BURN'S COMMERCIAL GLANCE.—It appears by *Burn's Glance*, for the first six months of 1844, that the total quantity of cotton yarn exported in the first six months of 1843 was 62,301,964 lbs., and total export during the same period of this year was only 55,041,134 lbs., showing a decrease on the six months of 7,257,830 lbs. The principal sources of this decrease seem to be in the exports to the Hanse towns, Mecklinburg, Oldenburg, &c. (in which the exports have decreased from upwards of 2½ millions to 14 million pounds); to Holland (from 9,520,000 lbs. to 6,970,000 lbs.); to Naples and Sicily (from 3,800,000 lbs. to about 2 million pounds); to Sweden and Norway (from 1,800,000 lbs. to 770,000 lbs.); and to Sardinia, Tuscany, &c. (from 2,400,000 lbs. to 1,600,000 lbs.). On the other hand, there is a considerable increase of exports to Belgium (from 31,000 lbs. to 1,848,000 lbs.); to Portugal, Madeira, the Azores, and Cape Verde (from 3,674,000 lbs. to 5,518,000 lbs.). The total increase on exports of plain calicoes, as compared with the first six months of 1843, is 23,404,050 yards, and of printed and dyed calicoes, 6,785,249 yards.

THE NEWSPAPER PRESS.—The number of newspapers published in the United Kingdom, in the year 1843, the returns of which can be obtained with the greatest accuracy through the Stamp-office, was 447. The stamps consumed by them in that year were 60,592,001. Their proportions are as follows:—

1843.	
79 London newspapers	31,692,063
213 English provincial	17,058,056
8 Welsh	339,500
69 Scotch	5,037,589
79 Irish	6,474,794
447	60,592,001

STATE OF TRADE.—We do not remember at any time greater activity in the principal branches of manufactures than there exists at present, except when that activity has been of a speculative and feverish character. Throughout Yorkshire and Lancashire, in the cotton, woollen, worsted, flax, linen, silk, cutlery, and machine-making businesses, trade is lively, and we believe all hands are employed.

The poor-rates are, of course, exceedingly relieved. We may state as a specimen, that in the Huddersfield Union the number of out-door paupers relieved was as follows:—

In the quarter ending June 24, 1843	12,220
Do. do. 1844	6,083

Diminution .. 6,140
or more than one-half.

If we should be blessed with a good harvest, there is every prospect of another year of prosperity. And here we have another proof of the connexion between prosperity and cheap food. At present there is the prospect of an abundant harvest.—*Leeds Mercury*.

LAND IN GUERNSEY.—Nothing surprised the farmers who attended the Agricultural Show at Southampton so much as being informed by the Guernsey farmers that they paid £5, £7, and £9 an acre for their land. In this county, for instance, where there are tens of thousands of acres let for 10s., including down land, per acre, the Sussex farmer could not comprehend how land in Guernsey could obtain such very high rents. But it was easily explained. In Guernsey there are no Corn Laws, and, secondly, the land is let on long leases and on equitable terms.—*Brighton Herald*.

LEITH.—FOREIGN WHEAT.—As stated in our last paper, upwards of £11,000 of duty was cleared at the Custom-house in two days upon wheat alone. This arose from an anticipated rise of duty, which has since taken place—namely, from 17s. to 18s. per quarter. We observe that a similar panic, but, of course, to a greater extent, took place at Hull, Liverpool, and London. At the first-named port, 1600 quarters were cleared at the 17s. duty, but previous to the rise at Liverpool the quantity entered for consumption on Wednesday and Thursday last amounted to 100,000 quarters. In London the duty rose on Thursday to 18s., previous to which 49,000 out of about 150,000 quarters were cleared at the 17s. duty. From the present position of the averages, the duty is likely to advance a step, and that in four or five weeks it will have risen to the maximum point; but whether holders under bond will enter for consumption before the next rise occurs will depend greatly on the weather. During the last two days about 2000 quarters of foreign grain have arrived at this port.—*Caledonian Mercury*.

PROSPECTS OF THE GUANO TRADE.—As guano is likely to come into general use as an available and profitable manure, an idea may be formed of the quantity ultimately required. There are, for instance, in England and Wales, 25,000,000 acres of land under cultivation, and almost 16,000,000 in Ireland and Scotland. Supposing, however, that guano be applied ultimately to only one-twelfth of this quantity, what a trade would thus be created! Taking it for granted that an acre will require about two hundred weight and a half, 600,000 tons annually would be required; while the import of this quantity would employ some 1200 vessels, of 500 tons burden each!—*Liverpool Journal*.

MARKETS.

CORN MARKET.

MARK-LANE, Monday, Aug. 12.—There was a short supply of English Wheat this morning, which, together with the heavy showers which have fallen last night and this morning, enabled factors to obtain an advance of 1s. to 2s. from this day week; there were a few samples of new Wheat, which sold at 52s. to 56s. There was more inquiry for Foreign Wheat, and a fair amount of business was done at a similar improvement. Barley met a slow sale at last week's rates. The supply of Beans and Peas was short, and last week's prices were readily obtained. We had about half a dozen cargoes of Irish Oats, and two of Foreign, fresh up since Friday; the improvement which we noticed on Friday, of 6d. from the prices of this day week, was fully maintained. S. H. LUCAS and SON.

Oats	24037	19s. 8d.	Peas	421 31s. 10d.

FRIDAY, Aug. 16.—The supplies of English grain this week are small, of Foreign large, and of Irish Oats moderate. On Tuesday and Wednesday we had rain from morning to night, with very short intervals; it rained again yesterday for some hours, but to-day the weather is fine. Wheat is held firmly at higher rates, and millers are compelled to give 1s. to 2s. advance on Monday's prices. Importers of Foreign Barley are holding in expectation of an advance, and there is but little offering of the recent large arrivals. The sales made are at the same prices as on Monday. There is rather an increased inquiry for Beans, and Monday's prices are fully maintained. No alteration in Peas. Oats are held firmly for an advance, and though the favourable change in the weather has checked the disposition to buy, which was apparent on Wednesday, the sales made are at 6d. over Monday's rates. The duty on Beans rose to 6s. 6d. yesterday. S. H. LUCAS and SON.

Account of Corn, &c., arrived in the Port of London, from the 12th of August to the 16th of August, both inclusive.

THE LEAGUE.

No. 48.]

SATURDAY, AUGUST 24, 1844.

[3d.]

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to receive a copy, weekly, of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward contributions to THE LEAGUE FUND, are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

REGISTER, REGISTER, REGISTER!

Particulars to be attended to up to the 25th of August.

The overseers must, on or before the 31st of July in each year, make out an alphabetical list of all £10 occupiers, within their respective parishes, entitled to a vote for the borough, including such as occupy the adjoining parishes and liberties, if any. They are entitled to have access to the books of assessed taxes, to ascertain whether the claimant is liable for, or has not paid his assessed taxes "in respect," only, "of the premises."

They must make a separate similar list of all parishioners, other than freemen and liverymen, qualified to vote in respect of ancient rights.

These lists, signed by the overseers, must be affixed on the doors of every place of worship, established and disestablished, within the parish, on the first two Sundays in August—and copies are to be kept for public inspection, without fee, in the overseers' custody.

Persons omitted from these lists will send claims to be registered to the overseers, on or before the 25th of August.

Persons on the first list may be objected to by any one, whose name is on any list of voters for the borough, serving notice of objection on the overseers, on or before the 25th of August.

DUTIES OF CLAIMANTS AND ELECTORS.—Every person should see for himself that his name is inserted in the list of that class of voters to which he belongs. If he have a twofold qualification, he should see that his name is on both lists. This is of great importance, as the voter may be objected to and lose one qualification, and retain the other and vote for it.

Any person whose qualification consists of a successive occupation of different premises, should be careful to observe that each set of premises is inserted in the list. He must also be very careful to see that the place for which he claims, and his own place of residence, are very correctly described in these lists. If this should not have been done, he must send in a claim to the overseers, as below, describing all the premises, and also (if he have changed his residence) his new place of abode.

CLAIMS BY PERSONS OMITTED FROM THE LISTS.—Persons omitted from the overseers' lists, should give notice, on or before the 25th of August, to the said overseers, in the following form. If the claim be for a successive occupation of different premises, each of such separate premises must be described:—

To the Overseers of the parish [or township] of —
I hereby give you notice, that I claim to have my name inserted in the list made by you of persons entitled to vote in the Election of a Member [or Members] for the City [or Borough] of —, and that the particulars of my qualification are stated in the columns below.

Dated this — day of —, one thousand eight hundred and —

Christian name and surname of the claimant at full length.	Place of abode.	Nature of Qualification.	Street, lane, or other place in the parish [or township], where the property is situate, and number of the houses, if any (when the right depends on property).

(Signed) A. B.

Persons, omitted from the List of Freemen, should give notice to the town clerk in the following form:—

To the Town Clerk of the City [or Borough] of —
I hereby give you notice, that I claim to have my name inserted in the List made by you of persons entitled as Freemen to vote in the Election of a Member [or Members] to serve in Parliament for the City [or Borough] of —, and that my qualification is as Freeman of —, and that I reside in — Street, in this City [or Borough].

Dated this — day of —, one thousand eight hundred and —

(Signed) A. B.

And of course, also, as a preliminary, in the rate-book relating to each occupation.

Lists of these claims are to be made out and published, in the manner already described, by the overseers, and the claimant should inspect them, and, if incorrectly inserted in any of the essential particulars, he must attend the Revising Barrister's Court, and get them altered. If, notwithstanding of his making his claim, he is omitted from the list of claimants, he upon attending the Revising Barrister's Court, and proving the serving of his claim on the overseers, will be placed on the register.

Notices of claims must be delivered on or before the 25th of August.

OBJECTIONS TO PERSONS ON THE LISTS.—It is of importance that every voter should carefully examine the lists made by the overseers and town-clerk, to ascertain if the name of any person has been inserted who is not entitled to vote. If there be any such, he is to give to the overseers, or to the town-clerk, a notice of objection, in the following form:—

To the Overseers of the Parish [or Township] of (or to the Town Clerk of the City [or Borough] of) —

I hereby give you notice, that I object to the name of — being retained in the List of Persons entitled to vote in the Election of a Member [or Members] for the City [or Borough] of —

Dated this — day of —, one thousand eight hundred and — (Signed) A. B., of [Place of Abode]

On the list of Voters for the Parish of —

The notice must also be given to the person objected to, as follows:

To Mr. —

I hereby give you notice, that I object to your name being retained on the list of persons entitled to vote in the Election of Members [or a Member] for the City [or Borough] of —

Dated this — day of —, one thousand eight hundred and — (Signed) A. B., of [Place of Abode]

On the list of Voters for the Parish of —

OBJECTING.—The party having taken the necessary steps to secure his own vote, should also examine the overseers' list of voters, with a view of objecting to the name of any person he finds inserted in the list, and believes to be disqualified; any person whose name is on the list of voters may object to any other name, either in his own or any other parish, within the city or borough. Those who do not possess the franchise themselves can prevent others not entitled from voting, by looking over the lists of voters, and giving the names of any persons they may find improperly inserted to some person whose name is on the list, or to a Registration Society, if there be one.

In all notices of objection, the christian name and surname of the person objected to, exactly as it appears in the list, should be written at full length. The christian name and surname, and place of abode of the objector must also be written at length, or the notice will be void.

If there be more than one list of voters, the notice should specify the list to which the objection refers; and if the list contains two or more persons of the same name, the notice should distinguish the person intended to be objected to.

These notices must be given on or before the 25th of August. Copies of the notices should be kept by the person objecting.

Notices of objection may now be sent by post; but care must be taken to have a duplicate copy of such notice stamped by the postmaster. Such duplicate will be good evidence of the service of the notice. The notice must be posted so that the person objected to may get it on or before the 25th of August, or the objection will fall to the ground.

It is of importance that none but well-founded objections should be made, as the Revising Barrister has now the power, in cases of frivolous objections, of awarding the payment of costs to the amount of not more than twenty shillings in each such case.

The following are the Grounds of Objections.

INCAPACITY.—Peers, except Irish peers being members of the House of Commons. Aliens, unless naturalized, or denizenized, father or grandfather English, or served in the army, navy, or whale fishery. Under twenty-one years of age. Idiots, or lunatics. Officers of Excise, Customs, Stamps, Post-office, Assessed Taxes, if appointed by Assessed Tax Commissioners, or not ceased to hold office twelve months. Conviction of bribery, or any other crime. Receipt of parochial relief within one year previously to the 31st of July.

DISQUALIFICATIONS.—Dead. Premises not of sufficient value, not a house, warehouse, counting-house, shop, or other building. Not occupied twelve months ending the 31st of July, the same or any other premises in the city or borough to qualify. Premises let during any part of the year, and not retained part, or kept by a servant. Bankrupt, insolvent, unless still in occupation. Not rated, or claimed to be rated. Poor's-rate not paid. Window-tax not paid. (These are the only taxes necessary to be paid.) Non-residence within seven miles, from the 31st of January to the 31st of July. Partners where premises do not give £10 a year to each partner, or not in partnership for a year ending the 31st of July, or want of qualification in other respects as above. Landlords who do not occupy a part of the premises. Servants, as secretary or manager, carrying on their employers' business on the premises. Not having occupied the premises described in the list during the whole year, that is, from the 31st of July, 1843. It is not sufficient that the voter previously occupied other premises that make up the year's occupation; if such premises are not described in the list, it is sufficient ground of objection.

THE FOLLOWING ARE THE GROUNDS OF OBJECTION TO SCOT AND LOT VOTERS.—1. Not an inhabitant householder on the 31st of July next previous to the time of serving the objection. 2. Not an inhabitant householder on the 7th of June, 1832, and for six months previously. 3. Not having been rated, or not having paid all poor's-rates demanded, on or before those respective periods. 4. Not inhabiting (sleeping) in any

part of the city or borough at those respective periods. 5. Not having resided (slept) within seven miles from the 31st of January to the 31st of July in the current year. 6. Name omitted from the register for two successive years.

GROUND OF OBJECTION TO A FREEMAN OR BURGESS.—That he was not duly admitted by the 31st of July; or, if the freedom is in right of birth, that it has not been derived from or through a freeman admitted before the 1st of March, 1831, or admitted since that period in respect of servitude. That he has not resided during the time or within the distance required.

COUNTY REGISTRATION.

The register of voters, and also the lists of claimants for counties, should now be carefully examined, and where there is reason to believe that a party has not a sufficient qualification, or that he is disqualified to vote, a notice of objection should be given on or before the 25th of August, to the overseers, or any one of them, and another should be given to the person objected to, or left at his place of abode, as described in the list. Any person whose name is on the register, may object to any person on the list, or to any claimant. The notice must be signed by the party objecting, and in the following form:—

To the Overseers of the Parish [or Township] of —
I hereby give you notice, that I object to the name of the person mentioned and described below being retained in the List of Voters for the County of —, [or for the — Riding, Parts, or Division of the County of —, as the case may be].

Christian and Surname of the Voter objected to, as described in the List or Register.	Place of Abode, as described.	Nature of Qualification, as described.	Street, Lane, or other like place, where the qualifying Property is situate, &c., as described in the List or Register.

Dated the — day of —, in the year — (Signed) A. B. [Place of Abode.]

The following notice must likewise be given to the person objected to:—

To Mr. —, of — [as described in the List.]

Take notice, that I object to your name being retained in the [here insert the name of the Parish] List of Voters for the County of —, [or for the — Riding, Parts, or Division of the County of —.]

Dated this — day of —, one thousand eight hundred and —

(Signed) A. B., of [Place of Abode], on the Register of Voters for the Parish of —

When the person objected to resides out of the parish or township to which the list relates, and the name of the occupying tenant of any portion of the property is stated in the list, the following notice must be given to tenant so named, besides the notice to the person so objected to:—

To Mr. —, of — [as described in List.]

Take notice, that I object to the name of A. B. [as described in the list] being retained in the [name of Parish] List of Voters for the County of —, [or for the — Riding, Parts, or Division of the County of —.]

Dated this — day of —, one thousand eight hundred and —

(Signed) A. B., of [Place of Abode], on the Register of Voters for the Parish of —

It is necessary that the notices of objection should specify the place of abode of the objector, and the notices to the voters and tenants, also the parish in which the objector is registered, otherwise they will be void.

Duplicate copies of each notice of objection should be kept by the objector.

Notices of objection may now be sent by post, but care must be taken to have the duplicate copy stamped by the postmaster; the production of such duplicate, in proof of their having been so sent, will be taken by the revising barrister as proof of service.

The principal grounds of objection are—

First, the insufficient value of the property, reference being had to the tenure by which it is held.

Secondly, the insufficiency of the title of the party to the property in respect of which he claims.

Thirdly, that the party has not been in possession during the period required by law.

Fourthly, that he has omitted to set forth any of the particulars required in his notice of claim.

Change of residence, since registration, is a good ground of objection, although the barrister, upon proof of the qualification, will not expunge the name, but correct the place of abode, if supplied at the revision.

Persons who are disqualified to be registered, in respect of personal incapacity, are as follows:—

Women; persons under twenty-one years of age; peers; Irish peers, except members of the House of Commons; aliens, unless made denizens by the King's letters patent, or naturalized by act of Parliament; persons of unsound mind, such as idiots, lunatics; persons convicted of felony, bribery, perjury, or petit larceny; commissioners and officers of excise, customs, stamps, and taxes; all persons in the employ of the Post-office; police magistrates or police officers; and all persons in the Thames and Metropolitan Police in the counties of Hertford, Essex, Kent, Surrey, and Middlesex. All these are legally incapacitated, and may be objected to.

A collector of taxes who is not appointed by the Tax-office, and a sub-deputy in the Post-office not appointed by the Postmaster General, are not disqualified.

The receipt of parochial relief will not disqualify a freeholder who claims to vote for a county.

The revising barrister has power to adjudge costs, to be

paid by objectors to persons objected to upon groundless or frivolous objections. The barrister is the sole judge of the nature of the objection, and may make such order as he shall think fit for the payment of the costs of any person in resisting it; such costs not to exceed twenty shillings.

SPECIAL NOTICE TO CLAIMANTS FOR COUNTIES.

THE IMPORTANCE OF EXAMINATION OF THE LISTS.

Under the Reform Act one list for each parish, of the old and new claims, was sufficient. The 6th Vol., c. 18, s. 5, directs that lists of all new claims shall be printed; also a copy of the register for the parish then in force; such lists shall be published by placing them on the church and chapel doors on the first and second Sunday in August. (Sec. 22.) It is most important that the lists be printed separately, and that the new claims be not inserted in the copy of the register, for this obvious reason: The 40th section requires the revising barrister to correct the list; and if he finds more names in the copy of the register than on the register, he must strike out those names. The effect will be, that, unless a list of the new claims is made out separately, the barrister has no list to revise; and the voter loses his vote, unless he is prepared with a duplicate claim, and is prepared also to prove his qualification in the Revising Barrister's Court, as directed by the 37th section.

The negligence of overseers (to speak in the mildest terms) is so great, that often three parts of the voters on a parish list stand a chance of being disqualified by the improper way in which the copy of the register is made. Example—St. Michael-le-Guerne, city of London, in the present year:—

Joseph Chapman ..	Ditto.	Ditto.	Ditto.
John Cowper ..	Starford-street.	Ditto.	4, Ditto.
Frederick Cowper ..	Russell-square.	Ditto.	Ditto.

The 40th section requires the revising barrister to expunge the name where the nature of the qualification shall, in the opinion of the barrister, be insufficiently described for the purpose of being identified. And it is a very common practice for the vestry clerks, instead of procuring a copy of the register, signed by the clerk of the peace, to copy, year after year, some old list of their own, the result of which is the omission frequently of many names.

Electors must not, therefore, and those who are watching the Registration, be content with having claimed, or take the lists as a matter of course as being perfect, but should carefully see that their new claims are on the new-claim list (separately), and not on the copy of the register; and also that those who have claimed years back should see that their names, addresses, and qualifications are properly described on the list for the present year's revision, or the overseers, by their errors, may disfranchise them without their having any notice on the subject, which, if detected, may be rectified on application at the court at the time the list is revised.

THE ANTI-LEAGUE CIRCULAR.

Mindful of its responsibilities, and complacent in its achievements, the Agricultural Protection Society has issued a circular to its members, for the purpose, as certified by "Richmond, President," of "stating our progress in the country, and the proceedings connected with us in the present session of Parliament." The preparation of such address was directed by the general committee on the 9th of July, and it was produced by the "publication committee" in about a month afterwards. The labour of signing it devolved upon Mr. Augustus Stafford O'Brien, and may account for his not being able to attend the call of his constituents to the Northampton meeting, to join the other Conservatives of the county in the minority which supported Mr. Feargus O'Connor and his Chartist resolution. *Non omnia possumus omnes*, even though the cause be that of monopoly, and the means an unprincipled combination.

With that disregard of truth which experience has now taught us confidently to anticipate in the publications of the Protection Society, the circular commences by a claim of admiration for the "remarkable popular movement" in which itself and its affiliated clubs originated. We are told that the tenant-farmers came forward spontaneously "at one and the same moment, through the length and breadth of the land," inviting and receiving both "the aid of the labourer," and "that of the landlord." The accordance of this assertion with fact may be tested by any one's recollection of the numbers who attended the various local meetings, and the class of persons who got them together and conducted their proceedings. The "aid of the landlord" was "received" before it was invited; and stewards, land-agents, and auctioneers were the media of its communication. As to that of the labourers, we know not to what the phrase can possibly refer, unless it be an acknowledgment of the services of the Suffolk peasantry in their practical interpretation of the principle of artificial scarcity, advocated by the society.

The services rendered by the society are enumerated with the emphasis which their importance appears to the actors to require. They are three in number.

First, as to the wool duties. We were not aware that the removal, or permission of the removal, of these duties, was one of the objects of the Agricultural Protection Society. Neither, we dare say, did the members, or the founders, imagine any such thing. The tone of congratulation took us by surprise. It shows that there are ways of satisfying the landlords, which may not be found impractic-

able on other questions; eventually, perhaps, on that of the Corn Law itself. But we must quote the words of the circular; for, like other matters in it, the statement would seem incredible in our own:—

"Suffice it to say, we found some of our ablest and most zealous supporters considered the abolition of the wool duties likely to be beneficial to the agriculturist; while others thought that, at worst, it would not be felt by him: we found great difference of opinion on this subject among our friends in the country, and the general committee therefore decided not to interfere, each country society remaining perfectly free to follow the course that might seem best to it."

And so, concludes this most self-approving committee, "on the first question brought forward by Government, we have shown our moderation." May they have many more opportunities of the same kind. It is a grand thing to form such an association, to show its leaders differing in opinion, doing nothing, and taking credit for moderation.

Feat the second:—

"With respect to the Bank Charter Bill, our only concern with it was in reference to those clauses which we feared might cripple country banks in their means of affording accommodation to the farmer at particular seasons; and the danger of this appeared to the general committee sufficiently imminent to justify their sending round to every country society a resolution on that subject, accompanied by a form of petition for such as chose to adopt it. The result has fully justified this step. Modifications have been obtained in the bill, acknowledged by all to be great improvements, and satisfactory, with some exceptions, to the whole body of country bankers."

On this achievement the committee bestows a higher laudation on itself. "We have shown—our strength." The world was not much amazed at the Herculean exhibition. It had already passed into oblivion, and would have remained there but for the timely rescue of the circular. In dragging forth the mighty deed, for its meed of applause, the committee has superadded an indication of the motive. For whose advantage is it that the farmer should have "accommodation" from his banker, "at particular occasions?" What are those "occasions" other than a gentle periphrasis for rent-day? The farmer borrows, the banker lends, the landlord receives. And how, when the day of payment comes? Promise him a new Corn Law, and let him borrow again; or else, sell him up. Truly the Protection Society has, by its own account, shown something more than its "power." The display of its principle is at least as striking. We hope it is relished by the tenantry. This is the one thing done; and for which, they are told, they came forward as one man. It must have been as the one man who made a rod for his own back. We shall next hear of a general movement of the sheep for sharper shears.

There is yet a third adventure to be chronicled:—

"With regard to matters brought under discussion by individual members of either House, you will remember that a motion was submitted to the House of Commons for an address to the Queen, 'representing that it is desirable to obtain authentic information upon all matters connected with the agriculture of the United Kingdom;' and although the agricultural members and the Government felt bound to resist this proposal in the form in which it was brought forward, yet, far from opposing the principle, we cordially acquiesced in it; and we believe that the more inquiry is made into our requirements, our difficulties, and our burdens, the better; provided always that such information be accurate, and the mode of obtaining it not inquisitorial."

The landlords thought information on agricultural difficulties and burdens desirable, and so they resisted its production. They thought inaccurate statements bad, and so they opposed an address for "authentic information." They agreed in "the principle," and so they voted against the motion. They are for answers without questions, and acutely distinguish between making inquiry and making inquisition; taking care that there shall be neither the one nor the other. They have taken extraordinary means to evince their desire for light by the prompt use of the extinguisher; and they intend to cant on all the same, after having negatived the best mode for testing their assertions. There is something in this boast. We question whether any other associate body is capable of equal frontery.

The remainder of the circular, more than one-half its length, relates not to itself but to us. The committee has kindly undertaken to record what we have been "unable to do." It announces our failures, especially in "meetings;" it complains that Free Trade members of Parliament did not come out on the Poor-Law Amendment Bill; it boasts of numerous converts from our ranks to faith in the blessings of monopoly; it is especially severe on the wish it imputes to the enemies of the Corn Law "to avoid its discussion altogether;" and it asserts that "the Free-Trade minority was smaller than last year," taking advantage of the literal truth of one vote less, and suppressing the fact of the annual diminution by fifty votes at a time of the monopolist majority. And it does not mention Mr. Cayley's tract, with its detected falsifications of Adam Smith, which we take to be really the greatest work of this puissant body.

However, if the members of the Agricultural Protection Society are satisfied, so are we. The

getters-up of the body are exposing themselves thoroughly. They are yet in the ascendant; but it will be a strange phenomenon should they continue so, while they take pains to demonstrate how poor is their capacity and how sordid their purposes. They say of us, "the League has overdone everything; the country has been smothered by its tracts, and deafened by its harangues; not to say fleeced by its importunate promises." This is their amiable way of describing the unanswerableness of our publications, our unprecedented meetings, and the zeal of our subscribers. We leave them to the full enjoyment of the contrast presented in their own experience.

GENUINE AND MOCK PHILANTHROPY.

There can be no character more exalted or more truly noble than that of the genuine philanthropist, the man who honestly exerts himself to do good in his generation, and is sincerely anxious to leave the world better than he found it. "The beloved disciple" has made philanthropy the test of religion, for he asks, "If a man love not his brother, whom he hath seen, how can he love God, whom he hath not seen?" It was to his philanthropic acts that our Saviour himself appealed to prove the truth of his mission, when he was questioned on the subject by the disciples of John the Baptist,—"Go, and tell John what you both hear and see: the blind receive their sight, the lame walk, and the lepers are cleansed." And the herald angels who proclaimed the advent of the Messiah declared philanthropy to be the very essence of Christianity, by coupling "Glory to God in the Highest" with "peace on earth, good will towards men." This declaration may also be regarded as the definition of true philanthropy: it consists in the promotion of peace and good will. On the other hand, the very essence of class legislation is, to set one part of society against the other, and create malevolent feeling between the favoured and the injured. Every ascendancy is an injustice, and every monopoly is a legalised robbery. The man who professes to be a philanthropist, while he advocates class legislation, and maintains monopoly, must either be too incorrigibly stupid to comprehend the nature of the most simple facts, or a downright hypocrite.

The Corn Laws are notoriously an injustice; various excuses have been devised to palliate the wrong, but no man ever ventured to deny that they are in themselves a gross violation of equity, being a tax levied on all consumers of food for the benefit of a few producers of food. As bread is most abundantly consumed by the poor and the working classes, it is obvious that the pressure of the tax falls upon them with its most grievous severity. Poverty is abridged of its miserable morsel to pamper the luxuries of a Richmond or a Buckingham; the lords of Stowe and Goodwood levy blackmail on the earnings of the labourer and the alms of the beggar. Thus the monopolists of corn aggravate the miseries of poverty, and add to the toils of labour; misery, oppression, famine itself, are deemed of too little consequence to be set against their paltry gains, for paltry they are, after all, the landlords being far from obtaining all that the nation loses. It is the bread-taxer who keeps factories open for a longer period than is consistent with the health of the young operative; it is the bread-taxer who compels the wretched sempstresses of London to toil day and night for a miserable pittance inadequate to the support of nature; it is the bread-taxer who has reduced the agricultural labourers of England to a far worse fare than the paupers of the workhouse, or the felons of the prison. And yet there are bread-taxers who lay claim to humanity! Nay, they set themselves up as apostles of philanthropy, and at their periodical meetings in Exeter Hall affect to be exceedingly generous at the expense of other people. With the unhallowed gains extorted from the misery and sufferings of the poor in their pockets, they ascend the platform and give vent to long orations of sentimental sympathy, fit to melt the hearts of a whole generation of boarding-schools. It is scarcely possible to understand how the amazing grossness of such inconsistency can escape their cognizance; and yet it is still more difficult to understand the powers of face which would be requisite to support the presence of an audience if they possessed such a consciousness.

It is painful to find a nobleman like Lord Ashley, who aims at obtaining a reputation for exalted benevolence, giving his support to as inhuman a system as ever disgraced any land; for what can be more inhuman than to lay a tax upon the food of the poor to enhance the wealth of the rich? The adhesion of his lordship to the iniquitous Corn Laws throws suspicion on all his efforts in favour of humanity. The words of charity from the mouth of a bread-taxer are like the merciful speeches in which the tyrants of antiquity were so profuse. Tiberius always prefaced his most sanguinary deeds with an oration in favour of benevolence; and if Dionysius of Sicily had been estimated by his words instead of

1. *Mr. Malthus, in his "Principles of Political Economy" (ch. iv., p. 261), concludes "that the great fall in the real wages of labour which took place in the 16th century, must have been occasioned mainly by the great and unusual elevation which they had previously attained, and not by the discovery of the American mines and the consequent fall in the value of money."* In arriving at which conclusion he makes two assumptions: 1. That wages, though high during the last half of the 16th century, were not so previously. 2. That the labour-market was left free and undisturbed. In philosophizing, the difficulty is not to draw correct conclusions from correct premises, but to obtain correct premises.

done them, would be by no means so "short and simple" as poets and romancers have led their readers to imagine. By the third chapter of this statute, the former statutes respecting artificers, labourers, servants, and victuallers were confirmed; and it was ordained that the said labourers be "duly justified (*duement justicez*) by the justices of the peace, as well at the suit of the King as of the party," and "that a pair of stocks be in every town to justify (*justifier*) the same servants and labourers;" that is, if they sought to obtain the fair market price for their labour, instead of working at the price arbitrarily offered by the purchasers of labour, they were to be set in the stocks, a mode of "justifying" them with a witness. It was further ordained by the same statute, that "no servant, nor labourer, be he man or woman, shall depart at the end of his term out of the hundred, rape, or wapentake where he is dwelling to serve or dwell elsewhere, or by colour to go from thence in pilgrimage, unless he bring a letter patent containing the cause of his going, and the time of his return, if he ought to return, under the King's seal."

Chapter 4 of the same statute contains a similar complaint to that made, as above stated, about fifty years before, that servants and labourers would not serve and labour without "outrageous and excessive hire, and much more than had been given to such servants and labourers in any time past." But this time a pestilence is not assigned as the "*dignus vindice nodus*," as the cause for the interference of the Legislature with the labour market. But this time the landholding legislators candidly confess that the cause for their stepping in is, that on account of the market price of labour, their tenant-farmers cannot pay their rents;* in other words, that their rents are above the market price; but that, in order to keep them above it, they are determined to force the wages of the labourers below it. That they succeeded ultimately in their object, subsequent events sufficiently made manifest.†

Mr. Ricardo, indeed, has said,‡ "If, as the wages of labour fall, the profits of stock rise, and they be together always of the same value, no fall of wages can raise rent, for it will neither diminish the portion nor the value of the portion of the produce which will be allotted to the farmer and labourer together, and therefore will not leave a larger portion nor a larger value for the landlord." Mr. Ricardo then goes on at some length to expand this proposition, but the expansion merely amounts to repeating it in somewhat different words; it adds nothing towards the demonstration of its truth, which rests solely on the hypothesis that "the wages of labour and the profits of stock are together always of the same value;" that their sum is an invariable or constant quantity; an hypothesis which, like many others that have been put forth as theories, or even as established and incontrovertible truths, by political economists, has far more affinity to that class of false hypotheses respecting the form of the planetary orbits (as that the heavenly bodies moved in circles, &c.) than to the hypothesis of Newton respecting the earth's orbit, which he verified by the most minute and exact application of the test of experiment and fact.

There is evidence to show that in England, in the thirteenth century, the rent did not amount to much more than one-thirteenth of the gross produce.§ In the

early part of the sixteenth century, according to the evidence of Tusser, an experienced practical farmer, rent was one-tenth of the gross produce; he divides the produce into ten equal parts, of which he sets aside the first for rent, the second for seed, the third for tithes, &c.* According to the returns made to the Board of Agriculture, the average proportion towards the end of the eighteenth century was about one-fifth. It appears from a minute analysis of the distribution of the produce to be at the present time about one-third: it is somewhat under that in England, and somewhat above it in Scotland;† but one-third may be taken as a near approximation.

The case, then, stands thus:—The proportions at one time in England allotted to the farmer and labourer on the one side, and the landlord on the other, were 12-13ths to the farmer and labourer, and 1-13th to the landlord; or say 11-12ths to the farmer and labourer, and 1-12th to the landlord. They are now 8-12ths to the farmer and labourer, and 4-12ths to the landlord. At the former time the labourer could earn two pecks of wheat by a day's labour; he cannot now earn one peck of wheat in the same time. What has become of the other peck? Has it gone to profits or to rents? Surely it has not gone to profits; but it must have gone either to profits or to rents. It could not become a vanishing quantity, being, (if even it did not represent an arithmetical relation, a ratio or proportion only) still produced more than twofold from the land which then produced it. The proportion of the landlord is four times larger than it was then; the proportions of the farmer and labourer are proportionally smaller; say formerly,

Landlord	1-12th
Farmer	7-12ths
Labourer	4-12ths
Now,			
Landlord	4-12ths
Farmer	6-12ths
Labourer	2-12ths

"But no," says Mr. Ricardo; "the loss to the labourer must have gone to the farmer, not to the landlord." According, then, to Mr. Ricardo's theory, the account must stand thus:—

Landlord	1-12th
Farmer	9-12ths
Labourer	2-12ths
If Mr. Ricardo's theory be true, then, we must have			
Landlord	1-12th
Farmer	9-12ths
Labourer	2-12ths

observed facts incorrectly, and, instead of rents rising and profits falling for these last 200 years in England, the reverse must have taken place—rents must have been falling and profits rising.

We have stated above that, in 1387 (at least, in Suffolk), the price of wheat was 4s. a quarter; but in 1390, according to the Windsor tables, the price of the quarter of wheat was 14s. 5d.; a rise which must, no doubt, have been caused by a particularly bad season. This great sudden rise in the price of bread was followed by a very important enactment, that, namely, which first empowered the justices of the peace to interfere with wages. The eighth chapter of the statute 13th Richard II., stat. 1, contains the following clause, which we copy *verbatim* from the Record Commissioners' Edition of the Statutes:—"Forasmuch as a man cannot put the price of

* Thomas Tusser, who had been educated at Eton and Trinity-hall, Cambridge, lived many years as a farmer in Suffolk and Norfolk. He afterwards removed to London; where he published the first edition of his work, under the title of "One Hundred Points of Good Husbandry," in 1557.—Note in "Cullum's History of Hawsted," p. 238.

† The following is the account of the distribution of the gross produce of two farms, the first in Kent, the second in Scotland.

A farm in Kent: gross produce, £920.			
Consumed in seed, and by horses	..	£141	5 4
Farm-servants (produce and wages)	..	169	0 0
Blacksmith, carpenter, &c.	..	25	0 0
Interest of capital, wear and tear of horses and implements	..	70	6 0
Repairing houses, fences, county and parochial taxes	..	29	10 0
Tithe	..	48	0 0
Rent	..	284	10 0
Tenant-farmer for services, in produce and money	..	152	8 8
£920 0 0			

A farm in Scotland: gross produce £1632 7s. 6d.			
Consumed in seed, and by horses	..	£392	8 5
Ditto, produce and money-wages for servants	..	298	9 3
Blacksmith, farrier, and carpenter	..	29	12 4
Manure	..	57	10 0
Miscellaneous expenses	..	37	18 6
Wear and tear of horses and implements, and interest of capital	..	117	11 8
Repairs of buildings, fences, and local taxes	..	24	14 6
Rent	..	542	0 0
Tenant-farmer for services, in rent of dwelling-house, produce, and money together	..	132	2 8
£1632 7 6			

In the above case the rent is not quite one-third of the gross produce; but in the following case, given in evidence before the committee on agricultural distress, April 22, 1836, the rent is rather more than a third of the gross produce. Mr. Howden gave a statement to show the quantity and value of the produce of his farms of Lawhead and Traprain, in the parishes of Whitekirk and Prestonkirk, Haddingtonshire, and likewise the expense of cultivation, the amount of rent, and the residue that remained to himself for the three years 1832, 1833, and 1834, of which the following is the average for one year:—

Total value of produce, £3202 15s. 4d.	
Expenses of cultivation	1830 8 7
Rent	1124 7 1
To tenant (exclusive of £50, the interest of capital in horses and implements charged in expenses), for interest of capital, superintendence, &c.	247 10 8
£3202 15 4	

corn and other victuals in certain parts is accorded and assented that the justices of peace in every county, in their sessions to be holden betwixt the feast of Easter and St. Michael, shall make proclamation by their discretion, according to the dearth of victuals, how much every mason, carpenter, tiler, and other craftsmen, workmen, and other labourers by the day, as well in harvest as in other times of the year, after their degree, shall take by the day with meat and drink, or without meat and drink, between the two [sessions] before said, notwithstanding the statutes thereof heretofore made, and that every man obey to such proclamations from time to time as a thing done by statute."

A few years afterwards the Commons petitioned the King, though without success, that the old law which protected villeins after residence in towns of a year and a day, should be repealed; and that villeins should not be allowed to put their children to school, in order to advance them by the church.

The above statutes were re-enacted, with some amendments, in 1427 and 1429 (by the 6 Hen. VI., c. 3, and the 8 Hen. VI., c. 8). By the statute 23 Hen. VI., c. 12 (1444), the wages of all the common descriptions of labourers were expressly fixed; and on comparing this act with the 12 Rich. II., c. 4 (1388), we find a somewhat higher scale of wages for agricultural labourers fixed in the last made statute, in which the wages by the day were—

A mower, with meat and drink	4d.
Do., without	6d.
A reaper, carter, with meat and drink	3d.
Do., without	6d.
A woman, and other labourer, with meat and drink	2½d.
Do., do., without do.	4d.

But, taking into consideration the degradation of the coin and other circumstances, it is difficult to say that this rise of wages denoted a corresponding improvement in the condition of the agricultural labourer during that interval.

In 1495* the statute 11 Hen. VII., c. 22, was passed for regulating, that is, keeping down wages at very nearly the same point at which they had been fixed by the act of 1444. By this statute an agricultural labourer was allowed for daily wages from Easter till Michaelmas (except in harvest) with diet, 2d., without diet, 4d.

In harvest, a mower, with diet	4d.
Do., do., without do.	6d.
Do., a reaper, with diet	3d.
Do., do., without do.	6d.
Do., a carter, with diet	3d.
Do., do., without do.	6d.
Do., a woman and other labourers, with diet	2½d.
Do., do., without do.	4d.

Taking the average price of wheat at that period at 6s. 8d. (the price at which exportation was allowed by the statute 15 Hen. VI., c. 2), we find that the reaper was not quite so well off as in 1387, when he had 4d. a day, wheat being 4s. a quarter. But still a labourer with 4d. a day when wheat was 6s. 8d. a quarter, could earn a quarter of wheat by twenty days' labour; and a reaper with 5d. a day, could earn a quarter of wheat by sixteen days' labour, or he could earn two pecks a day.†

Upon this statute Sir Frederic Eden makes the following important observation:—"From comparing the wages appointed by this statute to be given to servants in husbandry with those before recited under the year 1444, it will appear that, notwithstanding the increase of the price of the necessities of life and the increase of the demand for labour, which seems to have taken place between that year and 1496‡ (11 Hen. VII.), very little alteration had taken place in the price of labour."§

A similar act was passed in 1514 (16 Hen. VIII., c. 3), in which the wages of the agricultural labourer are precisely the same as in the statute of 1495, that is, a common labourer, except in harvest, with diet 2d, without diet 4d.

In harvest, a mower, with diet	4d.
Do., do., without do.	6d.
Do., a reaper, with diet	3d.
Do., do., without do.	6d.
Do., a carter, with diet	3d.
Do., do., without do.	6d.

We see, then, that the Legislature had interfered to keep the price of agricultural labour for about a century at exactly the same level, while the price of provisions and of other commodities had been rising all that time, and was now beginning to rise at a much more rapid rate than ever. There is abundant evidence to show, that in the course of the sixteenth century an extraordinary rise took place in the money prices, not only of food, but of all other commodities. This circumstance, being unattended with a rise of wages, which, as we have seen, were forcibly kept down by act of Parliament to their former level, necessarily produced much distress among the labouring population, and gave further employment to the makers of laws, in order to prevent that distress from being dangerous to them. It appears that a considerable portion of the labouring population preferred begging to working for wages, which were rendered by law inadequate to supply them with the necessities of life. But their legislators were resolved that they should work for what terms they chose; and accordingly they enacted|| that the head off-

* Record Commissioners' Edition of the Statutes. The common editions make it 1494. Sir F. Eden calls it 1496. † In his lectures on wages (lecture 1, p. 3), Mr. B. nior, taking the average (qy., harvest?) wages of the labourer at 4½d. says that the labourer in the reign of Henry VII. earned two pecks of wheat a day. This shows that the statement in the text is rather below than above the real state of the case, and therefore not liable to the charge of exaggeration. ‡ 1496. Record Commissioners' edition of the Statutes. § State of the Poor, i., 74. || 23 Henry VIII., c. 12 (1531), and 27 Henry, c. 25 (1536).

* The words of the statute in the original Norman French are, "*sig pr. chierle des ditz laborers & s'vantz les husbandes & trelantanz ne poent paier leur rentes*." The word "*chierle*" means "dearness"—("Kelham's Norman Dictionary")—the same as the modern word "*cherle*." In the translation (Rec. Comm. edit.) the word "*chierle*" is rendered "scarcity." And though it be true that from the English word "*dear*" comes "*dearth*" or scarcity, as well as "*dearness*" or high price, and also that "*cherle des viures*" is sometimes translated "*dearth, scarcity, want of provisions*," in short, that "*scarcity*" and "*high price*" may almost be considered convertible terms; yet we object to the word "*scarcity*" here as a misleading term, tending to produce confusion of ideas, by applying the exploded hobgoblin fallacy against forestalling and engrossing to the poor labourers seeking to obtain the market price for their labour.

† By chapter 5 of the same statute it is ordained that all persons who had been employed in any labour or service of husbandry till the age of twelve, should from thenceforth abide at the same labour, and be incapable of being put to any mystery or handicraft; and by chap. 6, that no servant in husbandry, or labourer, shall wear any sword, buckler, or dagger.

‡ "Principles of Political Economy and Taxation," p. 558, 1st ed.; p. 516, 2nd ed.

§ This statement may appear so startling that I shall make a somewhat long extract from Sir John Cullum's most valuable "*History of Hawsted*," compiled with great care from very minute accounts, to show the grounds of it. "In the year 1281, the prices of various kinds of grain, the produce of this village, were as follows: of wheat, about the conversion of St. Paul (January 25), from 4s. 3d. to 4s. 5d. a quarter; in Lent, 4s. 6d., afterwards, 4s. 8d.; of alligo, from 2s. 8d. to 2s. 10d.; of barley, 3s. 6d.; of new pease, from 2s. 9d. to 2s. 11d.; of old pease, 2s. 4d.; of draget, 2s. 8d.; of oats, from 2s. 2d. to 2s. 4d. This was a year of moderate plenty, and therefore may be considered as the standard of the prices of grain about this period. Supposing then 4s. 6d. to be about the mean price of a quarter of wheat, and 4d. a year's rent of an acre of land [he had said in the preceding page 'they paid from almost 7d. to less than a farthing an acre a year. Some of those who paid the very low rents probably performed some service in husbandry for their landlord in lieu of money; and some of the small sums were, perhaps, of the nature of quit-rents. However, we may not probably be far from the truth, if we lay their lands in general at 4d. an acre'], the disproportion between the produce of the land and its rent is almost incredible; for, if (as I suspect) an acre produced, in general, only 1½ quarter, (a) it would, if the ground was cropped only two years together, give the husbandman thirteen times the rent of his land (one year with another), a profit, which the best farmers, in the present state of improved agriculture, can rarely, I believe, reach."—"History of Hawsted," pp. 212, 213.

(a) "The learned author of 'Fleta,' who wrote about this period, and who, in his treatise of law, has not disdained inserting several particulars relative to rural economy, informs us, that if an acre of wheat yield only three times the seed sown, the farmer will be a loser, unless corn should sell dear. His calculation is this: three ploughings, 1s. 6d.; harrowing, 1d.; two bushels of seed, 1s.; weeding, 4d.; reaping, 5d.; carrying, 1d.; in all, 3s. 1½d.: which is 1½d. more than the value of six bushels." L. ii., c. 82.

of every city, shire, town, and parish, to which sturdy vagabonds should repair, should compel the said sturdy vagabonds and valiant beggars to be kept to continual labour in such wise as they may get their own living by the continual labour of their own hands. And they further directed that a sturdy beggar should be whipped the first time, his right ear cropped the second time, and if he again offend, be sent to the next gaol till the quarter sessions, and there be indicted for wandering, loitering, and idleness; and if convicted, suffer execution of death as a felon and an enemy of the commonwealth.

It has, indeed, been sometimes supposed that it was the dissolution of the religious houses (by the statutes 27 Henry VIII., c. 28; and 31 Henry VIII., c. 13) that led to all this vagrancy and mendicancy, and to the compulsory provision for the poor which followed; and the ground assigned for this supposition is, that a great distribution of alms was daily made by those houses. But, as Mr. Reeves has observed in his elaborate and valuable "History of the English Law,"* one of the principal enactments of Henry VIII. on the subject both of the aged and impotent poor, and of vagabonds and beggars, "being whole and mighty in body," viz., the statute 22 Henry VIII., c. 12 (1530), was passed before that event, and was in many respects a continuance, though with increased severity and more specific provisions, of the policy of the statute 12 Richard II., c. 3. Sir Frederic Eden has also expressed an opinion to the same effect:—"I very much doubt," says he, "whether the monasteries, generally and greatly, troubled themselves with relieving poor that did not immediately belong to their own demesnes. The same sort of charity was usually practised by the great nobility on their estates. The truth is, that the abbots were more burthened with the rich than the poor. Sheriffs and other great men often travelled from abbey to abbey and from house to house with great retinues, and not unfrequently, at their departure, extorted considerable presents from the abbot."† And here it is not unimportant to remark the length of the interval, viz., from 1388 to 1530, during which there does not appear to have been any legislation respecting the maintenance of vagrants and beggars.‡ During that period of 142 years the wages of labour were not altogether inadequate to the maintenance of the labourer. But a glance at Sir Frederic Eden's table of prices will show that, even in the early part of the sixteenth century, a very considerable rise had begun to take place in the price of provisions, though not so great as that which took place towards the close of that century; this will appear by the following extracts from that table:—

Table showing the Rise in the Price of Provisions, &c., during the Sixteenth Century.

Yr.	Price of Provisions.	Price of other Commodities.	Price of Labour.
1494	Wheat 0 4 0		
1495	Do. 0 3 4		
1496	Do. 0 4 4	1475. Wool	4d. the day, by
1497	Do. 1 0 0	the stone 0 4 0	stat. 11 H. VII.,
	Oats 0 2 0		c. 22 (1495)
1498	Wheat 0 4 0		
1499	Do. 0 6 0

	An inferior		"A reaper in har-
	do. shorn 0 2 4		vest, 5d. a day.

But, if the rise of prices was considerable in the early part of the sixteenth century, in the latter half of it, and particularly towards its close, the rise was unprecedented. Thus the contemporary author quoted by Sir Frederic Eden, § Mr. Hume, || and other writers, says that in 1581 it required £200 a year to keep as good a house as might have been kept sixteen years before for 200 marks, or £133 6s. 8d. He says, "I have seen a cap for 13d. as good as I can get now for 2s. 6d. Now a pair of shoes costs 12d., yet in my time I have bought a better for 5d." And he adds a little after, "Cannot your neighbour remember that, within these thirty years, I could buy the best pig or goose that I could lay my hand on for 4d., which now costeth 12d.; a good capon for 3d. or 4d., a chicken for 1d., a hen for 2d., which now costeth me double and triple the money. It is likewise in greater ware, as beef and mutton." A corresponding rise had taken place in the price of wheat. During the twelve

years from 1551 to 1562 (both inclusive), with the exception of 1557, when the average was 17s. 8d., the price of the quarter of wheat was 8s. But in 1574 it was £2; and in 1587 it was £3. 4s., a rise which cannot be attributed entirely to the seasons. Bishop Latimer, in his sermons, ascribes it to landlords raising their rents, and his words seem to preclude the supposition of extraordinarily bad seasons. His words are, "to much oommeth this monstrous and portentuous dearth made by man, notwithstanding God doth send us plentifully the fruites of the earth mercifully, contrary to our desertes, notwithstanding to much, which these rich men have, causeth such dearth, that poore men (which live of their labour) cannot with the sweate of their face have a lyving, all kinde of victuals is so deare, pigges, geese, capons, chickens, egges, &c.; these things, with other, are so unreasonable enhaunsed."*

In the often quoted passage, in which Bishop Latimer describes his father's mode of living about the beginning of the sixteenth century, he says:—"My father was a yeoman, and had no lands of his own; only he had a farm of £3 or £4 by the year, at the uttermost; and hereupon he tilled so much as kept half a dozen men;" and after describing all that he did "of the said farm," in the way of provision for his children, hospitality to his neighbours, and alms to the poor, he adds:—"Where (whereas) he that now hath it, payeth £16 by the year or more, and is not able to do anything for his prince, for himself, nor for his children, or give a cup of drink to the poor."† And in another sermon, preached before Edward VI., in 1549, he says:—"That heretofore went for 20 or 40 pound by year (which is an honest portion to be had gratis in one lordship of another man's sweat and labour), now is it let for L. or C. pound by year."§ And Harrison, while he complains of the wretchedness of the working people, bears testimony to the same effect:—"In my time," he says, "peradventure 4 pounds of old rent be improved to 40, 50, or even 100 pounds."|| And notwithstanding this great increase of rent, Harrison describes the condition of farmers as much improved, which is at variance with the account of Latimer.

The true state of the case seems to be this. The great change in the value of money, caused partly by the degradation of the coin, and partly by the fall in the real value of the precious metals, in consequence of the discovery of the American mines, was followed by a corresponding rise of the prices of all other commodities, except that which was the source of the value of all those commodities—labour. The wages of labour, instead of being allowed to rise to their natural level like other things, were violently kept down almost to their former level, that is to the level at which they were when other things were about half or a third of the price to which they had now risen. In Sir F. Eden's table of prices we find the following prices of labour:—1589, ditcher, the day, 4d.; a man cutting furze, one day, 4d. 1590, hedger, the day, 4d.; mason's man, ditto, 4d.; labourer in garden, ditto, 3d.; in which year we find coals the chaldron rose from 4s. to 9s.; a sheep, 6s. 4d.; a wether, 6s. 8d.; and in 1589, a fat cow, £3; a milch cow, £1 13s. 4d.; a swine, 8s.; a wether, 6s. 8d. It appears from the rate of wages made by the justices of the East Riding of Yorkshire in 1593, that the wages of an agricultural labourer were limited to 5d. a day, without meat and drink, from the 1st of March to the Feast of All Saints; and even for harvest wages, though a mower of grass or corn was to have, without meat and drink, 10d., a shearer or binder of corn (i. e., a reaper,) was not to have, without meat and drink, more than 5d. So that, while everything else had been rising in price at such an unprecedented rate, the price of labour had been kept stationary for nearly two centuries. The author of the article on the Corn Laws and Corn Trade in the "Encyclopædia Britannica" supposes that at that time the prices of corn nearly corresponded with the rates at which exportation was allowed by the statute 35 Eliz., c. 7, that is, wheat probably averaged 20s. a quarter, rye 13s. 4d., and barley 12s. Sir Frederic Eden's tables of prices give—

		£ s. d.
1590	Wheat	1 1 0
1591	ditto	0 18 0
1592	ditto	0 18 0
1593	ditto	0 12 0
1594	ditto	2 8 0
1595	ditto	2 4 0

It appears from this, that 1593 was an unusually cheap year. But even taking the price of 12s., which is so much below the average, an agricultural labourer even in harvest could not in that year earn a quarter of wheat by less than 28 4-5th days' labour; or, taking the price of 20s., by less than 48 days' labour. Whereas, we have seen that in 1494 he could earn a quarter of wheat by 16 days' labour; and in 1387 he could earn a quarter of wheat by 12 days' labour. His condition, consequently, was worse in 1593 than in 1387 in the proportion of 12 to 48, or of 1 to 4.

(To be continued.)

* Sermons, 31; cited Eden i., 99.

† This shows that the term "yeoman" was popularly applied, without the condition stated by Sir Thomas Smith to be requisite to make a yeoman, viz.: being able to spend of his own free land, in yearly revenue to the sum of forty shillings.—Commonwealth of England, book i., ch. 23.

REPUBLICANISM AND FREE TRADE.

(From the Economist.)

The Free-Trade party in England are often blamed by persons professing to be their friends, and who no doubt are so, for not being something else than what they are. It is said that they have no chance of carrying the point on which their hearts are set, except by a complete democratisation of the British constitution; so that, independently of the right of the matter, which is very much insisted on, it is represented as a matter of policy, and indeed of necessity, that an extension of the suffrage to all male inhabitants twenty-one years of age should be carried, before any reasonable hope can be entertained of trade being made free. We have said that we believe those parties to be friends of Free Trade. Many of them undoubtedly are so; and we do not choose to take notice of such men as F. O'Connor, who, we fear, are not very earnest or very honest in any of their opinions. If they are the friends of our opinions, then do not let them suppose that we are inimical to theirs. Some of us, they cannot but know, are quite the contrary. But we have never ceased to protest, and never shall, against the unfairness of perpetually thrusting another, not an antagonistic, movement in our way. Taking it for granted, for the present, that the doctrines of Free Trade are, as they have been authoritatively called, the doctrines of common sense, is there so absolute a guarantee that, under a different form or manner of government from our present, they would be reduced to practice, that we must needs forthwith give ourselves up to agitate for that change in the first place, hoping for the good which we desire thereafter? This is what we have never been able to see. Neither experience nor observation gives such warrant. Assuredly the case of the United States of America, which ought to be some guide in the circumstances, is not encouraging.

The United States are a young country, in which it might be supposed there would be no such accumulation of "vested interests" as there are in older countries. As to there being "special burdens" on any class of their community, where all classes are equally represented, the idea is absurd. Whatever would be for the good of all, it might be thought, would be the peremptory law of such a country, if of any. There, if anywhere, the idea of supporting one class of the community by a tax upon the rest ought to be scouted. But is it so? It is not. The protection given in this country to owners of the soil by a tax on the importation of food from abroad, which gives them an undue political importance, and, along with other enactments, saves them from bearing their legitimate share of the expenses of the State, besides needlessly distressing the poor—that protection is in substance given to the manufacturers of America, who have found means to cause the Legislature of their country to exclude, except on payment of large duties, all the great articles of clothing, machinery, and manufactures of every sort, which they themselves are employed in making. As the consequence of these Corn Laws of ours is to prevent the American landowner from obtaining in this country a better price for some of his provisions than he obtains at home, and to prevent us from obtaining the means of living more easily than we do at present, so the consequence of the present United States tariff is to prevent the people of that country from having cotton and woollen goods, paper, cutlery, types, machines, &c. &c., as cheap as they might, and to prevent the manufacturers of all those articles in this country from obtaining so many additional, and, we should hope, profitable customers. We say nothing, for the present, of the wretched policy which each country pursues towards the other, in excluding what each respectively could send to the other, and refusing to take what the other could spare, forgetting that, while they may hurt each other by doing so, they hurt themselves infinitely more; but, we ask, for whom is this voluntary sacrifice made by these nations? Why, a handful of their own communities, whom we maintain, it would be infinitely better policy to bribe into acquiescence with just views, by twenty times the proved amount of their temporary loss, by the adoption of a natural and abiding system of legislation.

Now, if we were asked at this moment to say whether the prospects of Free Trade were brighter in monarchical England or in democratic America, we should hesitate how to answer. The impending question of the Presidency in the latter country will be settled with not an inconsiderable view of the two candidates' opinions on the subject, and it is already reckoned next to certain that he who is less friendly to Free Trade than the other will be chosen. We say nothing of Mr. Clay's real claims to the support and gratitude of his countrymen. We believe them to be great and many. But on this point, if he is not himself deceived (which we can hardly think possible), he finds it necessary, in order to ensure his success, to succumb to interested clamour and groundless fear, which is not very encouraging to us in this country who look to republican government for an ultimate salvation from commercial ruin. It will be in the recollection of many of our readers, no doubt, that some months ago we made favourable mention of the Republic, New York paper, then recently established, avowedly for the purpose of spreading Free-Trade doctrines throughout the Union. For the sake of the principles which it advocated, we felt an interest in the paper. We quoted from it, and so far recommended it to the notice of our English readers. Well, the Republic, foreseeing seemingly which side was to win, in the meantime, in the race for the Presidency, and naturally not liking to be on the losing side, has *rattled*. Its "flag henceforth bears inscribed upon its folds the name of Clay"—not a matter of great importance, perhaps, on the other side of the Atlantic, and certainly of none whatever on this. But we shall extract part of the leader in the Republic which first announced its downfall—a downfall from principle to the service and slavery of party—to show how very like the cant of our protectionists is the cant of American patriots of the same sort. The writer is comparing the merits of the two candidates for the Presidency, in respect of their economical views, and thus holds forth:—

"On the subject of the tariff, we can ask for nothing more explicit and satisfactory than the repeated declarations of Mr. Clay. With him we believe that there is a safe middle course between a high protective tariff and absolute Free Trade. With him we believe that the principle of a tariff for revenue, with discriminations for protection, affords the only true basis for an equitable adjustment of the question. With him we believe that the existing tariff has operated most beneficially—that it has

* "History of English Law," vol. iv., p. 225.

† "State of the Poor," vol. i., p. 95.

‡ Reeves's "History of English Law," vol. iii., p. 171; vol. iv., p. 238.

§ "State of the Poor," vol. i., p. 119.

|| "History of England," Appendix iii.

Failed the prostrate credit of the country, restored prosperity, and infused new life and vigour through every branch of domestic labour. With him we also believe that should this tariff be found to depart in any one item from the principle laid down, it should be modified until its conformity can no longer be questioned.

"On the other hand, what are the views of Mr. Polk? If we may infer anything from the complexion of his past speeches and votes in Congress, he aims at the utter subversion of the whole protective policy. Carry out his avowed designs, and every workshop in the country would bear evidence of the desolation and blight which would have come over all our industrial pursuits. 'My own opinion is that wool should be duty free,' says Mr. Polk. ('Congressional Debates,' vol. ix., p. 1194.) Hear that, farmers and cattle-dealers! 'Distribution and a protective tariff—measures which I consider ruinous to the interests of the country, and especially of the planting states—I have steadily and at all times opposed,' says Mr. Polk. (Speech before the people of Madison, Co. Ten., April 3, 1843.) Hear that, mechanics and manufacturers, artisans and day-labourers! Will you be subjected to the competition of the half-starved, over-worked labourer of England? The candidate of the *Locofocos* does not propose taking from you your life; he would merely take the means by which you live."

"The competition of the half-starved, over-worked labourer of England." Blot out that word *England*, and insert Poland or Russia, and the words are in stereotyped use by our Harewoods in Yorkshire, our Richmonds in Sussex, and other great "provision dealers" among us in every county, in order to frighten that same class, so piteously depicted by the American, from competing with others in their turn. And sure enough the cry does its work but too well abroad and at home. Mankind—sent into different lands and climates, with different capacities, by the kind providence of God, with the express view of their supplying each other's wants—are misled everywhere by ignorant and interested clamour, and are taught to look upon one another as mutually inimical, instead of ministers to each other's wants, which they are, or were at least, designed to be.

From all this we conclude that Free Trade is not necessarily attached to republican government, but to enlightened government. Then, again, we apprehend every country has as enlightened a government as it deserves, or is fit for, at the time; if it deserved any better it would not be long in having it. So, without disparaging any movement set on foot to extend the power of the governed—for that movement will succeed precisely to the extent that it deserves to do so, and to that extent we wish it success very heartily—we shall continue, turning neither to the right nor to the left, to aid in that movement, and in that only, which will give to the industry, not of Englishmen only, not of Americans only, but of men throughout the wide world, the chance of suiting itself where it can—which will allow the hungry to be fed, and the naked clothed, where best they may—which will allow the industrious everywhere to work, and to be paid for their work, and punish the idle and ignorant, as they deserve to be punished—which, in fine, as it proceeds onwards to its accomplishment, will be the true leveller of all artificial distinctions between man and man, and suffer only to remain those which God and Nature have ordained.

COMMERCIAL PROSPERITY. (From the *Morning Chronicle*.)

Commercial prosperity is always an attractive theme to masses of our countrymen; and it is matter for no little congratulation that we can now speak upon this topic with a confidence somewhat more assured than it was possible to feel about the same period last year. At that time, public anxiety was painfully manifested in an anxious desire to ascertain what were really our prospects; and some remarks which we then made, indicative of confidence in the return of a better state of things, were regarded rather as partisan admissions of an inevitable fact than as cheerful acknowledgments of a truth, deeply interesting to every one, whatever might be the colour or the shade of his political opinions.

A year has now gone by; another autumn has come, characterised by all those seasonal vicissitudes which are watched with such feverish anxiety both in Capel-court and Mark-lane; but in weighing the prospects of commerce against those of the season, we can easily see that certainty and confidence combined have "kicked the beam." Every thing, so far as business is concerned, has a cheerful aspect. Good harvests have done the work which was predicted of them. Steady, moderate prices have disengaged capital; that capital has given employment to labour, and labour being employed has again employed capital. The increasing demand thus goes on, like a spreading circle in the water; increased consumption augments the revenue; that, again, augments confidence; a spirit of enterprise takes the place of jealous suspicion or supine indifference; and so on we go, sailing on a full tide of prosperity, until some sudden check brings us to a stand-still, and reminds us that, in such a country as this, commercial legislation has made commercial prosperity as fickle and uncertain a thing as our uncertain climate.

The latter is proverbially uncertain; and the two last years have afforded striking verifications of it. The spring of 1843 was remarkable for a long continuance of wet weather; that of 1844 for a still longer period of dry. And, during several years past, we have been kept through the months of July and August in painful suspense as to the probabilities of a fine season for gathering in the crops. In 1842 and 1843 the sudden coming in of fine weather, lasting the whole, or at least the greater portion, of the autumn, was more like a *coup de théâtre* than the ordinary operations of the seasons, even under our changeable sky; and though we cannot speak so confidently as to the results of the present fall of the year, appearances are pretty much in favour of our obtaining weather fine enough to enable the crops on the ground to be gathered in tolerable condition.

But is not this a most humiliating and painful condition for a great commercial nation to be placed in? We are made dependent on a week, more or less, of wet or dry weather for consequences affecting the happiness of the country itself! However surely we may be recovering from the state of misery into which several years of bad harvests and commercial disasters had plunged us, our progress has been exceedingly slow, and the slightest accident would check it. Two weeks

more of wet weather would have ruined us last year; and the shock to our commerce, just rising from its state of long-continued depression, might have proved fatal to greater and even more important matters. This year we have so far recovered that even a whole autumnal season of wet weather would have been less fatal, though undoubtedly very disastrous in its effects. Yet we have no occasion to congratulate ourselves upon entire escape. Fickle as is our climate, the meteorologists have deduced certain rules from experience; and one of these is, that a very dry spring usually precedes a wet autumn. Without exactly relying on such empirical conclusions as these, we are not without apprehension as to the certainty of fine weather to secure the entire crop on the ground, nor are we altogether confident that, though it may be what is called a fair average, it will exceed it when all circumstances are taken into consideration.

Yet, on fluctuating circumstances like these, our vast, our varied, our enormous commerce is dependent—dependent, be it remembered, not on the variable character of our seasons, or on the greater or less quantity of rain which in spring or autumn may fall in Great Britain, but on the legislation by which a few cloudy or sunshiny days become vital elements, at a particular period, in the determination of our prosperity or our adversity. The recent wet weather has demonstrated that the sliding scale of 1842 has the main inherent defect of its predecessor. Particular circumstances cause it to bring in more revenue to the Exchequer, but this is mainly owing to the fragment of a "fixed duty" craftily embedded in it, as well as to the operation of the still more crafty Canadian Corn Act, a piece of as one-sided and dishonest legislation as can well be imagined. Otherwise we find the sliding scale of 1842 as much the "parent of uncertainty" as ever; and this "uncertainty" would produce its natural fruit, in "scarcity and dearth," were they not prevented by a power which acts of Parliament cannot control, however much legislators may endeavour to coerce it to their purposes.

The busy activity which now prevails throughout the various manufacturing districts may cause a temporary forgetfulness of evils which exist only in the past or the future. But this period of diminished political excitement will not outlast the first slight interruption of commercial prosperity. The least check will throw all classes back with redoubled force into the movement for Free Trade.

FREE TRADE AND THE SHIPPING INTEREST.

The following letter on the above important subject is from the pen of Mr. Brown, of Liverpool:—

"Richmond-hill, Liverpool, July 29, 1844.

"MY DEAR SIR,—It was not my intention that the letter which I have written to our mutual friend, Mr. Johnson, on the 20th instant, which was the substance of a previous conversation with him, and shown to you, should find its way to the press; but, as you seemed to fear there might be some error in my figures, I thought it prudent to submit it to the Editor of the *Economist* (one of the best papers published for statistical facts), to be sure of their accuracy, as they in part were derived from his statements, intending, if I found them as I believed them to be, and as they are, quite true, again to bring them under your notice and that of my other ship-owning friends, from whom I expected the same frank answer as from Mr. Johnson.—Those statements are unanswerable.' But the editor seems to have misunderstood my wishes, and published my letter, and he has further stated how we stand in competition with the ships of those countries trading with us under our Reciprocity Act, which gives the most triumphant answer to those who think that we are the sufferers by the relaxation of our navigation laws. You will see at once that we are very great gainers, and you will probably recollect that in 1820 the Prussian Minister gave this Government to understand that they must place countervailing tonnage duties on British ships entering their ports, unless we removed them from Prussian vessels entering ours, and that our Government made use of every argument they could to retain the advantages we possessed, but found, unless we gave way, we must commence a war of tariffs with them, and with the certainty of injuring, if not annihilating, the direct shipping intercourse between us.

From the statement I now enclose, you will see that there is no question but that our Government acted with sound discretion in meeting the wishes of Prussia; for under a perfect freedom of intercourse between the two countries, or with corresponding countervailing duties, it does not deprive either country of any advantages they may have in being able to build and sail their vessels cheaper than the other. If the advantage is on their side, we have no means of counteracting it; if on ours, neither have they; and any attempt to countervail may be met by the other side retaliating. Under these circumstances the shipowners, not only for their own interest, but for the benefit of their country, ought to stand in the first rank as Free-Traders. The freer our intercourse the more extended our commerce, and the more ships will be wanted. Nor do all the advantages of a more extended intercourse with other nations rest with the shipowners alone, for the larger our imports the more equivalents foreigners must take from us, directly or indirectly; therefore the document to which you called my attention, in the *Mail* of the 20th instant, gives an incorrect view of our present position with respect to the shipping interest. The returns are not brought down late enough, and there is nothing to show the extent of our indirect exports to other countries. If Government prohibit imports, or try to keep them out by high duties, the smuggler interposes, and, to a certain extent, forces a trade; and the public, in many cases, from the highest to the lowest, sympathise with him, if they think our laws unjust or too stringent. At this moment a large smuggling trade is carried on between France and England, on which you can effect regular insurance. Fortunately the unwisdom Methuen treaty, which has kept us in trammels to Portugal for more than a century, is at an end, and that enables us to extend a more liberal policy to other wine-growing countries, and which has already benefited us much. It is well known that our mis-called protective policy forced the German League into existence; and, if you will refer to Mr. Addington's correspondence with Mr. Canning, you will find the same cause produced the same desire in the United States to do without us; and look at our position at this moment with the Brazils. My fears are, if we persist in these war-in-disguise measures, this trial of skill, who can do each other most harm, we

shall find every day we have less hold on these markets. In 1805, 1806, and 1807, about one-third of our exports were to the United States; and, although their population is trebled, our exports are now little more than one-half of what they then were, and not one-seventh of our whole exports. Monopoly interests are, unfortunately, at present too strong, both in England and the United States, to the injury of both countries; but I trust and hope that, ere long, these subjects will be better understood, and that we will not embarrass ourselves with any more commercial treaties, but steadily pursue our own interest, without reference to the folly of other nations.

"I am opposed to all retaliatory measures: the greater the amount of imports the better. Let us buy as cheaply as we can: I am quite sure that equivalents, to the benefit of our industrial classes, must be taken from us through one channel or another.

"I am afraid you will think my letter too long; but the vital importance of the subject to all of us must be my excuse.

"I remain, yours truly,

"WM. BROWN.

"Robert S. Henderson, Esq."

THE LEAGUE.

The leading weekly organ of the Anti-Corn-Law League has an article entitled, "The League and its Advisers"—which will be found in another column of the *Sun* of this day—wherein the *Chronicle* and one or two other journals are taken to task for having presumed to offer advice unsolicited to this great national confederacy, and represented it as being in a declining state of health. "The League is not convinced," says our weekly contemporary, "by such testimony as has been offered, of its own failing strength and energy. We believe ourselves to be as vigorous as ever, and moving onwards with firm and steady pace to the accomplishment of our object." The League is right. It is as vigorous as ever, and the great principle which it espouses is as influential as ever, if not more so. True, we have no more weekly Covent-garden meetings, but the good spirit is still actively at work; and addresses, tracts, and lectures are everywhere contributing to enlighten the public mind. Were the object which the League professes to have in view a mere Utopian theory, like Mr. Owen's social system, it might possibly, when once the novelty was at an end, sink into insignificance; but the principles which it advocates are practical and business-like, and every way fitted to meet the exigencies of the day; consequently there is no more likelihood of its declining in public estimation, than there is of Sir R. Peel becoming a member of Mr. O'Connell's Repeal Association, or of Sir J. Graham holding in his hand a private letter of M. Mazzini, without a wish to open it. In truth, the League is, to all intents and purposes, a national confederacy. It gives expression to the one great want of this unvalued commercial country. It walks side by side with the age, of whose wishes it is the recognised interpreter; and it is repudiated, and its vast moral influence denied, by none but the selfish, ignorant, short-sighted partisans of monopoly—an anti-national class, whose power is rapidly on the decrease, and whose theories must ere long be gathered to the extinct crotchets of other days. Already has the League been acknowledged by a potent adversary to be a "great fact," and never, whilst England continues to be the first commercial country in the world, can it cease to be otherwise. We can scarcely imagine any concurrence of public events but such as must tend to keep it steadily on the increase, for it represents the principle of common sense—a principle which, from its very nature, is as indestructible as the air we breathe—as the soul that informs us. But it is objected to the League, forsooth, that it will not enlist under the banners of Whiggery—will not accept of Lord John Russell as a Commander-in-Chief—but will pursue an independent course of action, irrespective of Whig and Tory parties! And why should it not be so? Why should it allow either a Russell or a Peel to clap a muzzle on its mouth—to dictate to it how it shall vote—how far it shall go—what it shall say, and what it shall not say, in Parliament? Its great excellence in the public eye is its independence—its entire freedom of thought and action; and were it once to forfeit this by an injudicious submission to either of the two contending political parties, from that moment it would cease to be a Power in the country. The duty of the League is so obvious that it is impossible to misapprehend or misinterpret it. It has nothing to do with Whigs or Tories, but is bound to keep solely in view the great—the paramount question of Free Trade. To this momentous consideration every other must be held subordinate; and that statesman—no matter to what party he belongs—must be deemed most worthy of the support of the League who will do the most to emancipate commerce from the galling shackles with which she has so long been manacled.—*Sun of Monday*.

THE TORY PRESS AND THE "LEAGUE." (From the *Manchester Guardian*.)

A fortnight ago, the *Morning Herald* announced to its readers, for the twentieth time since the alteration of the sliding scale, that, beyond all doubt, the Anti-Corn-Law League was now at last fairly put down by the successful working of Sir Robert Peel's Free-Trade policy; and the whole of the Ministerial journals throughout the kingdom re-echoed the welcome intelligence with the most unbounded demonstrations of joy. For several days, hardly a Tory newspaper appeared in which the farmers were not congratulated on their signal escape from so dangerous an enemy; and no small amount of gratitude was said to be due from them to the Premier, for his indefatigable exertions in their behalf. All at once, however, it seems to have been found out by some of the more astute persons at the head of affairs, that, if the Anti-Corn-Law League is to be considered as defunct, the discontented agriculturists may possibly begin to agitate the question themselves, after a fashion almost as unpleasant as that adopted by Messrs. Cobden and Bright. It was foreseen that landlords would very soon be asked, at this critical season, how farmers can be expected to pay their rents, when wheat is nearly 10s. per quarter below what they expected to obtain under Sir Robert Peel's Corn Bill. Week after week have they been assured by Corn Law orators at agricultural protection meetings, that, though Free Trade were not to reduce the average price of wheat more than 8s. a quarter, all that would be lost

be annihilated" so that no one can feel surprised at their expecting a considerable reduction of rent, when wheat has fallen 10s. below what the "farmers' friends" call a remunerating price." Last year, in the week ending August 12th, the average price of wheat was 61s. 2d. per quarter; this year, in the corresponding week of August, the average price of wheat, as we learn from the *London Gazette*, is only 48s. 10d. Last year the averages rose 12s. a quarter during the two months immediately preceding harvest; this year the averages have, within the same period, fallen 7s. a quarter; and, should the weather become favourable, we have no doubt that prices will be considerably lower than they are at present. With such facts staring them in the face, it is rather too bad that the farmers, many of whom have been ruined by these fluctuations, should be called upon to express their thankfulness to Sir Robert Peel for his alteration of the sliding scale.

Seeing, then, that it would be exceedingly dangerous, during the parliamentary recess, to let the farmers begin to discuss the policy of their "friends" in the Cabinet, it has been deemed advisable to provide some other exciting topic, which may prevent them from disturbing Ministers in their present retirement from the fatiguing duties of office. With this view, the *Morning Herald* has been induced, "by particular desire," no doubt, to resuscitate the Anti-Corn-Law League once more; and accordingly we find, from an article on Friday, that, so far from the "League" having quietly expired, it is still considered by the *Herald* as a very dangerous association, against which all well-disposed persons ought to agitate unceasingly. Of course, the sensible portion of the agriculturists will not fail to comprehend the secret springs by which this sudden change in the tactics of the Ministerial press has been produced, and must heartily despise such contemptible manoeuvring.

In the article in the *Herald* to which we refer, the agriculturists are much lauded for having "refused to carry a retaliatory warfare into the much-exposed camp of the manufacturers," which is probably quite just as regards the farmers, but not so with relation to that portion of the landowners who have taken the Dukes of Buckingham and Richmond as their leaders. That party and their organs have all along endeavoured to sow dissension between the manufacturing operatives and their employers, for the obvious purpose of diverting attention from the Corn-Law question; and, at a time when trade was depressed and employment scarce, they and their fellow-agitators of the Chartist press were tolerably successful. Now, however, when provisions are cheap, the demand for hands increasing, and wages, in some instances, thirty per cent. higher than they were twelve months ago, it would be utterly impossible for Richard Oastler and Feargus O'Connor, though backed by all the influence which the *Standard* and the *Morning Herald* can give them, to obtain the same power over the working classes which they had a few years ago. Of all this altered state of things the *Herald* appears to be entirely ignorant, or it would never have wound up its article on the League by the following appeal to the fears of the manufacturers:—

"Armed as orators like Messrs. O'Connor and M'Grath now are, with the convincing facts and powerful arguments collected and circulated by the friends of protection and the press, they are more than equal to the Cobdens and the Brights, in popular debate on the question; whilst by the *tu quoque* style in which they retort on the League manufacturers the charges of ill-treatment of their operatives which the former make against the agriculturists, they cannot fail to excite feelings of rancour and animosity which must be pregnant with the worst and most dangerous consequences. Over such men the League can exercise no restraint; and they may depend upon it that their inflammatory tactics will, by a just retribution be turned against them. Well do they know, that the manufacturing Leaguers are reposing on a charged mine: let them beware, lest, in bearing the brad of discord through the country, a stray spark should ensure their own destruction."

The obvious moral of all this is, that the Ministerial organ is afraid lest Mr. Cobden and his friends should take advantage of the present favourable opportunity for discussing the merits of the sliding scale in the agricultural districts; and therefore it tries to frighten them by a threat that the formidable artillery of "Messrs. O'Connor and M'Grath," armed with all the incendiary arguments furnished by the Tory press, is ready to be let loose upon the manufacturing population. The only feelings which such threats as these could possibly excite among the friends of Free Trade, are those of contempt for the men who make use of them. As for the farmers, to whom the *Herald* ought more especially to direct its attention, we hardly think they will again allow their attention to be diverted from the rent question, as it was last autumn, by any such devices. Killing the League one day in order to please them, and then reviving it next day more formidable than ever in order to frighten them, is rather too much even for tenants-at-will to swallow.

MISCELLANEOUS.

THE POLITICAL ECONOMY OF YOUNG ENGLAND.—There are some moral philosophers who set down one large class of mankind as rogues and another as fools. There live, move, and have their being not a few, certainly, who belong to each of those classes; but being rather of the eclectic school ourselves, we are led to think that there are not a few who may be set down as half-and-half in this respect. To what particular class of all the three those gentlemen known as Young England belong we are at a loss positively to say. Sometimes we have thought they had something better than any of the attributes here indicated about them; and what follows, supposing the gentlemen named to be really in earnest, must go some way to redeem the party from being thought to harbour any deep design against the welfare of the state, though this is brought about rather at the expense of what judgment they have heretofore been thought to have. In the debate on Friday night last week, in the House of Commons, when things were drawing to a close,—"Mr. Cochrane said the right hon. baronet (Sir R. Peel) had made one omission in his speech, inasmuch as he had not held out to them any hope of any further alteration in the poor law. He regretted also that they knew not whether anything more was intended to be done with reference to the allotment system, which had been found to work so beneficially in Scotland. He would take the opportunity of stating that it had been his intention to bring in a bill to regulate the wages of labour, which he would be of great importance to the working

classes, but he was compelled to defer it till the next session."—So reported in all the *Morning papers*. "A bill to regulate the wages of labour" to be sure! And why not another to regulate the number of coats a man must wear, the number and sort of buttons he shall have on it, &c. &c. Have the bills to regulate the price of food been so successful that that system of legislation must needs be extended? What wouldst thou think, O Mr. Cochrane, of letting bread come down to its natural price instead of attempting to raise wages, which are beyond the reach of legislation? The mountain will not come to Mahomet—the alternative is notorious.—"Would be of very great importance to the working classes." Very! "But he was compelled to defer it till next session." What a pity!!!—*Economist*.

BOLTON AND ITS FACTORIES.—If we next enlarge the radius of our visit, and pass from town to town of the "cotton district," we shall have the means more and more of appreciating the extent to which the system is carried. Say that we proceed north-westward, to Bolton, a distance of about ten miles. Here we come to a town which, in connexion with the history of the cotton manufacture, is second only to Manchester, and in some respects even takes precedence of it. Bolton was once the centre of the cotton district as Manchester now is, and was noted for its textile fabrics many centuries ago. Leland, writing in 1552, says:—"Bolton upon Moore Market stoneth most by cottons, and coarse yarne. Divers villages in the Moors about Bolton doe make cottons." It is now known, however, that the goods which obtained the name of "cottons" in those times were really a kind of woollen, and that the first undoubted evidence we have of the real cotton manufacture in England dates back to the year 1661 only, just above two centuries ago. Bolton, in bygone times, had its warehouses, where dealers were wont to come from all the surrounding towns—a system which has been superseded by the concentration of the wholesale dealings at Manchester; but Bolton still holds its rank as one of the most important towns of the series. There were in 1838 more than seventy cotton factories in Bolton parish, and there are more than twenty large bleachgrounds within five miles of Bolton. There is a pleasant walk of three or four miles northward from Bolton, which we will notice because it enables us to show that some of the factories, situated out of the dense mass at Manchester, are more favourably circumstanced than many readers are apt to suppose. In walking all the road from Bolton to Turton, which is a thoroughly open and country district, we arrive at a spot where a gentle range of hills separates the road from a valley through which a small river flows. On one of these eminences is a pretty church, recently built; and just beyond it is a small village of cottages, mostly new, almost wholly occupied by persons employed in a neighbouring cotton factory. The factory is in the valley just spoken of, and the house of one of the proprietors is on a gentle eminence between it and the village. There is a school house or room, supported partly by the proprietors of the factory; and there are chapels in the village for the principal denominations of Christian sects. The factory is bounded on every side by green fields, and, being situated on the banks of the little stream, receives its motive power from thence by means of a magnificent water-wheel, sixty feet in diameter, the largest, or nearly the largest, in the kingdom. The employers and the employed live near each other, and all are located in a spot where there are as many green fields and as much blue sky, as pure rivulets and as pure air, as if no such place as a factory were near. * * * * *

Bolton and Bury, besides their present rank as manufacturing towns, have contributed their full share, and more than their share, to the inventions by which the manufacture has been enabled to attain its present vast extent. It was to John Kay, of Bury, that the weavers are indebted for the "fly-shuttle," by which the web-thread is thrown across the warp with much more facility than by the old method. It was to his son, Robert Kay, also of Bury, that we owe an ingenious contrivance by which three or four different coloured threads can be used in weaving with great facility. It was Whitehead, of Bury, who introduced the plan of "piecening," by which much time is saved in spinning cotton. It was a Bolton barber, Richard Arkwright, who was mainly instrumental in placing the manufacture in its present position, and the wealth of whose son has recently so astonished the world. It was Crompton, of Bolton, who invented the "spinning mule," and whose house is still shown near that town [at "Hall i'th' Wood," Tong], in which he used to work secretly in his garret, until inquisitive persons, by mounting ladders to look in at his window, discovered the secret of his machine, and robbed him of the fruit. It was also in this immediate neighbourhood that Hargreaves, the inventor of the "spinning-jenny," endeavoured to introduce his machine, and experienced the fate which so often attends inventors, viz., persecution.—*The Textile Manufactures of Great Britain, by George Dodd*.

REPORTS OF THE FACTORY INSPECTORS.—The half-yearly Reports of the Factory Inspectors give evidence throughout of great activity in every branch of manufactures except flax-spinning. Mr. Horner says on the 1st of May:—"The cotton-trade is in a state of great activity; new mills are building, others long unoccupied have been taken by new tenants; and in some places it is difficult to find workers. There is also a much more prosperous state in the woollen mills. It is otherwise in the flax-spinning mills; there we have great complaints of bad trade; some are working less than twelve hours a day, and some are entirely stopped." And again on the 12th of July he says:—"There is great activity in the factories, especially in the cotton mills. In many places large additions have been made, both of buildings and machinery, to existing mills; and several entirely new mills have been built, and are now in progress. I not only do not hear of any persons being out of employment, but that in some places hands are scarce. One mill-occupier, who employs a large number of hand-loom weavers, has stated that he is paying them fully 30 per cent. more than he did twelve months ago, and that this advance is general for most descriptions of work." Mr. Saunders says in his report of the 10th April:—"The state of trade continues much as at the period of my last report, except that there has been more activity in the woollen branch." Mr. Stuart says, writing on the 1st April:—"The cotton factories in this country are, with the most trifling exceptions, all at work, and for the period authorized by law for the employment of young persons, but not one new cotton factory, either at Glasgow or in this district, so far as I have observed or can learn, is in course of being

erected." Mr. Howell, on the 30th June, reports:—"In the quarter just ended the greatest activity has prevailed in the several branches of manufacture." The activity of trade has tempted a considerable number of mill-owners to work beyond the legal hours. Mr. Saunders reports a satisfactory progress in the voluntary adoption of the half-time system at Halifax. He also states that the factory children in the two schools for them at Bradford have increased from 677 to 745. Mr. Stuart bears a very striking testimony to the healthiness of working in woollen mills, and quotes a medical testimony to the effect that it had cured a young man, a son of the chief magistrate of Selkirk, and that 7 children employed in these works are more healthy than other children who are kept at home without following any employment."—*Leeds Mercury*.

MEHEMET ALI.—The Pacha of Egypt is altogether an extraordinary character. He is well versed in the politics of Europe, and far too strong for the diplomacy of the Porte. History shows of what diversified and illimitable productiveness Egypt is capable under a wise legislative development. We leave our readers to augur future results, when we state that the Pacha contrived to possess himself of the last and greatest improvements of our manufacturing industry. He employed steam-engines and presses; he established colleges and schools of mutual instruction. He founded his own cannon; made his own gunpowder; and, not long since, imported 100,000 stand of arms from Birmingham into Egypt. He promoted steam communication; purchased steam vessels, and commenced the Suez Railroad. He enjoyed the advantage of selecting from all the superb inventions of modern engineers, French and English. If this country be admitted to have been raised to its great commercial eminence by the great mechanics of the last century,—Arkwright, Bolton, Watt, and others,—Egypt, through Mehemet Ali, comes in for a large share of the advantage. She was of old the granary of the world, as well as the *entrepôt* of East Indian produce; she is about to become so again; and it is with a soil of the richest and cheapest abundance in the production of grain that she begins her career as a manufacturing nation, at a time when the exclusion of corn is producing a baneful operation on our manufacturers. The progress she has made through the Pacha indicates what may be expected for the future. Triple the quantity of cotton was last year imported into Liverpool from Egypt. It would thus be curious, if the growth and manufacture of cottons, which, in old times, in conjunction with her granaries, enabled an Egyptian King, if we are to believe Herodotus, to collect private treasures to the amount of the English National Debt, should again supply one of the staple commodities of Egypt. Mehemet's last act was like Napoleon, to visit the commenced canal at Suez, and predict that its possessor would one day hold the keys of the commerce and governorship of the world.—*Cambridge Advertiser*.

FOOD AND WAGES.—It is worthy of remark that the statement in the letters we published lately from Australia, namely, that labour was very dear in that colony, and food very cheap, furnishes another proof of the fallacy of that doctrine of the monopolists that the cry for low-priced food is merely an indication of the manufacturer's desire to pay only low wages, and that the one must necessarily lead to the other. The people are no longer to be deceived by such a fallacy, nor by the reference, in support of it, to the wretched state of Polish serfs surrounded by cheap food. It is clearly seen, wherever civilization and personal independence prevail, to such an extent that skilled labour is called into action for the supply of the comforts and elegancies of life, that, instead of low price of food tending to reduce wages, it has precisely and necessarily a contrary effect. That which raises wages is an unusual demand for labour; and that which causes the unusual demand for labour is the cheapness of food, caused by its abundance, whether it be produced on our own soil or imported from other countries. This we have frequently shown, but it is worth reiteration, and ought to be impressed upon the operative classes. The moment the first want of a family, which is food, is supplied, any surplus of wages remaining in hand is devoted to the secondary wants, clothing and shelter; when these are obtained, a third circle of wants claim attention, such as furniture, &c.; beyond these are education, luxuries, &c. The demand for the second and third series of wants sets the mills in motion, and raises a clatter in the artisans' workshops. The fact is, the people become immediately busy in supplying each other with a thousand things which, when food is dear, cannot be had at all—while with cheap provisions the people are enabled to become the people's best customers. An intelligent friend puts the case as to the present manufacturing prosperity in this way:—

A few years ago		
The people received, in low wages	£100	
Cost of their dear food	70	
Leaving for clothing, &c. &c.	—30	
Consequence—dull times.		
Present Date.		
The people are receiving in higher wages, and for more hands	£150	
Cost of cheaper food to more people	60	
Leaving now, for clothing, &c.	—90	
Consequence—brisk trade.		

The latter amount being thrice the former, fully explains why it is that we have now a period of prosperity; and it must be borne in mind that it is not owing to there being a new gown or two seen in a village church—a rare sight, even in dear bread times, compared with the evidences of expenditure among the masses of the more active population of our great towns. The mistake has long been seen through, that it is necessary to favour the landed interest by a system of protection and high prices for farm produce, in order that "lords and ladies gay" may be better customers to the industrious classes. It is found that the wear and tear of clothing in rural districts is always trifling; that even farmers and farm-labourers are not the recipients of the excess in the price of food; that dear corn and high rents may indeed increase the number of unproductive servants, swelling the retinues of our aristocracy, and that a few favoured tradesmen may be benefited by splendid expenditure; but the prosperity of all classes (the agricultural included,) will be best promoted by a policy which shall ensure to the whole people cheap provisions, leaving them the power of being good customers to each other for all the comforts which render life something more than a mere existence.—*Liverpool Mercury*.

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, August 21, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the LEAGUE of the Saturday immediately succeeding, but are included in the list of the week following.

ERRATUM.

In LEAGUE No. 46, for James Rider, White Hill-lane, Bristol, read James Rider, Mitchell-lane, Bristol.

SUGAR DUTIES.—The effect of the reduction of the sugar duties is at once apparent, viz., a reduction in price equivalent to the difference between the present differential duties, and the former difference in price, of foreign and colonial sugar in bond—corrected by the tendency of the alteration to raise prices. Now, as this former difference in price was 17s., and the present preferential duty is 10s. 6d., the price should have fallen 6s. 6d. per cwt.; but as British demand is one-third of that of the whole of Europe, it is evident that prices generally must be affected by that contingency—hence the effect of the measure is to reduce prices 4s. 4d. per cwt. This circumstance must also be borne in mind by dealers when operating.—*London Commercial Record.*

WOOL.—The rearing of sheep is becoming quite extensive in Illinois. At St. Louis, on the 29th ult., 30 bales of wool were received from the prairies of Illinois. The *Washington Reporter* states:—"The wool-clip of this country has been large, and the market unusually brisk for some weeks past; never have we witnessed greater excitement on the part of both the buyers and sellers. The crop of this country alone for the present season will reach at least 800,000 pounds, and may possibly exceed that amount. The whole of the crop has been readily taken up by purchasers in the county and Pittsburg; an advance of from 35 to 40 per cent. over the prices of last year."—*American paper.*

POLITICAL ECONOMY, AS TAUGHT BY THE POST ON THE "LANKASTER"-IAN PLAN.

Within a village once their dwell
A shopman, who by retail dealt
In various kinds of useful stuff,
As bread, tobacco, sugar, snuff;
And, sad to tell, this luckless wight,
The simple truth I merely write,
One day was dragg'd before the great
Catchbull the justice, who in state,
With knitted brows and pompous air,
Sat in the magisterial chair.
Now, when the case had been preferred,
And facts both pro and con were heard,
Then Catchbull, having cleared his throat
With deep a-hem! portentous note!
Said, "Fellow, what is this I hear?
The case against you seems quite clear;
Your scales are false—nay, there's the lead;
And thus, in weighing out your bread,
You've wronged the poor. Unfeeling wretch!
When widows lone have come to fetch
A scanty bit with hard-earned pelf,
You've kept a portion for yourself.
From hungry orphans, wasted, pale,
Unmindful of their piteous wail,
You've kept a morsel 'neath your claw,
To stuff your own insatiate maw.
Speak, sirrah! say what vain pretence
You now can urge in your defence."
The court was silent, every eye
Turned to the culprit, whose reply
Ran thus: "If I have been to blame,
Others must share my guilt and shame;
Your worship's conduct I have sought
To copy strictly as I ought;
You're deeply versed in learned lore,
At Oxford studied; and, what's more,
A senator, and justice too;
Whom should I copy if not you?"
The squire replied, with low'ring brow,
"Why, fellow, what is this? How now!
'Tis certain you're of sense bereft,
Would you accuse me here of—thief?"
"Attend, your worship, I'll unfold
The simple truth—its briefly told:
A while ago, as fate decreed,
To visit London I had need,
And my ambition 'twas, when there,
To see the House of Commons, where
'Tis said that justice sits in state,
And wisdom guides the stern debate.
I saw the Speaker in his chair,
With flowing wig and sapient air;
And also well remember that
Your worship on his right hand sat:
I heard a member, much the same
As you now do, with force declaim
Against restricting people's bread:
You heard—but hooted all he said.
Like you, he spoke of widows' tears—
You answered in 'ironic cheers';
He told of orphans and their woe—
You cried out lustily, 'Oh, oh!'
Of hungry artisans he told,
And urged their claims in language bold;
And then the House, to my surprise,
Gave utterance to all kinds of noise;
And to the life you mimicked sounds
We hear from donkeys, geese, and hounds.
The speech being ended you began,
And in effect your words thus ran:—
'That men should be allowed to eat
Exactly that amount of wheat
Which they by honest toil could earn
(For honest toil a fair return),
Was truly in the abstract right,
This you at once conceded—quite;
But then it was not always tact,
On abstract honest rules to act:
In theory they were well enough,
To practise them was silly stuff;
Besides, from our past laws 'twas seen,
From immemorial time 't had been
A constant custom with the state
On other rules to legislate,
And for your part you felt quite sure
'Twould fare but badly with the poor,
If 'twere allowed 't increase the store
Of food from any foreign shore.'
Your worship, when I heard all this,
I thought it might not be amiss
To practise in my own small sphere
The doctrines by the 'House' held dear;
For if 'twere true as there declared,
More food would by each one be shared,
Provided you, by 'law of land,'
Reduced the total stock on hand,
Why, then, I thought the rule would hold
In every single loaf I sold:
And thus, th' amount of bread reduced
Into each family introduced,
Each separate member would have more
Than he had luck to get before.
My wife, its true, protested strong;
She spoke of justice—said 'twas wrong.
I, like your worship, met her flat
With crowing, barking, and all that;
But could not, like your worship, bray,
(You've quite a natural gift that way.)
Indeed, at once to end my tale,
Like you, I've used a 'sliding scale';
And with—your worship, 'tis most true,
Precisely the same motive too."

DEMOLITION OF MANUFACTORIES.—According to the *Standard*:—"England would be as great and powerful, and all useful Englishmen would be as rich as they are, though one ruin should engulf all the manufacturing towns and districts of Great Britain." According to the *North Star*:—"Large cities are the curses of civilization! God made the country; man made the towns. Oh, for some Titus to pass a ploughshare over them! Oh, for some Cincinnatus to lead us back to nature and the plough!"

CORRESPONDENCE.

The following letter has been addressed by a highly respectable and influential merchant in the City, to Mr. Villiers:—

TO THE HON. C. P. VILLIERS, M.P., &c. &c.
August 7, 1844.

DEAR SIR,—In conformity with your request I take leave to address to you the following lines, which contain my ideas on *Free Trade*, and an outline of the statistical information which I have carefully gathered through the medium of my numerous and influential friends in the different parts of Germany, which have led me to believe that our commerce with that extensive country, which, with its dependencies, contains about *seventy millions* of inhabitants, would greatly and advantageously be increased if in this country the restrictive import duties on German produce were abolished. Our trade with the German states is at present more extensive than is generally supposed or known; but a glance at the statistical returns made to our Parliament, as well as to the statistical bureaux of the different states in Germany, will easily show that about 1-5th of our whole exports are shipped to Germany, and had that trade not been burdened by our Legislature with almost annihilating fetters and encumbrances, the same would have amounted to more than at present do our exports to all parts of the world.

We annually ship to Germany a considerable quantity of manufactured goods, which, with the exception of cotton twist, are principally disposed of in those north-western parts of Germany which have not yet joined the Prussian Customs Union, and which contain only about three millions and a half of inhabitants out of the seventy millions. The total amount of our annual exports to that country is, in round numbers, about £8,000,000 sterling, 3-8ths of which, or about £3,000,000, are for cotton twist and yarns, which mostly go into Prussia and the other states that form the Prussian Customs Union; and of the other £5,000,000 sterling, at least, £4,000,000 are consumed in the north-western parts of Germany above alluded to, which is considerably more than £1 per head. It is beyond a doubt that those countries would consume double the quantity of our manufactures if Great Britain would allow them to do so by accepting in payment the produce of their soil; and the remaining parts of Germany, containing sixty millions, the inhabitants of Austria, Prussia, and the other states that form the Prussian Customs Union, where, in consequence of the illiberal import duties imposed by Great Britain on German produce, British manufactures are almost excluded from their territory,—as soon as we opened our ports to receive the produce of their soil, they would in return be willing to purchase and consume a considerable quantity.

Many thousands of English merchants reside in the north-western part of Germany—in Hamburg alone more than 2000—for the purpose of either disposing of British goods or of buying German produce. All this numerous and wealthy body are favourable to the establishment of *Free Trade* between England and Germany, but hitherto no opportunity has been offered to them even to give their opinion on that subject; for it is a very difficult matter for single individuals to communicate their ideas about it to their brethren in the mother country; this difficulty would, however, cease to exist if an association for such a purpose was formed abroad, where all those interested in the commerce between the two great nations—the British and the German—could meet together and give their opinions, to be reported periodically to the main body at home.

I therefore consider that it would be productive of much good if the Anti-Corn-Law League would establish in Germany branch associations, which should have their principal seat in Hamburg, to be known under one designation, namely, the *British Free-Trade Association*, with branches of it to be established in all the principal seaport towns on the North Sea and Baltic.

The expenses attending such an undertaking would, even in the first instance, not be considerable, but after a little time it would more than support itself. It would be a great assistance to the Anti-Corn-Law League in this country, in furnishing it from week to week with such treasure of knowledge and experience as even the most daring monopolist would not venture to dispute.

The formation of such associations in the different parts of Germany is perfectly legal; they would, therefore, not only be secure against any opposition on the part of the respective Governments, but would most probably enjoy the sincerest patronage of the mercantile community, as well as of the landed aristocracy of the German states. I have some time since corresponded with several influential noblemen in the north of Germany, and Prussia, who were fellow-collegians of mine when I was a student at the University of Königsberg, and I have the promise of their utmost support. If, therefore, you would lay my present letter before the Council of the Anti-Corn-Law League, and it should meet with their approval, I shall be very happy to render all the assistance in my power in establishing the branches in Germany, where my personal acquaintance with many of the most important German and English merchants in the north of Germany, my intimacy with influential noblemen and landowners there, as well as my knowledge of the localities and of the German language, would prove of considerable assistance.

I have the honour to remain
Your most obedient and humble servant,

FOREIGN CORRESPONDENCE.

PETER PLAYFAIR IN FRANCE.—No. VII.

Dunkirk, August 16, 1844.

Dunkirk, or Dunkerque, is the first large town in French Flanders on quitting Belgium. It is a seaport town, with upwards of 20,000 inhabitants, much superior in appearance to the towns of Calais, or Ostend. The streets are broad and well paved, the houses high, and the shops large and well stocked. Formerly the greater part of the commerce of Flanders and the north of France was transacted at Dunkirk; but Ostend, Bruges, and Calais now share with Dunkirk, both the export and the import trade. The port of Dunkirk, however, is still used by a great number of vessels, chiefly employed in the coasting and Channel trade, and in the fisheries. The land about Dunkirk is in a high state of cultivation, and affords evidence of what the elaborate Flemish farmer is capable of effecting even with inferior soils. Agriculture

coast the land is generally a light sandy loam; towards St. Omer it was originally all marsh, but is now reclaimed, and divided into fields and meadows by water, instead of hedges or other fences. The canals in this direction, form the roads, ditches the lanes, and barges and boats the waggons and carts, which convey produce to the market. The crops in general look well throughout the district; a good deal of the grain is cut but not carried, and the produce is generally satisfactory. The horse-bean is largely cultivated in this district, but more for the fattening of pigs, than as food for horses. The manner of harvesting the bean is, to pull them up by the roots, bind into sheaves, and then stack. The women are commonly employed in this and in all kinds of light field labour. They manage and harvest the flax and the cress, from the stalks of which they make brooms, after threshing out the seed for oil. The women also do the turnip-hoeing, and bind up the sheaves of corn as they are cut by the labourer, who almost invariably uses the scythe instead of the sickle for this purpose. The wages of the women average from 7d. to 10d. per day at this season. The dress is coarser than that worn by our labourers' wives, consisting of a blue woollen petticoat or skirt, with a cotton body reaching to the waist and frilled round. The men wear coarse and stout woollen clothes, with a blouse or smock of blue cotton; but it is very rare in either sex to see the torn or ragged clothes which characterize so large a portion of those who earn their daily bread in England. The wages of the labourer at the present time average from 1s. 3d. to 1s. 8d. per diem.

The gardens and orchards in this part of the country are very numerous. In the latter there is a quantity of very fine fruit, and much care is evidently bestowed upon its cultivation. The *pippin d'or*, or golden pippin, is the finest apple; and the *cuisse-dame*, and the *poire de la pucelle*, are the finest varieties of the pear, and grow here in great abundance. The poppy is also largely cultivated for medicinal purposes. The women harvest the poppy by tying up in bundles, when dry, and afterwards stacking. The seed is collected in a piece of sackcloth spread out in the field, and the heads of two bundles are knocked together, and necessarily a good deal battered in the process. The seeds of the flax, which is much grown here, are threshed out with a solid piece of thick board fastened on to a handle; with this slab they beat the flax about on a barn-floor, or on some board or canvas laid down for the purpose in the fields, if the wind is not too high. Red clover is much grown, along with wheat and barley, for feeding sheep, and for dry fodder; and oats and vetches are sown together for the same purpose. They are cut just as the seed of each begins to get hard, and are stacked like hay when sufficiently dry.

Wednesday and Saturday are the market days in Dunkirk. The market begins at daybreak, and is well supplied with vegetables and fruit, poultry and eggs. Cauli-flowers and large cabbages were quoted at 24 sous, or 1s. per dozen; gherkins, 1½d. per hundred; new potatoes, 6d. per 10 kilos, or 20 English pounds; fowls from 10d. to 15d.; ducks, 2s. 6d. per pair; turkeys, half-a-crown each; pigeons, 5d. each; eggs, 36 a shilling. The samples of wheat were fine; and the business of the corn market was entirely conducted by the women. I afterwards met upon the road many of the farmers' wives and daughters going home with stocks of clothes, crockery ware, and other articles, some of them riding what is vulgarly called a *straddle*, others in more feminine posture, but each in the position which convenience dictated; nor did the posture appear to excite the slightest attention from passers-by. The country is very open and unenclosed; and the farm-houses, instead of being distributed over the land as in England, are frequently collected into little hamlets or villages. The farm-houses are generally built in one fashion, with their gable-ends and backs fronting the road. The stable, cart-house, and barns are usually continuations of the same building; the walls, sometimes of stone, sometimes of brick, and quite as frequently of *pisé*, or rammed mud, and generally covered with a neat thatch. The interior of the farm-house in France is by no means so comfortable as the same description of building in England: the floor sometimes of wood, but more generally of brick, or earth; the furniture a few wooden chairs and deal table. The farms in this part of France are generally small, and the farmer is frequently proprietor of the land, and his own labourer. The farmer and his family rarely eat more than two meals a day, but both are substantial. Breakfast, consisting of soup, potatoes, meat, and milk. Dinner, with soup, rye-bread, vegetables, meat, and beer or wine. And it is remarkable that an able-bodied man is rarely seen begging. There are beggars to be seen in every village, but they invariably consist of afflicted persons, including the lame, the halt, and the blind. Even age is scarcely admitted as a plea for charity, unless it is so considerable as to prevent the applicant from labouring. Would to God there were no able-bodied paupers in our own country!

Calais, August 20, 1844.

Calais is a town of great interest to the English traveller, from the circumstance of its having been so long in the possession of the English, and its having served for so great a period to admit the English armies into France during the chivalrous wars of the middle ages. There are now two towns, the Upper Town and the Lower Town, but the greater part of the population in the latter are English lace-makers, from Nottingham and its neighbourhood. Unable, from the high price of provisions, of house rent and taxes, to earn a living in England, they have carried the valuable fabric in which they excel, and the admirable machinery they employ, to a country where the necessities of life are cheaper, where house rent is low, and taxes almost unknown, or, at least, unfelt, from being levied in an indirect way, and upon luxuries rather than necessities. I do not speak of the municipal duties, but of state taxes, because the former are so small as not to be felt in estimating their amount. The Upper Town, which is enclosed by fortified walls, and is considered a fortress of the second class, contains about 9000 inhabitants. The Lower Town, which is of recent origin, is not fortified, and contains about 3000 inhabitants, more than 2000 of whom are English, engaged in the bobbin-net and lace trade. The wages of the English workmen, here, average from 35s. to 45s. per week; and if the workman is sober, industrious, and expert, he can earn more, and rarely, with proper economy, fails to make a provision for his family in the country of his adoption, which he could not hope to accomplish in that of his birth. That the trade is a profitable one, though not at this moment so brisk as formerly, is proved by the fact that steam-engines and factories continue to multiply, and that stock rarely

remains on hand. The French Chambers have also just voted a sum of twenty millions of francs, for the construction of a railroad to Lille and Paris, which is to be completed in two years. The principal traffic from the coast to Paris is the passenger traffic; and large quantities of fish are also conveyed from Calais to the capital. To England the exports chiefly consist of fruit and eggs. Fifty-five millions of eggs are exported annually from this port to England.

The annual fair at Calais, which continues fifteen days, terminated last week. There is scarcely any perceptible difference between the fairs in France and our own country; and if a deaf man unacquainted with the two countries could have walked through the fair at Calais one day, and the fair at Camberwell another, he would not have known from anything he saw that he was in another country or among a different race of men. Perhaps the chief distinction is in the general order and decorum of the people in France, and the absence of all drunkenness. The amusements also terminate at an earlier hour, everybody returning to their homes at ten o'clock. A circumstance, creditable to the general honesty and propriety of the people was, that the keepers of the shows frequently waited till after the conclusion of the entertainment before receiving the admission money, and that no attempt was made to rush by, or evade its payment. One game* at the fair which deserves to be exposed for its brutality, and which seems strangely at variance with the characteristic humanity of the people, is to tie a cock with string to a stake, and pelt him at the distance of fifty yards with large stones. The owner of the bird receives a sous for every three stones that are thrown. If the stone strikes the bird and kills him, he belongs to the person throwing the stone; if he is not hit, or only slightly wounded, others take the place of the thrower until some marksman more successful than his competitors, succeeds in striking the wretched bird, and depriving him of life. I believe the authorities have endeavoured to put down this brutal game, but without success, so difficult is it to put an end to any national sport or amusement handed down from generation to generation, among a people. The French, as a nation, are highly susceptible to ridicule; let your contemporary, *Punch*, take cognizance of the case, and rescue the Gallic cock from the indignity and cruelty to which he is exposed, at the hands of "Young France." P. P.

PEEL'S BOAST.—Sir Robert has been legislating since 1841: he boasts that the country is in a much better state as to its commerce and social condition,—which is true; but we cannot tell how much of the returning prosperity is the mere alternation of bad and good epochs, which has been seen in the history of the country with such fortuitous regularity. The same agencies exist that produced the distress and dangers of 1841; far larger causes than mismanagement of joint-stock banks were then at work, and those causes remain untouched, to be called into operation again. With all the fruitfulness of the season, what has it done to provide for the additional thousand people that every day in the year adds to the number of those that must be fed? Nothing. Peel's legislation has occurred in a brighter time, but it gives no guarantee that the future may not find us as unprepared for storms as in 1841,—unless the armed Chelsea pensioners are to be accounted adequate provision for such emergency.—*Spectator*.

ENGLAND.—If true to herself, England might have been, and possibly still may be, a perfect garden—the centre of arts, wealth, and civilization—her land not permanently depressed by the repeal of the Corn Laws, but applied to new uses, cut up into small fields under the highest cultivation, into market and cottage gardens, yielding, under skilful culture, twice the returns now rendered. Her people, in a climate most favourable to the development of the human form, and the production of a noble race, busily employed in all the arts of life, using their boundless fields of coal and minerals in aid of the arts, and to minister to the necessities of distant lands, covering the sea with ships, bearing to her the produce, the materials, and the fabrics to which those lands are best adapted, and which alone they can offer in exchange. I would picture fourfold the population which now exists, living under equal laws, educated, contented and happy, drawing their bread, like Holland in her palmy days, from all the granaries of the earth, and bearing, with ease, the burdens which now press heavily on the lesser number.—*Two Months Abroad*.

PAY YOUR GAMEKEEPERS.—What is sport to country gentlemen, is death, it seems, or at least destruction, to the farmers. The *Brighton Herald*, of August 3, contains the following paragraph:—"We are glad to see that the Game Laws have excited a very general and strong feeling against them in all parts of the country. It is seen that the supply of hares is kept up, not for the landlord's sport, but for his profit—the hares being fed at the expense of the tenant-farmer. Five hares, it is well known, consume as much food as a sheep, and we know of an instance in this county where the damage done to one piece of wheat only is estimated at between £40 and £50." Hence, it would seem that game conducts itself pretty much like vermin. But "*Fiat justitia ruat cælum*," a phrase which we translate for the benefit of country gentlemen, because it is to them we would address ourselves—"Do justice, though at the sacrifice of rent." Whatever your game may eat up, do not let it eat up your tenants. Game must be preserved, we know. True, Poaching must coexist with its preservation. The peasantry must consequently be demoralised, gamekeepers every now and then shot, a man or two hanged occasionally, and hundreds imprisoned and transported. All this is very lamentable; but it cannot be helped; and the man who would sacrifice the pleasures of the field to the welfare and happiness of his fellow-men, is unworthy the name of a British squire. But, good gentlemen, behave as such—Pay for the keep of your game—allow for it at your audits—why do you not actually sell the animals which your farmers feed? But perhaps you are right. Then why not, at once, turn your horses, cattle, swine, poultry, into your tenants' flocks? You are the law-makers; pass an act for the abolition of pounds—all but your own. At least be consistent; at present you are doing both things and persons by halves.—*Punch*.

* The game of throwing at the cock is mentioned in Strutt's "*Sports and Pastimes*" as a favourite old English game. Happily, we are in advance of our neighbours in this respect; it has now ceased to be an English sport.—P. P.

REVIEW.

Knight's Weekly Volume. *Mind amongst the Spindles*. London: Charles Knight.

It was our earnest wish to have kept pace with Mr. Knight in our notices of his valuable series, because it promises to be a cheap library of instruction for the working classes, placed within their reach by the lowness of its price, and adapted to their use by its judicious selection of subjects. We wished every week to point out to manufacturers the fresh facilities afforded them for contributing to the intellectual recreation and improvement of those whom they employ at a cost too trifling to be felt; and we were not less eager to direct the attention of our operative readers to the ease with which they may procure all the advantages of a library for themselves and their children. We have selected one of these works for special notice on account of its peculiar interest to our operative readers. "*Mind amongst the Spindles*" is a selection from the "*Lowell Offering*," a work composed entirely of contributions from the factory girls of Lowell, and which at once refutes the absurd calumny, so studiously circulated from various corrupt and interested motives, that factory occupations have a tendency to deteriorate the moral and intellectual condition of the operatives. We cannot better introduce the work than by quoting a most interesting and valuable letter addressed by Miss Martineau to the editor, Mr. Knight.

"Tynemouth, May 20, 1844.

"MY DEAR FRIEND,—Your interest in this Lowell book can scarcely equal mine, for I have seen the factory girls in their Lyceum, and have gone over the cotton-mills at Waltham, and made myself familiar on the spot with factory life in New England; so that in reading the '*Offering*,' I saw again in my memory the street of houses built by the earnings of the girls, the church, which is their property, and the girls themselves trooping to the mill, with their healthy countenances, and their neat dress and quiet manners, resembling those of the tradesman class of our country.

"My visit to Lowell was merely for one day, in company with Mr. Emerson's party,—he (the pride and boast of New England as an author and philosopher) being engaged by the Lowell factory people to lecture to them, in a winter course of historical biography. Of course the lectures were delivered in the evening after the mills were closed. The girls were then working seventy hours a week, yet, as I looked at the large audience (and I attended more to them than to the lecture) I saw no sign of weariness among any of them. There they sat, row behind row, in their own Lyceum—a large hall, wainscoted with mahogany, the platform carpeted, well lighted, provided with a handsome table, desk, and seat, and adorned with portraits of a few worthies; and as they thus sat listening to their lecturer, all wakeful and interested, all well dressed and lady-like, I could not but feel my heart swell at the thought of what such a sight would be with us.

"The difference is not in rank, for these young people were all daughters of parents who earn their bread with their own hands. It is not in the amount of wages, however usual that supposition is, for they were then earning from one to three dollars a week, besides their food; the children one dollar (1s. 3d.), the second-rate workers two dollars, and the best three: the cost of their dress and necessary comforts being much above what the same class expend in this country. It is not in the amount of toil; for, as I have said, they worked seventy clear hours per week. The difference was in their superior culture. Their minds are kept fresh, and strong, and free, by knowledge and power of thought; and this is the reason why they are not worn and depressed under their labours. They begin with a poorer chance of health than our people; for the health of the New England women generally is not good, owing to circumstances of climate and other influences; but among the 3800 women and girls in the Lowell mills when I was there, the average of health was not lower than elsewhere; and the disease which was most mischievous was the same that proves most fatal over the whole country—consumption; while there were no complaints peculiar to mill life.

"At Waltham, where I saw the mills, and conversed with the people, I had an opportunity of observing the invigorating effects of *MIND* in a life of labour. Twice the wages and half the toil would not have made the girls I saw happy and healthy, without that cultivation of mind which afforded them perpetual support, entertainment, and motive for activity. They were not highly educated, but they had pleasure in books and lectures, in correspondence with home; and had their minds so open to fresh ideas, as to be drawn off from thoughts of themselves and their own concerns. When at work they were amused with thinking over the last book they had read, or with planning the account they should write home of the last Sunday's sermon, or with singing over to themselves the song they meant to practise in the evening; and when evening came, nothing was heard of tired limbs and eagerness for bed; but, if it was summer, they sallied out, the moment tea was over, for a walk, and, if it was winter, to the lecture-room or to the ball-room for a dance, or they got an hour's practice at the piano, or wrote home, or shut themselves up with a new book. It was during the hours of work in the mill that the papers in the '*Offering*' were meditated, and it was after work in the evenings that they were penned.

"There is, however, in the case of these girls, a stronger support, a more elastic spring of vigour and cheerfulness than even an active and cultivated understanding. The institution of factory labour has brought ease of heart to many, and to many occasion for noble and generous deeds. The ease of heart is given to those who were before suffering in silent poverty, from the deficiency of profitable employment for women, which is even greater in America than with us. It used to be understood there that all women were maintained by the men of their families; but the young men of New England are apt to troop off into the West, to settle in new lands, leaving sisters at home. Some few return to fetch a wife, but the greater number do not, and thus a vast over-pro-

portion of young women remains; and to a multitude of these the opening of factories was a most welcome event, affording means of honourable maintenance, in exchange for pinning poverty at home.

"As for the noble deeds, it makes one's heart glow to stand in these mills and hear of the domestic history of some who are working before one's eyes, unconscious of being observed or of being the object of any admiration. If one of the sons of a New England farmer shows a love for books and thought, the ambition of an affectionate sister is roused, and she thinks of the glory and honour to the whole family, and the blessing to him, if he could have a college education. She ponders this till she tells her parents, some day, of her wish to go to Lowell, and earn the means of sending her brother to college. The desire is yet more urgent if the brother has a pious mind and a wish to enter the ministry. Many a clergyman in America has been prepared for his function by the devoted industry of sisters; and many a scholar and professional man dates his elevation in social rank and usefulness from his sister's, or even some affectionate aunt's entrance upon mill life for his sake. Many girls perceiving anxiety in their fathers' faces on account of the farm being encumbered, and age coming on without release from the debt, have gone to Lowell and worked till the mortgage was paid off and the little family property free. Such motives may well lighten and sweeten labour; and to such girls labour is light and sweet.

"Some, who have no such calls, unite the surplus of their earnings to build dwellings for their own residence, six, eight, or twelve living together, with the widowed mother or elderly aunt of one of them to keep house for, and give countenance to the party. I saw a whole street of houses so built and owned at Waltham; pretty frame houses, with the broad piazza and the green Venetian blinds, that give such an air of coolness and pleasantness to American villages and country abodes. There is the large airy eating-room, with a few prints hung up, the piano at one end, and the united libraries of the girls, forming a good-looking array of books, the rocking-chairs universal in America, the stove adorned in summer with flowers, and the long dining-table in the middle. The chambers do not answer to our English ideas of comfort. There is there a strange absence of the wish for privacy; and more girls are accommodated in one room than we should see any reason for in such comfortable and pretty houses.

"In the mills the girls have quite the appearance of ladies. They sally forth in the morning with their umbrellas in threatening weather, their calashes to keep their hair neat, gowns of print or gingham, with a perfect fit, worked collars or pelerines, and waistbands of ribbon. For Sundays and social evenings they have their silk gowns and neat gloves and shoes. Yet through proper economy—the economy of educated and thoughtful people—they are able to lay by for such purposes as I have mentioned above. The deposits in the Lowell Savings' Bank were, in 1834, upwards of 114,000 dollars, the number of operatives being 5000, of whom 3800 were women and girls.

"I thank you for calling my attention back to this subject. It is one I have pleasure in recurring to. There is nothing in America which necessitates the prosperity of manufactures as of agriculture, and there is nothing of good in their factory system which may not be emulated elsewhere—equalled elsewhere, when the people employed are so educated as to have the command of themselves and of their lot in life, which is always and everywhere controlled by mind, far more than by outward circumstances. I am, very truly yours,

"H. MARTINEAU."

We have read the contributions of these factory girls, and we find them above the average of contributions to our "Keepsakes" and "Books of Beauty," in composition and style, while they are immeasurably superior in intellectual power and moral purpose. As a specimen of the poetry of a factory girl, we quote the following beautiful lines:—

"THE TOMB OF WASHINGTON.

"He sleeps there in the midst of the very simplicities of Nature."

"There let him sleep, in Nature's arms,
Her well-beloved, her chosen child—
There 'mid the living, quiet charms
Of that sequestered wild.

He would have chosen such a spot,
'T was fit that they should lay him there,
Away from all the haunts of care;
The world disturbs him not.—
He sleeps full sweet in his retreat—
The place is consecrated ground,
It is not meet unhallowed feet
Should tread that sacred mound.

"He lies in pomp—not of display—
No useless trappings grace his bier,
Nor idle words—they may not say
What treasures cluster here.
The pomp of nature, wild and free,
Adorns our hero's lowly bed,
And gently bends above his head
The weeping laurel tree.
In glory's day he shunned display,
And ye may not bedeck him now,
But Nature may, in her own way,
Hang garlands round his brow.

"He lies in pomp, not sculptured stone,
Nor chiseled marble—vain pretence—
The glory of his deeds alone
Is his magnificence.
His country's love the meed he won,
He bore it with him down to death,
Unallied e'en by slander's breath—
His country's sire and son.
Her hopes and fears, her smiles and tears,
Were each his own.—He gave his land
His earliest cares, his choicest years,
And led her conquering band.

"He lies in pomp—not pomp of war—
He fought, but fought not for renown;
He triumphed, yet the victor's star
Adorned no regal crown.
His honour was his country's weal;
From off her neck the yoke he tore—
It was enough, he asked no more;
His generous heart could feel

No low desire for king's attire;—
With brother, friend, and country blest,
He could aspire to honours higher
Than kingly crown or crest.

"He lies in pomp—his burial-place
Than sculptured stone is richer far;
For in the heart's deep love we trace
His name, a golden star.
Wherever patriotism breathes,
His memory is devoutly shrouded
In every pure and gifted mind;
And history, with wreaths
Of deathless fame, entwines that name,
Which evermore, beneath all skies,
Like vestal flame, shall live the same,
For virtue never dies.

"There let him rest—'tis a sweet spot;
Simplicity becomes the great—
But Vernon's son is not forgot,
Though sleeping not in state.
There, wrapped in his own dignity,
His presence makes it hallowed ground,
And Nature throws her charms around,
And o'er him smiles the sky.
There let him rest—the noblest, best;
The labours of his life all done—
There let him rest, the spot is blessed—
The grave of WASHINGTON.

"ADELAIDE."

Among the prose sketches we were most struck with the "Visits to the Shakers," one of the most interesting of the many new sects that have sprung up in America. We extract the account of the first visit:—

"Sometime in the summer of 18—, I paid a visit to one of the Shaker villages in the State of New York. Previously to this, many times and oft had I (when tired of the noise and contention of the world, its erroneous opinions, and its wrong practices) longed for some retreat, where, with a few chosen friends, I could enjoy the present, forget the past, and be free from all anxiety respecting any future portion of time. And often had I pictured, in imagination, a state of happy society, where one common interest prevailed—where kindness and brotherly love were manifested in all of the every-day affairs of life—where liberty and equality would live, not in name, but in very deed—where idleness in no shape whatever would be tolerated—and where vice of every description would be banished, and neatness, with order, would be manifested in all things.

"Actually to witness such a state of society was a happiness which I never expected. I thought it to be only a thing among the airy castles which it has ever been my delight to build. But with this unostentatious and truly kind-hearted people, the Shakers, I found it; and the reality, in beauty and harmony, exceeded even the pictures of imagination.

"No unprejudiced mind could, for a single moment, resist the conviction that this singular people, with regard to their worldly possessions, lived in strict conformity to the teachings of Jesus of Nazareth. There were men in this society who had added to the common stock thousands and tens of thousands of dollars; they nevertheless laboured, dressed, and esteemed themselves as no better, and fared in all respects like those who had never owned, neither added to the society, any worldly goods whatever. The cheerfulness with which they bore one another's burdens made even the temporal calamities, so unavoidable among the inhabitants of the earth, to be felt but lightly.

"This society numbered something like six hundred persons, who in many respects were differently educated, and who were of course in possession of a variety of prejudices, and were of contrary dispositions and habits. Conversing with one of their elders respecting them, he said, 'You may say that these were rude materials of which to compose a church, and speak truly; but here (though strange it may seem) they are worked into a building, with no sound of axe or hammer. And, however discordant they were in a state of nature, the square and the plumb-line have been applied to them, and they now admirably fit the places which they were designed to fill. Here the idle become industrious, the prodigal contracts habits of frugality, the parsimonious become generous and liberal, the intemperate quit the tavern and the grog-shop, the debauchee forsakes the haunts of dissipation and infamy, the swearer leaves off his habits of profanity, the liar is changed into a person of truth, the thief becomes an honest man, and the sloven becomes neat and clean.'

"The whole deportment of this truly singular people, together with the order and neatness which I witnessed in their houses, shops, and gardens, to all of which I had free access for the five days which I remained with them, together with the conversations which I held with many of the people of both sexes, confirmed the words of the Elder. Truly, thought I, there is not another spot in the wide earth where I could be so happy as I could be here, provided the religious faith and devotional exercises of the Shakers were agreeable to my own views. Although I could not see the utility of their manner of worship, I felt not at all disposed to question that it answered the end for which spiritual worship was designed, and as such is accepted by our heavenly Father. That the Shakers have a love for the Gospel exceeding that which is exhibited by professing Christians in general, cannot be doubted by any one who is acquainted with them. For on no other principle could large families, to the number of fifty or sixty, live together like brethren and sisters. And a number of these families could not, on any other principles save those of the Gospel, form a society, and live in peace and harmony, bound together by no other bond than that of brotherly love, and take of each other's property, from day to day, and from year to year, using it indiscriminately, as every one hath need, each willing that his brother should use his property, as he uses it himself, and all this without an equivalent.

"Many think that a united interest in all things temporal is contrary to reason. But in what other light, save that of common and united interest, could the words of Christ's prophecy or promise be fulfilled? According to the testimony of Mark, Christ said, 'There is no man who hath left house, or brethren, or sisters, or father, or mother, or wife, or children, or lands, for my sake and the Gospel's, but he shall receive an hundredfold now in this time, houses, and brethren, and sis-

ters, and mothers, and children, and lands, with persecutions, and in the world to come eternal life.' Not only in fact, but in theory, is an hundredfold of private interest out of the question. For a believer who forsok all things could not possess an hundredfold of all things only on the principle in which he could possess all that which his brethren possessed, while they also possessed the same in a united capacity.

"In whatever light it may appear to others, to me it appears beautiful indeed, to see a just and an impartial equality reign, so that the rich and the poor may share an equal privilege, and have all their wants supplied. That the Shakers are in reality what they profess to be, I doubt not. Neither do I doubt that many, very many lessons of wisdom might be learned of them, by those who profess to be wiser. And to all who wish to know if any good thing can come out of Nazareth, I would say, you had better 'go and see.'

Now, we should be glad to be informed of any industrial occupation in which the young persons employed have given such evidence of cultivated mind as the factory girls of Lowell? This volume is a decisive refutation of the calumnies which, under the pretence of a hollow philanthropy, have been vented upon the wives and daughters of the operatives of Lancashire. We claim for the population of our mills and factories as high a moral position as is held by any other class in the country. Undoubtedly there are evils connected with the factory system in this country, but these evils have arisen not from anything inherent in the system itself, but from the want of legislative foresight in not providing room for the development of such a powerful novelty in a land already crowded to the utmost with ancient customs and institutions. It is not very long since Manchester and Salford were, in the eye of the law, nothing better than villages; but the factory system must not bear the blame either of the folly which persisted in treating a metropolis as a village, or the many evils that have resulted from such an absurdity. It is within the memory even of the young, when the education or non-education of the persons employed in the mills was viewed with perfect indifference by the Government; the factory system, therefore, must not be blamed for the evils which have arisen from the culpable negligence of our political rulers.

The factory system is a modern creation; history throws no light on its nature, for it has scarcely begun to recognise its existence; the philosophy of the schools supplies very imperfect help for estimating its results, because an innovating power of such immense force could never have been anticipated. The steam-engine had no precedent, the spinning-jenny is without ancestry, the mule and the power-loom entered on no prepared heritage: they sprang into sudden existence, like Minerva from the brain of Jupiter, passing so rapidly through their stage of infancy, that they had taken their position in the world and firmly established themselves before there was time to prepare a place for their reception. These potent novelties also made their appearance in a land already crowded with institutions: the force and rapidity with which they developed themselves dislocated all the existing machinery of society, disturbed its very framework, and must necessarily produce, as they have produced, a considerable amount of confusion and suffering until the difficult task of re-adjustment is completed. A giant forcing his way into a densely-wedged crowd extends pain and disturbance to its remotest extremity: the individuals he pushes aside push others in their turn, though none know the cause of pressure save those with whom the intruder is immediately in contact; and thus, also, the factory system causes its presence to be felt in districts where no manufactures are established; all classes are pressed to make room for the stranger, and all are interested in knowing something of what is thus forced upon their acquaintance. Antecedent to any inquiry it would be well to recognise the factory system as what statesmen call *un fait accompli*; it exists, and must continue to exist; it is not practicable, even if it were desirable, to get rid of it; millions of human beings depend upon the factories for their daily bread. Were their heads sufficiently bold and their hearts sufficiently hard to propose their extermination, where are the hands by which the sanguinary decree could be executed?

It would be absurd to speak of factories as mere abstractions, and consider them apart from the manufacturing population. That population is a stern reality, and cannot be neglected with impunity. As a stranger passes through the masses of human beings which have been accumulated round the mills and print-works in Manchester and the neighbouring towns, he cannot contemplate these "crowded hives" without feelings of anxiety and apprehension almost amounting to dismay. The population, like the system to which it belongs, is new; but it is hourly increasing in breadth and strength. It is an aggregate of masses, our conceptions of which clothe themselves in terms that express something portentous and fearful. We speak not of them, indeed, as of sudden convulsions, tempestuous seas, or furious hurricanes, but as of the slow rising and gradual swelling of an ocean, which must, at some future and no distant time, bear all the elements of society aloft upon its

AGRICULTURE.

WAGES REDUCED TO MAKE UP RENTS.

In a letter written to Mr. Villiers, by an Oxfordshire agriculturist, published in the last number of this paper, giving an account of the state of the public mind in that county respecting the repeal of the Corn Laws, these remarkable passages occur. The writer says:—"The tenant-farmers, I verily believe, would be glad of the repeal of all Corn Laws, if the reduction of rent came with that repeal; but they are thumbed by the landlords, and dare not openly give in their adhesion to doctrines which, as I know, are approved by the majority of them." And he adds:—"The landlords, and the landlords only, stand in the gap between the people and cheap bread." And further on he says:—"As for the farm-labourers, they are with you to a man. The more sagacious of them know that if those laws be repealed—if rents fall so as to allow the British grain-grower to compete with the foreigner, labour would be more in demand, and at higher wages too; because then the farmer could afford to pay them, and it would be his interest to get every ear of corn from the land which he could get without impoverishing it." What a chapter in the history of the Corn Laws do these passages point at; and it shall be our business, by a few practical illustrations, to develop more completely the way in which, by the operation of the Corn Laws, the landlord's rent is made to sweep away the funds properly destined for payment of the labourers. Nor have we far to go for a striking illustrative instance. Our readers will recollect the statement made by Mr. C. H. Lattimore (which was published in our last week's number) of the amount of his annual expenditure in farm-labour, in answer to an attack made upon him by the monopolist local paper. From that statement it appears that upon 646 acres of land, certainly not worth more upon an average than about 22s. an acre,—and worth that only by reason of his high cultivation—he expends yearly in labour the sum of £1351, or very nearly two rents. It is by such means that this gentleman has brought his land into a state of productiveness unequalled in the neighbourhood; and whilst he has diffused great benefits amongst the farm-labourers, he has farmed with advantage to himself. Now, in order to see what is the ordinary proportion which in the county of Herts the labour-fund should bear to the rent, we referred to the speech made by Mr. Edward Roberts, of King's-Walden, in that county, who, at the "Protection meeting" at St. Alban's, when moving a Pro-Corn-Law resolution, said "three rents ought to be made from land, viz., one for the landlord, one for the labourers, and one for the tenant." But, in fact, not one-third of the farmers throughout England annually expend so large a sum in labour as the amount of their rent. If they did so, the distress which has lately occurred in the rural districts could not have existed; and if, like Mr. Lattimore, farmers in general were to expend two rents in labour, we entirely agree with the farmers who have verified his statement that—"there would not be a sufficient number of labourers in the locality." In general farmers employ much less labour than it would be for their interest to employ. This, however, is not the fault of the farmers, for they are fully aware of the advantages which would accrue to themselves by the employment of more labourers; but they are the victims of a vicious artificial system which is based upon the Corn Laws.

The following considerations will make that fact perfectly obvious. Under the actual state of husbandry, which for thirty years past has been "protected" to the uttermost, the average produce of wheat is about 24 bushels to the acre; and it has been loudly proclaimed by the protectionists that it is only when farmers can obtain the act-of-Parliament price—now fixed at 56s. a quarter—they are able to make the three rents deemed requisite for their own remuneration and for the employment of the labourers. But let us ask any man practically acquainted with the present state of the English tenant-farmers, whether in two cases out of three nearer one-half than one-third of their whole saleable produce has not for the last ten years, upon an average, gone to their landlords as rent? That such is the case whenever the market price of corn falls below the act-of-Parliament price, is admitted on all hands.

Now, about 24 bushels of wheat per acre may be grown upon most of the tillage farms in England with very moderate capital, perhaps seldom exceeding £5 per acre, and by a system which requires no great supply of manual labour. Little skill or enterprise is requisite for such farming; the class of farmers willing to engage in husbandry with such appliances is a numerous one, and their competition with each other induces them to engage to pay a rent which often requires a full half of their whole saleable produce. Here we find the rent absorbs nearly the whole of the fund out of which the labourers should have been paid.

But even in the instances in which the farmers do actually expend in labour sums equal to their rents,

which certainly do not exceed one-third of the English farmers, they cannot thereby farm in the most profitable way. Instead of three rents the farmers ought to make five, of which the landlord should receive one, two should be expended in labour, and two should form the farmer's remuneration; and such was, in fact, the old-fashioned calculation, before artificially-enhanced prices and yearly holdings had converted the farmer into a condition little better than that of a mere bailiff to the landlord; a servant with a farmer's risks without the certainty of receiving even a bailiff's wages.

Now, according to the showing of the monopolists, the farmers ought to sell produce to the amount of three rents, and one of such rents ought to be applied in payment of wages and labour. But as in truth not more than one farmer in three does sell produce sufficient to amount to three rents; and, as the rent is a fixed sum which must be paid at all events, the difference between the actual and the estimated money-produce must fall upon the farmers and the labourers; and as the latter form the most helpless of the two classes, they always bear the brunt of the miscalculation.

Whenever prices fall,—and under the artificial system created by the Corn Laws they always tend to fall much below the rates upon which rents have been estimated,—whenever crops fail, whenever losses of cattle and live stock are sustained, the expected three rents cannot be received by the farmer from the sale of his produce. Who then suffers? Not the landlord; for if the farm has produced only enough to pay one rent the whole must go to him, even if the farmer himself and his family shall be compelled to take refuge in the workhouse the next day. The law of distress has provided for that. The obligation to pay rent remains as immutable as the law of the Medes and Persians; or at most petty abatements of five, ten, or fifteen per cent. are made, and even these are so remarkable as to form material for eulogistic paragraphs in the local newspapers. The deficiency must, therefore, come out of the capital of the farmer and the bellies of the agricultural labourers. The former, perhaps, becomes insolvent, but the latter are literally starved. Yet the landlord rides secure amidst the turmoil and misery which surround him, and which are in fact of his making, and loudly calls upon his struggling tenantry to support him in maintaining a law to keep up rents!! All this has been completely exemplified during the present season, when in many districts the whole of the crops have failed, and the distress among the labourers in husbandry has been most appalling, while not a few farmers have been obliged to succumb under their burdens; but does any one imagine the rents will not be paid?

Possibly, in some instances, there may not have been enough grown upon the land to pay the rent, especially where there may be a year's rent due; but the farmer's stock, his implements, his household goods, all, all may be sacrificed at the hammer, to make up the rent.

And let us take the one-third of the tenant-farmers who are believed in ordinary seasons to make three rents, and to employ one of those rents in disbursements for labour, how are they and their labourers affected by the restrictive system?

They are yearly tenants; they are at the beck and call of the landlord and his steward on all political occasions; they are overridden by game, and are under the thumb of the gamekeeper; their rents are calculated upon a scale of prices considerably higher than they actually obtain upon an average of years; they are bound to obsolete customs, and inferior methods of cultivation, unable to grub up a hedgerow or remove a stick of timber, while their proved loss from hedgerows and timber-trees is often from 5s. to 8s. an acre in each year; and lastly, though men of some capital, they often want, perhaps, an additional £1000 or £1500, to give them complete command over their business, and enable them to turn it to the best advantage. Here, as in the case of the poorer farmers, all accidental losses, whether from falling prices, failing crops, or any other cause, must eventually light upon the labourers, for the rent is a fixed point, and, though for a brief period the farmer may go on paying rent out of his capital, that instantly tells upon the labourer.

These are the men who, amongst the farmers, are the great sticklers for protection, because they have engaged to pay rents calculated upon a scale of prices promised by the Corn Laws, and they know that, with their actual system of culture and their present average crops, they cannot pay their present rents and make a living, should the prices become permanently reduced some fifteen or twenty per cent. lower than the act-of-Parliament scale.

Mr. Robert Baker, of Writtle, in Essex, on whose published statement we commented last week, seems to be an average example of this class. They are most of them men capable of better things, and, if relieved from the shackles of "protection," would take their places in the front rank of British farmers. Let the corn trade be free, when wheat would probably range about 47s. a quarter, and we should

float them—heaven knows whither. There are mighty energies slumbering in those masses. Had our ancestors witnessed the assemblage of such a multitude as is poured forth every evening from the mills of Union-street, magistrates would have assembled, special constables would have been sworn, the riot act read, the military called out, and most probably some fatal collision would have taken place. The crowd now scarcely attracts the notice of a passing policeman, but it is, nevertheless, a crowd, and therefore susceptible of the passions which may animate a multitude.

The legislation for the factories has been conducted too much in a spirit of class-jealousy; the lawgivers have made the factory population, both masters and men, an exceptional case, and established between them an authorized interference which would not be endured in any other branch of British industry. The worst result of such interference is, that it leads men to look to the Government for that which they can only acquire by and through themselves. In all the movements in which the operatives have been induced to take a part, their object has been an increase of wages; in strikes this is directly avowed; but even in such agitations as those raised to put an end to juvenile labour, and to restrict the hours of work, the real purpose of the operatives who joined in both demands was to obtain a higher rate of payment for their day's work. The example of Lowell shows that well-paid operatives in factory employment are capable of the highest moral and intellectual attainment; and we quite agree with the operatives, that the increase of their physical comforts is essential to their social advancement. But greater wages are to be obtained only by greater amount of employment, and an increase of employment can only come from an increase of trade. It is because commerce is restricted that industry is insufficiently remunerated; and it is the insufficient remuneration of industry that has prevented the operatives of Lancashire from assuming so high a position in the intellectual world as their brethren and sisters in the United States.

VITALITY OF SEED.—Flowers are made the type of what is fading: but the moralist does not look deep enough—the seed of the flower is for ever reproduced, and, as we so often see, retains its vitality for ages. A pea taken from a vase found in an Egyptian sarcophagus, and supposed to be 2844 years old, has germinated in the garden of Mr. Grimstone at Highgate, and there are now nineteen pods on it. The flower of the pea was white, but of a peculiar form. So, if these nineteen pods were cooked, the Englishman of the nineteenth century would eat with his lamb peas one generation later than the peas that fed the Egyptian in the days of hieroglyphics!—*Spectator*.

EFFECTS OF THE GAME LAWS.—It appears by a Parliamentary return, ordered on the motion of Mr. Bright, that no less than 4529 persons were convicted in England and Wales, during the year 1843, of offences against the Game Laws! No doubt, a much greater number were tried. It is a serious question for the moralist and the patriot, whether laws which make it criminal to take wild animals, and thereby consign thousands every year to the contamination of a prison, ought not to be entirely abolished.—*Leeds Mercury*.

THE GAME LAWS OF GERMANY.—In the journal of a traveller in Germany, published in the *Dublin Evening Post*, the well-informed writer thus speaks of the Game Laws of Germany, as they existed before the French Revolution:—"Of all the grievances, however, of which the German people complained, the Game Laws were the most afflicting and oppressive. Taxation might be, and, I dare say, was burdensome, considering the number and the poverty of the German princes; tithes may have been onerous, though I do not recollect having read any complaints on this score; and the rents, in some cases, may have been imposed and exacted in the fashion of Mr. Shee, of Kilkenny; but the crying, the general, the monster grievance, which, like the rod of the Hebrew priest, appears to have swallowed up all minor plagues, was the Game Code of Germany. The people were necessarily discontented, but they had no one to advise or direct them. They had no leader—no press—no public courts of justice. They were left to the tender mercies of the gamekeepers, and to the laws, if such they may be called, of the Manor or Baronial Courts. In a word, they were the helpless victims of their lords and masters—not the Russian serf at Tamboff or Moscow more so. The French Revolution excited these people, as it did every other in Europe, and although many a hard battle was fought between French Flanders and the Rhine, it is a fact, which may not be disputed, that the Republicans were welcomed as deliverers by the Germans. They had not, nor could they have any, loyalty to their princes—these they knew only as collectors of taxes and conscripts—they hated their landlords as the most odious oppressors—and, after a hot and protracted struggle, their country—to the entire satisfaction of the mass of the people—became, not fiefdoms of France, but a portion of the French empire. They changed masters, and though there were heavy contributions levied, and severe conscriptions made, by the Republicans as well as by the Imperialists, subsequently, yet the lot was common. France herself suffered as much as the Rhenish Provinces, and the latter, perhaps, less than under their old lords. But the change began by the Republicans was an immediate blessing—one that could be felt and enjoyed forthwith. The Game Laws were repealed—feudal services were abolished—there was a mad equality proclaimed, which, doubtless, from its suddenness here, as was the case in France, produced, at first, much calamity, and was the parent of many crimes. But the small clamours proceeding from these sources were speedily lost by the movement of great masses of men, and in the thunder of mighty battles.

and these farmers entering into reasonable calculations, and insisting either upon large reductions of rent or upon long and rational leases. In ninety-nine cases out of every hundred the landlords would—indeed, must—prefer the alternative of granting leases. Then agriculture would assume a new aspect. The farmer, with a term certain of twenty-one years before him—and no shorter term is worth a farmer's acceptance—at a definite rent, from which he would have no right, at any time or under any circumstances, to expect an abatement, would exert all his skill and energy to increase his produce, which he might then safely do without the risk of having his rent raised at a month's notice. To increase his produce he must employ more labour, he would expend additional capital,—and his lease would form an ample security for any reasonable addition he might require to borrow,—and, instead of three rents, he would certainly not be satisfied with less than four, or probably five. Of these the landlord would have his one stipulated rent, while a sum equal to two rents would be expended in labour, and the remaining two would do no more than form a reasonable remuneration for the skill and the industry and the capital of the farmer. Let any monopolist who can judge rationally of the events which are passing around him, and of the actual circumstances of agriculture, deny that this would be the practical operation of a free trade in corn; and let our readers contrast the present state of agricultural distress and uncertainty with the more happy state of things which would result from untrammelling husbandry. Above all, let him observe narrowly how the Corn Laws, passed to keep up the rent of the landlord and to retain the tenant-farmer in a state of vassalage, rob the agricultural labourer of both his fair day's work and his fair day's wages.

GAME-PRESERVING versus FARMING!

Every day brings forth fresh evidence of the injury inflicted upon farmers by game, and of the enormous deterioration of husbandry which is caused in this country through game-preserving. The correspondent of the *Morning Chronicle*, writing from Norfolk and Suffolk, remarks on the slovenly practice which prevails in those counties of "leaving from twelve to fifteen inches of straw on the ground when reaping," and which he thus explains:—

"Another reason, and a very common one, for leaving such a length of stubble, at so great a loss to the straw yard, as is commonly left here, is, that the farmer is bound, under penalties, so to do for the protection of the game. Two or three weeks ago I had occasion to allude to an estate on the borders of Suffolk and Essex. It was mentioned as that of a 'noble lord,' and I stated, on the authority of some of the tenants, that though they had leases, and though the land was moderately rented, the leases were so full of stringent covenants that they could not use any enterprise or capital in cultivating in a new style. The leases were said to be like 'gridirons,' and I remarked at the time that those tenants were bound, though not intentionally by the noble lord, yet in reality by the practical operation of his covenants, not to advance in agricultural science one step during the whole duration of the lease.

"I find the same nobleman has an estate in Norfolk; and here I perceive the tenants are bound by their leases not to mow their corn crops—not because mowing despoils much grain, and, by the subsequent rakings which it renders necessary, spoils all the grain to some extent with earth and flints—spoils the bread and the health of the eaters of bread too, because these minute flints are ground with the wheat; the nobleman in question does not forbid, on pain of heavy fines, the use of the scythe in mowing the corn crops for any such reasons. On pain of heavy fines he forbids the use of the scythe or any other instrument which cuts lower than twelve inches—any instrument or style of reaping which does not leave a sufficient length of straw to shelter the game."

And this "nobleman" is no other than the newly-made aristocrat and monopolist Lord Ashburton, whilom Alexander Baring a Free-Trader!!!

But game-preserving is the rule in Norfolk, for

"His neighbour, Sir Holyoake Goodricke, has his estates overrun with game in like manner. But, in truth, all Norfolk and Suffolk, with but limited exceptions, are swarming with game. And more, the farmers are grumbling like a distant volcano; and beyond all question they have a right to grumble."

And the Norfolk farmers seem to have had the sense to look in the right direction for "protection to British agriculture," inasmuch as—

"A few months ago there was an attempt made in a district of country not far from Norwich, to get up a society for the protection of agriculture; in other words, a society for the maintenance of the Corn Laws. It did not succeed. The farmers said, so long as they could not get protection from evils which actually, palpably, and notoriously oppressed them and vexed them, and kept them poor—the swarms of game—there was no need for them wasting their energies, their time, and their money in defending themselves from the imaginary, and, at most, prospective evils of Free Trade."

And landowning monopolists will find that their protection societies will afford the farmers an opportunity of comparing notes, and bring some of their grievances before the public. But it seems game-preserving is profitable, for—

"There are many preservers of game in Norfolk who do not preserve it for their own sport. Many of them take a rent for it from sportsmen. They thus get a rent for their land; and, after the game has been fed by the farmer, THEY GET ANOTHER RENT FOR THE GAME."

Moreover it is fashionable; thus we find,

"There is a lady, not far from Norwich, a great preserver of game. She does so simply because it is fashionable and aristocratic to do so. One of her tenants having complained of the destruction done to his crops, the lady was so indignant that he should have dared to complain, that she ordered all the tops of his ditches and sides of his fields to be sown with furze, for the better protection of the game. He might, of course, leave his farm, but would leave the bread of his family also if he did so."

Now, farmers are only induced to submit to these things from the intense competition for farms, which is the consequence of the restrictive system. The reporter, referring to this point, says:—

"And when any grievance is felt by the farmers, as in the

case of game, they are afraid to speak of it—they endure it in silence. A farm of 500 acres was to let this year in this part of the country, and 85 different persons made offers for it!"

The following account of an incident relative to game is only to be equalled by the stories we hear of the capricious despotism exercised by the absolute tyrants of the East. Yet we could adduce hundreds of instances of the same kind, which would show that the picture is not overcharged:—

"There is a farm a few miles westward where I have been, which is dreadfully overrun with game. On ten acres of barley there is not one-third of a crop left. On another piece of twenty acres the crop is injured, at the least, to two coombs an acre (one quarter); so is the wheat, and so will the turnips be before winter is over. Last winter the turnips were very much injured, and the tenant mustered courage enough to go to his landlord to complain. The landlord listened to the end of the statement, and then replied:—

"If your crops are so much injured as you say, you must go to Mr. G— and complain. You know his property is close beside you, and the hares are his hares, not mine; you must go to Mr. G—, and get damages from him."

"Accordingly, the tenant set off one morning to catch Mr. G— at breakfast before he went out. He sent in his name and asked the favour of an interview. It was granted. And, on his entrance, Mr. G— said, 'Well, Mr. So-and-So, what do you want with me?'

"Why, Sir, I have come over to speak to you about the hares; they have ate up half my turnips, or, which is as bad, have bit them so that the frost has spoiled them. And they destroyed a great deal of my barley, and wheat, and clover, and everything this year; I am really almost eaten up with them."

"But, my good friend," replied Mr. G—, 'why not go to your landlord. He preserves the game, and it is he who should recompense you?'

"But, Sir," said the farmer, 'I have been to him, and he sent me to you; he says they are your hares.'

"Does he say so? Then, if they are my hares, I tell you what to do; go and kill every one of them, and sell them, or eat them, or give them to any body you like. Never let one of my hares live a day on your farm if you can kill it."

"Hearing this, the farmer went home, and, though he had some slight misgivings, he called to mind that his landlord said they were Mr. G—'s hares, and that Mr. G— said if they were he might kill them. He tried the experiment; but he had hardly begun, when his landlord's gamekeeper interfered. Next day the landlord sent to him to say that if he had forgotten that on taking the farm he had covenanted to preserve the game, not to destroy it, he had probably forgotten that he was a tenant at all. If so, he had better prepare to leave the farm."

"The unhappy farmer was glad to apologise, let the hares alone, and hold his tongue. He is eaten up this year as he was last, and expects to have a greater struggle to pay his rent; for though corn is scarce on his farm, partly through the drought and partly through the game, it is plentiful in the country at large, and prices will be moderate. He knows that, by hook or by crook, he must pay the rent. If he did not he must leave the farm; and if he left it, from fifty to a hundred persons would be competing for it; while he would have to compete for another at the same rate."

It will, therefore, not surprise the reader to find that "the game question is at present exciting a warm interest in the eastern counties." Now, there is no hope, no chance of emancipation for the tenant-farmer from this state of vassalage, but in a free trade in corn, which would compel the landowners to choose whether they will have game or rent. It is certain that but for the Corn Law, its frauds, and its delusions, they could not have both. There is no man who has such a direct and immediate interest in abolishing the Corn Laws as the tenant-farmer. The Game Law, for instance, amongst other oppressions he endures, is entirely dependent upon the semi-feudalism which monopoly upholds.

FREE TRADE FROM A FARMER.

To those who, like ourselves, have noted from week to week the state of opinion amongst the farmers upon the question of Free Trade, nothing is more remarkable than the constant increase of clear and defined knowledge of the subject which has been gathering during the last twelve months. Last autumn doubt and confusion were the feelings most commonly expressed by farmers in relation to the foreign trade in corn; now there is not a district without its knot of first-rate farmers who wisely repudiate protection, and denounce the delusive system by which the industrious tenant-farmer has been robbed for the past thirty years. Amongst the latest instances of the progress of the best agriculturists in sound views, is an excellent letter from an "Oxfordshire Farmer," which has appeared in the *Banbury Guardian*, a few extracts from which we shall be able to take.

This intelligent agriculturist begins by telling his fellow-husbandmen that they must discard all the absurd notions which prevail at protection meetings about the "wicked machinations" of the League; and asks them how the statement so obtrusively urged by the protectionists, "That of the whole annual value of manufactured goods, about three-fourths are sold at home, and only one-fourth to foreigners," is reconcileable with the supposition that the manufacturing capitalists who support the League "would go about wilfully to destroy their best market?" He urges them to throw aside all such passionate nonsense as the monopolists would have them believe, "and to make the question a simple matter of opinion." He then says:—

"The first and chief objection I have to notice is, that 'by repeal much land would be thrown out of cultivation, farmers would be ruined, and labourers unemployed.' Now, as to the first of these alleged evils resulting from repeal, it will be readily admitted, as a matter of course, that this will rest entirely at the option of the proprietor, who might cultivate his land if he thought fit, or could let it to others, but will refuse to do so only when the expense of cultivation shall exceed the value of the produce; and when is such a contingency likely to occur?"

And he proceeds to show that, even if the proprietors of the land were so absurd (which, however, it is clear their mortgagees would permit), there would be plenty of people ready to take up the cultivation of the worst land in the country for their own subsistence. But in truth the pretence that any land will be thrown out of cultivation by Free Trade is a pure fiction, which deserves only about the same amount of serious refutation as would be due to the story of "Jack the Giant-killer," or the "Forty Thieves."

The "Oxfordshire Farmer" then says:—

"But I do not anticipate such a state of things as the result of a free trade in corn. It is not my wish to deal largely in statistics, but I believe that, according to the opinions or rather information acquired by persons competent to judge in this matter, foreign wheat cannot be imported into this country at a profit, after paying all necessary expenses, under some £10 or £11 per load; of course I do not pledge myself to accuracy in this statement, but merely observe that authentic

sources of information are open to all who wish to be informed upon the subject. Whatever may be the price, one thing is clear: that an increased demand upon foreign sources for corn, through the abolition of the present duty, will tend to increase the price abroad, so that, unless they grow more than they do at present, they can no longer afford to sell it at the present rate. But, you will say, 'they will bring fresh land under the plough, of which they possess abundance.' True; but this cannot be done unless more capital and labour be called into action, and unless they have a superabundance of other employment, which is hardly to be supposed, this can only take place by withdrawing them from other profitable sources of employment; perhaps from their own manufactures, in which case the advantage to our trade is obvious. Besides, we may reasonably suppose that the whole of the corn now destined for English consumption is grown upon land the most favourable, in point of situation, for transit, &c., and consequently every additional quarter of corn for our market will be produced under more unfavourable circumstances, and, of course, will cost more in coming to market. In a word, the idea that land, in an advanced state of cultivation, lying in the midst of a great consuming population, possessing every advantage in the economy of cultivation which long experience and scientific skill have hitherto suggested, with other advantages, is unable in the disposal of its produce to compete with land far distant, as yet uncultivated, comparatively deprived of those means of communication and carriage, without which the most fertile land is almost valueless; and, above all, destitute in a great measure of capital and labour which are indispensable to its profitable cultivation, is one which I should have supposed could never have existed for a moment in the minds of reasonable men, did I not know, from experience, that long habits tends to reconcile us to many absurdities both in our modes of thinking and acting."

This is true, and nothing but the habit of walking hoodwinked at the bidding of the squires could have induced farmers to believe the many absurdities which make up the protectionist's political creed. The writer then deals with the alleged exclusive burdens on land, and says, if such exist, the right way is to equalize them with the burdens of other interests. He then proceeds:—

"This brings me to the consideration of the second objection you make to repeal: 'that it would ruin the farmer.'

"Now, gentlemen, you must be well aware, upon a little consideration, that these exclusive burdens, if such there be, bear upon landed proprietors and not upon occupiers, because, as you well know, every prudent man, in taking land, settles in his mind what rent he can afford to give after deducting the whole outgoings in the shape of taxes or other expenses, and therefore, if at all, they must be felt in the rent. But, I ask you, what has protection done for you hitherto? During some thirty years of continued protection, you have been ever and anon complaining of distress. You have not thriven under protection. Other classes have advanced without it, and you are confessedly in a worse condition than your neighbours. How is this? You have placed your trust in laws which have deceived you; you have paid, and continue to pay high rents, in expectation of prices which no law can establish. Who, then, has profited by the Corn Law? Landlords have obtained high rents and farmers niggardly profits. He assured that the profits of farming will never permanently rise above those of other trades or professions, because the farmer is simply a capitalist, and competition will not fail to reduce his profits to a level with others in the market, be protection what it may. Your prosperity as tenant-farmers, then, would seem to depend not upon Corn Laws, but upon the demand for capital in the market: when that demand is great by means of a thriving trade, the interest of money will rise, and capital, instead of pressing heavily upon agriculture for employment, will find other modes of investment, and thus the pressure of competition upon farmers will be partly removed; when, on the contrary, trade declines, the ordinary outlets of capital are shut up, the rate of interest is lowered, the price of funds rises on account of the greater security of that mode of investment, and the competition for land is greatly increased, thus accounting for the fact, strange indeed, but too well-known to farmers of late, that, in cases where tenants are leaving their farms from inability to pay their present rents, some ten and twenty competitors are commonly found to bid an equal or perhaps increased amount of rent for the same. Landlords, on the other hand, are not injured by these circumstances, but rather, perhaps, benefit by them, since increased competition for land, of course, tends to increase their rents, and lower prices of commodities enable them to live more cheaply. So much for the indignant denial, on the part of landlords, of the assertion that the Corn-Law question is one of rent, and so much for their own assumption that landlord's and tenant's interests are identical."

