in each month will be continued to be published the very important Official Table of Imports, Consumption, and Exports for the whole kingdom, of all leading Articles of Foreign Produce, and of the Exports of British Manufactures, for the current year, compared with the corresponding periods of past years, with a careful review of the results which these returns indicate. Also, monthly, or more frequently, an account will be given of the Exports of some of the leading Articles of British Manufacture, particularly of Cottons, Wool-lens, Linens, &c., distinguishing the countries to which they go, so as to act as a timely check to over-shipments.

The numerous and important Commercial and Financial questions which must be discussed in the ensuing Session of Parliament, on the subject of Taxation, Import Duties, and Banking, will specially engage the attention of this Journal, both before and during their discussion.

Every care will continue to be used to secure the most perfect accuracy on all points, and to maintain this Journal independent of all personal or party influence.

A Title Page and Index will be furnished at the close of the present year for the past numbers, and will be continued annually, forming a yearly volume of 1250 pages.

Annual Subscription, Twenty-six Shillings.
Office, 6, Wellington-street, Strand; and to be had of all Newsagents.

NOTICES TO CORRESPONDENTS.

"Another Leaguer" confounds together two very different things—the meaning of the word *morals*, and the standard of *morals*; assuredly we should not seek for the latter in Aristotle. The point really in issue has been sufficiently elucidated by Archbishop Whately, and with an extract from his "Lectures" we shall take leave of the subject.—"God has not revealed to us a system of morality such as would have been needed for beings who had no other means of distinguishing right and wrong. On the contrary, the inculcation of virtue and repression of vice in Scripture are in such a tone as seems to pre-suppose a natural power, or a capacity for acquiring the power, to distinguish them. And if a man denying or renouncing all claims of natural conscience, should practise without scruple every thing he did not find expressly forbidden in Scripture, and think himself not bound to do anything that is not there expressly enjoined, exclaiming at every turn,

"Is it so written in the Book?"

he would be leading a life very unlike what a Christian's should be."

"T. M."—"Will freehold property purchased out of a building society entitle the purchaser to a county vote? Please say in your next publication, and you will oblige."

[See last week's LEAGUE; the question you will find fully answered.]

"H."—"A freeholder occupying his own freehold in a borough."

"A thirty-five pounder" we fear is under the mark.

"John Johnston Carile."—"We think you might safely send in a claim for the freehold. A form and further instruction may be obtained by personal application at the League Office, Fleet-street, London."

"If A, B, C, and D purchase a freehold house and premises of the value of £20 per annum, and the conveyance is completed before the 31st of January next, will that enable each party to qualify and vote?" [Yes.]

"C. G. D."—"Will a house rated at £50 per annum, and occupied by him, entitle him to a county vote?" [Yes.]

"Yes." If the occupier is a *bona fide* tenant to a rent of £30, and the house is not situate in a city or borough.]

"G. R. J."—"Members' tickets still admit to the meetings at Covent Garden."

"J. L. W."—"If we can find room. The Free-Trader who received this answer some weeks ago must excuse us for not inserting his article."

"J. L."—"We doubt the practicability of his project."

"L. C." of Nottingham, is thanked.

"H. M."—"The verses are not quite up to the mark." "C. W." ditto.

"W. H. H."—"In political economy, as in all mixed sciences, an allowance must be made for exceptional cases, and the influence of special circumstances. It is probable that the party to whom he alludes wanted too strongly on rigid right, and forgot the application, *summum jus summa iniuria*. This answer applies also to the "Wiltshire Farmer."

"One of the League."—"The evils arising from tenancy-at-will have been so often exposed in this journal, that we do not think it necessary to publish a letter on the subject, which contains no novelty either in fact or argument."

"A Subscriber."—"The suggestion has been laid before the Council."

"K. H."—"The subject of Medical Reform is scarcely suited to this journal."

"A Vote to the Aristocracy."—"The author of a clever and sensible pamphlet bearing this title, complains that it has not been noticed in this journal; were we to notice a title of the pamphlets sent us, there would be no space for any other reviews in our paper. The object of our reviews is chiefly to show how intellects of the highest order illustrate the soundness of those principles which it is the purpose of the League to diffuse."

"A Constant Reader" is thanked.

"N. A. T."—"Might not the 'Sordid Weaver Boy' have sought to make a convert?"

"A. M. C." is under consideration; "G. S. P." ditto; "W. J. B." ditto.

We have received the *Derry Journal*, and have to thank the Editor for his attention.

The valuable communication of "L. W." and the letter of "A Lothian Farmer" are in type, but must stand over; they shall appear in our next.

We have still a number of communications which we must at present leave unnoticed, in consequence of a great press of matter.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 6d. by Post-office order to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the LEAGUE forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadaby, Newall's-buildings, Manchester; and the LEAGUE may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

POSTSCRIPT.

LONDON, Saturday Morning, December 14, 1844.

A more crowded or more enthusiastic meeting than that which met in Covent Garden on Wednesday night has not been held since the League commenced its agitation in London. Two other meetings were held on the same day, not less significant of the progress of public opinion; one for improving the sanitary condition of towns, and the other for presenting a testimonial to Sir Henry Pottinger. Though every one is aware that the bad state of the dwellings of the poor in London is partly the necessary result of the timber monopoly, no speaker at the sanitary meeting made the slightest reference to this result of protection; and the distress occasioned by those laws which render labour cheap and food dear received no notice from the philanthropic orators. Evils were described, but their causes were left without investigation, and their results without remedy. The only practical suggestion was made by a gentleman named Carden, who called attention to the burial monopoly, which fixes centres of contagion amidst the densest masses of population, and renders the dead a scourge to the living. As there happened to be a meaning and purpose in Mr. Carden's proposal, it was coolly dismissed, as unsuited to the parade of a field-day, when benevolent orators were marshalled to exhibit their manures and fire blank cartridge.

The testimonial presented to Sir Henry Pottinger for his able negotiation with the Chinese was virtually an act of homage to the principles of Free Trade. That treaty is based on the most complete and absolute freedom of commerce. There is not a word of reciprocity in it from beginning to end, and it stipulates that the Celestial Empire shall not be cursed with protection. Our rulers take credit to themselves for having thus conferred the blessing of unrestricted commerce on the Chinese; and have

thus deprived themselves of any plausible pretext for withholding the same boon from the people of England. Lord Aberdeen was in accord with Lord Palmerston on the merits of the Chinese treaty; Whigs and Tories equally glorified themselves for the share they had in fixing this new commerce on the basis of freedom and justice. This public recognition of a great principle by the leaders of political parties is a sign of progress, and must not be forgotten in future discussion.

The attention of the Covent Garden meeting was chiefly directed to the plans proposed for creating a Free-Trade constituency in the counties. From all parts of the country we receive the most cheering accounts of the zeal with which this project has been taken up and acted upon; and we may add that the enthusiasm with which it was received in the theatre is not confined to mere applause, but is being carried into practical operation. The middle class of England is beginning to feel its strength, and, when once roused into complete action, it cannot fail to win for industry its just reward, for property its fair rights, and for the nation the prosperity which the intelligence, the enterprise, the skill, and the integrity of the English people are calculated to achieve.

EPITOME OF NEWS.

FOREIGN.

FRANCE.—The French loan of 200,000,000*fr.* has been adjudged to De Rothschild, Brothers, at 84*fr.* 75*cs.*; the united houses of Baring and Co., and Durand and Co., of Paris, and Baring, Brothers, of London, at 83*fr.* 95*cs.*

The cold increases at Paris. On Monday morning at six o'clock, the centigrade thermometer marked 0.4 deg. below zero (15 Fahrenheit). The last severe winter felt at Paris was in 1838, the thermometer at the Observatory being down to 19 degrees centigrade (2 below zero of Fahrenheit). At 9 degrees centigrade (16 Fahrenheit), if continued for two or three days, the Seine freezes over.

We find the following extraordinary statement in the *Constitutionnel*:—"A young officer of the garrison of Luxembourg has just put an end to his existence under circumstances probably without example. He had, it was alleged, stolen some plate, and the fact having been discovered, the officers of the garrison, or at least a great number of them, held a meeting to consider how they could save the honour of the cloth. Some proposed to deliver him up to justice, others to provide him with the means of flight, whilst a third party declared that there was nothing else for an officer to do who had committed theft but to blow his brains out. This last opinion prevailed, and two pistols being loaded on the instant, some of the officers proceeded to their comrade's room, and handed him the weapons, informing him what the officers had decided. They then withdrew, but scarcely had they descended the staircase when a detonation was heard—the young man had ceased to live."

THE POLICE OF PARIS.—Several of the Paris newspapers are calling loudly for the adoption of a system of police in that capital similar to what exists in London. Although there are hosts of municipal guards patrolling during the day, there is no night police; so that during the night the citizens are left to the protection of a few of those guards, or troops of the line, who, by the noise which they make, give sufficient warning to the felon to lie close, or make his escape.

On Sunday morning last a dreadful fire broke out in the Rue Cadet, which caused the destruction of property to the amount of £12,000; by the falling of a wall a fireman was killed, and eleven persons were wounded.

The number of pupils at the Royal and Communal Colleges of France is at present not less than 57,278. Last year at the same period, they were only 53,864, which shows an increase of 3414 pupils.

The *Memorial des Pyrenees* states that a French sloop, having fifteen men on board, went down on Thursday the 5th, in the Bay of Saint Jean de Luz, and every soul perished. The name of the vessel is not given.

MADRID, Dec. 3.—It has been officially announced to-day, that the other son of Zurbaron, together with Don Jose Baltanaz, a captain in the army and Zurbaron's secretary, and Don Francisco Hervias, a cloth manufacturer of Escoray, were shot at Logrono, at seven in the morning of the 30th ult. Don Feliciano Zurbaron, the young man now shot, was a lieutenant in the army, and 24 years of age; his brother Don Benito, who was shot a day or two before, was 18. A great many arrests have taken place in the north, and among others Senor Gamboa, formerly Finance Minister, and who has been staying at St. Sebastian for some time, has just been thrown into prison at Tolosa, on the charge of being implicated in the late unfortunate movement. The Carlist general, Turbe, passed through Vittoria on the 1st inst., under arrest, on the way to Logrono, to be tried by a court martial on the same charge.

The New Constitution Bill has passed the Chamber of Deputies by an overwhelming majority. The Madrid journals also mention the departure of the Marquise de Casa Irujo for his post as ambassador to England. He is to visit Paris in his way. We hope he will recollect from M. Guizot some salutary observations on the arbitrary conduct of the Government that he represents, and that Lord Aberdeen, on his arrival here, will not fail to tell him that it is a disgrace to Europe. The best lesson that could be given to such a government would be to refuse to receive any of its ambassadors until it should have brought itself within the pale of civilization.—*Globe*.

MUNICH.—In spite of every measure of precaution taken by the Government, the epidemic amongst animals, which is raging in many parts of Germany, has broken out in a village on the frontier, called Viechtach. A sanitary cordon has been established round that village.—*Correspondent of Nuremberg*.

The *Gazette of Konigsberg* publishes a proclamation, addressed to the students of the university of that city, urging them to abolish the practice of duelling, as had done the students of Heidelberg, and to establish courts of honour for the settlement of their quarrels. Similar steps towards this object had previously been taken on the occasion of the commemoration of the foundation of the university, but without success. Konigsberg is one of the cities of Germany where duels are most frequent.

TERRENTIAL CONFLAGRATION.—The *Malta Times* quotes a letter from Magnesia, which states "that the greatest part of the city of Bulakesser fell a prey to flames. A fire broke out in and wholly destroyed the bazaar, as well as a great number of houses. The houses thus destroyed amount to 1500, and the loss of property is considerable. Bulakesser is now a mere mass of ruins."

TEXAS.—The following is an extract from a letter from Galveston, dated Oct. 1, received in the City:—"An invasion is expected. Galveston is entirely without defence, and Texas has not a single vessel that can put to sea against the enemy."

TAHITI.—News from Tahiti is to the 25th of May. It appears, from a French account, that an offer was made on their part to Pomare to resume the government of the island under the protectorate of France, the latter agreeing to abandon all claims to its actual sovereignty; but that the Queen, intimidated by Lieutenant Hunt, the commander of her Majesty's ship *Basilisk*, on board which the proposal was made through some of her chiefs, declined. The English version is, that the Queen voluntarily refused, fearing to trust the French, until even the protectorate was given up. This account represents the French as acting in the most provoking manner towards the British naval force, and as encouraging the most disoluble conduct amongst those natives—women especially—who have not retreated to the Tahitian camp. The missionaries have all left.

THE WEST INDIA MAIL.—SOUTHAMPTON, Dec. 12.—The Royal Mail Company's steam-ship *Avon*, Captain Strutt, arrived here at ten o'clock this day, bringing all the West Indian, &c., mails. She has brought on freight, it is believed, the largest amount of specie ever shipped from the eastern coast of Mexico in one bottom. Also seventeen passengers, five Government ditto, two wrecked seamen, one invalid, together with the crew of the late steamer *Acteon*, belonging to this company. The *Avon* was four days overdue, but it was partly occasioned by head winds. We are sorry to record the total loss of the *Acteon* steam-ship, belonging to the Royal Mail Company, which took place on the morning of the 30th of October, under the following circumstances:—"She was rounding the Punta Canoa, at eight in the morning, the Pops or high land within the city being S.S.E. The *Acteon* steering south, struck at 8.40, upon a sunken rock, supposed to be the Negritto, but which, according to the chart, should have been nearer the land than the ship then was. Immediately she struck, the captain, with the view of lightening her, ordered the boilers to be blown off, but without effect till about thirty minutes afterwards. A swell of the sea then lifted her off, which soon became evident that, in spite of every exertion, she could not be kept long afloat. She was then made to force her on shore, or into shallow water. 'Precisely, however, at 20 minutes past 11 she went down in 64 fathoms. The captain, officers, and crew, on this trying emergency, behaved with the most praiseworthy courage. Every one was calm and collected, and the crews of the *Avon* were obeyed with readiness and punctuality. He captain was the last to leave the ill-fated vessel. All hands were safely got into the boats, and steered for Veraguas, from which they were about nine miles distant. They landed in safety, and were hospitably received by the

thorities. The Acton makes the fourth vessel lost since the establishment of the Royal Mail Steam Company, the establishment of the number of steam-ships it has sailed at.

DOMESTIC.

One hundred and eighty pairs of excellent blankets, the gift of the Queen, will be distributed among that number of poor families of Windsor, at Christmas. A liberal supply of meat, bread, and plum pudding will also be given away to the poor of the town, at the same time, by command of her Majesty and his Royal Highness Prince Albert.

The Birkenhead Warehousing Company have engaged a great brickmaking firm to supply them, against next summer, with fifty millions of bricks for the building of their warehouses: within last week 300 operative brick-makers have been sent from Kent to Birkenhead, and have already commenced operations.

John K. Winterbotham, formerly a respectable attorney at Stockport, was last week convicted at the Chester Assizes of a fraud on the Pelican Life Insurance Company, to the amount of £5000, committed some years ago.

A shoemaker, named Yarham, has been arrested on suspicion of being concerned in the recent horrible murder of Mrs. Chandler, at Yarmouth. It appears that he resided in the same house with her, and that though he admits having sat up on the night of the murder, his apartment being separated from hers only by a thin partition, yet he heard no noise. The prisoner's mother and sisters are also in custody.

The Earl of Limerick died on Saturday evening at his seat in Berkshire, at the advanced age of 87. By his death a vacancy is caused in the Irish representation of the House of Peers. The Earl of Rosse, of scientific fame, is expected to succeed him.

A meeting of the soap trade, numerously attended, was held at the London Tavern some days since. The gentlemen present represented the manufacture of 50,000 tons of soap annually, and the resolutions passed, calling for a repeal of the excise duty on this essential article of use and cleanliness, show in a conspicuous light the evil consequences to the revenue and honest trader that result from the high duties now levied.

A proposition has been submitted by Mr. Hobler, the solicitor, to the Messrs. Rogers and Co., for cancelling the whole of the stolen Bank notes. The matter has been submitted to the consideration of the Government through Sir James Graham, the Home Secretary, and we have reason to know that the suggestion has not only been favourably received, but is very likely to be acted upon.

Between Monday and Tuesday evening five fires occurred in different parts of the metropolis. Much damage was done to furniture and goods for sale before the fires were quite extinguished.

The ornamental waters in the Regent's and St. James's Parks were sufficiently frozen on Sunday last to admit of skating. Several thousand persons accordingly indulged in this exercise during the day. In St. James's Park a serious accident happened between three and four o'clock by the breaking of the ice on the north side of the "island," seven or eight persons became immersed in fourteen feet water. Five were extricated, and the others it was thought at the moment had perished; but there is reason to believe they all escaped. A similar accident took place near Buckingham Palace, where the ice broke completely across from the northern to the southern shore, and about fifteen persons were thrown into the water. They were all extricated; some proceeded home instantly; but the others were taken to the marquee and put in warm baths and beds, where they were perfectly restored.

Tuesday night a very numerous and highly respectable meeting, in connexion with the Drapers' Metropolitan Association, was held at the Mechanics' Institute, Southampton-buildings, Holborn, in order to effect a more general early closing of shops throughout the metropolis among the whole of the different trades. After several speeches in support of the object of the meeting, a committee was formed to wait upon the shopkeepers of London, in order to induce them to co-operate with the meeting.

From returns of the Smallpox Hospital for the past month of November it appears that the epidemic continues to increase. The admission of patients during that period was 77, making a total of 573 patients received this year into this institution, which not only relieves the metropolis from so dreadful a contagion by the reception of patients, but diminishes the spread of the malady by means of vaccination.

The funeral of her late Royal Highness the Princess Sophia Matilda took place on Tuesday. The procession, which started at one o'clock, moved over Blackheath-hill, through Deptford, New-cross, Peckham, Camberwell, Camberwell New-road, Kennington-oval, over Vauxhall-bridge, up Grosvenor-place, through Hyde-park, and along the Edgware-road to the Paddington terminus of the Great Western Railway, which was reached at five o'clock p.m. The hearse was then transferred to a truck, and, with the mourning coaches, conveyed by special train to Slough. At Blackheath, Greenwich, and other places along the line of route, the usual insignia of mourning were exhibited. Prince Albert, several of the nobility, and many of the royal household, were present during the performance of the funeral ceremony in the chapel at Windsor, which did not terminate till half-past nine in the evening.

The annual Christmas show of oxen, sheep, pigs, &c., of the Southfield Farmers' Club was opened to the public on Wednesday, at the Horse Bazaar, King-street, Portman-square. The show this year surpasses both in numbers and the quality of the things exhibited any former years. The Leicester sheep and the Southdown sheep are of the first quality, and the oxen and cows are many of them very superb specimens. The pigs are also good. His Royal Highness Prince Albert obtained the second prize for pigs. Lord Spencer has not been so successful as in some former years, though he has obtained a prize. The Duke of Bedford has obtained several prizes, and the Duke of Richmond is also amongst the winners. The implements of husbandry and the other things connected with husbandry were more than usually numerous.

The Repeal Association met on Monday, in the Conception Hall, Dublin. Mr. H. Grattan, M.P., presided. Mr. O'Connell, in addressing the meeting, said he was deeply grieved to state that in the counties of Cavan and Leitrim Whiteboy disturbances had lately taken place to a most formidable extent. The infuriated wretches were led on by designing knaves; and nothing but the consequences of such atrocities could retard Repeal. Mr. O'Connell in a subsequent speech apologized for not re-

porting on the propositions regarding Repeal, which were still before the committee. The rent for the week was £333. 3s. 3d.

Wednesday evening Sir Henry Pottinger was entertained at a sumptuous banquet by the leading merchants, bankers, and other influential persons interested in the commerce of the city of London. This entertainment was given to the right honourable baronet as a testimony of respect for his character, and a public recognition of those eminent services which have conferred such important benefits on the trade and commerce of this country, and have opened up to the energy and enterprise of our merchants a vast empire, containing nearly one-third of the human race. Previous to the dinner, a large number of merchants connected with China and the East Indies assembled at the Merchant Tailors' hall, and presented an address to the distinguished baronet, whose presence was hailed in a manner forcibly expressive of the sense entertained of his eminent services by the commercial and trading community of the city of London.—*Chronicle*.

The Lancashire Operative Cotton-spinners held a meeting on Sunday last at Hyde, at which they passed a resolution expressive of their opinion that the tax on cotton-wool is impolitic; and in approval of the steps taken by the merchants, manufacturers, and cotton-spinners to obtain its repeal.

Wednesday morning a frightful and fatal accident occurred on the Dover Railway, near the Bricklayers' Arms station, Old Kent-road, by the explosion of an engine, by which one man, named Thomas Buckley, an engine-driver, was killed on the spot, and Aaron Wilkinson, the stoker, received such extensive injuries that his recovery is considered impossible. Several other persons were also severely injured and conveyed to Guy's Hospital.

Mr. James Bolestridge, landlord of the Three Horse Shoes public-house, Derby-road, who was a passenger in the up train which met with so much damage by the collision on the Midland Counties Railway, at Beeston, near Nottingham, died on Tuesday morning at his own house of the injuries he received.

A public meeting was held at Exeter Hall on Wednesday for the purpose of passing certain resolutions connected with the sanitary condition of the dwellings of the industrious poor. The Marquis of Normanby presided. Upon the platform were Lord Shelborne, Lord Dudley Stuart, the Right Hon. Richard Labor Shell, M.P., Sir Robert Inglis, Bart., M.P., Sir W. Clay, Bart., M.P., the Hon. W. Cowper, M.P., Mr. Hawes, M.P., and Mr. Ewart, M.P.; Dr. Southwood Smith, Mr. Sney, and several other gentlemen. Several resolutions declarative of the evils arising from the want of drainage in towns, a sufficient supply of water, and good ventilation in dwellings, and an effectual system of cleansing; of the necessity of legislative interference to provide for such wants; and the expediency of forming an association to diffuse information and remove misconception, were agreed to.

MISCELLANEOUS.

DARTMOUTH ELECTION.—(From a Correspondent of the *Chronicle*.)—Mr. Moffatt's canvass has been most successful, and his return is beyond a doubt. The Liberal party in the borough numbers two to one as compared with the Tories; but the cry of "Pocket against Politics" has turned many of these men to vote against their party. Still enough men of independent spirit, who say they have "always supported reform principles, and are not going to desert them, at all events on this occasion," remain to make Mr. Moffatt's success a matter of certainty.

PLYMOUTH FREE-TRADE ASSOCIATION.—DEFEAT OF THE CHARTISTS.—PLYMOUTH, Saturday.—Last evening there was a large muster at the Mechanics' Institution, in this town, for the purpose of hearing a lecture on Free Trade, from John Salisbury Trevelyan, Esq., the member for Tavistock. The lecture-room was crowded; and the lecture, which was an admirable one, was listened to by all parties with the greatest attention. At the close a discussion was started by a Chartist named Smith, who did not gain much favour by declaring that he stood there ready to defend every sentiment that Thomas Paine ever gave utterance to. After he had spoken the usual time, he was stopped by the chairman; and then another Chartist, named Robinson, rose, and read the greater part of a long leader from the old *Northern Star*, with a view to prove that increased production decreased wages. He galloped on at a great rate, with a view to get through his article, which, as Charles Matthews says, had "nothing in it;" but could not succeed, for he was also stopped by the general cry of "Time's up." He implored for two minutes more, but the audience was inflexible, and would not accord a minute, whereupon Robinson retired, looking very dismal.—Mr. Isaac Nichols and Mr. Nicholson then replied to the Chartist, after which another of that body, ycleped Blackmore, mounted the form, and advocated the principles of the Charter, which he contended was all that was necessary to remove all the political ills which flesh is heir to.—A working man, named Axford, of Devonport, followed in a remarkably clever and amusing speech, in which he told the Chartists of the advantages that arose to all parties who gave their consideration to one thing at a time, and that, while he was considering of the good or bad character of the Corn Laws, he was not able to give equal and undivided attention to the Charter. He, therefore, recommended the Chartists to have that subject considered by itself.—This closed the discussion, for Mr. Nichols then rose and moved a vote of thanks to the lecturer, which was seconded by Mr. Bayley. Smith immediately moved as an amendment the adoption of the principles of the Charter, which was seconded by Roberts. After a brief interruption, for the Chartists are an uncommonly noisy race at other people's meetings, whatever they may be at their own, the chairman put the amendment, when, lo! there were not twenty hands held up for it. The motion was carried amidst a tremendous burst of cheers, and after Mr. Trevelyan had returned thanks, and a similar vote had been passed to Mr. Calmady, the chairman, the meeting separated.—*Correspondent of the Chronicle*.

THE PROTECTION SOCIETIES.—We should be grateful to any of our readers who would inform us what has become of that Society for the Protection of Native Industry, which was formed nearly a year ago in York. It was to have its branches and committees, which were to meet fortnightly, and to do wonderful things: large subscriptions were put down on paper, but whether they were paid we have not heard. If the society should be in existence,

it seems to court the shade: it works in secret, if at all. Perhaps the Tory-Chartist hand-loom weaver and schoolmaster, Harper, may be the representative and tool of this society. If so, we congratulate Lords Harwood, Keble, and Beaumont on their choice!—*Leeds Mercury*.

THE CENTRAL PROTECTION SOCIETY AND THE MALT-TAX.—At a meeting of Norfolk farmers, held last week at Walsham, to petition for a repeal of the malt-tax, a letter was read from the Central Protection Society, stating that the committee had determined on not raising that question, on the grounds that it did not come within the scope of their original object—the maintenance of the present scale of protection to agriculture—and that the prospect of the property-tax being soon deducted from the burdens of the country would not justify the remission of so large a source of income as the malt duties, "unless some substitute were proposed, of the nature of which, however, no unanimity appeared to exist either in the committee or the country." This pretext, says the *Globe*, for perpetuating the odious income-tax, is, we presume, at an end. After this decisive opinion from those best qualified to know what is best for their own interests, he will be a bold man who will rise in Parliament, and propose the repeal of the malt-tax, as called for by the tenant-farmers, at the price of retaining every other item of taxation, including the property and income tax, on their present scale.

LECTURES ON THE CORN LAWS IN PEMBROKE-SHIRE, SOUTH WALES.—Mr. Jenkins is delivering courses of lectures on the Corn Laws and Free Trade in the contributories of the borough of Haverfordwest (Pembrokeshire), and the neighbouring agricultural districts.

THE REGISTRATION MOVEMENT.—The Gateshead Free-Trade Society have taken the registration matter up, and are on the look-out for eligible freeholds in North Durham.

MANCHESTER SUBSCRIPTION FOR PUBLIC PARKS, &c.—The total sum subscribed to the 6th inst. for this excellent purpose amounted to £28,574. 14s. 4d.

THE SCOTCH PRESS AND THE CORN LAWS.—When Mr. Cobden visited Scotland, two years ago, he reproached us with the statement that one small paper in the Duke of Buckingham's own town of Aylesbury had, during the preceding year, put forth more matter against the Corn Laws than the whole of the Scottish newspapers—and there was too much truth in the accusation. Since then, matters have been much amended; but at this moment, and for some time back, there has been among some of our Scotch contemporaries a want of attention and of energy, as regards the question of Free Trade, for which even the utter silence of the enemy's guns, and the absence of any strong provocative to discussion, seem insufficient satisfactorily to account. There are many exceptions, and to very few even of those journals which seem most remote can the suspicion of party motives of any kind attach. But the times now call and encourage to renewed and increasing exertion; and when we look at the energetic and unremitting efforts, not only of the League leaders, but of the great body of the English newspaper press, there is not a newspaper in Scotland but might be ashamed to great society in this cause.—*Birmingham Weekly Chronicle*.

AGRICULTURAL DISTRESS ACCOUNTED FOR.—When we look back, how clear is the whole story—how plainly will it be recorded on the page of history. The long war forced up prices. Some few farmers who had leases made fortunes; but whenever the leases fell in, the rents were proportioned to the prices. The rent-rolls of the owners of the soil were thus increased beyond their wildest expectations; their style of living kept pace with, or went beyond, their rent-roll; and they seemed to think that what, to every thinking mind, was clearly a fitful fever fit, was to be a permanent state of existence. But peace came; and with it came a desire on the part of the landowners to maintain war prices in time of peace. With the Continent trodden under foot—with whole nations disorganized—with industry prostrate over a large portion of Europe, then was the time, by the application of capital and science to the British soil, to have set competition at defiance for all future time. But the landowners put their trust in law rather than industry: they grasped at advantages adverse to those of the rest of the community; and the results have been the long train of evils inseparable from injustice—home distress, and the calling into existence of hostile tariffs all over the world.—*Bristol Mercury*.

MORE INCENDIARY FIRES IN HERTFORDSHIRE.—HERTFORD, Thursday.—On Monday night, about half-past eleven o'clock, a fire broke out on the Parsonage farm at King's Walden, near Stevenage, occupied by Mr. G. Roberts, an eminent agriculturist, and a member of the committee of the Herts Agricultural Society. The whole of the buildings, with the exception of one barn, a cow-house, and the farm-house, which stood at a distance from the barns, were reduced to ashes. The agricultural labourers showed great reluctance to assist in extinguishing the flames, and it was found advisable to station a guard in the rick-yard, which was some distance off, to detect or prevent any fresh act of incendiarism. The clergyman of the parish, who was at the scene of conflagration, was very active in his attempts to check the progress of the flames, but his endeavours to induce the great body of the labourers to assist him were ineffectual. Some of them assented, but a great many looked on and replied to the appeal made to them in a manner indicative of the utmost unconcern, and accompanied by the most offensive expressions.—It may be recollected that about three weeks since a fire took place at Lilly Hoo farm, between Hitchin and Luton, and in the occupation of Mr. Betts; and that the whole, with the exception of the dwelling-house and a range of fagot stacks, was destroyed. On Monday night last, at nine o'clock, the fagot stacks were discovered to be on fire, and in the course of an hour and a half all of them were consumed. Nothing now remains standing but the farm-house. No doubt is entertained that the stacks were wilfully fired.—On the following night (Tuesday), at eleven o'clock, another fire occurred in a wheat stack, on the Bedford-road, about a mile from Hitchin. Near the stack in which the fire originated were three other stacks, and the flames extended to these with great rapidity, ending with their total destruction. The loss is estimated at £700. The stacks were close by the road-side, and at a considerable distance from any building. It is confidently stated that the last fire was the act of an incendiary.—*Chronicle*.

THE LEAGUE MOVEMENT.

DISTRIBUTION OF THE SUFFRAGE.—The new League movement has now been fairly launched in the West Riding of Yorkshire. Meetings have been held at Leeds, Huddersfield, Halifax, Hebden Bridge, Holmfirth, and other places, which have been characterised by great enthusiasm; and which will unquestionably lead to the adoption of such steps as will retrieve the representation of Yorkshire, provided, that is to say, the Tory and monopolist portion of our population do not tread closely in the footsteps of the League, or perhaps even surpass them in their exertions to extend the freehold constituency of this county. The League has now been in existence some four years, and has exhibited an amount of energy, determination, moral courage, and practical ability, such as has rarely before been pressed into the service of any great public cause. Other men would have been daunted and cast down by the numerous defeats they have sustained; but the League has only risen with the difficulties to be surmounted, and it needs little gift of prophecy to foresee that men who are so thoroughly in earnest as they, must in the end succeed, whatever the means may be by which their object is to be accomplished. — *Leeds Times*.

QUALIFYING FOR LANCAHIRE.—For the southern division the process of qualifying goes on rapidly, showing a determination on the part of the Free-Traders to swell their majority. To increase the number of independent voters in the northern division, meetings have been held, or are arranged to be held, in Blackburn, Burnley, Colne, Accrington, Clitheroe, and Chorley. The Preston committee met, as usual, on Wednesday night. Many applications for qualifications were received, and property to sell registered. To facilitate the work, an office is about to be opened here as a central point for North Lancashire. — *Preston Guardian*.

THE HAPPY THOUGHT OF THE LEAGUE.—The League county-registration movement is proceeding most satisfactorily in the four northern counties to which attention has been more particularly directed. At Rochdale, Mr. Sharman Crawford frankly expressed his satisfaction "at finding Mr. Cobden was making an improvement upon his attempt; was trying to bring about practically, by means of an existing law, what he (Mr. Crawford) was attempting by a more circuitous route. If there was anything calculated to obtain for the League the enthusiastic support of that portion of the working classes who had hitherto held aloof, he should think it was their conduct in this respect." This manly avowal does the speaker great credit. We honour the man who, if he has a crooked stick, is not so bigoted to it as to refuse to add in a more practical movement. — *Patriot*.

THE WEST RIDING CONSTITUENCY.—It may be said that the reason why the manufacturing interest has fewer votes in the riding is, that the large boroughs have members of their own. Yes, but unluckily the small agricultural boroughs have members of their own too. Ripon, which may almost be said to have only one constituent, namely, Mrs. Lawrence, has as many members as Leeds. Knarborough has as many as Bradford. Pontefract has as many as Halifax. Northallerton (in the North Riding) has as many as Huddersfield; and Richmond (also in the North Riding) has as many as Sheffield. And the smaller the constituencies of these boroughs are, the more space is left for the creation of county votes. Now, as Mr. Cobden strikingly observes, the monopolists have done their worst with the Chartist clause; and it becomes the Free-Traders to fight them with the 40s. freehold clause. There cannot be a doubt that, if his advice be acted upon with a spirit worthy the cause, several thousands of Free-Traders will be added to the register ere the next year shall have passed over. This may and ought to be done. The manufacturing and trading interest has not only a right thus to defend itself against the aggression of monopoly, but it is its duty to embrace the means offered for so doing. — *Leeds Mercury*.

THE LEAGUE'S NEW MOVEMENT.—There is one branch of politics to which this movement particularly applies—and to which, indeed, it naturally belongs, though that was not the end for which it was proposed, viz.—the extension of the franchise. This important subject—on which a sort of panic seems to exist among the middle classes, but upon which they will be obliged, ere long, to think and to act on, if they wish to preserve any political influence among the millions who form the substratum of society—this subject, we say, will be immediately and practically affected by the scheme of which we speak, which will be a real extension, and that of the safest and most unobjectionable kind. Those admirers of the wisdom of their grandmothers, who dread everything in the shape of innovation, can hardly object to the mere increase of the possessors of a suffrage, not only now existing, but which has existed for centuries, and which has done much, both in past and present times, for the maintenance of liberty. Those who make manumission the god of their idolatry, honouring the dust of the earth instead of the divinely-created being whose powers give to that dust its value, and who regard the qualification for the suffrage as residing in the clay of the furnace, or in the clods of the valley, irrespective of any fitness in him for whom the former are made to construct a habitation, and the latter constrained to bring forth food,—surely they cannot object to a plan which recognises their favourite theory; but, except they be monopolists indeed, join with Mr. Cobden in the wish he expressed at Rochdale, that the head of every family in the country had property enough to buy a freehold, and thus to acquire a vote. — *Monmouthshire Merlin*.

AUSTRIAN COMMERCIAL STATISTICS.—The *Journal des Debats* observes, that "in the present day no country escapes publicity. To the number of States which publish the returns of their commercial affairs we must hereafter add Russia. Following the example given by our Government in 1838, the Aut. Chamber has published a return of imports and exports of the empire during the period extending from 1830 to 1841. We shall give a glance at the results of the last year. The total amount of the foreign trade of Austria is estimated at about 700,000,000, which would place Austria in the seventh rank of commercial powers, which may thus be classed—England, 34 millions; France, 21.5; United States, 13.10; German Union and House Towns, each 11.5 million; Netherlands, 720,000,000; Austria, 700,000,000; Russia, 680,000,000. The first fact which strikes us is the comparative feebleness of the Austrian commerce. The monarchy comprising its vast dependencies—to wit, Bohemia, Hun-

gary, Dalmatia, Illyria, Transylvania, and the Italian provinces—contains a population of about 37,000,000, inhabitants; but, notwithstanding its great natural advantages, the spirit of industry has scarcely reached this land."

THE ZOLLVEREIN.—BRASIL, Nov. 28.—The *Universal Gazette of Brasilia* publishes some particulars of the Zollverein, from which we extract the following:—"In the end of 1839 the German Customs League had in extent 8110 German square miles, and a population of 26,859,000 souls. In 1842 its territory, independently of the surplus of population in every state, had increased 111 square miles, and 475,000 souls, proceeding from the accession of the principality of Lippe, of the duchy of Brunswick, of the territories of Schaumburg, Pyrmont, and several other small states. In 1843 the population of the whole states consisted of 27,624,000 souls."

IMPORTATION OF FOREIGN CATTLE.—The Rotterdam and Hamburg steamers have this week brought 162 head of cattle, viz., 52 by the Hamburg, 32 by the Victoria, and 70 by the Queen of Scotland, with 8 cows and 66 sheep by the Emerald Isle. — *Hull Advertiser of 7th December*.

AMERICAN GRAIN AND FLOUR.—The flow of grain and produce coming by the canal at Cleveland bids fair to equal that of last year, but it will not meet the aggregate of flour so received in 1838; while pork, corn, and wool must far exceed it. Much of the flour from the interior of the state has been diverted toward the Ohio river, rendering it probable that the diminution of receipts as compared with 1843 will be something like 70,000 bbls.; while wheat will present an increase of nearly 190,000 bu., which will be equivalent to a total diversion of 30,000 bbls. The quantity of wheat is already 30,000 bu. greater than the whole received last year.

MARKETS.

CORN MARKET.

MARK LANE, Monday, Dec. 9.—There was only a moderate supply of English Wheat this morning; it was taken off more readily than last week, and in advance was obtained for the best dry samples. Foreign Wheat sold on the same terms as last week. The supplies of Barley last week were large, both of English and Foreign; there was not a large quantity fresh up this morning; the depression which we noticed on Friday has been generally recovered to-day, and prices are the same as on this day week for all descriptions. The supply of Beans and Peas was large, and both these articles were 1s. cheaper. The arrival of Oats last week were moderate, and there has been no addition to the quantity since Friday. Owing to the high prices at which they were held, the business done was not large, but the rates of this day week were fully supported.

Flour, 3078 sacks, 1047 burs.

FRIDAY, Dec. 13.—The supplies this week of all descriptions both of British and Foreign grain have been very scanty. The little English Wheat offering sells readily at Monday's prices, & in good condition. The improved condition of the

English Wheat has rather lessened the demand for Foreign, but holders being firm, the millers are unable to purchase under former rates. The continued severity of the weather causes all descriptions of Spring Corn to be held firmly, and Monday's prices are fully maintained for Barley, Oats, Beans, and Peas. Not a single cargo of Irish Oats is reported, but for a few small cargoes of Foreign, we should have scarcely enough to satisfy the present demand. The only alteration in the duties yesterday was an advance of 1s. on Rye.

THE LEAGUE.

No. 65.]

SATURDAY, DECEMBER 21, 1844.

[3d.]

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All Subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive, a copy weekly of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

The League Bazaar will be held during the month of May next, in the Theatre Royal Covent Garden.

We beg to inform our subscribers that bound volumes of the LEAGUE newspaper, containing the whole of the first year's numbers, may be had on application at the Offices either in London or Manchester.

Persons wishing to be on the Register next year, as Freeholders for County Votes, must be in possession of the property, or in the receipt of the rents and profits, before the 1st of January.

The parties must then claim to be registered; and, to ensure their due registration, the Council of the League invite freeholders to send in their claims to the Offices, Fleet-street, to be examined prior to their being sent to the overseers of the parish where their qualification is situated; or to call and have their claims properly filled in, when forms will be given them. The new Registration of Voters Act requires the claims to be set forth very specially; and it frequently happens that, for want of due precision in stating the claim, the claimant is open to objection and loss of his franchise for the year. It will also give the Council an opportunity of defending the claim if objected to by the monopolists.

QUALIFY, QUALIFY, QUALIFY.

PRACTICAL INSTRUCTIONS FOR ELIGIBILITY QUALIFICATION.

The electors for counties are as follows:—Freeholders, copyholders, leaseholders, occupying tenants.

FREEHOLDERS.—The following persons are entitled to vote as freeholders:—1. Any person possessed of a freehold estate for himself and his heirs, or, as it is called, an estate of inheritance, of the yearly value of 40s. 2. Any person possessed of a freehold estate for life or lives of the yearly value of £10. 3. Any person possessed of such an estate for life or lives of the yearly value of 40s., under any one of the following circumstances:—If the estate was acquired on or before the 7th of June, 1832; or since, if by marriage or marriage settlement, by devise (i.e., by will), or by promotion to any benefice or office, or if the freeholder is himself the actual occupier of the property. In any of these cases it is sufficient if the property be of the yearly value of 40s. Parish clerks, sextons, schoolmasters, Dissenting ministers, and holders of offices have a right to vote if entitled to emoluments of 40s. per annum, arising out of, or charged upon, land, and may be registered as voters in the parish wherein the land is situated. The appointment must, however, be for life, not for a temporary purpose, or at the pleasure of any other person; but an appointment during good behaviour is considered to be an appointment for life. If the freeholder occupy his own freehold property in a borough, of such nature and value as would confer upon him the right to vote for the borough, he will not be entitled, in respect of that property, to vote for the county. But if the freehold is not of the annual value of £10, or if it be land in a building, the freeholder may vote for the county, though he occupy it himself. And if the freeholder do occupy his freehold estate within a borough, he may vote in respect of it for the county, and his tenant may vote for the borough. Six months' possession to the 31st of July will entitle a freeholder to be registered. And if the freehold lands or tenements should come to him by descent, succession, marriage, or otherwise, will, or promotion to any benefice in a borough, or to any office, no definite period of previous possession will be necessary.

COPYHOLDERS.—Any person possessed of any lands or

tenements of the clear yearly value of £10, whether of copyhold or any other tenure than freehold, is entitled to vote. Tenants in ancient demesne may in general vote as freeholders, if they do not hold by copy of court-roll, but otherwise they will be entitled as copyholders. As freeholders, 40s. per annum will be sufficient; but as copyholders, £10 a year is required. The same period of possession previous to registration is required, in respect to copyholders, as in respect to freeholders. Copyhold property within a borough, if of such a nature as would qualify any person to vote for the borough, will not, under any circumstances, give a right to vote for the county.

LEASEHOLDERS.—The right of voting in respect of leasehold property extends to—1. Any person who is entitled by virtue of a lease made or assigned to him of any lands or tenements for the unexpired residue of any term originally created for a period of not less than 60 years, if the property is of the clear yearly value of £10 above all rents and charges. 2. Any person who is in like manner entitled to the unexpired residue of a term originally of 20 years, if the lands and tenements are of the clear yearly value of £50. The party to whom the lease was originally made, or a party to whom such lease may have assigned the original lease, may vote, though not in occupation of the premises. Any sub-lessee or assignee of an under-lease may also vote, but only when in occupation of the premises. Lessees or assignees must have been in actual possession for 12 months previous to the 31st of July, unless the qualification is acquired by any of the modes before mentioned as excepted; that is to say, by the death of a relative, by marriage, by will, or by promotion to any benefice or office. Leasehold property in a borough, if of such nature and value as will give any person a vote for the borough, will not give a vote for the county.

OCCUPYING TENANTS.—Any person occupying lands or tenements for which he is liable to pay a yearly rent of £50 is entitled to vote, if not within a borough, and not of such nature as would qualify a person to vote for the borough. In respect of the period of previous possession required, occupying tenants are placed on the same footing as leaseholders; but it is not requisite that the occupation be of the same lands or tenements: different lands and tenements occupied in immediate succession for twelve months previous to the 31st of July in each year will give the qualification.

GENERAL OBSERVATIONS.—Besides lands, houses, buildings, and the like, property and interests of the following description will entitle the owner to be registered and to vote, viz.—tithes, an annuity charged on land, a rent-charge, a leasehold estate in a house, a share in a navigable river, canal, &c., where the shareholder possesses an interest in the tolls of bridges, tolls of fairs and markets, purchases of unredeemed land-tax. Persons who have entered into an agreement of purchase of property, or who have paid any part of the purchase-money, or done any other act in part performance of the agreement, are considered to have equitable estates, and are entitled to vote and to be registered. Joint tenants and tenants in common have each a right to vote, provided the property be of sufficient amount to give to the share of each the value required. Mortgages may vote, if in actual possession or in receipt of the rents and profits, but not otherwise. Trustees are expressly excluded from voting for any trust estate; the right of voting in respect of trust property is reserved for the cestui que trust. In estimating the value of freehold or copyhold property, the marketable value of the property to let is the criterion to be attended to. If, owing to accidental circumstances, the rent should be less than might be obtained, the property will still give a right to vote. As regards leaseholds, the value required does not depend on the amount of rent. It is to be estimated by the profit which the tenant can make of the property, over and above the amount of rent reserved and any encumbrances charged on the property. The value required is to be "above all rents and charges." Under these words are included all encumbrances affecting the property, but not any public or parliamentary taxes.

BOROUGH FRANCHISE FOR 1845.

In order to secure a borough vote next year, those who occupy premises giving a qualification should immediately see that their names are placed on the poor's rate-book.

A claimant must be rated, or have claimed to be rated, to all rates made during the year ending the 31st of July. If, therefore, his name is omitted from any rate made during that time, he should immediately claim to be rated. The overseers are required to put the name of a person so claiming on the rate last made; consequently, if the claimant suffers two rates to be made before his claim, he will be unable to get upon the former one, and will thereby lose his vote for one year.

No particular form of claim to be rated is prescribed by the Reform or Registration Acts; but the following form may be adopted:—

"CLAIM TO BE RATED."

"To the Overseers of the Parish of _____
"I hereby give you notice that I occupy a _____ at No. _____ in _____ Street, in your parish, and I claim to be rated to the relief of the poor in respect of such premises, in order that I may be entitled to vote in the election of a member (or members) of Parliament for the city (or borough) of _____
"Dated this _____ day of _____, 1844.
"(Signed) _____

Insert the name of the parish, the nature of the premises, as house, shop, room, or as the case may be, and the name of the street, &c., and of the city or borough, also the date. The Christian and surname and place of residence of the claimant should be inserted at full length. Give the claim to an overseer, keeping a correct copy, on

* No registration of annuities or rent-charges with the clerk of the parish is requisite. The Act (No. 111, c. 26) is repealed.

which should be written the date when, and the name of the overseer on whom, it was served. If any poor's rates are due for the premises at the time of making the claim they must be paid, or the amount due tendered. Should the overseer refuse to accept the money, or omit to enter the claimant's name in the rate-book, he will be deemed to be rated notwithstanding; but, if the claimant's name be omitted from any future rate, he should again claim to be rated.

THE ONE IDEA OF THE LEAGUE.

Some of our contemporaries have innocently inquired, whether we regard the repeal of the Corn Laws as a panacea for all the evils of humanity? We are as far from entertaining such a notion as we are from accepting baths as a substitute for bread, or washhouses for wages. It is untrue that the Leaguers have shown themselves insensible to any of the ills that beset social life: the names of those who have contributed most largely to the funds of the League will be found to hold a high rank in every subscription list for promoting really benevolent objects. But as Colonel Thompson has said, with his usual force and clearness, "There is a natural suffering and an unnatural: there is one sorrow at the hand of Almighty God, and another sorrow of the landlords; and the proportions between the two are almost in the inverse ratio of the magnitude of the willers." It is the plainest dictate of common sense to direct our energies in the first instance against the most pressing and monster grievance, not refusing to aid in the removal of minor evils, but taking care that these trifling alleviations should not be received as substitutes for the great measure of justice, which can alone produce an effective change in the condition of the suffering population. We deny not the merit of those who endeavour to procure for the labourer pure air and wholesome water; but we assert that his greatest want is a sufficiency of food, and we lament the absence of those who call themselves friends of the labouring class from meetings where the restrictions on his food are denounced and the plunder of his industry exposed. We do not say that advocacy of the repeal of the Corn Laws is the test of the sincerity of pretensions to philanthropy, but we do say that it is the test of the consistency of such pretensions. The Pharisees of old, who neglected the weightier matters of the law, were punctilious in paying the tithe of mint, and of anise, and of cummin; and it is something like a sign of a similar spirit, to neglect the great source of the distress, the agony, and the woe which have fallen on our labouring population, and to devote exclusive attention to cricket-matches, parks, drains, and washhouses. "These things should ye have done, and not have left the other undone."

There is a sad propensity in human nature to prefer what is called generosity to justice.

"Most dangerous
Is that temptation which doth goad us on
To sin in loving virtue."

Generosity can blow its trumpet, can do its alms before men to be seen of men, can be blazoned in newspapers and applauded on platforms; it gratifies the selfishness of pride by flattering a man's sense of superiority, and it affords scope for that pleasing indulgence of sympathy which is so soothing to self-complacency. Justice is only known by its fruits: it is silent in all its operations, but certain in all its effects:

"It droppeth, like the gentle rain from heaven,
Upon the place beneath."

We object not to those who are generous to the poor, who desire to enlarge the sphere of their comforts, their enjoyments, and their recreations; but we say that these things are not bread, and that to offer them as a substitute for bread is a mere mockery and a delusion. We are told that the patrons of these projects are as anxious to procure proper sustenance for the labouring classes as we are ourselves: if so, why are they absent when the battle of Free Trade is marshalled for the conflict? What means the paltering with injustice and higgling with oppression? "There is no use," as Colonel Thompson says, "in mincing phrases: the people are trampled on by the rank and gross oppressions of an insolent order, who push their injustice to the cottage of the starving man and the bedside of the dying, and feed their hounds on the blood and sinews of the industrious population." What is the value of the philanthropy that views such a fearful grievance with folded arms, and only exerts itself to purify sewers and erect bathing-rooms? Is not such philanthropy more than suspicious when seen to court alliance with the authors, the advocates, and the supporters of those monopolies which have deprived industry of its field of exertion, muzzled labour from its re-

ward, and sacrificed thousands of lives to gratify rapacious cupidity?

We admire the truly generous, but we do not agree with those who ascribe generosity to the Spanish robber, that always returned to the plundered travellers as much money as would purchase them a bottle of wine in the next town. The old proverb says, "Be just before you are generous;" and we say, "Be just or we shall give no credit to your generosity." This is the "one idea" of the League, and we trust that it will continue so: it is practical and not sentimental philanthropy; it is based on principle, not on mere popularity or fashionable caprice; it is the idea of the common weal, not of the exigencies of party; and of course it is exposed to the censure of those whose whole existence is bound up with party. "Abundance of food," we are told, "even if it could be always ensured, without moral provision, would not satisfy the wants of society." But, until sufficiency of food is obtained, the lectures on moral provision are only fit

"To suckle fools and chronicle small beer;"

a task, indeed, for which some of them seem to have a natural vocation. "Nothing," says Archbishop Whately, "tends more to deteriorate the human character than the pressure of severe distress; *male audit finis*, as the poet calls it." The "one idea" of the League is to silence that "famine persuading to evil" in order that the voice of the moral teacher should be heard. It is no new discovery: it was proclaimed ages ago, by Thucydides, that "famine tends to make the moral character of the many conformable to the existing state of things." Corn Laws exert a more demoralizing influence than any existing social nuisance; they have diffused among the masses the vices of the slave, and infected the ruling classes with the more pernicious vices of the master. It is because we see "the harmonious connexion and mutual dependence," not only of reforms but of the evils which they are intended to remove, that we strike at the monster evil round which our other social ills revolve, and by the attraction of which they are retained in their ominous orbits.

We are advised not "to advertise Free Trade like quacks, with abuse of all other persons and all other remedies." We are thankful for the advice, and shall be more thankful when our able adviser informs us of a better remedy for famine than food, for stagnation than employment, for oppression than justice, for fraud than honesty, and for restricted commerce than Free Trade. When he does so we shall advertise his remedies side by side with our own.

DOES THE RATE OF WAGES DEPEND ON THE PRICE OF CORN OR THE DEMAND FOR LABOUR?

"Cheap corn means low wages," say the monopolists. "The selfish manufacturers want corn at continental prices, that they may grind down the poor operatives to the continental rate of wages; and this is the reason why they subscribe their money and *league* together for the repeal of the Corn Laws." Such was the language of the organs of the monopolists during the time that good wheat was selling at 70s. to 80s. per quarter. Well, wheat is now only 45s. per quarter, and what do we see? Have the "selfish manufacturers" succeeded "in grinding down the poor operatives to the continental rate of wages?" No. If this were their object in subscribing money to put down the Corn Laws, they have been most woefully deceived, for at the present moment they are obliged to give higher wages than when corn was nearly double its present price! The monopolist fallacy, then, that "cheap corn means low wages," is opposed to the evidence of facts daily pressing before our own eyes. But let us inquire a little into this question of wages, about which so much has been said to mystify and mislead the working classes. Let us see if we can discover the natural laws which govern and regulate the rate of wages; and then, perchance, our readers may be able to solve the mystery of high wages co-existing with cheap corn.

What are wages? Wages are the price paid for the labour or skill employed in the production of commodities. Labour itself may with great propriety be called a commodity—the only commodity which the working man has to offer in exchange for those things which he needs for the support of himself and family. Now, our experience tells us that the prices of all commodities depend upon the supply and demand in the open market. If there be a greater supply than is wanted of corn, or wool, or cotton, or any other commodity, prices fall; if there be a less supply than is wanted, prices rise. As it is with the commodity corn, so it is with the commodity labour: when the market is over-supplied with (the commodity) labour, the price (wages) falls; when the demand exceeds the supply, the price (wages) rises.

If these simple principles be true, the rate of wages depends, not on the price of corn, but on the supply and demand for labour. But we like always to test principles by facts. Let us see, therefore

how far the principles we have laid down correspond with the facts within our own experience. The rate of wages in Ireland is notoriously the lowest in Europe. Day labourers earn only 6d. per day. Is it because corn is lower there than in any part of Europe? On the contrary, corn is higher in Ireland than in any part of continental Europe. Transfer the Irish labourer to America or to Australia, and there, instead of 6d. per day, he can earn 4s., not because corn is high in these countries, for it is not much more than half the price it is in Ireland, but because there is a great demand for labour and a limited supply; while in Ireland, the labour market being so greatly overstocked, the people are reduced to the very lowest state of human existence. The condition of the agricultural labourers in England is fast approaching that of Ireland. In the highest market for corn in the world their wages are insufficient to afford them a decent livelihood; and so uncommon is the circumstance of their being able to bring up their children without parish assistance, that we constantly read in the reports of agricultural meetings of prizes being distributed to those labourers who, by extraordinary industry and spare diet, have reared families without the aid of parochial relief, or of their being rewarded for their patience in starvation by the privilege of shaking hands with squires and dukes.