We know that farmers now, pretty generally, understand that the Pro-Corn-Law outcry is simply a question of rent! He then adds:—

"It remains now to consider the other evil alleged to be the effect of repeal: injury to the labourer."

And he shows that it is most necessary to raise rather than lower the standard of comfort, education, and morality amongst the class of agricultural labourers, and that for that purpose steady employment, at fair wages, is requisite, and—

"The question is: will the labouring class obtain better wages and employment by repeal of these laws than they now do? for it is evident that the advantages of education above noticed depend in a great degree upon this circumstance. Now, what is their condition at present? I have lived among the rural population during the whole of my life, and, so far as my observation extends, can assert, without fear of contradiction, that labourers with families have difficulty enough to obtain a sufficiency of the necessities of life when in full employment, and that the unmarried labourer, who alone has it in his power to save money, has discovered a most satisfactory way of disposing of his earnings in the beer-shop. This state of things I believe to be attributable, in a great measure, to that most impolitic of laws, especially in its mode of application, the old poor law; but, whatever be the cause, no one can fail to perceive the probable failure of any liberal system of education attempted under such circumstances. The question then is: what difference in this respect may be expected to result from repeal of the Corn Laws? My proposition is, that we should greatly increase the trade of the country."

And the very necessity for improved agriculture, which must result from moderate prices, would give direct and immediate employment to the agricultural population to an extent people not practically acquainted with rural affairs have little idea of.

THE FOREIGN CORN TRADE.

The farmers and dealers in corn are gradually becoming convinced of the fact, broadly stated by Mr. Huskisson nearly twenty years ago, that "monopoly is not at all times profitable." Thus we find in an agricultural paper the following statement respecting the state of the corn market some eight or ten days since, which shows how certainly the restrictive system entails loss upon all connected with the trade in grain:—

"The foreign importations of all grain for some time past have had a powerful effect upon prices, as duties have been paid to an extent that never could have been anticipated. Notwithstanding the heavy losses that must affect various parties from standing the heavy losses that must affect various parties from the great depreciation in value, large cargoes of wheat, barley, and oats continue to press upon the market, and are in consequence sold at a very considerable sacrifice. The quantity of English wheat, even up to the present period, contained such

lower than there was reason to expect; and, as many of the farmers have themselves been importers of foreign, they do not possess much disposition to purchase under present circumstances. The importation also being with many that something like the quarter will be the maximum price for good wheat before long, entirely damps the ardour of buyers, and renders trade generally as dull as it well can be."

Here we find those who have made speculative importations of corn have sustained "heavy losses," while the market price of English wheat is expected to fall to 45s. a quarter "before long." And with a fortnight of fine weather, so that the present crops of wheat can be well housed, we have no doubt that expectation will be realized. Here we find the farmer, whose landlord and whose landlord's law have promised him 56s. a quarter, in a fair way to receive some 11s. a quarter less than that sum as his "maximum" price. Now, what injury would a free-trade in corn do him? On turning to the "latest intelligence" of last Monday's *Mark-lane Express*, we find that at Amsterdam, where the trade in corn is open, "old coloured Polish wheat was last week at about 46s. 6d. a quarter;" and the London average price was 48s. 4d. per quarter. It is quite plain that about 46s. a quarter is the present natural price of wheat in the open European market, and that the British market price (there being the prospect of a productive harvest) varies from the natural price in a very minute degree. The consumers are thus, for a moment, exempted from the operation of the Corn Law, as, through the accident of a fine wheat season, they will obtain bread and corn at prices not very wide of the prices which might be expected to rule under an unrestricted trade.

But how stands the case with the farmer? He calculated on receiving 56s. a quarter, and has entered into engagements upon that footing. How do his monopolist "protectors" propose to make good the difference to him? They merely leave him to his fate. The farmer, therefore, must sustain a loss upon his wheat crop, in consequence of the Corn Laws, while his beans, peas, and oats having failed him, he must maintain his live stock, if he can avoid the necessity of selling them to pay his rent, at an actual loss, because the Corn Laws prevent him from importing cheap foreign grain for cattle food. On this topic see what a correspondent of the *Mark-lane Express*—and one, too, who abuses, though evidently without understanding the objects of, the League—says:—

"I maintain that the seasons and the elements speak to us in language strong, and not to be misunderstood, that we should not henceforth trust in the precarious and expensive turnip crop for a winter supply of food for stock, but that we should, to aid it, have free access to foreign markets for the more common productions, such as corn of all descriptions, by which our stock here would be infinitely increased in quantity and quality, and our land improved in condition; this improved condition counterbalancing the depression of price which might occur from a free trade in corn."

And then, after proposing, in terms not remarkably intelligible, to place "equal protective duties on all the productions of the land, except corn and wool," meaning, we suppose, on meat and cattle, which experience has shown to run no risk of depreciation from foreign competition, and after roundly and ignorantly abusing the League, he says:—

"The operation of the Corn Laws has been like that of a two-edged sword, wounding the two great interests of the state with equal severity, the commercial and the agricultural; by the reduction of the tariff duties, Sir Robert Peel blunted that edge of the sword which cut the commercial, whilst it gave a keener power to that side which wounded the agricultural interest; yet on Mr. Villiers's motion on the Corn Laws, and the debate that ensued, Sir Robert exclaimed, 'I have protected agriculture so far, and to that extent I will abide,' that is, so far as the sliding scale goes. Brother farmers, I ask you, where do you find evidences of the protection of which Sir Robert boasts? Do you find them in your pockets?—in the deteriorating condition of your farms, for which you are so ignorantly and incessantly upbraided, and which you well know is not your fault, but your misfortune, not in accordance with your will, but the inevitable result of the system of Government regarding your affairs, which you cannot help?"

Now, this does not impress one with the clearness of the writer's views, but it is plain that he has got a glimpse of the truth, that so far from a free trade in corn injuring the farmer, that it will be of at least as much benefit to him as it will be to the other classes of the community; and let every farmer try to look into the condition of his own business, and try to answer the following questions of this writer:—

"Where, then, do we find the fruits of this 'protection' boasted of in Parliament? Echo only answers, 'WHERE?' Have we not then been misled by a 'Will-o'-the-Wisp,' and fixed in a quagmire to our very chins?"

What if the "Central Protection Society" should employ some of its superabundant leisure in resolving the doubts of this writer. They may be assured that these doubts and difficulties prevail extensively amongst farmers, upon whom the protectionist squires reckon as their bounden thralls. Then mark how trade has revived with the return of moderate prices of food, and yet how its fate stands trembling upon the changes and chances of the prospects of the harvest. Again we refer to the *Mark-lane Express*, and we find

"The state of trade in all the ports of England, Scotland, and Ireland, is most satisfactory. The river Thames is literally crowded with merchant vessels, British and foreign. At Liverpool, Goolie, Hull, &c., the docks are crowded. It is worth notice that in the last week guano, worth £59,000 to £60,000, was imported into Liverpool alone. At Hull, remarks a contemporary, 'the state of trade in the river reminds the inhabitants of olden times'; it is literally crowded with vessels, inasmuch that people can cross it by passing from one sloop to another. At the same time the docks are excessively crowded, and many vessels are lying out in the roads. The greatest activity prevails at all the quays and wharfs. The Custom-house receipts of Dublin have largely increased this year. The wool fairs in all parts of the country that have lately been held are reported to have been well attended, and the fleeces bought at higher prices. A remarkable degree of animation prevails in all the trading manufacturing districts. Upon this point the trade circulars that have reached the City are unanimous. The state of the weather has, however, been watched with much anxiety during the past week. A failure in the amount of the yield would, it is feared, tend materially to check the sales of goods for home consumption, which have recently been more satisfactory than for years past."

And again the same authority says:—

"The extreme fineness of the weather that has prevailed for the last few days has had a most beneficial effect upon the wholesale and retail trades of the metropolis. 'Goods to use the language of a partner of a large city firm' have moved off like lightning; and, with a full harvest, most certainly there will be a large and beneficial 'fall' trade done."

And these anticipations of a beneficial autumn trade are

entirely founded upon the prospect of a moderate price of corn. That it cannot arise from the flourishing state of agriculture is clear, for seldom has there been such a general depression amongst farmers, and never within living memory have the agricultural labourers been in such a state of penury and destitution. Rents must this year be, in a great measure, paid out of the farmers' capitals; and it is certain that the consumptive demand of farmers and farm-labourers must, for the ensuing year, be considerably below an average. The hopeful prospects of the "home trade" then do not arise from agricultural prosperity, or the operation of the Corn Laws, for nature's bounties have suspended the Corn Laws in favour of the consumers of bread; and the agricultural classes, in spite of their alleged "protection," are in a state of grievous distress. We believe, by next Christmas, not a few farmers will discover and proclaim, that the Corn Law is indeed "a two-edged sword, wounding the two great interests of the state, the commercial and the agricultural, with equal severity"!!!

DRUNKENNESS.—Returns moved for by Mr. Hume show that the maximum amount of persons taken into custody for drunkenness, by the metropolitan police, is to be found in the years 1831, 1832, and 1833, and the minimum in 1843. In 1831 they were, males and females, 31,353; 1832, 32,636; 1833, 29,880. In 1843 the number of persons taken into custody for drunkenness fell to 10,890, which, taking the census of 1841, say 2,068,107, was in the proportion of little more than $\frac{1}{200}$ in every 100. In the city of London also the same gratifying result is shown. In 1840 the numbers were 5113. In 1843 the numbers were 2595, which, taking the official estimated population at 125,273, was in the ratio of 24 to every 100.

GABOON.—Reference was made in the House of Commons last week to the proceedings of the French at Gaboon, on the coast of Africa; and Sir Robert Peel spoke slightly of the complaints made by British merchants. The facts appear to be these:—For upwards of a century British subjects have had factories there, and for upwards of thirty years the place has been considered a British possession; its ebony, beeswax, and tortoiseshell being admitted by our customs at the differential duties allowed to such articles if imported from British colonies. The British flag has been hoisted there for many years, and it was still flying on the 5th of April last. In March arrived Baron Daurican in a French war-ship; and he tried to obtain King Glass's signature to a treaty of session, but his Majesty declined to relinquish his sovereignty. M. Amouroux, the master of a French merchant-ship, undertook to procure the required autograph. He landed with a bottle of rum, sought the monarch, and returned with the treaty signed. Next morning, being sober, Glass disavowed the treaty; and, backed by his chiefs and subjects, he has appealed for aid against French aggression.—*Spectator*.

THE FARMER'S TRUE FRIEND.—The practical agriculturist has much reason to be grateful to the League. Prior to the serious agitation of the Corn-Law question, farmers seem to have thought that they had done their best. Improvements in every other department of industry were ever and anon introduced; but in husbandry there was, generally speaking, a dead halt, and the idea appeared to prevail that all that man could do for the amelioration of the soil had been done already. The landlords were contented to pocket their rack-rents, and gave not a momentary consideration to the amount of toil and anxiety which it cost the tenants to raise them. Now, in consequence of the agitation of the League, dukes, lords, and squires are compelled to give their countenance to agricultural societies; lecturers are employed to demonstrate the importance of applying the principles of chemistry to bring out the capabilities of the soil; new manures are introduced; those formerly in use more skilfully turned to account, and a new era in agriculture seems to have commenced. Had the monopolists not been frightened and aroused out of their drowsiness by the efforts of the League, we should have heard nothing of these improvements, or at least little, for a long time to come. Even as things are, those farmers only can be materially benefited who have leases of considerable length. The tenants-at-will are as completely shut out from the opportunity of improvement as ever.—*Berwick Advertiser*.

PERFECTION OF ENGLISH LABOUR.—An American, landing in Liverpool, is at once struck with the amount of labour everywhere expended; the docks, and the public buildings, and the lofty and magnificent warehouses astonish him by the substantial and permanent character of their structure. The railways, likewise, with their deep excavations, their bridges of solid masonry, their splendid viaducts, their immense tunnels, extending in some cases more than two miles in length, and their depôts and station-houses covering acres of ground with their iron pillars, and their roofs, also of iron, exhibiting a sort of tracery or network of the strongest as well as the most beautiful description, indicate a most profuse expenditure of labour, and are evidently made to endure. He is still more overpowered with amazement when, coming to London, he passes up and down the river Thames, and contemplates the several great bridges, two of which are of iron and three of stone, spanning this great thoroughfare of commerce with their beautiful arches, and made as if, as far as human presumption can go, they would bid defiance to the decay and ravages of time. If to this he adds (as, indeed, how could he help doing it?) a visit to the Thames Tunnel—a secure, a dry, a brilliant, and even a gay passage under the bed of the stream, where the tides of the ocean daily roll their waves, and the mighty barks of commerce and war float in all their majesty and pride over his head, exhibiting the perfection of engineering, and a strength of construction and finish which leaves not a doubt of its security and endurance—he perceives an expense of labour which disclaims all the limited calculations of a young and comparatively poor country. He remarks a thoroughness of workmanship which is most admirable, and which indicates a boldness and bravery of enterprise, taking into its calculations not merely years but centuries to come. We have in America a common saying with respect to many things which we undertake, that "this will do for the present," which does not seem to me to be known in England; and we have a variety of cheap, insubstantial, slight-of-hand ways of doing many things, sometimes vulgarly denominated "make shifts to do," which we ascribe to what we call Yankee cleverness, of which certainly no signs are to be seen here.—*Colman's Agricultural Report*.

NOTIONS TO CORRESPONDENTS.

The reply to the question from a "Free-Trader" on the subject of vaccination is—No. The lines of "Barlissa" express a beautiful and pious sentiment, but they are not sufficiently correct. "Monopoly's Boon" is a gift that we respectfully decline. "T. M. Mackay" is informed that the accounts of the income and expenditure on Earl Ducie's farms have been published by Ridgway; the last report is up to July, 1843, and appears in a supplement to *Morton on Soils*. "The Spirit of 1815" is too fanciful for our columns. "G. W. Wallis's" letter is too long for insertion. An esteemed friend at Manchester directs attention to the following lines from Pope:—

"The time shall come when, free as seas or wind,
Unbounded Thames shall flow for all mankind,
Whole nations enter with each swelling tide,
And seas but join the regions they divide;
Earth's distant ends our glory shall behold,
And the new world launch forth to seek the old.
Then ships of uncouth form shall stem the tide,
And feather'd people crowd on every side;
And naked youths and painted chiefs admire
Our speech, our colour, and our strange attire.
O stretch thy reign, fair Peace! from shore to shore,
Till conquest cease, and slavery be no more;
Till the red Indians in their native groves
Reap their own fruits, and woo their sable loves;
Peru once more a race of kings behold,
And other Mexicos be roof'd with gold.
Exiled by thee from earth to deepest hell,
In brazen bonds, shall barbarous Discord dwell;
Gigantic Pride, pale Terror, gloomy Care,
And mad Ambition, shall all there retire;
There purple Vengeance, and there fierce Retires,
Her weapons blunted, and her furies flies;
There hated Envy her own snakes shall feel,
And Persecution mourn her broken wheel;
There Faction roar, Rebellion bite her chain,
And gasping Furies thirst for blood in vain."

The letter of "A Shropshire Farmer," and other communications, deferred.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order, to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the *LEAGUE* forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadaby, Newall's-buildings, Manchester; and the *LEAGUE* may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

POSTSCRIPT.

LONDON, Saturday Morning, August 24, 1844.

The harvest is rapidly advancing; and, notwithstanding the interruptions which some rainy days have given, we believe and trust that the result will be an abundant produce. Abundant, that is, as compared with average results and ordinary expectation; abundant, in the absolute sense, as a supply for the wants of the whole population, no British harvest can be. Our landowning lawmakers, in their warfare upon the importation of food, laid themselves under an implied obligation to furnish a sufficiency of food themselves, at a cost within the reach of the great mass of the people. That obligation they have never fulfilled. The pretence that they would do so has been often repeated. We had only, it was argued, to pay a monopoly price for a while, and cultivation would be so stimulated that all should be fed, and our independence of other countries be secured. To that consummation we are no nearer than at the beginning. It is one of the many Corn-Law promises by which producer and consumer have been alike cajoled. Indeed, were we to arrive at such a point, Corn-Law policy would require that it should be receded from, in order to obtain the profitable results for which such laws are enacted. To keep up high rents, through high prices, there must, in that event, be a restriction upon the growth of grain, or its wanton destruction afterwards.

Should this harvest, like that of two years ago, be thought worthy of an especial form of religious thanksgiving, we trust that the deviation from the established forms which was then made will not be repeated. We refer to the omission of "cheapness" as a reason for gratitude to Providence. The instance was a very gross one, of making sacred things bow to secular. But the cheapness will come whenever the plenty comes. Heaven send them both to such an extent as may prolong the activity of trade, and alleviate the still embittered sufferings of poverty!

Successions of very good harvests, or of very bad, alike tend, though in different ways, to bring on the termination of the monopolist system. It will be, we trust, by the former, which, though it must involve considerable suffering, yet does not induce the fearful wretchedness that the other never fails to inflict upon millions. Our present legislation has not only to apprehend the assaults of the League, it is in warfare with the course of nature. The physical constitution of things threatens it in one direction; as the moral tendencies of our being, the universal principles of justice and benevolence, denounce it in the other. It will pass away like one of those pestiferous anomalies, in even the temporary existence of which after ages believe with difficulty.

The present is necessarily a time of comparative quiescence. Nature and the farmer, giving and getting in the harvest, are working for the League. We accept their co-operation, and await our time for renewed exertion. Monopoly knows this, and vainly attempts to persuade itself that repose is death, instead of the revival of energy, and the precursor of success.

EPITOME OF NEWS.

FOREIGN.

ATTACK ON TANGIER.—The following are some of the particulars of the bombardment of Tangier, furnished in the official report to the French Minister of Marine:—It was on Tuesday, the 6th inst., about half-past eight o'clock in the morning, that the squadron under the orders of the Prince, at anchor under the walls of Tangier, opened its fire with shouts of "Long live the King." In one hour the fire of the place was extinguished, the batteries were dismantled, and the guns dismantled. On our side the loss was not considerable. Notwithstanding the difficulty of the ground, the squadron took its position in a most successful manner. The ship Suffren, commanded by the Prince, anchored in six fathoms and a half, with a rocky bottom, and the position nearest the enemy's batteries was that chosen by the admiral. The fire, which commenced at half-past eight, was not entirely discontinued until towards eleven o'clock. It continued during this time with order which did not exclude for one moment that steadiness and precision necessary for taking good aim. It was to the accuracy of the firing, as much as to the position chosen by the Prince, that the rapid success is to be attributed. The example given by the Suffren was followed by each of the ships of the squadron. Everywhere on this occasion did officers, seamen, and soldiers, rival each other in ardour and steadiness. The resistance was much more vigorous than was generally imagined; several guns on the ramparts did not cease their fire until they were destroyed by our shot. Mr. Hay arrived during the action in the Vesuvius, coming from Mogador. In the evening he waited on his Royal Highness the Prince de Joinville, who had an interview with him. The Spanish division, a British man-of-war and frigate, some Sardinian ships, as well as some Swedish and American ships, were present at this brilliant exploit.

Accounts which have been published in the *Times*, professing to be written by British officers who witnessed the attack, state that the town has not suffered so much damage as was thought at first. These accounts also speak in disparaging terms of the naval tactics exhibited by the French squadron on the occasion.

PARIS.—The *Constitutionnel* states, that active preparations were making in Paris for the intended journey of King Louis Philippe to England.

POLYTECHNIC SCHOOL.—In consequence of the continued refusal of the students to be examined by a gentleman to whose appointment they objected, and the disorder which has thence ensued, the school has been dissolved. The officers of the school are to preserve their titles and emoluments, and an ulterior ordinance is to regulate the reorganization of the school. This is spoken of as a bold step on the part of the Government, the school being dear to the affections of the Parisians.

The new Game-Law Bill, notwithstanding its severity, continues to be infringed. A man was recently apprehended in the Forest of Bondy in the act of placing snares. The same day another individual was taken up for firing at small birds on the Boulevard Mont Parnasse. A man was also discovered in the act of introducing into Paris three quails and two partridges. All these birds were sent to the Hotel Dieu to be given to the convalescent patients.

Speaking of the late meeting at Exeter-hall on the subject of Otabeite, the *Journal des Debats* says:—"The speeches will give an idea of the incredible intolerance to which the religious passions of a portion of the English people carry them. In reading these furious sallies against Papism and scarlet Babylon, we might imagine ourselves transported to another age. We doubt, however, whether the effect of these demonstrations will be such as is expected from them." Almost all the other Paris papers contain articles commenting on the meeting in a similar spirit.

PRICES OF WHEAT AND BREAD IN PARIS.—The highest price of white wheat of the first quality in Paris is 29 $\frac{1}{2}$ per 1 $\frac{1}{2}$ hectolitre, which is equivalent to 44s. 3d. per quarter; and the highest quotation of white wheat of the first quality in the London market being 56s. per quarter, it follows that wheat is 26 $\frac{1}{2}$ per cent. dearer in London than in Paris. The highest quotation of flour of the first quality in Paris is 40 $\frac{1}{2}$ 10c. per 100 kilogrammes, which is equal to 40s. 1d. per sack of 280lbs. English; and the highest quotation for town-made flour in the London market being 45s. per sack, it follows that flour is 12 $\frac{1}{2}$ per cent. dearer in London than in Paris. The price of bread of the first quality in Paris is 35 cents per kilogramme, which is equal to nearly 6d. per loaf of 4lbs. English; and the price of bread in London at the shops of the full-priced bakers being 8 $\frac{1}{2}$ d. per 4lb. loaf, it follows that bread is 41 $\frac{1}{2}$ per cent. dearer in London than in Paris.—*Times*.

Madrid journals of the 14th instant announce the arrival from Paris of a naval officer, Lieutenant de Plas, who had travelled with great despatch, and brought despatches for the Duke de Glucksberg and the Prince de Joinville. The Duke was to start without delay for Cadiz and embark for Morocco, as Chargé d'Affaires at the Court of the Emperor. It was said that he had full powers to conclude a treaty of peace. This looks well, and is probably the result of the advice given by the most able general in the French army, Marshal Soult, who knows well the uncertainty and horrors of war.

SPAIN.—Madrid journals of the 13th contain the long-talked of decree for suspending the sale of church lands. It is given in the *Gazette* in these words:—"Art. 1. The sale of the property of the secular clergy and of religious communities shall be suspended until the Government, in accordance with the Cortes, shall determine on the most suitable course to be pursued. Art. 2. The revenues of the said lands are to be appropriated to the support of the secular clergy and of the religious communities. Art. 3. The Minister of Finance is charged with the execution of the above decree." This decree has caused great dissatisfaction among all classes. Original purchasers begin to fear for their property, and even the clergy receive the boon with a bad grace, as it deprives them of the administration of the property. The elections are going on in favour of the Government.

At Tarragona, on the 10th inst., the following serious accident happened. The Palinure, French brig of war, coming into the harbour, fired a salute, which was returned by the citadel, in doing which a spark caught a barrel of gunpowder, placed imprudently too near, and an explosion took place, by which five artillerymen were killed, and seventeen more or less seriously wounded.

BERLIN, August 14.—Letters from Vienna say that,

during the visit of our King, there will be conferences on the riots of the weavers in Bohemia and Silesia, and that very important measures may probably be carried into effect in common by these two powers, and that, perhaps, a cordon may be drawn between Bohemia and Silesia.

BERLIN.—The general exhibition of the produce of national industry in the States of Germany was opened at Berlin on the 15th inst. At the first, the catalogue contained only 1913 members, but was expected to be shortly increased to 3000. In the 1913 Prussia reckons 1315, but as yet only 21 of the States of the Confederation have contributed.

HAMBURG, August 15.—The number of ships that passed the Sound in July, 1844, was,

From the North Sea	908
" Baltic	1542
	2446

Of these the English were,

From the North Sea	289
" Baltic	373
	662

BELGIUM.—The continuance of the unfavourable weather does considerable injury to the corn, which is still standing. In the district of Nivelles, for instance, the wheat is not got in, and begins to sprout. In several parts on the banks of the Seine measures have been taken to guard against the effects of inundation.

The *Moniteur* contains a long report of Mr. Nothomb on the population of Belgium in 1841 and 1842, from which it appears that it was estimated for the latter year at 4,172,706 inhabitants. The Minister, however, is of opinion that the statement is one-tenth below the truth, and that a new census is absolutely necessary.

BOIS LE DUC, Aug. 19.—The water is rising in an alarming manner, and unless it speedily falls we shall have a terrible inundation. It wants only 16 inches to reach the level of the dike round the town. This morning an express has come from the Groenendyk, and we hear that a detachment of 109 Lancers has been sent to prevent the people from wantonly cutting through the dike.

ITALY.—A letter from Bologna of the 13th inst. states, that 15 persons (merchants, proprietors, physicians, and lawyers), implicated in the revolt of 1843, but who had not formed part of the armed bands, had been removed to Rome, to be tried by the Sacra Consulta tribunal.

Letters from Turin of the 10th inst. state, that a few days before the Duke of Genoa, the second son of the King of Sardinia, while riding in the neighbourhood of his chateau of Raconige, was stopped by banditti. The Prince told them who he was, which, however, did not prevent the robbers carrying away his purse, watch, and some jewels. Most of the young men in the Legations went into mourning on hearing of the fate of the brothers Bandiera and their companions.

TURKEY.—Letters from Constantinople of the 27th ult. state, that the cordiality which had hitherto prevailed between the English and French ambassadors at the Ottoman court had been of late somewhat impaired, and that they now opposed each other in almost every question under negotiation.

A letter from Constantinople of the 27th ult. says:—"On the evening of the 19th we had a tremendous fire, which made a great hole in the town of Beglos Bey, on the Bosphorus. Besides numerous other buildings, houses, and shops, about fifty splendid mansions, the residences of persons of distinction, were reduced to ashes. The palace at which the Sultan was then residing being closely menaced, great exertions were made by the soldiery collected there to prevent the flames from spreading, and one officer and two or three men perished. The Sultan has since removed to Chiraghan."

CIRCASSIA.—The war in Circassia, which has now continued so many years, does not appear yet to be about to terminate in the conquest of the country. On the contrary, the Russians have experienced a fresh defeat at Perdigorok, near Kouban. Another fact has been announced, which, if confirmed, would be still more serious—the capture of Derbend fortress, with its cannon and ammunition, by Schamyl, a species of warlike prophet, who has for several years governed and led to battle the Lesghis, the Koubitchis, and the other Mussulman tribes of Daghestan. He is the Abd-el-Kader of those countries.

WEST INDIES.—ARRIVAL OF THE WEST INDIA MAILS.—The Dee, Royal Mail Company's steam-ship, with the usual West India mails, arrived at Southampton on Monday evening at six o'clock, after a fine passage of nineteen days from St. Thomas's. She brings 228 ounces of gold dust, 1000 dollars, 342 ounces of silver, and a number of passengers. The dates of departure of the Dee, are—from Jamaica, July 24; Demerara, July 20; Trinidad, July 21; Barbadoes, July 24; Grenada, July 26; St. Thomas's, July 31; and Fayal, August 13. In most of the places the Sugar Duties Bill was a topic of bitter complaint. The Jamaica papers, however, say that one cheering feature in the aspect of colonial affairs was the zeal and energy with which the resident planters had been pushing forward improvements in agriculture. The preparation and manuring of the land, the planting and clearing of canes, and a variety of other matters, were now performed much more economically and effectually on the most extensive plantations. Nor were these improvements confined to the sugar estates. On the coffee properties guano manure was being tried, and, as far as the appearance of the trees enabled one to judge, with every chance of success. The advices from the country generally were to the effect that the rains have been abundant. A fire had occurred on St. Toolie's estate, in Clarendon. The estate had just finished crop, and the sugar on the premises was destroyed. The reduction of postage throughout the island had taken place, and the working of the altered plan gave considerable satisfaction. The House of Assembly had been further prorogued to the 20th of August next. The yellow fever, accompanied by the black vomit, had made its appearance in the island, and the cases already occurring were fatal.

At Trinidad the new tariff would not come into operation before the beginning of October next; and it is stated that, notwithstanding the increase alluded to, the scale of duties at Trinidad is much lower than those of the other colonies. The announcement of the consent of her Majesty's Government to the immediate introduction of English criminal law and trial by jury had been received with much satisfaction by the colonists.

The weather in Demerara, Barbadoes, and the other

principal islands is described as favourable for the crops, though in certain districts there are the usual complaints of the effects of the dry or the wet, as the case may be.

CUBA.—The *Jamaica Morning Journal* of the 24th July, says:—"In Cuba we are told the system of terror, thoroughly established and kept up by the tyrant who rules the destinies of that island, with his orders for the departure of all free people of colour, keeps all in a ferment. By the last steamer to Vera Cruz upwards of 100 departed. The Captain-General appears to pay no attention to the remonstrances of the British Consul, who, some parties think is not as determined, as he ought to be. We hope Government will pay particular attention to what is transpiring in this island, and will be especially careful of the rights of her subjects, which the Don has been trampling under foot without any compunction or hesitancy whatever."

EXECUTION OF TWENTY PERSONS AT HAVANNAH.—All is apparently tranquil here, but it is the tranquillity of terror, which the severe but necessary measures of government have inspired. What dreadful scenes have we not witnessed here these last few months! what arrests and frightful developments! what condemnations, and horrid deaths! But the bloody drama seems approaching its close; the curtain has just fallen on the execution of the chief conspirator, Placido, who met his fate with an heroic calmness that produced a universal impression of regret. Nothing was positively known of the decision of the council concerning him, till it was rumoured a few days since that he would proceed, along with others, to the "chapel" for the condemned. On the appointed day for the execution a great crowd was assembled, and Placido was seen walking along with singular composure under circumstances so gloomy, smoking a cigar, and saluting with graceful ease his numerous acquaintances. Are you aware what the punishment of the "chapel" means? It is worse a thousand times than the death of which it is the sure precursor. The unfortunate criminals are conducted into a chapel hung in black, and dimly lighted. Priests are there to chant in sepulchral voice the service of the dead, and the coffins of the trembling victims are arrayed in cruel relief before their eyes. Here they are kept for twenty-four hours, and are led hence to execution. Can anything be more awful? and what a disgusting aggravation of the horror of the coming death! Placido emerged from the chapel cool and undismayed, whilst the others were nearly or entirely overcome by the agonies they had already undergone. The chief conspirator held a crucifix in his hand, and recited in a loud voice a beautiful prayer in verse, which thrilled upon the hearts of the attentive masses which lined the road he passed. On arriving at the fatal spot he sat down on a bench with his back turned, as ordered, to the military, and rapid preparations were made for his death. It was well known that, in some affecting poem written by Placido in prison, he had said it would be useless to seek to kill him by shooting his body, that they must strike his heart to make it cease its throbbings. And now the dread hour had arrived—at the last moment he arose, and said "adios mundo!" (adieu, world), and sat calmly down. The word was given, and five balls entered his body. Amid the murmurs of the horror-struck spectators, he got up and turned his head upon the shrinking soldiers, his face wearing an expression of superhuman courage, "Will no one have pity on me?" he said. "Here! (pointing to his heart) fire here!" At that instant two balls pierced his breast, and he fell dead whilst his words still echoed in our ears. Nineteen were shot at the time with Placido, of which I send you a list. They all died miserably, and I spare you the sickening details.

DOMESTIC.

The locksmiths of Walsall, Wolverhampton, Willenhall, and neighbourhood, numbering about 300 persons, have turned out for an advance of 5 per cent. on their wages.—The receipts of twenty railway companies for the last four weeks are, in the aggregate, greater by upwards of £50,000 than those of the corresponding period of last year.—The Earl of Galloway has forwarded the sum of 100 guineas in aid of the fund of the Hospital for Consumption and Disease of the Chest, at Brompton.—Her Majesty's steamer Stromboli, under the command of the Hon. Edward Plunkett, when on her passage from Cork to the Shannon, on Wednesday week, struck on a reef of rocks which lies in the mouth of Bantry Bay, on the coast of Kerry. To all appearance she is greatly damaged; and up to the last accounts it was found impossible to remove her from her position.—Saturday morning last, at eight o'clock, the extreme sentence of the law was carried into effect at the Stafford county gaol, on William Beards, who was found guilty at the late assizes of the murder of Elizabeth Griffiths, at the village of Wednesbury, on Saturday, the 16th of last March.—During the last few days, says the *Times* of Monday, disclosures of the most extraordinary character have been made in the letter-carriers' office of the General Post-office, from the discovery by the authorities of a most extensive collusion on the part of several letter-carriers employed in the delivery of letters in the western district of the metropolis, who, it appears, have been for some time in the habit of opening letters directed to noblemen, gentlemen, and others connected with the sporting world, with the view, as far as we can learn, of disposing of such information for some pecuniary consideration, or betting themselves upon the strength of it. A most rigid inquiry into the whole circumstances of the case is instituted daily.—Returns of the amount of horse-power ordered for her Majesty's steam-vessels, between the 1st of April, 1839, and the 31st of August, 1841, and of the amount ordered between the 1st of September, 1841, and the 1st of July, 1844, have been moved for by Mr. Sidney Herbert, M.P., the Secretary of the Admiralty. The amount of horse-power ordered for her Majesty's steam-vessels in the first-mentioned period was 4496, the number of vessels 18, and the tonnage thereof 16,581. In the second period the horse-power was 11,261, the number of vessels 30, and the tonnage thereof 26,892.—The Royal Agricultural Society of Ireland concluded its great annual meeting at Dublin by a banquet given on the 15th inst. at the Theatre Royal in that city: an immense assemblage of the nobility and gentry were present. Some reflections of the nobility and gentry were present. Some reflections made on the Repeal party by the Earl of Erne, Vice-president, in the course of a speech in which he defended Irish landlords, led to the withdrawal of Mr. Smith O'Brien and others from the theatre; and subsequently, on a remonstrance addressed by the former to the council of the society, his lordship expressed his regret, at leaving the society, his lordship expressed his regret, at leaving the society, his lordship expressed his regret, at leaving the society.

remained that a large number of Calvinistic Methodists, one thousand at least, from Carnarvon and Anglesey, are preparing to emigrate to the United States, with a view to forming a community on the banks of the Mississippi. —*Chester Chronicle*.—The Central Criminal Court commenced its 10th sittings during the present mayoralty on Monday last, before the Recorder, Mr. Alderman Gibbs, the Sheriffs, &c. The Recorder in the course of his address stated that the calendar contained no less than 330 cases for trial, and he was much afraid that that number would be considerably augmented before the grand jury concluded their labours. —Her Majesty's cutter Prince Albert, Lieutenant Brown, R.N., commander, brought into Kingstown harbour, near Dublin, the foreign smuggling lugger *Cyrus*, of Flushing, with a crew of 12 men and a cargo of 175 bales of leaf tobacco, which it is supposed she was expected to land in the neighbourhood of Belfast. —A young lady of the name of Cussen, resident in Limerick, was, last week, while walking with her aunt in the suburbs of that city, forcibly seized upon by an armed party and carried off in a car, in spite of her screams and an attempt to rescue her. Miss Cussen is supposed to have a handsome fortune, which may account for the abduction. —The act of last session which abolishes imprisonment for debts under £20 will have a salutary effect in limiting the operations of those usurious companies called loan societies, of which there are at present upwards of 150 in various parts of the metropolis. The great majority of the loans do not exceed £20; and as the act gives no remedy against the person of the borrower, the societies will have to proceed, in case of default, against the goods of the surety, a process at once uncertain, expensive, and tedious. —The strike of the pitmen in the counties of Northumberland and Durham is now at an end, the whole of the collieries, with very unimportant exceptions, having engaged all the workmen they require on the terms and conditions offered by the coalowners previous to the 5th of April, when the strike commenced. —Patrick Larkin, who stood remanded from the previous Monday on a charge of stealing, at the General Post-office, a number of bills of exchange, &c., of the value of £782 7s. 6d., was brought up on Wednesday at Bow-street before Mr. Hall for further examination; and, after a lengthened investigation, was fully committed to take his trial. —The Great Western steamer sailed from Liverpool on Saturday with about 140 passengers and a full cargo of light goods. —The poor of Preston, to the number of 1000, were treated with a gratuitous trip to Fleetwood, on Monday week. The arrangements were made by the Temperance Excursion Committee, and tickets were sold at the rate of forty for 20s. to benevolent individuals who were anxious to give a treat to those who were unable to treat themselves. This is an example well worthy of imitation. —An inquest was held on Tuesday evening at the workhouse of the West London Union, West-street, Smithfield, before Mr. Joseph Payne, the deputy coroner, on the body of Michael Wright, aged 54, a law writer. It appeared in evidence that the deceased had not for nearly the past three years left his apartment, that he had no bed to lie upon, nor change of linen, and that in consequence his person was very filthy, as was also his room; he subsisted almost exclusively upon bread and milk. His death was attributed to disease of the lungs, probably accelerated by bad diet. —Joseph Stadman Madison, recently appointed superintendent of police at Dundee, has been arrested in that town on a charge of felony. The accused, it appears, was selected for that office out of nearly forty candidates; his personal appearance and the weight of his testimonials having secured his election. The charge it is said is for embezzlement. —On Sunday morning last, some children who were amusing themselves in a field of Mr. Pitcher, of Northfleet, close by the mail-coach road, discovered on the edge of a chalk cliff, at the verge of the field, a man tied by the neck to a small thorn tree, and leaning back quite dead. The deceased is about fifty-five years of age. There is little doubt that he committed suicide. —Up to Saturday nearly 120 persons availed themselves of the privilege given by Lord Brougham's Bill for the Amendment of the Bankruptcy and Insolvent Laws and for the Abolition of Imprisonment for Debt under £20, the majority of whom had been incarcerated for debts considerably under that sum. —A tribute has been set on foot in the Isle of Man, to commemorate the valuable services rendered by Dr. Bowring, M.P., in procuring, during the recent session, the removal of various fiscal restrictions which were felt to be a grievance to the inhabitants. —Captain Warner has addressed a letter to the newspapers, in which he says:—"If the Government will anchor a line-of-battle ship at the back of the Goodwin Sands, out of the ship-track, so that no harm may happen to passing vessels, I will, from on board another ship, destroy her at a distance of five miles. I am willing to take on board the vessel in which I operate, General Sir George Murray, Captain Lord Viscount Inglest, R.N., Captain Dickinson, R.N., and Captain Henderson, R.N., who shall have every opportunity of inspecting my mode of operation, and satisfying themselves that on this occasion I use a projectile. The kind liberality of my friends enables me to exhibit this experiment without asking the Government for a shilling towards it. If I fail, I am to receive nothing but ridicule; of which I have received quite enough to satisfy any reasonable man already. But previously I require a guarantee from her Majesty's Government for its purchase of my secret for £300,000, in the event of my destroying the ship and satisfying the four above-named officers of the feasibility and practicability of my plans." —The Repeal Association held its weekly meeting at the Conciliation Hall, Dublin, on Monday. Several large sums of money from the United States and British North America were handed in. Mr. D. O'Connell, jun., read the weekly report from the prisoners. Among other announcements made on behalf of his father, he stated that it was the intention of Mr. O'Connell himself, upon the 30th of May, 1845, to institute a pledge for the non-consumption of excisable articles in Ireland, and also a pledge for the non-use of any articles not of Irish manufacture. The amount of the rent for the week was stated to be £1125. —On Monday evening, at half-past nine o'clock, a special train of 42 carriages, containing 1075 passengers, started from the station at Euston-square to Liverpool, the fare to and from Liverpool being £1 10s. each. The passengers may return at the end of seven or ten days, and will have the opportunity of visiting several interesting places in Lancashire, as well as in England and Scotland, the fare to Glasgow being reduced to 5s. —On Sunday after-

noon Mr. Robert Owen left London to proceed to America on a visit to his family, residing in New Harmony, Indiana. His friends and disciples assembled in St. James's-park in numbers amounting to some thousands, and accompanied him on his way as far as Vauxhall-bridge, where Mr. Owen bade them farewell. —At the last Wells assizes a most notorious character named George Culliford, of Ilchester, was tried on four indictments, three for burglary and one for sacrilege, and transported for the term of his natural life, having only been liberated from gaol about five days, during which period he committed all these offences. —In the cotton-manufacturing districts of Scotland, the number of children employed between 9 and 13 years of age, have decreased from the beginning of 1842 to the 1st of April last, from 546 to 403—a diminution of 143 children of those ages. —During the last week two rich and valuable veins of copper ore have been fallen in with by the workmen employed at Cockleybeck. —From official documents it appears that a considerable decrease has lately taken place in the number of prisoners confined in the borough prison of Liverpool. The average number is now only 540, whilst twelve or eighteen months ago the number was 680. This decrease is mainly to be attributed to the great revival of trade which has taken place in Liverpool. —It is currently stated that arrangements are being made to secure the return of all the state prisoners as members of the Town Council at the ensuing municipal elections. —*Dublin Monitor*.—A letter in the *Kelso Mail* states, that Mr. Melrose, of Hawick, Roxburghshire, has invented a plying-machine to be used in woollen manufactures, by means of which two children will be able to do the work which at present requires ten. —On Friday, the 16th inst., a fire was discovered to have broken out in a straw stack on the premises of Mr. Samuel Wm. Bacon, of Bull's-bridge Farm, Hempstead, contiguous to a barn and extensive outbuildings, but, from the prompt and energetic assistance of the labourers and others present, was speedily extinguished. —At the Liverpool assizes, Mr. Aldis, formerly an artist, but now a clergyman, obtained a verdict against an attorney of the name of Gardiner, for negligence. Damages £300. —Octavius Clarke, the son of a late highly distinguished divine, was, on Wednesday last, fully committed at Worship-street, charged with committing numerous depredations in the houses of gentlemen connected with his family, and with whom he had been on terms of intimate friendship. —Prince Albert will complete his 26th year on Monday next. —It appears by a parliamentary return that the total amount of the land-tax in England and Wales in the year ended 25th March, 1843, was £1,858,924 6s. 14d. The proportion redeemed amounts to £724,463 19s. 23d., the unredeemed to £1,134,460 6s. 104d. The accounts to the 25th March, 1844, are not yet completed. —A fire took place at Richmond on Tuesday morning, which destroyed property valued at £4000. —The Sphinx steamer, which arrived in the river from Havre on Monday night, had nearly 700 packages of plums on board, about twenty of the baskets containing common plums, the remainder consisting entirely of greengages, quite ripe and in good condition. —In pursuance of directions from the Lords of the Committee of Privy Council for Trade, the collectors and comptrollers at the several ports of the kingdom have been ordered to make a return of the Spanish vessels at their respective ports; and also to specify if there are any, and if so what, local charges or dues at their several ports applicable to Spanish ships over and above such as are paid upon British. —Accounts from various districts in the kingdom state that, notwithstanding some heavy rains, the crops exhibit a fine appearance, and that there is every prospect of an abundant harvest. —An accident occurred at the Dewnup coal-pits, Dukinfield, near Ashton-under-Lyne, on Thursday week, which proved fatal to a young lad, named Henry Rowbottom, aged 17 years. The deceased was killed while engaged at work at the bottom of the pit, by the falling of a piece of coal on his head. —Great numbers of Irish reapers arrived in Glasgow last week. One of the Londonderry steamers brought over 1500 at a trip. The Fire King had a cargo of 1000, and the other Belfast steamers, we understand, were also crowded. In addition to these, a number were brought to the city by the Ayrshire railway. In all, not fewer than 10,000 Irish reapers passed through this city for the Lothians, &c., last week. —At the Central Criminal Court, on Wednesday, Mr. James C. Belaney, surgeon, was tried for the murder of his wife at Stepmey, and acquitted. —On Saturday night last, two railway sub-contractors, of the name of M'Cormick, uncle and nephew, both Irishmen, and the employers of about 200 of their countrymen in the formation of a road between Blane-toll and Gartmore, near Glasgow, while in a state of intoxication committed a violent outrage on the toll-keeper of Kepcullock, into whose house they forced an entrance, and then violently assaulted him, he having refused to supply them with any more liquor. They were subsequently arrested by a number of constables; but their hands having been left unmanacled, the elder seized a pickaxe, with which he struck an excise-officer a deadly blow, which felled him to the ground, and left him almost lifeless. They both then fled, but were subsequently arrested and lodged in Stirling gaol. —On Sunday morning last, during divine service at Emanuel Church, Camberwell, and whilst earnestly joining with the congregation in singing the 1st verse of the 41st Psalm, the Rev. J. T. P. Wyche, M.A., curate of Cranfield, Beds, was seized with a fit of apoplexy. He was immediately taken to the porch of the church, and there bled, and subsequently conveyed to the residence of his father, where soon afterwards he expired, in the 37th year of his age. —The consecration of a monastery, in Leicestershire, dedicated to St. Bernard, and intended for the use of a number of Cistercian monks, who have hitherto inhabited temporary buildings in Charnwood Forest, took place on Tuesday last, the ceremony being performed by Dr. Wiseman, Dr. Walsh, and Dr. Morris. —"For some weeks past," says the *Dublin Evening Post*, "there has been a gradual diminution of the military force congregated in Ireland at the period of the state trials. We mentioned, on Saturday, that two regiments, the 60th Rifles, and the 61st Foot, were under orders at Cove, awaiting the arrival of transports to embark for India. Those transports have arrived; but an order has been forwarded from the Horse Guards suspending the departure of both regiments." —A destructive fire broke out in a range of stabling within the yard of the Great Western Railway station at Maidenhead, in the middle of the day, on Tuesday last, which it is strongly feared was not occasioned by merely accidental means. The same,

when first discovered, burst forth with inconceivable rapidity, and within less than half an hour afterwards the whole building, which was composed of wood covered with slate, was a heap of burning ruins. There were 12 horses in the stable at the time, eight of which were fortunately rescued, after considerable difficulty, without sustaining any damage. Three horses, which obstinately resisted every effort to extricate them, were literally burnt almost to a cinder. —The Earl of Rosse has completed the polishing of the speculum of his leviathan telescope; it is expected that this magnificent instrument will soon be in full working order.

AMERICAN MANUFACTURES.—The *Providence Journal*, in noticing the general prosperity of business throughout the country, takes occasion to remark on the rapid extension of the cotton manufacture. One individual near Providence, had received an order for no less than 100,000 new spindles for a factory in Rhode Island. Preparations were making for the erection of a new mill on Fall River; and in New Hampshire a similar spirit of enterprise had been manifested in favour of this branch of industry.

INTERNAL COMMERCE.—Internal commerce suffers because industry, producing too much in comparison with the small remuneration which it affords to labour, and agriculture not producing enough, the nation finds itself composed of producers who cannot sell, and famished consumers who cannot buy. The want of an equilibrium of position compels the Government here, as in England, to seek even in China some thousands of consumers in the presence of millions of Frenchmen or Englishmen, who are destitute of everything, and who, if they could purchase suitable food and clothing, would create a commercial movement much more considerable than the most advantageous treaties. —*Extinction du Paupérisme, par Louis Bonaparte.*

THE BLESSINGS OF PEACE.—The following paragraph is from the speech addressed by the King of the French to the manufacturers, who recently assembled in the Hall of the Marshals, to receive the recompenses awarded to them by the jury:—"It is by peace, by internal tranquillity, that the arts can flourish, that industry can prosper—and France increase in wealth, in happiness, and in glory—in that peaceable glory that costs neither sacrifice nor tears to anybody. On that account have my endeavours constantly tended to preserve my country from the scourge of war; for I have always maintained as a principle that a nation should never engage in war, unless it was incumbent on it to defend the honour and independence of the country and its real interests; but, when that imperious necessity does not exist, one should resist those vain illusions which, under specious appearances, too often induce states and nations to incur the uncertain and dangerous chances of war, and sacrifice to fears or hopes equally chimerical the real blessings of peace—blessings which are for the country the best guarantee of public prosperity, as they are for the families that of their repose and domestic happiness."

THE LABOURER'S QUESTION.—We have always treated the Corn Laws as the labourer's question, for upon the working classes chiefly the burden falls. With this conviction we have laboured incessantly for their repeal. We know that if masters cannot make sales, or if their sales are made without profit, there is nothing to fall upon but the men's wages; and we know that if food be dear, their wages are inadequate to provide for their families. On the other hand, if trade be good and profits large, it is soon known, and such are the additional mills erected, that more wages are obliged to be given in order to secure hands; and if, in connexion with good wages, the operatives also get cheap food, the advantage must be obvious. These advantages would enable many men to keep their wives and children at home, and thus lessening the supply of hands, they would be able to counteract every unreasonable attempt to pull down their wages. We pronounce the repeal of the Corn Laws as emphatically the poor man's question, and, as such, we should advocate it if every factory master was on the other side, and the League itself dissolved. —*Preston Guardian.*

THE LEAGUE.—The kindness of a friend procured me admission to the great establishment of the League at Manchester, where I had the satisfaction of seeing and hearing much that surprised and interested me. George Wilson and other well-known leaders of the League, who were assembled in the committee-room, received me as a stranger, with much kindness and hospitality, readily answering all my questions, and making me acquainted with the details of their operations. I could not help asking myself whether in Germany men, who attacked with such talent and energy the fundamental laws of the state, would not have been long ago shut up in some gloomy prison as conspirators and traitors, instead of being permitted to carry on their operations thus freely and boldly in the broad light of day; and, secondly, whether in Germany such men would ever have ventured to admit a stranger into all their secrets with such frank and open cordiality. —*England and Wales, by J. G. Kohl.*

CHEAP FOOD AND MANUFACTURING PROSPERITY.—A Hull paper observes, that the state of the river reminds the inhabitants of olden times. It is so crowded with vessels that people can cross it by passing from one sloop to another. At the same time the docks are quite full. In many districts in Yorkshire and Lancashire, the poor-rates have been very much relieved. In Huddersfield, for the quarter ending June 24, in the present year, outdoor relief has been granted to only one-half the number to whom it was found necessary to dispense it in the corresponding quarter of 1843. The connexion is evident between cheap food and manufacturing prosperity. It is in our power to ensure the one, and every day furnishes fresh proofs that the other would inevitably follow it. —*Manchester Guardian.*

SUNDAY AMUSEMENTS IN THE SLAVE STATES.—(From a New York paper.)—We copy the following advertisement from a New Orleans paper:—"Bull Fight.—A fight between a ferocious bull and a number of dogs will take place this day, Sunday, at five o'clock p.m., on the other side of the river, at Algiers, opposite Canal-street. After the bull-fight, a fight will take place between a bear and some dogs. The whole to conclude with a combat between an ass and several dogs. Admission—boxes, 50 cents; pit, 30 cents. Amateurs bringing dogs to practise in the fight will be admitted gratis. Doors open at half-past three o'clock. The spectacle will be repeated every Sunday, weather permitting." —*PERA LULLA.*

SOUTH AUSTRALIA.

(From the Morning Chronicle.)

We have received from the committee for diffusing information on the state and prospects of South Australia, a mass of statistical and commercial detail relative to that colony, some of the leading features of which we are induced to condense, in the hope that they may prove useful both to merchants and intended emigrants.

In 1844 the population of South Australia was	17,000
The acres under cultivation	28,693
The value of imports	293,143
The value of exports	62,645
The value of grain and flour imported	3,509
The value of ditto exported	9,280
Value of oil and whalebone	12,981
Quantity of wool	854,815 lbs.
Its value	32,055
The ordinary revenue	25,694
Colonial expenditure	30,911
Manufactories, including flour mills and breweries	45
Schools	47

In 1843, the exports were chiefly colonial produce or manufactures. Previously to that year, however, they consisted, in a great measure, of imported goods re-exported. The value of the wool, in these tables, has been estimated at 9d. per lb., and the average weight of fleeces at 2½ lbs. It is stated, however, that some of the wool brought much higher prices, and that the average realized was 13d. per lb.

With respect to land, we may mention that upwards of 300,000 acres beyond those selected have been surveyed, and are now ready for purchase. Quarterly sales by auction take place in the colony; and during the intermediate periods the lands not sold are ready for purchasers. At the second quarterly sales in February last the demand was brisk. About 617 acres were sold, reaching £2354 1s. Persons purchasing land here from the Colonial and Emigration Commissioners have the privilege of securing a free passage out to four adult labourers for every £100 so expended.

The quantity of grain grown seems to be steadily increasing. The returns for 1843 show an increase in the number of acres under wheat cultivation of 9000, and of those bearing barley of 600. The surplus produce of wheat in 1843 has been reckoned at 200,000 bushels.

The return of flocks and herds for 1843 offers the following results:—Sheep, 402,187; cattle, 30,018; horses, 1693; pigs, 6354; and goats, 2680. At Rivoli Bay, a district within South Australia, but not included in the above estimate, the number of sheep was computed to be 15,000, cattle 100, the horses 10, and the population 50.

Several lead and copper mines have been discovered, some of them not far from Adelaide, and they are stated to promise a large yield of these useful metals.

The imports for 1843, valued at £93,000, show a considerable decline from the value of those of the previous year. The exports were estimated at £66,160 17s. 2d., exhibiting a considerable increase on the value of those of 1842. Were it not for the moderate valuation at 9d. per lb. of the wool exported in 1843, it is thought that the sum total of the exports for that year would have very nearly equalled that of the imports.

A number of mills, particularly for grinding corn, have lately been erected, and by the last returns number 16. The price of grinding is 1s. per bushel.

The results of the meteorological observations for five years show that during that period no calendar month has passed in South Australia without rain having fallen; that the average number of days on which rain has fallen was 100 per annum, and that the average number of inches was 20.

There are two banks of deposit and issue and one savings' bank. The number of depositors in the latter is 57, and the total amount of deposits on the 4th of March, 1844, was £559 12s. 6d., giving £9 16s. 5d. as the average rate of deposits per head.

The following are the latest quotations of the prices of provisions:—Bread, 4d. to 5d. per 4 lb. loaf; flour, 7s. to 9s. per 100 lbs.; biscuit, 10s. to 14s. per cwt.; beef and mutton, 2½d. to 3d. per lb.; lamb, 2½d. to 3½d.; veal and pork, 6d. to 7d.; tea, 2s. to 3s. 6d.; coffee, 8d.; sugar, 2d. to 3½d.; raisins, 6d. to 7d.; currants, 10d.; butter (fresh), 9d. to 1s.; salt, 8d.; cheese, 4d. to 8d.; new milk, 3d. per quart; skimmed, 1½d. per quart; eggs, 1s. per dozen; potatoes, 6s. to 8s. per cwt.; cabbages, 1d. each; onions, 1d. per bunch; melons, 2s. 6d. per cwt. Other vegetables, fruits, poultry, and dairy produce very moderate.

The following are the latest quotations of the rates of labour:—for joiners, carpenters, and others, 4s. to 4s. 6d. per day; smiths, and all descriptions of iron work, 4s. to 4s. 6d. per day; bricklayers, stonemasons, and cutters, 3s. 6d. to 4s. per day; day labourers, 2s. 6d. to 3s. 6d. per day; farm servants, with rations, 10s. to 12s. per week; reapers, 10s. to 12s. per acre; reapers, with rations, 3s. 4d. to 5s. per day; threshing wheat and gleanings, 6d. to 8d. per bushel; barley, 4d. to 6d. per bushel. The common ration list of the colony is—tea, a quarter of a lb.; sugar, 2 lbs.; flour, 12 lbs.; meat, 10½ lbs. per week.

STEAM NAVIGATION.—A paper has been printed and circulated in the City, showing the progress of private enterprise in Ocean steam navigation, the facts in which, being presented to the eye at one glance, are interesting, though in an isolated form they have always been accessible. The line of steam communication between England and America was established in 1838 by the Great Western steam-ship, and maintained by that vessel, the British Queen, and the unfortunate President till 1842, without the support of Government, or any contract for conveying the mails. The line to Halifax and Boston was established by Mr. Cunard, on obtaining a Government contract of £67,000 per annum to convey the mails 186,300 miles. The line to the West Indies was established in 1842 by parties who, in 1840, took a contract for £240,000 per annum to convey the mails 684,816 miles. The line to Malta and Alexandria was established in 1840-1 by the Peninsula Company, who took a contract for £31,000 per annum to convey the mails 72,000 miles. The line between Calcutta and Suex was established in 1842 by the India Steam Company of Calcutta, but no assistance has been granted by Government for the mails. The line between Calcutta and Suex in 1843 and 1844 was (and is now) occupied by the Peninsula Company's vessels, with a grant of £80,000 per annum for five years from the Indian Government, on condition of their performing 38,080

miles in the first year, 57,120 miles in the second, and 114,200 in the third.—Times.

INCREASE OF MANUFACTURING EMPLOYMENT IN DERBY.—In a report of Mr. E. J. Saunders, one of the factory inspectors, for the quarter ending 31st March last, we find the following passage:—"In March, 1843, some mill-occupiers complained they could not get a sufficient supply of hands. The numbers at that time employed in 12 silk mills of Derby were 1552 adults, 759 young persons, and 698 children, making a total of 3009. In March, 1844, four mills, which had been closed for some time, were at work in addition to the others; and the total numbers employed were 2186 adults, 1079 young persons, and 1064 children, making a total of 4329—the increase in one year having been 634 adults, 320 young persons, and 366 children, making a total of 1320 persons. This increased employment has been, I believe, almost entirely owing to the manufacture of a fancy trimming article called gimp. I am told that a great portion of this labour has been supplied by families who had been induced to remove into Derby in consequence of such demand. Some of the silk-throwsters in Derby complain now, as they did in 1843, that they have a difficulty in obtaining a supply of hands. This I conceive to be in a great measure accounted for by the fact that each mill-occupier wishes to get experienced hands, who of course are scarce, and must remain so especially during the time of an increasing demand for them. I am well convinced there are still in Derby many children whose labour will be made available if the demand continues or is increased, and this I think established by reference simply to two details to which I will briefly advert. Of 1064 children now employed, there are only 366 boys, and the remaining 694 are all girls. The latter are preferred in mills, because they are more easily controlled than boys, and will generally do more and better work than them. Again, of the 1064 children under 13, the numbers between 11 and 13 are 633, and those under 11 only 431. As it will be still open to the silk-throwster to employ children as young as 8, it must be evident that a much larger supply of children under 11 can be obtained than are now employed; and these will gradually be taken up if all under 13 are limited to half-days, and the parents find the children so employed receive as sound and useful an education as others who attend school twice a day, and are not employed at all."

MARKETS.

CORN MARKET.

MARK-LANE, Monday, Aug. 19.—The supply of English Wheat this morning was short, about 1000 qrs. of it were new. Large quantities of Foreign Wheat, Barley, and Oats continue to arrive; among the last are two cargoes from Archangel. The supplies of Irish Oats are moderate. Since Thursday the weather has been almost uninterruptedly fine, and the improvement in prices reported by us on Wednesday and Friday, caused by the bad weather in the early part of last week, could not be maintained at our market this day. We have therefore to report the prices of English and Foreign Wheat, Barley, and Oats as on this day week. There was more inquiry for Beans, and rather better prices were obtained. Peas, both White and Maple, fully maintain last week's rates.

FRIDAY, Aug. 23.—The arrivals of Foreign Wheat, Barley, and Oats continue large; but of all which English grain and of Irish Oats moderate. There is rather an improved demand for Wheat at Monday's rates. Foreign Barley is still held in expectation of a lower duty, and buyers of all descriptions are compelled to give fully Monday's rates. The Oat trade is not brisk, but the little business doing is at Monday's prices. There are not many Beans offering, and all descriptions sell readily at former rates. No alteration in Peas. The duty on Wheat advanced yesterday to 19s. The weather during the week has been uninterrupted by fine.

THE LEAGUE.

No. 49.]

SATURDAY, AUGUST 31, 1844.

[3d.

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive a copy, weekly, of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND, are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

SPECIAL NOTICE FOR COUNTIES.

POLLING PLACES MAY BE ALTERED.

Voters residing at one part of a county, and claiming to vote for property in another, may vote near their place of residence, by claiming in the form A or B.

An elector residing in the Strand, London, claiming for a freehold house, or any other qualification, at Uxbridge, had formerly to go to Uxbridge to poll: he can now poll at Westminster. Or an elector residing in South Lancashire, or any other county, having a freehold at Uxbridge, or in any other district in the county, may vote in London, thereby saving a journey from London to Uxbridge, or other district, and back.

This is a most important alteration in the law, and the claim may be made by the Free-Trade agents attending the court, a friend, or the tenant, if he can speak to the claimant's handwriting.* The barrister will write the place he desires to poll at against his name; but he will not be allowed to vote anywhere else. His name will then be printed at the end of the register in the proper list.

Form A.

County of Middlesex, to wit.
I, _____, whose name appears in the list of voters of the above parish, and whose place of abode, as stated in the said list, is not within the said county, claim to vote at the polling place at _____, in the said county.

(Signed) A. B. [Place of Abode.]

Form B.

County of Middlesex, to wit.
I, _____, whose name appears in the list of voters of the above parish, and whose place of abode, as stated in the said list, is not within the said county, claim to vote at the polling place at _____, in the said county.

(Signed) A. B. [Place of Abode.]

POLLING PLACES.—Brentford, Enfield, King's-cross, City of Westminster, City of London, Hammersmith, Hampstead, Redont, Edgware, Uxbridge, Mile-end, Bethnal-green.

COUNTY AND BOROUGH REGISTRATION.

From to-morrow, the 1st, to Sunday, the 15th of September, is the time for the publication of the lists of persons objected to in counties, and also of the lists of claimants and of persons objected to in cities and boroughs. Overseers and town clerks are required by law to keep copies of the said lists, and also of the notices of objection, to be perused by any person, without the payment of any fee, at any time between the hours of ten o'clock in the forenoon and four o'clock in the afternoon of any day, except Sunday, during the first fourteen days of September. They must also deliver copies of the lists to any person requiring the same on payment of a price after the following rate, which is copied from the schedule annexed to the new Registration Act:—

For any list or copy of a list containing any number of persons' names	s.	d.
Not exceeding 100	0	6
Exceeding 100, and not exceeding 200	1	0
" 200, " 300	1	6
" 300, " 400	2	0
" 400 and upwards	2	6

Every Free-Trade elector should now examine these lists—claimants in boroughs to see that their names are properly inserted, and electors generally to ascertain whether they have been objected to in either borough or county. Free-Traders who may be objected to should apply to the local committees, or to such other persons as may be engaged in the management of the registration, for such advice and assistance as they may stand in need of, so to the best mode of defending their votes before the revising barrister.

Any county voter residing out of the polling district in which his qualification is situate is at liberty to make his claim before the revising barrister to vote at the polling place of the district wherein his said place of abode may be situate, provided such place of abode is in the same county or division of a county. The revision of the lists may commence on or after the 16th of September.

All advice and assistance will be given by application at

* The form signed in the presence of the party producing it before the barrister is sufficient.

the London Registration Offices of the League, 68, Cheap-side, or the League Office, Newall's-buildings, Market-street, Manchester.

WELL-MEANING BENEVOLENCE.

The events of the past year, and the fearful distress of the agricultural labouring classes, have aroused a sentiment of benevolence amongst all right-thinking persons, and especially amongst a considerable section of the landed proprietors. This has shown itself in various ways. Everywhere when squire do congregate they earnestly appeal to their tenants on behalf of the rural labourers. Though somewhat inactive in their own persons in promoting the improvement of the labouring class, they join unanimously in offering lip service to the labourer. This is something to begin with. It is, at all events, an admission that there is something wrong in the system under which farming-labourers have sunk to their present depressed and degraded state. We have now the satisfaction of knowing that the misery which surrounds their halls, and the destitution of the once "lusty peasantry" abiding on their own estates, are no longer things unknown or unacknowledged by the squirearchy of England. Others again, more active practitioners, imagine the national disease is to be cured by "small allotments of land." They are delighted that a few roods of land, let at the ordinary rate and well cultivated with the spade, will save the labourer from starvation, and—though of course such considerations never enter the minds of the advocates of allotments to labourers—keep him off the poor's rate.

If small allotments be the specific for rural destitution, as some landed philanthropists seem to suppose, there can be no question that it is to them a very comfortable remedy, which, without any direct sacrifice of rent, may guard their rentals from indirect reduction under the operation of a heavy poor's rate. No one can avoid admiring the combination of dove-like simplicity and serpentine astuteness which this plan presents. Hereafter we shall have occasion to show that a reliance upon small allotments of land for permanently improving the condition of the labouring classes is a pure illusion; but it is a plan which cannot do much harm, and may afford temporary alleviation to many industrious peasants. At least it is an admission of past error in the method by which our landowners—who are the Legislature and the Government—have hitherto endeavoured, if they have endeavoured, to protect the interests of the sons of labour who till their fields. Admission of wrong is the first step towards right.

Again; another section of the benevolent, such as those who in July last, at some genteel place of meeting in some fashionable street (we forget the precise locality) formed "a society for the improvement of the condition of the labouring classes," imagine they have hit upon the sovereign remedy. Provident funds created by the poor paying a penny a week; loan funds from which the labourer may borrow a sum to be repaid by convenient instalments; co-operative stores; joint-stock cottages, and so forth, are amongst the means by which this society is to better the condition of the labouring classes. Like other benevolent plans, the society seems to overlook the fact that it happens that in large districts constantly, and in all rural districts occasionally, the labourers can't spare even "a penny a week" towards a provident fund, and, though they would often be glad to apply to the loan fund, they will never find it "convenient," nay possible, to repay the loan. We have been led to make these remarks by a circular addressed by Sir Henry Bunbury to the landowners of Suffolk, which we met with in the *Morning Herald*. The purpose of the writer is to form a local society in Suffolk for the improvement of the condition of the labouring classes, upon the plan of the London society, and in order to effect it he says:—

"It is clearly advisable that in all our proceedings and discussions we should avoid as much as possible all topics which have come to be matter of dispute, either on political or on religious grounds. We should have, I conceive, to deal simply, but broadly, with this great problem—how can the condition of the labourer and his family be rendered such as to enable us to say hereafter, with pride and confidence, 'the state of the working classes in West Suffolk is generally that of decent comfort, their moral feelings are sound, and the public peace and property are secure?'"

Here upon the threshold we meet with an infallible symptom of the inherent defects of the plan. The "great problem" of how the condition of the rural labouring classes is to be improved is to be dealt with "simply but broadly"; that is, that not

a whisper is to be heard which can alarm the most sensitive protectionist squire, or ruffle the complacency of the most bigoted political partisan. Why, this is the play of "Hamlet" with the part of Hamlet left out. Those who would go to see such a piece may be very excellent and, for aught we know, very sensible persons, but they can be no admirers of the genius of Shakspeare. So ladies and gentlemen who form a society upon the principles laid down by Sir Henry Bunbury may have very kindly sentiments towards the poor, but assuredly they have not enough of the nerve and muscle of mind or energy of purpose sufficient to effect any real improvement in the condition of the labouring classes. We say distinctly, no society really proposing to amend the state of the rural classes can avoid the discussion of the most acrimoniously debated question of the day—the Corn-Law question; and any attempt to blink such a discussion at once renders the society, to say the least, useless.

The first questions which would arise in such a society would be, "Why are our farming labourers so destitute, why is their employment so irregular, and why are their wages so low?" The answer, and the only answer, must be, "Our farmers are badly off, their farms are not so well cultivated as they ought to be, prices have fallen below the rates they expected to receive for their produce, and rent and other burdens are pressing them sorely." Here we have the question "simply but broadly" stated, but what is the next stage of the "discussion?" Is it not the obvious question, "Why have all these things happened to the farmers?" And how is that question to be resolved without discussing the policy and operation of the Corn Laws?

It would be sheer nonsense for any lying lordling or landed twaddler to talk about penny provident societies, clothing clubs, loan societies, or small allotments, for there would not be an old lady in the meeting who would not at once detect and despise the insufficiency of the proposed remedies. For the improvement of the condition of the agricultural labourers one thing is necessary, and that, and that only is sufficient for the purpose, which is to make the average agricultural practices of the country conform to average agricultural knowledge amongst our farmers. This is no very recondite scheme. It asks no high degree of scientific knowledge. It implies no necessity for consulting Liebig or importing guano, though both may be usefully done. It is simply to allow even our plainest and least advanced farmers the opportunity of doing the best they can.

But to this remedy, this really simple though effectual remedy, the total and immediate abrogation of all restrictions on the trade in grain is a condition precedent. Until this be done, there is no hope or help for the rural labourer. Unfetter the farmer, let him have the power to pursue his own interest in employing the labourer, and the most benevolent promoter of these societies will find that plain farmer Dobson, in merely trying to make the most he can of his farm, will do more in a year to "improve the condition of the labouring classes" than all the sentimental philanthropists who have ever assembled in charitable societies would effect in a quarter of a century.

There is one way, however, in which the landowners may assist to improve the condition of the peasantry without forming societies, with all the array of presidents, committee-men, bankers, and travelling secretaries. They may on their own estates build upon each farm three or four roomy and substantial cottages for every one hundred acres of arable land, laying to each cottage a moderate-sized garden, and let these tenements to their tenants as part of the farm. Possibly this might be somewhat more expensive than subscriptions to the London and local societies for "improving the condition of the labouring classes;" but until the landowners have done this and other acts of analogous character upon their own estates, the public will give them very little credit for benevolence in forming claptrap societies to benefit the agricultural labourers.

PUBLIC PLEASURE GROUNDS IN MANCHESTER.

While the League in its collective capacity has been labouring to achieve the great measure of political justice for which it was instituted, the liberation of industry from the shackles imposed upon it by monopoly, its leading members have taken an active part in many other schemes of social improvement, and particularly in providing places of recreation for the operatives of Manchester. Whatever tends to elevate the working

AN INQUIRY INTO THE EFFECTS OF ENGLISH LEGISLATION UPON AGRICULTURAL WAGES, PROFITS, AND RENT.

BY A BARRISTER.

(Continued from page 773.)

The inadequacy of the wages thus fixed by law to meet the rise in the money price, not only of food, but of all other commodities, which was a necessary consequence of the extraordinary depreciation in the value of money, is proved by the number and severity of the statutes passed during the sixteenth century with the professed object of repressing vagrancy. We have already noticed the cruel enactments of the 27 Hen. VIII., c. 25 (1536). It would seem, however, that the very severity of that act prevented its execution. The 1 Edward VI., c. 3 (1547), which repeals all former statutes for the punishment of vagabonds and sturdy beggars, recites that, "partly by foolish pity and mercy of them which should have seen the said godly laws executed, partly by the perverse nature and long-accustomed idleness of the persons given to loitering, the said godly statutes have had small effect, and idle and vagabond persons, being unprofitable members or rather enemies of the commonwealth, have been suffered to remain and increase, and yet so do;" and, as a milder punishment, enacts, that an able-bodied poor person who does not apply himself to some honest labour, or offer to serve even for meat and drink, if nothing more is to be obtained, shall be taken for a vagabond, branded with a hot iron on the breast with the letter V, and adjudged a slave for two years to any person who shall demand him, "to have and to hold the said slave, to him, his executors or assigns, for the space of two years;" and the said slave is to be fed on bread and water and refuse meat, and caused to work by beating, chaining, or otherwise. If he run away within that period, he is to be branded on the cheek with the letter S, and adjudged a slave for life; if he run away again, he is to suffer death as a felon. If no man demand such loiterer, he is to be sent to the place where he says he was born, there to be kept in chains or otherwise, at the highways or common work, or from man to man, as the slave of the corporation or inhabitants of the city, town, or village in which he was born; and the said city, town, or village shall see the said slave set to work, and not live idly, upon pain, for every three working days that the slave live idly by their default, that a city forfeit £5, a borough 40s., and a town or village 20s., half to the King and half to the informer. If it appear that he was not born in the place of which he described himself as a native, he was to be branded on the face, and be a slave for life. There is a clause of corresponding severity applied to children; and there is a clause empowering the master to let, sell, or give the service of such slave or child, "after such like sort and manner as he may do of any other his moveable goods or chattels." There is also a clause empowering the master of any slave "to put a ring of iron about his neck, arm, or his leg, for more knowledge and surety of the keeping of him."

This statute had a very short existence, for it was repealed by the 3 and 4 Edward VI., c. 16 (1550), and the 22 Henry VIII., c. 12, was revived. The 5 and 6 Edward VI., c. 2 (1551), "to the intent that valiant beggars, idle and loitering persons, may be avoided, and the impotent, feeble, and lame provided for, which are poor in very deed," confirms the 22 Henry VIII., c. 12, and 3 and 4 Edward VI., c. 16, and commands that they shall be put in execution. The same enactments, with the same preamble, are repeated by the 2 and 3 Philip and Mary, c. 5 (1555).

The state of extreme distress to which the labouring population was thus reduced by act of Parliament is distinctly acknowledged by the preamble of the statute 5 Elizabeth, cap. 4 (1562), which sets forth "that the wages and allowances, limited and rated in many of the said statutes, are in divers places too small, and not answerable to this time, respecting the advancement of prices of all things belonging to the said servants and labourers; the said laws cannot conveniently, without the great grief and burden of the poor labourer and hired man, be put in good and due execution." And to provide a remedy, so as to "banish idleness, advance husbandry, and yield unto the hired persons both in the time of scarcity and in the time of plenty, a convenient proportion of wages," the 15th section of the said statute 5 Elizabeth, cap. 4, enacts "that the justices of peace of every shire, &c., shall yearly, at every general sessions first to be holden after Easter, assemble themselves together, and calling unto them such discreet and grave persons of the said county as they shall think meet, and, conferring together respecting this plenty or scarcity of the time, and other circumstances necessarily to be considered, shall have authority, within the limits of their respective commissions, to limit, rate, and appoint the wages, as well of such and so many of the said artificers, handicraftsmen, husbandmen, or any other labourer, servant, or workman, whose wages in time past hath been by any law or statute rated and appointed; as also the wages of all other labourers, artificers, workmen, or apprentices of husbandry, which have not been rated; as they, the same justices, mayors, or head officers within their several commissions or liberties shall think meet by their discretions to be rated, limited, or appointed by the year, or by the day, week, month, or otherwise, with meat and drink, or without meat and drink; and what wages every workman or labourer shall take by the great for mowing, reaping, or threshing of corn and grain, or for

mowing or making of hay, or for ditching, paring, railing, or hedging by the rod, perch, lagg, yard, pole, rope, or foot; and for any other kind of reasonable labour or service."

CHAPTER III.

Third Period—From the Passing of the Poor Law of 1601 to the last Direct Interference of the Law with the Agricultural Labour-market in 1725.

Having brought things to this pass, the Legislature set about to devise a remedy. Instead of leaving off their most oppressive and impertinent interference with the labour-market, they bethought them of still keeping down the price of labour by the whip, the stocks, the branding-iron, and the halter; and, as the labourer with a family could not subsist on the wages allowed him by the justices, it was now proposed to make up the difference in the shape of alms to be provided by a compulsory contribution, called a poor-rate, "the effect of which would be this. Part of the poor-rate being levied on persons who were neither employers of labour nor receivers of rent, the farmers, having consequently to pay less in wages, could afford to pay more in rent. This system, indeed, had been going on to a certain extent for a considerable period, and it will help to account for the enormous rise of rents to which we have adverted above. But the system was rendered secure and permanent by the Poor Law of 1601, the famous statute 43 Eliz., c. 2.†

In 1610 the wages allowed by the justices in the county of Rutland to men employed in agricultural work were as follows:—

	With Meat.	Without Meat.
A mower by the day	d. 5	d. 10
A man reaper	d. 4	d. 8
A woman reaper	d. 3	d. 6
A man haymaker	d. 4	d. 8
A woman haymaker	d. 3	d. 6
A follower of scythes	d. 3	d. 6
A raker of barley and peas ..	d. 3	d. 6
A hedger	d. 4	d. 8
A ditcher	d. 4	d. 8
Every other labourer not before set down (harvest excepted) shall have from Easter till Michaelmas	3	7
And afterwards every such labourer shall have from Michaelmas to Easter	2	6

Upon this Sir Frederic Eden makes the following observation:—"In these rates of wages the justices seem to have calculated that half the day's earnings were equivalent to diet for one day; in modern times, however, a much greater proportion of the daily pay of a labourer is appropriated to the purchase of the single article of bread."

But it is to be borne in mind, in the apportionment of the day's earnings, that the labourer's family are to be fed, as well as himself; and if a larger proportion than half were devoted to the labourer himself, it is not easy to see how his wife and children could subsist at all. Accordingly, we find the following returns from Bootle, in Cumberland, to the question issued by the Poor-Law Commissioners of Inquiry, in 1832, as to the amount of wages:—"Summer, about 2s. a day if they victualled themselves; about 1s. if they do not. Winter, wages about 1s. 10d. a day if they find themselves, and about 10d. if they do not."‡ And Sir Francis Doyle, in his report to the Poor-Law Commissioners on the employment of women and children in agriculture, dated the 1st of March, 1843, makes the following observations on the mode of paying wages which prevails in the East Riding of Yorkshire:—"The labourers are fed in the farm-houses, and have a certain proportion of wages deducted to pay for their meat; this proportion (1s. a day), if we take wages at 13s. a week, which was as high as they were in January, amounts to 6-13ths of the man's entire income from work; so that, setting aside her husband's food, half and a fraction of his earnings is all that a woman has with which to confront the rest of life: her food, that of her children, the rent of the cottage, fuel, schooling, medical attendance, have all to be provided for out of a sum only just larger than what is retained for the bare meat and drink of an individual labourer. The farmers like this system, either because they profit by it, or because they have a notion, which I believe to be unfounded, that men work better in proportion as they are heavily fed. The men like it, because no doubt they get a better dinner than would otherwise fall to their share; but upon the women and children it must, and I am assured it does,

* Sir F. Eden says ("State of the Poor," l. 123), "It seems very probable (although history is silent on the subject) that the injudicious provisions of former statutes, which obliged a man to accept wages which, in times of scarcity, could not possibly maintain him, may, among other causes, have greatly contributed to the increasing wants of the people, and the consequent establishment of the poor's rate." And the author of the article on the Corn Laws in the "Encyclopædia Britannica" (note, p. 236) points to the same cause of the institution of poor-rates.

† The statute says, "by taxation of every inhabitant, person, vicar, and other," placing the clergy in the front of the battle. The Poor Law, from first to last, has been most oppressive on them; and its inherent evils have been aggravated towards them by such contrivances, for instance, as the labour-rate.

‡ In an article on "The Principles and Progress of the Poor Law Amendment Act," published in the "Edinburgh Review," and republished, "with Notes and Additions," in 1837, by the publishers to the Poor-Law Commissioners, it is stated that "the chief objects of the Statute of Elizabeth were to make the able-bodied who were indolent and turbulent conform to habits of industry." The able-bodied who were well paid were neither indolent nor turbulent. They never are.

§ See Vol. II. of the "Encyclopædia Britannica," p. 236.

¶ Appendix (B. I.), Part I., p. 160 &c.

operate for evil. To use the words of a man whom I asked about it at Malton, 'Poor things, they cannot live well; I defy them.'—P. 296.

The average price of the Winchester quarter of middling wheat in Windsor market from 1606 to 1625 (both years inclusive), was £1 14s. 18.9d.;* so that, at this time (1610), it would take a reaper, with wages of 8d. a day, 51 days' labour to earn a quarter of wheat; consequently he was worse off than in 1593, when he could earn a quarter of wheat by 48 days' labour; and very much worse off than in 1387, when he could earn it by 12 days' labour. Or, in other words, he could now (that is in 1610) earn by a week's labour only 60 pints of wheat, whereas, in 1387, by a week's labour, he could earn 236 pints of wheat; in 1498, 192 pints; in 1514, 147 pints; in 1545, 68 pints; in 1593, 64 pints; as appears by a table which we have drawn up for the purpose of showing the real return which the labourer has received for his labour in different periods.†

The author of a work intitled "A Discourse touching Provision for the Poor," published in 1683, and attributed to Lord Chief Justice Hale, computes the necessary expense of a labourer's family, consisting of six persons, the father, mother, and four children, at 10s. a week, or £26 a year. And he says they might probably get so much if employed, if two of the children, as well as their mother, were able to contribute something by their work to the family income; but if they cannot earn this by their labour, they must make it up, he supposes, either by begging or stealing;‡ which shows it was the least sum for which he considered the necessary quantity of food could be obtained for six persons. "In 1688," observes Adam Smith, "Mr. Gregory King, whose skill in political arithmetic is so much extolled by Dr. Davenant, computed the ordinary income of labourers and out-servants to be £15 a year to a family, which he supposed to consist, one with another, of three and a half persons. His calculation, therefore, though different in appearance, corresponds very nearly at bottom with that of Judge Hale. Both suppose the weekly expense of such families to be about 20d. a head."§

According to the Table of Averages quoted above, the average price of the Winchester quarter of middling wheat in Windsor market from 1606 to 1685 was £1 10s. 7 1-9d.; and from 1686 to 1705, £1 16s. 3 1-9d. Consequently at this time (i.e., 1683), the labourer and his family could earn 146 pints of wheat by a week's labour, which would be equivalent to 15s. 4d. a week in 1842, the average price of wheat being 50s. the quarter. It is necessary here, however, to guard against confusion in comparing this rate of wages with the preceding rate of which we have spoken, and carefully to bear in mind that here the earnings of the labourer himself, his wife, and two of his children are lumped together; whereas, in the former cases mentioned, the earnings of the labourer alone were considered. This will reduce the weekly earnings much nearer to the scale of 1610 and of 1725, which we are about to give.

We have seen how the legislative interference with wages led to the poor laws. The law which compelled every parish to maintain its own poor, naturally led to disputes between parishes about what constituted a claim for maintenance against any given parish, and then to further legislative interference in the shape of the statute 13 and 14 Car. II., c. 12|| (1662). This statute, after reciting that "the necessity, number, and continual increase of the poor, not only within the cities of London and Westminster, but also throughout the whole kingdom of England and dominion of Wales, are very great, and exceedingly burdensome; and that, by reason of some defects in the law, poor people are not restrained from going from one parish to another, and, therefore, do endeavour to settle themselves in those parishes where there is the best stock, the largest commons or wastes to build cottages, and the most woods for them to burn and destroy; and when they have consumed it, then to another parish, and at last become rogues and vagabonds, to the great discouragement of parishes to provide stocks, where it is liable to be devoured by strangers;" enacts, "That it shall be lawful upon complaint made by the churchwardens or overseers of the poor of any parish, to any justice of peace within forty days after any such person or persons coming so to settle as aforesaid in any tenement under the yearly value of £10, for any two justices of the peace, whereof one to be of the quorum of the division where any person or persons that are likely to be chargeable to the parish shall come to inhabit, by their warrant to remove and convey such person or persons to such parish where he or they were last legally settled, either as a native, householder, sojourner, apprentice, or servant, for the space of forty days at the least, unless he or they give sufficient security for the discharge of the said parish, to be allowed by the said justices."

The effect of this law was, by confining generally the labourer's market for his labour within the bounds of his own parish, to add still further to the disadvantages under which the laws already in existence respecting wages compelled him to sell his labour. "To remove a man," says Adam Smith, "who has committed no misdemean-

* See the Table of Averages published in Smith's "Theory of the Corn Trade," second edition, p. 100; and quoted in Eden, vol. II., Appendix, p. 1222.

† See this table, at p. 296.

‡ See Smith's "Wealth of Nations," B. I., ch. 8.

§ See Car. II., c. 12, in the Record Commissioners' edition of the Statutes.

our, from the parish where he chooses to reside, is an evident violation of natural liberty and justice. . . . There is scarce a poor man in England of forty years of age, I will venture to say, who has not in some part of his life felt himself most cruelly oppressed by this ill-contrived law of settlement."¹

Since Adam Smith wrote, the law has been rendered somewhat less oppressive by the statute 35 Geo. III., c. 101 (1795), which enacts that no poor person shall be removed until he shall become actually chargeable. "A change," say the Poor-Law Commissioners in their Report of 1834, "so imperiously demanded, not only by expediency, but by justice, that it is difficult to conceive how the arbitrary enactment of the 13 and 14 Car. II. could have been tolerated so long."† It appears, however, by the evidence collected by the Poor-Law Commissioners, that at the time of passing the new poor law the evils inflicted on the labourer in the way of obstructing the circulation of labour, and consequently limiting the market for it, were by no means removed. And the last Report (the ninth annual report) of the Poor-Law Commissioners (1843) shows that those evils, though they may be a little diminished, are by no means removed even now.‡

By an order and declaration,§ passed by the justices of the peace in quarter sessions for the county of Lancaster in 1725, it was ordered that—

	s.	d.
The best husbandry labourer, from the midst of March to the midst of September, shall take, by the day, without meat and drink, not above	1	0
Nor with meat and drink, above	0	6
And the ordinary sort of husbandry labourers shall take, by the day, without meat and drink, not above	0	10
Nor with meat and drink, above	0	5
The best husbandry labourer, from the midst of September to the midst of March, shall take, by the day, without meat and drink, not above	0	10
Nor with meat and drink, above	0	5
And the ordinary sort of husbandry labourers shall take, by the day, without meat and drink, not above	0	9
Nor with meat and drink, above	0	4
No man shall take for his wages, by the day, without meat and drink, above	1	0
Nor with meat and drink, above	0	6
No woman shall take for her wages, by the day, without meat and drink, above	0	10
Nor with meat and drink, above	0	6

According to the table above quoted, the average price of the Winchester quarter of middling wheat from 1706 to the end of 1725, was 35s. 4 2-9d., consequently at this time (1725), the labourer could earn 86 pints of wheat by a week's labour, which would be equivalent to about 8s. 3d. a week at the present time, the average price of wheat being about 56s. the quarter.

The above scale is particularly deserving of attention as being one of the last attempts of the justices to keep down agricultural wages by their authority. Henceforth, if the labour-market was acted upon by disturbing forces, we must look for them elsewhere than in the statutes made expressly to regulate, that is, to keep down wages.

However, though the labour statutes now ceased to operate directly, their effects still continued to be felt in the direct operation of the laws to which they had given rise, and still more of the principles of action, the opinions or mode of thinking upon which those laws were founded, and which were soon to produce other laws calculated to exercise a still greater influence on the labour-market and the condition of the labourer.

CHAPTER IV.

Fourth Period—From the last direct interference of the Justices with the labour-market about 1725, to the Passing of the Corn Law of 1791.

According to the already quoted table published by Mr. Charles Smith, in his "Three Tracts on the Corn Trade,"|| and quoted by Sir Frederic Eden,¶ who continues thence from 1765 to 1793, the average price of the Winchester quarter of middling wheat was:—

	s.	d.
From 1593 to 1635 (both years inclusive)	1	12 10 7-9ths.
— 1636 to 1653	1	14 1 8-9ths.
— 1654 to 1663	1	19 10
— 1664 to 1683	2	5 4 5-9ths.
— 1684 to 1693	1	16 7 1-9th.
— 1694 to 1703	1	16 3 1-9th.
— 1704 to 1725	1	15 4 2-9ths.
— 1726 to 1745	1	9 10 4-9ths.
— 1746 to 1764	1	11 8 4-9ths.
— 1765 to 1773	2	5 3 6-9ths.
— 1774 to 1793	2	4 1 4-9ths.

It appears from this table that within forty years of the end of the eighteenth century, the price of wheat was very nearly the same as it was towards the end of the sixteenth century, while, as appears from what has been already stated, the money price of labour had about doubled. According to Arthur Young,** the price of agricultural labour for

sixty-six years, ending in 1766, was 12d. per day. In the fifty years ending 1765, there were only five deficient harvests; and the average price for the whole half century following 1715, ranged at 34s. 11d.;* for the ten years ending 1751, during which the crops were above an average, the average price of wheat by the Eton tables, for wheat of better than average quality, was only 29s. 2½d. the quarter.† We have seen that in 1725 the wages of a reaper in harvest were fixed by the Lancashire justices at 1s. a day, without meat. If we take the harvest wages at 9s. the week, towards the end of the period during which the average price of wheat was 29s. 2½d. the quarter, we shall find that about the middle of the eighteenth century, the labourer could earn 157 pints of wheat by a week's labour, in harvest: or rather more than a peck and a half by a day's labour (equal to about 17s. a week at the present time). But in the reign of Henry VII. he could earn two pecks; and in the reign of Richard II., he could earn two and three-quarters, or nearly three pecks, by one day's labour (equal to about 30s. a week at the present time).

We have taken the harvest wages in order to have the means of comparison with the earlier periods in which the harvest wages appear to be the wages that can now be best ascertained. And we have added 6d. a day, or one-half, for the harvest wages to the 12d. a day stated by Arthur Young, as above observed, to be the average price of agricultural labour for 66 years ending in 1766, which is probably rather more than the average addition made in harvest. Notwithstanding this, however, we see that the labourer's power of purchasing the first necessary of life, obtained in exchange for his labour, though considerably greater than it had been for the preceding two centuries, was but about equal to what it was about two centuries and a quarter before, considerably less than it was two centuries and a half, and still more considerably less than it was three centuries and a half before.

But though, if the foregoing evidence can be relied on, not so well off in regard to the quantity of the commodities received in exchange for his labour as he was some three centuries before, the agricultural labourer was in a better condition at the period of which we now speak (1766) than he had been for a long time previously, or than he has been since. This improvement in the condition of the labouring population has been remarked by various writers; though it seems to have been generally overlooked that the evidence only proves an improvement with reference to more recent times, while, if we carry our view back to a remote period, we cannot draw the same conclusions.

Adam Smith gives it as his opinion that the real recompense of labour, the real quantity of the necessities and conveniences of life which it can procure to the labourer, increased during the first three quarters of the eighteenth century, or at least down to 1765, "perhaps in a still greater proportion than its money price."‡ For not only had grain become somewhat cheaper, but many other things, such as potatoes and all sorts of garden stuff, clothing, and many pieces of household furniture, had become a great deal cheaper. And this improvement on the whole had taken place, notwithstanding that soap, salt, candles, leather, and fermented liquors had become a good deal dearer, chiefly from the taxes which had been laid upon them.

It appears from the evidence already adduced, that by the middle of the fourteenth century wheat formed a considerable portion of the usual food of the agricultural labourers in many of the counties of England. It has been commonly supposed and asserted that one natural consequence of the increase of wages at the time of which we are now treating was the resort to a superior diet. The author of the "Three Tracts on the Corn Trade," writing in 1765, says, "It is certain that bread made of wheat is become much more generally the food of the common people since 1689 than it was before that time." What, at least, is certain, is that in the year 1764 more than half of the people of England lived on bread made of wheat. But as an erroneous impression appears to prevail on this subject in authoritative quarters,§ it may be useful to examine the subject with some minuteness.

It appears from the account of the first workhouses, that in 1725, when that account was published, wheaten bread was used in many of these establishments in the southern counties. In the second edition of Mr. Charles Smith's "Three Tracts on the Corn Trade and Corn Laws," published in 1766, the writer, after stating that some, who had considered this matter with great attention, and were better informed in regard thereto than most inquirers, were inclined to think that, in the year 1764, one-half of the people could not be supposed to feed on such bread, thus proceeds:—"In order, therefore, to get at all possible certainty in this matter no pains have been spared; and from a consideration of the several sorts of grain with which the London market is supplied from, and sends to, the distant parts of the kingdom, after many inquiries made of, and conversations held with, many who travel into, and have lived, or live, in several of the distant counties, particularly the labouring people, who are best acquainted with the bread they eat, and calculating the

number of months from the number of houses, there is reason to think that more than half the people do live on such bread." The following abstract is then given of the result:—

"The kingdom, with Wales, is divided into six parts, taking those counties which lie most contiguous, as may be seen in the map.

Part the First contains:—

- | | |
|--|-----------------|
| 1. London, with Middlesex and Southwark, | 8. Buckingham, |
| 2. Essex, | 9. Hertford, |
| 3. Kent, | 10. Bedford, |
| 4. Surrey, | 11. Cambridge, |
| 5. Sussex, | 12. Huntingdon, |
| 6. Hants, | 13. Suffolk, |
| 7. Berkshire, | 14. Norfolk. |

Part the Second contains:—

- | | |
|---------------|---------------|
| 15. Wilts, | 18. Devon, |
| 16. Somerset, | 19. Cornwall. |
| 17. Dorset, | |

Part the Third contains:—

- | | |
|-----------------|------------------|
| 20. Monmouth, | 26. Northampton, |
| 21. Gloucester, | 27. Salop, |
| 22. Oxford, | 28. Stafford, |
| 23. Hereford, | 29. Leicester, |
| 24. Worcester, | 30. Rutland. |
| 25. Warwick, | |

Part the Fourth contains:—

- | | |
|-----------------|----------------|
| 31. Chester, | 34. Lincoln, |
| 32. Derby, | 35. Lancaster. |
| 33. Nottingham, | |

Part the Fifth contains:—

- | | |
|-------------------|---------------------|
| 36. York, | 39. Cumberland, |
| 37. Westmoreland, | 40. Northumberland. |
| 38. Durham, | |

Part the Sixth contains:—

Six counties in South, and six counties in North Wales. The Accounts of each Part stand as follows:—

Part	Number of houses	Number of souls, six to each.	What number in the whole eat			
			Wheat.	Barley.	Rye.	Oats.
1	348,187	2,089,122	1,866,405	36,741	185,976	—
2	150,689	904,134	681,815	221,319	—	—
3	170,746	1,024,476	691,258	159,136	156,287	17,443
4	123,025	738,150	200,839	128,621	118,795	290,993
5	148,760	892,560	283,996	37,196	285,382	283,986
6	45,075	270,450	29,344	127,585	113,521	—
Total	986,482	5,918,892	3,754,157	710,598	859,911	594,226

Say the whole number is 6,000,000, and that of those who eat Wheat is 3,750,000
Barley 739,000
Rye 888,000
Oats 623,000

Total 6,000,000*

From 1765 to 1775 there was a very frequent recurrence of unfavourable years. Mr. Tooke is at some pains to show that the whole interval from 1765 to 1775 was marked "by dearths of equal, if not greater severity, on the continent of Europe."† It might be inferred from this that the great increase in the prices of grain in this country was caused solely by the seasons, and that the duty on wheat, which was prohibitory by the statute of 1670‡ till the price exceeded 53s. 4d. per quarter, was during that period inoperative. Now, the average price per quarter, during those ten years, of middling wheat in the Windsor market was 51s. 3½d.; while during the same ten years the average export price per quarter of wheat at Dantzic, as shown by the Consul's Returns made to Parliament in 1826, was 30s. 10d.§ However, as the average price at Windsor of the ten years preceding 1765 was 39s. 3½d., and at Dantzic 22s. 11d., the rise in price at Dantzic was quite as great as the rise in price at Windsor. But, even though the proportions may be nearly the same, it is important to observe how much lower the Dantzic level is than the Windsor, which is a proof that the then Corn Law had the effect of considerably raising prices in this country. And even though it be true that the same kind of weather may prevail at the same time throughout a great part of Europe, it does not by any means follow that the same sort of weather will prevail at the same time over the whole earth, or even over a very considerable portion of it.

Arthur Young|| states, as the general result of the information obtained by him in his extensive agricultural tours in 1767, 1768, and 1770, that the mean rate of wages for the whole year was 7s. 4½d. per week. "Taking an average of the five years from 1766 to 1770 inclusive, the price of the quarter of wheat was 47s. 8d., or nearly 48s., which would be 6s. the bushel, and 1s. 6d. the peck. At these prices of labour and wheat, the earnings of the labourer would be somewhat under five-sixths of a peck. Now, in 1763, and for thirty years before, his wages had been 7s. a week; and the average price of wheat in the five years ending in 1763 being 33s. 1½d., his daily earnings would be equal to very nearly a peck of wheat. And if the price of wheat be taken at the average of

¶ "State of the Poor," vol. III., Append. lxxix. Sir Frederic Eden has, in several places, quoted whole pages of Mr. C. Smith's tract, without marking them as quotations, further than by a reference to the "Three Tracts on the Corn Trade." The plan adopted by Mr. C. Smith, and usually followed since by writers on corn, for reducing the Windsor measure of the best wheat to the Winchester measure of middling wheat, is to deduct one-ninth for the difference of the bushel above the statute measure, and then one-ninth more for the difference of quality. This allowance, indeed, for the difference of quality, Mr. Tooke says he conceives is more than is warranted.—"Hist. of Prices," vol. I., p. 28.

twenty years preceding 1755, it would appear that he then earned somewhat upwards of a peck.*

By the Corn Law of 1773,† the following scale of duties was fixed, to come into operation on the 1st of January, 1774. Whenever the price of middling British wheat, at ports of importation, was at or above 48s. per quarter, a duty of only 6d. per quarter was to be taken on all foreign wheat imported during the continuance of that price. When the price was at or above 44s., exportation and the bounty together were to cease; and the carrying of British grain coastwise ceased also. But under this act the bounty, by which the corn-growers had formerly profited, never came into operation; and, alleging that the act had rendered England dependent upon other countries for the supply of corn, they made a new Corn Law in 1791; and yet, as appears from the Consul's Returns, the average export price per quarter of wheat at Danzig, during the period between 1774 and 1791, was 28s. 7d.

By the Corn Law of 1791 it was enacted, that after November 15, 1791, the bounty of 5s. per quarter should be paid when wheat was under 44s.; and the scale of import duties was

For wheat under 50s. per quarter	24s. 3d.
" at 50s., but under 54s.	2s. 6d.
" at or above 54s.	0s. 6d.

The duty of 24s. 3d., so long as the price of wheat was under 50s., was equivalent to a prohibition.

(To be continued.)

WAR.

(From the Spectator.)

Nobody sees a battle. The common soldier fires away amidst a smoke-mist, or hurries on to the charge in a crowd which hides everything from him. The officer is too anxious about the performance of what he is specially charged with to mind what others are doing. The commander cannot be present everywhere, and see every wood, watercourse, or ravine, in which his orders are carried into execution: he learns from reports how the work goes on. It is well; for a battle is one of those jobs which men do without daring to look upon. Over miles of country, at every field-fence, in every gorge of a valley or entry into a wood, there is murder committing—wholesale, continuous, reciprocal murder. The human form—God's image—is mutilated, deformed, lacerated, in every possible way, and with every variety of torture. The wounded are jolted off in carts to the rear, their bared nerves crushed into maddening pain at every stone or rut; or the flight and pursuit trample over them, leaving them to writhe and roar without assistance—and fever, and thirst, the most enduring of painful sensations, possess them entirely. Thirst, too, has seized upon the yet able-bodied soldier, who, with bloodshot eyes and tongue lolling out, plies his trade—blaspheming, killing with savage delight, callous when the brains of his best-loved comrade are spattered over him. The battle-field is, if possible, a more painful object of contemplation than the combatants. They are in their vocation, earning their bread—what will not men do for a shilling a day? But their work is carried on amid the fields, gardens, and homesteads of men unused to war. They who are able have fled before the coming storm, and left their homes, with all that habit and happy associations have made precious, to bear its brunt. The poor, the aged, the sick, are left in the hurry, to be killed by stray shots, or beaten down as the charge and counter-charge go over them. The ripening grain is trampled down; the garden is trodden into a black mud; the fruit-trees, bending beneath their luscious load, are shattered by the cannon shot. Churches and private dwellings are used as fortresses, and ruined in the conflict. Barns and stack-yards catch fire, and the conflagration spreads on all sides. At night the steed is stabled beside the altar, and the weary homicides of the day complete the wrecking of houses to make their lairs for slumber. The fires of the bivouac complete what the fires kindled by the battle have left unconsumed. The surviving soldiers march on to act the same scenes over again elsewhere; and the remnant of the scattered inhabitants return to find the mangled bodies of those they had loved, amid the blackened ruins of their homes—to mourn with more agonizing grief over the missing, of whose fate they are uncertain—to feel themselves bankrupts of the world's stores, and look from their children to the desolate fields and garners, and think of famine and pestilence engendered by the rotting bodies of the half-buried myriads of slain. The soldier marches on and on inflicting and suffering as before. War is a continuance of battles—an epidemic striding from place to place, more horrible than the typhus, pestilence, or cholera, which not unfrequently follow in its train. The siege is an aggravation of the battle. The peaceful inhabitants of the beleaguered town are cooped up, and cannot fly the place of conflict. The mutual injuries inflicted by assailant and assailed are aggravated, their wrath is more frenzied: then come the storm and the capture, and the riot and lustful excesses of the victor soldiery, striving to quench the drunkenness of blood in the drunkenness of wine. The eccentric movements of war—the marching and countermarching—often repeat the blow on districts slowly recovering from the first. Between destruction and the wasteful consumption of the soldiery, poverty pervades the land. Hopeless of the

future, hardened by the scenes of which he is a daily witness, perhaps goaded by revenge, the peasant becomes a plunderer and an assassin. The horrible cruelties perpetrated by Spanish peasants on the French soldiers who fell into their power were the necessary consequences of war. The families of the upper classes are dispersed; the discipline of the family circle is removed; a habit of living in the day for the day—of drowning the thoughts of the morrow in transient and illicit pleasure—is engendered. The waste and desolation which a battle spreads over the battle-field is as nothing when compared with the moral blight which war diffuses through all ranks of society, in the country which is the scene of war.

THE PAST SESSION.

(From Tail's Magazine.)

The past session, however barren of large legislative reforms, has, in one most important respect, been useful and beneficial beyond any other on record, viz., in bringing us better acquainted with the physical, moral, and social condition and wants of the most numerous and neglected classes of the community. This species of useful knowledge—the most useful of all knowledge—has been diffused of late with extraordinary zeal and success. The one-sided philanthropy of Lord Ashley and his friends has long since fixed the public gaze—now more intently than ever—on the conditions of life in the manufacturing districts, and carried the light of Government inquiry and inspection into the factories and dwellings of Lancashire and the West Riding—a service which the manufacturers have most amply repaid, by disclosures of the state of things in those once vaunted paradises of rural felicity and innocence, the cottage homes of the English peasantry. Between the two, we are in a fair way (by due sifting) of being put in possession of a body of facts of supreme importance and value, alike to the moralist, the economist, and the legislator. The peasantry, meanwhile, have been speaking for themselves, with such voice as they have. In Wiltshire, we have been startled and cheered by the novel spectacle of public meetings of farm-labourers (four within two months), assembling by the thousand, to discuss their grievances, and petition for Free Trade as a remedy; blundering a little, some of them, as might be expected, on the subject of thrashing-machines; but, on the whole, speaking of their rights and wrongs with a manly simplicity and good sense that might shame, if shame were in them, the twaddling ignorance and sordid selfishness of their landlord protectors. And in the eastern counties, we have had, for many successive weeks, those terrible signal-fires of distress, in which misery, oppression, and famine, proclaim to wealth and power their desperate determination to get themselves attended to. Whatever other questions may have slept during the past six months, the Condition-of-England question has not; it has made rapid progress, forced itself more and more pressing on public attention, and found its way at length (not until the last night of the session, however,) to the lips even of so cautious and cool a statesman as Lord John Russell.

The true remedy—i. e., the proximate remedy—for the industrial diseases of society,—the thing to be done first, and the doing of which will render all other things clearer,—is gradually making its own way with the public, and even with the Legislature. A striking characteristic of the past session is the greatly increased interest and importance assigned to fiscal and commercial questions. The whole parliamentary politics of the year have turned on points of political economy. Economical questions have twice effected a break-up of parties; on economical questions, a strong Ministry has twice been all but overthrown, and has owed its eventual safety to being a little more in the right than its confederated assailants. With an extremely small amount of that "useful and beneficial legislation" of which the Minister so pleasantly boasts, there has been a very large amount of most useful and beneficial discussion; and the one and the other have tended alike in the direction of economical truth and justice. There has been much moving of the straw, though not so much as yet to dislodge the vermin. Such speeches as that of Mr. Cobden, on the 12th of March, on his motion for inquiry into the effects of the Corn Law on the interests of farmers and agricultural labourers, and those of Mr. Milner Gibson and Mr. Bright, in the "incendiary" debate of the 19th of July, are a seed which, though cast on the stoniest and thorniest of soils, cannot be long without its fruit. In the disclosures thus forced on the public notice, of the actual condition of the protected classes, monopoly loses its last hold on popular gullibility. And with all this, the shabby, tricky monopolist Ministry has gone on doing its part towards undermining the frauds on which its power is based. It were an easy task—only it is not worth even the little trouble it would cost—to compile from this year's Hansard, as from last year's, a tolerable body of Free-Trade doctrine, enunciated by official lips. It may be enough to note, that the Home Secretary has told the working classes, that the Corn Law is the reason why they cannot have a ten-hours' law; and the landlords, that the whole protective system together is a "house of cards," which a touch may bring down about their ears.

STATE OF THE POOR.—There are many who, easy and supine, seem to think that the poor now are not worse off than at other times when no complaints were made, but they may rest assured it is not so; it is no political cry, no agitation of a faction, no hyperbole of a demagogue, that is gone up in these our days from the suffering poor. It is pure physical distress, grinding poverty, want of food and clothing, that call upon all to be up and doing, and to check the tide of pauperism that is spreading over the land. Something should, ought, and must be done to raise the poor labourers from the state in which he now lives—his miserable wages affording him hardly enough to keep body and soul together, and for the future nothing to hope or look for—no means of laying up a store for an evil day, for sickness, or old age. This cannot be permitted to endure; we must strive in our own immediate spheres to put an end to it. It is the first lesson of all religion, in which all parties are agreed—feed the hungry, clothe the naked, relieve those who are in distress; these are the first commands of the Gospel, and without attending to these it is vain to profess attachment to the others.—*Sheffield Journal.*

NOTES TAKEN BY A TRAVELLER IN THE SUMMER OF 1844.

No. VII.

Aix-la-Chapelle, July 20, 1844.

My arrival in Belgium was contemporaneous with a change in the legislative enactments that regulated the foreign commerce of the country, from which I anticipated no good. Scarcely have I reached the German frontier when the first fruits of this lamentable policy show themselves. The King of Prussia has issued a proclamation imposing a differential duty of fifty per cent. on all iron imported into Prussia from Belgium, to be levied until the Belgians reject the differential duties imposed on foreign vessels. Here we have the nominal representatives of the people in one country and a despotic monarch in the other playing a diplomatic game with the dearest interests of trading nations. If this sudden measure of reprisal on the part of Prussia leads to the desired change in Belgium, what self-complacent remarks we shall hear on the wisdom of the diplomacy of Berlin, and on the care taken of the interests of Prussian shipowners! What mischief in the meantime may result to manufacturers in Prussia from the sudden stopping up of a source of supply, or to mercantile houses in both countries that have running accounts depending on the existing laws, it would of course be too vulgar for starred and ribboned ministers to inquire. This place is, however, admirably adapted to afford us a survey of the working of such legislation on the class most immediately interested, but the effects of which can be traced to all the other classes of the community.

The mining interest in Belgium is one in which the gains of the landowner and of the manufacturer are as easily identified as in the linen production. The high lands through which the Sambre and the Meuse have eaten their way form a rich girdle crossing the southern provinces of Belgium from Mons to Liege, as valuable for the minerals they contain to the inhabitants as they are pleasing in picturesque effect to the traveller. They contain beds of iron and coal in juxtaposition as favourably situated in many places for working as our beds in Wales and in the Forest of Dean. After the separation of Belgium from Holland some relaxation was allowed in the strict police that mining operations on the Continent are subjected to; and mines were opened without an official sanction on the part of the Government. The impulse which the extension of the railroads gave to the iron trade in 1835 and 1836 was sensibly felt here as one of the first places on which there is a run whenever the supply of iron is short. The miners, considering themselves in a better situation than before, in consequence of the inclination of the Government to relax the internal restrictions, entered into large speculations, and joint-stock companies were formed to erect new works, while old ones were extended. The following table shows the nature and extent of the crisis which Belgium went through in consequence of the mining speculations of 1836:—

	1836.	1837.	1838.
Number of all kinds of mines worked	1,326	1,378	740
Labourers employed	4,904	5,237	2,975
Quantity of iron ore exported	630,955	685,573	384,838
" lead	548	240	274
" zinc	9,360	16,869	17,721
" alum schist	7,086	5,333	4,028

Thus the iron mines fell off in 1838 in their production more than one-half, and half of the labourers were dismissed. The coal mines, on the other hand, have prospered:—

COAL MINES.

	1836.	1837.	1838.
Number worked by individuals	318	345	389
Number worked by joint-stock companies	153	210	271
Production	3,052,181	3,228,797	3,260,271

Out of subscribed capitals, amounting to 770,255,690 francs, belonging to joint-stock companies that existed in 1838, it appears that 46,918,000f. were raised for mining and foundry speculations. This sum is equivalent to £1,800,000, an immense sum for so small a territory as Belgium, and one that it was hard to expose to the various chances by which industrial undertakings are now beset. Prussia was the first to take alarm at the extension of the production of iron in Belgium. The year 1837 saw a new tariff for the states of the Zollverein published, which limited the Belgian market at the moment that it was overstocked. With all their efforts to cheapen processes, this branch of industry has never recovered the blow it then received; and the recent additions to the duties levied in Germany will occasion more destruction of property. Belgium has thus serious reason to complain of the commercial policy of Prussia, and the summary justice inflicted by the new Berlin ordinance is indicative of a contempt that is scarcely politic. The measure cannot well be adopted by the other states of the Zollverein without the consent of their Chambers; and, as all are deeply engaged in railroad speculations, they will not like to see impediments thrown in the way of their progress.

For the commercial policy of Europe generally, some advantage may be anticipated from the dispute, since the King of Prussia's reprisal policy, if generally acted upon, would soon bring about a complete interruption of international communication, a climax that would infallibly lead to something more immediately interesting to crowned heads and their ministers than the solution of a theoretical question of political economy.

The comparative prosperity of the coalmines in Belgium arises from the great demand for fuel on the side of France, and the disposition the French Government has shown to encourage the importation from Belgium rather than from England. Without Sir R. Peel's export duty, it is probable that all the factories in Belgium within reach of sea vessels would have drawn their coals from England, while the Belgian coals would have gone from Mons and Charleroi to France. Our duty has been of the greatest service to the collieries on the Sambre and Meuse, which are daily extending their works. Here we have another instance of arbitrary interference with the natural play of trade, that, if left free, finds innumerable

* Tucke, *ibid.*

† 13th Geo. III., c. 43.

inadequate compensation for those irregularities which arise from natural causes.

The position of the Belgian speculator in any branch of industry may be estimated from all these facts. Where the jealousy of England, France, Holland, and Prussia leaves him a market, his own Government in all probability will interfere to protect him or to share his profits, and in both cases does irreparable mischief. For the phantom of a commercial fleet, which the Minister is now desirous to create, the whole mining interest in the country is paralyzed until the Chambers meet again; while, in the interval, new lines of trade will have been struck out in Prussia, and thus the mischief will prove irreparable.

I am especially anxious to show that this legislative and despotic interference in the mercantile intercourse between different lands can, in so small a country as Belgium, be immediately followed in its effects upon the different industrial interests. In large countries the clews that connect the various interests together are soon lost sight of, and the resources of individuals in money and other stock are less speedily exhausted. It is not every country that can bear to lose a whole West India capital, and then to vote a compensation for what was the effect of a monopoly—continuing the monopoly that occasioned the evil all the while; nor can any branch of industry that is essential as a safety-valve to keep the rapidly increasing population distributed be dispensed with, when others are being overstocked without a prospect of relief.

Another point on which I was anxious to establish a clear view is, that a continued repartition of the soil, even amongst the most skillful cultivators, affords no indemnification for the natural source of profit that every land possesses in its trade; but that any repression in trade is immediately felt by the agriculturist in equal measure with the manufacturer. From this last position results the important conclusion that no meddling is so dangerous to all interests as that which pretends to regulate matters of trade. Hence the present disposition in all European countries to direct the course of trade, is an assumption of power that is most unconstitutional, and, in an age when the means of subsistence are matter of difficulty amongst dense populations, actually equals the arbitrary right to dispose of life and property, to protect the subject against which constitutional guarantees were in most countries established. The connexion can be so clearly traced in Belgium, as to leave no doubt that the very considerable degree of misery that reigns in the country evidently is caused by the commercial legislation of the Government of that or of neighbouring countries. Let us now inquire whether the experience of Germany leads to the same conclusions.

The inquiry has become one to which intense interest now attaches, since the same posts which brought the news of the increased duties on foreign iron as agreed to by the states of the Zollverein inform us that a large manufacturing district in Prussia has just witnessed a fearful distressing tumult, in which blood has not been sparingly shed. The revolt has spread to Bohemia, and has even assumed a more serious character on the Austrian side of the mountains.

In what I have said respecting the effects of stagnation of trade in Belgium, and the insufficiency of the agricultural resources of the country to supply the deficiency which it occasions, the official statements fully bear me out. In the year 1839, the number of persons relieved by authority amounted in the mining districts of Hainault to 1 in 5 of the population; in Liege and Namur to 1 in 9; in West Flanders to 1 in 5; and in East Flanders to 1 in 7 of the inhabitants. 587,095 individuals, or 1-7th of the entire population, received in that year charitable relief. M. Ducpetiaux, who quotes the table in his essay on the increase of pauper distress, adds that in 1842 the number relieved was much greater. In the place of 96,880 individuals relieved in East Flanders in 1839, 111,734 received aid in 1842. In Antwerp the number rose from 38,004 to 45,542. In Liege, instead of 43,400 paupers in 1839, 62,202 appeared in 1842. What is to be the end of this rapid progress? Who is at length to provide for those who are debarred the means of supporting themselves?

The oldest member of the Chamber, M. Angillis, a few days before his death, pronounced these memorable words:—"The Flemings, as they are called, or the men of Flanders, as they once called themselves at the courts of their own sovereigns, make no demand of alms. Our unfortunate workmen who are without bread do not seek alms. They seek work, by means of which to earn a subsistence for their families." These are the words that now resound through every country of central Europe, for in all there is great and growing distress, both manufacturing and agricultural. They are the solemn protest recorded before Heaven against those egotistic measures which, in spite of their repeated failure, are still forced upon the unresisting majority of every country, with a view to enrich a few monopolists.

The cause of the pressure in the manufacturing districts of Prussia is not dissimilar to that which distresses Belgium. The linen weavers of Silesia have long suffered from the exclusion of their wares from the Russian markets, which they at one time supplied. The increase of the cotton manufacture afforded some indemnification for this loss, but latterly that has been stationary; while the rivalry of England has grown more formidable from day to day. Instead of furnishing large quantities of goods to the rich countries, Hungary and Poland, that lay so near them, the Silesians see their wares excluded from those markets which the Bohemians are unable to supply. If to this natural and touching demand for international trade, the answer is eternally to be restrictions and more restrictions, the end of all is easy to foresee, and the responsibility, as well as the quarters in which it will be visited, can be predicted with some certainty.

The most recent accounts from Bohemia are heart-rending. The military have repressed the riots that extended through the large towns between the Silesian mountains and Prague, all of which were the seats of manufacturing industry. The Austrian papers are of course not allowed to give details, but report swells the number of the killed under the fire of the soldiers to more than the victims on the Prussian side of the mountains.

The character of these riots is no less deplorable than their tragic result. In England, and even in Belgium, the destruction of machinery has long ceased. When the working classes recently desired to force the factories to raise their wages, they stopped the work, but spared

the machinery to which they knew they were to be indebted for their living. In Silesia and Bohemia the present excesses (for they are not yet at an end,) are accompanied by a fearful destruction of property, which must prove a serious blow to the manufacturing interests in those districts. This points to a second evil—neglect of education, which is held up in all the accounts of the state of those districts as a crying grievance, and is not denied in official quarters.

I have said that Aix-la-Chapelle is a good place from which to overlook the movement of the grand industrial stream; and, before going into the details of any particular district, let us see whether we can seize any characteristic trait that pervades many, or all of them, and which will aid us in our further researches.

In the first place, it must strike every one inquiring into the state of manufactures in Germany, that none are found situated at the mouths of rivers, or near the seacoast. The manufacturing district in Silesia is near the source of the great river Oder, which along all its navigable course belongs to Prussia. Frankfort-on-the-Oder, at which two great fairs are annually held, and which lies about halfway between Breslaw and the sea, is not a manufacturing town. Stettin, at the mouth of the river, is not so either. On the Elbe the manufacturing district is not near Magdeburg, or in the closest proximity to Hamburg; but in the province of Saxony, much higher up the river, and in the kingdom of Saxony, some hundreds of miles distant from the port. The nearest manufacturing district to the sea, measured by water communication, is that of Elberfeld and Solingen, on the Rhine, near Düsseldorf. Absolutely the nearest since the Belgian railroads have been completed, is this of Aix-la-Chapelle, which is a continuation of the districts of Verviers and Liège. At the time that Elberfeld first became a seat of manufactures, the Rhine mouth was inaccessible for the Germans, being monopolized by the Dutch; and the value which this trafficking nation set upon their exclusive possession of this river is best indicated by the efforts which they made to close the Scheldt against the trade of the world.

The origin, therefore, of manufactures on the Continent is to be traced to the period when, from the bad state of the communications in some states, and the complex political relations in others, particular districts were deprived of the foreign supplies that the more accessible parts of the Continent obtained by means of trade. In speaking thus of manufactures, I refer to the combination of resources that allowed of a division of labour, or the stage which preceded the introduction of machinery, and which does not date much before the commencement of the last century. Some intelligent princes, such as the Electors Palatine, the Electors of Saxony, the Kings of Prussia, perceiving the source of wealth which these industrial calculations opened to their subjects, gave direct encouragement in addition to this species of natural protection offered by the impediments alluded to. Under the Electors Palatine, Düsseldorf was at the same time a seat of the arts and refinements of high civilization, and its court was the encourager of the manufacturers of Elberfeld. The Princes of Berg and the Kings of Prussia, as Lords of Cleves and Juliers, encouraged the spirit of manufacturing industry brought by the French Protestant emigrants, who settled in the country, from Verviers to Aix-la-Chapelle. The silk manufacture died out there for want of supplies of the raw material. Woollens, and various kinds of linen and cotton wares, thrived and increased in importance.

The connexion with Poland made Dresden for a long period a flourishing capital, and opened a market for the manufactures, which there, too, grew up under the cherishing aid of their remoteness from the sea. Silesia, in like manner, shut in by mountains, although traversed by a river that is even now scarcely navigable, became both on the Prussian and Austrian side a manufacturing centre.

Bohemia, where industry had been awakened by the Princes of the House of Luxemburg, retained the habits and traditions of trade through all the distress of the religious wars. These habits and traditions are an inestimable fund of wealth and civilization to a people, and the wisest princes of Germany have been ever solicitous to preserve and increase this legacy of former times.

The revolution introduced into manufactures by machinery anticipated in these parts of Europe the improvement in the communications that ought to have brought the interior of Germany into closer connexion with the other parts of Europe. The resources of the whole of central Europe having been squandered by Napoleon on his warlike expeditions, the enfeebled state of both Germany and France after the peace was unequal to the task of at once creating roads and water communications, and several years of serious exertion were requisite before these great levers of civilization could be furnished to the people. The Prussian and Austrian Governments deserve all praise for their efforts to create good roads, and they have been wonderfully successful. Lines of roads of such immense extent as that stretching from Aix-la-Chapelle, on the Belgian frontier, to Tilsit, on the Baltic, the whole of which is on Prussian ground; or from Magdeburg, on the Elbe, to Oppeln, in Upper Silesia, could not be made without some lapse of time, and, in the interval, the circumstances that had called forth the agglomerations of manufacturers in certain districts continued. The master manufacturers in these parts being desirous of imitating the proceedings of other countries, and feeling the rivalry of strangers even in their seclusion, had introduced machinery; and both in Prussia and Saxony an attempt was made to transform the hand factories into machine factories, and cotton became an object of general consumption. As a necessary consequence, the population accumulated under the comparatively high wages which the circumstances allowed the manufacturers to offer; and the profits in the commencement were dazzling both to the speculators and to their Governments.

But with every new line of road that was opened the security in which these manufacturing experiments were made was invaded, and competition accompanied every facilitation of the importation of raw material and of the exportation of manufactured products.

A cautious Government, under such novel circumstances, ought to have abstained from interfering in a matter in which the cleverest statesmen saw no alternative but to sacrifice the interests of the consuming classes to those of the producers. Interference was, however, the fashion, and England, which was looked to as the pattern of a manufacturing country, was hastily presumed to be also a good and safe guide in commercial legislation. It was not perceived that the absence of competition gene-

rally, and the extent of our colonial empire, allowed us a wide field that we could move in without much apparent impediment from our ridiculous restrictions. It was still less perceived that these restrictions must inevitably fall before competition abroad, and even before the wants of an increasing population at home. It was hastily concluded that to these restrictions we owed our prosperity, and accordingly they were assumed to be wise and politic. Protecting duties were adopted, on a moderate scale in Prussia, in 1818, and would by this time have either become useless, or would have stifled her manufactures, if another great measure had not accompanied their introduction.

They would have become a dead letter in practice if, by persevering in attempts to supply a limited market, the Prussian manufacturers had been driven by internal competition to study and adopt the most improved and the most economical processes. But there was a greater chance that the efforts of the manufacturers would relax before the competition of the smuggler on a frontier line of 5000 miles, a large portion of which consisted of seacoast.

Both dangers were averted by the consolidation of the majority of the Germanic states into a commercial league, which is known under its German title of Zollverein.

The immediate results of this union have been to diminish many facilities for smuggling, while the home market for the manufacturer was extended. Thus the manufactures have remained in the spots in which they were first tried, instead of shifting, as they would probably have done under the pressure of competition from abroad, to more convenient places. At the same time the manufacturers, released in some measure from the active competition of England, have chiefly resorted to new processes only in consequence of the growing internal competition, and until lately produced neither so good nor so cheap articles as we can.

This, I think, will be found to be the true key to the present condition of the German manufactures. From the seats in which they are placed they do not offer elements for an extension under advantageous circumstances, and a change in their position must soon result from the pressure of internal competition, which will bring things round to the point to which foreign competition would, in the first instance, have led, without the expensive experiment, to which the country has been put, of restrictions on trade.

In addition to the pressure of this internal competition, and the rapid progress of our improvements, chemical and mechanical, the new element is now superadded of rapidly increasing pauperism; and if every country in Europe desires to escape periodical scenes of riot, destruction of property, and bloodshed, such as some of our towns, Lyons, Ghent, Silesia, and Bohemia, have within ten years witnessed, the field of industrial enterprise must be widened; there must be more and cheaper production every where, which will then every where find more and readier consumption.

The experience of the Rhenish district of the Prussian manufactures fully confirms the view I have taken. As long as the communication along the Rhine was imperfect, and the Dutch imposed difficulties in the way of the communication with the sea, the manufactures of the duchies of Berg, Cleves, Juliers, and the palatinate flourished. The silk-weavers had the choice of the silk which took this road from Italy to the Low Countries and to England. The clothiers had their choice of the wool that wandered by the same route. The delays, official formalities, and the expense of carriage up the Rhine, precluded competition from England. Until after the peace but one road, and that a very hilly one, connected Aix-la-Chapelle with Belgium. During the reign of Napoleon, the difficulties in the way of communicating with the sea were increased; but the land supplies also diminished in consequence of the interruption of trade by the constant military expeditions. Still this district on both sides of the Rhine increased in importance, if not in prosperity, as a manufacturing seat, and some of the first machinery was erected in it.

Within a few years the change which this district has experienced has been such as to defy all calculation. The substitution of steam tugs upon the Lower Rhine, for the strings of horses that formerly aided the navigation, was effected by the Dutch Government to evade the responsibility of keeping up the towing-path, to which it was bound by the treaty of Vienna. The steam navigation has rapidly improved, and the competition of rival companies has reduced freights to a minimum. Finally, in consequence of the completion of the railroad from Antwerp to the Rhine, the Dutch Government has all but abolished its transit duties. So that with the establishment of two new modes of access to the North Sea, a number of impediments to safe and rapid communication have been removed. Elberfeld is within two days' sail of Rotterdam, and Aix-la-Chapelle is on the high road, within a morning's drive of Antwerp.

That such changes should materially interfere with the manufacturer's speculations, which were made under different circumstances, must be apparent. But that the manufacturer has a right to be indemnified at the expense not only of the consumer's pocket, but to the endangering of the morals of the people and of the security of the throne, is assuming more than can be assented to. On the same showing the innkeepers, postmasters, dealers, and tradesmen of all kinds, whose interests are affected by the change, have the same right to claim an indemnification for the change daily effected in the value of their property.

But, while the impossibility of long continuing this false commercial policy is evident, the very inconvenience occasioned by the daily changes to which trade is subject ought not only to urge governments to the utmost activity in opening new fields for the disposal of manufactured wares, but should make them doubly cautious in imposing any restrictions likely to prevent a district from retrieving any profits that such changes endanger. Belgium has courted the change in the means of communication as a source of wealth. Prussia has gone half way to meet her in the same expectation.

Not only, therefore, is a restrictive commercial policy in these countries absurdly inconsistent, but it is depriving feasible, and the only result obtained from it is depriving the classes of the so necessary extension of trade. But all classes of the so necessary extension of trade in Prussia the inconsistency is even more absurd than in Belgium, since it militates against the very principle of the Zollverein—the step that is the most deserving of adoption that the recent history of Europe has to show. The commercial union of Germany is based upon the assumption that free unimpeded intercourse is the richest source

of prosperity to nations. The duties imposed on foreign goods are a subsidiary part of the project, and form, in fact, a disturbing element that is justified only by fiscal necessity.

By the establishment of the Zollverein the energies of 30 millions of enlightened and industrious human beings have been allowed unrestrained play, and a surprising increase of prosperity has been the result. But the system of frontier duties has impeded rather than forwarded this pleasing result. The high rate adopted by Prussia occasioned a delay of fifteen years in the extension of the League to its present boundaries. These duties still keep Hanover, Oldenburg, Mecklenburg, and the Hanse Towns from joining it; why, we shall have ample occasion to convince ourselves in the sequel.

OCCUPATIONS OF THE PEOPLE.

(From the Morning Chronicle.)

The long-expected abstract of the answers and returns obtained in 1841, relative to the occupations of the people, has at length appeared, and a more important publication has rarely issued from the press. It places beyond the possibility of further doubt or cavil a mass of facts respecting the condition of the population, which must in no very long time settle the question of Free Trade. We can at present only advert briefly to one or two of the results which appear on the face of the returns.

In the first place, it is ascertained that between the years 1831 and 1841 the amount of employment afforded by the agriculture of Great Britain remained nearly stationary, notwithstanding the enormous increase in the population. The multitude of additional hands has been obliged to find work in other departments. The total male population of Great Britain, twenty years of age and upwards, was, in 1831, 3,199,984; and in 1841, 3,829,668, showing an increase in ten years of about 630,000 adult males. Hardly one of these additional men has been able to find employment in agriculture. The agricultural occupiers and labourers were, in 1831, 980,750, and in 1841, only 961,585. Allowing here for a correction pointed out by the enumerators, it still appears, that at the end of the decennial period there was either no increase, or a very small one, in the number of adult males employed in agriculture. Look, however, to the numbers employed in commerce, trade, and manufactures. In 1831 they were 1,278,283, and in 1841 they amounted to 1,682,044, showing that those branches of industry had found employment for more than 400,000 additional persons of the class before mentioned. The preface to the abstract contains the following observations:—

"In columns 28 and 29 are given proportional tables of the two great classes of occupations, viz., agricultural and commercial (or trade and manufactures). In the former are included all farmers, graziers, nurserymen, &c., together with the whole number of persons returned as agricultural labourers; in the latter, all shopkeepers and manufacturers, with those working under them; while from both classes are excluded those returned as domestic servants or general labourers, together with all professional persons. It will be seen that for all England trade and manufacture include rather more than double the numbers included under the head of agriculture."

"The altered proportion which the agricultural bears to the commercial classes for Great Britain generally will at first, perhaps, excite surprise. The proportions which the agricultural, the commercial, and the miscellaneous classes bore to each other were, in

	Agricultural.	Commercial.	Miscellaneous.
1811	35	44	21
1821	33	46	21
1831	28	42	30

while they were respectively in

1841	22	46	32
------	----	----	----

"It should be noticed that these comparative statements refer in the three first decennial periods to families, but upon the present occasion to individuals. The latter mode gives a more accurate view of the amount of employment afforded in each division of labour; but inasmuch as there are rather more of the younger branches of a family employed in trade and manufactures than in agriculture, it may have slightly augmented the difference here exhibited. The other facts shown by these returns are, however, so much in accordance with these results as to confirm their accuracy."

Thus, the agricultural class comprises less than one-fourth of the people, and it is stationary in point of numbers, while the other sections of the population are rapidly increasing from year to year. Can anything more clearly demonstrate the folly of legislation which checks the development of the only kind of industry which is found to be capable of expanding with the multiplication of labourers? Is this to go on forever? The foundation of that vast system of manufactures and commerce by which so many millions are maintained, is the interchange of manufactured goods for raw products. The great check upon our prosperity is the increasing difficulty of obtaining those raw products. With respect to the essential article of food, we deliberately enhance the difficulty for the sake, professedly, of this agricultural class, which is every year losing some portion of its relative importance. Is it possible, when the numbers on the one side and on the other are now authoritatively stated, that this grievous injustice can be suffered to continue? The injustice would be palpable, even if all those engaged in agriculture could be said to benefit by what is called agricultural protection; but when we know that they, like every other class, are interested in having the chief article of consumption abundant, we can hardly use language strong enough to condemn the nefarious policy which so openly sacrifices the many to the few.

The returns give what has probably never been given before, an accurate statement of the number of persons employed in various branches of manufacture. Those employed in the cotton manufacture are classed thus:—

Males, 40 years and upwards	150,112
Do, under 40	54,171
Females, 20 years and upwards	104,470
Do, under 20	75,009
Total	377,662

We extract also the total number engaged in each of the following manufactures:—

Hosiery	5,000
Lace	35,847
Wool and worsted	167,200
Silk	88,773
Flax and linen	88,318

The total number of persons engaged in the manufacture of textile fabrics in Great Britain is stated to be 800,246.

Of those employed in mines, there are in

Coal mines	119,239
Copper ditto	15,407
Lead ditto	11,419
Iron ditto	10,948
Tin ditto	6,101

The total of persons employed in mines is 193,825.

Of persons employed in the manufacture and working of metals, there are, besides the miners, in

Iron	29,497
Copper	2,130
Lead	1,393
Tin	1,330

There are employed in

Pottery and glass	32,238
Gloves	9,325
Engines and machines	16,550

In considering the number of persons supported by any particular manufacture, it is to be remembered that the numbers given are of actual workers, and not of those who, as wives, children, &c., are supported by the labour of others. The total number of persons whose occupations were ascertained in Great Britain, was 7,846,569, leaving 10,997,865 as the "residue" of the population, which must be taken to consist of persons dependent on the former. Therefore, to the number given under each employment we must add another number bearing to it the proportion of about 11 to 8, in order to ascertain the entire number of individuals whom that branch of industry supports.

To estimate with perfect correctness the value of the conclusions contained in these returns, it would be desirable to advert to the plan upon which the information was collected, but this topic we must reserve for another occasion.

MISCELLANEOUS.

PUBLIC PARKS, &c.—A numerously attended meeting of the Public Park Committee took place in the Town-hall on Thursday the 22nd inst.; James Atherton, Esq., in the chair. Amongst the subscriptions announced was the munificent sum of £1000 from Jones, Lloyd, and Co. The committee resolved to organise an auxiliary committee, for the general canvass of the town; and also to avail themselves of the co-operation of the operatives' committee, which has also commenced its labours. The committee have issued an able address, from which we make the following extracts:—"One of the largest and most influential meetings ever convened in Manchester, having unanimously resolved that the formation of parks, public walks, or open spaces for exercise and active sports, in the immediate neighbourhood of the town, should be at once undertaken, as a means of contributing greatly to the health, rational enjoyment, kindly intercourse, and good morals of all classes of our industrious population, the committee appointed for carrying this resolution into effect are anxious, before a general canvass of the town is set on foot, to call public attention to the strong and urgent claims which the important object in view puts forward to general sympathy and support. Subscriptions have been already entered into, and large sums have been spontaneously contributed by various wealthy and influential individuals, for the furtherance of the excellent object in view. The committee venture to hope that the example which has been so nobly set will be followed in a similar spirit of generosity; that every one who has the means will contribute his quota towards the social and moral improvement of his fellow-townsmen; and that the result will be the raising of a sum proportionate to the wealth, and worthy of the well-known liberality of the town of Manchester, and such as will enable the committee, with as little delay as possible, to proceed in a work which is calculated, in an eminent degree, to increase the comforts and happiness of the great masses of the people. The committee deem it unnecessary to add more. They make this public appeal in behalf of a great public good; and they look with anxiety—but with confidence—to the issue. They feel assured that the rich will acknowledge the responsibilities which attach to wealth, and recognise the imperative duty of employing their worldly substance to promote the general happiness."—*Manchester Guardian*.

TRAVERS TESTIMONIAL.—We stated a few weeks ago the proceedings at the Hall of Commerce, at a meeting of merchants, bankers, and traders, assembled for the purpose of doing honour to the memory of the late John Travers, Esq., the qualities of whose heart and intellect had gained for him the warmest affection and highest respect of all who knew him. It was upon that occasion referred to a committee to consider of and report to a future meeting the best and most lasting mode of testifying the sense entertained by all of his worth, so that posterity, by contemplating his many public and private virtues, may be led to imitate his example. Subsequently a meeting took place, Sir George Larpent, Bart., in the chair, when it was resolved unanimously that the most suitable and most lasting testimonial to perpetuate the name and worth of Mr. Travers would be to found a scholarship in connexion with the City of London School, to be given to the boy whose merits and character, upon a strict examination, should be deemed the most worthy, and that such boy should be called the Travers Scholar, and proceed either to the University College, or King's College, London, as the parent or guardian of such boy might determine. A great number of the highest names in the City appear in the subscription list, as might be expected from the exalted merit of the individual whose virtues it is intended to commemorate.—*Sun*.

A SCHOOL EXHIBITION GAINED BY A FACTORY BOY.—Mr. Saunders, the factory inspector for Yorkshire, in his report for the quarter ending the 30th June last, says:—"That the education of factory children, where sufficient attention is paid to the subject, may be efficiently conducted, has been proved during the last quarter, by a factory worker having been the successful candidate for an exhibition to the York Training School, which was open to the competition of all National School children in Leeds. A second factory boy who offered himself was favourably noticed by the examiners. The boy, Edwin

Spencer, now between fourteen and fifteen years old, who has gained the exhibition, has worked in a factory since he was ten years old; and the only instruction he obtained during that time, was as a regular half-time attendant at the National School at Leeds, established almost expressly for factory children. Messrs. Elton and Atkinson, in whose employment he has been (for the sake partly of reward, and partly to stimulate all to exert themselves), permit four children, after they have attained the age of thirteen, to continue as half-timers, but in the receipt of the same wages as if employed full time, on condition that they continue their attendance at school. Had these boys been obliged to work twelve hours from the time they became thirteen, it would, of course, have been impossible for them to have undergone the same stiff examination to which they were subject on this occasion. The success of Edwin Spencer, there is no doubt, will excite others to greater attention and regularity, and will, I am convinced, prove of great service to many. The principle of giving this premium to a limited number of well-conducted boys has been adopted by other mill-occupiers; and the expenses in each case will doubtless be in part repaid, by the better conduct of the whole number of children employed."

THE CROPS—THE CORN LAW.—Should the crops this season fulfil the expectations generally entertained, there will be plenty in our native land for man and beast; there will be, as the consequence of that abundance, work and wages for the people. When food is cheap wages rise, when it is dear they fall. Such is the action of our laws. We are thus in a new position. The sufferings which have been felt with so crushing a severity for several years past will be alleviated if not removed; and the people, well fed and clothed, may cease to complain in terms bordering on insolvency; because the every-day pressure and penury have been removed by the bounty of nature. But assuredly the principles of Free-Trade legislation have undergone no change, and suffered no defeat. If Free Trade be right when the people groan under poverty, it remains right though the wealth of Croesus become the portion of every pauper. It can never become true and fair—if it ever was false and unjust—that we should be precluded from the export of our superfluities, be they corn, or linens, or yarns. In spite of the most oppressive enactments of any legislature, a skilful and an industrious people, such as the inhabitants of these islands are universally acknowledged to be, will force up their livelihood when not warred against and overthrown by concurrent adversities. But years of dearth will come which are too strong for their arm when cramped by the shackles of the enemy; and in these years their cry comes up to the ear that is never shut, and is even heard but disregarded by their fellow-men who, set over them by Heaven for good, deal wrongfully by the trust. Against such seasons a paternal government would have shielded its people, but against such seasons there is yet no provision but the iron-bound Corn Law, lessening the bread of the poor, enhancing its cost, and forbidding the labourer to give his time for his food because it is a stranger that would make the exchange. Would it not be better even for the monopolist class to be relieved of a large portion of the poor's rates, by permitting the employed to labour for any one who would employ and pay them?—*Dundee Advertiser*.

RULES FOR NEWSPAPER CORRESPONDENTS.—Supposing you wish to contribute to a public charity, send your money to the editor of a newspaper. He must acknowledge the receipt of it, and so you get your name and benevolence advertised in the best part of the paper for nothing. 2. Another good method, if you are fond of appearing before the public, is to request the editor to state that "the Richard Jones, who, in our police report of yesterday, was sentenced to Bridewell for shoplifting, is not the Mr. Richard Jones, the respected chiropodist, of Sackville-street." 3. If you are writing to a political newspaper, never mind about writing on the two sides of the paper, as, depend upon it, it will be a recommendation in your favour if the editor sees you can write well on both sides. 4. You need not be particular about writing legibly, as it stands to reason, if the editor cannot read your letter, that you will be spared the mortification of reading in the next day's notices to correspondents, that "Philo Justitia is an ass." 5. It is usual, in sending a statement which impugns the character of another person, to send your name and address with it; but, as in matters of libel this is a very troublesome as well as a very expensive plan, it is better to send any body else's card rather than your own. By this means you avoid publicity, and have the double gratification of annoying two persons at once. 6. Inserting your death one day, and contradicting it the next, is another very cheap plan of advertising in a newspaper. Besides, you have the advantage of learning in your lifetime what your friends think of you after your death. This plan will, however, only answer once. 7. It is better, perhaps, not to send any poetry to a newspaper. We never recollect an instance of the *Times* inserting "A Sonnet to a Sow," or "Lines to my Mary." 8. Be careful of quotations, especially in a foreign language. If an editor knows his own language well, it is as much as you have a right to expect of him. 9. Never send anything to a newspaper "to be continued," unless it is a legacy or a dozen of port. 10. Never trouble yourself in calling to see the editor of a newspaper. It is a strange circumstance, but you might call a hundred times and always find him "out."—*Punch*.

THE COST OF WAR.—Thursday, a return, procured by Mr. Leader, the member for Westminster, was printed, showing the charges incurred on account of the Canadas in respect of the Army, Navy, Ordnance, and Commissariat in each of the years 1835 to 1843 inclusive, and the amounts granted by Parliament from the year 1837 to the year 1843 inclusive, in consequence of the insurrection in Canada. It appears that, for the year ending March, 1836, the total charges of the army, navy, ordnance, and commissariat in the Canadas amounted to £165,834, and in the year ending March, 1843, it was £306,607. The largest sum was in 1839, when the charges were £1,629,070. The special grants by Parliament on account of the insurrection in Canada amount, from 1838 to 1843, to the sum of £2,006,046. The largest sum in one year was in 1839, £1,000,000.

STEAM.—Talk about your northern steam-boats, and a Mississippi steamer the other day, "you might as well burst for five years. Don't require no stumps to navigate them waters, any fool can do it; but if taken a man, stranger, to ride one of these here alligator boats head on to a sawyer, high pressure and the valve closed down, 600 passengers on board, and every soul endangered."—*Halfpenny paper*.

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, August 28, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the LEAGUE of the Saturday immediately succeeding, but are included in the list of the week following.

VITALITY OF ERROR.

In the *Spectator* of last week is an article on "The Vitality of Seeds" :-

"Flowers are made the type of what is fading; but the moralist does not look deep enough—the seed of the flower is for ever reproduced, and, as we so often see, retains its vitality for ages. A pea taken from a vase found in an Egyptian sarcophagus, and supposed to be 2644 years old, has germinated in the garden of Mr. Grimstone at Highgate, and there are now nineteen pods on it."

Remarkable as the above statement may appear, there are nevertheless phenomena to be observed in the political world quite as astounding. In certain well-known journals are to be seen, almost daily, articles which belong not to the present day, but which bear strong internal evidence of belonging to remote antiquity. Doctrines which flourished in the darker periods of man's history, but which the diffusion of intelligence has for centuries consigned to the sarcophagus of oblivion, are found germinating at the present time in soil especially adapted for such productions—the offices of the *Post* and *Herald*. There can be no doubt as to the antiquity of the articles to which we refer. The barbarous character of the notions they contain, their utter inapplicability in a state of advanced intelligence and civilization, and the crudeness with which they are set forth, incontestably prove that they belong to dark, very dark ages.

In the metropolis are several museums, containing doubtless many wonderful relics of antiquity, and which are properly resorted to by the lovers of the antique. But we should say to those who are curious in such matters, "Are you really desirous to be brought in contact, as it were, with bygone times, visit the establishments in Shoe-lane and Wellington-street."

The *Times* of the 23rd inst. declares that our venerable contemporary of Shoe-lane is a goose. Probably the *Times* may not be very far wide of the truth in this statement; at least we may safely affirm that we see no evidence to the contrary in the columns of the *Herald* itself. If, however, our contemporary belong to that particular species of the feathered tribe, he certainly is not one of the present generation. The most probable conjecture is, that he came into the world about the same time as the venerable pea now germinating in Mr. Grimstone's garden, and the extraordinary fact of his existing in this age of intellect can only be accounted for on the supposition that he must have remained, during the intervening ages, in a state of torpor in the trunk of some tree. Some accident, not yet explained, having liberated him in the present day, he stalks forth a sort of feathered Rip Van Winkle, mumbling and gibbering the long-explored inanities of bygone days. The *Spectator* adds :-

"If these nineteen pods were cooked, the Englishman of the nineteenth century would eat peas one generation later than the peas that fed the Egyptian in the days of hieroglyphics!"

We should say that a most appropriate dish to serve up with these ancient vegetables would be a leader from our antiquated contemporary. Those who had stomachs for such a repast would then have (assuming the *Times* to be right) a hash of goose to their green peas.

EMPLOYMENT IN NORFOLK.

A JOURNEY TO WORSTEAD AND NORTH WALSHAM.
(From the Correspondent of the *Morning Chronicle*.)

In whatever part of Norfolk there has been an incendiary fire, I always find a complaint made, as I found in Suffolk, that "there are so many bad characters about, no farmer can be safe, let him be the best master that ever had a farm." It is generally urged to me that the men employed on the farms are not likely to commit such acts. Near Wymondham there had been fires, eight miles south from Norwich. One gentleman whose premises had been burned, Mr. Neave, a tenant of Lord Wodehouse, was mentioned to me as one of the best of masters. I visited his farm, and, judging from the style of cultivation I saw there, I have no hesitation in saying that he is one of the best of farmers. Added to this is the fact, that he keeps up the good olden custom of having his workmen collected together three or four times a year to a domestic festival.

In short, Mr. Neave is an employer highly respected, yet his premises were burned by an incendiary. It was alleged in the *Times* that this was done because he was a poor-law guardian. From what I could hear, after repeated inquiries, I am enabled to say at once, and with out reserve, that there is not the least cause for ever suspecting that his premises were fired by any person who had been aggrieved by the administration of the poor law. But other parties are suspected, indeed they are known, though not legally proved, to be guilty.

In Wymondham town and parish there is a large, loose, and very dangerous population. They were at one time well employed in spinning and weaving; now they do little more, one-half of them, than follow the professions of poaching and thieving. To such as them it is not of the least moment that Mr. Neave is a good employer, a good man, and a good friend. He cannot employ them; but he has fields of corn, folds of sheep, and barns from which they can steal. If they should be hunted away, they may do other mischief.

I am sorry to hear that within these last few weeks several farmers who use threshing machinery have had threatening letters. Such letters are kept secret, and I have no wish to provoke much discussion about them. But, in passing, I just remark that such letters are continually being sent; all of them complaining about the machinery, most of them threatening destruction to the

new crops if the use of threshing mills is persisted in this winter.

Now, it is curious to trace the complaints of different working people, who are surrounded by different circumstances. In Norwich, among the weavers, I heard nothing so frequently alleged against the master manufacturers there, and particularly against the deceased Mr. Willett, at whose funeral they behaved so ill, as this—that because the masters could get work done at Wymondham cheaper than in Norwich, they sent the yarn out to Wymondham to be woven. I said to some Norwich weavers whom I saw at the funeral, and who were discussing the questions of work and wages, that I supposed the yarn would not have been sent to Wymondham unless there had been weavers there, and that they would not have taken the work to do unless they had needed employment; to which some half dozen angry voices replied, "But what business had he to send the work out of Norwich? Has a Norwich weaver not a right to get work from a Norwich master in preference to a Wymondham weaver?" "Why," I replied, "there is only the distance of a few miles between the places; and I suspect they were Norwich masters who first made the Wymondham people weavers."

"That is what we complain of," said they; "when work was more plentiful, and wages higher, they brought every one from the farms they could get to be weavers; men, women, boys, everybody. Now, what we say is, that the farmers should take all these back again, and keep them. We say no weaver who does not live in Norwich has any right to get our work out of Norwich, until all our own hands are full at higher wages."

On the other hand, the Wymondham labourers complain that the weavers of that place go to the farmers offering to work for under wages. The farmers complain of having to pay such exorbitant poor rates to maintain them in the workhouse, and so forth; and that they are liable to so many depredations committed upon them by those who form this superabundant population.

So it comes once more to this. How shall we provide profitable employment?—for to be permanent the employment must be profitable; and if it is not permanent, it is not a remedy. How shall we provide it?

That much might be done through the culture of flax, I have no doubt. But to cultivate and manufacture flax in Norfolk, there is the improved machinery of the north to compete with; and it must be worked in such a way as to ensure a profit. But the Flax Society which came into existence, the memory of which was to endure, according to the prophecy of Mr. Worne, its founder, when "the inscription was effaced from the tablet, and the splendid monument fell into decay!"—this splendid society, which came into existence one year, and which decayed and died the next, proposed to redeem the fortunes of Norfolk by setting the distaff, and spindles, and looms agoing, of 200 years ago!

In short, the Iowa Indians cannot be so ignorant of England, English manufactures, and of the most elementary principles of trade and political economy, now that they have been a whole month in Britain, than were the founders and patrons of the Norfolk Flax Society, though five or six were members of the English Legislature, and the others were magistrates, clergymen, farmers, and land-agents, all born and bred, and practising their arts of living in England.

Having been informed that while the society existed they had engaged Mr. Demann, a Belgian gentleman, and a few operatives from Belgium, to introduce the art of dressing the flax; and that now Mr. Demann, since the society's dissolution, had the work carried on as his own speculation, I resolved on paying him a visit.

I went by way of a village called Worstead, which is remarkable as the place where the woollen yarn called worsted was first made. This was some time about the reign of Henry I. I found Worstead a pleasant village, containing about 900 inhabitants. It has a very fine church, bespeaking by its amplexness and elegance the melancholy fact that the parish had seen better days. There is much good land about it. The best crop of wheat, standing in the stook, which I have seen in Norfolk, stood in two fields south-east of the village. But, good as the soil and crops are at Worstead, as in other places, there is an unemployed population.

I had stood in the village of Kersey, in Suffolk, and had looked upon the mere, or miry brook, which gave the name of *Kerseymere* to the well-known cloth of that name; and I had been in the next parish of Linsey, where *Linsey Woolsey* was first made in England. But the feelings with which I looked on those places were but moderate compared with the deep reverence with which I looked on the village of Worstead, and on the churchyard where lay the dust of those ancient civilizers of the human race—the olden manufacturers.

Worstead! What other name of place, or name of article, what household word, ever became so universal, penetrated so completely into every fireside circle, as this same word? And yet such is the decay of the trade that once made that place the law-giver in the art of spinning to six centuries, and half the civilized world, that many of the people living in it, and nearly all living around it, know not a word of its history. I saw nothing but rich ripe crops of wheat, and heard nothing but murmurs for the want of trade, and employment, and wages.

Such is at present the condition of Worstead, the mother of stockings and of stocking yarn.

Having left that village, I got across some sand hills, which on their tops have a coating of heath in bright red bloom, and, at the distance of three miles from Worstead, came to North Walsham, a market-town of larger dimension than one would expect to find who never knew even its name until seeing it on the map, or on the milestones. Like Worstead and many other villages and towns in the eastern counties, North Walsham is more remarkable for what it has been, than what it is now; unless we reckon it remarkable now for having a population three times more extensive than the employment from which they seek a livelihood. I suppose 3000 is about the amount of its population.

A mile beyond the town, at a cluster of old buildings called the workhouse, and which had been the parish workhouse before the time of the unions, I found the flax factory, which had been instituted by the society, and which is now carried on by Mr. Demann.

It being harvest time, many of the hands had gone away to work for the farmers, and therefore little was doing at the flax. There were altogether seven or eight persons working at it within and without. At other times there are forty or fifty. The most of the spinning is done

REVIEW.

done in Yorkshire, there being no machinery at Walsham, says the old one-handed wheel.

Mr. and Mrs. Demann, I found, had been in Ireland with the Irish Flax Society before coming here. They seemed very willing to show all the processes of the flax manufacture, and proposed that I should go first to the brook where the flax was steeping in the water. This was nearly a mile off; but, guided by Mr. Demann's son, a smart lad of about twelve years old, I was soon on the ground where the steeping process was going on. A stack like a small rick of hay was built up of the sheaves of the flax straw. The round seeds which branch out on all sides had been taken off by the farmers from whom the straw was purchased. A Belgian was sorting out the sheaves, loosening them, and picking out the best from the worst, and then binding up each quality by itself. The best was that which had grown tall and straight, with fewest branches, and which had not been so tall and straight as to fall down and be damaged, as we see grain and straw sometimes when too strong, or when very wet weather comes on.

The water had a channel eight or ten feet wide and about as deep. Several hundred sheaves were laid in this, and logs of timber put on the top of them to keep them below. The water being stemmed, the channel seemed choke full. The water was clear on entering the flax; on leaving, it was black and greasy. I subsequently asked Mr. Demann if he thought that water would be of use as a manure for the land, and he said there was no doubt of it. He said if he had land near he would use it; but none of the farmers had yet tried it.

I now went with a farmer, who joined us here, and who had an acre of flax growing in a field near by; and here Mr. Demann also joined us. The flax I had seen steeping and preparing to be steeped was last year's crop, and was longer in the straw than any of this year's crop. It is said the seed will be very good this year, but all the fibre will be of less than usual value from its shortness. The long drought in early summer was the cause of this; and the abundant rains since have caused new branches and new blooms to shoot out.

I was desirous of knowing how the English labourers got on in learning from the Belgians; and this farmer told me that they made a poor hand of the work. He did not expect that for many years to come the English labourers would be good at it; not until the boys of this day grew up to be men. He told me what, however, I did not need to be told, that they are exceedingly stubborn, and unwilling to learn anything that is new, if it does not go entirely with their own inclinations. And it seems they have no love nor good wishes for the flax culture.

Some of the flax being pulled for me, and kindly offered as a specimen to take to London on my return, one of the Belgians was tying it in separate parcels for me, with three or four plies of its own straw, the farmer drew my attention to him, and said, "That is one thing our labourers cannot do; indeed they *will* not do it; it hurts their fingers too much. There is no getting them to do that kind of work."

We next went to a grass field, several acres of which were covered with the flax, spread thinly and evenly out, to bleach. Some men were now engaged in tying this up, to set it up in sheaves on its end for the night. Next day it would be opened out and laid down again to bleach; and so on for ten, or fifteen, or twenty days, according to the weather. This flax had undergone the process of steeping for nearly the same period of days, yet there was much oil left in it. Where it lay the grass grew rapidly; and the marked difference in the grass where the flax was most seldom laid and most frequently laid was very remarkable. Mr. Demann rented the field, and then he allowed a farmer to have the grass, who, as it grew rapidly, sent sheep and cattle to it in such numbers as to eat it quickly down. They relished the grass, and thrived on it well.

The next process with the flax was to beat it with a broad wooden mallet. After that it was scutched. Scutching seems to be the most laborious work connected with it. The men are paid for that by so much per stone, and, according to their application, earn from 1s. 8d. to 2s. 6d. a day. They take a parcel of the flax which nearly fills both hands; holding with both hands by the one end, they strike it against the sharp edges of wooden boards, set into an upright frame. At this work much dust is thrown about, and much strength is wasted. The scutching breaks the straws lengthways, into innumerable fine fibres, almost finer than the naked eye can detect.

Much refuse falls out at this process. It lies about like heaps of chaff. Mr. Demann says it makes excellent manure.

Heckling is the next process. A number of stiff wires stand out, with sharp points, from a firmly fixed block of wood, six or eight inches each. The flax is taken by handfuls and drawn across these, and is combed by this process and laid even. It is then ready to be spun.

TRUE GREATNESS.—Greatness of character is a communicable attribute; I should say, singularly communicable. It has nothing exclusive in its nature. It cannot be the monopoly of an individual, for it is the enlarged and generous action of faculties and affections which enter into and constitute all minds. I mean reason, conscience, and love, so that its elements exist in all. It is not a peculiar or exclusive knowledge, which can be shut up in one or a few understandings; but the comprehension of great and universal truths, which are the proper objects of every rational being. It is not a devotion to peculiar, exclusive objects, but the adoption of public interests, the consecration of the mind to the cause of virtue and happiness in the creation, that is, to the very cause which all intelligent beings are bound to espouse. Greatness is not a secret, solitary principle, working by itself and refusing participation, but frank and open-hearted, so large in its views, so liberal in its feelings, so expansive in its purposes, so beneficent in its labours, as naturally and necessarily to attract sympathy and co-operation. It is selfishness that repels men; and true greatness has not a stronger characteristic than its freedom from every selfish taint. So far from being imprisoned in private interests, it covets nothing which it may not impart. So far from being absorbed in its own distinctions, it discerns nothing so quickly and joyfully as the capacities and pledges of greatness in others, and counts no labour so noble as to call forth noble sentiments, and the consciousness of a Divine Power, in less improved minds.

England and Wales. By J. G. Kohl. (Foreign Library, No. 19.) London: Chapman and Hall.

It is as advantageous for nations as for individuals occasionally "to see themselves as others see them," and to learn the opinions formed of their habits and institutions by impartial and intelligent foreigners. Mr. Kohl is a fearless critic, an acute observer and a shrewd judge of the elements of national character; there is no foreigner who has succeeded so well in seizing the characteristic features of everything which he undertakes to describe; and this artistic skill, combined with a patient investigation of statistical facts, renders even his slightest sketches equally interesting and valuable. We are a little pressed for space this week, but we must nevertheless gratify ourselves and our readers by quoting Mr. Kohl's graphic description of the League:—

"Manchester is the centre of the Anti-Corn-Law, as Birmingham is of the Universal-Suffrage agitation. At Manchester are held the general meetings of the Anti-Corn-Law League, and here it is that the committee of the League constantly sits. The kindness of a friend procured me admission to the great establishment of the League at Manchester, where I had the satisfaction of seeing and hearing much that surprised and interested me. George Wilson and other well-known leaders of the League, who were assembled in the committee-room, received me as a stranger, with much kindness and hospitality, readily answering all my questions, and making me acquainted with the details of their operations. I could not help asking myself whether in Germany, men, who attacked, with such talent and energy, the fundamental laws of the state, would not, have been long ago shut up in some gloomy prison as conspirators and traitors, instead of being permitted to carry on their operations thus freely and boldly in the broad light of day; and, secondly, whether in Germany, such men would ever have ventured to admit a stranger into all their secrets with such frank and open cordiality.

"I was astonished to observe how the Leaguers, all private persons, mostly merchants, manufacturers, and men of letters, conducted political business, like statesmen and ministers. A talent for public business seems an innate faculty in the English. Whilst I was in the committee-room, immense numbers of letters were brought in, opened, read, and answered, without a moment's delay. These letters, pouring in from all parts of the United Kingdom, were of the most various contents, some trivial, some important, but all connected with the objects of the party. Some brought news of the movements of eminent Leaguers or of their opponents, for the eye of the League is ever fixed upon the doings both of friend and enemy. Others contained pecuniary contributions from well-wishers of the cause, for each of whom the president immediately dictated an appropriate letter of thanks. Other letters related anecdotes, showing the progress of the cause, and the gradual defection of the farmers, the most resolute supporters of Peel.

"The League has now, by means of local associations in all parts of the kingdom, extended its operation and influence over the whole country, and attained an astonishing national importance. Its festivals, Anti-Corn-Law bazaars, Anti-Corn-Law banquets, and others of like nature, appear like great national anniversaries. Besides the acknowledged members of the League, there are numbers of important men who work with them and for them in secret. Every person who contributes £50 to the League Fund has a seat and voice in their council. They have committees of working men for the more thorough dissemination of their doctrines among the lower classes, and committees of ladies to procure the co-operation of women. They have lecturers, who are perpetually traversing the country to fan the flames of agitation in the minds of the people. These lecturers often hold conferences and disputations with lecturers of the opposite party, and not unfrequently drive them in disgrace from the field. It is also the business of the travelling lecturers to keep a vigilant watch on every movement of the enemy, and acquaint the League with every circumstance likely to affect its interests. The Leaguers write direct letters to the Queen, the Duke of Wellington, Sir Robert Peel, and other distinguished people, to whom, as well as to the foreign ambassadors, they send copies of those journals containing the most faithful accounts of their proceedings. Sometimes they send personal deputations to distinguished opponents, in order to tell them disagreeable truths to their faces. Nor do the Leaguers neglect the potent instrumentality of that hundred-armed Briareus, the press. Not only do they spread their opinions through the medium of those journals favourable to them; they issue many periodicals of their own, which are exclusively devoted to the interests of the League. These contain, of course, full reports of all meetings, proceedings, and lectures against the Corn Laws; extracts from Anti-Corn-Law publications, repeating, for the thousandth time, that monopoly is contrary to the order of nature, and that the League seeks only to restore the just order of Providence; original articles, headed "Signs of the Times," "Anti-Corn-Law Agitation in London," "Progress of the good work," &c. &c.; and last, not least, poems, entitled, "Lays of the League," advocating in various ways the cause of Free Trade, and satirising their opponents generally with more lengthiness than wit. Nor does the Anti-Corn-Law party omit to avail itself of the agency of those cheap little pamphlets called "Tracts," which are these favourite party-weapons in England. With these tiny dissertations, seldom costing more than two-pence or three-pence, and generally written by some well-known Anti-Corn-Law leader, such as Cobden or Bright, the League are perpetually attacking the public as with a bombardment of small shot. I saw three or four dozen of such publications announced at the same time by one bookseller, Mr. Gadaby. Still tinier weapons, however, are the Anti-Corn-Law wafers, consisting of short mottoes, couplets, and aphorisms of every class, grave and gay, serious and satirical, witty and unmeaning; but all bearing on the one point of Monopoly and Free Trade. These are sometimes taken from the Bible, sometimes from the works of celebrated writers and orators, sometimes from the speeches and publications of the Leaguers themselves,

and sometimes are produced by the inventive ingenuity of the editor. Eighteen sheets of these wafers are sold in a pretty cover for one shilling, and each sheet contains forty mottoes. Astonishing indeed is the prodigious expenditure of labour, ingenuity, wit, and talent, and likewise of stupidity, folly, and dullness, with which, in this wonderful England, the smallest party operations are carried on! Even in children's books do both the Leaguers and Anti-Leaguers carry on their warfare, thus early sowing the seeds of party spirit in the minds of future generations.

"All the publications of the League are not only written, but printed, bound, and published at the League-rooms, in Market street, Manchester. I went through the various rooms where these operations were carried out, until I came at last to the great League depot, where books, pamphlets, letters, newspapers, speeches, reports, tracts, and wafers, were all piled in neat packets of every possible size and appearance, like the packets of muslin and calico in the great warehouses of Manchester. Beyond this was a refreshment room, in which tea was offered us by several hospitable ladies, with whom we engaged in conversation for a little while."

We were much interested by some of Mr. Kohl's remarks on the Potteries, equally distinguished for good taste and good sense. There is probably no branch of English manufacture which would derive more profit from Free Trade than that of earthenware; and nothing can be more suicidal than the conduct of those manufacturers who continue to support the cause of monopoly:—

"In Hanley I saw a large magazine of earthenware, with which I was much better pleased than with the porcelain show-rooms that I had just before visited. English earthenware is, in fact, one of the finest and most complete articles in the world; and if all other things were equally perfect, this would be a world of perfection indeed. We know little of English earthenware in Germany beyond teapots and milk-jugs, partly because we are content to put up with things of an inferior quality, and partly because many of the articles in common use in England have not yet become matters of necessity to us. It would be difficult to enumerate all the articles here manufactured of clay. There are tea and coffee services of all imaginable sizes and kinds, ornamented in the most varied manner, and yet always with good taste. Then there are endless varieties of vessels, large and small, pitchers, jugs, dishes, bowls, basins, and every kind of apparatus for washing, and for bathing the feet and the different parts of the body, articles with which an English sleeping-room is usually so richly furnished, and of which the uninitiated stranger is often at a loss to divine the use. All these things in England are not only handsomely ornamented, but are also made large. The English complain, and not without reason, of the diminutive size of most of the apparatus of our bed-rooms.

"We must not forget the neat vessels made for the English dairies, nor the wine-coolers, the butter-coolers, and the water-coolers. The latter, admirably suited to the purpose they are intended for, are chiefly made for the East and West Indies. I was told that the clay used for these cooling vessels was not to be found in any part of England, except in the vicinity of the Potteries. An article, not at all known to us, but for which there has lately been a very great demand in England, is known by the name of 'tessellated tiles.' These are small, thin tiles, elegantly formed, either square or six-sided, and are used for paving halls, and particularly for churches, where they are used at present in astonishing quantities. They are of a red colour, ornamented with yellow or black designs. The floors of almost all the new churches in England are paved with them. Sometimes the designs on the several tiles are made to correspond, and in that case large pictures may be represented, or the tiles may be made to imitate the pattern of a rich carpet. A floor thus paved might not inaptly be said to be covered with a stone carpet. It forms really a very elegant species of mosaic, and is unquestionably the least expensive that has yet been invented.

"In some of the workshops I was much interested by the simplicity of the manner in which the little wreaths of flowers and other ornaments were fastened to the articles they were intended for. These little ornaments, often of a different colour from the vessels to which they are about to be attached, are, of course, moulded apart. They are then taken up quite dry, and laid loosely on the places to which it is meant they should adhere. A workman then comes, and with a pencil, filled apparently with water, moistens the parts, and places the ornaments in the desired position. This moisture, quickly imbibed by the clay, makes the parts adhere firmly, and all this is done with astonishing rapidity; but everything is done twice as fast in England as it is with us, for in no other country is the principle so well understood, that to save time is to save money.

"The copper-plate printing, in one of these large establishments, is also carried on upon an astonishing scale. Many thousand copies are often taken from one plate; and for this purpose a remarkably thin paper is used, that the ink of the engraving may be the more readily transferred to the clay, and that the paper may all the more easily be rubbed off. The paper-makers form no unimportant class of the population of the Potteries.

"All these things I saw with great convenience in the enormous warehouses of Mr. Copeland and Mr. Minton, probably the two greatest manufacturers of crockery in the world, for they told me that each of them had from 800 to 900 persons in his employment.

"If we compare the common earthenware of England with that of the French and Germans, or of any other nation, it appears not only excellent in quality, but also highly ornamental and unsurpassably beautiful. The common French and German earthenware is comparatively ugly, coarse, and misshapen. On the other hand, English porcelain, as I have already remarked, particularly those articles in which beauty and elegance are the main points aimed at, are far behind those of the Continent. I believe there is something characteristic of the English in this. In articles of ordinary use the English seem better than we to know how to combine excellence of quality with outward elegance and beauty, whereas in those articles in which grace and beauty alone are to be kept in view, the English are never equally successful. Their tools, their furniture, their machines, their knives and scissors, their bread, and their joints of meat, are not only excellent, vigorous, and nutritious, but also beautifully formed,

not set to be at all surprised; whereas their pictures, their sculptures, their pastels, and their oaks, and in short every thing in which fancy takes precedence of usefulness, are far behind ours in excellence. Look, not merely at the earthenware of the French, but at their tools, and their implements of gardening and agriculture. They are all strikingly rude, and little suited to the purposes they are intended for. Even the common bread in France is inferior to that used in England. On the other hand, how much loftier flights of fancy are displayed by the French in works of art.

"McGulloch estimates the value of the earthenware and glass annually manufactured in England at £2,800,000. Of this, the Potteries alone furnish to the amount of about £1,600,000. Speechman calculates that the earthenware, china, and glass, together amount annually to £4,991,136, or about five millions, of which, in 1840, four millions were consumed, and about one million exported. Of earthenware of all sorts, exclusive of glass, the exports are somewhat over half a million; and if we deduct this from £2,800,000, about £1,300,000 will remain to represent the amount of crockery consumed by the English themselves. The rise and fall in the exports of earthenware (exclusive of glass), during a period of seven years, are shown in the following table:—

1834.....	£403,382	1838.....	£661,844
1835.....	520,421	1839.....	771,173
1836.....	837,774	1840.....	674,600
1837.....	563,237		

"From these fluctuations, however, no distinct conclusions are to be drawn respecting the real prosperity of the manufacture, for sometimes over-production has led English merchants, as they themselves express it, 'to force a market,' by sending abroad large quantities of goods on speculation, to be sold for what they will bring, in the hope that people will accustom themselves to the new merchandise, and afterwards become regular customers for it."

Here we must pause, at least for the present; but we hope to have an opportunity of returning to this pleasant volume.

Collections in Popular Literature. *The Lord and the Vassal—Smeaton and Lighthouses—Sir Joseph Banks and the Royal Society—Linnaeus and Botany—Cuvier and Zoology—The Useful Arts employed in Food, Clothing, and Dwelling-houses—Chronicles of the Seasons—Reynard the Fox—Peter Wilkins—Van-ti—Norah Toole—The History of the French Revolution.* London: J. W. Parker.

Among the many creditable attempts which have been made to supply sound literature at a cheap rate to the middle and operative classes, there is none deserving of higher praise than the Collections in Popular Literature, whether we regard the wisdom of the plan, or the excellence of the execution. The publishers have not cramped themselves by fixing a definite size for the volumes, nor have they placed before the authors the temptation of hurrying their works so as to be ready for a particular day, by making the series periodical. On looking over the six divisions of the collections, as described in the prospectus, we are much pleased to find that there is an avoidance of collision with the established literature of the country, and with the series of weekly and monthly volumes issued by Knight and Murray. The publishers of the Collections have struck out an original path for themselves, and have pursued it with a steadiness well meriting the success which they have already obtained. Their volumes are level to the capacity of youth, without being below the appreciation of mature age; they are instructive to the less educated, and not devoid of interest for the learned. In the division of popular science and art four volumes have appeared: three devoted to explaining the application of the useful arts to the sustenance and comfort of mankind in their food, clothing, and dwelling-houses, and one entitled "The Writing-desk," which illustrates many curious and important facts in experimental science. These works adhere strictly to scientific accuracy, and at the same time are free from the technicalities which so frequently render similar publications dry and repulsive.

Among the tales, "The Merchant and Friar," by Sir Francis, is the most remarkable, and the most valuable. The merchant is Marco Polo, and the friar Roger Bacon. Under their guise the learned author has given most curious and accurate pictures of the middle ages, and of the manners, customs, political institutions, and social condition of England under the Plantagenets. The reprints of "Peter Wilkins" and "Reynard the Fox" deserve a word of commendation. Without materially altering the original features, those passages have been removed which were likely to offend the fastidious delicacy of the nineteenth century.

"The Chronicles of the Seasons," in two volumes, are the nearest approach that has yet been made to White's "Selbourne" in close observation of nature, and in a sympathy with the changes which the seasons produce in animal and vegetable life. We should have been glad to have learned the precise locality in which these observations were made, not merely because there is an additional pleasure derived from "a local habitation and a name," but also because much interest attaches to marking the differences which slight changes of place produce both in the animal and vegetable economy. The geology of London, for instance, is a subject full of curious interest, and the real history of its orni-

thology would fully equal in exciting narrative George Sand's whimsical "Biography of a Parisian Sparrow."

Miss Rowan's "History of the French Revolution" belongs to the class of works which naturalists term monographs, and is, on the whole, a very creditable performance. The fair writer has, however, fallen into one great error on system. She states "the faults of the people are more insisted upon than those of the rulers, because it is written for the former, not for the latter." Now, there is nothing more likely to warp the judgment than this writing of history for certain specified classes; it is almost certain to lead to that suppression of truth which is equivalent to the suggestion of falsehood; and we fear that Miss Rowan, however unintentionally, has been more than once, in the course of this little volume, led astray by her erroneous system.

There never was a people on the face of the earth guilty of an unprovoked insurrection. Agitators and demagogues are the creators and not the creators of popular excitement. Long before Mirabeau thundered, or Hébert preached assassination, the worst doctrines of the worst revolution were emphatically taught by a royal lecturer:—

"The expenses of the King and his abandoned mistress were enormous, and the deficiency of the year (in 1770) amounted to 74 millions. A national bankruptcy ensued; and the people were grievously oppressed by the injustice and dishonesty which were practised by the Government to raise money."

"The middle class, with its flourishing commerce, supported this enormous burden; but it was not so with the people, who, besides the shackles placed upon industry, and the numberless charges which took from them the produce of their labour, had also to suffer from continual scarcities of food, brought on by the most infamous manœuvres. Freedom of internal commerce in grain, decreed in 1754, had been revoked during the seven years' war; but in 1764 the economists had caused it to be re-established, and even had obtained liberty for exportation. Then a secret society was formed (in which the King himself held shares for ten millions of francs), which bought up all the corn, and exported it, thus causing the price to rise enormously, and then reimported the same grain with immense profits. The public clamour became so great that in 1770 the minister was obliged to forbid the free circulation of grain, but the *pacte de famine* was not destroyed. The buying up continued in the interior. The King openly jobbed in the prices of corn, boasting to everybody of the infernal lucre which he made out of his suffering subjects. The society did not bring into the market the grain so iniquitously bought up till the latest moment, when either the people must have revolted or have died of hunger. No one dared to expose this abominable pacte, which had accomplices everywhere, even in the Parliaments. Writers were forbidden, under pain of death, to speak of the finances, and the least complaint was stifled in the dungeons of the Bastille. The people, on the other hand, pushed to the extremity of misery, conceived the most atrocious hatred against the Government, the nobles, and the wealthy—hatred which was one day to turn into frightful vengeance."

The personal character of Louis XVI., however free from reproach, was not entitled to much respect: the people saw him permit excesses, and, so far as they were concerned, this was the same in effect as if he had committed them:—

"They saw but the profuse magnificence of the King's and the Princess' households, greater even than that of the superb Louis XIV., carried on at the expense of 86 millions per annum, besides 18 millions paid out in pensions. They saw the enormous debts of the Comte d'Artois, payments of which were constantly being made from the public purse; the destructively luxurious tastes of the Queen, which had to be gratified; and the costly presents which were lavished on the courtiers; while they, the people, were suffering every kind of privation, and the time was gone by when they had regarded even the brilliant faults of the court with a kind of stupid admiration."

It is generally slurred over by those who write "the faults of the people," that the revolt of the agricultural peasantry was far more terrific than any of the insurrections in the towns. These peasants were not instigated by demagogues, nor stimulated by a licentious press; they had no opportunity of hearing the one, and they could not read the other. But what was their conduct? Let us hear Miss Rowan describe it, noticing at the same time the error into which she has been led by her system in the passage which we have italicized:—

"The peasantry commenced a new Jacquerie against their landlords, they laid waste their property, and burnt down their houses, taking good care that the archives, containing title-deeds, &c., should not escape the flames, which circumstance seems to prove that the peasantry had among them advisers better versed in the knowledge of law than they themselves. They refused to pay their taxes, and in many cases committed the most outrageous cruelties against their masters, cruelties which we would willingly pass over in silence, were it not necessary to show what are the acts of a people who have set law at defiance, and what is the retribution that a false system brings upon itself."

"One gentleman, the owner of a chateau, was suspended in a well for an hour and a half, while his persecutors were deliberating upon what should be his mode of death. Another, the Chevalier d'Ambil, was dragged naked through the village, and buried in a dunghill, after his eyebrows and hair had been plucked out by the roots, the mob dancing round him all the while. In Normandy, a gentleman afflicted with the palsy was thrown into the fire, and only escaped with the loss of his hands. A gentleman's steward was tortured and burnt until his feet were consumed, to make him give up his

master's title-deeds. But it was not just done on whom these savages exercised their fury. In Franche-Comté, Madame de Batilly was almost torn to pieces, and was forced to resign all claims to her property while an axe was held suspended over her head. The Countess of Montcaut was dragged with her husband from their carriage into the middle of the road, a pistol was held at her breast for three hours, and she was finally thrown into a pond."

"Matrons, with their daughters, were seen flying from their burning houses in the middle of the night, with nothing but their night clothes on, too happy if the loss of their property was the only thing they had to bewail."

"Churches, churchmen, and church property, were as little spared as nobles and their chateaux; and the people, not content with hating the clergy, openly professed their hatred of religion not alone in their deeds but in words."

Really, Miss Rowan must have formed a strange notion of the French peasantry, if she supposes that the peasants required persons learned in the law to inform them that feudal privileges were based on royal grants and charters, and that it was, therefore, their obvious interest to destroy such memorials. It is quite true that, by so doing, they violated human law; but these feudal grants and privileges were violations of divine law. The true lesson to be learned from such events is, that, in the moral as in the physical world, "Reaction is precisely equal to action, and contrary thereto."

We need not pursue this subject further. With the single exception which we have taken against Miss Rowan's system, we are disposed to rate her historical powers as of a very high order. She exhibits much generous feeling and warm sympathy; her judgments, when not warped by her system, are generally impartial; and she is mistress of a translucent style, through which the meaning shines with a beautiful clearness not very common amongst modern writers.

Guide to the Madeiras, Azores, West Indies, Mexico, &c. By J. Osborne, Esq. London: Simpkin and Marshall.

This is one of the most complete guide-books with which we are acquainted. It contains all the information which can be available to a traveller, and is not encumbered with the multitudinous and useless details introduced into Murray's guide-books, merely to swell their size and enhance their price. Mr. Osborne's style is simple and unaffected; but he exhibits, in more than one passage, vivid powers of description, and considerable skill in producing picturesque effects.

Sequential System of Musical Notation. By Arthur Wallbridge. London: Simpkin and Marshall.

The author proposes a new and simple system of writing music, which admits of greater accuracy than that at present in use, and may be read with at least equal facility.

IMPORTANCE OF CHEAP BREAD.—M. Mclier investigates with a philosophic spirit that important medico-political question, the influence of a varying state of the price of provisions on general disease and mortality. The statistical documents he has collected, and the tables into which his figures are thrown, bear out the following inferences:—1. The mortality of a country is influenced by the price of corn and bread. 2. This influence was extremely marred formerly, and is less so at present. 3. The diminution of this influence has been gradual, and various causes have contributed to this result. 4. The cultivation of the potato is one of the chief of these. 5. The question is one of morality as well as of hygiene, for it is demonstrated that crime increases with the dearth of provisions. It is inferable too, the author considers, from his inquiries, that, in a well organized state of society, provisions tend constantly to increase in abundance. This tendency is more marked than that of the population to increase—"a powerful argument against the theory of Malthus."—*British and Foreign Review*.

EFFECTS OF A CORN LAW ON PUBLIC HEALTH.—It is not for the medical practitioner to meddle with party politics; but as he knows more of the poor than any one else, so is he better informed on the evils of destitution and the blessings of abundance than any other member of the body politic. He knows that disease follows want as the shadow follows the substance; and that health is no less inseparably connected with cheap, abundant, and wholesome food. He were therefore no true priest of Esculapius who should fall, upon every occasion that offered, to lift up his voice, and urge upon legislators the necessity of removing all restrictions upon commerce in articles of human sustenance. The soil of England is set now extensive enough to grow food for its inhabitants, whether in grain or in cattle: shall they continue to be half fed, and made obnoxious to disease, as they are under the present system of our corn and provision laws, or shall they be suffered to barter the products of their industry for the food they want, in the market of the world? These are the questions; and surely there is but one possible answer to them. It is as one of the guardians of the public health, not as a politician, that I speak here. It may seem matter of indifference to the layman whether a labourer shall have 12 or 14 ounces of hydro-carbonaceous matter in the shape of food each day for the supply of his corporeal wants; but the physiologist knows that the steam-engine will no more do the work represented by 14 lbs. of fuel with 12 lbs. than will the animal of 14 lbs. body do the work of 14 ounces of food with 12 lbs. less than that quantity. The labourer enforced to eat less grain of food than the expert requires, that he may be supplied by the living solids, and a small amount of oil continued, the solids skinned, the oil exhausted, and disease and death the result. Dr. Willis.

AGRICULTURE.

PRICES AT HOME AND ABROAD.

We observe that Mr. Baker, of Essex, and the other leaders of the protectionist party, are claiming the support of the farmers on a novel ground. "It is true," say they, "that we cannot guarantee you (the tenant-farmers) 56s. a quarter for your corn; true that the price for Huntingdonshire averaged only 43s. 6d. a quarter last week, in spite of the forty editions of Mr. Game Day's pamphlet, whilst Essex, Kent, and Oxfordshire fared but little better; all this is true, but what would the prices have sunk to had there been no Corn Law? Are not the foreigners actually paying the 18s. duty, and still competing with the English grower?" This is the argument which is now industriously put forth by the farmers' friends, and which we call upon the Free-Traders everywhere to prepare themselves to answer.

It is true that a certain portion of the foreign corn in bond has been entered for consumption at a duty of 18s., and even 19s. per quarter. It is equally true that many thousands of quarters were in one year taken out of bond and thrown into the river. In both cases the object was the same: to escape the risk of greater loss from keeping the wheat in the bonded warehouse without the prospect of a sale. And it would be just as fair to assert that it is profitable for the foreigner to send his corn here to be cast into the Thames, because such a transaction has occurred, as to allege that wheat can be sent from abroad to pay 18s. a quarter duty, because certain individuals liberated their grain from bond at that rate last week. It is a well-known fact that the foreign corn so imported has brought heavy losses upon its owners. It is notorious that it is not profitable to bring wheat from abroad to pay 18s. duty. If any man be bold enough to assert the contrary, let him try the experiment.

The point to which we would direct the attention of the farmers at the present moment is this: there are two descriptions of prices for foreign corn, the *real* and the *nominal* price. The real price is that at which the foreigners supply us when we are allowed by our law to buy from them for our consumption. When corn is lying in bond, with our sliding scale up at a prohibitive point, and no prospect of a market, then the prices are merely *nominal*. The question frequently asked, under such circumstances, by the unfortunate holder is, "how much had I better consent to lose, to escape the risk of still heavier sacrifices?"

It is undoubtedly of importance to the farmer to ascertain what the *real* price of foreign wheat would be under a Free Trade. It is of no consequence to him what the *nominal* price now is, because corn never enters regularly, and in large quantities, into consumption at the nominal price. We are able, by referring to the parliamentary returns of the prices of wheat at Dantzic and in England, during a period of continuous importation for consumption in this country, to form a fair estimate of the price at which foreign corn can be regularly purchased.

In the return ordered by the House of Commons, 3rd May, 1841, we are furnished with the weekly prices of wheat at Dantzic, and in England, for a series of years, embracing periods of high and low prices. We will first give the prices during four cheap years, when the duty under the old law was prohibitory:—

	Price per Imp. qr. at Dantzic.	English <i>Gazette</i> price, same time.
1835, 1st week in Jan.	19s. 0d. to 29s. 0d.	39s. 2d.
1836, — — —	17s. 10d. to 25s. 11d.	35s. 4d.
1837, — — —	27s. 4d. to 40s. 0d.	57s. 2d.
1838, — — —	20s. 11d. to 27s. 3d.	50s. 9d.

During the above period the duty ranged from 28s. to 50s. a quarter, and precluded any regular or profitable importation for consumption. Whatever purchases were made were speculative, for the purpose of storing up with the view to a deficient harvest, and with the risk of loss for warehousing and other expenses.

It will be seen that, in the first week of January, 1838, the price of wheat at Dantzic ranged from 20s. 11d. to 27s. 3d.; but as the English *Gazette* price for the same time was 50s. 9d., and the duty on foreign corn 35s. a quarter, the price at Dantzic was merely nominal, so far as England was concerned. But we now come to a period of real prices. In the summer of this same year, 1838, alarm began to be felt for the English harvest. The consequence was that prices rose here, and the following extract from the same Parliamentary return will show how instantaneously the Dantzic market felt the effects of an effective demand from England:—

	Price per Imp. qr. at Dantzic.	English <i>Gazette</i> price, same time.
1838, 1st week July,	34s. 10d. to 43s. 1d.	65s. 11d.
— — —	Aug. 37s. 2d. to 45s. 11d.	67s. 9d.
— — —	Sept. 40s. 6d. to 51s. 4d.	68s. 0d.
— — —	Oct. 40s. 8d. to 49s. 7d.	62s. 9d.
— — —	Nov. 47s. 10d. to 58s. 0d.	67s. 3d.
— — —	Dec. 49s. 2d. to 63s. 3d.	73s. 2d.

In the interval between January and December

of 1838, the price of wheat in Dantzic was more than doubled, in consequence of the demand for actual consumption in England. In the three years, during which this demand continued, the following quantities of wheat were imported from Prussia, of which Dantzic is the principal port:—

	Wheat imported from Prussia.
1836	550,826 quarters.
1838	740,906 "
1840	800,508 "

The same Parliamentary return from which we have already quoted gives the price per quarter for every week during the whole of this period. Mr. Baker and the other "farmers' friends" are fond of asserting that they could, once upon a time, import foreign wheat at 25s. a quarter, forgetting to add that it would have been a speculation for the bonded warehouse, with a chance of having to throw the purchase, or so much of it as escaped the rate, into the river, to avoid the payment of duty. But we recommend Mr. Baker and his monopolist patron, Lord Ashburton, who, to his shame, has condescended to like fallacies, to study the prices of foreign wheat during the above three years of continuous demand for consumption in England, and they will find that, during all that period, the price of wheat at Dantzic averaged more than 40s., and the price at which it sold in England alongside the English grain was upwards of 60s.

With the present abundant harvest in England, and the duty fixed at 20s. for perhaps a year to come, the prices of Wheat at Dantzic will become nominal again, and may sink probably to 20s. or 25s. a quarter. But we hope the farmers, who will be selling their wheat at 40s., and paying rents at 56s., will not suffer Mr. Baker to divert them from the true scent, by his solemn predictions of what the price might be without a Corn Law.

GOOD NEWS FOR THE FARMERS!

Whenever a grievance affecting a large class of the community begins to attract a large share of public attention, if the maintenance of that grievance is not beneficial to our landlord legislators it is speedily redressed; but when the grievance is one of the special pets of the squire, we are sure to find the Government of the day coming forward with some make-belief remedy; some sham measure of amendment to divert attention from the wrong. Now, amongst the many burdens and impediments of agriculture, which, in exposing the shallow pretence that the Corn Laws have benefited the farmers, we have brought to light, there is none more universally denounced than the game laws. We may fairly take credit to ourselves for having made this noxious law and its wasteful and demoralizing effects, next to the question of Free Trade, the most prominent topic of domestic discussion. And it is because the game laws form appendices to the Corn Law that they have fallen within our province. Monopolist squires and protection societies tell the public that the British farmer cannot compete with the foreign grower of grain because he is so heavily taxed, or because his land is inferior in fertility, and so forth; but we, knowing something of the details of rural life and of the system on which landed property is managed, tell the public that the game, the wild animals, kept by the landowners for their own amusement, or for their own profit at their tenants' expense, destroy yearly more corn than would be imported if the trade in corn were as free as air. This gives us the right, and renders it our duty to inquire into the policy, the principle, and the operation of the game laws. We have done so; we have been ably seconded by the provincial, and, of late, by the metropolitan press; and we have met with a hearty response from the whole body of tenant-farmers. There is not a farmer in England who does not regard the game laws as a curse to the rural districts, rendering in many good farming impossible, and everywhere forming a nursery for criminals. But, next to high rents, there is nothing about which the landowners are so watchfully jealous as their game and the game laws; and we were therefore not surprised to meet with the following evidence, that some "artful dodge" is to be attempted upon the subject, which is to be found in this authorised announcement by the Government paper, the *Morning Herald*. Says Grandmamma:—

"It may save both the *Chronicle* and the *Times* an infinite deal of declamatory writing as to the origin, effects, and defects of our game laws, to be told that the Home Office has for some time past been making very extensive inquiries on the subject; and that there is every reason to believe that another session of Parliament will not pass without a complete revision of those laws. We may also add, that since Sir James Graham has been at the head of the Home Department, the evidence on which convictions and commitments for poaching have been founded, has, in every case of alleged severity, been required by him from the convicting and committing magistrates; and that in not a few cases the term of imprisonment has been shortened, or the immediate release of the convict been ordered by the Home Secretary. On every account it is, then, most desirable that the administration of the game laws during the approaching autumn and winter should temper mercy with justice, and a broad distinction be taken, by magistrates, between poachers from necessity and poachers from idleness and confirmed vicious habits."

Now, this is sufficiently significant, and must be anything but pleasant to game-preservers, for though the Home Secretary has, probably, no intention of seriously interfering with their power to do mischief, they may be assured that the public, now completely aroused on the question, will not be deluded by a sham measure. Sir James Graham's "complete revision" is only intended to burk the inquiry threatened by Mr. Bright's motion for a committee on the game laws. Let the public understand that nothing but a total abrogation of all game laws will meet the necessity of the case; anything short of that must be a delusion. In the meantime we will endeavour to assist the "Home Office," by collecting a few of the scattered facts which weekly come to light in connexion with this subject. First, let us extract a page or two from a letter addressed by a farmer, to the farmers of "Oxon, Bucks, and Berks," on the "De-

struction of crops by game," which has been published in the *Oxford Chronicle*. The words are:—

"The mischief done by game is the sorely felt by nine farmers out of every ten, to make it necessary to say a word upon the subject here; but if we take the quantity of land under cultivation in England to be twenty millions of acres (which is nearly one million below the actual number), because that the depreciations committed by game cost the value to one bushel of wheat per acre—this loss would amount, with wheat at 40s. per quarter, to 80,000,000 quarters, which would pay the whole poor-rate of the country, and the amount of which never exceeded the sum of £2,000,000. As to the direct loss sustained by you from the introduction of game, but this is not all; I need not inform you to what extent the privation of game interferes with your manure in growing crops. Take the present year:—this is generally a bad year for the country, and is expected to reach 70 to 80 per cent. It might be advantageous for many of you to have a crop of winter wheat. Now, show me a farmer, whose game is strictly preserved, who does grow such a crop, and I will point out an instance of mortal damage rarely to be met with."

Now, our readers will remember that the loss here assumed is considerably less than that stated by the *Herts County Press*, a monopolist journal. But the pecuniary loss from game, grievous as it is, is not the least grievous evil inflicted upon the farmer by game-preserving:—

"If the loss incurred as above be correct (and it is within the mark), in a pecuniary point of view—what, let me ask, is the loss in a moral point of view? If one thing more than another is calculated to destroy that good feeling between a tenant farmer and his landlord which ought to exist, it is the fact of the former walking through his growing corn of an evening, and putting up large quantities of game, while perambulating his fields. But his feelings at this are outraged but a trifle to what they are when, repeating his visit the next morning, he finds that this game has damaged his corn, not to the extent of what they have eaten only, but, to a much larger extent, by what they have destroyed. In the course of his walk he finds large patches of land, with the corn cut through, and the upper part of the stem lying on the ground, as if the only object of these four-footed depredators was to clear a road for themselves. To such an extent was this done upon a farm we lately walked over, that upon our stating the loss to be full a bushel per acre, the occupier replied he would gladly compound for two bushels per acre, and even under those circumstances would be a considerable gainer."

And he refers for further corroboration to a letter from a Suffolk farmer, who said:—

"Many a respectable proprietor and occupier of land has to deplore his contiguity to the estates of our game-preserving landlords, and many an industrious tenant of theirs to rue the day he entered upon his tenancy. A farmer and neighbour of mine assures me that, last year, on twenty-four acres of barley which he sowed, he did not reap ten combs; and that £300 per annum would not cover the loss which game occasioned to his crops. Another remarked that game might frequently be seen of an evening by hundreds, feeding upon his land; and were he to shoot one he could not tell the consequence. It was distressing, he said, to be obliged quietly to witness the destruction of his property."

Such is the evidence of men who feel the grievance. We all remember the admirable speech made upon this subject by Sir Harry Verney at the late Buckinghamshire quarter sessions, when, to the confusion of the game-preserving squires, he showed that one wing of a new gaol now being built in that county was required solely for poachers. That speech has not proved fruitless, for already have the more active and intelligent of the Bucks farmers been "agitating" the question. This we had learned from private sources; and in the *Aylesbury News* of last week we find a correspondence between Sir H. Verney and some gentlemen who are moving in the matter. Dr. Lee, also, a county magistrate, thus writes:—

"The undersigned persons take leave to express to Sir Harry Verney that they have derived much satisfaction from the perusal of his speech, made on the 4th of July, at the quarter sessions at Aylesbury, on the question of the game laws, and the commitment to prison of poachers, as applicable to the county expenditure and the erection of a new gaol; and they respectfully request that Sir Harry Verney, Bart., will have the kindness to favour them with his company at Aylesbury, to explain to them fully his opinion on the game laws, and the manner in which they can best co-operate with him for their total repeal or amelioration. (Signed) "J. Lee, Hartwell. [And other gentlemen.]"

"Aylesbury, July 20, 1844."

Sir Harry Verney declined the invitation for the following reasons:—

"In order that the attempt to relieve the ratepayers and farmers from a burden and injury, which you agree with me in thinking to be unjustly imposed on them, may be successful, it must be made by men of all parties; and, however well attended and unanimous the meeting that you propose might be, still, if it wanted the concurrence of persons holding different opinions on political subjects, it would have the air of a party effort; and I feel a strong objection to risk doing injury to a good cause by converting it, even in appearance, into one of political partisanship. Further, I take the liberty to state that I think the sanction and co-operation of the magistrats would aid very materially in inducing the Government to propose a measure on the subject; and I entertain the hope that those who, by giving their time and attention to the affairs of the country, do the inhabitants important service, will confer on them an additional benefit, and obtain another claim to their gratitude, by representing in forcible terms the vast amount of injury caused by the preservation of game in very great abundance. I am confident, gentlemen, that the subject is one of the utmost importance to the welfare of all classes amongst us, and I intend to give notice at the adjourned sessions of a motion with reference to it."

Though we suspect Sir Harry will be much disappointed in his hope of co-operation on the part of many of his brother magistrats, his cautious yet decided way of dealing with the subject will tend rather to stimulate than check the activity of those who addressed him. In Buckinghamshire, then, an active opposition to the food-destroying game laws has been fairly established.

Let us now turn to the west of England; and from the columns of the *Wiltshire Independent* we present our readers with the following advertisement:—

"NOTICE.—It being intended strictly to preserve the game on the several lands and estates of Ebrilstone, Edlington, Spayton, Tintwood, Mestery, Tintwood, Rumsey, East Coulston, Great Chilverell, Little Chilverell, Marston, Urohsfont, Wodhampton, Eastcott, Bratton, Pottery, and Worton, the property of the trustees of George Watson Taylor, Esq., and now in our respective occupations, all qualified persons are requested to refrain from sporting thereon, and all unqualified persons found trespassing will be prosecuted.—Given the 13th of August, 1844."

"Jonathan Grant, Mary Haines, Wm. Grant, Wm. White, Edward Burdett, Charles Scammell, John Scammell, Jos. Whitaker, Humphrey White, George White, Edward Geo. White, William Taylor, James Price, Charles Anley, James Brown, Hugh Maitland, Wm. Chapman, William Cooper, James Watts, John Green, Robert, Wm."

Price, John Howell, Mark Butler, Jonathan Humphries, Wm. Potter, Stephen Hayward, Samuel Mitchell, Richard Oram, George Coleman, James Butcher, Richard Coleman, Moses Butcher, James Potter, Thomas Staples, Edward Price, Rebecca Butcher, Job Rose, Richard Newman, Richard Newman, Joseph Tanner, William Butler, John Snook, Harry Snook, Jacob Newman, John Downe, John Munday, Thomas Weeks, Robert Dean, John Downe, Henry Bishop, John D. Giddings, James New, James Lyne, Robert Hale, William Willis, Mary Tucker, Robert Weeks, Roger Matthews, James Darnford, Thomas Smith, James Few, Benjamin Harding.

Here we have sixty-two farmers performing an act of vassalage most abhorrent to their feelings, and most injurious to them in a pecuniary view. The history of that notice is this: Mr. Watson Taylor is abroad, his estates are in the hands of trustees for his creditors, and the mansion of Erlestoke, with enumerated manors, is let to Sir John Cam Hobhouse, who is an ardent game-preservation, and as he rents the landlord's right to "strictly preserve the game" at the tenants' expense, he requires the tenants to be called upon to give the notice we have extracted. These tenants are, no doubt, bound by the agreements under which they hold their lands to give such notices; and, probably, when they took their farms they had some confidence in their landlord's regard for his own interest, and believed that the stock of game would be moderate. They most likely never imagined the possibility of Mr. Watson Taylor's estates falling into the hands of trustees for creditors, and gave full rents for their farms. The reader can easily understand what must be their present position!

As a pendant to the above, we give the following extract from a monopolist journal, which might be almost taken as a satire upon the game laws; though no doubt it is all meant in sober seriousness.

"FREE WARREN.—The privileges called the right of free warren and free chase exclusively prevailed some centuries ago, but they are now exercised over very few of the manors of England; of this number Highclere is one. The title of the Earl of Carnarvon to the right of free warren and free chase in that manor was recently the subject of litigation in the Court of Exchequer, and judgment went in his lordship's favour. On the 9th inst., three days after the decision of the court, it was understood that the noble Earl would return to Highclere; and, in a manner somewhat analogous to the ancient celebrations of these franchises, an immense multitude of his tenantry and of the neighbouring gentry assembled on the verge of the manor, near the Winchester road, to give his lordship a cordial welcome after a legal victory, which is considered of GREAT LOCAL IMPORTANCE, and which had occasioned much excitement in that part of the country. There were of course the usual accompaniments of musical bands, gay banners, a lengthened procession, gratifying addresses, and thankful acknowledgments; but this scene was adorned, enlivened, and elevated in its tone by the merited popularity which the Earl and Countess enjoy, and by the sentiments of unalloyed pleasure with which the inhabitants of the surrounding districts viewed this restoration to the Herbert family of franchises as rare as they are honourable, and almost as ancient as the line of Herbert itself."—*Farmers' Journal*.

Does the reader know what the "right of free chase and free warren," the "restoration of which to the Herbert family" gives such "unalloyed pleasure to the inhabitants of the surrounding districts" really is? It is neither more nor less than the exclusive right to keep and kill game of all kinds over the lands of other proprietors!!! Of course Lord Carnarvon is a game-preservation, or he would not have attempted to enforce the feudal and nearly obsolete "right"; and the effect of his "legal victory" is to give him not merely the power of devouring by the mouths of his game the crops of his own tenants, but of rendering it impossible for any other landowner within the wide district over which this "right of free warren and free chase" extends, from having his land well farmed, or obtaining the fair rent of his land. We have no hesitation in saying, that the establishment of such a feudal "right" is a public calamity, and that the landowner who, in the present day, would seek to enforce it, ought to be visited with the strongest marks of public indignation.

"MUTUAL-CONFIDENCE" TENURES.

The warmest advocates of the Corn Laws will admit that one effect of those laws has been to cause the disease of leases, and, coupled with such admission, we shall probably hear a rhetorical account of the high-toned and mutual confidence which is alleged to exist between English landlords and their tenants serving as a substitute for leases. This picture would of course be drawn by the landlords. Let us hear, however, what the farmers say upon the subject. In the last week's *Mark-lane Express* a letter is printed which, though there addressed to the editor, was obviously written as a private letter to a brother farmer. It is dated from Kent, on the 18th of August inst., and speaks of the state of the crops in a great part of East Kent. The writer is a farmer writing to a farmer, and, in speaking incidentally of a mutual friend, is led into some of the most graphic and practical remarks upon "mutual-confidence" tenures we have met with. After describing the state of the crops of the district, he says:—

"I dined with — at —; was much pleased with his situation and crops; he has some fine brown wheats; had the seed last year out of Essex; the best set in the ear I ever saw; never before saw more than five set, many of these were six; it stands well, and is a very heavy crop; his crops all good except potatoes; of these he has a large grower; they must tell badly; hope he has a lease; fear not; do not like farming so extensively as he does without; IT IS VERY DANGEROUS; he may lose his landlord to-morrow, who has no family, when it might be sold; the purchaser or next owner might be a different person, or might want it himself. You may have excellent landlords, but you farm in fear, and dread to make outlays that are anything like a permanent benefit (depend on it this is a great drawback to the improvement to land, and produce to the country)."

In these few sentences how instantaneously all the high-flown nonsense of "mutual confidence" is scattered to the winds! The "hope he has a lease" is the expression which instantly rises to the husbandman's lips whenever he observes a tenant-farmer making considerable outlays upon his farm. An instance of this occurred recently under our own observation. A person who had taken a farm in notoriously bad condition, and situated in an ill-farmed district, was in a field by the roadside superintending some improvements, when a humble farmer, who had lived all his life in the neighbourhood, passed by, and, having observed attentively for some time what was going on, addressed the new tenant, and nearly the first words he uttered were, "You are laying out a good deal of money here; I hope to God you have got a lease."

This man, like the correspondent of the *Mark-lane Express*, had learned by experience the real value of a "confidence" tenure. But to return. The writer says:—

"We have most excellent landlords who do not grant leases; can there be better than Sir B. B. and Mr. F.? You seldom hear of change of tenants here; the first has no child; death with him, or the sale of the last estate (it is said they are all for sale) might place the tenants on these extensive estates very differently; might they not be placed in the same position as an adjoining estate at the last change of heir, on which W. and I were tenants? might they not then, like our then new landlord, find it difficult to find a successor in this country who sufficiently knew the value of his estates, so sends one out of another, who, never having been in this before, of course must be a better judge? In all events, he has found (what I suppose was wanted) the value, proved by almost the whole of the extensive tenantry having left, and some of the farms having exchanged hands several times since. Let us take the one you left yourself as a sample."

Here we have farmers writing in friendly confidence to each other, and the tale is somewhat different to that they too often allow the landlords to tell in their names when they have been whipped up to a protection meeting. This is the present state of the farm from which it seems the person to whom the letter was addressed was driven by the abrupt termination of the "confidence" tenure:—

"In ten years this has had three tenants; one year out of it occupied by themselves, HIGH RENT HUNTING, and is now again to let. What is the consequence?—ruin to every succeeding fool who takes it—RUIN TO THE ESTATE. Ride round it, and look at it; worse crops on it than anywhere; look at lands under different occupancy, intersected with it; on the one you will see good crops, good management; on the other the reverse, with bow weeds, docks, thistles, cickie, &c. &c., beautifully rearing their heads above the miserable crops. Truly this estate, which years back had the credit of being so highly cultivated, ought now to take the high title of the garden of Kent; why not? Can you find another so fully flowered? It must be a pride, indeed, to the landlord, to witness it, to know that he takes so much from it in the shape of rent, that the tenants have nothing left to pay for hoeing and picking these pretty things out. 'No, dare to do it—dare to improve your farms, so that your crops and diligence, with the assistance of your now poor unemployed labourer, overpower these pretty things, which so adorn my property—dare to show improvements of this sort, and thus fill your barns and rick-yards—dare to load my lands with heavy flocks of sheep, your waggon back with artificial or town manure, or oilcake, &c., it is not my pleasure to have profits made on my land by such like means as these—dare to do these things, and I will send my agent—I will administer to you a peppercorn which shall warm you up, and make you bring forth more rent.' This may seem a curious story to some, but you and I, and others, who, to our and their sorrow, have been connected, know it is most true."

Ay, and farmers in general know it to be true, and day by day they are becoming more and more ready to speak out upon the subject. And hear how this greedy landlord has benefitted himself:—

"What's the consequence? We who really know the value of these estates, know that they have decreased in value in these few years at least a fourth—that the actual produce from them is proportionably decreased—that it has removed a most respectable tenantry—that the farms, from a high state of cultivation, are run out, as frequent change of tenantry always will do—that it requires a great outlay of capital to put them in the same state as they were when this change of system and tenantry was commenced upon—that, in addition to the ruin brought upon many an industrious tenant's head, the evil must eventually fall upon the landlord, as it is doing by the farms successively falling into his hands—that the best remedy for it is to fall back to the old system on this estate for a term of years, at a fair and just rental, not running the term out by two or three years, before a fresh arrangement is made, as, if this is done, it causes the occupier, in fear, to take out the improvement to some extent, consequently decreases its value."

Again, he shows the disadvantage to landlords of even short leases, for he says:—

"How much landlords stand in their own light, by letting the terms run out! Will they never see that the occupier will, and can, better afford to give the full value when he has his land up to the mark, and in regular rotation, than when in the last years he has broke from it, and been running it? By these, men of capital and industry would be induced to take them; the tenants would then be respectable, the landlord respected, the poor labourers again happily employed, instead of cursing and damning them, as now, for not doing so—not seeing it is the landlord, who is not only having more than his right, but is depriving them of theirs, by taking, in addition to a fair rent, THAT WHICH SHOULD AND WOULD BE EXPENDED ON THEM BY WAY OF LABOUR."

Have we not often said all this? And it will not be long, now farmers have begun to write and talk to each other in this style, before the monopolists' high-rent law must must go by the board.

It is unquestionably as much for the landlord's interest as the tenant's that a lease should never be granted for a shorter term than 21 years, for, as the writer above quoted says, the regular rotation will constantly be broken up, and the tenant will be "running his land" during the last years of his lease. But, with a lease of twenty-one years, the tenant will have either made up his mind to quit some years before its termination, and the landlord will have an opportunity of seeking a good successor, or the farm—as is most likely—will be deemed by the tenant so much a family property, that he will be glad to renew the lease on fair terms for the benefit of some relative or connexion.

It has been proposed that in leases for long terms there should be certain periodical advances of rent; say, for instance, in a 21 years' lease that, after the first seven years, the rent should increase five or ten per cent., and so at the end of the first fourteen years; and we have no doubt that such arrangements might often be most beneficial to both landlords and tenants. But then there is the old obstacle to all improvements in connexion with landed property in this country, who will enter into such arrangements—landlords or tenants—until the question of the Corn Laws is settled? and can it be ever settled except by a total repeal?

THE PRICE OF BREAD AND THE PRICE OF CORN.

There has been of late in the papers various denunciations of the bakers for not having lowered their prices in proportion to the fall in the price of wheat. The following is an instance of the sort:—

"The abominable charge of 7½d. for what is called a quarter loaf, but is really only a 4lb. loaf, made by the bakers of Buckingham, will, it is hoped, induce bakers from the neighbouring towns to send bread into that town. We have no doubt that a large quantity would be sold if at a proper price. The quotation in the market of last Saturday is only 4½d. per quarter, and it is now even lower than that."—*Aylesbury News*.

Nothing but competition will set this right; but it must

be remembered that it is only just decided by the last ten days of fine weather that wheat will for some months be at a permanently low price; and until that had become obvious, the bakers could scarcely be expected to make the reduction of price in bread which the market value of wheat requires. This is one of the secondary ways in which the Corn Law, by increasing the fluctuations in the price of corn, and by preventing retail dealers from steadily competing with each other, operates against the consumer without giving the grower any corresponding benefit.

ONE OF THE "PROTECTED."

The following report of a charge made against a farmer of having set his own premises on fire shows, at all events, that the landlords feel their tenants' position to be at present not exactly a bed of roses. The landlord's evidence, as given before the magistrates, marks the sort of dictatorial way in which tenant-farmers are interfered with by their landlords:—

"A FARMER CHARGED WITH INCENDIARISM.—At Castle Hedingham petty sessions, on Monday, Mr. Thomas Chinery, a respectable farmer of Belchamp St. Paul, was brought up, in custody of the police, charged on suspicion of setting fire to farming buildings, in his occupation, the property of S. M. Raymond, Esq., on the evening of July 3. Mr. Raymond deposed as follows:—The prisoner is in the occupation of a farm called 'New Barns,' my property. On Wednesday evening, July 3, between nine and ten o'clock, I was alarmed by a person named William Stammers, coming to my house, and stating that Chinery's barn was on fire, meaning the prisoner's. On going out of my house I saw the sparks coming towards my farming buildings at home; I set some person to protect them. I called my son, and went immediately to the fire, which is about a quarter of a mile off; when I arrived the premises, which consisted of barn and buildings, were burnt down; after being at the fire a little time, I saw prisoner, when I said, 'this comes of your having so much haulm in the yard (having seen prisoner about fourteen days before the fire, and objected to so much haulm being in the yard in stacks and walls, on account of the prevalence of fires.)'

Now, this "wall of haulm" is a sorry mode of forming a yard for the farmer's stock, and which ought to have been rendered unnecessary by the landlord having had a proper fence or wall put up. The examination of the squire and some farm-servants then proceeded, and the circumstances of suspicion against the accused seemed to be, that he came to the fire through a gap in an adjoining field, and had stated that he first saw the fire when two miles off, but which the witnesses thought impossible from the early period at which he arrived after the fire broke out. He was, however, eventually discharged, and we are told:—

"The case excited the greatest interest in the neighbourhood, and the hearing lasted upwards of four hours. The room was crowded nearly to suffocation, principally by farmers of the neighbourhood, amongst whom the greatest sympathy seemed to exist on behalf of the prisoner, who had been incarcerated several days in the police station. On the acquittal of the prisoner great applause was manifested."

The following passage from the report of the landlord's evidence will indicate something as to the existing relations between landlords and tenants. After the scolding about the "haulm" before mentioned:—

"Prisoner replied, as any other farmer would have done, 'Had it been wet weather it would have all been made into manure before this time.' I asked him if he had suspicion of any person having caused the fire? He replied, 'No.' By Mr. Gooch: Did you go up to him or he come to you?—Mr. R.: I spoke to him first. I had given him notice to quit next Michaelmas, as he did not pay his rent regularly; about a fortnight after the notice was served he paid me his rent, and left the notice to quit at my house, saying, 'he did not know what it meant,' and there was an end of it, as I did not want to turn him out if he paid his rent. On the Monday following Mr. Blunden came over and valued the damage, when I said to him (prisoner), 'Have you quarrelled with any one?' He replied, 'No.' I then told him it would have been much better for him to have sold his wheat, and paid his rent, and then it would not have been burnt. By Mr. Gooch: When was the rent due?—Mr. R.: He had not paid the Michaelmas rent when the notice was served. By the Bench: The Lady-day rent was not paid till after the fire."

THE NEW TARIFF.—The imports of live stock under the new tariff during the past week have consisted of 60 oxen and cows from Germany and Holland, and 30 ditto from Spain, in the quality of which no improvement can be noticed. The above, added to the previous arrivals for the present year, form the following totals:—London, 1000 head; Liverpool, 80; Hull, 270; Southampton, 155; total, 1505.—*Globe*.

ENGLAND AND IRELAND.—Between two such countries as England and Ireland there must always be a reciprocity of wants; the produce of the soil and the productions of skill are ever exchangeable. Commerce stimulates industry; industry reacts on speculation. Putting out of the question the thousands of Irish who are employed in England, how many get employment in Ireland from English speculation? And yet a multitude of people in Ireland cry out for a domestic Parliament, to "protect Irish commerce and manufactures," i. e., to prohibit English goods, and to create an artificial market at home. Was ever such infatuation heard of? Beginning their legislative career with a people on whose poverty they are perpetually declaiming, they would in the course of a few years reduce them to the most desperate and helpless indigence; and then they would discover that it is not by acts of Parliament or protective systems, but by energy, industry, order, patience, and submission, that the arts are fostered and public wealth increased.—*Times*.

TO FARMERS.—At the end of August, 1843, I planted in my garden thirty-two grains of wheat, at six inches distance, an inch and a half deep; the seed was of the first-rate quality. This seed produced this year thirty-two plants, having from 10 to 28 stems and ears each; the average number of ears was 16; the average weight of each plant 1½ ounce. An acre of land would contain, at six inches distance, 174,240 plants; produce 304,940 oz., or nearly 19,600 lbs., 320 bushels, or 40 quarters per acre. The expense of sowing would be more than saved by the diminished quantity of seed required: I do not mean to state that such a result would be obtained upon a large scale; but I think it is worthy of trial, when we know that the average produce is only 2½ quarters per acre, and that it is possible to grow 40; it will be allowed that there is ample scope for improvement. Try a breadth in your fields an inch and a half deep: put one grain, and one only, in each hole—plant it at six or eight inches distant—be sure to plant good seed—get as much produce as you can, but go for 40 quarters per acre.—*Correspondent*.

NOTICES TO CORRESPONDENTS.

We must decline the publication of "W. Thomas's" letter, having already intimated our wish not to enter into any controversy upon the subject of which it treats.

"M., a Free-Trader, Leicester," is not disqualified even if he were a foreigner, unless he also be an alien. Even although he were born abroad, yet if his father, or grandfather by the father's side, was a subject of the Sovereign of Great Britain, he would not be an alien, and would, therefore, not be personally disqualified. There is no way of meeting the objection but by appearing before the revising barrister, and swearing to his nativity or parentage, or sending some witnesses in his place who can swear of his own knowledge to all the circumstances. M. can get costs, not exceeding 30s., by award of revising barrister if the objection turns out to be frivolous.

"A Subscriber and constant Reader, Liverpool," has asked from us a legal opinion upon a point not connected with our proper business, or with the registration; nevertheless we like to do the best to oblige all our friends. The tenant is liable in payment of the property tax almost in the express terms of the covenant. Had he been taken bound to meet all taxes "in respect of the premises" merely, he would have escaped; but then the tenant agrees to pay not only taxes upon the premises, but "upon the yearly rent here reserved, or on the said A. B. in respect of the same." The lease is so worded that we could almost suspect the landlord to be a Tory, and to have had private information that Peel was contemplating the introduction of an income-tax even before he acquired office.

"L." is informed that two or more dwellings, if they are separate and distinct, not entering into each other, cannot be joined to make up one vote. But if all the dwellings are under one roof, and in one and the same house, then the principal lessee, by keeping the exclusive possession of the key of the common street-door, reduces his tenants to the condition of lodgers, and would be entitled himself to qualify for the whole.

"F. W., Truro," is informed that all the claimant has to do is to prove that he has occupied, and been rated for twelve months prior to the 1st of July. Let him exhibit the receipts for rent and rates in evidence. He does not need to say a word about the lease or its stipulations, that being a matter entirely betwixt the landlord and himself. It is altogether *justitii* for any objector to raise that point. Besides, that the landlord has granted receipts in the son's name is conclusive evidence, under his own hand, that he has recognised his tenancy.

"L. La Roche" is informed that, by 6 and 7 Will. IV., cap. 96, every rate-payer is entitled to take copies of, or make extracts from, the rate-book at business hours, without payment of any fee whatever; and every inhabitant, although not a rate-payer, can inspect and make extracts from the rate-book, on payment of a fee of 1s. (17 Geo. II., cap. 3, secs. 3 and 4). Mr. La Roche may get any rate-payer, therefore, to examine the book gratis, or he may inspect it himself for 1s. We beg also to inform Mr. La Roche, in answer to his other inquiry, that the numbers who polled at the last Durham election were—for Mr. Bright, 488; for Mr. Purvis, 410.

We have great pleasure in complying with the request of the Secretary of the Peace Society, by inserting the following

"MEMORIAL OF THE LONDON PEACE SOCIETY ON THE AFFAIRS OF MOROCCO, HAYTI, AND TAHITI.

"To the Right Honourable Sir Robert Peel, Bart., First Lord of the Treasury; the Right Honourable the Earl of Aberdeen, Secretary of State for the Foreign Department; and the other Right Honourable Members of her Majesty's Government:

"THE MEMORIAL OF THE COMMITTEE OF THE LONDON PEACE SOCIETY.

"SHOWETH.—That your memorialists are fully persuaded that war is repugnant to the spirit and principles of the Christian religion, subversive of the true interests of mankind, and as unnecessary as it is unavailing as a mode of settling international differences.

That whilst your memorialists regard with peculiar satisfaction the continuance of peace among the nations of Europe, they are deeply and painfully affected by the hostilities which at the present time prevail in some other parts of the globe; especially in the empire of Morocco, the island of Hayti in the West Indies, and the island of Tahiti in the Southern Pacific.

"That your memorialists, as the committee of a society whose sole object is the promotion of permanent and universal peace, abstain from expressing any opinion on the political questions supposed to be at issue in these various regions; but they venture respectfully and earnestly to press upon the Right Honourable Members of her Majesty's Government the importance of employing (as your memorialists thankfully acknowledge that they have often and successfully done) their best efforts by argument and persuasion, founded on principles of true reason and policy, as well as on benevolence and religious considerations, to put a speedy termination to these distressing circumstances, with a full regard to strict justice to all the parties who are variously concerned in them.

"And your memorialists venture further to express their earnest desire and hope that the entire proceedings of her Majesty's Government may be such as shall promote a peaceable spirit and conduct among all classes of British subjects; and minister no just ground of offence, either to the great and mighty nations of Europe, or to any of those states which, in some respects, may be esteemed more feeble and less important, but whose natural rights are equally sacred and inviolable and dear to themselves; and whose very weakness, in a political point of view, claims for them the sympathy, and moral assistance, and protection of the more powerful nations of the world, and especially of Great Britain.

"And your memorialists will ever pray, &c.

"N.B.—A similar memorial was sent at the same time to his Majesty, the King of the French; both of which have been favourably received, and duly acknowledged."

Our friends of the Peace Society may see in these disputes a clear proof that Free Trade is the only bond of union by which the amity of nations can be secured. It is from a spirit of monopoly that countries are invaded and occupied; their productions might be obtained more honestly and more cheaply by fair commerce; but so long as the delusions of monopoly retain their hold on the selfishness of individuals and of nations, will aggression have a tendency to provoke resistance, and short-sighted avarice to prefer plunder to payment.

"J. P."—"Putting on the screw" means refusing to discount bills, or advance money on securities, and practically amounts to a diminution of the quantity of money in circulation. A piece of gold is as much an exchangeable commodity as a hat or a piece of cloth, and its value in the market, like that of any other commodity, will be determined by the amount of demand and supply. A foreigner will take gold for his produce if he wants the gold more than he does our manufactures; and he will take the manufactures if he wants them more than the gold. When the foreigner, however, takes gold, he in fact buys it when he gives his produce in exchange; and the price he pays for the gold will be its marketable value. The fallacy against which "J. P." has to contend is, that money, which has some occult and inherent value, independent of its marketable value; he practically creates the fallacy every day of his life: when he buys a coat he parts with his gold, the shopkeeper because cloth is more valuable to him than the gold, and the shopkeeper may be well paid to buy the gold as to sell the cloth. "J. P." will find the entire question clearly and simply investigated in a cheap little work called "Key Lessons in Money Matters," written by Mr. George the Archbishop of Dublin.

"G. P."—We shall be glad to see the information supplied. We have been earnestly requested to insert the following extract

from No. 23 of the "Westminster Review," in reference to Mr. Disraeli's statement, that commercial restraint originated with the Whigs:—

"WHIGS AND TORIES.—The word Tory is derived from the Irish *torraig*—to pursue for plunder. (Lugard's Hist., xl., 133.) The first Tories were Irish outlaws, such as we should now call Whiteboys, or Ribbonmen. The term appears to have been first imported from Ireland, during the civil wars of Charles I., when it was applied to the Cavaliers; subsequently to all the adherents of the House of Stuart. The word 'Whig' is an ancient Scotch term, signifying sour whey; a nickname given to the Covenanters, and afterwards to their political friends. At the Hanoverian accession there were three parties in the country. Catholics, friendly to James, and hence called *Jacobites*; Protestants friendly to the House of Stuart, offensively called *Tories*; and Protestants, opposed to the House of Stuart, and favourable to the popular rights which James had violated; these were called, in retaliation, by their opponents, *Whigs*. The latter of course came into power upon the landing of the Prince of Orange; but the Whigs were not an anti-church party; they were partly borne into office by the bishops whom James had sent to the Tower. The revolution of 1688 was an anti-Catholic, and to a great extent an anti-sectarian movement. The most unpopular act of James, in resisting which the bishops took the lead, was his declaration in favour of liberty of conscience; his object being to free the Catholics from the civil disabilities under which they laboured. To effect this it was of course necessary to proclaim a general indulgence for dissent, although there could be no doubt of his disposition to crush the Dissenters, if his own party had prevailed. The Whigs restored the Test Acts to put down Popery; and the Tories would have done the same. Sectarianism had nothing to do with Whig or Tory distinctions. It arose out of the spirit of free inquiry and earnestness in religion, which were the characteristics of the age; influences strong enough to govern state policy, rather than to be controlled by it. The political system which followed the accession of the House of Hanover was the result, not of 'Whiggism,' but of a natural and unavoidable compromise between the antagonistic principles of Parliament and prerogative; and it is trifling with history to throw the blame of 'commercial restraint' upon the Whigs. Legislative interference with freedom of industry is of the earliest antiquity. The first protective Corn Law was passed in 1463. This was the 3 Edward IV., c. 2, prohibiting the importation of wheat when the price did not exceed 6s. 8d. per quarter. In subsequent reigns laws were passed to make food cheap, by levying duties upon the exportation of corn—a popular object, but only 'commercial restraint' in another form. At the revolution of 1688 these duties were changed by William into bounties upon exportation, to make wheat dear. But this was not Whig craft, but King craft, for its object was to conciliate the great Tory landowners, who continued secretly opposed to the new dynasty."

The lines to her Majesty are very good, but they may be misrepresented, and we therefore reluctantly omit them.

"T. O."—The letter is referred to our agricultural editor, as also that of the "Shropshire Farmer."

"W. B."—His case is one of great hardship, but the publication of it would lead to no good result.

"R. J."—Dymond is not forgotten.

"Humanitas."—When we can find an opportunity.

"A Leaguer of Rochdale."—The sentiments are excellent, whoever may have written them; we must not, however, be too strict in criticising a lady's writings.

"G. W. W." is thanked for his interesting communication, though it discusses topics not suited to our columns.

"J. H."—Baron Alderson's jests are too serious matters for us to meddle with.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order, to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the LEAGUE forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadsby, Newall's-buildings, Manchester; and the LEAGUE may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

POSTSCRIPT.

LONDON, Saturday Morning, August 31, 1844.

The activity of the Free-Traders in the registration courts has excited the surprise and rage of the monopolist press. At the very moment when the *Morning Herald* had announced the defeat of the League, and declared that the condition of its offices in Fleet-street bore the visible signs of its dissolution, it was rather provoking to discover that the League not only retained its vitality, but had brought its forces to bear on the weakest part of the hostile line, and had already carried some important posts by storm. Our attention must now be directed to "the battle of the constituencies," which will be fought in the registration courts; and we must not relax our exertions until the revising barristers have concluded their labours. Electors must regard the franchise as a solemn trust committed to them by their country, the responsibility of which they cannot shake off without being guilty of a gross breach of duty. In the period of apathy which preceded the last election, the monopolists were permitted to play so many tricks with the constituencies, that they may be said in many instances to have framed the electoral lists at their pleasure. Thanks to the exertions of the League, this apathy has been dispelled, Free-Traders have been roused from their lethargy, and many of the frauds of registration practised by the monopolists have been detected, and will be exposed. We have been much amused by the alternate scoldings and threats that this course of operations has drawn from the *Morning Herald*.

Each day a different face it wears,
Now in a fury, now in tears,
Now scolding, now in sorrow.
All it has said 'twill soon unsay;
Bellows "the League is dead" to-day,
And roars "it lives" to-morrow.

The rage of the monopolists is the most signal proof of the wisdom of the tactics which the Free-Traders have adopted. We exhort them steadily to persevere until their position in the electoral lists shall be as strong as that of their principles in the public opinion of the country.

THE REGISTRATION.

THE LEAGUES AND REGISTRATION.—The course adopted by the Anti-Corn-Law League with regard to the registration of voters for the borough of Manchester, as well as for South Lancashire, is perhaps the most extraordinary ever attempted by any confederacy. At the last exhibition in Covent-garden Theatre, Mr. George Wilson informed his audience that the League was not yet extinct, and that they had turned their attention to the registration courts. When the statement of Mr. Wilson reached Manchester through the medium of the *Morning Herald*, few people understood the full extent of his meaning; but the course now adopted has explained, and thrown some light upon the ambiguity of that part of his oration. Saturday last being the last day for serving notices of objections, the two previous days presented such a scene of bustle and confusion at the Post-office as was never, perhaps, before experienced in this town. Parties were seen wending their way from Newall's-buildings to the Post-office with large parcels of letters, which upon inquiry turned out to be notices of objections that were to be served by the letter-carriers on most of the Conservative voters for the borough and South Lancashire. Many of these objections are of a most frivolous and vexatious character. It is said that upwards of 7000 have been served by the Leaguers, and that it is their intention to contest them every one.—*Morning Herald*. [Thanking our venerable contemporary for this and other unequivocal falsifications of his oft-repeated assertions that the League was well nigh defunct, we may just say that his fears have multiplied somewhat the extent of the League's objections to voters; and, passing over the fact that his informant could know nothing of the quality of objections he had never seen, time will show, not however to the satisfaction of our mourning contemporary, to what extent such objections are good and valid.]

ASHTON-UNDER-LYNE.—In this division of the county the objections made by the Free-Traders are 257; those by the monopolists, 128. For the borough there has been an increase in the list of voters this year, as made out by the overseers, in consequence of their having placed on the list all persons assessed above a certain sum; this has caused many objections to be made on both sides. The objections made in the borough are, by Free-Traders, 54; by the monopolists, 53. New claims by Free-Traders, 11; by monopolists, 1.

ROCHDALE.—The objections against county voters in this district are more numerous than they have ever been since the passing of the Reform Bill. Whole shoals arrived on Saturday through the medium of the Post-office, which made the letter-carriers very busy on that day. It is supposed that, out of the 1400 persons who vote at Rochdale, one-half of them are objected to. The Tories have had their own game returned upon them with a vengeance. In the borough there are rather more than 40 objected to.

EXETER.—One of our wise contemporaries, the other day, employed his time in writing a sort of lament, in his way, over the League; wishing most potently that it were dead, and saying nearly as much in plain words. This (Monday) morning they have found the League alive and kicking, for the Free-Traders have served 600 objections on their opponents, such objections as we believe cannot be parried; so that when the next contest arises the League will be prepared to back their men with a good majority.—*Devonshire Chronicle*.

THE PEOPLE AND THEIR RULERS.—Machiavel finds virtue to be so essentially necessary to the establishment and preservation of liberty, that he thinks it impossible for a corrupted people to set up a good government, or for a tyranny to be introduced if they be virtuous; and makes this conclusion, "that, where the body of the people is not corrupted, tumults and disorders do not hurt; and, where it is corrupted, good laws do no good."—*Sydney on Government*.

FOREIGN WHEAT.—In consequence of the contemplated rise of duty upon foreign wheat, last week there was an immense deal done previous to Saturday, in the clearing off stocks. The duty during the last average was 18s. per quarter, and by the Saturday's return it rose to 19s. On the Friday one house paid £2000 of duties; altogether, during the week ending Friday, foreign wheat, amounting to £7923 of duty was cleared at the Custom-house.—*Edinburgh paper*.

THE SUGAR TAX.—We find from parliamentary returns, that the quantity of sugar entered for home consumption in 1830, was 4,273,945 cwt.; while in 1840, the year immediately preceding the last census, we find, instead of an increase corresponding to that of the population, a want of only 3,764,710 instead of 5,000,000 cwt.; which would have been about the proper quantity according to that mode of calculation. We should, however, in estimating what ought to be the increase, not merely look at the increased numbers, but at the changed habits of the people: we must bear in mind the much greater taste for tea, coffee, and cocoa—articles to which (with increased consumption of sugar which they would naturally involve)—we must ultimately look to supply the deficiency in the revenue from spirits. When we find, then, that tea, coffee, and cocoa not only keep up their proportion to the population, but are consumed in a ratio nearly double that which would arise from such a cause, it becomes as clear as noonday, that nothing but the increase of price, occasioned by an artificial limitation of supply, has prevented the consumption of sugar being near upon 6,000,000 cwt. instead of under four. It should not be forgotten that we are dealing with an article which even now furnishes, in each year, a revenue equal to that of the whole customs' revenue of any one quarter; and in which every contraction of the natural demand, and impediment to the natural supply, must also very seriously affect the consumption of its attendant comforts, tea, coffee, and cocoa. If it be wished to promote the present temperance movement, and make up the consequent loss in the revenue from spirits, by encouraging a taste for the "cups which cheer but not inebriate," this can only be done by enlarging the supply, and thus moderating the price of that which is required to make these cups palatable. At present the tea-tables of the people at large furnish about a fifth of the whole of this great empire's revenue: let but the demand take its natural course, and the supplies flow in through their natural channels, and we should see that proportion insensibly and easily, but not the less certainly, raised to a fourth, and, at the same time, additional comfort presiding at this most domestic of meals.—*Edinburgh Review*.

EPITOME OF NEWS.

FRANCE.

FRANCE AND MOROCCO.—The following telegraphic despatch, announcing another conflict between the French and the Moors, has been received at Paris:—

"Marseilles, Aug. 22, five p.m.
"The Governor-General of Algeria to the Minister of War.
"Bivouac of Mondiat, Abderrahman, 14th.

"Having marched upon the Moroccan army, which became daily more strong and menacing to Algeria, I came up with it at two leagues in front of its camp. It assumed the offensive with 20,000 horse, at the moment the heads of our columns were crossing the Isly. We were surrounded on all sides. We gained a most complete victory. Our infantry, which stood most firmly, and a little lot of our cavalry, fought with the utmost bravery. They successively captured all the camps, which covered a space of upwards of a league in extent. Eleven pieces of artillery, 16 stand of colours, 1000 to 1200 tents, among which was that of the Emperor's son, his parasol, the insignia of his command, all his personal baggage, a considerable quantity of warlike stores, and an immense booty, remained in our power. The enemy left about 800 killed on the field of battle. Our losses, although severe, are light when we consider the importance of the battle, which we will call the battle of Isly."

The *Semaphore de Marseilles* of the 21st instant, and the *Revue*, the Ministerial Journal of that city, announce that a telegraphic despatch was received on the preceding day, at Toulon, ordering the immediate embarkation of 20,000 men for Algeria. These troops are intended to replace those sent to reinforce the army of Marshal Bugeaud, on the frontier of Morocco.

MOGADORE.—Mogadore was attacked and destroyed by the French on the 15th inst. The following is the Prince de Joinville's despatch to the Minister of Marine:—

"Mogadore, Aug. 17.

"On the 15th we attacked Mogadore. After having destroyed (*écrasé*) the town and its batteries, we took possession of the island and of the port. Sixty-eight men, including seven officers, were killed or wounded. I am busied in establishing the garrison of the island. I have placed the port in a state of blockade."

The *Journal des Débats* thus describes Mogadore:— "Situate on a peninsula, and surrounded by a plain of shifting sands, Mogadore is quite a new town, founded by the Emperor Muley Mahomed in 1760, in order to have a commercial port on the nearest maritime point to the city of Morocco. Mogadore is forty-eight leagues from the capital. The population of Mogadore does not amount to more than 14,000 inhabitants. There are not more than fifteen Europeans. It is the most commercial port of all Morocco. The commerce of Mogadore has been extremely flourishing. It has exported to Lisbon, Cadix, Marseilles, Gibraltar, and even to New York, large quantities of corn and wool, gum, almonds, olive oil, figs, wax, leather, kid-skins, aniseed, orange-peel, and various kinds of medicinal drugs. The imports consist of bar iron and steel outlery, and iron ware of every description, woollen and cotton stuffs, silk handkerchiefs, gold and silver trinkets, pearl, amber, or coral necklaces, looking-glasses, sugar, and spice."

The announcement of the destruction of this town, and the occupation of the island, caused a fluctuation in the French funds.

The *Constitutionnel* says, "The King's journey to England is postponed. Orders, it is said, have been despatched to the ports to delay the preparations. The period at present named for the embarkation is Oct. 17."

"We have forwarded to Dublin," says the *Univers*, a French Catholic journal, "the numerous addresses which have reached us from the different parts of France, together with those signed by the Catholics of Paris, expressive of their sympathy for the illustrious prisoner of Richmond (Mr. O'Connell). A respectable clergyman, called by private affairs to the capital of Ireland, kindly offered to take charge of them, and to hand to Mr. O'Connell this testimonial of admiration of Catholic France."

SPAIN.—It is said that the quarrel between Spain and Morocco has been definitively settled, the Emperor having given ample satisfaction for the alleged offence with which he had been charged.

MEHMET ALI.—ALEXANDRIA, August 7.—The Viceroy has abandoned his previous resolution to abdicate, nor will he persist in his intention of making the pilgrimage to Mecca. His return to Alexandria from Cairo is expected every moment.

THIRTE. Aug. 18.—A letter from Alexandria, of the 6th of this month, gives the following particulars:—

"Several governors of the provinces and district magistrates (Scheck Beleh) have made representations, both in Cairo and Alexandria, of the miserable condition of the Fellahs; and the Consul of Cairo reported to Ibrahim Pacha, at Alexandria, First, that the Fellahs in all the villages were in the most wretched condition. Second—That the public works for which the people were not paid, and received no food, have increased their misery in the most frightful manner, and have caused emigration. Third—That the land cannot be cultivated, and the harvest be got in, if the Fellahs are driven from village to village, and we are to pay penalties, &c. Fourth—That the governors and sheiks are no longer able to check the evil, and, therefore, require that a report be made to the Viceroy, and that the debt of 75,000 francs, due by the villages, shall be remitted them."

THE CORN TRADE.—FRANKFORT, August 18.—The changeable and rainy weather which we have had for some time has revived, in some measure, the hopes of the speculators for a rise in the price of corn. They give out that the wheat has suffered great injury in several districts, and that, though a great quantity has been housed, the quality is by no means so good as was expected. These reports, however, are not confirmed by the assurance of intelligent farmers in the principal corn districts, which have been received; here they rather expect a further decline in the prices.

BERLIN.—Recent accounts from Berlin announce a general strike among the workmen in the extensive calico-printing works of that city, comprising a body of from 2500 to 3000 men, for an augmentation of wages; but which, it appears, the owners were not inclined to grant. "One of the principal masters," says the *Hamburg Correspondent* of a London journal, "Mr. Loire, a very wealthy and at the same time a very liberal and benevolent man, informed me a little while ago, that recently he has been keeping his men

employed more from a motive to see them earning their bread than with any prospect of the slightest profit; and the difference of sale of his goods at the last Frankfurt fair amounted to nearly 60,000 thalers less than on a former occasion."

The Prussian Government, in order to avoid as far as possible the accident upon the railroads, has founded a school at Berlin for teaching the art of directing and managing locomotives; and an ordonnance has been issued that, from and after the 1st of January, 1846, no person shall be employed as drivers of locomotives on the railroads of the kingdom but those who have been taught in this school, and obtained a certificate of their capacity.

The *Hamburg Correspondent* states that the King of Hanover has concluded a treaty of navigation for ten years with the city of Lubeck.

The *Westphalian Mercury* states that several Sisters of Charity have lately arrived at Berlin, having been conducted to the frontiers of Prussia from their convent at Wilna, in Russia, which has been suppressed. They are young women of education and good families, and will return to their principal convent in France.

SWITZERLAND.—An article published by the *Basle Gazette*, of the 11th inst., would indicate that the Valais was on the point of being invaded by volunteers from the neighbouring cantons. "Enlistments to that effect," it says, "were making on a large scale in the districts of Aigle, and on other different points along the lake. At Duchy two hogsheads full of ball cartridges were embarked for Lower Valais, and concealed in a small tower near the lake. Muskets, purchased at St. Etienne, were also forwarded to the same destination. It was reported that the Valais intended to separate from Switzerland and unite with Piedmont."

THE CAUCASUS.—RUSSIAN FRONTIERS, August 9.—Extremely unfavourable accounts have been received at St. Petersburg respecting the operations in the Caucasus; but nobody ventures to speak of them. It may, however, be taken for certain, that at the end of May, and in the beginning of June, the Russians lost in the combats with the Circassians nearly 10,000 men, some important fortresses, several small forts, a number of cannon, and some very important positions. Besides this, many tribes, hitherto neuter, have joined the mountaineers. It is reported that the latter have since obtained further advantages. There is no doubt that the Emperor will go to the Caucasus as soon as the uncertainty respecting the illness of his daughter shall be ended. —*Elberfeld Journal*.

FROM HAYTI.—By the brig *Oscola*, Captain Sylvester, from St. Domingo, July 16, we learn that General Santana, with 700 men, came before that city on the 13th of July, and on the 15th the gates were opened to him, and he took possession without bloodshed. He was proclaimed President of the Spanish part of St. Domingo the same day. The negroes had sued to him for peace, which had been granted. A French man-of-war steamer had been off that place for some time, and sailed six days previous for Aux Cayes. The British frigate *Inconstant* had also sailed for the same port. —*New York paper*.

BOKHARA.—A letter received from the Rev. Dr. Wolff, announces that he is still detained a prisoner by the King of Bokhara. This letter also states that Colonel Stoddart was reported to be still alive.

UNITED STATES.—LIVERPOOL, Friday Morning.—The British and North American Royal Mail steamer *Caledonia*, Captain Lott, has just arrived, bringing New York dates to the 16th, and Halifax to the 18th instant. There is little doing in the cotton trade in this or any of the southern markets. A few bales of the new crop have reached market, but some little time must elapse before the receipts will be large enough to create much activity of business. The remnants of the old crop are slowly coming in, and by the 1st of September the receipts may be increased a few thousand bales; but we hardly believe the yield will exceed 2,025,000 bales. Estimates as to the extent of the growing crop are plenty enough. It is rather early in the season to make calculations as to the quantity produced, but there is every indication that the yield will be greater than ever before realized. Annexed is a comparative statement of the quantity of flour and wheat exported from Cleveland during July, 1843 and 1844:—

	1843.	1844.
United States ports, Bbls. Flour. Bu. Wheat.	104,245	185,530
Canadian do.,	469	12,536
	104,714	198,066
		90,607
		102,729

Here is a great falling off to the seaboard, and a large increase to Canada, and, therefore, to England. Accounts from all parts of the Canadas represent the grain crop as good.

By the overheating of the boilers of the *Marietta* steamer, on her passage down the Arkansas River, on the 25th ult., an explosion took place. About 15 persons were dreadfully scalded, and others jumped in the water and reached the shore in safety.

DOMESTIC.

Meetings of the different branches of the workpeople employed in cotton factories have been held from time to time, during the last few weeks, preparatory to giving notice for an advance of wages, such a course having been attended with success in some parts of Lancashire.

Between eight and nine o'clock on Thursday evening, the 22nd inst., a fire broke out on the Lambfair Farm, at Handford-hall, near Ipswich, by which a straw stack was totally consumed. There is reason to suspect that the fire was the act of an incendiary. Captain Elliott, of the 4th Dragoons, stationed at Athlone, and his son, aged about 15, were accidentally drowned in the river Shannon on Monday night week. They had gone down the river in a small sailing boat, but no one could tell how the accident occurred by which they lost their lives. The boat was discovered to have sunk, her mast being a few feet above water, and their bodies at a little distance from it.

Mr. O'Connell has received an address of condolence signed by several English Catholic noblemen and gentlemen. Several Irish papers announce that it is her Majesty's intention to visit Ireland early in September, when it is expected she will release Mr. O'Connell and his brother captives. On Monday last 138 human beings, or twenty-three families, allowing six to each, were cast houseless and friendless from their dwellings, wanderers on the world's bleak common. On that day the sheriff, Mr. E. Foley, with an escort of police and bailiffs, proceeded to the lands of Ballyharahan and Glenmore, the

property of Sir Arthur Gore Kelly, of Ballyharahan, in this county, to take possession of these lands under *Lease* for one year's rent, the late *Leaseholder*. The sheriff turned the unfortunate people from their homes, it was a truly heartrending sight to behold them, with their families assembling in groups, lighting fires by the ditchside to boil a few potatoes to satisfy the craving of nature. The greater number of these homeless wanderers have since had their lodgings on the cold ground. —*Waterford Chronicle*.—A coal-pit accident, attended with loss of life, occurred at the pit belonging to Messrs. O'Neil and Dunlison, at Dearham, near Maryport, on Saturday morning last. Two men and three boys, who were in the act of descending, were not more than three feet from the top when the rope broke, and the whole were precipitated to the bottom of the shaft, a depth of fully fifty yards. Two of the unfortunate sufferers breathed once or twice after they were taken up, but the others had died instantaneously.

On Friday, the 23rd inst., Mark Sherwood underwent the extreme penalty of the law for the murder of his wife, on a drop erected on the Town-moor, Newcastle, within the circle of the racecourse. The prisoner made a confession of his guilt, but denied that the act was premeditated. —A new system of detective police, under the superintendence of a lieutenant of the royal navy, has just been established by the commissioners of customs, and their duties will be confined to the tracing out of frauds committed by this branch of the revenue, and will also co-operate, when occasion may require, with the officers of excise. —Patrick Larkin, letter-carrier, has been convicted at the Central Criminal Court of stealing a letter containing valuable securities, and sentenced to transportation for life. —In the past week, the arrivals in the port of Liverpool of guano are estimated to be of the value of \$45,000. —Miss Cassen, of Limerick, whose abduction was lately reported, has been restored to her friends. She was traced by a constable to a hotel at Gort, where she herself had taken occasion to reveal the facts to the innkeeper. The abductor has absconded. —A model farm has been established at Berry Pomeroy, on the estate of the Duke of Somerset. —The general subscription fund for the approaching meeting of the British Association has already reached a sum exceeding £300. It is exclusively appropriated for covering the expenses at York, in which city the annual meeting is to take place on the 26th of next month.

The *Sun* of Tuesday reports the death of a respectable young female, named Sarah Anne Johnson, which occurred the preceding week at the house of a Mr. Stainbury, 27, Charlotte-street West, White Conduit-fields, and was caused by disease induced by extreme destitution. The deceased, with her elder sister, both persons of superior education, had some time back set up a school in the house in which she died; but the school failed, and they were unable not only to pay their rent, 4s. per week, but even to provide themselves with the necessaries of life. This so preyed upon both the mind and body of the deceased that she fell into rapid consumption, accompanied by partial insanity, which eventually terminated in her death. The unhappy survivor has since received some temporary relief from a few benevolent persons to whom her case was made known. The Honourable Mr. Bouverie, M.P. for Kilmarnock, has been on a visit to his constituents, whom he has publicly addressed, and to whom his parliamentary conduct, it appears, has afforded much satisfaction. —The American Quaker beehive-maker, who keeps his hat on before the Queen, and calls her Majesty "friend," arrived at Windsor Castle on Saturday last, with five additional hives, beautifully constructed in the shape of castles, for his Royal Highness Prince Albert. —Dr. Lambe, now in his 80th year, states that he has lived on a purely vegetable diet since 1804, and has brought up a large family on the same plan with success. —*Medical Times*. —The murrain is making alarming havoc among the cattle of the several parishes of Aberdaron, Bryn-croes, Llanengan, and Lleyn in this county. It is of so malignant a nature that every animal attacked dies almost instantaneously. Some pestiferous distemper, of the like nature, makes a shocking devastation among the swine. —*Carnarvon Herald*. —We understand that, in consequence of the great losses lately sustained, the premium on the insurance of farming property has just been increased by some of the leading fire-offices. —The *Stromboli* steam sloop is fitting with all possible despatch at Devonport, for the purpose of taking out shot and shells to Gibraltar, for the use of the Mediterranean squadron. —"Day by day," says the *Hull Packet*, "we have the most indisputable evidences of the prosperity of the port. During the week the whole of the dock, as well as the Old Harbour (the river Hull), has been literally crammed with vessels, many of them of a very superior class. On Monday and Tuesday the blue flag was again hoisted at the pier, to intimate to captains in the roads of the Humber that there was not disposable space for their vessels in the docks." So much for the revival of trade and commerce induced by two abundant harvests, and the prospect of a third. A bountiful Providence has thus temporarily repealed the Corn Laws. —On Monday the price of bread fell generally in the metropolis one half-penny per quarter loaf on account of the abundant harvest. The general price is now 7d., although at many of the bakers it is 6d. —Prince Albert entered his 26th year on Monday. The Prince's birthday was celebrated with the customary festivities. —Mr. Higgs, on Friday, held an inquest at the George, George-court, Strand, on the body of Joseph Matthews, tailor, of George-court, Strand, aged 53, who hanged himself on Thursday, while in a state of insanity, produced by calamities that rarely fall to the lot of one man. It was stated that he had been affected in his mind ever since the decease of his wife, who was accidentally burnt to death in St. Martin's workhouse about eight months ago. The day after that one of his sons, who was on board the Marine School ship, at Blackwall, fell from the mast head, and was killed on the spot. But a week or two following he sent another son with some letters to Regent-street, and while he was on his way back he fell over by a cab, and carried dead. A third son fell down the steps in George-court, and fractured his skull, from the effects of which it ultimately expired. There are seven children now living, several of whom have lately been suffering from rheumatism, and one of the daughters of the house in which they live, the *Cork Examiner* states that, "lately, a young woman, who had been turned out of doors, while a servant, was brought up to the

has been arrested, and is now in custody of the police, charged on suspicion of setting fire to burning ballings, in his occupation, the property of S. M. Raymond, Esq., on the evening of July 8. After an examination of the length the prisoner was discharged for want of sufficient evidence.—An inquest was held on Friday, the 23rd inst., and closed on Monday, on the body of Eliza Kendall, aged 19, who drowned herself in the Surrey Canal. It appeared that the deceased and her sister Jane, who at the same time also had attempted suicide, together with their father and others of their family, had suffered extreme destitution. The father stated that "they worked at slop shirts, but earned a very scanty pittance. They could not do enough to gain a proper subsistence, the price being so very low, five farthings only given for making up some. They had been much in want, but when he was in work they fared better. He generally earned 8s. a week when in employment. His daughters had at times fasted for twenty-four hours." The jury returned a verdict, "That the deceased committed suicide whilst labouring under a fit of insanity; and the jury cannot but deprecate the cruel practice of the slop-sellers in London, of employing young females at needlework at so low a rate of wages as to preclude the possibility of a subsistence."—On Wednesday, the 21st inst., the foundation of a monument to the memory of Muir, Palmer, Skirving, Gerrald, and Margaret, the political martyrs, was laid in the Old Calton Burying-ground in Edinburgh, by Mr. Hume, the member for Montrose.—Since the termination of the pitmen's strike freights have advanced so much at Sunderland that ships are now receiving £9 10s. per ton freight for Hamburg, and vessels are difficult to be got even at that rate; while, two or three weeks ago, vessels were freighted for the same place at £7 to £7 5s.—The cheap Sunday excursion train on the London and Brighton Railway, on Sunday last, having no less than 78 carriages, containing 2123 passengers, left London-bridge in the morning for Brighton and returned in the evening.—After the 1st November next the new act applicable to Savings' Banks will come into operation. The trustees, according to their discretion, may fix one of the following rates of interest to be paid to depositors after that day, viz., £3 0s. 10d., £2 10s. 4d., £2 15s.—The ceremony of presenting a new pair of colours to the 49th Regiment took place at Winchester on Tuesday, when the colours were "consecrated" by the Bishop of Winchester, and presented by Lady Pakenham to the troops.—The Repeal Association held its weekly meeting at the Conciliation Hall, Dublin, on Monday. The attendance was less numerous than heretofore. A letter was read from Mr. Smith O'Brien, in which he expressed himself opposed to the adoption at present of any pledge against excisable articles, save one against intoxicating liquors, until the union shall be repealed, and against pledging the repealers to do more than give a preference to Irish manufactures. Mr. O'Connell was announced to be in good health. The rent for the week was £634 13s. 3d.—The examination at the General Post Office of the parties implicated in the cases of letter-opening has concluded, and it has been fully established by evidence and their own admissions, that the letters of Lord G. Bentinck and other "sporting" gentlemen were opened, and the information obtained communicated to parties who were willing to pay for it, by which means no inconsiderable sums were realized.—Thomas Wyer, a brewer at the Boat Inn, Kidderminster, and who has numbered upwards of threescore and four years, has drunk for 35 years one gallon of ale per day, and spent 9d. per week in tobacco. The total amount he has thus expended is—for ale, £1277; for tobacco, £67. In all, £1344.—*Worcestershire Chronicle*.—The Duke of Norfolk has promised, on the expiration of a few leases, to give up 50 acres of his land for a pleasure-ground, for the recreation of the people of Sheffield. In Birmingham the town-council has opened a communication with Government, for the purpose of obtaining a grant towards providing public walks, which in Birmingham, with its 220,000 inhabitants, are felt to be imperatively needed.—The health of Edinburgh among the poorer classes is better at the present time than it has been for many years past. It appears, also, that employment is much more general—a state of matters which the harvest will, of course, still further increase. From the combined influence of these two causes, the number of applications to the Destitute Sick Society during the quarter that has just passed is fewer than has been known for many previous years.—*Caledonian Mercury*.—Tuesday letters were received at the principal insurance-offices in the City, detailing the particulars of two dreadful fires which occurred on Sunday in the village of Winham, situate near Chard, in Devonshire, and which terminated in the complete demolition of no fewer than 30 houses.—Tuesday morning, shortly after 10 o'clock, a fire broke out upon the premises, No. 15, Maynard-street, St. Giles's, near High-street, occupied by Messrs. Bridge and Co., cork-cutters, as a burning-house for cork, and a general storehouse of unmanufactured stock, the whole of which, from its inflammable nature, with the lofty and back premises, were destroyed. The same evening another destructive fire, and which was not subdued until a great deal of property had been consumed, broke out upon the premises belonging to Mr. Logie, potato merchant, situate on Cock-hill, Ratcliff.—An importation of New Zealand wool, the first, we believe, which has reached this country, arrived within the last few days, and realised from 1s. 2d. to 1s. 7d. per pound. It is to be hoped that this is the beginning of an extensive trade in wool, an article which New Zealand is in so many respects so well suited to afford.—Mr. Lalor, of Cascade, secretary to the Galway Farming Society, county of Kilkenny, has addressed a letter to the *Dublin Evening Post*, giving a very favourable report of the crops in that part of the country, particularly the turnip and potato crops.—Thursday morning early, a fire broke out on the premises of Mr. Watling, Mount-row, Lambeth, and, before it was extinguished, destroyed a considerable amount of property. Mr. Watling is insured.—An engine-boiler explosion took place on Sunday night last at the colliery known by the name of the Deep Pit, and in the occupation of the Sheffield Coal Company. The explosion, which was terrific, was the work of a number of misguided men who had turned out with the other pitmen some months ago, and took this means to prevent some of their companions from returning to work in the pit. They introduced under the boiler a cask of gunpowder, which ignited before they quitted the place. One man named Boden was dreadfully injured, and is not expected to survive; the others suffered more or less. The boiler

was badly damaged.—Lord Xmas, who attended the anniversary of the League, and this week at Brighton Lodge, Hampshire, in the 63rd year of his life.—Sir William Pole, it is stated, has considerably improved in health since he stay on the Continent.—The number of deaths in the metropolis for the week ending Saturday, the 24th instant, amounted to 906, of which 486 were males and 421 females.—For the last few days excellent American beef and pork have been getting in this town (Douglas) at 6d. per pound. This is one of the many benefits of Free Trade.—*Monks' Herald*.—The students of the "People's College," Sheffield, are 200 in number; and many of them, working men, translate Latin, Greek, and modern languages with great facility. One student, who, when he entered the college, did not know the meaning of the word mathematics, can now demonstrate a long and difficult problem.—One of the woolsorters' societies in Bradford have taken a lease of a small farm of eight acres, in the neighbourhood, which they intend to convert into a pretty Eden-spot, for their own amusement (and interest, if possible) and that of the public generally. The idea of renting the land was suggested during the late depression of trade in the town, and the land was intended as a field on which the society might employ its members when out of regular work.—*Manchester Guardian*.—The whole of the jenny spinners in Stockport signified their intention, on Saturday last, of leaving their employ at the end of this week, if an advance of 1d. per lb. (about ten per cent.) be not granted them.—The official statement, just out, of the duty paid upon tea in the different ports of the United Kingdom, during the present year to the 5th instant, shows the quantity to have been 23,000,824 lbs., and in the corresponding period of last year, 22,722,594 lbs., being a slightly increased consumption.—By an account just issued, it appears that the balance of unclaimed prize money is £18,715 10s. 0d.—On Thursday morning there was a meeting of the twelve judges of England at the residence of the Lord Chief Justice of the Common Pleas, to consider privately their views and opinions upon the writ of error brought by Mr. O'Connell and others in the House of Lords.—The Dutch steamer Batavien arrived at the St. Katharine Steam-wharf on Wednesday morning early, in perfect safety, with a fair complement of passengers, and a full cargo, comprising a quantity of fruit, cattle, &c.—The christening of the infant Prince is understood to be fixed to take place on the 6th of September, at Windsor Castle.—The public-house known as the Ship and Blue-coat Boy, in the Walworth-road, was burnt down on Thursday morning.—Bartholomew fair commences next Tuesday, but not the slightest interest is taken in its annual return, even by the licensed victuallers of Smithfield, who formerly derived so considerable an advantage from it.—Prince Albert has consented to become a member of the Royal Agricultural Society of Ireland.—Sir William Heygate, Bart., Chamberlain of the city of London, died on Wednesday, at Roeliffes, Leicestershire, in the 63rd year of his age. The deceased baronet was only elected to the chamberlainship about fifteen months since.—On Wednesday last the foundation-stone of a monument to the Earl of Durham was laid at Newcastle amidst an immense concourse of spectators.—All the provincial papers give most favourable accounts of the prospect of the harvest. The weather every where is most propitious.

CORN HARVEST.—It is a gladdening sight to stand upon some eminence and behold the yellow hues of harvest amid the dark relief of hedges and trees, to see the shocks standing thickly in a land of peace, the partly-reaped fields—and the clear, cloudless sky, shedding over all its lustre. There is a solemn splendour, a mellowness and maturity of beauty thrown over the landscape. The wheat crops shine on the hills and slopes, as Wordsworth expresses it, "like golden shields cast down from the sun." For the lovers of solitary rambles, for all who desire to feel the pleasures of a thankful heart, and to participate in the happiness of the simple and the lowly, now is the time to stroll abroad. They will find beauty and enjoyment spread abundantly before them. They will find the mowers sweeping down the crops of pale barley, every spiked ear of which so lately looking up bravely at the sun, is now bent downwards in a modest and graceful curve, as if abashed at its ardent and lustrant gaze. They will find them cutting down the rustling oats, each followed by an attendant rustic, who gathers the swath into sheaves, from the tender green of the young clover, which, commonly sown with oats, to constitute the future crop, is now showing itself luxuriantly. But it is in the wheat-field that all the jollity and gladness, and picturesqueness of harvest are concentrated. Wheat is more particularly the food of man. Barley affords him a wholesome, but much abused potation; the oat is welcome to the homely board of the hardy mountaineers; but wheat is especially, and everywhere, the "staff of life." To reap and gather it in, every creature of the hamlet is assembled. The farmer is in the field, like a rural king amid his people—the labourer, old or young, is there to collect what he has sown with toil, and watched in its growth with pride; the dame has left her wheel and her shady cottage, and, with sleeve-defended arms, scorns to do less than the best of them; the blooming damsel is there, adding her sunny beauty to that of universal nature; the boy cuts down the stalks which overtop his head; children glean amongst the shocks; and even the unwalkable infant, sits propt with sheaves, and plays with the stubble, and

"With all its twined flowers."

Such groups are often seen in the wheat-field as deserve the immortality of the pencil.—*Howitt's Book of the Seasons*.

WHAT MAKE POACHERS?—What make poachers? Game laws—ay, and Corn Laws, which prevent thousands from earning a sufficient subsistence by the hardest labour. Surely laws which are as certain to produce crime as the hardest frost is to produce ice, are not very creditable to our legislators. But from game laws spring poaching, and conflicts, and murders, and the destruction of large quantities of human food; from Corn Laws spring scarcity, and want, and famine, and starvation. Game laws are expressly enacted for the preservation of the birds of heaven and the wandering animals of the earth—the common property of all; Corn Laws are expressly enacted—at least they directly tend—to annoy, and starve, and madden the poor man; to fire his heart with discontent, and revenge, and hatred of his rulers. Let the game laws and Corn Laws be always taken in at one survey, and let them be looked at thus: Game Laws, that madden and per-

sonify the law, and women may be starved and destroyed.—the authors of both laws, the English aristocracy.—*Bradford Observer*.

PRAYER FOR DAILY BREAD.—The following is an extract from a prayer offered up at the Federal of 1877, Dalton, by the Rev. Jas. Bradley, minister of the Congregational Church in which the doctor is buried:—"May the God hasten when men will find out the true meaning of contributing the bountiful provision for human sustenance and comfort, even for this life, among each other, that the poorest, living a life of usefulness, may have in himself all things necessary to the comfort of that life."

IMPORTATION OF CORN.—The Commissioners of Customs having requested the opinions of the Lords of the Committee of Privy Council for Trade on a doubt which is entertained whether, under the third section of the act 5th and 6th Victoria, chap. 92, there is any limitation of time for the delivery of wheat from the coast, their Lordships have directed Mr. Macgregor to acquaint the board that they are of opinion that the limitation of time applies to the third section. Copies of this order have been furnished, by order of the Board of Customs, to the collectors and controllers of the several ports of the kingdom, for their information and government.

ENGLISH RECIPROCIITY.—England charging one hundred per cent. duty on Chinese teas, and requiring of China a duty of only sixpence a yard on English broad-cloth! England charging both specific and ad valorem duties amounting in the aggregate to one hundred per cent. on wooden ware, one thousand per cent. on tobacco, and virtually prohibiting American flour, lumber, fish, and other staples, and meanwhile complaining and protesting against revenue duties levied on British manufactures, which compete with our own. The duty of this book in England exceeds the cost of the work as it comes from the press in Boston.—*Two Months Abroad, by an American*.

TRADE OF AMERICA.—Statistics of the trade of the United States for the three quarters ending June 30, 1843, compared with the same period in the two previous years of 1841 and 1842, show that the exports had gradually diminished in value from 106,382,232 dollars to 77,793,783 dollars. Agricultural products, including cotton and tobacco, and manufactures, appear to constitute the chief items of decline; and the great depreciation in the price of cotton seems really to be one of the most remarkable features in the statement, since it is proved that though from 54,330,341 dollars, the item returned in 1841, there had been a decrease to 49,119,805 dollars in 1844, the quantity of the staple exported in that year exceeded by 262,000 dollars the quantity exported in 1841. The total exports of cotton for the three years were as follows:—530,204,100lbs. in 1841; 587,717,047lbs. in 1842; and 792,297,106lbs. in 1843.

THE HONEST WAY OF DOING BUSINESS.—The sedate Turk is a man of few words, and seldom utters more than is strictly necessary. He sets his goods before you, names their price, and leaves you to do as you please about buying. You need not think of offering him a lower bidding, he will not bate a para, and the only reply he will make, will be to take back the article in question, and return it to its place.—*Library of Travel*.

PROBABLE DURATION OF THE SUPPLY OF COAL IN GREAT BRITAIN.—Although the present known coal fields of Great Britain contain, perhaps, sufficient coal to supply her wants for 2000 or 3000 years to come, it is a very erroneous basis of calculation to assume that the whole is at our disposal. Under the present system, in the finest description of coal of the northern field, there is, even in its extraction, a loss of 80 per cent. The views of theoretical geologists, without allowing for waste, would lead to the most incorrect practical conclusions; while Conybeare, Lardner, and others, would make our coal resources sufficient for 1500 or 2000 years. Professor Sedgwick and Dr. Buckland, allowing for loss in working, calculated from practical experience, are convinced that 400 years will leave little more than the name of our best seams. Of forty-five feet of coal in a section of all the coal strata, in one of the best pits of the Tyne, not thirty feet are workable. In the north, coal cannot be extracted at a profit, if less than two feet eight inches. In the western part of Wall's End, the Bensham seam is considered unworkable at two feet ten inches, though there are times when it is worked at twenty inches. The thinnest seam worked in Yorkshire is thirteen inches, in North Lancashire twenty inches, in the Northumberland and Durham districts two feet six inches, and in St. Lawrence two feet nine inches. Most of the thin seams above are worked for local consumption, and cannot bear the expense of transit and competition for manufacturing and commercial purposes. Already the Tyne portion of the northern coal field begins to feel the difficulties of exhaustion in the finer description of coal; and that of the Wear and Tees (less worked than it) has the advantage, in commercial competition, of from 9 to 10 per cent. in price.—*Mining Journal*.

LEASES ESSENTIAL TO AGRICULTURAL IMPROVEMENTS.—Many tenants have not the requisite means to become improvers under any circumstances; and the unwillingness of landlords to grant leases of considerable duration, which unfortunately prevails throughout England, will prevent their obtaining tenants able and willing to invest the proper amount of capital in farming. The late Earl of Leicester and the present Earls Spencer, Ducie, and Radnor form, however, noble exceptions. This aversion to leases must be overcome, before any great and general agricultural improvement can take place. It has been said that a lease is binding on the landlord only, for if a tenant is unable to pay his rent and perform his covenants, the owner is but too anxious to get rid of him, which is true as regards the class of farmers before alluded to; but landlords, if prices should become steady, instead of looking to the man who might offer the most rent, would think more of the ultimate result of having persons of capital upon their estates, and in this way would really receive better and more certain incomes than they do at present. Such however has been the fluctuation of prices of late years, that really good tenants are as much averse to leases as landlords; they do not like being bound to terms calculated upon prices which they can never be certain of obtaining for two years together. If the rents offered can only be given when corn is at the artificial price promised by the Corn Laws, we cannot blame tenants who hold off from leases; but, while such a state of things exists, the capital necessary for extensive and permanent agricultural improvements will not in general be forthcoming.—*British and Foreign Review*.

THE SLIDING SCALE AND STEADY PRICES.

(From the Economist.)

The *Morning Herald*, in remarking upon an article which had appeared in the *Chronicle*, says—

"All that a wise and prudent legislation can do, is to adjust the market by a sliding scale, as far as possible, as to obtain an equable rate of price. This, we boldly maintain, is admitted by the present law. If the *Chronicle* denies this, we invite it to publish the averages for the last twenty-four months, i.e., ever since the present law came into force, and to adduce, if it can, twenty-four months of more equable and steady prices which have occurred within the last forty years."

Such hap-hazard statements, made with the air of authority and confidence in which this journal is so prone to indulge, and boldly to maintain, equally to the discredit and injury of itself and the Government it professes to serve, should not, when affecting such important subjects, be left unnoticed; for these are questions requiring an intimate knowledge of the subject, and a laborious investigation into facts, which few are disposed to undertake, to test the truth of such assertions; and, therefore, such empty vaunting and boasting are too apt to pass current for truth, if not contradicted and corrected.

We will, therefore, as the *Government organ* invites, "publish the averages during the last twenty-four months (or rather twenty-eight months), i.e., ever since the present law came into force," and we will see if it differs materially from the late repudiated law—repudiated chiefly on account of its tendency to create fluctuations; and how far it is needful to travel back into the forty years so generously proposed by the *Herald*, to find a match for "the equable and steady prices" under the law of 1842. That law came into operation on the 29th of April, 1842, and the following have been the average prices, in the first week of each month since (see *Parliamentary Paper*, No. 7, Session 1843, and *London Gazette*):—

AVERAGE PRICE OF WHEAT:—

FIRST YEAR.				SECOND YEAR.			
In the week ending				In the week ending			
1842.—6th May	60s.	8d.		1843.—4th May	47s.	0d.	
3rd June	68	6		2nd June	47	9	
2nd July	64	8		7th July	49	8	
6th August	61	0		4th August	57	7	
2nd September	62	0		1st September	56	8	
1st October	58	0		6th October	49	6	
8th November	48	8		3rd November	50	5	
3rd December	48	8		1st December	51	0	
1843.—7th January	46	10		1844.—4th January	49	10	
3rd February	49	8		1st February	52	6	
3rd March	48	6		7th March	56	2	
6th April	46	2		4th April	56	5	

THIRD YEAR.

In the week ending			
1844.—2nd May	55s.	6d.	
6th June	55	6	
3rd July	55	10	
6th August	51	0	
16th August	48	10	

After such unqualified boasting on the part of the *Government organ*, our readers will not be a little surprised to see so considerable a fluctuation as these figures denote:—

In the first year the highest price is .. 64s. 8d.
In the first year the lowest price is .. 46s. 2d.

Difference in nine months..... 18s. 1d. or 28 per cent.

In the second year the highest price is .. 57s. 7d.
In the second year the lowest price is .. 47s. 0d.

Difference 10s. 7d. or 17½ per cent.

In the small part of the third year expired, the price has fallen 7s. in less than six weeks, being 12 per cent.

We will not trespass far into the limit of forty years to discover not only entire single years, but a whole period of twenty-eight months, which will bear a favourable comparison with the above exhibition of the prices under the present law:—

In 1837 the highest price was .. 60s. 1d.
In 1837 the lowest price was .. 51s. 7d.
Difference 8s. 6d.

In 1835 the highest price was .. 43s. 2d.
In 1835 the lowest price was .. 36s. 9d.
Difference 6s. 5d.

In 1834 the highest price was .. 49s. 2d.
In 1834 the lowest price was .. 41s. 11d.
Difference 7s. 3d.

In 1833 the highest price was .. 56s. 8d.
In 1833 the lowest price was .. 49s. 8d.
Difference 6s. 9d.

And for twenty-eight consecutive months from September, 1831, to January, 1834, the price in the first week of each month was (see *Parliamentary Paper*, No. 24, Session 1839):—

FIRST YEAR.				SECOND YEAR.			
1831.—7th October	61s.	0d.		1832.—5th October	54	7	
4th November	61	8		2nd November	53	3	
2nd December	61	8		7th December	54	7	
1832.—6th January	59	1		1833.—4th January	53	6	
3rd February	59	11		1st February	53	3	
2nd March	58	2		1st March	52	3	
6th April	59	6		5th April	53	10	
4th May	59	6		2nd May	53	5	
1st June	61	0		7th June	52	10	
6th July	63	2		5th July	54	7	
3rd August	63	8		2nd August	56	5	
7th September	58	0		6th September	51	1	

THIRD YEAR.

1833.—4th October	52s.	10d.
1st November	51	7
6th December	49	8
1834.—3rd January	49	2

Making a comparison in this case, in the same way as we have done for the last twenty-eight months, we find that:—

In the first year the highest price was .. 61s. 8d.
In the first year the lowest price was .. 58s. 0d.
Difference 3s. 8d. or 8½ per cent.

In the second year the highest price was .. 56s. 8d.
In the second year the lowest price was .. 51s. 1d.
Difference 5s. 4d. or 9½ per cent.

And in the remaining four months the difference between the highest and the lowest was then only 3s. 8d. per quarter. The comparison is thus:—

Under the new law, Under the
the *Herald's* boast. late law.
In the first year the fluctuation was 28 per cent. 8½ per cent.
In the second year .. 17½ per cent. 9½ per cent.
In the last four months .. 13 per cent. 7½ per cent.

What, then, becomes of the boast of the steadiness of prices during the last two years under the new law, when

we show that the fluctuations were much less in 5 years out of the last 10 under the late law; and that, for the whole period of twenty-eight months that have elapsed under the present law, the fluctuations have been on an average more than double what they were during a similar period from 1831 to 1834, under the law which Sir Robert Peel repealed in order to substitute the present one, chiefly and mainly on the ground of its tendency to create fluctuations and unsteadiness. But would we, therefore, infer that the charge against the late law was unfounded? By no means. The periods to which we have been referring were years of fair weather and good crops, and during a great part of which the effects of the Corn Laws were in temporary suspension, as far as regarded the consumer and the commercial classes. But though the late sliding scale showed its inherent evils in so mitigated a form under the favourable circumstances and fine weather of the time alluded to, no sooner had we one bad harvest in 1838 than we find the fluctuations within the year upwards of 50 per cent., and within a period of little more than two years upwards of 100 per cent.

Now the three harvests, including the present one, since the new law came into operation, must unquestionably be considered as equal, if not superior, to any three consecutive harvests during the last twenty years; and the comparison that we have made has therefore been under the most favourable circumstances for "equable and steady prices." If, then, we have found that, with the most favourable circumstances under which it could be tried, the new law, in the new state of the country, with its increased numbers, makes so poor a comparison with the late law, which, as soon as events and weather become untoward, committed such havoc in the haunts of commerce and industry—brought the Bank of England to the brink of suspension, and the public Exchequer to a state of exhaustion and deficiency—what have we not to fear, of similar consequences in a highly aggravated form, when the present favourable combination of circumstances shall have passed, and instead thereof we shall suffer from such harvests as those of 1838, 1839, and 1840?

MARKETS.

CORN MARKET.

MARK-LANE, Monday, Aug. 26. — There was a moderate supply of Wheat at market this morning. The quality of the New was inferior to last week, and it realised in consequence 2s. to 3s. per quarter less. Old Wheat, both English and Foreign, and the finest qualities of New, sold at about the same prices as last Monday. There was rather a better demand for Barley at last week's rates. Beans and Grey Peas were 1s. dearer. There was no alteration in the value of White Peas. There was a fair sale for Oats at last Monday's prices. The accounts from the North report the weather unfavourable for the progress of harvest. We have had it fine here for the last week, with every prospect of its continuing.

FRIDAY, Aug. 30.—The arrivals of Foreign Wheat and Barley are large, but moderate of all English Grain, and of Foreign and Irish Oats. The Wheat trade is exceedingly dull at Monday's prices. There was rather an improved demand on Wednesday for grinding Barley for the country, but to-day the trade is dull again. The little business doing is at Monday's rates. The duty on Beans and Peas rose 1s. yesterday. We have no alteration to notice in the value of either of these articles. Factors are holding Oats at 6d. advance on Monday's rates, which the buyers are very reluctant to comply with, and there is in consequence but little business doing.

THE LEAGUE.

[650.]

SATURDAY, SEPTEMBER 7, 1844.

[3d.]

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive a copy, weekly, of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward contributions to THE LEAGUE FUND, are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

SPECIAL NOTICE FOR COUNTIES.

POLLING PLACES MAY BE ALTERED.

Voters residing at one part of a county, and claiming to vote for property in another, may vote near their place of residence, by claiming in the form A or B.

An elector residing in the Strand, London, claiming for a freehold house, or any other qualification, at Uxbridge, had formerly to go to Uxbridge to poll: he can now poll at Westminster. Or an elector residing in South Lancashire, or any other county, having a freehold at Uxbridge, or in any other district in the county, may vote in London, thereby saving a journey from London to Uxbridge, or other district, and back.

This is a most important alteration in the law, and the claim may be made by the Free-Trade agents attending the court, a friend, or the tenant, if he can speak to the claimant's handwriting.* The barrister will write the place he desires to poll at against his name; but he will not be allowed to vote anywhere else. His name will then be printed at the end of the register in the proper list.

Form A.

County of Middlesex, to wit.

I, _____, whose name appears in the list of voters of the above parish, and whose place of abode, as stated in the said list, is not within the said county, claim to vote at the polling place at _____, in the said county.

(Signed) A. B. [Place of Abode.]

Form B.

County of Middlesex, to wit.

I, _____, whose name appears in the list of voters of the above parish, and whose place of abode, as stated in the said list, is not within the said county, claim to vote at the polling place at _____, in the said county.

(Signed) A. B. [Place of Abode.]

POLLING PLACES.—Brentford, Enfield, King's-cross, City of Westminster, City of London, Hammersmith, Hampstead, Redout, Edgware, Uxbridge, Mile-end, Bethnal-green.

COUNTY AND BOROUGH REGISTRATION.

From the 1st to Sunday the 15th of September, is the time for the publication of the lists of persons objected to in counties, and also of the lists of claimants and of persons objected to in cities and boroughs. Overseers and town clerks are required by law to keep copies of the said lists, and also of the notices of objection, to be perused by any person, without the payment of any fee, at any time between the hours of ten o'clock in the forenoon and four o'clock in the afternoon of any day, except Sunday, during the first fourteen days of September. They must also deliver copies of the lists to any person requiring the same on payment of a price after the following rate, which is copied from the schedule annexed to the new Registration Act:—

For any list or copy of a list containing any number of persons' names	s.	d.
Not exceeding 100	0	6
Exceeding 100, and not exceeding 200	1	0
" 200, " 300	1	6
" 300, " 400	2	0
" 400 and upwards	2	6

Every Free-Trade elector should now examine these lists, and ascertain that their names are properly inserted, and electors generally to ascertain whether they have been objected to in either borough or county. Free-Traders who may be objected to should apply to the local committees, or to such other persons as may be engaged in the management of the registration, for such advice and assistance as they may stand in need of, as to the best mode of defending their votes before the revising barrister.

Any county voter residing out of the polling district in which his qualification is situate is at liberty to make his claim before the revising barrister to vote at the polling place of the district wherein his said place of abode may be situate, provided such place of abode is in the same county or division of a county. The revision of the lists will commence on or after the 16th of September.

Advice and assistance will be given by application at the offices of the party producing it.

the London Registration Offices of the League, 68, Cheap-side, or the League Office, Newall's-buildings, Market-street, Manchester.

A NEW MYSTIFICATION.

The perverted ingenuity of the upholders of monopoly is surprising, and, but for the evils the maintenance of their wrong inflicts upon the community, would be amusing. The windings and doublings of the creatures are infinite, but the latest shift we have noticed is certainly characterized by novelty and audacity. We need not tell the reader that the price of wheat has fallen far below the rates promised by the Corn Law, or that it must inevitably fall much lower. The Corn Law and its framers promised the farmers 56s. a quarter for their wheat; wheat has already been sold for 40s. a quarter, and there is much probability of the average price falling to that point. Well, this is rather an awkward state of things for monopolist landlords, who are exacting rents fixed upon the assumption that the farmers are receiving 56s. a quarter. Of course it will not do for the upholders of the wrong to admit that they cannot keep up prices by acts of Parliament, as that would bring a structure of legislative delusion about their ears in an instant, and therefore some new mystification has to be resorted to. And what of all things in the world does the reader imagine is the alleged cause of the low and lowering prices of wheat? If he guessed for a week he would scarcely hit upon it. Well, then, it is not abundance, it is not importation, but it is simply a PANIC!!! What a world of trouble does this word panic save. Let a troop of horse or a battalion of foot be frightened at the sight or sound of their opponents and take to their heels, and their cowardice is attributed to "a panic." Let men without capital speculate upon credit, with a rashness day by day increasing as the possibility of success grows less and less, and when some circumstance shows the baseless foundations on which their dealings were grounded, and wide-spread ruin ensues amongst those who trusted them, the short explanation is "a panic." And similar instances might be greatly multiplied.

In the present instance the person who has announced the astounding discovery to the rural community is a Mr. John Ellman, a farmer, and a sort of little squire, in Sussex.

This gentleman is a pet adherent—some ill-natured people call him a toady—of the Duke of Richmond; and having been lately, to the surprise of his neighbours, put into the commission of the peace for Sussex, he has been usually designated the Duke of Richmond's magistrate. We mention these things merely to authenticate the announcement by showing the source of the monopolist oracle's inspiration. Mr. Ellman, then, has addressed the "farmers of England," in terms so condescending that they would not have discredited the ducal patron himself, for the purpose of inducing them "to act upon due consideration, instead of being acted upon by selfish and designing persons," and in them he thus unfolds the grand secret:—

"What every one must have observed during the last few weeks must be quite sufficient to prove that a species of panic has taken possession of the minds of many, which, if not stopped, will prove the ruin of thousands of the most industrious of farmers. It will be my endeavour to prove that there is no cause for this alarm, and I entreat you earnestly to consider the reasons given by me for this opinion."

He then tells them that "there was never less English wheat in the hands of farmers, merchants, or millers, than at present;" that "the quantity of foreign wheat, either in bond or free, is much less at this season than it has been at the same period for some years;" and admitting that all the foreign wheat now in bond, or which may arrive within the next three weeks, when the duty will reach its maximum of 20s., may be entered for home consumption, he "will undertake to say that the quantity will be nothing like that we have had in previous years, with a much larger quantity of English wheat in hand." He then says, some of the wheat near the hedges had sprouted during the wet weather, and that "many farmers in Sussex have carried a considerable proportion of their wheat; but, with very few exceptions, although not absolutely carried in bad order, it will not be fit to thresh till after Christmas;" and then he makes a statement to which we beg the reader's attention:—

"We have seen in our markets, even before the wheat was reaped, some farmers make forward bargains at 40s. per quarter. For those (who are not a few) who are obliged to sell in order to raise money to get in their harvest, we can feel nothing but compassion; but for

those not thus circumstanced, who are thus guilty of suicide, we can feel nothing but contempt."

And he winds up by abusing the *Morning Post* for prophesying that the price of wheat must fall to 40s. a quarter, and with a fulsome and elaborate eulogy on his patron the Duke of Richmond, for his opposition to Free Trade, which is ludicrously said, "seconded as he has been by the tenantry, has changed entirely the policy of the country."

The last passage is sufficiently ridiculous to those who recollect that the only visible change in the "policy of the country" has been to change one of the Duke's younger brothers from a marching captain into a Lord of the Treasury; but the discovery that a panic is the cause of low prices, coupled with the admission of Mr. Ellman, that "not a few" farmers have been obliged to sell their wheat before it was reaped, "to raise money to get in their harvest," deserves further notice.

It is plain, upon the showing of this monopolist authority, that the stocks of old English wheat are shorter than usual at this season of the year, and that there is also less than the ordinary quantity of foreign in bond, while importation, under a duty of 20s. a quarter, is entirely out of the question. No man could now import foreign corn except at a serious loss, or at a hazard that it would be perfect insanity to incur. But mark how the farmers are to be deluded. Not a word is said about the abundance of the wheat crop as the cause of a low market price; but they are told they are sacrificing their property from panic! Yet, in the very same letter, these panic-stricken "industrious farmers" are stated to be selling some of their uncut wheat to get in their harvests.

How, farmers may ask, do the monopolists reconcile the two passages? We will tell them. Mr. Ellman is set to work to find some new delusion for the farmers, and he starts with his grand discovery of a panic; but as he proceeds he is forced to draw on his own practical knowledge and personal observation, and then the truth comes out. And what is the truth? Why, that the farmer, pressed by his necessities, having long since disposed of all his last year's produce, has no means of gathering in the abundant crop of the present season but by selling some portion of his standing corn at a price somewhat lower than the actual price in the open market, but not lower than the experience of those, who can thus aid the farmer by advances, tells them is the only safe rate at which they can speculate. Panic, indeed! The farmers who are thus rated by one of the tools of the protectionist landowners, will be best able to say whether it is panic which induces them to sell their wheat at a low price, or whether it is not their necessities which compel them to sell it for what they can get. In one sense, indeed, panic may be said to have operated upon the farmers; but that panic has been caused by the prospect of the coming rent day, land-stewards looking glum, and the shadow of the distraining bailiff looming in the distance: these form no phantoms of the farmer's imagination. With very many of the deluded victims of "protective laws," these things will too soon be sad realities; and Mr. Ellman says as much, though he endeavours to create a cloud, behind which the monopolists may escape the execration of their victims.

Let the farmers of England ponder on the fact, that the only explanation of their present distress which the protectionists have to offer is "a panic;" and let them contrast that with the distinct statement of the Free-Traders, that farmers are distressed because the market prices of their produce have fallen far below the rates which they calculated on receiving, and that this has occurred from home abundance, and notwithstanding the existence of a complete practical monopoly of the British market.

OCCUPATIONS OF THE PEOPLE.

The abstract of the population returns, describing the occupations of the people, so long expected and so unaccountably delayed, has just appeared, and is one of the most important documents which has ever been laid before both Houses of Parliament. It presents an array of facts and figures which convict the corn monopoly, not merely of palpable injustice, but of an impolicy that almost amounts to national insanity. While what is termed the agricultural interest has been nursed and fostered at the expense of the rest of the community, we have now indisputable evidence that the amount of employment afforded by agricultural occupations has greatly diminished in its relative proportions, and has even fallen in its absolute amount, so that the result of the boasted system of protection has been to lessen at a steadily progressive rate both the national value

and national importance of British agriculture. The proportions which the agricultural, the commercial, and the miscellaneous classes bore to each other were, in

	Agricultural.	Commercial.	Miscellaneous.
1811 ..	35 ..	44 ..	21
1821 ..	33 ..	46 ..	21
1831 ..	28 ..	42 ..	30

while they were respectively in

1841 ..	22 ..	46 ..	32
---------	-------	-------	----

Here is conclusive proof that agriculture has not been found capable of the expansion which would enable it to provide employment for an increasing population. It is perfectly obvious that, while the natural limits of the extent of land in cultivation must restrict the numbers engaged in cultivating it, the unlimited nature of the supplies afforded of the produce of other countries must make the extent of demand the only measure of the number of hands that may be employed in converting the raw material into the articles required for clothing or luxury, and in disposing of them when so converted. Now, the iniquity of the corn monopoly is, that it unnaturally restricts the demand, and thus limits the power of manufactures to afford employment, while agriculture, so far from being able to afford compensating employment for that which manufactures are withheld from giving, has not only remained stationary, but has actually retrograded. In 1831 the number of occupiers of land and labourers above twenty years of age in Great Britain, was 1,251,751; and in 1841 the number was 1,215,264; showing a diminution of about forty thousand.

In 1831 the number of persons engaged in commerce, trade, and manufactures, 20 years of age and upwards, was 1,572,292; and in 1841 the number was 2,039,409; showing an increase of more than 400,000. It must be further remembered that the year 1841 was one of severe manufacturing distress, when several large establishments were closed, and consequently that the number of persons employed in manufactures must since that time have been considerably increased.

Compared with the whole population, we find that the agricultural class forms not quite 8 per cent. of the entire, while trade and manufacture employ 16½ per cent. When we take into account that the agricultural labourers in their capacity of consumers are not less interested in obtaining cheap food than the manufacturing operatives, we find language fail us to describe adequately the perverse folly as well as the preposterous crime with which the Corn Laws sacrifice the many to the few.

The actual increase per cent. of the population during the decennial period between 1831 and 1841 has been 14 per cent., while the calculated natural increase would be rather less than 10 per cent. This is perhaps to be chiefly attributed to the immigration of Scotch and Irish labourers, for the ascertained increase for Scotland and Ireland is lower than that of England. The largest increase has been in the county of Monmouth, where it amounts to 36 per cent.; and the lowest is the county of Westmorland, where the increase is little more than 2 per cent. By comparing the actual increase with the estimated natural increase some curious results are obtained, which tend to show how manufactures provide employment for the surplus of the agricultural population. The estimated natural increase of the county of Westmorland is 7 per cent., while the actual increase is only 2 per cent.; hence 5 per cent. of the natural increase must have migrated to other counties. On the other hand, the estimated natural increase of the county of Lancaster is 9 per cent., while the actual increase is 24 per cent., so that 15 per cent. of its increase is derived from immigration. The same difference between the agricultural and the manufacturing districts prevails throughout England. The agricultural counties exhibit the actual increase below the natural increase, while the manufacturing counties exhibit the very reverse. For instance, the West Riding of Yorkshire shows an increase by immigration to the amount of 5 per cent., whilst the North Riding shows a drain by emigration to the amount of 3 per cent. The counties which have sent the largest proportions of surplus population to seek employment elsewhere are Buckingham, Huntingdon, Norfolk, Oxford, Suffolk, Westmorland, and Worcester. Thus, while the agricultural counties annually export a large portion of their population to seek employment in the manufacturing districts, their representatives vote for the perpetuation of a system by which the amount of manufacturing employment is restricted within the narrowest possible limits. We are almost tempted to exclaim that these facts go beyond the wildest imaginings of fancy.

The total number of persons engaged in the textile fabrics of Great Britain, including cotton, hose, lace, wool, silk, and flax, is 800,246. They may be thus classified:—

Males above 20 years of age ..	344,121
" under 20 years of age ..	109,260
Females above 20 years of age ..	211,070
" under 20 years of age ..	135,795*

* The diminished numbers of young persons employed in manufactures have been already stated upon the author-

The number of persons engaged in the manufacture of iron is nearly 30,000, and of iron-miners 11,000. The number of persons employed underground in mines amounts to 193,826, being very nearly an eighth of the number of persons employed in the cultivation of the surface. Of these, far the larger proportion, that is to say, 118,233, are returned as engaged in coal-mines.

We find that 24,774 persons are engaged in the Potteries; and there can be no doubt that this branch of British industry would be very greatly extended under a system of Free Trade. If we are inferior to the French and Saxons—which, however, is somewhat doubtful—in the manufacture of the finer kinds of porcelain, we are far superior to the rest of the world in the ordinary earthenware (*faience*) of general use; and nothing but our preposterous policy could have prevented us from supplying the markets of the whole world with the articles of pottery which unite in themselves the luxury and the economy of ordinary life. Glass gives employment only to 7464 persons. The progress of this manufacture in England has been much checked by its being subjected to the operations of the excise.

It appears that 16,550 persons were engaged in the manufacture of engines and machines when this census was taken. Our own inquiries have shown us that this amount has been considerably increased within the last two years, and this beneficial result has been entirely produced by the operation of Free-Trade principles, permitted to work freely by the repeal of those laws which prohibited the exportation of machinery. It is impossible to overrate the importance of this branch of industry, which comprehends the most intelligent and best paid class of persons, both as masters and handicraftsmen. The general activity of trade and manufactures is essential to their prosperity, and the commercial restrictions by which both are fettered greatly impede the development of inventive intelligence, as well as the increase of physical wealth in this class of the community. The general results of the inquiry are presented to us in the following table:—

EMPLOYMENTS.	England and Wales.	Scotland.	Ireland and the British Seas.	Total.
Commerce, trade, and manufactures	2,619,206	473,581	17,589	3,110,376
Agriculture, including farmers and graziers, labourers, gardeners, nursermen, and florists	1,261,448	229,337	8,493	1,499,278
Other labourers, miners, quarriers, porters, messengers, &c.	673,922	84,573	3,373	761,868
Navy, merchant service, watermen, &c.	95,193	24,339	2,279	121,821
Navy and merchant seamen afloat	—	—	—	96,799
Army, half-pay, and East India Company's service	86,763	4,631	840	92,234
Army abroad	—	—	—	89,230
Professions, clerical, legal, and medical	53,041	9,709	434	63,184
Educated persons in other pursuits	123,878	18,099	859	142,836
Government civil service	14,088	2,777	94	16,959
Parochial and law officers, police, &c.	22,125	3,085	65	25,275
Domestic servants	999,048	158,650	7,535	1,165,233
Returned as independent	445,973	58,291	7,176	511,440
Alms-people, pensioners, paupers, lunatics, and prisoners	176,206	21,690	1,173	199,069
Ditto, afloat	—	—	—	957
Residue of population afloat	9,390,866	1,531,402	74,130	10,996,398
Total of population, including army and navy abroad and afloat	15,911,767	2,620,184	124,040	18,655,991

This table gives us the occupations and pursuits of 7,846,500 persons actively employed in Britain, and the report thus accounts for the remainder:—

"The 'Residue' of the population whose occupations are entirely accounted for amounts to 10,997,865, which would at first appear to be a large proportion. It must, however, be remembered, that this comprehends both sexes and all ages; and it will be found, upon examination, that of this number only 2½ per cent. are males above 20 years of age. The males under 20, and the females above and under 20, make up respectively about 31, 32, and 33 per cent. of the remainder. For the large number under 20 of each sex, without any occupation, it is obviously easy to account, comprehending, as it does, infants and children of tender age. The number of women above 20 years of age, without any occupation, returned, consists generally of unmarried women living with their parents, and of the wives of professional men

of the Commissioners. A remark of theirs in further illustration of this will not be out of place here:—"In 1835 the number of persons under 13 years of age employed in factories upon the four staples of cotton, wool, silk, and flax, amounted to 53,455, and were reduced in 1839 to 33,566, being a reduction of 21,889, although the numbers employed of all ages had increased from 355,373 to 423,626, showing a transfer of employment from the young to the old, and that this could be done with a considerable extension instead of entailing a diminution of the business carried on." 153,172 is the number of females under 20 years of age engaged in manufactures in Great Britain.

of a keeper, living upon the premises, but not engaged as carrying on the occupation of their own business. The small number of males above 20 years of age who have been returned by the enumerators as not pursuing any occupations (nor as being persons of independent means, nor as paupers), amounting to 272,732, is a population of 18,646,991 souls (a proportion of 27.27 per cent.), may be supposed to consist of sons who continue to reside with their parents, and perhaps to assist in their business, without being returned as carrying on the same trades, of husbands supported by the labour and industry of their wives, and of persons temporarily out of employment."

Some of the results presented to notice by the report are a little whimsical, and these have been grouped together with some cleverness by the *Morning Post*. We shall quote a passage from our fashionable contemporary, which may serve to enliven the dryness of statistical discussion:—

"In the census returns of occupations recently presented to Parliament we find some rather curious matter relating to the occupations of ladies, which we must say, in spite of being accused of want of gallantry, afforded us much amusement. The first thing which struck us was the number of ladies who confess to being above 20; certainly in this respect there is a degree of candour displayed, which goes far to belie the old saying that a lady never tells her age. To be sure, the manner of stating ages is somewhat indefinite, being '20 and upwards,' and 'under 20,' and it is quite possible that many fairs of a certain age may, while entering their 'dates' upon the census book, have been honest under the idea that no one would take them to be above 20. It is satisfactory, however, to know that the entries in this blue book of ages above 20 are greater than those under that amount. The ladies, therefore, have always a Parliamentary return to refer to in proof of their honesty in this respect.

"Passing, however, from ages, we find fifteen ladies entered as 'authors,' and one as a 'professor of the belles lettres.' Of actresses, we have 357 females above twenty; but whether these are excluded from the performance of boarding-school misses is not related. Eighty-nine actresses are stated to be under twenty, including, we suppose, infant Sapphos, and other very juvenile performers. Of curiosity dealers, the total return is forty-six, only six being of the fair sex, a disproportion we by no means understand, but probably the latter would have mustered stronger as curiosity seekers. This disproportion, however, is amply redeemed by the statement that there are 584 females connected with the Post-office; if properly employed, we should think they are all in the secret department, under the command of the Home Secretary. Four ladies are engaged as bayonet manufacturers, 13 confess to having souls not above buttons, and 86 shoe horses or doctor them, which is not very material. Then, again, we have two registered as couriers, whether using side saddles or wearing the breeches is unaccountably omitted. One hundred and thirty-one are entered as chimney-sweepers; fair in sex, but alas, for the complexion! Of botanists, we have in all 65, two of them being ladies, who, while practising this agreeable science, must not mind wet ancles nor an occasional drenching while tramping over 'bog, brake, and scur.' The Scotch, too, profess to have 13 female drovers following their cattle to the Southron's market. Eighty females are entered as match makers—lucifers, not matrimonial, we presume, and therefore exclusive of prudent mammas. Under the head 'newspaper editor, proprietor, and reporter' we find 520; only four, however, are mentioned as females above 20, which is obviously a mistake, the establishment of the *Herald*, to our certain knowledge, being of greater extent, and every one in it considerably above that age."

Turning from this trifling to more serious matters, we have to regret that the report does not afford sufficient data for absolutely determining the sanitary condition of the various occupations. The rate of mortality appears, indeed, to be the highest in the manufacturing districts, but, as we have already stated, these are the districts into which there is the greatest amount of immigration; and all former statistical inquiries have taught us that the tables both of mortality and crime are greatly swelled by strangers in those districts into which a large tide of immigration has been turned. On the subject of immigration we cannot do better than quote from a very able abstract of the report which has appeared in the *Times*:—

"The question of immigration has become a serious question; and one which solicits the attention of all who take an interest in the condition of the English labourer, affecting as it already does, and that materially, in many parts of the country, his wages and habits of living. In Cumberland, in 1841, for every 10,000 inhabitants there were 356 persons born in Scotland, and 274 born in Ireland. In Lancashire there were 130 Scotch, and 636 Irish, for the same number of inhabitants—that is to say, one-thirteenth part of the actual population of Lancashire is made up of Irish and Scotch; and nearly one-sixteenth of that of Cumberland. Many other counties exhibit large proportions of immigrants from the sister kingdoms, though none so large as these. No county is free from a considerable proportion; Suffolk and Norfolk have fewest, show 33 for every 10,000 inhabitants. Throughout England and Wales the average is, for every 10,000, or 31 for every 1250—that is, something more than one-fortieth part of the whole population is composed of strangers. In fact, there seems good ground for thinking that the amount of this immigration into England considerably exceeds the amount of emigration from England to the colonies, so that it forms a permanent addition to the already superabundant population of this country."

We differ on one point from our able contemporary: there is no superabundant population in this country; under a sound system of political economy commerce England could find ample employment for all, and, consequently, more than any other country in the present number of its inhabitants.

from the abstract in the *Times* 66th of the miscellaneous heads which appear most interesting:—

"Clergymen (we presume of the Church of England) are returned for England at 18,574; commercial clerks (one of the largest descriptions) for Great Britain, 58,830; chirographers, 58; dressmakers and milliners, 106,801, of whom 22,174 are females, and 127 males, respectively under 20 years of age; East India Company's service, 591; farmers and graziers, 300,123; Government civil service, 16,750; agricultural labourers, 1,127,108, of whom 14,295 are females under 20; army, 38,067, of whom 6976 are soldiers under 20. There are only seven persons returning themselves as oculists in all Great Britain. The physicians amount to 1476; printers, 18,318, of whom 183 are females; surgeons, apothecaries, and medical students together, 18,658; so that the whole body of the medical profession in Great Britain, including students, comprises only 20,134 persons. The teachers of music and singing are 3285, being more than double the number of all the other teachers enumerated put together.

"In the metropolises, over 9 per cent. of the whole population are domestic servants, and over 4 per cent. persons of independent means. Somewhat more than 1 per cent. is the proportion of the class 'alms-people, pensioners, paupers, lunatics, and prisoners;' about the same is the proportion of those returned under the heads of 'army and navy' taken together."

The increase in the number of capitalists, bankers, professional and other educated men, 20 years of age and upwards, during the ten years ending in 1841, has been 69,012; and this large rate of increase is a convincing proof that the prosperity of the intelligent and educated classes is dependent upon that of trade and commerce, for, as we have already seen, the agricultural population during that decennial period has absolutely retrograded.

With such a document before the nation, we are unable to understand by what process any public man will henceforth be enabled so to harden himself as to appear an advocate of that most odious and most wicked monopoly the Corn Laws. He must have the hardihood to assert that it is more important to support 8 per cent. than 16 per cent. of the population; that a branch of industry which is not merely stationary, but retrograde, is more valuable to a nation than those branches which are capable of limitless expansion, and he must wind up with declaring that he is determined to support a system which unites the most obvious impolicy with the most monstrous injustice.

PROPRIETARY AGGRANDISEMENT.

"Ill fares the land to hastening ills a prey,
Where wealth accumulates and men decay."

We fully admit that the literal meaning of the above oft-quoted lines implies a contradiction in terms, for when wealth, in another word, capital, accumulates in a country it is impossible that any considerable portion of its inhabitants can "decay," unless they are slaves, or can by some contrivance be induced or compelled to labour to increase wealth without themselves obtaining any share of that increase. That such a contrivance exists and is in full operation in this country we shall show. There are circumstances in the condition of two important classes of the community which strike the most careless observer; these classes are the landowners and the peasants. The former have, during the last century, become aggrandised, have secured an increase of wealth, comfort, and the means of enjoyment to an extent which has no parallel in the world's history; while the latter have not merely stood still, they have retrograded. These facts are notorious; and they have now attracted the attention of the leaders of the great political parties of the state. Thus in a speech made by Lord John Russell, at the close of the late session, on "the state of the nation," the most important parts of which we have reprinted elsewhere, he said, "If we compare the condition of this country with what it was a century ago, it is impossible not to see that while the higher classes have advanced in luxury beyond measure, if we look at the men who either till the soil or labour in the factories, if we look to the quantity of necessities which their wages would buy in the middle of the last century, and that which they buy now, I think we must be convinced that they have not participated, in an equal degree, in the advantages which civilization and improved knowledge have conferred upon us."

This is true, but it is not all the truth, as not merely have "those who till the soil" not participated "in an equal degree" with the wealthier classes in the advantages of increased wealth, for they have had no participation in such advantages. The labourer in husbandry is not only relatively, as compared with other classes, worse off than his forefathers of 1740, but he is actually in a worse condition. He has less food, he is worse clothed, he has an inferior and less decent dwelling, and his employment is far more precarious and uncertain than that of the farm-labourer in the first half of the eighteenth century. But his deterioration is of more recent occurrence, commencing, in fact, with the period 1792, from which the landowners date the greatest improvement in their condition. And the explanation of this is simple and obvious. Down to 1815 the exorbitant prices of provisions, by which the landowners profited greatly, sent the tiller

of the soil back in condition, while the owner of the soil was swelling from a petty squire or country gentleman into a landed aristocrat minor or major. Since that time the struggles of the Legislature to enhance rents by means of an artificial scarcity, and the consequent fluctuations in prices, and the alternations of agricultural distress and fitful high prices, have prevented the development of rural industry and the application of capital to the cultivation of land in anything like the degree the abundance of unemployed capital and the state of agricultural knowledge would, but for the Corn Laws, have induced. This has vastly injured the condition of the farm-labourer. The labour fund of even that capital which is employed in farming has often gone for years together to make up rents, while the labourers were left destitute, or depended helplessly on alms from the poor's rate. We shall be glad next session to see a committee to inquire into the state of the country, for, if it be conducted with anything of fairness and purpose, it will be most obvious that the "protection" which both the great parties of the state seem desirous to maintain is the chief obstacle to any permanent improvement in the condition of the labouring classes. To a vast and immediate improvement of agriculture and landed property it is decidedly the only bar; and nothing can mark more strongly the line which divides the two aristocratic parties from the nation than the fact that people are for Free Trade—universal Free Trade,—while the party leaders agree in the principle of maintaining an artificial scarcity, but differ about straws as to the mode. There are signs, however, abroad which show this cannot last long; and it is not impossible that the rival political leaders are only trying which shall outflank the other, and, without being upset by the squires, take up his position on the safe ground of commercial freedom.

AMERICAN PROVISIONS.

We have been favoured with a private view of the American provisions imported by Messrs. Keeling and Hunt, previous to their sale by public auction on Wednesday last. The cured hams, pork, beef, ox-tongues, and sausages were of the very first quality; and we believe that, after paying the duty and allowing a fair profit to the retailer, they will come into the market at a price of from one-third to one-fourth less than similar articles of English produce. This new trade is one of great importance to the shipping interest. The increasing expense and difficulty in victualling vessels in English ports gave foreigners a decided advantage over English shipowners, and, but for the relaxations of the tariff, must have ruined our trade altogether; these relaxations have checked, but not entirely remedied the evil; nothing but Free Trade can secure the prosperity of the shipping interest. We had proof given us, while inspecting Messrs. Keeling and Hunt's stores, that the importation of American beef and pork will in no way interfere with domestic production. A gentleman was present who had been largely engaged in the Irish provision trade; he informed us that, though the Irish trade in salted provisions had greatly declined, a more lucrative and extensive traffic in live cattle had sprung up in its stead, which, while it amply remunerated the cattle-feeders, brought the luxury of fresh meat within the reach of many of the labouring classes previously debarred from its use. Messrs. Keeling and Hunt deserve well of their countrymen for the spirit and enterprise which they have shown in opening this new branch of trade. If, according to Dr. Johnson, a man is to be deemed a national benefactor who makes two blades of grass grow where only one grew before, much more is he a benefactor who places within the reach of consumers two carcasses of the animals to be fed on that grass where only one was previously attainable.

THE METROPOLITAN PARLIAMENTARY REVISIONS.—We understand that Mr. T. J. Arnold has been appointed by Lord Denman the revising barrister of the lists of electors for the city of London, and has appointed to hold his first court in the Court of Common Pleas, Guildhall, on Monday, the 16th inst. The proceedings of the first day's sitting will be occupied in receiving from the Secondaries the lists of the livery, and from the overseers the lists of the £10 householders. After this formal proceeding the discussion of the different claims and objections will be proceeded with in the order which, at its earliest sitting, will, no doubt, be appointed by the court. —*Times*.

COMMERCIAL RELATIONS.—It is a narrow and distorted view of human affairs to talk of commercial relations as the appanage of any peculiar nation; for, if the ships and manufactures of England are seen in all the markets of the world, it is because in all those markets England is either the best customer, or affords the most convenient means of exchange. To make war on commerce is to make war, not on England, but on the human race; it is to raise armed barriers, not against the speculations of a single people, but against the necessary interchange of the produce of the world and of mankind; and, if such a system of warfare could be successfully prosecuted (which it fortunately cannot), the inevitable consequence would be the relapse of all nations into that state of barbarism from which the extent of their commercial relations with each other has slowly awakened them. Alas! that so much of this barbarism should still prevail in the 19th century that men reason on these matters as if commerce was not essentially twofold in its qualities and effects, and as if its increase or destruction were not matters of universal rather than of national interest. —*British and Foreign Review*.

DESCRIPTIONS OF REMARKABLE FARMS.

By ADAM BROWN.

No. I.—Near Chelmsford, in Essex.

A journey of a few minutes less than an hour into Essex, by the railway from London, will bring you to a station, where, if you are curious about remarkable farms and farmers, you may leave the train.

Having got out and given your ticket to the officer, go down the winding stair. At the bottom of it you will find yourself beneath one of several archways, each raised upon many pillars, bearing aloft the level railway upon which runs the train you have just left. It is now on its way to Colchester, and you are at Chelmsford.

Looking through the pillars you will see passengers going to and fro, and carriages, carts, and waggons also. Before you have emerged into the full glare of daylight, you will observe the end of a new row of brick-built houses, and on the end of the house nearest you, on a painted sign-board, the words, "Office of the Essex Society for Protection to Agriculture."

Should you turn to the right, and proceed to the north and north-west, you will pass many pretty little houses with floral adornments around them; and you will come to a park of fine old trees and meadow grass, through which, to the left, there is a footpath.

Enter, and proceed by this footpath. You will in ten minutes reach a small river, over which you will cross by a wooden bridge. You will then proceed by the brink of this river for about fifteen or twenty minutes, if you do not delay. But if you linger and examine the farm land on your left, and the fences that enclose it, and the gaps in the fences, and the weeds in the fields, and all the signs of dilapidation, including the washing away of the road on which you walk by the river,—not a rolling, spilling, reckless river, but a deep, slow, lazy river, which, even in doing mischief, does it in such a lazy style that you are forced to believe that the road is gnawed away by the tooth of time, and not by the floods of one year,—if you linger to examine such things as these you may, likely enough, take another half hour.

And indeed, if you do, it will not be the worst-spent half hour of your life. You will see that the river has not done its little bits of mischief in recent floods; no, nor in the floods of recent years. You will, on more intimate acquaintance with it, find it is an old-fashioned river that does not like to be put out of its old way, and which never has been interfered with; for on its banks are those who, not liking to be stirred up, or turned aside themselves, not even for their own good, are averse to troubling even the old river by leading it in a new and more profitable and becoming course.

Therefore, on they go; the water in its course, and the dwellers on its bank in their courses, as the streams of water and the generations of men did even in the days of the Kings of the East Saxons.

But, having arrived at that junction of roads where the river is to be parted from, you may with propriety come to a dead halt. Stand still; think for a while. Here is a tollbar, there is a village. Behind you is a farmhouse, yard, stable, barns, sheds, cornstacks, haystacks, carts, waggons, wheels without waggons, one wheel without its fellow, its fellow lying a hundred yards off without its ring; its ring keeping company with a piece of a plough, and a piece of a plough lying in the most likely place on all the farm to break a horse's or a cow's legs. Fragments of implements, and implements separated from their companion implements, present themselves to you in wondrous confusion.

You may think it worth while to look round the whole farm-steading and farm fields after this. It is worth while. I will go with you; I will show you. Look here! A horsepond and a ditch full of water. "Is the water all of that black colour in Essex?" you will ask me. "No; it is not; you saw the river; the river was only earthy coloured because of the rain." "Why, then, is the horsepond and this ditch full of black water? and that other ditch as well? and this hole down in the field where the cattle are drinking? Do the horses drink that black water in the pond? Why, it has a stench. Ah! how nasty it is!"

Nasty; yes, it has cause to stink and be nasty. It contains the urine of the cattle and the washings of the farmyard dung. You wonder how anybody can give horses and cattle such water to drink; but it is an old custom to do so, and it would incur trouble and expense to drain the liquids of the yard somewhere else. You are surprised that the horses should drink this water. Rest assured the horses would choose good water as readily as any human being would; perhaps more so, for their tastes are not vitiated by strong drinks from choice, they only drink polluted water from necessity.

You are surprised that a farmer, for his own profit, does not provide his horses and cattle with pure water. But you may be still more surprised that the very pollution which poisons this water consists of substances which make poor soils rich, and rich soils richer still; consists of substances which are here utterly wasted, and for the draining of which into speedy and utter waste those ditches are made; consists of substances thus wasted at the very threshold of the farmer's house, though precious as the guano of Ichnaboe, carried to this country by five hundred ships, over latitudes of ocean measuring thousands of miles.

But, proceed over the farm. We have little difficulty in getting through, so far as gaps can serve us; but those undrained bogs, and broad ditches choked with weedy foulness, let us be careful how we traverse them, lest we sink. And mind the briars that fill up the wide distance between the old stumpy hedgerows—distances that would produce ten bushels of wheat on each four hundred yards lengthways; that is to say, if by any possibility one could ever hope to see wheat sown on so rich a soil as this.

You are surprised. See you not that wheat is not cultivated here. See you not that, where there was once cultivated land, as we may see by those ridges, there is now grass, and that grass is giving way to rushes and thistles, docks and weedy wastefulness. True, this is good land, the best land in Essex for wheat; but if you went over all Essex, and all England, you would not see wheat so little cared for as here.

Now, we come to another farm-steading, belonging to the same farmer, and again we see the liquids of the farm-

yard running to waste; again we see the solids laid out to dry in the sun, as if it were good that the ammonia should go into the air rather than into the earth.

You ask why it is that one farmer should hold so much land, and make such a poor use of it. I will tell you. He holds so much land because he is rich, and can be depended on for the rent better than a poorer tenant can be depended on. He is rich while many other farmers are poor; and he is so because they are poor. His work is not that of toiling at the farm to enable him to pay his rent; it is the "selling up" of other farmers who cannot pay their rents. His desire is not to get a good system of leases introduced, that he and his neighbours may expend capital on their land, and cultivate well. His desire is, that the present uncertain system of tenure may continue. He thrives by it. He is a land-valuer; and each tenant-at-will, moving from farm to farm, year after year, has his stock, and farm, and implements valued; and he pays the valuer at the rate of six guineas a day and his travelling expenses.

Did you not read those papers on the walls? Observed you not that sales of growing crops, sales of farm implements, sales of work horses, sales of household furniture, sales of brewing utensils, and several other sales of farm property, are advertised in at least seven different large bills, in large letters, posted on every side of the highway, and at the arches of the railway, the sales to take place this week, next week, and the next again; one five miles east, several of them six, and ten, and fifteen miles west; others north, and three out of the seven with no auction duty to pay?

Have you to be told that "no auction duty" means by warrant of the sheriff that "warrant of the sheriff" means a broken farmer being sold off, and that "broken farmers," when sold off to pay their rents, contribute also to the income of an auctioneer? And who is the auctioneer? Why, the farmer on whose farm we now stand. And who is he? No other than the secretary to the "Essex Society for the Protection of Agriculture," Mr. Robert Baker, of Writtle.

You may stare with surprise that this eminent farmer, as you would suppose him to be, who has got a prize of £50 from the Royal Agricultural Society, for the best essay on Essex agriculture, and who keeps upwards of one thousand acres of the best Essex land in that deplorable condition in which you see it, should be such a very bad practical farmer. But so he is.

Were he a grocer, and kept his tea and his coffee in one canister, and his sugar in such a place that he could not weigh an ounce of pepper without letting sugar and pepper mingle together; were the coffee, "when newly roasted and ground," put out to the door in an open tray to allow its flavour to escape into the air, instead of the flavour being preserved to bring back the customers at another time; were streams of water allowed to run through the sugar hogshead and carry the liquid into the cellar to mingle with the liquors there; were he to neglect to have the counter repaired when a panel was broken in its front; were he to have beam and scales tumbled over on the floor and covered with verdigris, and the tea-chests standing where each person who assisted in the shop must step into them or risk breaking a leg by leaping over them; were he to have his whole shop and stock in such confusion, while he was away from it all the year over five days out of six, who would believe that he was a good grocer, even though he might publish pamphlets on the grocery trade, and argue that all the villagers of Writtle should be constrained to buy just such articles at his own prices at his own shop as he had to sell? Would he not be called a very bad grocer? And is it not beyond all question that competition with another grocer would have at least two good effects?—that, while it gave the villagers of Writtle a better supply of sugar, and coffee, and tea, and spices at a moderate price, it would cause him to mind his own shop and improve his own business.

What is here supposed of a grocer, Mr. Baker, of the "Society for Protection to Agriculture," is, as a farmer. He may be a very respectable, moral man; that I know nothing of, nor is it my province to inquire; but, as an agriculturist, he is one of the most eminent slovens that ever came into distinction.

No. II.—Near Kelvedon, in Essex.

But let us return to the railway. We may take another road back to it. We shall enter Chelmsford at a part where several streets, crescents, and "places" or "rows," are in process of being built. We can hardly help remarking them. Are they to be inhabited and paid for by protected agriculture? or are they reared for persons who are still in, or have come out of unprotected trade? They are the last. London—commercial, competing, intensely competitive London—sends her tradespeople down to Chelmsford now that the rail is so convenient; and there they take lodgings and buy butter, and milk, and vegetables, and poultry, and eggs, and beef, and bread, *protecting*, while they do so, Mr. Baker and others of his neighbours from having to eat all those things themselves. We are again on the rail, faces eastward, and dashing along fast as the wind that comes with us from the west. So much for the enterprise of traders and the strength of commerce. This railway was made to facilitate the transit of agricultural produce, not by the growers but by the purchasers of that produce; and yet the growers want to be protected from those purchasers, one-third of whom would treble the amount of what they now consume, and one-half of whom would add a third to what they now consume, even though they got nothing more than barely three meals a day, if they could afford to pay the price. Mr. Robert Baker limits the supply to them, and he also advocates the perpetuation of their limited ability to buy. That vast community of London—who eat the produce of almost every blade of grass and ear of corn grown in Essex, and who depend on the commerce of their city for employment, and for the means of paying for every blade of grass and ear of corn, and who have neither enough of work to do, nor money to pay—Mr. Baker speaks of thus—if not in actual words he does so in effect.

"You are the persons who pay for blades of grass and ears of corn. I am the person who sells blades of grass and ears of corn. You say you want more than I have to give you; and you tell me you would buy still more if you were allowed to add a little to your ability by going

elsewhere. That may be, but you are not allowed to go elsewhere; and so long as I can prevent it you never shall. What, although you taunt me with not cultivating my land well, and growing as much upon it as I might do, I defy you to interfere with me, and make me do otherwise than I am doing."

But we have arrived at another station, at the distance of another twenty miles from London—forty miles in all. This is Kelvedon. We here hire a gig, and drive five miles north, to a farm called Tiptree-hall.