When the demand for labour is greatest, wages are always highest. Everybody knows that during harvest wages are nearly double what they are at any other period of the year, because labour is then in the greatest demand. A shrewd Scotch weaver, before a committee of the House of Commons, being asked what caused wages to rise, replied, "Plenty of work, for he had always found when two masters were running after one man wages rose, but when two men run after one master wages fell."

We have an exemplification of this truth in the existing state of the labour market in the manufacturing districts. Such is the demand for labourers at present that masters are running after men. The men, therefore, have the means of dictating their own terms, wages have therefore advanced, and the competition between the masters to obtain labourers will enable the men to get the highest rate of wages which can be afforded. What have the monopolists to say to this?

Here we have, contrary to their dictum, high wages and cheap corn. Look back to the distressing years 1839, 1840, 1841, and 1842: thousands of industrious working men, women, and children

were without employment; thousands more were working short time; our workhouses and prisons were filled; poor's rates enormously increased, and the dreadful increase of mortality was fearful evidence of the extent of general privation and want. During all this period we had dear corn, but we had low wages; there was a scarcity of employment, as there always is when corn is dear: the labour market being overstocked, men were running after masters, and underbidding one another to get employment, and therefore wages fell to the lowest point of existence.

Our experience at the present moment, as well as in all past times, proves the converse of the monopolist fallacy that "cheap corn means low wages." CHEAP CORN MEANS HIGH WAGES. Cheap corn enables the people to spend more of their earnings in clothing and other necessities, and this creates employment; more employment creates a demand for labourers; the demand for labourers causes wages to rise. And this is just the process by which we have emerged from the fearful state of distress and dependency which existed in the manufacturing districts during the high price of corn from 1839 to 1843. Now, thank God, we have cheap corn* and high wages; and the working classes, with their present full employment and increased wages, are enabled to purchase probably double the amount of necessities they could in the distressing period of high-priced corn to which we have referred.

The manufacturers are interested in cheap corn, then, not, as the monopolists accuse them, for the purpose "of grinding down the wages of the operatives," but as the only means by which they can sell their manufactures, and thus give employment to the operatives. The master thrives most when he has the greatest demand for his manufactures; and this is precisely the time when there is most employment for his workpeople, and consequently the highest wages. The master and the workman, therefore, are mutually interested in cheap corn, because then the one obtains the highest profits, and the other the highest wages.

A fearful crisis is approaching, unless the councils of our Legislature are guided by wisdom. Our population is increasing at the rate of a thousand

* When we say cheap corn, we mean the present price of wheat, 45s. per quarter, compared with 70s. to 80s. three years ago; but, whilst wheat is selling here at 45s., it sells on the Continent at 30s. per quarter. Nothing but the Corn Laws creates this inequality of price. The duty on foreign corn is now 80s. per quarter.

souls per day, but the land does not increase one inch. How is employment to be found for the thousand additional hands that are every day seeking it? Look at over-crowded Ireland, and wages 6d. per day. Look at our agricultural districts, which are fast approaching the same miserable condition. And what must be the inevitable result in the manufacturing districts if the population be allowed to overtake the means of employment? Is it possible that any rational man can reflect on these things and be blind to the importance and the urgent necessity of opening new markets to our enterprise by the total and immediate abolition of all those monopolies which fetter our trade, limit the employment of our industry, and prevent the labourer from earning "a fair day's wages for a fair day's work?"

THE BAZAAR.

The preparations for this important undertaking are, we are happy to say, proceeding most satisfactorily.

Since we last noticed it in our number of the 16th Nov., the Council have forwarded to each of their correspondents, and a large number of their contributors, a prospectus, together with a circular, asking their assistance, so that our readers are now fully informed as to the period of holding the Bazaar, and the most effectual mode of co-operation.

Although scarcely sufficient time has elapsed to allow replies to be received to any considerable extent, we understand the Council have from many places assurances of a most cheering character.

We especially press upon such of our readers as may not yet have responded to the invitation of the Council, to do so without delay. Two points in it are of the first importance, namely, the organization of ladies' local committees, and the addition of the names of as many of our friends as possible, together with those of the ladies of their families, to the two general committees.

The time for preparation for an undertaking of such magnitude is really limited; and we therefore again urge upon our readers the necessity of immediate exertion.

The Council have been honoured with the following letter from Sir George Mackenzie, Bart., of Edinburgh, a distinguished writer on agriculture:—

"11, Athol-crescent, Edinburgh, Dec. 14.

"Sir George Mackenzie presents his best compliments to Mr. Wilson. He has received his letter respecting the proposed Bazaar for the League fund. The only contribution he has in his power to make is a considerable number of gold and silver coins, many of them of value. They are not arranged nor catalogued, but there will be no difficulty in finding a numismatist to arrange them properly for exposure at the Bazaar. Sir George would be glad to know in what manner Mr. Wilson would wish the collection to be sent.

"Preparations are making for a bazaar in Edinburgh to assist the working men to erect baths, but it is not likely to interfere with that of the League. There is one thing Sir George has suggested to them which may be useful in London, viz.: to exhibit people at work in the formation of various articles. There are many simple articles in daily use which those who use them are ignorant of the mode of production. This might excite much interest."

A friend from Nottingham writes thus:—

"I beg leave to acknowledge the receipt of the circular relating to the Bazaar to be held in London in May next; and, as far as my means and limited influence extends, will render it my support. I may say that I have several lace machines, which are making splendid patterns in this description of material; and it has struck me whether my best plan would not be to have a quantity dressed, or, as we say, 'got up,' and then send it to you to be made into caps, collars, cuffs, flowers, &c., according to the judgment of those excellent ladies who are the mainstay of this laudable undertaking. I will also try to get a few articles made ready for the Bazaar, that I may be able to render you all the assistance I can for destroying lordly rule and destructive monopoly."

The Rev. Dr. Hewlett, of Coventry, says:—

"Your favour relating to the Bazaar was duly received; and on reading it I felt disposed to say, 'Silver and gold have I none, but such as I have give I unto thee.' If a few copies of my last work, 'Thoughts on the Thought,' would be worth your acceptance, they are most readily at your service; and also two or three copies of another work I am now preparing for the press, and which will be out I expect some time before May, 1845."

"Dundee, Dec. 14, 1844.

"I have this morning received a circular subscribed by you respecting the Bazaar; and, as I would feel myself much gratified by contributing in some shape to a great object, I should feel obliged by your informing me whether a number of samples of linen manufactures in this town and the surrounding districts would be desirable. If this would be the smallest degree contributable to your success, I could send you about fifty samples of different qualities, arranged on boards or something similar, so that they may possess a neat appearance. Yours, &c. &c.

"George Wilson, Esq."

COUNTIES REGISTRATION MOVEMENT.

MEETING IN SHEFFIELD.

On Monday evening a crowded, unanimous, and enthusiastic meeting was held at the Music Hall, when Richard Cobden, Esq., M.P., and John Bright, Esq., M.P., were expected to address the friends of Free Trade on the importance of co-operating in carrying out the plan of the League to rescue the county representation of England from the hands of the monopolists. In consequence, however, of an engagement in London, Mr. Bright was unable to attend, and his place was ably supplied by Mr. Cobden.

plied by R. R. Moore, Esq., barrister-at-law. Soon after seven o'clock, these gentlemen, with Edward Smith, Esq., Chairman, and other members of the Free-Trade Association, appeared in the orchestra, and were received with reiterated plaudits. Mr. Smith took the chair, and was supported by Mr. Cobden on the right hand, and by Mr. Moore on the left. On the platform were Francis Newton, Esq., Master Cutler; William Fisher, Esq., Dr. Corden Thompson, Edward Vickers, Esq., William Smith, Esq., George Chambers, Esq.; Messrs. Aldermen Carr, T. B. Turton, G. Turton, W. Hoole, and Moorhouse; Messrs. Councillors W. Jackson, Thomas Wiley, W. Fisher, jun., Thompson, I. P. Cutts, George Wostenholme, B. Vickers, Birks, Naylor, Jos. Turton, H. D. Wilkinson, Henry Wilkinson; Revds. B. T. Stannus, J. Davies, and H. G. Rhodes; Messrs. J. W. Smith, T. Hoole, John Stephenson, W. Ibbotson, J. Hargreaves, Bingham, T. Oates, George Johnson, James Wall, George Walker, Drabble, Sanderson, and several others. Many of the leading merchants and manufacturers, too, were in the body of the hall.

The CHAIRMAN having made a few explanatory observations, said it was now nearly twelve months since they met in a large body on this very important question. They were aware what at that time was the state of Sheffield. Trade was languishing, the working classes were to a considerable extent unemployed, upwards of 1300 artisans were receiving parish pay, gloom and despondency sat upon every class, shopkeepers were without their usual customers, merchants were without their usual orders, and owners of property found their houses and mills unoccupied and out of request. Under the pressure of those circumstances they met to give their opinion of the necessity of the measures advocated by the League; and a noble response was made to the appeal by a liberal subscription. This was done under a conviction that it must be by the success of the well-directed efforts of the League in striking off the shackles from our trade, if prosperity should once again visit our town. Since that time some change had taken place in our position. The gloom was gone, and sunshine was come over us. We had had some revival of prosperity, a revival not so much owing to the efforts of any class, as it was in spite of the efforts of men to keep up the high price of food, and close our markets against our best customers. The revival had come through the bounty of Providence in sending an abundant harvest. But let us not deceive ourselves. This prosperity did not contain within itself the elements of permanency. Two or three deficient harvests, an interruption in our monetary system, might bring back the distress that seemed to overwhelm us rather more than twelve months ago. Never let it be forgotten that while the prosperity of the country was in the hands of the Almighty, and while abundant harvests, by producing cheapness of food, produced an increased demand for our manufactures, we had an enactment in the Corn Law whose express object was to make food scarce and dear, and, as if that object was not sufficiently bad, it was embodied in that worst of forms, the sliding scale. Let there come two or three bad harvests, or even one harvest of unusual scarcity, and again, through the operation of that sliding scale, they should see gold suddenly, at the eleventh hour, withdrawn from the country, when it was too late to make an exchange of goods for corn in our utmost need. The question had been urged in the House of Commons till it was of no further avail. The speeches made there ceased to find an answer, because they were unanswerable. What was to be the next step? Their friends from Manchester advised—and most of them saw the excellence of the plan, and cordially concurred in it—that they should take measures to send to Parliament men better informed on this question than most of those who were now there. It was not his purpose to anticipate the subject, for their friends before them could enforce its necessity, and point out its practical bearing, better than he. His business was simply to introduce the proceedings, and he now concluded by calling on Richard Cobden to address the meeting. (Loud cheers.)

Mr. COBDEN was received with reiterated cheers, and one cheer more. He addressed the meeting in a lucid and argumentative speech. Having dwelt upon the spread of Free-Trade principles in America, he proceeded to remark on the treaty of commerce effected with China, which was altogether Free-Trade in character:—What is that tariff? The Chinese admit all corn and provisions duty free; and not only are the commodities themselves duty free, but any ship that takes a cargo of flour or rice into a Chinese port is also exempted from all port charges. (Cheers.) Well may such a people call us outside barbarians. (Cheers.) To show you how this works I may mention that a gentleman called on me the other day from South Australia who told me that last year he brought 50,000 bushels of wheat from that colony to England, a distance of 15,000 miles, and when it arrived he had to pay a duty of 5s. a quarter. I asked him as to the supply of corn in South Australia, and he said that every year the surplus would increase, but he should never send another cargo to England. He said, you levy a duty here, while the Chinese receive the corn duty free; and we have but a six weeks' or two months' voyage to China, while to England it requires seven or eight months. We shall, therefore, take all our surplus to China, where it is duty free, and our ships are exempt from all port charges. (Cheers.) Thus our own colony, established professedly to relieve and benefit us, is driven to trade elsewhere, and, instead of dealing with our cousins and nephews and nieces, we oblige them to seek a market for their corn in China. The first principle of Sir H. Pottinger's treaty with China is, that there shall be no duty on corn or provisions. The next is, that there shall be no duties for protection, but only for revenue. On our staple manufactures the duties average about 7½ per cent. That is the tariff of Sir H. Pottinger with China. There is no reciprocity stipulated for in this tariff; but England, France, America, and every other nation, are put on the same footing. This is the tariff which the monopolist manufacturers of England are meeting to glorify. It is the identical tariff which the League has been contending for these five or six years. (Cheers.) I have asked elsewhere, and I ask here, are these men in earnest when they tell us that it is a bad thing to have Free Trade without reciprocity? If so, what a pretty set of Christians must they be, to be glorifying Sir H. Pottinger for inflicting this bad thing on the Chinese. (Laughter.) In the next place, does free trade in corn reduce wages, throw labourers out of employment, and bring a country to beggary and ruin? If so, what precious Christians must they be, to give Sir H.

Pottinger a piece of plate for inflicting these evils on the Chinese. (Cheers.) The most charitable thing is, to suppose that they do not believe what they have been telling us. If they do not—if they think these things good for China—why will they not allow the people of England the benefit of the same principle. Really this inconsistency is so absurd that it must make people ashamed to follow these men. I have no hope of the men themselves. They are the men—take, for instance, some of the largest manufacturers of Preston (proud Preston!) now giving their £50 each to Sir H. Pottinger—who sent a petition to Parliament, presented by Lord Stanley last session, in favour of the present Corn Law. I have no hope of such people, and I'll tell you why. There is no principle in them. (Hear, hear.) As they have no principle it is fair to suppose that they have other motives for their actions. Let them give us free trade in corn, and nothing will be more easy than for our merchants to carry manufactures to China, and bring back tea, which they may exchange in America, on the Baltic, or on the Mediterranean, for corn to supply the people at home. By that means they will increase the demand for our manufactures; they will supply a luxury in demand in the corn-growing countries of America and Europe; and they will bring back to us what is wanted before tea—an additional supply of the first necessary of life. All these things are working for good, and, if we can convince the unprejudiced portion of our countrymen of the soundness of our views, we may leave them to work; for truth will go on working whether we wake or sleep, and bring about its own triumph. (Cheers.) (Mr. Cobden then developed the League plan for the purchase of freeholds, showing how extensively it could be carried out in Yorkshire, and the importance of winning such an extensive and influential county. Having urged the adoption of this plan upon all classes, he pointed out how ladies might aid in it.) I see some ladies here, and I am sorry we seem to have taken a start out of the course in which the ladies can give personal service. They cannot qualify to vote. I wish they could; for I am sure many of them would make better use of their votes than their husbands. (Cheers.) But if ladies cannot qualify themselves, they may persuade those over whom they have influence to qualify. Every one who can induce a person by fair influence to do so, produces the same effect in the polling booth as by qualifying herself. But there is another way. It is an odd thing, and will be laughed at some day, that, though ladies cannot vote, yet if they have property they may give rent-charges of 40s. a year to any stupid fellow who can vote, though the ladies cannot. Ladies of property may qualify as many as they please, by giving rent-charges. There is another way in which the law seemed to have made a special exemption in favour of the ladies. If a man bought a freehold, he must possess it before the 30th of January to enable him to be on the register that year. But if a man took a wife with a freehold, he might claim in July, though married only just before. (Laughter and cheers.) (He then showed how they had the means in their own hands of increasing the constituency in Yorkshire.) You have the means, in the West Riding, before the 31st of January, of putting yourselves in a majority of 2000 or 3000 on the registry. You can easily do it. I have said, wherever I have gone, that we must have 2000, but I am convinced it will be nearer 3000. We can bring you 500 from Lancashire. I qualified the other day for myself and my two brothers. We were only your visitors before, now we are your brother electors. (Cheers.) I believe we shall have at least 2500 to 3000 qualified. What difficulty will there be in this to Leeds, Halifax, and Huddersfield? Huddersfield will hardly be second in the scale to Sheffield, and, if you do not look to yourselves, will be a head of you on the poll. I was there the other day, and I told them they must get 400 additional votes. In two days I received a letter to say that they had then doubled the number previously on the register. I do not say that they had got double 400; but they had 170 votes on the register for the township of Huddersfield. In two days they had doubled that number, and I have no doubt at all that they will make up the 400 or more. This is a practical matter, and I hope that before we leave we shall have the satisfaction of hearing that you have formed a committee, and that that committee will meet frequently, as the time is short. It will be well that one part of the committee should look after property to qualify, while another should look out for persons who want to qualify. By canvassing the district you will bring together the people and the commodity, where in many cases you could not have expected it. It will be a good thing to have a Free-Trade lawyer or two. (Cheers.) I think this is a good opportunity for showing that the people can patronise lawyers as well as the aristocracy. There is one lawyer in Manchester who will make out a thousand conveyances before the 31st of January. There is one at Bolton, and another at Rochdale, who will make out three or four hundred. I hope you will make a systematic canvass of the town. Take the borough and county registers, and see all those on the former who are not on the latter. When you meet with a friend, let your first question be, "Are you on the register?" And be sure you never part with him till he has promised that, if he is not, he will be. (Mr. Cobden resumed his seat amid protracted cheering.)

The CHAIRMAN.—We have had brought before us, in a practical, business-like manner, a course of proceeding which, if honestly and zealously carried out, will wrest the West Riding from the parties who now hold it, and place its political power in our hands. It is for us to use it. If we will not now make an effort, and reach out our arms to grasp liberty, we deserve to be the feudal slaves and serfs of the aristocracy to the end of our days. (Cheers.) Now, I think it will be a little relief to our attention, if we distribute through the room a number of cards and pencils, which will give an opportunity of showing how far the meeting is disposed to act on the advice. The declaration printed upon the cards is in very general terms. It is simply—"I am inclined to possess the county franchise." To this let any person disposed to qualify add his name and residence. No one who signs this will feel himself tied to any particular manner of carrying out his intention, or to the employment of a particular solicitor, but will be perfectly free to carry it out in every respect as he chooses. I am desirous that this be done now, in order that our friends, when they return to Manchester, may be able to report the state of feeling in Sheffield, and what sort of a disposition is shown to carry out the plan. I was talking, the other day, with a respectable mechanic, an artisan of this town, who I hope is in the room. He richly deserves any honour that can be shown him, for he

is zealous in your cause. He told me that, on one occasion, he was at a meeting, when an unpopular candidate was addressing a body of people, and was interrupted by shouts and noises. He clenched his hand, and said, "Ah, you may shout, but one vote is worth more than all your shouting." When, therefore, you cheer Richard Cobden, John Bright, or Robert Moore, in their labours for your good, remember that to gain one vote for the cause will effect more than all your shouting. The cards will now be distributed, and the committee will render all the assistance in their power to any person who may give in his name. I have already promised from between 60 and 70 persons to qualify. As there might be some difficulty in finding properties in sufficient number of small amount, I may state that a number of persons may unite in the purchase of one property, each having a distinct interest in it. One deed of conveyance will suffice, and the solicitors can tell you of a simple, expeditious, and economical mode of doing it. (After an interval, during which the cards had been distributed, and a considerable number handed in again, the chairman added)—Well, now I think we have pretty well driven in the nail. We will clench it by another speech. I have received here 66 promises to qualify. (Cheers.) These are spontaneous, and will materially assist the committee, and save a great deal of trouble, by enabling us to open communications with the friends whose names are appended. These 66 are not all in addition to what were promised before; but I may safely say we have now promises for more than 100 new voters for the West Riding. (Cheers.) I call on Robert Moore to clench the nail which has been driven.—(Loud cheers.)

Mr. MOORE was received with loud and reiterated applause. Looking at that meeting, and at the promises to qualify as freeholders and electors for the West Riding, he felt that the League now stood in a triumphant position. Looking back on their former proceedings, some might ask why they had not taken this step before? For five and nearly six years, it might be said they had agitated the country, raised money, and spent it to no purpose—why did they not commence their attack on the counties long ago, and so accomplish their purpose? Nothing in the world was more easy than for people to look back from a position of success, and forget the steps that were necessary to reach it. (Cheers.) They stood now on the breach with the Free-Trade banner waving over them, and people asked why they did not come there before? They had to make this breach. (Cheers.) They at Sheffield, when he had last the pleasure of addressing them, were far behind the opinions they held now. This agitation had lasted so long that they now scarcely remembered the time when it was not easy to gather such a meeting as this. There was a time, perhaps, when many here to-night, if they had been freeholders, would not have given their votes for Free Trade. The change had been wrought by the spread of information by the League, by their reliance on the axiom that knowledge was power. This it was that had produced the feeling now evidenced in a nest-egg of a hundred more freeholders in Sheffield, whose number would no doubt be trebled or quadrupled. (Cheers.) (Mr. Moore then ably reviewed the progress of events for the last five or six years, and lucidly proved that the principles and statements put forward during that time by the League had all been amply verified. He concluded a powerful speech amid loud cheers.)

Several excellent remarks were afterwards made by Mr. Wm. Fisher, Mr. E. Vickers, Mr. Alderman Carr, and others, after which the meeting separated. It was one of the most enthusiastic that has ever been held in this town. We only trust that the admonitions delivered at it will be remembered, and its influence developed in that most practical of all ways—an immediate qualification for a county vote on the part of every Free-Trader who can realize the means.—(Abridged from the *Sheffield Independent*, and *Sheffield Iris*.)

ROTHERHAM.

A meeting was held here on Monday, the 16th, at three o'clock, to receive a deputation from the League. The use of the Town-hall for the occasion having been denied by Colonel Fullerton, one of the magistrates of the neighbourhood, a fierce protectionist, whose note conveying the refusal was couched in terms of insolence to the parties who applied for it, the meeting was crammed into a club-room at one of the inns.

Mr. JACKSON, a large farmer of the neighbourhood, holding several hundred acres under Earl Fitzwilliam and the aforesaid Colonel Fullerton, was called to the chair, and opened the proceedings in a spirited speech, denouncing the Corn Laws as a mischievous delusion to the tenantry, and declaring himself an unqualified repealer. He announced to the meeting that he had given all his sons county qualifications, which elicited rounds of cheering, as did also his spirited offer to subscribe for the erection of a hall for public meetings. The mainly straightforward bearing of this independent yeoman drew from his audience a very warm reception.

Mr. EDWARD SMITH, of Sheffield, a leading member of the Society of Friends, first addressed the meeting, going over the arguments of the Free-Trade question in a clear and concise manner.

Mr. COBDEN was the next speaker, who, after addressing himself to the farmers, many of whom were present, urged upon the people of Rotherham the importance of increasing the number upon the county register for their important district.

At the conclusion of his address, Mr. KNOWLES, an ironmaster, moved, and Mr. CHURMES, manufacturer, seconded, a resolution, which was unanimously agreed to, approving of the course recommended by the League, and pledging the meeting to carry out its recommendation, appointing a committee for the purpose.

A vote of thanks, upon the motion of Mr. BARNES, a highly respectable solicitor, and coroner of the district, was then passed by acclamation to Mr. Cobden, who shortly after left by the train, in company with Mr. Smith, for Sheffield, where a large meeting was held the same evening. The monopolist squires will not find their cause advanced by the refusal of the use of the Town-hall, which has excited general indignation.

MEETING AT WAKEFIELD.

(From a Correspondent.)

On Tuesday evening last Mr. Cobden and Mr. Bright attended a meeting, convened by circular, for the purpose of taking measures to improve the register for the West Riding of Yorkshire. The hall of the Mechanics' Insti-

tution was crowded by one of the most influential assemblies ever held in Wakefield.

James Micklethwaite, Esq., was unanimously voted into the chair; and on and about the platform we observed Henry Briggs, Esq., Edward Sykes, Esq., Messrs. John Boston, George Foster, J. Burrows, Wallace, Nicholls, Ash, G. W. Harrison, Marsden, J. Laurence, R. Carr, J. Nettleton, J. Kershaw, Rev. T. Roome, Mr. Thomas Flint (of Leeds), and many other gentlemen.

Mr. COBURN spoke for more than an hour, entering into some of the arguments by which the fallacies of the monopolists are met. He traced the mode in which high prices of food destroy the independence and the comforts of the working classes; and explained, by a very simple but most convincing line of argument, how the operatives must be the first and most materially benefited by an increased supply of food. He then entered upon a consideration of the means by which it is now proposed to bring the middle and working class-power to bear upon the county representation; and proposed that the Free-Traders throughout the riding should accept the invitation of the constitution and enfranchise themselves. He showed how preposterous is the notion that the owners of land are alone interested in the carrying on of the Government; and expressed his firm and deliberate conviction, that, if the middle classes would now exert themselves, they might save their country from the blundering and selfish legislation to which it has been subjected.

Mr. BURCH began by asserting that the good object the League was engaged in had been sought only by means altogether moral and unobjectionable, and that this ulterior step was perfectly legal, just, and desirable, and such as the most fastidious could not object to. The 450 tenants-at-will had swamped the freeholders, and now, by an addition of freeholders, the health of the county constituencies must be restored. He dwelt strongly on the value of the cause, and on the sacrifices it was worth; and spoke of the invasion of the rights of industry by the landlords as a tyranny of the most fearful character. He traced the ruin produced by their policy among manufacturers and farmers, and among every class of workmen, and denounced the Corn Law as a legislative crime, which prevented harmony and caused bitter feelings between class and class. He instanced the case of an incendiary fire in Hertfordshire, reported in last week's papers, at which the labourers refused to assist to extinguish the flames, and could hardly be prevented from setting fire to a portion of the premises not in immediate danger, as a proof of the extraordinary alienation of feeling existing in the rural counties. He called on the middle classes to arouse themselves, and to make common cause against a common enemy. Trade had made the middle class, and they must now save trade. Lancashire was doing its duty, so was North Cheshire and Middlesex and some other counties; and, if the West Riding would fairly come out, such a blow might and would be given as all the banded forces of the monopolists would not be able to resist.

Both speeches were greatly cheered, and the audience seemed delighted with the simplicity and power of the present movement of the League.

Mr. CHARLES MORTON, of Altofts, in a brief but telling speech, moved the following resolution:—

"That this meeting is deeply grateful to Messrs. Cobden and Bright for their admirable addresses this evening, and for their services in the cause of Free Trade; and pledges itself, to the utmost of its power, to carry out the course of action now recommended by the Council of the League with respect to the increase of the county constituencies."

Mr. JOSEPH RICHES seconded the motion, and it was carried with the loudest acclamations.

Mr. COBURN returned thanks, and proposed the thanks of the meeting to the chairman for his services on that and many other occasions. These were given with loud cheering, and the meeting then separated.

From the complexion of this meeting, of which we have only room for this short sketch, it is evident that we are about to witness in Yorkshire a glorious upheaving of the independence of the county, equal to that which in former years rendered its elections memorable in the history of the country. If Leeds, the metropolis of Yorkshire, will but lead, there is a disposition to follow on the part of the smaller towns, which cannot but bring about the most important results. We understand that meetings were to be held at Barnsley and Keighley on Thursday and Friday; and in other towns of the riding next week.

FARRINGTON CLUB.—FREE-TRADE BANQUET.

On Monday evening this Club, whose main object is to co-operate with the League and return Free-Traders in the municipal and parliamentary elections, held its first annual dinner at the newly-constructed Farrington Hall, in connexion with the King's Arms Hotel, Snow-hill. The building is a most admirable one, and well suited to the purposes to which it is intended to be appropriated. About 150 gentlemen attended on the occasion. Almost all the inhabitants of the ward who take an active part in its politics, whether local or political, were present to give effect to this first public meeting of the Club. In addition to the members of the body we noticed amongst the company, J. Pattison, Esq., M.P.; J. Bright, Esq., M.P.; J. Pattison, Esq., jun.; Messrs. Bedford, Taylor, Gresham, Wollatt, Barnard, Harding, Ramsdane, Charles, and Walker (members of the Common Council for the ward); Mr. Saward, Mr. E. Spicer, Mr. W. Spicer, Dr. Sheridan, Mr. W. Wilson, Mr. Teverham, Mr. Sharpe, Mr. J. P. Burnard, Mr. A. Galloway, Mr. James Gurney, Mr. G. Walter, Mr. Edmonds (the chairman of the Licensed Victuallers' Protection Society), Mr. C. Wood, Mr. Lowe, Mr. Carpenter, &c.

The chair was taken by John Buckmaster, Esq., the Chairman of the Board of Guardians of the West London Union, who was ably assisted by Dr. Lynch, the Vice-President on the occasion.

The cloth having been removed, *Non Nobis Domine* was chanted by Messrs. Turner, Jones, and Ramsford.

The Chairman then proposed "The Queen and the

rest of the Royal Family," which was drunk with great applause.

The CHAIRMAN said the next toast which he had to propose was one which he was sure would be received with enthusiasm by the company. It was "The health of their respected representative, Mr. Pattison." (Cheers.) He was an honest and enthusiastic advocate of the principles of Free Trade, and nothing could be more popular in that assembly than the advocacy of such a doctrine. (Hear, hear.) He was a consistent and straightforward Free-Trader—a man imbued with the great attributes of public virtue, and who, in the pursuit of the object which he had in view, was not to be exceeded or defeated by any man. (Cheers.)

Mr. PATTISON, upon rising, was received with enthusiastic applause. The hon. gentleman addressed the assembly as follows:—Mr. Chairman and gentlemen, I assure you that I feel deeply sensible of the honour you have done me. Although I am wanting in words to express what I feel upon this occasion, yet I trust you will consider that my heart is full of thanks. Allow me for a moment to go back a little, and trace the previous history of my political life; for I can never forget my election in this great city, and what I owe especially to this ward, when, in this month, in the year 1835—nine years ago—I first offered myself as a candidate for your suffrages. Mr. Pattison here briefly sketched some of the political transactions which took place previous to the year 1841; and proceeded. After 1841, there was a very great reaction; for a most extraordinary body sprang into existence in London as well as Manchester, a representative from which association is here to-night (hear, hear); they came among the people, and showed them that what this country most wanted was freedom of trade. (Cheers.) The proceedings of this association are truly surprising. A few excellent men have gone from place to place telling the people of this country what they really required to remedy their evils, namely, cheap bread and freedom of industry. By their efforts a great reaction was created in the City, and the result was the subsequent election of myself upon the vacancy occasioned by the death of the late lamented Sir Matthew Wood. You, gentlemen, cannot but remember what astonishing talent and zeal were employed by the gentlemen of the Anti-Corn-Law League in our cause and theirs; and also what an extraordinary phalanx was brought to bear against us by the enemy. The candidate whom our opponents brought forward was Mr. Baring, the most amiable man who could possibly be selected. He was supported by all the aristocracy of the City, who backed him by the use of the most foul intimidation, and he was supported also, I verily believe, by the corrupt influence of bribery. And yet, with all this powerful opposition, these gentlemen came into the City, and, supported by the great power of the City—its middle class—by your and their exertions, I was returned. (Hear.) As regards myself, I can only say I have endeavoured to do my duty in my humble way. I trust I have never been found wanting in my votes. If I have acted against the opinions of my constituents, I am sorry for it; but, at all events, I have voted according to my conscience. (Cheers.) I was in company the other day with a very strong Tory, who said to me, "I think you are quite right in your view upon the question of Free Trade; but I believe you will get the repeal of the Corn Laws from Sir Robert Peel and no one else." I replied, "I shall be very glad to have it from him or any one else: the League is perfectly indifferent whether Sir Robert Peel or Lord John Russell, or any one else, gives it so long as their object is accomplished." (Cheers.) Therefore, Sir, if Sir Robert Peel does it, my good friend on my left will be grateful to him for so doing ("hear, hear," from Mr. Bright), and so shall I. I beg leave to congratulate you, gentlemen, citizens of London, and the country at large, upon the success of this new body, the Anti-Corn-Law League; and I am perfectly sure of the good they will do to the great cause of liberty, civil and religious, Free-Trade, and all the people can wish for. (Cheers.) You will carry out these objects most effectually by continuing your labours and registering your votes right and left. Nothing, I am sure, will effect so much good, not only for this great city, but for the people at large, as the attainment of these objects. I am getting old, and perhaps shall not much longer be able to serve you (loud cries of "No, no"); therefore, I do not speak from any selfish feeling, but from an anxious wish for your benefit and that of the country. I hope, gentlemen, that you will unite together; I am sure that your labours will be beneficial not only to the great city of London, but to all the world. My earnest hope is, that the citizens of London will do their duty in this great cause. I conclude, by again returning you my very grateful thanks, apologizing for my imperfect mode of addressing you. I assure you I shall never forget my first reception in the Ward of Farrington in the year 1835, and your continued kindness down to the present time. (The hon. gentleman resumed his seat amidst loud applause.)

Song—Mr. Turner—"The Old English Gentleman," with the addition of the following appropriate verse, written by himself:—

"But whilst we mourn departed worth,
We yet rejoice to find
We've here an English gentleman,
Of honest heart and mind;
Whose life and labours to the last,
In fame shall be enshrined.
In him we find true Christian love,
And amity combined.
He's a fine Old English Gentleman,
One of the present time."

Dr. LYNCH then rose and addressed the meeting as follows:—Mr. Chairman and gentlemen, at the first meeting in our new hall we gladly seized the opportunity to pay homage to the great principle of Free Trade (cheers), and to do honour to the Anti-Corn-Law League and its great principle. (Hear, hear.) In the history of political movements there is no parallel to be found to the rapid and triumphant progress which the League has made. (Hear, hear.) Little better than six years ago a few gentlemen met in Manchester in a small room to endeavour to rescue

their fellow-townsmen from the misery they then endured, to proclaim the rights of labour and commercial freedom, and to endeavour to abolish the Corn Laws, which paralyze trade and industry, and bring death, destitution, and desolation to the homes of the labouring class. (Hear.) That movement at first was merely local; it then became provincial, then metropolitan; it is now national and universal. (Loud cheers.) As Curran said of democracy, it was like the mist at the foot of a mountain; it now occupies the whole political horizon. Wisdom first instituted this scheme of national organization, and pre-eminent talent and untiring industry have carried it into execution. (Hear, hear.) The League, by its millions of tracts, its endless political discussions, its arguments written and spoken, its illustrations gathered from all time and every country and quarter of the world—from laws human and divine—has converted and reduced the mere abstract speculations of philosophers in their closets into rules and maxims which they have made familiar to, and which have been adopted by, enlightened and enthusiastic multitudes. Fuseli, with all his power of pencil, never pictured humanity with more fidelity than the League has delineated the revolting features of monopoly. (Hear, hear.) It has established, with all the conclusiveness of mathematical demonstration, the monstrous evil which monopoly inflicts upon society. It has taught the masses that, wherever monopoly ceases, industry and enterprise develop themselves; that it is this which has created that great manufacturing system which has astonished the world, and proved the inexhaustible sources which Providence has in store for His creatures. The bounties God has spread over the earth are not to be prevented or intercepted from coming to man by any unjust or vile scheme of class legislation. These are the great, eternal, and immutable truths which the Anti-Corn-Law League has established, and which have now become principles of action among the people. (Cheers.) They have done still more; for by their labours they have emancipated the minds of tens of thousands from the trammels of party; they have taught us to despise the terms "Whig," "Tory," or "Radical," and led men of all opinions to co-operate in the great work of repealing the Corn Laws. (Cheers.) Mr. Chairman and gentlemen, in the presence of one of the greatest missionaries of that noble body the Anti-Corn-Law League, it would ill become me to enter into this subject at any length. I will not refer to the misery, mortality, and destitution that have been occasioned by the Corn Laws; I will not refer to the circumstance, which has been proved indisputably, that there are between four and five millions of our fellow-creatures in a state of hopeless and helpless destitution. Those are topics which the honourable gentleman who is now present is more master of than I am. (Dr. Lynch having passed an eloquent eulogium on Mr. Bright and Mr. Cobden, concluded by proposing Mr. Bright's health, and resumed his seat amidst loud cheers.)

The toast was drunk with the utmost enthusiasm, with three times three and one cheer more.

Mr. BURCH, upon rising, was greeted with the most rapturous applause, repeatedly renewed. Silence having been obtained, the hon. gentleman addressed the meeting as follows:—I confess that it is a most grateful task to which I am now called, in responding to the sentiment

proposed by Dr. Lynch; especially that portion of it connected with the Anti-Corn-Law League, and the wish which this meeting has expressed that success may attend its policy. (Hear.) I regard the cordiality with which you have received that toast as a proof that you feel that your interests are in some degree—I hope no small one—bound up with the operations of that important association. You, gentlemen, belong to what is called "the middle class" of this country; and are, in fact, the backbone and sinew of this its metropolitan city. The Anti-Corn-Law League is an embodiment of the interests and rights of that middle class; and as such it deserves your cordial and hearty support. (Cheers.) The claims which that great body has upon your good feelings are not difficult to be made out. After the very eloquent compliment which has been paid to them, I might, perhaps, spare myself the task of addressing you upon that head; but there are two points of view in which I think the League ought to be regarded by this meeting, and all those who have fairly weighed its merits. We have now entered the seventh year of our existence as an association. Six years ago the Anti-Corn-Law League first commenced its labours. It began in a very small way indeed; but from that time to this there is no point upon which change has taken place in the principles by which it was first actuated. (Hear.) We set out by promulgating to the people of this country the truth that they were entitled to the total and immediate repeal of the Corn Law, and as a consequence to the equally instantaneous abolition of all protective duties and every commercial monopoly. From that moment to this we have never swerved in the slightest degree from that principle. (Hear.) Although we have been attacked with as much obloquy and calumny as it was possible for any men or set of men to have had heaped upon them—notwithstanding attempts have been made by others to coax, wheedle, and ensnare us from the principle with which we started—yet I may assert with the utmost conscientiousness, truth, and sincerity, that in the council-room of the Anti-Corn-Law League the subject of the surrender of any portion of that principle has never even once been seriously discussed. (Hear.) There is, however, another view of the League—one which shows the very reverse of change—and that is the influence which it now exercises compared with what it possessed six years ago. I have been more or less connected with it from the first, and have been intimately acquainted with its proceedings from that time to this. Year after year I have witnessed its growth and watched its increasing strength, until at this moment I think I may say—without any of that partiality which, perhaps, from my identification with it, I might be excused for feeling—that I am quite certain there is no political or other question which at this moment has obtained one tithe of the attention in Great Britain which Free Trade now commands. (Cheers.) If, then, we have not changed our principle from the commencement of our course to the present time, and if we have found from time to time that our strength has been increasing, I take it that there is nothing in the circumstances of to-day to induce us to deviate in the smallest degree from that great fundamental

principle which we have asserted—that man has a perfect right freely to exchange the results of his industry for the produce of the labour of every other man in all countries of the world. (Loud cheers.) This principle has never yet been valued by us as it ought to have been; and we have not hitherto thoroughly understood its importance. It lies at the root and foundation of every description of liberty. We have long had the old cry of "Civil and religious liberty;" but what matters it that you may be allowed trial by jury, and be permitted to worship either in a church or chapel according to the dictate of your conscience, if you are not also allowed the enjoyment of the fruits of your industry, and that a law still exists which cripples the trade and commerce of the country, impairs the productive powers of the people, and gradually presses down a larger and larger number of the population into such a condition of destitution and suffering as to render the security of all other classes almost impossible. (Hear.) Yet that is the state of things at the present time in this country. Such have been the violations of this great law of Providence, that I believe there is no direct despotism which ever existed in this country, practised either by monarch or oligarch, that ever produced such terrible effects, or was so destructive of the happiness and comfort of the great mass of the people, as have resulted from the breach of those principles which we are endeavouring to promulgate and establish. (Hear, hear.) I reside in a part of the country where this law is all but universally acknowledged—a district where the distress which has been endured from the operation of the Corn Law has been nearly as great as that in any other portion of the kingdom. But let us bear in mind that it is not the weavers and spinners alone who are thus affected—not merely the men employed in the manufactories of Lancashire and Yorkshire who experience the suffering inflicted by monopoly—but in your own city, even amongst the largest class of its shopkeepers, who compose the greatest number of the electors of London, and also in all the suburbs of the metropolis, you will find that there are periods of three or four years during which they experience very great pressure—(hear)—when competition is increased to an extraordinary degree, the cause of which they cannot tell, or comprehend why a very large portion of their customers seem unable to spend so much money in trade as they had done at other periods. But not only is the pressure felt in the manufacturing towns and in the metropolis, but in the very districts where the persons reside for whose especial benefit, or rather I should say for whose *professed* advantage, this law was enacted, there is at this moment, and has been for years past, a greater amount of suffering and wretchedness than exists in any other part of the country. (Hear.) The distress among the farmers, of which we now hear so much, is no new thing. Ask any man who understands their condition, who has been acquainted with them for the last thirty years, ever since the conclusion of the war, and he will tell you that there have been periodical distresses, and hurricanes have occurred in the agricultural world which have swept down the small class of farmers; he will tell you that in 1822, seven years after the passing of the first Corn Bill, there were 120 advertisements of the sale of farming stock in one Norfolk newspaper. (Hear.) Look at the years 1829 and 1830, when the torch of the incendiary was lighted up in some of the south-western counties of England; when the farmers, landowners, and squires of every description found out what the poor people wanted; for in one week they raised their wages from 7s. to 12s., in the hope that this destructive torch might thus be extinguished. They would not confess that it was the Corn Law which had caused the mischief: nobody then could discover that fact. In 1835 and 1836 the price of wheat went down again, and then immediately the whole of the population of the manufacturing towns were in a state of prosperity; and the farmers were again plunged into difficulty, having their capital absorbed for the payment of a rent fixed at the rate of the Corn Bill of 1823, to be paid from the low prices of 1836. (Hear.) This was succeeded by a period of high prices, and consequently of manufacturing distress and ruin. The farmers rode home from market in great spirits, never for a moment suspecting that as prices rose rents would also advance, until in 1842 this temporary prosperity passed, prices went down again, and the farmer's condition was as melancholy and miserable as it had ever been at any former period. But, although there had been those four or five years of high prices of food, yet the labourers were worse off during that period than they ever were before. If the professed policy of the Corn Law had been true, there having been so many years of high prices, every labourer should have employed, and should, moreover, have had an increased share of the necessities and comforts of life. (Hear.) But there can be no doubt that at this moment when I am speaking the labourers in this country are not employed, and are worse off than they were four years ago, when you had such an amount of suffering. How comes it that you have this suffering now? The poor rates are actually falling in the agricultural counties, and yet there has been this increase in misery. The poor rates are actually falling, which is a fair proof that there are more labourers employed and able to keep themselves, without having recourse to parish relief. They are better off than they were; low price of food is a direct benefit to every labourer that is employed. Two days ago a paragraph appeared in the public papers, giving an account of an incendiary fire which had just taken place in the county of Hertford. It was not an occurrence of an ordinary description, for there were some features connected with it which rendered it peculiarly worthy of attention. The labourers stood by and refused to assist in extinguishing the flames; and it was even necessary to place a guard to prevent them from snatching brands with which to set fire to that portion of the property which was not then in immediate danger. The clergyman of the parish was present, and did his utmost in assisting to put out the flames. He exhorted the labourers to help; but they not only refused, but did so using the most offensive and insulting expressions. If I were a landowner, such a paragraph as that would set me thinking. I should ask myself, "How is this?" "In what way is this to be remedied?" That a remedy must be found is evident, or there will not much longer be security either for life or property. Why do the landowners ask themselves how it is that, after thirty years of all the protection which a thoroughly landed Parliament could give, the portion of the community pretended to be benefited are those to whom the whole country points their finger as the class on whom the burden of the misfortune seems almost entirely to

be resting? (Hear.) In Wiltshire things are pretty much the same. We have had lecturers in that district for a month or six weeks, who have visited every village and hamlet where anything like a congregation could be got together, and there has not been the least sign of discontent exhibited at the proposition which has been openly propounded by those lecturers, that the Corn Laws should be repealed; every amock-frock man has lifted up his hand in favour of their repeal. This week, in a monopolist paper at Devizes, in Wiltshire, there is a letter from a practical farmer of great intelligence in favour of Free Trade. It is the very first article in which such doctrines have been broached in that paper. The object of this meeting, if I understand it, is to adopt such means as may furnish a very good weapon, at a future time, to the city of London. (Hear.) We must wrest the government of this country from the hands of faction. (Cheers.) The men who have ruled for something like—I will not say how many years—as far back as the memory of the oldest of us, have generally been men who seemed to have had no proper appreciation of the rights of their fellow-countrymen, or the means by which their true interests could be advanced. We have not fought an up-hill fight with this or that party to get into office, and then engaged in another contest to dispossess them of it. People have been too much led to join with one or the other of these parties. (Hear.) We have never received any of the good things which they have obtained by such contests, but all the advantages have been shared among themselves, and we have been left to disappointment and regret. (Hear.) It is the constituencies of the empire which can alone wrest the government from the hands of faction. There is no electoral body which has so good a right to take the lead in this matter as that constituency a portion of whom I have now the honour of addressing. (Hear, hear.) London, in past times, was noted for its adherence to principle. About 200 years ago, your Guildhall was nearly full of plate and valuables of every description, which the citizens of this metropolis had brought there as a contribution to maintain the struggle then carrying on against a monarch who would have sacrificed all the rights of his people to his aggrandizement and the exaltation of his own despotic power. (Cheers.) Such times are passed: violence can no more be heard of in connexion with political questions. I have not the smallest fear that even the policy of the oligarchy of this country will draw any portion of the people into violence. It would drive them to rebellion if there was not a middle class to step in and save them—if there were not great constituencies like this upon whom no landowner can place his paw, and dictate to them how they shall vote. (Loud cheers.) This will prevent such catastrophes in future. Your excellent representative has alluded to the last election for this city. I was at a meeting in this ward, held in the schoolroom in Harp-alley, upon that occasion. It was the first meeting which was convened on the subject of Free Trade in connexion with that election. There was a remarkable fact exhibited in that contest—that of the whole number of electors the Free-Trade candidate had a majority of something like 1000 or 1100 of the householders; but that Mr. Baring, on the other hand, had the greater number of the *liverymen*. Now, I confess that I would rather have a majority of the householders than of the liverymen if I wished to represent the real opinion of the City. (Hear.) A dinner was given shortly after that election, at which Mr. Baring spoke, and the chairman on that occasion had the bad taste and impertinence to say that the respectability of the City was with Mr. Baring, and that the rabble were the supporters of Mr. Pattison. (Laughter.) I believe some people were so kind as to excuse him on the plea that he had taken too much wine. I am not so charitable: I suspect it was the real outpouring of the feeling with which his mind was filled. The monopolist party have thought for a long time that they were the only important class in the kingdom. Why, they do not hesitate to give it out to the world that they are the only religious, wealthy, intelligent, and learned class in the country! (Laughter.) All this may be true to some extent; but I suspect the time is not far off when we shall find that the real strength—the true power upon which alone this country can rely—is to be found in the middle class, and not that body which has so long tyrannized over the people. I know that the great majority of electors of London are as independent as any men on the face of the earth. The larger the city in which men live as tradesmen, the less is it possible to bring any undue influence to bear upon them. There are shopkeepers in the metropolis who have scarcely any regular customers, but whose business depends upon people with whom they have no personal acquaintance whatever. The large majority also of your electors are tradespeople. You have no great love, I believe, for the aristocracy. You do not care much about splendid equipages, and have no wish to make your way by political subserviency, or crawling into favour and gaining a high position for yourselves. (Hear, hear.) You are men of honourable industry, which is a thousand times more valuable to your country than the boasted idleness of the proudest peer of the realm. (Loud cheers.) If you would only combine and exert yourselves, you might do everything in this metropolis. You must first of all think seriously for a few moments, and see who and what you are—how many you reckon in number; and then you have to make up your minds as to that influence which justly belongs to you, that you will exercise it for the public good. But, in order to obtain this influence, you must combine and know each other; you must not be estranged from one another; men living in the same ward, and not knowing anything of your neighbours' opinions; neither must you seek to be strangers to the inhabitants of any other ward. If you are acting separately in municipal contests, you must act together in Parliamentary elections. You must establish such a club as this in every ward of the city. (Hear, hear.) And then, when you learn that a general election is at hand, do not ask three or four, or half a dozen men in Lombard-street what sort of individuals shall be your candidates; those men in Lombard-street have no more sympathy with you in the bulk than the men who own half counties. They are enormously rich; their sympathies are rather with those above them than with such as are beneath them. (Hear, hear.) You have had proof of this upon former occasions. If it had been left to them there would have been no contest at the last election. A gentleman of this description told me, the very day I came to town on the occurrence of that vacancy, that Mr. Baring would be returned without a con-

test; he believed so fully, although he was not a Tory. If it had not been for the middle class of the metropolis, and the agitation of the great question of Free Trade, there must not only have been no Mr. Pattison returned to the House of Commons, but there would not have been even a contest with Mr. Baring for the representation of the City. I would suggest, then, that you should combine in this way, and having thus united, you should work steadily together. In order to labour harmoniously you should have a single eye to some great object which you believe will be good for your country. (Hear.) You have, I understand, at present one League candidate, Dr. Lynch has spoken about the harmony existing in the ward between men of different politics on Free-Trade principles. I believe that every religious opinion which is held in this country is represented in the Council of the Anti-Corn-Law League. (Hear, hear.) There is very great difference there on many other questions, but the harmony is altogether unbroken on everything connected with this one great principle. We have made up our minds upon it; we have worked six years already, and are resolved to labour other six if necessary. (Loud cheers.) There is no talk whatever of breaking down among us; every man comes to the Council-room of the League at ten or eleven o'clock in the morning with the punctuality with which he attends his own business; every man, in fact, considers that his own business is there. My partners, for instance, and those of Mr. Cobden and some other members of the Council of the League, have no objection whatever that their time shall be given up to this cause, which they believe to be a matter of business as well as a principle on which depends the very salvation or destruction of the country, and probably the whole empire. (Cheers.) In conclusion: what I wish is, that the city of London should take its proper place. You have no squire among you to consult; the persons who hold that very milk-and-water doctrine, that nothing should be done by the people upon this question, but that we should leave Free Trade as a question for the monopolists to settle, are but very few. You have all the power on your own side. The late registration proves beyond a doubt that this city may be represented by four Free-Traders upon any other occasion. I believe that result to be certain now; but I am quite sure that another registration will make it so safe that there will be no doubt whatever about it. What we wish is, that London should take its proper place. When another election comes, let there go forth—I will not say unanimously, for with the frailty of human nature, and the besottedness of those men who cling to monopoly, I do not expect that it can be a unanimous voice—but let there go forth one great and powerful voice from this vast metropolis, which shall fill every electoral district in the kingdom—that voice which I can promise you will be caught up in Lancashire, Yorkshire, and the great seats of our national industry; and with your metropolis and county of Middlesex, with our metropolis (Manchester) and our great county of Lancaster, with the West Riding of Yorkshire and all its manufacturing towns, let us be once combined on this great question—let us know our own true interests and position now that upon our own industry depends the greatness of this country—let this be known, and I defy all the dukes and squires that ever existed, or all the fallacies that were ever asserted, to hinder the carrying of this great question, or to protract for one session the triumph we are seeking for our great principle of freedom to the industry of man. (The hon. gentleman resumed his seat amidst prolonged and enthusiastic cheering.)

Mr. Ramsford then sang, in admirable style, "The Oak and the Ivy."

Mr. Wood, in a very able speech, proposed "the health of Dr. Sheridan, the editor of the *Morning Advertiser*, and the liberty of the press."

Dr. SHERIDAN returned thanks in an eloquent speech, and concluded by proposing the toast of "An increase to the parliamentary franchise."

Glee—"King Canute."

Mr. CARPENTER gave, "The improvement of the social condition of the industrial classes," which he prefaced by an eloquent address, which was loudly cheered.

Dr. LYNN then gave the health of the chairman, who responded to the compliment, and after several other toasts were given, the company separated, highly gratified with the proceedings of the evening.

A VOICE FROM THE WEST.

The following letter, excellent alike for its direct and practical character and conciliatory tone, appeared last week in the columns of the *Devizes and Wiltshire Gazette*, a Monopolist newspaper. The writer, Mr. Atherton, is not only a good practical farmer, but has also been, possibly is now, engaged in the management of large landed estates; and he is moreover a man of education and high mental independence.

This letter affords corroborative testimony to the accuracy of our assertion that the best and most intelligent farmers—men who really understand the capacity of the land they cultivate—are either indifferent or hostile to the Corn Laws.

The *Devizes Gazette* calls the attention of its readers to the subject of this letter in a leading article, from which we extract the introductory paragraph:—

"The letter from Mr. Atherton, of Kington, which our readers will find in another column of this paper, is entitled to attention and respect. The opinions of a man of acknowledged intelligence, and who, moreover, is a practical farmer, upon a subject in which he himself is personally and deeply interested, must be of no small weight; and, though these opinions are at variance with those which we entertain and have always supported, yet we give them a place with the utmost willingness and pleasure, our object having ever been (we can most sincerely say) to assist our readers, as far as our feeble means will enable us to do so, in arriving at the truth. We publish, therefore, Mr. Atherton's letter, with the following few and slight remarks, being aware that our agricultural readers are much better qualified than we are to test the accuracy of the data from which Mr. Atherton deduces his conclusions."

To the Editor of the *Devizes Gazette*.

SIR,—Although your paper has hitherto been devoted to the principles of Corn-Law Protection, no doubt from

honest conviction on your part that protection is necessary, I presume you will not object to the insertion of a letter on the other side, written with good temper, and in a fair spirit. There are many and various grounds on which the total repeal of the Corn Laws may be advocated. Commercial men and manufacturers advocate such repeal for the sake of the stimulus which would be given to trade by the measure. Politicians, on the ground of the advantages arising from the creation of mutual interests and good feeling amongst the different nations. Medical men, on the necessity of feeding the poor better than they have ever been hitherto fed, and thus warding off disease and misery; whilst the great mass of repealers take the obvious ground of the injustice of one class being protected at the expense of all other classes, and require repeal on the clear principle that every man should be free to exchange the produce of his labour for that which he most requires. The advocates of the Corn Laws rely on one main answer to all these parties—namely, that their lands are specially charged with rates and taxes, and that in respect of such charges they are entitled to the protection afforded them. They state further, that the light lands would be thrown altogether out of cultivation by repeal,—the labourers employed on such lands out of work, and that one vast inroad on capital would at once be made, sufficient to bring eight farmers out of ten to ruin. I do not propose to enlarge on the arguments in favour of repeal on general grounds, nor shall I refer to the claim made for protection on the score of special charges on the land; but I will take this broad ground, that under the circumstances in which we are now placed, and to which I will presently refer, the occupiers of grass lands, whether for dairy or grazing purposes, would be benefited by having cheap corn for their cattle and pigs; that the occupiers of strong good arable soils cannot be injured by a repeal of the Corn Laws; and that the occupiers of light soils, who can grow neither beans, peas, nor oats to advantage, must change their system of culture if they mean to live by farming, and that a repeal of the Corn Laws would most especially benefit them. In order, however, to make my proposition clear, and to afford those who differ with me an opportunity of unawing it, I will state what I believe to be about the expenses and returns of a light farm of 400 acres, cultivated on the five-field course—the prices of produce being stated at what they are now with protection, and what they would be without it.

EXPENSES WITH PROTECTION.

Rent	£100 0 0
Tithes, at 5s. an acre	100 0 0
Poor, church, and highway rates, at 2s. in the pound	40 0 0
Labour	400 0 0
Seeds	240 0 0
Tradesmen's bills	40 0 0
Horse corn, oats at 20s. a quarter, none being grown	50 0 0
Losses by stock, and wear and tear	50 0 0
Other small expenses	30 0 0
	£1350 0 0

RECEIPTS WITH PROTECTION.

80 acres of wheat, 6 sacks to the acre, at 23s.	£452 0 0
80 acres of barley, 4 qrs. to the acre, at 30s.	480 0 0
(This year the price is higher, but there is no crop)	

Profit from sheep and other stock 500 0 0

Expenses 1350 0 0

Income on a capital of £3000 £182 0 0

This is a return on which no farmer can maintain a family, an allowance being made for the risk of loss attending his business. On many farms, this year, the failure of the hay, turnip, and barley crops will carry away the rent.

Now, let us see what the returns might fairly be expected to be on the same farm, a different mode of cultivation being resorted to from the facilities given by cheap corn for the feeding of stock, the prices being taken at what they might fairly be expected to be in the event of a repeal of the Corn Laws. The expenditure on corn would justify a more severe system of cropping; and I take what I consider to be the best system, namely, 70 acres in grass and clover, 60 acres in winter oats, rye, and vetches, followed by rape the same year; 20 acres in early turnips or rape, and 50 acres in swedes; then 200 acres in wheat and barley.

EXPENSES WITHOUT PROTECTION.

Rent	£100 0 0
Tithes reduced under the Tithe Act to about	80 0 0
Rates	10 0 0
Labour	550 0 0
Seeds reduced from the low price of corn, and less sown from the good condition of the land	210 0 0
Tradesmen's bills	40 0 0
Horse corn	50 0 0
Losses by stock, and wear and tear	50 0 0
Other small expenses	30 0 0
500 quarters of oats, at 15s. a quarter, or the same amount in beans or peas, at 11s. or 13s. a sack, to be fed on the land and in the yard	375 0 0
	£1825 0 0

RECEIPTS WITHOUT PROTECTION.

100 acres of wheat, 8 sacks to the acre, at £1.800	0 0
100 acres of barley, 5½ quarters to the acre, at 25s.	687 10 0
Profit from sheep and cattle	800 0 0

Expenses 1825 0 0

Income on a capital of £1000 £162 10 0

If I am asked what is to become of the oat grower at 15s. a quarter, I answer, let him feed out a part of his oats, and grow 8 or 10 quarters to the acre, and he will be safe.

Under the tariff, and under the law authorizing the importation of flour and corn from America, protection has been in a great measure quietly withdrawn. We as yet know nothing of the extent to which the importation of flour and wheat from America will be carried. Wheat is the staple produce of Canada, and the country adjoining. There are great facilities in the way of water power

for the conversion of wheat into flour; and there is the best and cheapest of all highways open for the conveyance of produce to Montreal, from an incalculable extent of fertile country, farmed by men who work with their own hands, on their own properties. My own opinion is, that so soon as this trade is in full play, all our seaport towns will, to a great extent, be supplied from that source, and that the average price of wheat in this country, with good harvests, will not exceed 23s. a sack. High prices have hitherto been occasioned from the certainty of importations being rendered necessary, and these prices have been increased from farmers with capital being in a situation, and finding it to their advantage, to hold corn until near harvest time. Under the present law, and with the certainty that there will always be corn steadily arriving from America, they will hardly be induced to speculate, and, as I have said before, prices are not likely to be high. The experience, too, of the past and present year ought to satisfy us that, with fair harvests, prices must be low; and we all know that with short harvests we are quickly inundated with foreign corn, when we are least able to stand competition. Speaking with reference to the parish and neighbourhood in which I live, I assert, without fear of contradiction from any man who understands the subject, that with present prices, present rents, tithes, rates, and charges, and the usual average crops from low farming, the occupiers cannot live. As farmers, we have, in truth, no real protection but that which can be derived from the growing good crops; and I know of no way of growing good crops but by farming higher than we have hitherto done. I have little faith in artificial manures—they are expensive and uncertain in their effects; and I believe there is no mode of manuring land so cheaply as by the feeding out of cheap corn. With oats and beans varying in price from 20s. to 25s. the quarter or sack, high feeding on light lands will not be generally resorted to; indeed it cannot without a free importation, because a general demand for beans, peas, and oats, for feeding purposes, would raise prices beyond any reasonable sum, and feeding would be at an end. When oats were at 16s. a quarter, two years ago, I fed out 5 quarters to the acre on 12 acres of the poorest land I have, and I had good reason to be satisfied. I have now by me 500 sheep, and I shall lose more on the purchase of oats for them than the protection on my wheat crop is worth. I have a protection advantage on my wheat to the extent of 3s. or 4s. a sack, and I must pay a protection penalty on oats to the extent of 8s. or 10s. a quarter. My firm conviction is, that the increased crop grown from corn feeding, and the improved profits from stock, would compensate us for any deficiency in price arising from a repeal of the Corn Laws, and I for one am most anxious for the change.

I will add, that my own property is to a considerable extent vested in land—that my most intimate and valued friends are owners of land and farmers: that one of them is the chairman of the Wiltshire Protection Society; and that, though I am a Free-Trader and a subscriber to the League Fund, I do not value or respect him the less on that account. I have no taste for newspaper discussions, leading as they frequently do to ill-natured observations and disputes; and I have been induced now to write this letter only from a strong feeling that something must be done to save both farmers and labourers, and from the conviction that what is now called protection is utterly worthless.

I am, yours, &c.,

Kingston, Dec. 5, 1844. NAT. ATHERTON.

NOTES OF A TRAVELLER.

No. XIII.

Frankfort, Sept. 27, 1844.

In my last I compared the Elbe, near Hamburg, to the Mosay, but the resemblance is, it must be owned, rather a forced one. You scarcely leave the precincts of Hamburg, which is the main point of departure on the southern bank, than you enter upon an interminable waste, bounded on all sides by the horizon. Such an extent of sky, except at sea in a calm, or in an African desert, it is not easy to survey. The road, too, leaves you after you have made some progress, or rather, you leave it to its course, towards Hanover, and then you enter on the countless tracks that from the time of Witsekind, the unsuccessful rival of Charlemagne for sway in these parts, have served the inhabitants as means of communication. It is a remarkable fact, considering the efforts made of late to establish roads in every direction, that a space of no less than 10,000 square miles, situated in the extreme west of Germany, is as denuded of roads as our own county of Mayo. Here, to be sure, the water communications, those at least afforded by the coast, are used, and the fine harbours formed by the "fleets," or inlets from the sea, are full of small craft. How they may be in Mayo it is difficult to tell; and, therefore, I need not pursue my comparison further than to infer that in olden time this naval mode of travelling may have stood the inhabitants of both districts in the same stead that the broken land in Flanders did the first citizens of Ghent and Bruges. For the seamen the water afforded nourishment, wealth, and civilization; for the horsemen of the Welfs, as for "De Burgo's chivalry," it was destruction. Thus were the lands of Stade, the Dittmarsh at the mouth of the Elbe, the Bodjadinger land at the mouth of the Weser, and East Friesland between the mouths of the latter river and the Ems, the seats of freedom, of flourishing agriculture and trade. In these countries the Hanse Towns recruited, and still recruit, their navies; but the scale on which the influence of these peaceful energies is felt in trade is happily marked by the interminable of different territories; and to disturb obscure industry at the present day is almost tantamount to exposing it to the evils which beset it in places where it is the fashion to strangle it with encouragement and protection. It is, however, wandering from my path to stray into the marshes. Here, around us, there is nothing but sand and heather as far as the eye can reach, varied about once an hour by the sight of a

few willow trees, and a village of the most miserable huts.

I am crossing the heath of Lüneburg—a district which appears boundless; for as in all directions from the central part, or heath proper, you find nothing but heath, and, even after temporary interruptions of villages, you come again to heath, and are assured that it is again met with far beyond the ken of any foreign traveller—this famous heath, like the old Herignian forest, really seems to have no limit. The greater part of this inviting district forms a portion of the territories of his Majesty of Hanover, whose capital lies about 200 miles south of Hamburg, the heath covering nearly the whole intervening space. The track we are following has been worn by successive wheels, that have eaten their way through the heather and availed themselves of level spots. Every five minutes we arrive at a spot where the water from the last rain has made a lodgment, or a hole a foot deep yawns before one or both of the fore wheels. The horses strain tightly—down we go, and up at the other side by the force of the fall, gently aided by the tightened traces. The motion for the traveller is luxurious; but no one asks more than that the springs, if there be any to the vehicle, shall be stiff and strong—elasticity here would be more than superfluous. This road, if it deserve the name, is, however, but a prototype of the inland communications through the greatest part of Germany some years back, and of those still prevailing to a great extent in the kingdom of Hanover and the lands bordering on the Baltic. The capitals are, however, now connected in every direction by excellent roads; but, where spaces are so great as in Germany, vast territories lie between the radiating lines that are unable to reap benefit from them. Wherever a road does exist it is sure to be made good use of. Such is the case with the main lines leading from Hamburg due south, through Hanover to Brunswick and Frankfurt, as well as that through Celle to Leipzig, which, although running parallel to the Elbe, is one of the most travelled roads in Europe. Along this road even the wool of Poland and Hungary is forwarded to Hamburg, for shipment to England and France. This circumstance is explained by my previous account of the state of the water communications. Along this road the wares of the Saxon and Prussian factories have to travel 200 miles from Schnerberg and Chemnitz, and 150 miles from Mirsberg; and yet the manufacturers hope to obtain profitable prices in Transatlantic markets. Although, in comparison to a heath road, the line from Leipzig to Hamburg is a very railroad, yet such a magical result can hardly be expected with its aid. Railroads are now building from Hamburg, through Lüneburg, to Hanover; and from the manufacturing district of Elberfeld, a line will go through Westphalia to Emden, in East Friesland. Immense distances, thinly peopled with scattered peasant cottagers. The attempt is, indeed, a bold one.

On approaching Bremen, things improve a little; but until you come into the immediate vicinity of the city the heath, with its stunted thin crops of rye and buckwheat surrounding the villages, continues its monotonous picture. The villas or comfortable country houses, such as abound round Hamburg, betoken the neighbourhood of a large thriving city. One reason of this, perhaps, is, that the actual territory of the town is very small, and its burghers have not found themselves induced to build without the precincts of their own jurisdiction. The Weser, of which you get a sight before entering the town, presents no imposing appearance, but is confined between two dykes, and is kept up to a level considerably above the harbour by floodgates. A steam communication now exists up the river as far as Minden, in Hanover; but the windings of the river, and the irregularity of the bed, make it tedious.

The impression that Bremen makes upon the traveller is very different from that with which he leaves Hamburg. In the latter city all is activity and bustle. The streets are crowded with busy people, walking fast and looking as if they toiled chiefly for the sake of enjoying at their ease the fruits of their industry. In Bremen there is an air of quiet. The citizens move gravely and half by stealth over their clean, neatly-paved streets; and all the houses, clean and white as if built only yesterday, seem to shut in their inmates as if to seclude them from the interruptions of the curious and of the troublesome. Their high and many-storied roofs supply the place of the large stores and warehouses of the Hamburg merchants, and surmounting, as they do, fronts with large French windows, form a curious and original style of architecture. Inside they are kept neat with Dutch punctiliousness; and the white floors, rarely covered with carpets, shine as if they had been hard-stoned like the quarter-deck of a man-of-war.

The city is now the scene of bustle of a different kind from commercial activity. The large assembly of German naturalists is now here, and many of its members from the interior have, on this occasion, been gratified with a view of the sea. To secure this they went down in three steam-boats to the mouth of the Weser on Sunday last, to Bremerhaven, a colony from the city planted on the Hanoverian territory in a manner similar to the Hamburg colony at Cuxhaven, and Ritzbüttel at the mouth of the Elbe. This colony was called into life by the enforcement of a toll at Elsfleth, resembling the Stade toll, although not so heavy. Yet, as a toll once acknowledged acquires a prescriptive importance, it was judged prudent

to place the foreign trade of the town in safety by opening a harbour of refuge on the other side. The neglected state of the river's bed, to correct which the toll at Elsfleth was levied, was another reason for the adoption of the measure, as vessels of 200 tons now go up to the town with difficulty.

The antique town-hall, one of the interesting reminiscences of the time when civic virtues and civic enterprise were able to command respect, is now decorated with all kinds of festive emblems, in compliment to the men of letters who have here received a hearty welcome. A proof of the practical spirit of mercantile men, and of the utility of which even an occasional intervention on their part in literary and scientific pursuits can be, was afforded in an extemporised museum which the merchants, with the aid of their correspondents in foreign countries, their ship captains, and their own cabinets, had prepared. This happy idea has given the meeting at Bremen a distinct character from the other previous meetings. Amongst the most solid proofs of the hospitality of the Bremen burghers, an invitation into the celebrated *Rathskeller* must be mentioned. This celebrated cellar consists of three divisions. In the ante-chamber, a few tables with wooden benches, something in pothouse fashion, receive the guests who make periodical libations to Bacchus. Inside of a mysterious looking door, which is only opened to the laity under special favour, lie the three divisions of the great temple, in such manner arranged as to leave a pleasing illusion on the part of the devotee out of which the bottle that is placed before him is drawn. On entering the shrine you find in one room twelve casks of Rhenish wine, of the size of tuns or double pipes, that being the usual quantity in which hock is kept to attain maturity. These have irreverently been christened the twelve apostles; and they are kept constantly full, the oldest being replenished from the next in age when evaporation or consumption has diminished its bulk, and the last being filled with fresh wine. Of course these select representatives of the Rhenish vintage receive none but the finest qualities; so that, without the somewhat dubious pretensions to age, a glass from any of them is a curiosity in the north. The last being supposed the most likely to play tricks with visitors, is termed "Judas;" and whoever passes his ordeal, in succession is admitted into the inner sanctuary, in which stands a single butt, and over it, in the centre of the ceiling, a rose in high relief, emblematical of the warning *sub rosa*, whether intended to encourage the votary to be communicative under the promise of secrecy, or as an indication of the power of the spell to impose silence, I do not pretend to decide. This routine, in addition to the tolerably large supply (each butt holding 100 doz.), makes it conceivable that, even of this choice liquor, a small *quantum* could be afforded to so numerous a body as nearly 400 guests on this occasion. The effect produced on the strangers was, as may well be supposed, most edifying; and many probably owned that they not only made their first acquaintance with the sea, but with genuine grape juice, at Bremen, and have thought that such a lecture on the fermenting process was more likely to prove convincing than Liebig's most elaborately developed theory.

Bremen has long been a chief depôt for wine in Germany, from the simple reason, that wine requires much watching and careful treatment, which are best managed in the merchant's cellar. In Prussia and Hanover he cannot obtain this command of his goods without advancing the duty; and the duty advanced on old wine, if the interest be added, soon exceeds the prime cost. Tobacco is another staple article of trade for the same reason. Cigars and snuff are prepared from it without payment of duty; and Germany is thus cheaply supplied. Any duty levied on the manufactured article as it goes into consumption is less oppressive than a low duty advanced before the article is manufactured. These free towns are thus more advantageous for the Prussian revenue than any system of drawbacks would prove. If we extend this principle we find that the merchants, ship-owners, and storekeepers of the Hanse towns are all working the preliminary stages of commercial intercourse for Prussia and the rest of Germany cheaply, because they are untaxed; and without their aid, under these favourable circumstances, the foreign trade of these countries would in all probability dwindle to nothing. It is, therefore, a most inconsiderate wish that some authors have put into the heads of the Germans to see these towns abandon the position in which they are so useful. They are now more the harbours of the Zollverein than they would be if they joined that league formally and adopted its heavy tariff. Under their present circumstances, when these merchants have the full control of their commercial affairs, and can depend upon the calculations they make, they embark their capital in ships and in trade freely and fearlessly. If the regulation of these matters were deferred to a conference assembled alternately at Berlin or at Stuttgart, they would soon be forced to imitate the wisdom of the men of things, and retire upon their fortunes from a pursuit in which there was no guarantee for security of property.

The streets of Bremen are at this moment thronged with another description of visitors, whose presence excites no less attention than that of the naturalists, but awakens very different sympathies. The first transport of emigrants to Texas, under the auspices of the new Emigration Society, has arrived at this port for embarkation. The emigrants are chiefly from the Rhine and Southern

Germany, and many of them appear to command some means. The society, which includes a number of noble capitalists, and is said to be sanctioned by authority, has acquired a tract of land on the plateau of the Colorado, whither the emigrants are bound. Amongst them care has been taken to provide tradesmen and mechanics of all kinds. A physician, surgeon, architect, and surveyor are amongst the number; and funds are provided not only for the passage, but for the purchase of stock and utensils on their arrival. If they are not too much scattered in their new residences, they may, after making acquaintance with the soil and climate, found one or two flourishing villages; but, considering that Germany is by no means overpeopled, it is not easy to enter into the congratulations uttered by the society at the prospect of getting rid of so many able and industrious hands. It would seem to a plain-thinking man quite as easy to study what prevented these poor people from being industrious at home as to project new settlements for them to work in. If the object of this planned and authorised emigration is to keep them in the New World under the restraints which impede their existence in Europe, the prospects both of the society and of those whom it has allured to join its speculation must be allowed to be, at least, highly doubtful.

Bremen has always been a great station for emigration, on account of the excellence of the build of the shipping employed, and the moderate charges made by the owners. The limited extent of the territory, and a natural indisposition on the part of the citizens to invest capital beyond their own control, must have more weight with them than the good return obtained in freights under the prevailing barbarous regulations towards foreign shipping. Should these continue to be relaxed in the manner that has begun in some countries, these cities would soon equip large fleets. But even our treaties of reciprocity are a paltry mockery of humanity while the vessels of each country continue restricted to the productions of the land to which they belong.

Bremen is far more oligarchical in its constitution than Hamburg, and its trade is in a great measure limited to what the capital of the merchants of the city commands. There is an air of more careful retirement observable amongst the townspeople, who have less *laissez aller* in their manner and less open hospitality in their houses than you find at Hamburg. The Anglomaniæ of the latter place sets an Englishman quite at home. In Bremen everything is strictly, almost pedantically, German. Nor can the freedom of the city be obtained at Bremen on such easy terms as in Hamburg, where every stranger is gladly received who promises to be industrious and has a small fund to commence with. The government at Bremen rests with senators chosen from a limited number of families, and the strict attention to the privileges of guilds and companies has kept the city from increasing like the sister city on the Elbe. On the other hand, the Senate of Bremen has kept strict discipline at home, and has come into less frequent collision with the great powers of the Confederation than Hamburg, whose police has been frequently called to account for the liberty allowed to the press of the free city.

Bremen put itself most prominently forward in 1825, when the Burgomaster, Schmitt, organized the Middle German Verein in opposition to the Prussian League. This league included—besides the Hanse Towns, Oldenburg, and Hanover—Cassel, Bavaria, and Württemberg. The duties were fixed at the rates now levied in Hanover and Oldenburg; and, had this tariff been adopted, no doubt Germany generally would have largely profited by it since. Its founders, however, were not able to cope on equal terms with an organized diplomacy like that of Prussia, and too little was known in England of the internal politics of Germany to secure it foreign co-operation. One by one its members dropped off, and Hanover and Oldenburg are now the sole remnants of a once powerful confederation. The utility of any foreign intervention would have been confined to a possibility of inducing Prussia to moderate her tariff. Independently of this, the union of Germany into one body, admitting free industrial circulation through all its parts, is of greater importance than any nice distinctions of custom dues; and, as the loss in these from overcharging is felt, too, by the governments, there is always a prospect of their being brought to reason.

With the exception of its town-hall, and the neat, peculiar style in the houses that I have already mentioned, Bremen offers little architectural novelty or beauty. On Monday I bid adieu to its quiet streets, and embarked once more on the heath in a carriage for Oldenburg. On leaving the city my baggage was again searched by the custom-house of the North-western League, but with more consideration than either in England or in Prussia. I had heard that the intervening country offered nothing but the flat, uninterrupted, sandy prospect that I had had so much of some days before, and I chose the night for the excursion.

Oldenburg, with which the grand ducal dignity is connected, was extended on the same occasion to the seacoast, taking in the Hudfading land, one of the rich and anciently free marsh districts that skirt the coast of the German Ocean. In these districts you find the best agriculture of Germany. Extensive meadows, yielding rich fodder and covered with immense herds of fine cattle, alternate with heavy crops of grain, flax, and hemp. If any of our cattle dealers in their exploring trips had taken the round

of the coast, they would not have been so satisfied as they appeared on the subject of the want of cattle in Germany. Butter appears now to be the article that pays the farmer best, and he turns the fancy of English landlords to grow wheat to good account.

I hope that the union of the marshes with the high land is productive of good political results; but one advantage to the inhabitants of the sand lies in the fine fish, which even the stranger can share and appreciate. The oysters of Oldenburg are the finest I ever saw, not even excepting the famous Cork Harbour oysters: they are of the purest white, and fat, although often two inches in diameter. I forgot to mention that, for a dinner given to the naturalists at Bremen, the people of Heligoland contributed four hundred lobsters! From Oldenburg the scientific gourmands might have drawn materials for a rival supper. The town of Oldenburg is small, and so rural in appearance, that, if the gay liveries and three-cornered hats of the grand ducal equipages did not remind you of the vicinity of a court, one would scarcely think that it was a capital. The reigning family escapes at different periods to another residence at Eutin, in Holstein; and from a gentleman who has lately returned from that neighbourhood I learned a curious little bit of political *causerie*.

The approaching expiration of the term for which Prussia recognised the advantage of paying dues at the Sound, has set the wits of the Germans and Swedes to devising means of escaping this ignominious relic of former times that presses heavily upon their shipping. A geographer, skilled in the localities of Scandinavia, has discovered that two little rivers run into the Sound—one to the northward of Helsingör, and one on the south side of that redoubted spot—which offer every facility for connexion by means of a canal. A project has been started and communicated to the courts of Stockholm and Berlin, for realizing the means of literally getting inside the Danes; and a company at Hull will, it is said, represent England's interest on the occasion, Government being looked upon as a dubious auxiliary since it formally recognised the Stade tolls by its late treaty with Hanover. As the interests of the leading community are in this case paramount, we may leave the respective governments to settle the question of dignity amongst themselves, and wish every success to the ingenious mode of settling the dispute respecting the northern Dardanelles that has thus been started.

From Oldenburg to Minden, is the same unvaried sand and heather for more than a hundred miles. At Minden the country grows more varied, and you reach once more the region of roads. Here the examination of baggage again takes place by the officers of the Zollverein, and it is really amusing to see with what scrupulous exactness it is made. The smallest particle of silk, or a single cotton handkerchief that appeared new, was laid in the scale, and it vibrated to show a duty of less than a penny. For this a printed receipt is filled up and countersigned, and then handed to the rate-payer as gravely as if it acknowledged the sum of one thousand pounds. Books and works of art, in moderate quantities, were, however, respected, and the oral declaration that they were for private use sufficed to free them; a practice that strongly contrasts with that of the London Custom-house, where the declaration required to free books printed and published in London has been a perfect extortion. The most rigorous search is made at all German custom-houses for almanacs and playing-cards, the stamp on both being regarded as a royal exercise of prerogative that must not be infringed. To pass through the strips of Hanoverian territory that intervene between Minden and Cassel, you can have your trunks loaded; and it is not until you enter the Electorate that you fairly feel yourself within the pale of the "Zollverein."

A little above Minden the banks of the Weser grow varied, and are occasionally highly picturesque. This is especially the case near Carlsbafen, the point where the river leaves the Electorate of Hesse, and where the valley can vie with any river scenery that I know in beauty. Thence to Hanoverian Minden, where the junction of the Weser with the Fulda forms the Weser, is a very delightful tract of country, which the river steam navigation makes accessible to travellers.

GUANO.—Extract of a letter from Ichaboe, dated Sept. 30:—"A great many vessels arrived here yesterday, and for every one that sails six arrive: 280 ships at present here will average 400 tons each."

VOTES FOR COUNTIES.—The League has very wisely turned its attention to the best means of increasing the constituencies of counties. But it would be well if certain newspapers would take the trouble to obtain correct information, before venturing to offer advice to the public. A local contemporary, for instance, says that "an annuity of forty shillings a year, secured on freehold land, is a secure vote in a county; and that a man of forty, the cost may be, including all expenses, sixty pounds." Now here are two mistakes, which it is of importance to correct. In the first place, an annuity of forty shillings, secured on freehold land, is not a secure vote, unless it was secured before the passing of the Reform Bill in 1832; and in the next place, such an annuity might be obtained by a man of forty at a cost of far less than £60. An annuity for life, to be a good vote for a county, must now be at least £10 a year; but freehold property can be obtained, in many situations, which will confer on the purchaser the right of voting at a cost very far below even that quoted by our contemporary as the value of a life annuity to a man of forty.—*Gateshead Observer*.

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, December 18, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the LEAGUE of the Saturday immediately succeeding, but are included in the list of the week following.

ERRATA.

In LEAGUE 64, for "George Jennings, Shrubbery-house, Buckland, Devon, £5," read "Shrubbery-house, Dover." In the list of contributions to the Bazaar, for "Grimshaw, John, Newick, Driffield, Yorkshire, £5," read "Grimshaw, John."

LETTERS ON THE CORN LAWS, No. XII.

LETTER FROM SOME OF THE WOMEN OF ENGLAND TO THE NORWICH WEAVER BOY.

London, Dec. 2.

It may be generally supposed that the women of England who contribute to the Anti-Corn-Law League Bazaar, or at least those who raise their voices in admiration of the principles and proceedings of that League, are the only ones who approve of Free Trade, or disapprove of unnecessary and undue legislative interference with the affairs of the nation. Such a supposition would, however, be erroneous. There are Englishwomen, and to their number we belong, who deprecate this interference, who are most anxious to see Free Trade and direct taxation introduced, who see the whole bearing of these matters upon the sufferings which they commiserate, but who still are prevented by every feeling of duty and humanity from upholding the principles of the League, the evident tendency of which is, to let doctrines of political economy supersede those laws which God first wrote upon the heart of man, and afterwards revealed in language which admits of but one interpretation. Those laws teach us to love our fellow-creatures as ourselves, and most forcibly enjoin charity; but that word has in the gospel a far more extended meaning than that in which it is usually employed; and we do not there see it used as giving some classes of our fellow-creatures an exclusive right to our love, while, at the same time, we are allowed, not only ourselves to hate and revile other classes, but even to teach the poor and ignorant to do so likewise. The gospel is a doctrine of love—of love so comprehensive that even the sinner is embraced in it, though sin is abhorred and reviled; and we are taught in humility not to judge others, that we may not ourselves be judged. It teaches nowhere to denounce, though throughout it teaches us how to reform. It tells us who is *blessed*, it tells us who is *curst*.

The members of the Anti-Corn-Law League may be the propounders of sound doctrines of political economy; but we do not see that they are on that account to arrogate to themselves all the virtue in the community, and to denounce every opponent, not only as ignorant upon the subject (so far they would be justified), but as an object deserving the hatred and execration of mankind. What will be the benefit to society, if, to ensure triumph in the struggle for Free Trade, hatred between class and class is to be not only nourished, but incultured? What will be the advantage of bread in every mouth, if there is to be hatred and jealousy in every heart? Is it with feelings such as these that justice is to be worked out, or when obtained by some is to be extended to others?

We are aware that the members of the League are so little conscious of the tendency of their own speeches or writings, that they indignantly repel every accusation of the kind here brought against them; yet to every unbiased observer such is their tendency. The answer which these gentlemen make to the materialism of their doctrines is, that it is not their mission to preach the gospel. We admit that it may not be their mission to preach it, but it is their duty to follow its precepts; and only when Free Trade is advocated in terms which are not at variance with the laws of God enjoining peace and good will among men, can the advocates be joined by those who do not allow that any human necessity can supersede the necessity of obedience to those laws.

We know that religion is in our day looked upon as a Sunday business only—a thing having nothing to do with the business of the week days; and as such, perhaps, it is excluded from the week-day labours of the Anti-Corn-Law League. As men passing judgment upon public measures, and advocating a new system of administration, the members cannot, however, pretend to be exempt from the consideration of all other state matters but those the study of which they have made their peculiar avocation. They ought to know that every citizen, though bound to do his best to correct errors of government, is likewise bound to do it in a manner that shall not subvert public order. Now, though we heartily wish to see the Corn Laws abolished, we cannot agree with those who think that this cannot be done without pulling down the aristocracy of the land, thereby virtually subverting the constitution of the realm; nor do we see the intimate connexion between the aristocracy exclusively and the Corn Laws. The aristocracy of Great Britain is not an exclusive class, for centuries separated from the body of the nation by an insurmountable barrier of onerous privileges; it is, on the contrary, continually being recruited from the middle classes, which in their turn receive numbers from the classes below; and it is in fact only in the precedence of rank that the main distinction between the aristocracy and the wealthy members of the other classes of the community consists. The Corn Laws are connected with the prejudices of the landed proprietors; but surely these are not exclusively members of the aristocracy; and, even were it so, the advocates of Free Trade have nothing to do with them in that capacity: they have merely to combat their erroneous opinions as to administration. Administrative measures can never be meant to be more than

temporary, and ought to be repealed as soon as they are discovered to be pernicious. Not so constitutional laws: these are part of the life of the nation; and none but the nation, in its entirety, can lawfully make any change in them. We do not see that there is in England any call or any disposition for such a change; and it is therefore with profound grief that we see the Anti-Corn-Law League, while following out its legitimate ends, sowing the seeds of unholy things. Besides, we think that the Anti-Corn-Law League, if working honestly for the abolition of the Corn Laws and for nothing else, is rather defeating its own object by attacking with such virulence the class with whom the power of abolishing them, in so great a measure, rests. If the League, however, prefers carrying its point by brute force, and is only trying to get up a masked democratic movement, then, to be sure, the means used may be efficient, though they, as well as the end, are criminal. And then it will remain to be experienced whether in England, as in France at no very distant period, the poor, after having been deluded by the middle classes into the belief that, by destroying what was obnoxious to the latter, they would be working for their own happiness, when discovering the deception,* will not turn upon their former flatterers, and exercise upon them the principles of hatred and revenge instilled by them.

SOME OF THE WOMEN OF ENGLAND.

REPLY TO "SOME OF THE WOMEN OF ENGLAND."

LADIES,—The perusal of your reply to the writer of these letters will, in one respect, afford high gratification to the advocates of the Anti-Corn-Law League. You apprise us that the desire, in your sex, to see the labourers' bread untaxed, and the ports open for the admission of that food of which multitudes are in want, must not be measured by the number of those who contribute towards the proposed Bazaar, or who (at our meetings, I presume) "raise their voices in admiration of the principles and proceedings of that League." Beyond this body there is, you tell us, a wider atmosphere of female sympathy in Free-Trade principles. You vouch for the fact as yourselves belonging to the number who occupy that position. The soundness of your reasons for standing thus aloof I shall discuss presently. It is just first to observe that those who do not stand aloof are so numerous; they shed such a halo of grace and beauty around our cause; they blend so becomingly the unobtrusiveness of woman's nature with her keen and courageous moral sense; their very presence has so purified the movement from the common coarseness of party strife in politics; the wealthier of them have given so liberally to our funds, and the poorer have so cheerfully imposed exertion and privation on themselves to become contributors; their suggestions as to the Bazaar plan, first in Manchester, and now in London, have been so judicious, and their co-operation so efficient; and, bringing into our agitation whatever of peculiar truthfulness, delicacy, compassion, and piety, constitutes their distinctive character, they have so imprinted on it the mark of a holy and Christian work, that it is gratifying to learn there are more of their sex who will rejoice in their triumph, although they do not aid in the needful means for its attainment. It is something to have the good they do appreciated; especially by those who leave the previous exertion unparticipated.

You approve the principles of Free Trade, and yet withhold your countenance from the League. You will not contribute even to the Bazaar, which is, at any rate, free from the offence given you by other proceedings. Allow me, then, to ask what else you will do, to promote your own principles and satisfy your own consciences? You behold the production, by monopoly, of "sufferings" which you "commiserate." What is your process for their alleviation? Are you content to stand by as inertly as if you were utterly indifferent to the wretchedness of which you know the source and the remedy? Is it a sufficient excuse for doing nothing, that those who are doing something speak sometimes erringly? If the very devils confess Christ, is that a reason for practically denying Christ? Are you willing to remember the injured poor in your prayers, but to remember them nowhere else? What is your intelligence worth, or your sympathy, if it shun the company of the like-minded, and adopt for itself no other course of action? Christian women, you cannot be at peace with yourselves, if you prolong this moral incongruity.

You accuse the League of letting the doctrines of political economy supersede the laws of God. And whose laws are the doctrines of political economy? What are those doctrines but the exposition of providential facts? They teach mutual dependence, mutual service, and common interests, in all the tribes and nations of mankind. They exhibit that wisdom which in varied climates and remotest regions has stored up the materials of useful exchange and friendly intercourse. They identify the objects of individual pursuit with the means of universal enjoyment. They abate the pride of

* We use the term deception, because we cannot but see that, though much benefit would accrue to the country from the introduction of Free Trade, the blissful state of utopian society which is held out as a lure to the poorer classes would be far from attained. Suffering will be the lot of mankind until the laws of Christ reign in all hearts; and we unite the hope of these laws to be set aside, were it even to facilitate the introduction of a more perfect human code than has hitherto been known.

wealth, and render industry honourable. They show how to replenish the world and subdue it, by making the wilderness a garden, and not the garden a wilderness. They interpose the strongest obstacles to the ravages of warfare; and, as with the voice of angels, raise the season-song of "Peace on earth and good will among men." Were there no revelation, political economy would suggest a religion. Were there no Christianity, political economy would shadow forth some faint outline of its divine benignity.

You say that you can only join the Free-Trade cause, as sustained by the League, when it is "advocated in terms which are not at variance with the laws of God enjoining peace and good will to man." If your requirement only related to the principles on which the League is founded, and the objects at which it aims, nothing could be more reasonable. In that case, I venture to affirm that your immediate co-operation may be challenged. But if your requirement extend to all the speeches and writings of individuals, then nothing can be more unreasonable. You are requiring perfection of humanity; and making the absence of perfection an excuse for not helping the effort for improvement. No large associated body can stand such a test, whatever be its objects, or whoever its supporters. There is no mission to the heathen or charity to the poor, no work of truth or mercy, in the language of whose supporters you may not find some taint or flaw, and so justify yourselves for passing by on the other side. You thus exonerate yourselves from all useful service. You claim permanent leave of absence from the warfare of good against evil. You plead a letter of license from the labours of benevolence. And, strangest of all, the very terms of your fancied exemption are taken from the precepts by which it is most emphatically condemned: the commands for practically evincing that universal love which would leave no grief unsolaced, no wrong unredressed, no want unrelieved.

Might not some of your charity be well bestowed on those whom you deem too fervent in a righteous cause? You allow them to "denounce every opponent as ignorant." There has been little of rebuke employed which such leave does not cover. Is ignorance a virtue in a legislator? Is it excusable, when he is surrounded by the means of knowledge? Does it not become a fearful sin, when the interests and lives of millions are dependent on his using his powers wisely? Should he be coaxed by soft words into contentment with his pernicious blunders? Is charity so enamoured of Barnabas, that it must needs unchristianize Boanerges? Have not both their work in the world? And would Felix ever have trembled before Paul had the apostle only told the tyrant how much he loved him? Can we, in Christian sincerity, and consistently with moral integrity, call bad things by good names? Is there no difference between the righteous and the wicked—the friends of the poor and their oppressors—those who would secure to labour the full amount of its earnings, and those who make laws to lessen that amount and fill their own pockets? Love the sinner as much as you will, but do not hide from him that he is a sinner. You can do him no greater mischief. It is worse than being "angry with the wicked every day."

Is not your charity offended on the other side? Do you observe no falsehood, no calumny, no vituperation, on the part of monopoly? Is the bad cause purer in its proceedings than the good cause? If not, your disapproval, extending in that case both to means and ends, must needs be much stronger than your disapproval of the League. And yet your conduct tends to support, in preference, what you most disapprove. For when the question is of repealing an existing law, the motive, as derived from public opinion, is exclusively formed by those who speak out against the law. The quiescent are acquiescent. Their silence tells for support. Their inaction is a sanction. Not showing themselves for change, they are reckoned as being against change. This is your inevitable predicament. You become responsible for the prolonged mischiefs, abhorrent to your principles and feelings, against which you do not protest. The master-roll of monopoly includes all who do not erase their names by some act of adhesion to the opposite principle. Can you rest till you have done this?

When one looks at the titled and wealthy subscribers to the League, the notion of a "masked democratical movement" for "pulling down the aristocracy" is almost too absurd for notice. Doubtless, many members of the League have their democratical partialities; as you, ladies, have your aristocratical partialities. No political creed is imposed by the League; nor by the opponents of the League either, who have from the first been not very scrupulously anxious to enlist the extreme democratical party in their cause. It is not by the League that any subsidized alliance has ever existed with the Feargus O'Connor Chartists, the physical-force Democrats. And if there be anything democratical in the present plan for extending and purifying the county constituencies, it is only that sort and degree of democracy which our governmental

system has sanctioned and presupposed for centuries. The power to be thus called into action has been, however dormant, the people's privilege from the days of the despotic Tudors. The mission of the League is merely to make this part of the constitution a reality. It brings a "great fact" out of a dormant but consecrated principle.

There is some truth in your distinction, though it is rather fine, between the aristocracy and the land-owners. Practically, the two classes are identical. But it is not as an aristocracy that the majority of our legislators tax the people's food: they only do it as traders in land and the products of land. You may also be correct in thinking that the results of Corn-Law repeal have been sometimes, and by some advocates, overrated and utopianized. It would be very strange were it otherwise. Results so natural of this species of struggle for an immense good, obstinately withheld, may be much more easily and rationally accounted for than by your hypothesis of the middle classes deluding the poor: an hypothesis which serves to show how the extreme of charity towards the selfish wrongers of others may slide into the extreme of uncharitableness towards the injured party.

I have thus endeavoured to avail myself of what appeared to be your invitation to discuss certain religious objections to active co-operation with the League. Their religious character entitles them to a respect which could not else have been felt for difficulties that tend to render all extended co-operation for redress of grievances impracticable, and so to prolong the miseries which man inflicts on man by the abuse of power and authority. The inertness of a portion of the religious public on this question is a phenomenon which you deserve thanks for helping to explain. Explanation cannot justify it. Even by passiveness and silence to encourage those who grind the faces of the poor, and abridge their pittance of daily bread, is a virtual renunciation of the gospel. To leave the industrious under injury, and the helpless unaided, when protest and exertion may serve them, is not doing as we would be done unto. There is no love in the allowance of wrong, even to the wrong-doer. We should bear and forbear with the mistakes of those who are striving to obtain redress, as well as with the mistakes of those who refuse redress. The Corn Laws are a demonstrated source of vice, wretchedness, crime, disease, and death. The path of Christian duty is most plain. The League affords opportunity for the discharge of that duty. It thereby enhances the obligation, and devolves upon all a deeper responsibility. Deepest of all should that responsibility press on those who make a religious profession. Neglected opportunities of good are the sternest of accusing spirits. Nor will they be silenced by carping at those who improve such opportunities earnestly, if not always (in your opinion) unexceptionably; and who have, by their zeal, been pioneers to clear the highway, through a wilderness of ignorance, error, and indifference, in which Christian principle, moral duty, and human feeling, enjoin you to unite and advance. There is yet time to "enter into their labours," and accelerate their progress to the great result. To woman, as well as man, applies the admonition emphatically uttered by the Rev. J. Burnett, at a Covent-garden meeting of the League—"Let every one solemnly charge his (or her) own conscience with the high duty and sacred obligation of carrying out this work to its full and final completion."

A NORWICH WEAVER BOY.

ON THE CONDITION OF ENGLAND.

TO THE ARCHBISHOP OF CANTERBURY.

"'Tis too much proved. We are oft to blame in this; that with devotion's visage and pious action we do sugar o'er the devil himself."—*Polonius*.

MAY IT PLEASE YOUR GRACE,—To you I beg permission to address myself with those feelings of the deepest respect, which are so justly due to you on every account, as the very head, source, and fountain of true religion, and consequently as the sure basis and foundation of genuine morality. If I chance to allow to escape from me any apparently unbecoming, indecorous, or unpalatable expressions or truths, I entreat your forgiveness, as I desire to address no person nor persons as individuals, but wish all I say to apply merely in a general sense, and as reflecting only on bad systems, institutions, laws, usages, or practices.

You are the great Alpha of our religion; I am too insignificant to deserve the title of the least of the Omegas. It should be with me as with the common soldiers slain on a field of battle—I should be numbered, not named, but that there is no number small enough to designate me rightly.

Having resided for many years at the largest medical institution in London, I have enjoyed the melancholy privilege of seeing human suffering, disease, want, and misery in the greatest amount that it can be witnessed at one point in our afflicted country; and my attention has been earnestly attracted to the subject of the depression in the moral, physical, and religious condition of the poor of England, which, in my humble opinion, is such as to cry aloud to Heaven for help, and to threaten at the existing hour not only the safety of our holy church, but of every institution of the country. Was it not a precisely similarly loosened state of society to that now prevalent through the length and breadth of our land which

preceded those horrors of revolution which have fixed an indelible stain on our brethren in France? And, with regard to the position of our national church, I would ask if its immediate danger is to be apprehended less from the assistance of its friends within, than from the hostility of its enemies without?

"Concordia res parve crescunt discordia maxime dilabuntur."

It seems to me like an army attacked at the same time both in the van and the rear; or like the ship with a squall ahead and a squall astern: which way should we put the helm? Nothing can stay the danger but steering the course, "Be just, and fear not."

On this point, however, you will probably disagree from me, not considering our Church or State in the least jeopardy; but I would humbly remind your Grace of the familiar observation, that even the ordinary supervisors of a game of chess often have clearer perceptions of the effect of various moves than the players themselves, however superior they may be in talent. I hope your Grace will not be offended with this similitude, nor disdain the few hints of a simple bystander, offered to a distinguished player in the great national game which is at the present moment going forward. I would suggest that the pieces on the right side of the game be named morality, sense, love, justice, truth, prosperity, labour, trade, industry, plenty, health, virtue, happiness; while on the other side are opposed falsehood, sophistry, hypocrisy, monopoly, hatred, want of work, hunger, stagnation, famine, crime, disease, and death.

To our national character for integrity, business, perseverance, and industry, we are indebted for all we possess: we owe our very existence as a separate people to our wealth, manufactures, and trade; and Napoleon never said a truer thing than that we are a nation of shopkeepers, by which he at the same time showed the singular felicity of the oracular enunciation.

Ἀρχαίως λογίζεσθαι μάχη καὶ πάντα κρατήσεις.

We did conquer with the silver weapons presented to us by commerce; with our trade we have risen in the scale of nations, and with it probably we shall in future flourish or decay: for industry, morality, and virtue always move one way; idleness, famine, falsehood, and crime always go the other. But, in our "most seeming virtuous" and suffering country, the great misfortune seems to be, that the receivers of rents and of tithes make every effort to stop trade and commerce as if they were a very pestilence, and labour under the fatal delusion that there can be over-production in a Christian land, where numbers of the community have neither food nor clothing in this most inclement winter season. I beseech your Grace to ponder, if this is washing our hands in innocence? Or is it not rather symptomatic of the madness which announces impending destruction? Is it prudent or wise, or is it not endangering our dearest and most sacred institutions, to attempt maintaining the rents of land which have been quadrupled in amount on such terms? Of the tithes received by the Church I know nothing. Your Grace can best judge if they have followed a similar course of augmentation: I sincerely hope, for the safety of our sacred institutions, that they have not.

But I must respectfully and earnestly beg permission to offer some other important points to the consideration of your exalted mind.

The population of our distressed native land, which might not improperly be called the Disunited Kingdom, as all are aware, may be stated at about 27 millions of immortal souls, almost every man, woman, and child of whom are strongly interested in obtaining food in exchange for work. The Prime Minister—a person of the most consummate knowledge, talent, and experience—has announced from his place in Parliament the truism that every one should buy in the cheapest and sell in the dearest market. Where, then, is the barrier or impediment to their so doing? Is it not made partly by the opposition of the receivers of rents, who are by no means unanimous on the subject, but of whom the most wealthy, virtuous, and truly religious are with the poor people; and partly by the receivers of tithes, who are almost unanimous in their advocacy of the benefits of scarcity for a naked and hungry population? Thus, in our national game of chess, have we a fearful struggle between the majority and the minority—between good and evil, right and wrong, abundance and scarcity, activity and stagnation, certain victory and equally certain defeat and disgrace—the whole mass of the people against some of the magnates and almost all the reverend clergy: with the odds in numbers of 27,000,000 against much less than 100,000! But, to drop our game of chess, what are those odds compared with the power of the Great Jehovah, who has laid the beams of His chambers in the waters, who walketh on the wings of the wind, and whose voice is the same as that of the people; nay, whose denunciations are every Sabbath day liable to be read in public by the reverend clergy against themselves! Who in His revealed will has said to man, "By the sweat of thy brow shalt thou eat bread," and "He that withholdeth corn from the poor, the people shall curse him." I hope your Grace will ponder on these things, and will excuse my reminding you that, in the miracle by which the blessed Saviour of the world fed the five thousand, he converted scarcity and hunger into abundance and satiety. Is it not, then, a miracle of boldness and blindness that his ministers on earth should help to shut food out of a country where the people are starving, and thus undertake the awful responsibility of changing abundance into want, and of sacrificing a whole army of martyrs at the shrine of the god Mammon? Is it not another living miracle that this heinous sin should be committed under the flimsy pretext of protecting a native industry, when any one of common sense knows and sees that it destroys native industry; that it fills the prisons with criminals, the union workhouses with paupers, the streets with human beings, barely covered with rags and at the point of death from hunger, and the newspapers with daily instances of madness, murder, suicide, and starvation; that it subverts the true foundations of religion and morality, and endangers every thing sacred in Church and State? But I fear I have already troubled your Grace with too long an address, and must, therefore, hope for other opportunities of placing this subject, which at present absorbs so much of the public attention, in other points of view.

I, therefore, beg leave to subscribe myself, your Grace's most devoted and obedient servant,

L. W.

45, Gloucester-place, Kentish Town.

LETTERS FROM THE SOUTH-WEST.

(From a known Correspondent.)

FIFTH LETTER.

Ringwood, Hampshire.

This is a small market town near the verge of the New Forest, standing on a low piece of ground level with the water of the river Avon, which comes from Salisbury in the north, distant eighteen miles, by Fordingbridge, distant six miles, on its course to the sea at Christchurch, distant nine miles south. Ringwood with its parish contained in 1841 a population of 3706. It is chiefly dependent on the agriculture north and south of it for its trade; to the east and west the land is mostly covered with heath, or with forest, and smaller patches of woodlands. A road from Southampton comes through the New Forest, which lies over a great extent of country eastward; and this road proceeds into Dorsetshire, which begins a short distance from this westward.

I write this letter from Ringwood to say something of the agriculture of the valley of the Avon. But, introductory to what I have to say, a brief notice of the New Forest may be taken. The agricultural valley of the Avon is, perhaps, the most remarkable for game-keeping and game-killing in the south of England. The New Forest has for 700 years been noted for its hunting grounds.

It is said that William the Conqueror, finding much sport in it, caused it to be extended; for which end many villages and churches were entirely cleared away. As is well-known, his son William Rufus, as keen a hunter as his father, was shot in this forest by an arrow, which Sir Walter Tyrrel intended for a deer. As we come through the forest by the Southampton road we can see at no great distance, when it is pointed out to us, a pillar erected on the spot where grew the tree which turned the arrow from its course. History tells us that this accident was attributed by the country people to the justice of Heaven: the crime being the "inordinate love of hunting, to gratify which, many populous towns and villages, and 36 parish churches, were destroyed."

The forest has been encroached upon since that time by the spade and the plough; but it has always been, and is yet less or more, a hunting ground. It is said to be forty miles in circumference now. Its timber is valuable for shipbuilding, but is sadly neglected in management. But from the days of Rufus up to a recent period, hunting and the kindred sports were confined to the forest. It was reserved for one Henry Baring, a member of the great mercantile firm of the Barings, to outdo William Rufus and William the Conqueror. He did not demolish "thirty-six parish churches and many populous towns and villages," to give him space to run and ride; and it is very doubtful if Rufus and his father did so much mischief as that. Yet if they did they were kings and con-

querors. Henry Baring was only lord of six miles of country; a great part of which was cultivated land, held by farmers who paid him rent. He did not pull down the hares, uproot the fences, and lay the valley of the Avon into an open chase: this would not have been "breeches pocket" policy. But being, as history says of Rufus and the Conqueror, an "inordinate hunter," he stocked every acre of his six miles with hares and rabbits, also with pheasants, until they swarmed beyond all number and calculation. These he caused his tenants to feed at their own expense.

Wonderful tales are told of his power of killing. A tenant on that estate tells me that he remembers seeing Mr. Baring one time kill 270 head of game in five hours. He had four guns, with keepers to load them for him.

He made his estate famous for game; and a nobleman of great wealth, the Earl of Normanton, having taken a liking to the preserves, and having offered a sum so far beyond that which Mr. Baring gave for the estate, the latter could not resist the temptation of pocketing a prodigious profit; so it was sold. And so Lord Normanton is now the landlord and the game-killer. He had so far imitated Rufus and the Conqueror, that he has taken to the pulling down of houses to extend his sport. The beautiful neighbourhood of Ringwood having from time to time attracted rich settlers, who built for themselves genteel residences within parks or other enclosures, which they obtained, some copyhold, some freehold, the earl has felt that it was necessary, for his complete superiority over the entire locality, to have these removed. The banishment of all the local gentry from the neighbourhood of Ringwood has done it no good; and on the earl's sides of the town very few remain. It is but fair, however, to state that he does not spare money in purchasing any one out. He tempted Henry Baring, and he has tempted poorer men, to sell their estates. There is only one small squire now who is an obstacle in his way, and he seems likely to be a fixture; a kind of boulder on the retrograde road to feudal barbarism, which the earl must be content to march round about and leave where he is.

The estate contains wide ranges of heath and copse. But game cannot be bred and fed in copse without farm fields. The farm land is of high quality, and extends to many thousands of acres. It has changed tenants rapidly of late years. No farmer in that part of Hampshire will now have anything to do with a farm here, not at any rent. Yet up to this time tenants are found. The farms are advertised, and the high qualities of the soil and climate, and beauty of the district, are duly set forth, and men come from a distance and offer as tenants. If they were told what awaits them when they come to look at

the farms, they would most likely think that somebody was telling them a fable to frighten them from bidding more for the land than that somebody was bidding. Thus they are mostly all left to find it out for themselves.

In ordinary cases it is considered a great hardship for a tenant not to have a lease; but on this estate the tenants find it to be a great blessing. They get away when their year is up.

Some fields are never reaped at all. One tenant, who sowed this year twelve acres of oats, took the whole crop home in a waggon, and when threshed out the produce was only three sacks—hardly the fifth part of the seed. For this field he has had to pay full rent and full tithe, besides his usual poor-rates and taxes. All his barley and wheat had been damaged, less or more. He says, rather than hold such a farm, he will "go to a day's work." He says many a sleepless night he has had since he had the misfortune to come upon the estate. He came to what he thought would be a good bargain, but he did not know that he was to have several thousand head of game to feed. He is now leaving the farm.

On a field of 28 acres of stubble 1200 pheasants have been seen this year. This field has been in the hands of different tenants; but is now held in the earl's own hand.

A pheasant lately shot on a farmer's field here, and given to the farmer by his lordship, was found to have 800 grains of wheat in its crop. Another farmer on this estate got a pheasant some time back, which was one of many hundreds bred and fed on his farm, and its crop contained 506 grains of barley, besides a quantity half-digested. On the farm where this pheasant was killed as many as 150 and 200 and 300 pheasants have been counted this year from time to time on the barley stubble of twelve acres.

My own experience enables me to say what destruction is done by the game where it is so abundant. But I may use the words of a farmer, who holds under Lord Normanton, with whom I have just been speaking. "We sow the seed, and the pheasants come. We must sow double of what we expect to grow, and then a crop is not left. As soon as it begins to get above ground the hares and rabbits come. They come after the pheasants. The hares bite the green stalks of grain when half grown, besides making runs in all directions. If the ears be not out a new stalk will shoot, and then we have a green ear at harvest when the others are ripe. If the ears be out when the hares bite the stalks, then the stalks fall and die; so we lose both ways. As soon as the grain is too high and hard for the hares to injure it, it is filling and ripening, and the pheasants come once more—many hundreds of them to each field.

SIXTH LETTER.

Ringwood, Hampshire.