Here we find a farmyard, farmhouse, barns, stables, sheds, and everything very complete and compact. We find every fence running square and parallel, and all clear and useful as fences should be. We find the soil to be very inferior compared with Mr. Baker's farm. Yet we find that while Mr. Baker has been allowing his soil of best quality to run out of cultivation into grass, allowing even his grass to run into rushes and marshy bogs, this cultivator has been bringing his poor soil into the highest state of cultivation. He has one hundred and thirty acres, for which, just about the time that the Anti-Corn-Law-League became a giant, he paid £3250. He is not one of the League; but he is a believer in the virtue of agricultural enterprise in preference to agricultural protection; and so far is he from supposing that Free Trade would injure the English farmers—and so far from having listened to the forebodings of the alarmists, who are led on by Mr. Baker to cry, "Land must go out of cultivation if Free Trade is carried"—that he has since January, 1843, expended in hard cash the sum of £6200 in improving his farm; every penny of which, he is sure, Free Trade or no Free Trade, will be repaid him with a good profit. While Mr. Baker has been laying the League prostrate and slaying it, and receiving the great token of the age, "a piece of plate," for having upset, and destroyed, and utterly annihilated the League—for so the inscription on the silver sets forth his services—this farmer has been quietly cultivating his land, and employing at least twenty times more labourers than ever Mr. Baker employed on the same number of acres. He has thus stated, in letters to a local newspaper, the nature of his improvements:—1st. The perfect and permanent drainage of the land with stones and pipes, 4 yards apart, and 32 inches deep—between 80 and 90 miles of drains.—2nd. To the entire removal of all timber trees, which cannot be profitably grown in corn fields.—3rd. To the removing all old, crooked, and unnecessary banks, fences, and ditches.—4th. The cutting new parallel ditches and fences, so as to avoid short lands.—5th. The enclosure of waste, and conversion of useless bog into good soil.—6th. The economizing time and distance by new roads, arches, and more direct communications with the extremities of the farm.—7th. The erection of well-arranged farm buildings, built of brick, iron, and slate, in a continuous range, excluding all cold winds and currents of air, but open to sunny warmth.—8th. The building a substantial and genteel residence, with all due requisites for domestic comfort and economy.—9th. The erection of an efficient threshing machine, and needful apparatus for shaking the straw, dressing the corn, cutting chaff, bruising oats, &c., so constructed as not to injure the straw; avoiding by its perfect action, that immense waste of grain visible in almost every truss of straw we examine.—10th. The avoidance of thatching and risk of weather, by ample barn room, with convenience for in-door horse labour at threshing, &c., when not employable without, so as to have no idle days for man or beast.—11th. The saving of every pound and pint of manure by a tank (90 feet long, 6 feet deep, 8 feet wide, with slated roof facing the north, and with well and pump), into which is received the whole drainage from the farmyard and stables.—12th. The conveyance by iron gutters and pipes of every drop of water from the roofs of each building, so as in no manner to dilute the manure in yards.—13th. The perfect drainage of the foundations of the barn, and every building on the farm.—14th. A steam-house to prepare food for cattle. He says he is thus particular to state his alterations, because—"It is from each of the above branches of expenditure that some portion of remuneration is expected."

And again he says—"During the progress of my undertaking I have been warned, entreated, and dissuaded by my farming friends, who protested that a profitable return for such an enormous expenditure was impossible. My calculations, however, were made, and mere assertions without facts and figures weighed nothing with me."

This is businesslike in a farmer. And it may now be worth while to inquire who this farmer is. It is not a new thing to find that a man who has been bred in trade makes the best farmer. This is another instance of it. This agricultural reformer of Tiptree-hall, in Essex, is a tradesman from Leadenhall-street, in the city of London; no other than Mr. Mechi, of the magic razor-atrop.

The tenant who occupied Tiptree before Mr. Mechi bought the land is still upon it. I shall hereafter mention some particulars of their bargain. He looked with amazement and dread at Mr. Mechi's first proceedings; but he is long since convinced that they are sound, practicable, and profitable.

Mr. Mechi says, after stating the benefit to the crops:—"In a moral and social point of view, these improvements have acted beneficially. They have excited the energies of the tenant and his labourers, stimulating them to think, compare, and improve. They have awakened the curiosity of the neighbouring farmers, who are watching the result, and already have they caused many undertakings in drainage, which otherwise would not have been thought of." He adds:—"Had I invested my money in the funds, there would have been an end of the matter; but now I have the satisfaction of having fulfilled a public duty (without injury to myself), by calling into action, temporarily and permanently, a considerable amount of labour. I conceive that the highest order of charity, which, by providing employment to the willing labourer, confers a favour unseen, and leaves uncompromised (his most valuable privilege) his self-dependence."

Mr. Mechi says he may be asked, what can a Londoner know about farming? If so, he is prepared to answer that he has been always fond of the country, and has been a close observer of the condition of agriculture. "I have seen," he says, "one farmer making a fortune, and his next neighbour losing one; I have seen one field all corn, and another nearly all weeds."

And, concluding for the present, so say I. It is the weedy field and weedy farm whose occupier calls most lustily for protection. But Mr. Mechi is one of those who know how to make agriculture protect itself.

AN INQUIRY INTO THE EFFECTS OF ENGLISH LEGISLATION UPON AGRICULTURAL WAGES, PROFITS, AND RENT.

BY A BARRISTER.

(Continued from page 789.)

CHAPTER V.

Fifth Period—From the Passing of the Corn Law of 1791, to the Passing of the Corn Law of 1815.

Towards the close of the eighteenth century, a succession of unfavourable seasons, the Corn Law of 1791, and other causes, tended to produce a state of things, as regarded the agricultural labourers, very similar to what was produced towards the close of the sixteenth century by the depreciation in the value of money, and the forcible keeping down of wages by act of Parliament.

The transition from the old range of prices took place in the twelve months between Michaelmas, 1794, and Michaelmas, 1795. The price of the Winchester quarter of wheat, according to the Eton College accounts,* was 45s. 0d. at Michaelmas, 1793; 52s. at Lady-day, 1794; 56s. at Michaelmas, 1794; 71s. at Lady-day, 1795; 92s. at Michaelmas, 1795; 96s. at Lady-day, 1796; having thus, by an uninterrupted ascent, more than doubled its height in the course of two years, while it still continued to rise. It also appears that the prices of all necessaries continued to rise about the same time, with the exception of those manufactured articles, the cost of which was materially diminished by the application of steam power, and by the great improvements that had been made in the cotton and other manufactures. Thus it is shown by the account of the contract prices of various articles supplied to Greenwich Hospital that butcher's meat, which in 1770 was purchased for 108s. 6d. per cwt., in 1775 for 113s. 5d., and in 1785 for 117s. 6d., cost 202s. 10d. in 1795, and 304s. 4d. in 1800. Coals were 34s. 2d. per chaldron in 1785, 39s. 9d. in 1795, 51s. 7d. in 1800; shoes were 4s. in 1770, 3s. 6d. in 1785, 4s. in 1795, 5s. 8d. in 1800.†

If the doctrine of those who assert broadly that wages depend on the price of food be correct, wages should have risen to meet this rise in the price of the necessaries of life. The Poor Law Commissioners of Inquiry, in their Report of 1834, assert that, "if things had been left to take their course, the consequences in England would have been what they were in Scotland, and what they were with us in those occupations which, from their requiring skill, raise the workman above the region of parish relief. Wages would have risen to meet the depreciation of money, and the labourer would have earned the same, or nearly the same amount of raw produce, and a larger amount of manufactured commodities."‡

It would be a somewhat difficult matter to demonstrate that in Scotland wages rose in proportion to the rise in the price of the labourer's necessaries. And in England, in "those occupations which, from their requiring skill, raise the workman above the region of parish relief," it is notorious that the rise in wages was very far from equal to the rise in the prices of necessaries. "There was a rise," says Mr. Tooke, "in artisan and manufacturing labour, between 1792 and 1801; but in a small proportion only to the rise in the prices of necessaries. Various statements were put forth by different classes of artisans, setting forth the inadequateness of the rise of wages, including the most recent advance in 1801. Among other statements was one from the journeymen tailors, by which it appeared that their wages, from 1777 to 1795, had been £1 1s. 9d. per week, which, at the price of 7½d. for the quarter loaf, would purchase thirty-six loaves; while the utmost advance of wages, which in 1795 was to 25s., and in 1801 to 27s. per week would purchase only eighteen loaves and a half in the latter year. A statement from printers' compositors, whose weekly wages were advanced from 24s. to 27s. in 1795, and to 30s. in 1801, gives a similar result in the disproportion of the advance of wages to the rise of necessaries—[the rise in wages being 25 per cent., that in bread above 140 per cent.].

"By the Greenwich Hospital table, the wages of carpenters, bricklayers, masons, and plumbers, appear to have experienced very little advance, according to the quotations of 1800, as compared with the twenty years preceding, viz.:

	s. d.	s. d.	s. d.
Carpenters ..	from 2 6	and 2 8	to 3 2 per day
Bricklayers ..	" 2 4	"	" 3 0 "
Masons ..	" 2 8	"	" 2 10 "
Plumbers ..	" 3 0	"	" 3 3½ "

If it be true that when the prices of the labourer's necessaries rise, wages will rise to meet them, the converse should also be true, that when those prices fall, wages will fall in proportion. On this ground it is asserted by some at present that the labourer will gain nothing by a fall in the price of food, because the price of labour will fall in the same proportion. About seventy years ago Arthur Young, whose object was the same as that of those who now make the above assertion, not only asserted, but produced in support of his assertion a large collection of evidence, that the price of labour had large collection of evidence, that the price of food. He showed that not only were wages not the highest where

* See the tables given in Tooke's "Hist. of Prices," vol. II, p. 387.

† Parliamentary Papers cited in McCulloch's "Dictionary of Commerce," pp. 953, 953.

‡ Report, p. 151, 2vo. edition.

§ "History of Prices," vol. I, p. 236, note.

provisions were dearest, but that in very many instances the converse was the fact.* Now, Arthur Young was, as a practical agriculturist, and therefore interested, he supposed, in a high price of food, writing against the notion then prevalent, he says, among some of the ablest writers on political economy in England, France, and Holland, that provisions must be kept low, in order that the rates of labour might be the same. His object being to make the price of food high, he set about proving that wages would not necessarily rise in proportion. The object of his successors being to keep the price of food high, they assert, they do not attempt to prove, the contrary of Arthur Young's proposition, viz., that wages must fall in proportion to the fall in the price of food: consequently, that the labourer would derive no benefit from the fall of the price of food.

The farmer's friend of 1770 has himself answered the objection urged against lowering the prices of provisions, on the ground that the manufacturers only want to lower them that they may lower wages in proportion. "It is the manufacturing interest in this kingdom," says Arthur Young, "that has usually complained of the rates of provisions raising the price of their labour; or perhaps more the sentiments of various writers than of persons really concerned in our fabrics. But their complaints are certainly groundless: some of our manufactures have sunk, and others have risen. Has the former been the effect of dearth of provisions, or the latter of cheapness? Manufactures have declined in Suffolk, and flourished in Yorkshire and Somersetshire, and all the west; but Suffolk, of all those, is the cheapest. They decline in Suffolk, and rise in Norfolk, though provisions be the same in both. And let it be remembered, that while provisions are at a regular price, labour is irregular; great orders for goods, from abroad, raise the prices much, though provisions remain exactly the same. All these circumstances would be different, if there were arbitrary laws of police to force men to work at rates decided by variations in the price of provisions."†

At the same time it must be observed, that the very high price of bread in 1801 was only temporary, and that the rise of the wages of skilled labour maintained itself after bread fell in price, and consequently came nearer a just proportion to the rise in the price of necessities. And something of the same sort would have taken place in the case of agricultural labour, if things had been left to take their own course. But things were not left to take their own course.

There being no question as to the fact that all kinds of agricultural produce greatly increased in price at that time, it is important to show the actual increase in the money wages of agricultural labourers which then took place, whence it will be evident that Arthur Young's statement, "that the price of labour had nothing to do with the price of food," was perfectly correct, and that the labourers were reduced to starvation,—so contrary to truth is it that high prices are beneficial to the labourers.

In Hertfordshire, in 1783, a day labourer received by the week 8s.; by the day from 1s. 2d. to 1s. 4d. In 1796, day labourers received by the day 1s. 6d.‡

"In the neighbourhood of Gloucester, labour by the piece, 1s. 6d. the day; common day labour, 1s., and liquor; and generally two meals a week. Bread and water almost the only diet of labourers' wives and children. Butter, from 10d. to 16d. the lb.; little milk to be had, owing to the great demand for veal. Bacon (alive) 10s. the score. Wheat, which in 1789 was on an average about 6s. 6d. the bushel, is now 12s. Cheese, 40s. the cwt.; labourers' shoes, 7s. 6d. the pair. In the neighbourhood of Bristol, common wages, thirty years ago, were 6s. the week; they are now 9s."§

"A few miles to the north of Northampton, common wages in 1792, and 1793, were 1s. 2d.; in 1794, 1s. 4d.; and are now 1s. 6d. the day, besides a meal and small-beer."||

It appears from a table published in the Appendix (A, Part ii., p. 75 a) to the Report of the Poor Law Commissioners of Inquiry, in 1834, that between 1792 and 1795 wages rose in Warwickshire from 1s. a day to 1s. 2d., the price of wheat having risen in the same time from 5s. 4d. to 8s. 10d. per Winchester bushel; that wages continued at that rate of 1s. 2d. till 1803, the price of wheat per Winchester bushel having been in the same district 13s. 1d. in 1800, and 15s. in 1801.

The result of all this was, that the price of bread had nearly doubled, and all other necessities, with the exception of some manufactured articles of clothing, had very greatly risen in price. The increase in the expense of subsistence to the poor man cannot be estimated at less than 50 per cent.—we should rather say at less than 75 per cent.: in other words, his 3s. 6d. in 1796 or 1800 would not go farther than his 2s. would have gone in 1785, or even in 1790. In order, therefore, that the condition of the agricultural labourer should be as good after this rise in the price of food as it was before, wages must have risen 75 per cent., or every man must have had 3s. 6d. to spend in

1796 or 1800 for every 2s. which he had in 1790. Indeed, according to the following case published by Arthur Young in the "Annals of Agriculture," in 1801, and cited by Mr. Tooke in his "History of Prices" (vol. i. p. 226), even if wages had been doubled, they would still have been insufficient. Arthur Young says:—"A person is now living in the vicinity of Bury, Suffolk, who, when he laboured for 5s. a week, could purchase with that 5s. :—

		While in 1801 the same articles cost	
A bushel of wheat	5s.	20	16 0
A bushel of malt	5s.	0	9 0
A pound of butter	5s.	0	1 0
A pound of cheese	5s.	0	0 4
One pennyworth of tobacco	5s.	0	0 1
		1	6 5
His wages in 1801 were	9s.	0	15 0
His allowance as a pauper	6s.		

Which still left him worse off by . . . 20 11 5"

We have shown that from the time (1350) when the great body of agricultural labourers had ceased to be the slaves or bondsmen of the landholders, the latter had exercised their authority as legislators to compel them to labour at less than the market value of their labour. We have also shown that the cause of their discontent was admitted by the statute 5 Eliz., cap. 4. (1562), and as a remedy it was enacted that the justices should have the power of fixing the rates of wages for the future, having regard to "the plenty or scarcity of the time," that is, the dearth or cheapness of provisions. This power, less unjust than the fixing the wages without reference to the price of food, was regularly exercised until about 1725, when it fell into desuetude.

The great rise in the price of food, which took place after 1794, was an occurrence for which the statute of 5 Elizabeth had provided. A meeting of the magistrates for the county of Berks was held about Easter, 1795, when the following plans were submitted to their consideration:—

"1st. That the magistrates should fix the lowest price to be given for labour, as they were empowered to do by 5 Eliz., c. 4; or, 2ndly, that they should act with uniformity in the relief of the poor, by a table of universal practice, corresponding with the supposed necessities of each family. The first plan was rejected, by a considerable majority; but the second was adopted, and the following table was published as the rule for the information of magistrates and overseers:—

This shows, at one view, what should be the weekly income of the industrious poor, as settled by the magistrates for the County of Berks, at a meeting held at Speenhamland, May the 6th, 1795.	When the gallon loaf of 4 lb. 10 oz. is . . .

In 1725 we find that the Lancaster justices fixed the wages of the best husbandry labourer at 6s. a week (without reference to his being married or single), which would have purchased 86 pints of wheat; but according to the Berkshire scale we find that in 1795, when wheat was 75s. the quarter, they only allowed the labourer 4s. 3d. a week, which would only have purchased about 29 pints.

The Poor-law Commissioners of Inquiry inform us that the "43rd Elizabeth never contemplated, as objects of relief, industrious persons."† The foremost provision of that act is, "for setting to work the children of all such whose parents shall not be thought able to keep and maintain their children." We have adduced abundant evidence of the fact, that at the time of the passing of this

law, wages were kept down by act of Parliament to a level totally inadequate to the support of a family. Accordingly Parliament fell upon this device to make those wages sufficient. The words of the act itself corroborate the necessary conclusion drawn from the prices, at that time, of food and of labour, that the wages of the *industrious labourer in actual employment* were inadequate to the support of a family. The inference, therefore, intended to be drawn from the words of the report, viz., that the law was not intended in the slightest degree to touch the labourer in actual employment, is altogether fallacious. But, besides this, the law provided for the compulsory maintenance of those labourers themselves who might be unwilling to work at the disgraceful rate of wages offered them by their legislating employers, the next provision being, "for setting to work all such persons, having no means to maintain them, and use no ordinary and daily trade of life to get their living by." And lastly, provision is made for the "relief of the lame, impotent, and blind, and such other among them being poor and not able to work; and also for the putting out of such children to be apprentices." All this amounts to as distinct an acknowledgment on the part of the Legislature that the labourer's wages of 1801 were unable to provide for his family as the allowance system introduced by the law of 1796 was in regard to the wages of 1796.

The following are the observations of the Poor Law Commissioners of Inquiry in 1834 upon the effects of this measure—the Poor Law of 1796, the statute 36 Geo. III., c. 23:—"When allowance to the able-bodied, in aid of their wages, had once been introduced, when it had been found to be an expedient by which the expenditure in wages could be reduced, and profits and rents could be raised; when the paupers became numerous in most districts, and in some places formed the majority, and even the large majority of the peasantry; when their clamours for allowance were favoured by the farmers, and apparently justified by the rise in the price of the necessities of life, who can be surprised if the magistrates were led, in some places to connive at, in others to sanction, and in still more to promote, a practice, the evil of which had not then been experienced, which seemed so plausible in itself, and which so many persons combined to favour? Who can wonder that, thus urged and encouraged, they should have fancied themselves entitled to settle the weekly income of the labourers; and who can wonder at any amount of evil that has followed so preposterous an attempt?"*

The allowance system introduced by the Berkshire magistrates, and legalized by statute 36 Geo. III., c. 23, was more effective than all the previous legislation from 1350 to reduce the husbandry labourers to a condition analogous to slavery, that is, to the condition of men who are not paid in proportion to the value of their labour, but simply according to their most pressing physical wants. The roundsman system is an illustration of that tendency. The practical operation of what was called the roundsman system is described as follows:—

"According to this plan, the parish in general makes some agreement with a farmer to sell to him the labour of one or more paupers at a certain price, and pays to the pauper, out of the parish funds, the difference between that price and the allowance which the scale, according to the price of bread and the number of his family, awards to him. It has received the name of the *billet* or *plocket* system, from the ticket signed by the overseer, which the pauper, in general, carries to the farmer as a warrant for his being employed, and takes back to the overseer, signed by the farmer, as a proof that he has fulfilled the conditions of relief. In other cases the parish contracts with some individual to have some work performed for him by the paupers at a given price, the parish paying the paupers. In many places the roundsman system is effected by means of an auction. Mr. Richardson states that, in Sulgrave, Northamptonshire, the old and infirm are sold at the monthly meeting to the best bidder, at prices varying according to the time of the year; from 1s. 6d. a week to 3s.; that at Yardley, Hastings, all the unemployed men are put up to sale weekly, and that the clergyman of the parish told him that he had seen ten men the last week knocked down to one of the farmers for 5s., and that there were at that time about 70 men let out in this manner out of a body of 170."†

If we were to judge by the instance given above from Arthur Young, we should conclude that the agricultural labourer's wages in 1801 could purchase scarcely more than a third part of the provisions which they could formerly purchase; and that, even when the parish allowance was added, the two together could not purchase much more than half what his wages as an independent labourer could formerly purchase. But supposing that in this case (besides its representing the depression in the labourer's condition that had taken place in the course, perhaps, of fifty or sixty years), it is possible that a very cheap year may be placed against a very dear one, let us, that we may not even appear to take the slightest unfair advantage in the argument, assume that, after the new poor law of 1796, the *PHYSICAL* condition of the agricultural labourer was, though not by his wages, by the parish allowance in aid of his wages, that is, by contributions from a fund which is not the natural fund for the maintenance of labour, made equal to what it was in the first three quarters of the eighteenth century. It must be remembered, however, that man's nature is not wholly physical, *that he is a being created with other capacities and other wants than*

hunger and thirst, and the other merely animal instincts. It is impossible, in a limited space, to convey anything like an adequate idea of the effects produced upon the English agricultural labourer's MORAL nature by the English poor law of 1796; but we refer the reader to the section of the Poor Law Commissioners' Report which treats of the effects of the law as administered upon labourers, from which we make the following extract:—

"We have seen that one of the objects attempted by the present administration of the poor laws is, to repeal, *pro tanto*, that law of nature by which the effects of each man's improvidence or misconduct are borne by himself and his family. The effect of that attempt has been to repeal, *pro tanto*, the law by which each man and his family enjoy the benefit of his own prudence and virtue. In abolishing punishment we equally abolish reward. Under the operation of the scale system—the system which directs the overseers to regulate the incomes of the labourers according to their families—idleness, improvidence, or extravagance occasions no loss, and consequently diligence and economy can afford no gain. But to say merely that these virtues afford no gain is an inadequate expression; they are often the causes of absolute loss. We have seen that, in many places, the income derived from the parish for easy or nominal work, or, as it is most significantly termed, 'in lieu of labour,' actually exceeds that of the independent labourer; and even in those cases in which the relief-money only equals, or nearly approaches the average rate of wages, it is often better worth having, as the pauper requires less expensive diet and clothing than the hard-working man. In such places a man who does not possess either some property, or an amount of skill which will ensure to him more than the average rate of wages, is of course a loser by preserving his independence. Even if he have some property, he is a loser, unless the aggregate of the income which it affords and of his wages equals what he would receive as a pauper. It appears accordingly, that, when a parish has become pauperized, the labourers are not only prodigal of their earnings, not only avoid accumulation, but even dispose of and waste in debauchery, as soon as their families entitle them to allowance, any small properties which may have devolved on them, or which they may have saved in happier times."

The effect of the laws upon the domestic affections is thus described:—

"The effects of allowance," says Mr. Stuart, "is to weaken, if not to destroy, all the ties of affection between parent and child. Whenever a lad comes to earn wages, or to receive parish relief on his own account" (and this we must recollect is at the age of fourteen), "although he may continue to lodge with his parents, he does not throw his money into a common purse, and board with them, but buys his own loaf and piece of bacon, which he devours alone. The most disgraceful quarrels arise from mutual accusations of theft; and, as the child knows that he has been nurtured at the expense of the parish, he has no filial attachment to his parents. The circumstances of the pauper stand in an inverted relation to those of every other rank in society. Instead of a family being a source of care, anxiety, and expense, for which he hopes to be rewarded by the filial return of assistance and support when they grow up, there is no period in his life in which he tastes less of solicitude, or in which he has the means of obtaining all the necessities of life in greater abundance; but, as he is always sure of maintenance, it is in general the practice to enjoy life when he can, and no thought is taken for the morrow. Those parents who are thoroughly degraded and demoralized by the effects of 'allowance,' not only take no means to train up their children to habits of industry, but do their utmost to prevent their obtaining employment, lest it should come to the knowledge of the parish officers, and be laid hold of for the purpose of taking away the allowance."†

The moral evils inflicted by this law are thus summed up:—

"At the time of my journey," says Mr. Cowell, "the acquaintance I had with the practical operation of the poor laws led me to suppose that the pressure of the sum annually raised upon the ratepayers, and its progressive increase, constituted the main inconvenience of the poor-law system. The experience of a very few weeks served to convince me that this evil, however great, sinks into insignificance when compared with the dreadful effects which the system produces on the morals and happiness of the lower orders. It is as difficult to convey to the mind of the reader a true and faithful impression of the intensity and malignancy of the evil in this point of view, as it is by any description, however vivid, to give an adequate idea of the horrors of a shipwreck or a pestilence. A person must converse with paupers, must enter workhouses and examine the inmates, must attend at the parish pay-table, before he can form a just conception of the moral debasement which is the offspring of the present system; he must hear the pauper threaten to abandon his wife and family unless more money is allowed him—threaten to abandon an aged bedridden mother, to turn her out of his house and lay her down at the overseer's door, unless he is paid for giving her shelter; he must hear parents threatening to follow the same course with regard to their sick children; he must see mothers coming to receive the reward of their daughters' ignominy, and witness women in cottages quietly pointing out, without even the question being asked, which are their children by their husband, and which by other men

previous to their marriage; and when he finds that he can scarcely step into a town or parish in any county without meeting with some instance or other of this character, he will no longer consider the pecuniary pressure on the ratepayer as the first in the class of evils which the poor laws have entailed upon the community."

Let us now endeavour to discover what was the effect of all this violent limitation of wages to the mere necessities of individuals at the discretion of a parish board, which generally consisted of the employers of labourers, upon the rent of land.

The poor law of George III. was, in fact, but an extension on a large scale of the system introduced by the poor law of Elizabeth, of making persons who were not employers of labour, and consequently could not profit by such employment, contribute to the support of the labourer.

An attendant upon the poor law of Elizabeth, was, as we have seen, a great rise of rents. It also appears from the following evidence, taken from the agricultural surveys drawn up for the Board of Agriculture, that an attendant upon the poor-law of George III. was a great rise of rents:—

"From Spalding to Boston, in fifty years, rent and tithes have been doubled, on some estates trebled.

"At Burton, a farm that was worth £90 a year, is now £300."—"Lincolnshire, 1799," by Arthur Young, p. 44.

"Within the memory of many persons, a farm at Rouham has advanced from £500 a year to £2500."

"All the country for many miles round Langley, the rent raised one-third in twenty-five years."

"At East and West Fleg, in the opinion of Mr. Farrier, the rent has doubled in twenty years."—"Norfolk, 1804," by Arthur Young, p. 36.

"Rise of rent from 1790 to 1804, 60, 50, 40, to 25 per cent.—average, 35 per cent."—*Ibid.*, p. 510.

"About most of the towns the lands let at a high price; pasture land for convenience from 40s. to 50s. per acre, and arable land at about 30s."—"Dorset, 1793," by Claridge, p. 22.

In the Appendix to the account of Hants, by Driver, 1794, it is stated by Arthur Young, that the rent of land increased from 50 to 100 per cent. in the last twenty years.

"Within twenty years the rent has nearly trebled."—"Dorset, 1812," by Stevenson, p. 93.

These increased rents still further increased, thus:—

"Fifty years ago, rents at Latchingdon, according to Mr. Rush, of that place, were 7s. 6d. an acre; twenty years ago, 10s. 6d.; the whole parish would now let for 20s."—"Essex, 1807," by Arthur Young.

"Rise of rents from 1796 to 1804, 35 to 38 per cent."—"Suffolk, 1804," by A. Young.

"Since the publication of the former edition of this work (1795), rents have much increased, and in some instances enormously, particularly in rich soils, and in the neighbourhood of market towns."—"Kent, 1805," by Boys, p. 39.

"Rent raised 40 or 50 per cent., and sometimes not more than 20 or 30 per cent."—"Bedford, 1808," by Batchelor.

"In forty years the merely agricultural parts of the county have in many parts quadrupled, and in all more than doubled."—"Oxfordshire, 1809," by A. Young, p. 327.

There is evidence to the same effect in the various Parliamentary Reports on the Poor Laws, &c., that these increased rents have been permanent. Thus, in his examination before the Lords' Committee, in December, 1830, Mr. George Harrison being asked, "Do you mean to say that the war rents are kept up now?"—replied: "There was a demand to raise them. I had a farm that I was paying £500 a year for, and which my ancestors, between 1790 and 1800, were giving £300 a year for; and that made me leave off farming entirely."—"Minutes of Evidence before Committee of Lords (1830 and 1831)," p. 91.

And before the same committee, Richard Mackenzie Bacon, Esq., stated as follows:—"There is the particular instance of Mr. Coke's estate in Norfolk, for which I may quote Dr. Rigby, who was on very intimate terms with Mr. Coke. In the year 1818, the Doctor published a book, 'Holkham, and its Agriculture.' He then stated, from documents, I believe, in the possession of the family, that, upon Mr. Coke's accession to the estate, one of the largest farms was offered at 5s. per acre, tithe-free, and refused. At the time he wrote, he saw the very same land bearing 12 coombs of wheat per acre; and Mr. Coke assured him that it had borne 20 coombs of barley; and he stated the general rise of Mr. Coke's property to be from £2300 to £20,000 per annum, and that in the course of Mr. Coke's agricultural life, which was then about forty years. It is impossible to conceive that the mere expenditure of capital could have produced such an advance of value, for if he had applied a sufficient quantity of capital to compensate the difference between the rent of 3s. and £3, it will be apparent that, taking the mean term, 210 years' rent must have been sunk."

"You do this upon the authority of Dr. Rigby, not upon your own personal knowledge?"—"I know the fact, as I have heard it from the Doctor himself. His book went through three editions, and has been circulated for twelve years without contradiction. I was intimate with the Doctor when he published his book; and I have every reason to believe he derived his information either from Mr. Coke or his steward."—"Minutes of Evidence before Committee of Lords (1830 and 1831)," p. 118.

(To be continued.)

THE POLITICIAN AND THE FREE-TRADER.

The following important passages from the speech of Lord John Russell upon the "state of the nation," made on the last day of the session, though several times referred to in the LEAGUE, have not been presented to our readers entire. This speech, to use an expression of his lordship, "winds its way between right and wrong," but is still a most useful one, as showing that, though moved, none of the great economical questions of the day can be imagined to be even temporarily settled. Neither has that prompt assertion of justice, not charity, on behalf of the labourer, made by Mr. VILLIERS, been given in full. Both are now reprinted. Lord JOHN RUSSELL, after reviewing the policy of the Government towards Ireland and its foreign policy, said:—

"There is another topic upon which I wish to say a few words, because I think it must force itself upon our attention in some shape or other before a very long period elapses—I mean the condition of the people of England. (Hear, hear, hear.) You cannot help, from day to day, and from time to time, observing the state of the people of this country—the inadequate means which the labouring people have to supply their families with the comforts of life (hear, hear, hear), with the extreme labour which in the manufacturing districts is undergone, and with the discontent which, both in our agricultural counties and in our manufacturing districts, is at short intervals excited; and I think, if we take a general view of this subject, it is impossible not to see whether it be the fault of our Legislature or not that the labouring classes have not advanced in comfort and welfare in proportion to the other orders of the community. If we compare the condition of this country with what it was a century ago, with what it was in 1740 for instance, it is impossible not to see that while the higher classes have advanced in luxury beyond measure—while the means available for the diffusion of comfort and the enjoyment of life have prodigiously increased—that while, if we look again at the middle classes and their means of procuring comfort, of travelling from one place to another, the quickness with which intelligence is conveyed, and the increase in the consumption of foreign articles of luxury, that these classes have made a very great advance. If we look to the labouring classes—if we look to the men who either till the soil or labour in the factories—if we look to the quantity of necessaries which their wages would buy in the middle of the last century, and that which they can buy now—if we go to the details with which I shall not now trouble the House, but which have been exhibited in the reports of the commissioners sent forth, some by the late Government and some by the present—I think we must be convinced that they have not participated in an equal degree in the advantages which civilization and improved knowledge have conferred upon us. (Hear, hear.) Neither, Sir, can I say that they have advanced in the means of education, or in the general communication of religious knowledge throughout all parts of this country. It is a subject so vast and so extensive that it will require to be divided into many parts, and which will necessitate a comparison of all the various counties, in order to give anything like an adequate view of this great subject. But unless the Government next year shall be prepared with some measure of a comprehensive nature, by which I will not say that the condition of the people can at once be altered for the better, but by which many restrictions which are now imposed upon their well-being shall be removed, I shall think it my duty to ask the House either to consent to some measure which I shall propose, or to go into committee of the whole House on the state of the country. (Hear, hear, hear.) Sir, I may say generally that I conceive there is no likelihood of improvement in that which I see is put forth by many as if it would be an improvement of the condition of the labouring classes, in either an alteration or a repeal of the existing poor laws. My own opinion is, that if you were to break down all the workhouses and give nothing but outdoor relief, and give it in as much abundance as those who desire it would wish, that you would be but increasing the difficulty—you would but be increasing the number of poor, and augmenting the miseries of the labouring classes (hear, hear, hear); and that, in fine, it is not to giving alms—it is not to state charity that we ought to look for the support of the people of England (cheers), but it is to enabling them to obtain by honest labour that which some of themselves declare to be their object—and there can be no more just object—a fair day's wages for a fair day's work. (Loud cheers.) In considering the question, I think it will be necessary to revise the whole of the subject which the right hon. gentleman brought before the House, I think in an imperfect manner, two years ago. I mean the subject of the import duties. (Hear, hear.) I think the right hon. gentleman has this year proposed a plan with respect to the currency which tends to bring us back to the principles which obtained before the commencement of the war of 1793. I think it is worth our while to see what were the duties upon the importation of articles of food and other general commodities of consumption. (Hear, hear.) I think, together with an improved and stable currency, those great articles of consumption should be admitted with as small a duty as can well be laid upon them; and, in regard to what is due to the mitigation of burdens imposed upon the consumers of this country, I think we should likewise consider what is due to the agricultural interest of this country. I think you should consider, with respect to many subjects, whether that unequal taxation which now presses upon us cannot be remedied. I remember at the commencement of the session that some expressions I used on this subject were misunderstood by some members of the House, when I declared that I thought it would not be wise at once to abolish all laws restricting the importation of corn without taking into consideration the increase of duties and taxes to which the producers of corn had been subjected since the commencement of the present century. I will mention but two of them. One, the very great increase in the county-rates since the beginning of the war of 1793; another, the very large augmentation of the malt-tax. It appears to me that now, when the Government have the leisure of the recess before them, they might very well consider whether some relief might not be given to the agricultural interest (hear, hear), and whether in giving that relief they might not frame measures more in accordance with those principles of trade which the late Government, as well as the late, and the present, have

† Report, p. 96.

* Report, p. 97.

EVILS OF WAR.—War gives more patronage to government, and more places and salaries to the tools of government; it causes the raising of more taxes, to be squandered among the locust crowd which surrounds the government, and it gives to the men in power an excuse for devoting all their energies to matters connected with the conduct of the war, and for neglecting all the evils which the country so loudly complains of. War is destructive of the true interests of a people beyond any calculation of the money spent or the lives lost in the contest. As in the roar of artillery all ordinary sounds are lost, and as amid the smoke and fire of conflict, clear vision is impossible, and fierce passions and blind vindictive rage are uppermost, so war, with its excitement, its defeats and victories, throws all other questions into the shade,—the voice of the poor and the suffering is lost in the din of arms, and the great principles of government on which the true happiness of a nation depends are disregarded and forgotten. Monarchs may gain renown in war; statesmen may gain a place on the page of history written by men seemingly unconscious that there exists such a body as the people; successful generals and admirals may live in stone on the top of some lofty pillar, monument at once of the scourge of our race and of the folly of mankind; but to the great mass of the people, to those who are born to toil and to pass through the world solaced and supported by the scanty recompense of their own industry, war brings only disappointments, increased toil, scantier recompense, heavier taxes, famine, and all the train of woes which mark the track of the cannon and the destroyer.—*Rochdale Spectator.*

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, September 4, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the LEAGUE of the Saturday immediately succeeding, but are included in the list of the week following.

CORRESPONDENCE.

To the Editor of the LEAGUE.

SIR,—I am glad to find that the League is attacking the agricultural interest, as it is called, in the registration courts. If the trick of joining several persons as the tenants of a farm, when, in point of fact, one only is really the tenant, could be defeated, the effect would be tremendous, and go far to deprive the landlords of their power in the counties. Now, it appears to me questionable whether the courts would hold a man to be the tenant of a farm of which he was only nominally a tenant. If it appeared that one person was the real occupant, that the whole capital employed was his, with all the profit, and that the other (nominal) tenants had no interest whatever in the farm, and could claim no part of the profits, I doubt much whether the courts would hold the latter to be such tenants as are contemplated by the act. The qualification is actual occupancy, and a man can scarcely be considered the occupant of a farm who has no interest in the capital or profits. It is no answer to this that the (nominal) tenants are responsible for the rent; they may be so, and yet not be the actual occupants of the farm. Perhaps the Council of the League will think this hint worthy of attention; this year it is too late to take advantage of it, but it may be useful next year. The farmers will not like to make their sons actual partners to avoid this objection.

Your most obedient servant, W. B.
Birmingham, Sept. 3, 1844.

The following letter, which was picked up in the neighbourhood of Bond-street, has been sent to us for insertion. It appears to be a rough copy of a circular from the chairman of the Publication Committee of the Society for the Protection of British Agriculture, to the local societies in the country; but we do not, of course, vouch for its genuineness:—

"Society for the Protection of British Agriculture.

"Private and confidential.

"DEAR SIR,—I am anxious to call your attention to a most delicate matter affecting the character of our body. The census report which has just been published, giving the occupations of the people, puts it beyond a doubt that those employed in agriculture are less in number than the manufacturers. This is being made the most of by the *Chronicle* and the other League papers, and I expect we shall hear of nothing else from the Leaguers during the winter. I have seen the *Morning Post* people, and requested them to turn it into ridicule, which I have no doubt they will do. But I would advise you to impose silence upon the editors of the country newspapers in our interest: the least said is the soonest mended with those fellows, who are too clumsy to be trusted to write jokes, especially upon arithmetical tables. But my principal object in writing is to urge on you the necessity of withdrawing from circulation, as quietly but speedily as possible, all those tracts and handbills which give the comparative employments of the people. There is one of our tracts headed 'Facts not Assertions,' which states that seven-ninths of the population are agriculturists: you must withdraw every one of these. I have just ordered all our stock to be burned. It is unlucky we ever put out this tract. I never had much confidence in Spackman's 'Statistics,' but, as they were written expressly to serve us, I could not refuse to quote him. Pray lose not a moment in suppressing these tracts. You may continue to circulate Mr. Cayley's pamphlet, for although Lord Radnor did expose its falsifications of Adam Smith, nobody will believe it.

"I remain, dear Sir, faithfully yours,
"W. STAFFORD O'BRIEN,
"Chairman of the Publication Committee."

THE HARVEST IN IRELAND.—The splendid autumn weather with which we are now blessed will crown the labours of the husbandman. In most of the Irish counties the corn harvest is now nearly completed. The wheat crop has turned out even more abundant than had been expected. The only crop reported short is oats, which, it is said, do not yield well in threshing; but, judging by all the accounts, even this crop will be pretty good. Green crops are in the most promising state. The markets are, as a matter of course, going down.—*Correspondent of the Chronicle.*

JAVA SUGAR.—A letter has been written to the East India and China Association by Mr. Lefevre, by direction of the Lords of the Committee of Privy Council for Trade, acquainting them that no certificate signed by the officer of a foreign government will be receivable under the fifth clause of the Sugar Duties Bill, passed in the present session of Parliament; and also, that her Majesty's Government has made arrangements, which will take effect immediately on the arrival of letters despatched by the July mail, for the appointment of persons duly authorized to certify the origin of sugar in the following ports of the island of Java, viz., Batavia, Samarang, and Sourabaya; and that a consul has been appointed for Manila, who has repaired to his post by the same opportunity.

THE REGISTRATION.

CLAIMS AND OBJECTIONS.—BOROUGH OF MANCHESTER.—We understand that the following are the numbers of claims and objections made in the several townships forming the parliamentary borough of Manchester:—

	Claims.	Objections.
Manchester	318	148
Charlton-on-Medlock	13	13
Hulme	12	31
Cheetham	6	9
Ardwick	4	4
Total borough	353	215

In the townships of Newton, Harpurhey, Bradford, and Beswick, there is neither claim nor objection. We believe that the great majority of the claims (about 250 we are informed) are by the Liberals, and the great bulk of the objections are made by them to the names of Tory voters on the list.—*Manchester Guardian.*

BOROUGH OF SALFORD.—CLAIMS AND OBJECTIONS.—We understand that in this borough 50 objections (all in the township of Salford) have been taken by Liberals, and not one by the Tories, a circumstance which seems to intimate the abandonment of all hopes of returning a Conservative candidate in future. There are only 16 claims, three out of every four of which are by Liberals; so that the parliamentary register for the borough must inevitably stand in a better position for the Liberals after the approaching revision than it even does at present.—*Ibid.*

SOUTH LANCASHIRE REGISTRATION.—TOWNSHIP OF SALFORD.—In this township 144 objections to names of Tories being retained on the register for the southern division of the county, have been taken by the Liberals and Free-Traders, and 42 have been taken by the Tories. The total number of claims in respect of property situate in the township, is 303, of which about 180 are by Liberals and Free-Traders, 80 by Conservatives, and the remainder have been made by the parties themselves at the overseers' office; and of these three-fourths are supposed to be by Liberals.

BOROUGH OF PRESTON.—On Saturday last, the time allowed by law for the delivery of claims and objections to the overseers expired, when, strange to say, not a single objection was made. This is the first time since the passing of the Reform Bill that this has occurred, which is no doubt, in a great measure, owing to the Registration Bill of 1843, entailing the costs upon parties making frivolous objections; and partly to the fact that the Conservatives are not making any effort this year. The number of claimants this year is 85. Last year the number of claims was 70, and objections 18.—*Preston Guardian.*

WARRINGTON.—Great excitement has been produced amongst the Conservatives of this place, by the energetic efforts of the Free-Traders in reference to the registration. In July, upwards of 50 claims were sent in by the Liberal party; of these 20 have been objected to by the Conservatives. The total number of objections made by the Free-Traders to county voters in this township is 120; whilst their opponents have objected to 24 (inclusive of those to claims above mentioned). In the borough revision the Liberals have every reason to expect great success; their number of objections is 39, all of them on good grounds; the Tory objections amount to 9. Free-Trade claims, 22; Tory claims, 2. Amongst the borough objections to Tories is one which applies to 18 of that party; and being based upon a recent decision of the Court of Common Pleas, to which the barristers must submit, is sure to be fatal to all these votes. It is, therefore, confidently expected that the next list of voters for the borough will show a decided majority in favour of Free Trade.—*Manchester Guardian.*

WIGAN.—Nearly 200 objections have been made to county voters on the list for the township of Wigan; and in the district of 15 townships polling at Wigan, the objections number nearly 600. Twenty-five objections have been taken by the Free-Traders to voters on the borough list, and 30 by the monopolists. The claims and amended claims of the latter are 12, and of the former 9. The principal ground of both claims and objections is a successive occupation of different premises.—*Ibid.*

COLCHESTER.—A vast number of objections to parliamentary votes have been served upon parties in Colchester, and it is alleged that the Anti-Corn-Law League has a hand in the matter.—*Essex Herald.*

THE ALTERNATE SACRIFICE.—THE HARVEST AND THE SLIDING SCALE.

(From the *Economist*.)

The harvest is everywhere rapidly progressing to a most successful close—the efforts of the farmer have been crowned with universal abundance—the prospect of plenty and prosperity gives cheer and confidence to the future to all classes, save one, and that the one which, under natural and wise laws, should, above all others, reap the benefit of a large crop—the producer himself. This is a melancholy reflection, not only from the fact that the most favourable combination of circumstances, securing general success to the efforts of the farmer, results rather prejudicially than favourably to him; but also from what is perhaps the more important fact, that, under our present laws, one class of society seems only to prosper on the ruin and losses of another. Socially this is a great evil, and produces most injurious consequences. There is no truer law, *prima facie*, than that which indicates one common and general ultimate interest to all members of a community; and that legislation which so much disturbs, nay reverses, this obvious rule, must be based on unsound principles. Those laws, which are based on the protection of the farmer, impose restrictions on the importation of corn of the most arbitrary kind, which can only affect prices when wheat is deficient, and from a deficiency. The moment there is a surplus, a succession of two or three favourable seasons, the law can no longer operate, and internal competition brings the price to its natural level. But the farmer's engagements for rent, and other obligations, are based upon the high and artificial prices which he commands under the restriction of the law. When scarcity made it operative, a farmer, who gave him an increase of one-fifth of the price of wheat, but as soon as the supply is abundant, the price falls, and much greater proportion than the increase of the price of wheat from 50s. to 70s. is lost.

REVIEW.

cent; while a corresponding abundance has again proportionably reduced it. Hence is it that farmers prosper when their crops are ruined—and hence is it that their success in producing large crops brings with it only disappointment and agricultural distress.

Much as the profession has been made that the Corn Laws are maintained for the benefit of the farmer, it is not difficult to show that not only is their general tendency, over a number of years, unfavourable to him, but that their peculiar effects from year to year, even while apparently operative for protection and the maintenance of a high price, are only prejudicial. By the very nature of those laws they inflict the most serious injury on the consumer, without a corresponding benefit to the producer at any time, and more usually are accompanied by real disadvantage. They may, indeed, not only from period to period, as the cycles of high and low prices proceed, but also in their effects in single years, be said to be an alternate sacrifice of the consumer and producer.

When the Corn Law was under discussion in 1842, the Ministers were obliged to admit many of the evils which had been charged against the late law, and to urge them as a reason for the modification which they proposed. Among the chief of these was its tendency to create violent fluctuations, which as often proved injurious to the producer as to the consumer, and more frequently to both. We last week showed, from the experience of the new law, that it has, as much as its predecessor, all the inherent tendency to fluctuation; and we would now, for the special benefit of the farmer, and the landlord as well, endeavour to show how prejudicially these fluctuations affect them, at all times and in every year; and, at the present moment, how much the tendency to sudden low price is aggravated by the very nature of this law.

It is, perhaps, not enough to show that fluctuations always have attended the operation of this law. It will be more satisfactory to show that they are inseparably part and parcel of it. The sliding scale holds out the highest premium and inducement to this end. If there is an appearance of scarcity indicated by a rising price, that, instead of being a cause why supplies should be furnished, forms, on the contrary, the best reason why they are withheld, in order that the merchant may benefit by a lower duty; but as soon as either the arrival of the harvest, or any other cause, shows that there is abundance, and prices begin to recede, then the whole of the foreign wheat in bond at the time is suddenly cleared for consumption, to avoid the inevitable consequence of a higher rate of duty with the lower price. In the first case, price is raised much higher than it would otherwise be by supplies being then withheld. In the latter case, prices fall much lower and more rapidly, by the sudden large supply thrown upon the market at the moment it is least required; and it is this constant tendency and direct inducement to extremes that the law itself holds out which produces the fluctuations so much complained of. It is a consequence inseparable from the law.

But the most serious effects of these fluctuations on the producer and consumer arise from the peculiar season when they most act on each—depriving the latter of supplies when most needed, and unduly depressing prices at the moment the former has his largest quantity to sell. The time when the consumer would be most benefited and the producer least affected by foreign supplies is during the spring and summer months, while prices are usually advancing, from the gradually diminishing stock of home-grown corn; but this is just the time when experience shows that, under this law, no supply whatever is obtained. On the other hand, the period when the consumer is least benefited and the producer most seriously injured by foreign supply, is at the moment of the harvest, and for two or three months afterwards, when our produce is coming in abundance to market; but this is just the period when the whole accumulated imports of the year have been usually brought forward. The new law was to remedy this obvious inconsistency and defect, and to produce a gradual and regular trade. Let us inquire how far it has succeeded, and this inquiry will illustrate and make clear the serious injury to the farmer, to which we allude. The events of the three last years are particularly instructive. Beginning with 1842, the following statement shows the time and the circumstances under which the wheat of that year was imported, and cleared for consumption:—

Quantity in bond at the end of month.	Imported.	Cleared for Consumption.	Average.
January.....	353,308	102,999	9,819
February.....	571,265	28,033	5,232
March.....	793,380	280,064	6,194
April.....	911,507	163,158	40,852
May.....	1,082,823	287,797	106,261
June.....	1,253,436	310,262	135,130
July.....	1,338,757	435,525	342,688
August.....	8,917	886,587	2,186,600

—(Tables of Revenue, &c., 1842.)

Thus we see that in the month of January, with 353,308 quarters in the bonded warehouse, and the price up at 61s. 7d., the most insignificant quantity was cleared for consumption. In February, with a stock of upwards of half a million of quarters, and the price above 60s. a quarter, only 5232 were supplied to the market. The importation continued steady and large in every month until, at the end of June, the stock in bond was 1,253,436 grs., and, though great scarcity and privation had been endured all the spring, and though the price, notwithstanding the limited consumption, had advanced to 64s. a quarter, yet the whole quantity which had been entered for consumption during the six months was not equal to the stock held at the beginning of the period. Now, we would claim special attention to what occurred during the next two months, July and August. In July the quantity imported amounted to 435,525 quarters, leaving a stock at the end of the month of 1,338,757, which was increased by the imports of August to 886,587 quarters; in that month the enormous quantity of 2,240,233 quarters, the accumulation of the whole year, was suddenly thrown on the market, leaving in bond at the end of the month only 8917 quarters; the warehouses being literally emptied in the last week of August, just as the new crop began to come to market. For several months we had gradually advancing prices, the best indication of scarcity; but for that very reason no foreign supplies were brought on the market, but when the fine new wheat of that harvest lowered the price in August to 55s. 11d., and gave evidence of internal abundance, then instantly the whole accumulated stock was brought forward, before the six weeks' average regulating the duty had fallen. The highest *Gazette* price was that of the 22nd July, which was 66s. 8d.,

when only 17,203 quarters were cleared for consumption. On the 26th of August the *Gazette* price was 56s. 5d., and in that week 1,354,797 quarters were cleared for consumption. Is it then too much to say that this large quantity of wheat had been kept back for several months only because price indicated scarcity and a great want of it, and finally all thrown on the market when it became plain that it was no longer so much required? But the effect produced on the farmer's interests was most disastrous—the price, which from January to the end of July ranged from 60s. to 65s. 8d., fell in August, as soon as they had any to sell, to 55s. 11d., in September to 52s. 6d., in October to 49s. 11d., in November to 49s. 1d., and in December to 46s. 10d.; showing a fluctuation of 18s. 10d. in five months; and that large accumulation of foreign wheat, so long withheld from the consumer, remained a dead weight on the market for several months. A similar process went forward in the year 1843. Importations accumulated all the spring and summer, until, in August, there was a quantity in the warehouse equal to 465,454 quarters, and immediately after arrival took place, early in September, of 371,403 quarters. During the first seven months of the year only 61,500 quarters were taken into consumption; but in the months of August and September, as soon as the arrivals of new wheat began to lower prices, the whole on hand, amounting to 844,984 quarters, was thrown on the market. The price had risen for some time, till, on the 18th of August, the week's average was 61s. 2d., in which week only 2510 quarters paid duty; the price then fell, until, on the 22nd of September, the *Gazette* weekly average was 50s. 10d., when 562,954 quarters were cleared for consumption—the average for the six weeks being 55s. 11d. On the 29th of September the price had fallen to 49s. 3d.

The experience for the present year has been to the same effect. On the 1st of January there remained in the bonded warehouses 220,483 quarters. The quantity imported and cleared for consumption has been:—

	Imported.	Cleared for Consumption.	Average Price.
January.....	35,420	3,546	49s. 0d.
February.....	15,074	1,981	52 6
March.....	39,600	3,076	56 2
April.....	68,061	80,880	56 5
May.....	216,361	63,320	55 6
June.....	224,892	80,979	55 6
July 1st to 24th..	181,656	112,415	55 9
Aug. 5th to 30th	202,373	440,941	51 0

and on the 14th the weekly average fell to 48s. 10d.

In the four last years the quantities of wheat cleared for consumption have been as follows:—

	From January 1 to July 31, in seven months.	August and September at harvest time—two months.
1840.....	784,538	1,561,933
1841.....	308,408	2,810,824
1842.....	646,066	2,320,515
1843.....	61,575	844,984
1844 first 6 months	233,782	last 8 weeks .. 553,356

What a subject for the reflection of farmers and landlords!!!

We thus see that every year the effect of this law is to accumulate a stock of foreign grain, to be thrown on the market, and unnaturally depress it at the very moment when our own farmers have the largest quantity to sell. Can this be called protection to the farmer?—a system which keeps back and accumulates our imports at a time when they are most required, and sustains high prices when he has little or nothing to sell, in order to depress the market when he has his all to dispose of. Can such a system be called protection to the farmer? Is it, then, protection to the consumer? It has as little pretence to the one as the other, for it withholds supplies when most needed. It condemns the consumer in the spring and summer to the unmitigated evils of high prices, without benefit to the producer; it condemns the producer to the competition of an accumulated stock thrown suddenly on the market at the moment when his own produce comes to it in greatest quantities—it is an alternate sacrifice of producer and consumer.

There is, then, surely great hope, when it is acknowledged that there is no obstacle between us and Free Trade but this universally ruinous and absurd system.

MANUFACTURES.—We are happy to announce the completion of various mills and sheds lately erected in Preston, the commencement and progress of which we have previously noticed. The three weaving sheds erected by Mr. R. Threlfall, Messrs. Goodair and Co., and Messrs. Horrocks, Miller, and Co., are now finished, and will be forthwith fitted with looms. The Sovereign mill, purchased and enlarged by Mr. Pickles, is also about to commence working; and Mr. Bashall's mill, on the Maudland estate, is all but roofed. In addition to the above, we may state that the mill of Messrs. J. and A. Leigh is rapidly progressing, and that John Paley, sen., Esq., has commenced the erection of a new mill adjoining his works in Stanley-street. Land has also been purchased by Mr. Lawson, corn-merchant, immediately behind Singleton-row, as the site of a new weaving shed, and another party has successfully treated for land in Ribblesdale-lane for a similar purpose. Lastly, Mr. John Evans, of Chipping, is about to erect a new mill upon a vacant plot of land between Newton-street and Edmond-street, opposite Barton-terrace. These facts are good evidences of the prosperity of our town, and give abundant promise of increased employment to the operative population.—*Preston Guardian*.

To talk of the population of this country as standing in the way, and obstructing the road of its prosperity, is sheer nonsense, or something worse. The population of the United Kingdom is not to be rated, by its extent of territory, as compared with the number of souls and acres in some other countries. Jacob, his family, and his servants, his flocks and his herds, required more extent of land for their subsistence. They were a pastoral community. But Great Britain is chiefly a manufacturing country; and how many thousands of labourers may support themselves and their families upon one square mile of workshop need not be accurately told. No one, casting an eye over the length and breadth of the land, will deny that there is "ample room and verge enough" for twenty times its present actual amount of manufacturing labour; no one, taking a survey of the world, but will admit there is a wide market for their goods. What, then, hinders their full employment? Commercial restrictions—colonial preferences and protections—Corn Laws, and a great many other opposing circumstances "too numerous to mention." Abolish them, then—away with them all!—*Lloyd's Weekly London Newspaper*.

The Taïti Question (Iles Taïti, Esquisses Historiques et Géographiques, par MM. Dumoulin and Desgraz.) Paris: Berthand. London: Dulau.

The group of the Society Islands, of which Taïti is the most important both in wealth and size, forms the first cluster in that chain of islands which seems designed by nature to unite Asia with the continents of Australia and America. With the groups of the Marquesas and the Gambier Islands it forms a vast triangle, the sides of which enclose an immense number of low wooded islets, most of which are inhabited. The Pomotou cluster is almost wholly the produce of the coral insect, that wondrous builder of marble rocks beneath the waters of the ocean. All persons who have recently visited the Oceanic Isles have been struck with the aptitude of the natives for navigation; they are in many places, but more particularly in the Tonga and Samoa islands, a bold adventurous race, frequently engaged in buccaneering expeditions, and making distant voyages in their war canoes to plunder weaker populations. Many of them have entered into the service of the South Sea whalers, and have been found excellent sailors, though they have not always been fairly treated by their European employers. The gradual spread of civilization has begun to teach these islanders the value of their internal resources, and at the same time has created a desire for the acquisition of those articles which belong not so much to luxury as to comfortable existence.

A perfectly free trade by which the islanders could exchange their raw produce for the manufactured goods of Europe would, in the natural course of events, lead the natives to attend to the cultivation of the soil and the development of their internal resources, while the payment which they would thus be enabled to offer for manufactures would attract competing merchants to their markets. Unfortunately there are men who believe that it is possible so to direct commerce as to ensure to some favoured party a disproportionate share of gain, and, acting under this delusion, they prefer schemes of colonization and forcible occupation to the free interchange of commodities, not discovering until it is too late that they must pay a higher price for an exclusive market than can ever be remunerated by all the traffic such a market could afford. The rage for colonization which has taken possession of a large and influential body of the French people is based on the mistaken notion that the extent of the British colonial empire is the main source of the commercial wealth of England; but the colonial trade forms a very insignificant item in British commerce, and our intercourse with the United States has become infinitely more lucrative and more extensive since they achieved their independence than when they were British provinces.

The considerations involved in the question of the occupation of Taïti are complicated by religious animosities, which, after having long disturbed the Old World, seem destined to raise difficulties in the New, and change the Pacific into the Belligerent Ocean. Messrs. Dumoulin and Desgraz have discussed this question with great candour and moderation, and we shall extract their views of the subject:—

"On one side the Protestants, who have formed settlements in most of the islands of the archipelago, where they have acquired such influence as to be perfect masters, do not hesitate to use violent methods to remove the Catholic priests from their dominions. The latter, in their turn, far from seeking to conquer new lands to the Christian faith and to extend civilization to those barbarous tribes, where cannibalism and prostitution are still honoured customs, seem, on the contrary, anxious to place themselves in constant rivalry with the Protestants, and to wrest from them their proselytes."

The authors then proceed to examine at some length the results of the efforts made by the Catholic missionaries, and we think that a portion of their account may be very beneficially laid before our readers:—

"The natives retain nothing of the instructions of our missionaries except what has been impressed upon their senses; amongst them ceremonies, and the external signs by which adoration is expressed, constitute the whole of the religion which they have embraced. To be convinced of this truth it is sufficient to open the annals of the missions, and read what the Bishop of Maronia has written:—'You cannot believe,' he says, 'the effect which the sight of devotional images has produced on our islanders. They have come fifty leagues to admire a coarsely painted picture, representing the Nativity and the Adoration of the Shepherds. All the natives that have seen our paintings have been filled with wonder. The room in which the altar of our mission is raised, is adorned with several large statues, before each of which it is not rare to find our savages in a state of contemplativeness which renders their visits rather long, but which assuredly confers benefit on their souls. In all the chapels which, please God, we shall erect, we shall not fail to place statues and pictures.' Hear the further testimony of the Rev. Father Servant, who writes from New Zealand:—'The ornaments of the chapel greatly delight the natives, the beauty of our ceremonies enchants

* We have followed the loose geographical arrangement which has been adopted both by French and English writers, but Taïti properly belongs to the Georgian group, which is both naturally and politically disconnected from the Society Islands.

them, their eyes seem never wearied of beholding them. Church music has also great attractions for them, and seems to produce a most lively impression. Doubtless the decorations of chapels, the luxury of religious ceremonies, presenting to them a new and lively spectacle, cannot fail to produce a lively effect, and even to realize several conversions; but will such means produce deep convictions? Will each convert be able to edify his points of doctrine, and to become Catholic or Protestant, according to his own belief? Would it be reasonable to expect from persons still barbarous sufficient discernment as even to comprehend the differences which exist between Catholics and Protestants? But our good fathers are satisfied with far less; a few drops of water sprinkled in secret on the head of a poor infant, are considered as a triumph by the Catholic missionaries. Thus the Rev. Mr. Bataillon, who appears to have invented a very simple process for attaining this object, hastens to communicate to his brethren; let us cite his words:—"I have always with me a flask of scented water and a flask of plain water; I begin by sprinkling a little of the scented on the head of the infant, under pretence of comforting the baby, and whilst the mother takes pleasure in spreading it over the baby's face, I dexterously change the flask and use the water which conveys regeneration, without any suspicion being excited of the nature of the action."

We also read the following in a letter inserted in the 'Annals of the Propaganda':—"But the child which we baptized so hastily, since it seemed at its last hour, died last night, to our great joy, for its death ensures its eternal happiness."

The errors which these writers ascribe to the Protestant missionaries are chiefly the adoption of too rigorous laws, and a selfish anxiety to engross the commerce or the produce of the countries in which they are stationed. They state that under the missionary codes, prostitution, intemperance, working on the Sunday, dancing, and even smoking, have been declared crimes, which are to be punished by stripes, or by pecuniary fines; and that such severity threatens to produce a dangerous reaction wherever the missionaries have established their empire. The authors further complain that the Protestants have not paid sufficient attention to the physical improvement of the converts by teaching them improved modes of agriculture and the rudiments of manufacture. Our authors then severely censure the Catholic missionaries for having neglected those islands where the name of Christ had never been heard, to interfere with the labours of the Protestants:—

"A glorious field was opened to them; some of the finest archipelagos remained untouched, such as the Isles of Samoa, of Viti, of Salomon, Papouasia, and New Caledonia; all the inhabitants of these lands were still idolaters, and promised the noblest conquests for religion and civilization. What, then, were the points on which our missionaries first sought to convert the natives. Two bishops were sent to the Pacific, the first to New Zealand, the second to the Gambler Islands. Instead of going to preach to the nations still sunk in idolatry, it was on the islands of Tahiti and Hawaii, already converted many years before by English or American missions, that our missionaries from the Gambler Islands sought to establish themselves at the risk of kindling a religious war. The French missionaries from New Zealand sought to convert the natives of the Tonga Islands, already Protestants, whilst the inhabitants of the neighbouring Viti Islands are still cannibals, and almost daily massacre the crews of the vessels cast upon their inhospitable shores. . . . Nothing can palliate the ill treatment which, at the instigation of Protestants, our priests received in these islands; but our impartiality also forces us to declare, that the design of the Catholics was pernicious and even culpable in the eyes of society, when they intruded themselves on ground already occupied by Protestants, for the purpose of making proselytes."

We shall offer no comment of our own on the religious divisions involved in this question, but we must say that, if the rivalries of missionaries should lead to a war between the two nations of Christian Europe which confessedly take the lead in civilization, the effect on the progress of Christianity must be fatal, for even savages will see that this holy religion can be perverted into a pretext for plunder and slaughter.

The importance of the French protectorate of Tahiti has been monstrously overrated. The group of coral islands to which Tahiti belongs contains about 300,000 acres of land capable of cultivation, and rather less than 20,000 inhabitants. Its occupation may serve to gratify national vanity, but it could in no conceivable way tend to increase the strength or improve the commerce of France. Its harbours are already open to trade, and whoever supplies the natives on the cheapest terms will command a preference. There is every probability that, under a judicious system of administration, the population would rapidly increase, and the internal resources of the islands would be still more rapidly developed; but these results are far more likely to be retarded than accelerated by a European protectorate. All that France could gain by the occupation of those islands would be a little addition of patronage to the Government in the appointment of functionaries to be paid by the French people. The islands cannot import until they have something to export, and as yet their exports are utterly contemptible.

The authors of the volumes before us have protested strongly against the occupation of the Oceanic Isles as a means of converting the natives to Catholicity instead of to Protestantism, though they hint in no very covert form that this has been a great recommendation of the protectorate of Tahiti at the Tuileries. While, however, they protest against this religious delusion, they have raised up a pe-

litical chimera, which they set forth as the sure means of establishing a French empire in the Pacific. They recommend that the French should occupy the Straits of Magellan as the English do the Cape of Good Hope; that all the Polynesian islands which have a convenient position for controlling the commerce between Asia and the western coasts of America should be similarly seized, and that then the French nation should by some inexplicable means secure to itself the monopoly of all intercourse between the states surrounding the Pacific. If France adopted all the means here recommended, the end which they were framed to attain would be as distant as ever. France could hold a share in such a commerce only by fair competition, or by a coerced monopoly. But what would be the cost of effective coercion? What would be the number of the navy and the amount of the custom-houses necessary to prevent smuggling through the length and breadth of the Pacific? We do not here pretend to discuss the question whether colonization is under any circumstances an advisable system; but we must say that such a system of colonization as is propounded in these volumes, and such reasons as are propounded for its adoption, belong more to the schemes for founding empires in the air than for acquiring dominion either by land or by sea.

Nothing can be more ludicrous than those French schemes of oceanic empire, except the alarm which some have attempted to excite in England at their probable realization. It is of course the duty of the British Government to prevent those markets being closed against British commerce, which British enterprise and British industry alone have opened; but this has not been, and is not likely to be attempted. Whether the semi-barbarous Queen of some twenty thousand savages has the tricolor flag or the union jack erected over her wooden hut, is a matter of as little importance to England and France as whether the lady wears a white or a red petticoat.

Monopoly is, in fact, at the bottom of all the disputes which have been raised respecting Tahiti; they began in religious monopoly, are continued in the spirit of political monopoly, and are avowed by many French writers to be designed to terminate in commercial monopoly. Here, then, is another added to the many proofs that Free Trade is the best security for the peace of nations, and that the spirit of war is identical with the spirit of exclusiveness. It would be intelligible to propose the foundation of a French colony in the Pacific, if the French commerce in that ocean was so extensive as to render it desirable to have harbours for the protection and supply of the vessels engaged in the traffic; but to found colonies in the hope of creating such a commerce, is not less preposterous than would be the erection of cities in the midst of deserts, and taking chance for their obtaining inhabitants. If, however, such a course of policy be adopted by our neighbours, we shall watch the results with far more of curiosity than of jealousy, for the success of the scheme would lead to an extension of commerce, in which it would be impossible to prevent us from having a share, and its failure would add one more to the countless proofs of the utter absurdity of monopoly.

Heeren's *Researches*, French and English translation. London: Talboys, Paris, Didot.

[Fourth Notice.]

In our former articles we have shown the great importance of the Nile to the people of Egypt, but have only slightly noticed its connexion with the agriculture of the country. Agriculture in Egypt appears to have been taken under the protection of the priests and kings. Even in the representation of a victorious monarch coming to pay homage to the gods for their protection, the importance of agriculture is manifested amid all the "pride, pomp, and circumstance of glorious war," when the king comes forward to present his offering, a priest holds out to him a bundle of corn, which the monarch cuts through with a sickle before depositing his gifts on the altar. Husbandry, indeed, was the parent of civilization; but in Egypt there were many circumstances which rendered it of peculiar importance. The most influential of these was the limited extent of the fertile ground, the complete dependence of the farmer on irrigation for success, and the small proportion of the year to which agricultural operations were consequently confined. Indeed, the most important part of the Egyptian farmer's labours was to superintend the distribution of the overflowings of the Nile, and this must have been a very difficult task in those seasons when the river did not rise to a sufficient height. Hence Moses particularly alludes to the abundance of rivers and springs in Canaan, when he describes the superiority of the Promised Land over that of Egypt. "The land, whither thou goest in to possess it, is not as the land of Egypt, from whence ye came out, where thou sowedst thy seed, and wateredst it with thy foot, as a garden of herbs: but the land, whither ye go to possess it, is a land of hills and valleys, and drinketh water of the rain of heaven: a land which the Lord thy God loveth for: the eyes of the

Lord thy God are always upon it, from the beginning of the year even unto the end of the year." (Deut. xi. 10—12.) The inundation manured the ground, and rendered further preparation unnecessary. The plough was chiefly used to turn a light earth over the seed, and was indifferently used as a pickaxe when used by men, or as the ordinary plough when drawn by oxen. There is no difference of shape between the hand-plough and the ox-plough; when oxen were employed, the pointed side was merely laid upon the ground, and the handle harnessed very rudely to a collar round the neck of the draught animals. It is probable that the hand-plough was only used when the waters had so long subsided

as to render the soil hard and stiff from the action of the sun. It was a very unwieldy instrument, and the use of it was most laborious and fatiguing; hence the draught-plough was always preferred whenever its use could be made available.

The ox was from the remotest ages the animal most commonly employed in agricultural labour, and it still continues to be so in most oriental nations. A body of Bedouins making an incursion on peaceful agriculturists, would probably find things in the state in which Job's messenger described them: "And there came a messenger unto Job, and said, The oxen were plowing, and the asses feeding beside them: and the Sabeans fell upon them, and took them away; yea, they have slain the servants with the edge of the sword; and I only am escaped alone to tell thee." Job i. 14, 15. On this account we find the Levitical law very minute in its precepts for regulating the damages to be assessed for injuries committed by oxen, or inflicted on them; and this consideration shows how forcible is Job's description of the violence of the wicked: "They drive away the ass of the fatherless, they take the widow's ox for a pledge." Job xxiv. 3.

The connexion between the ox and his master was always regarded both by the Egyptians and the Israelites as a social tie; and their mutual dependence on each other is the subject of frequent allusions in the prophetic writings. Thus Isaiah illustrates the gross insensibility of the disobedient Jews, by setting them lower than the beasts of the field: "The ox knoweth his owner, and the ass his master's crib; but Israel doth not know, my people doth not consider." Isaiah i. 3.

Hosea has given an elegant turn to the same image, by using it as a metaphor or allegory: "I drew them with cords of a man, with bands of love: and I was to them as they that take off the yoke upon their jaws, and I laid meat unto them." Hosea xi. 4. The meaning will be more clear if we preserve the original parallelism of Hebrew poetry in the translation:—

"I drew them with human cords, with the bands of love: And I was to them, as he that lifteth up the yoke upon their cheek;

And I laid down their fodder before them."

The middle clause, which seems rather obscure, is thus simply and clearly explained by Solomon ben Melek: "I was to them at their desire, as they that have compassion on a heifer, lest she be overworked in ploughing; and that lift up the yoke from off her neck, and rest it upon her cheek, that she may not still draw, but rest from her labour an hour or two in the day."

Very little labour was required between sowing and reaping, for there are scarcely any weeds in Egypt; no traces of the intermediate operations between seed-time and harvest, so important in our system of farming, can be discovered on the monuments. They usually sowed in November, and the harvest was ripe in April. The corn was cut with a sickle; its shape does not differ materially from that used at the present day.

"It will be seen that the reapers merely cut the ears off, for straw was of no value in Egypt; it was

were a better material for thatch than their cattle and horses seem rarely, if ever, to have been stabled, and consequently litter was not required; the chaff was preferred to the straw for stuffing beds. We find it recorded, that in the seven years of plenty "the earth brought forth by handfuls," a singular expression, which seems to allude not only to the great luxuriance of the crop, but also to this custom of cutting away only so much of the stalks as the reaper grasped in his hand. We find, however, that straw was used in the manufacture of bricks: the stems of the corn left by the reapers were plucked up by the hand for the brick-makers; and as this was both tedious and toilsome, we can estimate the injustice of Pharaoh when he refused to supply straw to the captive Israelites. We must remember that the tyrannical

Pharaoh issued his orders, prohibiting the supply of straw, about two months before the time of harvest. If, therefore, the straw had not been usually left standing in the fields, he would have required from the Israelites a physical impossibility; but the narrative shows us that the Israelites found the stems of the last year's harvest standing in the fields. "So the people were scattered abroad throughout all the land of Egypt to gather stubble instead of straw." (Exod. v. 12.) By stubble, the historian clearly means the stalks that remained from the last year's harvest. We find no traces of gleaning on any of the Egyptian monuments. It has been observed by the Jewish rabbins that where the harvests were most abundant the least corn was left for the gleaner. Hence Isaiah refers to the reaping of the harvest in the fertile valley of Rephaim, near Jerusalem, as an emblem of the total sweeping away of the Israelites by the King of Assyria:—"The glory of Jacob shall be made thin, and the fatness of his flesh shall wax lean. And it shall be as when the harvestman gathereth the corn, and reapeth the ears with his arm; and it shall be as he that gathereth ears in the valley of Rephaim." (Isaiah xvii. 4, 5.) Thus in Egypt and Palestine the rapacity of the lords of corn was always found to increase in proportion to the advantages which they possessed over the rest of the community; and hence it was necessary in the Mosaic legislation to make special provision for the rights of the poor to the gleanings of the field. When the corn was cut down it was not, as with us, bound into sheaves, the straw having been neglected by the reapers, but the ears were collected in large baskets and carried to the threshing-floor. There is no appearance of joy or pleasure among those engaged in bringing home the harvest; the agricultural labourers of ancient Egypt, like those of modern England, were screwed down to the lowest rate of remuneration which would support existence by the lords of the soil, but they were spared the insult of the hypocritical pretence that restrictions were imposed upon their food for their own benefit.

The threshing-floor was a place of considerable importance; it was formed of clay, well tempered and hardened, so as to become like a single marble slab. So important were these places, that we find threshing-floors mentioned as geographical points of equal importance with cities; indeed, it is probable that they were prepared at the joint expense of several communities, and formed a kind of centre of union for the surrounding districts. Threshing-floors are always mentioned, in the more ancient books of the Old Testament, as places universally known. Thus, in the account of the burial of Jacob, we find the halting-place of the funeral procession identified by a threshing-floor, whose name was changed in consequence of the solemnities by which the patriarch's loss was deplored:—"And they came to the threshing-floor of Atad, which is

beyond Jordan, and there they mourned with a great and very sore lamentation; and he made a mourning for his father seven days. And when the inhabitants of the land, the Canaanites, saw the mourning in the floor of Atad, they said, This is a grievous mourning to the Egyptians: wherefore the name of it was called Abel-mizraim, which is beyond Jordan." (Gen. l. 10, 11.)

Threshing was always performed by oxen, a custom to which we find frequent reference in the Holy Scriptures. One of the Levitical precepts was, "Thou shalt not muzzle the ox that treadeth out the corn."

Isaiah notices four different kinds of threshing in a passage thus translated by Bishop Lowth:—

"The dill is not beaten out with the corn-drag;
Nor is the wheel of the wain made to turn upon the cummin;
But the dill is beaten out with the staff,
And the cummin with the flail, but the bread corn with the threshing-wain;
But not for ever will he continue thus to thresh it;
Nor to vex it with the wheel of his wain,
Nor to bruise it with the hoofs of his cattle."
(Isa. xxviii. 27, 28.)

It is obvious that small and tender seeds would be crushed to pieces if trodden out by oxen, and they were therefore extracted from the husk by the staff or flail. The seed of the lotus we shall find hereafter was extracted by a peculiar instrument. Threshing by the drag or wain, which is a frame of rough planks, with or without serrated rollers, is still common in Egypt. It is called the *ndreg*, and is drawn by oxen over the corn-sheaves, the driver sitting upon it, in order to add to its weight.

Unthreshed ears, clods of earth, and gross impurities, were separated by a sieve, and the winnowed heap, which contained many ears of corn not yet broken, or at least imperfectly crushed out, was again subjected to the threshing of the oxen. After this second operation, the corn was once more flung against the wind by a shovel, or a square instrument, like a board slightly scooped, similar to the shovels used in corn-stores, but without a handle, called by the Hebrews *mizreh*, which, in our translation of Isaiah, is called a fan. "The oxen likewise, and the asses that plow the ground, shall eat clean provender, which hath been winnowed with the shovel and with the fan." (Isa. xxx. 24.)

It would appear, from a passage in St. Matthew, that the fan was considered the more perfect winnowing implement, for the Baptist, describing the advent of Christ, says, "Whose fan is in his hand, and he will thoroughly purge his floor, and gather his wheat into the garner, but the chaff he will burn with unquenchable fire." (Matt. iii. 12.)

The scattered straw, and the light chaff entangled in the stubble, were burned in Syria and Palestine for the purpose of manuring the ground, but this does not appear to have been the practice in Egypt, where, as we have already said, the fertility of the soil depended wholly on irrigation. The winnowed corn was removed to the granary in measured vessels of equal capacity, to facilitate the keeping of a proper account. The royal officer, with his pen and tablet, is always present at the winnowing and storing. A great portion of the royal revenues was derived from a corn-rent, and hence the officer took an accurate account of the produce. This was called "numbering," and was effected by measurement. The vessels in which the corn was carried from the winnowing floor to the granary were all of equal capacity, and officers were appointed to keep a reckoning in both places, that they might act as a check upon each other. We find that the practice of "numbering" existed before Joseph rendered the King proprietor of all the land of Egypt. "And Joseph gathered corn as the sand of the sea, very much, until he left numbering: for it was without number." (Gen. xli. 49.) In consequence of the imperfection of the threshing, great attention was paid to the operation of winnowing, which was several times repeated until the corn was perfectly clean.

The image of the threshing and winnowing is frequently used by the Hebrew poets with great strength and beauty, to express the utter destruction and dispersion of God's enemies, or the separation of the wicked from the righteous. Thus in Isaiah's description of the overthrow of Babylon:—"O my threshing, and the corn of my floor: that which I have heard of the Lord of hosts, the God of Israel, have I declared unto you." (Isaiah xxi. 10.)

Our translators have here used the word "threshing" in a passive sense, to express the object or matter threshed, that is, the population on whom God declares that he shall exercise a discipline as severe as that to which corn is subjected when spread upon the threshing-floor. It may be remarked that the words rendered "corn of my floor," signify in Hebrew "son of my floor," for it is an idiom of the Hebrew language to call the effect, the object, the adjunct, anything that belongs in almost any way to any other, the son of it. After the first clause, we find one of those sudden changes of person so common in Hebrew poetry; the prophet abruptly breaks off the speech of God, and begins to speak in his own person. This remark-

able verse briefly and appropriately gives the application, end, and design of the prophecy, partly in the person of God, partly in that of the prophet: its meaning is, "O my people, which for your punishment I shall make subject to the Babylonians, to try and to prove you, and to separate the chaff from the corn, the good from the bad among you: hear this for your consolation: your punishment, your slavery, and oppression will have an end in the destruction of your oppressors."

Extensive stores were provided for the reception of the corn, and, from the accounts we have received of them, there can be no doubt that they would have contained a supply sufficient for the support of the population during the seven years of famine. The vintage was of far less importance in Egypt than in Palestine, for the grapes that grow in the valley of the Nile, unless very carefully cultivated, are small and thin. Hence arose the surprise of the spies at the size of the enormous clusters of grapes which they found near Eshcol. In another article we shall take a glance at the progress of manufactures in Egypt, and examine their connexion with the commerce of Tyre.

ABUNDANCE OF FOOD—AGRICULTURAL DISTRESS.

To secure a sufficiency of good wholesome food to the masses of the people, and to secure the people in the enjoyment of this food, once that it has been produced, this, after all, is, or ought to be, the great end and aim of that complicated machine which we call government—this is, or ought to be, the end and aim of all our registration courts, our hustings, our polling booths, and our parliamentary talking. But this, or part of it at least—the abundance we mean; the distribution of that abundance is another and far more difficult question—we are likely to have this season, not in consequence of our Reform Bill, with its registrations, and hustings, and polling booths, and parliamentary talkers, but in defiance of them all. We are to have a good harvest; as a consequence, we are to have cheap corn; and again as a consequence, we are likely to have "agricultural distress"! Low grain prices will give the farmers a colourable pretence for raising the cry of agricultural distress; but we cannot see how their distress can be greater with low prices and a large quantity to sell, than with high prices and a small quantity of disposable produce. The fact is, that the agriculturists as a body are *always* "distressed." A good season is no blessing to them; for this reason—they are rack-rented. High prices are no blessing to them; for this reason—they are rack-rented. Corn Laws are no blessing to them; still for this reason—they are rack-rented; and the repeal of the Corn Laws would leave them much about where they are, unless they could get quit of the crushing burden of rack-rents. Rent is the "evil genius" of the farmers; and we can see no amelioration for them except in a thorough and radical revision of their relation to their landlords. Such a revision must be effected; rent, like every human thing, must fall. This is one of the great social questions which will agitate society after the repeal of the Corn Laws.—*Bradford Observer*.

DISTRIBUTION SHOULD FOLLOW PRODUCTION.—We like the benefits of every improvement and every discovery to be conferred upon all classes in society. Hitherto the upper classes have enjoyed almost exclusively the advantages accruing from our rapid progress in science, and our long-continued peace. There has been a large increase of production by the same labour, and yet the masses have scarcely known any abatement of toil, or obtained any considerable increase of enjoyment. Cotemporary with increased methods of production, the Legislature has taken care to transfer the results from the many to the few. It is certainly gratifying to anticipate the great increase of employment that must result from the number of new mills, weaving sheds, and manufactories, now in progress of erection; but unless our commercial laws be changed, so as to allow the produce to be sold to countries whose only means of payment consists of food, we fear that those engaged therein will be denied the enlarged benefit which might reasonably be expected from so great an extension of our powers of production. How apparent it must be to every considerate workman that if his employer can sell his goods he has a security for continued employment; but if not, that the workpeople must be the great sufferers. With good harvests, producing cheap food, the home demand may keep the mills at work; but as these are contingent upon the seasons, over which we have no control, how important it is for all to combine together to insist upon a free access to the harvests of other countries, and thus prevent the return of such miseries as were endured by the people during the late depression. We are glad, indeed, to find that a better feeling is beginning to exist between men and masters, which we trust will lead to united efforts for the benefit of both. We have lately heard of two threatened "turn-outs" being prevented, and the differences adjusted, by the free and kindly intercourse and deliberation of the employers with the employed. There is no doubt that if the men, instead of being excited and misled by reckless agitators, would calmly represent their requirements to employers, and if masters, on the other hand, would reasonably consider the merits of honest labour, we might hereafter entirely avoid those movements of the masses which ever and anon threaten the destruction of our social edifice. And if both masters and men, instead of supporting faction, would endeavour to understand the principles of national economy, and the advantages—nay, the indispensable necessity—of unrestrained exchanges, there is little doubt that such legislative changes would be the result as would enable the employer to reap the reward of enterprise, and the employed to receive the just recompense of toil. We rejoice to repeat that we see indications of better feeling between these two classes, and, in contemplating the almost infinite capabilities of our country, we cannot but reiterate the words of the beautiful prayer at the funeral of the venerable Dalton:—"May the time hasten when men will find out the true method of so distributing the bountiful provision for human subsistence and comfort, even for this life, among each other, that the poorest, living a life of usefulness, may have in all things necessary to the comfort of their life."—*Practical Guardian*.

covered the same offence, but said, it appearing that this was the first time he had been before them, they would give him the advantage of it. To pay fine and costs, 10s. each, and to do the same month's hard labour. *Rowling paid the 10s.* [This was giving him an 'advantage' with a vengeance—to pay 10s. for having been with a person who picked up three empty snare in a wheat field?—*Aylesbury News.*]

A LONG MINORITY.

The monopolist newspapers are very sedulously quoting passages from a very weak pamphlet of Mr. Alison, published by the "Central Protection Society." One which we have several times met with is headed, "The capacity of the British soil to support three times its present population," and which, after some statistical statements which are purely imaginary, the monopolist writer says:—

"Nothing, therefore, seems more reasonable than to hold that the British Islands contain within themselves the means of maintaining in comfort at least triple their present population; and, consequently, all arguments drawn from the supposed impossibility of adequately maintaining our population from our own agricultural produce, or of the inhabitants soon approaching the limits assigned to the increasing subsistence, are perfectly chimerical and absurd. While, on the other hand, these facts demonstrate that at least triple the amount of subsistence may be extracted from the soil of the British Islands than is at present obtained; and consequently triple the vent for our manufactures obtained in the home market from that which is at present afforded, and which even now, in its comparatively infantile state, takes off 130,000,000 worth of our home fabrics, being above four times the amount of our exports to all foreign countries put together. What, therefore, can be so unwise as to run the risk of injuring an interest capable of such prodigious extension, and on which such enormous classes are dependent, which is withal entirely within ourselves, and beyond the reach of foreign jealousy or attack, for one of far inferior amount, held by an infinitely more precarious tenure, and susceptible of a much less considerable extension?"—*From Mr. Alison's Pamphlet on Free Trade and Protection.*

Now, this is literally reading the history of British husbandry backwards. We have a firm persuasion that, under favourable circumstances, the production of food, grain and meat, in this country might be increased to an indefinite extent; but how is it that the home market, so dependent upon an agricultural demand, is still in "an infantile state" after thirty years of landlord-protective drynursing? Surely the landed interest has had a minority sufficiently long. An intelligent farmer lately said, at a farmers' club, when some one had been talking of recent rural improvements performed and projected, and had remarked that agriculture is in its infancy, that "It was true our husbandry is in its infancy, and he believed it would not emerge from that state until it is relieved from some of the swaddling clothes by which it is at present confined." So we say to Mr. Alison, if the agricultural interest is capable of such prodigious extension as he contemplates, why has not that extension taken place during thirty years of protection, if protection could conduce to that end? But the truth is, the shackles imposed by the Corn Laws, and their consequences, have prevented that extension. And it is a fact which no fictitious statistics can displace, and no wordy nonsense conceal, that precisely as protection has been diminished, has British husbandry shown signs of advancement. That it may soon attain its majority, and escape from the tutelage of the Richmonds and the Buckinghams, by a total repeal of all restrictions on the corn trade, is the earnest wish of every agriculturist who really understands the capacity of our soil for increased production.

DISTRESS OF THE LABOURING CLASS.—The reports of the state of agricultural labour, which we have received from different districts of Bedfordshire, have drawn our attention to the want of employment existing in almost every parish of the county. There are many circumstances in connexion with the moral condition of the peasantry which escape the notice of the prosperous yeoman, who is occupied with the management of his farm, and seldom contemplates anything beyond it; but these circumstances, when brought before the public, force on him reflection and the necessity of an improved course of action. We therefore proceed to recount some facts for consideration. At Harrold, we are told that in the midst of harvest forty labourers are without work. At Cranfield, we are informed that 12s. per week and two pints of beer a day are the wages of a harvest time, 9s. per week are the usual wages of a horse-keeper, and 8s. per week are the wages of labourers when they can get work, which is so scarce that many families are without it, and almost starving. We ask the farmers, the clergyman of the parish, the landowners in the lordship, what is to become of the poor fellows who are willing to work and cannot get it, what is to be done with them in the winter, when work will be scarcer still than at present? Are these men to be debased to pauperism—are they to be employed in increasing the national wealth, or are they only to be kept to consume it in demoralization and idleness? We propose to the above gentlemen that a piece of land be rented and cultivated by spade labour, and the produce of it, after paying a fair rent for the land, be divided amongst the labourers according to each man's labour done on the parish land; and that he be allowed to till the ground by the sweat of his brow for an honest and improved livelihood. The state of the people now at the end of August is frightful. The shopkeepers are without trade, and the labourers are without work. At Cranfield, we were assured that not one bullock has been killed during the whole month of harvest, whilst at times two and three bullocks have been killed in a week. The state of that village is not worse, we may observe, than many other places. How long it may be borne depends on the mercy of God to the holders of the capital and land of the country. Before hatred shall be engendered, we exhort them to place within the reach of every one, anxious to live by honest labour, the means to do so, and they will enrich a nation and improve the morals of the people. What pleasure the corporation of Bedford would confer on many of the industrious classes, if the town lands were to be cultivated by the poor at allotment prices! and other inhabitants of the town would derive advantage from the wealth created by the happy labourers who may be so fortunate as to occupy the land, for they would have more money to exchange with the tradesmen in the town. These are noblesse for men to stand idling with their hands feeling the bottom of their empty pockets. They must be employed to get food and the necessities of life for themselves and families, or society will pass into disorganization.—*Bedford Mercury, a monopolist paper.*

TO COUNTRY SUBSCRIBERS.

Any person forwarding 5s. 3d. by Post-office order, to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the LEAGUE forwarded by post on the days of publication. Subscriptions for the paper may also be left, with J. Gadaby, Newall's-buildings, Manchester; and the LEAGUE may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

POSTSCRIPT.

LONDON, Saturday Morning, September 7, 1844.

This week has been one of more political excitement than could have been expected in the proverbially dull month of September. The Queen's Speech at the prorogation of Parliament has been delivered by the royal commissioners; the iniquitous sentence on Mr. O'Connell has been reversed by the House of Lords; and a vacancy has occurred in the representation of North Lancashire, by the resignation of Lord Stanley, who is about to become a member of the Upper House of Parliament. The Queen's Speech will be found in another part of this paper; and, accustomed as we have been for some years to the "no-meaningness" of such documents, we must yield to the present speech the palm of inanity: never before has so little been said in so many words. Ireland was the most prominent topic in the speech with which the session was opened; not the slightest allusion is made to it in the speech by which the session has been closed. Her Majesty is made to congratulate the Parliament on "the completion of many legislative measures, calculated to improve the administration of the law and to promote the public welfare." It is to be desired that those who concocted this speech for her Majesty had ventured to be rather more specific in their congratulations: instead of many, we cannot find any legislative measures by which the law has been improved or the public welfare advanced. Lord Brougham's measure for the abolition of imprisonment for debt is bad in itself, and still worse when viewed as a substitute for that framed by Lord Cottenham; the Factories' Bill is an elaborate failure, for it will be impossible to enforce its petty and complicated details; and the changes in the Poor Law are merely precursors of new legislation.

Her Majesty is next made to eulogize Sir Robert Peel's monetary system and financial regulations. We shall not carp at the praise; the Premier's laurels are too few to render it worth while to contest his claim to three or four leaves of the chaplet.

We share in the pleasure with which assurances were given that the blessings of peace will be maintained, and we hope that tranquillity will continue abroad and at home. We must, however, remind our rulers that perfect tranquillity can only be perpetuated by perfect justice, and that so long as the consumers of this country are onerously taxed for the benefit of a few monopolists, so long will there be a spirit of just discontent and indignation fermenting below the surface, to which unforeseen chances may give a dangerous and even an irresistible activity.

The reversal of the sentence on O'Connell has been the great topic of the week; it came upon the nation by surprise, and it certainly has been the most important legal decision given in England since the acquittal of Hardy and Horne Tooke. The perilous principle of constructive conspiracy, which would have placed the liberties, and perhaps the lives, of all who sought the repeal of any oppressive law at the discretion of a despotic Minister, has been shivered to atoms by the speech of Lord Denman, a speech which united the profoundness of a lawyer with the sagacity of a statesman and the manly independence of a patriot.

Lord Stanley's removal to the Upper House has given rise to much party speculation; but most people see in it nothing more than Sir Robert Peel's cleverness in removing one of his chief difficulties from the House of Commons, and quietly shelving him in the Hospital for Incurables, as the House of Lords is usually called. A vacancy is thus created for North Lancashire, where no electoral contest has yet taken place, and where it is to be feared that the opponents of monopoly have not paid sufficient attention to the registration. Under such circumstances, little can be hoped from the result of a contest beyond the opportunity that will be afforded for the dissemination of Free-Trade principles, and the preparation for a future struggle against the feudal domination which the monopolists of land have imposed upon their serfs, who are mocked by the nickname of independent voters.

BOLTON BOROUGH REGISTER.—The borough register of electors, after revision by the barristers last year, contained the names of 1252 electors. The lists recently published by the overseers contain 1380 names, an increase of 128, but these proportions may be altered at the revision. The Reformers have made 66 objections to persons on the borough list, and also sent in some claims. The Tories have neither made any claims nor objections.

PROROGATION OF PARLIAMENT.

The House of Lords met at 10 o'clock on Thursday, in order to dispose of a number of judgments in cases of appeal, previously to the Parliament being prorogued by Royal Commission.

This business occupied all the early part of the day. One o'clock was the hour fixed for the Commission, but the judgments were not got through until some time after that hour.

The Commons having been summoned to the bar, and the usual preliminaries gone through,

The LORD CHANCELLOR proceeded to read

THE ROYAL SPEECH.

"MY LORDS AND GENTLEMEN,

"We are commanded by her Majesty, in relieving you from further attendance in Parliament, to express to you the warm acknowledgments of her Majesty for the zeal and assiduity with which you have applied yourselves to the discharge of your public duties during a laborious and protracted session.

"The results of the completion of many legislative measures calculated to improve the administration of the Law, and to promote the public welfare.

"Her Majesty has given her cordial assent to the Bill which you presented to her Majesty for regulating the issue of Bank-notes, and for conferring certain privileges upon the Bank of England for a limited period.

"Her Majesty trusts that these measures will tend to place the pecuniary transactions of the country upon a sounder basis, without imposing any inconvenient restrictions on commercial credit or enterprise.

"We are directed to inform you that her Majesty continues to receive from her Allies, and from all Foreign Powers, assurances of their friendly disposition.

"Her Majesty has recently been engaged in discussions with the Government of the King of the French on events calculated to interrupt the good understanding and friendly relations between this country and France.

"You will rejoice to learn that, by the spirit of justice and moderation which has animated the two Governments, this danger has been happily averted.

"GENTLEMEN OF THE HOUSE OF COMMONS,

"We are commanded by her Majesty to thank you for the readiness with which you voted the supplies for the service of the year.

"Her Majesty has observed with the utmost satisfaction that, by the course to which you have steadily adhered in maintaining inviolate the public faith, and inspiring a just confidence in the stability of the national resources, you have been enabled to make a considerable reduction in the annual charge on account of the interest of the national debt.

"MY LORDS AND GENTLEMEN,

"Her Majesty desires us to congratulate you on the improvement which has taken place in the condition of our manufactures and commerce, and on the prospect that, through the bounty of Divine Providence, we shall enjoy the blessing of an abundant harvest.

"Her Majesty rejoices in the belief that, on your return to your several districts, you will find generally prevailing throughout the country a spirit of loyalty and cheerful obedience to the law.

"Her Majesty is confident that these dispositions, so important to the peaceful development of our resources and to our national strength, will be confirmed and encouraged by your presence and example.

"We are commanded by her Majesty to assure you that, when you shall be called upon to resume the discharge of your parliamentary functions, you may place entire reliance on the cordial co-operation of her Majesty in your endeavours to improve the social condition, and to promote the happiness and contentment of her people."

HOUSE OF COMMONS.—THURSDAY.

The Speaker took the chair at twenty-five minutes to one. There was a considerable number of members present. Those on the Treasury benches, however, very greatly preponderating.

Mr. HOPKINS moved for a new writ for the northern division of Lancashire, in the room of the Right Hon. Lord Stanley, who had accepted the office of Steward of the Chiltern Hundreds. The writ was ordered amidst a considerable sensation in the House.

Earl JERMYN appeared at the bar of the House, and read her Majesty's most gracious Speech, in reply to the Address of congratulation of the House on the recent birth of a Prince.

Mr. T. DUNCOMBE gave notice, that early in the next session of Parliament he should call the attention of the House to the unsatisfactory report of the committee on the Post Office; and that he should also move for the repeal of the ratepaying clauses in the Reform Act.

In answer to a question put by Sir C. NAPIER,—

SIR R. PEEL said it would be satisfactory to the House to learn that he was in a position to say that the proceedings which had been going on on the coast of Morocco would not lead to any occupation of that part of the world to give the slightest uneasiness. All the promises made by France with respect to Morocco had been fulfilled, and he was satisfied would continue to be fulfilled. With respect to the question of Tahiti, he begged to say that discussions had taken place between her Majesty's Government and the Government of France with regard to the events that had taken place there, and that they had ended in such a way as was calculated to continue the most friendly feelings between the two countries. (Hear, hear.) He had the high satisfaction of saying that those discussions had had the most amicable and satisfactory termination that could be desired. That which had occurred between the two countries would, of course, at a future period, be fully communicated to the House and the country. He trusted, however, he should not be pressed further on the subject at that time. (Hear, hear.) Indeed, he felt it his duty to abstain from any further communication to the House than that satisfactory one he was happy to be enabled to make. This, however, he would add, that in everything which had taken place on this Tahiti affair, the honour and interests of England had been most scrupulously regarded. (Ministerial cheers.)

Mr. HINDLEY wished to ask the opinion of the right hon. gentleman (Sir R. Peel) as to the proceedings of the French towards Mr. Pritchard.

SIR R. PEEL said that he must at present decline to go further in his information than he had done, repeating his declaration, that when the proper opportunity offered he

should be brought to prove that the writ which had been done had been done consistently with the honour and true interests of this country. (Hear, hear.)

Mr. T. DUNCOMB said, in consequence of the new writ that had just been moved, he wished to ask if the noble lord alluded to (Lord Stanley) still filled the office of Secretary to her Majesty's Colonies? (Loud cries of "Hear, hear.")

Sir R. PAUL—I have the satisfaction to say that the position of my noble friend (Lord Stanley) in the Colonial department is not in the slightest degree affected by the writ which has just been moved by my hon. friend near me. (Loud laughter from the Ministerial benches, mixed with cries of "Hear, hear.")

Mr. T. DUNCOMB, having observed that he was not aware that his question was of so peculiar a character—especially after the writ which had been moved—as to call forth the ridicule which honourable gentlemen opposite attempted to attach to it, then moved for a copy of the opinions delivered by the Judges in an action of law against Daniel O'Connell and others, together with a copy of the notes taken by the short-hand writer, and the several judgments thereon. He wished especially to ask if the judgment of Lord Denman, which ought to be published all over the world in letters of gold, would be communicated authoritatively to the world. He should move that that noble lord's judgment should be printed, together with the opinions of the Judges on this most important case.

Mr. O. CAVE seconded the motion. Sir R. PAUL deprecated the inconvenience of a debate at a time when they might be interrupted by other business. Whenever the period should arrive he would be prepared to defend the course taken by Government. With respect to the particular motion before the House, he had only to say that he would not offer any opposition to the production of these judgments, and, though he apprehended that there would not be time to send a message to the House of Lords, he would take care that that should not prevent the communication being made to the House of Lords in the usual manner.

Lord J. RUSSELL concurred with the right honourable baronet as to the inconvenience of entering into a discussion upon these judgments at that moment, but he must reassert his opinion, that the trial which Mr. O'Connell and the others had received in Ireland was not that trial which would give an impression of fairness and justice. He should be prepared to enter into a discussion with the right honourable gentleman on the subject, and to maintain his former opinion, more particularly since his opinion had been confirmed by that of the House of Lords, who decided that the conviction was not according to law. (Cheers.) If the right honourable gentleman had, as he asserted that he had, resorted only to the law, and had given the persons accused the full benefit of trial by jury, he should not have complained, whatever might have been the result; but what he complained of was, not a trial by a fair jury, but by a jury elaborately put together for the purpose of conviction (loud cheers), charged by a judge who did not allow any considerations in favour of the accused to come fairly before his mind, but who charged more violently than the Attorney-General accused (loud cheers), and altogether acted towards a prejudiced jury in such a manner as to prevent justice being done to the accused. He trusted that the result of the proceedings would be to prevent any similar examples of such a trial being witnessed again, and that hereafter the people of that country would be allowed to enjoy the full benefit of English institutions (cheers); and that, if justice was not done them in their own country, they would see that in the highest quarters in this country, amongst men of the highest rank, attainments, and abilities, there was a determination to do towards them what they conceived to be justice—not because they belonged to that country, but because they thought that all the subjects of the United Kingdom ought to have the full enjoyment of the inestimable privileges which the people of this country enjoyed.

During some remarks from Sir THOMAS WILDE on the legal bearings of the question, the learned member was interrupted by the Usher of the Black Rod, at the bar, to summon the House to the bar of the House of Lords, to hear the royal assent given to certain bills by commission, and to hear Parliament prorogued.

On the return of the Speaker to the House, attended by several members, the royal speech on the prorogation was read from the chair, and the members separated.

REVERSAL OF THE SENTENCE ON MR. O'CONNELL AND THE OTHER TRAVERSERS.

The House of Lords met again on Monday for the purpose of receiving the opinions of the judges on the writ of error, in the case of the Queen v. O'Connell and others.

Mr. Justice Wightman, Mr. Justice Williams, Mr. Baron Gurney, Mr. Justice Patteson, Lord Chief Baron Pollock, and Lord Chief Justice Tindal were of opinion that the challenge ought to have been allowed in the court below. All the learned judges agreed in pronouncing that the sixth and seventh counts of the indictment were "so bad, that, if the indictment consisted of those counts alone, it would be impossible to give any judgment against the defendants upon the verdict," an opinion directly contrary to that of the four judges of the Court of Queen's Bench in Ireland, who pronounced these counts to be unexceptionable, and upon which, accordingly, as upon the others, they gave their decision against the traversers. Mr. Baron Parke and Mr. Justice Colman were for the reversal of the sentence of the court below, on the ground that there were some bad counts in the indictment; that the defendants had been found guilty upon each; and as the judgment was general, and the quantum of punishment a matter in the discretion of the judges, it was to be presumed that a part, at least, of the punishment must have been awarded upon the bad counts, and that, as it was impossible to ascertain how much had been, as the whole might have been so awarded, the defendants might in fact have been punished for that which was, in law, no offence.

After their lordships had severally delivered their opinions, the further consideration of the case was adjourned to Wednesday.

On Wednesday the House of Lords accordingly met, when, after the decision of the case of "Samuel Gray v. the Queen in error," in which the judgment of the inferior court was reversed, the Lord Chancellor proceeded to deliver his opinion in the case of the Queen v. O'Con-

nell and others. His lordship went minutely into the case, and, having expressed himself in accordance with the majority of the judges, moved that the judgment of the court be affirmed.

Lord Brougham followed on the same side. Lord Denman then delivered his opinion, dwelling chiefly on the challenge of the array, and contending that it ought to have been allowed, and that if such a practice as that with regard to the jury lists were permitted, a "trial by jury, instead of being a protection, would be a mockery, a delusion, and a snare." It appeared to him that the challenge to the array on the ground of the omission of several names ought to have been allowed. His lordship fortified his opinion on this point by that of Mr. Justice Coleridge (who, from illness, was prevented from attending), who entirely coincided with him.

Lord Cottenham said that, after the fullest consideration, he had come to the conclusion that the opinion expressed by the majority of the learned judges was wrong. He had formed his opinion early in the argument, and had heard no reason since given why he should change it.

Lord Campbell contended, among other points, that the parties ought not to have been tried by a jury struck from a defective list, but on the challenge the panel ought to have been quashed.

The question having been put by the Lord Chancellor, Lord Wharncliffe recommended such of their lordships as were not learned in the law, and had not heard the whole case, to abstain from voting, on the ground that their voting might lessen the authority of their lordships' House as a court of justice.

Lord Brougham, lamenting the decision of his noble and learned friends, agreed in the recommendation of the noble lord.

The lay lords accordingly retired behind the woolsack. The amendment of Lord Campbell was then put, and carried in the affirmative.

The judgment of the court below was therefore pronounced reversed.

EPITOME OF NEWS.

FOREIGN.

FRANCE AND ENGLAND.—The *Siecle* of Tuesday states, that the affair of Tahiti still caused the utmost uneasiness to the Cabinet, which was threatened with dissolution. The President of the Council, after a tolerably long resistance, agreed to the recall of M. d'Aubigny.

We see by the provincial journals that public rejoicings have taken place in many parts of France, in honour of the successes obtained by Marshal Bugeaud and the Prince de Joinville.

The French Minister of the Interior has ordered a medal to be struck at the mint in commemoration of the battle of Isly.

LOVE YOUR ENEMIES.—The Bishop of Chalons-sur-Marne has issued a circular, directing all the clergy of his diocese to render, during one week, public thanks to Heaven for the "glorious" successes obtained by the French in Africa, and prayers for the further protection of the Most High.

THE VISIT OF LOUIS PHILIPPE TO ENGLAND.—The *Courrier Francais* says:—"Some journals have announced that the King's journey to England was postponed until after the arrangement of the Tahiti affair. It is now affirmed that this matter is settled, and that the journey will take place speedily. A medal, destined to perpetuate the remembrance of his visit, is already being prepared at the mint."

TRADE OF FRANCE.—Great activity is at present manifested at Nîmes in all branches of its silk manufactures. The number of commands has rendered it difficult to find a sufficiency of workmen even at higher prices than usual.

FRENCH MARINE.—The *Paris Le Commerce*, in an article upon the commercial condition of France during the last three years, takes occasion to admit and lament the comparatively small extent of its commercial marine. The tonnage, in fact, of the merchant vessels belonging to France is stationary in amount. The tonnage of the foreign vessels which have entered French ports has been, for the last three years, steadily increasing, while that of native vessels remains almost stationary, and in matters of this kind, no progress means backward progress. The general small size of the merchant vessels of France is also admitted and deplored. In fact, in increase of size, and in number of sailors, the French commercial marine has made no progress for fifteen years, while we have been advancing steadily and rapidly.—*Chronicle*.

PRICE OF BREAD AT PARIS.—The price of bread at Paris has experienced a slight reduction. The 4lb. loaf, which was sold at 70c. during the month of August, has been reduced to 68c. for the first 15 days of September.

PRICES OF WHEAT IN THE FRENCH MARKETS.—The *Moniteur* publishes the returns of the prices of wheat in August last in the different markets of France, from which it appears that it sold, on an average, at 19f. 93c. per hectolitre at Toulouse, Gray, Lyons, and Marseilles; 18f. 44c. at Marans and Bordeaux; 17f. 76c. at St. Laurent and La Grand Lamps; 17f. 35c. at Mulhausen and Strasbourg; 19f. 49c. at Bergues, Arras, Roye, Soissons, Paris, and Rouen; 17f. 43c. at Saumur and Nantes; 16f. 27c. at Metz, Verdun, and Charleville; and 18f. 60c. at St. Lo, Palmopol, Quimper, and Hennebon.

TANGIER.—It is a pity that Tangier has been attacked at all—the only place in Barbary where there are marks of some civilization; where Christians are not insulted and spit upon in the streets; where not a leaf was touched in the gardens of consuls at a distance from the town; and where alone Jews have lived in peace throughout the town and mixed in the same streets with the inhabitants.—*Times*.

MOGADOR.—A letter from an officer on board the French squadron off Mogadore, dated the 17th ult., says:—"We are to keep for a time possession of the island, the garrison of which is already formed, and the troops have begun to raise fortifications. We shall leave here the brig of war Argus and Cassard, and a steam sloop. The other ships of the squadron are about to sail for Cadiz, to repair their damages; we hope afterwards to return to France. Our squadron during the conflict threw 16,000 projectiles into Mogadore. The *Jemappes* had her sides struck by more than 30 balls, and her rigging was much out of order. A ball passed through the flag at the topmast head of the *Triton*."

SPAIN.—The Madrid journals of the 28th ult. announce that the responsible editor of the opposition journal, the

Espectador, has been arrested by the Government and confined on secret, and that his journal is suspended and a new editor be appointed. A Madrid letter states that the demands of the Spanish Government upon Morocco not having been complied with, orders have been given to put all the naval forces in motion; and, to cover the expense, Treasury bills to a large amount have been drawn upon Cadiz and Corunna.

TREATY OF COMMERCE BETWEEN BELGIUM AND PRUSSIA.—The *Moniteur Belge* of the 2nd announces the conclusion of a commercial treaty between Belgium and Prussia, and the other states of the Customs Union. The *Commerce Belge* says, "The measure by which a high duty was imposed exclusively on our east iron and iron articles is withdrawn. The Customs Union concedes to Belgium a reduction of 50 per cent. on the duty on foreign east iron. This duty is fixed from this day at 2 francs 20 centimes per 100 kilogrammes. Thus Belgian east iron will pay only 1 franc 25 centimes; besides this a reduction of duty on iron articles is granted. The export duty on woollens at the frontiers of the Zollverein is reduced from two dollars to one dollar. The concessions made by Belgium are the repayment of the Sobelot toll, the maintaining in force of the law of the 6th of June relating to Luxembourg, the renewal of the regulations in favour of the German wines and silk manufactures, the revocation of the resolution on the exportation of bark, and the opening of the frontiers custom-house at Frankorchamp. Lastly, the ships of the Union are placed on an equality with Belgian ships with respect to all the privileges and advantages of the navigation. The transit of goods on both parts is wholly free."

PROVINCE OF POSEN.—The journal called the *Borsen Nachrichten des Osteeen*, of the 28th of August, announces that, according to perfectly credible information, orders from Prince Paskewitch have been received at the Polish frontier Custom-house at Peisern, not to allow any more corn to pass.

ATHENS, August 20.—The new Ministry have just issued a proclamation:—"We propose," say they, "nothing which shall not be avowed; we announce plainly, and with sincerity, the spirit which shall direct us. We hate exclusiveness. Justice and impartiality!—this is our motto. To execute religiously every portion of our valuable constitution—to apply rigorously our laws—to prefer for public offices those who have made sacrifices in the cause of independence, when accompanied by necessary qualifications—to reward the honest, and to punish the guilty—to administer the strictest economy which it will be possible to adopt; these are what we propose."

CIRCASSIA.—The *Universal German Gazette* contains a letter from Constantinople, of the 14th ult., which says:—"For some time a report has been current here that Schamil Bey had advanced with his forces as far as Tiflis, and that he remained three days there after having beaten the Russians. Some slave-dealers first brought this news, which, however, has been fully confirmed by a letter from a European residing in that city."

CAPE OF GOOD HOPE.—Cape of Good Hope papers to the 27th of June have arrived. The chief feature in these journals is the statement of Customs' returns, which show an improvement; but it is remarked that, notwithstanding the public revenue increases so rapidly as to enable the Government to pay off its old debts, there never was a period before in which the colonists felt so extreme a monetary pressure, or when there were so many unexpected failures. The exports of wool for the quarter ending March, 1844, was 847,544 lbs., value £43,236. In the corresponding quarter of 1834 the quantity was not more than 51,792 lbs., valued at £3498; thus showing the progress of ten years had increased the production of the staple about sixteen-fold. It appears by these same returns, that the gross amount of imports was valued at £226,117, and the exports at £114,399. The increase in revenue does not arise from additional taxation, but is the result of improving commerce and a reduction of the expenses of the service. Abundant rains had fallen throughout the colony, and the crops promised a large return. On the frontier the old complaint is made of the depredations of the Caffres. New treaties had, however, been concluded with the Busotas tribe. Reports had come to hand at the Cape of the continued arrival of vessels at the Guano Islands for supplies, and cargoes were being secured as freely as ever.

DOMESTIC.

A Cabinet Council was held at two o'clock on Monday: most of the Ministers were present. The Council sat two hours and a half. The difference between France and England, arising from the recent events at Tahiti, was, according to the *Times*, the subject of deliberation. On Tuesday, that journal "congratulates the country on the truly gratifying intelligence of a probable arrangement of the Tahiti question, and a termination to all fears of a rupture between ourselves and France." It states, further, that "M. d'Aubigny has been moved from Tahiti, his conduct has been made the subject of apology, and satisfaction will, we are told, be made to Mr. Pritchard for the ill treatment he has received. The former officer had been previously censured by his superior, Captain Bruat, and this additional stamp upon him, accompanied with a due measure of satisfaction to the injured person, appears to be a sufficient recognition on the part of the French Government of our charge against D'Aubigny. He is not dismissed the service, indeed, and it is not necessary that he should be; so that his Government acknowledges that his acts were unjustifiable, all is done that is required."—On Monday, new English wheat of the finest quality fell in Mark-lane between 2s. and 3s. a quarter; while wheats of inferior descriptions fell from 4s. to 5s. below the prices which prevailed last week.—It is stated that her Majesty and Prince Albert will embark on board the royal yacht on Monday or Tuesday next, and immediately proceed to Scotland, on a visit to the Duke of Atholl, over whose magnificent estates his Royal Highness will enjoy the sports of the field.—On Friday, the 30th ult., an incendiary fire broke out on the premises of Mr. Walters, sen., of Stratford-sub-Castle, Wiltshire, and which destroyed some hayricks, of about 25 tons or 30 tons each, and a rick of straw, containing about 30 loads.—On Saturday morning last Essey, the head gamekeeper of the Earl of Bradford, committed suicide at Hensham Park estate, of which he was keeper, by shooting himself through the head with a double-barrelled gun. The deed is attributed to the vexation and annoyance he experienced from predatory acts of poachers in the neighbourhood. He had recently succeeded in destroying great numbers of

case on the estate, which gave rise to a suit that he should be compensated for his lordship's absence, the suit being expected to arrive on the day of the fatal catastrophe, preparatory to commencing his sporting amusements the following Monday. — *Bartholomew Fair* was opened on Tuesday by the Lord Mayor. The scene altogether was very dismal. His lordship did not meet with one cheer. The Corporation of London has very properly taken steps to put down this annual nuisance, and it may now be said to be extinct. — *Sun.* — Last Sunday the cheap excursion trains of the London and Brighton Railway Company conveyed about 3000 persons to and from Brighton. Each train consisted of 25 carriages, carrying about 700 persons. — The will of the late J. Travers, Esq., has been proved in the Prerogative Court. The property is sworn under £70,000. — The funeral of the unhappy girl, Eliza Kendall, who committed suicide last week, took place on Friday, the 30th ult. The deceased was followed to the church of St. Paul, Deptford, by nearly fifteen hundred persons, a very great proportion of whom were females. — Mr. Francis Baily, F.R.S., president of the Royal Astronomical Society, expired on Friday, the 30th ult., at his residence in Tavistock-place, Russell-square, in the 71st year of his age. His scientific attainments were of the highest order. — An inquest was held on Saturday evening last by Mr. Higgs, deputy coroner for Westminster, at the Angel and Crown, Heddon-street, Regent-street, on the body of Mary Smallman, aged four years, who was burnt to death at a fire which occurred in the back attic of the house No. 5, Heddon-street, on the previous Friday evening. Verdict, "Accidental Death." — On Thursday night, the 29th ult., about eight o'clock, a fire broke out in the stack-yard of Mr. Woollard, of Barrington, about eight miles from Cambridge, and near the seat of the Earl of Hardwicke, the lord lieutenant of the county, when three stacks, viz., a pea stack, an oat stack, and a hay stack, valued at about £150, were destroyed. Mr. Woollard has no doubt that the fire was the act of an incendiary. — It has been stated, on pretty good authority, that the Dowlais Iron Company have at present as many orders on hand as will keep that establishment with all its irons in the fire for seven years to come. — *Bath Journal.* — The usual entertainment, given by Messrs. William and Robert Chambers to the numerous workmen and others connected with their extensive publishing and printing establishment, took place on Thursday evening, the 29th ult., in a spacious apartment in their own premises. About 200 persons sat down together, the greater part of this large company being composed of the work people, their wives and families, while the remainder consisted of invited friends of Messrs. Chambers. Several eminent authors and authoresses were present. — The *Leicester Mercury* reports a singular case of mesmerism which lately took place in that town; a young girl named Mary Ann Larkin, who had suffered from a painful disease of the knee-joint for many years, was subjected to the mesmeric influence, and while in that state her leg was amputated by Mr. Tossell, surgeon, the patient not manifesting the slightest indication of pain. Several medical men were present and witnessed the operation. — On Wednesday night week the extensive coach factory of Mr. Hill, on Green-hill, was discovered to be in flames. In less than an hour the factory, with all its contents, was entirely consumed. The dwelling-house was next consumed, and a house on the opposite side, tenanted by Mr. Bustard, a Wesleyan minister, was very much damaged, as were also several tenements in the rear of the factory, belonging to poor families. — Father Mathew has written a letter to Dr. Shiell, in which he says that he approves of the total abstinence repeal pledge, but solely on the ground that he recognises the benefits of abstinence to be so great, and not from any political motive; he denies, however, that the adoption of this pledge is sufficient to constitute a true teetotaler. — On Thursday night, the 29th ultimo, a large out-office, the property of Mr. Pae, of Donnybrook, county Tipperary, was maliciously consumed to ashes. Several articles of farming utensils, &c., were also consumed. The damage sustained on this occasion exceeds £50. The cause of this piece of incendiarism is attributed to the refusal of Mr. Pae to discharge from his service a steward who had become obnoxious to the peasantry. — According to the testimony of Captain Laws, the manager, as given before the railway committee, the original cost of a first-class carriage on the Manchester and Leeds line is between £300 and £400, and the renovation of lining, painting, &c., amounts to about £150 a year. This carriage will carry but 18 persons, whereas a third-class carriage on that line will take 40 persons, and costs at first only about £120, with about £10 per annum for repairs. — *Railway Record.* — On Friday afternoon last, as Mr. Robert Turnbull, merchant, Scalloway, Mr. Standen, of Oxford, and two men, were returning to Scalloway from Reanie in a sailing boat, and while about mid channel, between the islands of Hoy and Hebra, the boat took in so much water as to fill and go down, when Mr. Turnbull and the two men were drowned. Mr. Standen escaped by swimming. — *Perth Journal.* — *Le Pilote*, a Guernsey paper, states that the belief was gaining ground that Government was contemplating the erection of works and fortifications on an extensive scale in the island. — On Monday, the Marquis St. Simon Tecman gave another grand *soirée mesmerique* at her residence in Baker-street. The company was very numerous, and the experiments varied and striking. The Marquis herself was, in the course of the evening, subjected to the mesmeric influence, in which state she possesses, it is supposed to possess, the mysterious *specialité* called "clairvoyance," and, indeed, the revelations which she made to those who consulted her were surprising, and wholly inexplicable by any ascertained laws of nature. To some she described minutely the condition of their own health, and the seat, extent, and duration of disease, if any. To others she described the appearance, stature, age, health, and character of friends at a distance, respecting whom they put questions to her. To account for these things, and much more that were witnessed on this occasion, is impossible, but they seemed to be beyond the suspicion of collusion or deception. — *Sun.* — On Wednesday week a field of uncut barley, very ripe, in the parish of Rivenhall, the property of a Mr. Upson, accidentally caught fire from a spark from a locomotive engine which was passing on the railway adjacent; about two acres of the barley, valued at £30, were consumed. — A dinner was given last week at Birmingham, by the *Athenæ Institution*, which was founded about three years ago by some young men, for the purpose of securing during their leisure hours rational recreation and

mental instruction. The dinner was attended by Lord John Russell, M.P.; Sir J. Stansfeld, M.P.; and Mr. B. M. Milnes, M.P., who each spoke, and advocated the necessity of providing beautiful recreation for the people. — Last week Mr. Harcourt, M.P. for Barrowby, attended a meeting of his constituents, whom he addressed in a speech of considerable length, in the course of which he deprecated the tempering policy of the Government, and advocated the policy of "the new generation." — The Repeal Association met as usual on Monday. The usual bulletin from Mr. O'Connell was read by his son Daniel. A Mr. Gordon brought forward a resolution to the effect that, "in the event of a war with France an extraordinary meeting should be called to consider the propriety of reviving the volunteer organization of 1782." The chairman and other members denounced the proposition as illegal, and the mover, amidst much disapprobation and confusion, withdrew it. The rent for the week was announced to be £785. — The Commissioners of the Irish National Education Board have just issued their annual report. The following paragraph gives the progress the schools have made during the past year:—"At the close of 1843 we had 2721 schools in operation, which were attended by 319,792 children. At the close of 1844 we had 2912 schools, which were attended by 355,320 children. The increase in the number of schools in operation, therefore, amounted within the year to 191, and the increase in the attendance of children to 35,528." — Joel Fisher underwent the extreme penalty of the law on the new drop outside the walls of Wilton goal on Wednesday last, for the murder of his wife, at Weston-super-Mare, in June last. — The total number of deaths in the metropolis during the week ending last Saturday, as made up by the Registrar-General, was 798, being less by 148 than the weekly average of the last five years. — It is somewhat remarkable that during the whole of last week not a single commitment was made out by the Birmingham magistrates—a circumstance that has not occurred for 35 years. — The contest for the office of City Chamberlain commenced on Thursday. The candidates were Alderman Brown, Alderman Humphrey, M.P., and Mr. G. P. Heppel. The show of hands appeared to be about equal for the two former, but very few were held up for Mr. Heppel. Alderman Humphrey having refused to demand a poll in writing, the contest was confined to Mr. Alderman Brown and Mr. Heppel. At the close of the first day's poll there voted for the former 464; for the latter, 11. There is no doubt of Alderman Brown's return. — A meeting of the constituency of Arbroath took place on Thursday, in the Town-hall, to hear an address from their worthy representative, Mr. Hume, M.P., then on his way north. The hall was well filled on the occasion, the larger proportion of the electors being present. Mr. Hume was accompanied by the provost and bailies, and rapturously received by the audience. — The shipping interest in South Shields, during the last two or three weeks, has undergone a complete reaction. Freights, from being a losing affair, are rising up to the average of the best times. — On Thursday the bakers in the Blackfriars-road, the New-cut, Westminster, White-chapel, Minories, Bishopsgate, Tottenham-court-road, and other populous parts of the metropolis, reduced the 4lb. loaf to 6d. — A few days ago a barber, named Joseph Croucher, living at Mount Pleasant, committed suicide while in a state of drunkenness.

MISCELLANEOUS.

THE COMMERCE OF FRANCE.—The *Moniteur* publishes the returns of the principal imports of France, in July last, from which it appears that the duties levied thereon amounted to 14,980,828*fr.*, or 3,571,601*l.* more than in 1843, and 3,815,551*l.* more than in 1842. The duties levied during the seven months of 1844, ending on the 1st of August last, amounted to 86,528,235*fr.* They had been 78,290,530*fr.* in the corresponding period of 1842, and 81,328,445*fr.* in 1843.

THE DWELLINGS OF THE POOR.—We refer with great gratification to the unanimous decision of the Town Council (Manchester), that a portion of the funds at its disposal shall be devoted to the opening out of close courts and narrow streets, with the view of causing the thorough ventilation which is necessary to the preservation of health. We have rejoiced to see the probability of a sum of £50,000 being subscribed for the purchase of fields or gardens, in which every class of persons in our dense population may enjoy health-giving air and light; and we anticipate with pleasure the time when the toil-worn man shall be seen with his wife and children delighting in the fresh breeze, the verdant turf, the luxuriant foliage, and the glorious sky. Many thanks to the members of the Society for the Preservation of Ancient Footpaths, headed first by the benevolent Richard Potter, and latterly by his no less benevolent brother, Sir Thomas, for the many cool shady lanes, whose destruction they have averted—many thanks to them for the preservation to the working classes of many delightful walks; and many thanks to the noble-hearted men who have given of their abundance, in thousands and hundreds, and fifties, to secure places of recreation for those whose labour creates wealth, and multiplies the means of enjoyment. Each and all—footway protectors and field givers—deserve the warm gratitude of this and succeeding generations. But, great as are the advantages derived or to be derived from their humane and generous labours and contributions, we do think that equal benefits will be conferred by carrying out to its full extent the principle unanimously recognised by the Town Council; for if it be important that the toil-worn should have easy access to light and air in green fields and shady lanes, it is equally important to admit light and air directly to their abodes. Look at the evidence of Dr. Southwood Smith, and our townsman, Mr. Philip Holland, as to the effect upon health, and even upon morals, of residence in ill-ventilated, ill-drained, and ill-cleaned courts and streets. The one tells us that the benevolent aid of the physician is comparatively useless when the patient is so situated, and the other that mortality in the worst houses in the worst streets is double that in good houses and good streets! The report on the condition of large towns and populous districts is full of similar proofs. We trust, therefore, that the Improvement Committee will enter upon its labours with a full conviction that they are for the benefit of our common humanity, and that Manchester will become an inspiring example to every city and town in the kingdom in this great work of civic reform.

DEFEAT OF THE MONOPOLISTS BY HUNTER-PLACARDS were posted through our town last week, announcing that Mr. John Harper (an emissary from the Central Agricultural Protective Society) would deliver a lecture in support of the Corn Laws on Monday evening last, in the Court of Requests Room, Town-hall, this being the first public demonstration in Hull on the part of the monopolists, we naturally expected there would be a tremendous gathering on the occasion, and that the industrial "protectionists," who are said to be so numerous in our town, would muster strongly in support of their pet doctrine. Nothing of the kind took place, however, for notwithstanding Mr. John Tall, Mr. Digby, Mr. Rufus, and Mr. Wilson were present at the meeting, and seemed most anxious for its success, a more lamentable failure was never experienced. Not a monopolist opinion was applauded during the whole evening, except where it coincided with the views of the Chartists, who had assembled pretty numerous on the occasion. Indeed the Chartists, the Operative Conservative Association, and a few of the inhabitants of both sexes, from the classic neighbourhood of the Court of Requests, constituted the bulk of the meeting. The respectable portion of the assembly evidently viewed the whole affair as ridiculous in the extreme, and, beyond asking a few questions in elucidation of the lecturer's meaning, took no part in the proceedings. The chair was taken by the Rev. William Mill (late editor of the *Northern Star*). Mr. Harper then proceeded to deliver a very rambling address, but was frequently interrupted by some working men, who sadly posed him by their pointed questions and objections. A Mr. Kidd, a Chartist, moved a resolution in favour of the Charter, which was seconded by a Mr. Mudd. — Mr. Scoley, apparently a working man, who said he was in favour of the Charter, but who did not seem to be recognised by that body, made some very shrewd remarks on the lectures which had been delivered. He said, so far from the Corn Laws being beneficial to the interests of the farm-labourer, it was very detrimental to them. His father was a farm-labourer, and before the Corn Law was passed earned a guinea a week; he had now a brother a farm-labourer, who was a better workman than his father, and who, under the Corn Law, received only 9*s.* a week. (Cheers.) The misery of farm-labourers had been increased by the Corn Laws, and they had been, consequently, driven into the manufacturing districts. The Corn Laws had been designed by, and had the effect of supporting only a class of persons who had ridden rough-shod over the poor for centuries, and he was ashamed to find the lecturer, who said he was a working man, advocating such a law. The lecturer had talked about the working man being no better off when food was cheap. All the speaker knew was, that his family consumed four stone of flour a week, and that he got them that flour much more easily when it was cheap than when it was dear. The lecturer had made a comparison between the protection of the Corn Laws, and the union of workmen to protect themselves. There was no comparison between the cases. It was not a monopoly on the part of the working men, because, though they resolved to have a certain remuneration for their labour, there was no law to compel the master to take them at their own price. But when a law was passed to raise the price of food, it was a monopoly, because there was a law compelling them to take that food at the high price, and not go to markets where they could get it lower. (Cheers.) Mr. Scoley concluded by saying if he were a weaver, as Mr. Harper confessed himself to be, he would knock a shuttle up and down till he was silly before he would advocate such doctrines as he had. (Laughter.) After some further remarks from other speakers, the Chartist resolution was carried. — *Hull Advertiser.*

BONDED CORN.—Within the last few weeks a large quantity of bonded wheat has paid duty at this port, and at the present time the stocks of this article in bond at the warehouses here, we have heard, are lower than have been known almost at any time since the opening of the port. The stocks of other descriptions of foreign corn (peas, barley, &c.) are very large. — *Gloucester Journal.*

BLACKBURN.—A meeting of the operative cotton-spinners was held on Thursday evening, at the house of Mr. James Roberts, the Britannia Inn, Penny-street, to take into consideration the necessity of a demand for the increase of wages. No decisive resolutions were come to, but the feeling seemed to be in favour of a demand for an increase of ten per cent. A meeting of the power-loom weavers was held on Monday night, at the house of Mr. James Forrest, the Masons' Arms, to take into consideration the propriety of a demand for higher wages, considering the great demand for labour and the increase of trade. Resolutions were agreed upon to the above effect, and it was also decided that circulars should be issued to the manufacturers, soliciting their acquiescence. It was stated that Messrs. Hornby and Co., Mr. Eeles Shorrook, of Over Darwen, and one or two other firms in the neighbourhood of Accrington, had already signified their willingness to accede to the demand. — *Preston Guardian* of Saturday.

POLYTECHNIC INSTITUTION.—Whilst the controversy between Captain Warner and his opponents has been carried on in the daily journals during the past week, and has lost nothing by its continuance,—the Captain affirming with increased vehemence his original assertions, and his opponents rejecting his assertions and denying that he possesses the powers or the secret to which he lays claim,—Professor Ryan has very wisely been continuing his lectures at the Polytechnic Institution, on the nature, properties, and powers of combustible and explosive compounds, and has been attended by crowded audiences of scientific, naval, and military men, and that large class, the general public. These lectures of Professor Ryan have enabled a great many persons, who, but for them, would have had very limited means of judging for themselves, to form an adequate opinion of the claims which Captain Warner has made upon the Government of the country: they have, at least, excited such a spirit of investigation, and so well directed it, that prejudices and mistakes have been removed. The learned Professor explains intelligibly, and without involving his subject in the labyrinth of scientific vocabulary, the nature and properties of what are called explosive compounds; he shows by numerous experiments, conducted on a large scale—such a scale as, perhaps, the laboratory of the Institution alone could afford—what has been done by former layers, and what recent chemical discoveries render possible to be done now. The lectures at the present time are interesting to all parties, and deserve very general attention.

should be prepared to prove that the writ which had been done had been done consistently with the honour and true interests of this country. (Hear, hear.)

Mr. T. DUNCAN said, in consequence of the new writ that had just been moved, he wished to ask if the noble lord alluded to (Lord Stanley) still filled the office of Secretary to her Majesty's Colonies? (Loud cries of "Hear, hear.")

Sir R. PAUL—I have the satisfaction to say that the position of my noble friend (Lord Stanley) in the Colonial department is not in the slightest degree affected by the writ which has just been moved by my hon. friend near me. (Loud laughter from the Ministerial benches, mixed with cries of "Hear, hear.")

Mr. T. DUNCAN, having observed that he was not aware that his question was of so peculiar a character—especially after the writ which had been moved—as to call forth the ridicule which honourable gentlemen opposite attempted to attach to it, then moved for a copy of the opinions delivered by the Judges in an action of law against Daniel O'Connell and others, together with a copy of the notes taken by the short-hand writer, and the several judgments thereon. He wished especially to ask if the judgment of Lord Denman, which ought to be published all over the world in letters of gold, would be communicated authoritatively to the world. He should move that that noble lord's judgment should be printed, together with the opinions of the Judges on this most important case.

Mr. O. CAVE seconded the motion.

Sir R. PAUL deprecated the inconvenience of a debate at a time when they might be interrupted by other business. Whenever the period should arrive he would be prepared to defend the course taken by Government. With respect to the particular motion before the House, he had only to say that he would not offer any opposition to the production of these judgments, and, though he apprehended that there would not be time to send a message to the House of Lords, he would take care that that should not prevent the communication being made to the House of Lords in the usual manner.

Lord J. RUSSELL concurred with the right honourable baronet as to the inconvenience of entering into a discussion upon these judgments at that moment, but he must reassert his opinion, that the trial which Mr. O'Connell and the others had received in Ireland was not that trial which would give an impression of fairness and justice. He should be prepared to enter into a discussion with the right honourable gentleman on the subject, and to maintain his former opinion, more particularly since his opinion had been confirmed by that of the House of Lords, who decided that the conviction was not according to law. (Cheers.) If the right honourable gentleman had, as he asserted that he had, resorted only to the law, and had given the persons accused the full benefit of trial by jury, he should not have complained, whatever might have been the result; but what he complained of was, not a trial by a fair jury, but by a jury elaborately put together for the purpose of conviction (loud cheers), charged by a judge who did not allow any considerations in favour of the accused to come fairly before his mind, but who charged more violently than the Attorney-General accused (loud cheers), and altogether acted towards a prejudiced jury in such a manner as to prevent justice being done to the accused. He trusted that the result of the proceedings would be to prevent any similar examples of such a trial being witnessed again, and that hereafter the people of that country would be allowed to enjoy the full benefit of English institutions (cheers); and that, if justice was not done them in their own country, they would see that in the highest quarters in this country, amongst men of the highest rank, attainments, and abilities, there was a determination to do towards them what they conceived to be justice—not because they belonged to that country, but because they thought that all the subjects of the United Kingdom ought to have the full enjoyment of the inestimable privileges which the people of this country enjoyed.

During some remarks from Sir THOMAS WILDE on the legal bearings of the question, the learned member was interrupted by the Usher of the Black Rod, at the bar, to summon the House to the bar of the House of Lords, to hear the royal assent given to certain bills by commission, and to hear Parliament prorogued.

On the return of the Speaker to the House, attended by several members, the royal speech on the prorogation was read from the chair, and the members separated.

REVERSAL OF THE SENTENCE ON MR. O'CONNELL AND THE OTHER TRAVERSERS.

The House of Lords met again on Monday for the purpose of receiving the opinions of the judges on the writ of error, in the case of the Queen v. O'Connell and others.

Mr. Justice Wightman, Mr. Justice Williams, Mr. Baron Gurney, Mr. Justice Patteson, Lord Chief Baron Pollock, and Lord Chief Justice Tindal were of opinion that the challenge ought to have been allowed in the court below. All the learned judges agreed in pronouncing that the sixth and seventh counts of the indictment were "so bad, that, if the indictment consisted of those counts alone, it would be impossible to give any judgment against the defendants upon the verdict," an opinion directly contrary to that of the four judges of the Court of Queen's Bench in Ireland, who pronounced these counts to be "unexceptionable, and upon which, accordingly, as upon the others, they gave their decision against the traversers. Mr. Baron Parke and Mr. Justice Colman were for the reversal of the sentence of the court below, on the ground that there were some bad counts in the indictment; that the defendants had been found guilty upon each; and as the judgment was general, and the quantum of punishment a matter in the discretion of the judges, it was to be presumed that a part, at least, of the punishment must have been awarded upon the bad counts, and that, as it was impossible to ascertain how much had been, as the whole might have been so awarded, the defendants might in fact have been punished for that which was, in law, no offence.

After their lordships had severally delivered their opinions, the further consideration of the case was adjourned to Wednesday.

On Wednesday the House of Lords accordingly met, when, after the decision of the case of "Samuel Gray v. the Queen in error," in which the judgment of the inferior court was reversed, the Lord Chancellor proceeded to deliver his opinion in the case of the Queen v. O'Con-

nell and others. His lordship went minutely into the case, and, having expressed himself in accordance with the majority of the judges, moved that the judgment of the court be affirmed.

Lord Brougham followed on the same side.

Lord Denman then delivered his opinion, dwelling chiefly on the challenge of the array, and contending that it ought to have been allowed, and that if such a practice as that with regard to the jury lists were permitted, a "trial by jury, instead of being a protection, would be a mockery, a delusion, and a snare." It appeared to him that the challenge to the array on the ground of the omission of several names ought to have been allowed. His lordship fortified his opinion on this point by that of Mr. Justice Coleridge (who, from illness, was prevented from attending), who entirely coincided with him.

Lord Cottenham said that, after the fullest consideration, he had come to the conclusion that the opinion expressed by the majority of the learned judges was wrong. He had formed his opinion early in the argument, and had heard no reason since given why he should change it.

Lord Campbell contended, among other points, that the parties ought not to have been tried by a jury struck from a defective list, but on the challenge the panel ought to have been quashed.

The question having been put by the Lord Chancellor, Lord Wharncliffe recommended such of their lordships as were not learned in the law, and had not heard the whole case, to abstain from voting, on the ground that their voting might lessen the authority of their lordships' House as a court of justice.

Lord Brougham, lamenting the decision of his noble and learned friends, agreed in the recommendation of the noble lord.

The lay lords accordingly retired behind the woolsack.

The amendment of Lord Campbell was then put, and carried in the affirmative.

The judgment of the court below was therefore pronounced reversed.

EPITOME OF NEWS.

FOREIGN.

FRANCE AND ENGLAND.—The *Sidde* of Tuesday states, that the affair of Tahiti still caused the utmost uneasiness to the Cabinet, which was threatened with dissolution. The President of the Council, after a tolerably long resistance, agreed to the recall of M. d'Aubigny.

We see by the provincial journals that public rejoicings have taken place in many parts of France, in honour of the successes obtained by Marshal Bugeaud and the Prince de Joinville.

The French Minister of the Interior has ordered a medal to be struck at the mint in commemoration of the battle of Italy.

LOVE YOUR ENEMIES.—The Bishop of Chalons-sur-Marne has issued a circular, directing all the clergy of his diocese to render, during one week, public thanks to Heaven for the "glorious" successes obtained by the French in Africa, and prayers for the further protection of the Most High.

THE VISIT OF LOUIS PHILIPPE TO ENGLAND.—The *Courrier Français* says:—"Some journals have announced that the King's journey to England was postponed until after the arrangement of the Tahiti affair. It is now affirmed that this matter is settled, and that the journey will take place speedily. A medal, destined to perpetuate the remembrance of his visit, is already being prepared at the mint."

TRADE OF FRANCE.—Great activity is at present manifested at Nîmes in all branches of its silk manufactures. The number of commands has rendered it difficult to find a sufficiency of workmen even at higher prices than usual.

FRENCH MARINE.—The *Paris Le Commerce*, in an article upon the commercial condition of France during the last three years, takes occasion to admit and lament the comparatively small extent of its commercial marine. The tonnage, in fact, of the merchant vessels belonging to France is stationary in amount. The tonnage of the foreign vessels which have entered French ports has been, for the last three years, steadily increasing, while that of native vessels remains almost stationary, and in matters of this kind, no progress means backward progress. The general small size of the merchant vessels of France is also admitted and deplored. In fact, in increase of size, and in number of sailors, the French commercial marine has made no progress for fifteen years, while we have been advancing steadily and rapidly.—*Chronicle*.

PRICE OF BREAD AT PARIS.—The price of bread at Paris has experienced a slight reduction. The 4lb. loaf, which was sold at 70c. during the month of August, has been reduced to 68c. for the first 15 days of September.

PRICES OF WHEAT IN THE FRENCH MARKETS.—The *Moniteur* publishes the returns of the prices of wheat in August last in the different markets of France, from which it appears that it sold, on an average, at 19f. 93c. per hectolitre at Toulouse, Gray, Lyons, and Marseilles; 18f. 44c. at Marans and Bordeaux; 17f. 76c. at St. Laurent and La Grand Lemp; 17f. 35c. at Mulhausen and Strasbourg; 19f. 49c. at Bergues, Arras, Roye, Soissons, Paris, and Rouen; 17f. 43c. at Saumur and Nantes; 16f. 27c. at Metz, Verdun, and Charleville; and 18f. 69c. at St. Lo, Paimpol, Quimper, and Hennebont.

TANGIER.—It is a pity that Tangier has been attacked at all—the only place in Barbary where there are marks of some civilization; where Christians are not insulted and spit upon in the streets; where not a loaf was touched in the gardens of consuls at a distance from the town; and where alone Jews have lived in peace throughout the town and mixed in the same streets with the inhabitants.—*Times*.

MOGADORE.—A letter from an officer on board the French squadron off Mogadore, dated the 17th ult., says:—"We are to keep for a time possession of the island, the garrison of which is already formed, and the troops have begun to raise fortifications. We shall leave here the brig of war Argus and Cassard, and a steam sloop. The other ships of the squadron are about to sail for Cadiz, to repair their damages; we hope afterwards to return to France. Our squadron during the conflict threw 16,000 projectiles into Mogadore. The Jemappes had her sides struck by more than 30 balls, and her rigging was much cut up. A ball passed through the flag at the topmast head of the Triton."

SPAIN.—The Madrid journals of the 28th ult. announce that the responsible editor of the opposition journal, the

Reprocher, has been arrested by the Government and confined as a secret, and that his journal is suspended and a new editor to be appointed. A Madrid letter states that the demands of the Spanish Government upon Morocco not having been complied with, orders have been given to put all the naval forces in motion; and, to cover the expense, Treasury bills to a large amount have been drawn upon Cadiz and Corunna.

TREATY OF COMMERCE BETWEEN BELGIUM AND PRUSSIA.—The *Moniteur Belge* of the 2nd announces the conclusion of a commercial treaty between Belgium and Prussia, and the other states of the Customs Union. The *Commerces Belge* says, "The measure by which a high duty was imposed exclusively on our east iron and iron articles is withdrawn. The Customs Union concedes to Belgium a reduction of 50 per cent. on the duty on foreign east iron. This duty is fixed from this day at 2 francs 20 centimes per 100 kilogrammes. Thus Belgian east iron will pay only 1 franc 25 centimes; besides this a reduction of duty on iron articles is granted. The export duty on woollens at the frontiers of the Zollverein is reduced from two dollars to one dollar. The concessions made by Belgium are the repayment of the Scheldt toll, the maintaining in force of the law of the 6th of June relating to Luxembourg, the renewal of the regulations in favour of the German wines and silk manufactures, the revocation of the resolution on the exportation of bark, and the opening of the frontiers custom-house at Frankorchamp. Lastly, the ships of the Union are placed on an equality with Belgian ships with respect to all the privileges and advantages of the navigation. The transit of goods on both parts is wholly free."

PROVINCE OF POSEN.—The journal called the *Borsen Nachrichten des Ostens*, of the 28th of August, announces that, according to perfectly credible information, orders from Prince Paskewitch have been received at the Polish frontier Custom-house at Peisern, not to allow any more corn to pass.

ATHENS, August 20.—The new Ministry have just issued a proclamation:—"We propose," say they, "nothing which shall not be avowed; we announce plainly, and with sincerity, the spirit which shall direct us. We hate exclusiveness. Justice and impartiality!—this is our motto. To execute religiously every portion of our valuable constitution—to apply rigorously our laws—to prefer for public offices those who have made sacrifices in the cause of independence, when accompanied by necessary qualifications—to reward the honest, and to punish the guilty—to administer the strictest economy which it will be possible to adopt; these are what we propose."

CIRCASSIA.—The *Universal German Gazette* contains a letter from Constantinople, of the 14th ult., which says:—"For some time a report has been current here that Schamyl Bey had advanced with his forces as far as Tiflis, and that he remained three days there after having beaten the Russians. Some slave-dealers first brought this news, which, however, has been fully confirmed by a letter from a European residing in that city."

CAPE OF GOOD HOPE.—Cape of Good Hope papers to the 27th of June have arrived. The chief feature in these journals is the statement of Customs' returns, which show an improvement; but it is remarked that, notwithstanding the public revenue increases so rapidly as to enable the Government to pay off its old debts, there never was a period before in which the colonists felt so extreme a monetary pressure, or when there were so many unexpected failures. The exports of wool for the quarter ending March, 1844, was 847,544 lbs., value £43,236. In the corresponding quarter of 1834 the quantity was not more than 51,792 lbs., valued at £3498; thus showing the progress of ten years had increased the production of the staple about sixteen-fold. It appears by these same returns, that the gross amount of imports was valued at £226,117, and the exports at £114,399. The increase in revenue does not arise from additional taxation, but is the result of improving commerce and a reduction of the expenses of the service. Abundant rains had fallen throughout the colony, and the crops promised a large return. On the frontier the old complaint is made of the depredations of the Caffres. New treaties had, however, been concluded with the Busotas tribe. Reports had come to hand at the Cape of the continued arrival of vessels at the Guano Islands for supplies, and cargoes were being secured as freely as ever.

DOMESTIC.

A Cabinet Council was held at two o'clock on Monday: most of the Ministers were present. The Council sat two hours and a half. The difference between France and England, arising from the recent events at Tahiti, was, according to the *Times*, the subject of deliberation. On Tuesday, that journal "congratulates the country on the truly gratifying intelligence of a probable arrangement of the Tahiti question, and a termination to all fears of a rupture between ourselves and France." It states, further, that "M. d'Aubigny has been moved from Tahiti, his conduct has been made the subject of apology, and satisfaction will, we are told, be made to Mr. Pritchard for the ill treatment he has received. The former officer had been previously censured by his superior, Captain Bruat, and this additional stamp upon him, accompanied by a due measure of satisfaction to the injured person, appears to be a sufficient recognition on the part of the French Government of our charge against D'Aubigny. He is not dismissed the service, indeed, and it is not necessary that he should be; so that his Government acknowledges that his acts were unjustifiable, all is done that is required."—On Monday, new English wheat of the finest quality fell in Mark-lane between 2s. and 3s. a quarter; while wheats of inferior descriptions fell from 4s. to 5s. below the prices which prevailed last week.—It is stated that her Majesty and Prince Albert will embark on board the royal yacht on Monday or Tuesday next, and immediately proceed to Scotland, on a visit to the Duke of Atholl, over whose magnificent estates his Royal Highness will enjoy the sports of the field.—On Friday, the 30th ult., an incendiary fire broke out on the premises of Mr. Walters, sen., of Stratford-upon-Avon, Warwickshire, and which destroyed some hayricks, of about 25 tons or 30 tons each, and a rick of straw, containing about 30 loads.—On Saturday morning last Easey, the head gamekeeper of the Earl of Strathmore, committed suicide at Henham Park estate, which he was keeper, by shooting himself through the head with a double-barrelled gun. The deed is attributed to the vexation and annoyance he experienced from predatory acts of poachers in the neighbourhood. He had recently succeeded in destroying great quantities of

THE CANADA CORN TRADE.

(From the *Liverpool Times*.)

From a comparative statement of the exports from Canada, up to the 9th of August in the last and the present year, it appears that the quantity of flour exported had increased from about 50,000 barrels to upwards of 307,000, and the quantity of wheat from a little more than 15,000 bushels to upwards of 227,000. This has occurred in spite of unusually high freights and of a declining market in this country, and although the losses on the recent importations have fallen very heavily on the importers, the production of wheat on the banks of the St. Lawrence and the shores of the lakes is increasing so rapidly, that a constantly-increasing supply must find its way to the English market. It will be seen, from the following extract of a letter received by the Caledonia, that the harvest of the present year is one of the finest ever gathered in America:—
"Montreal, August 12.—We are in the midst of one of the finest harvests that ever occurred in America, extending from north to south."

In addition to the immense increase in the exports of wheat, there is a great increase in barley, oats, and peas.

GROWTH OF WOOL.—The following returns have been made of the growth of wool in Cambridge and the neighbouring counties:—

Counties.	Quantity.	Value.
Cambs.	657,840 lbs.	£32,892
Bedford	1,020,000	51,000
Bucks	1,369,440	68,472
Essex	2,372,640	118,632
Hertford	1,410,720	70,536
Hunts.	1,075,200	53,760
Middlesex	250,320	12,516
Northampton ..	3,840,000	192,000

Total wool produced in England is 102,803,758 lbs., and the total value at 1s. per lb. (the rate reckoned above) is £53,140,186. Yorkshire produces the greatest quantity, 8,265,558 lbs.; and Middlesex the smallest quantity.—*Cambridge Advertiser*.

THE GROWING COTTON CROP.—We copy the following remarks on the growing crops from the *New York Herald* of the 10th August:—"The growing crop, at this moment, bids fair to be larger than any previous one. The yield is estimated at from 2,500,000 to 3,000,000 bales. Should the quantity produced even reach the lowest estimate, the value must be reduced very much, as the demand for consumption must fall far below the supply. The data on which the above estimates are founded is this:—The regular increase in the production of this staple annually, is set down at 350,000 bales—the crop of 1841 and 1842 amounted to 2,373,000 bales; the season producing such a large crop, must, of course, have been very favourable, and free from freshets, nevertheless the land cultivated that year was in order, and was undoubtedly used the following year, with the average quantity of new land annually fitted for cotton. The crop for 1842 and 1843 should have yielded, with the same advantages as regards season, &c., 350,000 bales more than that of 1841 and 1842, this being, as we have heretofore stated, the average annual increase, consequently the crop should have been 2,723,000 bales. Freshets, early frost, and fall rains, &c., destroyed then at least 700,000 bales, leaving a crop of merchantable cotton amounting to little more than two million bales. The crop of 1843 and 1844, many bales of which have already reached market, must, calculating the regular increase, reach three million bales; making allowance for the floods, &c., that have, doubtless, destroyed the yield on many plantations, by throwing off 300,000 bales, and we find left a crop of 2,700,000 bales of merchantable cotton. Land that has been heretofore appropriated to the cultivation of cotton, is cultivated for the same crop this year. We are informed, that every acre of cleared land that could be put into cotton has been used, and many acres not thoroughly cleared have been cultivated for this staple. It is true that there are plantations now devoted to raising sugar that have heretofore been appropriated to cotton; but the new land brought under cotton cultivation, over and above the average annual quantity, will more than offset this drawback. The season thus far has been unusually favourable; there never was one more so. From every section of the country we receive the most flattering accounts of the crops generally. We see nothing now likely to prevent the picking of an immense crop of cotton; and, should the estimates made be realised, it will be impossible to tell how great a reduction will take place in prices."

TRADE OF ALEPPO.—The principal trade of Aleppo is the importation of British manufactures to the amount of about 5000 bales a year. The trade in colonial merchandise used to be in the hands of the French. In 1836 the importations from Britain were one-fourth less than those from France; they were in 1843 quadruple the French importations; the same with coffee and other colonials. Cloth is the principal article in which England yields the palm to her competitor, commerce having in this respect experienced an extraordinary revolution; for, as above stated, cloth used to be the staple article of the English trade for two centuries; but now that the general manufacturing capacities of England have received an unparalleled extension, we are outstripped by the French in this article, for nearly all the foreign cloth used comes from Marseilles; from England, little or none. The worst feature of the Aleppo trade, and that of Syria generally, is the want of exports: the silk of Antioch is all long reel, the cotton is good only for candle-wicks, the wools of the Taurus and the Desert, although of good quality, are, from their being dirty and unwashed, badly adapted to the English market. Thus, although the Paahelic of Aleppo and the surrounding districts produce in abundance the raw materials of the staple manufactures of Great Britain, from the want of skill and capital, caused by a want of security, their English imports are paid almost exclusively in specie and bullion; while France and Italy, enabled by vicinity of position and consequent low freights to take off the coarse cotton and the unwashed wool of Syria, have lost ground in the import trade. The result of all this is, that the exchanges have been thrown into the greatest disorder; there is a perpetual drain of specie and bullion, and moneys are yearly rising, in spite of all the efforts of Government to keep them down.—*The Modern Syrian*.

IMPROVE THE TIME.—A breathing space is afforded, that we may recover, in some degree, from the effects of the years of scarce and dear food. Wisdom would improve the time: take precautions against a return of scarcity with its attendant evils. Short-sighted folly says,

Enjoy the present time; trust the Anti-Corn-Law League that it has laboured in vain, and that prosperity is to come again without Corn-Law repeal. Have those who thus speak taken a bond from Providence against bad harvests? Are we guaranteed against cold summers and wet autumns? Is the increase of mouths requiring food, and increasing the disproportion between the demand and the supply, arrested? Is any precaution taken so that, at the next deficient harvest, we may have a foreign supply procured in abundance, on cheap terms, and by the natural operation of trade, instead of by the exportation of millions of gold, producing derangement in our currency, and stagnation in trade? If not, let us beware how we forget, in the day of temporary prosperity, the time of adversity through which we have passed, and which will again come upon us in aggravated horrors unless we remove those legislative follies that have inflicted such incalculable woes upon us. At present, our chief danger is from the fever of prosperity. The cheapness of food sets at liberty from the food trade, millions of money which must find other employments. Therefore speculation is rife. The abundance of food is additional capital. The greater part of it must be brought into employment, and food can only be employed in one way—the purchase of labour. In the exchange under such circumstances, labour has the advantage. Higher wages, that is to say, more food, are given for labour. And, if the law allowed abundance of food to be perpetual, we might enjoy a stable and constantly-increasing prosperity. But we have laws against abundance. At present, by the blessing of Providence, they are become null; and, therefore, we have a revival of trade, and a return to something like comfort.—*Sheffield Independent*.

MARKETS.

CORN MARKET.

MARK-LANE, Monday, Sept. 2.—There was a moderate supply of English Wheat this morning, which was not fine either in quality or condition. It was taken off slowly at a decline of 2s. to 3s. per quarter. Old Foreign met a slow sale at 1s. less than last week. There was a fair sale for Barley at last week's rates. The supply of English Beans continue very short; the few that were offering brought high prices, and all descriptions were fully as high as this day week. No alteration in the value of Peas. Towards the end of last week several cargoes of Oats arrived from Ireland, which, with a few from abroad, amounted to 20,000 quarters. There was a continued demand from the country, but owing to factors insisting on higher prices the amount of business done was not extensive. S. H. LUCAS and SON.

FRIDAY, Sept. 6. — The arrivals of English Wheat since Monday are chiefly direct to the millers; there is, in conse-

quence, so little doing that we cannot report any advanced prices. There is very little inquiry for Foreign Wheat, and the same remark applies to it as to English. The price of Foreign Barley is not large; the business doing is at a low rate. We have short supplies of Oats, both Irish and Foreign; the trade is not brisk, but Monday's prices are fully maintained. No alteration in Beans and Peas. The duty on Wheat rose yesterday to 20s., and on Peas to 2s. 6d.

S. H. LUCAS and SON.

CERTIFICATES.

Sept. 26. J. Holland, Buxted, Sussex, draper—Sept. 26. R. S. Saxby, Old Fish-street, London, wine merchant—Oct. 4. J. Simpson, jun., Wakefield, Yorkshire, manufacturing chemist—Sept. 27. J. Dyson, Sheffield, scythe manufacturer—Sept. 27. T. W. Green, Leeds, bookseller—Sept. 26. J. A. Forrest, Liverpool, glass merchant—Sept. 25. A. Watson, Liverpool, broker—Sept. 26. J. Fairfield, Tranmere, Chester, corn merchant—Sept. 26. Z. Bond, Manchester, brickmaker—Sept. 26. J. Royle, Manchester, flour dealer—Sept. 27. T. Wolfenden and J. Prestwich, Oldham, Lancashire, cotton spinners—Sept. 27. J. Carruthers, Blackburn, Lancashire, hosiery draper—Sept. 27. H. Griffiths, Chelford, Cheshire, innkeeper—Sept. 24. T. W. ren, Brushford, Devonshire, maltster—Sept. 26. W. A. Newport, Monmouthshire, draper—Sept. 24. E. Rayner, field, merchant—Sept. 24. T. Kearsley and T. Wait, Runcorn, Chester, bone merchants.

London: Printed by ROBERT PALMER (of Providence-street, 11, near the London-lane, Lambeth, in the County of Surrey) and JOHN J. SIMPSON, jun., Wakefield, Yorkshire, manufacturing chemist, at the office, Number 10, Crane-court, in the Parish of St. Dunin, in the City of London, and published by ANASTAS, at the Office of THE LEAGUE, Number 7, Fleet-street, in the County of Middlesex, on Monday, September 3, 1844.

THE LEAGUE.

No. 51.]

SATURDAY, SEPTEMBER 14, 1844.

[8d.]

NOTICE TO THE PUBLIC.

LEAGUE FUND, \$100,000.

All subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive a copy, weekly, of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND, are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

SPECIAL NOTICE FOR COUNTIES.

POLLING PLACES MAY BE ALTERED.

Voters residing at one part of a county, and claiming to vote for property in another, may vote near their place of residence, by claiming in the form A or B.

An elector residing in the Strand, London, claiming for a freehold house, or any other qualification, at Uxbridge, had formerly to go to Uxbridge to poll: he can now poll at Westminster. Or an elector residing in South Lancashire, or any other county, having a freehold at Uxbridge, or in any other district in the county, may vote in London, thereby saving a journey from London to Uxbridge, or other district, and back.

This is a most important alteration in the law, and the claim may be made by the Free-Trade agents attending the court, a friend, or the tenant, if he can speak to the claimant's handwriting.* The barrister will write the place he desires to poll at against his name; but he will not be allowed to vote anywhere else. His name will then be printed at the end of the register in the proper list.

Form A.

County of Middlesex, to wit.

I, _____, whose name appears in the list of voters of the above parish, and whose place of abode, as stated in the said list, is not within the said county, claim to vote at the polling place at _____, in the said county.

(Signed) A. B. [Place of Abode.]

Form B.

County of Middlesex, to wit.

I, _____, whose name appears in the list of voters of the above parish, and whose place of abode, as stated in the said list, is not within the said county, claim to vote at the polling place at _____, in the said county.

(Signed) A. B. [Place of Abode.]

POLLING PLACES—Brentford, Enfield, King's-cross, City of Westminster, City of London, Hammer-smith, Hampstead, Bedford, Edgware, Uxbridge, Mile-end, Bethnal-green.

COUNTY AND BOROUGH REGISTRATION.