I must resume the game question. In this district it, more than anything else, affects the condition of the farmers and their workmen. At the present time there is (so I learn from a county paper) one hundred men in Winchester gaol for poaching; more than a due proportion of whom have gone from this estate. The farmers have, therefore, to bear the loss of their best crops by game; have to pay full rents, tithes, and rates; and in addition have to pay for the keeping of these men in prison, and for the keeping of their wives and families in the workhouses. To balance all this it is said that the number of persons employed by the keeping of game is equivalent. There are a number of keepers and assistants certainly; and those who deal in game get a living out of it. When his lordship and party go out to shoot, from twenty to forty men and lads are employed to beat the bushes. In Squire Baring's time they say they used to get their wages and a couple of rabbits or a hare each. Now, they say there is never such a thing as a rabbit, or hare, or bird, given to them. They say the bushes tear their clothes sadly. They are collected and paid at a public-house at night, and get each their day's wages of 1s. 2d. or 1s. 4d., and nothing more. To some of the farmers a bird or a hare is occasionally given, not to all. But the greater part of them are sent to market.

One of Lord Normanton's tenants has just told me that he finds it very difficult to sell fowls, owing to the abundance of game. His wife had a quantity of fowls about three weeks back, which she sent to Salisbury for sale, depending on their sale for several articles of dress and so forth, because the rigid exaction of the full rent which they must pay, notwithstanding the game, had left them bare of cash. On that same day his lordship sent forty pheasants, ninety-five hares, and thirty couple of rabbits to Salisbury market. And there arrived also in the market considerable quantities of game shot by Lord Nelson's party at Trafalgar; the Honourable Sidney Herbert's party at Wilton, and from other places. And the market was so full of it that the buyers would not look at fowls; so that the farmer's servants had to take home the poultry, and their mistress had to be without her dress. Each market day has been the same since, and the fowls have been sold at last for a mere trifle.

Lord Normanton is a great man for protection to agriculture. And doubtless, if any kind of birds or beasts had come by ship from abroad to take the market from the farmer's wives and reduce the price of their fowls, there would have been a great outcry for protection. There would have been this outcry even though somebody had been giving new employment at home to make something which would have gone abroad to pay for those

kinds or four-footed beasts. But the hares and pheasants, which glut Salisbury market and make fowls unsaleable, have actually been bred and fed by those who get none of their profit, and who must bear the loss of the fowls.

This farmer assures me that he is able to prove that he keeps one man less per 100 acres than he would keep were he not troubled with game. Besides which, he says his threshers suffer. They have to go over the same quantity of straw in threshing for a smaller quantity of grain. He says that in threshing the greater part of his crop this year, his men will have to thresh the straw which should give five bushels, and there will only be four bushels. As they are paid by the bushel, he says this is a loss to them as well as to him.

CORRESPONDENCE.

To the Editor of the LEAGUE.

Dec. 16, 1844.

SIR,—Mr. Burke says "the constitution is not what it appears on paper." If so, I take it for granted that what is written is not consonant with matter of fact, and that theory is at variance with principle and practice.

During the reign of George III. there was more debating, arguing, and wrangling about what was "constitutional and not constitutional," and more time consumed, than would fill the space of one long session of Parliament, and yet the understanding upon this question is as unsettled as ever.

It appears to me very probable that the discussion on this point will be revived in the approaching session, in consequence of the strong measures recommended by the Council of the League touching the acquisition of 40s. freeholds, which, according to what is now called constitutional, gives the right of voting for a county member of Parliament.

The attention of the public, both in and out of Parliament, has been occupied recently with the subject of conspiracy; and, although Lord Denman's judgment, as given in the High Court of Parliament, may be supposed to have set the point at rest in many minds, yet it will not surprise me if some of the violent advocates for Corn-Law legislation should attempt to bring it forward in the shape of a charge against the League, particularly as the measure aims at nullifying the *Chandos* clause, which gives the £50 tenants-at-will the right of voting, contrary to the ancient practice and spirit of the constitution, as it is called.

It is not long since they swamped the 40s. Irish freeholders by raising the qualification; and it will not surprise me if, with a view to thwart the proceedings of the League, a similar measure should be introduced in the coming session. They are not nice in these matters of legislation for the people. It may be said that 40s. formerly were of the value of £20 of the present day, and why not raise the qualification to that amount? It will swamp Radicals and Chartists, and keep the League in a minority.

I beg to call to your recollection a few conspiracies of the "olden time." It will not be denied that the meeting at Runnemede was the result of a conspiracy by the barons, accompanied with such a demonstration of physical force, consisting of barons and their numerous serfs and retainers, the mere display of which on the field of battle induced John to sign the charter framed by the conspirators, and now called *Magna Charta*. John probably thought that what had been gained by the sword might be lost by the sword.

You have another conspiracy of the same class of men, on the "restoration" of Charles II. The nation had little to do with that event. Charles had been turned out of Spain in utter destitution, and he retrieved his situation by a compromise with the leading men, and relinquishing the prerogative rights and claims (the assertion of which had cost his father his life), as may be seen enumerated in the statute 12 Charles II., the first year of his reign. But there was no relinquishment of baronial rights and powers on the part of the barons: their power of holding courts and levying arbitrary heriots and fines on deaths and successions were continued intact.

You have another conspiracy of the same description, when James II. was frightened and advised to run away, to make room for William of Holland. This event, which the nation, as a body politic, had scarcely anything to do with, was honoured with the appellation of *our glorious revolution*; and Russell, and Cavendish, and Osborne were made dukes soon after.

By means of these conspiracies the power of the Crown became limited, and the privileges assumed by the peers were no longer in danger of being called in question by prerogative right. Thenceforth legislative power in the House of Commons became an affair of purchase; bribery and corruption were soon the order of the day; and this order has continued down to the present hour, witness the last general election.

There was next the conspiracy which took place at Lord Liverpool's house on the 3rd of Feb., 1815, six days previous to the meeting of Parliament, when, to the great disgrace of the Legislature, the members of both Houses, Ministerial and Opposition, held a meeting to plot the Corn Bill; the character of which measure is stamped by Lord Grenville's protest: a scheme for hoarding the food of the people to the growth and produce of their estates, and within the boundaries of England. Although there was no law to compel farmers to grow any specific sort of grain; these farmers, enriched by high war prices and become capitalists, were indifferent as to the quantity of produce: price was their object, and rent the object of the conspirators. This conspiracy was more ghastly than that which led to the massacre at Glencoe, inasmuch as a lingering death by starvation is more grievous than a speedy execution.

If the League be a modern conspiracy it differs from all predecessors, inasmuch as it is a movement of the people, led on by the middle class, against the landlord monopolists who have for centuries dominated over the workers and the nation. That this conspiracy, if it be so, will prove successful, in spite of all the efforts, however unscrupulous and desperate on the part of the aristocracy, to resist it, no honest man who believes in the liberality of truth and justice can for a moment doubt; but I would caution our parliamentary champions to be prepared for the attacks that will be made upon the new

and, to the landlord monopolists, fatal scheme for the multiplying of 40s. freeholds.

I remain, Sir, your sincere well-wisher,
A SUBSCRIBER OF £300 TO THE LEAGUE,
IN HIS 79TH YEAR.

[We do not share in the apprehensions of our respected correspondent, that the aristocracy will attempt to tamper with the 40s. county franchise—they dare not.—Ed., LEAGUE.]

Falkirk, Dec. 17, 1844.

SIR,—In order to facilitate the collecting of articles for the League Bazaar, a friend has suggested to me the following plan, which, if adopted, would, I humbly think, be the means of considerably increasing the number of contributors, as many would not hesitate to give something or other, if not put to much trouble in the matter. "Canna be fashed" prevents many good intentions being executed. The plan is simply this:—Let Scotland be divided into two districts—eastern and western, Edinburgh and Glasgow being their respective head-quarters. Then, in every considerable village and every town, let there be a properly qualified person appointed—say by the local Anti-Corn-Law League committees, where there are such—to whom all articles destined for the Bazaar may be sent, to be forwarded to Edinburgh or Glasgow shortly before the opening of the Bazaar; so that they may be sent to London from these cities in two vessels only. This would save a vast expense in carriage, and would otherwise be beneficial. The whole matter, of course, would require to be properly published. If these suggestions are of the least value I shall be very happy.

I am, Sir, yours very respectfully,
George Wilson, Esq. HENRY W. COCHRAN.

To the Editor of the LEAGUE.

Haddington, Dec. 6, 1844.

SIR,—Having occasion lately to pass through two or three of the northern counties of England, I was much struck with the very backward state of farming there: every thing appeared to me at least a century behind our Scottish system.

I had always thought the accounts of English farming in some of the counties, which appeared from time to time in different publications, as much exaggerated; but, on inspection, have found them below the truth, and have now ceased to wonder at the absurd outcry for protection to the farmer uttered at many public meetings lately, it being evident that men managing their lands in such style must be incapable of competing with even the most ignorant of our continental neighbours. I am more than ever confirmed in the opinion that they have not a shadow of a title to such protection, as to their own ignorance or their landlords' folly is to be imputed the whole blame of their position.

I passed through great portions of the estates of two noble dukes who grant no leases, and almost invariably found the land wretchedly farmed. Rushes and weeds were the distinguishing characteristics of his Grace of Northumberland; no finger-post was needed to mark the boundaries of his estate which the bad farming pointed out to every observer; while even around Ruby Castle, the seat of the other, all of the park that came under my observation was drowned with water, and carried more rushes than grass; the only attempt at draining to be observed being some four or five inch drains to carry off the water from the walks which lead through it to the castle.

Whenever I passed through land held on lease there everything looked better, although far behind what it ought to have been. This convinced me that want of confidence in the tenure by which land is held keeps the tenant from improving his farm. It also keeps him in ignorance, for, having no inducement to farm well, he remains at home contentedly, and thinks not of looking at what energy and science, properly applied, have effected, and are effecting, within a very short distance from his farm, under all the disadvantages of a more northern climate and an inferior soil.

Let the English farmer, then, instead of clamouring for legislative protection, apply to the only legitimate quarter—his landlord, and demand a lease and a properly regulated corn-rent, such as we have here in Scotland, where a certain quantity of produce, wheat, or other grain, according to circumstances, forms the rent, but is converted into money at the average price of each county, which is ascertained each year by every sheriff in his several county. This officer summons a great proportion of the farmers and corn-dealers therein, who make returns on oath of the quantities and prices of the grain sold or bought by each for ready money, and delivered within the county, by which means, if a proper quantity of grain is fixed on as rent, the landlord gets his fair share of each year's produce, while the tenant is protected from the ruinous effects of low prices, and has no occasion to blame anything but his own folly if he gives more rent than his land is worth; thus he has no interest in keeping up a Corn Law to raise his gains at the expense of his fellow-man.

I may be asked how I can advance this doctrine so confidently, when, even in this county where I write, we only very lately had one of the most clamorous outcries for protection that has been uttered anywhere; but it is well known this was got up by the landlords, who forced their tenants to the meeting, but it was and is utterly repudiated by every right-thinking person here.

I was also much struck at seeing in many parts of Durham and Yorkshire the plans adopted to protect the farmer's greatest enemy—the game, almost every field being studded with branches and bushes stuck up to prevent poaching by nets at night; and was thereby convinced that game must be reared in immense quantities, and the labourer be in a most wretched and demoralized state to cause such means to be resorted to for such a purpose. This is a strong argument why the country should demand, in the most determined manner, the repeal of the obnoxious and iniquitous game laws.

I am, Sir,
Your most obedient servant,
A LOTHIAN FARMER.

To the Editor of the LEAGUE.

SIR,—As the Free-Traders have at length awakened to a sense of the importance and practicability of making their opinions felt, by attention to the registration with regard to county votes, the following may be of service.

It is generally supposed that copyhold and leasehold

property, when situate in a parliamentary borough, will not give the copyholder or lessee a qualification for the county. This is the case only when the property is of a nature to confer a vote on the occupier for the borough; but if from any cause the property is of a nature that the occupier cannot vote in respect of it for the borough, the owner or leaseholder is entitled to be on the register, and vote for the county in which it is situate. This is clearly the case with regard to small cottages or tenements that are not (after deducting cost of rates, taxes, and repairs) worth £10 per annum.

To give the qualification, the property must yield a clear profit of £10 per annum, and be held under a lease, originally granted from the owner, for a term of not less than sixty years; but if the lease was originally granted for a term of not less than twenty years, and less than sixty years, the property must give the lessee a clear annual profit of £50.

Should the Court of Common Pleas decide in the appeal from Westminster now before the court that lodgers are not entitled to vote for the borough, any lodger paying a rent of £50 per annum (of which there are many in the city of London) will be entitled to vote for the county. I am, Sir, yours, &c.,

E. HUGGERT.

Darlaston, Dec. 14, 1844.

SIR,—Last year I subscribed to the League fund, and now I beg to hand you £3, which is in about the same proportion to my last subscription as agricultural produce of this year bears to that of the last year. Holding land in a manufacturing district, I have ocular demonstration of the effect our Corn Laws have upon both trade and agriculture. With corn, cheap as it has been lately, I see no men idle: every description of artisan in the neighbourhood in full work at fully the wages they received when corn was high, many of them at considerably increased wages, and some at a rise of nearly 100 per cent.; I see the paupers in the union workhouse lessened, outdoor relief not so much wanted, and the poor-rates diminished; I see the men and their wives and families better dressed, the butchers shops better filled with meat, and attended by customers; and the grocers and small hucksters doing an increased business. And all this I attribute to the late good harvest, not to Sir Robert Peel or the sliding scale; for seeing that my neighbours, by buying clothes with the money which in years of bad harvests and dear corn went to buy food, give employment to the workmen in Lancashire, Yorkshire, &c., I conclude that the better employment I see around me arises from the want of hardware goods by our manufacturing population, and which they are enabled to purchase with funds saved in the same way as that I have just described. The manufacturing classes, whatever may be said by the agricultural protection societies to the contrary, are the principal, almost the sole, supporters of the native industry of the country—agricultural and trading. If food be cheap there is more of it consumed, and more employment created for the consumers, by their being enabled, in consequence of such cheapness, to gratify other wants and tastes. I have not the least doubt that, if the trade in corn was free, the farmers by breeding and fattening stock, making cheese and butter, and growing vegetables to meet the increased demand, would be able to pay present rents, and make a better profit than they have done lately; or, if the worst came, the landlords would only have to lower their rents (land going out of cultivation is downright nonsense), which would be nothing but fair, and only placing them on the same footing as their fellow trading subjects. There is no manufacturer I know but is compelled to sell at the market price or have no customers; why should not the landowner be compelled to do the same? Your very obedient servant,

CHARLES GREEN.

R. Cobden, Esq.

FREE-TRADE LECTURE.—In compliance with a requisition from some of the friends of Free Trade at Shirey Row, Mr. Liddell, the indefatigable agent of the League, delivered a lecture on Free Trade in the long-room of the Londonderry Arms Inn, which Mr. Tate kindly placed at his disposal, free of charge. There was a respectable audience, including persons of all classes; and the lecture was well received. It was the first that has been given at the collieries of the Marquis of Londonderry, and Mr. Liddell was requested to deliver another lecture at the same place, which he consented to do after two or three weeks.—*Sunderland Herald*.

THE LAND AND THE LABOURER.—A few days since a body of labourers of the parish of Boarsall, Bucks, went to Owling-house, the residence of Sir Thomas Digby Aubrey, Bart., he being the owner of a large portion of that parish, to state to him their distress from inability to obtain employment, and their unwillingness to become, with their wives and families, inmates of the poorhouse. The men walked about a dozen miles to tell the owner of the soil their distress. It appeared that there were 14 in want of work. Sir Thomas expressed himself in favour of their having labour found them, and wrote to his steward at Boarsall to that effect. On an inquiry being made as to the labour employed on the land, it appeared that there were 900 acres of land in the place, which have but three labourers employed on them.—*Globe*.

INCENDIARISM.—On Sunday night last a fire broke out in a thatched house in Church-street, Lyme Regis, Dorset; the flames quickly spread to other houses also thatched, and soon enveloped them in flames, obliging the inmates to make a speedy exit. The adjoining houses having slated roofs, though several times on fire, were, by the strenuous exertions of the firemen and people, saved from destruction. Scarcely had the height of the fire been subdued than the cry of "Fire!" was again raised on the opposite side of the street, and some distance further down. In a short space of time not less than seven houses were reduced to ashes, notwithstanding the strenuous efforts made to check the flames; a great quantity of furniture was also destroyed.—On Monday night a large straw-rick, on Highfield farm, Hemel Hempstead, Hertford, was set on fire and destroyed.—An agricultural labourer, named Thomas Hodgson, has been committed to Lancaster Castle for trial at next assizes, charged with having set fire to a barn at Blutton Road, near Middlesbrough.

REVIEW.

The Chimes. By C. Dickens, Esq. London, Chapman and Hall.

Charles Dickens has won for himself a high and permanent place in literature, but he has done far more—he has established for himself a permanent claim on the respect, the affections, and the gratitude of those who are poor in circumstances and lowly in heart. His sympathies are with the labourer and the sufferer: alas! for the age in which the two names are so often identified. A writer of such warm and generous feelings is, however, exposed to the danger of allowing his sympathy to degenerate into sentimentality, and of sometimes using conventional cant instead of the language of genuine commiseration, for he is under a constant temptation of preference for immediate emotion to remote advantage. There is no real antagonism between the man of genuine feeling and the man of genuine science: the great ornaments of the Episcopal and Presbyterian churches, Archbishop Whately and Dr. Chalmers, are notorious among the first of our philanthropists as well as of our political economists. Intelligence does not check feeling: it guides but never deadens sympathy; but Mr. Dickens, in some passages of "The Chimes," has been betrayed into expressions which would seem to intimate that he regards knowledge as the natural enemy of humanity. He exclaims against the men of "facts and figures"—that is, against all individual and collective truths; we are left to infer that he prefers to these, as principles for social guidance, falsehoods and uncertainties. Facts are testimonies of individual experience; tabulated facts, or figures, are the results of collected experience: we should be sorry to infer from Mr. Dickens's hasty denunciations that he is the apostle of a philosophy which teaches that we should neither be warned by example nor guided by experience.

One great purpose of the tale is to recommend early marriages, by portraying, under the guise of a vision, the possible consequences of preventing the union between two lovers. It would be no difficult matter to portray as plausibly, though not so powerfully, a picture of the misery which might arise from an improvident marriage. Instead of the detested facts and figures, let us refer Mr. Dickens to the homely proverb, "When Poverty comes in at the door, Love flies out at the window." To those who do not share our author's prejudices we may venture to mention the notorious fact, that the countries where early marriages are most common, such as India, Bokhara, and some parts of Southern Europe, so far from being the most moral, are very much the contrary.

It may be said, and we believe with truth, that Mr. Dickens intended to condemn not the use but the abuse of economic science. We cheerfully concede to him that this science may be abused, and that in any evils may arise from giving to any rules of social life, whether moral or economic, the same rigid application as the physical laws of matter. But we never yet knew an economist who denied the modifying influence of circumstances; and the lecture on tripe, which Mr. Dickens gives as a specimen of economic statistics, actually violates every established law of economic and statistical science. That persons who flatter themselves that they have found out some short cut to knowledge should vituperate moral and economic science, which require labour and study, is quite natural. It is, however, a fair request to make of those who assail science, that they should make some effort to comprehend its principles; and we recommend to Mr. Dickens's attention the ancient aphorism, "Blame not before thou hast examined the truth; understand first, and then rebuke."

We have written these few words of censure reluctantly; we now turn to the more pleasing task of praise. The hero of "The Chimes," Toby Veck, is a ticket-porter; the description of his usual stand by the old church is worthy of the best pages of Pickwick:—

"A breezy, goose-skinned, blue-nosed, red-eyed, stony-toed, tooth-chattering place it was, to wait in, in the winter-time, as Toby Veck well knew. The wind came tearing round the corner—especially the east wind—as if it had sailed forth, express, from the confines of the earth, to have a blow at Toby. And oftentimes it seemed to come upon him sooner than it had expected, for bounding round the corner, and passing Toby, it would suddenly wheel round again, as if it cried, 'Why, here he is!' Instantly his little white apron would be caught up over his head like a naughty boy's garments, and his feeble little cane would be seen to wrestle and struggle unavailingly in his hand, and his legs would undergo tremendous agitation, and Toby himself all about, and facing now in this direction, now in that, would be so banged and buffeted, and tumbled and worried, and hustled, and lifted off his feet, as to render it a state of things but one degree removed from a positive uproar, that he wasn't carried up bodily into the air as a colony of frogs or snails or other portable creatures sometimes are, and rained down again, to the great astonishment of the natives, on some strange corner of the world where ticket-porters are unknown."

"But windy weather, in spite of its using him so roughly, was, after all, a sort of holiday for Toby. That's the fact. He didn't seem to wait so long for a glimpse in the wind, as at other times; for the having to fight with that boisterous element took off his attention,

and quite freshened him up, when he was getting hungry and low-spirited. A hard frost, too, or a fall of snow, was an Event; and it seemed to do him good, somehow or other—it would have been hard to say in what respect though, Toby! So wind and frost and snow, and perhaps a good stiff storm of hail, were Toby Veck's red-letter days."

The friendship between Toby and the chimes is obviously borrowed from Victor Hugo's description of the affection between Quasimodo and the bells of Notre Dame, and the imitation is far inferior to the original. But when Dickens comes to his own ground, and describes the charity of the poor to the poor, he rises to his full height of moral sublimity, and exhibits the united strength of nature, truth, and justice. There are some exquisite touches in the description of the artificers by which Toby Veck conceals his generosity from the objects of his bounty, Will Fern and his niece. Toby's telegraph to his daughter Meg is inimitable:

"Meg looked towards him and saw that he had elaborately stationed himself behind the chair of their male visitor, where with many mysterious gestures he was holding up the sixpence he had earned."

"I see, my dear," said Trotty, "as I was coming in, half an ounce of tea lying somewhere on the stairs; and I'm pretty sure there was a bit of bacon too. As I don't remember where it was, exactly; I'll go myself and try to find em."

"With this inscrutable artifice, Toby withdrew to purchase the viands he had spoken of, for ready money, at Mrs. Chickensnarker's; and presently came back, pretending that he had not been able to find them, at first, in the dark."

"But here they are, at last," said Trotty, setting out the tea-things, "all correct! I was pretty sure it was tea, and a rasher. So it is. Meg, my Pet, if you'll just make the tea, while your unworthy father toasts the bacon, we shall be ready, immediate. It's a curious circumstance," said Trotty, proceeding in his cookery, with the assistance of the toasting-fork, "curious, but well-known to my friends, that I never care, myself, for rashers, nor for tea. I like to see other people enjoy 'em," said Trotty, speaking very loud, to impress the fact upon his guest, "but to me, as food, they're disagreeable."

Yet Trotty sniffed the savour of the hissing bacon—ah!—as if he liked it; and when he poured the boiling water in the tea-pot, looked lovingly down into the depths of that snug cauldron, and suffered the fragrant steam to curl about his nose, and wreath his head and face in a thick cloud. However, for all this, he neither ate nor drank except, at the very beginning, a mere morsel for form's sake, which he appeared to eat with infinite relish, but declared was perfectly uninteresting to him.

No. Trotty's occupation was, to see Will Fern and Lillian eat and drink; and so was Meg's. And never did spectators at a city dinner or court banquet find such high delight in seeing others feast; although it were a monarch or a pope: as those two did, in looking on that night. Meg smiled at Trotty, Trotty laughed at Meg. Meg shook her head and made belief to clap her hands, applauding Trotty; Trotty conveyed, in dumb show, unintelligible narratives of how and when and where he had found their visitors, to Meg; and they were happy. Very happy.

"Although," thought Trotty, sprightly, as he watched Meg's face; "that match is broken off, I see!"

"Now, I'll tell you what," said Trotty after tea. "The little one, she sleeps with Meg, I know."

"With good Meg!" cried the child, caressing her.

"That's right," said Trotty. "And I shouldn't wonder if she kisses Meg's father, wouldn't she? I'm Meg's father."

"Mightily delighted Trotty was, when the child went timidly towards him; and having kissed him, fell back upon Meg again."

"She's as sensible as Solomon," said Trotty. "Here we come, and here we go—no, we don't—I don't mean that—I—what was I saying, Meg, my precious?"

"Meg looked towards their guest, who leaned upon her chair, and, with his face turned from her, fondled the child's head, half hidden in her lap."

"To be sure," said Toby. "To be sure! I don't know what I'm flapping on about, to-night. My wits are wool-gathering, I think. Will Fern, you come along with me. You're tired to death, and broken down for want of rest. You come along with me."

"The man still played with the child's curls, still leaned upon Meg's chair, still turned away his face. He didn't speak, but in his rough coarse fingers, clenching and expanding in the fair hair of the child, there was an eloquence that said enough."

"Yes, yes," said Trotty, answering unconsciously what he saw expressed in his daughter's face. "Take her with you, Meg. Get her to bed. There! Now, Will, I'll show you where you lie. It's not much of a place: only a loft; but having a loft, I always say, is one of the great conveniences of living in a mews; and till this coach-house and stable gets a better lot, we live here cheap. There's plenty of sweet hay up there, belonging to a neighbour; and it's as clean as hands and Meg can make it. Cheer up! Don't give away. A new heart for a New Year, always!"

"The hand released from the child's hair, had fallen, trembling, into Trotty's hand. So Trotty, talking without intermission, led him out as tenderly and easily as if he had been a child himself."

We have only room for another extract—the imaginary speech of the agricultural labourer—and we give it without comment: it is sure to make its own impression:—

"Now, gentlemen," said Will Fern, holding out his hands, and flushing for an instant in his haggard face. "See how your laws are made to trap and hunt us when we're brought to this. I tries to live elsewhere. And I'm a vagabond. To jail with him! I comes back here. I goes a nutting in your woods, and breaks—who don't?—a lumber branch or two. To jail with him! (One of your keepers sees me in the broad day, near my own patch of garden, with a gun. To jail with him! I has a natural angry word with that man, when I'm free again. To jail with him! I outs a stick. To jail with him! I

eats a rotten apple or a turnip. To jail with him! It's twenty mile away; and coming back, I begs a trifle on the road. To jail with him! At last, the constable, the keeper—anybody—finds me anywhere, a doing anything. To jail with him, for he's a vagrant, and a jail-bird known; and jail's the only howe he's got."

"The Alderman nodded sagaciously, as who should say, 'A very good home too!'"

"Do I say this to serve my cause?" cried Fern. "Who can give me back my liberty, who can give me back my good name, who can give me back my innocent niece? Not all the lords and ladies in wide England. But gentlemen, gentlemen, dealing with other men like me, begin at the right end. Give us, in mercy, better homes when we're lying in our cradles; give us better food when we're working for our lives; give us kinder laws to bring us back when we're a going wrong; and don't set Jail, Jail, Jail, afore us, every where we turn. There an't a condescension you can show the labourer then, that he won't take, as ready and as grateful as a man can be; for he has a patient, peaceful, willing heart. But you must put his rightful spirit in him first; for whether he's a wreck and ruin such as me, or is like one of them that stand here now, his spirit is divided from you at this time. Bring it back, gentlefolks, bring it back! Bring it back, afore the day comes when even his Bible changes in his altered mind, and the words seem to him to read, as they have sometimes read in my own eyes—in jail: 'Whither thou goest, I can Not go; where thou lodgest, I do not lodge; thy people are not my people; Nor thy God my God!'"

Here we must conclude. We trust that at our next meeting with Boz we shall be able to give him a more hearty reception, and not be compelled to use caution and qualification.

The Arithmetic of Annuities. By E. Daylis. London, Longman and Co.

This is an excellent treatise on a very important subject; the author has simplified the mathematical formula of his predecessors, and brought the practical calculation of annuities within the reach of persons who have not the advantage of an acquaintance with algebra and its symbols. The work will be found not only a valuable assistant to actuaries, but a very useful guide to insurers; and we should gladly see it introduced into schools for mercantile education.

The Christmas Tree. A Present from Germany. Darton and Harvey.

This seasonable little work describes in simple and pleasing language the Christmas customs of the Germans, which the author is anxious to have introduced into England. He has succeeded in inspiring us with a passion for "The Christmas Tree," and all its endearing associations of domestic affection. It is a custom which is likely to strengthen the ties of family, and to give reality to those parental, filial, and fraternal relations, which are the first elements of social life.

Anti-Corn-Law Almanac. J. Livesey, Preston.

This cheap sheet almanac, sold so low as one penny, furnishes, in addition to the usual matter found in almanacs, a fund of pithy information well calculated to fix the principles and facts of Free Trade in the minds of its friends and advocates.

A CHRISTMAS CAROL.

(From Punch.)

To Church betimes! The Christmas chimes
Are calling high and low in;
To Church then all, both great and small!

Chorus of many voices.

We've not a coat to go in!

Like our old sires, with roaring fires,
The fangs of winter braving,
Huge logs pile high, to sit thereby.

Chorus.

We've not a single shaving!

Good Christmas fare is physic rare
To warm the regions inner;
Plum-pudding join to stout sirloin.

Chorus.

We've not a crust for dinner!

Fill glass and bowl, each jovial soul,
As round the hearth we close in;
Our wine is bright in its ruddy light.

Chorus.

Our very water's frozen!

Right late we'll sup, and keep it up
Till time to morn shall creep on;
Then sink to rest in downy nest.

Chorus.

We've not a bed to sleep on!

Loud be the song, the laughter long;
Our joy no care shall leave us;
Christmas is here but once a year.

Chorus.

For that, at least, thank Heaven!

PUNCH.—Many of the blessings universally desired are frequently wanted, because most men, when they should labour, content themselves to complain; and rather linger in a state in which they cannot be at rest, than improve their condition by vigour and resolution.—*Rambler.*

AGRICULTURE.

A PLEASANT WEEK FOR THE MONOPOLISTS.

We can readily understand the satisfaction with which Richmond and Company must have hailed last Saturday night. We fancy we hear the monopolist Duke, the coroneted fishmonger, the chairman of the "Central Protection Society," exclaim, "Thank God the week is over!" But, though the week has passed over without an open rupture between the grandee monopolists and the tenant-farmer monopolists, what do the big-wigs think of their future prospects? Things are not quite as they were this time twelvemonths in the monopolist camp. Then the figment of "protection societies" of tenant-farmers and mortgaged landlords to uphold that monopoly, which that great "protection" society, the Imperial Parliament dared not maintain, served to divert the attention of tenant-farmers from too close a scrutiny of their own position. The monopolist landowners believed they had turned the growing discontent of the farmers into at least a harmless channel. They imagined that by petting a few noisy land-agents and topping farmers, they could lead the farmers as a body into a crusade against Free Trade, and thereby put down the League and intimidate the Government. Vain expectations! Vain, at all events, as regards the League, for never was the influence of that body so powerful as now; and, next to its own righteous cause and the exertions of its leaders, the protection societies have mainly advanced its object—the dissemination of Free-Trade opinions. What the aered monopolists proposed to extort from the Government we know not; but the Duke of Richmond having obtained a seat at the Treasury board for his younger brother, and the Duke of Buckingham having received his blue riband, seem disposed to let the Pro-Corn-Law agitation die a natural and an easy death.

Not so, however, the tenant-farmers. They now demand that the protection societies shall do something. A room in Bond-street, and a few tracts which are not read, won't now serve their turn. They require an alleviation of their burdens, and show a great disposition to demand that alleviation directly from the hands of the individual landlords. It is true they have gone off, or have been led after a will-o'-the-wisp—the repeal of the malt-tax; but with the first mention of the subject in Parliament that bubble will burst; and then, landlords, look out, for your tenants are becoming aware of the delusions which for your own selfish objects you have practised upon them.

to the successful efforts of Mr. Falvey, in Wiltshire, in advocating Free Trade, and wished the monopolists to send forth rival lecturers. That the lords and squires are wiser in their generation than Mr. Allnatt we admit, for rival lecturers would bring discomfiture upon the protectionists in every hamlet throughout the country wherein they might venture on the experiment. Imagine a monopolist lecturer addressing the labourers of Lynham, or Hillmarton, or Goatacre, in North Wiltshire, on the benefits of high rents, dear bread, and low wages!!! However, the suggestion shows that tenant-farmers do not think that by taking the chair at the "room in Bond-street" the monopolist magnates are much advancing the interests of the tenantry. Mr. Allnatt then said "he was perfectly conversant with the views and condition of the farmers by whom he was surrounded, and he would say their prospect was a melancholy one. Taking the case of the little occupiers, he did not hesitate to say that they were in a most lamentable condition; if he were to say of absolute insolvency he would not be going too far." "The occupiers of England were not to be destroyed, and would not be destroyed, without making a bold and determined effort for self-preservation. He might be asked what it was he would propose as a remedy? He would say he thought this society should take upon itself to bring, or endeavour to bring, the condition of the British farmer before Parliament, with a view of revising those laws which had crippled the agricultural interest;" and he then proceeded to denounce in round terms the fraud which had been put upon the farmers by Sir Robert Peel, when in 1842 he promised them 56s. a quarter for wheat. How the tamed duke and the parliamentary adherents of the Government must have wriggled in their seats under the infliction of this speech.

Mr. Bennett, another farmer, then took up the strain, and said he should like to see expunged from the report that passage which stated that "the agriculturist had everything to hope and nothing to fear;" he thought they were not in a condition to say that. The property of the farmers was being "frittered away;" the condition of the labouring classes was "lamentable," and incendiary fires were not diminishing. "He thought that ANY BETTER PRICES, or any further protection, were impracticable; but he thought it behoved noble dukes and lords, and owners of the soil, to look to these prices, and ask themselves whether they were to be maintained along with the burdens to which farmers were subjected. It behoved gentlemen who possessed large landed estates in the country to look the matter fully in the face, as he thought, from peculiar circumstances, they did not know the real position of the country. He admitted that there was no difficulty in letting farms, and it was from this circumstance that landowners were deluded." These remarks were received by the farmers with vehement cries of "HEAR, HEAR, HEAR!" The chairman duke then became apologetic, and said, "The landowners were deeply impressed with the difficulties under which a great portion of the tenantry laboured," and that he was delighted that "occupiers" should attend the society "and express their feelings;" but they would "do little service to the great cause if they did not keep firmly united together," and so forth. "He thought they might trust the Central Society that they would do all they could, at all events, not to allow the protection they had at present to be diminished." Cold comfort this for their tenant-farmer dupes.

Mr. O'Brien, M.P., admired the "candid yet harmonious tone" of the farmer-speakers!

Mr. Newdigate, M.P., "heard with joy the farmers express themselves so freely as they had done!"

Mr. Miles sighed over the Canada Corn Bill.

The meeting then closed with what the reporter of the *Mark-lane Express* calls "a general discussion on the Canada Corn Bill;" and which we hear was a general hubbub, from which dukes and M.P.'s escaped with more speed than dignity.

On the previous evening, at the meeting of the Farmers' Club, a strong determination was manifested by the farmers to take their own affairs into their own hands. Many allusions were made to the scarcity of provender, and the danger that "much of the stock would be literally starved to death;" and all the practical suggestions of substitutes for the ordinary food—*as*, for instance, boiled linseed and bran—proved how much the stock farmer is injured by the exclusion of foreign grain.

Mr. Shaw said, amidst the applause of the company, that "the tenant-farmers should unite for the purpose of their mutual interests, and the protection of those rights which every man ought to enjoy, considering him a man of capital, skill, and industry, going, as a matter of contract, upon the soil of another to employ it to its utmost extent."

And the same speaker, in giving the health of the chairman, a tenant, said, "He trusted that the example set to-day, of placing a tenant-farmer in the chair, would be followed out in future years; that they would feel that it was quite enough to have such a man, and that no appetency for 'aristocracy' would lead them to look higher. It had been the

fault of the class of tenant-farmers to suffer themselves to be led by others; but they had good authority of late for saying that the tenant-farmer had learned his strength, and, having so learned it, it is his own fault if he does not use it." And these sentiments were vociferously cheered.

Then, after the "protection society's" meeting, there was the malt-tax repeal meeting, where the absence of landlords formed the subject of some sarcastic comment.

The expected chairman did not come, and the impatient meeting "prayed a tales," and caught Mr. Spottiswoode, the Queen's printer, for a chairman. Mr. Baker was the principal speaker, and went over the usual reasons for repealing the malt-tax, which come at last to this, that malt is somewhat better than oilcake for feeding cattle. The benefit of the measure to the labourers was virtually given up by some and formally disclaimed by others. Mr. Baker ridiculed the landlord nostrum of allotments, saying, "Some persons thought to benefit the agricultural labourers by allotting to them strips of land which they could just stand upright upon." And he thus referred to the present state of the farmer:—"It must be quite evident that there must be something wrong where there was so much enterprise, so much capital, and so much industry, and yet the farmers found everything slipping from their grasp—('Hear, and cheers')—without knowing why it was." (Renewed cheers.)

Then Mr. Fyfe said—"Some would pretend that the question would interfere with protection; but let him tell them that protection was taken away already. (Cheers.) They had formerly depended upon friends, instead of attending to their own affairs, and those friends had betrayed them." And he very sensibly added, "It now remained for them to obtain for themselves such a remission of their burdens as should enable them to go on with moderate prices (cheers); for he was afraid they would never see high prices again."

Mr. Bennett, who spoke in Bond-street, said—"The first objection would be that the Government could not spare the revenue; that was a statement which would meet them at every turn ('hear, and cheers'); and that was the chief reason why there were not more landlords present."

Now it is quite obvious the shrewder farmers see that the game of protection is up; that they have hitherto been misled and betrayed by the monopolist landowners; and that they must henceforth take care of their own interests. It requires no prophet to tell that they won't be protectionists much longer. How little the monopolist and political landowners like the present temper of the tenant we need not say; for assuredly something more than the corn monopoly is slipping from the grasp of the landed aristocracy. They have grasped at a shadow and are likely to lose the substance. Have they any to blame but themselves?

FROM WHAT DO FARMERS REQUIRE PROTECTION?

We do not yield to the most ardent "protectionist" in a desire to proclaim the necessity which exists for protecting the tenant-farmers; but we differ from those loud-voiced Richmondites as to the evils from which farmers require protection. We say it is not from foreign competition, which is a mere bugbear, but from miscalculations induced by a delusive promise of high prices, and the mismanagement by the landowners of their own property. Nor do we stand alone in such assertions, for the farmers are now everywhere feeling the force of the first evil, while they are more and more frequently proclaiming the wrongs inflicted upon them by the latter. Of late a new and most potent witness has come to the aid of the farmer in the person of Mr. Low, the professor of agriculture in the University of Edinburgh, by a work just published "*On Landed Property and the Economy of Estates*;" wherein he distinctly shows that British agriculture languishes under insecure tenures. This is the immediate consequence of the restrictive system our landlords have struggled for the last thirty years to uphold. Upon the subject of "the relations between landlord and tenant" Mr. Low says:—

"Not even the accumulation of capital, to the degree of stocking the farms of the country, will avail for giving to agriculture the means of successful cultivation and improvement. The owner of this capital must have the means of employing it with advantage, by security of possession, by the privileges required for the proper management of his business, and by that fair and lenient exaction upon his industry which will enable him to employ his capital with a profit."

This is true; but not a few landowners seem to think that, if tenant-farmers can pay their rents and just rub along, they have no right to expect more. Tell a landlord that any particular tenant is making "a profit," and he will immediately think, and not unfrequently act upon the thought, that the farm has been let for too little rent. What has been the consequence of the prevalence of such notions amongst the squirearchy, let the following passage from Mr. Low's work tell:—

"In the finest parts of England funds have been progressively accumulating for stocking the farms to a degree unknown in any other country in Europe; but the essential conditions having been too often wanting, of security of possession, and a beneficial connexion between the

This has been shown in the most marked manner at many of the leading agricultural meetings of the past autumn, and it broke out in an unmistakable form at the general annual meeting of the "Central Protection Society." That precocious association—sudden and inexplicable in its rise, and rapid in its decline—assembled in its "room in Bond-street," and it is recorded that three dukes, ten members of Parliament, and six other persons, worthy of being particularly named, were present; and it is added that "several tenant-farmers were present." Yet even in this select assembly the smothered fire which now smoulders in the breast of every tenant-farmer burst forth. The Duke of Richmond, as chairman, of course was pinned to the stake; but the Dukes of Buckingham and Cleveland seem to have soon made themselves scarce, for the chairman "thought it due to those two noble lords to explain the cause of their absence," namely, that they had "made engagements" elsewhere "before the meeting was fixed." The "Central Protection Society," then, it is clear does not dwell very much in the memories of its ducal patrons. We suspect the proceedings of last Friday will cause it to be sunk by those noble persons into yet deeper oblivion. Like a judgment for political sins, or a judgment for an unsatisfied debt, it will be regarded as an unpleasant memento; and we shall not be surprised if it ceases to exist, even as a shadow of a shade, after the promised dinner of next February.

After the report, which partook of that negative quality which has characterized all the proceedings—if proceeding its inaction can be called—having been read and carried, the chairman-duke proposed a public dinner the day before the meeting of Parliament, "to maintain the position they had taken up," a position which a west-country farmer lately described as "stuck in the mud." So far all seemed smooth. Then up rose a Mr. Allnatt—a fluent speaker, and a high protectionist farmer, or quasi farmer—who said "he had been frequently asked, as a member of this society, what they were doing or attempting to do for the benefit of British industry?" He had told them of the society's circulation of tracts; "but he was sorry to say that the tenant-farmers residing at a considerable distance from London did not believe that the society was doing much, because they saw nothing tangible, nothing obvious, in the manner in which they proceeded, and that they had not shown sufficient fight." He spoke slightly of the tracts, "for farmers and labourers were not reading men;" and referred

landlord and the tenant, agriculture has remained comparatively fixed, while every other branch of industry has been advancing."

So much for the benefits tenant-farmers have derived from protection! Now compare the stationary state of agriculture with the onward progress of other branches of British industry, at whose expense it was intended to "protect" agriculture. Mr. Low says:—

"The manufacturer of cotton, of wool, of iron, has the assurance that the machine which he constructs and improves for the purposes of his trade is his own, and that the more perfect he can render it the more profitable will be the use of it become to him. The farmer who lays out capital on the great machine on which his all depends—the earth which he tills—has often no such assurance. It is the property of another, who in the end will profit by all the improvements which the skill of a temporary possessor can make upon it. The manufacturer receives, directly, the profit of his stock in trade; the farmer must share those profits with another, who undergoes no part of the labour and risk; his industry is fettered by conditions imposed upon no other class of traders; and the inconveniences of obtaining returns for a present expenditure more slowly than in any other profession are frequently aggravated by the uncertainty whether he will ever have the power of recovering the capital advanced."

Let the monopolists gain this if they can.

And in the following passage on tenancies-at-will Mr. Low, in effect, repudiates "mutual confidence" tenures, tenant-rights, and other makeshifts, when he observes:—

"The only fitting security for a man who has capital to employ in the cultivation and improvement of land is a written covenant, subsisting for a definite and adequate period. Tenancy at will, it must be apparent, so much extended over the richest parts of England, is in no degree an adequate substitute for the lease, ensuring to the tenant his right of possession for a determined period. Habit, indeed, may reconcile the tenantry of a country to such a species of tenure, and a kind of confidence may arise that a tenant will not be capriciously dispossessed, nor an unfair advantage taken of his expenditure; but this confidence, however great, is not to be compared, as the means of inducing men to expend capital on land, with that sense of security and independence which is the soul of industry and exertion. It is impossible to divest the tenant-at-will of the knowledge, that every improvement which he makes upon his farm gives it a higher value to another, and adds to the means of raising the rent against himself."

All this is almost as applicable to tenant-right holdings as to yearly tenancies. In the one case the tenant saves a something from the wreck caused by his being dispossessed of his farm; in the other his loss is a total one. It is merely a question of degree. The problem is how to prevent any wreck at all, and that can only be effected by a lease.

On right adjustment of rents the professor says:—

"The tenant who takes land, and the landlord who lets it, should so adjust the rent, that the tenant shall be able to bear the pressure of deficient crops, or of low prices arising from favourable causes; and no prudent man ought to contract for a rent which will not allow him to meet that contingency of his trade which arises from a fluctuation in the amount and prices of his commodities."

Nobody but a monopolist-landowner or a "protected" farmer could doubt the above axioms.

On the fall of prices which ensued upon the termination of the war in 1815, and which the landowners by their Corn Law vainly strove to prevent, Mr. Low remarks:—

"That whenever landlords properly met the necessities of the case, by new arrangements with their tenants, suited to the altered circumstances of the times, their interests were better served than when they allowed the capital of their tenants to be wasted away before they applied the remedy. The landlord who would secure a prosperous tenantry, and improve his estate, must not trust to his per centage or bounty on an audit day, but must place his tenants in the condition which will enable them to fulfil the obligations under which they engage in virtue of a fair and well-considered covenant."

How much better would have been the present condition of English tenants had these true and common-sense views prevailed in 1815, and all the attempts to create artificial scarcity which have since been made had been avoided! And, although landowners have since that time been largely paid their rents out of the capital of their tenants, we believe that the landowners, as a body, have suffered nearly as much as their tenants from erroneous and restrictive legislation. Of the usual covenants in English leases he observes that

"The tenant is fettered by a mass of cumbersome and useless restrictions, which take from him the power of exercising his judgment, and adopting his management to the circumstances that arise; and that many look merely to the lease as a common document defining the legal rights of the parties, without being aware how greatly the conditions imposed on the one party or the other may affect the improvement of the estate, and the mutual interests of landlord and tenant."

Of the importance of placing the tenant-farmers of the country on a safe footing none ought to doubt, and none but monopolists do doubt. On this point Mr. Low says:—

"These things being so, the great mass of the public territory being in the hands of tenants, and their capital being invested in it to an amount unknown in any other country, and nearly all the means of rendering it productive being intrusted to them, it is of primary importance that the interests of this valuable class of men be maintained by all the means which the case allows. These means rest primarily and essentially with the landowners of the country, and they are not difficult to be applied. They are reasonable, in truth, into the prudent, equitable, and salutary management of landed property. The interests of the two parties can be hardly said to diverge, and the cases are the more exception to the general result, in which

the landlord who takes the prudent means to promote the prosperity of his tenants, does not promote his own. These means, namely, the granting of the necessary security of possession, the limiting the demand on the tenant's industry to what is just, the establishment of equitable covenants for the management of the farms, and the making the necessary provision for the buildings and other adjuncts necessary for the profitable occupation of the land, may be said to comprehend nearly all the essential duties of proprietors towards those who occupy their estates."

This entirely excludes all the semi-feudal obligations, to preserve game, vote for the landlord's political party, and so forth, on which the owners of land lay so much stress. It is clear from these views, put forth as they are by a practical and most intelligent agricultural surveyor—for such was the professor's original profession—that what tenants require is protection from the mismanagement of their landlords, and relief from artificial fluctuations. It was therefore with much reason that, at a late agricultural meeting in Somersetshire, Mr. George Turner, a farmer, offered as a "new premium, a cup of £20 value for the best landlord." Now, whether the worthy yeoman was in jest or in earnest, the farmers present evinced their opinion of the necessity for such a premium by the "loud and long-continued cheering" with which the announcement was received; and the accuracy of that opinion is confirmed by the sober criticism of Mr. Low.

NOTICES TO CORRESPONDENTS.

"A Leaguer, Leeds."—We have not heard of the movement referred to by our correspondent, for memorializing the Government to reduce the import duties, and recommending the continuance of the Income-tax. We advise our friends to be cautious how they commit themselves to any proceeding of the kind. The business of the League is clear and simple—viz., to procure the abrogation of all protective duties which are maintained for the benefit of monopolists, and the removal of which will not sacrifice a shilling of revenue; but, on the contrary, by extending trade, and increasing the demand for labour, will add to the consumption of articles which pay duties to the Exchequer. Mr. Deacon Hunt's evidence before the Import Duties Committee shows that the repeal of the Corn Laws alone would cause the revenue to flow in with such an increased prosperity as to render the income of the state abundant for all purposes. If to this we add the equalization of the sugar, coffee, and timber duties, the revenue would be still greatly augmented. Without opposing the principle of direct taxation, we say, let not the Free-Traders be considered the authors or supporters of the Income-tax, which was the direct offspring of monopoly, and which is necessary only so long as monopoly exists. Above all, let not our friends be drawn into an agitation for the reduction of revenue duties before the protective duties are abolished. A dexterous Prime Minister will be willing enough to catch popularity with the Free-Traders, by reducing the revenue duties on tea, &c., and substituting a tax upon income. There are no powerful class-interests to offend in such a course. Our business, we repeat, is to force the Government to deal with those monopolies which enrich the majority of its supporters; and this can only be done by a continued, persevering, and individual agitation against all protective duties.

Since Mr. Cobden's recommendation at the Covent-garden meeting to employ Free-Trade lawyers, we have been inundated with letters requesting us to publish a list of the persons who support the League movement. In answer to our correspondents, on personal application at the Office in Fleet-street, the names of gentlemen in whom the Council have confidence may be obtained.

"A Leaguer," (Brighton).—A deed of gift, perhaps, would be the best and least expensive mode.

L. L. cannot prove his qualification, if objected, without a conveyance. He should get his father to grant him a rent charge, which would be the readiest way of securing a qualification. The letter of "J. H. Dublin," on the "Sugar Monopoly and the Anti-Slavery Society," as well as those of other correspondents on the same subject, will shortly be noticed.

"A Y.," Roston and Victoria Railway Hotel, London.—"Is a shareholder entitled to a vote out of the above for the county of Middlesex?"

[No; the shares are only personal property.]

"X. Y. Z." would feel much obliged to the Editor of the LEAGUE if he would say, in his answer to correspondents, where he should apply to purchase one of these small freeholds, say for £250 or £300, in order to have a vote before Jan. 31, 1845.

[By calling at the Office, 67, Fleet-street, he may learn of some friends that have them to dispose of.]

"O. P. Q., Wakefield."—"I have a borough vote, and occupy land of different landlords out of the borough, for which I pay £50 a year. Will that entitle me to a vote for the West Riding or not?"

[The judges in the Common Pleas, this last term, decided it must be one rent and one holding.]

"D. H."—"By granting rent charges to your sons 40s. each. The deed will cost about £4.

"W. M. S."—"Will a lease of 56 years for a wharf, at £100 rent, with a £10 a year dwelling-house, with two houses in the lease, situated in the borough of Finsbury, give votes for the county?"

[No; the property gives a vote for the borough.]

"A Leaguer."—"1st. If a person has been in possession of a freehold many years, is it necessary to have his vote registered, having never yet had occasion to vote? 2nd. When and where are contributions to be received for the Bazaar? 3rd. Should the title deeds of freeholds be in the hands of a mortgagee, the rents being still retained by the freeholder, will the circumstance of the mortgage deprive him of a vote?"

[1st. No person can vote unless his name, &c., are on the register. 2nd. At the League Office in Manchester or London, any time prior to the end of March. 3rd. Deeds are not usually in the hands of the mortgagee; but the freeholder would confer a vote if the estate is of the value of 40s. above the mortgage money and interest.]

"A. B."—"We would rather not commend his taking legal steps merely for the sake of a vote, as we think the money he must spend in obtaining his object might be better applied to purchasing a qualification."

"C."—"Receiving weekly a mass of communications, we do what we can, as far as our space permits, to make use of such as seem to possess most interest. We cannot undertake to return those for which we have not room, or that do not suit our columns."

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the LEAGUE forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gidley, Newall's-buildings, Manchester; and the LEAGUE may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

POSTSCRIPT.

LONDON, Saturday Morning, December 21, 1844.

The movement of the Free-Traders to obtain qualifications in the counties advances more rapidly and successfully than we dared venture to anticipate. Meetings have been held during the week at Sheffield, Wakefield, Rotherham, Bolton, Burnley, and Keighley, where the project was most enthusiastically received, and committees formed to carry it into practical effect. The Free-Traders of these several localities have set themselves to work with an energy, earnestness, and determination which must ensure the success that such qualities merit. In the West Riding of Yorkshire registration committees are in active operation in every polling district, and there is now no doubt that nearer 3000 than the proposed 2000 Free-Trade freeholders will have registered their qualifications before the 31st of January. No class has taken up this project so warmly as the operatives: the working man, setting before himself the possession of a freehold as an object of practicable attainment, seeks that form of investing his savings, because, while it returns him as high a rate of interest as any other, it gratifies his honourable ambition, as the free citizen of a free country, by securing to him the right of the suffrage. In Lancashire and the West Riding of Yorkshire the result of the present movement will settle, at once and for ever, the chances of the monopolists in these most important districts. The Free-Traders have gained such strength that they are certain of returning none but staunch advocates of their cause; and they have firmly resolved to wrest the representation of the manufacturing districts from avowed enemies and from lukewarm friends.

This movement is good not merely as a means to an end; it is scarcely less beneficial when viewed in itself and by itself. So long as the representation of the counties was abandoned to the bread-taxers, that representation was a mockery and a delusion; so long as independent freeholders became few and powerless, there was a temptation for landlords to multiply the number of dependent voters, and to increase the influence of the demoralizing principle that voters were to exercise the franchise—that sacred trust, delegated to them by the community—not according to their conscience, not in the interest of their country, not with any regard to their duty towards God and man, but in obedience to the dictation of a political jobber, eager to sacrifice individual rectitude as well as the common good to his own selfish purposes. There are some calling themselves "Liberals," who have described this registration movement as one of the "fatal" consequences that have resulted from withholding Free Trade. We should be glad to inquire to whom or to what is it likely to prove fatal, except to monopolist dictation and the usurped rights over conscience assumed by the lords of the soil. It is to be hoped that the deprecatory phrase was inadvertently used by our friends of the *Morning Chronicle*, and that they are not anxious to maintain pocket-counties as a compensation for pocket-boroughs.

It is desirable that our friends in all the counties should exert themselves to increase the number of Free-Trade voters, and make such preparations as will strengthen their position at the next registration. The League is now engaged in measures which will add to South Lancashire—already won—the important electoral districts of North Lancashire, North Cheshire, the West Riding of Yorkshire, and the county of Middlesex; when these are secured, as they will be within a few weeks, the other populous counties shall engage our attention. England must be won for the English people. In this movement no exertion, however apparently hopeless or trifling, must be neglected: we exhort our friends everywhere, even in the most landlord-ridden counties, to qualify themselves as freeholders before the 31st of January. The banner of Free Trade must be unfurled not only in London and Manchester—the standard must be planted everywhere where that ground can be found for fixing its staff; the monopolists must have our flag before them every time that they lift their head, and in every direction to which they turn their eyes. A constitutional battle must be won by constitutional means; these means have been placed within our reach, but we must combine our efforts to use them aright. Let, then, the friends of Free Trade associate for the purpose of procuring qualifications and getting their names registered in every electoral division and in every polling district throughout the country. A crafty master of tactics, well versed in all the manoeuvres and stratagems of political warfare, has pointed out the course we are to follow; and we therefore join with Sir Robert Peel in saying—Register, Register, Register.

EPITOME OF NEWS.

FOREIGN.

FRANCE.—M. Bismarck, editor of the German journal *Vorwärts* ("Go-ahead"), printed in Paris, was sentenced by the Court of Correctional Police, on Friday, to two months' imprisonment, and a fine of 300L, for

publishing his paper without having previously deposited the usual security. It was stated publicly, and believed, that the prosecution was instituted at the request of the Prussian Minister in Paris, in consequence of the appearance in the *Vorwärts* of an article justifying in some measure the attempt of Tschek against the life of the King of Prussia.

The unprotected state of the public against the hordes of criminals at large in Paris has excited much alarm there. The *Reforme* states that a number of persons had written to the Prefect of Police in Paris, to inform him that their affairs obliging them to remain out to a late hour of the night, and not wishing to be murdered in the streets, they should hereafter walk armed with loaded canes, poniards, and pistols.

SPAIN.—The *Journal des Débats* announces that Col. Rengifo, Captain Pedro Garcia, and Surgeon Manuel Arilla, who, after the sentence of the court-martial held at Madrid, had been placed *en capilla* previous to their execution, were, after a meeting of the Cabinet Council, pardoned by the Queen. "This act of clemency and of royal generosity," adds the *Journal des Débats*, "does honour to the Spanish Government. It is, under existing circumstances, a proof of courage, and at the same time a proof of force. Such acts tend more to secure the duration of a Government and the peace of a kingdom than those we have been lately obliged to condemn, and we trust that they are the omen of a really humane and liberal policy."

The *Journal des Débats* publishes the following extract from a letter dated Bedous (Lower Pyrenees), of the 7th inst.:—"It may be recollected that three Spanish villages had risen in insurrection, in consequence of the attempt of General Ruiz, and had assisted in disarming two feeble detachments sent to suppress the revolt. The misery of the wretched inhabitants is far from having terminated. Yesterday twenty persons from the communes of Echo, Anso, and Siresa, came to seek an asylum on our frontier. Those unfortunate persons had concealed themselves during several days in the mountains, whence they were compelled to retreat by cold and hunger. They would have returned home, but having heard that twelve of their comrades, who had been captured by the troops, had been shot, they determined to seek refuge in France."

INSURRECTION IN SWITZERLAND.—An *estafette* reached Berne on the 9th, bringing an account of the defeat of the Liberal party in the canton of Lucerne. The insurrection commenced at five o'clock a.m. on the 8th, and was suppressed at five in the evening. The insurgents, wanting artillery, were obliged to retreat. In an attack against the arsenal they had lost a number of killed and wounded, and two of their chiefs, Dr. Steiger and Captain Auf der Maur, were taken prisoners. Colonel Guggenbühler, the ex-Councillor of State, Baumann and Isaac, succeeded in quitting the town, and the struggle recommenced in the country; but, notwithstanding the assistance afforded by volunteers from Argau, Soleure, and Basle, there was little hope of their being able to maintain themselves. The *Basle Gazette* of the 10th instant announces, that on the preceding day everything was perfectly tranquil at Lucerne. The Liberal bands had dispersed, and Professor Herzog, with about twenty students, had taken refuge at Züsingen in the Kesslo. The *Zurich New Gazette* states, that the Executive Council of that canton, having been officially informed that the Government of Lucerne had succeeded in suppressing the movement of the factions, had no further occasion for the assistance demanded of the other cantons. The Burgo-master of the Executive Council of Zurich had addressed a proclamation to the inhabitants, to inform them officially that order had been restored at Lucerne. In this proclamation it is said that Zurich had called the attention of the Government of Lucerne to the unpleasant consequences which might attend the admission of the Jesuits, and that it is to be regretted its advice was not followed; but, on the other hand, Zurich protests with energy against any attempt at a violent intervention in the affairs of the state, and demands that none but legal means should be resorted to in order to obtain redress for the grievances complained of.

On Sunday week a poor little Savoyard was found frozen to death on the ramparts at Douai. He had with him his only friend and companion, the carner of his bread, a little white mouse!—*Galignani*.

STEAM-BOAT COLLISION OFF OSTEND.—(Extract of a letter dated Dec. 18.)—Information has reached us that the Princess Mary and the Princess Alice came into collision yesterday as the former, in a dense fog, was leaving Ostend with the mail, and the latter entering. No lives have been lost (thank God for that); but much damage has been done to the vessels, the Princess Mary suffering the most; a week or two will, however, put her right.

HAMBURG, Dec. 12.—Several merchants of our city, who have long resided in Brazil and are well acquainted with the state of that empire, entertain strong doubts of the negotiations which are on the eve of being opened between the Zollverein and Brazil producing any important advantages to the German manufacturers, as Brazil would fear the reprisals from England. The mission of Viscount d'Abrantes, and the negotiations he will open with the Zollverein, must be looked upon as an attempt on the part of Brazil to obtain at least some concessions from England; and it is confidently believed that, should a treaty be concluded between the Brazilian Government and the Zollverein, the former power would extend the advantages of the same to Great Britain.—*Augsburg Gazette*.

THE TREVEN PILGRIMAGE.—BERLIN, Dec. 9.—To-day we learn from Breslau that the chapter of the cathedral degraded and excommunicated the Catholic priest, Ronge, on the 3rd inst., so that he is excluded, not only from the priesthood, but from the church. The affair has caused great excitement at Breslau, and other parts of the country.

THE JEWS IN RUSSIA.—The *National* states that Russian and Polish Israelites are emigrating in great numbers to Prussia, in order to avoid being transported by force to the remote quarters of the Russian empire. The greater number propose to remove to France or to America. They expect that their brethren in those countries will afford them pecuniary assistance.

PETERSBURG, Dec. 5.—On the proposition of the Minister of Domains of the Empire, his Majesty has approved of the establishment of a society for the encouragement of the agricultural and manufacturing economy in Livonia.

UNITED STATES.—The British and North American royal mail steam-ship, *Britannia*, Captain Hewitt, arrived

in the Mersey on Monday. She left Boston on the 1st inst., Halifax on the 3rd, and made the run from the former port, including the usual detention at Halifax, in rather more than fourteen days and a half. The final result of the election for President is as follows:—Clay, 105; Polk, 170: Polk's majority of electoral votes, 65. The second session of the 28th Congress was to commence on the 2nd inst., and the President's message would probably be delivered on the following day. It is generally agreed that the annexation of Texas will be strenuously urged. The *New York American* of the 30th ult. says:—"Attention will be turned chiefly in regard to the topic of Texas, of which the annexation will, it is expected, with great probability, be urgently pressed. As to the expediency of occupying the Oregon territory, too, it is supposed there will be held very decisive language; and these two topics, connected with the obnoxious proceedings of some British cruisers towards American vessels on the coast of Africa, constitute matter which an unfriendly tone might exaggerate into serious discords." The Texan Congress was to meet on the 2nd instant. It is reported in Galveston by a gentleman just from the west, that intelligence had reached San Antonio, that all Northern Mexico along the Rio Grande is now in a state of revolt against the Dictator. The report appears to have obtained but little credence, and occasioned no great excitement. The *New Orleans Courier* thinks this intelligence is entitled to no confidence.

MELANCHOLY SHIPWRECK.—Letters received in the City on Saturday afternoon from the Cape of Good Hope, dated September 28, mention the total loss of an East India trader, called the *St. Mungo*, a fine barque, 355 tons, commanded by Captain Lamond, and, what was worse, ten of her crew met with a watery grave. It appears the melancholy event occurred on the night of the 20th of that month (September), on the point of Cape L'Agullas, during a severe gale of wind from the westward. She was on her homeward passage from Calcutta to Newcastle-upon-Tyne, to which place she belonged, and had a very large cargo on board, consisting of merchandise of every description. For several days the weather, it seems, was exceedingly stormy, when on the night in question the wind blew terrifically, in the height of which the ship, to the consternation of the crew, struck on some rocks, which subsequently proved to be those on the extreme point of Cape L'Agullas. In a few seconds afterwards the vessel pitched on her broadside, the mainmast giving way and falling overboard. Whether any of the poor creatures took to the boats or not we are unable to say, but at daybreak ten of the crew were found to be missing, and in the course of the morning it was ascertained beyond a doubt that they had perished.

DOMESTIC.

A dreadful accident occurred on Saturday night last, at Drury Lane Theatre, to Miss Webster, the dancer, while performing in "The Revolt of the Harem." The light drapery of her dress accidentally caught fire from gas placed at the bottom of the stage; she was instantly enveloped in flames, and ran round the stage shrieking and causing great consternation among the audience. One of the carpenters having at length seized her in his arms, threw her down and, rolling over her, succeeded in quenching the flames, but not until she had been severely burned in the breast, hands, and lower extremities: he also suffered some injury himself. She received immediate medical aid, but, although she appeared and was pronounced out of danger, on Tuesday she became suddenly worse, and, after suffering great pain, became insensible and expired.

On Saturday her Majesty and Prince Albert visited the Smithfield Club Cattle Show. The black polled ox, bred by the Prince, and other oxen, the Southdown sheep of the Duke of Richmond, and mangold wurzel grown by Lord Radnor, chiefly attracted her Majesty's notice.

On Sunday morning last three husbandmen—John Stedman, Thomas Webb, and George Wright—in the employment of a farmer, Mr. Oakley, at Darling, were found dead in their bedroom, in the village of Luton, near Chatam. The unfortunate deceased, it appears, had their bed in a room having no fireplace, and in which, to keep out the cold, the landlord's wife had placed a lantern filled with lighted charcoal; and from the position of their bodies it would seem that, on entering the apartment with a view to going to sleep for the night, they had all three been suddenly overpowered by carbonic acid gas, which caused their speedy death by suffocation.

A dreadful collision took place on Tuesday afternoon, between the Sylph, Woolwich steamer, and the Orwell of Ipswich, between Woolwich and Greenwich. It appeared that after the Sylph had landed her passengers at Woolwich, she was proceeding up the river with a fresh supply of about forty persons, when about half a mile from Greenwich the Orwell, which was coming in an opposite direction, came with fearful contact against her larboard side, and capsized her. She almost immediately filled and went down. The Orwell was proceeding on her voyage to Ipswich, and, the weather being foggy, it was believed that the captain could not see the Sylph until they came in contact. Several persons on board the Sylph received severe injuries: one who was taken on board the *Dreadnought* died; another who had his eyes knocked out, and a leg and an arm broken, is also since dead.

A man named James Crowley, of Parnell, was arrested on Saturday last at Chester, charged with the murder of William Tilsey, one of his father's farm-servants, whom he shot with a gun on Christmas-day, 1842. The prisoner fled on committing the act, then went to the United States, from whence he returned, and has resided since March last at Chester. He constantly carried a pistol with him, which was found on his person, together with powder and ball, when arrested. On being seized he avowed the act, and signed the following declaration:—"I have to say I am guilty of what I should do again to-morrow. I did shoot the man in open day. I think I did my duty."

The Manchester manufacturers have subscribed £2837 towards a testimonial to Sir Henry Pottinger, which was to be presented at a public entertainment in that town on Friday; and the week following the merchants, &c., of Belfast (of which place Sir Henry is a native), pay a similar compliment to him.

At the last celebration of the Lord's Supper at Wandsworth Church, a lady placed on the silver at the altar a £100 note, to be laid out by the worthy vicar in warm clothing and fuel for the poor of the above parish.

On Sunday night week the *Hera*, a schooner with a general cargo from London to Amsterdam, was wrecked

off Languard Fort beach, and notwithstanding the most praiseworthy efforts of Captain Saxby, commander of the Revenue cruiser *Scout*, and his men, the crew of the unfortunate vessel, save one man, all perished.

On Thursday night week a fire was discovered on board the ship *Scotland*, moored at the Broomielaw Quay, Glasgow, and before it could be got under destroyed the cargo and left the vessel a complete wreck.

Between Saturday and Sunday evening not less than eight fires occurred in various parts of the metropolis.

A great repeal banquet was given to Mr. O'Connell, at Waterford, on Friday, the 13th inst. The chair was occupied by the mayor. Mr. Roche, M.P., Dr. Gray, and other leading repealers were present.

The Repeal Association met on Monday, in the Conciliation Hall, Dublin. The attendance was not numerous, and the proceedings possessed no peculiar interest. The rent for the week was £179. 12s. 6d.

A meeting of magistrates has been held in the King's County, to take into consideration the disturbed state of the district. Resolutions declarative of the increase of agrarian outrages, and calling on the Government for an increased police force and other such measures, were agreed to.

On Monday last, the long closed up avenue at the east end of the 'Change, formerly Freeman's-court, was opened to the public. By this opening all sides of the new building were cleared, and the shops and offices all round became accessible. Wednesday a further step was made for public accommodation, and for the gratification of public curiosity, by the throwing down of the barriers of the portico at the west-end, and the opening of the merchants' area to the free access of the public. On the 1st of January it will be given up to the merchants for their use.

Sir Henry Pottinger was entertained by the merchants of Liverpool, at a grand banquet given to him in that town, on Tuesday. Lord Stanley was one of the guests, and took part in the proceedings.

It is said that the nomination for the Dartmouth election will take place on the 23rd, and the polling, if any, on the following day.

Thursday evening a respectable and very numerous meeting was held in the long-room, Exeter Hall, to consider the pecuniary difficulties of the Rev. T. Mathew, with a view to aid in raising a fund to assist him in the discharge of the debts he has incurred while carrying on his temperance labours in Ireland. Lord J. Russell presided, and spoke warmly of the benefits conferred on Ireland by Father Mathew. Admiral Codrington, Mr. J. S. Buckingham, and other gentlemen, spoke and supported resolutions to the like effect. A subscription was then opened, and thanks having been voted Lord J. Russell for his kindness in taking the chair, the meeting separated.

By the tables of mortality, published for the week ending 11th of December, the number of deaths in the metropolis, from all causes, amounted to 1291, of which 31 were from violence, being an increase as to the 1170 of the previous week, arising from natural causes, of 205.

The first annual meeting of the Metropolitan Relief Society was held on Thursday at the Hanover-square Rooms; the Bishop of London in the chair. By the report it appears that 50 societies, employing 1000 visitors, were added to the society during the year, their operations extending over a population of 530,000; 20 other societies are partially supplied from its funds. The annual subscriptions at present amount to scarcely £500. The income of the society had been £20,408, and the expenditure £9993; the rest, having been laid out in Exchequer-bills, now being sold in weekly portions as occasion requires.

LIVERPOOL SAILORS' HOME.—The published list of subscriptions to this most important institution amounts to the sum of £12,307. 11s. His worship the Mayor of Liverpool has given £150.

RISE OF RENTS.—The English farmers are complaining loudly of high rents and low markets, but ours seem neither to feel nor apprehend anything of the kind; witness the following fact:—Three farms, whose aggregate rents under the expiring leases were £1295, were let by Mr. Bailie, of Mellerstane, last week for £1790.—*Scotsman*.

STRIKE OF THE POWER-LOOM WEAVERS OF GLASGOW.—We understand that at a meeting of the power-loom weavers, representing factories in and around Glasgow, which was held in the New Chapel, Nelson-street, on Friday last, it was unanimously resolved that the weavers should give in their warning on the 14th of the present month, and cease working on the 29th, provided that their demand for an advance of wages is not by that time complied with.—*Glasgow Chronicle*.

REPEAL OF THE DUTY ON COTTON WOOL.—A numerous meeting of merchants and manufacturers was held in the Town-hall, Manchester, on Tuesday, for the purpose of petitioning Parliament for a repeal of the duty on cotton-wool. The Mayor presided. The meeting was addressed in able speeches by Mr. R. H. Greg, Mr. Robert Gardner, Mr. Alderman Hopkins, Mr. John Shawcross, and Mr. Robert Stuart; and a deputation, in conjunction with the directors of the Chamber of Commerce, was appointed to wait on the Lords of the Treasury for the purpose of urging the repeal of the tax.

HOW TO MAKE GOOD PARLIAMENTARY REPRESENTATIVES.—You ought not solely to rely on us; for be assured that it is not either the members of Parliament, or the men in any other public capacity, that have made or kept a people safe and free, if they were wanting to themselves. If members are honest, they deserve, and I am sure they will want, support; if they are corrupt, they merit, and I am sure they ought to have, blame and reprehension. We are like other men, who all want to be moved by praise or shame; by reward and punishment. We must be encouraged by our constituents, and we must be kept in awe of them, or we never shall do our duty as we ought. Believe me, it is a great truth, that there never was, for any long time, a corrupt representative of a virtuous people; or a mean, sluggish, careless people that ever had a good government of any form. If it be true, in any degree, that the governors form the people, I am certain it is as true that the people form the governors. Such as you are, sooner or later, must Parliament be.—*Kilmarnock Herald*.

WHEAT.

Quantity of Wheat imported into Canada from the United States of America, from Oct. 11, 1843, to July 5, 1844:—

By sea	634
By inland navigation or land carriage	21,161
Total	21,795

The returns from Canada having been received only to the 5th of July last, the foregoing statement has necessarily been made up to that day, instead of the 31st of the same month, the day specified in the order of the Hon. House.

Quantities of Wheat and Wheat Flour, the produce of Canada, imported (for home consumption) from Oct. 11, 1843, to July 5, 1844, being the latest period to which the returns have been received.

WILLIAM IRVING.

Inspector General's Office, Customs House,
London, Sept. 4, 1844.

PRICE OF CORN.—HAMBURG, Dec. 13.—Wheat—Polish, 87 to 122; Anhalt and Magdeburgh, red, 80 to 98; ditto, white, 90 to 114; Marks and Brunswick, 80 to 98; Silesian, yellow, 78 to 94; ditto, white, 87 to 111; Mecklenburgh and Pomeranian, 68 to 102; Holstein, 68 to 84; Elder and Busum, 70 to 82; Lower Elbe, 70 to 84.

RUSSIAN COMMERCE.—We learn by the official returns made to the Russian Government of the commerce of Russia in 1843, that the exports amounted to 82,563,000 silver rubles, and the imports to 75,028,399 silver rubles. In 1842 the exports amounted to 85,358,206 silver rubles, and the imports to 81,593,391.

LOWELL.—The statistics of Lowell manufactures show that the whole amount of capital invested in that place is over 11,000,000 dollars. Sales of cotton used per annum, 62,010; pounds of wool doted, 1,000,000; tons of anthracite coal doted, 12,500; gallons of oil doted, 67,819; spindles, 201,076; yards of cloth made per week, 1,425,800.—*American paper.*

SUNDERLAND.—The Lords of the Treasury have granted £750, part of the Parliamentary grant for public works, &c., to the corporation of Sunderland, in aid of a plan for providing a place of recreation for the inhabitants, the only condition of the grant being, that the ground, when purchased, shall be legally and permanently secured as a place of recreation for the people. It is intended to purchase and lay out Building-hill. The estimated cost is about £3000, the remainder of which will be raised by public subscription.

NAVIGATION STATISTICS OF TAHITI.—According to the returns of the navigation of Papeti (Tahiti) during the last quarter of 1844, the number of vessels which visited that harbour in that interval were—whalers, French, 3, measuring 715 tons, manned by 96 men, with 3010 barrels of oil, valued at 222,000f.; English, 1, measuring 330 tons, and a crew of 31 men, with 1700 barrels of oil, valued at 95,000f.; American, 15, measuring 4853 tons, manned by 430 men, with 16,270 barrels of oil, valued at 877,000f.; from Bremen, 1, measuring 310 tons, with a crew of 31 men, with 1700 barrels of oil, valued at 95,000f.; total, 20 vessels, measuring 6238 tons, and crews amounting to 551 men, with 23,280 barrels of oil, valued at 1,289,000f. Commercial vessels, French, freighted by merchants, 8, measuring 213 tons, and crews of 39 men, the cargoes of which are valued at 16,250f.; French, freighted by the State, 5, measuring 1842 tons, and 85 men, the value of the cargoes not mentioned; English, 9, measuring 1094 tons, with crews of 81 men, value of the cargoes 221,500f.; Chilean, 1, measuring 115 tons, and a crew of 7 men, value of the cargo 15,000f.; Danish, 2, measuring 633 tons, manned by 30 men, value of the cargo 65,000f.; total, 25 vessels, measuring 3927 tons, manned by 245 men, value of the cargoes, 317,750f.

THE AMERICAN TRADE.—Recent advices from the United States give but a gloomy picture of the state of business, so far as regards British manufactures. Our exports the last season have been greatly in excess, and sales effected to a ruinous loss. With this exception business was tolerably good and money abundant, notwithstanding the exchanges were against them, causing an export of specie which to this country has reached, during the last three or four weeks, to between £300,000 and £400,000. The prospect for a revision of the tariff appears remote, for, although the election of President has terminated in favour of the "Free-Trade candidate," no action can be had upon it before the summer of 1846, by which time, in a country where changes are so frequent and the results so uncertain, public opinion may go in favour of protection. We gave it as our opinion in the month of January, that the increased home demand for manufactures would curtail materially their exports; and it now appears that up to the 31st of August they amounted to not quite one half of those to the same period in 1843.—*From Gibson, Ord, and Co's Monthly Circular, Dec. 5.*

THE WINE RISING FOR FREE TRADE.—We rejoice to learn that the suggestion of the League with respect to the electoral lists of the West Riding, is taken up with spirit in all the most populous districts. A valued friend in Huddersfield writes—"We were out in the country yesterday on this business, and wherever we called we found the people quite prepared, almost working for us, rejoicing that the question is taking a practical turn. Within two days of Mr. Cobden's visit, we received 100 signatures of parties willing to be placed on the register; we expect to obtain 300; and shall aim at 500. If the present enthusiasm continues it is not at all improbable that we shall obtain the larger number. It is astonishing what a rich mine of strength this new idea has opened. We know not our own power." The like feeling exists in the Halifax and Leeds districts: in the former they expect to add 600, and in the latter 500, to the register. If anything like a corresponding feeling be evinced in the Bradford, Sheffield, and other manufacturing districts, the doom of monopoly in this riding is sealed.—*Bradford Observer.*

ROYAL POLYTECHNIC INSTITUTION.—The musical illustrations which Mr. C. Horn gave last season at this institution having proved highly attractive, the proprietors have re-engaged that gentleman, with the view of adding to the intellectual enjoyment which the visitors of

this place meet in every portion of the establishment. On Tuesday Mr. Horn made his bow to a large audience in the theatre of the institution, who listened with manifest pleasure to a lecture on the national music of England. Mr. Horn proved that, even in the most barbarous periods of English history, music of a purely national character existed in this country; and from the instances which he gave, between that time and the present, in support of his hypothesis, he placed the correctness of his argument beyond all doubt. His illustrations, both instrumental and vocal,—in the former of which he was supported by an efficient band, the latter depended entirely upon himself,—were, besides being most appropriate, of a gratifying and effective description. In the course of the illustrations he gave one of his own composition, "Come, come with me," in so pleasing a manner that it was enthusiastically encored. We have no doubt but his musical lectures and illustrations will command large audiences at this institution for the remainder of the season.

MARKETS.

CORN MARKET.

MARK LANE, Monday, Dec. 16.—The supply of English Wheat this morning was rather short; it was taken off readily at last week's prices. The demand for Foreign was not active, but former rates were fully realised. For the finest samples of Chevalier Harley a little improvement in price was obtained: other descriptions of English and Foreign were sold on the same terms as this day week; there was rather more inquiry for feeding qualities, but the sales made were not extensive. New Beans and Peas brought the same prices as last week, but there was rather more inquiry for Old Beans at a trifling improvement in price. Not a single cargo of Irish Oats was reported during last week, and only two cargoes arrived in time for market this morning; the supplies of Foreign and English were also quite trifling. The very small quantity offering causes buyers to hold off as much as possible; the little business done was at an advance of 6d. from this day week. The frost broke up yesterday; the river is already clear of ice, and we may expect the canal will be navigable again in a day or two, unless the frost returns.

Flour, 8930 sacks, — bars.

FRIDAY, Dec. 20.—The supplies of all descriptions of grain coastways and from Ireland since Monday are exceedingly scanty, and not a single cargo of foreign grain is reported. There is a very small attendance of buyers there to day. The little English Wheat offering, as well as foreign, sells at Monday's prices. The finest samples of Matting Harley are taken off readily at fully former rates; and though the demand for secondary qualities is slow, they are not cheap. Beans and Peas are the same as on Monday. The flat dealers still hold off for the expected supply; the little business doing is almost entirely to consumers, who are compelled to purchase, and consequently to give some advance on Monday's rates. The duty on Rye advanced to 10s. 6d. yesterday.

A. H. LUCAS and Son.

FRIDAY, DECEMBER 13.

DECLARATION OF INSOLVENCY.

H. HIGGINS, Leeds, Yorkshire, cloth merchant, BANKRUPT.

C. SNEEZUM, Wynatt-street, Clerkenwell, licensed victualler, [Buchanan and Grainger, Basinghall-street.

W. ATWATER, Devonshire-street, Queen-square, dyer, [Whitaker, Furnival's-inn, Holborn.

S. LEBBIS, Stratton St. Mary, Norfolk, innkeeper, [Abbott, Rolls-yard, Chancery-lane; Day, Norwich.

R. STOCKLEY, Ramsgate, Kent, upholsterer, [Llewellyn, Cook's-court, Lincoln's-inn-fields.

J. FORSTER, Leeds, Yorkshire, cloth manufacturer, [Wiglesworth, Rildesdale, and Craddock, Gray's-inn-square.

B. CREIGH and T. R. CREIGH, Newcastle-upon-Tyne, cartwrights, [Gibson, Newcastle-upon-Tyne; Maples, Furness, Maples, and Stevens, Frederick's-place, Old Jewry.

H. BENTLEY, Liverpool, commission agent, [Oliver, Old Jewry; Evans, Liverpool.

A. FRANCIS, Halkin, Flintshire, ironfounder, [Milne and Co., Temple; Roberts and Son, Mold, Flintshire.

G. HARROLD, Birmingham, merchant, [Messrs. Ryland, Birmingham.

T. BERRSFORD, Lincoln, boatowner, [Galworthy and Co., Cook's-court, London; Andrew, Lincoln; Payne, Addiscombe, and Ford, Leeds.

S. PARSONS, Manchester, paperhanger, [Edge and Parker, Manchester; Mawe, Bridge-street, Blackfriars.

DIVIDENDS.

Jan. 10. J. W. Braddick, Bristol, tanner.—Jan. 10. W. Walker, Walnes, Lancashire, dealer.—Jan. 10. J. Parker, Manchester, coachbuilder.—Jan. 16. J. Whitehead, Alnworth, Lancashire.—Jan. 15. C. D. Broughton and J. J. Garnett, Nantwich, Cheshire.—Dec. 31. T. Todd, Manchester, dealer in cotton goods.

CERTIFICATES.

Jan. 4. H. Dencon, Waterloo-road, coal merchant.—Jan. 4. F. Cock, Lambeth-walk, Surrey, painter.—Jan. 6. W. Walker, Birmingham, hatter.—Jan. 6. J. Garrett, Tipton, Staffordshire, grocer.—Jan. 16. J. Whitehead, Alnworth, Lancashire, common brewer.

SCOTCH SEQUESTRATIONS.

J. WEIR, Kilmarnock, tobaccoist.—J. ROSE, Invergorrie, ironmonger.—P. WOOD, Edinburgh, banker.

TUESDAY, DECEMBER 17.

BANKRUPTCY SUPERSEDED.

W. C. BUTTRISS, Sewardstone, Essex, silk throwster, BANKRUPT.

L. WATSON, Rickmansworth, Hertfordshire, smith, [Walters, Basinghall-street.

W. A. WORTH, Hampstead, victualler, [Pike, Lincoln's-inn-fields.

H. C. BALNE, Poole, grocer, [Shaw, Furnival's-inn.

J. THORLEY, Northampton, china-man, [Smith and Taylor, Basinghall-street.

R. BROCKLEY, Crewe, Cheshire, huedraper, [Makinson, and Sanders, Elm-court, Middle Temple; Atkinson and Saunders, Manchester.

F. FOTHERGILL and J. M'INNES, Scotlandwood, Northumberland, lampblack manufacturers, [Chisholme, Hall, and Gibson, Lincoln's-inn-fields; Harle and Kent, Newcastle-upon-Tyne.

S. PEACH, Nottingham, grocer, [Maples, Nottingham.

DIVIDENDS.

Jan. 10. M. Thompson, Baffron Walden, Essex, ironmonger.—Jan. 10. W. Yull, Cornhill, tailor.—Jan. 11. I. Isaac, Chatham, Kent, army clothier.—Jan. 11. H. Milne, Southampton, Hampshire, woollen draper.—Jan. 11. T. Rowell, Cambridge, linen draper.—Jan. 11. A. Hay, Great Queen-street, Lincoln's-inn-fields, coachmaker.—Jan. 11. D. Burton, Allion-place, Battle-bridge, pawnbroker.—Jan. 11. N. Blake, Edgware-road, hatter.—Jan. 11. C. Bayley, Abingdon, Berkshire, draper.—Jan. 11. J. Battye, Courtney-terrace, King'sland, huedraper.—Jan. 10. K. Walker, Newman-terrace, Oxford-street, auctioneer.—Jan. 7. G. and W. Noel, Jermyn-street, St. James's, bootmakers.—Jan. 16. J. Marshall, Birch-lane, City, merchant.—Jan. 10. W. G. Kelton, Canterbury, builder.—Jan. 14. T. Fraser, Brook-street, Bond-street, Italian warehouseman.—Jan. 15. J. Bird, St. John's-square, Clerkenwell, watch manufacturer.—Jan. 15. J. Richards, George-yard, Lombard-street, City, gold broker.—Jan. 10. J. C. and O. H. White, Bath, music sellers.—Jan. 8. R. Hetherington, Cross Canby, Cumberland, tanner.—Jan. 8. W. Hearup, Newcastle-upon-Tyne, joiner.—Jan. 8. G. Newton, Seatham-harbour, Durham, bookseller.—Jan. 10. G. J. Greco, Birmingham, glass manufacturer.

CERTIFICATES.

Jan. 9. R. Buckler, Birtley, Hampshire, grocer.—Jan. 9. G. and W. Noel, Jermyn-street, St. James's, bootmakers.—Jan. 7. F. Howard, Tonbridge-place, New-road, publisher.—Jan. 10. T. Benson, North-place, Gray's-inn-road, stationer.—Jan. 7. P. French, Worthing, Sussex, carpenter.—Jan. 9. B. Hervey, Hartlepool, Durham, butcher.—Jan. 9. J. Haron, South Blith, Northumberland, shipowner.—Jan. 9. J. Nicholl, Hallowgate-street, Wigan, watch housekeeper.—Jan. 7. M. Morton, Bishopton, Kildare, Yorkshire, woollen cloth manufacturer.—Jan. 7. J. Jones, Liverpool, merchant.—Jan. 7. H. Ford, Manchester, huedraper.—Jan. 7. D. O'Leary, Bath, wine merchant.—Jan. 7. T. Eldridge, Upper North-place, Gray's-inn-road, coach builder.—Jan. 7. W. Bowen, Methyr Tydvil, Glamorganshire, grocer.

SCOTCH SEQUESTRATIONS.

G. MOON, Russell-mill, Fifeshire, mill splener.—D. SCOTT, Dundee, grocer.—J. M'FARLANE, Glasgow, dyer.—K. GLASS, Edinburgh, printer.

THE LEAGUE.

No. 66.]

SATURDAY, DECEMBER 28, 1844.

[3d.]

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All Subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive, a copy weekly of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

The League Bazaar will be held during the month of May next, in the Theatre Royal Covent Garden.

We beg to inform our subscribers that bound volumes of the LEAGUE newspaper, containing the whole of the first year's numbers, may be had on application at the Offices either in London or Manchester.

Persons wishing to be on the Register next year, as Freeholders for County Votes, must be in possession of the property, or in the receipt of the rents and profits, before the 31st of January.

The parties must ~~the~~ claim to be registered, and, to secure their due registration, the Council of the League invite freeholders to send in their claims to the Offices, Fleet-street, where they will be filed and examined prior to their being sent to the overseers of the parish where their qualification is situate; which will be done between the 20th of June and 20th of July, and not before, as the overseers are not legally bound to take cognizance until that period; or to call and have their claims properly filled in, when forms will be given them. The new Registration of Voters Act requires the claims to be set forth very specially; and it frequently happens that, for want of due precision in stating the claim, the claimant is open to objection and loss of his franchise for the year. It will also give the Council an opportunity of defending the claim if objected to by the monopolists.

QUALIFY, QUALIFY, QUALIFY.

PRACTICAL INSTRUCTIONS FOR ELECTORAL QUALIFICATION.

The electors for counties are as follows:—Freeholders, copyholders, leaseholders, occupying tenants.

FREEHOLDERS.—The following persons are entitled to vote as freeholders:—1. Any person possessed of a freehold estate for himself and his heirs, or, as it is called, an estate of inheritance, of the yearly value of 40s. 2. Any person possessed of a freehold estate for life or lives of the yearly value of £10. 3. Any person possessed of such an estate for life or lives of the yearly value of 40s., under any one of the following circumstances:—If the estate was acquired on or before the 7th of June, 1832; or since, if by marriage or marriage settlement, by devise (i.e., by will), or by promotion to any benefice or office, or if the freeholder is himself the actual occupier of the property. In any of these cases it is sufficient if the property be of the yearly value of 40s. Parish clerks, sextons, schoolmasters, Dissenting ministers, and holders of offices have a right to vote if entitled to emoluments of 40s. per annum, arising out of, or charged upon, land, and may be registered as voters in the parish wherein the land is situate. The appointment must, however, be for life, not for a temporary purpose, or at the pleasure of any other party; but an appointment during good behaviour is considered to be an appointment for life. If the freeholder occupy his own freehold property in a borough, of such a nature and value as would confer upon him the right to vote for the borough, he will not be entitled, in respect of that property, to vote for the county. But if the freehold is, if it be not of the annual value of £10, or if it be land without building, the freeholder may vote for the county, though he occupy it himself. And if the freeholder do not occupy his freehold situate within a borough, he may vote in respect of it for the county, and his tenant may also vote for the borough. Six months' possession prior to the 31st of July will entitle a freeholder to be

registered. And if the freehold lands or tenements should have come to him by descent, succession, marriage, marriage-settlement, will, or promotion to any benefice in a church, or to any office, no definite period of previous possession will be necessary.

COPYHOLDERS.—Any person possessed of any lands or tenements of the clear yearly value of £10, whether of copyhold or any other tenure than freehold, is entitled to vote. Tenants in ancient demesne may in general vote as freeholders, if they do not hold by copy of court-roll, but otherwise they will be entitled as copyholders. As freeholders, 40s. per annum will be sufficient; but as copyholders, £10 a year is required. The same period of possession previous to registration is required, in respect to copyholders, as in respect to freeholders. Copyhold property within a borough, if of such a nature as would qualify any person to vote for the borough, will not, under any circumstances, give a right to vote for the county.

LEASEHOLDERS.—The right of voting in respect of leasehold property extends to—1. Any person who is entitled by virtue of a lease made or assigned to him of any lands or tenements for the unexpired residue of any term originally created for a period of not less than 60 years, if the property is of the clear yearly value of £10 above all rents and charges. 2. Any person who is in like manner entitled to the unexpired residue of a term originally of 20 years, if the lands and tenements are of the clear yearly value of £50. The party to whom the lease was originally made, or a party to whom such lessee may have assigned the original lease, may vote, though not in occupation of the premises. Any sub-lessee or assignee of an under-lease may also vote, but only when in occupation of the premises. Lessees or assignees must have been in actual possession for 12 months previous to the 31st of July, unless the qualification is acquired by any of the modes before mentioned as excepted; that is to say, by the death of a relative, by marriage, by will, or by promotion to any benefice or office. Leasehold property in a borough, if of such nature and value as will give any person a vote for the borough, will not give a vote for the county.

OCCUPYING TENANT.—Any person occupying lands or tenements for which he is liable to pay a yearly rent of £50 is entitled to vote, if not within a borough, and not of such nature as would qualify a person to vote for the borough. In respect of the period of previous possession required, occupying tenants are placed on the same footing as leaseholders; but it is not requisite that the occupation be of the same lands or tenements: different lands and tenements occupied in immediate succession for twelve months previous to the 31st of July in each year will give the qualification.

GENERAL OBSERVATIONS.—Besides lands, houses, buildings, and the like, property and interests of the following description will entitle the owner to be registered and to vote, viz.—(1) An annuity charged on land, a rent-charge, a fee-farm rents issuing out of an estate in fee; shares in navigable rivers, canals, &c., where the shareholders possess an interest in the soil; tolls of bridges, tolls of fairs and markets, purchases of unredeemed land-tax. Persons who have entered into an agreement of purchase of property, or who have paid any part of the purchase-money, or done any other act in part performance of the agreement, are considered to have equitable estates, and are entitled to vote and to be registered. Joint tenants and tenants in common have each a right to vote, provided the property be of sufficient amount to give to the share of each the value required. Mortgagees may vote, if in actual possession or in receipt of the rents and profits, but not otherwise. Trustees are expressly excluded from voting for any trust estate; the right of voting in respect of trust property is reserved for the cestui que trust. In estimating the value of freehold or copyhold property, the marketable value of the property to let is the criterion to be attended to. If, owing to accidental circumstances, the rent should be less than might be obtained, the property will still give a right to vote. As regards leaseholds, the value required does not depend on the amount of rent. It is to be estimated by the profit which the tenant can make of the property, over and above the amount of rent reserved and any encumbrances charged on the property. The value required is to be "above all rents and charges." Under these words are included all encumbrances affecting the property, but not any public or parliamentary taxes.

BOROUGH FRANCHISE FOR 1845.

In order to secure a borough vote next year, those who occupy premises giving a qualification should immediately see that their names are placed on the poor's rate-book.

A claimant must be rated, or have claimed to be rated, to all rates made during the year ending the 31st of July. If, therefore, his name is omitted from any rate made during that time, he should immediately claim to be rated. The overseers are required to put the name of a person so claiming on the rate last made; consequently, if the claimant suffers two rates to be made before he claims, he will be unable to get upon the former one, and will thereby lose his vote for one year.

No particular form of claim to be rated is prescribed by the Reform or Registration Acts; but the following form may be adopted:—

"CLAIM TO BE RATED."

"To the Overseers of the Parish of _____
"I hereby give you notice that I occupy a _____ at No. _____ in _____ Street, in your parish, and I claim to be rated to the relief of the poor in respect of such premises, in order that I may be entitled to vote in the election of a member (or members) of Parliament for the city (or borough) of _____.

"Dated this _____ day of _____, 1844.

"(Signed) _____

* No registration of annuities or rent-charges with the clerk of the peace is requisite. The 3rd Geo. III., c. 24, is repealed.

Insert the name of the parish, the nature of the premises, as house, shop, room, or as the case may be, and the name of the street, &c., and of the city or borough, also the date. The christian and surname and place of residence of the claimant should be inserted at full length. Give the claim to an overseer, keeping a correct copy, on which should be written the date when, and the name of the overseer on whom, it was served. If any poor's rates are due for the premises at the time of making the claim they must be paid, or the amount due tendered. Should the overseer refuse to accept the money, or omit to enter the claimant's name in the rate-book, he will be deemed to be rated notwithstanding; but, if the claimant's name be omitted from any future rate, he should again claim to be rated.

THERE IS YET ANOTHER MONTH.

To those who are not in possession of the county franchise the next month is a period of critical importance. The register for 1846 will be closed against all who possess qualifications purchased after the 31st of January next. This is important: for should we escape a not improbable break-up of parties in 1845, it is all but certain that a dissolution of Parliament will take place the year following. There are just thirty-four days left, during which all who are not qualified, but who are able and willing to purchase 40s. freeholds, may secure for themselves the privilege of striking a blow for Free Trade at the hustings in 1846. Come when it may, the next general election will be fraught with more momentous consequences than any that has occurred since the passing of the Reform Act; and we can predict the regret and remorse which every Free-Trader will feel who shall be doomed to look on, an inactive spectator upon that contest, having neglected the precious opportunity for placing himself on the muster-roll of voters.

The work goes gallantly forward in those counties where the leaders of the League have their headquarters. Nothing can be more satisfactory than are our accounts from North and South Lancashire, the West Riding of Yorkshire, Middlesex, and North Cheshire. But we are anxious that this effort to enlarge the county register should not be confined to a few leaders or to certain districts. It must be as extensive as the operation of the 40s. freehold qualification, and embrace all England and Wales. It requires no gifts of prophecy, or other high talents, to qualify individuals to be useful in this movement. All that is wanted is earnestness of purpose; and that this quality abounds in the breasts of great numbers in every county our subscription-list alone is a sufficient guarantee. Some organized system of action should be entered upon by the friends and subscribers to the League in every locality where three or more of them are to be found. A copy of the county register should be procured and distributed in parts to the several polling districts, and an immediate canvass should be entered upon to induce those friendly to Free Trade, who are not on the register, to purchase a qualification before the 31st of January. The sole business, up to that date, should be to increase the number of qualifications. Other matters, such as the claiming to be registered for those already qualified, and the striking off from the register the bad votes of the monopolists, may be attended to better after than before the 31st of January. But, when that day is passed, it will require nearly two years to make a new qualification by purchase available at the polling booth.

No county should be given up in despair, because upon the present register our chance appears hopeless. Let the Free-Traders everywhere secure a qualification in the first place in their own county, whichever it may be, and then purchase freeholds in as many others as convenient. We would not make even Buckinghamshire an exception to this rule. The county registers generally give a very erroneous view of the state of parties: they require a purging revision, by which hundreds and sometimes thousands of bad votes might be struck off from a single register. In some counties, such as Buckinghamshire and Westmorland, where a contest was not likely to occur, there has been no motive for overhauling the lists, and they have, therefore, been left in the hands of blundering and often illiterate overseers. But, after the 31st of January, the League will be prepared to apply to other counties the same system of revising and purifying the register as was found so successful at the late registration for South Lancashire. In the meantime let the number of new Free-Trade qualifications be everywhere augmented; let nothing else distract the attention of our friends, but let the watchword everywhere be

QUALIFY! QUALIFY! QUALIFY!

THE SKIN-DOCTORS AND THE LEAGUE.

The *Examiner* is again, we see, very angry with the League, because the League will not take up with the new bath-and-laundry philanthropy, laughs at the notion of feeding people on air as a substitute for bread, and is of little faith in improved domestic architecture as a remedy for national distress. As our contemporary's article of Saturday last appears to be part of a systematic attempt to put the League wrong with the public—to which attempt we do not mean to be accessory by any lack of diligence in keeping ourselves right—we embrace the opportunity of once more stating exactly the position we have taken, and intend to maintain, with regard to the pseudo-charities of the day.

The *Examiner* complains that—

"The Leaguer cries out upon baths and wholesome dwellings, they are not bread."

"In former days, when a man had set his heart upon some object, he made a vow not to shave, or not to cut his nails, or not to wash; or to wear a horse-hair shirt, or a girdle with spikes in it, till he had accomplished the exploit."

"Our friends of the League are reviving this sensible expedient. The people are not to bathe, and not to live in wholesome dwellings and untainted air, till the restrictions be removed from their industry."

The Leaguer does not commit any such silliness as that which his friend here fathers on him. The Leaguer cries out, not against baths and wholesome dwellings, but against the mock benevolence of bread-taxers, who offer these things to a people that are short of food. He refuses to believe in the virtues of men who look you in the face, talk philanthropy, with their fingers the while in your purse. He has no sort of quarrel with baths and wholesome dwellings; but entertains a very poor opinion of the morality of the Spanish friar who waved the beggar his pastoral benediction with one hand, and slyly picked the poor fellow's pocket with the other; and he would rather hear the ugly name of *Adventus Diaboli* than see the said friar canonised saint, under favour of honest men's gullibility. The Leaguer, moreover, believes practically—what the *Examiner* believes in the abstract—that the food monopoly is "the main cause of suffering" (we quote from the same article from which we have above extracted); that its removal is the "main thing" which philanthropy now has to do, and that Free Trade is "of transcendent importance." And the Leaguer will not sit quietly by and see this main thing, this transcendently-important thing, shoved out of the way and shelved, to make room for a mere talk about projects, which, whatever may be their intrinsic value, he knows can never have fair play until the main thing is done.

For it is not the mere arbitrary will of "our friends of the League" which says "the people are not to bathe, and not to live in wholesome dwellings and untainted air, till the restrictions be removed from their industry." We can assure the *Examiner* that his friends are people of cleanly tastes, and no more in love with "dirt and miasma" than himself. That the people of this country are doomed not to be a well-washed and well-housed people, so long as their industry remains restricted, is, we apprehend, a simple matter of fact—for which the League are in no way answerable—which it lies in the option neither of Leaguer nor landlord to alter. Restricted industry, with unrestricted increase of population, means that larger and larger numbers of the industrious class are to be dragged down to pauperism, and that pauperism is to be made more and more hopeless and reckless; and a starving, idle, pauper people will be a dirty people, do what you will to keep them clean. Cleanliness is not a pauper virtue. Cleanliness presupposes a certain amount of energy and self-respect; and a working man's energy and self-respect can only be kept up by a steady and ample supply of work and wages. A law against work and wages, a law for intercepting the one and cutting down the other, is a law against cleanliness, and in favour of dirt and miasma. If baths and laundries and the like find some favour with a portion of the public just now, it is because just now the action of the Corn Law is in great part suspended. Another bad harvest or two—another crisis of national distress—and there is an end of the agitation for baths and wholesome dwellings. The crusade against dirt and miasma is little better than hopeless, so long as the enemy is reinforced by ill-health and starvation. Monopoly is linked with dirt and miasma by a union which not a whole parliament of Lord Ashleys can ever repeal. The "main thing" must have precedence, in time as in importance, over the subsidiary and secondary things.

All which, in the *Examiner's* new philosophy, is resolutely ignored. Our contemporary broaches the curious doctrine, that it does not signify what we put first or what last—

"It is idle to dispute about the order of reformations. Free Trade we hold of transcendent importance, but we can strive for it without setting ourselves against other improvements which have also great value. There is no rivalry in political and social objects, and we are not to exalt one by disparaging and crying down all others."

But there is, in political and social objects, such

a thing as a relation of means to ends, which it were well not to sink altogether out of sight; and the reformers will not do much who are above minding the order of cause and effect in their reformations. The *Examiner*, it seems, is for doing things anyhow. It is perfectly idle disputing whether we shall begin building our house at the top or the bottom. It is of the least possible consequence, whether you dress a bruised and broken limb by plastering the skin, or setting the bone; the practitioner who prefers the latter course must be "tolerant of the good works" of his brother who adopts the former—must not hold "exclusively to one remedy," nor "present a bigoted discouragement" to the skin-doctor's "measures of improvement." It is all one, whether the removal of the main cause of national or individual suffering precede or follow the attack on secondary symptoms. It is not worth a word, whether the transcendently-important object shall be taken first or last. It were more curious than useful to raise the question of precedence between the horse and cart.

We are sincerely sorry to see that our contemporary has graduated so fast and far in the new school. The language of "Free Trade in the abstract" is already familiar to him. To be sure, monopoly is the "main cause of suffering;" Free Trade is the main thing we have to look to—the thing of "transcendent importance;" but there is a disagreeable tone of admission in these well-sounding generalities. They do not accord with the tenor of the argument, which goes all the other way. Nor is it pleasant to those who retain a vivid and grateful remembrance of the *Examiner's* former services in the popular cause, to find him talking so coolly—almost complacently—of the transcendently-important object as a thing "not so immediately attainable," and one on which "wide disagreement exists." We tell him, in his own words, that "so to guard any cause, however just, great, and vigorous, is the sure way to make it dwindle, and pine, and perish." Men do not realize things of transcendent importance by coldly acquiescing in "wide disagreement." We should much like to know, by the way, the grounds on which our contemporary holds the amazing belief that clean skins and clothes, with wholesome dwellings, are more immediately attainable by the people of Great Britain than freedom of trade.

One word more for ourselves. The Anti-Corn Law League does not hold that the abolition of the Corn Laws is "all that is due to the labouring classes." But the League does hold that the abolition of the Corn Laws is the thing to begin with—the thing most needful, and first needful—the central, primary reform, which will make all other reforms clearer to our perceptions, easier and surer of attainment, and surer in their operation. The League freely allows that "it is not this thing or that thing separately that will suffice to place the working classes in the condition they should enjoy;" but the League presumes nevertheless that the "main thing" is that which will mainly conduce to this result, and when the main thing is done we shall be in a better position for attending to the subordinate things. The League has a clear conviction of the utter fatuity of all schemes for improving the condition of the labouring class—or of any section of that class—physically, intellectually, morally, or socially—which do not go on the basis of more work, wages, and food; and for a fast-growing population, insulated on a scanty territory, in a tickle climate, there is only one way in which the more work, wages, and food are to be had. And the League sees neither virtue nor wisdom in the "toleration" which allows the authors and abettors of a gigantic national wrong to make a cheap composition with public opinion. The gain of iniquity and the glory of philanthropy are more than belong to one man's share.

SIR H. POTTINGER IN MANCHESTER.

It is not often that public entertainments are given to a hero of humanity; generals and admirals have been fêted, fêted, and applauded for slaying their thousands, and their tens of thousands,—the libations of wine have been proportioned to the effusion of blood; statues have been raised, pictures painted, titles granted, and estates bestowed in grateful homage for triumphs in the battlefield,—the consequences of which had disappeared before the applauding generation had passed away. The answer given by the peasant, in Southey's fine ballad on the battle of Blenheim, should of necessity be adopted by many of ourselves, if asked why we huzzed and illuminated, and fired away gunpowder, and gave public dinners for Vimeria, Talavera, and Salamanca:

"Nay, that I cannot tell, quoth he,
But 'twas a famous victory."

Sir Henry Pottinger has been justly honoured as the hero of peace; his conquest—for the treaty with China deserves to be called a conquest in the best sense of the word—inflicted no general misery, entailed no national disgrace, exhibited no doubtful honesty, and involved no pernicious principle. He has been the first to give prominence and effect to the great principle which is at once the best source

of the internal prosperity of a country and the best security for the permanent tranquillity of its external relations; he has based a treaty, involving the interests of a population exceeding three hundred and fifty millions of people, on the sound basis of Free Trade. We rejoice that honours have been awarded to the man; we rejoice that unanimous homage has been accorded to the principle. It would, indeed, seem as if many who had opposed the efforts of the League to carry out the same principles had been unconsciously Free-Traders the whole time, like the tradesman turned man of fashion in Molière's comedy, who had been speaking prose all his life without knowing it. Mr. Richard Birley astounded us by the soundness of his political economy; indeed for some time we were disposed to believe that there had been an error of the press, and that the speech ought to have been headed "Mr. Richard Cobden." The new economist pointed out the benefits of Free Trade with China in the improved condition of Stockport, but he forgot to say a word of the crisis of misery through which that borough recently passed in consequence of the restrictions imposed upon trade in England. He stated it as his inference from the speeches made by Lord Stanley and Lord Aberdeen, that "the course of negotiation carried out by Sir Henry Pottinger in China would be supported by the Ministry in this country." If this simply means that the treaty will be faithfully observed, we cannot comprehend the necessity for such a confession of faith; but if Mr. Birley believes that the Free-Trade policy commenced in China ought to be and will be consummated in England, we have only to express our regret that he had not learned this lesson of sound wisdom at the last election.

Mr. Thomas Bazley justly remarked that the principles of the Chinese treaty might be called Chinese principles or Pottinger principles, but that they are essentially Free-Trade principles; and he hinted at the importance of names to minds of a certain structure, when he noticed the cheers given to these principles with their Chinese appellation by those who shrunk from them when they had an English title. It reminds us of the old story of a worthy clergyman, who, though dangerously ill, refused to take his medicine when it was called a radical remedy, but swallowed it at once when presented to him as a sovereign cure. The application of the principles of the Chinese treaty to the general commerce of the world was too obvious to escape observation; we should not have been sorry if the clergyman, who with great feeling and propriety urged the advantage of sending missionaries to teach the Chinese the principles of Christianity, had touched on the expediency of bringing back an exchange of missionaries from the Celestial Empire to teach us some of its practices. "It would be the duty of the merchants," said Mr. Canon Parkinson, "to show that they would conduct their trade on Christian principles;" he ought to have gone farther, and stated it to be the duty of our Legislature to allow our merchants to do so. Though there are some omissions which we have reason to regret, we still must confess our gratification at this decided acknowledgment of the equity, the sound policy, and the beneficial influence of the principles which the League has advocated for the last seven years. It seems as if Mr. Birley had been serving his apprenticeship to our creed during that period, and has at length gained sufficient proficiency in Free-Trade doctrines to set up for himself. He has, at all events, mastered the Chinese alphabet of economic science; we trust that he will not be long in learning the same lesson in plain English.

We were sorry to observe in Mr. Canon Parkinson's speech traces of a belligerent disposition more in accordance with the sound than the significance of his designation; we do not quite approve of missionaries who are "as ready to fight as they are to pray." We trust that this was a mere rhetorical flourish, and that the worthy orator would be as far as ourselves from making military tactics a department of theology.

ADDRESS OF THE WORKING MEN OF MANCHESTER TO SIR H. POTTINGER.