From the 1st to Sunday the 15th of September, is the time for the publication of the lists of persons objected to in counties, and also of the lists of claimants and of persons objected to in cities and boroughs. Overseers and town clerks are required by law to keep copies of the said lists, and also of the notices of objection, to be perused by any person, without the payment of any fee, at any time between the hours of ten o'clock in the forenoon and four o'clock in the afternoon of any day, except Sunday, during the first fourteen days of September. They must also deliver copies of the lists to any person requiring the same on payment of a price after the following rate, which is copied from the schedule annexed to the new Registration Act:—

For any list or copy of a list containing any number of persons' names	s.	d.
Not exceeding 100	0	6
Exceeding 100, and not exceeding 200	1	0
" 200, " 300	1	6
" 300, " 400	2	0
" 400 and upwards	2	6

Every Free-Trade elector should now examine these lists—claimants in boroughs to see that their names are properly inserted, and electors generally to ascertain whether they have been objected to in either borough or county. Free-Traders who may be objected to should apply to the local committees, or to such other persons as may be engaged in the management of the registration, for such advice and assistance as they may stand in need of, as to the best mode of defending their votes before the revising barrister.

Any county voter residing out of the polling district in which his qualification is situate is at liberty to make his claim before the revising barrister to vote at the polling place of the district wherein his said place of abode may be situate, provided such place of abode is in the same county or division of a county. The revision of the lists may commence on or after the 16th of September.

All advice and assistance will be given by application at

* The form signed in the presence of the party producing it where the barrister is sufficient.

the London Registration Offices of the League, 68, Cheap-side, or the League Office, Newall's-buildings, Market-street, Manchester.

We beg to inform our subscribers that bound volumes of the LEAGUE newspaper, containing the whole of the first year's numbers, may be had on application at the Offices either in London or Manchester, after the expiration of the present month.

OCCUPATIONS OF THE PEOPLE.

The Corn Laws may be regarded as a buttress erected to prevent the fall of a tottering edifice, the doom of which may be protracted but cannot ultimately be averted. They form part of a vast system of monopoly which grasped at all the elements of wealth produced by the industry of the people, and which had for its great object to gorge idleness with the fruits of labour. Such a purpose nakedly stated would have been met with universal reprobation; it has been, therefore, the policy of the monopolists to set forth hypocritical pretences, having at least the semblance of plausibility; and the foremost of these was, that protection to agriculture meant protection to the farmer and agricultural labourer. Now, the Occupations Report proves that this system yearly affords less of employment, and, consequently, less of protection to the agricultural labourer; it shows that hundreds of the agricultural labourers would inevitably perish if they did not obtain employment, and, consequently, means of subsistence, by migrating into the manufacturing districts. But, conclusive as is the report on the state to which the agricultural labourers have been reduced by the operation of the Corn Laws, it is scarcely less decisive as to the operation of this iniquitous system on the condition of the farmers. No better test could be found of a farmer's prosperity than the number of labourers in his employment; and, consequently, no better test can be found of the progress or decay of British farmers, taken as a body, than the number of agricultural labourers in the periods compared. Now, the report establishes not merely that the agricultural population has not kept up its relative strength, but that it has absolutely retrograded; and the fact of this diminution proves that there must have been a lamentable sacrifice of farming capital during the decennial period under our consideration. This inference is confirmed by the results of every inquiry that has been made into the condition of the agricultural districts; while population has increased in these districts, the means of accommodation have been diminished; the food used by the people has been diminished in quantity and deteriorated in quality; the home consumption of farm-produce is daily diminishing. Such, indeed, must be the natural result of a monopolist system. The report merely adds the confirmation of irrefutable figures to the obvious deductions of reason.

The owners of land passed a law which was intended to procure a fixed price for the produce of that land, and they let their fields to their tenants on an estimate of the average produce sold in the market at the supposed fixed price. The only thing that was fixed with any certainty in the matter was the rent, for price is a matter beyond legislative control, and fixes its own averages in the market by the proportions of demand and supply. If corn reached or exceeded the expected price in any given year, the immediate result was that a larger breadth of land was sown with corn in the following year; and if the harvest happened to be favourable, as it is this year, prices fell far below the expected point of remuneration, but the rent still remained the same. But, even in a dear year, the farmer, under the operation of the sliding scale, had anything but a fair chance of obtaining remuneration: if he held over his corn in the expectation of receiving a high price, he exposed himself to the danger of competing with foreign corn poured in at a low rate of duty. He was playing a very hazardous game against corn-speculators, whose whole business was to understand every trick and finesse of the play, while he was suddenly called to hold a hand, scarcely knowing one card from another. No wonder that farmers playing at such desperate hazard have been ruined in rapid succession—no wonder that their trade is proverbially the least lucrative in the empire.

Every improvement in farming points to increase of production; but under the system of the Corn Laws an increase of supply was what the farmer was taught chiefly to dread. If he sowed a wide breadth of land he feared that one field would compete with

another, and that his too abundant supply would interfere with his expected price. He did not see that the laws which gave him the power of exclusive supply necessarily placed similar, and even greater, restrictions on the amount of demand, and that, when the landed legislators promised that they would procure him a fixed price, they forgot to give him the only possible security for the performance of their promise, namely, fixed customers. The delusion that a famine price could be obtained for an average produce is the entire source of agricultural distress; it has placed the farmer in a vicious circle, from which he vainly attempts to extricate himself; at one extreme he is met by a good harvest and low prices, at the other by a bad harvest and few customers; but whether prices be high or low, whether customers be few or many, he finds one thing fixed and invariable—that is the rent.

How farmers can continue under the delusion that prosperity is attainable under an artificial system, which deranges every principle on which the fair and profitable exchange of commodities can be conducted, is perfectly astonishing. But that they have been so deluded is now indubitably established, for the falling off in the number of agricultural labourers is not only evidence of a diminution in agricultural employment, but also evidence of a diminution in the farming capital which gives that employment.

THE MONOPOLISTS UNMASKING.

There is but one opinion amongst those best skilled in the art of husbandry as to the impolicy of the Corn Laws, and of the mischiefs farmers have sustained by the artificial and unstable state of things those laws have created. They understand that, so long as any restriction on the corn trade continues, there is no safe basis on which the agricultural capitalist can found his calculations, and they feel most strongly the hazards under which they are compelled to carry on their business; but they have been so long led, by the Legislature and by all those persons of station and influence with whom they come most into contact, to believe that high prices are essential to agricultural prosperity, and that high prices can be secured by act of Parliament, that they have listened with reluctance and incredulity to every true exposition of the effects of "protection" on agriculture. They have been taught to think that Free-Traders have some peculiar interests adverse to agriculturists, and, though unable to resist the arguments in favour of Free Trade, they still cling, in too many instances, to the hope of high and artificial prices, and shrink from a thorough examination of the question of the Corn Laws. They know that rents are usually fixed upon such exaggerated estimates, that little profit is left for the farmer, and that the funds which ought to be employed in wages are constantly encroached upon, yet until the monopolists had been compelled to defend their monopoly orally—as soon as they felt obliged to speak in public, and to argue in favour of protection by their organs of the press—the farmers scarcely understood the grounds upon which "protection" was demanded. Now, however, the upholders of protection have thrown off the mask. The present plentiful season has obliged them to avow that it is high price, and high price as the consequence of deficient supply, which they seek to make permanent, and to declare openly their hostility to all improvements in domestic husbandry which may reduce the price of grain. We have frequently noticed that the most ardent monopolists look askant at the Royal Agricultural Society and its diffusion of agricultural knowledge and experience; and in a late article in the *Dorset County Chronicle*—a journal so congenial to the sentiments of Mr. George Banks, the notorious Dorsetshire monopolist, that it is believed to speak his opinions, perhaps in his own words—this jealousy of the society is very strongly indicated. The writer, whoever he may be, begins by saying:—

"In recently calling attention to the great exhibition of stock at Southampton, we expressed our opinion that the Royal Agricultural Society is an association well calculated to promote useful improvements in the various branches of farming, and consequently entitled to general support; intending, with this statement of our views, to have left the subject of this particular society without further comment, at least for the present. But, having since observed the party anti-protection use which the League and semi-League journals have endeavoured to make of this annual meeting and show of the Royal Society, we did not feel ourselves justified in silently allowing the enemies of the British farmer to take advantage of the circumstance, with the view of artfully promulgating their destructive principles, under pretence of wishing well to the agricultural body."

Does not this mean that those who advocate the

increased production of grain by the introduction of more general adoption of improved husbandry, are "artfully promulgating the destructive principles" of Free Trade? Thus he says:—"Without openly avowing their design, the liberal supporters of the Royal Society are artfully endeavouring to convert it into a vast normal school of leaguism, in which the work of Cobden, Bright, and Co., may be done without exciting suspicion." The truth is, that the Royal Agricultural Society does form, and that without any active interposition of Free-Traders, "a vast normal school" for the elucidation of the great principle of Free Trade, that the only method of giving prosperity to any class is to teach them to rely on their own resources and industry. The society distinctly does this; and in so doing, according to the Dorsetshire monopolist oracle, it calls upon "landlords and farmers" to "at once throw aside their common sense;" and then the Royal Society and the Protection Societies are thus brought into open contrast:—

"They are, forsooth, to look to improvements in agriculture as their only future protection against the free importation of the cheap corn of the foreigner. If the agricultural body can be brought to adopt this opinion of what must be their only future protection, they will, of course, at once dissolve the Protection Societies, as being worse than useless, as only drawing from them some of those 'resources' which would be more profitably applied in assisting to carry out the very liberal and enlightened views of the Leaguists and Radical members of the Royal Agricultural Society. * * * They [the farmers] will rather, should they have to choose between the two, abandon the Royal Society, than withdraw their support from the Protection Societies, being well assured that these will prove their best defence in future struggles."

Here, then, is a clear preference for the societies formed to maintain a permanent artificial scarcity, over that whose object is to increase production from our soil. And then the writer tells his dupes:—

"The farmers know full well, that however improvements may be carried out, this will not enable them to pay their rents, rates, and taxes, and to compete, without protection, with the foreign corn-grower; they know, as every one must who has given the subject the least thought, that improvements, however desirable they may be, cannot be effected without a considerable outlay, and that no one would be mad enough to lay out money in improvements, with the expectation that, as soon as the improvements have been effected, protection will be taken away, and the farmer who has sunk his little capital in the land, perhaps his all, left to compete with the cheap corn of foreign growth."

Every farmer knows full well that improvement will alone enable him to pay his rent and outgoings, and retain any profit for himself; for at whatever price corn could be kept artificially, the competition amongst farmers would enable the proprietor of the land to put in his own pocket the whole difference between the natural price and the artificial price. By means of the Corn Laws the prices of grain in this country are in many years raised considerably above the natural price, and landlords and landvaluers, say, and too many farmers assume that such artificial prices will be permanent. That is protection; and the best that could happen to the farmer, if such prices could be rendered permanent, would be that he would pay a high rent, and find everything in which he laid out his own money considerably enhanced in price from the dearness of food. He would also find the power of his customers to purchase much lessened, and the general rate of profits in all businesses lowered from the same cause. But what takes place when such seasons as the present occur? There has been no diminution of nominal protection. The farmer has now a complete monopoly of the home market, yet wheat is full 12s. a quarter below the price which he was told protection would give him, and upon the faith of receiving which he has engaged to pay his present rent.

How do monopolists meet this fact? It will not do to try to beguile farmers with long tirades about currency bills, and Canadian corn, and American junk. True it is that improvements cannot be effected without some outlay, though the amount is often greatly overrated; but what farmer can safely lay out money in improvements, when an abundant season may defeat all his plans, by knocking down the artificial price upon which his calculations were founded, and leaving him to pay, out of his capital, a rent calculated on the high and artificial scale of prices?

The farmers are now forced to examine this view of the Corn-Law question; and the monopolists, feeling the shoe pinch, have openly declared that they claim to maintain high rents by keeping the community under-supplied with corn.

This was distinctly stated in the *Morning Post* a few days ago, in these terms:—

"We maintain, however, that steady prices of food are to be secured, not by the adoption of Free-Trade schemes, but by an expansion of the protective system. Let all forms of native industry be protected; let the cultivation of our soil be encouraged; let foreign agricultural produce of all kinds be at all times excluded from our markets. When our harvests prove superabundant, let the surplus be bought by Government. When our harvests prove deficient, let that surplus be sold at a certain determinate price."

This plan is undoubtedly bold and simple, and

its announcement argues a high degree of candour on the part of the *Journalist*, or a firm conviction that his lucubration would not be read beyond the ignorant class of landed monopolists for whom it was written. Let us examine it. When our crop is deficient, all foreign importation being absolutely prohibited, bread corn may be run up to any conceivable price, say 80s., 90s., 100s., or 110s. and upwards a quarter; now, our sacred legislators may, as they have done before, fix upon any sum less than those prices, and say by act of Parliament, the price of wheat shall there remain steady; steady in their vocabulary meaning that it shall never fall below the legislative point. But suppose them to have some bowels of compassion for the bread eaters—not to say a word about an insurrection of the belly—and that they fix their "steady" price at 64s.; whenever the price of wheat shall fall below 64s. a quarter, in the language of the *Post*, "when our harvests prove superabundant," Government will be required to purchase "the surplus," that is, enough to raise the market price to 64s., to be afterwards sold in years of deficiency at "a certain determinate price." That price must, of course, be above the legal limit of 64s. This is a very pretty scheme for keeping up rents; and we think the Free-Traders are especially obliged to the writer in the *Post* for setting before the world, in *puris naturalibus*, the exact purpose for which the many complicated and clumsy Corn Laws have been framed. If we are to have a Corn Law at all, in the name of common sense let us have the simple and effectual plan of the *Morning Post*! It is merely opening a Government office, over the door of which will be inscribed—in letters of brass we suspect—"64s. a quarter for wheat always given here." We grieve, however, to be compelled to mar this notable project by asking—we hope we don't intrude—what is the Government? Whence are the funds for purchasing this "surplus" of "superabundant harvests" to be derived? Can they come from any other source than the pockets of the industrious people?

The scheme, then, is merely one to tax the people in order to raise the price of food, for the purpose of keeping up rent; and what is this but the Corn Law?

MONOPOLIST TACTICS.

It is notorious that the champions of "short commons," the advocates of starving on a scanty home growth, in preference to feeding on a sufficient supply, have grounded their defence in a great measure on the statement that the Corn Law keeps up wages. To lower the price of bread, according to the philosophy taught by the monopolists, is in effect to lower wages, the price of the quarter loaf, as they would have it believed, always determining the value of the working man's toil. Scarcely a Pro-Corn-Law tract has been published, scarcely one speech made at any of the protectionist meetings, in which it has not been asserted that the manufacturers have sought repeal in order that they might be able to reduce the wages of their hands. And the organ of the monopolists, the journal so appropriately designated the "*post*," is at this moment with amusing gravity declaring that "high prices" in food and high rates of wages are synonymous. Now, with all the experience of past years to contradict such statements, he must have no ordinary measure of charity who believes that such notions have been put forth in honest candour. But, with facts, as at this moment, staring the monopolists in the face, what shall be said if these assertions be persevered in? The average price of wheat for the three years 1839, 1840, and 1841, was 67s. 1d.; at the present time wheat is actually selling for 43s. per quarter. Here is an enormous reduction in the price of food; and if the doctrine of the monopolists be true—if the value of labour does rise and fall with the price of bread—there has been a proportionate reduction in the rate of wages. The fact is however, that instead of wages being now lower, they are both relatively and absolutely higher than they were at the period of high-priced food. This is not a matter of mere speculation or unfounded assertion; the fact is now staring the advocates of monopoly in the face; and were they capable of such a weakness, a blush would rise to witness their own oft-refuted fallacy so palpably contradicted.

Another method which the monopolists have taken to defend the Corn Law, has been to overstate the proportion of persons employed in agriculture as compared with those dependent on commerce and manufactures. And here we may state, by way of parenthesis, that, provided they had succeeded in establishing their point, we cannot see how this would have justified a law to limit the supply of food. If it could have been proved that that portion of the population which depends on commerce and manufactures were relatively as insignificant in numbers as the protectionists desired to make out, and provided (which is by no means the case) that that portion alone were injured by the Corn Laws, the injustice of the enactment would

have remained unchanged. To deprive fifty poor men of a portion of their bread is as much a theft as to rob fifty millions, and to effect the deed by a Corn Law is as criminal as to accomplish it by any other means. However, the friends of monopoly have supposed that they could gain something by an array of statistics, and they have appealed to them. Men who have the hardihood to declare that extraordinary monopolist problem, that by limiting the nation's supply of wheat you give to each individual of the community a larger loaf than he could otherwise procure, are likely, in any use they may make of statistics, to be much more figurative than correct. Therefore it can excite but little surprise that the monopolists, by some mode of calculation unknown to "Cocker," should compute the proportion of persons dependent on agriculture as constituting 7-9ths of the entire population. Yes, the length and breadth of the land has been made to ring with the monopolist announcement, that 7-9ths of the whole population are engaged in agriculture. The parliamentary "Occupation Abstract," however, unfortunately for their trumpeting, is now published, by which it is seen that the agricultural portion of the community, instead of being, as represented by the monopolists, 7-9ths of the whole population, is little more than 1-5th, and not equal in number to one-half of those employed in commerce and manufactures. Now, although the monopolists had the authority of "Spackman's Tables" for their assertions, it is hard to believe that any individuals, old enough to lay aside their pinafores, could be so ignorant of the actual condition of the country in which they lived, as to credit themselves the extravagances they were retailing. If they were themselves deceived, blind leaders of the blind they must in truth be, and their followers must, sooner or later, find themselves in the ditch. But if they were conscious that the statistics (!) they were using were erroneous, we must say, and nothing stronger can be said, that the means employed were worthy of the end.

Another of the reputable modes employed to sustain the tottering Corn Law has been, the falsification of quotations. Who has not heard, in Parliament and out, of the shameless interpolations, substitutions, and perversions of Adam Smith by the convicted Mr. Cayley, whose pamphlet with its monstrous perversions and substitutions was adopted by the Protection Society, and defended in the House of Lords by the Duke of Richmond when Earl Radnor exposed its falsifications? As the members of the Society for the Protection of Agriculture are not expected to know themselves what is or what is not in Adam Smith, charity might have suggested, when the Cayley pamphlet first appeared, that the author had been practising on their ignorance; but when, after its glaring falsifications had been exposed, the publishing committee continued to advertise further editions uncorrected, it must be acknowledged that the society took the whole guilt of the disreputable affair upon themselves. The monopolists deride Adam Smith's philosophy, and strive, by fair means and foul, to hinder the adoption of its principles, but they do not scruple to borrow Adam Smith's name in order to pass off surreptitiously their own base coin, to serve the purpose of monopoly. Again, we exclaim, a suitable means for such an end!

We might adduce instances, *ad infinitum*, but those we have pointed out may suffice to show the character of the witnesses brought forward in favour of monopoly. The principles of the protective system are acknowledged to be wrong, in the admission made by the friends of monopoly, that the theory of Free Trade is right; and it is fitting that a system false in principle should be defended by false figures and false quotations. And although much cannot be said, it is true, about the uprightness of using such means, yet the advocates of monopoly may at least urge the plea of necessity for such a course: they are not in this respect dishonest from choice, for compel them to use honest figures, honest quotations, and honourable means, and they would at once expose the dishonesty of the system they defend.

We cannot do better than conclude this article by referring to the tables (which will be found in another portion of our paper) from the parliamentary "abstract" just published, showing the proportions of juveniles and adults employed in factories, &c. It will show what sort of dependence may be placed on the statements made by the friends of scarcity in their attacks on the factory system. We especially recommend it to the attention of Lord Ashley, and would at the same time respectfully intimate that it will furnish him with more authentic data than any that he can glean from such authorities as he is accustomed to quote in the House of Commons.

We are reluctantly compelled to suspend, until next week, the continuation of the "Inquiry into the Effects of Legislation upon Agricultural Wages, Profits, and Rents." There was an error in the second paragraph of the paper which appeared last week under this head that may possibly have struck many of our readers. In the

statement of the contract prices of various articles supplied to Greenwich Hospital, the printer had misread the MS., and made the quotation of the price of butcher's meat, in 1770, 108s. 6d. instead of £1. 8s. 6d. The same error runs throughout the subsequent quotations in the paragraph. In 1775, instead of 113s. 6d., the figures should have been £1. 13s. 6d.; in 1785, instead of 117s. 6d., £1. 17s. 6d.; in 1795, instead of 202s. 10d., £2. 2s. 10d.; and for 304s. 4d. in 1800, the figures should have been £3. 4s. 4d. Though so obvious an error of the press, it is a very important one; and we have to thank several of our correspondents for so speedily detecting and calling our attention to the mistake.

MEETINGS.

GRAND ANTI-CORN-LAW DEMONSTRATION AT WALSALL—PRESENTATION OF A SALVER TO JOHN B. SMITH, ESQ.

It is this week our pleasing duty to record another striking instance of the untiring devotion of our good friends at Walsall to the principles of Free Trade. It will be in the recollection of our readers that in the year 1841, when the great battle was to be fought against monopoly in Walsall, Mr. Smith of Manchester offered himself a candidate to the electors of that borough. Every influence that corruption could bring to bear against him was put in requisition, and a temporary triumph of monopoly was the result. Mr. Smith's spirited conduct on that occasion won for him the unbounded esteem and respect of all classes, amongst whom were not the least interested in his favour the ladies of the borough, who resolved on presenting him with a piece of plate as a token of their regard. A subscription was accordingly set on foot amongst the fair sex, and it very soon amounted to a sum sufficient to purchase a splendid salver. The means of presenting it was the next consideration, and, emanating as it did from the ladies, a tea-party was considered the most appropriate medium through which the compliment could be conveyed. Wednesday evening last was accordingly selected for having the *soirée* in the large assembly-room. At five o'clock, the appointed hour, the room was filled to excess by a highly respectable company of ladies and gentlemen. The room was tastefully fitted up for the occasion, and had a most pleasing effect. The arrangements were admirable, and the whole reflected infinite credit upon the generous hearts who had the management of the festivity. Robert Scott, Esq., M.P., presided at the head of the table, supported by John Bright, Esq., M.P., Charles Greatrex, Esq., Thomas Brittle, Esq., Samuel Cox, Esq., Charles Wilkinson, Esq., and Messrs. Grafton, Mason, Swift, Standley, Westwood, &c. At the same table sat a number of highly respectable ladies, amongst whom were Mrs. Cox, Mrs. Whitney, Mrs. Grafton, Mrs. Bartram, Mrs. Myring, Mrs. Griffiths, Miss Mall, Miss Creswell, and Mrs. Standley.

The CHAIRMAN rose and said, in an assemblage composed as that was of many ladies, it would be highly improper to commence the proceedings without allusion to their most gracious and beloved Sovereign. It was one of the glories of England to be subject to female dominion, and it was still further glory that in the history of this country the domination of the more tender sex had been productive of greater happiness and prosperity to the nation than the sway of great and mighty men. If ever they had reason to be proud of their Sovereign it was at the present time, when they had upon the throne one who was the solace and comfort of her own home, who had set an example well worthy of imitation, who had a heart to feel for the distress of her people, and who would, if she could, have long since relieved them from those laws which had so long oppressed her people and ground them down to the very dust. (Hear.) He most cordially proposed the health of her Majesty, which was received with loud applause.

The CHAIRMAN soon after rose and said, they had lately witnessed some slight revival of trade; at the same time they could not forget the great and appalling distress which had so long prevailed in that town and neighbourhood. (Hear, hear.) They ought to be thankful for the change which had taken place, but they could not hope, under the existing laws, that the present prosperity would be permanent, or continue for any great length of time. It was impossible it could last so long as they were governed by class legislation; so long as the interests of the many were sacrificed to the benefit of the few, so long would difficulties, uncertainties, and hardships attend their commercial pursuits. He was well aware that many of their legislators were influenced by good motives, but they were unfortunately ignorant of the real wants of the people, and deficient of that commercial knowledge which would enable them to legislate, as they ought to do, for the interests of the country at large. He proposed with all his heart success and prosperity to the manufacturing interests of Great Britain. (Applause.)

Mr. HENRY WALKER, of Wolverhampton, responded to the toast, and, after some introductory observations, said, he most cordially thanked the ladies of the borough for their attendance on that occasion. He thought the public were much indebted to them for the part they had taken in the agitation of the great question of the Corn Law. It was not a question of religious or political difference, but one which came home to the wants, feelings, and affections of those who were more keenly alive to the necessities of their fellow-creatures. It was now well known that the land of England had long since ceased to grow sufficient food to feed the people of the country. This had long been denied by their opponents, but now it had been demonstrated. It had also been proved that the agricultural interests of the kingdom only maintained 22 per cent. of the entire population; while the manufacturing population consisted of forty-seven out of every hundred. Another singular fact connected with this question was, that the agricultural portion of the population had been growing less under the operation of the Corn Laws, and that whatever increase had taken place was owing to the increase of commerce and manufactures. The aristocracy of the country had been governing them upon a feudal system thoroughly incompatible with the present state of society. Land was considered by the aristocracy the only property in the country, and under this belief those noblemen had given

themselves all sorts of privileges, but the most odious privilege they ever assumed was the right to tax the bread of the people. It was his firm belief, founded upon a thorough knowledge of the present system, that it was utterly impossible to have devised any means by which the trade and commerce of the country could have been more effectually destroyed than by the perpetuation of the restriction upon the food of the people. (Applause.)

The CHAIRMAN, after the elapse of a short time, again rose and said, he then came to the principal business of the evening; and in doing so he must beg their indulgence while he adverted to the circumstances connected with their first acquaintanceship with the hon. gentleman to whom they were that evening about to pay so marked a tribute of respect. He well remembered when in the year 1841 they were called upon to come forward as the champions of Free Trade in England. That was the first borough in which the question was fairly tried, and nobly, indeed, did they respond to the call. They had then a Whig candidate who did not come up to the mark; they tested him, and found him wanting; upon which, with great prudence, he retired from the contest, and the Conservative candidate was actively engaged in his canvass, and his friends busily employed bringing to bear upon the electors every possible interest which they possessed. Many incautiously had given their promises without considering that the trust which had been reposed in them was not one given for their own exclusive benefit, but one for which they were answerable to the non-electors who were not so favoured. He well knew the anxiety which the friends of Free Trade had felt at that period, and the difficulties they had in procuring a candidate to stand forth as the uncompromising advocate of the great principles which they were desirous of testing in that borough. It was at that moment of difficulty and struggle that Mr. Smith (loud cheers)—a gentleman of great station, of well-known character, of extensive commercial knowledge, and considerable talents—unhesitatingly consented to become a candidate, and make an effort to rescue the borough from the thralldom in which it had been held. Mr. Smith was then the president of the Chamber of Commerce in Manchester, chairman of the Anti-Corn-Law League, and universally known and respected throughout the country. He came to Walsall at their request, and conducted the contest in such a manner as to merit not only the applause and esteem of his friends, but the approval of even his opponents. There was not a person in Walsall who could be found to utter a single word against Mr. Smith during that memorable contest. He (Mr. Scott) held in his hand a publication which came out during the election at Walsall, and which was called the "Letter Bag," having, he believed, that peculiar advantage over all other "letter bags" which secured it from the inspection of Sir J. Graham. (Laughter and cheers.) In that publication he found addresses from nearly all parts of England, and some from Ireland, to the people of Walsall, calling upon them to return Mr. Smith, and thereby achieve one of the most glorious victories which had been obtained for the benefit of their country. To these addresses the people nobly responded; and, had it not been for the highly improper influence which had been brought against them, there was nothing more certain than that they must have succeeded in the contest. They were, however, borne down by the influences to which he had already adverted, but not until they had reduced the majority of their opponents to that point which proved the impossibility of his or any other monopolist again successfully contesting the borough. The ladies of Walsall felt grateful to Mr. Smith for his invaluable services, and they were resolved that at some future time they would prove the estimation in which they held him, by the presentation of a substantial token of respect. He would not detain the company longer from the enjoyment they anticipated in the presentation of that tribute, but sit down leaving the next part of the business in the hands of those with whom that festivity originated.

Mrs. Cox then rose and, taking up a very splendid silver salver which was on the table, presented it to Mr. Smith, saying:—I have great honour in handing you this piece of plate.

The hon. gentleman accepted the plate, which is a specimen of exquisite workmanship: it bears the following inscription:—

"Presented to J. B. SMITH, Esq.,

By the ladies of Walsall, as a testimonial of their gratitude and esteem for the patriotic and spirited manner in which he stood forward in February, 1841, to contest the representation of the borough against a monopolist and bread-taxer; for his upright and independent conduct and urbane demeanour during the struggle; for his general and unwearied advocacy of the rights of labour and happiness of all, in opposition to the selfish interests and usurped domination of a class.

"May he live to enjoy the reward of his exertions, in beholding truth triumphant and his country happy."

Mr. SMITH then rose, and was received with loud and continued applause, which lasted for a considerable time. After the applause had subsided, the hon. gentleman rose and said, he was exceedingly happy to have the pleasure of meeting them on that occasion. After so long an absence they would not be surprised that he felt some embarrassment at coming before them, and inadequate to express himself upon the reception of that beautiful testimony of their kind esteem and regard. He could assure them he never should forget the kindness of his friends at Walsall, particularly the ladies. (Cheers.) It was delightful to see so many then around him who had cheered him on in his contest, and many of whom had made great sacrifices for the advancement of those principles which he and they deemed essential to the welfare of their country. When he first came to Walsall he had not the most distant idea of becoming a candidate, and it was nothing but a deep sense of the importance of the struggle in which they were then engaged that could have induced him to engage in so arduous a contest. It was the first struggle for Free Trade which they had had in the kingdom. It was nobly fought, and, though they were defeated, they were greatly indebted to the generous enthusiasm of the ladies for the favourable struggle they had made. (Cheers.) When he commenced the canvass, his opponent boasted that he could command 700 votes, and that he, Mr. Smith, could not raise 500 supporters. He believed there was some truth in the calculation which was then made, and if he had come forward upon any other grounds than those which he had adopted he never could have succeeded to the extent he did against such great odds. He did not come before them as the advocate of any faction, nor the tool of any party, but he preached a new doctrine which found a response in

the heart of every man, woman, and child in the borough; he contended for the right of every man who could make any description of goods to exchange them for any other description of articles in which he might stand in need. He contended for perfect freedom of trade independent of any paltry party consideration, and, having submitted the arguments in favour of this principle to the people of Walsall, they at once saw the reasonableness and justice of them. They saw how intimately their own immediate interests were bound up in the question, and what was the consequence? Why, the election came on, and instead of having 300 majority against him (Mr. Smith), the monopolist got only 27 votes above him. (Loud cheers.) To those who knew the circumstances under which that contest was fought, the result would be surprising, and nothing less than a great amount of enthusiasm could have effected such wonders. In five months after, however, the contest was renewed, and in place of a majority of 27 in favour of the monopolist, they had a majority of 23 in favour of his honourable, excellent friend, Mr. Scott, and Free Trade. (Loud and continued cheering.) Now, he did not hesitate to say, that he could not attribute that extraordinary success to any other cause than the enthusiasm by which the ladies of the borough were actuated. They influenced their husbands, their friends, and neighbours, and prevailed upon them to make sacrifices for the good of their country, which had reflected infinite credit upon them throughout the length and breadth of the land. He believed there was a spirit planted in the borough at that time which would never die until they got freedom of trade established throughout the whole world. Since he had last the pleasure of addressing them they had unfortunately suffered great privations, and he was delighted to know that they were now enjoying the benefits of an improved state of trade; but it would be instructive to look back and see how far the principles they maintained were founded in truth, and to ascertain, if possible, the cause of the sufferings they had endured. At first, when distress appeared in the land, the monopolists denied its existence; and it were not until it forced itself upon them in the most appalling forms that they admitted its existence. He remembered going at that time upon a deputation to Sir Robert Peel, and representing to him that not less than 10,000 houses were empty in that district. The Premier then said it was over-population, that there was too many people; but, if that was the cause of the distress, most certainly it had not been removed, for they had one million souls more at the present moment than there were at that time. Then, again, it was said the distress was to be attributed to over-production, and they must make less goods. Now, they had not made less goods, on the contrary, they had more goods, and yet there was a revival of trade. Was it not, therefore, quite clear that the arguments of the monopolists were unfounded? (Hear, hear.) If over-population and over-production were the causes of the distress, the increase in both ought, as a matter of course, to have increased the distress; whereas, in point of fact, the distress had decreased in proportion to the increase of population and of manufactures. (Hear, hear, hear.) Then, what was the cause of this prosperity? He recollected, on a former occasion, when they had a similar revival of trade, the Whigs claimed the credit, because they were in power, and now they were told the prosperity was the result of Sir Robert Peel's Government. The truth was, two good harvests, sent by a bountiful Providence, had caused the increase of trade; and, if they always had the blessing of free trade in corn, they would always have good trade. (Hear, hear, hear.) He defied any man to show him where prosperity reigned amongst the people without there being an abundance of food in the land. It was impossible that prosperity could exist in this country unless that the people were in the enjoyment of plenty of food. When corn was scarce and dear, all the money the poor working men of Walsall could get for their labour was insufficient to buy enough of bread for themselves and their families, and therefore they had no money to expend upon clothes or those other necessities the consumption of which were essential to the well-being of other parts of the community. The hon. gentleman next proceeded to point out the great evils resulting from leaving a country like England depending upon the limited produce of her own soil, and stated that he had lately been in conversation with a gentleman who assured him that they had not more than seven or eight weeks' consumption of corn in the country. Now, he would suppose that they had had a bad harvest this year, who could tell what would have been the consequences, with such a limited supply of food in the country. The same gentleman informed him of that of which he (Mr. Smith) had no doubt, that, if there had been a failure, corn would have been raised fifty per cent. in two months' time. Now, he would ask, with such startling facts before them, how could any honest man say that monopoly in the great necessary of life ought to be tolerated for one hour? If it were not for this monopoly they would always have good trade and abundance of food; they would not be reduced to seven or eight weeks' supply, as would appear evident from the quantity of other articles in the country upon which there was no monopoly. They had now in stock in England forty weeks' consumption of cotton, forty weeks' consumption of bread, a year's supply of coffee, a year's supply of tea, enough of sugar to last for one year; there was enough of pepper to last two years; the ginger would hold out the same length of time; the mace, nutmegs, cloves, pimento, and cinnamon now in England would last during the next three or four years. What did that prove? Why, it proved the advantages that the country derived from having useful commodities untrammelled. If they had free trade in corn, in place of seven or eight weeks' supply, they would have two or three years, so that they would never be under any apprehension of scarcity or high prices. He would therefore, in conclusion, have them bear in mind that, if the present system of Corn Laws continued, they could have no security for continuance of that prosperity they now enjoyed; they would be always subject to danger; and, whenever foreigners were unable to pay in cash, they (the manufacturers of England) would always feel the hardships arising from not being able to exchange with them for that food which they might be able and willing to give in return for our goods. Mr. Smith, after paying a well-merited compliment to Mr. Cobden and Mr. Bright for their unprecedented exertions in behalf of the best interests of their country, concluded by again thanking the ladies of the borough for the splendid present they had made to him, and assured them that he would never be

inseparable of their kindness or be unmindful of the interests of their borough.

The CHAIRMAN in highly complimentary terms next proposed the health of John Bright, Esq., M.P. for Durham. The announcement of this gentleman's name was received with loud and continued cheering, waving of handkerchiefs, &c. Silence having been restored,

The Hon. GENTLEMAN rose and was again received with renewed applause, after which he delivered one of those powerful and patriotic addresses in favour of Free Trade, for which he has already obtained, both in the House of Commons and out of it, so much applause. He appealed to facts in proof of the doctrine of Free Trade, and most forcibly elucidated the advantages which all classes in the community would derive from an entire free trade in corn. His address throughout was listened to with great attention, and made a deep and lasting impression upon all who heard it. He regretted the absence of Mr. Cobden, who was detained at home in consequence of the temporary illness of his lady at the time when he was about to leave for Walsall.

The health of the Rev. W. Mackean, the Committee of 1841, who assisted in the contest of Mr. Smith and subsequently of Mr. Scott, was afterwards drunk: the company soon after separated.

HORSHAM.—THE LEAGUE.—A public meeting of the electors and other inhabitants of Horsham was held on Wednesday evening, to take into consideration the subject of agricultural protection, and the vote of Mr. Hirst on Mr. Villiers's motion. On the motion of the Rev. Mr. Ashdowne, seconded by Mr. Agate, Dr. Rickwood was unanimously called to the chair. After opening the business of the meeting he introduced Mr. Sidney Smith, who gave a view of the great progress of the Anti-Corn-Law League, and its present high position. He examined the measures of the present Cabinet, and exhorted all to prepare for an election, and to look out for an honest Free-Trade representative against a dissolution, which the affairs of Ireland rendered by no means improbable at an early period. The rest of the address was occupied with an examination of the agricultural part of the question. A number of farmers were present, and Mr. Smith pointed out that, even in Sussex, there were only 34,000 persons employed in agriculture, out of a population of 299,000. He also showed that the "Canada backdoor" had admitted upwards of 400,000 barrels of flour, at a nominal duty—that large sales of American provisions were made—that Russell had declared against the sliding scale—and that all was uncertainty as to law, prices, and prospects, which could only be obviated by absolute freedom of trade. A unanimous vote of thanks was passed to Mr. Smith. The assembly-room of the Richmond Hotel was crowded with a respectable auditory, and all the front seats were occupied by ladies.

IMPORTATION OF WALNUTS.—the steamer Antwerp, which arrived at the St. Katharine steam-wharf on Thursday, the 5th inst., from Antwerp, had, in addition to a full complement of passengers, and a variety of fruits of different sorts, a large quantity of walnuts on board, which were landed immediately, and cleared for the London market. This is, we believe, the first importation of walnuts from the Continent this season. Fruit of all kinds is very plentiful at present, in consequence of the extensive importations from abroad; and the superior kinds of fruit are remarkably cheap, peaches, nectarines, &c., being offered, of very excellent quality, in the markets at the low price of 1d. each.

FREE LABOUR.—THE COST OF PRODUCING SUGAR.—One of the most encouraging circumstances with regard to the British colonies in the West Indies, is the great improvement which is taking place in agriculture, and which the Earl of Elgin and the other governors are doing everything in their power to promote. Amongst the numerous agricultural societies formed in Jamaica, is one in the parish of Clarendon, and amongst the prizes offered by that society was one of £20 to be given to the manager of the plantation who should produce the greatest quantity of sugar at the smallest cost. It appears from the report of the Jamaica Royal Agricultural Society, that two managers competed for the prize, one of whom succeeded in producing sugar at a cost of 9s. 6½d. per cwt., and the other at an expense of 8s. 10½d. This is a surprisingly cheap rate of production, much cheaper indeed than anything we had supposed to be possible, and would justify much stronger hopes of the triumph of free labour over slave labour than we should before have ventured to indulge.—*Liverpool Times.*

GAME LAW VICTIMS.—Two of the gamekeepers of the Earl of Stradbroke committed suicide on Saturday and Sunday last, within twenty-four hours of each other. Report attributes the death of both of them "to their anxiety and dread of meeting their master (who was expected at Henham-park on Saturday, on his return from his Irish estates, but who is not now looked for till this week), fearing his anger that such extensive depredations should have been allowed among his preserves as have lately thinned the number of his pheasants, &c." There are other reports to a similar effect, showing that the anxiety of mind which ended in these unfortunate men destroying themselves, was caused by their solicitude about the game they had to preserve. It is not long since another gamekeeper of this same Lord Stradbroke was murdered by poachers, and, if our memory serves us aright, several transportations beyond the seas were the consequence. Look, then, at the loss of life, the misery, and the expense to the public, in order that this single landlord's game may be preserved. Let it be kept in mind that, during the last ten years, some thirty gamekeepers have been murdered, and as many poachers hanged for the murders—that in one year, namely, 1843, thirty persons were transported, and four thousand five hundred convicted and sentenced to fine and imprisonment in England alone for infringements of the game laws—that the cost of prosecuting the "criminals," and of maintaining their families when thrown upon the parish, amounts annually to not less than £100,000 sterling—not to speak of the immense cost of maintaining those who are transported beyond seas, nor of the wreck and ruin of virtue and happiness to tens of thousands, nor of the brutal and revengeful feelings engendered, and the desperate criminals who are brought into existence and fostered by these laws—and who shall say but that they are one of the greatest curses of our land, and ought, without delay, to be swept from off the statute-book for ever.—*Leeds Times.*

EARL SPENCER'S ESTATE.

To the EDITOR of the LEAGUE.

SIR,—The matter which I am about to introduce to the readers of the LEAGUE in a series of letters, or essays, is so similar to that communicated by another correspondent, Mr. Adam Brown, that, at the outset, I feel it necessary to make a few explanatory observations.

Neither Mr. Brown nor myself are professional authors. We have written on matters relating to the farm, and have published what we have written; but we are not professional writers. Mr. Brown has never been, I believe, much of a party man; and I have never been a party man at all. I have hesitated until lately even to join the League, though I know it to be of no party but that of the Free-Traders. But I am bound to say, that, so far as my humble judgment goes, the time has come when those favourable to Free Trade should declare for the League. During the present session of Parliament the members of that body in the House of Commons have so honourably occupied, and steadily maintained, their neutral ground in the conflicts of factions, that all who are not of the conflicting parties must seek the neutral ground; that is to say, if they have no objection to the company they may meet there.

Now, it seems to me that there never was neutral ground upon which men could meet with more benefit and satisfaction to one another than the Free-Trade ground. Those who have held aloof from the League, though approving its principles, lest, in joining it, they might be making up another of those state parties from which the public has gained little and suffered much, may safely and consistently and usefully come forward here; for there is no danger of being called upon as a body, in future, either to achieve or defend other projects. There is but one object to attain, and it is public, palpable, and national. That object obtained, the Free-Traders have no farther compact.

As an agriculturist, I offer what little assistance I can for the settlement of this question of questions. I may do so with more than a requisite or justifiable preference for my order—the order of the plough. But, born and bred upon the farm, I love it. In the correspondence which I shall send to this paper I may seem to the men of the steam engines and the ships to be too partial to the farmyard; but it will be seen that it is that partiality, I should rather say that love for, and that high importance in which I hold the agricultural interest of our country, that makes me advocate the abrogation of the delusive Corn Laws, and the settlement of agriculture on the basis of justice and common sense.

I may say truly enough that it is Mr. Adam Brown who at present induces me to undertake to be a regular correspondent of the LEAGUE. But I must also say that it is the principle of Conservatism, the love of our national institutions;—I do not mean the Conservatism of a party so calling themselves—but the Conservatism of such as love their country for their country's sake, and who would preserve and extend its greatness; who venerate the virtues of our national institutions, not their vices or their blemishes; it is this kind of Conservatism which makes me desire to give my humble hand of friendship and of help to Free Trade. It is that I love England and England's reputation, and feel a joy in her greatness and her power, that I would join with those who are labouring so zealously and so well to keep England in the front rank of nations, and who are contending for the ability to advance her as far beyond what she has ever been as she is now in advance of all other communities.

It is, however, more especially for the benefit of British agriculture that I offer a helping hand to the League. It is to redeem the farmers, if possible, from that most fatal delusion which has been spread among them—the belief that the so-called "protection" does them any good, that I offer my correspondence; and I hope to prove to every landowner who will listen to proof, that the whole agricultural interest of Britain suffers from the restrictive policy which keeps millions hungry and poor to raise the prices of corn and the rents of land; prices and rents which, on the contrary, are neither so high or so well paid as they would be if the millions were not constrained to be poor and hungry.

As I just now said, Mr. Brown has been, through his correspondence with the LEAGUE paper, the immediate cause of my beginning this series of descriptive letters. We once ploughed the fields together on the same farm. We have at times travelled together. We have formed opinions very much alike; and when arrived at home from our travels we have, on chancing to meet, often compared notes and thoughts together. Mr. Brown empowers me to say, in introducing myself, that he has been for some months too much engaged with his personal affairs to keep up a continued correspondence, with all that attention to freshness of matter and correctness of facts which this great subject requires. And, though he began a series of letters last week on "Remarkable Farms," he is afraid that his engagements will still interfere with his ability to carry them out as he intended.

We have, therefore, agreed that, as some of our visits to notable places were performed in company, he shall give me some of his exclusive information, and allow me to mingle it with what I myself have collected or may collect, and with what we have in common, and that I shall write it and send it to London to the LEAGUE for the information of those who read that paper. And I am told they are very many in number.

One thing I am not able to do, at least not at present. I cannot take up Mr. Brown's visit to the "Remarkable Farms" in Essex where he left off. But, as he says he will still communicate with the LEAGUE so often as he has leisure, this is of the less importance. Nor is the subject which I choose for my first letter one that I am so completely master of as I should like to have been. It is a description of the estate of that most excellent nobleman, Earl Spencer. My visit to his estate was brief; and it is now some months since it occurred. Moreover, I did not by any means see all that should have been seen, not even for a brief period. But what I did see will probably be read with interest.

JOURNEY TO EARL SPENCER'S ESTATE.

The First Day.

I was a passenger on the London and Birmingham Railway on the 31st day of May last, coming from the north; and, calling to mind that Earl Spencer's seat was in Northamptonshire, I bethought myself of going thither to see his lordship's cattle, and his celebrated breeding and feeding establishment. I was wrong in supposing this establishment to be at Althorp, in Northamptonshire; it is in Nottinghamshire; but of that hereafter.

Not knowing where Althorp was situated, save that it could be reached from Northampton, I came on to the Blisworth station, which is the nearest to Northampton, though, as I subsequently ascertained, I was nearer Althorp at the Daventry station, which I had passed.

Blisworth is between four and five miles from Northampton, westward, and Althorp-park is six, or perhaps seven miles northward from Northampton. It may be worth while to remark that the railway has its station at Blisworth, so inconvenient to the principal town of the county, which should have been a principal station, because of the bitter, resolute, and expensively-continued hostility of the corporation of Northampton to the railway project when it was before Parliament. The corporation, and all the inhabitants who sided with it, have lived to repent their hostility to the railway, and that before they were much older than when the line was made. It is pleasant, however, to see that they gain in wisdom much faster than they grow in years. They are as eager advocates of railway intercourse now as they were hostile opponents to it before. The staple trade of Northampton, which is shoemaking, has been much improved by the railway, even though it did not come to the town. Thus it will be hereafter with many of those who are the bitterest enemies of the extension of trade, and the facilities of intercourse between nation and nation. Freedom of intercourse will be carried in spite of them; they will reap their share of the general benefit; and then they will be the most hearty approvers of it.

Thus it will be, that those who now suffer reproach and contumely for their labours in the liberation of commerce will return to their enemies good for evil.

To be at Northampton, with one's face turned towards Althorp, and one's thoughts turned upon Earl Spencer, it is impossible to forget the question of the Corn Laws. The simple honesty, the political integrity, and benevolent nature of Earl Spencer would excite at any time a high interest in the mind of a stranger visiting in his neighbourhood; and all the more so, if that stranger listened to the repeated and never-ending testimonies of respect and love which the tenantry and their work-people are ever paying to his lordship when his name is mentioned by the stranger. And, in addition to that, the interest in the mind of the stranger is heightened, if it is remembered that this amiable nobleman is personally and untiringly engaged in advancing the increase of human comfort, by increasing the first element of comfort, human food; but how much greater is the interest heightened, when we call to mind that this eminent agriculturist, who led, when it was not fashionable to follow, but who is now followed because it is fashionable to be, or to seek to be, good breeders and feeders of cattle; how unspeakably more interesting is it to approach his estate with the recollection that he has declared it to be his decided and well-considered opinion that a Free Trade between England and all other nations would not injure agriculture, but would, on the contrary, be for the good of agriculture, and the great good of all England.

I went out of Northampton on the road to Harlestone, a village on Lord Spencer's estate, with all those things revolving in my mind. I knew no one in that part of the country, nor did I know if his lordship was at Althorp. I had rather some reason to believe that he was in London; but I had no doubt that I should push myself into a right channel by some means or other for seeing his estate.

The village of Harlestone is pronounced as if written *Alston*. I had inquired at Northampton if it was a place which was likely to afford me a night's lodging, and, being told there was no doubt of that, I hired a gig, and a man to drive me there and take the gig back; so I went in the evening, that I might have a walk in the early morning amid the fine old woods, which, I was told, covered the country about Harlestone.

I entered the village by going down a rather steep road, midway by the side of which, facing upwards, stood the inn, or public-house of the village, as if it were looking out for customers, and waiting there to receive them.

Such was my impression while my face was to its face, and we had not yet met. But I was much disappointed to find that its landlady was not disposed to admit me as

a lod house and lady that was h she he only man He in mornl should The of bus tion n her ac come with t comfor was to it not me, I freshn bedche village Noti riches thered hung t compa windov during the aw in my to wak was no mornin June w from t —to th key to all the gloriou But ing, I v the roac which i and whi bottom, see into I do they ca stretch to have blessed of bless more gr gardens run off i wander And if children lofty el looking upon th ther;—r upon th as if pl but that spect, a I did have do westwar road an which tl down to top of th view of hundred height, valley, t branches enclosur cattle gr house I say belong t The man Honours the cattl The which I is most i opposite its old gr its brigh garden, barns and And all dewy sur of exhib being ye are not more cor I her road; or

a lodger for the night. I inquired if there was no other house, and there was none. I asked for the next village, and found that was some miles off; and when the landlady said I could soon go there in my gig, I suggested that they might be as unwilling to admit me there as she was here; and again I pleaded to be allowed to stay, for she had not said that there was no room for me; she only said that she did not think I could stay there. The man that drove me knew, however, what string to touch. He intimated that I was going to Lord Spencer's in the morning on business, and that it was necessary that I should stay in the neighbourhood all night.

The mention of his lordship's name and residence, and of business to do there, was enough. She had no objection now, save a fear that I would not be satisfied with her accommodation; but such as it was I should be welcome to try it. I did try it; and never was I accommodated with a bedchamber more delightfully fresh and fair and comfortable. I might have almost formed an opinion that it was too spotless and perfect to be intended for use; had it not been that my experience in travelling has proved to me, long ago, that if the most perfect cleanness and freshness and general comfort are to be found in any bedchamber, that chamber is to be found in the little village inns of rural England.

Nothing could be more delightful than this. Floral richness adorned the outside and fresh flowers were gathered and brought within. In the lofty trees that overhung the roof, blackbirds and throats, and their musical companions of the evening, sung to me almost at the very window; and for several hours after they were done, during the whole night indeed, the nightingales kept up the sweet discourse. I had only to sleep with their voices in my ears, and dream myself into Elysium. I had only to wake in the morning, and find that to be in Elysium was no dream. The brilliant sun of four o'clock in the morning of the 1st of June was out; and the flowers of June were out with him; and thousands of vocal birds, from the full-voiced thrushes—the Wilsons of the woods—to the sparrows that were so happy as not to know what key to sing in, nor which of them to make most noise; all these, in such a place, made an awakening out of sleep glorious beyond my power of telling.

But I go too fast. On my arrival there, in the evening, I walked out to see the village and its neighbourhood; the road still descended until it came to a clear streamlet, which issued from the deep shady woods on the left hand, and which, after watering the garden walls and hedges at bottom, went on its way, wandering farther than I could see into the country, eastward.

I do not know how many houses the village contains: they can never be seen all at once. With but little stretch of the imagination, one might believe this village to have descended upon the earth from some place more blessed than the earth, and to have brought the beauty of blessedness with it. One might suppose that the more grave and aged houses were sitting quietly in their gardens; while the frolicsome and the young houses had run off into the woods and were hiding there, while others wandered out and scattered themselves to look for them. And if we could speak of smiling cottages as of smiling children, and speak of them peeping from beneath the lofty elms, decked in their roses and twining flowers, looking out to see if the pleased face of a mother was upon them, we might be at no loss to discover that mother;—not only that a full-sized mansion looks down upon them from the gentle eminence upon which it sits, as if pleased to see their rosy faces through the trees; but that this mansion on the eminence is, in many respects, a parent to the little cottages below.

I did not, however, turn this way at first, which, to have done, would have required me to turn to my left westward, out of the public road. I kept on the public road and ascended, going northward, an acclivity upon which the road toiled, similar to that which brought me down to the village on the southern side. Gaining the top of this rise, I at the same time gained an unexpected view of a portion of the village which lay about three hundred yards to my left on the brow of an opposite height, separated from where I stood by a narrow deep valley, the height crowned with lofty towers of green branches, and the valley dotted with gardens and green enclosures; in each enclosure some of those remarkable cattle grazing, the breeding of which distinguishes the House of Spencer.

I say the House of Spencer, for these cattle did not belong to his lordship, nor was I yet at Althorp-park. The mansion, of which I just now spoke, is that of the Honourable Captain Spencer, brother to his lordship, and the cattle belonged to the captain.

The scene before us, from that rise of the road on which I first caught a view of it, is most lovely. And it is most thoroughly English. The chiefest object on the opposite height is the village church, venerable and gray in its old graveyard. Next to it is the parsonage-house, with its bright windows and slated roof, its shrubberies and its garden, and its elaborate floweriness. Lower down are barns and stables and a farmyard, all substantial and new. And all around are those matchless beasts grazing in the dewy sunset, which help to make up that most matchless of exhibitions, the London Christmas Show. But, not being yet put up to be fed at the stall for Christmas, they are not so loaded with fat as then, and are consequently more comely and handsome to look upon.

I here turned direct to my left; went down a narrow road; crossed the streamlet in the hollow, and went up

to the churchyard and the church. As is always my custom in a strange place, I went there to read the epitaphs and the ages of the dead; and to pay my respects to the church. It may be fantasy in the eyes of some, and superstition in the eyes of others; but, whichever it may be accounted, I must confess to it that I never feel that I have formed a full and fair acquaintance with a village until I have become acquainted with its graves and its tombstones.

Leaving the church, and keeping on the footpath that led towards Captain Spencer's mansion, I found myself in the park. Here there were also cattle grazing; and such splendid cows some of them were! But the cattle, fine as they were, did not as far surpass the inferior and ordinary runts, such as we may see in Galloway or Wales, than did the trees of this park surpass all ordinary forest trees.

There they stood, each tree towering like a dome, and spreading out its branches like the roof of a great cathedral. And, looking along, they seemed in number and in breadth as if all the cathedrals of Christendom had been collected and formed into one; their huge trunks, vast as if they had stood there in the days of the giants, forming a succession of pillars, each of a magnitude which would take three or four or more men to encompass with their outstretched arms. And high overhead among the millions of leaves there was a solemn humming that sounded as if the worship was just dying away with the closing twilight. And it was a place which infused into the soul thoughts of solemnity whether the soul desired them or not.

There was so much of the greatness and the glory of the Creator present, that the creature was overpowered thereby with a sense of his own nothingness. And such thoughts partook still more of devotion when the eye could see, and the mind could understand, that all this majesty of nature was not walled round and separated from the world to make one man proud that it was all his own, and that nobody else could look upon it. It was in this park, sheltered by the most magnificent of forest trees, and looking out upon the meadow sward that intersected their groups in many parts, that the houses of the village lay scattered about; and it was pleasing and most grateful to the mind to reflect, after being told, that of the industrious families who inhabited there, no hand was unemployed, no mouth was unfed.

Finding the night coming on me fast, while I had to return by paths of which I knew not the intricacies, I turned back, and, in doing so, forgathered with a man who came down another road. He was going towards that part of Harleston where I was to lodge for the night, and offered to conduct me. I remarked to him that this was a place of most singular beauty; and he replied that he had been, in his time, in nearly every part of England, but he had seen nothing to equal this; "and more," said he, "I have seen few people to equal those who are the owners of this place." Which remark of his led us into farther conversation, and I found that he was a mechanic employed in the building of new cottages, which on all sides of Althorp-park, in several parishes, Earl Spencer was at that time providing for the labouring population. His lordship was pulling down the old ones, not so much for their inferiority or age, for they were equal and rather superior to the ordinary class of labourers' houses; but they were pulled down, and new ones of a very superior kind were built in their room, because the old ones did not come up to the class of dwellings which his lordship thought the families of working men should inhabit. But I have here expressed myself erroneously. The old houses were not pulled down and new ones built in their place. The new ones were built first, and then the old ones were pulled down. But, as I saw these new cottages on various parts of the estate next day, I shall defer a farther account of them until I describe my proceedings on the next day.

When I began writing this account of my visit to Althorp-park, I thought to finish it in one article; but finding myself not farther yet than Harleston village, on the evening before my visit to Althorp, I shall halt here, as I did there, and repose myself before going farther.

ONE WHO HAS WHISTLED AT THE PLOUGH.

THE HARVEST.—The crop will be a full average one, and, with this fine weather to get it in, the grain heavier and better than last year. Again the lesson will be taught the farmers, that with abundance prices cannot be kept up by Corn Laws or any other legislative contrivance, except that of pouring out bales of paper, or, in other words, increasing the circulating medium, which Sir R. Peel will not do, and which no threat of noble dukes will ever induce him to do. And again, Mr. Cobden's question, "What good do the Corn Laws do the tenant-farmer or the labourer?" will be forced on public attention. The question has never yet been satisfactorily answered, nor ever will. — *Brighton Herald*.

TREATY OF COMMERCE.—On Monday the treaty of commerce and navigation between her Majesty and the Grand Duke of Mecklenburgh Schwerin, which had been laid before Parliament, was printed. The treaty was signed at Schwerin in May, and the ratification exchanged on the 10th of August last, at Dobberan. There are eight articles in the treaty, and three in the treaty containing the accession of the Grand Duke to the treaty of commerce. The vessels of the respective powers are to be subjected to the same charges as national vessels. All articles of the growth, produce, and manufacture of the two countries are to pay the same duties, whether exported or imported in vessels of Mecklenburgh Schwerin or in British vessels.

THE REGISTRATION.

NORTH AND SOUTH LANCASHIRE.—(From a Correspondent.)—The Conservative agent announced, on Saturday last, that South Lancashire is lost unless the Conservatives come forward to aid the cause. This was to be expected long ago. For three years past, E. Worthington, Esq., has been constantly attending to the registrar, and this year the League, with thirty clerks, are endeavouring to complete what Mr. Worthington began. In North Lancashire the same sad aspects are too evident to be mistaken. Wherever you turn you find Mr. Moorhouse and his emissaries of the League earnestly searching into the most remote and secluded spots for information. As a freeholder said to us in Preston, "he is here, there, and everywhere." With these startling facts before them, the Conservatives ought to buckle on their armour for the conflict, and by active unity again defeat, as they can, the impertinent interference of the League. — *Morning Herald*.

CAUTION TO OBJECTORS.—The barristers on the Northern circuit have given notice of their determination to grant costs under the 46th section of the Registration Act, in the following cases:—If an objection be withdrawn without reasonable notice being given to the party objected to, where a person has already been objected to, and the case heard by the revising barrister and the name retained upon the list; if it appear, upon a subsequent objection, that no change of circumstance has taken place; and, lastly, where the facts disputed might be ascertained by reasonable diligence, as examining the rate-book or the like. — *Hull Advertiser*.

BOROUGH OF BEVERLEY.—The business of the barrister's court is likely to be light this year. The number of objections to be decided are, compared with previous years, only few. On the freemen's list there are 19 objections and 106 claimants; the latter are principally persons who reside in Hull, but as their case was argued last year, and decided against them, we should say they will have no better chance at this revision to prove that they are within the required distance. We understand the registry this year is likely to show a further gain to the Liberal party. — *Ibid*.

PERTH.—In this burgh there has been a gain to the Liberals and Free-Traders of 31 on the present registration.

PUBLIC PARKS, WALKS, &c.

Tuesday evening a great meeting of the working classes of Manchester and Salford, convened by public advertisement, was held in the Free-Trade Hall, Manchester, for the purpose of forwarding the movement now making for the establishment of public parks, walks, &c. The following extract from the advertisement indicates the feelings of the working classes on this important and interesting subject:—"Every working man who feels an interest in the improvement of the town should attend this meeting. Every man who is fond of healthful, pleasant walks and recreative exercise should bear himself in this question. Every one who knows the value of good air and manly sport, as conducive to the proper development of both mind and body, should be in action himself, and should rouse his neighbours to action, to push on to success this important movement. Every woman who finds her children's sports restricted by the smallness of her house, and their health deteriorated by continual habitation of crowded streets, and who loves her offspring and wishes them to live, should move herself, and induce her husband to move, in support of the establishment of free public parks. Above and before all, every person engaged in the improvement of the masses, physical, intellectual, or moral, should exert himself and work earnestly in this question; for the establishment of free parks will excite the mind to action, by supplying instructive and pleasing lessons in science; will moralize by the association of classes, and the generation of sympathy between them. Educators of youth should engage in this public work; for free parks will supply them with free school-rooms, full of ever-changing and ever-beautiful apparatus, capable of furnishing practical lessons in plenty and variety for life. This is peculiarly the question of the working man; and all, without exception of class or party, should heartily engage in it." Resolutions in favour of the object of the meeting were unanimously agreed to, and a handsome sum was subscribed by many present. A resolution of thanks to the Council of the Anti-Corn-Law League, for lending the Hall, was moved by Mr. James Morris, who said that, although its price was £20, its gratuitous use was at once granted. Mr. R. J. Richardson seconded the resolution, which passed with great applause.

SIR ROBERT PEEL AND THE MANCHESTER PUBLIC PARKS.—We have very sincere and very great gratification in laying before our readers the copy of a letter received by the honorary secretaries of the Public Parks Committee from the Premier—a letter which reflects honour upon the right hon. baronet, for the sentiments it avows, the associations adverted to, and the acknowledgments made; and which we commend to general attention as a noble example worthy to be followed by many other gentlemen formerly connected with Manchester, and on whom it has much stronger claims individually. The following is the Premier's letter:—

"Gentlemen,—Although I have no longer any personal connexion with the town of Manchester, by property or other local tie, yet, considering Manchester to be the metropolis of a district to the industry of which I and my family are under very deep obligations, and most heartily approving of the wise and benevolent design to provide for those who are doomed to almost incessant toil the means of healthful recreation and harmless enjoyment, I willingly contribute to the furtherance of that design, and offer my cordial wishes for its success. "I request my name may be added to the subscription which has been commenced for this purpose, for the sum of one thousand pounds.

"I am, gentlemen, your obedient servant,
"Malcolm Ross, Esq.
"Edward Watkin, Esq."

This munificent donation is, to our mind, greatly enhanced in value by the graceful and liberal terms in which it is conveyed. We hail it, too, as a pledge that, in the estimation of every benevolent mind, no petty party feelings should be allowed to obtrude into this excellent design for the benefit of a large and industrious community. — *Manchester Guardian*.

MACCLESFIELD.—We understand that John Latham, Esq., town-clerk of Congleton, is in communication with the Lords of the Treasury, for the purpose of obtaining a grant for the construction of public walks in the Town.

Wood, which it is hoped will be successful. The plans are already made, and it is expected that workmen will very shortly be employed in carrying them out.—*Maulesfield Chronicle*.

BIRMINGHAM.—In most of the great towns in England some progress has already been made towards providing the resources of parks and public walks and baths for the people. A movement in the same direction has already commenced in this town. Perhaps there is not a community on the wide surface of England that stands more in need of such auxiliaries to healthful recreation than the working population of Birmingham. The higher ranks of the community may depend upon it that no more effective check can be applied to those dangerous anti-social doctrines which infect society than a removal of the odious class distinctions in which they originate.—*Birmingham Journal*.

THE "LANKESTER"IAN SYSTEM.

There is too much reason to fear that Lankester fired more stacks than those of Mr. Frederick Payne, of Great Barton. There is no doubt at all that he had been at Stanton, and spread his opinions among the labourers there. And certain it is, for I have held argument with persons of high and low degree in that and other parishes in the west of Suffolk—certain it is that, with most farmers and with some of their men, an opinion has taken root there, that the dearer corn is the more prosperous is the country. None of them would wilfully destroy their own property, nor like others to destroy it. Yet still they hold scarcity and dearth to be a blessing. Lankester, however, carried the principle and the doctrines of artificial scarcity into practice. The judge exclaimed from the bench when he heard the witnesses—"A new and most extraordinary application of the doctrines of political economy certainly!" And when he passed sentence on the prisoner, he spoke of the peculiar atrocity of his conduct as distinguished from the others who were standing at the bar with him, in having gone about the country spreading the most pernicious opinions and doctrines.

No doubt the conduct of this man was most criminal and criminally stupid; but his doctrines, which may be called the "Lankesterian School of Agricultural Economy," is neither so new nor so extraordinary as the honest judge declared them to be. That great oracle of the Duke of Richmond's party in Sussex, Mr. John Ellman, who boasted to be, and is believed to be, the father of the sliding scale, addressed a letter to the farmers of Sussex, through a Brighton newspaper, two weeks ago, cautioning them against thrashing out and selling their wheat too hastily, as there was a very strong probability at that time of continued wet weather; which wet weather would either injure permanently, or unfit for the market for a long time to come, the abundant crops of corn in the counties not so favoured as Sussex; the crops of which were all in the rick or in the barn. Mr. Ellman told the farmers to hold back until Christmas, and the scarcity in the market would redeem their hopes. He could only justify their holding back until Christmas by the assurance that they would then have it all their own way, as the wet weather would have destroyed the crops yet left in the field.

What is the difference between Mr. John Ellman, of Sussex, and Mr. James Lankester, formerly of Suffolk, and now of the hulks? Only this, that John rejoices in water, and James rejoiced in fire; John hopes the rain will do the business, and James was so sure that lucifer matches were better than the rain, that he actually applied them.

Is there not a paragraph going the round of the newspapers of London this week—a paragraph of printed joy—telling us that, because of the good weather, the wheat is down in price, and the quartern loaf is down after the wheat? Does it not tell us that in all the populous districts of London the loaf has been lowered to 6½d?

Who needs to be told that the difference between that price and 11d., in 1840, and in 1841, is the difference between the activity of trade in those years and in this year? When the mother of a family this night pays her baker 6½d. per loaf for the bread she has had during the week, will she not have more money to get shoes or stockings, or dresses, for her children, than if Mr. John Ellman's hopes of wet weather and scarcity had been realized? Does not the increased purchase of shoes, and stockings, and dresses add to the business of the shopkeeper, enabling him to live better and dress better? And does not his increase of business give more work to mercantile travellers, and carriers, and merchants, and manufacturers, and all the people employed by all of them? And do not these people buy largely of bread, and beef, and bacon, and butter, and consume it when well employed, thus making corn scarce and dear by legitimate means—the only means which virtue, humanity, and policy sanction?

If John Ellman will open his eyes to look for "protection to agriculture" in the quarter from whence alone it can be obtained, he will see that the ability of the consumers to buy and pay for farm-produce is that protection.—*Morning Advertiser*.

INCENDIARISM IN BEDFORDSHIRE.

BEDFORD, Sept. 7.

During the past week a painful degree of alarm has been created in some parts of this county, owing to the revival of those incendiary outrages which spread dismay throughout the district last winter.

In addition to the destructive fire at Dunstable on Wednesday, four others are reported to have occurred under circumstances which admit of little doubt that some, if not all, are attributable to design.

The most destructive of these fires took place at a farm in the occupation of Mr. Pope, of Lower Caldicott, an extensive farmer, and who is also landlord of the King's Head. The flames broke out soon after eleven o'clock on Wednesday night, and spread rapidly over the homestead before any alarm was given. A large number of labourers collected, who generally evinced a disposition to render assistance, but, owing to the difficulty of obtaining a sufficient supply of water, their efforts proved unavailing. The property consumed consisted of the produce of nearly three acres of wheat in the straw, three acres of barley also in the straw, some live stock, and the whole of the farm-buildings. None of the workmen were on the premises later than eight o'clock on that evening, where everything was left apparently safe, and it is said that the flames broke out at two separate parts of the stack-yard—a

fact which strengthens the presumption that it was the act of an incendiary. Mr. Pope will be a large loser by the fire, as the stock was uninsured. The farm is the property of Mr. Hogg, who is insured in the Norwich Union to the full amount of the farm-buildings.

On the previous morning, so early as two o'clock, another fire broke out near Biggleswade, on the premises of a man named Giles Smith, a gardener. There was a large quantity of dry straw in the yard, which rapidly ignited, and the flames attained a frightful ascendancy before assistance was obtained. Messengers were sent off to Biggleswade, the nearest town, for the engine, but on its arrival there was, as usual, a dearth of water. The fire had spread over the yard, and every attempt to arrest its progress failed. The dwelling-house, barn, stables, and other out-buildings, together with some pigs, were wholly consumed. The property was not insured. The origin of the fire has not been accounted for.

On the same morning, and nearly at the same hour, another fire occurred at Tempsford, in a cottage occupied by two men, named Page and Jeeves. The inmates, who were aroused from their beds, narrowly escaped with life. The building and the greater part of the property were consumed. It is supposed that this fire resulted from negligence.

On Thursday morning another fire broke out at Goldington, in a cottage belonging to a labourer named Gaunt. The damage was inconsiderable, as the fire was speedily discovered. It is supposed to have been caused by children who had been amusing themselves with lucifer matches, one of which is presumed to have fallen among some barley spread to dry on the floor.

Another fire took place at Toddington, on the premises of Mr. Fox, saddler and harness-maker, on Tuesday night. There is reason to suppose that it was quite accidental; but a circumstance connected with it is not a little calculated to awaken suspicion. It seems that Mr. Fox, after retiring to his bed-room, had occasion to go to a linen closet, and some time afterwards, perceiving a smell of fire, he returned to the place, where he saw the flames issuing from under the door. On entering the apartment he found his apprentice, whom he had left up, nearly suffocated in a vain attempt to extinguish the flames. The lad, probably apprehensive of his master's anger, made his way into the garden, where he hung himself to the bough of a tree, but, fortunately, the noose slipped, and he dropped to the ground without material injury.

The police have been actively engaged in investigating the cause of the frightful conflagration which took place at Dunstable on Wednesday. The agents of the insurance companies have had the premises accurately surveyed, and it is understood that the loss will be more considerable than the first estimate. The destruction of the Wesleyan Chapel will prove a great inconvenience to the congregation, who erected the edifice by subscription, and will have some difficulty in finding a fresh fund for its restoration. The police have apprehended a man on suspicion, who was to undergo a private examination to-day, before the magistrates of the Luton division.

Some of the principal landholders in this county have recently evinced a disposition to adopt any tangible scheme that may be suggested with a view to better the condition of the agricultural labourers, of whom there are at present a very considerable number only partially employed, and there is no doubt whatever that the encumbrance will be immensely increased by the cessation of field labour, as the harvest has in many places been nearly got in.

Amongst others, Lord St. John has announced his intention of introducing on his estate the plan of fork or spade husbandry, recommended by the Highland Agricultural Society. His lordship says, "I have already broken up some land with the fork, and am so satisfied with the advantages of the plan, that I intend forking the whole of the land for fallow crop next year, which will most likely be the double one of turnips and beans, a system I have adopted for two or three years past."

It is said that the substitution of spade husbandry for the plough would give constant employment to the surplus labourers, and without materially increasing the cost of cultivation. If so, the scheme is surely worthy of general adoption.—*Times*.

THE GUANO TRADE.—A private letter, from an intelligent shipmaster, at Ichaboe, who had personally measured the island and surveyed every part of it, states, that, on the 20th of June, the average depth of the guano not excavated was then thirty-five feet, fifty-five feet being the extreme depth of any part yet delved. The writer's calculation was, that 120,000 tons of the deposit were yet available for commerce.—*Liverpool Mercury*.

WAGES OF THE MILL OPERATIVES.—For several weeks the operative cotton-spinners of Oldham, as well as others classes of cotton-mill hands, have held meetings of their respective trades at various public houses, to arrange new lists of prices for their work, with the view of ultimately demanding a higher rate of wages than is at present paid. As yet no turn-out has taken place in connexion with the present movement, and it is to be hoped the difference will be otherwise settled.—*Manchester Times*.

CHEAP RAILWAY TRAVELLING.—An article in the "Westminster Review" on railway administration attracts some notice in the City, on account of the mode in which it advocates the principle that passengers may be carried at infinitely less sums than they now pay, and that very low fares will prove in the end the best source of profit to the proprietors. From the evidence given by Mr. Hudson before the Railways Committee, the writer draws the statement, that on the North and York Midland Railway coals are carried at the rate of three farthings per ton per mile, and that that price is a remunerative one. Estimating that 13 passengers would go to a ton, he finds that a regulation load of passengers on the London and Birmingham Railway—that is, three tons and a half, or 46 passengers, who, standing up, would only occupy a wagon of the common size—might be conveyed at Mr. Hudson's remunerative price for £1 12s. 8d., or 84d. per passenger. Why, then, he asks, should passengers, who can load and unload themselves, and, moreover, are not liable to be lost or stolen, be charged higher than goods? This is, of course, going to a violent extreme; but it is a useful line of argument as showing that the fares are capable of being very considerably reduced, leaving a profit which would very much increase from the additional numbers conveyed.—*Times*.

HARVEST WAGES AT KELSO.—At our port on Monday morning last for hiring shearers, there was a great attendance of Irish shepers. Wages were from 12s. to 13s.—*Border Watch*.

IMPORTS OF HAY.—The value of hay in this country continues sufficiently high to make it an article of profitable import from the agricultural ports of Holland.

NORTH LANCASHIRE.—North Lancashire contains 254 townships, and the number of votes on the present register is 10,337. There are eleven polling districts and places—namely, Blackburn, Burnley, Chorley, Garstang, Hawkshead, Kirkham, Lancaster, Poulton, Preston, Ulverston, and Whalley. The county court for the election of knights for the northern division is held in the Shire Hall (or Nisi Prius Court), Lancaster.

CAUSE OF THE POTATO FAILURE.—For some time after the failures appeared, I durst not venture to offer any opinion on the subject; but, from seeing the fanciful opinions that began to be vended as to the cause of failure, I turned my attention to the subject, and soon came to be satisfied that the evil arose entirely from the seed being placed in the ground when it and the manure were too dry to bring on vegetation.—*Correspondent of the Ayrshire Agriculturist*.

MONOPOLY.—Monopoly commits the crime of forbidding man to serve man. It throws up a barrier between man and man. It interdicts human intercourse, lays an embargo on human sympathies, makes it a statutory offence to do good and communicate.—*P. Harwood*.

IMPORTATION OF FOREIGN CATTLE.—Since our last, the Hamburg, Capt. Brown, from Hamburg, has landed 25 head of cattle; the Victoria, Capt. Draper, 35 head; and the Emerald Isle, Capt. Bouch, 15 cows, 2 bullocks, and 73 sheep.—*Hull Advertiser*.

EXPORTATION OF MACHINERY.—The exportation of lace machinery to France is again in operation. The exporters allege that it is done to evade the patent laws, and that the National Institute of Paris levies a duty of 50 per cent., but if the machinery is upon a new principle not known in France, the duty is only 15 per cent., as heretofore.—*Notts Review*.

EDUCATION AND CRIME.—Of 68 prisoners committed to take their trial for various charges of felony and misdemeanour, at the Salford Hundred Sessions, now holding, 25 can neither read nor write, 37 can read and write imperfectly, and only four can read and write well. None of them have received a superior education. Of two prisoners in the calendar there is no account given.

POPULATION OF EGYPT.—The prolific soil of Egypt not merely increases the fertility of vegetable and animal life, but that of the human race likewise. This fact is noticed by many ancient writers, particularly Aristotle, who states that women in Egypt sometimes produce three, four, or even seven at a birth. Early marriages, the longer duration of life, abundance and cheapness of provisions, would tend, under the Divine blessing, still further to promote the population of this flourishing district.—*Milman's History of the Jews*.

SUGAR REFINING IN BOND.—The Lords of the Treasury, having had under consideration an application of Messrs. M'Fie and Sons, of Liverpool, sugar-refiners, praying to be relieved from payment of the duty on certain quantities of bastard sugar and treacle, being the deficiency which has arisen from sundry parcels of those articles produced from foreign sugar refined in bond, and deposited in the warehouse for the purpose of exportation, and that no duty in future be demanded upon deficiencies of sugar and treacle deposited in the warehouses under similar circumstances, directions have been issued by their lordships authorising the Board of Customs to direct in the present case, and in all similar instances in which there may be no reason to suspect fraud, and without exposing the revenue to risk, that the duty may be remitted. This order has been made general, and communicated to all the departments.

HOW TO LIVE ON 9s. A WEEK.—Every man's income is limited more or less; and he must limit his expenditure accordingly. Thus, he may be forced to content himself with a house of a rent not exceeding £2000. a year, with no greater number of servants than a dozen, with six horses and no more; with but two carriages; with turtle, venison, champagne, and burgundy, only now and then; with a middling box at the Opera, and so on. 9s. a week is a decidedly limited income. To live upon it a man must first cut down his expenditure to the fewest possible branches, and secondly apply the closest shaving to each. They can hardly be reduced below three—food, clothes, and lodging; but if anybody could do without one of these, the difficulty would be much simplified. As to lodging. The cheapest to be had must be chosen; the more unpleasant the situation the better, as the rent will then be more reasonable. A roadside hovel, or a ruinous old house up a court, may be recommended. A single room, however small, must suffice for a whole family, however large. Chairs, tables, bedsteads, and other moveables, may be dispensed with; the entire furniture should consist of a few blankets and some straw; and the blankets ought to be begged. Coals and candles are too expensive; and it is extravagant to have any fire at all, except to cook a few potatoes, or to avoid being frozen to death. With regard to clothes, these must be obtained, if possible, through charity; there is another way of getting them, which it would be hardly right to hint at. By a proper economy they may be made to last till they fall to pieces, which they will not altogether do for years. If it is necessary to buy clothes, they must be bought; but the purchase should only include indispensables. Shirts and stockings are superfluities; and the younger children may at times, and the whole family at times, manage to do without shoes. Food must be confined, in general, to bread and potatoes; but perhaps, with management, a little bacon may be indulged in now and then. It will be out of the question to think of any other drink than the plain water; and tea and sugar are luxuries not to be dreamt of. By following the above rules it is perhaps possible to live honestly on 9s. a week, with a wife and family. Medical attendance is out of the question. What are called comforts must be considered unobtainable; for any man, even though starving and perishing, to help himself to a meal, a handful of wood, or anything of the kind, is highly immoral; the law respects not persons but property, and severely visits such wickedness.—*Punch*.

MIDDLESEX is the least agricultural county in England, there being little more than one per cent. of the population so engaged. The average of the population to each house in the same county is seven. In 14 other English counties, the average to each house is five.

EMPLOYMENT OF WOMEN AND CHILDREN IN FACTORIES.

The following valuable tables, with the accompanying observations of the Commissioners, we take unabridged from the Parliamentary Occupation Abstract, just published:—
Table showing the Number of Persons in Great Britain engaged in the Manufacture of Cotton, Hose, Lace, Wool and Worsted, Silk, and Flax and Linen.

"It is gratifying to see that the returns as to sex and age will afford consolation to those who have regretted the supposed preponderance of the weaker sex and of more tender youth in the number of persons employed in these manufactures. Under the head of cotton manufacture (all branches), comprehending, as we have already mentioned, 302,376 persons, the males above 20 years of age are more than double the number under 20, and considerably exceed the total number of females above 20 years of age, who, in their turn, exceed by a third the females under 20. It is also an additional satisfaction to add, that the proportion of very young persons employed appears to be progressively diminishing, as the last detailed returns on this subject, viz., those furnished by the Factory Commissioners, show a continued improvement in this respect.

"In 1835 the number of persons under 13 years of age employed in factories upon the four staples of cotton, wool, silk, and flax, amounted to 55,455, and were re-

duced in 1839 to 33,566, being a reduction of 21,889, although the numbers employed of all ages had increased from 355,373 to 423,626, showing a transfer of employment from the young to the old, and that this could be done with a considerable extension instead of entailing a diminution of the business carried on.

"So lately as January 15, 1844, Mr. Saunders, Inspector of Factories for the Yorkshire district, says the increase in the number of young persons and adults is greater than in the number of children. Mr. Howell, in his Report for the same quarter, p. 18, for the Cheshire and Midland Counties, says it might be worthy of notice that the few factories in which children under 13 years of age continue to be employed are chiefly isolated in rural districts or in non-manufacturing towns. Mr. Saunders, in his Report for the quarter preceding, gives a very favourable view of the proportionate increase of numbers as follows:—

Total numbers employed in 1838	95,000
Ditto 1843	106,500
Increased number	11,500

"The proportion in which this increase is divided among the three classes recognised by the Factory Act, viz., adults or persons above 18 years of age, young persons or those between 13 and 18, and children under 13 years of age, is as follows:—

Increase of adults	12,000
Ditto of young persons	1,500
	13,500

which is reduced to the actual increase, namely, 11,500, by a positive decrease in the number of children amounting to 2000."—*Parliamentary "Occupation Abstract,"* pages 16 and 17.

Food.—The facilities for procuring wholesome food are now so great, that diseases which in former times spread over extensive tracts of country, from sheer want of aliment fitted for the use of man, are now unknown. Through the progress of agriculture almost every spot of earth is rendered useful, and the produce of our lands is vastly increased and is still increasing. The cultivation of the potato, of fresh vegetables, and of various kinds of useful fruit, the apple, the plum, the chestnut, and the orange, in the different countries of Europe, materially reduces the price of wheat, and have an unquestionable influence on the health of communities. Two centuries ago a salad was not to be bought in the markets of London for money; a cabbage-stock and a carrot were unknown; apples were scarce, and never used save in the crude and unwholesome state. Sir Walter Raleigh and Admiral Drake might have brought half a dozen oranges for the Queen's table, but the community had never seen the golden fruit of the Hesperides. At the present time we buy this delicious fruit at the rate of two for a penny in the streets of London! and, through the blessing of sugar, we are never at a loss for a meal for our children when we have an apple. Sugar is, in fact, one of

the grand conquests of man's industry, and the barbarism of regarding it as a luxury, and making it a source of revenue, ought to be abandoned: it is one of the prime necessities of life, and ought to be as free as air; the first act of the stomach upon the amylaceous principle, which constitutes about four-fifths of our ordinary food, is to turn it into sugar, and dextrine, an insipid kind of sugar—a fact from which the value of sugar as an article of nourishment may be inferred. Nature presents us with the article ready formed, but we make it inaccessible by our absurd laws! It is little more than a century since the great bulk of the community lived upon salt provisions through the winter. Agriculture had made so little progress, that there were no green crops, no such staple as the turnip, not merely to keep cattle alive, but to fatten them; and so little hay was made that it was always an object to save it for the use of the stock that must be maintained till the spring. The cattle which now supply us with fresh animal food through the whole of the winter, in our grandfathers' days, would all have been slaughtered and salted down at Michaelmas; there was no more fresh meat until God's providence brought round the spring. In Sydenham and Morton's times, and even considerably

later than these, among the grand causes for which the assistance of medical men was sought, were the scurvy and intermittent fever. The faculty would starve now did they depend on either one or other of these diseases. The death of the members of the community was then the source of professional income, now it is their birth."—*Dr. Willis.*

IRISH FLAX.—The flax crop in the county of Monaghan never presented a finer appearance, and we are credibly informed that there is more than double an average crop on the ground.—*Banner of Ulster.*

MANUFACTURING PROSPERITY IN SCOTLAND.—We are glad to notice the continuance of favourable accounts from the different seats of our manufacturing industry. In addition to the animation which exists in our own department of production, we understand that there is an extraordinary excitement in the woollen manufactures of Scotland. The factories of Galashiels, and the southern districts adjoining, are all in a state of the liveliest activity. Sufficient hands cannot be got to execute the orders which the factory-owners have been receiving. The weather has become most favourable for harvest work, and great progress is making in reaping.—*Glasgow Chronicle.*

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, September 11, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the LEAGUE of the Saturday immediately succeeding, but are included in the list of the week following.

NORTH LANCASHIRE ELECTION.

(From the Times of yesterday.)

Lancashire is again about to be the scene of a Parliamentary contest. Lord Stanley has taken his congé, and Mr. Talbot Clifton makes his *début*. The well-graced actor leaves the scene, and the eyes of men are bent with a semi-curious listlessness on him who follows next. And painfully alive does the *débutant* appear to the exigencies of his position. He is oppressed by the novelty of his character, and the expectations which it raises. He feels that he is expected to speak on certain topics, but hardly knows what. He therefore speaks on all. But as he has not quite made up his mind what to say, he speaks with that ambiguity and indistinctness which Lucian ascribes to the oracles of Heathenism. He is aware that "it is no ordinary constituency before whom he is invited to present himself." He then proceeds to show how it is "no ordinary constituency," which is done by describing it as "a constituency rendered important not only by its numbers, but also by the varied nature of its interests." This might be supposed to be a circumstance rather calculated to awaken diffidence than audacity. But Mr. Talbot Clifton is not a man to be thus daunted: that is the very thing that makes him bold. He leaps at it, and over it. "To ALL these interests," says, or rather writes he, "my duty and my inclination would lead me to give the most unwearied attention." Happy Lancashire!—"Dives agris; dives posit in fœnore nummis."

Rich in land, in capital, and speculation; teeming with the produce of acres and of factories; exulting alike in natural and artificial wealth! but doubly happy in the possession of a citizen who vows that he will bestow equal attention—and that, too, unwearied—on both the great and hitherto conflicting interests!

Then follow the samples of Mr. Clifton's unwearied attention to the interests of his prospective constituents:

"For the agriculturist I desire most undoubtedly to secure that full protection to his capital, his industry, and his enterprise, to which the burdens he has to sustain justly entitle him." "That full protection to which the burdens he has to sustain justly entitle him." But what is the *quantum* of this full protection, Mr. Clifton? That is the important point. As it is, you have said no more than Mr. Cobden might say. He, too, would give the agriculturists "that full protection to which their special burdens entitle them." But then he fixes their burdens at *nil*, and their full protection at *nil* also. He tells them that 40s. or 45s. a quarter is as much as they ought to receive and other folks pay for corn. You must speak a little more plainly on the hustings, Mr. Clifton.

Now for another piece of mystification:—

"To the representation of the Northern Division of Lancashire, I fully appreciate the great importance of its combined commercial and manufacturing interest, and that I shall always be ready to promote them to the utmost of my power. I trust that by a constant attention to the duties which they impose upon a representative, I shall acquire that confidence at your hands to which it might be considered presumption in me at the present moment to lay claim."

Mr. Clifton "trusts that he shall always be ready to promote the combined commercial and manufacturing interests" of the county. We "trust" that he will. But, unless he gives a somewhat less vague exposition of his economical creed, we fear that the electors are likely to take him upon "trust." North Lancashire deserves something more than wide generalities.

ADVANCE OF WAGES IN PRESTON.—Messrs. Ainsworth and Co., Mr. John Cooper, and some other firms in this town, have intimated to their hands their intention to raise their wages about 7 per cent. It is probable the advance will be general.—*Preston Chronicle*.

THE HARVEST MOON.—As there is an erroneous opinion prevailing amongst many persons unacquainted with astronomy, who are in the habit of denominating that the *harvest moon* which occurs at the time of harvest, let that happen when it may, the following may not prove unacceptable to such of our readers. The moon, during the week in which she is full, about the time of harvest, rises sooner after sun-setting, and with less difference between the times of two successive risings than she does in any other full-moon week in the year. By these means she affords an almost immediate supply of light after sunset, which is very beneficial for gathering in the harvest and fruits of the earth; hence this full moon is distinguished from all others in the year by the appellation of the *harvest moon*. To conceive the reason of this, it may first be considered that the moon is always opposite to the sun when she is in full; that she is *full* in the signs *Pisces* and *Aries* in our harvest months, those being the signs opposite to *Virgo* and *Libra*, the signs occupied by the sun in that season; and that those parts of the ecliptic (in which the moon then is) rise from the horizon in northern latitudes in a smaller angle, and, of course, equal spaces, in shorter intervals of time than any other points, as may be easily shown by the celestial globe; consequently, since the moon's orbit deviates not much from the ecliptic, she rises with less difference of time, and more immediately after sunset about harvest than when she is full at other seasons of the year. The sun enters *Libra* on September 23, and the full moon which is nearest that day is, properly speaking, the *harvest moon*.—*Mark-lane Express*.

REVIEW.

The Lives of Oliver Cromwell and John Bunyan. By Robert Southey, LL.D. (British and Colonial Library.) London: Murray.
Les Œuvres de Victor Hugo (and Victor Hugo's Dramatic Works, including the Tragedy of "Cromwell"). Paris: Gosselin. London: Dulau.

Southey's "Lives of Cromwell and Bunyan" are in the main reprints from the "Quarterly Review," and are, of course, thoroughly imbued with the one-sided spirit of partisanship. Cromwell was a regicide, and nothing else, in Southey's eyes; and to this single circumstance he makes the rest of Cromwell's career subservient, as if the 30th of January was the epoch to which the whole of Cromwell's youth tended, and from which his old age radiated. Bossuet, speaking from his episcopal pulpit, erected near the throne of Louis XIV., naturally enough confined himself to the simple view of Cromwell's anti-monarchical character; but we may well be surprised that an Englishman, who had been neither an uninterested nor inactive spectator of the repetition in our days of most of the great political struggles which agitated the days of Cromwell, should have confined himself to so narrow a view of the Protector's character—a view which excludes some of the most striking features both of the man and the age. Victor Hugo justly observes that Cromwell is one of the many illustrious men who is at once greatly celebrated and but little known. It has been too much the custom to view him as an isolated individual, and to pass lightly over the circumstances by which he was surrounded; he has not been sufficiently regarded as the colossal prototype of English religious reform and political revolution. Cromwell combined these two elements in himself to a wondrous extent, but it must be remembered that they had been intimately associated in England from the days of the Conquest; nor, indeed, are they yet dis severed, for no political question has been discussed in our day to which parties have not endeavoured to give a religious aspect, and there has been no religious dispute which has not been more or less complicated by party politics.

Alienation from the Established Church began in England under the reign of the Norman William. The Saxon Church, though nominally submissive to the Pope, was, to a considerable extent, independent in its character, and most of the inferior clergy were intensely national. The Saxon priests and monks possessed extraordinary influence over the multitudes; but this power belonged to them rather in their individual than in their corporate capacity; they were respected, not as members of a great and imposing establishment, but as men whose daily sacrifices gave proof of their sincerity, and whose unwearied exertions demanded respect and gratitude. The ecclesiastical system introduced by the Normans not only gave the prelates, the abbacies, and the other rich preferments of the English Church into the hands of foreigners, but introduced other changes still more alien to Anglo-Saxon habits and feelings; forms and ceremonies were substituted for appeals to the reason and the affections; preaching was discontinued, and the clergy and people were separated by the greatest of all obstacles, an utter ignorance of each other's language. We, however, find continuous traces from the Conquest to the Reformation, of a native Saxon clergy, sometimes, as in the case of Wicliffe, going to the full extent of dissent from the established system; sometimes, like John Ball, taking a lead in insurrectionary movements, but, in all cases, viewed with suspicion by the Plantagenets, and with dislike by the Romish See. The Anglo-Norman monarchs, the Anglo-Norman nobles, and the foreign ecclesiastics were banded together in support of the same system, and all were equally detested by the Saxon people, whom they oppressed by their cruelty, plundered by their rapacity, and slandered by their malice.

The wars of the Roses annihilated the Plantagenet dynasty, and all but exterminated the Anglo-Norman aristocracy. Those nobles who survived were indisposed to submit to the new race of monarchs, and hence it became the policy of the Tudors to raise up a new aristocracy as a counterpoise to the hereditary influence of the Anglo-Norman nobles.

Though the proximate cause of the quarrel between Henry VIII. and the Pope was simply the capricious passion of a lustful tyrant, yet the political interests of the Tudor dynasty were directly opposed to those of the Romish Church. That Church, as then existing in England, was, by its traditions, its associations, and its habitudes, intimately connected with the dynasty which the Tudors had overthrown, and both were in their natural position when they became open and avowed enemies. The seizure of the church and monastic lands gave Henry an opportunity of founding a new aristocracy; he bestowed these immense estates with a lavish hand on the panders and parasites of his court, and he created a new nobility, which he naturally believed that a consciousness of its vicious origin would retain in complete subservience to the Crown. His expecta-

tions were frustrated by his death; the Crown descended to a boy, infirm in health, and not very strong in intellect; its powers, during the minority, devolved on the new nobility.

Henry VIII. effected very little in the way of religious reform, but he had effected a complete political revolution, and out of this he left for his successors the task of framing a new constitution.

The nobles of Italy, and especially those of Venice, were the only aristocracy which at this period claimed high consideration in the eyes of Europe; the feudal nobility of France had been broken in its strength by Louis XI., that of Spain had succumbed to Cardinal Ximenes, and that of Germany was a mass of chaotic confusion. The new English aristocracy, left during a minority to frame its own constitution, took that of the Italian states, and particularly that of Venice, for its model; and thus were laid the foundations of that Venetian constitution which the author of "Coningsby" has, with equal justice and eloquence, denounced as the great evil in the social economy of England.

Those who have studied English literature of the age between the death of Henry VII. and the establishment of the Protectorate must be struck at the great influence which the Italian school then exercised over the English mind. Harrington's "Ariosto," and Fairfax's "Tasso," are signal instances of the most powerful poetic minds being directed to the work of translation; indeed, their versions have never since been surpassed. But it was not merely in translation that the influence of the Italian models was visible; Milton and Shakspeare have borrowed largely from the writers of Italy, and imitations of "Ariosto" occur in almost every page of the "Paradise Lost." It would appear as if Italy had lost its religious power in England only to establish a stronger hold of literary and political influence. The English nobility, created by the Tudors,—for the older families were so soon swamped by the new men, that they can scarcely be taken into account,—had nothing better than a provisional existence under the reign of Elizabeth; but when the accession of the imbecile James rendered monarchy contemptible, they made rapid strides towards the attainment of their favourite object—a Venetian oligarchy, and were aided in their work by the Scotch having already adopted an oligarchy of somewhat a similar character in the government of their Church. Geneva had been the chosen model of Scotland, as Venice was of England.

Charles I. saw more clearly than his father the design of the new English aristocracy to reduce the monarch to the condition of a Venetian Doge, and he endeavoured to counteract it by elevating a monarchical Church to the chief power of the State, and reviving, as far as was in his ability, those feudal institutions of the kingdom which had brought royalty into closest connexion with feudal aristocracy. On the other hand, the new gentry and nobility planned for themselves a Genevese Church and a Venetian Parliament, claiming for both the attributes of liberty, but desiring to exercise under both the most grinding tyranny. In the great Civil War one side aimed at Despotism, the other at Oligarchy; and it was a benefit to humanity that Cromwell triumphed over both.

The cause of the Long Parliament has been so often identified with that of constitutional freedom, that we are likely to provoke many ardent lovers of the great cause of human improvement, when we intimate some doubts of the purity of motive in the great parliamentary leaders. But we have carefully examined the records of their Parliament, the memoirs many of them have composed, the pamphlets which were published in their justification, and we can find nothing but efforts to secure the whole power of the Constitution for a privileged class, and to exclude all others from the benefits and privileges of citizens. Their laws of exclusion were as rigid as any that were ever enforced in the isles of the Adriatic; and their intolerance exceeded that of the Romish Church in its worst days of persecuting existence. Their great object was to exonerate the landholders of England from the obligation of providing for the defence of the country, which was the primary condition on which estate in land was created; and their patriotism began and ended in the protection of their pockets.

Had the Long Parliament given proofs of an honest desire to advance general good it would have maintained its superiority at the close of the war; its intense selfishness became apparent with victory, and was particularly manifest in all the negotiations with the unfortunate King. Charles, well aware that a Doge was necessary to a Venetian constitution, stood out for better terms than the Parliamentary leaders proposed, and the consequent protraction of the negotiations afforded indisputable proofs of the insincerity of the King, and the selfishness of the Parliament.

Cromwell assumed a dictatorship by seizing on the King's person at the instigation of the army. It would be a great error to suppose that this army consisted of mere mercenaries; on the contrary, it embodied in its ranks the whole moral force of England, and represented the sense of the nation far

more truly than did the Parliament. The trial and execution of Charles were grievous errors; yet it is difficult to discover how, under the circumstances, they could have been avoided. The worst result of the judicial murder of the King was the impossibility it created of Cromwell's assuming the character of a legislator, and framing a new constitution. His Protectorate was merely a provisional form of government, the permanence of which depended on the life of Cromwell himself; but it is evident that he was anxious to frame a constitution which would have given to the country a strong executive, and, at the same time, secured liberty to the people.

Cromwell's instrument of government, though never put into full execution, had great merits; it corrected the gross anomalies of the old representative system, and anticipated the acts of union with Scotland and Ireland. But when this plan was formed, Cromwell stood somewhat in the position of a prophet who has begun to doubt of his inspiration, and therefore stops short in the fulfilment of his mission.

Victor Hugo has given a most powerful portraiture of Cromwell at the crisis when the crown was proffered to him, and very reluctantly refused. He hesitated at the very crisis of his fate, and the opportunity was lost for ever.

The Reformation is the epoch from which the landed ascendancy of England dates its existence, and its constitution was established by the Revolution. In this interval Cromwell alone perceived that the tendency of the new oligarchy was to a Venetian constitution; but, though he saw the evil, he had not energy to apply the remedy, or rather the circumstances of his position compelled him to temporize. Since that period the monopolists of land have held the monopoly of political power, and have dictated law both to the monarchs and the people.

Doctor Southey's "Life of Cromwell" does not rise beyond the average of common political pamphlets; it is deficient in extension of survey, and in appreciation of character. The "Life of Bunyan" is written in a far better spirit, though even in this memoir there are passages which exhibit more of the rancour of a renegade than of the deliberate judgment of a philosophic critic.

Notions on Corn Laws and Customs' Duties. By H. T. Prinsep, Esq. Second Edition. London: W. H. Allen and Co., 7, Leadenhall-street. 1844. pp. 56.

The pamphlet whose contents we are about to notice is one of the most recent as well as the most important which the pro-corn-law press has put forth. It is the production of Mr. Prinsep, one of the unsuccessful candidates at the late election for the Kilmarnock district of boroughs, and is written in a better spirit, a higher tone, and with a more honest intention to search for truth than any publication on that side of the question which it has been our lot to read. Unlike the large majority of monopolist writers, Mr. Prinsep avoids, with equal mind, all cringing servility to the dominant landowners, and all vituperative censure of his opponents. He neither claims the patronage of "The Agricultural Protection Society," nor seeks to obtain their approval by assailing "The League."

Mr. Prinsep's first edition, which had escaped our attention, "was published only a month before he offered himself as a candidate for Kilmarnock;" and he sends the second impression into the world with the following declaration:—"It is my earnest wish that all I have advanced in these pages should be discussed and submitted to the severest test of argument."

Mr. Prinsep opens the subject which he proposes to discuss in the following manner:—

"The Corn-Law question is divisible into two parts.

"There is, first, the expediency of laying duties of protection upon articles which form the agricultural produce of the country, and the proper limit of such protection, if there be any.

"And, secondly, the form in which to give that protection, whether by fixed duties or by a scale varying conversely with the prices."

The main arguments of the writer in favour of protective duties are, "The degree in which home trade is preferable to foreign trade;" "that every substitution of foreign productions for home productions entails to a country the loss of the entire return for industry and capital afforded by one equivalent of the exchange;" "that customs' duties on import and export are inevitable in an advanced state of civilization;" "that wherever there are customs' duties, there is, *pro tanto*, protection;" and "that the Corn-Law question resolves itself into a claim of exemption from the general rule for agricultural produce."

The course of Mr. Prinsep's argument is ingenious, and, in some sort, or, in his own language, "after a fashion of its own," conducted with fairness. He contends that, "the argument against protection is general, and not confined to agriculture." In this we concur; but we insist that, "of

all things an indiscreet tampering with the trade of provisions is the most dangerous." * He assumes "customs' duties on import and export to be inevitable in an advanced state of civilization." This, also, we admit. But when he contends that "wherever there are customs' duties there is, *pro tanto*, protection," and that "the question of the Corn Laws is resolved into an inquiry whether corn shall be placed upon the same precise footing as other commodities of home production, or shall for special reasons be excepted," we are called upon to exhibit our own views.

First, with regard to the "*pro tanto* protection" afforded by customs' duties. This protection is not required by manufacturers in general; many of the most important manufacturers repudiate protection altogether; and, this being the case, it results that, if protection were withdrawn from manufacturers, who do not need it, the converse of Mr. Prinsep's proposition would hold, viz., there would be no reason why corn should be placed on any other footing than other commodities of home production.

On the effect of prohibitory and protective duties generally, we have the decisive opinion of the committee appointed by the House of Commons on the 6th of March, 1840, "to inquire into the several duties levied on imports into the United Kingdom, and how far those duties are for protection to similar articles, the produce or the manufacture of this country, or of the British possessions abroad; or whether the duties are for the purposes of revenue alone." This committee was composed of fifteen members, and contained a proportion of monopolist principle and fixed-duty leaven, more than sufficient to neutralize their antagonist Free-Trade ingredients, if the "valuable character of the evidence" had not surmounted and overpowered by its unanswerable convictions every argument which the advocates either of monopoly or fixed duties have at any time advanced.

This opinion we find expressed in the following words:—

"The effect of prohibitory duties, while they are, of course, wholly unproductive to the revenue, is to impose an indirect tax on the consumer, often equal to the whole difference of price between the British article and the foreign articles which the prohibition excludes." "On the articles of food alone, it is averred, according to the testimony laid before the committee, that the amount taken from the consumer exceeds the amount of all the other taxes which are levied by the Government. Somewhat similar is the action of high and protective duties. These impose upon the customer a tax equal to the amount of the duties levied upon the foreign article, whilst it also increases the price of all the competing home-produced articles to the same amount as the duty; but that increased price goes, not to the Treasury, but to the protected manufacturer. It is obvious that high protective duties check importation, and, consequently, are unproductive to the revenue; and experience shows that the profit to the trader, the benefit to the consumer, and the fiscal interests of the country are all sacrificed when heavy import duties impede the interchange of commodities with other nations."

"With reference to the influence of the protective system upon wages, and on the condition of the labourer," the committee observe, "that, as the pressure of foreign competition is heaviest on those articles in the production of which the rate of wages is lowest, so it is obvious, in a country exporting so largely as England does, that other advantages may more than compensate for an apparent advantage in the money price of labour."

So much for the effect of prohibition and protection upon the community at large. But the committee goes further:—

"They find, on the part of those who are connected with some of the most important of our manufactures, a conviction, and a growing conviction, that the protective system is not, on the whole, beneficial to the protected manufactures themselves."

And, finally, "The committee were persuaded that the best service that could be rendered to the industrious classes of the community would be to extend the field of labour, and of demand for labour, by an extension of our commerce; and that the supplanting the present system of protection and prohibition by a moderate tariff would encourage and multiply for the state and for the people our commercial transactions."

These are not the opinions of any author on political economy, but the solemn judgment of fifteen intelligent members of Parliament, of all shades of political sentiment, and selected indiscriminately from the ranks of all parties in the House, founded on the evidence of many persons of long experience in the public service, and in all the most important walks of commerce; and this evidence went to show most conclusively, amongst other things, that the manufacturers of all the principal articles of home production do not fear competition, and do not require protection.

We may go further back, and quote the opinion of the merchants of the city of London, in their memorable petition presented to the House of Commons on the 8th of May, 1820, twenty years prior to the report which we have just cited. It was from this petition that Sir Robert Peel borrowed the expression used in his speech on the 10th of May, 1842, and since so frequently alluded to, "that we should purchase in the cheapest market, and sell in the dearest." This petition, so important for the sound principles of commercial policy which it has recorded,

* Right Honourable Edmund Burke.

concluded with the following declaration:—"It is against every restrictive regulation of trade, not essential to the revenue; against all duties merely protective from foreign competition, and against the excess of such duties as are partly for the purpose of revenue, and partly for protection, that the prayer of the present petition is respectfully submitted to the wisdom of Parliament."

Retiring into the shade of the last century, we may there discover some lights which indicate the opinions of those who had to deal with fiscal regulations affecting a former generation. M. De Caradeuc de la Chalotais, procureur-general, when he carried into the Parliament of Brittany an edict of July, 1754, made use of the following language; and, taking into consideration the different positions of France at that period, and England at the present, his sentiments are at least remarkable:—

"I have the honour to inform you of the most signal benefit with which his Majesty can gratify his people—a liberty to trade in corn. After having permitted the free circulation in the interior of the kingdom, the King grants by this edict the entire liberty of exportation and importation."

"The system of prohibition seems to be abandoned for ever; a fatal system, which cuts off between France and other nations that communication of exchanging superfluities for necessities which is so conformable to the order of Divine Providence." He describes "particular permissions, that useless resources," as having "enriched a few private persons at the expense of the nation;" and states, "it is certain that the most useful of all political laws is that which gives the greatest facility to the sale of the productions of the earth. The necessities for consumption, taxes, even the trade of the nation, all take their rise from the sale of merchandise; we cannot, therefore, extend this source too much, nor be too careful how we straiten it; if it should be dried up, the evils of the state would be without remedy and without bounds." "The facility of a Free Trade is a remedy as well for scarcity as for the too great plenty of merchandise, which is naturally carried where it is most wanted."

It is unnecessary for us to discuss, in this place, the "notions" of Mr. Prinsep on differential duties and the slavery question. These are topics to which the attention of the public has recently been drawn; they have occupied a very prominent position in the arena of polemics as well as that of politics; the daily and weekly press has conceded an unusually extended space to the consideration of both these subjects; and though their discussion has discovered an attachment to party rather than to principle, in quarters where we anticipated no such falling away, we fearlessly refer our readers to other columns of this journal for the full development of our own views, and therein we believe also the full refutation of Mr. Prinsep's arguments.

Proceeding to the allegation "that every substitution of foreign productions for home productions entails to a country the loss of the entire return for industry and capital afforded by one equivalent of the exchange," Mr. Prinsep quotes Mr. McCulloch, "the great apostle of Free-Trade doctrines;" but, like many of his friends of the Pro-Corn-Law party, he does not quote with fidelity. We will, therefore, place both extracts before our readers:—

MR. PRINSEP.
"Suppose that we import £1,000,000 worth of any commodity, that its importation is prohibited, and that the same quantity of produce cannot be raised in this country for less than £1,200,000; in a case of this sort the prohibition has the same effect on the consumers of the commodity as if they had been burdened with a tax of £200,000 a year;" and this amount, instead of benefiting the revenue, "is of no advantage to any one."

MR. MCCULLOCH.
"Suppose that we import £1,000,000 worth of any commodity, that its importation is prohibited, and that the same quantity of produce cannot be raised in this country for less than £1,200,000, or £1,500,000; in a case of this sort—and this is actually the case in ninety-nine out of every hundred instances in which prohibitions are enacted—the prohibition has the same effect on the consumers of the commodity as if, supposing it not to have existed, they had been burdened with a peculiar tax of £200,000, or £500,000 a year. But had such been the case, what the consumers but would have gone into the coffers of the Treasury, and would have afforded the means of repaying an equal amount of other taxes; whereas, under the prohibitory system, the high price, being occasioned by an increased difficulty of production, is of no advantage to any one."

The preceding quotation of Mr. Prinsep, professing, though without referring to the authority, to be made from Mr. McCulloch's "Dictionary of Commerce," is not fairly given. The omission of the suppositions increased amount of cost of production is uncandid, because the author doubtless used that increment to strengthen the effect of his argument; the deletion of Mr. McCulloch's parenthetical assertion as to the numerical consequences of prohibitions is unjust, because it deprives his sentence of much of its weight; and the suppression of his conclusions on the fiscal results of prohibition denudes the case which he proposes to establish of one of

the strongest testimonies in its support. The expression, "instead of benefiting the revenue," adopted by Mr. Prinsep, sinks into insignificance when contrasted with the powerful language used by the "Veteran Political Economist," Mr. McCulloch.

We may, however, venture to differ a little in opinion from both our authors, when they state that the amount which the consumers lose "is of no advantage to any one." So far, at least, as the restriction upon the importation of corn is concerned, we believe the landlords do not deny that this amount has hitherto been and at present is of advantage to them.

"Home trade (says Mr. Prinsep, quoting Adam Smith,) replaces capital, and supports the industry represented by both equivalents in every exchange transaction of such commerce. Whereas, in foreign trade, one of the equivalents represents foreign industry and foreign capital. In every case, therefore, in which exchange with a foreigner is substituted for home dealing, we transfer to the foreigner the support to industry, and the employment of capital represented by the one equivalent of such exchange, which was our own, but has become foreign. So much industry, therefore, as was so represented, is thrown out of work at home."

This position Mr. Prinsep illustrates "by supposing a coalmine to be thrown out of work in consequence of coal being produced, and brought to market cheaper from abroad." And he contends that, "the case of coal is strictly analogous with that of corn." He anticipates the answer of the advocates of Free Trade, and admits that they

"Are not such bad logicians as not to see the results of such a substitution in throwing able workmen upon the parish, and stopping the concern, whether manufacture, mine, or agricultural farm, which produced heretofore the home equivalent. What is their answer? Take it in their own words. The fact that workmen are thrown upon the parish is denied thus:—'We may (says Mr. McCulloch) change the species of labour in demand, but it is not possible that we should thereby change its quantity. If, in consequence of the abolition of restrictions, our imports were increased to the amount of four or five millions, our exports, it is certain, must be augmented to the same extent; so that whatever diminution of the demand for labour might be experienced in certain departments, would be balanced by a corresponding increase in others.'"

"Now, is it possible (inquires Mr. Prinsep) that any acute reasoner can be satisfied with such an answer?"

This answer, as it is called, is another quotation from Mr. McCulloch's Dictionary, but has no immediate or peculiar application either to corn, or to coal "strictly analogous with it." The extract is made from an able article upon "restrictions on commerce," and is quite as applicable to every other commodity of home production as to coal or corn. But the argument supposes a substitution of foreign productions for home productions, which implies a present home supply sufficient for the wants of the people. Can this be the case when, without further resort to statistics, Mr. Prinsep himself calls "attention to the destitution and wretchedness of three millions of the population of Ireland," and to "upwards of one million of paupers relieved in England in three months only?" And upon this he asks whether "it is not a desirable thing to secure for its population as much productive employment as possible?" Why, this is precisely the recommendation of the committee to whose report we have referred: "Extend the field of labour, and of demand for labour, by an extension of commerce."

Mr. Prinsep concedes that, "so long as a foreign exchange does not displace and stand in lieu of a home one, it is a real benefit." And he has recourse to the assertion so often used, that a repeal of the Corn Laws would throw land out of corn cultivation:

"But, as the land thrown out of corn cultivation would still not be wholly unproductive, the difference of value between the new and old produce would be all that need be added to the foreign import of corn, to make the country on the whole no loser by the substitution. That difference it is, of course, very difficult to estimate. The conversion of corn-land to pasture is generally assumed as the consequence of substituting foreign for home corn; and this would assuredly be a sacrifice of more than half the industry employed on the land converted, whatever might be the effect upon rents. To guard against such an evil, a duty of protection, at the same rate as we find laid on manufactures, cannot be regarded as excessive."

On these points, as applicable to the Corn Laws, we will lay before our readers an extract from the evidence of Mr. McGregor, one of the joint secretaries of the Board of Trade, given before the committee whose report we have quoted:—

"Mr. Blake: Do you think that the alteration you propose in the duties on agricultural produce imported from abroad would interfere materially with British agriculture?"—No, I do not at all.

"Do you think the production of corn in this country would be diminished?"—I think the production of corn in certain parts, which have been forced into corn cultivation, would be diminished, but not otherwise.

"Mr. Villiers: You do not think the soil would cease to be used?"—No; I believe that the rents of lands, generally speaking, in this country would gradually increase, in consequence of the greater demand for labour creating a greater demand and ability to pay for fresh or green vegetable food, and especially for animal food.

"Mr. Blake: From the encouragement which you expect your tariff would give to commerce and manufacture, do you expect that the population and the wealth of the country would rapidly increase?"—Certainly I do. I depend upon this change in the duties diminishing emigration, and giving full employment in this country; and I

look at the quantity of additional bread which in that case would be consumed. The people of England do not eat one third the bread they ought to eat, nor the people of Ireland one-twentieth that those of France do.

"Do you think, in consequence of that increased population and wealth, the population of this country might consume an increased quantity of imported corn, without diminishing the demand for the agricultural produce of our own country?"—I think so, taking all kinds of agricultural products. In the course of ten years you would want at least ten millions of quarters of grain additional, if you were to produce as much as you have done in the last six years in the United Kingdom; but then you would not produce so much, but you would change a great deal of the land into grazing and culinary vegetable land. Ten millions appear to be a great quantity to introduce into the population we have, but it is but little more than the third of a quarter to each individual. When I made out this I allowed one-fourth less per individual of bread to the population of the country than to France."

In concluding this notice, which, if we now accompanied Mr. Prinsep into the questions of bullion and currency, would occupy more space than we can afford, we cannot but advert to his "desire that the constituency of the Kilmarnock district of boroughs should be placed in full possession of his opinions on all subjects, and so judge whether or not he was the kind of person they desired for a representative." In this desire we heartily concur. We hope the electors will investigate the principles of Free Trade, but rather more deeply than Mr. Prinsep has hitherto done; and, whilst we willingly concede to him an honest intention to search for truth, we recommend him, with all respect and good feeling, to extend the field of his inquiry.

NORTH LANCASHIRE.—A meeting was held at Preston on Monday, of gentlemen from various parts of the northern division of the county, to consider what steps ought to be taken, at which it was resolved, that in the present state of the registration it was not advisable to bring forward a candidate on Free-Trade principles alone; but that if the gentlemen of the county favourable to liberal principles were to bring forward a candidate who was for the repeal of the Corn Laws, he should receive the hearty support of the Free-Traders throughout the division. The result was communicated by deputation to Mr. Towneley, of Towneley Park, whose son, now absent, was the most likely person to come forward and vindicate the independence of the county.

DECREASE OF CRIME.—On recent inquiry at the Guildhall, Huddersfield, we found that there had not been a commitment during the past three weeks, and that the duties of the sitting magistrates during the same time had been comparatively light. These circumstances may be attributed to the prosperous state of trade, and the facility with which labour is obtained, coupled with the present low prices of provisions.—*Leeds Mercury.*

CONDITION OF THE PEASANTRY.—In the circumstances, feelings, and views of the various classes of which society is composed in this country, there is none which merits more careful attention than the momentous change which has been brought about in the condition of our rural peasantry. That an all but universal change for the worse has taken place in the condition and habits of this important class, is a lamentable and admitted fact:—that honesty, sobriety, industry, and contentment have disappeared almost entirely among a body of men once remarkable for their virtues, is a truth which no person conversant with the state of our country parishes will venture to controvert. The wealth of the country, the productive capacity of the soil, has been constantly and steadily increasing; while the condition of those who till our fields—of those who may, in one sense, be said to increase the wealth—seems to be daily retrograding.—*Farley's Bristol Journal.*

THE BREAD TAX.—On Monday evening Mr. Liddell delivered a lecture on the Corn and Provision Laws and the Coal Tax, in the Long Room, Hetton Colliery Inn, Hetton-le-Hole. The distress which had for a long time been felt in the manufacturing districts, the lecturer remarked, was ascribed by the Anti-Corn-Law League to the scarcity of food in the country, and this scarcity was occasioned by our Corn Laws, which prevented the people from receiving proper supplies from abroad when there were deficient harvests at home. The League therefore maintained that these laws were cruel and unjust, and ought to be repealed. The League, however, had not merely to contend with the bread taxers; some persons, in whom masses of the working classes had confidence, maintained that the repeal of the Corn Laws would be followed by the building of mills and the extension of machinery, and these persons gave their aid to the bread taxers. The present condition of the people in the manufacturing districts was proof of the sound principles held and promulgated by the League. Food was become more abundant, and this was immediately followed by greater employment and better wages. Food was more abundant, and the millowners, or cotton lords as they were sometimes called, were enlarging their buildings and increasing their machinery. There was a greater demand for labourers, and with that greater demand the wages of the operatives had increased. They were not at the present time paupers, but independent labourers in the enjoyment of the necessities and comforts of life, attending to the education of their children and their own mental improvement, and engaged in measures for obtaining pleasure-grounds and gardens, in which they were efficiently aided by the principal leaders of the Anti-Corn-Law League. Not one of the predictions of the bread taxers and their operative allies had been verified—all their statements, the present condition of the operatives showed to be fallacious. The miserably low wages which the operatives in the factory districts had received was owing to the limited supply of food, and, as the present abundance of food was followed by good wages, no credit was due to employers in the one case, nor blame to them in the other. Employers had no control over the wages of the operatives; these depended upon the demand and supply of labour, and those who formerly blamed the employers should now give them praise for the comfortable circumstances in which the operatives are placed. On Tuesday evening Mr. Liddell delivered a second lecture on the same subject in the same place.—*Sunderland Herald.*

AGRICULTURE.

WHAT IS THE FARMER'S PROSPECT?

The harvest has now so far advanced that some basis exists for an estimate of the state of the corn trade, and of the farmer's prospects during the ensuing year. Just before the commencement of the harvest, when the weather appeared settled, and there was every expectation of a fine season, the price of wheat underwent a large and rapid reduction. In one week the price of wheat fell from 4s. to 6s. a quarter, and the state of the crops justified the expectation of a further decline. Since that time a week or ten days of wet and unfavourable weather rallied the grain market, and wheat advanced in price from a third to one half of the extent of its previous decline. Again, the weather cleared, and for five weeks we have had most favourable harvest weather: there has been a good deal of sun with brisk drying winds, so that all those farmers who were not alarmed by the wet week into housing their wheat in bad condition, have gathered into their barns wheat of as good quality and in as good condition as possible. This has again given the price a downward tendency, and the little business which was done in the corn trade last week has been at lower rates; and this week has been marked by a more decisive fall. At Mark-lane last Monday se'night new English wheat was 3s., 4s., and 5s. a quarter lower than on the previous Monday; and from the *Mark-lane Express* of last Monday we learn that "very good wheat, weighing 63 to 64 lbs. per bushel, may be bought in many parts of the country at 43s. to 44s. per quarter; and old wheat could only be sold at a considerable reduction." The price of white wheat is quoted as low as 42s., and red 40s. a quarter. And it is remarked that the quality of the different parcels offered for sale is exceedingly various. If little wheat has been actually injured by the weather, a good deal has been got in damp, and that chiefly by the poorer farmers, to whom the chance of a thoroughly wet harvest offered the prospect of utter ruin. By this time the wheat harvest in the south of England has been completed, and so large a proportion of our bread corn has been well got in that the character of this year's produce may be stated to be dry and fine. In the north of the island more wet weather has occurred, and a little uncertainty still prevails as to the result of the wheat harvest there. Whatever that result may be, though it may materially affect individual farmers and particular districts, will not greatly alter the state of the corn trade. It may be taken as decided that for the next six or eight months, at all events, the price of wheat will be low. The average price of wheat on the 23rd of August was 49s. 1d. per quarter, having fallen from 54s. 10d., which was the average of the 13th of July last. At the corresponding period of last year the average price was 59s. 9d. The average has since temporarily risen from the advance of prices during the wet weather. With another week's fine weather our wheat harvest will be over, and the average price will probably be not much above 45s. a quarter. But wherever the land has been tolerably farmed the wheat crop has been abundant; and had the farmer's business been in a sound and natural state, so far as regards his wheat, he he would have had no just reason to complain. At Spalding, Lynn, and Boston, two weeks since, fine new wheat brought 48s. a quarter, while at some of the inland country markets the prices range from 46s. to 52s. a quarter; from the corn reports of the week before last we learn that, "at the principal shipping ports on the east coast, viz., Boston, Lynn, Spalding, &c., new wheat has been selling at least 2s. per quarter below the opening price, no difficulty having been experienced this week in buying good qualities of red, weighing 62 lbs. to 63 lbs. per bushel, at 45s. to 46s. per quarter free on board, at the places named;" last week in the same markets a further fall of 2s. a quarter is mentioned.

Each successive week, also, shows that more wheat has been injured by wet than was at first supposed, for much of the new wheat now offered is in but indifferent condition. Of course the new wheat sent to market comes from the poorer farmers, who must sell to meet their current outgoings, not to say a word of rent.

From the beginning of November till Christmas the Michaelmas rents will be in course of payment, and with the great mass of farmers their wheat crop, which is always their main reliance, is this year their sole resource for meeting their rents. Now, if wheat averages about 45s. a quarter—and it is now absolutely certain that whatever may be the average price, an immense quantity of wheat, if sold at all before Christmas, must be sold for much less than 40s. a quarter—how can the farmer be expected to pay a rent calculated upon the assumption that he would obtain yearly and every year, the price of 56s. a quarter at the least? The law awards him that sum, and the landlords who made that law tell him that unless he obtains such a price he cannot compete with foreign growers, and they give him a prohibitory duty of 20s. a quarter to shield him from such

competition. Yet, in the absence of all foreign competition, the price of wheat falls more than 10s. below the act-of-Parliament price, and, however the miscalculation has happened, the farmer pays for it. It is therefore plain, that the farmer is punished by the transfer of a considerable portion of his capital into the landlord's pocket, for having believed that an impossibility could be performed by an act of Parliament.

So far as regards the wheat crop, then, the effect of an abundant season is to mulct the farmer to the extent of at least 20 per cent. upon the estimated value of all his wheat. And precisely the same thing happens with respect to his other crops, when he has any other crops, for all other articles of produce are calculated by valuers at the enhanced prices promised by the Corn Law.

But the present year offers additional instances of the onerous way in which the Corn Law may affect the farmer; for, though the wheat crop is abundant, nearly every other crop is a failure. Barley, oats, beans, peas, and hay, almost universally are deficient; and the effect of that deficiency, as we have before had occasion to explain, will render it impossible for the farmer to keep his usual stock without a serious loss. Here his interest is that of a consumer, and if he could obtain foreign pulse, oats, and other grain suitable for the food of stock, duty free, he would not find his stock converted into a burden instead of a source of profit, and the fertility of his land in future years seriously impaired, from his unwillingness or inability to maintain his accustomed stock.

In the *Mark-lane Express* of last Monday we find it stated, that "the late dry weather has checked the growth of grass, and the second crop of hay will scarcely prove much heavier than the first; a fact which must have a material effect on prices of all articles used as provender for cattle." This acts again upon the breeders of stock, who are just now suffering as much from the high price of provender as the grain-growing farmer. At the late Barnet fair—the largest fair for lean stock in England—scarcely a fourth of the usual sales was made, and, though the prices of store stock were low, the most enterprising farmers bought cautiously and sparingly. The common remark of the dealers was:—"There are plenty of lookers-on but no buyers;" and the almost invariable response to an offer to sell a "nice lot of beasts" was, "I have no keep this year." We noticed, in particular, one very good lot of ten short-horned oxen, offered for £10 each, which would certainly have sold when fat for upwards of £20 each, yet, from the extravagant price of all artificial food, the purchase was declined by one of the most spirited farmers of the home counties. Had the trade in corn been free, the breeder would have obtained a better price for his stock, while the grain-growing farmer would have bought the stock and fattened them, with the certainty of a fair return for his trouble and outlay.

The monopolists are just now trying to show that the low and declining prices of wheat are caused by the admission of Canada wheat at a low duty; but the very passages they cite in support of their position prove the contrary. Thus all the London monopolist papers have given an extract from the *Liverpool Times*, which states that the import of Canadian flour had increased from 50,000 barrels in 1843, to 307,000 in the present year; and that Canadian wheat had also increased from 15,000 to 237,000 bushels during the same period; but adds, "this has occurred in spite of unusually high freights, and of a declining market in this country, and although the losses on the recent importations have fallen very heavy on the importers." It is absurd to assert that such an insignificant quantity as the whole of the Canadian wheat and flour imported could affect our market; but the monopolist authority itself proves that such importations have not reduced prices, but on the contrary, that our declining markets had rendered such importations losing speculations. Now, our prices have fallen from an abundant home produce. The only object of these statements is to prevent the farmers from investigating the causes which affect their business, to divert them from inquiries which would not produce the results the monopolists desire. But farmers must inquire why rents are so high while prices have fallen so low, and they will as certainly discover that they have been most grossly deluded by the monopolists.

We suspect that ere Parliament again assembles we shall have a central association of farmers aiding the League to abolish the Corn Laws, in the place of the high-rent protection society over which his Grace of Richmond presides.

RURAL INVESTIGATION.

The following letter, written by a farmer, so clearly shows the sort of investigation to which the agriculturists are subjecting the Corn Laws, that we insert it with the request that our readers will look more to the facts mentioned than to the reasonings, which are to some extent inaccurate. It is addressed to Mr. Johnson, the secretary of the Nottingham Anti-Corn-Law Association:—

"DEAR SIR,—I am greatly obliged by the receipt of a small pamphlet from you on the Corn Laws, written by Mr. Baines, jun., of Leeds, and addressed to the Earl of Harwood. It contains the best and most correct facts I have yet seen stated upon that subject. I have made the Corn Laws a study since 1818, and I find Mr. Baines's remarks to prove correctly the effects produced by that cruel, injurious, and unjust sliding scale, which has deceived and ruined thousands of industrious, hard-working farmers.

"I am convinced that, in 1818, the Corn Laws were altered in order to oblige and benefit the landlords, of whom many, with their time-serving agents, went to those of their tenants that desired their rents to be reduced, owing to the sudden change from war to peace, with this beautiful language in their mouths, springing from their selfish hearts—'We cannot think of lowering your rents at present; we consider it would be very improper to do so while you have any property left, obtained by you during the dear times.' These were the exact words used to me by my landlord's agent, and the same to others I then knew well in the county of Shropshire.

"Mr. Baines has very justly pointed out the effects of the sliding-scale Corn Law, which was framed and carried out to oblige, and intended to benefit, one class of her Majesty's subjects (and that a small one), to the great injury of all, or nearly all the rest. An exemption may be made to lawyers, who, I believe, have been greatly benefited by it, as all men know, the greater the distress, the better for lawyers and sheriffs' officers; and, allow me to say, those landlords who live beyond their income are those who most oppress their tenants, and change them most frequently, the result of which is, that their estates become ultimately the poorest, and in the worst condition. I ask, why should this class of subjects be protected in the high price of bread above the natural one, to maintain them in their folly, at the expense of the many who are ruined by their imprudence? The tenant-farmer will, in time, see his error, and resolve not to rent a farm under a landlord who advocates a sliding scale without a lease of 7, 14, or 21 years; for it has been long enough tried, and the most ignorant farmer, as well as the more intelligent, well knows it does not answer what they were led to expect from it, by the representations made to them upon the subject by their landlords. The farmers will see it in the same light Mr. Baines, jun., does, when more of them are compelled to become inmates of union-workhouses, and their children to resort to some town to work day-labour for those manufacturers whom they have been advised by their landlords to vilify, and cast unjust reflections upon. I have seen many in such situations already, and should I live a few years longer, shall see or hear of many more (should the sliding scale continue) sink into insignificance, without remorse, regret, or pity from those who have wrung from them their patrimony by exorbitant rentals; and when they seek for pity, or complain to these gentlemen of their losses and misfortunes, they will reply to them, with a bold face, thus—'How can I help you? I am not answerable for your losses; you should have taken better care of yourself; but take care now; and then turn away with an insulting sneer.' This is the exact case, I know by experience. I know also there are a great many now in towns working as day-labourers, whose fathers were doing well, and living respectably as farmers; and thousands will be in a similar situation in a few years, if the sliding scale is not superseded by a low standard duty, or abolished altogether.

"It is my opinion a duty of 3s. or 4s. a quarter on imported wheat would be much better than free, for more reasons than one. Sixpence per bushel would injure no one, and not only England the United Kingdom. I mean,) but all other nations would know what they were doing—not so now.

"Secondly, to take the whole duty off would be injurious, because it would only be changing protection so called from one class of persons to give it to another, viz. the corn-merchant and corn-dealer, who are a class much more intelligent respecting the corn trade, the state of the country, what land is sown with wheat each year, what quantity is grown, how it yields at harvest, &c., than the generality of farmers or their landlords can; therefore, to have no duty at all would be jumping out of the frying-pan into the fire. As for landlords talking of land going out of cultivation if the sliding scale was abandoned, it is a complete humbug; it would bring all waste lands into cultivation, and not lower that fairly rented is. per acre; for if farmers and high-renting landlords would only consider the consumption of bread in the United Kingdom, according to the calculation of Mr. McCulloch and others, viz., that every man, woman, and child, on an average, consumes one pound of bread each per day, to be alarmed at the threatened importation of a few millions of bushels of wheat is rank folly, and shows a deficiency of intellect. The calculation of Mr. Baines and others is, that the United Kingdom contains 27,000,000 of people. Now, by experience I know that 64 pounds of good, dry, well-got wheat will make 56 pounds of good flour, which, if made and dressed a few weeks before baked, will, if well manufactured, make 75 pounds of bread; I have seen 80 pounds made from that quantity of good fine flour; so that, if each person should consume one pound of bread a day, the consumption in the United Kingdom would be in the year 9,855,000,000 pounds, a quantity which it takes 19,218,010 quarters of wheat to make. Mr. Baines observes that 16,000,000 quarters a year, or thereabouts, are consumed, and that there are 5,000,000 acres of wheat grown in the United Kingdom yearly. I say, if Ireland had the same laws that England has, and the sliding scale was abolished (which it ought to be, having injured England long enough), then no doubt there would be a consumption of fully one pound of bread per day by each person, which would be about 3,000,000 quarters of wheat more than England can grow, on an average, on 5,000,000 of acres. Now, I ask those landlords and tenant-farmers who appear to be so offended at the Anti-Corn-Law League endeavouring to obtain free trade in corn with all the world, how many ships of 300 tons burden each would it take to bring the grain to England to fill up the deficiency of her native growth? and, if imported, how long it would last the consumers, at 64 pounds to the bushel, if ground and made into bread? It would last this kingdom only a few weeks; and yet the landlord pretends to be so alarmed, that he cries out for protection to keep the price of bread above the poor man's means or ability to purchase. Surely, the wish to injure the persevering industrious manufacturer and tradesman, without benefiting themselves (for the tenant-farmer must come down low enough if the sliding scale is continued, and the landlord be compelled to grant leases), proves the landlord's conduct to be not only the extreme of folly and infatuation, but as dishonest as it is unwise.

"The third objection I have against importing wheat or other grain free from duty is, that this nation is in debt, and the national creditor must be paid. A standard duty of 3s. or 4s. per quarter on imported wheat would pay for taking an account of it, leaving a little to the revenue, and, what would be better than all, the dealer would have no inducement to hold corn, in the expectation of thereby raising the averages to get it out of bond at is. per quarter, as in 1842, to the great injury of the corn-grower. It would then not stay in bond to spoil, but be sold at a market price as it arrived, and the knowing corn-dealer would follow the advice of Sir Robert Peel, of buying in the cheapest and selling in the dearest market; trade would be as free and open with a small duty as with none, and prove much more regular; and I doubt not a much better trade would be the result with all nations than this country ever yet witnessed; no complaints from want of work, except by the naturally idle, who wish to live as the drone bees do, on the more industrious; the commission of crime would diminish, and employment would increase as quick as, or quicker than, the population. Yours truly,

"THE OLD SHROPSHIRE FARMER.

"Mr. J. G. Johnson, Secretary to the Anti-Corn Law Association, Nottingham."

The "Shropshire Farmer" is right enough so long as he speaks of matters within his own knowledge; but when he comes to talk of a duty of 3s. or 4s. a quarter being necessary to protect the farmer against the corn-merchant, and to pay the interest of the national debt,

he has evidently got out of his depth. It may, however, be worth while to say a word or two on the fallacy of a fixed duty, for some men of more knowledge than the generality of farmers have fallen into the error of preferring a fixed duty to a free trade in corn.

The first and very obvious objection to a fixed duty is, that it must operate as a tax upon all the corn consumed in this country, both home-grown and imported. There cannot be two prices in one market, and until the deficiency of home-grown corn is so great as to cause such an advance of price as would render it worth while for merchants to buy and import foreign corn, it is plain no foreign corn will be imported. The price here must be so much above the foreign price as to enable the importer to pay the expenses of importation, and realize the ordinary profits upon the transaction. Now, let us take the present price of wheat, about 41s. per quarter, and we shall find that, if the trade were absolutely free, all the merchant would have to consider would be whether he could buy and import wheat with a profit to himself, when he must sell it at 41s. per quarter. And the same thing would occur, whatever might be the price of wheat in our market. The effect would be to prevent any sudden or exorbitant advances of price. But if a fixed duty of 4s., 8s., or any other number of shillings should be imposed, no importation could take place, until all the wheat here sold for 4s. or 8s., as the case might be, above the rate at which merchants could buy and import foreign wheat at a profit. This would be a clear loss to the consumers of 4s. or 8s.—according to the rate of duty imposed—on every quarter of corn consumed in this country; and as all rents would be fixed according to the anticipated price, including the duty, the landlords might gain increased rents in proportion to the rate of duty. The farmer would profit nothing by the rise in price, because the difference would all go to the landlord. That, however, would happen only when there was a scarcity of wheat in this country, and foreign supply would be wanted; for in such seasons as the present, when the home growth will be sufficient for the home consumption, the farmer would not merely not profit from the fixed duty, but would be an absolute loser of the amount. Say, for instance, that 48s. should be assumed to be the price of wheat here when the supply is just equal to the demand, and that a duty of 8s. is put on with a view to shut out the foreign corn, which, being imported duty free, would have equalized the supply to the demand, until the supply being deficient the price would rise 8s., or to 56s. a quarter; then if our crops are abundant, and the home supply exceeds the home demand, the price would fall not merely 8s. a quarter below the act-of-Parliament price, but, perhaps, 8s. or 10s. a quarter besides, according to the measure of our abundance. Now, though the large crop might compensate the farmer for the natural low price, that is, all below 48s. a quarter, yet nothing could save him from losing the difference between 56s. and 48s. a quarter on every quarter of wheat he might send to market. The effects, therefore, of a fixed duty would be precisely of the same kind as those produced by the sliding scale: the farmers and the consumers would be robbed alternately, and the only persons who would obtain anything in the scramble would be the landowners, who, so long as the delusion lasted, would take a slice from every one's loaf when the price of corn might be high, and would seize a large section of the farmers' capital when the price might be low. As to corn-dealers benefiting at the expense of farmers, because the trade in corn is free, the notion is merely absurd. Corn-dealers make their profit by employing capital in buying up the corn as it is brought to market by the farmers, either in large or small quantities, and reselling it again at a slight advance when the market has risen, or to persons who buy of them as they require. Sometimes they sell upon credit that for which they have paid ready money; or they have business connexions which enable them to supply precisely the kind and quantity of the commodity required, whereby they make a profit. It will invariably be found that the effect of the intervention of capitalists as corn-dealers, between the growers and the consumers, is to give the former, in the long run, steadier and better prices than they would otherwise obtain, while it at the same time equalizes and renders less fluctuating the prices paid by the latter. We will illustrate the benefits conferred on growers and consumers through the dealer's operations, by a case which not long since happened within our own knowledge. A farmer had a quantity of barley to sell, for which a person who wanted to use barley in some way or other offered a certain price, but no sale was effected for this reason. The farmer wanted ready money, and the consumer, though safe, was a man slow in his payments, and would have taken six weeks or two months after he had received the barley before he would have paid for it. Here, though one party had a commodity which the other wanted, the terms upon which alone either of them could afford to deal would not suit the other. No business was, therefore, done between them. Afterwards, a corn-dealer, on the same day, purchased the barley at 1s. 6d. a quarter below the price the consumer had offered, paid the farmer for it in ready money, and immediately resold it to the same consumer at the same price he had offered to the farmer, and which had been refused. The dealer in this case sold at six weeks' credit. The quantity of grain was considerable, and the dealer being satisfied with the responsibility of his customer, was satisfied with

a profit which the farmer's necessities would not permit him to obtain by giving credit.

So much, then, for the idea that dealers will profit at the expense of farmers should the trade be free; the truth being that, as the risks of their trade will be diminished by the greater steadiness of price consequent on Free Trade, they will be enabled to take less profit and to give the farmers better prices.

Then, as to a fixed duty assisting the revenue, nothing can be more absurd; for a tax on which reliance is to be placed for payment of the interest of the national debt must be constant and regular; whereas a corn duty, fixed or sliding, is of necessity irregular. Sometimes, for years together, no duty would be paid; while in other years—always years of scarcity—the duty would be wrung out of the diminished incomes of the people, and more than the corn duty would be indirectly lost to the revenue in other ways. Moreover the farmers, above all others, want the question settled, and a fixed duty would be no settlement at all. Though we have deemed it right thus shortly to glance at the mistakes of the "Old Shropshire Farmer," we are, nevertheless, glad to find him putting forth his views and supporting them by references to his own line of business. No farmer of ordinary intelligence, who begins honestly to inquire into the operation of the Corn Laws, will be long before he becomes an advocate for total and immediate Free Trade.

HELPS FOR THE HOME SECRETARY; THE GAME LAWS.

In pursuance of our promise to assist Sir James Graham in his "searching investigation" into the operation of the game laws, we string together a few paragraphs which have caught our eye in the provincial papers. Here is an instance of the loss, from game, sustained by the community through the farmer:—

"GAME LAWS.—As a proof of the injury the tenant-farmer sustains by these iniquitous laws, we may mention the case of a tenant on the estate of a wealthy baronet, near Ipswich, who, within the last three years, has lost £700 from the ravages made upon his crops by his landlord's hares. The redress he has obtained is to leave to quit the occupation a year before his lease expires, which was gladly accepted, and he now waits anxiously for the day when he can escape from the boasted 'protection' under which he, with others of his brother farmers, have been so sadly fleeced."—*Suffolk Chronicle*.

Next we have a specimen of "justices' justice," in which the contrast between the prompt punishment of a poacher and the non-protection of individual safety is strongly marked. The locality is Buckinghamshire, and the magistrates are the Duke's own:—

"ASHKENDON PETTY SESSION, Monday, August 26.—Present—Revd. Geo. Chetwode and Thos. Martyn, and John Stone, Esq.—The Game Laws.—John Cadle and Thomas Neary, both of Long Crendon, were charged with having damaged some vetches, the property of Mr. John Dodwell, of the same place, to the amount of 10s., on the 17th ult. Mr. Dodwell said it was not for the damage he proceeded, but snarers had been found in the field, and he believed the parties were regular poachers. Mr. Stone was of the same opinion, and said the first time he could catch them he would mark them. One of them had been previously convicted. Convicted in a penalty of 20s. each, with costs 10s. 3d., and fine 6d. They said they had no money, and were sentenced to one month's imprisonment with hard labour."

The poachers, or rather the suspected poachers, were quickly disposed of, and a promise on the part of the magistrate that he would "mark them next time," show that here Justice was "short, sharp, and decisive." In the next case her movements showed more of reluctance and hesitation:—

"Mr. J. D. Reed, solicitor, of Brill, applied to the bench to order Wm. Archer, of the same place, into custody, under the 1st and 2nd Vict., the Lunatic Act. Mr. Reed related a train of grievances under which he laboured from the conduct and threats of Archer, who he said was not a fit subject to be at large, and that he carried a weapon of about a foot long (a kind of needle) in a sheath about with him, to do him (Mr. R.) an injury with. Mr. Chetwode said, that the act authorizing them to take a man's liberty away was a serious one, and should be acted on carefully. Mr. Reed called Mr. Knight, surgeon, who was of an opinion that Archer was a 'monomaniac' as regarded Mr. Reed, but he could not say he was mad; he certainly had strange feelings towards Mr. Reed, but his conduct towards others was in many instances proper enough. He thought it was chiefly his malicious, nasty disposition. The bench declined issuing their authority to have the man apprehended as a lunatic. Mr. R. then applied for proceedings against him, declaring that he felt himself in danger and his life insecure. Mr. R. called Messrs. Stuchfield and Lamb to prove the danger from Archer's threats. Each had seen Archer's formidable dirk, and he had told them that if Mr. Reed spoke to him he would 'give him a prick' with the instrument, and that he would serve him out. Mr. Reed said Archer was constantly annoying and insulting him; was under his window in the night, and followed him along the street. Mr. Chetwode said, Archer had, it appeared, qualified his threats, and it appeared he meant acting in self-defence. He was, no doubt, an annoying fellow, and would advise Mr. Reed to have a good stick, and to give him club law. The magistrates declined acceding to Mr. Reed's request. The latter gentleman (considerably excited) hinted that he should apply for a 'mandamus' to the Court of Queen's Bench on the subject. Several persons from Brill who were present spoke of Archer's bad conduct in the streets; and one of them suggested that the bench should authorize their clerk to write him a cautionary letter; this was also declined. [It will be remembered that Mr. Reed was, before he reached home, stabbed by this Archer.]—*Aylesbury News*.

But is not the preservation of pheasants and hares of more consequence than the safety of a solicitor? So, at least, the Buckinghamshire justices seem to think; but in so doing, do they not overlook the friendly semi-official warning given to them by the *Herald*, to administer the game laws leniently during the present autumn? Let us give Sir James another specimen of game-law leniency, as exhibited in the adjoining county of Oxford:—

"THAME PETTY SESSION.—Tuesday, August 27.—Present—J. W. Henley and C. A. Sheppard, Esqrs.—The Game Laws.—Geo. Gurney, a young man of Thame, appeared to his summons charging him with having, on the 12th ult., at North Weston, been in search of game on the land of Mrs. Mary Phillips. William Ward, an under gamekeeper of Lord Abingdon, preferred the charge, and Benjamin Ward, another of

his lordship's gamekeepers, attended to prove the charge. Defendant admitted being on the ground, but it was in search of mushrooms in the morning. Ward said he saw him in the afternoon of the day looking among the grass, about twenty yards from the footpath; that a rabbit jumped up, which the defendant threw at and missed, but afterwards picked up the stone that he threw with, and that he (witness) was about 140 yards from him. Gurney declared that he was not there in the afternoon at all, and that he could, had he known the time to be in the afternoon, have brought witnesses to prove it. It appeared he had been twice before convicted; once for breaking a line fence, and once for a trespass in pursuit of game. FINED 40s., INCLUDING COSTS. The poor fellow asked for time to pay the amount, which was refused, and he was committed to prison for one month. He said he thought it very hard to go to prison for picking up a few mushrooms."

We think so too; and we believe there is no one in England, not being a game-preserver, will think otherwise.

MORE GAME LAW HORRORS.

If anything beyond the injustice and the practical mischiefs caused by the Corn Laws was requisite to stimulate all reflecting persons to seek for a speedy abrogation of those laws, a secondary motive of great force would be, that with the repeal of the Corn Laws that fearful remnant of feudalism, the game laws, must also fall. Not a week passes but some new catastrophe happens through the practice of game-preserving. And this is not, as has been said, a merely sentimental view of the subject, for the direct and positive evils inflicted by game-preserves upon the working classes in rural districts are as real and palpable as the injuries done to agriculture by game. Indeed, the two evils are so closely connected that they can only be deemed branches from the same fatal root. This is illustrated by the awful self-murder of two gamekeepers on the Suffolk estates of the Earl of Stradbroke, who, having lost much game from the daring incursions of the destitute peasantry, feared their master's arrival to enjoy his *dear-bought* sport. We take the following account from a local paper and from the correspondence of the *Times*. The *Suffolk Chronicle*, after referring to the extent to which crime and ill-blood are fostered by game-preserving, says:—

"In the eastern parts of this county game is preserved with a severity that few who have not a personal knowledge of the fact could believe—it is abundant to excess, devouring the farmers' crops, and offering a perpetual and irresistible temptation to the poor man. The consequences are that poaching becomes the occupation of the idle, and too often of those who would do better had they the opportunity presented them, and that keepers and policemen are constantly on the watch by day, or prowling after their game at night. It is said, however, that, so bold are the poachers on many estates, the keepers dare not attempt to capture them, and that in some cases they cannot help sympathizing with the poor wretches whose only choice lies between the union-house and the gaol. Be this as it may, at any rate such are the remarks we have heard from persons who reside in these localities. Whether attributable to any of these causes we know not, but an extraordinary event has occurred on the estate of the recently-appointed Lord-Lieutenant of the county, the Earl of Stradbroke, at Henham—namely, the suicide of his head gamekeeper on Saturday, and of another keeper on Sunday. A third keeper we understand has been put under personal restraint for fear of similar consequences. At such a moment, people living in the immediate vicinity of the estate, are afraid of opening their mouths; but dark hints are thrown out which we should prefer hearing put into clear and unmistakable language."

This forms a cause which ought to undergo a searching inquiry; but will it receive it at the hands of the Home Secretary? We know that there is no chance of any efficient investigation in that quarter, and it therefore becomes incumbent upon every journalist to assist in bringing the whole affair to light. Here is the official report of the coroners' inquests:—

"INQUISITIONS TAKEN BEFORE MR. SPARROWE, CORONER.—On Monday last, at Henham, the seat of the Right Hon. the Earl of Stradbroke, on view of the body of William Easy, aged 54, one of the gamekeepers of the noble earl, who on Saturday last destroyed himself by shooting himself through the head in one of the covers near his dwelling. The deceased had tied a twig of osier round the but-end of his gun, and connected it with the lock in such a manner as to enable him to pull the trigger, and, placing the end of the barrel in his mouth, discharged the contents of the barrel through his head, which was literally blown to pieces. It appeared from the evidence of several witnesses that the deceased had for some time past been in a very low dejected state of mind, and his intellect at times was much disordered. The jury returned a verdict of 'Insanity.'—On the same day, on the body of John Cuckey, aged 58, also a gamekeeper, in the service of the Earl of Stradbroke, whose death, proceeding from a similar catastrophe, and so immediately following that of Mr. Easy, excited the most intense interest in the neighbourhood. It was stated in evidence by Richard Andrews that he had gone on Sunday evening last to the cottage of Mr. Ludlow, adjoining that of the deceased; that while sitting in Ludlow's room, about seven o'clock, he saw John Cuckey go into his house with his wife and three children, as if from a walk, and that deceased could not have been in the house more than two minutes when he heard the report of a gun in deceased's house, and hearing the screams of his wife and children, he ran down stairs and went round to the house, and there saw the deceased lying on the carpet of the room, and his wife stooping to extinguish the fire which had communicated to his shirt and waistcoat. His gun was lying on the floor with the but-end next his feet. He was quite dead. Mr. Lay, surgeon, of Wangford, stated that he was sent for on Sunday evening, and arrived at the house a short time before eight o'clock; he found the deceased lying dead on the carpet, with a gun at his feet, one barrel of which was recently discharged; his shirt and clothes had been burnt considerably. He found a large wound under the jaw, from which considerable hemorrhage was flowing—the wound, proceeding upwards into the head, was instantly fatal. He had attended the deceased for some time past as he had been unwell. He had had a fall from his horse, and suffered from a pain in his side; saw him on Sunday morning, when he seemed very low, and said he had had a bad night. He saw him also on Saturday morning, after Easy's death, which had shocked him much, and he appeared much excited and distressed about it. It further appeared in evidence, that the deceased on entering his house had complained of being very chilly, and desired his wife to get some coals and light a fire, and while she was gone into the yard to get the coals the catastrophe occurred. The gun, it appeared, was suspended from the beam by a couple of holdfasts, one of which supporting the stock of the gun was found on the floor near where the gun laid. The ceiling of the room was very low, so much so that any one passing through the room with his hat on, would come in contact with the beam and gun as it hung. This circumstance, and the holdfast being found upon the floor, coupled with the remarkable fact of the gun going off so immediately after the entrance of the deceased and his family, it having been possi-

tively stated to have been not more than two minutes, caused considerable doubt in the minds of the coroner and jury whether the deceased had inflicted the injury upon himself, and, after considerable deliberation, the latter returned a verdict—"That deceased died from a gun-shot wound through the head, but whether inflicted by his own hand or the effect of accident, sufficient evidence thereof did not appear to the jurors."

How curt and cautious is this report, and what a slight investigation into the circumstances which led to these two poor fellows' self-slaughter does it indicate! But, probably, as the *Suffolk Chronicle* says, "people living in the immediate neighbourhood of the estate are afraid to speak out." The *Times's* correspondent, however, gives a further glimpse of the causes of this dreadful scene. He says:—

"The neighbourhood of Henham-park, the country seat of the Earl of Stradbroke, was thrown into a state of great excitement on Saturday morning last, August 31, by the rumour being spread that his lordship's headkeeper, whose name was Easy, had destroyed himself. This report, on inquiry, was found to be but too true. About eleven o'clock on the morning of that day the unfortunate man, it appeared—whose character for quietness and general worth was high—left his cottage, which is situated on the Henham-park estate, taking a double-barrelled gun with him. He proceeded to a spot at the back of his house, where grow a quantity of bulrushes; and of these he managed, in an ingenious and most original manner, to form the means of his death and fearful mutilation. From the relative positions in which the body and the gun were found, it would seem that he had fixed some of the rushes across the two triggers of his piece, and placed his foot upon the end of those rushes in such a manner as to enable him, having put the end of the barrels in his mouth, to fire off the gun. The effect of this most extraordinary and determined act of suicide was, of course, the immediate death of the unhappy man. The whole of the head was shattered in a frightful manner, particularly the left side, which was blown completely away. The brain was found in a tolerably perfect condition, at a distance from the corpse. A more resolute and horrible mode of self-slaughter can scarcely ever, if ever, have occurred. As may be imagined, the circumstance has created great excitement in the immediate vicinity of the park, and indeed around that part of the country; and the various circumstances attending the melancholy act are such as to be well calculated to increase the peculiar and painful interest of the case. From the situation held by the deceased, he necessarily had the chief care and direction of the Earl of Stradbroke's game preserves; and, as the noble lord was expected to arrive on Saturday at Henham-park with his family, Easy was anxious to have all duly prepared for his reception and sporting amusement on Monday. However, for some time past, the poachers have been active on the estate, and great quantities of the game have been destroyed and taken by them: including several of his lordship's favourite breeding birds, among numbers of pheasants that have fallen before these illegal sportsmen. The vexation and annoyance caused to the deceased by these predatory acts have been very great. Persons who had seen and conversed with him during the past week, all remarked how unusually dull and depressed his manner was. It is imagined by his wife and those most intimate with him, that this has been the cause of that state of mind which led to the commission of the fatal deed, combined with the expectation of meeting his master so soon, and the fear excited that the noble earl would impute blame to him for negligence of his duties in permitting the continuance of such robberies of his preserves. Whether such were really the origin of the suicide or not, it is, of course, quite impossible now to decide; but it would seem to afford a very probable and likely cause for the melancholy circumstance in the absence of any domestic and private motive for the act. It is also stated that he was to have been a witness at the examination of some poachers, who will be brought before the magistrates on Wednesday. These men he saw leave with game in their possession, he being afraid to attack them, they being four or five in number. This may have added to the troubled state of mind under which the unfortunate man had evidently for some days laboured."

In the despot-ruled countries of the East men not unfrequently commit suicide rather than meet a cruel master, whose anger they have justly or unjustly excited; but when before did respectable English servants rush uncalled into the presence of their God, under the terror of the frowns of an offended master? Lord Stradbroke was the person who introduced in the past session the last and most oppressive game law of our feudal code! Every one knows the state of destitution to which the labourers in *Suffolk* have been reduced during the present year, and the reckless and desperate disposition which the prevalence of game-preserves has fostered amongst them; and there can be no doubt that the utmost vigilance on the part of Lord Stradbroke's gamekeepers has been insufficient to protect his preserves from the depredations of desperate gangs of half-starved poachers. The fact mentioned in the latter part of our last extract, that the unfortunate man Easy had seen "men leave the premises with game in their possession, he being afraid to attack them, they being four or five in number," shows the fearful character of these marauders; and that the keeper knew that, if he attempted to stop the poachers, he must be prepared for a death struggle. Is this horrible state of things to continue? Has not public opinion been sufficiently aroused to put an end to this constant endangerment of human life, and this frequent recurrence of human bloodshed, for the sake of aristocratic sports?

Public opinion compelled the abrogation of the punishment of death for forgery; it has forced Government to put down smuggling conflicts by reductions of duties; and will it not compel the removal of the yet more fatal source of crime and bloodshed—game-preserving and the game laws?

WHAT IS TO BECOME OF THE LABOURERS?

"Now the harvest is pretty well over, the farmers are beginning to discharge their labourers or lower their wages. In several parishes near *Lewes* this has been done, and the winter is again looked forward to with dread by the agricultural population."—*Brighton Herald*.

We hear universal apprehension expressed amongst farmers as to what will become of the labourers during the next winter. Rents will leave the great mass of ordinary farmers but small surplus for the cultivation of their farms and the employment of labourers; and in many instances, with abundant crops of wheat, farmers will find themselves mere collectors—and too often unpaid collectors—for the landlords' benefit. This is the neces-

sary consequence of a law which causes rents to be fixed at a rate artificially high. Farmers, however, are beginning to discover that their protectionist friends are but false friends after all. At *Barnet* fair, the other day, we heard great numbers of farmers—both those who were unable to sell their lean stock, and those who, from the high price of cattle provender, were afraid to venture to purchase—express most earnest wishes for a final settlement of the Corn Law question; but we did not meet with one who believed that there could be any final settlement of that question except a total and unconditional repeal. In the meantime the labourers in *Wiltshire*, at all events, are endeavouring to help themselves; for they have not, and never had, any faith in the high-sounding professions of the monopolists. The following report extracted from the *Wiltshire Independent* shows that the agricultural labourers of that district are up and doing:—

"MEETING OF THE WORKING CLASSES.—A public meeting was held on Monday, the 2nd of September, at the Independent Chapel, *Goatacre*, *Wiltshire*, where upwards of three hundred attended. Mr. Read, of *Goatacre*, was called to the chair. The object of the meeting was to explain the rules and objects of a society formed in *Goatacre* for moral and political information."

"The chairman, on opening the meeting, pointed out in a very clear manner the rights and privileges of the working classes, and the necessity of their uniting to strive against ignorance, and to endeavour, upon sound constitutional principles, to regain their rights. The chairman then called upon William Edwards to address the meeting."

"W. Edwards then came forward and addressed the meeting, and pointed out the manner in which the working classes had been, and were, oppressed by those who ought to have protected them; and showed the necessity of their being on their guard against some who professed friendship, and wished them to meet and discuss the true principles of government, and judge for themselves."

"The following objects of the society were then read to the meeting:—1st, to obtain by every legal and just means the repeal of the Corn Laws, and all restrictions on trade and commerce. 2nd, to inquire into the state of the working classes, and point out the cause of their distress. 3rd, to promote a union among all classes, and to guide and direct the public mind into uniform, peaceful, and legitimate operations. 4th, to collect and organise the peaceful expression of public opinion so as to bring it to act upon the legislative functions in a just, legal, and effectual way. 5th, to consider the means of organising a system of operations whereby the public press may be influenced to act generally in support of the interests of the people."

"The chairman then proposed that an address be forwarded to Mr. John Arkell, thanking him for the kind manner in which he has come among us to advocate the cause of the working classes. It was carried unanimously, as was also the following resolution—"That this meeting think it highly necessary to call upon the inhabitants of *Wootton Bassett* to sign an address requesting the Right Hon. the Earl of Radnor, the Hon. Charles Villiers, M.P., Mr. Cobden, M.P., J. Edridge, Esq., and Mr. J. Arkell, to attend a public meeting in the town of *Wootton Bassett*, to discuss the principles of Free Trade."