We have referred in the preceding article to the entertainments given by the merchants to Sir Henry Pottinger, and the absence of any reference to the great principles of Free Trade by the speakers at meetings held expressly to do honour to the Free-Trade negotiator. We are pleased to see that the working men of Manchester, took the opportunity of Sir Henry Pottinger's presence in that town to present him an address—a document characterized by the usual shrewdness and good sense of those intelligent artisans, and a striking contrast to the addresses from the mercantile bodies in different towns. The working men thank Sir Henry for his able and successful efforts in obtaining a tariff "based on the most complete and absolute freedom of commerce." This tariff has caused a greatly-increased export of cotton goods to China, and increased employment to the manufacturers of them. The Chinese have derived no less

benefit from their tariff than ourselves: they have imported cheap cottons, and have obtained high prices for their tea; both parties have, therefore, been mutually benefited. But there is one point in the tariff which seems especially to have attracted the attention of the working men—"the beneficent provision of not only allowing the import of grain and rice free of duty, but encouraging the same by the remission of port charges on all vessels conveying these important and necessary articles of food." This forms so striking a contrast to our own infamous Corn Laws, which at the present moment impose a duty equal to 60 per cent. on the present value of foreign wheat, that we do not wonder that the working men earnestly entreated Sir Henry to use his good offices with our own Government to imitate the Chinese tariff in the admission of corn duty free. A correspondent informs us that he lately sent a ship to China laden with rice, on which he saved no less than £1400 port charges. This is in effect a bounty on the import of corn, to secure abundance of food to the people. Well may the Chinese call us "outside barbarians," when they hear that we pass laws to starve our people, by prohibiting corn by the imposition of enormous duties.

The following is the interesting account of the presentation of the address given by the *Manchester Guardian*:-

"PRESENTATION OF THE OPERATIVES' ADDRESS."

"The visit of Sir Henry Pottinger to Manchester having afforded an opportunity to the working men to testify their sense of the valuable services rendered by that distinguished individual to the trade and commerce of the country, by opening the trade with China, they resolved to present him with an address, embodying their sentiments on the subject. A committee was accordingly appointed, and an address prepared; and, in the short space of fourteen hours, no fewer than 10,438 signatures were attached to it. Application having been made to Sir Henry to appoint a time and place convenient to himself to receive a deputation to present this address, he appointed a quarter before four o'clock on Saturday afternoon, at the Queen's Hotel, for that purpose. Shortly before that time, the members of the deputation, or as many of them as could attend, assembled at the Olympic Tavern, Stevenson's square, and proceeded thence to the Queen's Hotel. The deputation was composed of the following workmen:- Archibald Edmeston, Thomas Johnson Spetch, James Padmore, Robert Griffiths, Ralph Smith, John Holland, Michael McCabe, James Bythell, James Alcock, Richard Mayor, John Fleming, Matthew Nall, Jonathan Gent, and James Morris. Mr. John Brindle, who had assisted the Committee in making the necessary arrangements, accompanied the deputation. In the absence of Robert Neill, it had been arranged that Archibald Edmeston should present the address. The deputation were received by Sir Henry with the greatest courtesy. There were present with Sir Henry, Colonel Malcolm, Major Pottinger, Captain Eastwick, Mr. Fane, and Dr. Woosnam. Mr. John Macvicar was also present.

"Mr. Edmeston, addressing the right honourable and gallant general, spoke as follows:- Sir Henry Pottinger, I have the honour to be appointed by my fellow-workmen of this town to present you with this address, as a mark of the esteem with which they regard you for your honourable services, in having so completely settled the affairs between the two empires of Great Britain and China. It gives me great pleasure, and also I think will you, to inform you that the address has been signed by no less than 10,438 working men, in the short space of fourteen hours. With your permission, I will now read the address:-

"To the Right Hon. Sir Henry Pottinger, Bart."

"Honourable Sir,-We, the undersigned operatives engaged in the different branches of the cotton manufactures of Manchester, beg to take the opportunity of your presence in this town most respectfully to tender our acknowledgments for the benefits we have derived from your able services in your negotiations with the Chinese Government, which resulted in the remarkable tariff of the Emperor, based on the most complete and absolute freedom of commerce-imposing no protective duties, but granting free admission to the productions of all nations at moderate rates of duties, and prohibiting none. The low duties on the products of this district have caused a greatly-increased export of calicoes, printed cottons, and cotton twist, to China, whereby we have been benefited by obtaining increased employment.

"Seeing the advantages which we, in common with the working classes of this country, have enjoyed from your successful labours, whilst we beg gratefully to express our thanks for your past services, we venture to take the liberty, respectfully but earnestly, to entreat the favour of your good offices with our Government, to induce them to imitate the enlightened measures of the Chinese, by imposing the like moderate duties on all foreign products imported into this country, and especially to imitate the wise and beneficent provision in the Chinese tariff, of not only allowing the import of grain and rice free of duty, but encouraging the same by the remission of port charges on all vessels conveying these important and necessary articles of food.

"That you may long live to enjoy your well-earned honours, and have the happiness of seeing our own and other countries adopting the like freedom of commerce with China, and thus giving the industrious artisan the means of earning a fair day's wages for a fair day's work, is the sincere wish of, honoured Sir, your most obedient, humble servants."

[Here follow the signatures: the address, from their numbers, formed a roll of considerable bulk.]

"Sir HENRY POTTINGER, on receiving the address, said:-I beg to assure you, and the other gentlemen who were present, that nothing could have given me greater satisfaction than this address; that I entirely appreciate the kind feeling which has induced you to come forward to present it to me on this occasion; and that I am greatly happy and flattered that my humble exertions in China should have tended, as you tell me they have done, so materially to benefit your condition, and that of others of my countrymen. (Hear, hear.) Nothing, I assure you, is dearer to my heart than the welfare

of you all, individually and collectively; and if at any time and in any manner it may be in my power to further your views, consistently with what is due to the other classes of this great empire, I am sure I need not tell you I will most cheerfully and heartily do so. (Hear, hear.) I have not had time, since I came here, to prepare an answer to your address; but, before leaving this place, I will do so, and send it to you. (Hear, hear.) I am sure that nothing could have given me greater pleasure than the assurance from your own mouths, that my services have been of benefit to you; for I tell you, as I said before, and again repeat, that the happiness of my fellow-subjects is the dearest object of my hopes and wishes. (Hear, and applause.) I again thank you.

"The deputation then withdrew, very much gratified with a reception at once distinguished by frankness, cordiality, and courtesy."

TO INCREASE THE CONSUMPTION OF TEA, THE SUGAR MONOPOLY MUST BE ABOLISHED.

The entertainments given by the merchants of London, Liverpool, and Manchester, to Sir Henry Pottinger, have had a twofold object: one to do honour to the able negotiator with the Chinese; and the other to bring prominently before the public the necessity of a reduction in the duty on tea. It is remarkable that the men who have taken the lead in all these entertainments are monopolists-the Barings of London-the Gladstones of Liverpool, and the Gladstones of Manchester; and this will account for the anomaly, that though they assembled to do honour to the diplomatist through whom the Chinese were induced to issue a tariff based on the most complete and absolute Free Trade with all nations, with the exception of the speeches of Mr. Brown at Liverpool, and Mr. Bazley, the President of the Chamber of Commerce, at Manchester, not a word was said about the great principles contained in that remarkable tariff, or of the necessity of adopting the like wise policy which we so much applaud in the Chinese. Instead of Free Trade the speeches teemed with miserable laudations of the royal family, the army and navy, the high sheriff, and the clergy-hip, hip, hurra!

Monopoly is a selfish principle, and its upholders in corn, timber, and sugar are actuated by selfishness in desiring a reduction in the duty on tea. They are engaged in the trade to China, and have discovered that the Chinese tariff has opened the door to large exports of our manufactures, but that there is no means of getting paid for them except we are willing to take in exchange what they have to give us; and tea being the chief article the Chinese have to offer, unless we can take more tea than at present we cannot increase our trade with China. Sir Henry Pottinger observed, in his speech at Liverpool:-

"The extent of trade and consumption in China is so very extensive, that, if I were to state it, some persons would deem it incredible; and in cotton especially, and manufactures of cotton, the demand will be unlimited. The only question will be as to the returns-as to how the Chinese are to pay for these articles. This is a subject which will necessarily depend very much for its explanation, and a perfect understanding of its bearing, upon time alone; but in the meanwhile new demands will be created, and the Chinese people will be taught, I trust, by our conciliation and kindness, to have those new demands. (Hear, hear.) These are some of the results which will be produced by the treaty. That those results will follow I have not the least doubt, &c."

This is, in other terms, League doctrine-if you wish to sell you must also buy; and it is cheering to see the monopolists, despite of their abuse of us, forced to pay homage to the truth of our principles in the article of tea. We are making progress. Even Lord Sandon, who deprecates the abolition of the sugar monopoly, and has hazarded the loss of our trade with Brazil because we will not take sugar in return for our manufactures, thinks that something should be done to enable us to take tea from China in return for our manufactures. In reference to Sir Henry Pottinger's speech he said:-

"Was it possible that China could not send adequate returns back? (Hear, hear.) It was said that those returns could only be effected by, or obtained through, a reduction of the duty on tea. Now, that was a question which it would be for other parties, and on other occasions, to discuss; but he would say that, if such reduction of the duty on tea could be effected consistently with the general benefit of the British empire, he should be glad to see it take place, and such a boon conferred upon the country. (Immense cheering.)

Sir Henry Pottinger had now opened up that soil to the ploughshare of industry, and, to speak in language which would be well understood in Liverpool, he had, by opening a new country, done that which would adjust the balance of trade, by providing an outlet for our manufactures. (Loud applause.)

It is clear that Lord Sandon is prepared to vote for a reduction in the duty on tea, and we are almost as desirous of seeing cheap tea as cheap bread; but the question is, will the reduction of the duty on tea increase the consumption? We are decidedly of opinion that that measure alone will not, to any great extent. A reduction of 1s. per lb. in the duty on tea would amount to nearly £2,000,000; and we believe that the greater part of this sum would be revenue thrown away without any material benefit to the public, so far as an increase of our trade with China goes; but if the duty on tea were re-

duced 1s. per lb., and at the same time the duty on all foreign sugar were equalized and reduced to 1d. or 1½d. per lb., we do not doubt that in seven years the consumption of both tea and sugar would be doubled, and that the same amount of revenue would be produced from these two articles as at present. The same remarks apply to coffee. People cannot drink coffee without sugar, and the consumption has nearly reached its maximum unless we let in more sugar. We see by the official statement the quantity of coffee on which duty has been paid in the United Kingdom from January 5 to November 5, 1844, compared with the same period the previous year, is as follows:-

1843	25,171,576 lbs.
1844	26,072,645 lbs.

Now, when the improvement in the condition of the people is considered, taking into consideration the great reduction in the price of low and middling Jamaica coffee, which last year was quoted from 99s. to 122s. per cwt., being now quoted at 72s. to 90s. per cwt., and also that the duty on coffee has this year been reduced 2d. per lb., we cannot but be surprised that the increase in the consumption has been so small, and we do not know how to account for it except on the principle explained by two Lancashire weavers, whom we accidentally overheard discussing the question a short time ago:-"I can drink tay weecout sugar (said one to the other), but I canna manage coffee;" to which his companion rejoined, "Nor I nother."

The consumption of tea in the like period has been:-

1843	33,522,010 lbs.
1844	31,746,893 lbs.

This increase must have arisen either from the "gude wife" putting a small extra quantity into the teapot, or it must have been drunk without sugar; for, as will be seen, the consumption of sugar has scarcely increased, being:-

1843	3,431,049 cwt.
1844	3,494,398 "

We have the monopolists now in a pretty dilemma they see the importance of our buying more tea from the Chinese; but we cannot buy much more tea without buying more sugar to sweeten it. Our own colonies, under the monopoly system, cannot supply us with more sugar. What is to be done? Will Lord Sandon burn his wooden bible, confess his errors, acknowledge "Free Trade is the law of the Almighty," and admit slave-grown sugar? *Nous verrons.*

The consumption of sugar in the United States, where its use, except for tea and coffee, is by no means so general as in England, forms a striking contrast to that in our own country:-

In 1841, the foreign imports amounted to about	180,000,000 lbs.
The home production, about	180,000,000 "
	360,000,000 "

Now, taking the population of 1841, exclusive of slaves,* at 14,000,000, the consumption of sugar was 26 lbs. per head.

The consumption of sugar in the United Kingdom in 1841 amounted to 45,145,436 lbs.; and taking the population as per returns that year at 27,000,000, the consumption per head amounted to only 17 lbs. If, therefore, the consumption in England were equal to that of America, our imports of sugar would amount to 243,000,000 lbs. per annum more than at present; and taking into account the very general use of sugar in this country, and the desire to obtain it if the working classes possessed the means, we are justified in our estimate that the consumption would soon be doubled. If the monopoly duty were abolished, and the existing duty reduced one half, sugar could be afforded retail at 4d. per lb. What a boon to the working classes would sugar be at 4d. per lb., and tea at 1s. per lb., less than at present! And all this may be accomplished, without the ultimate sacrifice of one farthing of revenue, by the simple abolition of the sugar monopoly.

COGGESHALL AGRICULTURAL SOCIETY.

The *Post* has been frightened from its propriety by the delivery of a sound Free-Trade speech at a meeting of Essex farmers: it declares in set terms that the game of monopoly is up, that the protectionists are a set of craven cowards who will not only refuse a fair meeting with their adversaries in the open field, but who will not even fight when assailed on their chosen vantage-ground. During the last six months the *Post* has been amusing mankind with lectures on the blessings of scarcity and dearth; it has expressed a consistent horror of tile-draining, and it shrinks from all contact with guano like a delicate waiting-woman or a dandy butler. The monopolists, however, have shrunk from the chivalrous course of policy recommended by their belligerent advocate: agricultural chemistry has been preached in spite of the *Post's* avowed prefer-

* The slaves eat no sugar, but molasses, of which 20,000 gallons were imported in 1841, besides the quantity made at home.

ence for ignorance of all science; but, worse than all, Mr. Unwin, an Essex agriculturist, when his health was proposed at the Coggshall meeting, "favoured the farmers who surrounded him with a regular lecture in praise of Free Trade. Of Mr. Unwin's auditory, moreover, no one would seem to have questioned either the soundness of the general principles or the accuracy of the details which the champion of Free Trade propounded." Such a phenomenon has naturally amazed and annoyed our worthy contemporary. Differing as we do fundamentally from the course of policy advocated in the *Morning Post*, we still recognise in that journal an honest, a candid, and a consistent opponent: if monopoly could be defended, the course which the *Post* has taken is the only one that could have possibly succeeded. But the monopolists have become ashamed of their own fallacies: their miserable sophistries have been so thoroughly exposed that they dare not venture on their repetition. Mr. Unwin is not a Leaguer; we believe that to some extent he may be reckoned among the opponents of the League: indeed we should not accept without further explicitness the declaration of faith which has provoked the wrath of the *Post*: but, nevertheless, the time and place in which the declaration was made render it too remarkable to be passed over. He said:—

"I wish the alliance was as cordial as the connexion is intimate between agriculture, manufactures, and commerce. I should rejoice to see the day when the present jealousies and dissensions which unhappily prevail between those great interests shall have terminated, and instead of, as we now find, the prosperity of one being always consistent with the adversity of the other, that they should both be able to pursue a course of prosperity together, and in a condition by which they should advance most rapidly in the career of improvement. I think that day of reconciliation is not far distant. I think I can perceive, from the tone and sentiments of the leading agriculturists at the meetings this autumn, and from the tone and observations of the gentleman who proposed this toast to-night, that they are not unprepared to see a settlement of this great question, and that they are more willing than they ever were to listen to the claims and just rights of the trade and manufactures of this great community. I fancy this altered state of feeling has arisen mainly from the extraordinary statistical facts and figures disclosed by the publication of the last census. You, gentlemen in agriculture, have, and no doubt justly so, looked on your interests as the preponderating interest of the country. Far be it from me to depreciate from its importance, for I feel it as highly as any man; but facts and figures have been brought to light which show us that agriculture has been pushed, as to the employment of the population, to its utmost limit. We find by the last census that the number engaged in agriculture in 1841 was rather less than those engaged in it in 1831; so that all the increase of population has had to be absorbed and taken up by other interests. The number of males employed in agriculture in 1831 was 1,251,751; in 1841, 1,215,201, being 36,487 less in the latter year; while in manufactures the increase was 467,117. I think this clearly shows that, though agriculture is looked on as the older sister, the first in age, rank, and privileges, yet while you have been, I will not say indulged and caressed and petted by the Government, your other sister has outstripped you in growth and magnitude, and nearly twice the number are engaged in manufactures and commerce as compared with agriculture, the numbers being—in commerce, trade, and manufactures, 3,110,376; and in agriculture, 1,499,278."

We quite agree with the *Post* that Sir Robert Peel's sliding scale is no "settlement" of the question in dispute, and is very far from meeting the views of our patriotic Free-Traders; but we further say that no settlement but a total abolition of restriction on import can be either permanent or complete. The only shadow of a claim for protection to home-grown corn is proved to have been an ardent falsehood; the pretext was the necessity of providing employment for agricultural labourers: it is now established, on the authority of a Report issued by the Government itself, that agriculture does not keep up its own absolute numbers, and that, so far from agricultural employment having kept pace with the increase of population, it has absolutely retrograded. If, then, "protection" be continued, its certain result must be still further to depress the agricultural labourer, whose condition already is a disgrace to the age and nation.

THE BAZAAR.

We continue from our last, selections from the correspondence relative to this undertaking; and desire to draw the attention of our friends generally, and more especially that of our female readers, to the first of these extracts, which would be weakened by any commentary of our own:—

"Parkfield Cottage, near Stone, Staffordshire.

"Sir, There are few things which I should consider as conferring upon me higher honour than to have my name appear as an active member of the Anti-Corn-Law League; an association, I believe, as unparalleled in the importance of its object as it is in the sound judgment which characterizes its plans, and the untiring energy with which they are carried into execution.

"At the age of seventy-two, however, bodily strength and mental clearness and energy begin to fail; and it is with reluctance, therefore, that I must on this account decline an appointment which, a few years ago, it would have given me the highest gratification to have filled.

"In 1842, I wished to have offered to the Ladies' Committee of the Manchester Bazaar the assistance of much skill in the cause, and many years' experience in undertakings of this nature; but being entirely unknown to

them, I gave up the idea; and the brilliant success of the undertaking proved how little aid of any kind was needed. As it was then, I have no doubt it will be in the present undertaking; and, as a pecuniary contribution is the only way in which I can now assist, I shall have much pleasure in making a remittance as soon as I can do so conveniently. I am, Sir, with great respect,

Your obedient,

"SUSANNA MORGAN."

"Bridport, Dec. 18.

"DEAR SIR,—I shall feel it not only a happiness, but an honour, that my name and that of Mrs. Maclellan should be found on the two General Committees of the League Bazaar.

"I know not what can be done here as yet; but will at once consult our leading friends on the subject. At the very least, we will send you some pecuniary aid.

"From all I know of nature and of revelation, the smile of God hovers over our cause; and what He approves must prosper. Yours, &c. &c.,

"ROBERT MACLELLAN."

"Dundee, Dec. 16.

"SIR,—In regard to the approaching Bazaar in May, I am sorry I can do nothing for it, unless a collection of copper and a few silver coins could be made available—there may be 200 copper and 20 silver coins. Perhaps I overrate them, but they are surely worth £10. If considered worthy of acceptance, I offer them a free gift to the League Fund; and I will also make an appropriate case, with glass top for showing them properly, and deliver them free in London. I will also make descriptive catalogues, and put all in the very best order I can. Yours, &c. &c.,

"GEORGE STEPHEN."

"Keighley, Dec. 21.

"DEAR SIR,—I can scarcely give an opinion as to the practicability of forming a Ladies' Bazaar Committee in this town; the subject, however, will claim the earnest attention of our infant association, and I may venture to assert that something, but of what nature it would be premature to speak, will be contributed."

THE ECONOMIST NEWSPAPER.

There is, perhaps, no symptom which more clearly proves the rapid and general progress of the principles of political economy as a science, and of Free-Trade as its legitimate and necessary practical result, than the almost universal support which such doctrines now meet with from every portion of the press of this country which can be considered in any degree independent: and even many press organs who, from their party attachments, are unable to join in the advocacy of the adoption of Free Trade, yet, ashamed of being found adhering to doctrines and opinions long since repudiated by science, take refuge in the admission of the truth of those doctrines in the abstract, while they deny only their immediate application to the condition of this country. This, at least, may be termed the homage which monopoly is obliged to pay to Free Trade.

Our special reason, however, for referring to the state of the public press is to call the attention of our readers to a weekly contemporary (the *Economist*), from which we have derived and continue to derive the most essential service to the cause which we advocate. This paper is now in the second year of its career; we know that in the outset many of the most ardent supporters of our cause scarcely permitted themselves to hope that public opinion was so far advanced in these great questions, as to render it possible for an independent organ, taking the high ground which this paper did, to obtain a circulation sufficient to induce a continued application of the talent and acquirements requisite for its successful accomplishment. We are, however, glad to learn that, by the singular union of political and scientific ability with great practical utility, it has acquired a station of such authority, both among men of science, leading politicians, and practical men of business—who all find in its columns so much that is of the greatest utility to their separate pursuits—as to make it no longer a question of doubt that this journal will maintain a permanent place in the periodical literature of the country: and this is a fact on which we heartily congratulate our Free-Trade friends in particular and the community generally.

Many of our readers will remember the singularly able paper which in 1843 issued as the preliminary number of the *Economist*—a paper which was extensively circulated for its value as one of the most striking Free-Trade documents which has, perhaps, issued from the press; and, however much we were led to expect from the paper itself of which it was the precursor, we are bound to say that our expectations have been fully realized by the weekly numbers which have ever since appeared.

We have not unfrequently had inquiries made by our friends at a distance respecting the *Economist*, whether it in any way existed in competition with, or in opposition to, our own journal. We particularly wish to say that, so far from this being the case, we have ever regarded it as the most able and friendly coadjutor which we have. The *Economist* is a paper which, though perfectly independent of us, exists only for the same object; and is conducted by individuals to whose writings and unwearied personal exertions for many years the cause of Free Trade and our own efforts have been greatly indebted since the day we were first associated. The *Economist* occupies a place in the struggle in which we are engaged, which we, from the nature of the movement, could not occupy. Our attention is necessarily confined, in great measure, to the immediate question of the Corn Laws, to their influence on the consumer, and also on the producer; for agriculture, and its condition, have necessarily become an important branch of the subject.

The *Economist*, on the other hand, extends its inquiries

over the wider and not less important field, of the consequences and effects which all commercial restrictions, and our Corn Laws in particular, have upon our GREAT FOREIGN TRADE, OUR HOME INDUSTRY, THE CURRENCY, FINANCE, and general REVENUE of the country. The singular and difficult combination of talent to discuss first principles with an extensive and minute knowledge of the commerce of the country in all its varied branches,—an intimate acquaintance with the laws which regulate our foreign trade and that of other states, of international negotiations and existing treaties,—this singular combination of talent and practical knowledge has given to this journal an interest, usefulness, and authority never before presented to the political and commercial community; and we are glad to observe that the press throughout the country freely acknowledges this by the frequent quotation of its facts and opinions.

The readers of the *Economist*, in common with ourselves, must have experienced much satisfaction from observing the perfectly independent spirit which that journal has on all occasions manifested: "the entire absence of any personal or party influences;" and the warm and earnest, though always temperate, manner in which it discusses any subject which arises.

It is, however, only fair to state that we believe the *Economist* has obtained an important part of its standing and circulation by its great practical usefulness to individuals connected with every branch of commerce. The extensive, important, and minute information which it affords weekly on the state of trade, the statistics of imports, exports, consumption, and existing stocks of all the chief articles of commerce, render it of the greatest importance to dealers in every line of business, as well as to the general merchant and the banker.

We may allude to a striking example of this fact. The peculiar and extraordinary principles on which the Government proceeded in the last session of Parliament, in the change of the sugar duties, had been anticipated and announced by this paper, and thoroughly discussed for three months preceding the introduction of that measure; and the readers of that journal could not fail to be perfectly familiar with the proposition and its peculiar operation on prices as soon as it was announced. Again, the *Economist* predicted the exact effect of that change in its minutest details, which have so far proved to be exactly correct, one evidence of which has been the introduction of sugar from Venezuela. To such important commercial advantages, which we know have been extensively experienced and acknowledged, the *Economist*, no doubt, owes a considerable part of its character and authority. We, therefore, cannot but consider the paper an acquisition of considerable use and importance to every man engaged in commerce; and no such man can regularly read it without finding his immediate interest benefited thereby. We were much gratified by the frank acknowledgment made on this subject at the recent meeting of the Chamber of Commerce in Manchester by Mr. Wylie, of the distinguished firm of Gordon, Wylie, and Co., of New Orleans and London, who, though differing from the general politics of the *Economist*, paid the following just tribute to our contemporary:—"he spoke of it as 'a newspaper which he would take the opportunity of recommending to their support, as one of the best papers in this country, full of valuable information, and, so far as he had had opportunities of testing it, exceedingly correct—he meant the *Economist*.'" (Hear, hear.)

Among its varied contents we especially call attention to two very important features exclusive and peculiar to this journal:—

First. The monthly publication of the official accounts of imports and exports of all leading articles of foreign produce and British manufacture as the year goes on, comparing the same with the quantities in the three preceding years. These accounts hitherto have not been published until the following year, when they had really ceased to be of much practical utility.

Second. Once in each month, or oftener, the *Economist* announces that it will publish, after the new year, an account of the quantities of the leading articles of manufacture, especially cotton, woollen, linen and silk goods, exported to each of the chief markets of the world, comparing the quantities with those exported in former years, so as to act as a timely check to overstocking markets. Had this been done formerly, it is difficult to calculate the amount of private loss that might have been avoided; and it seems peculiarly requisite at this time.

The *Economist* contains a careful and well-abridged, though full, detail of the news of the week, combined with its other advantages.

We conclude the pleasing duty of bearing witness to the benefits our cause has derived from that paper, and in its general merits, by calling upon our friends throughout the country, for the sake of the cause, to promote its circulation in every way they can, and especially to see that every CLUB, NEWSROOM, MECHANICS' INSTITUTE, and public room of every description in which they are interested, be supplied with a number of copies proportioned to their size and importance.

CHRISTMAS LETTERS FROM THE SOUTH. (From a known Correspondent.)

FIRST LETTER.

collection, seven farms; on each of these lived a tenant and his family, and in his house lived his carters, ploughmen, ploughboys, and servant girls. The toast and ale went round in each house to all comers. A "bushel pan" was put on the fire, filled with ale, by six in the morning, and the lads and girls were by that time making toast, and the mistress and her daughters stirring in spice and bidding "Little Jack" taste the warm beer, and say if it was good. And then "Little Jack" ran as fast as he was able, "Ay, faith, faster; I one time had my head where my feet should have been, a coming down that road;" and he called to the men, "What be ye at, ye don't come?"

The seven farms are now one. The occupier is landlord of the greater part of the houses in the village. "Little Jack" is grown a man long since. He is a father of five children; they all need victuals, though none of them are old enough to work. He says, "They be young, and it be a hard thing to get them made to look as we would like them to be seen; but they'll be old enough afore they see any such Christmas as I used to see. No, Sir, there ben't no Christmas now-a-days for such as we; they has service at church, as they used, but that be all. No more Christmas with toast and ale; it be all gone, and I doesn't see myself how it's ever to come back." "Little Jack" and his family will have no Christmas dinner save the ordinary crust of dry bread; but he says he will "thank God if there be enough of that."

Stephen Hern, of Crawley, is the same, he says, as most of his neighbours. He does not know where he is to get a Christmas dinner to-day more than any other day. Stephen Hern has a daughter, aged eleven and a half years, and four others. This daughter goes out bird-keeping, but in the frost there be no need for her. She have no clothes but those on her. She comes home wet up to the knees often. It ben't no profit to have her out bird-keeping. She eats in bread all she earns, and more, by being in the field all day. When she comes home of a night she must put on a thing or two of her mother's and a thing or two of her next sister's, until her own things get washed and dried. Stephen must himself go to bed, if he comes home wet, to get his clothes dried. All seven sleep in one room; "there be a kind of two blankets," but they must lay their day clothes over them at night, else they would have no heat.

"Christmas dinner, Sir! where be the likes of we to have any Christmas dinner? We be lucky an' we have bread and cheese; seldom we get cheese. And firing," says Stephen, "be terrible dear. A shilling goes nowhere for firing here. We must only burn a fire to boil a drop of water, or potatoes. Must not burn fire else."

About eight yards, not quite so much, from Stephen Hern's door, is the door of a stable. On the door of the stable are a variety of fancy horseshoes nailed fast; and inside each is an inscription setting forth the different races and stakes gained by the horses whose shoes are there, and who have been next-door neighbours to Stephen Hern in that stable. No want of bedding and covering for them.

Stephen has nothing, and has had nothing, to do with the stable. He is a worker on a farm. There are twenty or twenty-one families in the village precisely of his class. There are about the same number of race and hunting horses. The twenty families have an average income of 9s. a week, out of which they pay house-rent and find food, firing, and such clothing as they can get. The twenty horses cost 10s. a week each on an average, exclusive of stable-rent, warm blankets, and men to attend them.

The twenty horses are rented by the labourers from Mr. Pers. This gentleman is the chief farmer, and a considerable landowner. He is also poor-law guardian. He is, indeed, everything. To him the labourers go for work—to him to seek parish relief—to him to pay their cottage-rent;—they may be said to belong to him.

The hunting and race horses belong chiefly to the family of the Venerable the Dean of York.

Last year some of the labourers went to the parson, and asked for "summat" for a Christmas dinner. He said he had really very little meat in the house, and none to give away; and he thought it was a very bad custom of working men to go seeking a dinner in that way. They say there is only the alternative of seeking it as a gift or going without. And this year they will go without, "for it ben't no good seeking a bit of meat from any one. There be nobody in those parts to give anything away."

The Dean of York's family have also a pack of fox-hounds here. It is said by the farmers to whom I have spoken that the hounds and horses are a great help to such a place as Crawley. "See how much of everything they want to eat: hay, straw, oats, oatmeal, and all such things as grow on a farm." When asked if it would not be equally serviceable to a farmer to have the labourers fully employed and better paid, to enable them to buy some of the land produce, they say—"The labourers be too much as their work be worth now."

Nearly a dozen young men in this small place are out of work now. Those in work only get 5s. and 6s. a week. Two of them told me that they work accordingly. They were old, and never will, work more than they can help unless paid like other men. One man, in answer to a question, replies thus:—"It used to be, I suppose, from what I hear old people say, that young men saved up something to be married with; but there ben't none of that work now. The young women do it an' it be done at

all. They go out to service, and get wages and board, and they save part of their wages because they have no victuals to pay for. Then they come after we when they wants to be married. It used to be, the old people say, that a young man married a young woman; but that ben't done now; the young woman marries the young man."

SECOND LETTER.

Coming on to Stockbridge, Christmas is before us. It has taken up its abode with fulness and jollity in some houses, and has passed by others.

Christmas is a respecter of persons. Hear how loud he laughs, how jocund he looks, in the house with the slated roof, the painted door, and the bright knocker! Listen for his voice in that row of houses opposite the *Three Cups*. Do you hear him!—No. Not a whisper of him there! Yes; he is in one of the houses. John Pringle and his wife have got as much tea and sugar, and bread and butter to make toast to the tea, as will give them a treat. Their three children are already saying, "Mother, I wish you would get on with this tea. It be a precious job waiting for it so long." John Pringle is a farm-labourer at 9s. a week. No other of the family employed; house five feet wide by ten; one room for sleeping.

Thomas Strong has a wife and four children at home. He works on the roads for 8s. a week. Let us listen at their door for the voice of Christmas. Do we hear him?—No. Not a whisper. Let us go in and see if there be no sign of him at all.

No; he is not here. There is no fire to warm him and make him welcome; two pieces of roots, the size of two hands, are all that burn here. There are only two old chairs and a table, none of them such as Christmas would indulge upon. Mrs. Strong shows us that the back-door is not a door, it is so worn and broken; the partition is no partition, save for old paper pasted on it. Literally there is only the patchwork of old paper between the north frost wind and the cold fire-place; and the papers are old numbers of the *Times*, which a richer neighbour was kind enough to give her. It is not the first time that the *Times* has befriended the poor, and warded off a cutting wind.

There is a rent of 1s. a week paid for this miserable den. It belongs to the church, and the churchwardens have ordered the rent to be increased to 1s. 3d. a week. In default of paying that the Strongs have been served with notice of ejectment. Here is the rent-book, and here is the notice; we can inspect them at length. The churchwardens have already sold part of the furniture of this family for rates and arrears.

Let us look up stairs. One small room, four feet high, the ceiling falling in, the rain not running in because there is no rain; two low bedsteads for the family of six, and the clothing on them thin—very thin—not a whole blanket between the two. The day clothes must be all heaped on them at night, and tucked into their backs to give them any chance of warmth.

Here there is a girl aged fifteen, but she has no work to do. Some person has sent a quart-mug filled with broth; and this, with a bit of bread of their own, is the sole Christmas fare of this working family.

Elizabeth Brown, wife of James Brown, a labourer at 8s. a week—is Christmas in her house? Not he; not even his shadow.

Elijah Lane's house. There is a daughter aged fifteen. There are six of them, and father and mother. Father receives 9s. a week from a farmer. No work for the others, and no Christmas. All sleep in one small bedroom; have no clothing but what is on them.

Here is Stephen Shepherd's house. He is a shepherd, and has 10s. a week. Is out all Sunday, and often all night, at certain seasons of the year. "Have had thirteen children; have eleven alive; four of them married, four at home. Had to pay 10s. two weeks ago for a dog; the old dog having taken the disease and died. This has thrown them far back. Mrs. Shepherd expects to have a cup of tea this afternoon for a Christmas treat. Things are not as they used to be."

Why need we linger? Such are the houses of the labourers on each side.

Let us go past the tollgate, up the hill, and take the road to Broughton and adjoining villages.

What! here is a place in a hollow of the downs which was not expected to be met with. It is not a rich man's dwelling, and yet, Christmas is here in all his roaring joviality. Let us try to discover what kind of people inhabit here. First, what can those rows of fine large stone buildings be used for,—the enclosed yards, the walls round all. They do not prevent us from entering: let us enter.

What substantial doors; and windows to open and shut like clockwork! What abundance of warm straw inside, and creatures wearing coloured blankets girded round them! The atmosphere which they breathe, and the temperature in which they live, being regulated according to the most scientific principles. How clean is everything; how comfortable, how well attended!

Who would not be a racehorse in training for the Derby? These stables, and the others across there, Mr. Day's and Mr. Saddler's, hold within them the choice "flesh" of Britain. Lord Chesterfield's, Mr. Gully's, Lord George's (some of them), Mr. Elwell's, Mr. Tre-lawney's, and many *etceteras*.

The early departure of the post from these inland villages, and the necessity of writing early in the week to

ensure publication, make it necessary to defer the remainder of my Christmas letters until next week.

LETTERS FROM THE SOUTH-WEST.

SEVENTH LETTER.

Ringwood, Hampshire.

There has been much discussion and some dispute of late in the newspapers, London and provincial, as to what the game laws really are. I have been aware for years past that the game laws were different in different parts of England; and I have been at some pains to inquire what the difference is. The enactments under which convictions take place are general, not local; but the manner of their administration is local. A bench of magistrates in one part of the country uses one law, and another bench elsewhere uses another law. Sometimes the magistracy of one county is content with only one law; while the magistracy of another county makes use of several laws against the same offender. The practice of dealing with offenders in this part of Hampshire is to bring the whole statute-book to bear against them in whichever way it is applicable, according to the character of the poacher or the determination of the prosecutor to get him well prosecuted and punished. As a general rule, there is little mercy shown, and less forbearance. The following are the chief modes of procedure:—

1st. The surveyor of the taxes employs certain men as secret informers; they go to him privately, and inform him that they have seen A. B. looking for game. The surveyor, no matter what the time of the year may be, demands that A. B. shall make oath that he has not killed any game since the 5th of April last. If A. B. refuses to swear, he is compelled to pay for two years' certificates, namely, the sum of £8. 1s. 8d. This law is most commonly applied to farmers, who may be suspected of having at some time or other killed a hare, or pheasant, or partridge clandestinely. In such cases gamekeepers are usually the informers. Such informations are also laid against tradesmen and others. Unless the accused persons be conscientious men, and fearful of an oath, they will tell the truth; but it is alleged that there is a great deal of false swearing. It causes a familiarity with oaths which is not for the good of morality. Yet many swear they have not killed a hare who have done so, rather than lose their £8. 1s. 8d.; and more do so, to hide the grievous fault of having done so from their landlords. It is said that when a tenant complains of the game as destructive to him, and makes himself any way disagreeable, secret information is given, and he is required to swear. And it is also said that, rather than run the risk of exposing himself and thereby losing his farm, he in many cases will swear, though he may have killed something. Of course those who have a certificate are not liable to this secret inquisition; but the poorer class of farmers seldom have certificates, and it is they who dread the inquisition most. On some estates no tenants are allowed to have certificates; thus, if by any chance they destroyed a hare or game-bird, however thoughtlessly, during the summer, and though no eye had seen them do so, they may be called, upon the information of some one whose name they never know, next March, to swear that they have killed nothing that is game since the 5th of April. No excuse of how or why the beast or bird was killed, no regrets for having struck it in a moment of excitement or thoughtlessness, will do. If not lax enough in conscience to gulp an oath, they must pay for their two years' certificates; and these are retrospective.

2nd. Against a poacher who is seen to kill game (not as the other, only suspected) the prosecutor may proceed under the game law, and sue for a penalty of £5 for a misdemeanour; or the offender may be committed to prison under the same law.

3rd. He may also be prosecuted under the *Trespass Act*, and sued for a penalty of £2, and committed to prison. Under this law he may be convicted, whether he has killed game or not.

4th. If convicted under either of the last two laws, or under both, he may also be proceeded against under the *Stamp Act* for a penalty of £20, for killing game without a license.

5th. If convicted under any or all of these laws, save the first, he may be further prosecuted for the sum of £4. 0s. 10d., the price of a certificate.

6th. If he should not be convicted under any of these laws, inasmuch as he may have killed no game, nor have committed any trespass in looking for it, a man may be, and men very frequently are, committed to prison as a *rogue and vagabond*, for being on a road near to which game is supposed to be, he having no good excuse for being on such road at the particular time charged. So even lovers must beware of green lanes.

There are thus six applications of the law to poachers, and four of them, numbered here 2, 3, 4, and 5, may be directed against one single offence. In some parts of England, I am told, other laws are made to bear against poachers; but these are what are found sufficient in the south of England, with which I am best acquainted.

There is much anxiety manifested here by those who have heard of Mr. Bright's motion for returns on the game laws last session to know what he intends doing this next session. And no wonder there should be anxiety; Lord Normanton has already shot, with his friends, several thousand hares and pheasants on the farms which pay rent to him here, and these creatures seem swarming

as much as ever. And look at the difficulty to pay rents with crops so much injured. Look at the poor rates required to keep men who are out of work and their families, whom the farmers, next to penniless themselves, cannot employ. Look at the county rates required to prosecute and to keep in prison the hundred poachers who were in Winchester gaol a month ago; and there are more of them there now. Look, too, at their families on the poor rates. Look at the way that poachers become familiarized with crime; how they become sheep-stealers and housebreakers when they cannot get game; and cannot get work because they have been known as poachers. Look at the rencontres with gamekeepers; the assaults to the effusion of blood; the murders, and the hanging by the neck upon the gallows because of murders. Look at the inquisitorial nature of the secret information law, which I have marked No. 1, so repugnant to the English constitution and the English love of fair play. Look at the game-preserves, and the game history on every side, and, at best, that shooting game only affords the same pleasure to a few individuals within an enclosure which they might procure by going into a farmer's yard and blazing away right and left at the pigs, sheep, and poultry assembled there to be fed. Lord Normanton's game are as thickly penned up.

But you will perhaps, also, look at the fact of a vast quantity of corn and productiveness of soil being wasted by those who will not allow you to trade for corn to foreign countries, lest you injure the sale of the home growth. I think that if there was no Corn Law, there would be less game. And so do many farmers begin to think, down this way, who have always been friendly to the landlords and their Corn Law.

NIGHTS LETTER.

Sandhill-heath, Hampshire.

I have had occasion to be several times along the roads and across the roads which intersect this common. It is between two and three miles west of Fordingbridge, and is the place, as will be remembered, where Lord Shaftesbury has enclosed some acres of common for allotments. I have just come here at seven o'clock in the evening, nearly two hours after dark, and have had pointed out to me some persons working at their allotments. I am told that it is quite common for the labourers who have them to work at them until eight o'clock in the moonlight, when it is moonlight. This fact may go for what it is worth; but I have just spoken to a man who is digging in his allotment now at seven o'clock, when there is no moonlight. He must be up to his stable and have his breakfast of potatoes to-morrow morning by six o'clock. His wages are 7s. a week. He has a family, and not one of them earns anything but himself.

When writing from here before I did not mention the families that I visited in this neighbourhood. Some of the poorest are to be found near this, and some of the best-conditioned. Several of the men who work at Mrs. Currie's, where wages are 9s. a week—a sum which is in reality high wages in this part of England—live near this. To speak generally, their houses are better than common. Most of them are brick. Yet all are not so good as they look like. Several persons who have only 8s., 7s., and 6s. a week live in the same class of houses. I inquired of an informant if I could see some family where the father's wages were the highest, and where the moral conduct of both father and mother was considered wholly blameless. At the same time where they were dependent entirely on their own exertions for their condition—not on charity.

I was directed to the house of William Mortimer. I saw his wife and some of the children: they occupied a very inconvenient house; they were eight in number, there being six children, the eldest fourteen. The mother said she wished she could get some work for this girl. She said they seldom had enough of bread to eat, and had to depend a good deal on potatoes. They had one of Lord Shaftesbury's allotments, as also a piece of potato-ground elsewhere. Their house rent was only 20s. a year. They paid that to the husband's father. It had a ground-floor apartment, about twelve feet square, and not quite five feet six inches high; and beyond that a place for lumber, which the husband had built himself. Overhead there was one apartment in which they all slept. This was about four feet high, and was the size of the one below. They had some good furniture, and a better and more neatly arranged stock of crockery were than is usually seen in labourers' houses here. The woman told me that they might get a better house; but as everything had to go for virtuous, and as more money should go the same way than could go, they were obliged to live in the cheapest place they could get their heads into. They could not afford to pay 1s. 6d. or 2s. a week for house rent. This in which they were was much dilapidated, and exceedingly inconvenient for cleanliness; yet the children looked clean and healthy, and might have done honour to a mansion as regarded brightness of face. The poor woman did not look so well. She said she had to work hard among them to keep them clean and tidy; and it was beyond her power to get new things for them when they needed them. She said her husband, after his day's labour, had also to go to the allotment and work hard to get the potatoes, on which they mostly lived. To a question, how the other families lived whose wages were only 7s. a week? she said she could not tell. Some got their rent paid by the parish; and some lost their furniture for rent, and lived in little more than the

bare walls on the bare floor. But even the best of them had a sore struggle for life. Nobody paid more than 7s. or 8s. a week in that part save Mrs. Currie's people, where Mortimer worked, and that was in a gentleman's park. She had not known the farmers to pay more than 8s. a week since she could remember.

There is a monumental column in the park erected in memory of Sir Eyre Coote. An old man to whom I spoke about it says, he "wishes to the bottom of his heart there were some more generals to build monuments to. He worked two years at that one, and he had two quarts of drink every day. "Ah!" he continued with a sigh, "that was a time."

COUNTIES REGISTRATION MOVEMENT.

FREE-TRADE TEA PARTY AT BOLTON.

On Wednesday evening, the 18th inst., a Free-Trade tea party was held in the Temperance Hall, Little Bolton, which was attended by about 700 persons. After the repast, John Slater, Esq., the Mayor, was called to the chair, and we observed around him, on the platform, the following gentlemen:—Dr. Bowring, M.P.; Richard Cobden, Esq., M.P.; Messrs. R. R. Moore, Henry Ashworth, Edmund Ashworth, Robert Heywood, Thomas Cullen, James Arrowsmith, C. J. Darbishire, Henry Hollins, Joshua Crook, Samuel Taylor; and the Revs. R. Brown, J. Pye, F. Baker, D. Nimmo, and S. Dyson.

The Mayor having briefly opened the business of the evening,

Dr. Bowring rose to address the party, and was most cordially greeted. After a few preliminary remarks, he alluded to the improved state of the country, and to those mighty energies which made her so illustrious and so powerful, and which had enabled her to beat down much opposition. She had been fettered; yet, in spite of her bonds, had kept a proud position among the nations of the earth. But what might this country become, with all her capital, her machinery, and her intelligence, if the impediments in her course were removed? (Hear, hear.) Within the last few weeks it had been his fortune to have an opportunity of comparing the prospects of England—its manufacturing prospects—with those of other lands; and he had come to the conclusion, that if the people of this country had but fair play they would have nothing to fear from foreign competition. (Hear, hear.) The monopolists had asserted that Free-Trade would lower the rate of wages, and be a great injury to the working classes and to the community at large. Now, there was present that evening a friend of his, who was connected with some little exertions he had made in favour of Free-Trade in the Isle of Man, and who could bear out the statement he was about to make, that the experiment in the Isle of Man completely falsified all the assertions of their opponents. (Hear, hear.) In connexion with this island there was, fortunately, no great sinister interest to induce opposition to the step that had been taken. Having the honour to possess the confidence of the islanders, he (Dr. Bowring) represented to the Government the grievances under which they laboured. He showed them that the money of the rich was made to go twice as far as the money of the poor, and the Government having no motive for patronising the injustice, the appeal to them was successful. The system produced nothing to the revenue, and was a profit only to a small body, who, no doubt, viewed the interference of a stranger like himself with great dissatisfaction. Since they came to Bolton, he had asked his friend what had been the operation of the Free-Trade principle in the Isle of Man, amongst a community numbering only 50,000 souls. His friend had shown him a sample of sugar, which could be bought for twopence a pound. He told him, also, that good beef was selling at three halfpence per pound wholesale, and twopence retail; that the price of the best tea was three shillings per pound, and that of ordinary descriptions two shillings. Now, when he (Dr. Bowring) went to the Isle of Man, he found no difference of opinion among the people on the subject of Free-Trade legislation; and what had been the result of the change? His friend informed him that last year great numbers were dependent upon a public subscription for their support, but that now there is scarcely one unemployed person on the island; and that the average rate of wages has increased, whilst the price of provisions has greatly decreased. Such had been the result of the Free-Trade principle in the Isle of Man: it had removed distress and suffering, and had introduced in their place prosperity and happiness. (Cheers.) The hon. gentleman concluded with an exhortation to his auditors to continue their exertions in favour of Free-Trade until their labours should be crowned with success; and resumed his seat amidst loud and general acclamations.

Mr. Cobden was then introduced by the Mayor, when the company rose and cheered him most enthusiastically. He delivered an able speech in which he lucidly pointed out the plan adopted by the League for the increase of Free-Trade voters, and showed that it was practicable and constitutional. The hon. gentleman sat down, amidst prolonged cheering.

Mr. Rouear R. R. Moore then addressed the meeting with his accustomed eloquence, and was succeeded by

Mr. Henry Ashworth, who strongly recommended the plan suggested by Mr. Cobden, and moved a vote of thanks to Dr. Bowring, Mr. Cobden, and Mr. Moore for their services in the Free-Trade cause.

Mr. ALPHAS DAWKINS seconded the motion, which was carried by acclamation.

Dr. Bowring acknowledged the compliment, and moved a vote of thanks to the Mayor for his services as chairman.

Mr. COBURN seconded the motion, which was carried amidst several rounds of applause; at the suggestion of Mr. Cobden, three cheers were also given for the Mayors, who had favoured the company with her presence.

The Mayor returned thanks, and the meeting then broke up.

MEETINGS IN THE WEST RIDING OF YORKSHIRE.

(From a Correspondent.)

In addition to the meetings attended by Messrs. Cobden and Bright, four have taken place in the smaller places of the riding, which have been attended by Mr.

Plint, as a deputation from the Leeds Anti-Corn-Law Association.

The first in order was at Dewsbury, when about fifty gentlemen of the town and immediate neighbourhood were present. Mr. Matthew Hale presided, and, after some observations from Mr. Plint, a committee was formed, chiefly of volunteers, which entered on its duties forthwith, and with an ardent determination to extend the county constituency in the township. An addition of from one hundred to two hundred was confidently talked of, and it is believed will be realized.

The next meeting was one of the committee for the Birstall polling district, and was held at Clackheaton, and presided over by George Anderton, Esq., the zealous chairman of the district. Here, as at Dewsbury, an excellent spirit was exhibited, and arrangements made to canvass the district and to look out for property. Messrs. Cobden and Bright never having visited this district, a resolution was carried at the meeting inviting them so to do, with which they have complied. The meeting was announced to take place on Friday, the 27th, at Clackheaton or Batley.

On Wednesday, the 18th, a third meeting was held at Yeadon, to which delegates were invited from Grimston, Rawdon, and Horsforth. This was a general meeting, many working men being present. J. Marshall, Esq., of Horsforth-hall, was in the chair, and speeches were delivered by him, Mr. Plint, and Messrs. Ryecroft and Marshall, of Yeadon. A committee was named for the four townships represented at the meeting, and it is hoped a considerable addition will be made to the electoral list, although all the townships have at present much above the average number of the riding, taking the ratio of the population to that of the riding, on the measure of proportion.

The fourth meeting, convened by circular, was held at Idle, on Thursday, the 19th, and was attended by Mr. Plint. About one hundred and fifty persons were present, who listened with evident interest to a lengthened speech from Mr. Plint, at the conclusion of which a committee was organized, and steps taken to carry out the object of the meeting. It is a source of great satisfaction to us to state that the tone of public opinion in these smaller townships of the riding shows a vast improvement during the last two years. Sentiments and doctrines which, two or three years ago, were listened to either with incredulity or dislike are now evidently understood and appreciated, as was evident, particularly at Yeadon and Idle, in the hearty and unanimous cheering which followed their enunciation. At Yeadon, Messrs. Ryecroft and Marshall, both of whom are working men, spoke of the League as the instrument by which errors of a grave and pernicious kind had been removed from their minds; on the subject of protection, and the relative position and interest of masters and operatives; and their remarks were heartily applauded by their fellow-workmen present. When the farmers and the agricultural labourers shall be equally enlightened as to their interest in the Corn Laws, the landowners may look about (as Moore used to say in his almanac) for great and portentous changes.

MEETING AT KEIGHLEY.

On Friday, the 20th inst., a public meeting was held in the hall of the Mechanics' Institution, Keighley, which was attended by Mr. Bright, M.P., as a deputation from the Council of the League. The hall was crowded to excess, more than a thousand persons being present, the greatest portion consisting of working men. John Briggs, Esq., was called to the chair. On and about the platform we observed a large number of manufacturers and influential inhabitants of the town and neighbourhood; among whom were Messrs. J. B. Clapham, John Craven, Joseph Craven, James Mitchell, Henry Clapham, John Butterfield, William Butterfield, Robert Milligan, Thomas Threlfall, John Town, William Greenwood, Edward Brown, C. Busfield, Edward Townsend, Frederick Smith, William Wright, Frederick Butterfield, and R. S. Butterfield, &c. &c.

The CHAIRMAN opened the meeting by expressing his regret that Mr. Cobden was prevented from being present, and on introducing Mr. Bright, requested for him, and for every one who might address them, a fair and impartial hearing.

Mr. BRIGHT commenced his address by stating that he stood there as a deputation from the League—an association formed for the purpose of overthrowing the Corn Law and every commercial monopoly. Its object was to secure the freedom of industry, in order that every man might be free to work and to enjoy the whole fruit of his labour. Civil and religious freedom was good, but without the liberty to work and to exchange the produce of work, freedom could never be complete. Mr. Bright explained that the League made war upon the Corn Law, seeing that it was the mainstay of the whole system of monopoly. He then entered into an elaborate argument to prove how radically vicious is the principle of "protection," how impossible it is to extend it to all classes, and, therefore, how unjust it is to all those who are excluded from it. The League was resolved to repeal the Corn Law, and they sought to secure this their honest object only by honest means. For six years they had laboured in this cause. They had broken no law; they had avoided every thing tending to violence or bordering on deception. Their present policy was sanctioned by sound morality, and was in strict accordance with the constitution of the country. They invited Free-Traders everywhere to qualify for boroughs and counties, and especially for the latter by the purchase of 40s. freeholds. The ancient and free franchises of the counties had been borne down by the 450 tenants-at-will; and to restore them to independence more freeholders must be created. The middle and action more freeholders must be created. The middle and working classes, or the great industrious class, had the power if they had the will. Combination and zeal were necessary, and there seemed springing up on every side. Mr. Bright concluded by a powerful appeal to the meeting to unite for the defence of their just rights, and for the deliverance of industry from the blind and selfish oppression of the landlords.

His address lasted for two hours, and was listened to with the deepest attention. During its delivery he was loudly cheered, and at its conclusion the audience rose en masse, and expressed their approval by enthusiastic and repeated rounds of applause.

A person of the name of FRYER rose in the body of the meeting to put a question to Mr. Bright; his appearance was that of a good-natured but not very deep-thinking man, and his remarks were in accordance with

his put in o bill.

Mr. M the atten the state period of the cour advocate

his appearance. He concluded a few observations by putting several questions, all of which may be summed up in one—Why did Mr. Bright vote against the ten hours' bill?

Mr. BRIGHT entered at some length upon the question of parliamentary interference with adult labour, and expressed his decided conviction that no good could arise from it. Parliament in this country had small sympathy with the working class, and to intrust to them the fixing of the hours of labour would be a most hazardous experiment.