"After the meeting was over, nothing could show the interest the labouring people take in the cause, more than the manner in which they came forward to contribute their pence out of their hard and scanty earnings towards the furtherance of its objects."

This, and other labourers' meetings, constitute the most complete refutation of the falsehoods and fallacies endeavoured to be palmed upon the public by Mr. Bennett and the other monopolist squires of *Wiltshire*. Indeed, we have, in some measure, to thank the monopolists for this form of Anti-Corn-Law agitation, for it was the outrageous assertions that the west-country labourers had not suffered distress from want of employment, which aroused the peasants to give in person direct contradiction to the misstatements.

WAR.—Religion has not prevented, morality has not stayed, pecuniary interest has not arrested, national depression has not impeded human slaughter and human affliction, although the horrors of desolated provinces, burning towns, and kingdoms laid waste have not deterred monarchs and statesmen from their asserting the triumphs of might over the dictates of humanity and justice. We maintain that the most pernicious, most disastrous, most slaughterous, most ruinous, most afflicting, most monstrous of all human errors is the error of war.—*Norwich Mercury*.

DWELLINGS OF THE POOR.—With regard to the description of dwellings erected for the poor; the holes and corners into which labouring men are often driven; the wretched undrained streets and courts; the buildings totally unprovided with many accommodations which are needful for the comfort of human life. Why, it is not enough to say, when speaking of these things, "people might live in better habitations if they would." The fact is, they cannot do it. Apart from the question of rent, they are by circumstances tied to some particular locality; their occupations in life require of them that they should be within reach of the place where they have to earn their daily bread: they have no choice; the society which says to them, "We condemn you to gain your means of subsistence by your daily labour," says also, "and we add to this the doom that you shall earn it in an impure and disease-generating atmosphere." In the various improvements which are effected in this great metropolis, what is the common tendency of the alterations? Why, to clear away small houses, and erect larger ones in their place. No doubt these large edifices are more valuable than the smaller, and bring a higher rent to the proprietors of the ground: but do the people of this country exist only for the benefit of the proprietors of the soil? Is a city an erection intended merely to enhance the private emolument of those who may have previously gained possession of the land upon which it is built? Is it not an arrangement which society has in charge, and which I think it is bound to carry into effect, to overrule any of those irregularities of private property which prove themselves to be destructive of public health and enjoyment? The abodes of a large portion of the community, in which they are condemned by the necessity of local circumstances to dwell, are a disgrace to any civilized society, the existence of which should be prohibited, and they should be swept away from the face of the earth, like any other nuisance. I see no reason whatever why we should tolerate machinery for the production and diffusion of malaria, or why we should feel any charity for factories of fever.—*For's Lectures to the Working Classes*.

NOTICES TO CORRESPONDENTS.

An agriculturist, who sends us his name and address, has forwarded the following for insertion:—

"Sevenoaks, Sept. 10, 1844."

"MR. EDITOR.—Being on a visit to this town, I last Saturday (it being market day) ascertained the price wheat was selling at here to my surprise to be for best white, 48s. 6d. per quarter, and brown, 40s., with, as a farmer informed me, almost a certainty of a further reduction next Saturday, in consequence of the difficulties they will have to contend against to meet the coming rent-day."

"These prices ill accord with the specious promises of the protection-loving 'Farmers' Friends.'"

"A FREE-TRADE FARMER'S SON."

"W. P."—It would be difficult, and perhaps imprudent, to comply with his request.

"A Subscriber to the League."—It is equally unjust and absurd to charge the bakers, or any other class of tradesmen, with fixing too high a price on the articles they vend. We are informed by our correspondent that flour and meal are disproportionately high, because the extreme dryness of the season has prevented the full working of the water-mills; and this may be sufficient to explain the apparent overcharge for bread. Had we a perfectly Free Trade such anomalies would be impossible, and the want of water would neither cause consumers to suffer in pocket, nor tradesmen in character.

"Z."—Is such a trifle worth notice?

"Humanitas."—The subject is very important, but it is not connected with League objects.

"Viator" proposes that the farmers of England should form an "Anti-Game-Law Association;" and the same proposition is urged by another correspondent, who adds that "all poachers should be regarded as honorary members."

"W. S."—Subscriptions are received at the office in Fleet-street.

"G. W. W." letter has been received.

"Louis La Roche" is informed, that the Hastings election took place on Friday, the 29th of March last, when there voted for Biscoe, 513; for Moore, 174.

"A Working Man."—We cannot comply with his request, but we quite agree with his appreciation of the merits of the late Mr. Cobbett.

"W. W." is a little too strong; we may, however, use some of his hints diluted.

"A. M."—The lines are not quite up to the mark.

The remarks of "Odor Oppressionis," in which he traces out some of the evils of oppression, and urges the removal of all restrictions on labour as a remedy, are, in the present stage of the Free-Trade discussion, much too trite, even in their abridged form, for insertion as an original communication.

"W. Wells" is informed that the debate in which Sir Robert Peel insinuated that Mr. Cobden instigated assassination took place on the 17th of February, 1843. "*Hansard's Debates*" contain the report.

"A Subscriber" is informed that if, on letting a farm, no stipulation is made as to the game, the tenant will be entitled to it. It was provided by the Game Act, 1 and 2 William IV., c. 32, that where land was under lease at the time of the passing of the act, the landlord should have the game, unless it had been by the lease expressly granted to the occupier. Several other notices to correspondents deferred.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order, to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the LEAGUE forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadsby, Newall's-buildings, Manchester; and the LEAGUE may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

POSTSCRIPT.

LONDON, Saturday Morning, September 14, 1844.

Amongst the lengthy accounts of the Queen's voyage to Scotland, and the still more interminable narrations of the mimic royal festival of the Duke of Buckingham, at *Stowe*, wherewith the daily press deems it fit to entertain its readers, we yet meet with sundry evidences of Free-Trade opinions. Thus we find the ladies of *Walsall* have presented a splendid piece of plate to Mr. J. B. Smith, in testimony of the estimation in which they held his exertions in 1841, when he contested the representation of that borough upon Free-Trade principles, and laid the foundation for the subsequent triumph over the monopolists. This is a just and discriminating tribute to a gentleman whose sound views and intelligent advocacy of Free Trade are well known, and the more so because his well-timed efforts did not result in personal success.

In breaking down the monopolist party in any place it often happens that the first candidate, whose exertions pave the road to the future success of the righteous cause of Free Trade, cannot himself obtain the reward; and this causes many men in every way well fitted to represent a Free-Trade constituency to shrink from the turmoil of repeated elections, in the first of which they are usually unsuccessful. But the man who dares to fight a first battle often deserves as much credit as he who finally succeeds; and in this point of view it is most gratifying to Free-Traders to see the ladies of *Walsall* bearing testimony to the good services of Mr. Smith, in putting down the monopolists in that borough. Moreover, it furnishes fresh proof that the repeal of the Corn Laws has become an Englishman's domestic question.

Another symptom that Free-Trade opinions are working their way with considerable rapidity amongst the farmers, under the influence of low prices, is found in the elaborate efforts of the monopolist press to show that either the Canada Corn Bill—the effects of which are practically insignificant—or the Corn Law of 1842 has rendered the existing "protection to British industry delusive." Delusive enough it is, our readers well know, but not upon the ground so mendaciously asserted by the *Morning Post*. That journal says that corn may be imported into this country from the east of Europe, paying the highest duty of 20s. a quarter, and that

the importers may thereby obtain a profit! Now, we really hope that there is no one in the corn trade so green as to be influenced by such statements; for while by the Post's own showing, in the same article, "an exceptional wheat, weighing from 62 lbs. to 64 lbs. a bushel," has been sold in Mark-lane "at from 40s. to 43s. per quarter," the price of wheat at Dantzic is about 31s. and 32s. per quarter! If there be any regular readers of the *Morning Post* who can work a sum in simple addition, and they will condescend to add 10s. for freight and expenses and 20s. for duty to the cost price of a quarter of wheat at Dantzic, they will find it results in a cost price here of 61s. or 62s. a quarter!!! Still such stuff will serve to amuse the monopolist squires, and therefore is it written.

LIBERATION OF MR. O'CONNELL; DEMONSTRATIONS OF POPULAR FEELING IN IRELAND.

As might have been expected, the decision of the House of Lords, and consequent liberation of Mr. O'Connell and his fellow-prisoners, has caused an extraordinary state of popular enthusiasm in Ireland; and never in his remarkable career has the honourable member received such tokens of love and admiration from his countrymen as on this occasion. When the intelligence reached Kingstown by the *Medusa* steamer, a crowd of people who had been anxiously awaiting its arrival exhibited the most vehement exultation. The news was speedily conveyed to Dublin, and spread like wildfire over the city, and everywhere caused the same delirium of feeling. Mr. O'Connell himself heard it with calmness, but, at the same time, with unmingled satisfaction; as did also the other traversers. For a time he was almost overwhelmed with congratulations; and even the governor of the prison, Mr. Purdon, a gentleman of opposite politics, but who treated his illustrious prisoner with remarkable courtesy and kindness during his three months' sojourn in the Penitentiary, was quite overcome by the unexpected intelligence, and gave vent to the depth of his feelings of hearty sympathy in the most unequivocal manner. When it was understood that Mr. O'Connell was to be released, all restraint on the number of visitors was withdrawn, and thus hundreds were permitted to have access to and congratulate him. It is said that he gave in a short time not less than twelve hundred of his autographs to parties who solicited the favour of his name. During the whole of Friday thousands of the inhabitants gathered round the prison, anxious to catch a first glimpse of the "Liberator," Mr. O'Connell having expressed his wish and intention to walk home. So soon as he made his exit from the prison, and became visible to the congregated masses, shouts of exultation rent the air. The people then ranged themselves in files, firmly grasping each other by the hand, and thus formed a free passage for Mr. O'Connell and the other traversers to proceed uninterrupted, save by enthusiastic cheers, to Merrion-square, his place of residence, where, having entered his house, and ascended to the balcony, he addressed the immense multitude in terms of hearty congratulation on his triumph, and exhorted them to separate peacefully, an injunction which they scrupulously obeyed. On the following day, Saturday, according to arrangement, a triumphal procession took place from the Penitentiary through the principal streets of Dublin. A chariot had been hastily prepared and decorated for the occasion, in which Mr. O'Connell took his seat; next the other traversers, also in carriages, but less conspicuous, and an immense train of private carriages and other vehicles; then the various trades of the city, with banners and bands of music; the rear was brought up by a dense crowd of the inhabitants not only of Dublin, but of the surrounding country districts. When all had formed in marching order, the procession set out at noon from the Penitentiary, and having passed through the principal streets, arrived before Mr. O'Connell's house, where he delivered a stirring speech, similar in strain to that of the previous evening, and concluded by announcing that at the Conciliation Hall on Monday he would detail his future plans. The crowd separated in the most orderly manner, and not a single breach of the peace occurred throughout the day's proceedings.

On Sunday, a grand pontifical high mass was celebrated at the Metropolitan Church, as a thanksgiving for the triumph of Mr. O'Connell, who, with other of the traversers, was present. The chapel was densely crowded. The Roman Catholic Archbishop, Dr. Murray, officiated. The Rev. Dr. Miley preached, and, in alluding to the event of the liberation, ascribed it to the intervention of the Virgin, whose intercession had been sought during the Novena, or nine days' devotion, which had just been celebrated, and which terminated on the very day of the decision of the Lords. This portion of the preacher's discourse produced a great sensation.

The rejoicings throughout Ireland have been characterised by the same enthusiasm as at Dublin.

THE IRISH REPEAL ASSOCIATION.

The weekly meeting took place at the Conciliation Hall on Monday, when the crowd was immense. The Lord Mayor was called to the chair, and after some preliminary business,

Mr. O'Connell addressed the meeting. He announced that Irishmen might now meet in thousands and tens of thousands to petition! There was no impediment now—by keeping themselves within the law there was nothing to prevent them strengthening themselves by the increase of numbers—by increasing the registers, and pouring petitions into the House of Commons until the table should break beneath the load of complaints of the people of Ireland. Mr. O'Connell next commented upon the proceedings in the House of Lords. He made a full and ample apology to the Whigs, and promised never to abuse them more; and complimented the *Morning Chronicle* for the able manner in which it had exposed the proceedings against him. The country, he said, owed the Whigs a debt of gratitude for the judges whom they appointed—it was to the Whigs they were indebted for such judges as Lords Denman, and Cottenham, and Campbell—men who never would be on the bench if the Tories continued in power. After stating that he would move for a committee to consider the propriety of calling

the Clontarf meeting, he proceeded to give his views on his plan for forming a Preservative Society:—The next matter to which I intend to refer is the plan I brought forward last year for the establishment of a preservative assembly in Ireland. (Tremendous applause.) This is a subject surrounded by legal difficulties, which we must approach by degrees, and which we were prevented considering last autumn by the iniquitous prosecution. My plan, you are aware, was this—that 300 gentlemen should meet in Dublin in a body, and that the title of each gentleman to form part of that assembly should be his handing in £100. They were to appoint their own treasurer, and be the guardians of their own money. (Cheers.) I would propose that they should unite together for the purpose of correcting and controlling every thing done by the association, the members of which should take no step without their full sanction and unqualified approval. (Hear.) A body of that kind would be a drag on the wheel, which would prevent any danger of revolutionary violence, and would have the greatest influence over the association to preserve it from all danger, and to remove its proceedings from all suspicion. (Loud cheers.) They would act between the Government and the association, and enter into arrangements with the Minister which could not be otherwise effected, and obtain ultimately a parliament for Ireland—should it only be a federal parliament in the first instance. I do not myself approve of a federal parliament, or think it the best; but still I would not object to their getting the best they could from the Government, which could not attempt to disturb such an influential body of men, and which, if properly addressed, could not refuse them what they asked legally and determinedly (loud cheers); therefore, upon the next day of meeting, I will move for a committee to form such an assembly, or rules for their guidance; and when formed that they be laid before the most eminent lawyers both in England and Ireland for their opinions, in order to establish it upon a legal and firm foundation. (Cheers.)

He concluded by giving notice that on the next day of meeting he would submit the three following subjects to the consideration of the association.

1st. As to the propriety of holding the Clontarf meeting—his own opinion was not in favour of doing so.

2nd. The propriety of forming a preservative society of 300 gentlemen, each one paying £100. It should not be an initiative body, but correct and control everything of a revolutionary tendency.

3rdly. The impeachment of the Irish judges and the Attorney-General.

The rent was announced to be £575 6s. 6d.

EPITOME OF NEWS.

FOREIGN.

FRANCE.—The French Government and Opposition press, as might have been expected, take totally opposite views of the mode in which the Tahitian question has been terminated. The Government press approve of the concessions made to England, while the Opposition journals denounce them as humiliating to France, and derogatory to national honour.

VISIT OF LOUIS PHILIPPE.—We understand that the visit of the King of the French to her Majesty is now definitely fixed for the early part of next month. It is arranged that his Majesty will embark at Treport on the 3rd of October, and proceed at once from Portsmouth to Windsor. The Queen of the French will not accompany his Majesty; but it is expected that King Louis Philippe will be attended by two of his Ministers, and by his youngest son, the Duke de Montpensier.—*Times*.

The *Journal des Débats* states that the Court of Assize of Saintes (Charente Inferieure) has devoted three days to the judgment of a parricide. This crime was committed on an old man of 80 by his son. The means employed was poisoning by arsenic. The parricide (Pierre Guyonnet) was condemned to the penalty of death.

LOSS OF A FRENCH WAR STEAMER.—The *Groenland*, one of the largest of the French war steamers, was totally lost on the west coast of Morocco, on some rocks about three leagues from Larache, on the 26th ultimo. The Moors immediately commenced an attack upon the vessel, which had lasted full four hours, when fortunately the steamer *Vidette* arrived to her assistance, succeeded in dispersing the Moorish soldiers, and received on board the crew and such things as could be saved from the wreck. In the afternoon the Prince de Joinville, in the *Pluton*, also arrived on that part of the coast, and, finding it impossible to float the *Groenland*, caused her to be destroyed by fire.

We are assured that a treaty, the origin of which may be referred to 1840, is on the eve of being concluded, by which England will obtain possession of the port of Suez, free passage from Alexandria to that port, and other advantages of importance in Egypt and Syria. This treaty, to which France is said to be no party, is guaranteed by Russia, Austria, and Prussia. We know not by what intrigue the King of the French has been prevented from participating in it, but have reason to believe that England has had nothing to do with his exclusion.—*Morning Herald*.

SPAIN AND MOROCCO.—A despatch has been received from Morocco, announcing that the Emperor has acquiesced in all the demands of Spain. The concessions made are:—1. The severe punishment of the Arab who caused the consular agent to be assassinated. 2. Our Government will receive indemnities for all the acts of piracy which have been committed on Spanish vessels. 3. Two leagues of territory are to be granted to Spain beyond the lines of Ceuta. 4. The Spanish flag shall be saluted by the Morocco cannon. It is thought that the Spanish Government will not hesitate to ratify this arrangement, which will appear immediately in the *Gazette*. The troops which were assembling to form part of the Morocco expedition are already ordered to march back into the interior. This conclusion of the differences with the Emperor of Morocco is generally attributed to the good offices and intervention of Mr. Bulwer.

LONDON.—The Lisbon corn monopoly is destroyed by royal decree. By this most beneficial measure the price of bread will be reduced one-third.

ITALY.—The road between Rome and Naples is again infested by robbers; and two diligences having been recently attacked by them. Travellers have been compelled to make the voyage by sea, in French steamers.

The *Augsburgh Gazette* contains a letter from Naples, announcing that the Government of the Two Sicilies is at

present revising its tariffs, with a view to diminishing the duties now pressing on foreign exports. The letter adds that the Neapolitan Cabinet has renounced all hope of concluding an advantageous treaty with France, England, and Spain, but that it was on the point of entering into negotiations with the Zollverein.

COLOGNE, Sept. 1.—For some days past a printed prayer for O'Connell and the martyrs of Catholicism has been circulated here; it is in the French language, and was sent from Namur.—*Allgemeine Zeitung*.

FRANKFORT, Sept. 4.—According to the Nuremberg correspondence, sentence has been pronounced at Berlin in the first instance against the assassin Tschisch. The sentence is said to be that he is to be broken on the wheel.

BRUSSELS, Sept. 5.—A Belgian manufacturer has undertaken to form a settlement at Campos, in Brazil, in order to introduce there the cultivation of flax; and a great number of Belgians were invited to join in this enterprise.

BELGIUM AND THE GERMAN UNION.—The *Moniteur Belge* publishes a decree by the King of the Belgians, dated the 7th instant, by which, as a consequence of the recent treaty with the German Customs Union (Zollverein), it is ordered that, in future, Prussian vessels in Belgian ports shall pay only the same duties as Belgian vessels; that the customs duties on wines of the union shall be reduced to 50 centimes per hectolitre in cask, and two francs per hectolitre in bottle; the excise duty also to be reduced 25 per cent., and the import duty on silk manufactures of the Zollverein to be reduced 20 per cent.

FOREIGN CORN TRADE.—The *Cologne Gazette* contains the following letter from Berlin of the 1st of September:—"A great uneasiness is felt for the corn trade of the Baltic provinces, and especially for the trade of Dantzic, where immense quantities of wheat are accumulated, which cannot be disposed of except in case of a bad harvest in England; but as it is better this year than it has been for a long time, the merchants of Dantzic, being obliged to keep their corn, are threatened with considerable losses. One house has already failed for 180,000 dollars, and it is feared that several others, and more considerable houses, will share the same fate."

THE SLAVE TRADE.—In consequence of a convention concluded between the five great powers on the 20th of December, 1841, for the suppression of the slave trade, the Prussian Government has published an ordinance, by virtue of which the captain, supercargo, and the first pilot of every ship convicted of having been engaged in the slave trade are condemned to hard labour for a period varying from five to twenty years. The same punishment will be inflicted on the owner, the insurer, or on any person advancing funds knowing the destination of the vessel. The crew are to be liable to an imprisonment of from six months to five years, if it be proved that their operation in this trade has been voluntary.

ATHENS.—Our Athens correspondent writes under date the 26th ult., that the Colletti Ministry would find it difficult to weather the impending storm, and that the protecting Powers would again be obliged to interfere, in order to save the country from anarchy.—*Times*.

TUNIS.—We learn from Tunis that the Bey has permitted the free export of corn for six months by vessels of all nations.

TRIPOLI.—A private letter from Tripoli, dated August 21, just received, mentions that the Pasha has sent his interpreter to the consuls, informing them that the troops of Hamed Pasha had succeeded in defeating and entirely routing the Arabs, and was in complete possession of the Gibel, after three days' and three nights' hard fighting. The loss in killed and wounded on the part of the Pasha's troops was exceedingly heavy, as the Arabs defended the mountain passes with the greatest obstinacy. Fifty heads and a great number of prisoners are on their way down.

INDIA AND CHINA.—The usual monthly overland despatches from India appeared in the London morning journals of Wednesday. The delay of the mail, which generally arrives much earlier, was caused by the shaft of the steamer in which it was despatched from Bombay on the 19th July having broken at sea; the vessel was compelled to return, and the mail was then forwarded in another vessel on the 31st. The 64th Bengal Native Infantry had again broken out into open mutiny at Shikarpore on the 20th and 21st of June; they demanded more pay, and having been refused, insulted and pelted their officers. They were subsequently reduced to submission, but the following day, after receiving their pay, they demanded to be discharged. The regiment was subsequently disarmed, and the ringleaders were arrested. A party of 40 cavalry, sent out about twelve miles from Shikarpore to protect a body of grass-cutters, was attacked by some Beloochees in the pay of Shere Mahomed, in consequence of the neglect of the native officers commanding, who retired from the road to smoke with their soldiers. The grass-cutters, and 12 men and one native officer, were killed by the assailants. This had produced a stringent order from Sir Charles Napier. Scinde was otherwise tranquil.

CHINA.—The news from China is to the 21st June. Sir H. Pottinger left China on that day in her Majesty's steamer *Driver*, touched at Singapore, Trincomalee, and Galle, whence the *Driver* sailed for Bombay on the 23rd July; and Sir H. Pottinger intended to leave Bombay for Suez by the September mail in the *Ackbar*. Hong-Kong was healthy. Turkey opium had advanced in price, owing to the Malwa proving inferior; but as next year's crop of Malwa is large, and will be ready for shipment partly in November and December, no arrivals of Turkey later than the end of the year are likely to benefit by the advance. Trade in general was languid. The French embassy proceeding to China had anchored at Singapore. The new Governor of Hong-Kong, Mr. J. F. Davis, with his suite, landed there on the 8th of May. He was immediately sworn into office. Some disturbances had occurred at Canton between the Chinese and the Americans, but they were of trifling import. Piracy prevailed on the Chinese coasts, especially of small boats.

COMMERCIAL NEWS.—The *Hong-Kong Gazette* of the 15th of May states, that the necessity of a reduction of the duty on tea is daily becoming more evident. The increased consumption of goods in China must be met by a corresponding export; hitherto, with the exception of tea and silk, China has been unable to furnish other articles to any amount, suitable to the English market, and, so far as is now known, it is with these commodities the enormous importations from England and India must be

paid. The opium trade is draining the bullion out of the country, and the American bills on London, which have long afforded a safe remittance, are decreasing—the Americans, finding that their own manufactured cottons yield a handsome profit, will send goods to procure their tea charges. That China will, in the course of time, be an outlet for a very large quantity of the staples of British manufactures, is undoubted. But the question now is—how is she to pay for them? With the enormous drain upon her in the shape of compensation money, and the heavy annual burden of some twenty millions of dollars for opium, all paid in specie—unless there are mines in the interior, of which Europeans are in ignorance—a few years will drain the greater part of the silver out of the country, and raise what remains to a fictitious value. Even now, in Canton, the sales are in many instances made in exchange for inferior teas; the price of the article sold being merely nominal, as it is impossible to calculate upon what these teas may realize in the English market.

Sir H. HARDINGE.—The Hindostan steamer, with the Governor-General on board, touched at Madras on the evening of the 19th of July; his Excellency declined, however, to land, and started for Calcutta on the morning of the 20th, which place he would probably reach on the 24th.

The recall of Lord Ellenborough had taken the people of India by surprise; but appeared to have been expected by his lordship, who had provided himself with a private residence, a few miles from the Government-house. The officers of the army at Calcutta had invited him to a dinner, which was to take place there four days after the arrival of his successor, Sir H. Hardinge. A subscription for a testimonial was also on foot.

The ship *Cameo*, from Liverpool to Calcutta, with a cargo valued at £60,000, was lost off Kedgerie. The *Candahar*, from China, was totally wrecked near Bombay. In Bombay there was a trial going on of eighteen Parsees for a murder committed at two o'clock in the day, in one of the most public streets in the town, on the principle of the gang murders which degrade India. Great excitement prevailed on the subject; the murdered man was one of their own tribe, and yet much money was expended in the hope of preventing the conviction of any of the parties.

SYDNEY.—The news from Sydney to the beginning of May, describe that country as suffering much from the depreciation of stock.

UNITED STATES.—The New York packet ship, *New York*, arrived at Liverpool on Thursday morning with papers to the 17th ultimo. They do not contain the least news of interest. There has been no variation in the cotton market since last intelligence.

DOMESTIC.

On Monday morning, at seven o'clock, her Majesty, Prince Albert, and the Princess Royal, left Windsor Castle for the Slough station of the Great Western Railway, en route for Woolwich. The royal cortege consisted of three carriages and four, and was accompanied by a guard of honour. Her Majesty embarked at Woolwich in the royal yacht, which reached the Nore in two hours and fifty minutes. Her Majesty proceeded on her visit to Scotland. By latest accounts she had reached Dundee, where preparations on a magnificent scale had been made, and where she has received an enthusiastic reception.

The infant Prince was christened on Friday, the 6th inst., with much ceremony, by the names of "Alfred Ernest Albert." The royal children will remain at Brighton during her Majesty's stay in Scotland.

Accounts received from Drayton Manor on Monday announced the severe indisposition of Miss Peel, daughter of the Premier: later intelligence states that she has become much better.

On Friday evening, the 6th inst., as the mail train on the Bristol and Gloucester Railway was passing near the Dursley station, it passed over a gate which had been maliciously thrown across the line. Fortunately the impediment was crushed to pieces, without causing any injury to the train.

On Thursday evening, while a number of reapers were at work in a corn field, within two miles of Campsie, in the vicinity of Kilayth, two of them entered into a violent dispute touching some recent shearing match, and one party, unable to control his temper, in a sudden gust of rage plunged his shearing-hook into the bosom of his companion, and instantly deprived him of life. The murderer, whose name is John M'Lachlane, immediately fled. —*Glasgow Reformers' Gazette*.

A fine little girl, three years old, belonging to Sidney-street, North Shields, died there last week in consequence of eating hemlock.

The committee of the National Temperance Society are now establishing book clubs for the exclusive use of the members of their association. These clubs are to be conducted upon the principle of circulating libraries, the number of works to depend of course upon the extent of the funds.

On Saturday night five cottages at White-lane, near Church Oakley, Basinstoke, all occupied by labouring persons, were completely destroyed by fire. The accident was occasioned by some hot ashes, incautiously left on a dunghill, being blown on the thatched roof. The greater part of the furniture of the poor tenants was saved, but they are all considerable sufferers.

Last week a land slip occurred at Atherfield, Isle of Wight. About an acre of land suddenly, and with a loud noise, moved off into the sea.

The most respectable booksellers, grocers, chemists, milliners, and other shopkeepers, excepting provision and refreshment shops, have commenced now to open at seven in the morning, and close their doors at eight every evening, excepting Saturday night; then one hour later. Arrangements are also being made to close at seven o'clock in the months of November, December, January, and February. —*Sun*.

The Bank of England has suffered a forgery to the extent of about £3000 Consols, by a clerk in the establishment who was away on leave of absence.

On Friday evening, the 6th inst., the village and neighbourhood of Hazel Grove, Cheshire, were visited by a terrific thunder storm, accompanied by a heavy fall of rain. A little brook in the village overflowed its banks, which having given way the water rushed into Wellington Cotton Mill, belonging to Mr. Cooper, extinguished the fires and stopped the works. Many of the hands were dragged out of the water by ropes. About thirty of the workpeople sought to cross a bridge under the protection of a brick wall, behind which there was a large reservoir for supplying water to a factory situated on its banks.

They had proceeded but a little distance when the banks gave way, letting the water rush with such violence against the wall that it also gave way, burying about twenty of the poor people under its ruins, and forcing the others into the stream. As soon as the materials could be removed, four girls and a little boy were found to have been killed, and the following day another girl was found dead clinging to a tree. The others were seriously injured. On Saturday an inquest was held, and in each case a verdict of accidental death returned.

During the nights of Sunday and Monday there were severe thunder storms at Brighton, Canterbury, Petersfield, and other towns and districts, and some damage to property was sustained.

Recent accounts state that the progress and condition of the harvest in Scotland are most satisfactory.

Louis Philippe has sent her Majesty a present of a beautiful *char-à-banc* similar to those used by the royal family of France. Her Majesty, it appears, during her visit to Eu, having expressed her admiration of these social vehicles, the King on his return to Paris gave orders for the construction of this one as a present to her Majesty.

The *Times* of Tuesday announces that the Admiralty have decided "on commissioning a number of brigs, which, although not of themselves constituting a very efficient force, supply the means of manning larger vessels, if ever their services should be required."

About half-past two o'clock on Monday morning, a fire was discovered making considerable progress in the lower part of the Rose and Crown public-house, near Stratford turnpike. Stock and furniture to the value of £600 were consumed.

A fire, which has proved very destructive in its consequences, broke out about two o'clock on Saturday morning, on some extensive premises occupied by Mr. Cleave Hooper, a tanner and leather-factor, in the Sparrow, Bermondsey, having a frontage of nearly 500 feet. The principal building destroyed was a warehouse, termed the "bark-barn," having an altitude of 80 feet, 60 in depth, and 100 in length. The whole extent of the property destroyed is roughly estimated at £20,000.

A project is on foot which, if realized, will materially benefit a large portion of the London community. It is proposed to establish baths, coupled with washhouses for clothes, on such a scale as to place the comforts of cleanliness within the reach of all. "It is contemplated," says the *Spectator*, "to begin with four foundations, three on the Middlesex, and one on the Surrey side of the river, at a total expense of £30,000. The annual charge thereafter to be met by the payments of those who use them; 1d. for a cold, and 2d. for a warm bath (the use of a towel inclusive), being the rates for the bathers, while at the washhouses, all appliances and means for six hours' scrubbing, drying, and ironing, are to be supplied for 2d. With the aid of an income to be derived from a few baths of a more expensive kind, the institutions are thus expected shortly to compass their own support. It cannot be doubted that the £30,000 will speedily be raised."

Various public manifestations of rejoicing, such as illuminations, processions, &c., have been adopted by the Irish part of the population of Manchester, to commemorate the reversal of the judgment upon Mr. O'Connell and his fellow-prisoners; and, with one or two trifling exceptions, these exhibitions have passed off peaceably.

Mr. O'Connell gave the sum of £70, on Saturday, for the liberation of persons confined in the Richmond Bridewell for petty assaults, &c.

Belany, the surgeon, who was acquitted on the late charge of poisoning, has arrived at North Sunderland, the place of his nativity. The greatest excitement prevailed against him by the people, and his effigy has been burned.

The *Panama*, of Liverpool, a vessel of 200 tons burden, which sailed from that port on Monday for Montreal, was run down on Tuesday morning at two o'clock, near Point Lynas, by the Iron Duke steamer, on her way from Dublin to Liverpool. The unfortunate vessel sank almost immediately, and with her seven out of eleven persons who were on board; the other four were picked up by the steamer, and thus rescued from a watery grave. The steamer had her bowsprit and figure-head injured.

Last week the Honourable Mr. Walpole, a mate of the *Collingwood*, lying off Spithead, while coming on board from a small yacht, the latter upset, and it being a dark night he would have perished but for the heroic conduct of Mr. Roderic Dew, a brother mate, who plunged into the water, swam to his assistance, and succeeded in bringing him in safety to the ship.

Three incendiary fires took place last week: one at Barrington, near Cambridge; the second at Stratford-sub-Castle, in Wiltshire; and the third near Guildford, where a field of cut and standing barley was destroyed.

On Thursday, the 5th inst., the act to indemnify persons connected with Art-Unions and others against certain penalties came into operation, having on that day received the royal assent. The act is only to legalize Art-Unions for a limited period, and is not to sanction, for the purchase of pictures, transactions which are in law illegal when adopted for other purposes. Another act of the late session respecting gaming matters has a fixed period; and, as Art-Unions are considered somewhat analogous in their operation, a definite application has been appointed by the Legislature.

In a letter to the "Quarterly Journal of Agriculture," the Earl of Essex says he has found the spirit of turpentine, about half-a-pint at a dose, an effectual remedy for distemper in cattle. Half-a-pint is the smallest, and a pint the largest dose, to be given every three or four days.

During an awful thunder storm at Dover, on Sunday night, a police constable named Samuel Couchman, while attempting with a companion to quell a riot, received such ill usage from a prize-fighter named Clarke, that he has since died. Four of those concerned in beating him have been apprehended, but the ringleader, Clarke, has escaped. Deceased has left a widow and two children.

On Friday evening, the 6th inst., during a thunder-storm at Derby, two men, who were at work in a field, were struck with lightning. One, named Sanders, was killed on the spot; the other, named Pegg, was knocked down and rendered insensible.

The docks at Leith are more thronged at present than they have been for more than a year. A great many arrivals from the Baltic, Holland, Dantzic, and other grain ports, have taken place within these few days; and one or two sugar and wine ships have added to the general activity. —*Scotman*.

A public dinner is to be given in Dublin on Thursday next to Mr. O'Connell and his late fellow-captives, in commemoration of their liberation from their recent unjust imprisonment. It is likely that the banquet will be given either in the Rotunda or in the great room at the Mansion-house.

The *Cork Examiner* states that great preparations are in progress to strengthen the forts on the Cork coast; guns of large calibre are erected.

Mr. Alderman Brown has been elected to fill the office of Chamberlain by an immense majority.

An order of the Postmaster-General was affixed to the walls of the General Post-office on Monday, notifying the dismissal of the letter-carriers who had been proved to have been guilty of opening the letters of sporting gentlemen.

On Thursday, the Dutch steamer *Batavier* arrived at St. Katharine's Wharf with a full cargo, consisting of 49 live oxen, 11 cows, and 9 calves, being the largest quantity imported in any one vessel from Holland since the passing of the Tariff.

Several Irish papers state that the Government are increasing the military force and strengthening various fortifications in Ireland. The rejoicings for the liberation of O'Connell still continue.

BRIGHTON FREE-TRADE MEETING.—W. J. Fox, Esq., and Robert R. Moore, Esq., have been deputed by the Anti-Corn-Law League to attend a meeting of the Brighton Free-Trade and Registration Association and its friends, which will take place either on Tuesday the 24th, or Wednesday the 25th instant, and of which due notice will be given. —*Brighton Herald*.

GOOD PROSPECTS FOR THE WORKING CLASSES.—The certainty of a most abundant harvest has produced not a little speculation as to the probable average price of wheat. We have heard the best judge in England declare his opinion, that within six months the average price would fall to 45s. per quarter. Should this be the case, the margin of wages remaining to the working classes, after paying for mere necessities, will be much enlarged, and their capabilities of purchasing the comforts of life be extended in the same proportion. —*London Commercial Record*.

TRADE OF THE TYNE AND WEAR.—Coal freights from the Tyne and Wear, coastwise as well as foreign, have been higher during the last week than for some years past. We should have rejoiced could we have attributed such augmentation to an increased demand for coal; but, unfortunately, we cannot do so. The fact is, that vessels have become scarce in the Tyne and Wear, in consequence of the long strike of the pitmen. Ship-owners have been driven to seek employment elsewhere; and very many have entered into arrangements which will prevent their return, for some time, to their old quarters. In addition to this, vessels have been making long voyages to Archangel and America, thereby preventing them from competing in the coal trade. —*Gateshead Observer*.

CHEAP BREAD AND HIGH WAGES.—The advocates of cheap bread used to point to 1836, when wheat was under 40s. a quarter, as a period when successful strikes for an advance of wages have taken place. Similar successful strikes for wages had taken place during the present year, but we have no example of any such thing during the intervening years of dear food. The tendency of which we speak is, in fact, so obvious that, but for the mist which has been intentionally thrown around the subject, the labour of arguing upon it would appear altogether superfluous. To any who may still entertain doubts as to the effects of cheap bread on the well-being of the labouring-classes, we would recommend a reference to a work just published, entitled the "Vital Statistics of Glasgow," by the regularly appointed statistic of that city, A. Watt, LL.D. Alluding to the National Savings' Banks, he says, "that the amount of deposits by the working classes, the number of accounts opened, and the number closed during particular years, rises and falls as the price of the 4lb. loaf (or grain) rises and falls during these years; and that the average amount of the sum accumulated by each depositor greatly diminishes at the termination of a series of years in which the grain is high, and again increases during the years of cheap bread." —*Macclesfield Chronicle*.

A FACT FOR LORD ASHLEY.—Such is the demand for labour in the manufacturing districts of this riding, arising out of the briskness of trade, and the great increase of that much abused and vituperated machinery, especially power-looms, that there is the greatest difficulty in procuring servants for domestic purposes, the female population very much preferring employment in the mills to domestic servitude; nor do we much wonder at this preference, when it is known that females can earn at the power loom from 10s. to 15s. per week, at the least laborious and most cleanly occupation in a mill, leaving their work as neatly clad, and their persons as cleanly, as if they had been all day employed at their needle; and with a very different result to either the London female shirt-makers, or the able-bodied *Dorsetshire* agricultural labourers. Would it not be quite as well if Lord Ashley would, for a short period, suspend his persevering efforts to extract the mote from his neighbour's eye until he has succeeded in plucking the beam from his own? —*Leeds Mercury*.

ASHBURTON.—EXTRAORDINARY CASE.—A young man, named John St. Clements Palmer, a native of Devonport, was committed to the county gaol, on Wednesday last, by J. Caunter, Esq., for killing a sheep. From the evidence given, it appears that the poor fellow had been upwards of five years a seaman on board the *Waraspite*; but since that ship had been paid off he has travelled hundreds of miles, seeking employment, but without success; day after day he subsisted on a scanty morsel of bread and cold water, which he obtained from some kind friend; but during the last few days his hardships were truly distressing, having nothing to make use of, and without a friend in the world. In a fit of despair, through want and starvation, he entered a field on the above morning, killed a sheep, and commenced skinning it; he spoke to a person passing by at the time, and desired him to tell some one to come and take him in custody for the offence, as he was starving; accordingly he gave himself into the hands of justice, and was committed for the offence. His emaciated appearance betokened the want and privation which he must have suffered. —*North Devon Advertiser*.

MONTHLY CORN CIRCULAR.—The following is the Circular of the Messrs. Sturge for the present month:—"Birmingham, 9th month 5th, 1844.—From the impossibility of giving any accurate opinion of the prospects of the corn trade, at a time when so much depended on the state of the weather, we did not issue our usual circular at the commencement of last month. The drought continued with very little exception during the whole of the month of July, and the price of wheat gave way about 4s. per quarter; but from the 1st to the 17th of last month, the weather was unsettled, and though the quantity of rain which fell was not large, it caused some reaction in the price of old wheat, and a good deal of the new in the early districts was secured in very indifferent condition. More recently, the weather has been very fine and warm, and the later crops are harvested in excellent order. Our markets are well supplied with new wheat, the quality of which is, with very little exception, fine, but the condition various. Some of the best and driest samples weigh as much as 64lbs. per bushel. The small stocks of old wheat, added to the failure of the crop in the great corn-growing districts in the north of Europe, and the deficiency in all other kinds of agricultural produce, will operate against very low prices for wheat during the ensuing winter; notwithstanding we have, as usual in dry seasons, more than an average crop of wheat in the midland, southern, and western counties of England. The stock of wheat in bond at Gloucester is about 11,000 quarters. The free does not exceed 4000 quarters. Dantzic wheat sells slowly at 6s. 6d. Polish Odessa 6s. to 6s. 8d., hard 5s. 6d. to 5s. 9d. per 60lbs., at Gloucester. English new sells at 5s. 10d. to 6s. 4d. per 62lbs., at Birmingham.—The crop of barley, as generally anticipated, is greatly affected by the dry weather, and in this part of the country turns out, with few exceptions, from one-half to one-third deficient; but, as it was not ripe so early as wheat, it is secured in better condition. The sale for all qualities is large at 29s. to 34s. per quarter at Gloucester, for foreign. Should our prices be as high as expected, we may get some fine from France, but we do not look for any of even fair quality from the Baltic before the spring, if then. English new is held with us at 40s. to 44s., and the latter price has been obtained.—Oats in this district are a light crop, and, although in Ireland they appear to have suffered much less from the dry weather than with us, the general testimony of our correspondents is that this grain will prove below an average both in quantity and quality, and we have recently had an improved demand at somewhat lower prices; and the stocks of oats at Gloucester, which a month since were very large, are now reduced into a moderate compass. Light foreign have been disposed of as low as 18s.; Irish, 19s.; heavy 19s. to 20s. 9d. per 312lbs., at Gloucester.—Beans, hay, and turnips may be considered as an almost entire failure. In many cases beans have not been thought worth the trouble of gathering. Hay with us is about the same price by weight as oats. The bean crop is said to be more or less deficient wherever grown, not only on the Continent, but in Egypt.—The reports of the potato crop, as far as it has been tested, are also very unfavourable, and they find a ready sale at high prices. Altogether, the agricultural produce for feeding cattle, horses, and pigs, is so short, that, although the imports of oats, barley, beans, and peas, into Gloucester, the last three months, have exceeded 10,000 quarters, the most part is already gone into consumption."

PRICE OF WHEAT.—Wheat sold last Saturday week in Peterborough market, weight 18st. 12lbs. per sack, at 43s.; at Lynn, wheat sold Saturday, the 7th, weight 18st. 6lbs., at Mr. Cobden's predicted price, 40s. per quarter. Wheat never heavier, and more than an average crop, in the fens and marshes. I am going from here through Rutland, Northamptonshire, Leicestershire, Lincolnshire, and several other counties, from which I shall send you information how they are going on. I never heard such complaints amongst the farmers since I was born. I have talked to several who say that Mr. Cobden is a true prophet.—*Correspondent.*

THE COAL TRADE.—The formation of a company is in contemplation to introduce steam-vessels upon a new construction into this description of trade. The enormously increased consumption of coal renders it an exceedingly desirable object that every effort should be made to supply that mineral as cheaply and quickly as possible, and it appears somewhat singular that no successful adaptation of modern improvements has hitherto been made in the construction and arrangement of vessels so employed. We find that upwards of 10,000 colliers entered the port of London last year, the consumption being about 3,000,000 tons; and if it be satisfactorily shown that a steam-vessel from 300 to 500 tons can be brought to London, and land her cargo at any wharf between the bridges, for 2s. 6d. a ton less freight than at present charged, we think the utility of the company cannot be doubted.—*Mining Journal.*

IGNORANCE THE PARENT OF CRIME.—We deem it our duty always to place prominently before our readers such facts as may come to our knowledge, in proof of the motto which we have placed at the head of this article. We do so in order to stimulate parents, who can afford it, to impart to their children sound mental and moral instruction, and to enforce on the higher and middle classes the necessity of educating the offspring of the poor, if they desire to see rising up around them a virtuous and happy population. The Government report of the state of the Model Prison, at Parkhurst, in the Isle of Wight, supplies further and conclusive evidence that, generally speaking, the inmates of our gaols are the ignorant and the neglected. Since the opening of that prison, 596 persons, whose ages vary from eleven to twenty, have been admitted, and the following statistics exhibit their comparative attainments:—

	Capacity of reading.	Capacity of writing.
Well	21	7
Tolerably	131	110
Imperfectly	233	172
Scarcely at all ..	95	66
Not at all	116	241
	596	596

It thus appears that only 21 out of the 596 were able to read well, and only 7 to write well. Scarcely any of them had any knowledge of Scripture, the meaning of words, or general information, and upwards of 100 were altogether without instruction. Facts like these, whilst they prove how the children of the poor are neglected,

ought to rouse society to a right appreciation and a prompt performance of their duty.—*Sunderland Herald.*

THE MANUFACTURE OF POTTERY, EARTHENWARE, AND GLASS.—The following are the numbers given in the recently published Occupation Abstract of the Census Returns of 1841, of the persons employed in the manufacture of pottery, earthenware, and glass, in Great Britain:—

	Males.		Females.		
	20 and upwards.	Under 20.	20 and upwards.	Under 20.	Total.
Pottery, china, and earthenware....	12488	5028	3978	3330	24774
Glass & glass bottle	8548	1605	234	77	7464
Total	17986	6633	4212	3407	32238

These manufactures are principally carried on in the counties of Stafford, Worcester, Salop, Derby, Northumberland, and the West Riding of the county of York.

COMMERCE WITH MOROCCO.—In 1839 the commerce of England and France with Morocco was as follows:—

	Imports into Morocco.	Exports from Morocco.
England	£457,760	£356,560
France	82,840	79,560

The existing commercial treaty between England and Morocco is upon the most friendly conditions—the subjects of England being admitted unreservedly to all the privileges which other powers enjoy at present, and if hereafter any further indulgences be granted to any other power, the greatest share shall be extended to the friendly nation by the Emperor of Morocco."

COST OF WAR.—A French journal asserts that the losses sustained by the Emperor of Morocco since the commencement of hostilities with France are estimated at 30,000,000 of francs, and this loss is every day increased by the cessation of commerce, and the impossibility of collecting taxes.

MARKETS.

CORN MARKET.

MARK-LANE, Monday, Sept. 9.—The supply of English Wheat this morning was not large, and the quality and condition of most of it was very inferior. The best samples were readily taken off at the prices of this day week, but the rest were sold at a decline varying from 1s. to 3s. according to quality. There was rather more inquiry for the best descriptions of Foreign; but the trade in secondary qualities was about the same as last week. The prices of Barley, Beans, and Peas were firmly maintained: there were but few samples of new of either of those descriptions of Grain. There was a fair supply of Foreign Oats during last week, but about of Irish. This morning there appeared to be rather less demand from the country than of late, and the high prices at which Oats are held had the effect of checking business. S. H. LUCAS and SON.

Oats	8853	30s. 10d.	Peas	531 3s. 6d.

FRIDAY, Sept. 13.—The supply of Wheat since Monday is very moderate; of Barley only 320 quarters of English have arrived, with about 5000 quarters of foreign. There is not a single cargo of Irish Oats reported, and only four or five small cargoes from abroad. The attendance of buyers of all descriptions of grain is small, and there is, therefore, but little business doing. Monday's prices are maintained for Wheat, Barley, Beans, and Peas; Oats are held for an advance of 6d., with which necessitous buyers are obliged to comply. The duty on Beans fell yesterday to 6s. 6d.

THE LEAGUE.

No. 52.]

SATURDAY, SEPTEMBER 21, 1844.

[3d.]

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive a copy, weekly, of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of the subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND, are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

We beg to inform our subscribers that bound volumes of the LEAGUE newspaper, containing the whole of the first year's numbers, may be had on application at the Offices either in London or Manchester, after the expiration of the present month.

THE LABOURER AND HIS FRIENDS.

From the activity displayed by royal and other agricultural societies, a stranger might be induced to believe that the agriculturists of this country are in a prosperous and advancing condition; whereas, all this pomp and circumstance, all these Cereal festivals, are merely symptoms of agricultural uneasiness. Who ever heard of public associations and annual exhibitions as means to promote the improvement of any branch of manufactures? And much as we admire "a short-horned cow," or an "improved Leicester sheep," we do not believe that the beauty of their forms—and beautiful they certainly are—would entitle them to exhibition as works of art. So again, the squirearchy of England would seem from their rural speeches to be altogether immersed in the consideration of plans for the improvement of the condition of agricultural labourers. Yet this is only evidence that public attention has been attracted to the fact that the rural labourers, the "bold peasantry," by whose means all the splendid cattle of the agricultural shows are reared, and on whose labour all projected agricultural improvements depend, are in a state of deep destitution and dangerous degradation. In Suffolk and Norfolk, the wages of the agricultural labourers are 8s. and 9s. a week, and with a large proportion of them employment is uncertain, irregular, and precarious. In Wiltshire, harvest wages have been only 8s. a week, and a very general reduction has lately been made to 7s. a week. Indeed, the writer of the Royal Agricultural Society's "Prize Essay on the Agriculture of Wiltshire," states that the ordinary wages of a farming workman in that county are 7s. a week. And these counties may be taken as examples of the state of the peasantry in the eastern and western counties of England.

Then we have the most important fact, that, while the number of workmen employed in every other kind of industrial occupation had greatly increased during the ten years from 1831 to 1841, there had been, during the same period, an absolute diminution in the number of labourers employed in husbandry. Has this happened because labourers in husbandry are less wanted in 1841 than in 1831? or because improvements in tillage have enabled farmers to grow their produce with less labour? Far from it. All agricultural authorities agree that the soil of this country presents a vast field for the beneficial employment of capital, and that nineteen-twentieths of the farmers in England are sadly deficient in the requisite supply of manual labour. Yet there is no lack of capital seeking profitable investment, and the term "superabundant population" is one of daily use in the rural districts. In truth, according to the actual demand for agricultural labour, there is a superabundance of labourers—two men are usually running after one

master. But let any one who has the slightest acquaintance with rural affairs imagine that some considerable part—say one-half—of the land of this country had been cultivated in the same way as the best farmer he knows cultivates his farm, and say whether there would then have been any diminution of the number of labourers employed in husbandry? We know there would not; on the contrary, if one-half of the land in England had been cultivated from 1831 to 1841 up to the average practice of good farmers, there must have been as great, or nearly as great, an increase of the labourers in husbandry as in the other departments of industry during the same decennial period.

Indeed, the circumstance that fewer farm-labourers were employed in 1841 than in 1831 is a decisive proof of the partial character of the much-vaunted modern improvements in agriculture. In every district a few men farm well, adopt many improvements, and secure large produce. These farmers invariably employ a great many labourers, and are the only persons who make farming profitable; but the ordinary farmers have since 1831 been suffering under the alternation of high and low prices, and during many years of that period have been paying rents out of capital. They have decreased the number of their labourers, and the condition of their farms has deteriorated.

Few will venture to gainsay these positions, and when we remember that during the same ten years in which the number of labourers in husbandry has fallen off, the trade and manufactures of the nation have endured several years of most grievous distress from the high price of food, and still have gone on to employ an increasing proportion of the working classes, is it possible to resist the conclusion that there are some peculiar causes affecting the condition of agriculture and the demand for the services of the rural population? It cannot be said that a diminution of forty thousand in the farming occupiers and labourers took place between 1831 and 1841, because agriculture was without "adequate protection;" for during the whole time that law, which is now referred to by protectionists as the perfection of Corn-Law legislation, was in existence. Foreign corn came into home consumption only after the British community had endured for some time famine prices; and it came in then under circumstances which secured to the British corn grower, for a brief period, an unnaturally high price. He had a monopoly of the home market secured to him by law, and though in the ten years prices had been as low, if not lower, than they would have been with a free trade in corn, such low prices were caused by the abundance of home produce. This has again occurred in the present year, and in spite of a law giving the home grower a high nominal protection, he is again in a state of great distress. The farmer's distress is caused by his rent being fixed according to a scale of prices much higher than he actually obtains for his produce, as well as from his system of cultivation being adapted only to high prices; and both causes affect the condition of the labourers. It cannot be pretended that the farm-labourers who are constantly employed do not benefit by low prices of provisions; but when the farmer finds that a much larger share of his saleable produce is required to pay his rent than he calculated upon when he engaged his farm, he is compelled to discharge all those labourers whose services are not indispensable to carrying on the farm. It is certain, and the farmer knows it, that by discharging these men his cultivation must go back; but he has hitherto hoped that the low prices would be only temporary, that Government and Parliament would do "something" for the farmers, and that with a *bad harvest* he might recover his lost ground. But in fact he never does recover his lost ground, even when the Corn Laws and artificial scarcity press most heavily upon the consumers; and he is a fortunate man if he can even then pay his rent without further encroachment on his capital. His farm has deteriorated, and it would require not merely the labourers he dispensed with during the low prices, but more labour and more outlay to bring it back to its former state. This he is either unwilling or unable to undertake, and a permanent reduction in the number of his labourers takes place. This is practically the way in which the number of labourers in husbandry has diminished since 1831 under the operation of the Corn Laws. It is not merely low price which causes the discharge of labourers, but a price lower than that upon which the cultivator founded his expectations; for with the majority of farmers those expectations are founded on no calculations. For

a price permanently low the farmer would provide by increased and *less expensive* production, and to that end he must employ more labourers. The way in which Corn Laws, by teaching the farmer to look for high prices, introduce a system of low cultivation, is this:—A certain amount of corn—say of wheat, from 18 to 24 bushels an acre—can be grown without maintaining a large stock, and without growing the root and green crops required to keep the stock; and the expectation of receiving the high prices promised by the Corn Laws induces farmers to undertake farms with barely sufficient capital for cropping the land in an ordinary way, but with far too little capital for growing wheat, by the aid of good farming, at a low cost. It is notorious that a good crop, though costing more to grow it, is obtained at a less proportional cost than an inferior one; but to grow the better crop requiring more skill, forethought, and outlay in the first instance, is only resorted to by the best farmers, who will, perhaps, give no more rent, and will require more secure tenures than inferior husbandmen. Hence the tendency of the Corn Law is not only to make bad farmers, but to make the owners of land rather prefer the bad to the good farmer. In every way its effect is to diminish the employment of labourers in husbandry. And yet the monopolist landowners have often the assurance to assert that they seek to maintain the Corn Laws for the benefit of the agricultural labourers!

THE SOUTH-WESTERN EXCURSION.

Amongst the most useful as well as the most agreeable results of the railway system, are the excursions to considerable distances at cheap rates, and with the allowance of sufficient time for the travellers to look about them. The operatives of Manchester and Birmingham have thus had, and in great numbers availed themselves of, the opportunity for becoming acquainted with the sights of the metropolis; and many a Londoner who would scarcely have found it practicable, a few years ago, to get beyond the sound of Bow bells, has lounged amongst the beauties of our coast scenery, or had a wholesome wonder excited by the inspection of some grand specimen of manufacturing machinery. Besides the actual amount of enjoyment thus afforded, there is great good in the information obtained, the stimulus given to observation and thought, the abatement of local prejudices, and the raising the general mental qualification of those whose voices tell in the expression of public opinion, and very often their votes in the selection of representative legislators.

During the present week the South-western Railway has offered to a cargo of Londoners conveyance to and from the Isle of Jersey at the cheap fare of 28s. there and back, railway carriage and steam voyage both included, and one week allowed for returning. This excursion was well thought of. The remarkable peculiarities of the Channel Islands, both physical and social, cannot fail to make the tour a most interesting one. It has all the advantages of a visit to a foreign country, combined with a sufficient prevalence of the English language to secure the uneducated traveller from any difficulty or embarrassment. Moreover, it is the very thing which, as Anti-Corn-Law Leaguers, we would have suggested to the railway directors. Jersey is a great school of instruction on Free-Trade and landlords' law-making. Let the metropolitan visitors keep a keen eye when they get there. They will find it as good as a Covent-garden meeting; and a very pleasant way of filling up some of the vacant space, keeping the same object in view, during the suspension of those popular assemblages.

The first sensations of the citizen at the deep blue sky above, and the deep blue sea below, the grotesque rocks and the beautiful bays, will scarcely have subsided before he becomes equally astonished at the cheapness of everything. At the best hotels in St. Helier's he may have every accommodation of bed, board, and sitting-room, at 24s. the week. He will find good bread from five farthings to three halfpence the pound. Ducks, 1s. 6d. per pair. Fine poultry turkeys, 2s. to 3s. each. Gunpowder tea, 5s. per pound. Double-refined sugar, 4½d. to 6½d. per pound; and Brazil, 3d. Port wine, 15s. the dozen; very good sherry at from 1s. to 2s. the bottle. If a brandy-drinker, he will get it good at 3s. 6d. a gallon; and finer than is to be had in England at 7s. the bottle for that same sum a gallon. Hollands, 2s. 10d. to 3s. 4d. the gallon. If he inquire the rent of a house, he will usually find it below even the cheap out-of-the-way country-houses in England; little more than one-half of those in villages near London; and with this important cir-

circumstance, that the rent is all that has to be paid for the house: there are no taxes. To be rated, and so have a vote for the local authorities, is a favour which English residents obtain with difficulty, and which, when obtained, is in its amount little more than nominal. The total cost of the island government, which includes all that corresponds with the parish as well as the state expenditure in England, is defrayed by a small import duty on wines and spirits. By this means the whole expenditure is met, even to that of mending the roads. There is no such thing as a tollbar on the island. The roads and the port are alike free, with the trifling but sufficient exception just mentioned. Hence the striking contrast with the price of similar articles in England. A hundred pounds per annum there is worth at least one hundred and fifty on the island; more, rather than less; for the difference in currency must be added to that already made apparent in our list, and this alone is considerable. The English shilling goes for thirteenpence in Jersey, so that after all the cheapness, when the Londoner comes to the payment, he will be yet more delighted to find, on proffering the nominal amount, that he may "take his change out of that."

Why is all this? Not because Jersey is a little island, and Great Britain a large one. No: it is simply because Jersey has, by ancient charter, and for the political purpose of conciliating a people whose natural connexion would rather seem to be with France, the privilege of Free Trade. There is the whole secret and mystery of the matter. The difference, as to bread, sugar, &c., is what we in England have to pay for monopoly. What is not resolvable into that cause may be placed to the account of a system of aristocratical taxation, which spares property, to plunder industry. The cheapness of Jersey, as compared with England, or rather the dearthness of England as compared with Jersey, is artificial not natural; it is solely the result of subordinating the interests of the many to those of the few.

The bread in Jersey is very good. It is generally made from foreign wheat. There is plenty of home-grown corn. The soil is exuberantly fertile. But the Jerseians eat bread made from Prussian or Danish corn, and send their own wheat to England, thus buying at the cheap market of Free Trade, and selling in the dear market of monopoly. A thriving trade this; and one that makes Master Bull look rather ridiculous. 'Tis true, he is used to it. His beloved negroes in the West Indies enjoy Brazilian sugar, even after it has voyaged to England and been refined in bond; and sweeten therewith the liberty which their late owners make a cant word of, to extract a protection duty from the English poor. The landed proprietors in Jersey are of course favourable to the existing Free Trade, on the one side, and the existing monopoly on the other. Seven pounds per acre is the average rent of land in Jersey. Enormous as this may seem, the thrifty farmers manage to live. Nor is that accomplished by any peculiar degree of skill. They are as averse from all improvement as most of their tribe.

One Jerseyman was lately using a modern Scotch swing plough—two horses and one man only required—one-foot furrow; and another in the next field the old-fashioned Jersey plough—twelve horses and several men—eleven inches furrow only. The former politely invited the latter to see the improved plough, which makes a deeper furrow than the old one, with so much less labour and expense. The latter replied, "He would neither walk three yards, nor give a d—n, to see any plough but the good old big Jersey one."

For persons of limited incomes, Jersey is a paradise; especially if they like a warm climate. It offers little attraction to the working classes. Whatever perversion may be made of the fact, it is right to mention that wages are low. We see no evidence that the freedom of trade causes this evil; on the contrary, it mitigates the mischief which it has not prevented. Two reasons for the fact offer themselves to notice: first, a large influx of poor Irish, those colonists and missionaries of pauperism; attracted chiefly by the low price of spirituous liquors. Even the pledged Irish are here out of Father Mathew's sight. And secondly, the prevailing agricultural character of the island. The natives do not know what a factory means. Agriculture alone always debases the labourers to serfdom. It is so here. The little tenant-farmers are farmers, labourers, carriers, fishermen, &c., all in one. There must be manufactures to keep up wages. Except shoemaking, for British North America, whither from 10,000 to 20,000 pairs are annually exported, scarcely anything is made in Jersey. And yet the natural produce (especially of apples for cider), and the foreign trade, render it rich and thriving; the landowners and shipowners being the principal recipients.

The London visitor will be wise to keep out of the clutches of Jersey law, which seems constructed for the special behoof of the proprietary, and is marvelously fitted, though by foul means, to exclude English intrusion into the possession of their little feudalities. But for this part of the subject, such birds

of passage as our steamed friends may consult their books afterwards. They may haply see enough to set them inquiring; and we put that down as so much more good achieved by the cheap excursion. They cannot read much on the subject without additional reason for reflection on the consequences of attaching legislative powers to the possession of landed property.

And so, *bon voyage* to the South-western cargo for the Channel Islands. Thanks to the locomotive for its co-operation in the struggle against monopoly. As the stars, in their courses, fought against Sisera, so do the steamers, in their courses, fight against Richmond. The Free-Trade agitation could never have accomplished what it has, but for railways. They multiplied our meetings, and gave ubiquity to our missionaries. Thanks, again, to the penny postage, the other great and strong arm of our cause. All good things are in alliance: mechanical invention fights for social right; physical discovery aids moral improvement; harmless enjoyment excites useful thought; and the progress of invention facilitates the triumph of justice.

THE REGISTRATION COURTS.

In the constitutional struggle to obtain the emancipation of British industry from the unwise and unjust restrictions imposed upon it by selfish monopoly, Free-Traders should ever bear in mind that victory must be won by and through the agency of the electoral body. The franchise is our weapon of war, and it must be sought in the armory which the Reform Bill has provided. It is of the utmost importance that our friends should look after their votes in the registration courts, so as to be prepared for the great struggle at an election, which may come when it is least expected. The importance of personally appearing before the revising barrister does not appear to be sufficiently understood; it is valuable not merely for the purpose of establishing the right of vote, but also as an evidence that Free-Traders will not relax in their efforts to obtain justice, and that they look for success to the right use of the means which the Constitution has provided. If any incentive were requisite to urge Free-Traders to the performance of this duty, it would be found in the alarm which the steadiness of attention our friends are paying to the registration has excited in the monopolist ranks. In the *Morning Herald* of Tuesday there appeared an article of most melancholy mirth, designed to deter Free-Traders from attending to the business of registration. Having announced the utter extinction of the League some dozen times, the *Morning Herald* is now content to allow of its existence, though in a state of weakness and decay; and in the next breath discovers that the League is not only alive, but has formed revolutionary projects which could only suggest themselves to a body in the very vigour of power, and animated by the confidence of permanent vitality. It informs us that, "the proceedings of the League are not only grossly unconstitutional, but, according to the old reading of our duties, actually illegal and punishable as breaches of law." One would have thought that recent events might have inculcated the propriety of a little more caution. But this puerile threatening is not destitute of significance; it shows that the Free-Traders have found out the weak point in the lines of monopoly, and that the monopolists are forced to cover their apprehensions by a vaunted assumption of security which betrays their real fears.

The classes to which the elective franchise has been delegated should look on the right of voting as a sacred trust, which it is scarcely less improper to neglect than to use injuriously. Registration, which secures the right of voting, is an act of duty; it affords the only available means by which the unjust system of monopoly can be safely and surely abolished. We are anxious that Free-Traders should make themselves familiar with the business of registration. The law of the subject is not very difficult; a man of ordinary understanding can easily master both its principles and details; we therefore strenuously recommend the active members of our associations in town and country to attend diligently to the registrations, and, so far as possible, to be personally present in the registration courts. Every hour thus spent will be equivalent to days of labour at a general election; and every man should act as if the final result depended on his own individual exertions.

We must, of course, be prepared to find every constitutional exertion to secure a Free-Trade constituency assailed with all the coarseness and virulence which distinguish the monopolist press. But, instead of being daunted by such attacks, they should afford us fresh ground of encouragement, for their anger will be in the direct proportion of the success of our efforts. We must never forget that the object which the League has been formed to attain is one that involves no organic change, but is simply the removal of an oppressive burden—a burden imposed for the pretended benefit of one class at the expense of all other classes, and a burden which the Population Report proves to have been injurious

to the very classes which it professes to serve, for the returns show that agriculture becomes annually less and less adequate to provide support for the population. The Corn Laws were, and are, a mischievous innovation; the repealers of the Corn Laws seek only to return to the ancient and equitable system, now that the device of a sliding scale has been demonstrated to be fraught with grievous injury to the interests of the general community. Every member of the constituent body is called upon to give his vote either for the abatement of this mischievous nuisance or for the continuance of monopoly; neglect of securing the right to vote is little better than desertion to the enemy. We therefore exhort Free-Traders to exert themselves strenuously in the registration courts; there the battle must be fought, and there, we doubt not, the victory will be won.

THE SUGAR QUESTION.

We are requested to insert the following letter from Mr. Joseph Reynolds, the son of the celebrated philanthropist:—

Bristol, July, 1844.

"Dear Friend,—I presume it is in the recollection of the Committee of the Bristol Auxiliary to the British and Foreign Anti-Slavery Society, or some of them, that the efforts made by the Committee of that Society to uphold the law which in effect prohibits the importation of Cuban and Brazilian sugars for our own use was objected to by me and some others, as erroneous in principle and injurious in its effects; and I have now to request thee to submit to the Committee of the Bristol Auxiliary that as the British and Foreign Anti-Slavery Society, at a special meeting called together for the purpose of considering the propriety of continuing to support that prohibitory law, has authorised their Committee to continue their support of that law, it appears to be my duty to withdraw from the Bristol Auxiliary of that Society, because,

"1st. The refusal by those who govern this country to permit the importation of Cuban and Brazilian sugars for our own consumption is a direct infraction of the law of God. 'Whatsoever ye would that men should do to you, do ye even so unto them.'

"2nd. The refusal to import and use such sugars is highly injurious to the people of this kingdom; is partial in its operation, weighing heavily on the middle and labouring classes of the community; and is a breach of the ancient constitution of England.

"3rd. Every prohibitory law is an impediment to the progressive increase of that commercial intercourse between nations through which they confer reciprocal benefits on each other, and which is, in the ordering of Providence, instrumental in preparing mankind for the reception of permanent and universal peace. Therefore every law which prohibits or restrains the progress of commerce tends to prolong the practice of war, and ought to be repealed.

"4th. Though this nation, and those by whom it is governed, are awfully responsible for their breach of the divine law, 'to do as we would be done by,' they are not responsible for the conduct of other nations, over whose internal arrangements they have not, and ought not to, have any control.

"5th. The lawfulness or unlawfulness of using sugar, or any other product of slave labour, is a question of conscience; like that respecting the use of meat which had been offered unto idols, which was proposed to the Apostle and by him answered, 'Whatsoever is sold in the shambles, that eat, asking no questions for conscience' sake; yet the consumption of that meat contributed to the encouragement and support of idolatry.

"6th. As the Apostle asks, 'Why is this my liberty (to eat such meat) to be judged of (or condemned) by another man's conscience? for, if I by grace be a partaker, why am I evil spoken of for that for which I give thanks?' So they who would thankfully eat the prohibited sugar may ask why they are to be deprived of that liberty by the judgment of other men's consciences? And they have the precept and example of the Apostle to support them, in claiming to have the law by which they are deprived of that liberty repealed by the Parliament of England.

"7th. Though the British nation has of late years been sufficiently enlightened to perceive the unchristian nature of slavery so clearly that it would be criminal in us to practise it, our having liberated our slaves does not justify us in imputing criminality to those nations which have not been so enlightened, and continue to retain a system of labour which was practised by their forefathers, has been sanctioned and established by the laws of perhaps every civilized nation, and was recognised in that law which was given through the instrumentality of Moses to the Israelites; nor have we a right to refuse to share the benefits of commerce, and to cultivate feelings of kindness and good will with other states employing slave labour, in order to do away with slavery, or even to prevent an increase of their present sufferings, because it would be to do evil that good may come of it.

"These are my conscientious convictions, the result of long and serious consideration; and they are respectfully offered to the consideration of the Committee of the Bristol Auxiliary Society, in the hope that, though they may not concur with me in these views, they will give me credit for estimating very highly the character, talents, and humanity of the Committee of the Parent Society, and for the desiring the abolition of slavery and commiserating the condition of the negroes as sincerely as ever; and I will thank thee, as the Bristol Secretary, to lay this paper before the Committee, on behalf of their friend,

"JOSEPH REYNOLDS.

"To Thomas Doyle, Secretary to the Bristol Auxiliary Anti-Slavery Society."

TABITI.—During the year 1843, the arrivals and departures of commercial vessels at and from the Island of Tahiti, amounted to 98; viz., 67 whalers, measuring 22,517 tons, with 1068 men; 118,200 casks of oil, valued at 8,545,200*l.*; 12 other trading vessels, measuring 3906 tons, and crews amounting to 234 men; and 12 coasting vessels, measuring 302 tons, and navigated by 61 men.—*Morning Herald*.

AN INQUIRY INTO THE EFFECTS OF ENGLISH LEGISLATION UPON AGRICULTURAL WAGES, PROFITS, AND RENT.

BY A BARRISTER.

(Continued from page 806.)

CHAPTER VI.

Sixth Period—From the Passing of the Corn Law of 1815, to the Passing of the Poor Law of 1834.

"The Corn Laws," says Mr. Tooke,* "were inoperative, or nearly so, between 1792 and 1815." Mr. Tooke seems to attribute the high prices which prevailed previously to 1815 to the combined influence of the war and the seasons. However that may be, the Corn Law of 1791 imposed the prohibitory duty of 25s. the quarter until the price was 51s. 6d.; then, in 1804, until the price was 64s. 11d., the duty was 31s. 3d., which was advanced to 34s. 4d. in 1809, and to 40s. 9d. in 1813.† During that period of twenty-four years we find that the average export price of wheat at St. Petersburg was 34s. 7d.‡ But if there can be any doubt as to the Corn Laws being operative from 1791 to 1815, there can be none with respect to the law of 1815, which fixed 83s. 6d. (the imperial quarter) as the lowest price at which importation could take place. The poor law of 1796—which legalized payments from the poor rates to labourers in aid of wages—and the Corn Law of 1815 were now, therefore, at work together; and the evidence produced before the various Parliamentary committees, particularly the select committee of the House of Commons on labourers' wages in 1824, and the select committee of the House of Lords on the poor laws in 1830 and 1831, together with the vast body of evidence collected by the commissioners appointed by his Majesty, in 1832 to make a full inquiry into the practical operation of the laws for the relief of the poor in England and Wales, affords us an opportunity of observing their joint operation upon the condition of the agricultural labourer.

It is stated in the report of the committee of 1824, that "In some counties, as in Bedfordshire, wages are kept so low that it is utterly impossible for the labourer to support a wife and child without parish assistance."—*Report*, p. 3.

Upon the allowance system it is remarked, that "Persons who have no need of farm-labour are obliged to contribute to the payment of work done for others. This must be the case wherever the labourers necessarily employed by the farmers receive from the parish any part of the wages which, if not so paid, would be paid by the farmers themselves."—*Report*, p. 4.

Mr. Thomas Bowyer, Buckden, Huntingdonshire, gave in evidence that the following were the average prices of the wheat sold, and the wages paid by him, from 1815 to 1824:—

Year.	Wheat.	Wages.
1815	8s. 3d.	14s.
1816	8s. 10d.	11s. 6d.
1817	11s. 1d.	11s. 6d.
1818	9s. 2d.	11s. 6d.
1819	10s. 0d.	12s. 0d.
1820	8s. 6d.	11s. 9d.
1821	8s. 0d.	11s. 6d.
1822	6s. 6d.	10s. 6d.
1823	5s. 6d.	7s. 6d.
1824	7s. 0d.	8s. 6d.

"Those are the prices that I have taken from the average of my own books within my own parish what I have paid for my labour and what I have received for my wheat; my sales have been regular throughout the year; it is a system that I have adopted; I have sold regularly. I dare say some people, if they were asked the price of wheat, would give it higher than I do; but this is not taken from my trade books, but from my farm books. I have inquired the price of a material article of expenditure, which is shoes, and I find that is a very heavy expense upon our labourers; for instance, now it costs our men 30s. a year for shoes; the price of a pair of shoes for a labourer, in the first year I commenced, was 14s. 6d. a pair; they got down from 1s. to 1s. 6d. a pair in 1819 and 1820, and they have now got back again to 14s. a pair; my labourers are in the habit of saying that they feel the expense of shoes more than any thing; it does not cost them less than 30s. a year for shoes; I presume that the expenses of other parishes are very similar to those of my own, I do not know any difference in other places."—*Minutes of Evidence*, p. 22.

"Do you consider the general mode of living of the labourers at present better or worse than it was when you first remember it?—Worse."—*Ibid.*, p. 28.

Mr. John Dadds, of Little Stukeley, near Huntingdon, was asked,—

"Have you any savings' banks in your neighbourhood?—Yes.

"Do you find the labourers often put money into them?—No.

"What is the average price of labour now?—9s.

"Is not that more than is sufficient for the support of a single man?—Most certainly; he might save half of it, and if he cannot save half that, what is the labourer with a family to do, who has four children to maintain with that?"

"You do not find many instances of labourers laying by part of those earnings in a savings' bank?—I should think not one."

"Have you observed any change in the condition and character of the labourers within your remembrance?—Very much.

"Has it changed for the better or for the worse?—For the worse."—*Minutes of Evidence*, pp. 29, 30.

"What was the rate of wages at the former period?—Not so much as it is now. I remember wages at 6s. a week.

"You attribute the change, then, to the great variations in the prices of labour and provisions which have occurred within your memory?—In some measure I do.

"Do you think commons tend to the comfort or discomfort of the poor?—I think, perhaps, the enclosure was rather an injury; there were some little people who kept a cow, or two cows, who were glad to sell their milk, which the poor are always glad of.

"How were those cows fed, then?—They hired little bits of land to grow hay upon.

"Does not the enclosure create a demand for labour?—Yes, at the first part of the time, but not afterwards. I think if there was much waste ground in the parish, and that was taken into cultivation, that would create more labour; but if the parish was all arable, that would make very little difference."—*Ibid.*, pp. 31, 32.

Mr. Stephen Bourne, of Tolbridge, Dorsetshire, being asked what was the usual manner of paying labourers there, replied:—

"The overseers are principally farmers, and they have a scale furnished to them by the magistrates of what the magistrates will allow the paupers; they probably hire the labourers as low as they can, from 4s. to 5s., or 6s., and at the very extreme 7s., the natural consequence of which is, that the families are obliged either to starve, or to go to the parish.

"You think the average wages are not more than 6s.?—Not more than 6s.

"That is barely sufficient for the support of a man and his wife and two children?—It is not sufficient."—*Minutes of Evidence*, p. 32.

"Have you any savings' bank?—At Sherborne there is a very considerable one, and at Shaftesbury, and at Blandford; and there is a branch of it in our parish.

"Do you find the labourers put money in it?—I am not able to speak to that; I am quite sure they cannot in any large quantity, because I know the rate of wages is not enough to maintain them."—*Ibid.*, p. 33.

The Rev. Philip Hunt, LL.D., a magistrate for the county of Bedford, was asked:—

"Is it usual for the parishes to pay any part for the wages of labourers employed by the farmers?—I believe that the rate of payment of labourers has been reduced so low, of late years, that it is impossible for a labourer who is married, and has a family (with the greatest energy, assiduity, and economy, on the part of himself and his wife), to support his family without aid from the parish rates.

"What are the wages usually paid to a single man?—At present, I believe, not more than 5s. a week, frequently less.

"Do you suppose that it is possible for a labourer to lay by anything out of those wages?—I do not think that an unmarried labourer in Bedfordshire is in a situation to lay by anything from his earnings; I would say it is almost impossible for him to support life on his actual wages, if he has lodgings or medicines to pay for, in addition to the expense of food and clothing.

"Do you not consider that the character of the agricultural population generally, in that part of the country, is thereby greatly degraded?—I think it is very much so; and I conceive the evil to flow originally from the very low rate at which the labour of an able-bodied single man has of late years been estimated; he cannot lay by any money against the time he may wish to marry; he can scarcely indulge any temporary gratification without having recourse to other means than labour: and in counties where game preserves are very numerous, the resource of poaching immediately presents itself to him. If detected, he cannot pay the penalty, and is consequently sent to prison, where he remains three months, and where he sees other persons not suffering a greater penalty for petty larceny. When he is at length liberated, perhaps he goes a step further in delinquency, and he commits an offence that he knows will not be visited more severely than poaching; he breaks open a dove-house, or he steals poultry, and other half-protected property, and probably he is sent to prison again, and in the end becomes a confirmed depredator or felon; whereas, if he could have gratified an occasional wish for any extra little enjoyment by what he could have saved out of his wages, the first temptation to crime would not have presented itself so strongly to his mind.

"Has there been, in fact, a great increase of crime in the county in which you reside?—I am afraid that I must say that crime has very much increased in Bedfordshire within the last fourteen years (1810—24).

"Have you any means of comparing the state of crime at present with that of a period still further back?—I have not at present the means of giving any accurate information upon that point; but the impression on my mind is, that crime has been very much on the increase amongst the labouring class of the inhabitants since the wages for agricultural labour has fallen so low as it lately has been.

"What are the lowest wages you have known given to a single man?—Three shillings and sixpence a week.

"Have you many savings' banks in your county?—There are three or four in the county of Bedford.

"Do you find many labourers depositing money in them?—I am persuaded that there are scarcely any agricultural labourers who deposit in the savings' banks. Deposits seem to be confined, in general, to domestic servants, to journeymen, and to little annuitants, that save something out of their incomes."

In reference to the labour-rate (as it was called), the principle of which was to make the shopkeepers and others pay a part of the wages of farm-labourers, Dr. Hunt was asked:—

"Then, if you were to exempt small tenements, that objection would be done away with?—The hardship would not be done away with, unless you exempted every individual that does not want hired labour."—*Minutes of Evidence*, pp. 33, 36, 38, 40.

The Rev. Henry Walter, rector of Haselbury Brian, county of Dorset, was asked:—

"What wages did they (the labourers) receive from their employers?—They had stated wages at tenpence or a shilling.

"Do you imagine that any single men labouring in the parish could lay by anything out of their wages?—If they could, it must be from exceedingly frugal habits, which are the habits certainly of that district. With regard to the mode of living, they live almost entirely on tea and potatoes: they take tea three times a day.

"Do they use milk and sugar with their tea?—I think they use sugar certainly; milk not often, though it is a dairy county.

"Do they eat meat?—Very seldom indeed."—*Minutes of Evidence*, p. 45.

Henry Drummond, Esq., J. P. for the counties of Hampshire and Surrey, observed that, with respect to the increase of the poor rates:—

"The poor rates are not nearly so high as one would be led to suppose, from the parliamentary returns—first, because much of the expense returns to the farmers in the labour which is performed upon their farms; secondly, because much is expended upon roads, and therefore does not properly come under the head of poor rates. I have never known any instance where gravel-digging or stone-picking was paid for by gentlemen, but it is always paid by the overseer. Again, a great part of the allowance which the labourers receive returns to the farmers and landowners in the shape of exorbitant rent for cottages. I have known many instances where the amount paid by a labourer for a cottage was greater than the amount of relief which he received from the overseer. The rent of cottages is so high that it is one of the chief causes of the agricultural labourers being in a worse state now than they ever were. Before the war the average rent of cottages, with good gardens, was 30s. a year; it is now in our own neighbourhood commonly as high as five, seven, or even ten pounds per annum; and where cottages are in the hands of farmers they always prohibit the labourers from keeping a pig, and claim the produce of the apple-trees, and of the vine which usually covers the house; so that, although if the wages of labour be compared with the price of bread corn, it appears that the power of the labourer to procure a given quantity of that article has varied very little, yet there are many other articles of quite as urgent necessity, such as house, fuel, and clothes,* all of which are increased very much in price; and therefore, even supposing the labourer is able to procure as much corn, he cannot procure as much of any one of the other necessities. The increased rent of cottages is owing to an increased demand for them, which is occasioned, first, by an increased amount of population; secondly, by fewer servants being kept in farm-houses; and thirdly, by the parishes forcing marriages. Again, all around us, most proprietors have pulled down cottages because they yield no rent, without distraining, which gentlemen are unwilling to do; and again, the farmers have been very anxious to get the gardens to throw into their fields.

"The farmers invariably oppose the poor man's building himself a house upon the wastes, and generally succeed in preventing his doing so. In some parishes where cottages are at this exorbitant rate, the poor have built themselves turf huts on the wastes. The farmers have pulled them down, and the people have rebuilt them. The farmers invariably refuse to relieve those who occupy these huts, alleging that they are possessed of property, and that they will not relieve them nor give them work unless they give up their huts; this they refuse to do, and, being unable to support their families by fair means, they become perfectly lawless; such parishes furnish the poachers, carriers of stolen apples, hives, fowls, &c. &c., for all the neighbourhood."—*Minutes of Evidence*, p. 47.

Mr. Thomas Todd, Park Farm, Woburn, stated in answer to the question,—

"Have you any savings' banks?—Yes; there are several savings' banks in the neighbourhood (Woburn).

* Of course this does not include cotton articles. The rise in the price of other articles of the labourers' dress is shown in a statement of the prices of labour, provisions, and necessities in Warwickshire, furnished to one of the Assistant Commissioners in the Commission of Inquiry, and published in the Appendix to his Report. Appendix (A), Part II., p. 75. It appears from that document that the price of a pair of labourer's strong shoes, which in 1792 cost 7s., had in 1832 risen to 11s.; that the price of labourers' coats or jackets, which in 1792 cost 6s. a piece, had in 1832 risen to 11s.; that the price of a labourer's smock or round frock, which in 1792 cost 4s. 8d., had in 1832 risen to 6s. 6d.

* "History of Prices," vol. i., p. 85.

† Parliamentary Returns relating to the Importation of Corn, &c., 1843, No. 18.

‡ Parliamentary Return, 2, No. 27, 1836, p. 3.

"Do any of the labourers put any money into them?—There are some, but not many of them; there are very few of the labourers that have done so lately."—*Minutes of Evidence*, p. 53.

The following evidence of Thomas Smart, 46 years of age, a labourer at Eversholt, in Bedfordshire, who had been married twenty-eight years, and had had thirteen children, of whom seven were then living, is remarkable, as showing the condition of a labourer in a highly-pau-perised district, who brought up a large family without assistance from the parish. It presents a simple and unadorned, but most faithful picture of the life of an English peasant, still struggling amid the degradation of his race against the effects of laws of which it is the object of these pages to trace the operation.

"Have you ever received any relief from the parish for the support of any of those children?—For funerals when any of them died, but no otherwise.

"How many children have you alive now?—Seven; I buried six.

"During the sickness of your children have you had no assistance?—No, only for burying them.

"What have been your wages for the last five years (1819—1824)?—10s. and 8s.

"Is that summer and winter?—In harvest we have more: the last two years I have had 8s., and the three years before that we had 10s., and they have sunk us down to 8s.

"What had you in harvest time?—Forty shillings and our food for the month of harvest.

"Have you had that every year?—Yes.

"Then the food was the only addition to your wages in harvest time?—Nothing else.

"Do you belong to any benefit society?—I belong to a club; I have been in it twenty-four years.

"Has your wife been able to earn anything besides those wages?—She always did as far as she could.

"Had you or your wife anything when you married?—Nothing at all.

"Have your children obtained anything by their labour for you?—We kept them at work as soon as they were able.

"What have they been able to obtain?—Platting and lace making.

"How much have they been earning in a week?—I do not know; the platting and lace making are gone, and they cannot earn anything hardly.

"How much in the last year?—The oldest would earn about 3s. a week, and the youngest would come in. I have only one boy.

"How many of them can assist you with their labour?—Three.

"At what age do they begin to earn anything?—About nine.

"From that age up to the oldest, how much have they got you per week, upon the average, for the last year?—About 2s. a week each.

"Have you had pretty constant employment summer and winter?—Always pretty constant employment.

"Has the employment been pretty constant for your children in the lace making?—Pretty constant, only very low.

"What have you paid for your rent?—Fifty shillings a year.

"What have you paid for your coals every year?—I have generally paid as much for wood or firing as I have for rent, or rather more.

"How much have you paid a year to this club to which you belong?—It costs me about one pound a year; it is fifteen pence a month.

"Have you ever had assistance in sickness from the benefit club?—I have never had but a month's pay out of the benefit club since I have been in it.

"What is the food on which you have supported yourself and your family?—Bread and cheese, and what we could get; sometimes we were short, and sometimes we got enough for them.

"Did you get meat on Sundays?—I have not had a bit of meat for a month together sometimes.

"What do you drink?—Water.

"Have you no bacon?—We get a little bacon; that is the chief meat we get when we get any.

"You do not keep a pig?—No.

"Have you a garden?—Yes.

"Is that of much use to you?—A great deal of use to me.

"Do you get potatoes?—Yes; I get plenty of potatoes.

"Do you ever get any milk?—Now and then we get a halfpenny worth of milk, but the farmers are very shy of letting us have it.

"What wages had you by the week in 1813?—I have never had more than 2s. a day.

"You had then 12s. a week?—Yes, when I was under Mr. Potts, about eight years ago.

"Were you much better able to live then than you are now?—No, I could not get so much as I can now, particularly because my children are grown up, and they help me.

"Have you had no kind friends to assist you in any way occasionally?—None.

"Do you use tea in your family?—Yes.

"And sugar?—No, sometimes we do not.

"Do you have tea for breakfast?—The children do, and sometimes water gruel and what we can get; we cannot get tea always.

(To be continued.)

VISIT TO EARL SPENCER'S ESTATE.

The Second Day.

As stated before, the morning of the 1st of June was a lovely morning. The weather had been long dry, and rain was looked for, hoped for, and prayed for—prayed for by those who never prayed for anything else. And in the absence of rain the copious dew was only the more delightful.

It was at that hour when dew is freshest and clearest and most pleasing to look upon, when it is brilliant as diamonds and far more precious, the hour of sunrise, that I went out of the village towards Althorp-park. So far as I remember, the distance might be a mile from the village to the park gates. But I went out of the direct way into some fields where people were beginning, or waiting to begin, to work, and talked with them.

Here I saw a lad, thirteen or fourteen years old, who was plying himself well at a large hunch of bread. I said to him he would not get through it soon; and asked him how long he thought it would last. "Well," said he, "I cannot tell how long it will last: all I know about it is, that it will be done too soon." He was sitting on the sunny side of a high thorn hedge; and some other lads of the same age were near him. One of these looked at me as if he saw an old acquaintance, and laughed; I looked at him, and laughed; yet I did not know him. Again he laughed and looked exceedingly familiar. So I laughed once more and looked familiar also. And then we both laughed together, and all the others, old and young, laughed. And we seemed to do so the more vigorously that no one knew what the other was merry at. Eventually the youngster managed to say, "Don't you know I am one of the boys you gave the money to, to buy a new bat?" And again he lost himself in mirth, and winked his eyes in the bright sun, and screwed his face about most comically.

And then I called to mind that on the previous evening I had overheard a discourse amongst a number of boys who had been playing cricket, or some game resembling it, and who, having broken their bat, were holding a little parliament under the hedge, and were discussing how to raise the ways and means to get a new one. They were rather astonished and somewhat pleased to find a mysterious stranger step out and relieve their difficulties.

I passed a space of two hours or more out of one field and into another, and off one farm upon another. And I had much satisfaction in talking with the persons whom I met. For the first time in all my travels I found, in society completely rural, on the estate of an extensive land-owner, on the very verge of a nobleman's park, nay, almost in front of his gate, that I moved in a moral atmosphere of Free Trade. The farmers spoke freely and unequivocally, and condemned the Corn Laws without reserve. The labourers also seemed familiar with the question, and were not afraid to speak about it. Everybody knew Earl Spencer's sentiments on the subject, and everybody had discussed the question of Corn-Law delusion.

I subsequently discovered that much of this familiarity with the Free Trade arguments here and all round the neighbourhood resulted from Lord Spencer's retirement from the Northamptonshire Agricultural Society. It may be remembered that certain of the members of that society intimated their intention to withdraw from it if Lord Spencer continued, he having declared that agriculture would thrive all the better without that delusive protection which is no protection; and that his lordship, rather than have the society broken up, which, he believed, had conferred some benefit on the county, chose to withdraw from it himself. This generous sacrifice of himself for a supposed public good; together with the undoubted fact that he had been persecuted out of a society which he himself had founded and advanced to maturity, by those members of it who never, of their own accord, would have founded nor supported any society for any good public purpose whatever until led to it by such a leader as Lord Spencer; these various circumstances resulted in a general fire-side discussion on the merits of the Corn Laws and Free Trade. Because the population on the Althorp estate would not submit to see their venerated landlord come out of a society without discussing his merits, and the cause of his retirement. They knew it must be a good cause of which he was the friend, and of which, at least, some of the other agriculturists in Northamptonshire should be seen as enemies.

Remarks on the merits of Earl Spencer led to the merits of the general question. His lordship's tenants are, of course, at liberty to read what papers, or pamphlets, or printed circulars come in their way without being reported and reproved at head-quarters by the agents. They did read. They were enlightened, and they have enlightened others. Thus, though the ungenerous treatment of Lord Spencer is to be regretted for the sake of his lordship's feelings, it has done great good to the progressive cause of Free Trade. In no county in England has any single event done more to advance that cause than has the mean attempt of the Agricultural Society to persecute its founder and its chief patron, Earl Spencer, done in Northamptonshire.

As I said before, I moved in an atmosphere of Free Trade in the vicinity of Althorp-park.

The park does not hold within its bounds such large old timber as I saw near Captain Spencer's mansion on the previous evening. Yet the timber is generally large, and the park is picturesque. It seemed to be a mile, or rather more, across either way; and the house is in the

centre, in a hollow. This house contains the most choice and comprehensive library (so I have been told) that belongs to any private individual in England. I saw the library; but, to me, books are not worth looking at if there be not time to read them. I was more interested in his lordship's pictures, especially the family portraits. And of these, the most interesting were the portraits of Lord Spencer himself. I could conceive nothing more pleasing than to see the infant, the playful child, the youth, the young man from college, the young statesman in Parliament, the grave statesman a leading member of the Government—all following in succession; and then to see them all merged in the fine old English gentleman that has retired from public life, and now walks about in his park enjoying the high luxury of doing good to his fellow-creatures in private.

I entered the park by a gate from the Harleston road, and walked by what seemed to be a carriage way. I soon saw cattle grazing; but there was nothing remarkable about any of them. As I subsequently found, they were nearly all bought in from different fairs and markets, and were only to be grazed for the season. There were, as nearly as I can recollect, between fifty and sixty of them. They were in two divisions. With those I saw first there was a boy who was keeping them in a certain part of the park, to allow the grass to get up in another part. The drought had kept the pasture very low, and they deemed it better to let the cattle eat one portion bare, so that another might get up for them to be eaten the week or fortnight following, rather than to have it all bare alike.

After going across the park, and out at the opposite side towards the west, I found that the morning was advancing. And having heard that Lord Spencer was at home, I thought it would be most appropriate to ask leave to go over the estate to look more minutely into things. This leave I intended to apply for from the head steward, Mr. Elliot; but he had not then arrived. He lives at a farm about three miles from Althorp. But when I heard that Lord Spencer was at home, I thought it better to address a note to his lordship.

It is not with every lord I would presume to take such a liberty. But I felt well assured that Earl Spencer would not take it amiss. And I was not mistaken. Yet his lordship's personal condescension prevents me from writing as particularly here as some might wish me to do, and as otherwise I might have done. Suffice it to say, that though his lordship was going to London that day, and though business extending over a year had to be transacted with the steward (it being a day of annual reckoning) I had his lordship's attention for some time, and subsequently that of the steward, to whom his lordship introduced me, with orders that I was to see all the cattle, and everything else that might be of interest. It was now that I heard from Lord Spencer himself that his breeding establishment was not on this estate, but in another county. This was to me some disappointment, as the young cattle and calves were the chief of what I wanted to see.

However, as I have been describing, I may proceed with my progress here; for, being here, I felt an interest in looking over the estate simply because it was Lord Spencer's.

When we parted from his lordship, Mr. Elliot took me to a district of the park where a number of cattle were grazing, of the most of which he gave me some account; such as saying how old they were, at what fair such a couple were bought; how long they had been grazing, and so forth. None of which particulars I noted down; nor, if I had, would they have been of sufficient interest for publication here.

We went westward, and by a door in the park wall, which Mr. Elliot opened with a key which he took from his pocket, we went out into an avenue of trees, near which we again saw cattle and sheep at grass. But they, I think he said, belonged to a tenant-farmer. Here we had a fine view of the adjacent country, west and north. It was what is called a fine fox-hunting country; that is, bold in its heights and hollows, with high fences, deep ditches, and covered with farmers' crops and farmers' interests. A good fox-hunt is rarely carried out without a very considerable loss to the farmers, on whose fields of wheat newly sown, or newly sprung through the ground, or among whose sheep it takes place; for it cannot be a good fox-hunt if not in an enclosed and cultivated country.

Lord Spencer is too much of a kind neighbour both to poor and rich to deny the rich the privilege of the fox-chase on his estate. Consequently there are some great hunts there, and in the neighbourhood, as I was told.

On this western side of the park we soon came to a village called Brington; and first of all we came to its church. Into this we entered. There were workpeople cleaning and repairing it, who, when Lord Spencer's steward entered, came to him for orders, for he seemed to be chief man everywhere, even in the repairs and alterations of the church. When he had given his orders, he showed me the different tombs and monuments of the Spencer family; for they have been buried here for many generations.

It was in the village of Brington where I saw the first of the new cottages in process of being built on different parts of the estate: they are generally formed so as to have four apartments, besides other conveniences. Some of them at another village were built so as one cottage with two or with three apartments should stand between

two with more apartments; the outside architecture, a kind of Gothic, being particularly attended to. These were built in groups, and each group had a middle cottage, as it might be, for single a widow or two poor women; while on each side dwelt the married people with families. In the largest houses there were two rooms up stairs and two below. The doors were of massive oak, panelled and polished; the window frames were large and convenient. The people were encouraged to keep all clean inside, and flowery and weedless without; for they had flower gardens in front, and potato gardens behind. They had also to each four houses a bakehouse and a washing-house. They had pigsties conveniently removed from the cottage, &c. &c.; and the rents were to those who paid full rents £2 a year, but some poor people had them cheaper, and some had their dwellings altogether free.

They had allotments of land also at a moderate rent: at 15s., and 20s., and 30s. per acre, according to quality. The quantity of ground was regulated in some cases according to the number of persons in a family. But these allotments were mostly all at too great a distance from the cottages to be as valuable as they should be. Some of them were a mile, and some more; and none that I saw were nearer than half a mile, except at Brampton (I think that is the name of another of Lord Spencer's villages which I saw), where the allotments are close to the village.

In one of the new cottages at Brington which we entered I discovered that the person who inhabited it, an elderly woman, had only been in the village twelve months, and that she came from London. I had some curiosity to know why she had come from the metropolis to live there, and was informed she was a midwife. The want of such a personage had been felt in the neighbourhood; so Lord Spencer provided the people with her services, by giving her a house and garden and some portion of an income. I was not told how much, and did not inquire. But this little circumstance is a pleasing instance of the kind respect of Lord Spencer for the poor.

When I had left Mr. Elliot, and met another person belonging to the estate, I heard many more proofs of such kindness. "In fact," said my informant, "Lord Spencer does harm with his generosity. When I came to this part of the country first, we had the old poor law, and to get the labouring men to work a day's work was beyond my power, or the power of any other employer. The men just did as they liked, or did nothing if they liked; but, after the new poor law came into operation, things began to change. It took some time; still they were growing better, and were obliged to work for their wages. But his lordship came to live here, and, after a while, he just began and spoiled them again. They came about him, some really poor and needy, but the greater part impostors; or, what is as bad, persons who fall out of work because they will not work. Well, on certain days of the week, his lordship gives them audience. There he stands, twenty, or thirty, or forty people about him. Some have one tale of distress, and some another—some true, and some a parcel of lies. He pretends to make particular inquiries into their stories, and does do so, and learns that they have been trying to impose on him. But what of that? He puts his hand in his pocket to every one of them. It is not in his nature to refuse one of them—no, not one of them—who pleads poverty, no matter how undeserving they be. He says they must be needful, or they would not run the risk of telling him such lies! In fact, Sir, Lord Spencer has virtually repealed the poor law, so far as the people about him are concerned."

Some of the Lancashire readers of this paper will recognise a striking similarity in one point of his lordship's benevolence to that of a late manufacturer remarkable alike for his generosity and his wealth. The gentleman whom I heard relate the anecdote illustrative of that one point says he was one day in company with the benevolent capitalist, when a man of very bad character, known to them both, but who had seen better days, came to beg. In his better days the man had done a deep injury to the manufacturer; he had libelled him and cheated him; and even now in his poverty he was a common cheat to others. But he was relieved of his liberal sum from the benevolent man whom he had injured so much. Observing which, the visitor said, "Mr. G., you surely know what a vagabond that is? a libeller, a liar, a swindler, a common cheat, who never did good in his life, and will never try it? if I mistake not, you have suffered by him yourself?" to which Mr. G. replied, with some uneasiness of manner, "Yes, yes; he is all that; but then what a dreadful state of poverty he must be in before he would come to beg from me?" And Mr. G. turned the conversation into another point as quickly as he could; for, in fact, his benevolence had been excited and he was glad to get an excuse for his generosity, as if he had done something wrong in letting a third party know that he was benevolent.

That generous and in all respects good man, and his brother, were the originals of the *Brothers Cheeryble* of Dickens. Mr. Dickens says, that for the honour of human nature he is glad to say, that, at least, two of his characters in "*Nickleby*" were not fictitious; and that these were the two brothers, who had done more good in real life than would be readily believed in fiction.

Having heard many anecdotes of the generous doings of these two brothers, in their real characters, these appeared to me a most pleasing resemblance to their actions in those of Lord Spencer. His lordship seemed to be

under the necessity of getting excuses for himself even to his own servants, for his benevolence to those who did not deserve it. And all this made me think the more highly of his lordship, even though his generosity might have had the effect which my friend attributed to it, of virtually repealing the poor law.

Having gone over different parts of the estate, first with one guide, and then with another, I went to the farm at which Mr. Elliot lived. Here were three fine animals put up to feed, each in a box, for the London Christmas show. And, instead of so many beasts as his lordship has been in the habit of sending to the show, these will be all he will send this year. Owing to the scarcity of grass at that time other cattle were to be put up to feed on oil-cake, corn, &c., but they were not of a class admissible at the show.

His lordship has also begun the breeding of racehorses at Althorp; but I am not aware of anything connected therewith that deserves notice. I shall therefore proceed to another topic.

OF THE OCCUPANCY AND CULTIVATION OF THE FARMS.

Earl Spencer still keeps up the tenantry-at-will system on his estate. This is all but universal in Northamptonshire. I think it is much to be regretted that his lordship does not break through this, for the sake of public example, if for nothing else. No doubt his tenants are safe enough. And, if all landlords were to be Spencers in this and every other generation, there would be no need of leases. Neither if all men were honest would there be any need of laws. But there is a need for laws, and there is a need for leases. His lordship and some of his tenantry are first-rate breeders and feeders of stock; they are, in fact, eminent graziers. They stand much higher in that respect than as cultivators. Now, it is in cultivating crops where the benefit of leases are most apparent. From what I heard I can believe that great advances have been made there in cultivation within these few years; but there is, unquestionably, much to do yet; and the more so, as the culture of crops and the feeding of cattle must go hand in hand, if the highest rate of profit is to be extracted from the land.

There is a farm in that part of the country, but not on Lord Spencer's estate, which I shall here notice. It is the farm on which is situate the battle-field of Naseby. A Scotchman has found his way to it, and is now growing very fine wheat on the ground where Prince Rupert wheeled round to give Fairfax battle, and where Fairfax, and Cromwell, and Ireton overthrew the royal troops as a preliminary to the overthrow of the throne. This farmer has been draining and enclosing, and ploughing and sowing, and reaping on that ground, devoting it to better purposes than that of war. He has been increasing human happiness, not diminishing human life. Yet, from the day that the rebels and royalists slew each other on it up to a recent period, that ground, and much of Northamptonshire, has remained the same. Here is its description by a writer thirty years ago:—

"The open field is extensive, and in as backward a state as it could be in Charles I.'s time, when the fatal battle was fought. The lower parts a moist, rough grass, with furze, rushes, and fern abounding; the rest of the field a strong, brown, deep loam, in the usual bean and wheat culture; pasture enclosures near the village, and a good many cows kept. The parish is as much in a state of nature as anything I have seen in the country. The avenues across the field are zigzag, as chance has directed, with hollows and sloughs unfilled, except with mire. The village contains a good many dwelling-houses and other buildings, all of which, I observed, built with mud, and covered with thatch, except the church and two dwellings. The walls of many of the houses were apparently shivering under the pressure, and seemed to indicate that a small weight or force additional would convert them and their contents into a ruinous heap. Yet neither the soil nor the aspect are by any means contemptible."

The appearance of this place is much altered now; but many parts of Northamptonshire have remained the same as in the days of Charles I., even unto this day. The soil is generally good; for grazing it is exceedingly good. But agriculturists have established the fact elsewhere, that even the best grazing land would be more profitable if cultivated. Of course the breeding of cattle and sheep requires grazing farms; but the feeding of them is most decidedly obtained with the largest profit by cultivating crops, by economizing food, and by saving all the manures that can be made while feeding the cattle.

On Lord Spencer's farm at Brampton this is partly attended to; and on some other farms a movement is made in this direction. Still, with excellent soil, the farmers of this county are very profitlessly employed, both for themselves and landlords; and I do not expect it will be much otherwise with them until a new spirit is infused by giving them leases of their farms.

I found the rent of good land to be from 20s. to 30s. an acre, if not used for garden ground nor nurseries in the immediate vicinity of a town. Wages 9s. and 10s. a week; except at Lord Spencer's, where they generally ran about 2s. a week higher. I should say, however, that 10s. a week is fully the average of that part of the country.

Some people do not attach the same importance to the improvement of the dwellings of the poor that I do; but they have not, perhaps, attended as much to the subject. A good cottage, a good garden, and a tasteful adornment

with flowers is worth all the county police for making people stay at home and cultivate good behaviour. It was intimated to me that the expense of building Lord Spencer's cottages was too great for general imitation. I did not ascertain what the expense was; but I understood the steward to say that £2.10s. of annual rent would not pay the expense. This I can well believe. But, in most counties, the merest hovels are rented as high as that. In most of the wretched villages of Dorsetshire, for instance, where the traveller sees the worst of houses and the poorest of labourers, the cottage rents are £3 and £4 a year, with not a yard of garden ground.

But I hold that, apart from the mere expense of building, there is another question of expense; that is, of keeping a demoralised population in the old hovels; the expense of shifting them alternately from their hovels to the prisons, or to the workhouses. With good gardens and allotments for the labourers, according to the size of their families that they may have an anchor, as I may say, to hold on by; with good cottages, that they may have pride and pleasure in their homes, we would soon see a saving of expense and of loss to both farmers and landlords in prisons and workhouses.

I just now spoke of Dorsetshire as containing the worst houses and the poorest population. The poorest population is correct enough; but on calling to mind that there is on the other extremity of England a county called Northumberland, where but a few years ago the houses were worse than ever they have been in Dorsetshire, I must retract the superlative degree of badness from Dorset, the more so as, on many estates, the Northumberland hinds' houses are not changed one whit, save to the worse, up to this very day of writing.

But even where they have been building new houses, both in Northumberland, and in the neighbouring counties of Scotland, particularly Berwickshire, they have only built mere sheds. On the estates of the princely Duke of Buccleuch in Dumfriesshire new houses for the farming men have been built recently, and they have neither ceiling nor lofting of any kind. Neither are they plastered inside; neither have they any partitions, nor inside doors, nor cupboards, nor conveniences for any purpose whatever. There is nothing but the bare walls, about twenty-four feet long and twelve feet wide, inside measure, and seven feet high; one door in front, and a little square window. The walls are built of stone and mortar, and, as said before, are not plastered. Into that shed, with the bare roof above their heads, the Scotch hind and his family are crammed, men and women, young and old. And these are the houses which are the new dwellings of the hinds on the Duke of Buccleuch's farms.

Though Lord Spencer should do nothing more than he has already done, agriculture is deeply indebted to him for his advances in the breeding of cattle; and humanity is not less indebted to him for his advances in the moral science of advancing the comforts and the virtues of the labourers.

Let us hope that his lordship will take the lead in his county in improving the condition of the farmers and their style of cultivation, by reforming the tenures of the farms. Landlords need his example.

ONE WHO HAS WHISTLED AT THE PLOUGH.

NOTES OF A TRAVELLER TAKEN IN THE SUMMER OF 1844.

No. VIII.

Cologne, August 1, 1844.

Having, in my last, offered some general observations regarding the origin and prospects of the German manufactures, I propose to give a more detailed account of the various territorial divisions into which the manufacturers have grouped themselves, taking each separately.

Belgium, we have seen, has two distinct mining districts, which separate in the province of Namur: one district stretching in the direction of Mons and Charleroi into France; the other taking the direction of Liege, and extending into Prussia. A traveller who goes by the railroad from Brussels to Namur, and descends to Liege by the steamer, traverses the whole of this last district, and finds that it unites a superior system of agriculture to that prevailing in the northern provinces, united with an excellent mode of improving the resources of the country by manufacturing industry. While farms, varying in extent from one hundred to four hundred acres, produce the heaviest crops that are found in Belgium, the farmer is in every way superior to the general class of farmers in Flanders. The stables, if not luxurious in their construction, are spacious; and the number of cattle is large, because the steep sides of the hills are better adapted to pasturage than to tillage. On a farm that I stopped at to make some inquiries respecting the management of the meadows, the owner asked me to walk over them with him, as he was going with his servants to milk the cows. I found that, even here, no artificial irrigation was practised beyond conducting, by means of small channels, any rills or overflowings of springs from the high ground upon the meadows. When the cows are milked, the dung that has dropped in the preceding interval is brushed asunder and thinly spread to prevent spots of rank verdure from spoiling the even surface of the pasture, which is usually as smooth and as densely clothed as a bowling-green.

The province of Hainault has long been one of the seats of the culture and management of flax, and its dense po-

pulation had fallen into the system of miniature farms, which that description of industry, as we have seen, induced under the old processes. There is, therefore, more pressure at present felt in Hainault than in Liege and Namur.

In Liege and Namur the population is much less dense; accordingly the number of miners employed in coalpits in Hainault exceeds 25,000, while in Namur it is below 1000, and in Liege it does not exceed 10,000. These are official returns, but of not later date than 1838. The price of labour, I find, is higher in Hainault, where so many hands are required; and 2s. per diem are given to pitmen there, while 1s. 3d. to 1s. 6d. is the pay in Namur and Liege.

The province of Namur turns out annually more coals than the kingdom of France, and Belgium in general produces half as much again as France. By one of those freaks which mock the intelligence of men, with all this abundance of coal, the Belgians are forced to import from France some kinds better suited for particular branches of smelting than their own, while the export to France of Belgian coals is very large. This play of industry, that but for the intervention of frontiers, with their injudicious restrictions, would be more frequent every where, and would tend to enrich every body, is more remarkable between the province of Liege and the Prussian mining district that joins it, and that indeed forms a continuation of the same beds of coal and ores. There having been but a nominal duty on iron in pigs, the smelters on the Prussian side have long taken all their raw iron from the Belgians, and have only worked their own coalmines to obtain fuel to forge it.

The offsets of the Ardennes that run into Prussia are, however, rich in iron ore, so that it requires some little explanation to account for this circumstance. The mines in Belgium are, as I before remarked, free of control as far as the ordinary arrangements for working them are concerned. The Government has for some time tacitly abandoned the right of granting permission to open mines, and the inducement to embark in mining speculations increased to the extent that I reported in my last; so that in 1836 the quantity of iron raised in Belgium reached 636,955 tons, or as much as England produced but a few years ago. In Prussia the Government reserves the direction of all mining operations; and the consequence is that, with far greater resources for this description of industry, Prussia produces but twice that quantity. In the Rhenish province the Prussians are, as we see, gladly dependent upon the Belgian miners. It must, therefore, appear strange to those who are not accustomed to such contradictions, to find Belgian writers lamenting the absence of such a control as is found in Prussia; and the Belgian Government disposed to re-establish it in the face of the experience that lies so near them. For all but such as have spent any time in investigating the causes of the present distress amongst the labourers of Europe, the simple remedy for Prussia, when it felt jealous of the progress of Belgium, was to imitate the policy by following which Belgium had thriven. If the Belgian miners were dissatisfied with their trade, it would seem easy to ascertain by comparison whether the Prussian system was likely to correct the evils under which they suffered. This mode of proceeding is, however, too simple for governments; instead of releasing the enterprises of miners from the control of the bureaux, Prussia has preferred, at different times, to augment its import duties on foreign iron, and has thus narrowed the market for the producer, while it has imposed an unjustifiable burden on the consuming classes. The distress felt in Belgium has arisen not from any abuse of the privilege of mining without control, but in consequence of the withdrawal of the foreign market on which the producer speculated.

The insecurity of property thus produced by this barbarous and unchristian-like international legislation, has found a sad and a striking monument on the banks of the Meuse, where I am writing. Belgium, abounding in all resources for industrial enterprise, densely populated, rich in coals and in minerals, had found a man of knowledge and of talent to lead the way in utilizing the rich boon that nature had placed at her disposal. John Cockerill, although a foreigner, was respected by the rulers and revered by the inhabitants of the country into which he brought his acquirements and his experience. It was natural for a man able to calculate the advantages that spring from well-guided exertion, supported by machinery, to imagine that his convictions must be general. He was familiar with the wants of the industrial classes, with the elasticity of markets, and with the imperfect supplies that can now be commanded. It was natural for such a mind to expect that no country would reject the boon of the means of acquiring riches, even if its inhabitants were imbued with the modern abhorrence of all supplies drawn without difficulty from abroad. Iron and machinery he of course supposed would be welcomed everywhere at a low price; and when he had a sufficient command of these, he thought it only necessary to show the continental manufacturers how to use them, to find immediate imitators and customers. But he had not studied ministerial bureaux, nor did he know the kind of education which those who work in them receive.

Following the impulse of his own vigorous and clear understanding, he created the remarkable works at Seraing, which I visited yesterday morning. A few miles before reaching Liege, up the river, you arrive at an establishment which is unique upon the Continent,

and is not easily matched in England. The summer palace of the old Bishops of Liege presents itself surrounded by factory chimneys, foundries, railroads, wet and dry docks, mining shafts, and steam-engines, forming a *multum in parvo* of manufacturing activity, but yet not on a very small scale. A canal connects the premises with the Meuse, on which the raw materials enter the establishment, which they quit in the shape of steam-boats, locomotive engines, rails, twist, or separate portions of manufacturing machinery, by the same channel.

The eleven workshops divide and enclose a number of courtyards, varying from 450 to 200 feet in length. In these everything is constructed which is requisite to complete a steam-boat from the keel to the decorations of the cabin. The first department is occupied by the turners, carpenters, modellers, and upholsterers. Planing machines for wood and iron, drills, boring instruments, circular saws, locksmiths' forges, &c., are here united. A second establishment works up the raw iron brought from the neighbouring country to bars, rods, and sheets. Casting furnaces, and a manufactory of fire bricks, complete this division of the works. In another section coals are raised for the use of the concern; and in a fourth the steamers are constructed, launched, and fitted with their engines.

The vigorous mind that conducted these extensive works, in which 16 steam-engines and 2500 work-people of both sexes are in constant employment, did not find sufficient occupation within them. In order to obtain a sale for the productions of Seraing, Cockerill was obliged to take shares in vast undertakings in all parts of the globe. A model factory at Liege is said to have occupied 800 hands. Three cloth factories—at Liege, Aix-la-Chapelle, and Ardennes; a paper-mill and a factory of woollen stuffs near Namur, were also founded by him. At Colbur, in Prussia, a manufactory of nets; at Przelborg, in Poland, a cloth mill; two others at Berlin and at Guben; again, at Aix-la-Chapelle, a wool-combing establishment; a spinning factory at Liege; a cotton factory at Barcelona; steam-engines in sugar mills at Surinam; a commission house at Amsterdam; besides other establishments in different parts of Germany, were called into life by the energy and talent of a single individual. Immediately before his death, Mr. Cockerill erected a workshop for the construction of steam-engines and railroad carriages at St. Petersburg; and undertook to raise coals near St. Etienne for the use of the French railroad company on the line from St. Etienne to Lyons.

Such wonderful activity, if it exceeded the bounds of prudence, cannot be said to have been an uncalled for exertion, unless the countries thus supplied with the means of creating wealth can be proved to have been able to dispense with the aid thus proffered them, or not to have needed the impulse which it imparted to their industry. This will scarcely be asserted; and society has, therefore, only to lament the state of commerce generally, which prevented these undertakings from proving successful, without entailing upon one individual so unfair a responsibility. That there is room for an extensive application of machinery in tropical countries, is proved by the fact, that the opening of the English market, even partially, to foreign sugars has made it evident to planters of all nations, that machinery is their only resource. Were the trade in textile fabrics once free, we should see the same thing take place; weaving by hand would everywhere disappear, and, as the consumption would increase with the reduction that would be afforded in price, the result of a better supply of clothing for the poor would be, that these iron districts would be kept in full employment. On Cockerill's death it was found impossible to sell a concern of such magnitude; and the creditors, having constituted themselves into a joint-stock company, are working Seraing for their common benefit.

Various ridges of the Ardennes—a low, but intricate mountain chain—divide Belgium from the government of Aix-la-Chapelle, in Prussia. The coalbed that is common to the two kingdoms increases in depth on the Prussian side, and near Eshweiler presents forty-four seams in one dip.

The extensive forest tracts that the traveller passes on the Prussian side are curiously interspersed with lofty chimneys of the iron or coal works that are very numerous. Many branches of industry were driven into these valleys by the intestine troubles in the great cities during the fifteenth century. Thus Aix-la-Chapelle lost its copper and brass founders; Cologne its weavers, which there, as at Ghent, were at one time the leading guild in the city, and numbered half the present population. In the retired valleys of the Ardennes, these manufacturers found shelter from the insecurity of civic tyranny, and were joined after the revocation of the Edict of Nantes by the industrious Huguenots who were expelled from France. The circumstance that iron and coals abound in these districts opened to the weavers of the Ardennes the resources of machinery, and they have taken advantage of them. Nor does any obstacle oppose a flourishing progress of the woollen manufacture in these districts, which have the market of the Zollverein open to them, but the dearthness of other articles of clothing, such as cottons and linens.

All the towns of this district are manufacturing seats on a smaller scale than Verviers and Liege, but considerable for Germany. Needles, and objects of cutlery, as well as girdlers' wares, are made at Aix. Cloth and woollen factories are found at Bartschied, Eshweiler, Stolberg, Eupen. The cloths of the last-named towns are as

celebrated as those of Elberuf, in France, for texture and dye. Stolberg has a very large copper and brass foundry, that dates from a French emigration as early as the year 1450. It would appear that the emigrants brought some secret with them, which makes their brass peculiarly desirable for watch work, and it is for this use admitted exceptionally at a low duty into France.

The iron veins in the Ardennes are, as we have seen, not worked on the Prussian side, the founders and forgers finding it more advantageous to buy the Belgian pigs. The coalmines are worked, and we find upon inquiry, that they are emancipated from the yoke of the bureaux, and have been so since the French occupation of these provinces. A small tax is levied at the pit's mouth on the coal extracted, to compensate for the tithe levied by the crown on the produce of the mines in the old provinces; but, as the coalmines on the left bank of the Rhine are otherwise not interfered with, they are exposed to no other checks than such as arise from the faulty financial systems of the nations of Europe in general. The price of the best coals, suited for cooking and for the use of the steam-boats on the Rhine, is at Stolberg about 5d. per cwt., or 8s. 4d. per ton. As the country abounds with minerals, and the population is sufficiently dense (225 to the square mile), the advantages for many kinds of manufactures are greater even than in Belgium, where the demand for coals for France has raised the price of the best qualities to 20s. and 22s. per ton. Labour is to be had at about the same rate on both sides of the frontier: common hand-labour at 1s. per day, and skilled labour not exceeding 2s., except where trust is reposed, as in the case of machinists and engine men, when the head men are paid 3s. to 4s. The custom of piece-work prevails generally. In the large glass works at Stolberg, 9 gros (1s. 6d.) are paid for blowing six sheets of window-glass, 30 inches by 40 inches. When in full work the earnings of the men are considerable; and a workman, who acted as my guide, told me, that in nine years he had saved 2500 dollars (£375). Savings' banks are now general in Prussia; but circumstances have not, as yet, forced the Government to introduce the regulations adopted in Belgium of the "*Livret*." In fact, labour is, in these districts, sufficiently scarce to make it easy for industrious workmen to get on, and a sufficient number cannot be collected on an emergency, as, for instance, to do railroad work, without advertising in the newspapers. The labourers are universally colliers, and often travel some miles to their work, from the neighbouring villages, where their families attend to their gardens, and sometimes keep one or two cows. This circumstance does not, it would seem, improve the quality of the work they do; and, although increasing their fatigue, it really acts like an augmentation of wages upon the masters' profits. There is an evident waste of labour in the arrangement, by which none is benefited; and the heavy work, I cannot help thinking, gives the men a clownish look, which they otherwise need not have. Schools open to all classes (and which it is obligatory on children to frequent), then two years of drilling as a soldier, ought to set up (as officers say) a man, and give him an intelligent look and dexterity of motion. This effect is less generally visible in the Prussian peasantry than might be expected, and unquestionably arises from the labour which they undergo, and the few comforts they secure to themselves, in consequence of the bad economy of time and exertion, which, as we shall have occasion to see, is the plague of Germany.

The opening of the railroads on the one side to the sea, and on the other to the Rhine, is too recent an event to display any striking result in the economical position of the district of Aix-la-Chapelle, which, however, cannot but be sensibly affected by it. In an article in the "*British and Foreign Review*" (No. 22), attention was called to the imperfect state of the public communications in many parts of Prussia, as illustrated by the average prices of corn given in the officially-published statements. In 1836 the price of wheat at Münster, in Westphalia, was 40 6-12ths gros the sheffel, while at Cologne it was 43 gros, and at Malmedy, in the Ardennes, 60 gros. In 1840, when the Germans felt the effects of our scarcity, the prices averaged, at Münster 73 gros, on the Rhine 80 gros, and on the Upper Moselle and in the Ardennes, 100 gros per sheffel. The price in the manufacturing districts was thus 50 per cent. higher than in 1836. The distance from Cologne to Malmedy is nearly 65 miles, and took light waggons drawn by two horses at least four days to accomplish. With the railroad, a similar distance is now performed in a few hours; but it is likely that this means of conveyance will increase the demand for coals, and raise the price. These countervailing changes, when they happen to prove conflicting, may, doubtless, often render it difficult or impossible to carry on descriptions of work that formerly were profitable. Inconvenience may partially be anticipated, and has in the first place been felt, as I have noticed, by introducing English yarn and iron at a cheaper rate than before into these parts. What, we may ask, is the natural policy of the Government under such circumstances? Ought it, by bolstering up the duties, help to keep a district, so fertile as this is in resources, in exactly the same position that it stood in before the railroads were laid down? To do so would be to annihilate the result which the railroads are intended to bring about. Is it not the far nobler task—imperative on those who undertake the responsibility of guiding the activity of their fellow-countrymen—that of aiding them to overcome the difficulties that are inseparable

ble from all progress to improvement, especially by opening new markets for the sale of their productions, and by removing any obstructions that now render their labour unprofitable. The simplifying of the forms which now clog mining speculations in Germany must have been a boon to the miner, while it spurred him on to increased exertion. The new duties imposed by Prussia on iron wares (I do not allude to the exceptional treatment of Belgian iron) has a tendency to relax exertions, and to prevent the ironmasters from preparing against the further changes that must be looked forward to. They have, in the present instance, the double effect of paralyzing this branch of the national industry, and of impeding the prosperous result of the railway speculations. Every shareholder in the Prussian railways is a double loser by the new duties. Perhaps this is an argument in favour of Government railways; the proprietors then, at least, have the remedy in their own hands.

In my last I remarked the advantages which the Belgian constitution, by means of the *Congrès provincial*, possessed, as they enabled petitions to be couched in more energetic terms when addressed to the Minister than would be tolerated in individuals or companies. Since then the Council of the province of Liege has addressed a strong remonstrance on the subject of the differential duties, which have called forth the hostile proceeding of Prussia, that threatens to destroy the ironmasters of Liege. The answer of the Minister, after a conference with some of the leading members of the Council, was, that negotiations should immediately be commenced with Prussia. In this province I have heard nothing but complaints of the same proceedings, which threaten to stop many works that depend upon supplies of raw iron from Belgium. But there is no provincial Council on the Prussian side to lend weight to the protestations of the industrious inhabitants; neither a remonstrance has been forwarded to Berlin, nor has the Government at that remote capital given any cheering assurance to the parties it has placed in jeopardy.

In the hilly country adjacent to the Belgian frontier the same good system of cultivation and dairy farming continues that prevails in Limburg. The fields are enclosed, and the cattle graze in the field, which is kept free from weeds and receives great attention from the farmer. In that part of the country the rural population is scattered, and inhabits houses each placed on the land belonging to them. As soon as the traveller leaves the offsets of the Ardennes, and enters the magnificent plain that stretches to the Rhine, the face of the country alters. Tillage succeeds to pasturage; there are few or no enclosures; no scattered farms, but large villages at a considerable distance from each other proclaim that he is in a land liable to be a seat of war according as whims govern the Chamber of Deputies at Paris or the Council of State at Berlin. As the manufacturer depends on the fancies of legislators at a distance respecting the possibility of buying his materials on advantageous terms, and his obtaining access to the best markets to sell them, so the farmer depends on the notions of national honour or of personal ambition that decide whether his crops are to be reaped or trampled, whether he is to grow his own food only, or is to be allowed the benefit of suiting his crop to his climate and the course of trade. But the result is precisely the same in both cases. As merchants think twice before they buy ships that they are not sure of being allowed to load to advantage, and capitalists give enormous prices for land rather than embark in fair speculations, so the farmer seeks to shelter himself from the chances which the experience of centuries has taught him to expect, and over which he has no control. His house is crowded into a village, where it meets the trifling support of public opinion when pillaging bands of invaders or defenders scour the country. He lays out no money in collecting choice stock or in making costly improvements which one war may destroy, but with his savings he buys land—more land to cultivate in the same imperfect manner as what he had before—more land, no matter how situate, but at all events more land. The manner in which land changes hands in this province may be estimated from the number of parcels registered for the payment of the land tax. They were, in 1841, 11,215,517 in number, and, as the population of the Rhenish province amounted but to 2,600,000, or little more than 500,000 families, it is curious that their properties should average twenty parcels each. But I must return to this remarkable illustration of the state of property in Germany in another letter. Here I must continue my journey across the Rhine into the coal and iron district on the Ruhr.

Pursuing my route from Aix-la-Chapelle to Düsseldorf by the way of Inlich, I embarked in the steamer for Ruhrort, about thirty miles down the river, and situated at the mouth of the river Ruhr, which opens a rich mineral district towards the Rhine. The Ruhr rises in the heart of Westphalia, and is navigable for a long portion of its course. It divides the extensive tract of sandhills known by the name of Sauerland, in Westphalia, from two other low chains, the Hellweg and the Hardestrang. These hills are mostly of sandstone, and abound in coalbeds as well as veins of minerals. The coals supply all the Lower Rhine, and are easily raised. Accordingly the whole country is here, as near Aix, filled with mills and factories, in which, however, only the greatest industry and economy enable the manufacturers (even with the protecting duties they enjoy) to compete with England and Belgium. The principal coalmines are near Duisburg, at a short distance from the Rhine, and communicating with

that river by a canal. The pits produced, in 1834, 1,400,000 tons of coal of all qualities, which averaged at the pit's mouth 9s. per ton. The production is now probably greater. These coals, which require no land carriage, are sent up and down the Rhine and furnish employment for the skippers of Ruhrort. At Muhlheim and Sterkrade, further up the river, are factories of steam-engines, and several of the fine steam-boats now plying on the Rhine have been built at Ruhrort, and fitted with engines from Sterkrade by the great house of Jacobi Haniel and Huyssen. This firm has here established a second Serravallo. Three high furnaces, two cupola, and two flame furnaces turn out seventy-five tons of iron per week. The works are driven by two water-wheels and three steam-engines.

The population is here more dense than in the neighbourhood of Aix-la-Chapelle, as it exceeds 320 on the square mile, and if exempted from the trammels of the bureau-cracy would assuredly be very prosperous. Cloth-manufacturers have been established here since the twelfth century. The Emperors of the Saxon dynasty held their court occasionally at Duisburg, the strong positions of which place, covered by the Ruhr and the Rhine, point to the same origin with that of the Netherlands towns. My course took me up the Lenna, a tributary of the Ruhr, into the heart of the Sauerland, whence I had not far to go to Siegen, famous for its meadows and its native steel. Siegen lies on the western declivity of the Westerwald, a chain of mountains that divides Nassau from Prussia. The little river Lieg, after being very serviceable both to farmers and factories in the hills, crosses the level country slowly, and falls into the Rhine opposite Bonn. The ore of Siegen, for the smeltings of which the forests of the Westerwald furnish the fuel, is a carbonate of iron from which steel is made that is worked up in the celebrated workshops of Solingen. I came down upon the Rhine from Siegen near Neuwied, having traversed in a circular route from Duisburg nearly one hundred and fifty miles of scattered mining and metal-working districts, into the details of which it is needless to enter, as the result by no means corresponds with the resources that these districts contain. Nor is this the fault of the inhabitants, who are docile, industrious, and well conducted as workmen, and as masters careful, economical, and well supported by scientific assistants. At every establishment I met men thoroughly acquainted with chemistry, metallurgy, and the theory of mechanics, while their practical knowledge was not confined to a blind imitation of known processes, but often showed great ingenuity in adapting to their wants the simple advantages of the locality. Wages are about the same as at Ruhrort and Aix-la-Chapelle, and small agricultural undertakings are every where combined with the factory work. If I do not mistake, some highly valuable hints respecting the treatment of metals have recently been taken from the ironfounders of the Westerwald by English ironmasters that will enable them to turn to better account some of our own mineral resources. When I express myself dissatisfied with the result obtained by so much industry and knowledge expended where resources are by no means deficient, I allude to the small amount in metal raised in comparison with the demand throughout the country for tools and machinery. The total production of the Rhenish province, which, besides the three mining districts of the Ardennes, the Ruhr, and the Sieg, contains the very important district on the Upper Moselle near Saar Louis, did not exceed 45,000 tons in 1835, and does not now exceed 50,000 tons. The basin of the Saar, which lies between the Vosges and the Harde Mountains, contains vast coalbeds that stretch from France into the Prussian and Bavarian dominions, and form a source of wealth for the French machinists of Alsace, besides what is produced by the extensive works on the German side.

It was some notion of the relative superiority in resources of some of the mining districts of Prussia that induced a Belgian miner, M. Delvaux de Feuille, to make a visit of inspection in the fifth great iron district, that of Upper Silesia. He found in that mountainous district a similar abundance of ore and of coals, with the addition of immense forests and cheap charcoal. But he found the greatest carelessness in the planning of works, deficiency of communications, and the navigable Oder in the worst possible condition; after which he was not surprised to find that the Prussian founders were afraid of English and Belgian competition.

The present high duties, it must be evident to all who visit these districts, are not intended to protect industrious men who have natural difficulties to overcome, but to allow of the continuance of false notions of government and financial legislation.

TRUTH.—The inquiry of truth, which is the love-making or wooing of it—the knowledge of truth, which is the presence of it—and the belief of truth, which is the enjoying of it—is the sovereign good of human nature. The first creation of God in the work of the days was the light of sense—the last was the light of reason—and his sabbath work ever since is the illumination of his spirit. First he breathed light upon the face of matter or chaos; then he breathed light into the face of man; and still he breathes and inspires light into the face of his chosen. Certainly it is heaven upon earth to have a man's mind move in charity, rest in providence, and turn upon the poles of truth.—*Bacon*.

In the metropolis over 9 per cent. of the whole population are domestic servants, and over 4 per cent. persons of independent means.

REGISTRATION.

MIDDLESEX COUNTY REGISTRATION.—The Free-Trade party, it would appear from the following statement, are active in the field, and have again an advantage over the Monopolists, although we are sorry to say the old Whig party have rendered but little aid. The Anti-Corn-Law League have rendered service:—

	Free-Traders.	Monopolists.
Bedfont district	10	17
* Brentford do.....	0	28
Enfield do.....	7	36
Edgware do.....	15	3
Uxbridge do.....	13	7
* Hampstead do.....	0	4
Hammersmith do.....	28	52
King's-cross do.....	68	96
Westminster do.....	35	43
Mile-end do.....	62	129
Bethnal-green do.....	35	38
City of London do.....	364	61

* The overseers have objected in these parishes.

In the county list in the city of London two Judges, the Solicitor and Attorney Generals, and eighty-five barristers and attorneys, who voted for the Monopolists, are objected to, they having claimed in the wrong parish. No doubt much noise and declamation will be made to induce the Revising Barrister to retain their names.

METROPOLITAN REGISTRATION COURTS.—Of these only two have as yet been opened—the Tower Hamlets and the City. East Surrey commences on the 20th, and Middlesex on the 27th.

TOWER HAMLETS.—This revision occupied Monday, Tuesday, and part of Wednesday, when the proceedings closed. No appearance was made on behalf of any party except the Free-Traders, for whom Mr. Boxer and Mr. Sidney Smith attended. No objections of any kind were made, and the only claims were those of Leaguers; those amounted to 84, of which 70 were allowed and 14 disallowed.

CITY OF LONDON.—Proceedings commenced here on Monday, and on Thursday afternoon the whole of the Livery lists were gone through. The result of the Livery revision is as follows:—

	Total of Objections.	Objections sustained and names expunged.	Objections sustained but name retained. The address corrected.	Failed.
By Free-Traders	872	189	94	89
By Monopolists	156	53	42	61
By both parties	67	62	..	6
Total ..	595	304	136	155

Majority of objections sustained for Free-Traders .. 136

CITY OF DURHAM.—Registration analysis:—

FREEMEN.			
Monopolists objected to ..	12	struck off ..	9
Free-Traders objected to ..	18	..	9
HOUSEHOLDERS.			
Monopolists objected to ..	27	withdrawn ..	1
Free-Traders objected to ..	45	..	11
Total objections by Free-Traders ..	39	struck off ..	23
Total objections by Monopolists ..	63	..	19
Majority for Free-Traders	4
NEW CLAIMS.			
Free-Traders ..	6	allowed ..	5
Monopolists ..	7	..	2
Majority of new claims	3
Majority of objections	4
Gross majority for Free-Traders	7

Eight of the Free-Trade objections and ten of the Monopolists were for change of qualification, but as new claims had been given, describing the parties as "occupying in immediate succession," they were not gone into.

REGISTRATION.—REVISING BARRISTERS' COURTS, SOUTH LANCASHIRE.—The revision of the lists of voters for the southern division of Lancashire commenced on Monday, at Newton and Ashton-under-Lyne. The proceedings before the barristers derive some interest from the recent discussions in the newspapers upon the large number of objections made to the names of voters. A smart struggle took place between the advocates of the two parties, both at Ashton and Newton, in reference to a large class of names which had been objected to by the Free-Traders, on the ground that the qualifications of the parties were not sufficiently described to enable objectors to identify them, and test their sufficiency; and that, in this respect, they did not fulfil the requisites of the recent act of Parliament. The struggle was not with the object of determining whether the votes were to be struck off or retained, but whether the barrister should or should not amend them, by inserting the names of tenants, or other particulars, so as, in each case, strictly to identify the qualification in respect of which the vote was claimed. The Monopolists opposed the amendment, on the ground that it was unnecessary, and claimed costs from the objector. Mr. Matthews, who sat at Ashton, reserved his decision until he knew the course taken by his senior, Mr. Brandreth; and, as the latter gentleman decided upon amending the descriptions, and refusing costs, we presume that Mr. Matthews will now take the same course. This decision will, in a great measure, dispose of the loud complaints of the Monopolists, as to frivolous objections alleged to have been made by their opponents. A very large proportion of the objections said to be frivolous have been made on the ground which Mr. Brandreth has decided to be reasonable and proper.

VENICE.—For some years after the final evacuation of this city by the French, and the occupation of it by Austria, we were told that it displayed an extreme appearance of depression, and was really a most forlorn-looking place. But the present government is employing every means, and with success, to revive its trade. Venice, like Trieste, is made a free port, and ships of many nations are again in its harbour, giving animation to the scene, and exciting renewed industry and enjoyment amongst the people, who strike me as being on more the merrier set I ever met; they are all night long singing, as far as I can judge by the hours they keep me awake, not with songs "most musical, most melancholy," but with cheerful ditties, never exchanged for bawls or strathspeys. *Mrs. Yates's Italy*.

There is one very singular feature connected with the imports of wheat during the last two years and the present one, viz., that, while the losses suffered by the importers of wheat have amounted to at least £3,500,000, the whole amount of the duty paid thereon has not exceeded £2,500,000, showing that a loss equal to £1,000,000 has been sustained by the importers above the whole duty paid; and that, consequently, under similar circumstances, and at the same relative prices, there would, on the transactions of these years, have been a loss to this extent, even had wheat been duty free, and which shows more strongly than any other circumstance how gross a delusion

to the home grower is the pretended protection which the law offers him, while it inflicts so much injury on others. And we believe it can be shown, in an undeniable way, that, with an entirely Free Trade, these losses would have been avoided, the home producer would have been exposed to less competition, and the wants of the consumer would have been better supplied. The chief cause of these losses, and especially of those in 1842, arose from the fact, that anticipation of the very high price which is obtained here under the stringent operation of the sliding scale whenever a deficiency, however slight, occurs, raises the price by speculation abroad during the winter and spring, while purchases are being made much above what it would otherwise be; at which enhanced price a larger quantity is secured for this market than would otherwise be. During the spring of 1842 the price of wheat in Dantzic, caused entirely by the speculative purchases for the English market, was from 54s. to 60s. per quarter. This price was regulated, not according to the *existing price and existing duty* in England at the time the purchases were made, but in reference to a *speculative price and a speculative duty*, which were looked for before the harvest. The wheat, therefore, as it arrived, was all warehoused, to wait the time when it was expected the *duty* would be most favourable for its being entered for consumption; and this time, as we showed last week, has always been just on the eve of our own crop being ready for the market. Now, it must be plain, that in the event of a better or earlier harvest than had been anticipated, as was the case in 1842, the losses of the importer, as well as of the home producer, are greatly increased by the fact that the whole or chief part of the imports of the year have been kept back and thrown upon the market at the moment it is least wanted, and thus unnaturally depressing the price both to the importer and home producer; and the consumer, who has suffered from extreme prices all the spring and summer, suddenly finds a greater reduction than would take place, or than could probably be permanent under a perfectly Free Trade. We are now looking at this question without reference to the legitimate increase of price, which, under a Free Trade, would arise from the improved condition of the country generally. The monthly average prices of 1842 were:—

January	61s. 7d.	July	64s. 2d.
February	60 4	August	55 11
March	58 11	September	52 6
April	59 11	October	49 11
May	61 3	November	49 1
June	64 0	December	47 1

Now, with an entirely Free Trade, purchases of foreign wheat would be made chiefly with a view to the existing prices at home; and if an opinion obtained that the price would advance, and speculative purchases were made in consequence, English wheat would first feel the influence of such opinion, and the markets abroad would follow; whereas at present speculation is confined chiefly to foreign wheat, in consequence of the declining duty with the advancing price. With an entirely Free Trade purchases would, therefore, only be made abroad at such rates as would repay the importer at the moment the purchase was made, and as it arrived the market would be regularly supplied; no reason or inducement would exist for keeping back foreign wheat from the market more than applied to English wheat; and, therefore, no great accumulation would be found on hand in the autumn, when least wanted. The effect of a Free Trade in the year to which we allude, and which will serve to illustrate the effect in every year, would have been as follows:—

The importer would have purchased wheat in foreign markets only at such prices as would have repaid him at the existing prices in the early part of the spring, when his orders were given, and not with reference to a speculative reduction of the existing high duty. The price, in consequence, in Dantzic would not have been so high as it was by 8s. or 10s. per quarter. As it arrived during the spring and summer months, it would have been as gradually supplied to the market as if it were English wheat, as no more inducement would exist for keeping it back. The price during these months would have been a few shillings per quarter lower; increased consumption and trade generally would have been promoted thereby; the intense suffering which then existed would have been mitigated; the working classes would have continued larger consumers of other articles of agricultural produce; and every importer of wheat would have taken care to have sold his stock in the months when the greatest scarcity existed, and before the price was likely to be reduced by the supplies of the coming harvest; so that, instead of the enormous accumulation which the home producer had to encounter in the autumn, the market would have been cleared and ready for his supplies; and, instead of the price ranging from 60s. to 64s. in the first six months, and from 47s. to 52s. in the last four months, it would have been maintained at an equal medium rate the whole year; for we are quite willing to admit that the operation of the sliding scale produces prices at particular moments, and often for an entire year, much below what would be maintained with a regular Free Trade; but such low prices are always the reaction from, and the forerunners of, extreme high prices, which again disorganise every interest.

We have shown that, with an entire Free Trade, and other circumstances the same, more foreign wheat would not have been imported during the last three years than has been, for even without duty the price has been such that no profit could be derived from it; but that the imports which have taken place under the delusive induc-

ments of the present law would, with a Free Trade, have been made, without entailing such large losses on the importer, with more benefit to the consumer, and with much less injury to the home producer. And if, as a consequence of a Free Trade, circumstances were materially altered, and we imported much more wheat than we have done—which we sincerely believe would be the case,—it could only be in consequence of a general improvement in the condition of the consumer, and could only again tend further to improve that condition by promoting the general trade and industry of the country, in the results of which no one could have a deeper interest in every way than the cultivator of the land at home, dependent on near and good markets for the consumption of his produce generally; and the more we increased our imports, the further we extended the radius of our supply, under such circumstances, the greater would be the legitimate advantages of his locality and proximity to the best market.

THE FRENCH WAR MONOMANIA.

Surely the brave, acute, and clever French nation is labouring for the moment under a most mischievous monomania. They are mad after conquests and colonies,—mad after the very things which painful experience should have taught them have ever proved injurious, or embarrassing, not only to themselves, but to every other European nation. The French see the English rich, manufacturing, commercial, and powerful at sea, and they at once jump to the conclusion that England owes her wealth and maritime strength to her possessions in Asia and America. They, therefore, begin the career of wealth by conquests in Africa and Polynesia, over warlike and ungovernable barbarians, or timid half savages, equally unprofitable as subjects.

If the French nation had come to the conclusion that England possesses great wealth and great naval power in spite of conquests and great colonies, France would be much nearer the truth. If the French people could but for a moment be brought to their sober senses, they might see this at a glance. The most splendid of our acquisitions is India. As sovereigns, or protectors, we have 100,000,000 of people under our sway. In finance, the utmost that can be said of this very fine possession is that it just pays for the trouble of keeping; while, as to trade, our commerce with it is much less than that with China, in which our sovereignty is confined to one barren rock.

If we turn to the Western Continent, the result is still more striking and instructive. The colonies, now the United States, took us a century and a half to establish, and all this long while they cost some portion of their civil charges, and all their military and naval charges, while a commercial monopoly was caused by their possession, more oppressive to parent and offspring than needless fleets and armies. Then we lost them, and the struggle to hold an unprofitable dominion cost us one hundred and thirty millions.

We have still extensive possessions on the North American Continent, containing as many subjects as the United States at the declaration of independence; but let the French point out, if they can, what benefit we derive from them. They cost us the expense of a large army and a considerable squadron. They are the cause of a monopoly which takes a clear million and a half a year out of the pockets of the British people; they are the only source of danger to our peace and friendship with the American Republic; and finally, they do not take off one-half the emigrants, nor one-fifth part of the manufactures, which does that Republic that costs us not one farthing.

Our Antilles are still worse. We bear the whole charge of their military and naval protection, and we have been performing the same pleasant office for near two centuries. Some ten years ago we paid them twenty millions of head money, and ever since we have been paying them a net £5,000,000 a year for their produce beyond what their produce is intrinsically worth. All this is surely not very encouraging for that course of territorial and colonial aggrandisement which the French nation seems so intent on pursuing.

If France itself be a smaller loser than Britain by her colonies, it is only because she has the good fortune (not certainly appreciated) of having a smaller stake at risk. She once possessed Canada; and at the end of a century it involved her in a war with England. She lost it, making it over to us (to whom it has ever since proved a burden), the poorest and most backward colony of North America. Unable to make anything of Louisiana, she sold it to the United States; and the prosperity of Louisiana commenced from the date of the sale. In the West Indies she pursues the same policy as ourselves: that is, the policy approved of by the great-grandfathers of all men of any decent amount of enlightenment: and she is a proportional loser by it. As to her East India possessions, they are on such a scale that she could not seriously hurt herself if she were to pave all the streets of all their towns with silver.

Fourteen years ago the French nation was bitten with the wild notion of conquering and colonizing Africa on the Mediterranean, and they made their first essay in the ancient Numidia, which they have held ever since,—the concern becoming every year more and more unprofitable, and more and more unmanageable. Some 40,000 men were enough to make the conquest, but it now takes 120,000 to keep it; that is, four times the number of European troops necessary to the maintenance of British authority in India, over fifty times the number of inhabitants, about fifty times as far away, and yielding about seventy times as much revenue!

With this unprofitable essay staring them in the face, the French are now proposing to add the empire of Morocco to their African colonies. That is obviously their intention; whether they may happen eventually to be crossed in their purpose or not is another matter. The French would seem to have forgotten the very meaning of the word colony. It means an unoccupied country, or nearly so, planted with an exotic race of men, who shall have room to grow and thrive in it. Now, this common notion of a colony does by no means apply to Algiers and Morocco, which are said to contain between them above ten millions of inhabitants, composed of no less than nine different races of men, all warlike, and all semi-barbarous; and, although so close to Europe, the very antipodes of Europe in religion, manners, and language.

We have not colonised Hindustan, although in possession of a large portion of it for near a century, because Hindustan had been colonised or settled by other races of men when we conquered it. Neither can the French colonise Africa, unless they first exterminate the different races of men who now occupy it, and who probably have done so as long as the Hindus and Mahomedans have occupied India. Among the many races that occupy India the English are numerically among the smallest, and so will the French continue to be, should they conquer the Mediterranean coast of Africa, under the fanciful notion that they are colonising it.

When the French, therefore, talk of colonising Africa, what they really mean is conquering it. What, then, is to be gained to France by such a conquest? We really believe nothing worth the cost of a single regiment of *chasseurs*, but it is easy to see that she will entail on herself an enormous national loss by it. A country that can pay a surplus revenue beyond the expense of maintaining the conquest must have a very fertile territory, and that territory must be peopled by a dense, docile, and industrious population. There are very few such countries in the world. We know of none that can be named, except the plain of Lombardy, the valleys of the Nile and Ganges, and perhaps the fertile islands of Java and Cuba.

Now, Algeria and Morocco possess not one of the necessary qualities. The country is fertile by patches, but sterile by larger patches. The population is not dense, and, instead of being docile and industrious, it is turbulent, idle, predatory, and vicious. In what calculable number of ages can France be expected to convert 10,000,000 of such barbarians into peace-loving and tax-loving subjects?—*Examiner.*

TRAVELS AMONG THE SUFFOLK FIRES.

(No. VI.)

FIRE AT ANN MANNING'S COTTAGE, AT WANGFORD.
(From the *Morning Advertiser.*)

The notice of this miserable woman in the report of the inquest on the Earl of Stradbroke's gamekeepers, which appeared in the *Morning Advertiser* on Tuesday, is substantially correct, but not wholly so. As stated there, it is true that her husband was suffering imprisonment in gaol for a trumpety offence against the game law, the most trumpety of laws. He had taken some pheasants' eggs, and his summer and his harvest months were doomed to be spent in a prison because he had done so. It is a dreadful thing in Suffolk to take pheasants' eggs, even though they are but newly laid in the grass by the side of a hedge, and offer a tempting prize to the hungry father of a hungry family. It is an awful thing to take away the eggs. The taker gets three months in the gaol, treadmill and all, for the first offence. Three months in gaol, with the additional punishment of knowing that his family is starving outside, and that his furniture will be seized on and carried away and sold to pay the cottage rent. Thus much for a man who takes the eggs from a pheasant's nest. But the gamekeeper who loses the eggs feels the awfulness of the loss in a degree commensurate with the enormity of the crime of the man who put them in his pocket. Dreading to face his noble master and to account for the eggs which were in a nest, and have produced nothing better than a brood of criminals in the house of correction—fathers in one gaol, mothers in another gaol, and their children in the workhouse; dreading to meet a master's face with no better account of the pheasants' eggs to give than this, he puts the muzzle of his fowling-piece in his own mouth and blows out his own brains. Had he met the stealer of the eggs in the act of taking them, then they might have reversed the manner of the death. They might have grappled and struggled; they might have struck, or stabbed, or strangled each other. The gamekeeper might have been slain by the egg-stealer, and the egg-stealer would have been hanged. All this would have been more common than what did happen. But the egg-stealer was not caught in the act, and no battle took place. No blood was shed; no excuse could be offered to the noble owner of the eggs; so the gamekeeper slew himself.

This was no sooner done, than another gamekeeper, who had to answer for his eggs, took his fowling-piece, and also slew himself; and after him another was ordered to be bound and confined, and watched, lest he should do the same.

So much for the man who put the noble lord's eggs in his pocket, and so much for the men who lost them, and were answerable to their owner for their loss. And now for the family of the man who put the eggs in his pocket.

The mother was left, while the father was in gaol, with a family of young children, without money, without food, and almost without hope of life. Arrears of rent accumulated, and James Ruthen, the owner of her cottage, put in a distress. He sold off her furniture, which was worth £8. or upwards, for the sum of £2. 19s. The rent due to him was £2. 7s. 6d.; but when he had paid the expense of the distraint and sale, he had only 18s.; this deducted from the arrears, left a balance of £1. 9s. 6d. still due.

This wretched mother of a starving family—miserable wife of a husband sent to the treadmill for taking the eggs of a wild bird which destroys the farmer's grain, which eggs he saw in the field: this miserable woman begged for time to pay from James Ruthen, but James Ruthen said the case was now in the hands of his lawyer, and he had not the power to stop the sale of her furniture.

The reporter, writing on the subject of the suicide of the gamekeepers, intimates that a belief prevails that the woman burned the cottage by accident. I was present at her trial, and I am sorry to say I cannot hold such an opinion. There seemed no doubt to me, the jury had no doubt, and the judge concurred with the jury, that the wretched woman did set fire to her cottage.

It was proved that in her madness, when Ruthen refused to withdraw the distraint, she said to him, "Before you shall have my things I shall burn them in the room, and your old house too." Mr. Prendergast, for the prosecution, with a mildness which distinguishes him at all times, and an expression of mercy which distinguished him at this time, did not press for a conviction beyond what the evidence fully warranted. And Mr. Palmer, for the defence, encountered the proofs in vain. The jury found her guilty, and recommended her to mercy, on account of the very peculiar circumstances of the case.

The judge, Mr. Baron Alderson, said that he entirely agreed with the jury. He believed their verdict was just; and he also believed the recommendation to mercy

was well founded. He deferred passing sentence; but after having conferred with his brother judge, Mr. Justice Williams, he sentenced her to the punishment—an inferior punishment for arson—of two years' imprisonment. The reporter who said one year, is misinformed. The judge also condemned the enormous costs of the lawyer who distrained and sold the furniture.

There is now to be added to all this catalogue of evils, which have followed the taking eggs from a pheasant's nest, the expense of keeping the children in the work-house, and the parents in the prisons.

There is also the moral effect of all this on the population around. Theft is theft, and every thief knows it, whether found out or not. Every man who takes another's property knows that he is doing wrong—knows that he is breaking a commandment; but the man who kills a pheasant, or who takes her eggs from the hedge, believes no such thing. He knows that the law calls the bird private property, and that its death is punished severely by the law; but he also knows that the bird is a public depredator; that, unlike all other creatures called private property, it is not fed at the expense of the man who claims to be its owner. He knows it is a wild bird, living at the expense of those who dare not touch it nor complain of it, if seen or heard, yet who do complain of it, and who would destroy all its kind, were it not for fear of losing their farms by offending their landlords, the owners of the pheasants.

A man who knows that the game law is made to create and protect a species of property which is not recognised as property by any other law; but which, on the contrary, is maintained by the infringement of every other law relating to private property—a man who breaks this game law is not likely to believe he has broken a sacred law, not even though administrators of the game law are, in eight cases out of ten, the clergy of the Church. So far, indeed, from their sacred profession investing this law with that sacred character which it so much wants, and which other laws possess, the administration of the game law only detracts from much of the respect which might otherwise attach to the clergy.

The game laws have produced many evils. Crimes of every dye have resulted from them. Morality has been assailed, and overturned, and trodden down by the keeping of game in so densely peopled a country as this, amongst so much poverty. And, as if it were not bad enough that morality should suffer—not bad enough that murders, and thefts, and every vice should be propagated by the breeding and keeping of game—religion is prostituted and depreciated by the same means in a like manner. The successors of the Apostles, instead of confining themselves to the cure of souls, employ themselves in executing the law against poachers. They set themselves up as a kind of head gamekeepers.

THE FARMERS' PROSPECTS.

To the Editor of the Times.

SIR,—You would be conferring a great blessing upon the agricultural part of the community, if you would endeavour to enforce upon the minds of landlords, through the agency of your powerful journal, the injurious effect which is produced by the centralization of landed occupations.

In your remarks on "savings' banks" on Saturday last, you briefly referred to this subject. You ask a very important question about the labourer—"When he has saved his £50 or £100, then comes the greatest difficulty; what is he to do with his money?"

This question is equally applicable to the situation of the farmer. He has toiled through many a period of war and peace, of famine and of plenty; he has lived to see the changes which have taken place between the reign of George III. and the present period of Queen Victoria; and it is a subject worthy of inquiry to know what is his present position, and what are his prospects for the future.

We will suppose a case from the number which is continually occurring. The members of a family are gathered round the death-bed of their aged parent, and are soon called upon to perform the last tribute of affection to their departed father. The produce of his industry and economy is divided fairly and justly among them. The lease of their farm probably expires the following Michaelmas; previous to which they are informed by the landlord's steward that Mr. Smith, or Mr. Jones, or Mr. Somebody-else, who has already in his occupation one-third of the parish, has hired it, and that it is useless to expect a renewal of the lease. The house, in which a large family had been trained up in habits of industry, is to be occupied by Tom Brown, the gamekeeper, who is strictly charged to attend to the game preserves, and forward as large a quantity as possible to the fishmonger at the nearest market town, in exchange for oysters, salmon, and turbot; while his wife is to rear poultry to forward to the town-house in the winter. The carpenter is ordered to board up all the windows in the house save two, over which you may see the words "Cheese-room" and "Dairy," in order to save the assessed taxes; and the house is entered in the parish books "unoccupied." If any man doubts this, let him take a tour through Suffolk and Essex, and examine for himself.

But I will return to the case of the farmer's son who has been bred up to agriculture. He is now in possession of the dividend of his father's property, but out of the farm. Now comes the important question, "What is he to do with his money?" He asks the very question himself, and everybody who knows him asks the same. "Small farms are become obsolete." The new poor law has swallowed up every trader who cannot take a contract for £3000. "Do what he will, he has a very fair prospect of the union workhouse before him." What a lamentable fact to know, that, with so great an increase of population, our landed aristocracy should encourage a system so baneful to the welfare of society!

If England is to remain a great nation, she must provide her people with occupations, or be prepared to support them as paupers, or punish them as vagabonds and felons. Surely it must be far wiser and better to do so, than to build for them prisons and workhouses. Landlords may blind their eyes to these facts, but the number of occupations which are thrown into one, and those which are held "off-hand," as it is termed, will, every year, tend to increase pauperism.

I have made several careful inquiries lately in Suffolk and Essex, and I find in many parishes that the number of farmers and farms does not amount to more than one-half, and, in many instances, to not more than one-third of what they were 40 years ago; notwithstanding many

thousands of acres have been added to estates from waste and common lands.

Do the agricultural labourers profit by this? Do they not look upon the grasping power of landlords as one of the great sources of their poverty and distress? The landed interest, indeed, may well "feel a want of supporters;" and "yet they continue to drive humble thrift and ambition to the towns, decimating the yeomanry, and grinding down the labourer." These facts are indisputable.

The late meeting of agriculturists at Wickham-market was but a sorry affair. It is really sad to find a set of country gentlemen met together in such a county, and under such circumstances—to hear them talk of "assumed distress," and of exporting our "redundant population," like so many bales of cotton goods. Why not make allusion to the spirit of disaffection which is not yet destroyed amongst the agricultural labourers of the county? It would be far better if those gentlemen would divide and subdivide their immense estates amongst those who would be yeomen, but cannot, so that there might be more employment for men of small capital, instead of adopting Captain Rous's plan of sending them to the coast of Africa.

If you can rouse the attention of landlords to the certain evil which must result from the modern system of centralization in agricultural property, it will amply repay the labours of your powerful influence. We shall look in vain for any change but by the force of public opinion, if we may judge from the specimen of "after-dinner speeches" made at agricultural meetings.

I am, Sir, your obedient servant,
Sept. 18. H.