The parliamentary leader of the ten-hours' bill party represented a county whose labourers were sunk to the lowest point of destitution, and yet he had never said a word in their behalf in the House of Commons; and that sympathy was greatly to be suspected which left Dorsetshire labourers to starve, and expended itself upon the operatives of Lancashire and Yorkshire. Mr. Bright declared himself willing to give political rights and every privilege to the working men that he himself enjoyed; but he had an insuperable objection to place the regulation of labour and wages in the hands of a class who had shown themselves so utterly regardless of the condition of the labourers on their own estates, and so cruel and heartless in the legislation they had inflicted on the country. (This reply was loudly cheered by the meeting, and seemed to give satisfaction to all present.)

After a vote of thanks to Mr. Bright, and to the Chairman, the meeting separated.

Before proceeding to the meeting, an address was presented to Mr. Bright from the members of the Keighley Free-Trade Association, expressing their high approval of his labours in the great cause of Free Trade. The committee of this association have undertaken to procure additions to the county register, and, from the unanimity of feeling pervading the district, much good may be confidently expected.

MEETING AT PONTEFRAC.

On Monday evening last, Mr. Cobden and Mr. Bright attended a public meeting held in the Town-hall, Pontefract. John Phillips, Esq., the mayor of the borough, was unanimously called upon to preside. On the platform were, Thomas Routledge, Esq. (the late mayor), Mr. Councillor Brooks, Mr. Bywater, Mr. Carter (of Nottingham), Mr. Francis Barker, Rev. Mr. Millsom, and others.

Mr. COBDEN addressed the meeting, and spoke of the effects of protection on the interests of agriculture, showing how greatly the farmers were deceived in supposing they had any interest opposed to the rest of the community, and in relying on acts of Parliament for success in the prosecution of their trade. He alluded to the subject of wages, and explained how directly the labourers are interested in an abundant supply of the chief necessities of life; and called upon those present to unite with the League in putting down the injustice of the Corn Law.

Mr. BRIGHT followed, and in the course of his speech touched upon the attempts made to secure the influence of the representation of Pontefract for the monopolists, by means of intimidation and corruption exercised upon the electoral body. He made a strong appeal to the meeting to remove the stain which attached to their borough, telling them that if they sold their franchise, the men they sent to Parliament would sell them.

The present policy of the League was dwelt upon in both speeches, and the Free-Traders of the town were urged to unite and work in the good cause which promised so much of relief to all classes in the country.

A vote of thanks to the deputation was moved by Mr. BARKER, seconded by Mr. BROOKS, and carried with great cheering; and after thanks to the Mayor for his services in presiding, the meeting separated evidently greatly impressed with the importance of the object for which they had assembled. A committee was appointed to co-operate with the League in their exertions to secure the return of Free-Trade representatives from the West Riding.

MEETING AT BARNSELY.

On Thursday, the 19th inst., Mr. Bright, M.P., and Mr. Moore, visited Barnsley as a deputation from the Council of the League. A very numerous meeting was held in the schoolroom of the Wesleyan Methodist Chapel, attended by the most active Free-Traders of the district. James Russell, Esq., of High-royd-hill, a farmer and landowner, was unanimously called to the chair. Among those present were John Clark, Esq., of Keresforth; John Twibell, Esq.; William Cooper, Esq., of Banktop; William Harvey, Esq.; William Taylor, of Redbrook; Edward Parker, of Stairfoot; George Travis, William Pack, Joseph Parkinson, George Smith, John Battman, &c. &c.

The CHAIRMAN, after expressing his hearty approval of the object and proceedings of the League, introduced Mr. Bright to the meeting.

Mr. BRIGHT commenced by alluding to the heavy charges which the monopolists have brought against the League—charges which were wholly false, but which were to be expected to be made by men who have their hands in other people's pockets. He proceeded to show how utterly groundless was the belief that a system of protection was necessary to maintain the prosperity of agriculture; supporting his arguments by a reference to the frequently-recurring distress of the farmers, and to the frightful condition to which the farm-labourers are reduced in the southern counties of England. He then adverted to the partiality and unfairness of the Legislature, and accounted for it by the fact that the landowners were the Legislature—that they had their heavy hand upon the smaller boroughs, and, by working the Chaudon clause in the Reform Act, had secured almost every seat in the representation of the counties. To this latter point the League were now directing their attention, and were resolved, by the help of the Free-Traders in the populous counties, to wrest several of the most important constituencies from the hands of the monopolists. He strongly urged upon the Free-Traders of the Barnsley district the duty of securing qualifications for the West Riding; and promised them that at another election, if in the meanwhile they would work zealously in the cause, their present representatives should be dismissed and their places filled by better men.

Mr. MOORE then addressed the meeting, and directed the attention of his audience to the striking fact that all the statements of the monopolists, made during the recent period of manufacturing distress, had proved false, whilst the course of events had shown the soundness of the views advocated by the League. He particularly dwelt upon the

various points of wages, machinery, and revenue, showing that with a fall in the price of bread, wages had in almost every trade considerably advanced, whilst with more machinery at work, there was an increased demand for labour, and at the same time the revenue of the country was rapidly improving. Mr. Moore concluded by an eloquent appeal to the meeting on behalf of the great cause of Free Trade, and exhorted them to labour to spread sound principles to the utmost of their power.

Both speeches were most attentively listened to, and were loudly cheered.

Mr. WM. HARVEY, an extensive manufacturer, moved a vote of thanks to the deputation, which was seconded by Mr. W. E. PARKER, of Stairfoot, and carried with enthusiastic applause.

Mr. BRIGHT acknowledged the compliment paid to himself and his colleague, and proposed a similar vote to the chairman, whose long and consistent labours in the cause of freedom and justice entitled him to the gratitude of his countrymen.

Mr. RUSSELL briefly returned thanks, and the meeting separated.

The Committee of the Barnsley Free-Trade Association have undertaken the care of the register for the district; and from their known zeal we anticipate important results. We may add that several ladies in Barnsley are engaged in preparing articles for the great Bazaar, to be held in Covent-garden Theatre in May next.

ON A CORN RENT.

To the Editor of the Mark-lane Express.

SIR,—My attention has been called to a letter in your last week's paper, signed "S. A. F. Kerby," near Deane, Northampton, commenting upon that portion of my speech at Rochdale which had reference to the subject of corn-rents. The writer has also wasted a good deal of indignation upon an erroneous report of what I said about the parish of Ruislip. He quotes the *Morning Chronicle* report, in which I am made to say that the parish of Ruislip, with 700 acres, gives employment to only 100 men. There is a slip of the reporter's pen, or of the fingers of the compositor, which has decimated the number of acres in Ruislip parish, which I stated to be 7000, upon the authority of the evidence before the coroner's inquest, and which is correctly given in the full report of my speech in the Manchester paper. Your correspondent's imagination has led him a dance into "Ethiopia upon the banks of the Niger," and carried him back to the time of "Saul, Samuel, and the witch of Endor." It is not my intention to follow him in those distant flights; but I have a word to say upon his remarks on another subject, more interesting to the readers of your paper.

Your correspondent finds fault with my advocacy of corn-rents, and more especially with the opinion I expressed, that low prices were as profitable as high to farmers, provided their rents were fixed in proportion, and that corn-rents were the best arrangement to meet the Corn-Law-created fluctuations in prices. He then states his argument thus:—

"Were a farmer to pay his rent in wheat, and other corn in proportion, say one-third for rent, as every farmer ought to make three rents, in some cases four, or he cannot live; say a farmer growing 200 acres of wheat upon lands in a high state of cultivation, to four quarters per acre, or 800 quarters; take 200 quarters for rent at £2 per quarter, makes £400 for the landlord's rent for wheat; and so in proportion with other grain: take 200 quarters of wheat for the landlord at £3 per quarter, the landlord would receive £600 instead of £400; and the tenant, for his 200 acres of wheat, 800 quarters, deducting 200 quarters for the landlord, would leave 600 quarters for the tenant, which at Mr. Cobden's wished-to-have price, £2 per quarter, would amount to only £1200, but at the promised-by-act-of-Parliament price, 60s. per quarter, would amount to £1800. The farmer having a surplus between Mr. Cobden's ruinous price and the promised-by-act-of-Parliament price, a price of £600 upon 200 acres of the farmer's wheat crop, therefore, between Mr. Cobden's price and the promised price to the farmer, makes a difference upon 200 acres of wheat of £800, £200 to the landlord and £600 to the farmer, or £3 per acre to the tenant and £1 per acre to the landlord, or £4 per acre to both, in the farmer's wheat crop of 200 acres. £4 per acre is nearly four times the yearly average rent of all the cultivated lands in Great Britain and Ireland. Take all the rent off, it will not compensate the farmer for Mr. Cobden's low price."

It is scarcely credible that the above can be the production of a practical man. He assumes that a farm of 200 acres is wholly under wheat, and makes no allowance for the land which is in pasture, or in preparation for a wheat crop, and which pays rent, although it yields nothing for the market. He assigns one-fourth of the wheat to the landlord, and three-fourths to the tenant! But he does not tell us how the lucky tenant disposes of his share. He must have a great hoard somewhere, if Mr. Kerby's calculation be correct; let us see if it be so. A farm of 200 acres, worked upon the five-courses system of cropping, will have forty acres in wheat every year; and this system will, I suspect, be found more profitable than your correspondent's mode of growing wheat on every acre. If we adopt the general notion that the wheat must pay the rent, then it will require at least two-thirds of the wheat crop upon the forty acres to satisfy the landlord for the rent of the whole farm. Instead, therefore, of three-fourths of the wheat going to the tenant, as stated by Mr. Kerby, one-third only falls to his share; and instead of the landlord getting one-fourth, I find he has two-thirds.

Let us now see how a corn-rent will bear upon landlords and tenants. The landlord asks, we will suppose, 25s. an acre for his 200 acres, and Mr. Kerby accepts the offer. The Scotch farmer, on the other hand, bargains with his landlord to give four bushels of wheat, or half-quarter an acre. Let us suppose that these bargains are entered into with wheat at 60s. a quarter; so long as this price continues, all parties, both Scotch and English, stand upon the same footing, paying 25s. an acre rent. But let us suppose that wheat falls to 40s., and how will matters be? Why, Mr. Kerby will continue to pay 25s. an acre, whilst the Scotch farmer pays 20s.; a difference of £50 upon the 200 acres, or of 25s. an acre on the 40 acres growing wheat. 10s. a quarter is, however, by no means the limit of the fluctuation under the sliding

scale. In 1835 the average price of wheat for the whole year was under 40s. a quarter. At that time the tenantry of England held their farms at a rent calculated upon the understanding that wheat was to sell for 60s. at least, which price it was believed the sliding-scale act of 1828 would secure. We all know the distress which then overtook the English farmers, as proved before the committee of 1836. But we also know that the Scotch farmers, paying corn-rents, who were examined before that committee gave a very different account of their condition; and I have heard from the lips of one of the most intelligent farmers in Haddingtonshire, that he cleared more money from his farm in 1835 than in any year since. The difference in the state of things in Scotland and England was caused by the difference in the terms of renting, for whilst the Scotch farmer paid £400 to his landlord, the Englishman paid £600.

These facts sustain the opinion I expressed, that farmers may make as good profits with low prices as with high, provided their rents are fixed in proportion. It is a too common fallacy to confound profit and price as one and the same thing. So far from this being the case, it is a notorious fact that all the money made in trade and manufactures during the last thirty years has been done by selling cheaper and cheaper. But then, if the manufacturer sells cheaper he buys cheaper. If he sells his cotton cloths now at a quarter the price he did in 1815, he buys his cotton wool at a quarter the price. The farmer, on the contrary, is paying thrice as much rent for his land as his grandfather paid about 70 years ago, whilst his wheat is actually selling under the price of that period.

There will be a remedy for this when tenant-farmers talk over the subject amongst themselves, without the meddling intervention of landowners, titheowners, and land-agents, who appear to me to mix in farmers' clubs and agricultural societies for scarcely any other object than to prevent the discussion of the questions of rent, tenure, game, &c., and to direct the attention of the tenantry upon false scents.

I am, Sir, your obedient, humble servant,
Manchester, Dec. 18. RICHARD COBDEN.

THE ONE IDEA OF THE LEAGUE.

(From the Morning Advertiser.)

The League, and we speak now of the League itself as well as of its organ, has been called into existence to be the expositor of "one idea," and to force that "one idea" on the mind of the whole kingdom. The strength of the League and its success depend on its steadfast adherence to this "one idea" to the exclusion of every other. If ever the League should take up any other "idea" than the destruction of the Corn Laws, the amazing power it now possesses would, by being divided among numerous objects, become utterly useless, and render it the laughing-stock of those who now tremble at its colossal energies. Every one knows that the great bulk of the Leaguers are orthodox enough on the numerous questions which engage the attention of politicians, and that the general principle of justice which is involved in the object for which they contend, would lead to the adoption of many other measures calculated to promote the public benefit. But if the League as a body were now to start in the pursuit of any of those collateral objects, it would turn at once out of its high path, and the object to which it is now advancing, as the goal of its efforts, would be never obtained. Baths and washhouses, and cheap dwellings for the poor, and even small allotments and cricket, and numerous other palliatives of suffering, are all good things in their way, and they have our warmest advocacy; but if the League were to begin and advocate these things, or even to talk about them, it would stultify itself, and prove as helpless as the *Herald* or the *Post* could wish it to be.

We admire in the League that unity of purpose which the *Chronicle* appears to condemn. Instead of apologizing for this simplicity of intention, we can speak of it only with admiration. If those intelligent and honest men who lead the councils of Manchester and London were to give a premature publicity to any other plans they may have formed for the public good, they would at once forfeit the high character they have acquired as guides of public opinion.

For the time, until its end is gained, the League ought to magnify its object above everything which political energy can accomplish; it should see nothing in the best schemes of philanthropy, and it should hear nothing from its best-meaning friends who would for a moment withdraw its efforts from the work to which it is pledged. If it were possible for any mind to overrate the giant evil of corn monopoly, we cannot see the harm that would follow were the League to do so; if the eloquent men whose deep feeling and sterling good exercise so powerful an influence on the crowds they address, could fall even more intensely than at present on the theme they discuss, the only result would be that the consummation they anticipated would be the more speedily realized.

Such passages as those which the League has quoted from Colonel Thompson, in favour of its "one idea," are therefore, very appropriately brought forward, and the more widely they are read the better. "There is a natural suffering, and an unnatural; there is one sorrow at the hand of Almighty God, and another sorrow of the landlords; and the proportions between the two are almost in the inverse ratio of the magnitude of the willers."

"There is no use in mincing phrases; the people are trampled on by the rank and gross oppression of an insolent order, who push their injustice to the cottage of the starving man, and the bedside of the dying, and feed their hounds on the blood and sinews of the industrious population."

By the way, we observe a new illustration of the truth of this remark in the fact that the enormous quantity of game now sold by the gentry is actually driving poultry out of the market. The poultry is raised by the small farmer, or the cottager, at their own proper cost and charges; the game is fed, not at the expense of the proprietor, but on the produce of the tenantry, among whose crops it makes tremendous havoc. But the game of the landlord is purchased, and the produce of the little farmer returns unpaid. We understand that this piece of injustice is being practised to a great extent, and affording a fresh instance of the determination of the landlords to act as well as to legislate for their own special benefit, come what will of the poor.

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, December 25, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the LEAGUE of the Saturday immediately succeeding, but are included in the list of the week following.

FREE-TRADE LECTURES.—Two lectures on the Corn Laws and Free Trade were delivered in the large room, Three Cranes Inn, Rotherham, on the evenings of Friday and Saturday, the 20th and 21st inst., by Mr. Falvey, from the Anti-Corn-Law League. At the close of the first lecture a resolution condemning the Corn Laws was carried almost unanimously—not more than six or seven hands being held up against it, and those not in favour of the Corn Laws but the "Charter." On the following evening Mr. West, the Chartist lecturer, was sent for to Sheffield to oppose Mr. Falvey, but with no better success. Mr. West's objections to Free Trade were answered by Mr. Falvey to the evident satisfaction of the audience, as evinced by their cheers at the close of his reply.

THE POLYTECHNIC INSTITUTION.—The directors of this popular institution have again secured the musical talents of Mr. Charles Horn; and that gentleman has during the last week been giving concerts or musical lectures, illustrated by instrumental and vocal assistants, in the theatre of the establishment. It is almost unnecessary to tell the public that Mr. C. Horn is one of the best of the native composers of the day, and that to a fine and cultivated taste he unites extraordinary industry of research, and a construction of intellect admirably adapted for deduction from the results of his long experience. These qualifications render him particularly adapted for the sort of lectures he has undertaken to give, viz.—"The nature and history of the musical science in the various countries of the world." His concerts or lectures (for they are both or either) have been well attended, and received with the greatest applause.

INCENDIARISM.—Two fires occurred last week in the district of Selby, within a few miles of each other, and under circumstances which leave no doubt of the calamities having been occasioned by the hand of an incendiary. The first, which happened on Monday night, has resulted in the total destruction of a corn-mill, situate at South Uffield, the property of Mr. Huddesley. The second fire occurred on Tuesday night, at Cawood, and terminated in the entire destruction of a farmhouse and barn, occupied by Mr. Matthew Button, farmer, the whole of the inmates of which narrowly escaped, in a state of nudity, with their lives. On Friday afternoon a fire was discovered in an outhouse adjoining Messrs. Stead's slaughter-house, Frome, but it was eventually extinguished without much damage. A few nights ago a large cow-house, containing a quantity of feed and straw, situate at Great Elm, near Frome, the property of the Rev. Dr. Griffiths, was entirely consumed by fire, and there is no doubt it was the act of an incendiary. On Thursday morning, about half-past two, a fire was discovered raging in an outhouse, the property of Mr. Tony Waller, situate behind Westoe. Assistance was shortly on the spot, but not in time to save a stack of hay, containing about twenty tons, and a shed filled with potatoes. There was a scarcity of water. To all appearance the fire has been by the hand of an incendiary. The property, we are informed, is insured in the Newcastle Fire-office. *—Sunderland Herald.*

LETTERS ON THE CORN LAWS, No. XIII.

TO ALL TRUE LEAGUERS.

A happy new year to you! Happy in the hope that you are advancing, with steps as steady and sure as those of Time, towards the full accomplishment of the objects for which you are associated.

And that will be a happy consummation. There are some, indeed, who seem very anxious to abate the glow of your anticipations. They preach from the text, "Blessed is the man who expecteth nothing, for he shall never be disappointed." But their Scripture is not canonical. The doctrine is as false as its influence is depressing. No change in the direction of Free Trade, whether in ships, silks, or sugar, has ever yet been without its measure of advantage. The mischief of the giant monopoly of corn may be calculated from the effect of such minor restrictions as have been removed. The merchant, the manufacturer, the tradesman, the workman, the housekeeper—all would feel its abolition like the flight of the nightmare; and the very child reap the benefit in more school and less work, better food and brighter hopes. Something more to the purpose must be said than that Corn-Law repeal will neither realize Utopia nor introduce the millennium, before you are convicted of extravagance, or compelled to "bate one jot of heart or hope." Philosophers have worn out their lives in intellectual labour, and philanthropists have perilled theirs in compassionate enterprise, without achieving a fraction of the good already effected by your combination. True, you have not yet obtained a parliamentary majority; Russell has not renounced his fixed duty, nor Peel his unfixed policy; and therefore you are supposed to have done nothing. And is it nothing to have imbued the public mind with truths which it can never forget? Nothing to have taught multitudes to think and reason, rendered them alive to the power and worth of argument, and destroyed for ever the dominion of the cant phrases of party? Nothing to merge the spirit of faction in the pursuit of a well-understood national advantage, and given to public energy a patriotic purpose? Nothing to have raised the middle and trading classes out of the mire of a base servility, made them hold on for the right, and instilled the rudiments of independent thought and action? Nothing to have influenced the policy of the chosen minister of monopoly, and made his crooked ways tend towards the straight path, until he hesitates between class interest and public principle? Nothing to approximate towards the closing of the gulf that had separated the middle and the working classes, dispelling the delusions that forbade their union, and impeded thereby all prospect of improvement? All

this you have done incidentally. It is the work, not of your victory, but of your agitation. Your conflict is more beneficial than others' triumph—your temporary failure is richer in good than a thousand successes.

The closing year has given you the working classes. The stones of the field cry out for Free Trade. Farm-labourers have got an inkling of the truth. Like Mary Ferris of Chalcot, they are "for Free Trade, and then there will be more work and more food." Look at that noblest compliment to Sir Henry Pottinger—the address of the Manchester operatives, with 10,438 signatures attached to it in fourteen hours. Adam Smith himself might have penned the document to which those signatures are appended. Long have you toiled for the millions; it will now be with the millions. A pleasant pledge of cordiality for the commencement of the year.

Union against disunion. In the 5000 at Covent Garden there is unanimity; in the 40 at No. 17, Old Bond-street, there is dissension. The committee of the Central Protection Society reports that it has done nothing, and the members of the reporting committee are not all satisfied with the nothing they have done. "The tenantry of England are being silently but rapidly destroyed," says Mr. Altham. Certainly they are; but they have hitherto retained their "protection." It has done for them its little utmost. For months it has kept the duty at its maximum; what now can they have? If 20s. a quarter avail them not, will 40s.? How long will it take them to perceive that law may preserve high rents, but cannot prevent low prices? The promise was 50s., the payment is 45s. The tenant's purse is drained to the tune of the former, and replenished to that of the latter. Peel's promises are like Cayley's quotations. Still the Duke of Richmond thinks that the farmers should "trust the Central Society." If they do, it will reverse the innkeeper's saw, and be "trust to-day and pay to-morrow."

It is curious to see how little liking the "protectionists" have for the law which they associate to uphold. No voice cries "God bless it;" no tongue grows lavish in praise of its beneficial results. It pleases nobody. Neither the producer nor the consumer is satisfied. Prices are low, and people are unfed. Providence has repealed its practical operation in lowering prices by the abundance of the harvest; while the benefit of cheapness is impaired in the obstruction to trade presented by the sliding

scale. The experience of cheap years is thus conjoined with that of dear years in favour of your object. A succession of good harvests ruins the farmer, as a succession of bad harvests starves the operatives. How long will the match last, of "protection" against Providence? Peel's bill has weathered another year, but another year may weather Peel's bill. The sun that ripens the corn will rot the parchment. Abundant harvests will keep wheat down to Free-Trade prices, without the blessings of Free Trade to any class of society.

We are now in the height of the charity season of the year. Forty thousand persons have eaten their Christmas dinners in the workhouses of the metropolis and its environs. Almsgiving advertisements run along the columns of newspapers by the side of railway announcements. And yet a coroner complains that, on account of their number, in many parts of the country, no inquests are held upon deaths by destitution. What is the moral of this fearful state of things? Is it not the want of some great remedial measure that shall infuse fresh life-blood into the frame of society? Will any almsgiving ever bestow the title of what is taken by monopoly? Free Trade is the only principle that can lay any plausible claim to the power of renovation. Yet the very parties who themselves plunder the poor of fourpence out of every shilling they earn, and then give them a penny for scores to scramble for at Christmas, talk of the "muddle-headed and cold-hearted economists!" Muddle-headed, because they strive for justice and prosperity according to the laws of providential government; cold-hearted, because they would raise the labourer to independence, and enable him to help himself, instead of cringing with sickening gratitude for a pitiful boon taxed out of his own food and earnings. O the poor have as many friends as the hare in the fable; and the loudest amongst them are the hounds! Few things are so disgusting as the cant of charity from the mouth of monopoly. Those whose consciences are clear of the foul inconsistency, have a right to stand before the world as advocates of the little amenities of benevolence, even though they feel the unavailingness of all such doings while the great dictates of justice are violated, and the great concession of industrial right refused. Not so the pharisees of philanthropy, who destroy the temple of Justice, and busy themselves in building an almshouse with fragments of the ruin. I wish them no worse, however, than that their "muddle heads" may learn, and their "cold hearts" glow at the fact, that the first day of commercial freedom will begin the happiest of new years for our country and the world.

A NORWICH WEAVER BOY.

NOTES OF A TRAVELLER.—No. XIV.

Frankfort, Sept. 29.

I hastened rather more than I should have done across the country from Bremen, in order to see the famous Frankfort Fair, of which everybody, even in the Hanse towns, had something to tell. The notes I took on the road I will therefore defer until I have given you an account of this commercial assemblage, and of the impression it made upon me. The roads in the Electorate of Hesse gave the first token of something important going on in the neighbourhood, for the diligence in which I travelled from Cassel had at least a dozen chaises as an appendage. At the post-office of a German town you are treated with an indifference that sufficiently marks the monopolizing character of the establishment. In times of bustle you shove through a crowd of candidates to a window resembling a pigeon-hole, behind which the official, in uniform, sits uncovered, and answers your questions, or enters your name, with all the nonchalance of a superior person. Your ticket for the diligence is like a lottery ticket, its number, which fixes your place, being decided partly by the number of claimants who precede you, partly by the description of vehicle chosen by the authorities for the day's service, and partly by the affection which the inscribing clerk exhibits for patrons or friends. On receiving mine at Cassel, I found, to my horror, that its number (nineteen) condemned me to a seat in one of the chaises, notwithstanding the capacity of the principal diligence, that embraced thirteen passengers. The chaises are usually *caldèches*, with a moveable leather roof and leather curtains that close round, and of a fine autumnal hue are not a bad shift where time presses. Their number can be extended to any the passengers demanding to be forwarded may require; for a condition of the monopoly attached to the post throughout Germany is, that no traveller willing to avail himself of this description of vehicle shall be refused. In addition to the sundry currents of air to which you are exposed in the *caldèche*, the inconvenience of being obliged to change your carriage at every stage, and consequently to get out and stand in the wet or the cold, whatever be the weather, is not a trifling addition. The night proved, fortunately, a fine one, and we got on tolerably. The road, which winds round the westerly extremity of the Taunus range, descends into the hazy plain, of which Frankfort, and the scenery which it then was marked by nothing characteristic, became a once striking and beautiful. Towards the west the Taunus retreated, its peaks grouping themselves into picturesque masses, at whose feet Hamburg and Kasselstein

disclosed themselves successively; and one or two elevated ruins could be traced on elevated points in the dells which intersected the principal heights. Opposite, on the south side of the Maine, the Oden range rose beautifully, tinted by the rays of the evening sun—a chain that furnished Victor Hugo with his legend of "The Wild Huntsman." Notwithstanding the great extent of the plain we entered, these mountain chains, each asserting so distinct a territory, had something grand and unusual. Another hour's drive brought us into the immediate neighbourhood of the city, which is surrounded to some extent with villas and summer residences, and these by small but very neat gardens. The whole country had, for a short time before, assumed an appearance uncommon in Northern Germany. The fields, for miles together, were covered, as in Italy, with fruit trees; but instead of the mulberry, apples and pears—the most perfect in shape for their size that I had ever seen—stretched in countless rows over the slips of land which they shaded without enclosing. A great deal of both cider and perry is made along the banks of the Rhine and the Maine; and I was told that the value of planted land far exceeded that which is naked.

The tower of Frankfort Cathedral being stunted and unfinished, the town wants something to give effect at a distance to its appearance. On approaching, one or two curious towers, crowned with smaller turrets with sharp-pointed roofs, are distinguished, and give an air of antiquity, that, however, soon disappears before the modern look of the principal street.

On entering a low gate, that had no very formidable appearance, but which had a military guard, I saw some small boxes fastened in the archway, resembling a kitchen salt-box, on one of which I read "Hanoverian Embassy." On inquiring what a foreign embassy could have to do with the entrance into a free town, I was desired to look at a small window or loop, before which a parcel of young men, with sticks, knapsacks, and somewhat damaged shoes, were crowded, and in whom I recognised the travelling apprentices that are so singular a feature in German road-scenery. Every day several groups accosted us in an obsequious and quiet manner, which seldom failed to extort a small contribution from the person addressed. These poor travellers deliver the book, which is at once their passport and certificate of service, at the gate of the town, and take it up again after it has gone through the respective embassy or consulate of each at the police-office. The boxes that had struck me were receptacles for such as belonged to certain embassies, the porters of which emptied them periodically.

On their arrival at a town, the apprentices are directed each to the house of call, or "herberg," a public-house supported by the guild whose sign it bears. Here he learns what masters want aids; and, as "the wandering" is constant, as many are usually leaving as arrive at a town. To judge from the workmanship of most articles, this is not a good arrangement for promoting technical skill; nor can it be very conducive to steady habits of business or close application. The antiquity of the custom probably causes it to be continued.

On reaching a large open space, which my companions called the "Rossmarkt," or horse-market, we found it crowded with booths, amongst which a menagerie, a circus, and a theatre for gymnastic exercises were conspicuous, and reminded me of a large English fair. I was looking at these various erections when I espied in the back ground, at no great distance, the name of the hotel at which I was advised to stop. I called out to the coachman of the *caldèche* to stop; but he was deaf to all remonstrances, and cracked his whip as the sole answer he could give. It was useless trouble, as I found, to try to stop him; and our vehicle went on for about ten minutes, when it reached the post-office, and we were formally delivered over with our baggage to the authorities. You are expected to get in and out at the office, which thinks it serves your convenience quite as much as is necessary by condescending to take you at all.

Frankfort is the seat of government of Prince Thun and Taxis, who inherits a small remnant of the privileges of his forefathers, who were hereditary postmasters-general to the empire before it was dissolved. After the peace, a few states preferred leaving the duties to this nobleman; amongst the rest Frankfort and Nassau, which, from their central position, are important. A treaty, it seems, was lately concocted between this little potentate and the British Government, which, as it stipulated the reduction of postage, made people here wonder what it can be about. The post-office is a handsome building, enclosing a spacious court, rather larger than the space at the back of the London Post-office where the walls assemble; and, as some indemnification for not being dropped at your hotel, is provided with a covered part, where you alight without being incommoded by the weather. One of my fellow-travellers had amused us as we came along with a description of the state of the roads and of internal traffic at the beginning of the present century. A mounted police, in the pay of the Elector of Mayence, or of the Princes of Hesse, kept an indifferent kind of guard on the highways, for which a toll was exacted on the wares that came to the fair. The merchants of the larger cities, who were half-free at Frankfort, came in separate bodies, and being duly announced beforehand, were met at the entrance to the territory of the city by a deputation of the corporation, and escorted into the town. Their arrival was a matter of no little importance, and the entrance of the caravans of goods which they brought

with them created no small bustle. In the city, each of the large cities had its own house, which was occupied by its merchants, with their train of stout youngsters, that even after the times of chivalry did good service with their staves against purloiners, and disturbers of the peace, both on the road and in the town. On a day fixed, the chiefs of the corporation of Frankfort assembled in the town-house, and a deputation from each of the privileged towns left the "hof" where their merchants were quartered, and, with a piper at their head, proceeded to demand a renewal of the freedom which they enjoyed from tolls. On its being granted, tokens were given by those who received it, consisting of a white wooden bowl, a pound of pepper, an old white beaver hat, two white gloves, and a white wand. The city of Worms, until a very late period, gave the hat alone, and redeemed it with a piece of gold. This session of the corporation officers was termed "the pipers' court," from the pipers who preceded each deputation as it went through the streets.

I may remark, *en passant*, that Frankfort seems originally to have been indebted for its fair to the possession of a relic, at that period of some estimation—the skull of St. Bartholomew. This relic was annually exhibited, and attracted such crowds of devotees that it was found advantageous to turn the meetings to commercial account. The second fair was instituted more recently than that of St. Bartholomew, which was celebrated as early as 1239.

Besides the trains of merchandise that formerly collected under special escort from all parts along the high roads, market bonts made periodical trips with no little ceremony from the different towns on the Rhine and the Maine. A barrel of wine was usually a part of the provision, and was kept on tap for the benefit of the crew and passengers as long as the voyage lasted. In these good old times, as they are still considered by some, a tour from Cologne to Nuremberg was a matter of more amusement, profit, danger, and demoralization than a trip to Japan or to the Friendly Isles at the present day. The *Eilwagen*, with its train of dependent *caldèches*, is now the most romantic feature of the assembly. In a year or two more all trace even of this primitive mode of travelling will have been effaced by the railroads that are approaching Frankfort on all sides. The old times, with their very questionable goodness, but unquestionable scenes of mirth and activity, have disappeared, but Frankfort retains its fair, and is a place of commercial assembly of the greatest utility, not only for Germany, but for all Europe. The really important part of the fair is, of course, invisible for those who have no concern in it, as are the transactions on the London Exchange. But buyers and sellers meet here from distant places, and turn the town into a vast exchange. Legal value only attaches to contracts made after the ringing of a certain bell, which proclaims the opening of the fair. But this, of course, is a ceremony that might as well have been dismissed with the pipers and the armed escort; for of course the signature is what binds buyer and seller in a court of justice at Frankfort as well as everywhere else, and not the place or the time at which it was affixed to paper. But few of the frequenters of the fair bring more goods with them than suffice for the supply of the neighbourhood. Perhaps the leather dealers who then emerge from the forest districts in which they are usually located, form an exception; and leather is one of the few remaining articles in which transactions are carried on by sale and delivery at Frankfort. The gradually increasing demand which is perceptible in this useful article, and with which the supply scarcely keeps pace, allows of the adherence to old-fashioned usages. The leather market is a scene of curious bustle and crowding still at the fair time, when the tanners from the Ardennes and the other forests on the left bank of the Rhine meet the retailers from the little country towns scattered over the immense expanse of Southern Germany. Another branch of trade still asserts its privilege to be treated in an old-fashioned manner. The linen-house is still the centre of the traffic in homespun and homewoven linen. In the shops the retailers are careful to recommend the linen spun from "machine yarn" as the best, and even charge higher for what notoriously costs less. Still the spinning-wheel and the domestic loom are considered objects to be regretted by many, who forget that they belong to the whole house "that Jack built" of escorted traders, market-ships with Bacchanalian crews, processions with pipers, and what not, that I have enumerated, forming an economical system nearly as antiquated as the romance that has wild huntmen and Walpurgis witches for heroes and heroines. With those who hold that labour is the standard of value, perhaps because man has to earn his wealth with the sweat of his brow, the loss of any tool like the distaff, the loom, or the spindle is a serious calamity, and the inventions of our true philanthropists, the mechanics and manufacturers, are supposed to threaten moral and material destruction. Of the staple articles of manufacture but small quantities are to be seen—destined, as I said, for local supply. They are, however, in sufficient quantity to afford a fair idea of the state of industry in different parts of Germany; and as Frankfort and its neighbourhood are rich districts, the selection may be looked upon as representing the best of the productions in the Zollverein. Yarn of all kinds is no article of debt in such a place, and passes directly from the importer into the hand of the manufacturer. Cotton cloths I found well represented in temporary shops hired by the printers of Augsburg, Saxony, and Berlin. The patterns were

part, he wished for no such thing. He only regretted that his brother was not present to explain, as no doubt he would have been able to do, whether he found it necessary to discharge those men for drunkenness, disorderly conduct, or keeping improper company, for upon these points their firm were sometimes thought to exercise a very despotic authority. He regretted that it should be rendered necessary for him to speak of his own concerns, or his own business, especially in a public gathering; but this appeared to be called for by reason of the observations of others, no less than by the eulogium which had fallen from his friend, Dr. Bowring, in reference to the management of their concerns and their workpeople. However such a disclosure might be at variance with the impressions which had just been conveyed to that meeting, it appeared by what the Doctor had stated that their establishment and the comforts enjoyed by their workpeople had been thought by other persons to redound to their credit, and it appeared that remarks to that effect had fallen in the way of the Doctor in various and remote countries, and in many different languages. (Applause.) Such a testimonial could not fail to be gratifying to him, and nothing could afford him a greater pride than to deserve it; but let them not misunderstand him—he was not about to say that he ever had or ever should make a study of procuring a reputation, but he would tell them what he would do, which was in effect to tell them what he had already done. It had been his policy, no less than his duty, throughout his life to try to do what was right, and to care for nobody. (Loud applause.) Now, if that policy was sound—and he felt convinced that it was, since it had ever afforded satisfaction to himself, and had yielded more than an average of comfort to his workpeople—he had only to say that, whatever might be the estimation awarded to him, either in that assembly or elsewhere, he should proceed undismayed in the course he had hitherto taken, regardless of any other object than that of securing satisfaction to himself and the greatest amount of comfort amongst the workpeople who flocked around him. (Applause.) He would take the liberty, however, to remark, in reference to the topic under discussion, that he thought no one could fail to be impressed with the pathetic appeal which that evening they had heard from the first of those working men who had addressed them. There was a simplicity and truthfulness in his appeal which he had greatly admired, and which had created emotions of deep sympathy in his breast; they had heard it most graphically depicted as the hard fate of the working man that the social duties and solacing comforts of life were either denied him altogether by his labour, or that they could only be enjoyed by trenching upon those hours which nature had designed for repose. This did appear a very hard fate, and he did not doubt, such was the lot of very many; he wished it were otherwise. It grieved him to see that twelve hours of labour should be deemed requisite. There was throughout society a general craving for leisure, which could not long be resisted; and he hoped and trusted that it would not for ever be the lot of working men, and he reckoned himself of the number, to be called upon to toil as they were now doing. (Applause.) Still it appeared to him that the remedy was not so easy as many persons might imagine; for his own part, in considering the subject, he first inquired of himself, is twelve hours' labour a condition which has been imposed by the Omnipotent? for if it is, it is our duty to bear it,—and if it is not,—and he believed it was not—(hear, hear),—then it was a condition imposed upon man by his fellow-man. (Hear, hear.) Therefore, if twelve hours of labour was of man's appointment it was within man's power, and it was no less a part of every man's duty, to remedy. (Applause.) Now I tell you (said he) it is my full conviction that this sum of hard labour has been imposed, not by the Almighty, but by your fellow-men, and by means of bad laws (hear); and it is in the repeal of those laws, and not in the enactment of time bills, that we are to find our redress. In seeking the remedy let us first find out the origin of the wrong. There is no doubt whatever that at least two hours a day have been imposed by the Corn Laws, and that the sugar laws and other monopolies have imposed the remainder of that excess of which the working men so justly complain. (Loud applause.) Now, gentlemen (said Mr. Ashworth), let me draw your attention to the class of persons who are so instrumental in raising your discontent, and who would persuade you that the remedy may be obtained by the mere enactment of a ten hours' bill. Are they the persons who, above all others, are desirous for freedom of trade, who would throw down monopolies and give you cheaper food? No such thing; many of them are the monopolists themselves! and the staunchest supporters of the Corn Laws! How is it that you have never entertained your misgivings when you have seen certain persons, some of them great men, too, coming amongst you, trying to persuade you that you have hard masters, men who talk of oppression, and cruelty, and long hours? Did it ever occur to you that charity begins at home? and how comes it, then, that we hear of persons coming amongst you from so great a distance, who, if we are rightly informed, leave behind them, and upon their own estates too, a class of beggarly dependents, who are ill-paid, ill-housed, ill-fed, discontented? (Applause.) How comes it that they who can so pathetically bewail your long hours, can leave this wretched class behind them, and those, too, whom they have undertaken to represent in Parliament? How is it that gentlemen who have been publicly told in their own localities of the misery and destitution around their own dwellings, could affect so utter an ignorance and astonishment at the disclosure of facts which so ill become them not to know? Think you not that they ought first to hasten to remedy their own native distress, ere they come to you? What mean they thus to try to set yourselves and your employers about one another's ears? (Hear.) If you believe these common pretenders to philanthropy, you will naturally suppose that you see them going full speed with a ten hours' bill—some act for the regulation of wages, or some popular remedy for these crying grievances. They know better than to attempt any such thing in their own case. Don't give them credit for being in as great a hurry to cure the ill of life at home as they are abroad. One of them, whose visits you sometimes hear of in this neighbourhood, first affected grave doubts upon those ill, and finding that they could not be gained, he very coolly exhorted the farmers to think of the poor, and to open the gates of their fields more widely to the gleaners. O how tenderly could such a one afford to sympathise with you, seeing that, in his neighbourly compassion,

he could spare as food to the poor only as much as they could glean by robbing the fowls of the air of the droppings which fall to the ground in harvest time! (Applause.) Earnestly would I entreat you to beware how you rely upon such pretensions. I know how little it suits your liking to be told of these plain truths. I can afford to be plain with you; you may, if you like, affect a disdain of those who thus honestly and boldly denounce bad laws and endeavour to apprise you of the danger of trusting to false hopes and long-promised legislation; nevertheless, though the course which I have submitted for the improvement of your condition may not square with your ideas or be suited to your taste, I will not come hither to delude you by propounding the more acceptable doctrines of philanthropy when I know that your remedy does not lie in that way. (Applause.) I feel willing to lend you my own feeble efforts, and at any time to afford you the earnestness of my zeal, to accomplish that substantial aid and benefit which I am persuaded will come from the overthrow of injustice by the abolition of the Corn Laws and other monopolies. (Applause.) I am willing to do anything for you as a neighbour that I have ever done, or that I am accustomed to do for those who are dependent upon me; but I promise you that I will never pander to your prejudices or your varying and imprudent likings. I will not fawn upon you nor approach you in the garb of charity or of philanthropy; nor will I deal with you in any other manner than in the spirit I have before told you, of denouncing every injustice by which you are oppressed, and of promoting your well-being by doing that which I believe to be right and honest, alike regardless of what may be said or thought about me or the course I have ventured to adopt. (Mr. Ashworth resumed his seat amid general cheering.)

Several speakers now wished to address the meeting at one time, but John Gillepie mounted the platform and figured away, in more senses than one, for some time, until the meeting would not hear him longer.

The motion of thanks to Dr. Bowring was then put and carried, almost every hand being held up, followed by cheering many a time renewed.

Dr. Bowring returned thanks, and the meeting separated at nearly eleven o'clock.—*Abridged from the Bolton Free Press.*

TURN-OUTS.—A strike of colliers has been avoided at Ashton-under-Lyne, the matter being amicably arranged between masters and men.—The moulders and millwrights at Bury still remain out.—The factory hands at Heywood have given notice to leave employment unless their wages are advanced.—1000 miners are out at Oldham.—The colliers who turned out at Tonge-lane colliery, near Rochdale, have resumed their work, the masters having granted the advance asked for.—The principal hands at Pilling and Co.'s and Town-meadow mills are still out.

SOUTH LEICESTERSHIRE.—We have long regretted that the Southern Division of this county should have been allowed to remain in the grasp of the monopolists, and have thought that, with suitable efforts on the part of Free-Traders, it might be emancipated from its present thralldom. We are glad to find that the leading gentlemen of the Liberal interest of this town are at length about to take up the subject. On Wednesday evening an influential meeting was held in the Town-hall, to consider what steps should be taken for this purpose. Although the specific plans contemplated by the gentlemen present have not reached us, we learn that it was resolved to form at once a South Leicester-shire Reform Registration Society, and that a committee was appointed to provide "the sinews of war," and conduct the operations of the new registration campaign. We cannot but hope that the design will be carried out with vigour. That the division of the county in which are situated Leicester, Hinckley, and other places where a large amount of manufacture is carried on, should be in the hands of the monopolists is an anomaly. Let such towns exert to the utmost the influence which their magnitude and their wealth give them by a continuous and systematic aggression on the usurped powers of monopoly, through the registration courts, and we trust that the emancipation of this division of the county will be effected. At all events it becomes the duty of every one who is engaged, either directly or indirectly, in the staple manufacture of the county, to make every effort to crush that monopoly which is sapping the foundations of commercial prosperity, and robbing industry of its just reward.—*Leicester Mercury.*

THE MEETINGS ON BEHALF OF THE LEAGUE.—The more we see and hear of the new move of the Anti-Corn-Law League, the more we are convinced that they have now "hit the right nail on the head." It is a measure that will extend immensely the popular power in our elections. The counties have been looked upon as belonging almost of necessity to the great landlords. Lord Stanley, indeed, the most imprudent of his class, once confessed that it was only necessary to know the politics of the owners of the large estates, to know how a county election must turn. And cases have occurred where the fate of a county election has been decided by the passing of an estate, by inheritance or purchase, to a person of different politics. To cure this monstrous anomaly, not by new legislation but by putting in force the existing law, will be one of the greatest moral triumphs that can be achieved by the people. They need not go to Parliament for aid. The help lies in themselves. They have merely to create a general resolution to possess the county franchise; and thanks to an old-fashioned law, which, had at first, has grown good by keeping, their determination can be carried into effect with ease and certainty. It has always appeared to us degrading, that, even in a liberal county constituency, the real nomination of candidates has been in the hands of the great landlords. They have been looked up to as the great providers of money for the registration, and to find the means for the election expenses; and the consequence has, of course, been, to place the selection of candidates in their hands. But let us have the more numerous and more independent constituencies, which the League's measure will produce, and this nominating power will be brought to an end. We shall then have county representatives chosen, like those for Yorkshire in 1830, by the voice of the people of the county, and sent to represent them. This transfer of political influence and power, from the landlords who have usurped it, to the people to whom it lawfully belongs, will be an incalculable gain. The county constituencies will be too numerous to bribe, and too much varied for any class to coerce.—*Sheffield Independent.*

REVIEW.

Travels in Luristan and Arabistan. By the Baron C. A. de Bode. 2 vols. Madden and Co.

Luristan is the name of that mountainous province of Persia which extends from the frontiers of Fars to the borders of Turkestan; it is inhabited by nomade and pastoral tribes, who are also robbers whenever an opportunity offers. The exploits of banditti are the chief themes of legend and song among these wild clans; but there are occasions when their simple manners afford travellers more pleasing pictures of pastoral life, and we take as an example the account given of the reception of a party of mountaineers, after a long absence, on their return to their camp:—

"The return of the Janeki created great glee and animation in the camp, and many were the endearing scenes I witnessed on the occasion. Mothers came out to greet their lords and masters, holding up their little offsprings in their arms to be caressed: the children, it is true, were dirty and half naked, but they were not the less hugged and kissed by their fond parents. The women and the boys took charge of the horses, while the travellers throw off their boots and war apparel, and took their places on the threadbare carpets of their tents. But during the hurry and bustle of arrival, the kids and lambskins had found means to upset their enclosures, and, in the joyful sensation of freedom, spread over the plain, skipping and prancing in wanton sport, whilst pursued by the younger branches of the community, with the faithful shaggy guardians of the Hyat camps."

The women of Luristan exhibit the same martial spirit and passion for adventure and plunder which distinguishes the sterner sex. Baron de Bode found one who acted as regent of a clan during the minority of her son, and who was cheerfully obeyed by all the tribe. She actually placed herself at the head of the contingent of troops which the tribe was bound to provide for the service of the state, and was ready to lead her forces to Teheran that they might be inspected by the King in person. The Shah declined an offer so very inconsistent with Mohammedan usages, though an anecdote told of the heroine in her youth shows that she was likely to prove a good soldier:—

"An anecdote was related to me about this Amazon, which, if it does not tally with our notions of right and wrong, shows, at least, that she was a woman of no common spirit. When yet a spinster, she used to dress in men's clothes, saddle her horse, and, armed with a lance, would sally forth into the desert, there to waylay travellers. An elderly Kurd, who was for some time my companion in that part of the country, related to me that, crossing one day an unfrequented tract, he was suddenly attacked with great impetuosity by an armed horsemanship, and it was not until he had inflicted some severe wounds on his assailant in self-defence that he induced the robber to retreat. He had likewise been wounded, and towards the close of day sought refuge at an Hyat encampment. The chief of the tribe, in whose tent he was lodged, washed and dressed the wounds for his guest, lamenting at the same time that he could not command the help of his daughter, who had been herself that morning roughly handled by a stranger Kurd. This intelligence awakened the curiosity of my narrator, and, on inquiring into the nature of her wounds, he was strengthened in his suspicion that the daughter of his host was the very person who had attacked him in the desert. In order, however, to ascertain more fully the fact, he expressed a wish next morning to see the invalid, to which the father made no objection. They met and recognised each other; but as both were wounded, and had fought valiantly, they were quits, and parted friends; nor did the old man evince any resentment against the Kurd; the latter having, moreover, acquired a claim to his protection, having tasted of his salt, and rested under the shadow of his tent."

The low country adjoining the mountainous districts of Luristan is called Arabistan by our author; the characteristics of its inhabitants differ little from those of the mountain tribes. In the midst, however, of this barbarism, there are many traces of ancient civilization, some of which the Baron has investigated with equal assiduity and learning. As an example of his powers of combining imagination with antiquarian description, we shall take his account of the ruins of Persepolis:—

"I moved from one group of ruins to another like one under the influence of wine; my head felt quite giddy. Not that each separate monument was a masterpiece by itself—it was the *total ensemble* which kept the mind and the imagination in a continual state of excitement. But these feelings, however delicious and grateful they might be to oneself, were yet so vague, so undefined, so confused even, that it would be impossible to bring them into any tangible form, for words are inadequate to give them expression. I can only point out the elements which served to give birth to these feelings. It was the originality of the scene before me, so totally different from everything one is daily accustomed to meet: the chaotic simplicity of the monuments, beautifully harmonizing with their gigantic proportions; the Titanic rocks of marble and granite, evidently piled up with the presumptuous thought of struggling with Time, as to who should have the mastery; and, although nearly vanquished by the latter, the lofty columns still rearing their proud heads toward the sky. The mystery attached to the origin and design of Persepolis; the isolated position it now occupies; the awful silence that breathes around it; the generations of men and empires which have rolled over its head, and sunk into oblivion; the events it has witnessed; the vicissitudes undergone; the noise and bustle of which it must once have been the centre, compared with the unearthly quiet which at present pervades its clustered pillars and plinths, were all subjects for meditation, and capable of raising the soul above its ordinary level of indifference and apathy. Nor could the eye, while gazing on these memorials of past grandeur,

help casting a look upward to the Throns of Omnipotence, where all was immutable and eternal. The pure, bright sky of the East, which had smiled upon the birth of Persepolis and witnessed its pristine glory, was the same which now looked down on its fallen grandeur,—still pure, bright, and serene as the Spirit which dwells there!"

In describing the caverned monuments at Persopolis, or, as the Easterns call it, Istakhr, the Baron takes occasion to notice the accuracy with which they are described in Beckford's wondrous "Tale of Vathek," and insinuates that the fiction may have had an oriental origin. This is a curious point of literary history, which we should be glad to see investigated. In taking leave of these volumes we are bound to mention that the ethnographical and geographical portions of the work, from which we have made no extract, are as full of information as the lighter parts are of amusement, and that the whole forms a pleasing and valuable addition to the library.

The Life, Progresses, and Rebellion of James Duke of Monmouth. By G. Roberts, Esq. London: Longman and Co.

The History of the English Revolution. By P. E. Dahlman. Translated from the German, by H. E. Lloyd. London: Longman and Co.

"The Ashley delusion"—for to such a name the "Popish Plot" is fairly entitled—not only failed of accomplishing the object for which that mystery of iniquity was devised, but threatened, by its reaction, imminent ruin to the Protestant cause in England. Had James II. been a less honest bigot—had he gratified the high Churchmen by maintaining laws of persecution and exclusion—he would have found the same aid in resisting the invasion of William that he did in crushing the rebellion of the Duke of Monmouth. Mr. Roberts has displayed great industry and sagacity in tracing the duke's progress to the fatal field where his hopes were overthrown; and he has for the first time brought before the public many interesting circumstances of the fearful cruelty manifested by the royal party on the suppression of the insurrection. We are, however, more struck by the mercenary meanness which the aristocracy displayed at the crisis: several of the soldiers who had joined Monmouth were sold as slaves in the plantations, and there was a regular scramble among the nobles and courtiers for the profits to be obtained from such a detestable traffic in the blood of their fellow-countrymen. The young virgins who had worked a banner for Monmouth were obliged to compound for their lives by the payment of heavy ransoms; and this money was assigned as a perquisite to the ladies of the court, who proved themselves more rigid creditors than *Shylock himself*. Hardly less discreditable was the conduct of the clergymen who accompanied Monmouth to the scaffold, and embittered his last moments by reproaching him for abandoning the doctrines of passive obedience and non-resistance. In a few short years all these parties were found at a different side, having engaged in what is called "The glorious Revolution."

Dahlman's history of this event is a valuable, because an impartial, survey of its causes and its consequences; Mr. Lloyd has done good service by naturalizing it in England. Having recently examined some of the antecedents to the Revolution, we shall take up the subject at the death of Monmouth, and bid farewell to Mr. Roberts, whose book has hitherto served as a text.

In the reign of James II. the Whig party was composed of the new families which had been ennobled by the Tudors, and enriched by the spoils of the Reformation. Being extensive holders of what had been Church property, they were not without fears of being compelled to disgorge part of their plunder if Romanism ever again became triumphant, or if the semi-papal system advocated by Laud should be established in England. They were, therefore, naturally opposed to the High Church system; and as that system, by its slavish doctrines of passive obedience and non-resistance, had won the friendship of the Crown, the Whigs were obliged to throw themselves in some degree upon the people. But in so doing they were very far from embracing popular principles; their only notion of what they were pleased to term freedom was a Whig Administration.

The Tories consisted, for the most part, of the older families of the nobility, and of those country-gentlemen who had not shared in the distribution of the great prizes which the dissolution of monasteries had placed at the disposal of the Sovereign. They regarded the Whigs as upstarts, and believed that the attachment of the Whigs to Puritanism was merely the result of inherent vulgarity. Some of them adhered firmly to old Catholicism; the rest

"A Subscriber" objects to the account given of Lord Ashley in our former notice, that his moral dishonesty is attributable to his religious scepticism. This is a very forced inference from our words; what we contended for was, that bigotry may be the result of irreligion rather than too great zeal for religion. In the instance of Ashley, his strength of profession was exactly proportioned to the weakness of his principle; we blame him because he was not honest either in his belief or in his scepticism.

would have invested the hierarchy with the attributes of the Papacy, not from any attachment to principle or form, but simply because ecclesiastical splendour seemed a proper adjunct to a hereditary aristocracy. The Catholic Tories were not very strong in their attachment to Rome; but the Anglican Tories were devoted to the Church of England, and resolved to maintain its supremacy at all hazards.

So long as James had no son, the succession was open to his Protestant daughters, and parties were willing to submit to Romish rule for a season; but, when the birth of a Prince of Wales seemed to threaten the continuance of a dynasty alien in its religion to the great body of the people, a desire for some change was generally diffused, and a struggle became inevitable. The issue of that struggle would have been doubtful had not James involved himself in a quarrel with the Church; he interpreted too literally the profession of passive obedience with which he had been greeted, and found that his first step towards toleration put an end to the doctrine of non-resistance. The error was natural, but it was fatal.