LEASES ESSENTIAL TO AGRICULTURAL IMPROVEMENTS.—Many tenants have not the requisite means to become improvers under any circumstances; and the unwillingness of landlords to grant leases of considerable duration, which unfortunately prevails throughout England, will prevent their obtaining tenants able and willing to invest the proper amount of capital in farming. The late Earl of Leicester and the present Earls Spencer, Ducie, and Radnor, form, however, noble exceptions. This aversion to leases must be overcome, before any great and general agricultural improvement can take place. It has been said that a lease is binding on the landlord only, for if a tenant is unable to pay his rent and perform his covenants, the owner is but too anxious to get rid of him, which is true as regards the class of farmers before alluded to; but landlords, if prices should become steady, instead of looking to the man who might offer the most rent, would think more of the ultimate result of having persons of capital upon their estates, and in this way would really receive better and more certain incomes than they do at present. Such, however, has been the fluctuation of prices of late years, that really good tenants are as much averse to leases as landlords; they do not like being bound to terms calculated upon prices which they can never be certain of obtaining for two years together. If the rents offered can only be given when corn is at the artificial price promised by the Corn Laws, we cannot blame tenants who hold off from leases; but, while such a state of things exists, the capital necessary for extensive and permanent agricultural improvements will not in general be forthcoming.—*British and Foreign Review.*

RESTRICTION AND RECIPROCITY.—Driven from so many of the strongholds, which for a long time they had so tenaciously kept possession of, the monopolists have at length hit upon a certain crotchety sophism, which, upon a superficial view, has all the appearance of a certain kind of rough, plausible common sense about it, but which, examined a little more closely, will be found to be nothing more than mere empty moonshine. It is said that, so long as foreign countries continue to impose restrictive duties upon our manufactures, it would be madness in England to take off all restrictive duties upon the importation of their corn. Upon this subject a great deal of very learned argument and a great variety of curious statistics have of late been most elaborately displayed in many of the daily journals on both sides. The matter, however, lies in a nutshell. The common-sense view of it is open to the common understandings of all men. There is an old proverb which says—"It is possible to cut off one's nose to hurt one's face." The propriety of committing such an act there are few, it is to be hoped, who will be heroic enough to undertake to defend. But this would be exactly the course which England would pursue if she were to postpone the period of granting a Free Trade to foreign corn until foreign countries have granted a Free Trade to her manufactures. A familiar illustration will demonstrate the truth of this:—A and B are possessed of two articles which each of them is anxious to dispose of. Let it be said, for instance, that A has a horse which he wants to sell, and that B has a plough which he would have no objection to part with. It so happens, however, that A wants B's plough much more than B wants A's horse. A has a horse too many, and that is the reason he is willing to sell. But A wants a plough to make up his necessary number, which is the reason that he is still more anxious to become the purchaser of B's plough. Now, suppose B says to A, "I will not purchase your horse unless you pay to my steward a handsome per centage when the money is being paid to you. Do as you like about the plough, but those are the only terms on which I will buy your horse." Now, recollecting A wants the plough more than he does the horse, would it be a sensible mode of acting in him to say in return—"No, if you impose those terms on me when selling my horse, I will impose similar terms upon you when I am purchasing your plough." "Very well," the other would naturally reply, "I can do without your horse, but if you do not get my plough you must be seriously inconvenienced in consequence." This is precisely the case of England. England wants America's corn much more than America wants England's manufactures. Why then should she be so foolishly obstinate as to wait for a perfect system of reciprocity? If she can get it, of course it would be so much the better. But to open her ports first for the article which she wants, and then leave it to America afterwards to do as she pleases in regard to manufactures, is certainly the more sensible course—the course more in accordance with those principles of common sense on which Sir J. Graham himself has acknowledged Free Trade to be founded.—*Sydney Guardian*, New South Wales.

REVIEW.

The Popular Member, and other Tales. By Mrs. Gore. London: Bentley.

Creditable as this work is to the versatility of Mrs. Gore's powers, it is far from raising her character either for correctness of observation or soundness of judgment. Her purpose is to deter wealthy manufacturers from seeking a seat in the Legislature, by showing them the danger to which their domestic peace will be exposed from the new connexions into which they are likely to be led by parliamentary life. The error into which she has fallen in her delineation is one very likely to be produced in the atmosphere of May-fair. She supposes that a manufacturer entering Parliament must of necessity come out of his order, and seek new associations in fashionable circles; she believes that St. Stephen's Chapel cannot be dissevered from Almack's, and that political life is impossible beyond the sphere of attraction belonging to fashionable circles. The author of "Coningsby" has taken a more just view of the proper position of a man of business who has been led to take a part in public life. Millbank is one of those ideal creations which present themselves to the mind with the stamp and impress of reality. So far from wishing to come out from his own class, and seek to be a dependent on the caprice of a different rank, he exhibits a determination "to stand by his order" not less energetic than that of Earl Grey himself. On the other hand, Mrs. Gore's hero, Robert Myrton, sets out from the commencement of his public career as a creature of the aristocracy; he is brought into Parliament by a Whig peer for a rotten borough; he is represented as ready to sacrifice public principle to the behests of party, and as eager to court the smiles of great personages. It may be said that Mrs. Gore is unable to form any other notions of patriotism, and that she cannot conceive any political existence free from the conventional morals and usages which party has created. This is undoubtedly true; all her clever novels derive their principal attractions from her exposure of the hollowness of those conventionalisms with which the circumstances of her life have rendered her familiar; and she can no more conceive a public career independent of conventional rule than Scriblerus could separate the idea of a Lord Mayor from the mace and gold chain. Her tale is an utter failure, because she is completely ignorant of the class of men from which she has taken her hero.

Robert Myrton is represented as having married the portionless daughter of a clergyman, but after being three years wedded he embarks in large speculations, which withdraw his attention from his wife and children. We shall introduce him at the moment when he has completed a new mill:—

"I heartily wish you joy, my dear Car.," cried he,—"after witnessing the admirable operations of the new machinery; 'the event of this day will put some thousands a year into your pocket.'"

"Rather wish me joy," she retorted, "that it will restore to me the company and affections of my husband!"—For Mrs. Myrton had yet to learn, that a man of active mind, long absorbed in an arduous undertaking, does not easily return to the uneventful and rapid monotony of his previous life. The responsibility which had devolved on Robert Myrton's shoulders at the death of his father, was never more to be shaken off. The services of his right hand were too often in request in his house of business, to admit of its remaining enclamped, as of old, between those of his lovely wife.

The vastness of the speculations in which the house of Myrton and Son was now engaged, and which he found, from Aunt Minchin and other persons of more account, had drawn upon him the sneers of his manufacturing competitors, seemed to render success a duty, as well as a delight. Every nerve, therefore, was strained, every faculty exercised to the utmost, in order to support the firm in the high position it had long maintained in the export trade of the country.

Success, even beyond his hopes, soon entitled him to claim the congratulations of his wife. Unwilling as he had been to weary the attention of a fair creature still scarcely past the age of girlhood, with the tedious details of his buildings and new patent, no sooner was the product tangible, than he called upon his beloved Caroline to rejoice with him, and be glad.

"And glad she was,—but not with the perfect and heartwarm sympathy of other days. During the three years which had elapsed since the death of the old gentleman, Caroline Myrton, deprived of her husband's society and of active domestic duties, had created employments for her leisure which now satisfied her attention. An expert artist, a fine musician, a good linguist, her memory was stored with the choicest works of imagination in her own and other languages. At two-and-twenty she was an accomplished, as well as a beautiful woman.

"But she was no longer the idolizing wife of the man of business, who comprehended all the joys of life in an evening stroll by the river side, hand in hand, with her husband! At present, indeed, Robert was unconscious of what he had lost or what she had gained; nor, while she remained so considerate and submissive a daughter-in-law, and so affectionate and gentle a mother, was he likely to notice that she lent only a forced attention to his perpetual exultations over the increase of his traffic, and the superior quality of his merchandise.

"On the other hand, the superficial accomplishments she had acquired were as unimportant in his eyes, as in hers the admirable texture of his cloths. Her pianoforte and water-colours appeared to him only the toys of her grown-up play-hours; and when, one evening at Hilliard Park, he found himself eagerly complimented, by a party of London fashionables, on the exquisite taste with which

Mrs. Myrton executed her part in one of Beethoven's symphonies, he could scarcely refrain from a smile at hearing so much enthusiasm wasted on an excellence so trivial.

"It was enough, however, that there was no cause for fault-finding with the new pursuits in which his wife was absorbed. She neglected no duty for the prosecution of her pleasures. The poor found as kind a friend in the accomplished wife of the manufacturer, as in his silent bride; and when, twice on every Sabbath, she took her place in the family pew, in the neat parish church of Stainton erected at the sole cost of the elder Myrton, the eyes of the workmen and their families rested upon their patroness with a degree of veneration almost amounting to worship."

The entire description which we have quoted is not true in fact, and is scarcely comprehensible in theory. Men of enlarged minds and great speculation, so far from being indifferent to domestic joys and social accomplishments, are precisely those who seek most for the support which sympathy affords, and the recreations which artistic accomplishments always yield. There is no part of the world where the fine arts, and more especially music, meet more liberal encouragement than in Manchester, and there are no men who exhibit so decided a love for the affectionate enjoyments of the domestic circle as the manufacturers of Yorkshire and Lancashire. But, though Mrs. Gore has failed in the great purpose of her story, it is one which contains a valuable moral. It should teach the manufacturers that they can only maintain respectability when they show, like Millbank in "Coningsby," that they are not ashamed of themselves or their order, but that they will fall like Myrton if they become dependents on party, or aspirants to the honour of permissive existence as fractions of aristocratic circles.

The Fountain, and other Poems. By W. C. Bryant. (Clarke's American Series.) London: Clarke and Co.

Clarke's cabinet series of cheap and beautiful works has just been enriched by the addition of the poems of W. C. Bryant, the most national of the American poets, and one of the most faithful translators of the silent language of Nature that has ever written verse divine. He has studied the universe until the voices of its winds and waters have become familiar to his soul, and its beauties intertwined themselves with all his feelings and all his intelligence. It is almost a picture that presents itself to the mind when his descriptions of the beauties of creation are read; but the picture is pervaded with life and feeling, each object is associated with lessons of high and holy philosophy, which elevate the soul and influence the heart. His philanthropy is universal in its sympathies; he everywhere manifests a sincere love of freedom, and an intense hatred of oppression. We have seen few odes on the liberation of Greece, countless as are the lyrics in which that event was celebrated, equal to the following stanzas:—

"THE GREEK BOY."

"Gone are the glorious Greeks of old,
Glorious in mien and mind;
Their bones are mingled with the mould,
Their dust is on the wind:
The forms they hewed from living stone,
Survive the waste of years alone;
And, scattered with their ashes, show
What greatness perished long ago.

"Yet fresh the myrtles there—the springs
Gush brightly as of yore;
Flowers blossom from the dust of kings,
As many an age before.
There nature moulds as nobly now,
As e'er of old, the human brow;
And copies still the martial form
That braved Platea's battle storm.

"Boy! thy first looks were taught to seek
Their Heaven in Hella's skies;
Her airs have tinged thy dusky cheek,
Her sunshine lit thine eyes;
Thine ears have drunk the woodland strains
Heard by old poets, and thy veins
Swell with the blood of demigods,
That slumber in thy country's sods.

"Now is thy nation free—though late—
Thy elder brethren broke—
Broke, ere thy spirit felt its weight,
The intolerable yoke.
And Greece, decayed, dethroned, doth see
Her youth renewed in such as thee;
A shoot of that old vine that made
The nations silent in its shade."

A very different interest attaches to the "Death of the Flowers," which is equally vivid in its delineation, and affecting in its suggestion:—

"THE DEATH OF THE FLOWERS."

"The melancholy days are come, the saddest of the year,
Of wailing winds, and naked woods, and meadows brown
and sere,
Heaped in the hollows of the grove, the withered leaves
lie dead;
They rustle to the eddying gust, and to the rabbit's
tread.
The robin and the wren are flown, and from the shrubs
the jay,
And from the wood-top calls the crow, through all the
gloomy day.

"Where are the flowers, the fair young flowers, that
lately sprang and stood
In brighter light and softer airs, a beauteous sisterhood?"

Alas! they all are in their graves—the gentle race of
flowers

Are lying in their lowly beds, with the fair and good of
ours.

The rain is falling where they lie, but the cold Novem-
ber rain

Calls not, from out the gloomy earth, the lovely ones
again.

"The wind-flower and the violet, they perished long ago,
And the briar-rose and the orchis died amid the summer
glow;

But on the hill the golden-rod, and the aster in the
wood,

And the yellow sunflower by the brook in autumn
beauty stood,

Till fell the frost, from the clear cold heaven, as falls the
plague on men,

And the brightness of their smile was gone, from up-
land, glade, and glen.

"And now, when comes the calm, mild day, as still such
days will come,

To call the squirrel and the bee from out their winter
home;

When the sound of dropping nuts is heard, though all
the trees are still,

And twinkle in the smoky light the waters of the rill,
The south wind searches for the flowers whose fragrance

late he bore,
And sighs to find them in the wood and by the stream
no more.

"And then I think of one, who in her youthful beauty
died,

The fair, meek blossom that grew up and faded by my
side:

In the cold, moist earth we laid her, when the forest
cast the leaf,

And we wept that one so lovely should have a life so
brief:

Yet not unmeet it was that one, like that young friend
of ours,

So gentle and so beautiful, should perish with the
flowers."

"The African Chief" is a very vigorous conception,
and very powerfully developed.

"THE AFRICAN CHIEF."

"Chained in the market-place he stood,
A man of giant frame,

Amid the gathering multitude
That shrunk to hear his name—

All stern of look and strong of limb,
His dark eye on the ground:—

And silently they gazed on him,
As on a lion bound.

"Vainly, but well, that chief had fought,
He was a captive now,

Yet pride, that fortune humbles not,
Was written on his brow.

The scars his dark broad bosom wore,
Showed warrior true and brave;

A prince among his tribe before,
He could not be a slave.

"Then to his conqueror he spake—
'My brother is a king;

Undo this necklace from my neck,
And take this bracelet ring

And send me where my brother reigns,
And I will fill thy hands

With store of ivory from the plains,
And gold-dust from the sands.'

"Not for thy ivory nor thy gold
Will I unbind thy chain;

That bloody hand shall never hold
The battle-spear again.

A price thy nation never gave,
Shall yet be paid for thee;

For thou shalt be the Christian slave,
In lands beyond the sea.'

"Then wept the warrior chief, and bade
To shred his locks away;

And, one by one, each heavy braid
Before the victor lay.

Thick were the platted locks, and long,
And deftly hidden there

Shone many a wedge of gold among
The dark and crisped hair.

"Look, feast thy greedy eye with gold
Long kept for sorest need;

Take it—thou askest sums untold
And say that I am freed.

Take it—my wife, the long, long day
Weeps by the cocoa-tree,

And my young children leave their play,
And ask in vain for me.'

"I take thy gold—but I have made
Thy fetters fast and strong,

And when that by the cocoa shade
Thy wife will wait thee long,

Strong was the agony that shook
The captive's frame to hear,

And the proud meaning of his look
Was changed to mortal fear.

"His heart was broken—crazed his brain:
At once his eye grew wild;

He struggled fiercely with his chain,
Whispered, and wept, and smiled;

Yet wore not long those fatal bands,
And once, at shut of day,

They drew him forth upon the sands,
The foul hyena's prey."

Among the religious poems "The Song of the
Stars" is, on the whole, our greatest favourite.

"SONG OF THE STARS."

"When the radiant morn of creation broke,
And the world in the smile of God awoke,
And the empty realms of darkness and death
Were moved through their depths by his mighty breath,
And orbs of beauty and spheres of flame
From the void abyss by myriads came,—
In the joy of youth as they darted away,
Through the widening wastes of space to play,
Their silver voices in chorus rung,
And this was the song the bright ones sung:—

"Away, away, through the wide, wide sky—
The fair blue fields that before us lie—

Each sun, with the worlds that round him roll;
Each planet, poised on her turning pole;

With her tales of green, and her clouds of white,
And her waters that lie like fluid light.

"For the source of glory uncovers his face,
And the brightness o'erflows unbounded space;

And we drink, as we go, the luminous tides
In our ruddy air and our blooming sides:

Lo! yonder the living splendours play;
Away, on our joyous path, away!

"Look, look, through our glittering ranks afar,
In the infinite azure, star after star,

How they brighten and bloom as they swiftly pass!
How the verdure runs o'er each rolling mass!

And the path of the gentle winds is seen,
Where the small waves dance, and the young woods lean.

"And see, where the brighter day-beams pour,
How the rainbows hang in the sunny shower;

And the morn and eve, with their pomp of hues,
Shift o'er the bright planets and shed their dews;

And, 'twixt them both, o'er the teeming ground,
With their shadowy cone the night goes round!

"Away, away! in our blossoming bowers,
In the soft air wrapping these spheres of ours,

In the seas and fountains that shine, with morn,
See, Love is brooding, and Life is born,

And breathing myriads are breaking from night,
To rejoice like us, in motion and light.

"Glide on in your beauty, ye youthful spheres,
To weave the dance that measures the years;

Glide on, in the glory and gladness sent,
To the farthest wall of the firmament,—

The boundless visible smile of Him,
To the veil of whose brow your lamps are dim!"

Our last extract shall be the last poem in the
collection—

"THE ANTIQUITY OF FREEDOM."

"Here are old trees, tall oaks, and gnarled pines,
That stream with gray-green mosses; here the ground

Was never trenched by spade, and flowers spring up
Unseen, and die ungathered. It is sweet

To linger here, among the fitting birds,
And leaping squirrels, wandering brooks, and winds

That shake the leaves, and scatter, as they pass,
A fragrance from the cedars, thickly set

With pale blue berries. In these peaceful shades—
Peaceful, unpruned, immeasurably old—

My thoughts go up the long dim path of years,
Back to the earliest days of liberty.

"Oh, FREEDOM! thou art not, as poets dream,
A fair young girl, with light and delicate limbs,

And wavy tresses gushing from the cap
With which the Roman master crowned his slave

When he took off the gyves. A bearded man,
Armed to the teeth, art thou; one mailed hand

Grasps the broad shield, and one the sword; thy brow,
Glorious in beauty though it be, is scarred

With tokens of old wars; thy massive limbs
Are strong with struggling. Power at thee has launched

His bolts, and with his lightning smitten thee;
They could not quench the life thou hast from heaven.

Merciless power has dug thy dungeon deep,
And his swart armorers, by a thousand fires,

Have forged thy chain; yet, while he deems thee bound,
The links are shivered, and the prison walls

Fall outward: terribly thou springest forth,
As springs the flame above a burning pile,

And shoutest to the nations, who return
Thy shoutings while the pale oppressor flies.

"Thy birthright was not given by human hands:
Thou wert twin-born with man. In pleasant fields,

While yet our race was few, thou sat'st with him,
To tend the quiet flock and watch the stars,

And teach the reed to utter simple airs.
Thou by his side, amid the tangled wood,

Didst war upon the panther and the wolf,
His only foe; and thou with him didst draw

The earliest furrows on the mountain side,
Soft with the deluge. Tyranny himself,

The enemy, although of reverend look,
Hoary with many years, and far obeyed,

Is later born than thou; and as he meets
The grave defiance of thine elder eye,

The usurper trembles in his fastness.

"Thou shalt wax stronger with the lapse of years,
But he shall fade into a feeble age;

Feebler, yet subtler. He shall weave his snares,
And spring them on thy careless steps, and clap

His withered hands, and from their ambush call
His hordes to fall upon thee. He shall send

Quaint maskers, forms of fair and gallant mien,
To catch thy gaze, and uttering graceful words

To charm thy ear; while his sly limbs, by stealth,
Twine round thee threads of steel, light thread on thread,

That grow to fetters: or bind down thy arms
With chains concealed in chaplets. Oh! not yet

May'st thou unbrace thy corslet, nor lay by
Thy sword; nor yet, O Freedom! close thy lids

In slumber; for thine enemy never sleeps,
And thou must watch and combat till the day

Of the new earth and heaven. But wouldst thou rest
Awhile from tumult and the frauds of men,

These old and friendly solitudes invite
Thy visit. They, while yet the forest trees

Were young upon the unviolated earth,
And yet the moss-stains on the rock were new,

Beheld thy glorious childhood, and rejoiced."

There are lessons taught in these powerful lines
which ought not to be lightly banished from me-

memory. It was overweening confidence that caused
nations to lose their freedom; monopoly, the most

insidious form of tyranny, is ever on the watch to
avail itself of unguarded moments, and there is as

much necessity for vigilance to preserve freedom as
for courage to achieve it.

AGRICULTURE.

HOPE ON FOR EVER!

The season is now arrived at which lords and squires gather about them their tenants and adherents under the pretence of promoting agricultural improvements. For the gentry these meetings vary agreeably their pleasure-hunting lives; and to "gammon the farmers" forms a pleasing relaxation from the business-like pastime of partridge shooting. We had, however, some curiosity to learn what would be the particular topics of consolation these magnates would address to the farmers upon the present aspect of rural affairs. Amongst the first of the meetings of the sort is that of the *East Suffolk Agricultural Association*, which assembled on Friday se'nnight under the auspices of its President the *Earl of Stradbroke*. Many circumstances concur to render this meeting one worthy of remark. The president of the association, and of course the chairman at the dinner, is the lord-lieutenant of the county, a position to which he has lately been appointed by Sir Robert Peel; and he is the notorious game-preserver upon whose estates two gamekeepers have just destroyed themselves in consequence of the depredations committed by poachers on their master's game-preserves. Moreover, Suffolk is the seat of incendiarism, the dreadful resource of a destitute and half-employed peasantry to call attention to their sufferings. It was therefore impossible for Lord Stradbroke to avoid touching upon delicate ground, and accordingly he did touch upon it; though with a tenderness and in a way by no means satisfactory to the farmers present. He observed:—

"He should take the liberty of saying, that the distress of the labouring population, which was put forward as the chief cause of incendiarism, was ascribable to circumstances over which neither the owners nor the occupiers of land had any control. He was most anxious to abstain from treating the subject as a political question, for he felt that by so doing he should violate the rule of the association, a rule which no one could be more anxious than he was to abide by. Nevertheless, he was not precluded from adverting to facts, and facts were far more convincing than opinions. Every gentleman present must be well aware that the harvest of 1843 was deficient in quantity. That, in itself, was a great evil to the farmer. But his embarrassment did not stop there. In addition to a confessedly short crop, there had been a very large importation of foreign corn, which so affected the market that the English farmer was unable to obtain a remunerating price for his produce, although the consumption might be supposed to advance with the increase of population, and population would, of necessity, increase in any country having a poor law. The effect was inevitable. The farmer, being unable to get a fair price for his produce, had not the means of giving employment to the surplus labourers. It was not the interest of the farmer to restrict the means of cultivation, but he had no other alternative left. Hence it was that the labourers were thrown out of employment. Idleness and want produced discontent, and want and ignorance combined led to the commission of crime. The retrospect was painful—most painful—the future was more encouraging. He rejoiced to learn that the harvest would prove abundant this year; and, although for some time the farmers must calculate on low prices, they were in a far better position than they were last year."

Now, if there were any farmers present, who had the power of thinking for themselves, and the capacity for observing what has been passing around them for the last year or two, they could not have regarded this speech as anything but the most heartless mockery. It was not because the harvest of 1843 was deficient that prices fell; on the contrary, the wheat crop of last year was moderately productive upon the whole, though less so than the great bulk of straw promised. This, and not importations, brought food down more nearly to the natural price than farmers relying on the Corn Laws had been led to expect. Thus it was that they were "unable to obtain a remunerating price for their produce." The rents swallowed up an undue proportion of their produce, and the labourers suffered in consequence. Does Lord Stradbroke pretend to say that the owners of land had "no control" over this circumstance? Why, it was the direct consequence of their last thirty years' legislation! The Corn Law is a one-sided measure; it is only effective in seasons of scarcity: in good years it is inoperative except to plunder the farmers—who have relied on its delusive promises—of part of their capital to keep up the landlords' rents. Then this noble consoiler of rural woes, having expressed his delight at learning that the present year's crop would prove abundant, said that "although for some time the farmers must calculate on low prices, they were in a far better position than they were last year." We wish there had been some farmer present with spirit enough to have asked the noble president, why farmers are in a better position this year than last. There perhaps has never been a year in which so large a proportion of the whole saleable produce of a farm will be required to pay the rent; and a more fearful prospect for the agricultural labourers than the coming winter presents seldom occurred. Nothing but outlays of capital by farmers, in the expectation of future profit, can keep the labourers employed; but such hope of profit will be illusory unless rents are adjusted and the fluctuations produced by the Corn Laws brought to an end. These, however, are the last things the landowning monopolists of Suffolk

think of doing, for Lord Henniker, one of the county members, observed:—

"He thought the country was under auspicious circumstances. They had the word of the Prime Minister that it was not his intention to alter the Corn Laws. He had always said that the farmers might rely on Sir Robert Peel. This he repeated now."

Yet under this "auspicious" Corn Law, the price of wheat is now full 10s. a quarter lower than that which the president had declared to be "not remunerating" to the farmer, and which did not enable him to "give employment to the surplus labourers."

It is difficult to conceive how the farmer's "position" is better this year than it was last, upon any grounds stated by the monopolists. And this is the view of his lordship's speech taken by the more consistent starvation-men of the *Morning Post*, who, after referring to the last passage of Lord Stradbroke's speech above quoted, says:—

"Is not the same tale told to the poor farmer at the close of each disastrous season—at the close of every season which false schemes of legislation have rendered disastrous to the cultivator of the British soil? Was not the farmer told in the autumn of 1843, that his position was much better than it had been in 1842? And was not the farmer in 1842 encouraged to submit to the Tariff and new Corn Law by the assurances of great landowners that he had no reason to fear that increased competition to which Sir Robert Peel had doomed him? How long will men of station condescend to lend themselves to this game of subterfuge? How long will they shrink from the duty of aiding those who are, more or less, dependent on them, to look boldly and honestly at the extent of the danger to which, in melancholy truth, all the forms of native industry are now exposed?"

"In what way, it may be demanded of Lord Stradbroke, will the abundance of the present harvest improve the condition of the British farmer and labourer?"

This is quite fair on the part of those who say that to high prices, and high prices only, can the farmer look for "remuneration," and the labourer for employment; but Lord Stradbroke, and such as he, blow hot and cold with the same breath. They tell the farmer that a price of 53s. a quarter for wheat is too low to be remunerating, and quite accounts for the non-employment of the agricultural labourers. Yet, when the price has fallen to 43s., the farmer's "position" is improved, and he is called upon to place implicit reliance on Peel and his Corn Law. Well may the thorough-paced monopolists of the *Post* chafe with indignation at such (for their and his lordship's object) suicidal nonsense. If this is the kind of consolation the political landlords have to offer to the farmers, we shall have a tenant-farmers' anti-corn-law league by the next session of Parliament. And having duly discoursed on guano and other manures, and urged the Suffolk farmers to purchase them lest they be outstripped by the farmers of Ireland, Lord Stradbroke said:—

"He need not mention to Suffolk farmers the good use of improved machinery, and, though they employed all the labourers that could be employed, without machinery they could not expect the land to produce all it could produce, and he was sure that with the combination of this power, and the full employment of labour, farmers may avoid those difficulties, and bear that taxation, which surrounded and pressed upon them."

Thus apparently forgetting the first part of his own speech, wherein he had shown, or attempted to show, that from the low price of corn farmers could afford a "full employment of labour."

Captain Rous, M.P., afterwards said, with reference to the president's injunction to the farmers, that they should employ the labourers:—

"He concurred in the view generally. Still he thought it necessary, to render the plan universal, it must be shown that if the farmer laid out £10 in labour he should get £10. 10s. return, then he would be ready to employ; but if it was only proved that by this employment, though he had laid out £10, £9 was got back only, he would not do it."

This is true; but it does not follow, as Capt. Rous seemed to infer, that, because there is no land to be gained from the sea in Suffolk, the only remedy is emigration. We say, advisedly, that there is ample room for the employment in Suffolk of all the agricultural labourers, and that with profit to the farmers, provided our landlord-legislators would place agriculture upon a solid basis, by releasing it from the trammels of imaginary "protection."

Lord Rendlesham, another Suffolk county member and a monopolist, then had his say, and he appeared to feel the difficulty of, and perhaps some compunction at, expatriating our labourers, saying:—

"I allude to a subject of vast importance, and which at present occupies much of the public attention—the condition of the labouring classes. The hon. and gallant captain observed that emigration would be the better plan. I agree with him, but you cannot force people to emigrate; there is always attachment to country, and there must always be a few relations left behind. I confess I think we ought not to get rid of our labourers altogether."

But he had no better reason for wanting them than this:—

"For I conceive the time may come when, as the gallant captain has held out, we may be plunged into war. We may want our men—we may want their sinews in the conflict."

We say we do now want our men, we at this moment want their sinews in conflict,—not in con-

flict which leads man to imbrue his hands in the heart's blood of his brother,—but in conflict with the stubborn soil, with the rushes and weeds, the banks and hedgerows which now encumber our soil. When our own lands are cleared and brought into a state of real cultivation, then, but not till then, may our "surplus labourers" (if any) be sent to clear the wilds of Canada or New Zealand. His lordship then descanted upon the "allotment system" as a great prevention of "poaching and crime," and in stating the alleged advantages of that system he incidentally gave the following view of the condition of the labourers:—

"I believe, if you give the industrious man the means of employing his time, he will not go about committing depredations. It must be known to most of you that great numbers of men are employed regularly by the farmers as ploughmen and servants, at about 9s. per week. But others receive only occasional employment. Now, I ask any reflecting person, if a man be cut off his one or two days in a week, how is he to support perhaps his wife and seven children? All I want is to give him the means of employing his leisure hours when he is not fully engaged; and it is far from my intention to render him independent of his natural protector."

This confirms the view we have often expressed, that the small allotment system is really nothing more than a cheap substitute for parish relief. Its promoters assume that there must always be a large number of men in the rural districts who are half employed, and that a bit of land will feed them and their families—on potatoes, for that is the utmost in ordinary cases it can do—and keep them from poaching.

Now, at best, this is a mere palliation; the remedy for the disease being higher cultivation by farmers, whereby all the labourers would be regularly employed. All the land the labourer in full employ wants, is a small piece of garden ground attached to his cottage. Let the landowners provide this, and the cottage—though it may be somewhat more expensive than staking out a poor field into garden allotments—and the public will give them credit for some of the anxiety they profess to feel for the welfare of the labouring classes who surround them.

IMPROVED FARMING—WHO IS TO BEGIN?

For a long time tenant-farmers were periodically lectured by their landlords upon the necessity of adopting improved systems of husbandry, and such lectures were usually received rather silently and sulkily; though in some instances the more spirited farmers frankly declared that if the improvements recommended were to become general, the first steps must be taken by the landlords. Now, falling prices have impressed upon the minds of most landlords that something must be done on their parts to sustain the value of their property, and the more sensible of them are offering various inducements to their tenants. Take for instance the following paragraph:—

"LONG LEASES.—We have been informed that Sir Stephen Glynn, Bart., M.P., has given instructions that a draught of a lease on the Scotch principle of 19 years shall be prepared, with the view of submitting it to his tenants for their acceptance. We feel assured that, if corn rents are connected with it, a great boon will be conferred on the tenantry, and a good example set to the country."—*Chester Chronicle*.

Here we have an example of the uncertainty the Corn Laws introduce into all contracts concerning land. Sir Stephen Glynn offers to his tenants leases of long duration, and gives the best evidence of his desire to grant such leases under reasonable covenants, by submitting a draught of the proposed lease to the occupying tenants. So far all is as it should be; but the local journalist, speaking unquestionably the sentiments of the farmers of the district, says, "if corn rents are connected with it, a great boon will be conferred on the tenantry." Whence comes it that the adoption of the most judicious act of liberality a landlord can do is to be received with such qualified praise? There is no great difficulty in framing a calculation of the average money value of a farm during so long a term as 19 years; nor is there any intelligent farmer who would require a corn rent merely to guard him from the effects of variations in seasons. Such variations it is his peculiar business to guard against, and he will have no difficulty in doing so. Wherefore then is the addition of a corn rent necessary to render a long and rational lease "a boon" to the tenant? Simply because the existence of a Corn Law sets all calculation at defiance. Suppose the draught of Sir Stephen Glynn's lease approved by the tenants, the long and secure tenure for 19 years received with satisfaction, the question arises upon what data are the rents to be calculated? The farmers naturally say, "we must take wheat at from 40s. to 43s. a quarter, that being the rate at which it is selling when the produce of this country is believed to be sufficient for the year's consumption." "Oh!" says Sir Stephen's steward, "that won't do, for though it so happens that a panic amongst the farmers has lowered the price at this moment, that will only be temporary, for there is an act of Parliament in being, expressly made to 'protect' the farmers from receiving less than 56s. a quarter for wheat; the rent must be calculated on that scale." Here, then, the farmers are at issue with the landlords; for, great as their faith may be in the said act of Parliament, they cannot forget the facts that they have not received the act-of-Parliament price above three years out of five for the last nineteen years, and that they are not likely to receive it so often

during the next nineteen years now to come. A corn rent, then, is necessary to make a long lease a safe speculation for the tenants. On the other hand, a corn rent fixed now would certainly be disadvantageous to the landlord, who is thus, by his much cherished Corn Law, placed in the dilemma of being obliged to accede to corn rents, which will not give him the full value of his property, or to see his estate undergoing constant deterioration in the hands of yearly tenants, who have neither the motive nor security for improving their farms. Thus landowners are met and defeated in their first efforts to improve the management of their estates by the very law they have passed for their own exclusive advantage.

The proposition that agricultural improvement must commence with landlords giving secure tenures to their tenants, is strongly enforced in a lecture delivered by Mr. Edward Archer, a landowner, at the *East Cornwall Experimental Club*, in which he says:—

"The next point for consideration is, the tenure under which land should be held; our existing practice, in which respect may be fairly learnt from the daily advertisements to be observed in our provincial journals, nine-tenths of which will be found to be to the following effect, viz:—'To be let, for a term of five, seven, or twelve years, all that very desirable farm, &c. &c.' or more commonly, perhaps, if the estate advertised is of any size, it will be thus:—'To be let, for a term of fourteen years, determinable at the end of the first seven years, all that capital messuage or barton, &c. &c.' Now, this mode of tenure I consider so fatal at the outset to any improvement in agriculture, that I must stigmatise it as the first great defect in our system of husbandry. Indeed, I consider the tenancy from year to year a far more beneficial system."

And he refers to the fact that under yearly tenancies some farmers have been found who have risked considerable outlays in the expectation of not being dispossessed, or having their rents raised. They must have had at least the feeling, if not the reality of security. But—

"The tenant for a term of short duration has daily before his eyes the fear that at the end of his first five or seven years his farm will either be taken from him, or offered to him at an increased rent; his only object is, therefore, to extract as much profit from it, with as little trouble or expense to himself as possible. He thus shuffles through his term, and the unfortunate estate is again put into the market, and let to the highest bidder, to undergo once more the same fatal process. Now, for this no one is to blame but the landowner himself; and, in spite of all that may be urged by the advocates of the tenancy-at-will system, it does appear to me that the first grand step towards improvement of husbandry is the lease for a long term of years. In fact, it may be looked upon as the basis of agricultural prosperity."

True, but we have seen what an obstacle to long leases is formed by the Corn Law. What tenant will take a long lease, at a rent calculated on the assumption that wheat will always sell at 56s. a quarter? What landlord will agree to a price of 40s. a quarter with the existing state of husbandry? Mr. Archer, in confirmation of his view, then quoted the following passage upon yearly holdings from "Morton on Soils," where that intelligent agriculturist observes:—

"The landed proprietors of England must arouse themselves from that apathy and indifference with which they have so long regarded the improvement of their estates, and endeavour to give the land an increased power of producing a much greater return. This, we think, may be easily attained, by giving to their tenantry leases of 21 years, and binding them to effect all the permanent improvements of which the soil is capable. The high state of culture which exists in the Lothians, and other parts of Scotland, is entirely attributable to leases which the farmers have of the land they occupy for terms of 19 or 21 years. The tenant-at-will who, on the good faith of his landlord, lays out his capital on the improved culture of the land he occupies, knows that he has no security that the money he lays out, in the case of his death or of accident, which may derange his pecuniary affairs, will ever be returned to him or his family, and therefore he limits his expenditure to the natural and yearly expense of the crops he annually puts into the soil, and, of course, never expends a shilling in attempting to improve the permanent productiveness of his farm. Being constantly in a state of uncertainty, he jogs on the beaten track, anxious to be able to clear the way, but never anxious to increase the productive powers of the soil, lest his rent should be raised, or he should be turned out, to give place to some one in greater favour with his landlord. Give to the English farmer, who has sufficient capital, a certain term in his estate, and then he would not only be justified in laying out his capital in its improvement, but he will exert all his energy in increasing its productiveness, so as to ensure the greatest return to him for his outlay. The length of term should be in connexion with the improvement which the land requires. When land is let for building on, a term of 60, 80, 90, or even 999 years is granted, to indemnify the speculator for the expenses of brick and mortar, and the risk he is liable to: and just so should it be with the farmer, where there are extensive improvements required, or great risk to be sustained."

But the risks occasioned by the Corn Laws cannot be guarded against, and therefore the most decisive evidence in favour of leases becomes the strongest condemnation of the Corn Laws. Mr. Archer then shows that it is the landlord's interest to prevent the leases from ever being run out, and thus states his own practice in that respect, saying:—

"The plan which I purpose to adopt on my own estate is to grant an absolute term of 14 years, giving the tenant the option at the end of the first seven years of renewing his term absolutely again for 14 years, and so on; thus I hope obviating the 'racking' which usually commences at the end of the term approaches. Whatever, indeed, be the mode of tenure, it must obviously be of the first importance that the industrious and well-disposed tenant should feel as much at home as possible in his estate."

This is the language of a man well aware of the circumstances which give value to or deteriorate landed property. And the *Mark-lane Express*, in referring to this part of the lecture, says:—

"However much we may admit, and none do so more than we do, that sort of, as it were, family connexion subsisting between landlord and tenant, through the influence of which the farms are continued from father to son as the ownership of the land descends to the landlord, still less cannot blind ourselves to the fact that the present artificial state of society is rapidly changing this state of things, and the connexion between landlord and tenant is every day becoming more a matter of contract between man and man. We can mention many cases in which the estates of a landlord, whose family and himself had carried out this principle to its fullest extent, have been sold, and the tenants, unprotected by leases, handed over to a new landlord and a new agent, either or both of whom having no

connexion with the tenantry, could have no sympathies with them, and who might embrace the opportunity of enabling some expectants or friends to step in and reap the fruits of the toil and capital of the occupiers of the estate. Capital invested in the cultivation of the soil as much deserves protection as when employed in any other pursuit, and we trust that, 'as the spirit of enterprise' grows among the tenant-farmers, that a 'spirit of encouragement' will likewise grow amongst the landlords."

But it is the Corn Law, of which this journalist professes to be an admirer, that stands in the way of both the "spirit of encouragement" amongst landlords and the "spirit of enterprise" amongst farmers, and prevents "contracts between landlords and tenants" from being framed upon a fair and reasonable consideration of the interests of both parties.

HIGH FARMING v. MONOPOLY.

Perhaps there is no single speech which has effected so much towards the destruction of the corn monopoly as that delivered by the Earl of Ducie at Covent Garden. His lordship has practically carried out improved husbandry—arable husbandry—to a greater extent than any other person in England, and the results have been proportionally beneficial; but so generally has a very inferior system been adopted, that the statement of his produce at Whitfield has been received with something like incredulity by persons who have not been accustomed to high farming, though they are by no means monopolists. It is by exciting the observation of such men that his lordship's speech has been so eminently useful. We only hope all men who really desire to know of what land is capable, will visit Whitfield Farm, and observe in person his lordship's practice in agriculture. Not a few of Lord Ducie's critics forget these very important facts, namely, that such high farming, and such large returns as are found on Whitfield Farm, can only be obtained by the employment of a much larger amount of capital per acre than is usual; and that farms ought to be better prepared for a tenant's occupation by a preliminary landlord's outlay than has hitherto been general. Like Mr. Baker, they are too apt to say, "we don't do so much in Essex," and then imagine they have thereby thrown some doubt upon his lordship's statement. Something of this feeling seems to pervade the following sensible and, in many respects, useful letter from a correspondent:—

"To the EDITOR of the LEAGUE.

"Lord Ducie seems to have got into a hornet's nest by his statements as to the prices at which wheat can be profitably grown. Agreeing, as I do, with his lordship, that neither heavy nor light land will be thrown out of cultivation by a repeal of the Corn Laws, I think that, in order to arrive at anything like a sound opinion on the matter, the whole expenses and receipts of a farm must be taken into account, and that a partial calculation is good for nothing. I am the more strengthened in this opinion from having paid three several visits to the Whitfield Farm, and from having, on each occasion, had reason to feel satisfied that the extraordinary growth of wheat on that farm is dependent altogether on the expensive system of cultivation, and the corn-feeding of cattle and sheep, in my opinion, of necessity entered into for the sake of securing the green crops. The published accounts in the second report of the Whitfield Farm will not help his lordship's argument; and now that the farm is rented by Mr. Morton, and stocked with cattle and sheep (not with hunters, as the stables were on my first visit), the better plan will be to wait until Ladyday next, when, without doubt, Mr. Morton, who has already confirmed his lordship's views, will put forth such a statement of his receipts and payments for the year as will set all doubt on the matter at rest. In the meantime I will give you an estimate of my own, presuming that, though Mr. Morton paid a large sum at Ladyday last for straw, manure, and cultivation, he will be entitled to the same return on his leaving the farm, and that such items need not, therefore, be entered in the account."

"The statement as to the cropping of Whitfield Farm contained in your last paper was, I believe, accurate. The farm consists of 240 acres of arable land, and Mr. Morton will take annually 40 acres of clover, 80 acres of roots, and 120 of wheat. Mr. Morton has also about 20 acres of pasture land. I now give you my notion of the expenses on one hand, and the receipts on the other, taking wheat at 25s. a sack."

Presumed Expenses on Whitfield Farm.

Rent	£500 0 0
Labour	500 0 0
Poor, church, highway rates, and tithes	125 0 0
Seed corn, grass and root seeds	125 0 0
Corn for eight horses, no oats being grown on the farm, at two bushels a week to each horse	100 0 0
Wear and tear, bills, losses by stock, bone manure, marketing and other expenses	260 0 0
40 oxen to be purchased in May for feeding on clover in the yards, and finished off with roots and corn, at £12 10s. each	500 0 0
1000 sheep to be purchased when the roots are ready, at 25s. each	1250 0 0
Corn for oxen, at 50s. per head	100 0 0
Beans and oats purchased for sheep, the beans at 20s. a sack, the oats at 20s. a quarter, each sheep to consume on the average half a bushel of beans and two bushels of oats. Beans	125 0 0
Oats	250 0 0
	£3775 0 0

Presumed Receipts.

120 acres of wheat, 10 sacks to the acre, at 25s. a sack	£1500 0 0
40 oxen, at £20 each	800 0 0
1000 sheep, including wool, at £2 each	2000 0 0

Return for interest on capital, and profit	4300 0 0
	3775 0 0

£825 0 0

How, then, will a repeal of the Corn Laws affect Mr. Morton? My belief is, that such repeal would reduce his wheat to 20s. a sack, by which he would lose £300. He would, however, gain about £150 in the purchase of his beans and oats, and the improved demand which a Free Trade would give for his beef and mutton would more than compensate him for the remaining £150.

"I farm light land on the alternate system of white and green crops; and I have long been in favour of a total repeal, and am a subscriber to the League Fund on that ground. At the same time, I take this opportunity of stating my belief, that, with the excessive competition which exists in this country for land, it is absurd to suppose that farming can ever become a profitable business; and, though a great admirer of the manly character of Lord Ducie, I think he was wrong in separating the cost of growing wheat from the expenses attendant on the green crop. Mr. Morton's real difficulty will be that of making enough of his green crop. There is great risk in the purchase on a large scale of leam, and the sale of 'at

stock. I have always felt that difficulty, and I know that many farmers in Norfolk have been ruined by the small return they have got for their roots on sending their beasts and sheep to Smithfield. We can have no real competition in the articles of beef and mutton. There is not a sheep on the Continent that a Smithfield butcher would look at. We ought to have the means of fattening beasts and sheep at the cheapest possible rate, and thus improving the condition of our land. A repeal of the Corn Laws would at once give us these means. The low prices of corn would render good farming absolutely necessary; and, as no good farming can be had without a large expenditure in labour, the poor would be benefited by cheap food and abundance of employment.—I am, &c.,

"A WILTSHIRE LEAGUER."

On this letter several obvious remarks occur. First, our correspondent will find, that in every district in which an "extraordinary growth of wheat" is attained, that it is entirely owing to an "expensive system of cultivation and corn feeding of cattle, sheep, &c." That is high farming; go to any part of the country, and it will be seen that high farming alone has for the last thirty years been profitable farming; and further, that the Corn Laws and their consequences, direct and indirect, have formed the great obstacle to the extension of high farming.

Secondly, the estimate here given, though showing a good profit, is not so favourable to the farmer as it ought to be. Wheat, on an average of years, would probably be higher than 40s. a quarter; while grain for cattle food would certainly be obtained at lower prices than those of the estimate. The prices for the purchase and sale of the stock are also stated more against the feeder than they ought to be, assuming him to be an average judge of stock.

Thirdly, as to the competition for land which has undoubtedly reduced the profits of farming, it is a mistake to suppose that that competition will be increased by a Free Trade; on the contrary, all that competition which is founded upon a reckless expectation of high prices will altogether cease, and offers to rent land will be more in accordance with sober calculation than has been the case under the delusions of "protection." Finally, that which our correspondent states as "Mr. Morton's real difficulty, the 'making enough of his green crop,'" is a difficulty solely caused by restrictions on the free importation of foreign grain for fattening stock, as indeed our correspondent has himself ably shown in a subsequent passage.

CROPS AND PRICES.—LEFT-HANDED FREE TRADE.

The wheat crop is now admitted to be good, the grain is heavy, and, where farmers have had sufficient firmness not to hurry in their corn upon the first show of wet, the quality is excellent. The usual consequence of such a wheat crop has ensued, for wheat in Lincolnshire of the best quality sells for "from 41s. to 43s. a quarter." This is pretty much the natural price in the world's market; for, from the foreign corn-trade reports, we find that best Dantzic wheat, in bond at Amsterdam, was last week worth from 40s. to 43s. a quarter, or as nearly as possible the Lincolnshire price. Every other kind of farming produce, however, is scanty. Thus, from the Derbyshire report, we learn that

"The turnip crop is partially a failure. On soils cleaned early, and of a light texture, the crops are good; but heavy soils, which in a more hurried season would have grown first-rate Swedes, are this year a failure, or extremely patchy. One half the turnip-growers in this county lose their crops for the want of more autumnal cleaning of their grounds. Soils allowed to rest during winter, and which have to be dressed in the spring, have generally a foul tilth, and the plants cannot maintain health under such unfavourable circumstances. Keep is more plentiful, but not abundant. Hay has receded a shade in price. Stock continues depressed in value, and is extremely low. Our corn markets are dull, and the supply more than the demand. Everything the farmer has to sell realises very little money: how payments are to be met is the secret. Trade generally is good, and few out of employ."

The main dependence of stock, the root crops, have failed, and that, in a great measure, arises from neglect of autumnal cleaning of the land; while the Corn Laws shut out all kinds of grain and pulse which would have supplied the deficiency. Barley is generally a very poor crop; while oats, peas, and beans, of which farmers themselves are the great consumers, are still worse. Indeed, the present season has pretty generally forced farmers to the opinion that the existing state of things cannot be maintained, as they very loudly complain of the tariff which has admitted foreign meat, while the Corn Laws exclude all the cheap provender which would enable the British grazier to compete in the production of meat on equal terms with the rest of the world. The following passage from the letter of a correspondent of the *Mark-lane Express* sets forth the grievance very much in the terms we have often heard it stated at the market-table:—

"What was it then (granting there was an apparent deficiency of these products [meat]) that produced that deficiency? O, the Corn Laws, to be sure! the Corn Laws are restrictive, without affording 'protection': they caused the deficiency in the supply of the more elaborate articles of agricultural produce; they shut out of the market the raw material of their production. How, then, could the farmers manufacture sufficiently for the wants of the community? What, then, was the true remedy? Why, a repeal of the Corn Laws would have enabled our farmers to have supplied all those products lately protected by the tariff to an infinity; there would then have been 'protection' without restriction; we should then have had that natural protection which distance gives to the home producer over the foreigner, by causing the latter to supply us with the coarsest and cheapest kind of produce, its very bulkiness being an additional protection; whereas, by one of the most extraordinary errors ever committed in the way of legislation, the foreigner has now the supreme advantage of transmitting his produce in the most concentrated forms of which it is capable, by which he is enabled not only to overcome that natural protection of the home grower which distance and freightage gave, but to secure far more valuable profits, and to introduce at least twenty times the amount in real value of agricultural produce than he could have done if at liberty to import corn alone."

And he recommends the "Central Protection Society" to adopt this view of the subject; and then adds:—

"I can do no more than draw an outline of the subject, and return to detail by-and-by, to ascertain by a rigid calculation to what extent (if any) of protection to agriculture the Corn Law has afforded, taking into the account the consumption of the taxed article by the agriculturists themselves, for whose benefit they are supposed to have been enacted, not neglecting to reckon the probable consumption of it by the farmers during the growing winter in support of their live stock, which, after having fed through the winter upon food paying a tax of thirty or forty per cent., they will have to offer in the market next spring and summer in competition with the produce of foreign countries paying a nominal duty of 5 per cent. only; to ascertain, also, to what extent the late tariff duties on live stock and animal food protected agriculture, and the value of the importations of agricultural produce in that shape compared with the value of corn if freely imported; and the effects of either or both on the prosperity of agriculture."

Now, we think the admission of foreign meat and cattle a just and sound measure in itself; but it does imply great ignorance of British husbandry on the part of the Ministry who propounded such an alteration, without, at the same time, permitting the regular importation of foreign grain. There is certainly no class of men who have been so unfortunate in the choice of their political "friends" as the farmers.

SUPERIOR BARLEY.—Lately was sold to Mr. Mehan, distiller, Waterside, by Mr. George Alexander Grange, 500 bushels of barley, of this year's growth, which weighed 57 lbs. per bushel, being the heaviest barley that we ever heard being produced in this country, and equal to the finest grown in the Lothians, from which the seed was procured.—*Derry Journal*.

EXTRAORDINARY CROP OF WHEAT.—William Taylor, market-gardener, of Bootle-cum-Linacre, has just reaped a most extraordinary crop of wheat, off a piece of land in that township, measuring 70 yards less than half of a Cheshire acre. It is a beautiful sample of yellow wheat, the seed of which was grown in Kirby. The produce of this small lot of land was—delivered at the mill, 53 bushels, of 70 pounds each, and warehoused for his own use 11 heaped-up imperial bushels. We believe the annals of agriculture do not record such a crop under any circumstances; and, when the droughty season is considered, in conjunction with the hot, sandy nature of the soil, it is wonderful. This produce speaks volumes in favour of small farms and the allotment system; for, although the ploughing and harrowing of this piece of land was in the ordinary manner, yet there is no doubt that the large crop may be ascribed to the cultivation of the land previously. The year before it had been planted with potatoes and cabbages, and had been trenched to the depth of four feet.—*Liverpool Advertiser*.

BONE DUST ON PASTURE LAND.—There is, perhaps, no county in England where the pasture lands (particularly the poorer soils) have been so much improved during the last ten or twelve years as in Cheshire; and this principally by the application of what is termed bone dust. This extraordinary manure has a peculiar effect upon the poor clay-land pastures, for on the application of boiled bones a sudden change takes place in the appearance of the fields, and instead of the carnation-leaved, or pink grass, which so much abounds on this kind of land, a luxuriant herbage presents itself, consisting of red and white clover, trefoil, and other grasses, of which the cattle are so fond that they eat up almost everything before them; even thistles and rushes are very much weakened, and eventually reduced, by being constantly eaten off by the stock after the pastures have been bone dusted.—*Mr. Paulin on Cheshire Farming, in the English Agricultural Society's Journal*.

A TEST OF GOOD GOVERNMENT.—The ruin or prosperity of a state depends so much upon the administration of its government, that, to be acquainted with the merit of a Ministry, we need only observe the condition of the people. If we see them obedient to the laws, prosperous in their industry, united at home and respected abroad, we may reasonably presume that their affairs are conducted by men of experience, abilities, and virtue.—*Junius*.

THE POWERS OF VEGETATION.—In those good days of old, when there were no cornfactors in England to counteract that part of our Redeemer's prayer, "Give us this day our daily bread," by hoarding up vast stores of grain until mouldiness and vermin have rendered it unfit for the use of man, there stood at Walton-hall a water-mill, for the interest of the proprietor and the good of the country round. Time, the great annihilator of all human inventions, saving taxation and the national debt, laid this fabric low in ruins some sixty years ago; and nothing now remains to show the place where it once stood, except a massive mill-stone, which measures full seven-teen feet in circumference. The ground where the mill stood having been converted into meadow, this stone lay there unnoticed and unknown (save by the passing hay-maker) from the period of the mill's desolation to the autumn of the year 1813, when one of our nut-eating wild animals, probably by way of a winter store, deposited a few nuts under its protecting cover. In the course of the following summer, a single nut having escaped the teeth of the destroyer, sent up its verdant shoot through the hole in the centre of the procumbent mill-stone. One day I pointed out this rising tree to a gentleman who was standing by, and said, "If this young plant escape destruction, some time or other it will support the mill-stone and raise it from the ground." He seemed to doubt this. In order, however, that the plant might have a fair chance of success, I directed that it might be defended from accident and harm by means of a wooden paling. Year after year it increased in size and beauty; and when its expansion had entirely filled the hole in the centre of the mill-stone, it gradually began to raise up the mill-stone itself from the seat of its long repose. This huge mass of stone is now eight inches above the ground, and is entirely supported by the stem of the nut-tree, which has risen to the height of 25 feet, and bears excellent fruit. Strangers often inspect this original curiosity. When I meet a visitor whose mild physiognomy informs me that his soul is proof against the stormy wind of politics, which now-a-days set all the world in a ferment, I venture a small attempt at pleasantry, and say, "that I never pass this tree and mill-stone without thinking of poor old Mr. Bull, with a weight of eight hundred millions of pounds round his galled neck; fruitful source of speculation to a Machiavel, but of sorrow to a Washington."—*Waterton's Essay on Natural History*.

NOTICES TO CORRESPONDENTS.

"G. W. W."—A fixed duty imposed for purposes of revenue would be equitable only when applied both to home and to foreign produce. Importation of corn creates a demand for labour probably equal to that which arises from the home production of corn; it provides employment for shipping, for sailors, and for the artisans engaged in the manufacture of the goods exported to pay for the corn. A fair demand for labour is identical with Free Trade, for every restriction on trade is an interference with the natural conditions of industry, and consequently unfair to the labouring classes on which this interference acts, whether directly or indirectly. There is no inconsistency between the measure which "G. W. W." advocates and that supported by the League; we do not see that any good result would follow from discussing which has abstractedly the stronger claim to preference, but we hold it to be the part of wise men not to be diverted from the attainment of a practical object by the prospect of a more remote advantage, which, however meritorious in theory, must be contingent on circumstances beyond, not only their control, but their powers of foresight.

"Oremio."—The subject has been already discussed in the League, and we should not, for many reasons, wish to return to it at present.

"J. L." asks, "What would the farmers now do if there were Free Trade?" He does not see that the difficulties which impend over the farmers have all arisen from the want of Free Trade—from the confidence which they reposed in the delusive system of monopoly. If the farmers now had Free Trade, they would have some certainty to guide them in their future arrangements; they would have a solid base for their calculations instead of the doubts and perplexities which render every bargain they make a speculative hazard, and leave them uncertain whether they had better till their fields or leave them idle.

"A Newcastle Farmer."—If he sends the price here, either by Post-office order or letter-stamps, the numbers will be forwarded.

"N. R." omits in his argument the difficulty of estimating beforehand the amount of the deprecations.

"An Ardent Repealer."—Porter's "Progress of the Nation" ought to be in every library in the United Kingdom; it contains much that is not to be found in McCulloch, and the information common to both is better arranged and more pointedly put by Porter. Mr. McCulloch is a sound statistician, but Mr. Porter is not only a sound, but a scientific statistician; and a very slight comparison between the works of these gentlemen will illustrate the importance of the distinction.

"An Old Subscriber."—We are gratified to find that the legend has produced such an impression, but it would not be quite in rule to reprint our own articles.

We are requested to insert the following acrostic, from the pen of a fair juvenile:—

Champion of liberty! the bondsman's friend,
On in the cause of freedom I and though might
Bear for a while the palm of victory,
Dismal 'twill always triumph over right;
E'en though wealth, power, rank may all assail,
Notless, pure patriot, thou shalt yet prevail.

"Rusticus" wishes us to direct attention to the practical refutation of "Rigby's" impudent fallacy in the "Quarterly Review," which he put in the shape of a mathematical formula, "Cheap Bread—Low Wages." Rusticus has taken pains to collect the rates of wages paid in various manufacturing districts last month, and to compare them with the rates paid in the corresponding period of 1840 and 1841. We have no doubt of the correctness of his conclusion, that wages have risen; but we should not like to publish his tables without an opportunity of verifying the statistical data on which they are based.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order, to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the LEAGUE forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadsby, Newall's-buildings, Manchester; and the LEAGUE may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

The Morning Post of Thursday last contained a long letter from Mr. Baker, of Writtle, in reply to the description of his farm in Essex, which appeared in this paper on the 7th inst., from the pen of Mr. Adam Brown, under the head of "Visits to Remarkable Farms." As we are ignorant of Mr. Adam Brown's present "whereabouts," we have forwarded a copy of the Post, containing Mr. Baker's letter, to his last address in the country, and have no doubt we shall hear further from him on this subject in the course of next week.

POSTSCRIPT.

LONDON, Saturday Morning, September 21, 1844.

Mr. Talbot Clifton was, we presume, yesterday returned without opposition for North Lancashire. The interests of upwards of half a million of people are thus intrusted to the parliamentary keeping of a youthful ex-cornet of the Guards. The manufacturers of Blackburn, Preston, Burnley, Clithero, and the rest of this great cotton district, will be represented by one who is, we dare say, incapable of distinguishing between sheep's wool and cotton wool, or between a power-loom and a spinning-jenny. Well, in this respect Mr. Clifton stands only upon a par with Mr. Newdigate, Mr. Stafford O'Brien, and a score of other young gentlemen who sit for English counties.

Lord Stanley's resignation took place, designedly we have no doubt, at the moment when the League was engaged in the business of the county register, preparatory to the visit of the barrister. However desirable it would have been after the pending revision to have tested the strength of parties, a contest now would have been not only hopeless, but it would have prevented the Free-Traders from giving that attention to the registration in South Lancashire by which they hope to secure the return of both members at a general election. The Council of the League therefore wisely determined not to be diverted from the important labours of the registration courts by the somewhat startling announcement of Lord Stanley's resignation.

If the absence of all interference from the Leaguers, it is instructive to see the manner in which this important constituency is disposed of. We do not refer to the character of the elected member, for, we repeat, he is quite upon a par, in every way, with the ordinary run of county representatives. But it is edifying to see the state and working of parties in the counties in connexion with the Corn-Law question. In this respect North Lancashire affords a type of the condition of nearly every other county, in all of which the old line of demarcation between Whig and Tory has been melting gradually into thin air, ever since Free Trade came into earnest collision with monopoly. "The Tories have turned Conservatives, and the Whigs Corn-servatives," said an old politician, during the late South Lancashire contest. The truth of this observation has been exemplified at the present election for the northern division. Not only was there not a sign of opposition on the part of the Whig aristocracy, but the requisition contained the names of more than one large landowner who were until now regarded as of the popular party. Nay, the candidate himself is a member of one of the wealthiest Whig families in the county, and was, we believe, only a few years ago elected a member of the Reform Club. Religion seems to be no barrier to the irresistible tendency to Corn-servatism on the part of our Whig landowners, for some of the oldest and most active Catholic politicians have gone over. We mention these facts now, because it has been before argued that hatred to the League and its interference, and not love of monopoly, has driven the Whig landowners into the ranks of the Tories. How has it happened that in North Lancashire, where the League stood aloof, not a breath of opposition has been raised by the so-called Liberal proprietors? At all events, let us not be told in future, should the Free-Traders contest the division, that they are preventing some other party from doing so.

THUNDER STORM AND FLOODS NEAR HAZLE GROVE, CHESHIRE.—SIX LIVES LOST.

No fewer than six lives were lost in consequence of the recent floods and storm near Hazle Grove. It seems that the thunder-storm, which passed over Hazle Grove in a south-easterly direction, commenced in that neighbourhood about two o'clock in the afternoon, and continued till about six in the evening. The rain fell in torrents; and the brooks, reservoirs, and lodges of water in the neighbourhood were soon considerably swollen, and, in some instances, overflowed their banks. In consequence of the stream leading to Mr. Cooper's cotton mill at Bosden overflowing the basement story of the mill, the hands were compelled to quit the mill a little before six o'clock in the evening. So great had been the force of the water, that a bridge (which the hands would have to cross in their way home) was thrown upwards and washed away; and the young women had, consequently, to come through the field, and so into the by-road already described, to the lower or southerly end of Hazle Grove. In the grounds of Torkington-lodge is a small reservoir, kept for ornament only; and in the lower side of this reservoir is a sluice, by which its water can be let off by a tunnel under the by-road. This sluice was shut, and a circular hole to take off the overflow was of too contracted dimensions to receive the great and sudden rise of water in the reservoir, resulting from the heavy fall of rain. The reservoir consequently overflowed into the field; and the waters, sweeping over a small kitchen garden, were dammed up by an old brick wall, about 3½ yards high, and 35 yards in length, which divides the Torkington-lodge premises from the by-road. The waters, spreading along the upper side of this wall, at length began to pour into the road below, at each end of the wall; and the factory hands, having arrived in the road, at the end of the wall farthest from Hazle Grove and their homes, were urged not to attempt passing along the road, but to take shelter in a stable belonging to the premises till the rain should abate. Unfortunately, however, they persevered; and just as they were running along the footpath, under the wall, the weight of water in the field above threw it down for nearly its own length, and the flood swept the unfortunate people, together with the stones, bricks, &c., of the wall, into the lower ground and the brook below the road; the flood making its way a distance of 200 yards upon the high road at Hazle Grove. Six individuals were killed and a great many others severely injured. Five of those most severely injured were conveyed to the Stockport Infirmary. One had lost a leg; another had a thigh and an arm broken; and the others were very seriously bruised. The body of a sixth was found on Saturday morning, in the brook below, at a distance of 200 yards from the spot, having been caught by a tree on the bank. On Saturday evening last, an inquest was held on the bodies of the six unfortunate sufferers, and a verdict of "Accidental death" returned in all the cases.—*Preston Guardian*.

EPITOME OF NEWS.

FOREIGN.

FRANCE.—FINAL TERMINATION OF HOSTILITIES BETWEEN FRANCE AND MOROCCO.—The following important announcement from Paris has been received, by which it will be seen that a treaty of peace has been signed at Tangier, on behalf of the Emperor of Morocco and the King of the French; the conditions of Prince de Joinville having been unconditionally accepted by the Moors:—
Paris, Sunday Evening, Nine o'clock.

The Messenger of this evening contains the following telegraphic despatch:—

"Bayonne, Sept. 15.

The following telegraphic despatch has been transmitted by the Prince de Joinville to the Minister of Marine, and by the Duke of Glücksburg and M. de Nyssa to the Minister of Foreign Affairs:—

"Tangier, Sept. 10.

"The Government of Morocco has sued for peace. The squadron has arrived to-day at Tangier. The governor of the city came on board to renew that request. Our conditions have been signified and accepted, and the treaty has been signed. In the course of the day the consul-general's office has been replaced, and the flag of the consul has been duly saluted. An order to cease all hostilities, and to evacuate the Island of Mogadore, will be despatched this evening."

Naples letters of the 6th inst. speak of the marriage of the Duke d'Aumale with his first cousin, the Princess of Salerno, as fixed for the second week of next month. Great preparations were in progress for the celebration of the marriage with pomp and circumstance.

EXTENSIVE INUNDATION.—The *Journal des Débats* publishes the following extract from a letter dated Plescof (Russia), the 2nd instant:—"In consequence of the torrents of rain we have had during more than two months, the great lake of Peipous, situated between the Governments of St. Petersburg, Plescof, Livonia, and Esthonia, through which the river Embach runs, has overflowed its banks and inundated an immense extent of ground. The greater part of the fine road from Riga to St. Petersburg is flooded, and can only be passed in a boat. During the height of the flood the peasants were obliged to take refuge on the roofs of their houses. The number of persons who lost their lives by this disaster is estimated at 1500. The crops which have been destroyed, and other damage, exceed in value 2,000,000 roubles, or about £300,000."

A NEW MOTIVE POWER.—The Paris papers mention that a first trial of M. Andrau's new locomotive power, by means of compressed air, was made on Monday week, on the Versailles Railroad, in the presence of commissioners appointed by Government, the engineers of the railroad, and a great number of spectators. Although the locomotive was charged upon the low-pressure system, because there was not a sufficient power to compress the air to a greater extent, the experiment perfectly succeeded. In expending two or three atmospheres, the locomotive ran a quarter of a league with great rapidity and regularity. The trial is to be repeated in the course of next month.

SPAIN.—Accounts from Madrid of the 11th inst. state, that a Council had been held on the preceding evening, but the result of its deliberation had not transpired. M. Martinez de la Rosa attended at it. Report stated that he had refused the Department of Foreign Affairs, but would readily accept the Presidency of the Chamber of Deputies. The elections had been generally favourable throughout the kingdom to the Conservative party. The Carlists had boldly disputed the victory at Palencia, Guadaluara, Saragossa, Seville, Leon, and Segovia, but had only succeeded in this last town. The *Castellano* announces that the Government, being apprehensive of a new Carlist insurrection in the northern provinces, had ordered a body of 7000 men to march to Navarre, under the command of General Villalonga.

Two capitalists, Messrs. H. J. da Silva, of London, and Manuel Mathieu, of Madrid, had offered the Minister of Finance to supply him during three years with the funds necessary (75,000,000 of reals per annum) for the payment of the clergy and nuns. They required 6 per cent. on the amount of their advances, 2 per cent. commission, and to receive as a guarantee the management of the clerical estates yet to be disposed of.

ITALY.—Letters from Rome dwell still upon the unsettled state of the public mind in the Roman states. That a conspiracy is still on foot, and may lead to the destruction of the unhappy enthusiasts engaged, would appear unquestionable. It seems equally beyond doubt that the Pontifical Government refuses to listen to the advice of Austria, Naples, Tuscany, and other powers, to concede a little to the popular desire, in order to escape a calamity sure to occur in case of a continental war. The *sejour* of the imperial family at Trieste suggested the belief that political affairs—those of Italy—would be then seriously considered, but no hope seems to exist that the Papal Government will give way.

AMERICA.—MANUFACTURES IN CANADA.—A meeting was held in Sherbrooke on the 19th inst., at which it was resolved to carry out a long-talked-of project of establishing a cotton factory at that village. A subscription was opened for 25,000 dollars, in shares of 100 dollars each: 150 were taken up on the spot, leaving 100 open. A gentleman from Massachusetts, acquainted with the manufacture, subscribed 2000 dollars. A building will be erected this fall, 40 by 80 feet, three stories high, on the site of the old saw-mill, just below the Magog-bridge. The British-American Land Company has given a choice of a water privilege, with the use of it, rent free, for twenty years. Machinery is to be employed to drive 1000 spindles, capable of turning out 300,000 yards of cotton cloth per annum. In addition to the cotton factory, knitting machines are to be set going for the manufacture of woollen drawers, shirts, stockings, &c.; and arrangements have been made for making sewing silk from the raw material. —*Sherbrooke Gazette*.

UNITED STATES' STATISTICS.—Taking the population of the United States to be, in round numbers 17,000,000, the proportion

Employed in agriculture is 12,750,000
Employed in manufactures and trades 1,500,000
Employed in commerce, fisheries, &c. 1,250,000
Employed in mines, forests, &c. 1,500,000

How important that England, whose population is chiefly commercial and manufacturing, should cultivate commerce with the United States!

In Bombay there was a trial going on of 18 Parsees, for a murder committed at two o'clock in the day, in one of the most public streets in the town, on the principle of the gang-murders which degrade India. Great excitement prevailed on the subject. The murdered man was one of their own tribe, and much money was expended in the hope of preventing the conviction of any of the parties.

MUTINY AT ICHABOE.—By a letter received at Lloyd's from their agent at Bristol, it appears that advices had been received by the writer from Ichaboe, of the 6th July last, from which it appears that serious disturbances had occurred amongst a portion of the vessels loading at the island with guano; that several parties had been put in irons and sent to St. Helena. The officer selected by the committee appointed by Captain Brooke, of her Majesty's steam-ship *Thunderbolt*, to form a judicial body, had elected Captain Albert Hancock, of the *Victoria*, commodore, who had deemed it advisable, the island being in a state of mutiny, to send

to the Cape for the assistance of a man-of-war. The brig *Canning* had been despatched for that purpose. The number of vessels loading at the date of the letter above mentioned is represented to have been between 70 and 80, and the origin of the disturbances was from the new comers attempting to take precedence of previous arrivals in the loading of the vessels. —*Morning Herald*.

DOMESTIC.

The Duke of Norfolk is about to give 50 acres of land to the people of Sheffield for public pleasure grounds.

On Thursday last, one of the most extraordinary packages perhaps ever sent through the same medium reached the post-office of this city. This was no other than a parcel containing some fifteen or twenty live frogs. The contents of the parcel were discovered by two or three of them jumping out at the post-office. The frogs, it is believed, were of the Egyptian or some other rare species, and were addressed to Dr. Buchanan, of Moore-place, in this city. They reached their destination in safety. —*Glasgow National*.

A rumour has reached us from more than one quarter, that the Queen intends to visit some parts of the Western Highlands and Islands before returning to England, and that the royal yacht will be ordered round to the west coast to receive her. In particular, we have heard Staffa and Iona mentioned as likely to be visited by her Majesty, in which case she will probably return by Inverary and the Clyde. Whether the report respecting her intended progress has any good foundation, we, of course, cannot vouch. The movements of the royal party will no doubt be regulated in a great measure by the state of the weather and other contingencies; but the magnificent scenery of the Hebrides, and the splendid reception which would be sure to await her Majesty on our western Frith, render it by no means improbable that she may be induced to take this route in her return south. —*Glasgow Citizen of Saturday*.

The proprietors of the London and Greenwich Railway have leased their line to the London and Dover Company. The lease is for 999 years, to commence from the 1st of January, 1845, at a rent of £36,000 for the first year, and £1000 additional every year till it shall reach £45,000.

A French paper says, almost every day there are sent from Paris to Windsor, for the Queen of England, cargoes of peaches, Fontainebleau grapes, and pears from the gardens of the Civil List. It is probable that these fruits will arrive without hindrance—not like the pheasants sent by Prince Albert to the King, which were seized.

Mr. Barry, the clown at Batty's Circus, has undertaken to float in a washing-tub from Vauxhall to Westminster-bridge, drawn by two geese, on Monday afternoon, Sept. 23. A similar feat was performed by Mr. Usher, the celebrated clown, about twenty-five years ago, and attracted several thousand spectators.

As a gentleman was passing through Tyndall's Park, Bristol, about noon one day last week, he saw a shoemaker's lad coolly milking a cow into a new pair of boots, which he was taking home to a customer.

The mail for the Caledonia steamer to Halifax, made up here this evening, Wednesday, is rather large, as the fall trade is now in full activity on the other side of the Atlantic.

The Tweed, Royal Mail Steam-packet Company's ship, Captain Sharp, arrived at Southampton, on Wednesday, Sept. 18, at ten A.M. She brings 155 ounces of gold dust, and 1193 ounces of silver. On the 26th of August a destructive fire at Guadaloupe destroyed the Custom-house and 55 houses; loss estimated at 30,000*l*. We believe that the Tweed brings no other news of importance.

Watches, remarkable for their extreme thinness, are now manufactured at Geneva. They are not thicker than a line and the sixteenth of an inch (little more than the twelfth of an inch). This change does not, however, militate against the full play of the movement, for that remains the same, the thinness being obtained by placing the hands at the side, instead of over the works. This arrangement makes the watches rather larger in circumference. —*Galignani*.

Thursday morning last a special railway train (in four divisions) went from Sheffield to Hull. Altogether it was decidedly the most monstrous of all monster trains ever recorded. The number of engines employed were 10, the carriages 250, and the passengers amounted to the enormous number of nearly 7800!

MISCELLANEOUS.

IMPORTANCE OF CHEAP BREAD.—M. Melier investigates, with a philosophic spirit, that important medico-political question, the influence of a varying state of the price of provision on general disease and mortality. The statistical documents he has collected, and the tables into which his figures are thrown, bear out the following inferences:—1. The mortality of a country is influenced by the price of corn and bread. 2. This influence was extremely marred formerly, and is less so at present. 3. The diminution of this influence has been gradual, and various causes have contributed to this result. 4. The cultivation of the potato is one of the chief of these. 5. The question is one of morality as well as of hygiene, for it is demonstrated that crime increases with the dearthness of provisions.—It is inferrible too, the author considers, from his inquiries, that, in a well-organized state of society, provisions tend constantly to increase in abundance. This tendency is more marked than that of the population to increase.—"a powerful argument against the theory of Malthus." —*British and Foreign Review*.

LIEUTENANT VIBART'S NEW MACHINE POWER.—Our agricultural friends will remember that we noticed this new and truly wonderful power, invented by Lieutenant Vibart, of Chilliawood-house, near this town, in our paper of the week before last. We had yesterday, through the kindness of Mr. Richards, ironfounder, an opportunity of again inspecting the invention, which has been further improved, and which may now be considered to have reached the acme of perfection. It was applied to a thrashing machine, also of Lieutenant Vibart's construction, and which affords another proof of the splendour of his inventive genius, and the ease and rapidity with which the latter machine was worked was wonderful. We are informed that it is capable of thrashing sixty stiches of wheat per hour, and this it accomplishes in the most perfect manner, not a single grain being left in the ear, while the straw is thrown aside wholly uninjured. It may be worked with ease by one man and a boy, and is unquestionably one of the most surprising, as well as

valuable, novelties in mechanical skill that has ever been submitted to public notice. —*Somerset County Gazette*.

ORDERS IN COUNCIL.—A Supplement to Friday's *Gazette* was published on Saturday, containing a series of Orders in Council, giving effect to recent commercial treaties with Hanover, Oldenburg, and Mecklenburg-Schwerin. The commercial treaty with Hanover is that under which the State duties are in future to be regulated, and by which certain concessions and privileges are accorded to Hanoverian commerce in British ports. In compliance with the terms of the treaty, it is now ordered by her Majesty in Council, that all Hanoverian vessels coming from the mouths of the Meuse, the Ems, the Weser, or the Elbe, or from any navigable river between the Trave and Memel, inclusive, shall be admitted into British ports, at home, or in our colonies, on the same terms as if they had come from ports actually within the dominions of the King of Hanover. These concessions are a return for British commerce being placed in Hanover on the footing of that of the "most favoured nation." Similar orders are made with respect to "vessels of Oldenburg," and "vessels of Mecklenburg-Schwerin." Those of the latter state, when coming from the ports of Barth, Stralsund, Griefswald, Wolgast, and Stettin; or from the ports in the Trave, Elbe, or Meuse, or any river between the Elbe and the Meuse, or between the Trave and the Oder, are to be admitted into British ports on the same terms as if coming from ports actually within the dominions of the Grand Duke of Mecklenburg-Schwerin. It is also ordered that all vessels of less than sixty tons burden, belonging to Austria, Mecklenburg-Schwerin, Mecklenburg-Strelitz, and Oldenburg, shall enjoy the same privilege in British ports as British vessels under sixty tons burden, of being exempt from the necessity of taking licensed pilots; this, along with some minor regulations, being intended to carry out the provisions of the commercial treaty to which the orders in Council relate.

POLYTECHNIC INSTITUTION.—MR. MAGNUS'S ENAMELLED SLATES.—Few things have been added to the immense collection of works of art, natural and artificial curiosities, which are exhibited in the gallery and rooms of the Polytechnic Institution, than the recent addition to that collection of the specimens sent for the inspection of the public by Mr. Magnus, of Pimlico. That gentleman, after many years of labour, directed by judgment and a very intimate acquaintance with chemistry and machinery, more especially as they are applicable to practical purposes, has discovered a method of imparting to slate the appearance of marble, and of giving it a polish to which marble cannot be brought. The invention enables him to cut slabs of marble, or solid pieces and forms of it, with great ease by means of circular saws worked by steam-engines, and by other tools of which he is also the manufacturer, by which mouldings and devices of all kinds are in a manner sculptured by machines with great rapidity and precision. By a chemical process colours are prepared and laid upon the surface of the slate, which is then subjected to the heat of a furnace for a considerable time, say a fortnight, and the colours burnt into the slate in the same way that colours are burnt into earthenware or porcelain, or what is called enamelled; the slate is then polished, and the process is complete. The resemblance which it then bears to porphyry, Sienna marble, black marble, *negro antico* (as the finest black marble is called), to the marbles of the oriental quarries, and to lapis lazuli, and to other precious opaque stones, is so close as to defy the most minute inspection. It is more durable than real marble, will bear any degree of heat or cold, and is calculated for all purposes for which marble is or can be used. The expense is, of course, in comparison as nothing. The Duke of Wellington has some very fine pieces of decorative furniture of this material, and he has a billiard-table with enamelled legs and mouldings made of it, which is, perhaps, the most elegant and complete thing of the sort ever produced. We do not wish our readers to take upon trust our description of the invention, but to go and examine for themselves at the Polytechnic Institution.

What are politics? History in the making. The working of those second causes which are preparing happiness or misery for those who will come after us. The present page of Divine Providence. The notion that any Christian man can be at liberty to decline attending to the signs of the times, and to the duties which they indicate, is a strange delusion. But, if this fallacious notion is repudiated, then religious men must study politics; politics must be made a branch of practical duty; religious principle must be carried into the concerns of the borough and the county, as well as of the market and the exchange. To the religious members of our congregations who are not possessed of the franchise, we would say in the words of an Apostle, "If thou mayest be free, use it rather." There is no more reason that a Christian man should be content to be a political serf or nullity, than that he should willingly remain in personal bondage. If every religious Dissenter and Methodist in this country had a registered vote—and almost every one might obtain one—it would so modify the character of many constitencies, as to admit of a very material improvement in that of the representative body. If every Dissenter who could afford to invest £50 in the purchase of a freehold, would entitle himself to vote as a freeholder, the country might be recovered from oligarchical domination. —*The Patriot*.

The great western states and territories are pouring their products into the cities on the seaboard to an extent hitherto unparalleled. Bread stuffs of the richest description—fine wheat flour, Indian corn, buckwheat, rye, barley, &c. &c.—are selling at very low prices. The only difficulty is to find a market. As England will not take our bread stuffs, we are compelled to establish manufacturing and manufacturing towns, so as to divert masses of the people from agricultural pursuits; thus we create a home market for our produce, and become large exporters of manufactured goods. Our manufacturers already compete with England in some branches, and in two or three years more, without a tariff even, they will drive English fabrics from the home market, if not from foreign markets. The result is inevitable. And all the efforts of English currency regulators to keep down prices at home (so long as the British landed interests retain the present Corn Laws) will avail nothing. We can produce the necessities of life to any extent at far cheaper rates than English agriculturists can under the Corn Laws, and as a natural consequence we must excel in domestic manufactures; while, at the same time, our operatives can live like European princes. —*The Weekly Sun*, New York, Aug. 31.

SHREWSBURY FAIR.—The supply of sheep was the largest that has been witnessed in this town for several years past (pewee could not be procured for several hundreds), and the number of buyers was also considerable, some of whom bought largely. Several large lots were purchased for the Smithfield market, by Mr. Thomas, the well-known ox-dealer, sixty fine wethers, estimated at 25s. a quarter, were sold by Mr. Langford, of Henbury, near Montgomery, for the London markets. Best wethers were not over numerous, and smaller ones were eagerly bought at 4d. to 5d. per lb.; the larger sort 5d. to 6d. per lb. Mutton, of best quality, sold at 4d. to 5d.; inferior, 3d. to 4d. There was a good call for smart steers. There were but few lambs in the fair, the season being nearly over; the prices ranged from 5d. to 5d. per lb. The pig market was also overstocked; the price for strong well-meated animals was about the same as last fair; but small pigs sold very low. The cattle market on Wednesday had but a very limited supply of good beef, the quality of most of the beasts being inferior; in fact, there was not a first-rate cow in the fair. The prices varied from 4d. to 5d. per lb. The bullock trade was very much depressed, owing to the scarcity of turnips, and the fear of a scarcity of winter provender. Bullocks which sold for £12 at last September fair, now only fetched £9. 10s. to £10 a head; and this price was from 20s. to 30s. a head better than was given at Bishop's Castle fair on Monday. Even good cows and calves sold but middling; and stores were a drug in the market. There were a great many horses in the fair, the majority of an inferior kind; all, however, were depreciated in value. The supply of cheese and butter at the Circus was smaller than usual, and a few lots of each were left unsold. Cheese 20s. to 30s. per cwt.; butter 8d. to 9d. per lb.; hams 7d.; bacon, 6d. per lb. At the Market Hall, Howard-street, the supply of cheese was good, about 60 tons being pitched. Buyers were also numerous, and all was sold at a decided improvement in price. New cheese ranged from 40s. to 60s. per cwt. upwards of 60s. being obtained for a dairy of this year's make, belonging to Mr. Elkes of Rossall. Prime old Cheshire obtained from 60s. to 67s. per cwt. At Pool fair on Wednesday the prices of sheep and cattle were at least equal to those at Shrewsbury.—*Shrewsbury Chronicle*.

WILTON FAIR.—At Wilton St. Giles's great sheep and lamb fair, held on the 12th inst., the number of sheep amounted to near the usual average—viz., 80,000. The price for all descriptions was about 1s. per head higher than at the late Britford fair, with a brisk sale, and but few remained unsold at the close of the fair. The prices may be quoted as follows:—Wethers, from 24s. to 34s.; ewes, from 18s. to 24s.; lambs, from 12s. to 20s. A large pen of fine wether lambs, the property of Mr. Waters, of Stratford, sold at 28s. per head. Two pens of very fine lambs, belonging to Messrs. Lush, of Damerham and Stride, of Deverill, were much admired, and sold at high prices. Mr. Stephen Mills of Elston, and Mr. Sainsbury of Lavington, sold a pen of very fine ewes at 31s. per head. The show of rams was not so numerous as last year, but quite as fine. Those from the celebrated stocks of Messrs. Brown, Northeast, Mills, and Sainsbury, attracted great attention, and deservedly sold and let readily at good prices. A lot of 600 ewes belonging to Mr. S. Mills, of Elston, commanded unusual attraction; their great size, combined with some of the best blood in the kingdom, elicited universal commendation from the breeders of Southdown stock. These sold at 31s. per head. A lot of lambs penned by Mr. Lush, of Damerham, were much admired. They were sold at 24s. per head. The number of horses was large, but met a very dull sale.—*Salisbury and Wiltshire Herald*.

POSTAGE LABELS AND ENVELOPES.—The following facts relative to the manufacture of our present postage labels and envelopes may not be uninteresting to the reader. The manufacture of the envelope is effected by many powerful yet accurate machines. The paper is provided by coloured threads as a security against frauds; and when sent from the manufactory is cut into lozenges by an engine with the utmost precision, at the rate of 60,000 or 80,000 a minute. Previously to being stamped, each lozenge has a notch out in each side for the convenience of folding; this is done by an angular chisel. The envelopes are then stamped at Somerset-house by a machine which combines the operation of printing and embossing—the invention of the late Sir William Congreve. The last process is the folding and gumming, and a quick hand can fold 3500 a day. One engraving on the hard steel roller will afford 1680 transfers to soft steel plates; these again will, when hardened, admit 60,000 impressions being pulled upon each, so that one original will afford 100,800,000 impressions of labels. Twelve years ago common envelopes were sold at 1s. the dozen; now the postage envelope, with its medallion, may be bought wholesale at half a farthing, exclusive of the stamp; and yet, though the manufacture is peculiarly costly, it returns a small profit to the Government. More than 22,000,000 of chargeable letters were posted in 1843; so that, supposing all the letter-boxes in the United Kingdom to be open 12 hours in the day, and to communicate with one large spout, the letters would keep flowing through it at the mean rate of 14 in a second.

VITAL AND SOCIAL STATISTICS OF LANCAHIRE.—We derive the following curious calculations relative to the population of this county in 1841, from an elaborate table in the preface to the occupations abstract of the census returns, just published:—Lancashire possesses 1475 inhabitants to every 100 statute acres. The following are the numbers in each case to every 10,000 inhabitants in 1841:—Annual average number of marriages, 89'3; of births, 370'5; and of deaths, 279'2. Proportion of both sexes alive under five years of age, 1382; males alive between 20 and 30 years of age, 1851; ditto between 30 and 40 years, 1400; females alive between 20 and 30 years, 1989; ditto between 30 and 40 years, 1381; both sexes alive above 50 years, 1068. Inhabited houses, 1734 to every 10,000 inhabitants. Born out of the city, natives of England and Wales, 1220'7; of Scotland, 130'4; of Ireland, 635'3 to every 10,000 inhabitants. The actual increase of population in the ten years, by the census returns of 1831-41, was 24'7 per cent. The assumed national increase in the same period, by excess of births over deaths, was 9'1 per cent.; so that the difference, 15'6 per cent., is assignable to immigration to this country from other places. Out of every 100 marriages celebrated, the following are the proportions of each. Sex married under 21 years of age:—males, 9'21; females, 14'26; mean, 9'73 per cent. Out of 100 marriages celebrated, the number

of each sex signing the marriage register with marks, was:—males, 38; females, 67; mean, 52. The annual mortality of children under one year of age, to the total number of births in 1841, was 17'7 per cent., and to the total number of deaths, 25'4 per cent. The average annual proportions of marriages and births in three years, and of deaths in four years, to the total population of both sexes, was one death in 36, one birth in 27, and one marriage in 112. The number of persons engaged in agricultural pursuits was only 3 per cent. of the whole population. The number of persons engaged in trade and manufacture was 28'1 per cent. out of the whole population.—*Manchester Guardian*.

ENGLISH AND FOREIGN RAILWAYS.—In the evidence before the select committee of last session, Mr. Laing, of the Board of Trade, stated that the average railway charges in Belgium, for 100 miles, are, for the first, second, and third classes respectively, 10s., 7s. 6d., and 4s. 8d.; in Germany, 12s., 8s. 6d., and 5s. 6d.; in France, 15s., 10s., and 8s. 6d.; and in England, 25s., 17s., and 10s. As one cause of the comparatively high rate in England, he states that the average cost of railways in this country is three or four times that of the German lines; double that of the Belgian, and greater by one-half than the cost of the French. Mr. Laing is of opinion that the advantage is in favour of the English in regard to speed; but that, in point of accommodation, the second and third class passengers in Belgium, and on the Continent generally, have the decided advantage over those of the same classes in England.—*Railway Record*.

A PLEA FOR STATE ABUSES.—The great secret in English internal policy is to get up a given quantity of wrong, and then set the wrong to cry out against the inconvenience of its own removal.—*Colonel Thompson*.

MARKETS.

CORN MARKET.

MARK-LANE, Monday, Sept. 16.—There was a moderate supply of English Wheat to this morning's market, the condition of most of it was very inferior; the finest samples were sold early at fully the rates of last week, the rest were not disposed of till late in the day at a little reduction. There was some inquiry for Free Foreign, but the buyers were very unwilling to give the same prices as last week, and the holders being firm the amount of business done was very limited. There was a good deal more New Barley at market than last week; Malting and Distilling qualities were 1s. to 2s. lower, and for Grinding, whether English or Foreign, former prices were with difficulty obtained. There were more Old Mazagan Beans offering on the Kentish stands; they were not cleared off at a late hour, though offered on rather lower terms; other descriptions being scarce maintained former rates. White Peas the same as last week, Maple and Grey 1s. lower. The supply of Oats up to Saturday was short, both of Irish and Foreign; about ten vessels arrived in time for market this morning from Ireland, some of them with the first cargoes of New, the quality of which is very inferior to the early shipments last year. There was not quite so much demand for Oats from the country as last week, and where vessels were on demurrage a trifling abatement had to be submitted to. This applies principally to Irish; fine fresh cargoes of Foreign being less plentiful than they have been, fully maintain last week's rates. S. H. LUCAS and SON.

LONDON AVERAGES for the Week ending Sept. 17, 1844.
Wheat .. 5530 47s. 7d. Rye .. 37s. 3d.
Barley .. 3020 38s. 8d. Beans .. 72s. 3d.
Oats .. 13484 21s. 0d. Peas .. 40s. 3d.

FRIDAY, Sept. 20.—There is not much English Wheat fresh up since Monday; some of the Monday's supply still remains unsold on the Kentish stands, owing to its very inferior condition. Foreign Wheat is held firmly at Monday's rates, but the millers buy only to supply their immediate wants. Barley, Beans, and Peas are exactly as on Monday. There are a few cargoes of Irish Oats fresh up, some of them new, and two or three small parcels of new Lincolnshire; the quality of the former is much as we reported on Monday, that of the latter is also inferior to the usual quality of the early shipments. The new Irish have been sold at from 20s. 6d. to 23s. 8d., but only in small quantities. Prices generally are the same as on Monday. There was no alteration in the duties yesterday.

S. H. LUCAS and SON.

Account of Corn, &c., arrived in the Port of London, from the 16th of September to the 20th of September, both inclusive.

THE LEAGUE.

THE EXPONENT OF THE PRINCIPLES

OF

FREE TRADE,

AND THE ORGAN

OF THE

NATIONAL ANTI-CORN-LAW LEAGUE.

"Surely as much food as a man can buy, with as much wages as a man can get, for as much work as a man can do, is not more than the natural inalienable birth-right of every man whom God has created with strength to labour and with hands to work."—Mrs. Loudon's *Philanthropic Economy*.

VOLUME THE SECOND.

THE LEAGUE.

No. 53.]

SATURDAY, SEPTEMBER 28, 1844.

[3d.]

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive a copy, weekly, of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND, are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

We beg to inform our subscribers that bound volumes of the LEAGUE newspaper, containing the whole of the first year's numbers, may be had on application at the Offices either in London or Manchester, after the expiration of the present month.

THE CALM.

A temporary lull seems to prevail over the Anti-Corn-Law agitation: but it is merely temporary; and only by a very unobservant mind can the character of the present comparative quiescence be mistaken. It is the repose of power, and not of defeat; of inherent vitality, and not of death. The assertion may safely be made that, since the suspension of the great public meetings, not one mind has become less dissatisfied with the Corn Laws, or more disposed to submit to their continuance. There is no ebbing away of strength, nobody "hates one jot of heart or hope." The temper and spirit of the Anti-Monopolist public exhibits a complete contrast with that of their opponents. With the former, there is no premature craving for renewed excitement; they wait the fitting time for fresh demonstrations of their resolve, quietly and confidently. On the other hand, we behold an incessant restlessness. The newspapers, that affected scarcely to notice the League or recognise its continued existence, while its thousands were every week gathering together, now write about it and against it from day to day. There is the visible uneasiness that indicates a haunting bodement of impending peril. There is the flutter of the bird in the snare of the fowler. Monopoly is made nervous by the quietude of the League. It would feel better assured of its own safety by the heaves and throes of active Agitation.

In fact, the term "agitation" is not a thoroughly accurate description of the efforts of the League, and the sympathy of the public mind in those efforts. We use the word for want of a better: our political vocabulary is imperfect. The course of the League, though a "movement," is not an "agitation." It is the progress of rational conviction; the intellect being stimulated in its inquiries and expressions by moral feelings and humane consideration for the multitude of sufferers wronged by the unjust laws whose removal is sought. In this case, therefore, there is none of the common and characteristic dependence of what is called agitation upon the continued application of external excitement. The strength of the movement is self-sustained. People cannot un-know what they have been taught. Facts do not ebb and flow, like feelings. The success of the League is, not to have worked the millions into rage and fury, but to have instructed, enlightened, convinced, and determined them, so that the power which has been created exists independently of its authors; and enduringly, in virtue of its own nature.

The advocates of Free Trade are sometimes using hard words and fierce expressions. If it be so, no wonder; for the protest against outrageous injustice cannot always clothe itself in lullaby language. But what is the prevailing character of the efforts that have been made, whether by speaking or writing? It is not to be mistaken. It corresponds with that

of the cause which is advocated. It mainly consists in stating facts; and then, additional facts; and then, still more facts—*voilà tout*. That is the essence of the Anti-Corn Law agitation, if an agitation it must be called. It is simply the dissemination of a knowledge of facts, bearing upon the question. They do the work. The mere theory and the sophistry, the suppression and the perversion, are all on the other side. The Leaguers deal only in actualities. They are our case. The pleadings are in the evidence. There is nothing to be answered; and so opponents take to railing. Perceiving the power of the truths, they fasten upon whatever they deem, or can make appear as, the failings of the promulgators.

Indeed, others, unconnected with the cause, are not spared when they report facts which illustrate the real industrial interests of the country. Witness the hubbub just now raised against the population commissioners for the statistics of employment and occupation. They ought, it is contended, to have included the wives and families of farm-labourers in the number of persons employed in agriculture. Suppose they had, what would it have done except to show the starvation power of monopolist agriculture? What pitiful sophistry to reckon the five children of the farm-labourer, who has to support them all on 10s. a-week, as employed in the same sense as the three children of the factory operative who add each their 6s. to his 21s. weekly, for the sustenance of the family! How preposterous to say, here are six persons connected with agriculture in the one instance, and only four persons connected with manufacture in the other instance, and therefore agriculture is the greater interest, and must be upheld by exclusive privilege! And what a practical inference from the whole that the food of all the ten persons is to be enhanced in price by taxation! The farm-labourer does not receive the bread-tax; he pays it, as well as the cotton-spinner. It falls as hardly, and often much more hardly, upon his scanty wages. Whoever may gain the advantage of monopoly, it is not the labourer. Some, undoubtedly, believe they profit by restrictive laws, or such laws would not be upheld as they are. They may deem it an aggrandisement of the monopoly, which they miscall agriculture, to multiply the numbers to whom it is said to afford employment. But what if there were millions, so long as the system condemns them only to sow, toil, and reap starvation?

One reason why those on whom the forlorn task devolves of championing monopoly by means of the press cannot know peace or rest, while all others are refreshing themselves by repose, is that they feel all is not as they wish in the ranks of agriculture. A good harvest threatens to put the farmer into the anomalous position of paying a "protection" rent while he receives Free-Trade prices. This cannot last: another such harvest, and the settlement of prices must enforce the unsettlement of rents. These victories are ruinous. The writers who catch at the argument of cheapness, as against their opponents, are made tremulous in wielding it by the effect upon their clients. They wound those behind them, while striking at those before them. Their logic strikes both ways, and most keenly amongst their friends. Well may they writhe and wriggle, and be ill at ease.

They know, also, that the cessation of League demonstrations is not the suspension of League workings. The courts of the revising barristers begin to show that noiseful processes have been continuously going on, and are producing outward and visible results. The toil, expense, divisions, and disasters of the next general election rise before their imaginations in appalling perspective. Hence an infuriate quarrel with the very machinery by the dexterous use of which they turned the Reform Act to the destruction of its framers. To their fancy, registration was only devised for parties, and not for the people. The *Herald* discovers that the interference of agents is "unconstitutional" (save the mark!), and the penny-a-liners of the *Times* have their cue to ridicule the claims on behalf of numbers for whose enfranchisement the Reform Act was believed to be especially intended. Abused for losing elections, the League is now also abused for taking the means to win elections. Like the unfortunate drummer, it always hits too high or too low to please the patient. The less noise it makes the more it occasions.

Let those who think the present rather too much of a slumberous time look at the indications afforded by our opponents. In their restlessness, irritability, and wrath, are the symptoms that things are going right. The evidence by reflection supersedes the need for direct demonstration of progress. The

movement continues; and the external impulse will be renewed the instant it is needed.

STARVATION AND SUICIDE AT SUNDERLAND.

We take from the *Sunderland Herald* the following extract, being the evidence of Elizabeth Pemberton, wife of James Pemberton, given at an inquest held on the body of her husband in the town of Sunderland a fortnight ago. We ask the especial attention of our readers to this simple but terrible narrative:—

"Elizabeth Pemberton:—I live in Baines'-lane, and am widow of the deceased, who was a 'striker' to the blacksmiths. He was 32 years of age last June. The deceased was discharged from a factory at Gateshead, at Christmas, and has only had 16 days' work since the commencement of this year. We have been for a long time past in a state of complete destitution—we pawned all our clothes and furniture, and for some weeks we have laid on nothing but a bit of straw. I used to carry fire papers about for a living, but since the cold weather came in I have not been able to obtain any. The last article I sold was a 'skeel' for three-pence. We lived very poorly; I think we did not live, but only breathed. My husband has been all over the country side seeking work, but he was not able to obtain any. Sometimes he was very much depressed in consequence, and I tried to cheer him up by telling him we should be better soon. Many times the children cried for bread and we were not able to give them any; he said he thought if things did not take a turn they would get the better of him—he was tired of his life. On Thursday morning my husband and myself went out to glean on the Durham road. We could not find a corn-field likely for some time, and at last when we found one near Ryhope, in which Irishmen were shearing, my husband asked if we might be allowed to glean there, and the farmer said no, he did not allow any person to glean after Irishmen. He then wanted to return, but I advised him to seek more fields. When we got to Ryhope Dene, we found a main leading corn; he spoke to him, but this person took no notice of him, and we walked on. At Tunstall, a man threatened to punish us if we went into the corn-fields. 'Jim' persisted in going on, and the man pursued him, but did not overtake him. I walked back towards home. When I got to the house, which was about half-past one o'clock, my little girl shouted, 'O mother, father's ill.' I went to him and found him lying on some straw; when I first saw him he was dreadfully sick, and I asked him what he had taken. He was breathing heavily, and made no reply. I was impatient to know what had happened to him, and repeated the question. As soon as he could answer for retching he said, 'I've taken arsenic.' I gave an alarm, and the neighbours went and brought two doctors. They applied the stomach pump, bathed his head with cold water, and used other means. About five o'clock he became more composed and wanted to sleep, but I would not let him, for the doctor said he would never come round again if he did; he was a dying man. I asked him to tell me what he had taken the arsenic in that none of my children might be poisoned. He said he had taken two pennyworth of dry, which he had bought at a druggist's shop above Number 5 Garth. He took some castor oil, and tried 'with his last heart's blood' to come round again, but he could not; took a fit, became insensible, and died about nine o'clock. My husband never applied to the relieving-officer here, as we did not belong to the parish, and I was afraid of being sent to Gateshead, as I knew they would not give us out-relief, but we should be put into the poorhouse, where I should have been parted from my little hairs, and I had rather starve than be parted from them.

"The jury returned a verdict of 'Died of poison, taken whilst in a state of temporary mental derangement, occasioned by want of the common necessaries of life.'

James Pemberton was a striker to the blacksmiths, which denotes the possession of muscular strength; he was 32 years of age, in the very prime of life; he was discharged from his work at Christmas last, and had only sixteen days' work from that time to his death. For several years the greatest depression has existed among the various trades carried on on the banks of the Tyne and the Wear. Capital has made no return of profit, labour has been almost valueless, and industrious men have sunk to pauperism. The years of Corn-Law dearth have been a time of heavy suffering in the seaports of Northumberland and Durham; the coal trade, the iron trade, the ship-building trade, all trades have languished, and all dependent on them have suffered, and among the rest James Pemberton. But, mark the progress of this case. "Only sixteen days' work since the commencement of the year. We pawned all our clothes and furniture, and for some weeks we have laid on nothing but a bit of straw. "We lived very poorly; I think we did not live, but only breathed." And whilst this horrible tragedy was being enacted, the nobles of England were battling for the bread-tax in the British House of Commons! "Many times the children cried for bread, and we were not able to give them any." And whilst these helpless infants, thus cried for bread, and their parent was driving on to madness and despair, parliamentary majorities were turning the lock upon the world's granaries, which a bountiful Providence has filled with his

stores! And James Pemberton, after wandering over "the country side to seek work," after hearing his children cry for bread, when he had none to give them, sank beneath the burden; despair seized him, and the broken-hearted man became a suicide. It is truly an appalling history. It is published to the world, and we are startled by it; but in many of its features it is but one of thousands of cases which to the public eye are never revealed. And this is Christian England so called; and in it there exists a law which cannot work its purpose but in proportion as it is the dispenser of sorrow and despair, and the messenger of death to many of the weakest and the poorest among us. And the great champions of this law are lords and squires, men of large wealth, of high title, of boasted ancestry; and with them there are associated some men who are high in the pursuit of trade and commerce, and some men even who claim to be ministers of religion. Do these men consider how every commandment of Heaven is violated by the Corn Law, and how every right of their fellow-men is outraged by it? Do the magnates of our land ever think for a moment of the end of the path they are treading? Has history no instruction for them on her pages, and in the signs of the times can they discern no promise of the future? The hunger scourge which drove James Pemberton to death is guiding the torch of the Suffolk peasant. Reason flies the helm when there is no shelter from the pitiless pelting of the storm; and thoughts, dark and wild, take possession of the heart which, in other days, has been warmed with virtue and filled with generous and kindly sympathies. A Scotch weaver—Thoms, the poet of Inverury—recently describing the state of mind which, in his own person, destitution and the sight of his starving family engendered, eloquently says:—

"I felt myself, as it were, shut out from mankind—enclosed—prisoned in misery—no outlook—none! My miserable wife and little ones, who alone cared for me—what would I not have done for their sakes at that hour! Here let me speak out—and be heard, too, while I tell it—that the world does not at all times know how unsafely it sits—when Despair has loosed Honour's last hold upon the heart—when transcendent wretchedness lays weeping Reason in the dust—when every unsympathising onlooker is deemed an enemy—who *rien* can limit the consequences? For my own part, I confess that, ever since that dreadful night, I can never hear of an extraordinary criminal, without the wish to pierce through the more judicial view of his career; under which, I am persuaded, there would often be found to exist an unguessed impulse—a chain, with one end fixed in Nature's holiest ground, that drew him on to his destiny."

"The world does not at all times know how unsafely it sits." This is true; and it is a happy thing that safety and injustice cannot exist together. There is a feeling now spreading in our country that we do sit "unsafely," people have a consciousness that there is somewhat of a volcanic action going on; even the haughty and the indolent, the noble and the mighty, think it worth while to inquire a little about it; and it may be that out of this uneasiness, if from no higher motive, something like justice may be obtained. The selfishness which is the essence of the Corn Law is not a cement which will bind a nation firmly together. The system of government under which men are driven to self-murder by the pressure of a famine made by law, can hardly be passed off as perfect. The sorrows of many victims call loudly for retribution, and in the day of reckoning the broken heart of James Pemberton will form a heavy item in the account.

DESCRIPTIONS OF REMARKABLE FARMS.

By ADAM BROWN.

No. III.—Mr. Mechi, of Leadenhall-street, on his Estate; and Captain Rous, of Westminster, and Earl Stradbroke, on their Estates.

In resuming my letters on "Remarkable Farms," I must continue my notice of Mr. Mechi's farm at Tiptree-hall, in Essex. It is not only remarkable as evincing a comprehensive practical knowledge of agriculture on the part of a man who has been all his life in trade, but it is remarkable and valuable as a lesson to those who have been all their lives engaged in agriculture; and especially those who are keeping up a continual outcry that the Free-Trade agitation has prevented the application of capital to land.

In the first place, let us see what Mr. Mechi's tenant is going to *save* and *gain* by having engaged, which he has done, to pay in yearly rent the sum of £210 for the 140 acres over and above the rent which he paid for the same 140 acres before Mr. Mechi became his landlord. I should like Lord Stradbroke, and his sporting relative, Captain Rous, M.P. for Westminster, who have been lately talking at a public meeting of an "extensive scheme of emigration," as the best means of relieving the superabundant population of their ill-cultivated estates in Suffolk, to read this. But perhaps the electors of Westminster will profit more by reading such instructive matter than their extraparlimentary tea captain. And that the electors of Westminster may be the better able to judge of their member, let me direct those of them who go near the family estates in Suffolk and Norfolk, to observe how completely opposed is the cultivation there to the order

and economy pointed out by Mr. Mechi. And be it remembered that Lord Stradbroke has within these ten days been excusing the lowness of wages paid on his estate, and small number of persons employed, by saying that the large importations of foreign corn in 1842 unsettled agriculture and brought down prices. He who keeps game on every farm, destroying as much farm produce to the farmers as ten millions of quarters of wheat would be to the whole kingdom (and this is a moderate computation),—he who has all his farms overgrown with large wasteful hedges and bushes for the protection of game, covering and wasting ground, to say the least, at the rate of seven acres to each hundred, which are measured to the tenants, and for which they have to pay rent,—he who keeps game in such abundance that the very farmers are obliged to get the eggs of pheasants, and many of the leverets, destroyed secretly to be able to raise crops at all,—he who keeps game with such tenacity and resolution that the very gamekeepers cannot survive that secret destruction of it which they cannot prevent,—he who keeps about him a feeble tenantry in the thrall of yearly occupancy, and who cannot, if they were willing, employ more people and pay higher wages while holding such farms, upon such a tenure, under such a landlord:—he opens his mouth amongst those who dare not contradict him, and says the importation of 2,000,000 quarters of wheat have brought down the markets so far that farmers cannot employ so many labourers as they used to do.

He says this while he knows that over all his estate, when the quarter loaf was 10d. and 11d., three, four, and five years ago, wages were at the very utmost only 1s. a week more to an able-bodied man than now, when the same loaf is 6d. and 6½d. And to the greater number of men wages were no higher in those years than now. And while Lord Stradbroke talks thus, his relation, the representative of the trading city of Westminster, talks of getting rid of the extra population on the Suffolk estates by a comprehensive scheme of emigration; in other words, compulsory transportation. They want to get rid of those labourers whom such improvers as Mr. Mechi would employ. And they pretend that they cannot keep up their usual amount of employment on their fertile estates because of the importation of corn under the sliding scale; while under the same sliding scale the farmer at Tiptree-hall greatly increases the number of his labourers on a soil that is not naturally fertile. Observe how he employs his labourers and gets his profits:—

"STATEMENT OF GAIN OR SAVING."

	s.	d.
200 trees removed—estimated to damage by their roots and by their shade, 1s. each	10	0
950 linear rods (5½ yards each) of removed banks and fences (ditches filled up), averaging two yards wide—some were four yards wide, but the difference is set off against a few new ditches.	10	0
It is estimated that each rod of those fences and banks damaged 6d. by their roots, their shade, their encouragement of weeds and vermin	21	5
1-6th saved in horse labour and wear. (This, in the <i>Price Essay of the Royal Agricultural Society's Journal</i> , vol. iv., part 2, p. 336, is estimated at 1-4th)	21	0
1-8th ditto in manual labour	20	0
Seven acres gained in fences, banks, ditches, bog, and waste, which produced nothing, but cost the tenant, rent, rates, tithes, &c., 36s. per acre	12	12
Profit in cultivation of the above seven acres at 15s. per acre	5	5
105 quarters of wheat, threshed by machine, gain in quantity 1-28th, or 2s. per quarter	10	10
150 ditto spring corn, at 1s.	7	10
Saving in thatching, removing stacks and straw, waste by birds, &c.	5	0
Liquid manure tank, calculated to contain 120,000 gallons, but we only reckon upon 20,000 gallons, at 50s. per thousand (each 1000 gallons being equal to 4 cwt. guano)	50	0
Improved quality of solid manure	10	0
Increased value of stock, by warmth, dryness, and diminished consumption of food	15	0
General increase on 90 acres of corn and clover crops, arising from perfect drainage, at £1 per acre	90	0
Saving in quantity of seed sown	20	0
Twenty acres that used to be long-fallowed, at an expense of £5 per acre, now calculated to pay their expenses, if got a profit, by bean or root crops	100	0
A first-rate house to live in, with every comfort and convenience—the lower rooms eleven feet high, the bed-rooms ten feet high, and convenient rooms for the bullif. (The tenant could not reside in the old dilapidated hovel, which was damp, unhealthy, and caused several deaths by fever)	30	0
	£498	2

"To sum up; whereas the former gross annual return of the farm was under £5 per acre, we shall try to increase it to £10 per acre."

This is what a man of trade does to make his farm fruitful and profitable; while my Lord Stradbroke, and Captain Rous of Westminster, both men of law-making, expect their land to be profitable by act of Parliament. But Mr. Mechi calculates his profit from additional sources, which cannot be so well set down in figures. He says:—

"1st. The being able to fat at least 100 to 150 sheep more than before, of a better quality, and earlier lamb. The tenant could breed, but never thoroughly fatten a lamb or sheep on the farm in its former cold, wet, and exposed state, with its homestead open to the cutting north-east winds, without gutters or drainage.

"2nd. The facility of cooking and steaming food, and the economy of several acres that were required for horse-food, by growing lucerne, tares, &c.

"3rd. The very important benefit of early sowing and harvesting. We reckon we shall gain at least a fortnight in both, as proved last year, with superiority of sample, and avoidance of a catchy week in September.

"4th. A perfect independence (by our efficient drainage) of a very wet season, which has often ruined the crops on this farm. Witness 1842, when the oats yielded but three quarters two bushels per acre, and an inferior sample.

"Lastly. The agreeable feeling of having a complete farm

with good roads, comfortable homestead, and good crops, instead of the former dilapidated, beggarly, and poverty-stricken land and premises.

"The saving of horse and manual labour is considerably underrated, when you consider the ready communication with each part of the farm, the abolition of all short lands, the facility of ploughing or carting at almost any time with less power, the land being firm and mellow, instead of putty-and-paste-like; no idle days in wet or cold weather, there being employment under cover for men and horses, grinding, chaff-cutting, or threshing; the facility, at harvest, of drawing the loaded carts into the bays of our large barn, and at once depositing the sheaves; the ease with which they are transferred from both barn and stacks to the threshing-machine, the straw being delivered by the machine into a gallery over the very sheds, yards, and stables, where it is required; no time lost, or accidents, in leading horses or cattle to water, there being tanks in every yard, and a yard to every stable—all the tanks filled simultaneously from a single pump."

"There is another advantage of which no valuation is taken—I mean the farmer or bailiff's time; whilst writing up his accounts, or arranging his plans, by stepping from one room to the other, he can at once see every man, boy, horse, or sheep, on any part of the farm, except about four acres. Any accident, mistake, neglect, maltreatment, or pilfering, is perceptible at a glance."

Lord Stradbroke speaks of the insecurity that arises to land from the agitation for Free Trade, and the evils that result from *insecurity*. Does he suppose that any tenant of his could, supposing him to have the requisite capital and the requisite knowledge, venture on any of those expensive, yet profitable, alterations mentioned here? What security have any of his tenants, who are told that if they do not like to have their turnips and clover eaten up with hares they may leave their farms and go elsewhere, they knowing well that they cannot get farms elsewhere, but by a ruinous competition for them, with fifty persons seeking each farm? Does his lordship think that the labourers on his farms ever can be well employed and well paid with tenants who lose a fifth part of their crops by game, and a tenth part by the timber and foulness that shelter the game; while, if they are themselves known to kill game—that which they feed on their own farms, at their own expense—they are prosecuted and dismissed from their farms?

"Insecurity," indeed! His lordship and Captain Rous are just the last men in England, of the landlord class, who should speak of insecurity to farmers, unless they have determined to put their tenantry on a very different footing from what they now stand on.

The captain sometimes indulges in jokes and puns in Parliament. There is a pun which is a standard on and around his family estate. It is, that when a farmer is ordered about his business, and told to seek a farm elsewhere, he is "*Rous'd* out."

AN INQUIRY INTO THE EFFECTS OF ENGLISH LEGISLATION UPON AGRICULTURAL WAGES, PROFITS, AND RENT.

By A BARRISTER.

(Continued from page 836.)

"Do you find tea do better for them than other things?—Not so well as water gruel."

"Do not you find it answer to keep a pig, having a garden?—I could not afford to buy one."

"If you had been able to afford to buy one, you think it would have answered?—Yes, it would have answered if I could have bought one and kept it."

"Have the poor felt any benefit from getting salt cheaper?—That is a great encumbrance to us, we cannot do without it."

"Do you find you get it cheaper than you used?—Yes."

"Does it make much difference in your expense?—It makes a trifle."

"A man is able to salt a pig now that could not salt one before?—If he has got one it would come a good deal easier with the salt."

"Have you any idea what your clothes for yourself and your family have cost you in a year?—My shoes cost about 15s. a year, for a pair of strong shoes to go to work in, and the rest of my family makes it another £1. I dare say it stands me in £2 for shoe bills."

"Have not you sometimes known a farmer get his labour cheaper than he ought?—They give them 4d. a day when it is paid out of the round."

"Then the farmer gets a benefit by that?—Yes; the tradespeople help to pay it."

"Do you know any labourers with so large a family as you have, who have brought them up without assistance from the parish?—Never one but me."

"Do you not find tea much dearer than gruel for your children?—A good deal; but they are sickly sometimes, and they cannot have gruel always."

"What is the greatest number of children you have had alive at one time?—Eleven."

"Do you cut down much timber?—I do sometimes."

"Upon those occasions you have a right always to as large a fagot as you can carry home?—No; they will not allow us any now."

"Then you have it in pay, do not you?—No."—*Minutes of Evidence*, pp. 53–56.

In the nine years, 1815–1823, during which period the average price of wheat was 69s. 2d., the agricultural labourers had sunk to the condition of paupers. They did all that men could do to escape from the degradation, but it was of no avail against the combination of their employers, which the law of 1796 authorized. It was established beyond question before the parliamentary committee of 1824, that the employers of labour—landholders and farmers—combined, not in individual parishes but generally, to compel the small freeholders and copy-

holders to sell their holdings and become paupers. This effect of the Corn Law to make food dear, and of the poor law of 1796 to give the power of fixing the rate of wages at the pleasure of the employers, has been particularly noticed by continental writers. They view the disconnection of the labourers with a property in the soil as pregnant with danger. The class of small proprietors, whether freeholders or copyholders, the race of the "bold yeomen,"—whose stake in the country, small though it was, had formed that country's best security in many a trying scene of political convulsion,—is now almost extinct. The poor law and the Corn Law have here done their work effectually; and though, undoubtedly, they have made the rich richer, and the poor poorer, the rich might do well to consider whether it might not be better, upon a cool calculation, and a long-sighted view of all the circumstances and chances of the case, to have moderate wealth in the midst of a population such as England's former yeomen, or small proprietors, than to have immoderate wealth amid a population, poor, hungry, and reckless, such as England's peasantry now, or France's fifty years ago.*

The process of converting persons possessed of a little property into paupers has been very distinctly stated by the Rev. Henry Walter.

"In December, 1822, on going to the parish of which I am rector, Haselbury Brian, in the county of Dorset, I found that some of the best workmen in the parish, who happened to be cottagers possessing land, property in gardens, and so on, had not been employed since September nearly; they were not employed in consequence of the arrangement made by the overseers for paying wages of persons employed on farms out of the poor rates; they told me they had had no quarrel with their employers, their employers were ready to give them good characters, but said, we cannot take you, since we can get others for nothing. I said, Do they hold out any hope to you of being employed soon? They said, No, they cannot employ us, for we cannot be put upon the poor's books; persons having property cannot; we must therefore wait till we are ruined."—*Minutes of Evidence*, p. 43.

There was much evidence to the same effect collected by the Poor Law Commissioners of Inquiry.†

Lister Ellis, Esq., who had resided both in the manufacturing and agricultural parts of England, and had been conversant with the management of the poor in both those districts, in his examination before the select committee of the House of Commons on the poor laws in 1828, stated, in reference to the wages and diet of agricultural labourers in the neighbourhood of Carlisle:—

"I paid no more, for several years, than 9s. a week, when I had ten ploughmen. The only perquisite they had was the use of a horse and cart to take for their coals, for which they paid, as well as all expenses on the road.

"Are not the habits of the working classes, in that particular district, such as to make them content with very humble diet?—Yes, very.

"What is the diet?—It is a mixture of oatmeal and barleymeal, made into bread, and potatoes; the salted trimmings of bacon (it is an extensive market for bacon), that is, the parings, the dressing; and they have no fresh meat, except on very rare occasions.

"Not wheaten but oaten bread?—Rarely ever wheaten bread."—*Minutes of Evidence*, p. 52.

The same witness stated it as the result of his experience in the manufacturing districts, that the price of manufacturing labour is never at all influenced by the price of food, further than that as the price of grain advanced, the price of weaving fell.—*Ibid.*, p. 51.

The evidence of Henry Drummond, Esq., cited above,—to the effect, that the general condition of the agricultural labourers had deteriorated,—is corroborated by the following evidence of Thomas Law Hodges, Esq., M.P., given before the Select Committee of the House of Lords, on the poor laws, in December, 1830:—

"Is any allowance paid in aid of wages in the parish?—Oh yes, in all the parishes, and must be so; that is the great grievance of the present time, that the wages that a man earns cannot by possibility keep his family, if that family exceeds three children.

"Twelve years ago, was there any considerable portion of your parish out of employment?—I have no doubt of it, but I cannot state the proportion; it has been so, I think, very nearly since the peace.

"Did the system of giving parish allowances in aid of wages exist at that time?—It has existed ever since the year 1797 or 1798, when corn rose to £30 or £40 a load; previous to that time, from the year 1783, which is the earliest time that I recollect the parish, to 1793 or 1794, or, perhaps, 1795, very little variation took place in the condition of the labourers. The labourers at that time were

universally, without any exception, able to maintain themselves by the wages they received; and that can be proved by many witnesses as old as myself, and by reference to the poor rates at that time; the poor rates were such a mere trifle, that it is quite clear no part of the wages of the labourers could have been taken from that fund during that period.

"Are you aware what the average price of wheat was at that period?—No, I cannot tell.

"Was it much dearer at that time, or at all dearer, than it is at the present moment?—I think it was cheaper.

"Can you state what was the rate of wages at that time?—Less than now, considerably. I think in my parish there were three periods of the year, and they were paid, according to those periods, 1s. a day, 1s. 3d. a day, and 1s. 6d. a day; 1s. 6d. a day was the highest, and notwithstanding that, there was scarcely an instance of any man ever going directly to the poor's rate; but in the event of a very large family, seven, or eight, or nine children, they had a few peas or a little barley given them about Christmas time, to fatten a pig; a little assistance might have been given towards the rent, but that could have been but trifling, the amount of the rate was so small.

"Is the disproportion between the rate of wages now and the price of wheat greater than it was at the period to which you have just alluded?—I cannot say; but, whatever that proportion may be, it will not show of itself the relative condition of the labourer, for the money went so much further at the former period than it does now.

"In what respect does it go further?—The taxation of the country was so much less. Money then bought more goods than it will now.

"What particular articles were bought at a cheaper rate then than they are at present?—Malt, candles, soap, and articles of ordinary consumption; tea, I remember, they never drank at all; I never saw a teapot in any man's cottage at that time.

"Do they drink tea now?—Universally.

"What is the price of the tea they drink?—I cannot say.

"Did they brew at that time?—Every labourer who kept house brewed then.

"Has the use of coffee been introduced among the labourers?—Not generally.

"Is that superseding the use of tea amongst them?—Not in that district.

"Was not the clothing* of that day much stronger, and did it not go much further than that of the present day?—Decidedly."—*Minutes of Evidence before Committee of Lords* (1830 and 1831), pp. 21, 22.

Mr. Richard Holloway, overseer of the parish of Shipley, near Horsham, in the Weald of Sussex, being asked,

"Upon what do your labourers live principally?" replied, "They live very hard; they have had nothing now but bread for some time past." And again, being asked if the labourers lived as well then as they did ten or fifteen years ago, replied:—"No, they do not live so well."

"Does your answer apply generally to all descriptions of labourers?—They are not so well off, any of them, as they used to be.

"Do you mean to say that a man receiving 10s. a week is not as well off as he was fifteen years ago, when he received 12s.?—No. I can say that they are not so well off by some means as they were at that time of day; they do not get so much meat."—*Minutes of Evidence before Committee of Lords* (1830 and 1831), pp. 34-37.

Richard Pollen, Esq., Chairman of the Quarter Sessions of Hampshire, and a landholder in North Wiltshire, was asked:—

"Upon the whole, are the wages of labourers employed by farmers very much decreased within the last ten years?—Yes. I should think so." The witness being asked whether the reduction in the price of the necessities of life during these ten years has been equal to the reduction in the price of labour, gave it as his opinion that upon the whole, the labourer then was worse off than he was ten years before."—*Minutes of Evidence before Committee of Lords* (1830 and 1831), pp. 53, 54.

Mr. Robert Chick was asked:—

"What are the rents of cottages in that neighbourhood? (Mitcham, Surrey).—Rather high for small cottages; the rents have been doubled within forty years. I was born where I live now. They were £5 a year, and were raised to £10.

"Do you suppose that the poor are in a worse situation as to their comforts now than they were when the rate of wages was much higher?—They never were so badly off as they are now.

"You think that the necessities of life have not fallen in price in proportion to the wages?—By no means; they used to have 10s. or 12s. a week upon the roads, and it is reduced to nothing almost now (1824).

"Supposing you or any other individual in the parish had to employ able-bodied men to perform work for you, is there any great difference in the wages of such a person during the last ten years? I should pay 2s. 6d. per day, and 3s. for labour.

"What did they ask for that ten years ago?—I do not think they asked much more ten years ago than they do now.

"Then your observation with respect to the decrease of the value of labour compared to the decrease in the price of provisions applies only to those persons who are employed by the parish upon the roads?—It is decreased in

this kind of way:—formerly masters used to keep men a number of years, probably till they died; but now, directly they got a little slack in work, they say, 'We have no employment for you,' and send them to the parish.

"Are the wages of those men who are kept decreased?—I do not think they are, a great many of them."—*Minutes of Evidence before Committee of Lords* (1830 and 1831), pp. 57, 58.

The Rev. James Beard, J.P., of Cranfield, in the county of Bedford, was asked:—

"How do you account for there being more out of employment now than when you first became acquainted with the parish?—The farmers are poorer.

"Yet you say the lands are equally well cultivated?—Yes.

"Are there any arable lands thrown out of cultivation?—No: the truth is, there is a great deal more labour got for the money.

"The poor people work cheaper?—Yes: the poor people work cheaper—a great deal cheaper—the competition of labour is so great.

"Have you formed any opinion whether there has been a proportionate diminution in the price of articles supplied to the poor?—I think there has in my neighbourhood.

"Then they are equally well off, in your opinion, with the low wages as with high?—Oh dear, no.

"If there has been a proportionate diminution in the price of articles which the poor require to that in the wages of labour, how do you account for their not being in the same state?—One great cause is, that the lace trade was an exceedingly good one; and now a woman must work very hard to get a halfpenny an hour—sixpence a day.

"You say there has been no land thrown out of cultivation that you are aware of in this parish?—None that I am aware of.

"Are there any other reasons for the labourers being worse off now than when the wages were higher and provisions dearer?—Formerly the labourer could get employment, now he cannot at any price.

"Have you any means of collecting from the farmers whether, considering the present price of produce, they should be able to continue these payments which you say is so good-naturedly proposed by them?—They, in a body, told me that they could not; and my answer to them was this:—'Then, as the labourers have come to me in a body,' as they had ninety in a body at my house, 'you must go in a body to your landlords.'

"Have cottage rents fallen in proportion to the fall in the other necessities of the labourer?—Decidedly not; and nothing oppresses the labourer more than the present price of cottage rents.

"From what cause do you suppose cottage rents have not fallen in proportion to the other payments of the labourers?—That as population has increased, the cottages have not increased in number so much, and therefore there has been a demand for them, and consequently the rent is almost the least rent which a labourer can get a cottage for."—*Minutes of Evidence before Committee of Lords* (1830 and 1831), p. 10.

The Rev. George Wells, of Weston, Sussex, was asked:—

"Have you been long resident in the parish of which you are the clergyman?—Thirty years.

"Have you, during the whole of that time, had opportunities of inquiring into the mode of living and the condition of the poor?—It has passed under my observation.

"Has it appeared to you that, of late years, there has been any material difference in their mode of living?—I think there has been a deterioration of their condition, generally speaking; how far they have altered their diet I hardly know; I am afraid that is the last thing they will alter.

"In your opinion has their diet become more refined than it was?—No, I think it has not; the people of Sussex have always lived on a superior diet to those of the western and northern counties.

"Do you recollect what the wages were in former years?—The wages, during the high prices occasioned by the war, were 15s. a week for best labourers in the summer.

"What in the winter?—12s.

"Did the price of wages at that period bear the same relation to the price of provisions in the high times as it does at the present moment?—That would require a calculation into which I have not entered; but the price paid must have borne a greater proportion to the rate of wages at that period certainly.

"Is it your opinion that a labourer during the war when corn was selling at a high price was in a better or worse condition than he is at present?—I think he was in a better condition than he is at present.

"Though he paid so much more for his food?—Yes.

"There were means for the wives and children obtaining something?—Yes; every one capable of gaining something was in the way of doing it.

"Where a good labourer is paid the regular price for his wages, and is in full work, is he not now as well off as ever he was?—I conceive that the individual labourer is."—*Minutes of Evidence before Committee of Lords* (1830 and 1831), pp. 113, 114.

Even in Lincolnshire, where, upon the whole, the agricultural labourer is probably better off as to food and lodging than in any other county in England, there is evidence of a deterioration in his condition. The Rev.

* In his examination before the Lords' Committee on the Poor Laws, in 1831, Earl Stanhope being asked,—"Does your lordship mean to say that the landowners ought to be bound to employ him (the labourer)?"—replied,—"I think they certainly ought, when those labourers have not, by allotments of land, or in other modes, other sources of support; and I would here observe, that in several, if not in all of the states of Germany, the labourers are copyholders, and derive great advantage from the occupation of land, which, however, in some states is heavily burdened by direct taxes, land-tax, and others; but that such are the advantages which they receive, that in those countries poor's rates do not exist; and as far as my experience, which is very considerable, extends, I am fully convinced that the labourers in those countries live in much greater comfort than they do in this."—*Minutes of Evidence*, p. 215.

† See some of this evidence, cited at pp. 78, 79, 80, of their Report, 8vo. edit.

coudly, upon the assumption of a rate of wages much higher than the general average, and of a great fall in the prices of clothes and other necessities; whereas the price of some of the labourers' most important necessities, such as shoes, coats, house-rent, &c., has risen greatly instead of falling. Certainly, considering the rate of wages and the price of corn about the time of which Mr. Becher speaks, or rather a little later, it is difficult to account for the answers of the witnesses which we are about to quote presently, without taking into account the much higher price of some of the prime necessities of life above referred to. We subjoin in this place the table to which we have referred, with the authorities from which it has been drawn up:—

Year.	Wheat per quarter.	Summer wages, per week, not including haytime and harvest.	
		In money.	In wheat.
1495	6 3d (a)	2 0 (b)	163 pints.
1514	8 8 (c)	2 0 (d)	118 "
1545	18 8 (e)	2 6 (f)	68 "
1593	20 0 (g)	2 6 (h)	64 "
1610	34 1 (i)	3 6 (j)	52 "
1725	35 4 (k)	5 0 (l)	72 "
1750	29 2 1/2 (m)	7 0 (n)	122 "
1763	33 1 1/2 (o)	7 0 (p)	108 "
1770	41 4 (q)	7 4 1/2 (r)	92 "
1792-4	46 9 (s)	8 5 1/2 (t)	94 "
1824	64 0	8 7 (u)	68 "
1832-3	55 9 1/2	11 5 (v)	104 "

(To be continued).

NORTH LANCASHIRE ELECTION.

This election took place on Friday, the 20th inst., at the Town-hall, Lancaster. There was very little political excitement or exhibition of party feeling. The proceedings commenced a few minutes after ten o'clock with the usual preliminaries, and a short address from the High Sheriff.

Mr. TOWNLEY PARKER proposed, and Mr. C. SWAINSON, of Preston, seconded, the nomination of Mr. John Talbot Clifton.

The SHERIFF then asked if any other freeholder had a candidate to propose?

Mr. LIVESLEY, proprietor of the *Preston Guardian*, amidst much interruption, proceeded to address the electors. After stating that it was his intention to propose another candidate, and expressing the respect he felt for Mr. Clifton, he went on to say that he had a strong feeling in favour of agriculture as one of the great interests of the country, and he was anxious to promote its prosperity; but he was opposed to the principle of protection. He was a Free-Trader, and he took that opportunity of asserting that the principles of Free Trade had progressed more rapidly since Sir R. Peel came into office than they had during the ten previous years. "What," said Mr. Livesley, "is the meaning of protection? It has been proclaimed to be necessary at 'protection meetings' a thousand times, but never defined. I will tell you simply what it means: although it may be brought about either by a sliding scale or a fixed duty, it means keeping up the price of food higher than it would be if the trade in corn were left perfectly free. (No.) If not, why pass a law to keep out foreign food? 'No,' say gentlemen. It is the first time I have heard this denied. There is not a gentleman here who can say that that is not the object of protection to agriculture. It is to prevent foreign food coming into this country and to lessen the supply. (No, no.) No doubt gentlemen mean to say it is for the protection of agriculture, and for the increase of the home supplies. (Hear.) If that had been its working I should not have been here to-day to quarrel with it. Have twenty-nine years' experience of that law of protection proved to you that protection has created improvements in agriculture? (Yes.) It is either the certainty of the approach or the fear of Free Trade which has done more within the last few years than all your 'protection' for the improvement of agriculture." Protection neither improved agriculture nor the condition of the labourer, nor saved the country from those frightful depressions of trade from which, owing to two abundant harvests, it was now recovering. "Protection," he said, "is put forward as a cry on behalf of the farmer and the agricultural labourer. They are always put forward as if there were an eternal sympathy for them; but the truth is—and it ought to come out—that the protection is not for the farmer or the labourer, but for the landlord. It is a protection for rents. Farmers are only middle-men; whatever they receive goes eventually to the owner of the land. You have heard many speeches about protection, but you have never yet been told the plain truth, that it means protection for rents." The farmers were injured by protection; for, during the last twenty-nine years, theirs was worse than almost any other business. Many of them had spent all their property to pay their rents, and a vast proportion were no better off now than they were thirty years ago. He wanted agriculture, like trade, to stand on its own merits; and that landlords should, instead of de-

pending on "legislative protection," depend on their own enterprise, stay at home and improve their estates. Mr. Livesley concluded by proposing Sir Thomas Potter, of Buile-hill, Pendleton.

Mr. Alderman Brooks stepped forward to second the nomination; but on learning that he could ask questions of the candidate as an elector without seconding Sir Thomas Potter, the latter candidate was withdrawn, and the High Sheriff declared Mr. Talbot Clifton duly elected amidst the cheers of his supporters.

Mr. CLIFTON then came forward to return thanks. This was the proudest moment of his life. He had come forward at the request of a most numerous signed requisition—signed by the holders of land, and by men of all religions. He had already stated some of his peculiar political opinions in his address. He would support a Conservative Government, as long as it continued Conservative. That Government had supported Free Trade as far as it ought to go; it had maintained the revenues of the country; and, from the fact that trade was never so prosperous, it ought to receive the support of the commerce of England. He did not come to give pledges or promises; and if he did not maintain that independence which befitted the character of an English gentleman, he should be unworthy to represent one of the finest counties in England. He did not pledge himself to support any man or measure, but a Conservative Government that would maintain the constitution. (Much cheering, and a cry of "Give him time to read it," in reference to some notes at which the hon. gentleman was glancing during the applause.) Gentlemen, I will not have the impertinence to detain you so long as some people have here (loud hisses, met by cheers); they, at all events (renewed hisses)—they, at all events, in considering your mighty interests, have not given a thought to your precious time. (Ironical laughter, "Ay, ay," from Mr. Brooks, and another voice calling "Spake up.") Mr. Clifton then proceeded to notice some of Mr. Livesley's statements, and contended, in opposition to that gentleman, that in the Book of Common Prayer the words "cheapness and plenty" nowhere occurred: the words were "peace and plenty." He agreed with his seconder that the principles of Free Trade could not now be beneficially carried out; they could have no hope of such principles prevailing while England admitted foreign commerce, while foreigners would not admit hers into their ports. He also thought Free Trade would injure agriculture. He was not an advocate for withdrawing protection from it. "All the interests of the state ought to be protected, and agriculture most particularly so. (Cheers, and "no, no," from Mr. Brooks.) I am an advocate for eating our own corn, entirely independent of foreign markets. (Hear.) Only suppose we were dependent on foreign countries for corn, and we had a war, with all our land out of tillage, where should we be able to get food for ourselves?" (Hear.) (After this astounding supposition, which must have mightily terrified such of his hearers as could even imagine it, the hon. member proceeded to cheer their affrighted minds, like another *Herakles*, by proclaiming—"The death of the League." This portion of his speech is so rich a specimen of monopolist-senatorial eloquence that we give it unabridged, dressed up by the skilful pen of a *Times* reporter):—"Well, gentlemen, I perfectly believe that I am going to tell you a gratifying, and I am sure you will think it a happy fact. I believe, gentlemen, that the power of the League is upon the decay. (Cheers, and cries of 'No, no, no,') Where is their boast that they would contest every vacancy in Parliament? (Hear, hear.) I will tell you why they have not. They had no money (cheers)—and a very good reason why. (Renewed cheers.) I will tell you why they have no money—it is because you have all your eyes so open that you will not subscribe to them (great cheers); for you are perfectly aware, at this time, that the cry for cheap bread is only another cry for low wages (hear, hear); and which of you would like low wages? Where would be the advantage of the change if you could not get anything to eat? (Loud applause.) One thing more. To touch upon the subject of religion is, I allow, very delicate; but I may say, gentlemen, that I am a supporter of the Established Church of England; and yet I am an advocate for religious freedom. (Loud cheers.) I quarrel with no man for worshipping God according to his conscientious convictions. (Cheers.) And now, gentlemen, I take my leave of you. I thank you for the kind consideration and attention in listening to me; and I hope that though this is the first day I have been here it will not be the last. (Hear.) I tell you so now, and believe me when I say it shall not be the last, if I live. (Cheers.) For the first time in my life in the character of a representative of this great and mighty county, I take my leave of you." (The hon. gentleman then retired amidst much applause.)

Mr. Alderman Brooks then came forward amidst a storm of uproar from Mr. Clifton's supporters. After repeated interruptions,

The High Sheriff said: I must insist upon it that you give Mr. Brooks a patient hearing. He is a freeholder of the county, and has a right to put any questions he pleases to the new member. (Cheers.)

Mr. Brooks said he did not wish to stand there under false colours, and therefore he was much obliged to Mr. Parker for one observation, which afforded him an opportunity for a reply. Mr. Parker thought that he (Mr. Brooks) was a speculator. He was no such thing. He was a merchant and a manufacturer; and he paid in wages every fortnight no less a sum than between £1700 and £1800, a sufficient proof, he thought, to the public that he did not come within the description.

Mr. T. PARKER explained that he had made no application of the expression to Mr. Brooks.

Mr. Brooks was very glad of it; and he would now ask his first question from the candidate. In his address Mr. Talbot Clifton said, "For the agriculturist I desire most undoubtedly to secure that full protection to his capital, his industry, and his enterprise to which the burden he has to sustain justly entitles him." Now, he wished to know what protection Mr. Clifton would give to agriculture?

Mr. CLIFTON: Protection, by not allowing the duty to be taken off foreign corn. That is what I mean, Sir. (Cheers, and some hisses.)

Mr. Brooks: Show me that they require that protection. (Cries of "No, no.")

Mr. CLIFTON: I am here, Sir, to answer you any questions that you wish to put; but I am not here to be catechized just as long as you please. (Cries of "Bravo," and some cheers.)

Mr. Brooks said he was very sorry to put any question that might be considered unpleasant. Mr. Clifton, in his

address, had spoken of the burdens upon agriculture, but he had not enumerated them, and he (Mr. Brooks) did not understand them.

Mr. CLIFTON: If you cannot understand them, allow me to tell you that I think the fault is rather more in the dulness of your comprehension than in anything else.

Mr. Brooks: You may think so; but I never yet could find them out, and the Government cannot find out what those peculiar burdens are. Sir Robert Peel, in 1841, upon the hustings at Tamworth, stated they had poor-rates and church-rates.

Mr. CLIFTON: Put your question in a tangible shape, and I will endeavour to answer it. (Hear, hear.)

Mr. Brooks: My question is, what burdens are they which the agriculturist has to sustain? You say, "the burdens he has to sustain," and that is no explanation.

Mr. CLIFTON: I do not say so alone. I am afraid the difficulty is in your own dull comprehension. (Cheers.)

Mr. Brooks: I am here to ask this question; and as there are perhaps many here who may be as dull as myself about it, we wish to have it explained.

Mr. CLIFTON: If you will put your question in a tangible shape I shall be glad to answer it. What is the question?

Mr. Brooks: Why, what are the burdens on the agriculturists?

Mr. CLIFTON: Why, tithes, poor-rates, and a great many others, which it would take me too long to enumerate. (Cheers.)

Mr. Brooks said he thought just the reverse of this; they were not peculiar burdens, inasmuch as tradespeople paid them equally with the other parts of the country.

Mr. CLIFTON: Mr. Brooks, has not every man a right to his own opinions upon that subject? I believe what I have stated—you do not; and here we rest.

Mr. Brooks: Yes. That is what you intend to rest upon, and they are your opinions. If I should prove—

Mr. CLIFTON: Oh, none of your ifs, if you please.

Mr. Brooks: Well, I will not put an "if" to it. Do you think these burdens should be taken off agriculture?

Mr. CLIFTON: That is a matter which would lead to a long discussion and inquiry in Parliament—the particular burdens.

Mr. Brooks: But are you willing to take off those burdens?

Mr. CLIFTON: I am not here to answer that.

Mr. Brooks: In another part of your address you say, "Not less important than the above, to which I have already alluded as demanding the care of your representative, I feel to be the welfare of the poor. I should consider myself bound to regard them equally with their wealthier neighbours." Will you be kind enough to tell me what you would do for the poor?

Mr. CLIFTON: What I can do for them is not the question; but every measure that comes before Parliament respecting the poor shall receive my fullest attention.

Mr. Brooks said, his next question related to sugar. Sugar was brought here worth 1 1/2d. or 2d. per lb. The duty upon it was 4d. per lb., thus increasing the price 200 per cent. Did Mr. Clifton think this duty too high, or would he attempt to reduce it?

Mr. CLIFTON: Why, you are indirectly asking me to pledge myself, which I will not; certainly not. (Cheers.)

Mr. Brooks: Nay, I am not. I do not want to pledge you.

Mr. CLIFTON: Yes; you are asking me what I will do when I go into Parliament.

Mr. Brooks: Well, I do not think that is too much which I have asked of you.

Mr. CLIFTON: I feel myself at liberty to decline answering that question. (Hear.)

Mr. Brooks: Very well; we shall see what you will do when you get into Parliament.

Mr. CLIFTON: Yes; you must wait till then.

Mr. Brooks then retired; and three cheers were given for Mr. Clifton.

Mr. T. B. CROSS, after congratulating the county upon there having been no opposition, proposed the thanks of the assembled freeholders to the High Sheriff for his able and perfectly impartial conduct as president of the meeting. (Cheers.)

Mr. LIVESLEY seconded the motion; and it was carried enthusiastically, followed by three cheers for the new member.

The High Sheriff returned thanks.

Cheers were then given for the mover and seconder, for Mr. Wilson Patten, and three for Mr. Livesley; after which the proceedings terminated, having occupied about two hours and a half.

The usual procession and ceremony of chairing took place in the course of the afternoon, and Mr. Clifton afterwards dined with a large party of his supporters at the King's Arms Hotel.

PUBLIC PARKS IN MANCHESTER.

The subscription towards this laudable object is progressing favourably. The Phoenix Fire-office of London has, unsolicited, forwarded a donation of £200, accompanied by the following letter to the secretaries:—

"The benevolent measure entertained by the leading merchants and manufacturers of your town, for the promotion of the health and comfort of its industrious population, by the establishment of public walks and gardens, has to-day come under the notice of our Board; and the Board feeling that, during its long and extensive connection with the trade of Manchester, the Phoenix Company has had frequent experience of the good disposition of the labouring classes, when their personal services have been required in cases of fire, are desirous to avail themselves of the opportunity which the measure alluded to presents, of adding their assistance towards the success of a measure so well calculated to effect the object contemplated. I am therefore instructed to request that the name of the Phoenix Company may be added to the list of contributors for the sum of £200."

THE PRINCE OF WALES'S INCOME.—It appears, from documents just prepared, pursuant to the order of Parliament, that the total revenues of the young Prince of Wales, the heir apparent to the British throne, amounted, in the year ending 31st December last, to no less a sum (from the two duchies of Cornwall and Lancaster) than £73,100 and upwards. This is a tolerable revenue for a three-year-old prince.

(a) Average of 10 years, in Sir F. Eden's Tables. —
(b) Stat. II, Hen. VII., c. 22.
(c) Average of the prices in Sir F. Eden's Tables.
(d) Stat. 16, Hen. VIII., c. 3.
(e) Sir F. Eden's Tables.
(f) *Ibid.* (g) Average, or below it, in Eden's Tables.
(h) Rate fixed by Justices of East Riding of Yorkshire in 1693.
(i) Eden, Appendix No. 111.
(j) Rate of Rutlandshire Justices in 1610.
(k) Eden, Appendix, p. lxxix.
(l) Rate of Lancashire Justices, 1725.
(m) Eden's Tables, cited Tooke, "History of Prices," i., 48.
(n) Tooke's "History of Prices," i., 63. The wages here given are the general mean for the whole year. The summer wages are very near the general mean, as appears by the proportions in Arthur Young's "Six Weeks' Tour," p. 333. The equality is produced by the excess of the summer wages over the winter's being balanced by the excess of the harvest wages over the summer.
(o) Tooke, *Ibid.*
(p) *Ibid.* (q) Parliamentary Return. (r) *Ibid.*
(s) Parliamentary Return.
(t) Summer wages, computed as above, from the accounts drawn up for the Board of Agriculture.
(u) Average of all England from Report of Committee on Labourers' Wages in 1824.
(v) Average of all the counties of England, from Appendix (B) to the Poor Law Commissioners' Report in 1834. This result has been obtained from a careful examination and analysis of the returns from more than 1200 parishes. But the average seems too high, even allowing for the temporary rise caused by the riots of 1830 and 1831.

FREE-TRADE SOIREE IN BRIGHTON.

A tea party, to promote the objects of the Anti-Corn-Law League, took place in the Town-hall, Brighton, on Wednesday evening last. Messrs. Fox, Thompson, and Moore attended as a deputation from the Council of the League. The large and elegant room of the Town-hall was well filled by a highly respectable party, including a large number of ladies. A public tea party being an entirely new thing in Brighton, many doubts were entertained regarding its success; but the attendance proved that in Brighton, as well as other parts of the kingdom, a *soirée* is one of the best means of bringing together a mixed and respectable audience for the advancement of Free-Trade sentiments. The chair was ably filled by Moses Ricardo, Esq., who, after some brief observations, introduced to the meeting W. J. Fox, Esq., who, by his cogent arguments, his brilliant eloquence, and great powers of sarcasm, kept the audience enchained for upwards of an hour, and sat down amidst great applause. Mr. Moore followed, and in a speech of considerable length, which was listened to with the most gratifying attention, ably analysed the late population returns, and refuted the monstrous assertions of the Pro-Corn-Law press in reference to the comparative value of agriculture and manufactures as the means of affording employment for the people. Mr. Thompson, who rose at a late hour, made a short speech, confining himself to an earnest appeal to all present to aid the cause of Free Trade by their personal exertions.

Mr. Isaac Bass announced, that several of the Brighton ladies had determined upon furnishing some valuable contributions to the great League Bazaar, amongst which would be some of the sea weeds, fossils, and agates, for which Brighton and its neighbourhood are famed. The meeting broke up about ten o'clock, and the proceedings appeared to have given great satisfaction to the company.

DR. BOWRING—FREE TRADE—THE ISLE OF MAN.

(From the *Manks Advertiser*.)

It becomes our pleasing task to note the reception of Dr. Bowring, M.P. for Bolton, by the Manks people at Douglas. It is well known that the worthy member has for the year past especially interested himself in behalf of the Isle of Man to procure for it a better condition for its trade than it had before *endured*; and, moreover, he has given some assurances that his future efforts shall not be withheld to bring about a reform in the House of Keys, and to improve our other institutions, according to the will of a great majority of the people. Now, for all these worthy acts done and promised, it is right, and our bounden duty, to bestow on him those hearty tokens of gratitude which good works merit; and hence we have had our heart and hand in this matter from beginning to end. True, we are *Conservative*, and the Doctor *Radical*; yet, so far as Free Trade and Manks Reform go, we quite agree; and, if we did not agree, still we should be no less ready to bestow honour on one who has manifested so much good will toward our little island. Well, our people at large, impressed with the sentiments above expressed, had been conveying to the Doctor for some time past repeated invitations that he would come over and visit us. At length the Doctor complied with those repeated requests, and he and his lady arrived here last evening by the King Orry. Previous to his arrival our Reform Committee had devoted themselves to the subject in such a manner as to give the Doctor a reception worthy the occasion, and the character and deserts of our guest.

Previous to the arrival of the King Orry, the whole of the shipping in the harbour had displayed their various flags at the topmast, overshadowing the whole harbour with coloured bunting of all hues, and representing several nations. Flags of public functionaries and distinguished individuals were seen floating in the air, among which those of Sir William Hillary and James Quirk, Esq., High Bailiff of Douglas, were most conspicuous. From half-past four o'clock, until the arrival of the steamer, well-dressed citizens and country people were seen flocking toward and along the pier, that they might all be present at the landing of our worthy friend. These anxious and patriotic friends filled up the pier, stretching from end to end, before the arrival of the various clubs which had volunteered to participate in the general demonstration. By about five o'clock the orders of the Artificers, Rechabites, Foresters, Odd Fellows, and others for what we know, marched down in gallant style, led by their bands of music, and, displaying their various flags and hieroglyphic emblems of their respective orders, occupied the centre from end to end. At length the steamer King Orry touched by the side of the pierhead, opposite the Observatory. Some gentlemen of the committee and others availed themselves of this occasion to step aboard and give the Doctor the right hand of fellowship. Among these were Sir William Hillary, the Douglas delegation, and, though last not least, our own self.

The Doctor very soon rendered himself portable; while the worthy Baronet, Sir William, bestowed his gallantry on Mrs. Bowring, to the admiration of all who witnessed it. As the Doctor put his foot on shore, another burst from the multitude rent the air, and the cannons responded in fine style. At this point, scientific marching, *en militaire*, was quite out of the question; the anxious multitude eachwearing all order, rushed forward and became a real pressing, until they saw our worthy guests safely seated in the coach, which was placed in front of the Victoria Hotel. Here the people, in the fulness of their gratitude and respect, persisted on removing the horses from the carriage, and drawing it themselves. This was prevented by the Doctor himself, who begged that they would be men, and not beasts. The carriage now moved on, surrounded by thronging multitudes on all sides, and before and behind as far as the eye could reach. Competent judges estimated the number of persons assembled at 10,000.

In leaving the market-place, a most splendid and tastefully decorated triumphal arch met the eye, illuminated by an hundred brilliant lights, its motto was "Welcome to Mona." At the Wellington Market another triumphal arch was sprung across the street, having this motto, "John Bowring, LL.D., a Friend to Mona."

At all the windows, on the walls, hedges, hills, and green knolls, as the procession passed along from the heart of the town to the Castle, clusters of human beings of both sexes were grouped, all anxious to raise their voices

above the stormy multitude, or throw out some signal to attract notice. Our kind friend of course bowed to all these, and his recognition was especially marked when ladies were the parties concerned.

On arriving at the front door of Mona Castle, the carriage halted, the bands were still playing, and the countless multitude covered the lawn. The Doctor arose from his seat, and, after obtaining silence, addressed the people to the following effect:—"I wish my voice was ten times its real compass, that I might express to the immense multitude around me what I feel at this unexpected and unexampled demonstration. Some have said that man is naturally cold and ungrateful; but I have never found him so; and the present demonstration proves that such is not the character of the Isle of Man. I have done but little, very little for this island; and the return you make is wholly out of proportion to, and beyond my deserts; but I pledge myself hereafter to serve you to the utmost of my power. As we were coming along I heard some saying, 'Down with the House of Keys;' now I do not participate in that sentiment, neither can I do anything to destroy any part of your venerable institutions. The House of Keys, in my opinion, should not be destroyed—they are, to be sure, rusty keys, and need brightening, so as to harmonize with the progressive improvements of the present age. But you may feel assured that, at all times hereafter, I shall be most happy to render any aid in my power, either to any individual of this island who may need such aid, or to the whole island generally."

The multitude cheered the Doctor as he went along, and at the close of the speech rent the air with acclamations. In the evening fireworks were played off at the Castle grounds, and other parts of the town. Several houses were illuminated in the evening, and among the rest the houses of the London delegates especially. No disorder of any kind was manifested in any part of the display. All was harmony and good will; and, as far as could be seen, the entire mass of our population entered heart and soul into the affair, each one emulous of showing himself forward in bestowing respect and a welcome upon our worthy friend.

AGRICULTURAL GATHERINGS.

(From the *Times*.)

The games and festivals of the agricultural associations remind us of the gentleman who endeavoured to fatten his pigs upon sugar-plums. Country gatherings and merry-makings seem, really, in this utilitarian generation, to be tolerated only as stimulants for provoking people to "industry" who cannot find or procure work. And they remind us, as we have said, of the attempt to "encourage" an empty stomach into fulness by the simple administration of sauces without meat.

"One thousand five hundred and fifty pounds, ten shillings, and no pence"—records the chairman of one of these societies in Warwickshire, astonished, as it should seem, at the terrific aggregate of his own benevolence—have literally been spent by this society, since 1830, in prizes to "labourers and servants in husbandry!" Here are comfits and sugar-plums with a vengeance; but where is the substantial food upon which the unfortunate husbandman is thus bribed to fatten? The "labourers and servants in husbandry" have certainly been well coaxed into "industry"; but we are tempted to ask, have they had an equal supply of work?

We presume, indeed, of course, that in Warwickshire no one is unemployed, except by his own fault, and that workhouses are there, of course, either empty or unknown. The office of guardian of the poor is doubtless a sinecure in the county of Warwick. The whole agricultural population having been "encouraged" to "industry" at the cheap rate of 103*l.* and a fraction per annum, it is not to be supposed that any such thoroughly depraved and disreputable miscreant as a labourer "out of work" is to be met with in the county. For why? Are we not told, on the authority of the "Warwickshire Agricultural Society,"—a body which comprises, we observe, all the persons who are, or ought to be, most worthy of belief in the county,—that the sole and only thing wanted, in order to produce "industry" among the agricultural poor, is not "work," but the *will* to do it? "Give us only a willing class of labourers," seems to be the language of these prize-givers,—give us only readiness and disposition to industry on the part of the poor,—and we want no more;—we are convinced that there is no such thing as any lack on our part to find the necessary work to keep them in employment."

We put it to our readers whether this is not a fair and impartial construction of the language held forth by these associations. We have instanced the Warwickshire Society as being one, whose manifesto, just now published, happened first to meet our eye; but there are others equally, some perhaps more, obnoxious to the inference which we think they all suggest. We published only on Friday the report of a grand association festival held at Banbury, in Oxfordshire, and we published yesterday an account of equally great doings at Buckingham; and in both places, the whole proceedings were, from first to last (we except one speech at Banbury, to which we shall refer lower down), based upon the assumption, first, that it was the fault *exclusively* of the labourer, the result *exclusively* of his want of energy or capability, that he should be at any time out of work; and, secondly, that the institution of rewards, with the celebration of festivities over their distribution, was capable of supplying that deficiency and curing that fault.

We say advisedly, that never was a greater mistake committed than that which is involved in these assumptions. The agricultural labourer is destitute and starving;—his labour may be had at 6*s.*, or 8*s.*, or 7*s.*, or even 6*s.* a week;—and why? Simply because he cannot find a market for it, because people prefer supporting him in the workhouse,—which they *must* do,—to finding him work out of it, which they *may* or *may not* do, as they please. This, then, is the condition of the labourer; what is his treatment? Instead of work, you give him—prizes! Instead of holiday—the festival of their distribution. Instead of the rivalry of sport and pasture, you bid him make merry while he celebrates,—very possibly in compulsory idleness,—the victory which you award to his character for superior "industry;" or while he commemorates,—with a wife and children in the union workhouse,—the premium which you have granted to his pre-eminent thrift and frugality.

Let us not be misunderstood. We are far from feeling enmity against those country meetings and festivities

which bring together and unite the squire and the peasant. It is with no feelings of contempt or derision, much less of mere political jealousy, of such societies as those in question, that we make these remarks. Quite the contrary. The union of the poor with the rich; the intercourse and sympathy of all classes of society one with another; the common ground where all may meet, in some sort, upon an equality;—these have always appeared to us as among the things wanting in our social condition,—as among the great desiderata of the present age; and it is solely as promoting these objects that we could regard the agricultural meetings with anything like a favourable eye. But we do lament that this, the sole and only point of contact now remaining, should have assumed the shape which it has done. We do lament that, instead of the common festive meeting of the county—instead of union and festivity for its own sake, and openly,—we should be reduced, in order that we may indulge the poor with any recreation or merry-making at all, to celebrate with misplaced festivities what is in reality the greatest disgrace to all, viz., the necessity of securing the good conduct of the poor by artificial and secondary contrivances.

But the most obvious reflection which occurs on hearing or reading of these associations is, as we have already said, this:—Where is the common sense or common consistency in giving prizes for agricultural "industry," when you refuse to provide the labourer with work? We repeat that it is futile, and worse than futile, for landlords to interfere with the labourer's condition solely and only by giving paltry prizes to "encourage" industry, while he is left to find or make work where he can. This is *not* the way in which the interference of the landlord ought to be made. The labourer wants not the *will*, but the *MATERIAL* for employment. Let the landlord give him the latter, as he can do, if he will, and not seek to deceive himself and the country by these delusive societies for "encouraging" the former. The humbug is transparent, and cannot long deceive any one.

TRADE.

From present appearances, we may expect a continued good export demand for manufactured goods, with a better chance of remuneration to the shipper than for a considerable time past. In the import trade we can notice no improvement generally, and once more we have to report a very gloomy market for cotton. The accounts from America, in reference to the crop, are so universally in favour of the largest yield that has ever been produced, that speculation has not been thought of, and manufacturers, pressed by an eager desire to realize on the part of holders, have made their purchases this week at prices always *3d.*, and occasionally *4d.* per lb. below the rates current a fortnight ago, whilst it may be still quoted as a remarkable fact, that the spinners have taken less from this market for consumption this year than they did during the corresponding period in 1843. It can only be supposed that more labour and less raw material are now employed than were required for the heavy manufactures then produced. The West India news is not of a very agreeable nature. The planters had not recovered from the discouragement occasioned by the measures in reference to their produce passed in the last session. Here the prospect for them is improving, as sugar is daily becoming more valuable now that the first impulses have given way to calm reflection, and buyers and sellers both discover that they cannot all at once be overwhelmed with an import of foreign produce. The new trade in guano continues to be much talked of, and reports as varied as possible are in circulation in regard to the capacity of the islands to furnish an adequate supply. It is a new, and it may become an important trade, and we should regret to see it interfered with unnaturally by any premature speculation. From the manufacturing districts, in every direction, the most satisfactory statements of improvement continue to be received, and, with the present low prices of corn, the prospect is gratifying.—*Liverpool Mercury*.