Whether William III. expected to obtain the crown when he landed at Torbay is very doubtful; he probably, at first, only looked to have himself, in right of his wife, recognised as next in succession. There is, however, no doubt that the idea of making him King was the farthest thing possible from the minds of most of his supporters. The hesitation, the confusion, and the cowardice of James, who seems to have been for the moment bereft of his senses, left the Royalists without guidance; and his subsequent flight equally perplexed his friends and his enemies. All parties were in what the Americans call a dead fix, and William alone possessed the power of extricating them.

We shall return to this subject next week, when we shall resume the consideration of Dahlman's work in connexion with "Walpole's Memoirs," so as to trace the relation between the parties of the present day and those of the Revolution.

The Natural History of the County of Stafford. By Robt. Garner, F.L.S. London, Van Voorst.

We want a new series of county histories, and this before us may be taken as a model. It avoids the long disquisitions on general science in which our old folio writers indulged; and its antiquarian lore, instead of being a series of dry and dull genealogies, is enlivened by interesting anecdotes of the principal families of Staffordshire. The geology is written in the form of plain description, and all peculiar theories are carefully avoided; this renders the work more permanently valuable than if the author had adopted any of the theories on which ink and paper have been so unprofitably wasted. The county of Stafford is rich in geological interest; its coal-fields in the north, and its silurian rocks in the south—its mines of lead and copper, and the curious foldings of its limestone and shale in the vicinity of Dudley Castle—present many circumstances of stratification worthy the attention of the practical geologist. The zoology and botany of the county are not marked by any striking distinctive characteristics; but the Calendar of Natural Phenomena which Mr. Garner has compiled vies in interest and value with that furnished in White's "Selborne."

We have, however, been chiefly induced to notice the work on account of the description it contains of the manufacture of pottery—a branch of British industry which has recently risen unto great importance, and is capable of much farther extension. We doubt whether any classes of manufacturers or operatives in the empire have a more direct and obvious interest in the establishment of Free Trade than those engaged in the fabrication of porcelain and earthenware. Little more than two centuries have elapsed since the earthenware of Staffordshire was of the coarsest and rudest description; now, specimens of porcelain are produced that rival the best specimens of Sevres and Dresden. English ware has a high reputation in both hemispheres; and hence our continental neighbours, both in Germany and France, are making every possible exertion to become our successful rivals. It is impossible for a nation to sell that refuses to buy, because all commerce ultimately resolves itself into barter. The new villages, towns, and cities, which are so rapidly springing up along the Ohio and the Mississippi, would afford thousands of customers for British earthenware, if we would only consent to take the only payment they have to offer—provisions. The permanence of the market would be secured by the laws of nature, as the flint and clays suited to the manufacture of the best ware are not found in any abundance in America.

Mr. Garner has given a very interesting memoir of Josiah Wedgwood, to whom the English figuline art is indebted for its present excellence, and the Staffordshire Potteries for their great prosperity. He was, if not the first, certainly the foremost in connecting the fine arts with this branch of production; and many of the models prepared under his

direction have never been surpassed either for purity of taste in the design, or striking beauty in the effect. We may take another opportunity of examining the history and statistics of the Potteries, but we cannot part from Mr. Garner without commending his volume as one of the best specimens of local history which we have seen for many years.

AGRICULTURE.

A MONOPOLIST ON GAME-PRESERVING. WHO'S THE DESTROYER?

It is now about eleven months ago that, at the meeting of the *Herts Protection Society*, held at St. Alban's, the Earl of Essex seconded the following resolution:—"That a free trade in corn, the object sought by the Anti-Corn-Law League, would destroy to a ruinous extent all capital now vested in agricultural operations, bring desolation and misery on the agricultural labourer, and prove destructive to the landed interest." And his lordship supported that resolution in a speech remarkable for passion rather than logic, and for its utter disdain of anything so commonplace as fact. The *Herts Protection Society* is amongst the things which have been: in one convulsive throes, on the 2nd of February, 1843, it was born and died, for since the unnatural and anti-social speeches of the monopolist squire at St. Alban's not a whisper has told that the society continues to exist. In charity to the noblemen and gentlemen who, on that occasion, advocated monopoly, we should not have recalled from oblivion their not very creditable sentiments, and most incredible statements, had not one of them, the Earl of Essex, again obtruded himself upon the public by a lecture to the farmers on game-preserving and bad farming.

But as it happens that the earl's letter is such a biting commentary upon the earl's speech, it becomes our duty to defer charity to justice.

Lord Essex, amidst other flowers of rhetoric, said—"From that day [repeal of the Corn Laws] the people of England will be degraded into the position of slaves and dependents upon foreign nations, ay, into very beggars of bread." At this flourish the aered monopolists—the nominal owners of vast estates—absolutely yelled with ecstasy. Our immediate purpose, however, is with that part of his lordship's speech which was addressed to the tenant-farmers. He asked—"With regard to the tenant-farmers, have not the League whispered in their ears that they are an oppressed race? Have they not said that they are the prey of avaricious landlords, who charge them oppressive rents, far beyond the value of the lands they cultivate. This the League has insinuated; but they have not told the tenant-farmers that these rents became oppressive—not, I firmly believe, owing to the Corn Laws—not even to the tariff—but solely to that vile system of agitation which is kept up in the country, thus endeavouring to sow discord and disunion between parties whose interests are inseparable, and who—come weal, come woe—must stand or fall together." Now, we almost fear that some of our readers may say, that, though it is perfectly fair to call attention to the lordly monopolist's opinion, it is cruel to republish his lordship's English, but,—we tried without success to correct his lordship's grammar,—as accuracy is desirable, we give his reported language.

Then, with peculiar complacency, his lordship said—"They have said that landlords are interested in keeping up high rents, because, if agricultural produce is depreciated, rents must fall. I need not tell you, gentlemen, how little rent has to do with the question—how small a portion it forms in the cost of production; * * and, were it possible that a reduction of rent could take place equivalent to the fall, need I tell you what would be the consequence? The first result would be the utter impoverishment of the landed aristocracy and gentry, and with them the ruin of three-fourths of the labouring classes. The country has been so long accustomed to the blessings arising from a landed gentry, that perhaps the people are hardly able to value them sufficiently." And he threatens, if the Corn Laws were repealed, the lords of the soil would "abandon their patrimonial residences, and take refuge in towns, or on the continent of Europe." He then said, addressing the farmers—"It [the League] will have the effect of causing you to exert yourselves more vigorously in the cultivation of the soil, and of teaching you that you must rely on your own exertions,—the sure reward of which will be an increased produce of the soil. NO MAN CAN PRETEND TO SET LIMITS TO THE PRODUCTIVENESS OF THE SOIL." Such were Lord Essex's sentiments when taking part in the bull-frog agitation in support of monopoly. Let us now turn to the noble monopolist when defending another wrong.

It seems that the Earl of Essex is a preserver of game, and as such felt aggrieved by some strictures on "game and game-preserving" which appeared in the *Herts County Press*, a monopolist journal; and accordingly he took pen in hand and indited an epistle to the editor, from which we extract the principal passages.

He commences by saying that "the entire destruction of all game would be productive of more evil than is now sustained by the farmers," and adds:—

"I, however, by no means deny that, in many parts of England, hares and rabbits are too numerous, or, that when they are so, they do an infinity of mischief; and I do not hesitate to affirm that I act up to that opinion, by not allowing my own farms to be overstocked by them; in proof of which I may state that, in eighteen days' shooting in September, always with two guns, and sparing none, only forty-four hares and seven rabbits were shot, over the whole extent of my property here."

Reader, we shall show you presently what his lordship's tenants say upon his lordship's "moderate" preservation of game.

He then says that "most of the statements made of damage done by game are most grossly exaggerated," and he thus proposes to "come to figures" upon the subject:—

"The damage chiefly done by hares and rabbits (which seem, at present, to bear the brunt) is on the borders of the fields. Supposing all the borders of a square field to be the scene of operation, I need not tell you, the smaller the field the greater the damage would be in proportion to its area. For instance, take the extreme case of a square field of one acre, and that on an average two yards in width on all the four sides were entirely destroyed, why, even this would only amount to one-eighth of the produce of the whole field. Now, take a field of twenty acres. Its area would be 96,800 yards, and allowing (which, I again say, is an extreme case, and still more so if it is supposed to be the same on every field on a farm, and on every farm in the country), allowing, I say, the same average of damage, namely, two yards of border all round entirely destroyed, it would only amount in that field of twenty acres, to one thirty-eighth of the whole produce—a long way from the one-fourth talked of."

Now, supposing the earl's calculation to be correct—which it is not—it must be remembered that the farmers pay rent for the whole field, and look for the whole produce to enable them to pay their rents. Of this, however, more presently; and, having thus to his own satisfaction shown that hares and rabbits destroy only two yards round the outside of each corn-field, his lordship turns upon the complaining tenant-farmers, and gives them the following wiggling:—

"Now, Sir, on the other hand, I assert that on many farms throughout the country, a great deficiency of produce arises from the space occupied by rubbish of all kinds, to the exclusion of the legitimate crop, then from any amount of game; and this not only for the width of two yards round any one field, but over the surface of any one field. Who is there that ever looks about him, that has not seen whole fields of barley or oats, ay, and even turnips (a so-called cleaning crop), one mass of brilliant yellow, instead of a lively green, without an attempt being made to get rid of the noxious weed? Who has not seen wheat-fields full of thistles in full flower, ready to send their winged seeds all over the country in the first gale of wind—or brown, with ripened docks—or white, with the large one-eye daisy? I have: and I have seen wheat stubbles this very year such a mass of entangled rubbish, that it was like walking through a heavy crop of tares. I say, Sir, when such is the character of the farming—and such it is in many parts of England, both near and far—the farmers have no right to complain of game; and, moreover, that if they assailed their landlords for damages on that account, and, on the other hand, landlords assailed them for the deterioration and destruction of their land, the tenants would have very much the worst of the bargain. It is undeniable, that where the farming is most slovenly, the most damage will be done by game. Take a field which is in good heart and clean: the barley or oats, or anything else, comes up, and, under tolerably favourable circumstances of weather, soon grows out of reach of the enemy, or recovers from any damage done. Take, again, a field that is in poor heart, has been harshly treated, and very foul: no sooner does the plant come up than it has to commence a struggle for its existence with every kind of abomination; the weeds check its growth—the enemy attacks it; the weeds have it now all their own way, and you see no more of the plant."

Now, if there be a fact more completely demonstrated than any other, it is, that the fluctuations caused by the Corn Laws, the fallacious reliance upon protection, and the frequent necessity of paying monopoly rents out of the farmers' capital during moderate prices, have caused the slovenly and inferior cultivation which, as his lordship says, is so general, and renders the crops so liable to destruction by game. His lordship then repeats his St. Alban's threat of withdrawing the light of the landlord's countenance from the rural districts, if there is any opposition to feeding the landlord's game on the tenant's produce.

"There can be no doubt that a very large proportion of the landed proprietors reside in the country because they are fond of field sports, and are enabled to gratify their sports by offering them the enjoyment of shooting, &c. I do not stop to argue whether or not this is a worthy motive for residing in the country. Many will think it is not. I think it is, or, at least, a very excusable one. Be it as it may, it is a fact, and an equally undoubted one, that, take away those field sports, and very many of those who now pass a great portion of the year in the country, spending their thousands and tens of thousands, to the great benefit of innumerable labourers, tradesmen, and farmers, themselves would then go elsewhere for their amusement, to the great grief of all tradesmen, and leaving the labourers as legions to the farmers—in the shape of very great additional poor-rates, amounting throughout the country to much more than is now sustained by them from damage done by game; to say nothing of the destitution and lack of employment of the mid-labourers. I think, Sir, this is worth consideration,

before you and others of your opinion urge so zealously a measure which already is beginning to breed discord and unkindly feeling between landlord and tenant, where, hitherto, nought but a friendly and good understanding existed."

Now, we are not unfriendly to field sports when they can be enjoyed without detriment to the community or injustice to the cultivators of the soil. For instance, who does not sympathise with the manly sportsman, who trudges over the heaths and moors of uncultivated districts after grouse and black game? These field sports may be legitimately followed. So, on the wild downs and hills of the west of England have hunting and coursing afforded healthful amusement to hundreds without injuring any one, for it is absolutely necessary to sport that hares should not be too numerous.

Again, what farmer regards a few gaps in his fences, or occasionally a broken gate, when the foxhounds pass over his farm? It is not sportsmen who do mischief by game preserves, for game-preservers are never sportsmen—that is a rule without exception. But there are landlords whose enjoyments are always selfish and exclusive, and not unfrequently mean and sordid. The residence of this class in the country is an immense evil to their several localities. Indeed, there is high authority for the opinion that most of the great establishments of large landed proprietors are in themselves evils, for Mr. Senior, when professor of Political Economy in the University of Oxford, in his lectures distinctly alluded to such establishments as setting examples of profusion and wasteful expenditure amongst the minor gentry, and spreading immorality and dissoluteness amongst the lower classes. And the preventing much land from cultivation, by turning land for stock-feeding into deer parks and game-preserves, was especially named by the same learned professor as one of the evil consequences of resident landed proprietors.

It is possible, therefore, that should our great landed monopolists and game-preservers execute the threat of abandoning their patrimonial estates, to take refuge in towns or on "the Continent" when they can no longer keep up their rents or enjoy their battues at other people's expense, their neighbours, farmers, and all, may console themselves with the line applied to another class of offenders, of whom it was said—

"They left their country for their country's good."

His lordship then adverts to the injury done to the morals of the peasantry by game-preserving, upon which part of the subject he says:—

"As to the old argument of game being a temptation to the poor man, I hold it good for nothing. The same might be said in respect to any thing else, especially with respect to the immense flocks of geese that are allowed to wander unattended over the large farms in the North after harvest, sorely tempting, I should imagine, many a poor hungry fellow to break the laws; or the half-wild sheep, wandering in thousands over mountainous tracts. As to entirely destroying game, the idea is absurd. Diminish it in quantity very considerably, and you hold out a still greater inducement to poaching. There will always be a demand; and the smaller the supply, the higher price will the poacher obtain. The risk to him will be the same, and the additional trouble a matter of indifference, so long as he got (which he would get) the additional price."

The fallacy of this reasoning is only equalled by its childishness. The distinction between domestic poultry and stock—however much they may be turned loose in the fields at certain seasons—and game, merely wild animals, is so obvious that none but those whose privilege it is to rule without reasoning would venture to overlook it.

To this letter the editor seems to have replied, for in the following week Lord Essex writes a second letter, in which he justifies landlords for selling their game, upon the ground that, "if they do not supply the market, the poachers will." He then admits some mischief is done "by runs" beyond the borders of a field, and thus returns to his "figures" as to destruction by game:—

"A farm being injured to the extent of 10s. per acre, throughout, is (if such exists) a very strong case, and argues either a prodigious and unwarrantable quantity of game, or an extremely small farm, in an extremely unfortunate situation. As to the calculation you state of five hares consuming as much as one sheep, I do not know on what grounds it is made, but, if made with reference to the weight of the two animals, it must be very erroneous. Animals generally consume food in proportion to their own weight. Taking the average weight of a hare (old and young) at 15lbs., and the weight of a half-bred Leicester (as an average-sized sheep) at 120lbs., it would require twenty hares to consume the food of one sheep. Allow one-fourth more for waste, and it gives fifteen to one sheep. When you consider that sheep eat all day long, almost undisturbed, and that a hare only eats at certain hours, and always in a state of fear, I doubt if even twenty hares would eat as much as one sheep."

Now, the coolness with which his lordship compares the quantity consumed, according to his calculation, by a hare and a sheep, is surprising; and he seems to totally overlook the fact that, whether the consumption of sheep be as one to five or to fifteen hares, farmers don't let any sheep wander amongst their corn-fields cropping the blade from the moment it appears above the ground. What would be said of the landlord, who, having received a full rent from

his tenant, claimed to keep one sheep in place of every fifteen of the actual stock of hares and rabbits, and to allow those sheep to wander at will over the tenant's growing crop? Yet this in substance is what the Earl of Essex, upon his own showing, claims to do. Then his lordship, unmindful of that "kindly feeling" between landlord and tenant with which his heart—his lips at all events—overflowed at St. Alban's, made the following desperate onslaught on the farmers, whom he justly believed to be the real anti-game agitators:—

"As to my remarks on the slovenly and foul condition of many farms, you say, 'Farmers are the best judges if such censure is deserved.' You should have said 'good farmers.' I would hardly put a jury of bad farmers to sit on their own case. Of the former there are no lack in Herts. At the same time, of the latter there are too many. You say 'farmers will be able to state if such farming exists in Beds and Herts, and likewise what is the quality of the land, and the rent paid.' I say that neither the quality nor rent have anything to do with the matter; neither can justify an extreme and continued foulness of the land. I know, by what I have done myself in five years, what may be done in the way of cleaning land. 'Ay! but my lord has capital,' some will say. And I reply that no man should undertake a farm, unless he has enough and to spare to enable him to bring it or keep it in a good state of cultivation; or he should adapt the size of his farm to the amount of his capital. The non-observance of this has done more, I believe, to ruin farmers than any thing else. What the amount of capital should be, this is not the place to discuss; but I should say, no man should enter on an arable farm with less than £9 or £10 per acre. How many have that? Many have £1000 or £2000, perhaps; but there are few cases, I fear, of a man possessing £2000 capital being satisfied with a farm of 200 acres. And yet I will venture to say that were that man to be satisfied with such an extent, and devote his capital and energies, with some addition of science, to it, instead of expending it over a surface of 400 acres, which his ambition would probably suggest, he would, in the end, be the better farmer and the richer man, and might afford to give his landlord some good sport on his farm, without any danger of its interfering materially with his own profits, or the kindly relations existing between them. In conclusion: with all my respect and regard for farmers, and it is both great and sincere, I cannot but think they often see double, to say the least of it. One hare, seen two or three times a day in his favourite haunt, does duty for two or three. In fact, 'a fear is father to that thought.' Also, if he sees a dozen hares in one particular field, and mentions the fact, the conclusion is come to that an equal number may be found in every field of his farm. A census of game would be a most difficult one to make, and the quantity spread over the whole country I believe to be much less than is generally imagined. What sporting landlord, be he the greatest preserver in the kingdom, can say he ever in any one year killed one head of game (including even rabbits) to the acre, or, I believe I might even say, to two acres?"

Now, this lecture on want of capital amongst tenant-farmers comes with an ill grace from one who upholds the law by which the system of low farming, with insufficient capital, has been mainly perpetuated—a law, too, by which a vast amount of the tenant's capital has been transferred in the form of rent into the landlord's pocket. And his lordship concludes by offering, as consolation to farmers, that pheasants and partridges "live almost entirely on grubs and other injurious insects." This assertion is quite unfounded. Pheasants and partridges, especially the former, are only a degree or two less mischievous than hares and rabbits.

Now, taking Lord Essex's letters as they stood, we should have referred to them as plain confessions of the injury done by game, and injustice committed by every game-preserving landlord; but that trouble has been spared us by a tenant of his lordship's, Mr. John Horneastle, of Gammon's farm, Watford, who thus writes to the County Press newspaper. Mr. Horneastle, as one of his lordship's tenants, considered himself personally alluded to, and deemed it right to "answer his lordship's statements:—

"His lordship sets out by stating that he is an advocate for preserving game in moderation, and does not deny that where hares and rabbits are too numerous, they do an infinity of mischief. So far we perfectly agree; but the question now arises, what is to be considered moderation? His lordship then proceeds to state that he acts up to that opinion, by not allowing his tenants' farms to be overstocked by them, and states that in eighteen days in September, with two guns, only forty-four hares and seven rabbits were shot—certainly a very moderate quantity. Now, it may require some explanation why there were no more killed. I do not hesitate to affirm, that it was not from any deficiency of hares, having frequently seen from thirty to fifty out feeding on an evening; but it will be in the recollection of your readers that the month of September was remarkably hot, and consequently hares did not sell well, and, as his lordship preserves for profit, he prudently forbore forcing them on the market at a time they were not likely to realize a good price. His lordship has also omitted to state what he has shot on other occasions. I will endeavour to supply the deficiency. On one occasion last season, when his lordship had a party shooting, I inquired of the keeper how many hares had been shot, and was informed ninety-eight (his lordship admits ninety-seven), besides other game. I afterwards heard it confirmed by others, with the addition that eight more hares were picked up the next day, making one hundred and six hares for one day's shooting; and on several other occasions, I have reason to believe that his lordship was nearly as successful. The display at the shop at Watford, on these occasions, is truly astonishing, and draws forth many sympathizing remarks from the beholders for the poor tenants. But, to come to the present time. Whilst I am writing this, I hear the report of guns almost incessantly, frequently four barrels at a time. Perhaps his lordship will favour you with the result of this day's shooting, to set off against the shooting in September."

ber. A cart accompanies the party, which seems well loaded with game. Since writing the above, I have heard that the number shot was one hundred head of game, from three guns (the proportion mixed could not be less than three to one shot, from the number of shots I heard fired off), and this on a very small space of ground. What now do you think of his lordship's idea of moderation?"

This needs no comment: the tenant, then, shows the absurdity of his game-preserving landlord's pseudo-calculations, saying:—

"His lordship next proceeds to make a calculation of damage by game to the outsiders of fields, which he estimates at two yards on the borders. Would any person suppose that this remark could possibly proceed from a person in the habit of walking across corn, grass, or turnip fields? Every one of your farming readers are aware that hares do the greatest damage to the inside of fields, as I to my cost can verify, having had the crops totally destroyed for poles together in a place, and that in many places in a field."

Mr. Horncastle then mentions some fields in Lord Essex's own occupation which present flagrant instances of slovenly farming, and adds:—

"Before his lordship passes such a sweeping stigma upon farmers, he would do well to remove the obstacle to good farming in the first place, and when he has eradicated the weeds from his own land, he may come forward with a better grace to find fault with his neighbours. Every one acquainted with land is aware that, where a crop is greatly injured by game, weeds of some sort will fill up the bare places; the land will not remain idle, and so long as the crop remains on the ground it is impossible effectually to separate the weeds from the wheat, but some must unavoidably remain until the harvest. So long as the present system continues of overstocking farms with game, no farmer in his senses will be found to expend his capital in permanently improving the land, that his landlord may derive a greater profit from the sale of the game; his landlord may rest assured that the incubus of the present system will prove an effectual bar to all improvement. I pass over his lordship's remarks of the danger of the landed gentry leaving the country, if they had not the attraction of field sports, as there has not been any attempt to deprive them of it, but only to put bounds to excessive preserving; or else that they should pay a fair remuneration for all damage done by the game."

As to the spreading discord between landlord and tenant, he says:—

"Instead of you and those of your opinions breeding discord between landlord and tenant, his lordship must look to the true cause—the game, and to those designing and unprincipled persons who are always ready to pander to the ear that is too prone to listen to base and injurious insinuations. His lordship affects to hold the argument of the temptation of the poor man from game as nothing. Are all the expenses of committing and keeping the unhappy poacher in goal nothing? Is the expense of maintaining the wife and family in the union nothing? Is the moral depravity occasioned by blasted character and mixing with felons nothing? And are not the farmers the party that are charged with the greater part of the expense of all this? But his lordship says that the same may be said of the flocks of geese in the fields after the harvest in the north, or the half-wild sheep on the mountain tracts. The comparison admits of no analogy, for when game are so numerous that a peasant cannot walk across a field in his work, or at his work, without their lying in his path, it is not to be supposed that they can discriminate that they are guilty of a moral crime in picking it up. I am by no means an advocate for poaching, but at the same time I do say that such a temptation should not be placed in the way of ignorant, uneducated parties; and equally certain am I that the individual who places the temptation in their way, and then mercilessly hurries them to destruction, will have an awful responsibility to answer for. His lordship then calls upon the farmers to be fair and just, and to draw a fair line between the failure of the crops from game or from other causes. In this remark I most cordially agree with his lordship; and, to arrive at a fair conclusion, the only equal way is to appoint a disinterested and competent surveyor to assess the damage. If his lordship consents to this there would be no difficulty, as far as landlord and tenant are concerned, and it would remove all suspicions of exaggeration."

"His lordship then says, as far as his observation goes, he has too often seen that, whatever cause exists for the failure of the crop, the game alone bears the blame. I am aware that his lordship does invariably make that excuse when applied to; but at the same time I must meet it by saying, that when the real cause of damage is as apparent as the sun at noonday, still his lordship persists in denying it. But this point may be easily adjusted by adding the award of a respectable valuer. His lordship concludes by expressing a wish that the friendly feeling that exists between himself and his tenants may remain undisturbed. A wish to which I, as one of them, most cordially respond, and with feelings of the greatest pleasure do I bear testimony to the kindly feeling on which his lordship has ever been among them, on every other subject but that all-absorbing one which quenches every generous spark, and makes the landlord look upon his tenants with distrust and suspicion."

This letter produced a rejoinder from Lord Essex, which may be termed mere special pleading, and really admits the substantial charges Mr. Horncastle has established against him. But there is one passage which incidentally tells of the state of dependence to which the game has reduced his lordship's tenants. He says, "With regard to them [rabbits], all my tenants know they have only to send for my keeper and point out a burrow in order to get rid of them."

Imagine a farmer occupying land on which he dare not himself kill a vermin so noxious as a rabbit, but must send for my lord's gamekeeper to do so, the said keeper being interested in not killing the rabbit at all. When the reader contrasts Lord Essex's remoteness at St. Alban's about the people being dependent upon foreigners for their daily bread, his exhortations to farmers to improve,

and the impossibility of setting "limits to the productiveness of the soil," with his own practical limitation of corn-growing, and destruction of agricultural capital; we may safely ask who are the destroyers—the monopolist game-preservers or the Free-Traders?

It seems, moreover, that not merely farmers and farm-labourers suffer from game preserves, for a clergyman, who writes in reference to Lord Essex's letter, says:—

"As to the game-preserving, it annoys us smaller gentry and clergy as well as the farmer. My glebe land lies between two manors, one owned and the other rented by the same person. My crops and garden, partly walled and pale-fenced, but partly hedged only, are greatly injured; fruit-trees and wall-trees, of costly price, are barked and gnawed by hares, which I must neither shoot nor snare! And my gardener can neither keep cat, or kite, or owl, to ward off mice and rats in abundance, for the keeper shoots the former and exterminates the latter."

"The county-rate cost this parish, a century ago, just £15, and it now costs £115; to which may be added the police-rate, the police and the gaol being both of them very much taken up and occupied by trespassers on these pernicious preserves."

Whilst monopolist and game-preserving landlords like Lord Essex are quarrelling with their tenants about game, demoralizing the peasantry, and keeping up a store of public indignation against their class, the more intelligent landlords are giving up game and disbanding their "private police" and staff of gamekeepers.

We learn that, in addition to the landowners of whom we have before had occasion to make honourable mention, the Duke of Bedford has recently pensioned off his keepers, and given up the game to his tenants.

THE GAME LAWS.

THE LATE POACHING AFFRAY AT CROOME, WORCESTER.—The unfortunate gamekeeper who was brought to the Worcester Infirmary on Friday with a fractured skull and other injuries, inflicted on him by a gang of twenty poachers early on that morning, in the preserves of the Earl of Coventry, in the parish of Croome, has since died. His name is Thomas Slote. The two other men who were seriously injured by the poachers are brothers, named Compton, residing at Kempey, between that city and Croome. They are in a fair way of recovery.

At an early hour on Tuesday morning, two of the keepers on the estate of Mr. Bell, M.P., at Woolington, heard the report of fire arms in a plantation, and proceeding to the spot, came upon five men—four of whom fired. Hewitson, one of the keepers, was slightly wounded in the arm. Two of the poachers, named Robert Patrick and Anthony Stephenson, were seized; the others escaped.

THE BATTLE:—THE GAME LAWS AND AGRICULTURE.—An excellent (albeit a Tory) newspaper, the *Nottingham Journal*, contains a communication from "A Country Squire of the Old School," the writer of which observes:—"Without mentioning names, I will quote part of a letter received from Norfolk, with some account of a battle at a great man's residence. It says, 'I did not leave them until four o'clock, when, with ten guns, they had slaughtered five hundred head of game. This is called sporting. I call it anything else—mischief or murder.' When I departed they were keeping up regular volleys, more like a regiment of soldiers than field sports.' The letter goes on to add, that in one week no less than 9000 hares were sent from the aforesaid county to glut the London market. 9000 hares, allowing one to every three persons for a meal, would dine 27,000 people. It is said that four hares (I am not sure if is a correct calculation) consume as much as one sheep. If so, 9000 hares eat as much as 2250 sheep. The average weight of a mutton-sheep, say 60lbs. each, multiplied, would produce 135,000lbs. of mutton, which of course would afford a dinner for the like number of persons. If it be correct that 150 hares will destroy the produce of ten acres, it is equally clear that 9000 will destroy the produce of 600 acres."

CONVICTION FOR THE MURDER OF A GAMEKEEPER.—On Tuesday, December 17th, at the Stafford Assizes, the trial of Downing and Powys, for the murder of Cooper, Sir Thomas Bourchier's gamekeeper, terminated in a verdict of guilty against both the prisoners, with a recommendation to mercy from the jury, "so far as mercy could be shown in a case of murder."

It is currently reported (and we have every reason to believe the truth of the statement) that the Duke of Bedford is about to abandon the preservation of game, and to pension off or otherwise provide for his keepers.—*Aylesbury News*.

"PECULIAR BURDENS OF LAND."—We do not remember ever meeting with a better definition of this hackneyed phrase than was given by Mr. Robert Gardner, a Manchester manufacturer, at a meeting held in that town on Tuesday last, "for the purpose of promoting the repeal of the tax on cotton-wool."—"Cobden, Villiers, and others (remarked Mr. Gardner), had been repeatedly inquiring what these peculiar burdens were that belonged to the land. It could not be in the poor-rate; because if we were to believe the landowners) the agricultural labourers were in comparatively an easy and comfortable state compared with the manufacturing operatives. Then we manufacturers were subject to auction duty and insurance duty, which they were not; and they had privileges on the roads, paying no tolls on measures, &c., and a hundred other matters from which they were exempt. They would not tell us what these peculiar burdens were; but he really thought he had that morning discovered them. He believed there were peculiar burdens on the land,—but they were mortgages. (Laughter and applause.) He believed he had penetrated the secret, and got at the truth at last."—*Leicester Guardian*.

NOTICES TO CORRESPONDENTS.

"Edward Roistop, Sheffield," should have waited for the report of the proceedings at the meeting, and not troubled us with a letter beginning "I have been told that Mr. Cobden said," &c.; still less should he have ventured to insinuate that that gentleman's statement was untrue, merely because he (Mr. Roistop) happened not to be aware that Australia was a corn-exporting country. In future he will do well to suspect his own ignorance rather than throw doubts on the veracity of those whom he is incapable of understanding.

"A Constant Reader, and Subscriber to the £100,000 Fund."—Am I entitled to register in order to vote for the county, the borough of Sudbury being now disfranchised? I occupy premises at a rent of £70 on a lease of fourteen years. An answer in your next will oblige.

[The 25th section of the Reform Act declares that no person shall be entitled to vote as occupier of any house of such value (£10) as would, according to the provisions of the Reform Act, confer the right of voting for any city or borough. Now, our correspondent has the requisite, but he is prevented from exercising them for the borough, and it may be doubtful if he can avail himself of a county vote in lieu thereof; at any rate, as the question has not arisen since the passing of the Reform Act, there can be no impropriety in claiming, and taking the opinion of the revision court.]

"Free-Trader."—Is a person owning a freehold chief rent of the amount of 40s. per annum entitled to have his name inserted in the list of county voters, although subject to a deduction for the property-tax on the said 40s.?

[Yes. The 21st section of the Reform Act declares that no parliamentary tax shall be deemed to be any charge payable out of, or in respect of, any lands or tenements within the meaning of this act.]

"A. B. C."—My brother and self jointly possess a leasehold cottage in Forest-row, Daldon. The original lease was for 63 years; it lets for £30 per annum; we pay a ground rent of £11. 11s. per annum. Are both or either of us entitled to a vote for any borough, or the county of Middlesex?

[No. A sixty years' lease will require a beneficial interest of £10 for each.]

"H. R. W."—Would you oblige me by informing me whether it is necessary that the claim (to be registered) should be made before the 31st of January. Two sentences in your last week's paper have raised this doubt in me?

[It is necessary to send in a claim when the name is not on the register, and where persons have changed their place of abode since claiming in a former year. This should be done in the first twenty days in the month of July next; but we recommend the persons to call or send their claims to the office, as advised in the first column of this paper.]

"B. I."—Your opinion upon the following points is requested. In this neighbourhood there is a minister of the Independent denomination, who preaches in a chapel, which is freehold, and free from debt. He has what the chapel makes. Will this give him a county vote? There are also two cottages, built originally for residence of the minister for the time being. They let for about £9 a year; besides, there is a small legacy of £1 a year given to the minister of the same place for the time being. The land on which the cottages are built was given for the purpose of having a house built for the minister. Will these, conjointly (cottages and legacy), confer a vote?

[From his ministerial office, it would appear he has no estate or interest, legal or equitable, in the chapel or building in which he preaches; nor will the fact that he receives a salary paid out of the fund which is commonly called parents give him such an interest in real estate as will entitle him to a vote for a county. To enable a Dissenting minister to vote, his appointment must be for life, or for some uncertain period which may endure for life.]

In answer to "A Leaguer,"—in the last number a typographical error occurred. For mortgagee, read mortgagor.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the LEAGUE forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadsby, Newall's-building, Manchester; and the LEAGUE may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

NOTICE TO ADVERTISERS.

We beg to announce that on and after the 18th of January, *Two Pages* of the LEAGUE will be appropriated to Advertisements. No Patent Medicine Advertisements will be admitted; nor will any Advertisements be received after the Thursday preceding the day of publication.

POSTSCRIPT.

LONDON, Saturday Morning, December 28, 1844.

Instead of closing the year with controversy, and exposing the hollowness of party cries in the journals of party, we shall rather wish a happy new year to two new periodicals—George Cruikshank's "Table Book," and Douglas Jerrold's Magazine—brought before us under auspices deservedly dear to every friend of enlightened philanthropy. During the many years that George Cruikshank has delighted and instructed the public, he has never omitted an opportunity of exposing hypocrisy, and has never spared a sentimental delusion because it happened to be popular. He has honoured virtue in the humble, and lashed vice in the mighty; with much of Hogarth's power as a pictorial satirist, he has a more original and pointed humour peculiar to himself, which can have no successor as it had no precedent. The first number of his "Table Book" contains rich promise of amusement blended with instructive exposure of current fallacies and fashionable follies. The following is a specimen:—

"WASHING HOUSES FOR THE POOR."

"The people call for bread in many a quarter;—It seems a strange idea to give them water! Benevolence thus cheaply cuts a dash—With water any one may make a splash. Why bid the poor go seek the washing tub, Drooping them thus to bear another rub? Yet cleanliness with all our notions jumps; Must they who offer water needs be pumps? No! let us cherish eagerly the hope They'll make the poor much better off for soap. Yet if a mendicant should cross our path, Must we in future bid him 'go to Bath?' Oh! might he not reply in language proper—'I do not want a bath, I want a copper!'"

The pen of Douglas Jerrold, like the pencil of Cruikshank, has also performed good service in the cause of humanity. Few have pleaded the cause of the poor more powerfully,—none more honestly or more earnestly. The tale with which his first number opens depicts very powerfully "the charity of the poor to the poor," the extent of which few suspect and scarcely any are willing to believe. Both the magazines have invited attention to the deplorable condition of the agricultural labourer, and exposed the hollowness of the philanthropy which seeks distant objects for the exercise of its benevolence, and neglects the misery writhing at its own doors. We who are engaged in demanding justice for the industrious, who insist that labour should no longer be unnaturally cheap and food unnaturally dear, gladly welcome the appearances of such fellow-labourers in the struggle against monopoly;

"And through this glorious and well-foughten field
We'll stand together in our chivalry."

We do not usually refer to literary topics in this part of our paper, but this is a special occasion, and one intimately associated with the great object which the League has been established to advocate. Whatever raises the standard of public morality must hasten the triumph of justice; and, eminent as are both our friends as humorists, they are still more honourably distinguished as moralists. In both, the hatred of oppression has been as fixed a principle as the love of justice; and in both the suffering have ever found sympathy, and the injured, if not redress, at least an appeal against the wrongdoer. We write warmly because we feel deeply. It would not be easy to make too high an estimate of the services rendered by Cruikshank and Jerrold to the advance of social improvement by teaching the public to form a right estimate of men and things. In gratitude for their past labours, and in sanguine anticipation of further benefit to our country and our cause from the same powerful hands, we heartily wish a happy and successful New Year to George Cruikshank and Douglas Jerrold.

EPITOME OF NEWS.

FOREIGN.

FRANCE.—Several of the Paris journals announce that the committee on postal reform have recommended that a uniform rate of postage of twenty centimes (twopence English) shall be adopted in France. The journals are unanimous in approving of this recommendation of the committee.

The King of the French opened the French Chambers on Thursday with the usual ceremonies. His speech, given in the *Herald* of yesterday by express, refers principally to the operations by land and sea against the Emperor of Morocco, and the treaty of peace recently concluded with him; the friendly settlement of the differences between the French and English Governments growing out of the affair of Tahiti; his visit to the Queen, his friendly reception in England, and the additional guarantees for peace thus afforded; and the prosperous state of France.

The Paris correspondent of the *Times* writes as follows:—"La Reine Blanche frigate, with Admiral Dupetit Thouars on board, has been seen off the Azores, and is expected at Cherbourg every moment. The whole population of that town have revolved upon giving him a grand reception—nay, even the National Guard, at the risk of being disbanded, are, I am assured, determined on turning out to do him honour." This announcement had had the effect of lowering the funds on the Bourse.

WOLVES.—The late severe weather had the effect of forcing the wolves in several parts of France to leave their lurking places, and come nearer than usual to human habitations in search of food. Close to Marseilles two persons who lived at La Plaine, found their passage barred by an enormous wolf. They at once fled towards the Boulevard Chave and escaped. The animal remained all night in the neighbourhood, prowling about a stable of cows and goats, but without being able to commit any depredation. It was fired at twice in the morning without effect. Near Crepy the postman was followed for some time by four or five wolves, who seemed half afraid to approach nearer. At last, when they appeared unwilling to form a more intimate acquaintance with him, he thought it best to throw down before them a little dog which he was carrying under his arm. He by that means got safe away.

We learn by the last arrival from the island of Bourbon, that the guillotine had just been used there for the first time, for the execution of three blacks, two for mutiny and the other for the horrible crime of murdering a person and eating his flesh. It is twenty years since any one has been convicted of this latter offence.

TUNIS.—Letters from Tunis state that a strong sensation had been created in that city by the violation of the Sardinian territory by a body of French gendarmes, dragoons, and other armed soldiers who had been taken prisoners, and conveyed, under circumstances of unnecessary brutality, to Grenoble. The affair seems likely to produce a serious misunderstanding between the French and Sardinian Governments.

The journal *L'Afrique* publishes the following dated Algiers, the 15th inst.:—"I have just learned a very important fact—Abd-el-Kader has not left Morocco, as was some days ago, and all the tribes residing between Fez and our frontier are in open insurrection against the Emperor. This news is given to me as official. Thus it is highly probable, Abd-el-Kader be the author of that insurrectionary movement, our battle of Italy will have but for its result to weaken the Emperor and facilitate the task of the Emir, if he really wish to supplant Mouley Abdrahman."

MARTIAL LAW IN SPAIN.—During the late events more than two hundred innocent citizens have been shot. Such a state of affairs is horrible, while at the same time we are congratulated on the peace and tranquillity which

is the result. More than two hundred murders! Add to these the exiles and prisoners, and say if there is any honourable man and true Spaniard who would not curse an order of things so violent as that which at present exists. *Eco del Comercio*.

SWITZERLAND.—The *Observateur Suisse* states that the meetings lately held at Fraubrunnen and Zifinger had occasioned great alarm to the central Government, so much indeed that it had called out the Landwehr, and forwarded troops from Schwyz towards the frontier of the canton, in order to be able to enter Lucerne at the first signal. The Pope's nuncio had congratulated the Director of the Vorort on having overcome the party opposed to the Jesuits. To such a height had the exasperation of the people towards this body arrived, that a revolutionary journal, published at Argau, offers a premium of 75 Swiss francs to whoever will kill a Jesuit.

THE REGICIDE TSCHERCH.—The *Journal des Débats* announces that on the 14th inst. the regicide Tscherech, who attempted to assassinate the King of Prussia, was executed at Spandau, where he had been conveyed under an escort of cavalry. The King had remitted that part of his sentence which stated that he was to be broken on the wheel.

THE CENSORSHIP IN BAVARIA.—The *Presse* gives the following description of the manner in which the Bavarian censorship is conducted:—"Every morning a police-officer attends at the Post-office of Munich to receive all the newspapers which arrive there, to carry them to the office of the censors, where they are opened and read. If they contain nothing objectionable, they are forwarded to their address, but if they treat of one out of the thousand subjects which is forbidden to be discussed in Bavaria, the subscriber loses his journal." How many papers would be delivered from St. Martin's-le-Grand if our Government had the same power of excluding what was offensive to themselves, and exercised it as rigorously?

STETTIN.—A dreadful fire broke out at Stettin on the 3rd of Dec. inst., which burned down several houses and warehouses, and an immense amount of property. The river was frozen over, and the engines were so frozen that they would not work without pouring in hot water. The men, too, were so drunk that they could not work, and several were killed by the falling ruins.

Accounts from Constantinople announce that Dr. Wolff had arrived in safety at Teheran.

PERU.—Accounts from Africa to the 4th of September state that her Majesty's steamer *Cormorant* arrived there on the 2nd, with Mr. Pitt Adams, the British Minister, on board. The authorities at first would not allow her to water, but after a few shots and shells had been thrown into the town by the Talbot, a better understanding existed. The dispute, the nature of which is not explained, was adjusted, and permission to take in water was granted. The Peruvian squadron at Islay was placed under embargo by her Majesty's ship *Dublin*, Admiral Thomas, about a fortnight before the occurrence took place, in consequence of their having detained the British barque *Horsburgh*: the latter had been released.

SCINDA.—A private letter from Scinda, dated 13th of October, states that the sickness there was then extreme; one cavalry regiment had only 19 men of all grades out of hospital: it had of soldiers, grooms, gunsmen, and officers' servants, close upon a thousand in hospital. The fevers were of a bilious type, attacking the head immediately, as well as spleen or liver—the former with the natives, and the latter sometimes with the Europeans. The other corps were suffering in a like manner. The fevers were not of long duration (fever and ague generally), but relapse on relapse was what destroyed—five, six, seven days free of fever, and then a relapse; and thus it continued until dysentery came on and carried them off.

DOMESTIC.

On Friday, the 20th inst., Sir Henry Pottinger was entertained at a grand banquet by the leading manufacturers and merchants of Manchester. The Mayor presided. In the address presented to him, and the speeches made on the occasion, the honourable baronet was warmly eulogised for having opened a free intercourse with China, by effecting a liberal and comprehensive commercial treaty with that nation, and thus extending the trade and commerce of Great Britain.

On Saturday morning, about four o'clock, a most destructive and fatal fire broke out at the residence of Mr. John Faray, civil engineer, No. 67, on the north side of Guildford-street, Russell-square. The building in question was one of the large and capacious brick houses peculiar to that locality, and comprised on the basement five stories, containing sixteen rooms; and, in addition, extensive offices and stabling at the rear, and an entrance in Colonnade-mews. The fire was first discovered by the inmates of the house, who consisted of Mr. and Mrs. Faray, Mr. Faray, jun., three female servants, and a youth who acted as Mr. Faray's clerk, all of whom, with the exception of the latter, succeeded in effecting their escape on to the roof of the house in a state of nudity, but were unable without assistance to proceed further.

Through the great exertions of the police and firemen, the conflagration was prevented extending itself beyond the building. About 20 minutes before five o'clock a portion of the roof at the back of the premises fell in, and a still larger portion about a quarter of an hour afterwards, which carried with it the whole of the massive timbers of the floors down to the basement with a tremendous crash. A man was discovered near the wine-cellar in a helpless state of intoxication; and another was discovered in the ruins in a dying state. He was found to be a policeman, John Birkmyer, who had been assisting to extinguish the flames. He died soon after having been extricated. As soon as the ruins were sufficiently cooled an active search was made for a youth named Wm. Robinson, aged 15, clerk to Mr. Faray; his remains, were not, however, discovered until three o'clock in the afternoon, when they were found nearly at the top of the ruins, in a dreadfully burnt state. Between two and three on Tuesday, two other bodies, namely, those of police-constable Wright, and Jenkins the groom, were found in the ruins. They were not far from each other. All the four bodies presented a frightful appearance. Mr. Wakley held an inquest on the bodies on the same day, and after having heard some evidence it was agreed to adjourn the further investigation into the frightful calamity until Monday next.

We are glad to learn that a pension—from, we believe, the funds of the Civil List—has been conferred upon Mr. Thomas Hood, the author of, amongst other things, "The Song of the Shirt."—*Globe*.

The Irish corporations have not been forgetful of the press. The mayor of Cork is the proprietor of a newspaper; the proprietors and editors of the *Kilkenny Journal*, *Drogheda Argus*, *Tipperary Free Press*, and *Sligo Champion*, have seats in their respective corporations; and the editors of the *Freeman*, *Register*, and *Nation*, are in the Dublin corporation.—*Nation*.

Mr. O'Connell left Dublin very unexpectedly on Friday evening, to spend his Christmas at Darrynmo Abbey. The *Monitor* states that the hon. gentleman made his exit in a downright "huff" at the failure of his parish agitation against the Charitable Bequests Bill.

The most pressing of the Irish "difficulties" at the present moment would seem to be the agrarian outbreak, which is rapidly extending from one end of the country to the other. The outbreak assumes the character more of an insurrection than of isolated crime, and is rapidly increasing in intensity, instead of seeming to have met with any check.—*Sun*.

On Thursday, the 5th instant, died Miss Murton, of Trumpington-street, in this town, aged seventy-one, a person of most eccentric habits. She was possessed of property to the amount of £50,000, but lived in a most wretched state, in a house entirely by herself. She was in the habit of sitting on the ground, surrounded by filth of all descriptions, and two starved black cats on each side of her. She would have perished through cold and want, or been eaten up with filth, but for the kind attention of her relatives.—*Cambridge Independent*.

A grand *soirée*, to celebrate the first anniversary of the establishment of the half-holiday in Manchester, was held in that town on Saturday evening last in the Free-Trade Hall. There was a crowded attendance; and among others present were Sir H. Pottinger, Joseph Brotherton, M. P., C. Hindley, M. P., &c., and a large number of the leading men of Manchester.

The inhabitants of Brighton, at a public meeting last week, attended by 2000 inhabitants, negatived the proposal to petition the Queen for a charter of incorporation.

More than one-third of the number of prisoners tried at Stafford were totally uneducated, included among whom are the two youths, Downing, 19, and Powys, 19, who are condemned for the murder of the gamekeeper.

On Monday three persons were killed at a colliery near Morriston, in Wales, by an explosion of foul air. The coroner's jury returned a verdict of "Accidental death."

The coroner's jury which sat at Greenwich, on the bodies of the men drowned by the collision between the *Sylph* and the *Orwell* steamers, have returned a verdict of "Accidental death." They attach, however, certain blame to the captain of the *Sylph*.

We understand that Lord Ashley has remitted the sum of £32. 10s. to the Rev. Mr. Balfour, Clackmannan, to be distributed by him, in the exercise of his own discretion, "among those labouring women, in the parish of Clackmannan and in the adjoining parishes, who have been thrown out of employment by the operation of the Act to regulate Mines and Collieries." Lord Ashley has likewise transmitted the following sums to the under-mentioned places: Polmont, £12. 10s.; Tranent, £22. 10s.; Newton, near Dalkeith, £12. 10s.—*Fifehire Journal*.

Strict orders have been given to the workmen at the Woolwich Dockyard not to introduce lucifer matches into any part of that establishment.

The unfortunate young woman, Mary Gallop, who was recently convicted at Chester of having poisoned her father, has made a full confession of her crime to Mr. Penry, the visiting magistrate of the prison, in the presence of the chaplain. As a very strong impression prevails that the young woman is insane, and was so at the time when she deprived her parent of life, a petition has been forwarded to the Home-office, in order to obtain a commutation of the sentence to confinement or transportation for life. The petition was signed by the Lord Bishop, Chancellor Raikes, and a great body of the clergy and gentry. Other petitions are also in course of signature.

There are upwards of 40,000 persons in the various work-houses of the metropolis and its suburbs. They were regulated on Christmas-day with roast beef and plum pudding.

On Monday week about 250 weavers in the employ of Messrs. Simpson, Thompson, and Co., of Crumpsall Mill, turned out for an advance of wages. A few days previous to their doing so, a deputation from the weavers waited upon the firm, and they were informed by their employers that the full average of prices paid in Manchester and Salford, for the same description of work, would be paid at all times by them; and, in order still further to show them their wish to deal liberally, they would allow them to select the six best houses in Manchester and Salford, and would regulate their list accordingly, if it should be found to be a fraction less than the average list that was paid at those mills. This reasonable offer was declined by the weavers, and the strike still continues.

On Christmas-day the lending library at the Greenwich Union-house was opened for the use of the inmates. Upwards of 200 volumes were distributed, and the effect was so signally beneficial that the master, Mr. Ellis, had not, last evening (Thursday), a single case of impropriety to report to the Board of Guardians, which had arisen after the festivities of Christmas-day.

A man, named William Oliver, and his wife, having a large family of children, all living in the greatest distress in a miserable cottage, in the village of Ashford, Staines, committed suicide on Tuesday last. It is supposed by police; and from the circumstance of one of the children having become ill from the eating of a cake, and the father having solicited another child to partake of it, it is suspected that the wretched parents intended to destroy the whole family.

The weekly meeting of the Repeal Association took place on Monday, in the Conciliation Hall. In the absence of Mr. O'Connell, nothing of interest marked the proceedings. The rent for the week amounted to £175. 12s. 2d.

At the funeral of the Earl of Limerick, which took place on Monday last, at Limerick, the populace expressed their feelings of dislike to the deceased nobleman by shouting and groaning, which increased more and more till at length a riot ensued, and a military force was sent for to quell it. A local newspaper states that Lord Montague, Lord Limerick's son-in-law, was assaulted and had to take refuge in a spirit-shop, and that the mayor, in endeavouring to protect him, was also maltreated. The *Tipperary Vindicator*, while lamenting and deprecating this disgraceful scene, states that the deceased nobleman's conduct as an absentee landlord was such as was calculated to excite the wrath of the people.

OUR TRADE WITH CHINA.—At the banquet given by the merchants and manufacturers of Manchester to Sir H. Pottinger, the Mayor, who presided, in proposing the toast, 'baronet's health,' gave the following details respecting our trade with China under the new treaty of commerce, which is based wholly on Free-Trade principles:—"I may remind you, gentlemen, that the empire of China, which has been so extensively opened to you by the successful negotiations of Sir Henry Pottinger, includes a territory equal to, I believe, 810,000,000 of British statute acres, and comprises a population which is now computed to amount to upwards of 310,000,000 of souls. It will then be easy for you, gentlemen, all of whom are accustomed to minute calculations, at once to determine what the degree of advantage will be to this manufacturing patriot by having a market of this extraordinary extent opened to us. (Loud cheers.) You will recollect that the population of Great Britain amounts to 27,000,000; and, if we consider for a single moment that 27,000,000 of people have now the opportunity of free and equal trade with a population exceeding 310,000,000 of people, the advantages must be almost wholly upon our side. (Loud cheers.) I have heard an exclamation which proceeded from one of our country manufacturers upon the subject, which I dare say will convey some idea to the minds of gentlemen present of the advantages which we are likely to derive from the extension of our intercourse with China. 'Why,' said the worthy manufacturer, 'all the mills we now have will hardly make yarn to find them with nightgowns and socks.' (Laughter.) Without, gentlemen, entertaining any very extravagant notions upon the subject myself, or at all wishing to excite any spirit of speculation by any remarks I may make upon the present occasion, I may state that I have been furnished, by the kindness of my friend, Mr. Macleay, with a statement of the exports to China during the years 1843 and 1844. (Loud cheer.) The account is made up from the 30th of November, 1843, which I presume was the period when the intelligence reached England of the successful termination of Sir H. Pottinger's labours, and is carried up to November, 1844. From that account I perceive that in 1843, of plain cotton piece goods there were shipped to China, from the ports of London, Liverpool, and Clyde, 148,381 pieces, and in the corresponding period, namely, for the year ending 30th of November, 1844, the number of pieces of cotton shipped to China amounted to 2,250,795; making an advance, in that short space of time, of 1,102,414 pieces. (Cheers.) It will not be necessary for me to occupy your time in stating the various descriptions of pieces of cotton goods which are mentioned in this return; but, in order to enable you to judge of the increase of our exports in that short period to this extraordinary country, I may simply state to you that the value of all the foregoing articles enumerated in this statement amounted, in 1843, to £1,468,115 sterling, and that of the same descriptions in the year ending 30th of November, 1844, amounted to £2,043,093; showing an increase in value of the exports of this country to China, in a single year, of £574,978. (Cheers.)"

London: Printed by ROBERT FARMER (of Providence-place, Upper Kensington-lane, Lambeth, in the County of Surrey) and JAMES CHALTON (of Number 394, Strand, in the County of Middlesex), at their Printing-office, Number 10, Strand-court, in the Parish of St. Dunstons in the West in the City of London, and published by AUGUSTUS WALLIS PATERSON (of Number 27, Warwick-square, Strand, in the County of Middlesex) at the Office of TUN LANE, Number 57, Fleet-street, in the said Parish of St. Dunstons in the West on Wednesday, the thirteenth of May, 1844.