PAISLEY.—STATE OF TRADE.—Trade still continues brisk, and all hands are employed. This remark applies to the whole of the different branches of our manufacture. The neighbouring villages also participate in this agreeable state of things. In the neighbouring town of Johnstone, cotton-spinning has not been so brisk for a good many years. The old mills are all busy, and some new ones are in course of erection. No doubt wages are small, but provisions are unusually cheap, and of excellent quality, so that the poor man's circumstances must be considerably improved.—*Glasgow National*.

THE SILK TRADE.—We understand the silk trade is a very depressed condition, notwithstanding the revival in other branches of manufacture. Several of the silk manufacturers in Leigh, West Houghton, &c., have made reductions in the wages paid to their weavers: 7200 satins are offered by one firm at one halfpenny, and 6100 satins at one farthing per yard less than the present prices; 3200 plain reeds are offered by another firm at one farthing per yard less. The committee of the "Rights of Industry Society" have issued an address to their members and the public generally, asking for suggestions as to the necessary steps to be taken to counteract the present attempt to reduce wages.—*Manchester Guardian*.

THE JEWELLERY TRADE OF BIRMINGHAM.—An effort is being made by the workmen engaged in the gold, gilt, and black jewellery trades of this town, to obtain royal notice and patronage, by which the very elegant and useful ornaments produced in the various departments of this manufacture may be brought into more general use. We understand that the employers are co-operating with their workmen in this very laudable movement, in which the interests of both are so intimately connected; and we have no doubt if our ingenious artisans can lay before her Majesty specimens of their skill, unrivalled in taste and elegance by the French or German artists, that Birmingham jewellery will obtain the patronage and favour of our most gracious Queen, and soon cease to become unfashionable amongst the nobles and wealthy of the land. Specimens are also about to be presented to his Royal Highness Prince Albert, who, from the readiness he evinced on a former occasion to patronise another branch of our staple manufactures—the gilt and plated button trade—will, we are sure, cordially second the efforts of a very numerous class of our artisans to improve a trade which, owing to the caprice of fashion, has suffered long and severe depression.—*Birmingham Journal*.

LEITH.—Trade at this port has materially improved.

During the last few months the Docks have presented a scene of interesting bustle and animation with vessels discharging cargoes of grain, timber, wine, and guano, &c. Owing to a scarcity of berth-room, vessels are lying three-deep from the quay. The numerous take of herrings are now being prepared in great quantities for the Sicilian and other markets on the Mediterranean. The cheapness of price, and the early period of the season at which they will be ready for the market, almost ensure a profitable return. The receipts at the Custom-house, we understand, are continuing to increase. Leith, in our opinion, is often underrated as a mercantile town. As a port from which is distributed over the country all the luxuries, and even necessities, of life, it is by far the first in Scotland. It may not be generally known, but it is nevertheless true, that the Custom-house revenue at Leith exceeds that of Glasgow by nearly £100,000 a year. As a proof of its increasing importance and general traffic, there are now twenty-two omnibuses plying regularly upon Leith-walk, a distance of a mile and a half, for twopence each passenger. We believe that they are yielding a fair remuneration to the proprietors. Twelve years ago two old stage-coaches were employed for the same purpose. They started once an hour, and charged ninepence! We believe they did not pay the proprietors at nearly five times the present charge.—*Edinburgh Weekly Chronicle*.

RETURNING PROSPERITY.—The *Leeds Mercury* gives from a correspondent the following flattering account of improvement in the state of some of the manufacturing districts:—"I have just passed through Lancashire, and found every symptom of prosperity. Indeed, I fear there is some danger of their 'going a-head' so fast. I saw several new mills, all apparently first-rate, under construction—three at Preston, two at Blackburn, one or two at Burnley, and some between Burnley and Todmorden; and there may have been others in the district I passed through which escaped my attention."

ADVANCE OF WAGES.—The general, though quiet, proceedings of the factory operatives, throughout the cotton district, of which Manchester is the centre, with the view to obtain an advance of wages, affords an unerring sign that those hitherto misguided people have at last learned one of the first lessons in political economy—viz., that in order to secure their object it is of the utmost importance to select the right period for their operations to secure so important an object. In days gone by, strikes, as they are termed, were generally remarkable for occurring at a time of great depression in trade—in fact, oftentimes when many of their employers were thankful, rather than otherwise, for such demonstrations, because it enabled them to get rid of their immense stocks, and on better terms than they otherwise could have done. This was pre-eminently the case in 1842, when labour may be said to have ceased for some weeks in the manufacturing districts—a period which the operatives will have cause to remember for a long time to come. It is now generally understood that the operative spinners and power-loom weavers, indeed all hands employed in cotton mills, are seeking for an advance of wages; and as hands are really scarce, and in some places not to be had, a general advance of wages seems not only probable, but almost certain; but whether to the full extent of the operatives' demands, is another thing. In some towns, as at Preston, a few of the masters have, it is said, consented to an advance, and this example is likely to be followed at Ashton, Hyde, &c. The period seems favourable for such a step, seeing the demand that exists for goods and yarns, as well as the prospect of the staple continuing both abundant and low in value for a long time to come. The operatives, if successful in their applications, will, no doubt, learn another lesson—viz., that when a demand exists for their labour, it is no more possible for the masters to resist an advance, than it is possible for the workmen to resist a reduction when their labour is not required. The masses are generally, nay, always, slow learners—but better late than never.—*Leeds Mercury*.

THE COMMERCIAL MIDDLE CLASS.

(From the Times.)

Antique and aristocratical prejudices dispose many respectable minds to speak slightly of the "middle classes," to hate commercial upstarts, to regard great towns as the gates of hell, and the smoke of factories as that of the bottomless pit. The village shopkeeper above all comes in for the fulness of their scorn. New, pushing, clever, smug, consequential, and prone to dissent, a canvasser for the Liberal candidate, and a collector for the London Missionary Society, he is about as unpleasant an object as can be imagined for the immediate nose of a noble, or still more a gentle but untitled family. How will the clergyman and his patron blow up one another's wrath at his expense! It would be strange if he did not deserve a little at their hands. But what is it which has made the middle classes so exclusively anti-aristocratical? That state of the landed property which reduces to a minimum the middle class, and every other class connected with it. The children of commerce are many; the children of the soil, except the very serfs, are few. The landed interest has now to speak with its enemy, or rather its rival, in the gate, and possesses not that confidence which can alone be imparted by the multitude of offspring. The upward tendencies of every lower class, instead of being enlisted on its side, are suffered to be estranged, nay, are driven into antipathy. In that vast primitive stratum of rural labour is many a vigorous aspiration. The stream of ambition cannot rise through the hard, veinless, impermeable mass which landed property now presents above. Here and there manufacture and commerce drive their shafts below; through which arise the imprisoned energies of the poor. Blame not their brackish or metallic flavour. They cannot but retain the traces of their only exit. Before you cry down our commercial middle classes, show us your own agricultural. Does the plough make better half-castes than the counter or the loom? You cannot produce your middle class. You have none. You may have £50 voters enough to turn your county elections, but not enough to fight the battle of opinion and sentiment. The towns are too many for that; the village shopkeepers are almost too many. Well, you have made your choice. You cannot have it all ways. You divide the land, and legislate for the labourer with a view to the greatest possible rent. Rent you have, but not hearts and men. They are irrevocably passed to the other side.

FREE TRADE IN THE CITY.

The election of an Alderman for the Ward of Portoken presented for candidates Mr. Sheriff Moon, the advocate of the sliding scale, and Mr. David Salomons, well known as the author of a modified Free-Trade pamphlet. The Free-Trade Association in the ward is very powerful, and the members had refused to vote for either candidate. At the close of the first day's poll Mr. Salomons was only 24 a-head, and a half of the electors yet unpolled. On the morning of the second day's poll Mr. Salomons issued a placard inscribed with the words, "I am the constant advocate of UNQUALIFIED freedom of trade." This had the effect of increasing his majority to 38. The Free-Traders have kept up the canvass, and Mr. Salomons has been returned by a majority of 32. Even Mr. Moon has been professing Free-Trade principles; and we hear that Alderman Wood is to declare himself a total and immediate repealer to help him to the mayoralty.

REGISTRATION.

The registration courts must be the future battleground of the League. During the last few months the almost exclusive attention of the Council has been devoted to a systematic revision of the registers in every borough where the slightest improvement could be calculated upon. We are now reaping the harvest that past exertion has prepared. Our efforts have been noiseless, but our progress sure. It has been a work of immense labour, the full fruits of which cannot be seen on a single revision. Not only has an immense amount of valuable information been diffused on the subject of registration, but a practical acquaintance with technicalities in the conduct of cases has been acquired in almost every constituency that will greatly facilitate the further efforts of the League in this all-important department of their future labours. We would urge upon our friends in every borough the paramount duty of continuing their exertions in this direction. The following returns have been mostly forwarded to us from our own agents or correspondents, and we shall continue to give a weekly summary of the progress made in the registration courts:—

SOUTH LANCASHIRE REVISION.—The silence of the monopolist journals as to the proceedings in the revision courts is more ominous than volumes of abuse, of the steady progress which the League is making in this division of the county. The result upon the objections alone, so far as the revision has been completed, is given below. In a future number we shall give the gain upon the claims, which is quite as great or greater than that upon the objections.

POLLING DISTRICTS.

Ashton-under-Lyne.—The number of Monopolists struck off at the revision at Ashton is, 130; Free-Traders struck off, 70; Free-Trade gain, 60.

Newton.—The revision of voters in this district remains unfinished. Up to the period when the Court broke up, the number of Monopolists struck off was, 110; of Free-Traders struck off, 21; Free-Trade gain, 89.

Ormskirk.—The revision of voters for this polling district finished on Tuesday. Monopolists struck off, 189; Free-Traders, 95; gain, 94.

Wigan.—Unfinished. Monopolists struck off, 39; Free-Traders, 6; Free-Trade majority, 33.

Oldham.—Monopolists struck off, 138; Free-Traders, 96; Free-Trade majority, 42.

Bury.—Unfinished. Monopolists struck off, 47; Free-Traders, 6; majority, 41.

NORTH LANCASHIRE.—*Hawthhead and Ulverston.*—The registration agent writes:—"We have struck off 30 Monopolists, and are better by about 60 in the Hawthhead and Ulverston districts."

Lancaster, Wednesday.—We have had a most successful day. Of 32 objections taken into Court, we struck off 29. Our adversaries made two objections, sustained one, and failed in proof of notice as to the other.

ROCHDALE BOROUGH REVISION.—Monopolists struck off, 46; Free-Traders, 19; gain to the cause of Free Trade, 27. With the new claims the Free-Trade majority in the event of an election will not be less than 150.

REVISION OF THE BOROUGH OF COLCHESTER was held on the 19th instant, at the Three Cups, by S. R. Bosanquet, Esq. The result was as follows:—

Claims.	Allowed.	Objections.	Sustained.
Monopolists ..	0	0	0
Free-Traders ..	5	4	38
Claims	4		

Majority in favour of Free Traders

COLCHESTER, Sept. 21.—(From our Correspondent.)—It is with much satisfaction that I have to inform you that we have been able to do good service in the revision of our borough voters which has just taken place; and it seems due to the Council of the League, after the assistance which it has afforded, to state the result of our exertions. I am not able at present to furnish all the particulars; but we have succeeded, by establishing claims and objections, in improving our position by thirty votes, in spite of apparently an adverse barrister. This has been effected mainly by the omission in the overseers' lists of the double qualifications, *our opponents being ignorant of the point of law on the subject*. It is singular that the Monopolists made neither claims nor objections, and therefore could only act on the defensive at the revision. They are very angry at the result.

KENDAL.—The court for the revision of the list of voters for the borough of Kendal, was held in the Town-hall this day (Friday), at one o'clock, and the business thereof did not terminate till near six. The following is an analysis of the result upon the several claims and objections:—

Objections.	Allowed.	Failed.
Free-Traders	9	7
Monopolists	30	18
Claims.	Allowed.	Failed.
Free-Traders	24	20
Monopolists	19	11

The Monopolists were fined 3s. 6d. each for five frivolous cases of objection.

State of list as compared with the list at the last election:—

	Votes lost.	Votes gained.
Free-Traders	8	11
Monopolists	2	4
Total gain for the Free-Traders		1

KIRKLAND.

Claims.	Admitted.	Failed.
Free-Traders	1	1
Monopolists	1	0

NETHERGRAVE SHIP.

	Admitted.	Failed.
Free-Traders	1	1
Free-Trade gain	2	

—*Kendal Mercury*.

ANDOVER, HANTS.—The court was held on Tuesday, the 24th instant, at nine o'clock, at the Town-hall, by George Granville Kekewich, Esq., barrister-at-law, who revised the list of that borough. The day's result was as follows, viz.:—

Objections taken.	Objections sustained.
Free-Traders	18
Monopolists	24

Majority of Free-Trade claims

Majority in favour of Free Trade

HUNTINGDON.—The revision of the list of voters for the borough of Huntingdon took place on Monday, before Nathaniel Palmer, Esq., the revising barrister, at the Town-hall, Huntingdon. Mr. William Trott appeared for the Free-Traders, and Mr. G. F. Maule, agent to the Earl of Sandwich, appeared for the Monopolists. The Free-Traders sustained 29 objections against the Monopolists, and failed in six; they succeeded in establishing three claims, and did not fail in any. The Monopolists made three claims and one objection, but failed in all. Among the names struck off by the Free-Traders was that of the Earl of Sandwich. An agent from the League was present to watch the proceedings.

CASTLE DOUGLAS, Sept. 18.—(From our Correspondent.)—The Registration Court for the Dumfries district of burghs is over, and, independent of a goodly number of Monopolists who are now Free-Traders, the registration lists prove that Mr. Ewart is safe, come an election when it may.

BURGH OF JEDBURGH.—The Sheriff, on purging the roll on objections, struck off fifteen voters who usually supported the Monopolist interest; and six who usually supported the Free-Trade party. Twelve new claims were lodged by the Free-Traders, and sustained; and three new claims were lodged and admitted on the Monopolist side. The entire natural increase of the constituency has always been on the Free-Trade side; and but for the corrupt and abominable system of creating fictitious voters, Jedburgh long ago would have been as independent in politics as any town in the three kingdoms.—*Kelso Chron.*

SHEFFIELD.—E. E. Deacon, Esq., held his court at the Town-hall, on Thursday, the 19th inst., to revise the borough lists of voters. There were no objections. In the township of Sheffield there were 22 claims, chiefly, however, to correct existing entries, and they were all allowed but one. In that case, it appeared that the rates were paid by the landlord, and that the tenant was not named at all in the rate-book. The learned barrister said that it was the duty of the overseers to place all occupiers on the rate-book, whoever paid the rates, and he instructed the claimant to require the overseers to enter his name. For the townships of Brightside, Attercliffe, and Upper Hallam, there were no claims. For Nether Hallam there was one claim, but it was from a vote already registered. For Beeclesall there were five claims. Two of these were admitted; three were rejected, in consequence of the non-attendance of the claimants, and of the fact that they did not appear on the rate-book to be rateable occupiers. It has heretofore been the custom for the overseers, in making out each year's list, to omit such names as had disappeared from the rate-book in consequence of death, removal, &c. The learned barrister, however, stated that the overseers had no right to omit any name once upon the list. It was their duty, in all such cases, to write "objected to" in the margin of the list, opposite to the names, and then it would be for him to strike them out on the revision. The court concluded its sitting in less than an hour.—*Sheffield Independent*.

SUNDERLAND.—The Revising Barrister held his Court here on Wednesday last, for revising the borough lists. The Free-Traders were supported by Messrs. A. J. Moore and Thomas Thompson; the Monopolists by Messrs. G. W. Wright and William Snowball. The following is the result of the registration:—

	Free-Trade Objections sustained.	Free-Trade Claims allowed.	Total.	Monopolist Objections sustained.	Monopolist Claims allowed.	Total.
Bishopwearmouth	10	15	25	0	0	0
Sunderland	8	1	9	5	1	6
Monkwearmouth Shore	0	0	0	0	0	0
Total	18	16	34	5	1	6

Majority for Free-Traders

EXETER.—The business commenced on the 18th and terminated on the 25th instant. The number of objections was large, but very many depended upon the powers of the Revising Barrister to amend insufficient descriptions. The Court was of opinion he had that power, though not without some scruples. The Revising Barrister nevertheless stated that the objections were anything but frivolous or groundless; so that the torrent of abuse with which the Free-Traders in this city were assailed on that supposition is now set at rest. The Free-Traders were professionally assisted by Mr. Richards (Exeter), Mr. Tucker (Ashburton), and Mr. Aberdein (Huntingdon). The exact result is not yet correctly ascertained, but it is believed that above 100 have been gained by the registration to the Free-Traders and Liberals.

TAUNTON, Sept. 20.—Our registration has terminated gloriously for Free Trade. Some advice given us by the Anti-Corn-Law League has been the means of securing to us about 20 votes, which we should otherwise have lost this year, from not making the claim in time under successive occupation. On the other hand, we cut off a number of opponents.

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, September 25, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the LEAGUE of the Saturday immediately succeeding, but are included in the list of the week following.

* Those names marked with an asterisk are renewed subscriptions.

Sept. 20, 1844.

SIR,—As my subscription to the League Fund is becoming due, I hasten most cheerfully to renew it. The liberating our native industry from the shackles of monopoly is looked forward to by thousands of anxious and suffering beings, who, with humble means, limited information, and time incessantly occupied in struggling for a scanty subsistence, are precluded from co-operating in this mighty effort against the greatest wrong ever inflicted on an industrious and confiding people. You will please to enrol my name again among the list of contributors, and acknowledge in the usual manner the receipt of the enclosed £5, being double my last year's subscription. With my hearty wishes for success to our great and enlightened cause, I remain, Sir, yours, respectfully,
J. H. HUTCHINSON.
19, Little Pulteney-street,
Golden-square.

THE ROYAL EXCHANGE.

The new Royal Exchange is almost completed, and although as a work of architecture we cannot give our unqualified approval to it in all its parts, still we must confess that it is on the whole a noble structure. Its massive proportions, and the commanding position which it occupies in the very heart of the City, are worthy of the great purposes for which it is intended. It rises from amongst the edifices that surround it as if conscious of the important affairs to be transacted within. Here—the appointed rendezvous for merchants in the commercial capital of the world—shall assemble the representatives of every clime under heaven. The spicy groves of Asia, the plantations of America, the snowy regions of the North, and Africa with its gold and gums, shall each have their delegates to assemble in the busy but peaceful assemblage that shall congregate within its walls. The unbending Spaniard, the subtle Greek, the vivacious Frenchman, and the speculative and dollar-loving Yankee, will here be found together, not for purposes of national exclusion, not to foster popular antipathies, and to excite the sanguinary feelings of military glory, but to advance the welfare of the whole brotherhood of man, in dispersing throughout the entire world, the teeming gifts of the beneficent Father of All. The wants in some respects, and the superabundance in others, of each portion of the human family will here be represented, and the varied blessings of Providence, so far as monopoly will allow, will be equalized and diffused. Here will be a true congress of nations. The high-titled plenipotentiaries appointed by courts, represent merely the dominant parties in the respective states that have despatched them; but here will assemble the representatives of peoples in their social condition and necessities. The merchant will here be the means of communication between the inhabitants of the most distant climes, and by his instrumentality the labour of one people shall be exchanged for that of another. Bonds of interest and amity between the inhabitants of different kingdoms, will here be formed and strengthened by means of commercial intercourse—the most effectual method of destroying national animosities, and of averting the horrors of war.

Her Majesty has graciously signified her intention of opening the new Royal Exchange in person. Considering the commercial greatness of England, it is fitting that the building intended as the place of meeting for her "merchant princes" should thus be honoured by the

footsteps of royalty. It is, however, melancholy to reflect that her Majesty, after having in October opened an edifice erected for the purpose of facilitating the operations of commerce, in February will be called upon to open an antagonistic assemblage in St. Stephen's, in which commerce will be decried, merchants and manufacturers maligned, and every possible impediment thrown in the way of international exchange. An exchange in the City, and an anti-exchange in Westminster, present a strange anomaly, and a melancholy subject for contemplation. The fact is, we have a commercial people, but an agricultural and oligarchical Legislature, composed of men who, though probably well versed in the mysteries of horse-racing and grouse-shooting, are totally unacquainted with the simplest principles of business; and, what is worse, inherit with their titles and estates an aristocratic jealousy of commerce, an inordinate love of rent, and a notion that they can best serve the interests of their order by a continuance of monopoly. Under such circumstances, is it a marvel—that, whilst we have skilful and industrious operatives, and merchants famed for enterprise and intelligence, we have, at the same time, commercial laws the most absurd and suicidal?

It is a remarkable coincidence that the first Royal Exchange was erected during the reign of a female Monarch—Elizabeth, and was opened by that Princess. The present edifice has been erected during the reign of another female Sovereign, and will be opened in state by her Majesty. This coincidence, we trust, will be followed by another and a more important one. Elizabeth not only countenanced the trade and commerce of the country by honouring the Royal Exchange with her presence, she did more—she abolished the monopolies that then pressed on the industry of her subjects. This was the brightest feature in the reign of Good Queen Bess; and we trust that the reign of Queen Victoria shall be made illustrious by the demolition of the monopolies which now pauperize her subjects, impede the free action of commercial activity, and hang like a millstone round the energies of the country.

ADAM BROWN'S ACCOUNT OF ROBERT BAKER'S FARM.

To the Editor of the LEAGUE.

SIR,—I have received the copy of the *Morning Post* containing Mr. Baker's letter; but, seeing that in that letter he denies everything that I said out and out, admits nothing—no, not a shadow of anything—I have considered whether it might not be as well to let the matter stand where it is. The public know pretty well what to think of such very strong replies as that of Mr. Baker. Moreover, it is so very, very full of ill temper and ill names, that a farther notice of it must be, at best, a sacrifice of self-respect.

Still, as some of our friends expect that I should say once more whether I believe Mr. Baker to be, as a farmer, what I formerly said he was, I shall repeat it. I say, yes! his farm and farmyard had all the elements of confusion, wastefulness, and agricultural slovenliness about them when I was there.

But Mr. Baker says, "Their great object is to attack the character of individuals rather than their mode of farming." This is untrue; I never spoke of Mr. Baker's private character. I expressly stated that it was as a farmer I wrote of him. "Of his private character," I said, "I know nothing, nor is it my province to inquire into it; but he is, as a farmer, one of the most eminent slovens," &c. &c.

Well, he says he is not a sloven; and I will be sworn that slipshod Betty, the housemaid, would say the same if some one dared to tell her she was a sloven.

Mr. Baker denies that he wastes his liquid manures, or that the rain washes the riches of his dunghills into the ditches and the ponds. I said, and again say, that he does waste his manures thus. He seeks to prove that he does not, by asking is it probable that an agriculturist occupying 1000 acres of land would act "so ruinously to his own interests?" But I ask, in return, if it is not as ruinous to the interests of other farmers to do so? The letters of Mr. Mechi, published in the *Essex Standard*, which seems to be a special farmer's paper of Mr. Baker's own agricultural politics, contain the following passages. The writer is speaking of a spring of water which he has conducted to his farmyard. The words printed in *italics* are marked by me. The letter is dated July 11, 1844:—

"This water formerly spoiled some acres, and caused the bog; but now it answers a much better purpose. I do not like the usual custom of giving manure water to horses and cattle, instead of to the land. I presume they are, like ourselves, all the better for drinking pure water, instead of filthy compounds."

And again, in the same letter, he says of the wasting and washing away of manure from the farmyard:—

"The iron gutters and pipes to our roofs may be found fault with on account of the expense, but I really cannot see the utility or profit of the present custom, that is, putting good and costly manure on straw, and then washing it all out again with tens of thousands of gallons of pure water off the roofs, taking especial care that it shall poison the horsepond, and then run down to enrich some stranger's meadow at the first flood. I hope, in fifty years time, the farmer who does this will be considered insane. The idea of a man's throwing away his manure with his left hand, and with his right paying money to bring it back again, all the way from Peru or Africa, seems too ludicrous for the nineteenth century."

Thus, what Mr. Mechi says of all Essex, I said of

Mr. Baker. Has Mr. Baker or any other farmer denied that these accusations of wasting their manure and polluting their water, published in their own paper, are true? I have looked through the subsequent numbers of the paper, and there is no denial. But I have also travelled over Essex, and I know they cannot deny this charge of negligence and wastefulness, notwithstanding the argument of self-interest which Mr. Baker puts in his defence.

Yet, if the letters containing the imputation had been published in the LEAGUE, a denial would have been made for Essex in general, as is done for Writtle in particular. The truth is, Mr. Mechi either is, or is supposed to be, a political ally of the paper in question. And in those very letters which I have quoted, and of which in most parts I think so highly, he goes out of his way to have a fling at the Anti-Corn-Law League; finding it necessary, no doubt, to throw a bone to the "Essex Lion" to keep him quiet. Thus, it is only when a supposed enemy comes into the jungle that the "Lion" growls.

Mr. Baker, called by his friends the "Essex Lion," denies that his liquids run to waste, or that he has any horseponds. It was wet weather when I was there, as I intimated in speaking of the muddiness of the river; and doubtless there was more manure running away at that time than in dry weather. What I complain of is, that it should run away at all; and I tell Mr. Baker, and all whom it may concern, that when he or they come forward in print to contradict a nobleman of such great professional knowledge and moral integrity as Lord Ducie, by accusing him of "monstrous exaggerations," as Mr. Baker does; and when he or they give us statements of figures to prove that wheat costs *this* in production, and manure costs *that*, which we know to be unfairly stated, we *shall* go and see how the land is managed, and how the manure is saved or wasted, upon those farms from which the statements emanate.

The Lion demands to know how any one should dare to come upon his land to see what he is doing without, being asked. I answer, the Lion has asked for that which he has no right to; namely, that the shopkeepers and artisans of Chelmsford, who live by minding their own business, should pay a tax to keep up the cultivation of Mr. Robert Baker's farm, which he himself neglects.

As to the *horsepond*: the name is conventional. If we see a pond upon a farm, we are apt to call it a horsepond, even though it may be a goosepond. I saw ditches and pools of water into which the liquid washings of the farmyard were running to waste; and I saw cattle where there was no water but what the ditch so polluted gave them. Moreover, I asked a workman if the liquid from the manure always ran away in that manner when it rained; and he answered, yes. It was running out upon the public road.

But the "piece of plate." Let us get to the "piece of plate." Mr. B. quotes from my letter the following words:—"Mr. Baker has been laying the League prostrate and slaying it, and receiving the great token of the age—a piece of plate—for having upset, and destroyed, and utterly annihilated the League—for so the inscription sets forth his labours." To which Mr. B. rejoins:—"Really, the mendacious Adam bears the palm from Mendez da Pinto; there is no such piece of plate in existence, and, consequently, there can be no such inscription."

And then, in the absence of the piece of plate,—the alleged absence of it, for I shall show, by-and-by, that Mr. B. is not so unacquainted with the "token of the age" as he would have us believe; that, in fact, he gets out of this by a quibble,—in the alleged nothingness of the plate, he goes on with all gravity to digest the extravagant mouthful which he has just swallowed, namely, the destruction of the League. If Robert Baker did not see that Adam Brown spoke in ridicule, he is the only person who read the sentence in question without seeing its meaning. The League prostrated! and slain! and annihilated! At the very time the piece of plate was being subscribed for, to reward the "Lion of Essex" for his slaying of the League, the League was in greater vigour than it had ever possessed; and it is more powerful and universal in its action now, even at this moment, than then, as the elective registers will one day testify, to the dismay of such lions of dear corn and poor agriculture as Mr. Robert Baker. But it may be that the League is yet alive,—that the piece of plate is not forthcoming. However, here are the self-complacent reflections with which he receives Adam Brown's intimation that the League is destroyed:—

"That the establishment of Agricultural Protection Societies has laid the League prostrate, and frustrated its destructive purposes when nearly effected, is a matter of the highest gratification to every real friend of British agriculture. That my humble efforts, seconded by the powerful assistance of others, have tended to produce so beneficial a result, is to me the best reward I ever expected or desired to receive."

But is there really no piece of plate, after all the meetings, and speeches, and advertising for subscriptions? Have there not been articles in the local papers, articles native-bred, and articles borrowed from the *Morning Post*, inserted from time to time to remind the yeoman that the League was dead, and that the League's tombstone should be inscribed to Robert Baker? If Mr. Baker means, by his denial of the very existence of the plate, that there is no testimonial at all, I ask what have the meetings and the speeches led to? If he only denies

that the testimonial is a "piece of plate," then I must blame his own newspaper for misleading me. Plate was mentioned in its columns, and nothing else has been mentioned since.

The gentleman who moved the resolution that a subscription should be entered into for Mr. Baker's testimonial said, that *guinea* subscriptions would be the most suitable; "for he remembered when the agriculturists of the county presented a *piece of plate* to Lord Western, the great mass of subscriptions were in that sum. And none, he would say, who contributed towards the testimonial presented to the noble lord, would withhold their hands from supporting this," &c.

This is the only mention of the *kind* of testimonial given, or to be given, or once intended to be given, to Mr. Baker, which I have been able to discover. Moreover, a reverend gentleman spoke of *engraving* the motto. And all the speakers repeated again and again the object of the testimonial. The chairman spoke thus:—

"He [the Essex Lion] came forward at a time and in a manner which required no common nerve—when the League were getting majorities—when the Cabinet was wavering—and when the country teemed with Free-Trade nostrums from one end to the other. * * *

How successfully he had worked, the present state of the League fully showed. The fact was, the great fact was dwindling away; its influence was evidently sinking under the influence of the Protection Society," &c.

If all this did not mean a "piece of plate," plate was never foreshadowed by its symptoms. But it seems there is a screw loose. In fact, the League is not well enough killed yet.

Mr. Baker complains that I should have spoken of the little river which washes away his road, and called it *deep*; and more so, that certain figurative expressions should have been used about the slowness of its course. But Mr. Baker may get a key to that, by the speeches made at his "piece of plate" meeting. He who proposed the plate subscription said, the Protection Society was a deep slow river; but the League rushed like a torrent! &c. &c.

Mr. Baker says the houses are not *new* in which the office of the Protection Society is. Perhaps not; but they may have been done up *anew*. But whether so or not, the matter has little to do with his style of farming.

He has got a great case against me by my putting a toll-bar where there is none. I can only tell him that I sent a gig from Chelmsford to meet me at a point farther inland; that when I came up to Mr. Baker's corner I found the gig there; and, inquiring why it was there, the man said he had no money to go through the toll-bar. I gave him money, and walked away in another direction while he went into the village. I know there was some kind of gate there, and I was under an impression it was the toll-gate.

Still this does not affect the main question, which is, whether Mr. Baker's expense of growing wheat is a necessary expense. I shall return to that part of the subject again; as also his statement that he employs six men to each hundred acres. And more, I shall have something to say to him about the protection being for the good of the labourers, that is, *his* labourers.

He says he is an advocate of leases. Here I apologise to him. I had not seen then, nor have I yet, his advocacy of leases. But I had seen and heard, at a former time, his advocacy of what is tantamount to the destruction of all security of tenure.

He says that the sales of broken-up farmers do not pay auction duty, so I could not see the words "no auction duty" on the bills. I saw the words "no auction duty" on bills which related to property which I was told belonged to persons who had, at a former time, been flourishing farmers. On this I did not express myself so clearly as I should have done in the LEAGUE; and I humbly give Mr. Baker the benefit of it. When I saw his farm I did not know that he was an auctioneer. It was after I was fifty miles distant from Chelmsford that I was told that the Messrs. Baker and Son, whose name I saw in advertisements and placards, were the same as Mr. Robert Baker the farmer. I then called to mind that I had seen bills of property selling under distress posted on the walls; and wrote to a friend to ascertain if any of the property belonged to farmers. As there are other auctioneers there, it is very likely that some of their sales were included in the account sent to me. All this I give up to Mr. Baker. He has been in the habit of telling us how severely and exclusively the land is taxed. But the understood exemption from duty of farming property sold by auction, of which he now makes a triumph in levelling me as he has so successfully levelled and annihilated the League, suggests new ideas. However, for the present, I bid him farewell, only reminding him that the real question at issue is the expense of growing wheat.

ADAM BROWN.

SALES OF LAND.—A considerable portion of the property purchased by the late Mr. Fairhurst, of Holt-hill, at Woodside and Birkenhead, at 2s. and 2s. 6d., has been disposed of by the heirs, at three guineas per yard, producing a return, in a few years, so enormous as to appear incredible. One field, between Woodside and Birkenhead, alone realised above £50,000. Such has been the rapid increase in the value of property in that bustling township, in a few years, that in some cases land has changed hands no less than four times, on each occasion leaving a handsome profit to the parties. —*Liverpool Mercury*.

REVIEW.

Arthur Arundel: a Tale of the English Revolution. By the Author of "Brambletye House," &c. London, Colburn.

Mr. Horace Smith has, through the medium of a very clever novel, directed attention to a portion of English history which has not received all the attention that its importance demands: we mean the period between the Restoration and the Revolution. It was during this epoch that the parties now called Whig and Tory were first organized and first baptized by their present names; but the student of history who endeavours to comprehend the difference between the systems of policy advocated by these opposite parties finds it difficult to discover anything like a distinct political creed adopted by either. Both were desirous to have a monarchical Government, but the Whigs wished to have a Sovereign with powers as restricted as those of a Venetian Doge; while the Tories, at least so long as they believed the Monarch to be on their side, preached the doctrines of passive obedience and non-resistance. Both were in favour of placing the chief political power in the hands of an oligarchy, but the Tories took for their oligarchic model the ancient system of feudalism, and the Whigs the more modern constitutions of the Italian republics, particularly that of Venice. Both advocated an established church, with a system of penalties and disabilities against Dissenters; but the Tories wished for a hierarchy on a feudal basis, and the Whigs were enamoured of the doctrine, discipline, and constitution of Geneva, as nearer approaching their ideal perfection of republican oligarchy. In the reaction against Puritanism in 1660 the Cavaliers, or Tory party, had the decided lead in the nation, and would have retained it, had Charles II. been less imbecile as a Monarch and less profligate as a man. Mr. Smith sketches a picture of his abandoned and licentious court, which we know from the memoirs of the day to be far short of the melancholy and disgraceful reality:—

"What signifies it to the novelist, the recreator, that stately palaces and solemn temples have passed away, slowly converted into dust by the withering blight of time, or suddenly smitten into smoke and ashes by one fell sweep of fire? He waves his magic wand, and they are conjured up again in all the integrity of their pristine splendour. Lo! look! behold you are gazing upon the magnificent, the gorgeous, the glorious gallery of Whitehall Palace, with its painted ceilings, gilded cornices, and rich tapestries.

"Mark you that swarthy, deeply-furrowed, saturnine, and yet sensual-looking man in the black flowing wig, with a ribbon and a diamond star upon his breast, the Order of the Garter round his knee, and a Belfonia spaniel in his lap? He is not yet sixty, though excesses of every kind have stamped an additional decade upon his haggard features. His looks may betoken the gravity of age; but even the folly and the wildness of youth would not excuse the depravity of his occupations. They betray the man, and apprise the gazer that he is contemplating Charles II. Where is now the plea of the witty Monarch, who, when he was told that he never said a foolish thing, and never did a wise one, rejoined that nothing was more likely, since his sayings were his own, and his doings were the work of his ministers? Is this scene of Sabbath profanation the suggestion of his Privy Council—is it they who have converted his palace into a sink of iniquity?

"Behold him where he sits playing at riddles, joking, not over delicately, about court intrigues, the favourite subject of his raillery, or indulging in frivolous discourse, which, with a more refined or less servile auditory, might well imperil his reputation for decency and good sense.

"Yonder bevy of patched, powdered, feather-waving, rouged, diamond-sparkling wantons, duchesses though they be called, do they not tell us, by their bold looks and levity of speech that they have been enamoured for their infamy? See how they crowd round one of their own body who is telling fortunes with a pack of cards, and promising them a succession of guineas for the coming week. "And who is you dark-complexioned lady with the diamond stars and the care-worn countenance, talking with a nervous rapidity, and endeavouring at times to conceal her mortification by a forced laugh? That is Queen Catherine of Braganza, who is compelled to receive her husband's mistresses as her ladies of the bed-chamber, and his natural children as the highest titled and most conspicuous inmates of the palace.

"Were there then, at this period, no honest men or women at the court of England's Monarch? Heaven forbid that this question should be answered in the negative; though one cannot help suspecting that decent and respectable persons would almost be ashamed of appearing among such a contaminated crew. Yet such there were. Turn your eyes to yonder corner of the gallery, where, standing by the window that looks out upon Holbein's beautiful gate, you will see, amid a knot of strangers and visitants, Colonel Arundel, laughing and joking, and evidently seeing nothing objectionable in the scene before him; while the looks of his son Arthur attest how profoundly he is shocked at the wasteful luxury, the gross licentiousness, the shameless profanation, manifested in the orgies of which he is a spectator. Those nocturnal revels have already been frequently described; but we have sketched one of them afresh, because it had a marked influence upon the opinions and actions of Arthur's future life."

Yet it was to this Monarch that a sycophant clergy gave the title of "our most religious and gracious King,"—epithets the remembrance of whose origin ought alone to be sufficient to banish from the Anglican Liturgy. The Whig leaders, remembering that the death of Charles I. had been the signal for their ruin as a party, devised various

schemes to bring the second Charles into their power, and among these the Popish plot was at once the most extraordinary and most iniquitous. A popular frenzy was created; it burned out from its own intensity; reaction ensued; the Rye-house plot became the counter instrument against the Whigs, and the whole herd of spies and informers turned against their employers. In a former generation the rival oligarchies had met in hostile array to decide their differences in the battle-field;—their arena of strife was now changed to courts of justice; pious frauds and purchased perjuries were their weapons of war. Never, in the annals of mankind, was such a spectacle exhibited as England displayed at that moment: the country was "bribed by paupers, bullied by cowards, and duped by idiots." Men were hypocritical in their pretensions to vice as well as to virtue, "and not to be corrupted was the shame." Such a system could not have endured under any Monarch save one, who never scrupled to make any sacrifice that would procure an adjournment of difficulties. But at length the great Sovereign of miserable expedients terminated his mortal career, and the closing scene of his unhonoured life is thus powerfully portrayed by our author:—

"See you yonder superb beauty with the dark brows and jetty hair seated in a saloon, gorgeous with tapestries, paintings, japan, screens, and furniture of solid silver; and whispering to a powdered foreigner, who listens with rapt attention to her tidings? It is the Duchess of Portsmouth, one of the King's mistresses, revealing to M. de Barillon, the French Ambassador, the important secret just confided to her by the King, of his having recently embraced the Catholic faith. Testifying the most eager anxiety for the salvation of his soul, she urges her companion not to lose a moment in seeking the Duke of York, in order that his Majesty may have proper spiritual aid in his dying hours. Behold! the messenger hastens to the apartment of the King's brother, whose countenance, previously darkened with grief, assumes an expression of satisfaction as he receives the intelligence. Starting from a deep reverie of some continuance, he at length exclaims,

"You are in the right; there is no time to be lost. I will hazard all rather than not do my duty: send instantly for a priest; but, as you suggest, it may be well that he should be led up the back stairs, and wear a disguise of some sort."

"Father Huddleston, a Benedictine monk, who had assisted the King in making his escape after the battle of Worcester, being the first that was encountered, a hat was placed on his head, a cloak thrown over his shoulders, and, thus accoutred, he was brought up to the closet of the Duke, who let him into a magnificent chamber, where, upon a gorgeous bed, emblazoned with the royal arms, lay extended a forlorn wretch, whose cadaverous hue, sunken eyes, and look of haggard terror proclaimed him to be a dying man. That miserable object was King Charles II., the merry Monarch."

"Consulting the interests of his own order rather than those of his royal penitent, the monk began by exacting from him a promise to make open profession of the Catholic faith should he recover from his illness; and then proceeded to administer those religious offices which his Majesty had refused to receive from ministers of the Established Church. And now, amid the convulsions of nature, he gathers together his remaining strength, to speak his last wishes to the Duke, recommending to his care with a tenderness that is honourable to his memory, the Duchess of Portsmouth and her son, and desiring him to be kind to his other children, and not let poor *Nelly* starve.* But of his ill-used Queen, of the Government, of his people, of the interests of religion, and those of the nation, or of his servants, or of any other subject that should have been uppermost in a Monarch's mind at such an awful moment, not a syllable does he utter! He sinks—his senses fail him—he who never said a foolish thing, babbles idle balderdash—his tongue cleaves to his mouth—his eyes close—the joyous reveller of last Sunday evening, the merry Monarch is a corpse! Dong!—Dong!—Dong!—hear you not the great bell tolling for his death?"

The accession of James II. did not put an end to the reign of hypocrisy, but it rendered the position of the hypocrites exceedingly difficult. "No Popery" was the Whig weapon of war, but not a few of the Tories were ready to join in the cry so soon as James had shown any signs of a desire to meddle with the Anglican clergy. In a clover scene in the family of a Protestant Cavalier, whose lady had been a firm believer in the revelations of Titus Oates, we find a very probable picture of the perplexities which beset the minds of many of the Tory party:—

"But after all, Madge," cried the Colonel, "why should you keep such an everlasting coil about Popery? You ask what would become of us if we were all to be mass-gore? Why, we should become what your ancestors were and mine;—what the whole nation was, till bluff King Harry got tired of his wife, and fell in love with a pretty girl, and quarrelled with the Pope because he couldn't get a divorce. Here was the whole good people of England, and no fools neither, all of 'em well contented to be Papists for I don't know how many centuries, up to the time when Harry had a crow to pick with the Pope, only about a divorce and a pretty girl, as I said before; and then when the King gives the word, 'right about face!' and they all turn Protestants before you can say Jack Robinson! Well! only a hundred and fifty years are past, and here's the very same people frightened out of their seven senses about a Popish plot, and half ready to dethrone their lawful Sovereign because he goes to mass, and has a few dirty monks sneaking about the court. If that isn't a downright puzzle, I don't know what is."

"Shocking, my dear, shocking!" ejaculated the wife,

* "Nell Gwyn, the only one of the King's mistresses who refused to be ennobled, if a title so acquired can be said to confer nobility."

lifting up her hands, "I thought you were a better Protestant. Margaret! You will pull off that silk tassel, if you keep twiddling it so."

"Why, Madge!" rejoined her spouse, "there isn't a better Protestant in all England than I am, and that you know, or ought to know. Don't I go to church whenever I am in the humour; don't I hate Puritans and Roundheads, and Independents and Anabaptists, and all that kind of vermin; and don't I ask Parson Chudleigh to dinner, and get muzzy with him almost every Sunday? Chudleigh's a good fellow and a loyal, does his duty well, is beloved by all the parish, and understands how to draw a cover for a fox or a hare almost as well as old Buckthorn. Better Protestant indeed!" and he followed up this repetition of the phrase with an indignant oath.

"Mrs. Arundel had been so long used to these expletives, that they gave her no offence, and she had even ceased to notice them; but her daughter could not help exclaiming: 'Oh, papa! how can you call yourself a good Protestant, and yet swear so terribly?'"

"Zooks, girl, that's the proof on't. Why, the Cavaliers were all good Protestants, weren't they? and I never knew one that didn't rap out oaths by the dozen now and then. You wouldn't have them more mealy-mouthed than the King, would you? Now, old Rowley, rest his soul! was a swearer; and so was his father before him; for when some canting fellow took him to task on the subject, he cried with a laugh, 'Oaths! why your Martyr was a greater swearer than I am!'"

Another picture of political perplexity and inconsistency, arising from the rebellion of the unfortunate and betrayed Duke of Monmouth, has all the verisimilitude of a real occurrence, and was no doubt actually exhibited in many varied forms during the time:—

"His father in return related the particulars of Monmouth's defeat and apprehension, the quartering of the dragoons on the Moat House, and other details—ending with the inquiry, 'Did your mother tell you that this madcap affair of Monmouth's brought us an unexpected visitor in the person of your uncle the Bishop?'—You won't forget him in a hurry; no, nor the rascally master of Luther House, whom you would not suffer me to horsewhip? Well, the invader having been proclaimed King at Taunton and Bristol, it was rumoured in London that the whole country, from east to west, was up in arms; that two regiments had gone over to him; and that the game was all up with King James. Whereupon the Bishop fell suddenly sick, was recommended change of air, and hurrying down to the moat, actually proposed that we should both hasten to the Prince's headquarters, and have the merit of being among the first to join him."

"You did not, of course, listen to so wild a proposal?"

"My dear boy! when a fellow knows a great deal of Latin and Greek, I always take it for granted that he knows very little of other matters, so that I never had the least respect for his lordship's judgment. Besides, I had taken his advice once too often in sending you to school. Your mother wanted me to do as he advised. Any stick you know will do to beat a dog, and so she thought any invader, even an illegitimate adventurer, would do to put down a Popish King."

"I need not tell you that I am a Loyalist to the backbone; a Loyalist upon principle, my dear boy! and besides, as an old soldier, I always wait to see which way the cat jumps before I decide for myself; so I counselled the Right Reverend to do the same, and remain for a short time at the moat. And lo and behold! one fine afternoon, as he had quite forgotten his illness, and was pouring down humpers of my best Gascony, (how I envied him!) and I was making wry faces at this beastly barley water, comes an account of the battle of Sedgemoor, and the flight of the Duke. Never surely did any medicine act like that. Instantly cured of sickness, his lordship jumped up from table, started in an hour for London, and for aught I know to the contrary has been among the very first to fly to court, and do all loyal homage to King James. Ha! ha! ha!"

Mr. Smith has shrunk from delineating the meanness, the treachery, and the obliquity of political vision which distinguished the principal leaders who invited over the Prince of Orange. He has, however, intimated his opinion of their deficiencies rather than their demerits, by introducing his hero at one of their private meetings giving advice which never entered into the heads of any of these pretended patriots, and which assuredly would have been rejected, even more contemptuously than the novelist describes, if it had been tendered:—

"I was in hopes," said Lord Devonshire, "that our zealous young friend, Mr. Arundel, would have favoured us with his information and assistance in this discussion."

"Not being a regular member of your conclave," said Arthur, "I did not feel authorised to offer an opinion. Such information as I can supply will be found in my letters to Mr. Sydney, which have doubtless been laid before you, and by which you will perceive that I have not been idle on either side the channel. What I would now most strenuously advise is, that, before you sign this all-important invitation to the Prince, you should annex to it, in the most formal and specific manner, the conditions upon which he is to govern us, if he succeed in his enterprise."

"Extensive observation of the whole eastern coast convinces me that England is ripe for a revolution. Rarely indeed does it happen that the governed can dictate terms to their governors; but such will be our fortunate condition if our great undertaking be not frustrated. We have the crown of three kingdoms to offer; let us place our civil and religious liberties beyond the reach of future despotism; let us have a free and well-defined constitution that may save us from future civil wars and convulsions."

"On the part of the people of England, I solemnly protest against your imitating the example of the traitorous General Monk, who, having the fate of the country in his hands, sold it to an arbitrary Monarch without a single stipulation for its liberties."

"We have no authority either to dictate terms, or to remodel the constitution," objected Lord Lumley; "that must be left to the Parliament."

"What!" exclaimed Arthur, "to such a House of

Commons as that which lately committed Mr. Coke to the Tower for saying, in allusion to the King's intemperate speech, 'I hope we are all Englishmen, and not to be frightened by a few high words.' No; I would stipulate beforehand for perfect freedom of speech and of opinion both in civil and spiritual matters; I would have a Magna Charta for the mind."

"I differ from you entirely," said the Bishop. "Religious liberty means spiritual anarchy, and I was therefore opposed to repealing the test, as well as to the King's declaration of liberty of conscience, for which, as you all know, I have suffered censure and official suspension. Besides, it is much too early to dictate to the Prince of Orange. It would certainly surprise and might probably offend him."

"With submission to your lordship," replied Arthur, "it would hardly take him by surprise, for I myself, with a premature rashness which I am most ready to admit, sought an interview with his Highness soon after the commencement of the present reign, when I proposed the enterprise which we are now planning; and ventured to state, that, as it would be no advantage to the nation to exchange one arbitrary ruler for another, I would wish to have it previously stipulated that the power of the Sovereign and the obedience of the subject should be defined and secured by equal laws and a free constitution."

"And what was the reply?" inquired the Bishop with a slightly supercilious smile.

"I had no authority: the time had not yet come, and his Highness would not listen to me."

"To a certain extent we are in the same predicament now; and were we to dictate terms we might probably meet a similar rebuff."

The scenes which took place in London on the flight of the King are thus described:—

"The Government was thus dissolved; no power of any sort had been appointed as even a temporary substitute; the royal troops had mostly disbanded themselves; and the populace being masters for the moment, it is almost needless to add that they were committing every sort of excess. Bands of vagabond marauders, drunken soldiers, and disreputable women roamed about the country, pillaging the houses of the Catholic gentry, emptying the cellars of the publicans, laying travellers under contribution, bellowing in chorus the popular ballad of 'Lillibulero,' and swearing with ribald jests and execrations that they were ready to lay down their lives for the Protestant religion!"

Mr. Smith's opinions of the Revolution are given with great candour and boldness: they are more than justified by the secret history of the transaction:—

"To apply the word *glorious* to the revolution of 1688 is a curious infelicity. The nation could not furnish forth anything justly meriting that epithet. Its high and palmy days had passed away with the large-minded usurper who, by combining together the great elements of human power, religious enthusiasm, military skill, and sagacious policy, had raised up England from its fallen state, and made it the mistress of the nations. The reaction from fanaticism to indifference or infidelity, from Puritanism to gross licentiousness, from the wise and vigorous sway of Cromwell to the misrule of the feeble and profligate Charles, had again laid England prostrate in the dust, infecting the whole kingdom with such a mass of public corruption and private immorality, that a modern historian has branded this epoch as the *Nadir* of the national character and prosperity."

"King Charles himself, his ministers, his mistresses, and his courtiers took bribes from the French King for betraying the interests of their country. If Barillon is to be believed, a similar imputation rests upon the patriot, Algernon Sydney; and it was probably deemed an act of fastidious nicety on the part of Lord Russell, that he refused to participate in these degrading acts of venality. The revolution, so long prepared, and so long concealed from the King by a succession of the most monstrous falsehoods, perfidies, and treacheries, was finally accomplished by the defection of English, and the invasion of foreign troops, circumstances which utterly repudiate its title to the word *glorious*."

"Not less discreditable was the hesitation of the nobility and gentry in joining the Prince on his first landing, when they feared the vengeance of the King; and their subsequent rush to his standard when they saw in the successful invader the sure dispenser of posts, titles, and rewards. What a sordid scramble there was for these distinctions is too well known!"

"Betrayed on all sides, and the most shamelessly by those on whom he had lavished the greatest favours, and hunted into the toils by a grand *battue* of the whole nation, our sympathies become partially enlisted on the side of the fallen Monarch, whose mistaken but honest, open, straightforward bigotry assumes a certain aspect of respectability when compared with the duplicity, fraud, and fanaticism by which he was assailed."

"True, he was uxorious and yet inconstant, a slave to the forms and dogmas, a stranger to the spirit of Christianity, a laborious plodder in the details of king-craft, while utterly incapable of any comprehensive views of policy; but he possessed that perseverance which is only called obstinacy when it fails; and he was at least open, sincere, and honest. A sorry jester was he who, pointing to the King at St. Germain, contemptuously exclaimed, 'Behold the simpleton who sacrificed three kingdoms for a mass.'"

"This anecdote was an unconscious compliment, for in those days it must have been difficult to find a man who would make any sacrifice, however small, for any principle, however sacred. Had he avowed the same devotedness in a good cause that he did in a bad one, King James would have been hailed as a martyr, instead of being regarded as a self-immolated victim."

We have dwelt rather on the historical than the artistic character of this work, but viewed merely as a novel it is one of high merit. Few writers of fiction would have ventured on the introduction of a hero suffering under personal deformity, still fewer could have worked out of this defect such an analytic display of mental and moral formation as the author of "Arthur Arundel."

Relics of Ancient English Poetry. By the Right Rev. Dr. Percy, Lord Bishop of Dromore. New Edition. London: Washbourne.

This very beautiful edition of Percy's relics deserves a word of commendation, as it places within the reach of persons of moderate income a work which led the way to the overthrow of the conventional school of poetry, and led us back from the corrupt streams of affectation and imitation to drink from "the pure well of English undefiled." Bishop Percy was among the first to reveal to the world that the Norman Conquest had not broken down the inherent energies of the Saxon mind, but that the bold foresters of Northern England maintained in their fastnesses a daring independence which, though often repressed, could never be destroyed. The old forest laws were the most galling badge of slavery imposed upon the English people; and, even in their present mitigated form of game laws, they have not ceased to be onerous and vexatious. But against these iniquitous forest laws the Saxon peasantry maintained a determined and indomitable resistance. They exhibited in their struggle against the petty tyrants of their fields the elements of those higher qualities of character which enabled them in every successive generation to extend the power of the English Commons, and secure for the English people a recognised position among the powers of the State.

The greatness of England is in no degree owing to Norman chivalry or Norman feudalism; it was the Saxon race, as it gradually reconquered its rights, which raised our land to its proper place in the scale of nations. Even now we find that the triumphs of industry and ingenuity are greatest and most signal in those districts where the bold Saxon foresters most sternly resisted Norman oppression. Unconquerable by the rigours of war, they have found their time for triumph by the arts of peace. It is because in the feudal ages that the forests of Rosendale and Pendle, of Sherwood and of Needwood, afforded shelter to the Saxon peasant, that these same districts now exhibit the triumphs of Saxon energy and the wonders of Saxon skill.

Viewed merely as a literary work, Percy's relics are evidences of the intellectual superiority of the Saxon race; let the spirit and vigour of the English ballad be compared with the lays of the *jongleurs* or the *siroventes* of the Troubadours, and it will at once be seen that the rough energies of the former are to the tameness of the latter somewhat in the same proportion as the statue of Hercules to chimney ornaments of porcelain. We trust that the success of Mr. Washbourne's edition will lead some enterprising publisher to undertake a complete collection of those ballads, which will historically illustrate the condition of the English people. It would be curious to trace the songs of the modern poachers in their various changes from the days of Robin Hood, when the barons kept the land a waste of forest to preserve their deer, down to the present age, when the lords of the soil sacrifice the interests of the farmers to the preservation of hares and partridges.

PREVENTION OF INFECTION FROM TYPHUS FEVER.—Dr. J. C. Smith obtained £5000 from Parliament for the following receipt:—"Take six drachms of powdered nitre (saltpetre) and six drachms of sulphuric acid (oil of vitriol), mix them in a teacup. By adding one drachm of the oil at a time, a copious discharge of nitrous acid gas will take place. The cup to be placed, during the preparation, on a list hearth, or plate of heated iron, and the mixture stirred with a tobacco pipe. The quantity of gas may be regulated by lessening or increasing the quantity of ingredients. The above is for a moderate-sized room; half the quantity would be sufficient for a small room. Avoid as much as possible breathing the gas when it first rises from the vessel. No injury to the lungs will happen when the air is impregnated with the gas, which is called nitrous acid gas, and it cannot be too widely known that it possesses the property of preventing its spread."

CRICKLADE.—There happens to be a considerable extent of charity land belonging to the poor of this place, situate about two miles from the town, which has been usually let, and the rents divided among the poor according to their debts and necessities. Through the pious and humane exertions of a few individuals, but more especially of their tried and unflinching friend, Dr. Wells, sufficient of this land has lately been appropriated and divided into allotments for every poor family to have one, in size according to the number of each family, at a small rent. It was truly gratifying to behold the splendid crops of wheat growing thereon, and to hear how the poor creatures, to whom this summer has been so barren of labour, consoled themselves with the prospect of their own little harvest. There happens, however, to be a Court of Requests at Cricklade for the recovery of debts under 40s., held under Mr. Joseph Need, of Grittleton-house, lord of the manor of the borough and hundred of Cricklade, of which Mr. Davenport Welsh Collyns, attorney-at-law, is the steward. It happens, also, that many of these poor creatures, most of them having large families, have been sued in this court, and being unable, owing to the want of work afforded this summer, to pay the demand, for lack of household furniture, their little crops of wheat and potatoes, their sole dependence for the coming winter, have been seized, which, in many instances, will not be more than sufficient, after payment of the rent, to cover the steward and bailiff's charges. Truly the privations of the poor are not half known. A revision of these petty courts might profitably employ the meddling taste of Lord Brougham.—*Wills Independent.*

AGRICULTURE.

HARK YE, FARMERS, NO POLITICS!

What inexplicable people are the landed advocates of the Corn Laws! How paradoxical are all the workings of the monopolist mind! At the beginning of the present year farmers were dragged or driven to "protection meetings," to listen to the ravings of the landed monopolists, and to be conjured to uphold the corn monopoly as the only salvation of the tenant-farmers and the farm-labourers. They were asked in varied accents of wild despair, "How they could bear English burdens with continental prices?" They were told, that if a declaration in favour of the Corn Laws could be extorted from the Government all might be well, and that farmers would become prosperous under the shelter of legislative protection; that Free Trade was the single object to be opposed, and that nothing but the machinations of the League prevented prices of agricultural produce from rising up to the point promised by the land-agents and the Corn Laws.

This, and much more to the same effect, was the theme of every political landowner's discourse some nine months ago. Where are these loud-voiced squires now? Have the latest promises of the protectionists been fulfilled, or have fresh delusions been imposed upon the farmers? Sir Robert Peel has, after his manner, declared for the maintenance of the Corn Laws; but has that declaration, which was asserted to be the one thing needful to let prices rise, given the farmer 56s. for his quarter of wheat? On the contrary, good wheat is now selling at 42s. and 43s. a quarter. The monopoly of the corn market by the home grower is complete, yet he is in a state of grievous distress. The provincial newspapers are crowded with advertisements of sales of farming stock. One man is "declining the farming business," another "is giving up dairying," a third "has discontinued breeding," and various similar polite phrases are used by the different auctioneers to cover the retreat and discomfiture of the unfortunate farmers who have been compelled to succumb; while some sales are broadly stated to be made "under an execution by the sheriff," or "under a distress for rent." The frequency of sales of farming stock was referred to by a farmer at one of the recent agricultural meetings as evidence of the present distressed condition of the tenant-farmers. The state of the farm-labourers is still worse. Already hundreds of able-bodied men are out of work in the rural districts, and wages are reduced to starvation point. Farmers themselves regard the coming winter, from the destitution of the peasantry,

with anxiety and dread. Incendiarism has recommenced in Suffolk and Norfolk, and we observe with deep regret that it has extended into several other counties. Here, then, is a state of things wherein the "farmers' friends," their political advisers and their representatives in Parliament, might naturally be looked to for advice. The farmers having assisted the political gentry to achieve the objects they represented to be essential to the protection of agriculture, might have expected some intimation of the way out of their present labyrinth. They are discontented and exasperated by the failure of the protective system, and seek for information from their political leaders as to how it is all to end.

But there is one article of farming produce, and one only, which is selling well, and which, from so selling, will this year save many farmers from serious consequences; that article is wool. This only adds to the puzzlement in which the farmer has been involved by his political friends, for the abhorred principle of Free Trade has just been applied to wool. And with what result? Why, for the first six months of 1842, when wool was protected and the prices of English wool were at the very lowest point of depression, the quantity of foreign wool imported amounted to 15,342,343 lbs. only, while during the corresponding period of the present year, the first year of *Free Trade*, no less than 28,618,888 lbs. of foreign wool have been taken into consumption in this country. Still, with the large importation of foreign wool, the price of English wool has greatly risen! Thus, by means of protected produce, corn, the farmer is brought to the verge of ruin, from which he may be saved by the unprotected commodity, wool. This is enough to shake the faith of the farmers in the utility of protection, and it has more than shaken that faith with all the most intelligent of the body.

Yet all members of the farming class have been regarding the present season, when their county members and their landed grandees meet them at agricultural meetings, with anxious expectation. Some anticipated a new panacea for their present distress, and all wished to hear whether the landowners regard the actual condition of tenant-farmers as the sequel of the protectionist agitation. With these feelings farmers, who heartily despise the silliness of the county agricultural associations, have gone in great numbers to the dinners of such meetings; and they are there told by the landed magnates, who a few short months since were so rampant on the question of protection, that the rules of the associations forbid the introduction of

politics! Not long since "protection" was not a political question. All sects of politicians—Whigs, Tories, Radicals, and Chartists—were invoked to protect "native industry." Whence this change? Simply because all the promises of the landed monopolists have failed, all their prophecies have been falsified, and their deluded victims, the farmers, are now paying the penalty of their folly in listening to men who have deceived them so often. The monopolists have no explanation, no plausible excuse to offer for the present state of things, and hence they shelter themselves by the subterfuge of "no politics." We know that farmers view such conduct with mixed sentiments of indignation and contempt; and justly, for when the political landowners have any personal or party objects to serve, this rule of "no politics" is as easily broken as lovers' vows.

A striking instance of this conduct occurred at the *Herts Agricultural Meeting*, held at St. Alban's on Wednesday last, where, according to the *Post*, some 300 persons sat down to dinner. Nowhere were the monopolist landlords more unmeasured and unreasoning, during the short-lived fever of the protectionist agitation, than in Hertfordshire; and in this very town of St. Alban's some of the wildest and most incoherent nonsense anywhere used in support of the Corn Laws was uttered by the Hertfordshire gentry. Their determination to uphold the monopoly, at all times and in all places, was invincible. Their opposition to Free Trade, and especially to the importation of foreign corn, was immovable. Their hatred towards Free-Traders was unextinguishable. Then nobody talked for the Corn Laws more sillily than Lord Grimston; no one raved more furiously for short commons than Mr. Dudley Ryder. Now, to talk about protection is to infringe the rule of "no politics." What a change has come over the spirit of these men's dreams! Both have since given in their adhesion to Free Trade—in wool; what they say about corn we shall see presently. On the other hand, never were the questions which affect the condition of the farmer so much discussed and thought of as by the tenant-farmers on the show-ground in the morning. Much speculation was hazarded as to how the landed grandees would account for the existing state of things. Hence the large assembly at the dinner. The chairman, Lord Verulam, after stating that "these societies held out an inducement to agricultural labourers to become good servants, and stimulated their employers to become good masters"—at which every farmer present must have uttered to himself, "Fudge!" said:

"This was a matter entirely dis severed from politics, and, indeed, it was one of their rules that all political disquisitions should be avoided. He hoped that feeling would prevail on that occasion," and so forth. This was a short way of escaping awkward explanations. Next Lord Grimston said, that "he considered these agricultural societies did a vast deal of real and *bond fide* good at once,"—how choice the language!—and that "they acted as a stimulus for exertion on the part of the farmers to produce good stock and good crops, and actuated the agricultural labourers also to equal exertion in the development of the produce of the soil! He (the labourer) was full of hope, and he (Lord Grimston) hoped that the establishment of agricultural societies generally would be an incentive to hard labour, and that not only they, but the whole community, would reap the fruit of that labour." Surely, in the present state of the Hertfordshire labourers, it was little short of mockery to talk of hope in connexion with them. Hope for them does not exist so long as the monopolists can succeed in upholding the Corn Laws.

Then, how profoundly ignorant of the springs of human action is this monopolist member for Herts! Farmers stimulated to exertion by such a miserable exhibition as that of St. Alban's, or labourers at 9s. a week, and sometimes half employed, "actuated to develop the produce of the soil," are notions so absurd that none but those whose intellects have remained in the schoolboy state could have seriously propounded them. These local societies are supported by two sets of persons, with different objects: the one consists of a few topping farmers and farming squires, who, having good stock, like to exhibit them to their neighbours and obtain the credit and glory of carrying off two and five pound prizes, where, in fact, there is no real competition. These men treat the agricultural associations as playthings: they are few in number, and have not been led to keep good stock by the societies' prizes, nor are they likely through the societies to influence other farmers by their example. The other and more numerous class of supporters of these societies are the political squires and landed magnates, who use them as instruments to serve their own party or selfish purposes. Here they sometimes lash their foolish dupes amongst the farmers into an agony of terror lest they should lose a shilling a quarter on the price of wheat by a Free Trade in corn; while at another time, when such topics might be inconvenient—when a fall in prices might lead the minds of the most gullible farmers to the idea that as prices had fallen, so

ought renis—they exclaim with prudish horror, "No politics."

But if one member's speech was unmeaning, that of the other, Mr. G. D. Ryder's, will be sufficiently significant to the observant agriculturist who has been taught to rely on "protection" for profit. Mr. Ryder said:—

"That these agricultural societies were of the greatest benefit to the whole community, inasmuch as they tended to encourage the production of the largest quantity and the best quality of the staple articles of human consumption. (Hear, hear, hear.) The object of agricultural societies was to encourage the produce of as much English corn as possible, for it was obvious that if there was not a sufficiency of English corn to supply the population of the country, then they must depend on foreign countries for a supply; and he would ask, where was the Englishman who would not prefer corn grown on English soil to that grown in a foreign land? (Hear, hear.) With an increasing population of 120,000 per annum, if England did not increase in the produce of her wheat in an equal proportion, no alternative was left to them but to get their corn from abroad."

We all recollect this gentleman's short turn from a thorough monopolist to a Free-Trader on the wool question, and can any farmer doubt that he is now preparing himself for a similar gyration on the Corn-Law question? And then he declared that farmers must have leases if they are expected to improve their systems:—

"He thought that great alterations were necessary in the present system, to render agriculture that assistance which it required. He must say that he thought the present mode of letting farms might be improved. (Cries of 'Hear, hear, hear.') If, as under present circumstances, the tenant held a farm simply as tenant from year to year, it was utterly impossible that he could feel himself justified in expending several pounds per acre in improving his farm. (Hear, hear.) He (Mr. Ryder) thought the time had arrived when the landlords should be somewhat more liberal, when they should come forward and take measures which would make the land more productive. This was not only necessary for the advantage of the tenant, but to alleviate the distress which existed amongst the agricultural labourers. He (Mr. Ryder), as chairman of the board of guardians of his district, could speak to this fact, and he would ask if even now the farmers were compelled, in the month of September, to discharge their labourers, what was to become of them for several months to come? These labourers were the same as themselves, both in the sight of God and man, and the law of England said they must not starve. He would suggest, therefore, that there was never a time so opportune when the landlords should step forward in such a way as would not only assist their tenantry, but at the same time give employment to the labourers."

Now, some of our friends might suspect that this corn monopolist and free-trade-in-wool member for Herts had been studying our columns, and had become a convert to the opinion that self-dependence is that which alone can bring permanent prosperity to the cultivators of the soil. We, however, make no claim to the merit of this conversion. The English of it all is this—Mr. Ryder who, for a county member, is not an unintelligent person, finds that, unless farmers can be induced to adopt a better system of husbandry than heretofore, rents must come down, and a mass of pauperised labourers will be sides be thrown upon the land. Monopoly has failed to keep up prices, and God's bounty—so unnatural is the operation of the Corn Laws—has reduced farmers of this country to the very verge of ruin. Mr. Ryder sees what the rest of his class will see ere long, that the game of monopoly is up; that high rents by the agency of bad farming and short crops are at an end, and that henceforth tenant and landlord must look to large produce both for profit and rent. We are glad to see even one protectionist coming to his senses and talking rationally on this question; but what will the farmers, who have been cheated and deluded, say, and ruined during thirty years of monopoly, say to those who have led them this will-o'-the-wisp dance, and now coolly turn round and reiterate all which the advocates of Free Trade have asserted with reference to the necessities of agriculture?

INCREASED VALUE OF LAND.

WHO HAS GOT THE LION'S SHARE?

Amongst the many significant symptoms of the spread of Free-Trade opinions which are now constantly appearing in various directions was the dinner of the *Wheat-harvested Free-Trade Club*, which took place on last Wednesday evening. Wheat-harvested is a mere village in Hertfordshire, situated in a district exclusively agricultural, and in the very centre of the influence of the land-owning monopolists of that county; yet there were no less than forty intelligent persons assembled to promote the cause of "Free Trade." The chairman on the occasion was that consistent advocate of Free Trade, Mr. C. Lattimore, who during an excellent speech, in introducing the toast, "Commercial freedom all over the world," made the following comparative statement of the present value of a farm with its value nearly a century ago:—

"He thought that it was for want of attention to the amount of rental and tithe at the present day, compared with what it was sixty or seventy years ago, that the situation of the agriculturist was not understood. At that time there was a bounty of 5s. per quarter on wheat, and of 2s. 6d. on barley, and if they considered these facts together, and then compared them with the present state of things, they would find there was very little mystery in the matter. He held in his hands one of those very rare documents—a twenty-one years' lease—as pure as a black swan. (Laughter and cheers.) This was a

very rare and unique document; it was the lease of a farm within the parish of Wheat-harvested, granted the 7th of October, 1748, by Mr. Thomas Garrard, of Mackery End; the terms were exceedingly fair, and evinced much of that good old English feeling which, he was sorry to say, was now nearly extinct. (Cheers.) There was no clause in the lease containing any mention of a penalty, or at most a very slight one, and there was no mention made of the accursed game system. (Cheers.) Could the present owner of that land say as much now? (Hear, hear.) It provided for the interest of the tenant, as well as that of the landlord—and the rental was, for the first three years, £130, and for the remaining period to 1769, £140. He had been told by those acquainted with the fields specified in this document, that the extent of land was 300 acres, so that the rental was 9s. per acre; and the tithe, from the best information he could obtain, was 2s. per acre, which, added to the rental, would make the whole 11s. per acre. Now, the average price of wheat from 1701 to 1766 (which included the period for which the lease was granted) was 32s. 1d. per quarter. The average at the present time was about 44s., so that the difference in the price of wheat in the two periods was somewhere about 25 per cent. Now, he came to speak about the rent of the same land at the present time; the rent was about 24s. per acre, and the tithe charge was about 6s. 6d. per acre. (A voice, "You understate it.") Well, he wished to be under the mark; he never wished to be over the mark in any of his statements, for that was a bad way of advocating a good cause. (A voice, "They are a good deal over the mark.") Well, then, they had seen that the difference in the price of wheat, at the period of the black-swan lease and the present time, was only 25 per cent., while the increase in the fixed burden was about 200 per cent. There now, they saw what had become of the labour fund. (IMMENSE CHEERING.) They always found that, in discussing these subjects, a great deal of soreness was evinced by some persons when they came to the rent—but true it was that all the demands he had enumerated had to be satisfied before one shilling could be devoted to remunerating the skill and industry and capital of the cultivators of the soil. (Cheers.) He did not find fault with the landlord to whom the farm alluded to belonged making as much of his land as he could; but he did find fault with him for having, after that, endeavoured to injure a tenant for daring to think and act independently. (Cheers.) He had now stated one of the causes why the remuneration of the farmer and the farm-labourer was so unequal to that which in justice they had a right to expect; and, if protection societies would take such items as he had given into their consideration, they might then arrive at some conclusion as to the right method of making agriculture prosperous. That would never be accomplished until the Corn Laws were repealed—and then agriculture would adjust itself, and they would see a few more of these black swans in the neighbourhood."

Now, this is the sort of comparison which will be made wherever agriculturists and dwellers in rural districts fairly and fully discuss the operation of the Corn Laws on the condition of the farmer and farm-labourer. Everywhere it will be found that the value of land has increased enormously during the last century, and that in most cases the whole of that increase, and in many instances more, has gone into the pockets of the landlord.

The land has, undoubtedly, become more productive; but by whose capital—with whose sweat and toil has it been rendered so? Surely that of the farmers and the labourers. Landowners have ridden into wealth upon the shoulders of the industrious agriculturists, and then they have sought to appropriate to themselves, by means of the Corn Laws, a most undue share of the produce of the soil. At this moment the landlord is literally devouring the farmer and the labourer, for he is taking as rent the fund from which the profit of the one and the wages of the other should be derived.

At the same meeting, the Rev. Thomas Gilbert stated: "He was much gratified to see so numerous a body of intelligent men present on this gratifying occasion, and he felt convinced that, although their numbers were comparatively small, they included a large majority of the men of intellect in the neighbourhood. They knew well, and there was some pleasure even in this, that there were many who would rejoice to join their ranks if they dared."

We know that farmers are becoming daily more and more disgusted with the Corn Laws, the evils of which are now so obvious; and though many are restrained by habitual deference to their landlords, and by other motives, from avowing their sentiments, the monopolists are well aware that their influence over the farmers is rapidly waning.

AGRICULTURAL REVELATIONS.

The reports of meetings of those landlord-created clubs called agricultural associations now come upon us so thickly that we can scarcely find space to notice at the moment half the remarkable things which are there said and done. However, most of them tell, in substance, the same tale, namely, that the "protected" interest is the most helpless and distressed one of the whole community. The way in which this comes out fully confirms the arguments against monopoly which Free-Traders derive from the condition of agriculture and agriculturists. Amongst the recent meetings one of the most notable was that of the *Banbury Agricultural Association*, held on the 17th of September; and in the annual report of the committee of that society there are several passages which farmers will do well to treasure in their memory. After alluding to the progress of agricultural science, the report says:—

"Even the unaccountable drought which has prevailed during the year seems to have added a stimulus. Scarcely a month passes without the communication of some new fertilizer, or some new proverender, as if the goodness of Providence had ordained that they who strive should not be unrewarded."

Can those who penned that report avoid the conclusion that the law which excludes the best proverender our stock could have, viz., beans, peas, oats, and so forth, and which imposes a heavy duty on oilcake, is a direct contravention of the ordinances of Providence and the dictates of common sense?

Again the report says:—

"The growth of flax was suggested by your worthy chairman as a means of supplying the deficiencies of other crops for which the demand is increased by the introduction of railways. Your committee despatched a deputation from their body to inquire into the merits of the suggestion, a report was published, and it was followed up by a determination of several members of this association to adopt the plan. It has been partially acted upon, and some very fair crops of flax have been grown and secured, particularly when the drought of the sea-

son is taken into consideration. In the course of next year it is understood to be the intention of many other farmers to have recourse to similar plantations."

Here farmers are advised to grow an article comparatively unprotected, to make good deficiencies caused by the growth of "protected" grain. How does that consist with monopolist theory?

Further on the

"Committee cannot refrain from adverting to the condition of the labouring classes; they view with considerable alarm the great disinclination to give them employment apparent in many parishes. It is true the very low prices of agricultural produce, on the one hand, and the deficiency of crops on the other, make the situation of the farmer himself any thing but satisfactory, still, however, the poor are here and must be maintained, and it is become a question whether they shall be maintained in the workhouse, where they make no return, or on the land, where the benefit of their labour is felt."

True; but if the farmer's money goes for rent he cannot pay wages; while an increased poor rate forms at once a plea for a reduction of rent. This is the reason and owners are always in such a fright when labourers are likely to come upon the poor rates. The above passage bears evident impress of the landlord's hand. And the next more so, for it tries the now stale trick of asking the farmer to look to legislation for relief, when the report adds:—

"The answer is obvious. Whether the farmer may not be relieved by some measure of the Government, may be worthy of consideration, for unquestionably the tendency of the measures of the present Ministers is to lower prices; and low prices and high taxes cannot co-exist for any lengthened period."

However, the members having been prepared by this somewhat lugubrious report, went to dinner. As we are informed by the local newspapers:—

"The number who sat down was between 120 and 130. The president, Lieut.-Col. North, took the chair. Among those present were the Marquis of Bute; Lord Norreys and J. W. Henley, Esq., two of the county members; Colonel Cartwright, Henry George Hawtin, Esq., B. Applin, Esq., Charles Brickwell, Esq., Henry Norris, Esq.; the Revs. John Ballard, W. C. Risley, F. Litchfield, Chas. Wyatt, Geo. Nelson, F. Clarke, C. Chichester, E. Paine, S. Y. Seagrave, and other clergymen; Messrs. Horwood, Jeffs, Hadland, Carpenter, White, Lovells, Pages, French, Gullivers, Neville, Stilgoe, White, Kilby, Boyes, Pearce, Wilsons, Greaves, Jones, Perkins, Barratt of Wicken, Cowper, Southam, Payne, Hitchcock, Godson, Gardner, and other eminent agriculturists; and of the townsmen, French, Potts, Goffe, Greaves, W. Risher, Strange, Danby, Stanley, Barford, Hardwick, Ward, Merry, Abbotts, Floyd, Potter, Cowper, and others. As might be expected, there was a sprinkling of solicitors, who would have been still happier than they appeared to be to have heard the probability of a revival of the good old custom of granting leases."

The necessity of leases has now become a canon in the agricultural creed; but the Corn Law forms the obstacle to the "revival of the good old custom."

The Marquis of Bute, the chairman, and the earlier speakers dealt chiefly in compliments to each other, and eulogies on the society as rewarding "male and female servants, not only for their skill in agriculture, but for remaining many years in the service of one master."

This must be deemed mere cant in the mouths of those who cling to a law which restricts the demand for farm-servants, and lessens the value of their wages. Lord Norreys, this year, admitted the prudence of the chairman who had last year pulled him (Lord Norreys) up when entering upon politics. The Corn-Law question is just now an awkward one to discuss on protectionist principles before the farmers, and therefore monopolist M.P.'s take shelter under the plea of "no politics." But would not the farmers like one or two knotty points explained? As, for instance, how rents calculated according to actual prices are to be paid when real prices are 20 per cent. lower?

Colonel Cartwright gave a brief account of a journey of 1000 miles which a friend and himself had made on the Continent. Leaving their partialities in favour of English agriculture behind them at Dover, they looked right and left, and he could confidently repeat that the best of foreign farming was only on a par with the worst of English. There were, however, some points which he could speak well of. The first was irrigation; and there they seemed as fond of getting water on their land as people were here of getting it off. As to manure, that was most carefully collected and preserved, while an English farmer was generally most negligent in the matter. In this country manure was to be seen on the side of the road, the essence draining down the ditches; and he even remembered a gentleman's bailiff putting a heap on the very road itself. Stall-feeding cattle was more in use than in England; even in summer the cattle were stall-fed, much after the manner of cow-feeding near London, where every bit of grass the cow had was carried to her."

Yet with their inferior husbandry the unprotected farmers of the Continent make a living, while here the farmers only strive to pay high rents, often out of their own capital. And Mr. Boyes accounted for the seeming negligence of English farmers in regard to manures, and so forth, by saying:—

"He admitted the charge of negligence against the English farmer in the article of manure; but Colonel Cartwright must bear in mind that in no country in the world are the homesteads so bad as they are in England. (HEAR, HEAR.) On the Continent there was every convenience for stall-feeding, while in this country they were neglected by landlords as well as tenants; the landlords did not afford the conveniences they ought in proper homesteads for stall-feeding."

That was a home thrust for the son of the absent monopolist member, and to the aored monopolists present! And the Rev. Francis Litchfield, himself an active protectionist, said:—

"He agreed with Mr. Boyes that the homesteads generally were not what they ought to be; and, talking before the wealthy of the land, he would say that every land might be greatly improved by improving their homesteads; but unfortunately the management of estates was not sufficiently looked to by the owners, but often left to the management of subordinates, whose only thoughts are to make rents, and not to lay out money, either for the benefit of the landlord or tenant. Houses should be built, barns added to barns, hovel to hovel, by landlords, until every homestead shall be adapted to, and sufficient for, the farms from which they are receiving their rents. A tenant on a well-arranged farm is better able to pay his rent, and he will do it with more heart and willingness. It was of

no use making and hearing of speeches on these occasions, without we think and consider of what we have heard when we have left."

This lets out the whole secret of the landowners' anxiety for high prices, by means of which they obtain rents four and five times higher than their predecessors of a century ago received, while the homesteads of their tenants have undergone no improvement whatever, unless the tenants have themselves improved their homesteads, and then, perhaps, have been charged a still higher rent. Mr. Litchfield also referred to the labourers' prospect:—

"He spoke of the coming winter, and the finding of employment, and that the best way of promoting the welfare of the poor was to encourage the poor in habits of industry. Labour was certainly redundant; but he would say that money-laid out judiciously in labour was the best investment. He would remind the farmer that his labourer was not a wandering mechanic; he was bound to one spot, and the farmer must, in some way or other, support him. No greater calamity could happen to an industrious labourer than to make him an idle man; an idle man was a bad example to his children, and the example of an idle man was often the foundation of an idle generation. You say you don't want a labourer; but the time may come when you may want him, nay, must have him; in the meantime, therefore, make his habits as good and perfect as you can, and continue him in them, that when you do want the man you may find him the man you want. Don't send the industrious labourer to break stones on the road, nobody asking, nobody caring what he does: such a practice undermines his habits, and has often ended in making an industrious labourer an idle and ruined man. He (the rev. gentleman) had no disinclination to see men employed on the roads, under proper superintendence, at fair wages; bad roads were false policy; the saving of employing three horses instead of four was something, and the employment of labour on roads gave a profitable return not often thought of."

None admit all this more fully than the farmers; but with monopoly rents, uncertain tenures, and natural prices, how can they employ the labourers?

But the truth-telling speech of the evening was, as usual, that of a farmer, Mr. William Hadland, who said:—

"From many farmers, and particularly the smaller occupiers, from what he (Mr. Hadland) knew, and from what he had heard, THEIR LANDLORDS WERE TAKING THAT MONEY WHICH OUGHT TO GO TO THE EMPLOYMENT OF THE POOR. (Hear, hear.) Many of the rack-renting tenantry, unless the gentry come forward and give them time or allowances in the payment of their rents, must be ruined. He would repeat that in many cases if the landlord was paid, the labourer could not be employed."

And every farmer, in every part of the country, who thinks fit to speak out, will unhesitatingly tell the same tale. It seems, however, that Mr. Hadland's dose was rather too strong for the squirearchical stomach, for he is recorded to have been imperfectly heard, and the meeting was immediately after brought to a somewhat hasty conclusion.

FAITH AGAINST FACTS.

It is surprising how an individual, or a class, having submitted to believe in an error, "hugs the dear delusion to the last." Thus, in a leader of the *Morning Post* not many weeks since, we find the following passage:—

"Nothing is more evident than that the permanent establishment of a moderate but efficient protective system would of itself give such an impulse to agricultural operations as must put the country, even in unfavourable seasons, altogether beyond the necessity of importations of food from abroad."

Why, the *Post's* faith beats that of the followers of the Vell'd Prophet of Khorassan, as described by Moore. Have not the monopolists tried every imaginable "protective system" from the year 1815 until this day? And are not all the landed men of the nation now vigorously engaged in bribing the farmers by prizes and promises to take the very first steps towards good husbandry?

THE GAME LAWS IN FRANCE.—A conductor of the Messageries Royales appeared before the Correctional Police recently, on a charge of having, before the shooting season was opened, brought on his diligence a basket from Nantes containing two rabbits. For the defence it was alleged that the basket was marked "Fowls," and that the diligence company had no right to examine what the parcels committed to its charge did or did not contain; that, in addition, the shooting season had commenced at Nantes at the time the rabbits were transmitted. For the accusation the King's advocate argued that the Court had nothing to do with the measures taken or not taken by the company to ensure a proper observance of the law, and that it was not the locality from which the game was despatched, but that to which it was sent, where it was necessary to have the shooting-season open. The Court found the defendant guilty, and condemned him to 50*fr.* fine and costs, making the company responsible for its payment.

MIDNIGHT.—The Earl of Egmont, who purchased the Cowdray estate about two years ago, very liberally made an abatement last year of 10 per cent. from his rents, in consequence, as his lordship then said, of the low prices of agricultural produce. At his audit on Monday, the 9th inst., the noble earl put on the 10 per cent. again, although he has filled the farms full of game and game-keepers, producing such havoc among the corn as has never been seen hereabouts. Indeed, the farmers all agree in saying that since Lord Egmont has had the estate they are full 20 per cent. higher rented, taking the game, &c., into consideration; and they say that if he continues his present course they must all be ruined. This treatment of the tenantry is not, however, without its effects, for the eyes of the farmers are beginning to open. Some already wish the Corn Law was abolished, being now convinced that it is of no use to them. Many of the tenants would not go to the dinner, and speak both of landlord and his steward in no very measured terms; and, when the landlord's health was given, it is said that many among those who were present would neither "whoop nor holler," while some few turned their glasses up with an unwary expression which we care not to record. Such an audit, with such long faces and such discontent, is not within the memory of man on the Cowdray estate; and, to mend the matter, the noble lord has turned miller, and has, through his agent, just taken the contract to supply the Eastbourne Union Workhouse with bread!!! —*Brighton Guardian, Sept. 18.*

NOTICES TO CORRESPONDENTS.

The acrostic on the name of Dan O'Connell is received, but we cannot insert it on account of its political bearing. The letter of James Humphreys is hardly suited to our columns.

"A Borderer," writing from Liverpool, denies that the hinds' houses in Berwickshire deserve the name of *sheds*, as applied to them by "One who has whistled at the Plough." Will the "Borderer," or any other person acquainted with Berwickshire, favour us with a description of the hinds' houses? If so, he should state the dimensions, breadth, length, height, and the conveniences attached to them.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3*s.* 3*d.* by Post-office order, to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the LEAGUE forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadsby, Newall's-buildings, Manchester; and the LEAGUE may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

POSTSCRIPT.

LONDON, Saturday Morning, September 28, 1844.

The daily papers contain an account of the meeting of the *Lichfield and Midland Counties' Agricultural Association*, of which Sir Robert Peel is president; and where he last year delivered the celebrated Tamworth speech which spread so much alarm amongst the monopolists. This year Col. Anson presided, in Sir Robert Peel's absence, and the affair was more tame than such meetings usually are. The great man was expected, but he came not, neither did he send any excuse. The recent illness of his daughter even could not, according to the chairman's apology upon hypothesis, be made to account for his absence, and the "duties of office" were perforce taken as the reason. But Sir Robert Peel is one of those men who never cross the street without some considered purpose, and we may be quite sure that if silence upon agricultural matters had not been most convenient to her Majesty's Administration, Sir Robert Peel would have found leisure from the "duties of office," to discuss guano, hares, rabbits, and Birmingham bulls this year as well as last. This silence is an ominous sign for the monopolists; and another, still more so, will be found in the startling articles which, during the week, the *Times* newspaper has directed against landlord and sugar-plum patronage of agriculture. The only remarkable thing said at this *Lichfield* meeting was Lord Hatherton's reference to an increased employment of children in agriculture, as an improvement at once beneficial to the farmer and the labouring classes: a curious illustration of the landlord-directed imputations against the employment of children in manufactures. His lordship said:—

"He had had the opportunity last year of seeing in practical operation a system, the advantage of which had presented itself to his mind long ago. He had visited the Duke of Bedford, and his attention had been directed to two sets of boys employed in picking stones, hoeing turnips, dibbling wheat, and other occupations in which women were generally employed. He then formed the intention of establishing the same system upon his own farm, but he found that his steward, Mr. Bright, had been beforehand with him, and there were now 130 boys so employed upon his farm, and the profit derived from their labour was greater than what the former system yielded. Where women were employed, the children were unavoidably left without that maternal care which was so indispensable to their well-being, but by the system of employing boys, not only was this evil prevented, but the work was better executed. The mother was then enabled to attend to the education of her young children, and the moral effect of the stimulus thus given to education was very great. He recommended the subject to the attention of all great farmers. The credit of introducing the system rested with the Duke of Bedford, but its general adoption would be productive of the greatest possible benefit to families and to parishes."

This is all very well, and there can be no doubt that the only way in which large numbers of boys or women can be usefully employed in agriculture, is in sets under strict and competent superintendence; but, in order to exempt mothers of families amongst the rural labourers from field labour, the wages of the father of the family must be enhanced. The Corn Laws and the system engrafted upon them form, however, the chief obstacle to all enhancement of agricultural wages.

EPITOME OF NEWS.

FOREIGN.

FRANCE.—The *Journal des Débats* publishes the terms of the treaty now finally settled between the French Government and the Emperor of Morocco. He undertakes to outlaw Abdel Kader, and employ every means in his power to expel him from his dominions; or, should he fall into his hands, to confine him to one of the towns in the interior of Morocco. The Moorish chiefs who violated the Algerine territory are to be punished; the army on the frontier, under the command of the Calid of Ouchda, is not to consist of more than 2000 men; and the boundaries are to be the same as they were when the Turks held possession of Algiers. A new commercial treaty has been prepared, which will form the subject of future negotiations; meanwhile France is to be placed on the footing of the most favoured nations. The *Moniteur* announces the promotion of the Prince de Joinville to the rank of vice-admiral. The title of Duke d'Isly

has been conferred, by Royal ordinance on Marshal Bugeaud.

The Hospital steamer *Cerbère* arrived on the 18th inst. at Toulon from Algiers, which port she left on the 15th. She brought 255 passengers, 90 of whom were sick soldiers from the hospitals at Algiers. She has also brought cases containing the tents of the son of the Emperor of Morocco taken at the battle of Isly.

The *Revue de Paris* announces that the Lord Mayor and Aldermen of London had written a most respectful letter to the King of the French, inviting him to an entertainment in the City. "The King," it says, "was extremely grateful for this mark of attention on the part of that celebrated corporation, but declined accepting the invitation, on account of his health and the shortness of his stay in England. His Majesty would have gone to London had it been possible to avoid the ceremony of a formal reception. The King wishes that, in the present circumstances, his journey to England should preserve the character of a mere visit from one Sovereign to another."

SCIENTIFIC CONGRESS.—The twelfth session of the Scientific Congress has just finished at Nismes, after its seventh sitting. The Congress voted the following recommendations to the Government:—A pension fund for workmen—an irrigation bill—the execution of the laws relating to workmen's hours—the creation of a special ministry for agriculture—the alleviation of the wine trade—the suppression of the title of *officier de saute*—and the immediate abolition of negro slavery.

FRENCH NAVY.—The *Courrier Français* states that there are now building in the different French ports twenty-three ships of the line, nineteen frigates, two brigs, three schooners, and ten transports and store-ships, besides six steam-frigates, of 450 and 550 horse-power, eleven steam-corvettes of 220 to 320 horse-power, and seven smaller steam-ships of 80 to 160 horse-power.

THE KING OF THE FRENCH ON PEACE.—The *Journal du Cher* publishes the following speech, purporting to have been addressed by the King to M. Larochehoucauld Liancourt, who presented to him, as President of the Society of Christian Morality, various addresses forwarded to him by the English and American Societies for the Preservation of Peace:—"I am happy to receive these addresses, and feel particularly gratified to find that our American friends should do justice to the pains I have taken to maintain the general peace of Europe. There is no advantage in making war, even when a nation has attained the object for which it has fought, because ultimately the losses are always greater than the gains. I have ever professed that principle: when I was in America, 40 years ago, I was often asked to propose toasts at public dinners, and I almost invariably expressed the wish that universal and permanent peace should exist among all nations. I was then exiled from my country, and my anxious desire was that it should enjoy peace and happiness. This is what caused me to adopt that salutary precept. I could not then foresee that I should be called upon one day to exert my influence and act myself in favour of that great cause. May the Almighty accord me the maintenance of peace! War appears to me a malediction; and war in Europe, between civilized nations, I regard as an absurdity; if the smaller states desired it we should prevent them; and as peace between the great powers becomes daily more consolidated I hope, if I live a few years longer, that a general war in Europe will have become impossible."

According to letters from Rome of the 9th inst., the Pope had signed on the preceding day the dispensations necessary previous to the union of the Duke d'Anjou with Princess Caroline of Naples, his cousin-german.

The *Moniteur* contains a despatch from Rear-Admiral Gourbeyre, Governor of Guadeloupe, in which the damage occasioned by the late fire at La Basseterre is estimated at 2,500,000*fr.* It had been ascertained that the fire broke out accidentally, and that no lives were lost.

A letter from Gibraltar of the 11th states that the frigate *Belle-Poule* and three steamers sailed on that day for Mogadore, to take on board the French garrison left on that island. On the 12th the Spanish Chargé d'Affaires was to proceed in the Christina frigate to Tangiers, to terminate finally all the differences between Spain and Morocco.

SPAIN.—Letters from Bayonne of the 18th speak of the probability of an outbreak in the northern provinces. They state that several roving bands of desperadoes, calling themselves Carlists, have made their appearance in the mountains of Catalonia, and commit all sorts of outrages. These desperadoes will be soon amply provided with arms, for ten thousand muskets were landed on the 11th, near Barcelona, under a fire from Fort Monjuich. However, the contrabandistas managed to effect their object.

PORTUGAL.—One of those sudden and terrible falls of rain which make Portugal at times resemble the tropics occurred on the 3rd inst. in the Douro district. A cloud opened over Pelagao, and a torrent of water came down in a rush all about, not like rain, but a waterspout. Gardens, fields, and vineyards, were instantaneously swept away. The river of Povoia was swollen at once to such a height that five masons who were constructing a wall on its banks were hurried to eternity in the same instant. Their bodies were swept away with the speed of a whirlwind, and only two have been since discovered. The bridge of Povoia and all the neighbouring walls and boundaries were merged in a common destruction. Other lives were lost in different localities, but the sphere of the disaster was fortunately limited.

The Azores now rival Madeira and the north of Portugal in the eagerness with which the miserable inhabitants emigrate to Brazil, and there sell themselves into substantial slavery for a term of years, bringing with them no money nor means of subsistence. St. Michael's is especially notable for this gloomiest of self-transportations, but not more so than the northern provinces of Portugal. Thus it is in the best wine and fruit districts that the greatest misery prevails. In Madeira the finest wines are unsaleable at two or three dollars the barrel. To this outcry of nature for a reduced tariff with England is added much insecurity of life and property through the Douro district, where highway robbers now prowl in great numbers. A gang of 24 lately attacked several properties near Oporto, and only one of the number was arrested. —*Times.*

VIENNA.—The *Berlin State Gazette* states that there will be an exhibition of the products of industry next year at Vienna, but that it will be confined to the manufactures of Austria, whereas the Berlin exhibition includes the products of the whole of Germany. The Emperor of

Austria intends, it is said, to create a special order of merit for the manufacturers who shall be declared worthy of it, and the possessor of the decoration will be declared noble, but his nobility is not to be hereditary.

A letter from Munich, of the 13th, states that a company of English capitalists is now there, with the intention of establishing manufacturing on a large scale.

The *Augsburg Gazette* states from Berlin that there is great probability of Bohemia joining the German Customs Union, but that the arrangement will in the first instance be made for a period of only five years.

THE ASSASSIN TSECH.—A correspondent writes, on the 16th instant, from Berlin:—"The announcement made a fortnight ago by the German journals, that Tsech had been condemned to be broken on the wheel, was premature, the judgment, in fact, not having been passed till the day before yesterday. The sentence is, however, the same, being the severest existing upon our code, and is commonly inflicted upon men convicted of one of the four following crimes, viz., an attempt upon the life of the King, high treason, parricide, and the murder of a Christian ecclesiastic exercising his functions in Prussia. Tsech received the notification of his sentence with perfect calmness, declined exercising his right of appeal, and has since not only retained an imperturbable indifference, but even assumed a haughty and arrogant demeanour. It is, however, reported that an *ex officio* appeal will be laid before the Royal Court of Berlin."

HANOVER.—A letter from Hanover states, that, in consequence of the numerous perjuries which have taken place in the courts of justice of that country, orders have been given by the Minister of Justice that in future no oath shall be administered except in the presence of a member of the clergy, who is to remind the person about to take it of the solemn nature of the obligation.

The *Hanoverian Journal* of the 18th inst. brings accounts of a dreadful fire at Clausthal (a town of 10,000 inhabitants), which took place on the night of the 15th. 1200 or 1300 dwelling-houses, and as many outbuildings, including many public institutions, were destroyed. Above 3000 persons are without shelter, and the loss of property cannot be less than 300,000 dollars.

BRUSSELS, Sept. 19.—There have been some disturbances at Verviers; some hundred persons of the working classes of that manufacturing town left their work for a time; they assembled in the square, broke some windows and cried "Down with the Jesuits!" under the windows of some of the principal inhabitants, whom they supposed to be favourable to that religious order. It appears that the disturbances have been put an end to, and some persons arrested.

The *Paris Globe* states that the Commercial Council of the Zollverein had rejected the treaty lately concluded with Belgium, because it did not contain terms sufficiently advantageous for the Union, particularly as respected the harbour of Antwerp.

TAHITI.—We have been favoured with the following extract of a letter, dated Valparaiso, May 31:—"I write in haste, as a vessel sails to-morrow morning. Mrs. Pritchard and family arrived here this afternoon in great distress and trouble at not finding her husband at this place. Tahiti is still in a dreadful state. The French seized Mrs. Sammon, the Queen's cousin, taking her for Pomare, took her on board the *Uranie*, when they found out their mistake. They also stole a man's wife, and took her on board a frigate; eight of her relations stormed a fort and killed 20 men. The French say the fort was stormed by 300 natives, who killed two men and wounded five, losing 15 of their own. In another action the Tahitians killed 90 French, losing 100 themselves, besides 109 muskets and 16 old guns, mounted on coconut logs, but taking two pieces of artillery from the French, who were conducted to a pass by Henry, son of the missionary. The Tahitians were led by two Englishmen, who were killed. The French have been awfully handled, having lost altogether upwards of 400 killed and wounded, amongst the former six officers, one of whom is the first-lieutenant of the steamer, which, it is said, when going along the shore, killed upwards of 100 natives; however, the French governor has had enough of it, and has issued a proclamation, to say he will not attack any more. A Tahitian, in the last agonies of death, threw a stone at M. Bruat, which missed him. It is said they (the French) have taken a lieutenant of the *Hazard*, and have been playing all sorts of games. It is also reported the troops refused to fight; 17 deserted one day and six the next, but two of them being caught were shot. These deserters, with some English and Americans, are of great service to the natives."—*Palmouth Packet*.

THE AFRICAN GUANO TRADE.—A letter, dated Sunday, received at Liverpool on Tuesday, from Falmouth, contains a statement of a very extraordinary character, the truth of which there seems no reason to doubt. It is as follows:—"The *Sam Slick*, of London, arrived off here (Falmouth), reports that Mr. W. Vaughan, master of the merchant brig *Courier*, of London, having touched at Bathurst (Gambia) on the 15th of June, whence the *Sam Slick* sailed on the 7th of August, made a declaration to the authorities there that nearly the whole of that vessel's crew, as well as the master, and some of the seamen of the bark *Margaret*, of London, including the captain, had been captured by the Moors at Arguin, upon the western coast of Africa, where they had gone to procure guano. Seven men, including the chief mate of the *Courier*, had been killed. The Africans, of London, Captain Fremonger, lying off Portendic, having heard of the tragedy, had ransomed a party of nine persons, including the captain of the *Margaret*, for £300; and six of the party arrived at Bathurst on the 6th of August, including the captain of the *Margaret*. Three remained behind, unable to travel in consequence of their wounds. The captain of the *Margaret* was three months in captivity."—*Manchester Guardian*.

SHIPWRECK OF THREE EAST INDIANMEN, AND LOSS OF LIFE.—Within the last two or three days much attention has been excited at the melancholy accounts recently received at Lloyd's, of the dreadful shipwrecks of several noble vessels while on their voyage to and from Bombay and China to England, attended with sacrifice of human life. The ships in question are the *Candahar*, an Indianman, 612 tons burden; the *Royal Admiral*, a bark, 414 tons burden; the *Columbia*, a schooner, 180 tons burden, laden with treasures and jewels; the *Amelia*, of Sydney; and the *Camden*, an East India packet ship, 388 tons burden, trading between Liverpool and Calcutta, all of which, we regret to state, with their

rich cargoes, estimated at an enormous amount, are irrecoverably lost.

THE ISTHMUS OF PANAMA.—The following appears in the *Courrier Français*:—"We learn, from a source upon which we can confidently rely, that the hopes which have been entertained relative to the cutting of the Isthmus of Panama cannot be realized. M. Gardella is returned from making his survey, and the result of it is that the isthmus rises between the two oceans not merely to the height of ten yards above the level of the sea, as stated by the Franco-Grenadine Company, but in reality to 125 yards: so that, instead of a single trench or canal without any sluice, which would have been an artificial strait, as we had been given by the company's engineers to expect, nothing can be thought of less than a canal with 60 locks, divided between its two sides. M. Gardella is a distinguished mining engineer, employed by the French Government to verify the levels taken by the Franco-Grenadine Company."

ALEXANDRIA, Sept. 6.—Last week the first Government public auction of the new crops of Egyptian produce took place. The wheat fetched an average price, equivalent to 16s. 9d. per imperial quarter, and the beans 12s. 10d. per quarter, free on board, without freight. The wheat is fine and abundant. The crop of beans will be deficient, but the quality is excellent. Sesame seed found buyers for only a small portion of what was offered for sale, as the upset price was too high; and as this seed cannot be delivered before the end of the year, with interest &c., it will not cost less than 45s. per quarter free on board. Linseed is to be had in abundance from private hands, and fair quality may be obtained at about 28s. 6d. per quarter free on board. The crop of lentils is very small, and there will be very little for exportation this year. No important transaction has lately been made in cotton, the last sale being a lot of 500 bales of raw quality, at 7½ dollars per cantar. For selected qualities 8½ dollars are asked. Yesterday there was to have been an auction of 5000 bales of the Viceroy's cotton, but his Highness suddenly changed his mind, having probably been induced to do so by interested parties, who are naturally anxious to get rid of their own stocks first. The Pacha has now upwards of 50,000 bales of cotton in store. British shipping is very much in demand.—*Correspondent of the Times*.

DOMESTIC.

The national banquet to Mr. O'Connell and the other liberated traversers took place at Dublin on Thursday the 19th instant, in the Music-hall. About 800 sat down to dinner. Mr. Smith O'Brien presided, and was supported by nearly all the eminent leaders of the Repeal movement. On Mr. O'Connell's health being proposed, the cheering for the honourable member was more than usually enthusiastic. His speech responding to the toast consisted of the usual topics, and was rapturously applauded throughout.

The weekly meeting of the Repeal Association was held on Monday at Conciliation Hall, which was densely crowded. Mr. F. Cumming, ex-justice of the peace, presided. Mr. O'Connell in the course of his speech stated, that the committee to whom the consideration of the question of holding the meeting at Clontarf had been referred, were of opinion that it was unnecessary, as the principle had been already vindicated. Further time, he said, would be needed to consider the formation of the Preservative Society. He thought it right again to state, that all Federalists were admissible to the association. Mr. Grey Porter had promised to mature his scheme of Federalism by next Christmas; and he (Mr. O'Connell) declared his readiness to acquiesce in any plan which would secure the people self-government. Referring to the question of impeachment, he said, he had a work now nearly ready detailing all the events of the trial; and when it was completed and published, he would then test the English people to see whether they would unite with the Irish people in demanding inquiry. The rent for the week was announced to be £600, 12s. 6d.

On Wednesday last Dr. Maunsell, a Conservative, brought forward, in the Dublin Corporation, a motion for an address to the Crown to convene a Parliament every third year in Dublin. The motion had no seconder, and therefore fell to the ground.

On Sunday evening a wherry containing nine persons was run down on the river, opposite Millwall, by the Ariel, a Woolwich steam-boat; a man named John Haywood perished; the other eight were all rescued.

On Saturday evening the granary of Mr. Silverstone, of Saxham, Suffolk, was set fire to, and before it could be got under, two large bean-stacks, a quantity of barley and barley rakings were consumed. This is said to be the third incendiary fire which has occurred in the parish within the last fortnight, and great fears are entertained that they are only the precursors of many others during the approaching winter.

On Sunday morning, a little before eight o'clock, a man named George Benson, a labourer, 22 years of age, was killed in a fight which took place by appointment, between him and a man named Henry Jones, aged 21, also a labourer, at a place much used for similar encounters on a Sunday morning, situated on the east side of the Kensington Canal.

A large and fine West Indianman, the *Codrington*, belonging to the firm of Luggins and Co., arrived from the West Indies, and entered the Southampton Docks on Monday morning, to discharge her cargo of sugar. This is the first arrival in our docks of a West Indianman homeward, and we hail it as the commencement of a new and extensive branch of trade at our port.—*Hampshire Independent*.

Great excitement has been caused in the town and neighbourhood of Reading, by a prophecy of some wandering fanatic, that the end of the world will be in the course of this year. Their frequent preachings have produced most mischievous effects on weak-minded persons, not wholly confined to the uneducated ranks, and several ministers have thought it expedient to warn their flocks from the pulpit against the delusions of these pseudo prophets.—*Berkshire Chronicle*.

We perceive that hams cured with sugar are sent to the London market from Devonshire. This shows that sugar is as important as salt to preserve provisions, and ought to be as free from duty. The quantity of fruit that would be preserved, if sugar were duty free, would be ten times the present amount; and the quantities grown by gardeners, farmers, and others would be enormous; but fruit without sugar cannot be well preserved, or, if preserved, it is almost prohibited by the high price of sugar, without which it cannot be consumed.—*Brighton Herald*.

A few nights ago a destructive fire (which is supposed to have been caused by an incendiary) broke out upon the premises of Mr. Parsons, a farmer, at Bramley, near Basingstoke. In the course of less than an hour, a barn filled with barley, a stack of wheat, and a bean-rick were totally consumed.

The Earl of Harborough, at his recent audit at Melton Mowbray, caused the rents of the whole of the cottage tenants on his estates at Whissundine, Stableford, Saxby, and Teigh to be returned to them.

The tithes income of England and Wales will this year be about £5,000,000 sterling.—*Eclectic*.

The ship-carpenters of Sunderland struck last week for an advance of wages.

A commission *de lunatico inquirendo* was opened last week at the Ship Inn, Waltham Abbey, before Mr. Commissioner Winslow and a special jury of sixteen gentlemen of the county of Essex, to inquire as to the state of mind of Mr. Thomas Telford Campbell, aged 40, only son of the late poet, Mr. Thomas Campbell, described in the commission as of "Dr. Allen's Asylum, Highbeach, Essex, bachelor." After a lengthened investigation, the jury found a verdict—"That Mr. Thomas Telford Campbell was of sound mind."

We regret to state that the young man, Fife, who was so severely injured by his father a few weeks ago, sank under the infliction, and died on Friday last. The father, who, it will be recollected, in agony of remorse attempted to commit suicide, is, we understand, confined in the new prison at Alloa, and is slowly recovering.—*Glasgow Chronicle*.

On Thursday se'nnight an explosion took place at the gunpowder-mills of Mr. J. Wakefield, at Sedgwick, near Kendal. A man, named William Stewardson, was shattered to pieces, and the mills were completely destroyed. The unfortunate man was the only person about the mills at the time.

On the first of next month a very considerable reduction will be made in the fares on the London and Birmingham Railway. Third-class passengers will be carried at the rate of one penny each per mile.

Mr. Barry, one of the clowns at Astley's Theatre, performed, on Monday last, the feat of sailing in a tub drawn by a pair of geese from Vauxhall to Westminster. A great concourse of spectators witnessed the novel spectacle.

Lord Howick, M.P., spent a few days in Newcastle and neighbourhood last week. The noble lord has been engaged in promoting the objects of the proposed railway, upon the atmospheric principle, between Newcastle-upon-Tyne and Berwick.

Mr. E. James, the eminent barrister, has given it as his decided opinion that Derby clubs are illegal, and that persons in any way connected with them are liable to be proceeded against for heavy penalties, under the act for the suppression of lotteries.

Flour is now conveyed from Stockton to Sunderland by railway, and delivered in that town for 1s. a sack, saving to the millers and dealers the expense of insurance by sea, and securing a quick transit.—*Durham Advertiser*.

Information having been received by one of the customs officers that a large quantity of gold watches, which had been illegally imported, were deposited at the premises of a watchmaker in the neighbourhood of Soho-square, he, two or three days since, in company with another officer of longer service and more experience in such matters, proceeded to the shop of the party, and were there but a very short time before they made a seizure of the whole of them, amounting, it is understood, in value to about £2000.

The Maidstone Branch Railway, connected with the Dover line, was opened to the public on Tuesday. The event was commemorated by a dinner given by the Corporation of Maidstone to the directors, of which about 300 persons partook.

On Thursday, the 19th inst., arrived in Falmouth harbour the Lord Bruce brig, Captain Poole, with a cargo of sugar from Pernambuco. A few mornings after the Lord Bruce left Pernambuco, a very fine Bongo black lad, about 18 or 20 years of age, made his appearance on deck, to the no small surprise of the captain and crew of the Lord Bruce. He is not able to speak a single word of English, but talks the Portuguese language tolerably well, from which we learn that he was a slave, and had been brought to the Brazils in a slave from a far distant country. It appears he, with many other slaves, had been sent off to the Lord Bruce with barges of sugar, and again returned on shore, and the night previous to the sailing of the vessel he stole a craft peculiar to the South Americans, called a catamaran, taking with him a tolerable stock of provisions, and some very good clothes, and came on board, and stowed himself away unobserved amongst the cargo, and did not make his appearance until he knew the vessel was so far at sea that there was no chance of his being sent back again, thus effecting his escape from slavery. The captain treated him with every possible kindness, but, as the poor fellow seems rather unfit for the sea, he will be thrown on the parish of Falmouth until some means can be adopted to get him to provide for himself.—*Devonport Independent*.

The carpet-weavers and other manufacturers of Barnard Castle are all in full employment at advanced wages—a practical commentary on the doctrine that wages advance with the price of bread.—*Manchester Guardian*.

The Earl of Rosse's telescope, now complete, is open to public inspection four hours every day. His lordship has, within the last ten days, taken astronomical observations, which will be shortly given to the scientific world.—*Limerick Chronicle*.

The *Times* is informed that the writer of one of the letters dated from the Warship, criticising the naval operations of the French squadron before Tangier, is the chaplain of that vessel, and that he has been reprimanded by the admiral on the station.

A new Liberal journal has been started in Kilmarnock, under the title of the *Kilmarnock Herald*.

The Gloucester Musical Festival commenced on Tuesday. The attendance was much better than that of previous years on the first day of the festival; but, as regards persons of "mark and likelihood," there was a great falling off. The sermon was preached by the Rev. F. T. J. Bayley, one of the stewards, from 2 Chronicles, v. 13. The collection made at the close, in behalf of the charitable fund, amounted to £163. 18s. 4d. In 1841 the sum was £130. 12s. 4d.

Mr. O'Connell was to have left Dublin early this week for Derry Abbey, with the intention, it is said, of not returning to the Irish metropolis until after Christmas.

Arrangements having been concluded between the

owners of the Great Britain and the Bristol Dock Board, it is expected that this magnificent vessel will be liberated about the 16th of October.

A ballot will take place this autumn to complete the English and Scotch militias, for which purpose it is expected an order in Council will be forthwith issued.

Mr. Sidney has been elected alderman of the Ward of Billingsgate.

The 50th anniversary of the London Missionary Society was celebrated at Exeter Hall on Wednesday by a crowded meeting. Sir Culling E. Smith presided, and was surrounded on the platform by a large number of ministers of various denominations. The Rev. Dr. Vaughan, Rev. E. Bickersteth, Rev. Dr. Bunting, Rev. Mr. Hamilton, and others, moved and seconded resolutions. The Rev. Dr. Liefchild, in reviewing the operations of the society, stated that the dozen missionaries which it had at first sent out had been multiplied to 400, and with native teachers, to 700. It had 85 stations in the world, each station having several outposts; it had caused to be translated and published sixteen versions of the Scriptures in the various languages of the earth, and since its establishment the society had expended more than a million and a half of money in furthering its mighty object; and they might fairly conclude that more than a million of individuals had been taught the Christian faith by the efforts of the society.

MISCELLANEOUS.

THE DUTY ON FLAX.—According to Mr. Talbot Clifton, in his amusing speech at Lancaster, "flax is now almost a prohibited article in some countries, because of the immense tax put on its entering the ports." We are not precisely aware as to what countries the new member for North Lancashire here refers; but we are glad to know, that our Legislature has had too much regard for the prosperity of the linen manufacture to permit of its following so ruinous a course of policy. For some time past, the duty on all flax imported into Great Britain has only been 1d. per cwt., an amount of protection to the home grower so very trifling, that it need hardly be taken into account; and yet we hear from various quarters, that the cultivation of flax is one of the most profitable modes in which the farmer can invest his skill and capital. At the last monthly meeting of the Society for Promoting the Growth of Flax in Ireland, it was stated that "the culture of flax continues to increase in a steady progression," and not a word of complaint was heard from any of the speakers regarding the danger of foreign competition, and the lowness of the import duty on the foreign article. At the annual meeting of the Arundel Agricultural Association, last week, several of the speakers endeavoured to impress upon the members of the society, that the home cultivation of flax was not only profitable for the farmer, but that it was exceedingly well calculated to furnish employment to the agricultural labourer. Mr. Clifton told the electors of North Lancashire, that the reason why he opposed Free Trade was because "he believed that Free Trade would be a great injury to agriculture;" but it does not appear that his belief is founded on a very secure basis. Were he acquainted in the slightest degree with the subject on which he affects to give an independent opinion, he would know that, as regards flax, on which he lays so much stress, we have already come to Free Trade; and yet so little has agriculture been injured thereby, that practical farmers find no difficulty in proving that the culture of that article, with a protecting duty of only 1d. per cwt., is much more profitable than that of wheat with a protecting duty varying from 1s. to 20s. per quarter. Here, then, is practice *versus* the "visionary speculations" of Mr. Talbot Clifton, Mr. R. T. Parker, and all such agricultural alarmists. This single fact, in our opinion, furnishes the most satisfactory reply to all the sophistry and declamation which has over yet been uttered in favour of restrictions on commerce for the protection of agriculture. —*Manchester Guardian*.

ANTI-CORN-LAW TRACTS.—Mr. William Grice, of Ulverston, has been employed for several days past in distributing extensively in Ulverston, and the surrounding neighbourhood, a variety of tracts and papers published by the League; and, while so engaged at Dalton, was accosted by an individual well known for his monopolist opinions, who asked what he had got, to which Grice replied, "Anti-Corn-Law tracts;" and said, "Will you have one?" "Yes," was the reply; and immediately on receiving it the person above mentioned tore it in pieces, saying Grice ought to be beaten out of the town with a stick. Grice civilly said, he thought no one would venture to do that, and then coolly turned his back on this specimen of vulgarity and impertinence. This incident shows in some degree the limited amount of intelligence possessed by many of the Pro-Corn-Law men in this district. A repetition of suchlike occurrences will tend, however, more to arouse attention; and, despite every effort to suppress facts, they will show themselves with a bold front, and each and all existing "protection" fallacies must and will ere long explode. —*Lancaster Guardian*.

FALL IN THE PRICE OF BREAD.—In consequence of the large supply of wheat and flour at Mark-lane on Monday, and a general tendency to a decline in prices on Tuesday, the bakers throughout the metropolis fell the best bread to 7d. per 4lb. loaf, and the second quality to 6d. In Blackfriars-road, the New-cut, Whitechapel, Westminster, and other populous parts, many of them only charge 5d. for the 4lb., weighed on delivery, and excellent bread. Wheat at market—Kent and Essex, 42s. to 54s.; Norfolk and Suffolk, 41s. to 51s.; Foreign, 42s. to 53s. per quarter (20s. duty paid). Flour—Norfolk and Suffolk, 34s. to 37s.; Town made, per sack of 280 lb., 42s. to 45s.

EXCITATION TRIKK!—Immediately after the announcement of a vacancy in the representation of South Lancashire, an agent of the Conservative party purchased from the clerks of the peace every disposable copy of the register for this division, which, in case of contest, would have very much inconvenienced an opponent, leaving him almost without the means of knowing who were the "free and independent electors" to whom he had to pay his respects. As there is no probability of a contest, the "sharp practitioners" have gained nothing by this step, except the possession of an immense quantity of what will be mere waste paper. The trunk makers and butter merchants may therefore look out for bargains. —*Preston Chronicle*.

CONSUMPTION REDUCED BY EXORBITANT TAXATION.—The Flemish papers notice the fact, that for several years past there has been a sensible falling off in the manufacture, and consequently in the sale, of beer at Louvain, a city celebrated for the production of that beverage. According to a report upon the state of trade presented this year to the permanent deputation of the Provincial Council of Brabant, there was, in 1843, a decrease upon 1839 of 36,000 hectolitres of brewing ingredients, a circumstance which has produced a loss to the public treasury of 73,034 francs. The consumption of beer had become so general in Belgium as to have induced the Government to place upon the material a tax more than proportionately heavy; and this it is, from all that we can learn upon the subject, that has led to the marked change noticed in the quantities made at Louvain. —*Times*.

THE RUMOURED TREATY WITH BRAZIL.—Letters have been received from Pernambuco by the Priscilla, to the 12th of August, which repeat the rumours received both from Bahia and Rio, that a new commercial treaty between England and Brazil was about to be concluded, and that the packet (which is now very much behind her time) is detained in order to bring it. Surprising and unexpected as this intelligence is, it comes from so many quarters that it is just possible that there may be some truth in it, though, after the position taken by our Government with regard to slavery and the slave trade, it is difficult to conceive how a treaty can have been concluded by the present Ministry with a country in which both those evils are so deeply rooted. Still, where there is a will there is generally a way; and as it was evident in the course of last session, especially from some of Mr. Gladstone's speeches, that Ministers were anything but satisfied with their own policy with regard to slave-grown sugar, and as it is even still better known that the Brazilian Government has the strongest financial reasons for desiring such an arrangement with England as will improve its position in the money market, it is not impossible that the basis of a new treaty may have been arranged by mutual concession. The terms of this treaty (supposing it to exist) are unknown, but, to render it valuable, it must include the admission of British goods into Brazil, and of Brazilian sugar and coffee into England, on moderate terms. Any treaty that does not effect both these objects will be of little value; and the extent of the value of the treaty, which is said to have been just concluded, will altogether depend on the completeness with which these objects are effected. —*Liverpool Times*.

THE STANLEY MAUSOLEUM.—Died, last month, universally condemned, the political career of Lord Stanley. The remains have been interred in the House of Lords. —*Punch*.

AIRDRIE.—A CONSERVATIVE TRICK.—A proprietor of houses at Langloan applied to the agent of the Conservative party in Airdrie, to prepare a claim of enrolment for him as a county voter, and to support it at the registration court. His title was complete, and his property was of far more than the requisite value. The Conservative agent undertook the business, and accordingly prepared and signed the claim of enrolment, and lodged it with the schoolmaster. But after doing so he discovered that the claimant was a Liberal, and, therefore, not wishing to object to his own claim, he got another of the Conservative agents in Glasgow to make the objection. When the case was called in the registration court, the agent who had prepared and signed the claim, and who was in possession of the claimant's titles, not only declined to support it, but actually withdrew it, and marked the withdrawal on the back of the claim. The claimant was thus nearly deprived of the franchise, and although he was in court, being a simple countryman, he did not observe what was going on. The agent for the Liberal party, however, saw him and called him to the bar, and, on being questioned, he stated he had given no authority to any person to withdraw his claim, but, on the contrary, he had given his titles to the Conservative agent, with instructions to support it, which he had engaged to do. The Liberal agent immediately took up the case, and called for production of the titles, which were accordingly produced, and the Conservative agent then, seeing that his manoeuvre to keep the claimant off the roll was likely to be defeated, attempted to become the agent for the objector to the claim, which was prepared and signed by himself. This the sheriff very properly refused to allow, and the case being clearly established, the claimant was admitted on the roll. —*Scotch Reformer's Gazette*.

NOTHING LIKE CONTRACTING.—While the revising barristers were paid so much per day, it required three barristers two days to get through the registration lists for this city; but now that the work is done by contract, one barrister manages to get through the whole in one day. So much for contract *versus* day-work. —*Durham Chronicle*.

SPORTS FOR THE PEOPLE.—THE MARCH OF INTER-LACER.—The following are some of the "sports" provided at Stowe by the Duke of Buckingham on occasion of the coming of age of the Marquis of Chandos:—"Diving for silver in flour. Hands to be tied behind—the silver to be taken out with the mouth. 1s. or 6d. each time." "Treacled buns. Boys eating one in shortest time. First prize, 1s. 6d.; second ditto, 1s.; third ditto, 6d." "Boys eating cakes. Twelve each in shortest time. Prizes as before." "Hobbling for apples in water. Boy getting out four in shortest time with his mouth. Prizes as before." "Hot hasty pudding. Boys eating a basinful in the shortest time with a skewer. Prizes as before." "Smoking by men. Half an ounce each in shortest time. Pint of beer after third pipe. First prize, 1lb. of tobacco; second ditto, half a pound ditto; third prize, quarter of a pound ditto." This is certainly one way of improving the condition of the labouring class. It must have delighted the heart of "Young England" to witness the refined and rational spectacle of human beings "diving for silver in flour," "eating treacled buns in the shortest time," "hobbling for apples in water," and eating "hot hasty pudding with a skewer." Well may Lord John Manners, the head of this enlightened school, sing—
"Let wealth and commerce, laws and learning die,
But leave us still our old nobility."

ROCHDALE AND MIDDLETON FREE-TRADE HALL.—This splendid building, in Bullis-street, is now completed, and was opened on Wednesday evening by a public tea-party, which was numerously attended. In the evening a concert took place; the principal vocalists were Miss Hardman, Miss Kell, Messrs. Heekes, Cooper, Skelrick, and J. W. Isherwood. Mr. Gresvay presided at the piano-forte. The above hall, which has been

erected in shares of £5 each, is said to have cost upwards of £3000. It is for the purpose of holding public meetings in. —*Manchester Guardian*.

WORCESTER.—The Poor Law Commissioners have decided that all occupiers of houses compounded for to the poor rates are entitled to have their names placed upon the rate-books. Occupiers of parts of houses, whose several rents amount to £10 per annum, are also, we understand, entitled to be placed upon the rate-book. We are told that this decision, if strictly acted upon, will have the effect of adding nearly 500 names to the register for this city. —*Worcester Guardian*.

The circular of an eminent firm at Hamburg, for the 13th of September, states that the weather had been remarkably fine for harvest operations, which, in addition to the reports from other countries, had the effect of causing a considerable reduction in the prices of wheat and rye. But even at the reduced quotations there was no disposition to buy in either of these two descriptions of grain. Barley was in more favour, and the purchase of 400 lasts of the best Saal barley was announced at an advance of 1s. per quarter. —*Hull Advertiser*.

THE FARMERS' DEPENDENCE.—While the successful operations of trade depend upon the good, healthy condition of customers, the prosperity of farmers is, on the contrary, made by legislators—who will not see that their interests are bound up with the welfare of others, and that, throughout the chain of being, all are mutually dependent on their neighbours—to rely on the contingencies of a demi-famine; their wealth being derived, like the luxuriance of a swamp, from the general decay and decomposition spreading and festering around them. —*Kendal Mercury*.

DEATHS FROM DESTITUTION.—It is a startling fact, well worth the attention of our Premier and Home Secretary of State, that, since January last, in six or seven instances, coroners' juries have returned verdicts—*Death by destitution; or, Starvation, from the want of the necessities of life.* —*Bath Journal*.

WHO ARE THE FARMERS' BEST CUSTOMERS?—On the 8th instant the annual wakes commenced at Hyde, in Cheshire, which is situated in a purely manufacturing district, preparatory to which 122 cows and sheep, lambs, calves, &c., almost innumerable, were killed; and for Glossop wakes, which began on the 15th instant, 86 cows, and a proportionate quantity of sheep, lambs, calves, &c., were slaughtered. Query: How many purely agricultural parishes would it require to consume a similar quantity of animal food on a like occasion? —*Macclesfield Chronicle*.

PERIODICAL LITERATURE IN 1844.—227 monthly periodical works were sent out on the last day of May, 1844, to every corner of the United Kingdom, from Paternoster-row. There are also 38 periodical works published quarterly: making a total of 265. The periodical works sold on the last day of the month amounted to about 500,000 copies. The amount of cash expended in the purchase of these 500,000 copies is £25,000. The parcels despatched into the country, of which very few remain over the day, are 2000. The annual returns of periodical works, according to our estimate, amount to £300,000. Mr. McCulloch estimates them at £264,000. —*Knight's Weekly Volume*.

FOREIGN CATTLE.—By the steam-ship Leeds, from Hamburg; 35 head of cattle have arrived, and by the Emerald Isle, from Rotterdam, 64 sheep. Thirty-seven head of fine large Holstein cattle were also landed on Wednesday from the Transit steamer from Hamburg, and 30 from the Helen McGregor, from Hamburg, on Tuesday. —*Hull Advertiser*.

FOREIGN FRUIT.—The imports by the Emerald Isle, from Rotterdam, this week, have been 611 baskets walnuts, and 41 ditto plums; the Antwerp steamer brought none. By the Leeds, Captain Mowle, from Hamburg, we have had 900 baskets of fruit, of which 400 were walnuts, and the remainder plums. The Transit has brought 270 baskets plums, and 30 ditto almonds. —*Ibid*.

GOD SAVE THE KING.—"God save the King" means, with too many loyalists, "God save my pension and my place—God give my sisters an allowance out of the privy purse, make me clerk of the Irons, let me survey the millings, let me live upon the fruits of other men's industry, and fatten upon the plunder of the public." —*Sidney Smith*.

THE PUBLIC PRESS.—The moral power of the public press in this country is not the less absolute from being unacknowledged. "What will the newspapers say if we do so and so?" crushes in the bud many a promising job. The knave, the swindler, the profligate, and the debauchee are all more or less held in check by a salutary fear of seeing themselves reported in the newspapers. If the ambition of one-half the world is to keep out of the newspapers, the account is fairly balanced by the desperate efforts of the other half to get in. In fact, all people who court publicity through these, the great dispensers of it to our day, work upon the newspaper's blind side: they wish the paper to have no eye for anything but their vices and their abilities, and their virtues. —*Bentley's Miscellany*.

POLYTECHNIC INSTITUTION.—Those who are disposed to learn what can be done by the combination of sciences, hitherto considered to have little or no connexion with each other, should go to the Polytechnic Institution, and attend the novel sort of concert which takes place in the theatre of that establishment. The concert consists of the works of Coligny's "Ode to the Passions," set to music by Dr. Wallis, and sung by Miss and Mr. Herbert Clifford, &c., with an instrumental accompaniment. The words and music are illustrated by the reflection, on a very large disc, of heads beautifully drawn and coloured. First is seen the Goddess of Music, such as she might have been "Whilst yet in early Greece she sang!"

and her appearance is accompanied by harmonious sounds, and the words of the ode denoting her characteristics and power. Then comes Fear admirably depicted on the disc, and such as the ode describes him—

"Fear, his hand its skill to try,
Amid the chords bewildered laid;
And back recoiled, he knew not why,
Even at the sound himself had made."

He is followed in succession by Anger, and by all the passions which the poet has described, each appearance accompanied by vocal and instrumental music. The whole has been got up with great care, and much praise is due to those by whom this entertainment has been rendered so effective and complete. The theatre was crowded, and all seemed pleased; and the whole was received with much approbation.

THE HARVEST.

Looking at the country as a whole, it affords us the highest satisfaction that we can congratulate our readers on one of the most abundant harvests, in relation to the grand staple crop of the country—wheat—with which an indulgent Providence has ever blessed this kingdom. It is not only abundant, but it is also, in its general characteristics, of excellent quality—the exceptions to this description of it are not to a greater extent than usually occur in highly favourable seasons. Here and there, in some few districts, wheat may still be seen in the fields; and in Northumberland, and the northern parts of Scotland, considerable quantities still remain unharvested, and it would require another week of favourable weather to enable the farmers of those districts to secure it in good condition; but, whatever may be the ultimate character of the portions of the crop just referred to, it cannot materially alter the general result. No doubt can be entertained that the yield will be considerably above an average; and in one or two instances, in the East Riding of this county, where the wheat has been thrashed out, it has come within our knowledge that the yield has been double what it was last year, and the quality excellent.

The wheat crop in Ireland last year was the largest and best they had ever had; and the reports from that portion of the empire this year represent it as larger, and even better, than it was last season.

Extending our observation from our own country to Canada, the prospect there is equally cheering, or even more so.

In Lower Canada, where the ravages of the fly have almost every year proved so destructive as to reduce the yield considerably below the wants of that division of the colony, they have been happily exempted from its depredations; and this year the abundance and good quality of the crop leave them a surplus beyond the supply of their own wants.

In the Upper Province they have been equally favoured. The wheat crop there is the largest ever known in that country, and the quality is represented as exceeding that of any former year. Thus, instead of having to supply the inhabitants of the Lower Province with the amount of the deficiency of the crops there, as has been invariably the case hitherto, the whole of their large surplus, in addition to the surplus of the Lower Province, will find its way to this country, either as wheat or flour; and, added to our own abundant supply, will provide for our entire population a liberal provision of the chief necessary of life at a low price and unexceptionable in quality. The effect of this state of things on every interest in the country cannot fail to be of a very happy character—stimulating and giving scope to industry, and securing an adequate remuneration to all classes.

We may also mention that the harvest in the United States of America has been equally good and abundant as in our own country and Canada; the good effects of which we are sure to feel in our commercial relations with our transatlantic brethren.

Reports have reached us that the great wheat-growing country of Poland has not been so highly favoured in relation to its harvest as we have been; but those reports are not of such a nature, nor do they come through such channels, as to enable us to form a right estimate of them.

From what we can learn, the corn-fields of Germany are hardly, if at all, behind our own, although it is yet too early to speak very positively of them.

In Dantzic there are very large supplies of old wheat; and in consequence of our market not requiring any supplies thence, nor being likely soon to do, the price has given way considerably, and some minor houses have been ruined by the depreciation which has taken place in the value of grain, and it is feared that some other houses in the trade may be involved in the same ruin.

We wish we could report as favourably of the other grain crops as we have of wheat, but this we cannot. Oats, barley, and beans will all be short crops, and the weight is decidedly below that of last year. It is yet too early to give a more definite character of the harvest in relation to these three articles.—*Leeds Mercury.*

THE LATE FALKIRK TRYST.—As one proof of the loss sustained by the dulness of prices at the tryst last week, we will mention the following fact which we have from good authority. A gentleman, a dealer we believe, sold 100 beasts, and lost upon each 30s. of the purchase money, and, in addition, 7s. per beast of expenses, or 37s. on each, being a direct loss of £185 upon this one transaction. However much cause there may be to regret the loss of an individual in such a bargain, the public have great cause to rejoice at any fall in the price of cattle; for it is somewhat strange, in the working of our Corn Laws, that while we have had to pay, for many years, one invariable price for butcher meat—being from 5d. to 6d. the pound, according to the quality—we get sometimes the 4lb. loaf for 6d., and at other times we pay 9d., just in proportion to the goodness or badness of the crop—being a rise or fall, as the case may be, of 50 per cent. But with butcher meat, if there be any variation at all, it has hitherto been a rise only. How is it that, under the same law—and that a law enacted for the avowed purpose of keeping grain at a high and steady price—the grazing has such a uniform advantage over the arable farm? There must be something wrong when such is the undeniable fact.—*Stirling Observer.*

THE STARK DUES.—The city of Hamburg has refused to ratify the Dresden treaty of the Elbe-bordering powers for settling the dues payable to the Hanoverian Government at Stade. This rejection may possibly not be final, but the Assembly of Citizens have three times refused to ratify the treaty when presented by the Senate. This is extremely natural, seeing that the treaty causes a serious augmentation of the dues. Even to England, which is to pay one-third lower dues than other countries, they will be raised as follows:—On woollen yarn, which now pay 7d. sterling per bale, the dues will be 1s. 1d. On woollen stuffs, which now pay 2s. 10d. per bale, the dues will be 4s. 8d. The fact is that Hanover has no right to a due of more than 1-10th per cent. *ad valorem*, which was fixed by the treaty of 1691; and Lord Palmerston refused, in his negotiation for a treaty, to allow more than this 1-10th. But the present treaty has taken the actual tariff as the basis for the new arrangement, and in some particulars, as we have shown, the dues are greatly raised. In the article of "domestic" the duty even on English goods, instead of 1-10th, will be 2-3rds per cent. *ad valorem*. The treaty is a gross blunder on the part of our Government.—*Leeds Mercury.*

READING MICHAELMAS FAIR.—The annual September fair, on the 21st inst., was an unusually extensive one, there being a large supply of cheese, horses, cattle, and, owing probably to the fineness of the weather, a vast influx of visitors, dealers, &c. The quantity of cheese pitched was from 400 to 500 tons, being a full average supply. Business commenced with an animation which continued throughout, London as well as provincial dealers being numerous and free buyers at the following prices:—Fine Wilts, 52s. to 58s. per cwt., one fine dairy realizing 59s. Coward, 34s. to 38s. The average prices of good useful Wiltshire were from 40s. to 48s.; loaf, 46s. to 65s. Prices, generally speaking, must be quoted at from 3s. to 4s. per cwt. higher than last year—an advance which may be attributed to increased consumption, and this season's diminished produce occasioned by the extreme dryness of the season, and the consequent shortness of the grass crops. The supply of horses of inferior descriptions was very large, but they moved off slowly. Those of superior character were scarce, and realized, as usual, their full value. There was more than the annual average of booths, stalls, shows, &c., and the "pleasure folks" mustered in great numbers.

MARKETS.

CORN MARKET.

MARK-LANE, Monday, Sept. 23.—The supply of English Wheat during last week was large; it chiefly came direct to the millers. There was a fair supply fresh up this morning from the Home Counties, and on the whole the condition was better than last week. The stands were pretty well cleared even of the inferior qualities, and the best samples sold at fully as good, and in some instances rather better prices than last week. There is a large arrival of Canadian Flour, but the quantity of Foreign Wheat which has arrived during the past week is very moderate; the demand is steady at former rates. The continuance of mild weather prevents the millers from buying Barley, and prices are in consequence 1s. lower than last Monday; in other descriptions of Barley, and in Beans and Peas, we have no alteration to report. The supplies of Oats are moderate, and there is no alteration in the value of any description except New, which are 6d. to 1s. lower. Fresh Old Foreign continue in request at fully former rates.

FRIDAY, Sept. 27.—The supplies of Foreign Wheat and Barley are considerable; of English Wheat and Barley moderate; and of English and Foreign Oats very scanty, while not a single cargo of Irish Oats has arrived during the week. There is not much activity in any branch of the trade, but the prices of all descriptions of Grain are well supported. Fine Irish Foreign Oats being now reduced within a small compass,

and it not appearing likely that the quantity will be greatly added to, fully late prices are readily obtained, and in some cases buyers are compelled to give a trifling advance. The duty on Barley fell to 3s. yesterday.

S. H. LUCAS and SON.

THE LEAGUE.

No. 54.]

SATURDAY, OCTOBER 5, 1844.

[3d.]

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All Subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive, a copy weekly of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

We beg to inform our subscribers that bound volumes of the LEAGUE newspaper, containing the whole of the first year's numbers, may be had on application at the Offices either in London or Manchester.

LABOURERS' FRIENDS IN WEST SUFFOLK.

The county of Suffolk has long been in high repute as a Labourers' Paradise—a sort of model farm for the exhibition of the beneficence and wisdom of landlordism. Its industry "protected" by the parliamentary votes and speeches of its representatives, and "encouraged" by extra-parliamentary associations, with annual distribution of prizes; its poverty relieved by coal and blanket societies without number; its ignorance enlightened by the unceasing exertions of such a staff of clergy as few other counties of England can boast; with a corps of gentry unremitting (we have their own authority for it) in their "anxiety to promote the welfare of the lower classes,"—really one does not see what Suffolk can want more to make it go on well. As Lord Henniker told Parliament, no further back than the 19th July last, "He could make the House ring with applause were he to read—but time would fail him—the number of institutions which had been established in the county of Suffolk for the benefit of the labouring class." With the exception only of some hundred and more of incendiary fires within the space of six or eight months, every thing has seemed to go on as it should in that favoured district. And even these fires were not nearly so serious a matter as people at a distance were led to suppose. What they did arise from was not very obvious, but clearly not from lowness of wages; for Lord Henniker found that "in most places where they had happened the wages of agricultural labourers were nine shillings per week." However painful might be the almost nightly spectacle of blazing wheat-stacks and farm-houses, it was plain that the state of the county could not at bottom be much amiss; for Sir James Graham—himself a high authority—told the House that "he had been told on the highest authority that no symptoms had been displayed of a generally diseased state of society." The grand jury gave their minds very anxiously to the subject, and had "great satisfaction in presenting, that in very few cases the plea of inadequate wages had been instrumental to the commission of the offences in question;" nay, it was "some satisfaction to find," as Mr. Baron Parks told them, "the great bulk of such crimes were committed by children, by boys and girls of tender age." So that, on the whole, it seemed philosophical to conclude that, as the fires came of themselves by spontaneous combustion, they would go out of themselves; at any rate there was nothing very wrong in the general state of society in the county of Suffolk.

Unfortunately, however, the fires have not gone out of themselves. The brief sunshine of harvest work and wages is no sooner over than midnight incendiarianism blazes up again in glaring refutation of the logic of judges and juries, and the dicta of the highest authorities. It would appear that, after all, something is wrong somewhere in the social condition of this much protected and encouraged labouring population of Suffolk; and accordingly our indefatigable bucolic philanthropists are again

in the field, establishing new "institutions for the benefit of the labouring class," armed with a host of new schemes, or old schemes brushed up to look like new, for "bettering the condition of the labourer."

The meeting held at Bury St. Edmund's on Friday, September 27th, is a sign of the times well worthy of even more attention than has yet been bestowed on it. The spectacle of a hundred of the nobility, gentry, and clergy of a county, meeting by special appointment to discuss the means of bettering the condition of the labouring classes, is certainly, so far as it goes, a pleasant one to see. Such a meeting is a not insignificant homage to the doctrine that "property has its duties as well as its rights." It is a distinct recognition that something is wrong in the condition of the labouring classes, which it is the business of the nobility, gentry, and clergy to put right; that wide-spread crime has deep-rooted causes, ascertainable and removable by human means. It is a confession of failure, and a promise of amendment. It is saying that parliamentary protection, and charitable institutions the mere mention of which (only that they are too numerous to mention) would make the House ring with applause, have not resulted in producing a safe and healthy condition of society, and that there is still something to be done, or undone. If we cannot look forward with very sanguine hope to benefits to be achieved by the future operations of the West Suffolk Association for bettering the Condition of the Labourer, we may note with satisfaction some characteristics—of the negative sort, at least—of their first day's proceedings. There was no ill feeling shown towards any class or party. There was not a word of abuse spoken of the Free-Traders and the League. No mention was made of Colonel Rushbrooke's specific of more gallows, as the cure for all social maladies; nor did any speaker echo the suggestion of a writer in the *Bury Herald*, that "bloodhounds" should be employed in aid of the rural police. That the crimes by which Suffolk and the adjoining counties have been of late disgraced are caused by grievous and grinding misery; that this misery is remediable by wise social arrangements; and that it is the business of the nobility, gentry, and clergy, to devise and apply the remedy,—these are great facts, of which we hail the recent West Suffolk meeting as a distinct public recognition.

And here, we are sorry to say, our praise of this philanthropic demonstration must end. Anything more vague, unbusinesslike, and futile than the views and proceedings of these labourers' friends could not well be. The whole thing has a mumbly-pamby, dilettanti air and tone about it. It is the blind leading the blind, at the obvious and imminent risk of both falling into the ditch. The real question at issue—how to make labour valuable, and the labourer's bread cheap—was studiously blinked by every man who spoke. The plainest common-sense rudiments of economical science were resolutely ignored; all sorts of crotchety, fantastical experiments were pompously recommended as grand healing measures, complacently discussed, and half decided on; the unanimous sense of the meeting was, try anything and everything for the improvement of the condition of the labourer that the wit or folly of man can devise, except the simple and natural thing—the just and honest thing—untying the labourer's hands, and giving him leave to do what he will with his own.

The object of the meeting, as stated by the chairman, Sir Henry Bunbury, was—

"First, to promote more constant and extensive employment; secondly, to provide small allotments of land for the labourer; and, thirdly, to establish and promote parish clubs, schools, benefit societies, and so forth."

Truly, a most excellent "first;" so excellent that, if we could but get it, the "secondly" and "thirdly" might very well be left to shift for themselves. "More constant and extensive employment." What can labourers or labourers' friends desire better than this, and that which is implied in this? Constant and extensive employment means constant and extensive wages, constant and extensive supply of food, and everything else that wages purchase; it means money in the savings' bank, and schooling for the children; it means personal self-respect, political and social independence. But "constant and extensive employment" is a dangerous text for West Suffolk landlord philanthropy: it smacks too much of Free Trade and the League; it suggests foreign competition, to stimulate that constant and extensive improvement in the cultivation of the soil, without which there can be no increase in the demand for agricultural labour; and

it suggests manufacturing and commercial prosperity to draft off from the over-crowded agricultural labour market the teeming population of which agriculture has no need. Accordingly, Sir Henry Bunbury has next to nothing to say about "promoting more constant and extensive employment." He begins his speech with putting his "first" last, and giving his hearers something else which he thinks "more important." Will our readers believe it—at least, would they believe it of any other man than a Suffolk landlord?—Sir Henry Bunbury has a crotchet in his head, which he thinks more important than the improvement of the labour market; and that crotchet is—"allotments." "Allotments" is Sir Henry Bunbury's panacea for all social evils. Great are the virtues of allotments! Lord Rendlesham has tried allotments with a success than "which nothing could be more decisive." Mrs. Gilbert, in Sussex, the same, "with the best effect." Mr. Paling, in Cheshire, the same, with "astonishing success." Twenty years ago, allotments saved Long Newington, in Wiltshire, from being eaten up with poor-rates; though how Long Newington is off now we are not informed. Once upon a time a parish in Buckinghamshire—name and date unknown—where all the inhabitants were paupers, recovered itself by allotments. There is "no end" to the evidence of the excellent effect of allotments, "if he were to turn to the newspapers, and to publications of every sort, and to letters which he has received." He has practised allotments himself, "and, with only one exception, it has produced the most beneficial effects." Allotments are even better for the landlord than the for the labourer—provided always that the landlord gets his "rent in advance." It is the most lucrative philanthropy going. Allotments turn "very unprofitable" land into "extremely valuable" land: £8 per acre is the allotment price for "inferior" land. Altogether, nothing can be more marvellous than the virtues of the allotment system, except that it is not universally carried into effect. The thing is so simple—the only conditions for its success being rent in advance, and the absence of any "excess of population;" where this exists, indeed, Sir Henry "sees no resource but emigration." And then Ireland, too, as another baronet observed, is so encouraging a precedent:—"Ireland might be called a nation of allotments; for every cottage had its garden, and, though the Irish were poor, yet the union houses were deserted."

Having disposed of the allotment question in the style of a Morrison's-pill advertisement, the president of our West Suffolk College of Health "arrives to what stands first among the propositions for us to discuss—the extension of employment." He "feels that this is a great deal more difficult question." It is satisfactory to think that it is a great deal less important question. Still, he thinks it is in the power of the landlords to do a vast deal, and in a way that would benefit the whole community. "If landlords would only borrow money at four per cent., and lend it to their tenants at five, to be invested in the improvement of farms, the thing would be done—the tenant "would receive an ample return in the increased value of his crops;" the landlord "would not only receive the difference in the per centage, but would be benefited by the improved condition of his farm;" and £200 so laid out "would employ twenty labourers at 10s. a week for many weeks in the year." Or, perhaps, "district farms" might be established, "to which every able-bodied man, woman, and child out of work should be sent every Monday morning, with a ticket authorising their employment in spade husbandry;" but he "only mentions this for the information of the meeting." By the adoption of some one or other of these schemes he hopes that the labourer "may be enabled to obtain those little comforts of life which they all, he is sure, desire that he should have (hear, hear), such as MEAT, and little comforts of various kinds." For the rest, he thinks benefit clubs, coal clubs, clothes clubs, and medical clubs good things when well managed; but "the meeting will excuse him from going into any further details."

The Rev. H. HOLMESWORTH confirms the opinion of the worthy chairman as to the great advantages of the allotment system. He would even carry it further, and "give the labourers three or four acres of land—in fact, render them small farmers, and independent of their parishes altogether." Not but what there would be some "difficulty in elevating the labourer to that position;" for, unluckily, it would require that he should be "a man of some small capital." "A gentleman at Stowmarket" had recently adopted the system of al-

lotments of "from three to nine acres," which allotments were most "thankfully received." "The only difficulty he found was in the selection of those tenant-labourers who had sufficient capital—some £20 or £30 beforehand." How mortifying that so fine a scheme should be hampered with an "only difficulty" of this sort! If the paupers were "only" capitalists, the thing would work. First catch your hare is as valuable a maxim in political as in culinary science. Catch your capitalist labourers, with their £20 or £30 beforehand, and then it will be time enough to consider the best means of cooking them into tenants paying rent in advance.

The next speaker, Mr. H. WILSON, differs point blank with his predecessors. He holds "more constant and regular employment" to be the "great desideratum," and puts no faith in allotments. The evil, in this gentleman's view, is not unemployed labourers' capital at a loss for investment, but unemployed labourers at a loss for work and food. For this he "conceives there is no remedy but emigration," which he pleasantly tells us "he has tried himself, with the most perfect success"—i. e., by proxy. We wonder whether it ever occurred to Mr. Wilson that immigration of food and work would be a cheaper, simpler, easier, and somewhat more humane solution of the difficulty than emigration of mouths and hands. Of one thing we are sure, that, if Mr. Wilson should ever try the experiment of emigration otherwise than by proxy, he will appreciate, in its extent, the iniquity of that protection to British industry which first drives British industry off to the antipodes, and then excludes its products from British markets.

Mr. BRAVAN, too, throws cold water on allotments, and is all for emigration. The allotment system would only "increase the evil, because if they bettered the condition of the poor it was a known fact that they would increase." There was not a fact more fully confirmed by the statistics of any country: as they improved the condition of men they increased, and nothing but starving would diminish their increase." It is but just to the meeting to add that this indecent escapade elicited "some hisses," which made the speaker retreat on a self-contradiction: "that was no reason why they should not try to better their condition."

The gentlemen seem now to have got tired. A variety of random, desultory suggestions followed from different speakers—some of them ridiculous absurdities, some inane truisms—not one, we will venture to say, by which any human creature to the end of time will ever be bettered one atom in body, soul, or estate. One sagely recommended that gentlemen should "look after the poor properly," and "see that their tenants properly employed the poor;" another was for getting rid of the redundant horse population, and employing the labourers and their families in the lighter descriptions of horse-work, recommending, at the same time, that the landlords should dabble a little in manufactures, by "setting up spinning for the poor;" a third was of opinion that the landlords would do well to combine the retail of groceries with their other avocations, by establishing "emporiums to retail to the poor at prime cost," leaving the whole shopkeeping class to the chances of allotments or emigration; and, that nothing might be wanting from the general hotch-potch, a Rev. Mr. Haggitt "recommended education as the only way to elevate the condition of the poor," taking care not to mar the effect of his counsels by one single syllable on the knotty questions of the "How and What" of education.

And so the seditious ended; and West Suffolk philanthropy—having duly "organized" itself with treasurer, secretary, and "provisional committee" for making the necessary arrangements for doing nothing—went home to its dinner; its head sadly muddled with allotments, emigration, district farms, coal and blanket clubs, spinning-wheels, prime-cost emporiums, and education in the abstract; its heart, however, beating high with the proud satisfaction of having added one more to the number of those institutions the bare mention of which were enough to make Parliament ring with applause; and, we suppose, its conscience undisturbed by one passing twinge for the sordid and wicked bread monopoly that is the root of the whole mischief, against which it makes mock fight in twaddling speeches and a ten-shilling subscription.

A CONTRAST.

A few days since, the following letter, which had been forwarded by a London insurance-office to the committee for raising a fund for public parks, was published in the Manchester newspapers:—

"The benevolent measure entertained by the leading merchants and manufacturers of your town, for the promotion of the health and comfort of its industrious population, by the establishment of public walks and gardens, has to-day come under the notice of our Board; and the Board feeling that, during its long and extensive connection with the trade of Manchester, the Phoenix Company has had frequent experience of the good disposition of the labouring classes, when their personal services have been required in cases of fire, are desirous to avail themselves of the opportunity which the measure alluded to presents, of adding their assistance towards the success of

a measure so well calculated to effect the object contemplated. I am therefore instructed to request that the name of the Phoenix Company may be added to the list of contributors for the sum of £200."

By a singular coincidence, within a fortnight of the date of the above well-merited tribute to the morality of the operatives of Manchester, another letter of a very opposite tendency was issued by the fire-offices to their agents in the agricultural districts; from which we subjoin an extract, premising merely, for the credit of Scotland, that the printed circular is headed "England and Ireland."

"ENGLAND AND IRELAND."

"Insurance Office, Sept. 1844.

"Sir, I now annex a copy of the rates which the several London and country fire-offices, at a meeting held on the 26th of July last, agreed to charge for insurances on farming property.

"In all new proposals which may be made to you for insurances on farming stock, you will satisfy yourself—

"1st. That the party has not received any threatening letter.

"2nd. That he is not unpopular with the labouring class.

"3rd. That there has not been any fire, supposed to have been the act of an incendiary, in the neighbourhood of the farm proposed for insurance.

"In transmitting the instructions to the office, you will always state—

"1st. The number of acres constituting the farm, over which the insurance is to extend.

"2nd. Whether a steam thrashing-machine is used on the farm.

"3rd. The numbers of any policies, and the amounts thereof, which the party proposing the insurance may already have in this office, distinguishing those on farming stock from other property.

"You will be cautious in accepting insurances on farming stock for parties who do not insure other property with this company.

"Existing insurances on farming stock, if no thrashing-machine worked by steam power is used on the farm, may be renewed at 3s. per cent.; and you will endorse each policy to the following effect:—

"Mem.—No thrashing-machine worked by steam power being used on the within-mentioned farm (or farms), the rate on this policy is raised to 3s. per cent., and the future annual premium will be £

"On renewing a farming stock policy you will ascertain if a thrashing-machine worked by steam power is used on the farm; and where so used, the following form of endorsement will be necessary:—

"Mem.—A thrashing-machine worked by steam power being used on the within-mentioned farm (or farms), the rate on this policy is raised to 5s. per cent., and the future annual premium will be £

A volume might be written to describe the comparative morality and intelligence of the manufacturing and agricultural labourers, and yet fail to give half as much information as is conveyed in these brief but significant letters. In the first we have an expression of thanks, backed by a more substantial acknowledgment, for the exertions of the Manchester operatives in preventing the destruction of their employers' mills and manufactories, filled with machinery and set in motion by the steam-engine; in the next, the peasantry—the protected peasantry—are held up as objects of suspicion, as persons likely to fire the property of their neighbours if they should happen to be unpopular; and

40 per cent. additional insurance is charged if a thrashing-machine worked by steam power be found upon the premises. This 40 per cent. extra, then, is the measure of the risk which the farmer runs who ventures to do what every manufacturer and millowner in Lancashire does, viz., employ a steam-engine. How is it that, whilst the Manchester operative elicits reward and commendation for his willingness to rescue, even at personal risk, the machinery of his employer from an accidental conflagration, the chances are, according to the calculation of the fire-offices, 40 per cent. in favour of the Suffolk or Essex labourer burning his master's stackyard if his barn should happen to contain a thrashing-machine? We were wrong probably when we said it is to be accounted for by a comparison of morals. There is no proof that an Englishman on the farm is less honest or more malicious than another in the factory. It is purely referable to the dense ignorance, and prejudice the offspring of ignorance, which prevail in the rural districts upon the question of machinery; and nothing has done so much to foster and strengthen this blind antipathy as the speeches and writings of the Protectionists.

We happen to have lying before us a tract, issued by the Essex Agricultural Protection Society, entitled "Facts relating to the Corn Laws," from which we give the following extract upon the subject of machinery:—

"Machinery as far as it aids mankind is beneficial, but it may be used to such an extent as almost to supersede hand labour, and thus become injurious. The manufacturing of cotton and iron by the application of machinery has been carried at some periods to such an extent as to overwhelm the market beyond the demand, thus producing the greatest injury and distress to the workmen, by putting it entirely out of their power to obtain 'a fair day's wages for a fair day's work.'"

"If men could live without labour, then machinery to an unlimited extent and Free Trade would be beneficial, but whilst men must live by their labour it would be ruinous."

This writer deals with the question of machinery in a more guarded manner than many of the pro-

tectionist speakers and writers. He does not denounce it as the curse of the country, like Colonel Sibthorp or Mr. Ferrand; yet what does his argument amount to—but a justification of the hostility which the distressed farm-labourers entertain against steam-engines and thrashing-machines? He is dealing with the grievances of the manufacturers, who complained of want of work, and consequent privations, caused by the Corn Laws. "Your idleness and misery are occasioned by the free use of machinery," is virtually the writer's answer. Now, the farm-labourer, in his turn, finds himself unemployed and starving, and he turns to the protection pamphlet, where he is told that machinery stood between the factory man and "a fair day's wages for a fair day's work;" and what so natural as that he should apply the argument to his own case, and carry the precept into practice by destroying his employer's thrashing-machines? He does not refine like a special pleader upon the matter; he looks broadly and bluntly at the arguments; he sees that the self-styled "friends of the agricultural interest" are opponents of machinery, and he treats as his enemy the farmer who attempts to thrash by steam power.

We repeat that the farmer must thank the protectionist orators and writers for the ignorance and prejudice which prevail upon this subject in the rural districts, and for the dangers which, in consequence, environ his peace and property. It is not our intention now to go over the argument to prove that the freest use of machinery, so far from diminishing the demand for manual labour, tends only to call it into increased and more profitable employment. Lancashire, with its population exceeding that of any county in the kingdom, and its wages so much above the rates of the agricultural districts, is the readiest answer to the protectionist party. It might be easily proved that the use of the steam thrashing-machine need not be an exception to this rule. The saving which the farmer effected in his thrashing would, unless it were absorbed in increased rent, be expended in reproductive labour upon the soil, as is the case in the best parts of Scotland, where they enjoy the advantages of long leases and corn rents, and where the labourers are too intelligent to make warfare upon steam-engines. We advise the English farmers to endeavour, by employing public lecturers in the agricultural districts, to counteract the mischievous effects of the protectionist doctrines. They may even find a pecuniary advantage in the diffusion of knowledge; for, so soon as their labourers shall have become as enlightened upon the question of machinery as the Manchester operatives, they will be able to insure their property at 40 per cent. less than at present.

FLAX—A PUZZLER.

The duty on foreign flax is, one penny per cwt. A hundred-weight of good flax is worth about 43s., which is the average price of the quarter of wheat in Lincolnshire for the last week. Wheat enjoys a protection of 20s. a quarter at this moment, which is 210 times more than the *ad valorem* duty on flax; and the question may be fairly asked of the farmer—do you find this protection reach you in the shape of extra profit upon your wheat as compared with your flax? This inquiry is answered by our old acquaintance, Mr. Warnes, of Norfolk, who we see has been paying an agitating visit into Sussex, to stimulate the farmers to grow flax instead of wheat; and Sir Charles Burrell, under whose auspices he appeared at the Arundel and Bramber agricultural meetings, is urgent in recommending his tenants to enter upon the cultivation of this unprotected article. The wheat-growing farmers in Sussex, as Mr. Ellman informs us, are in a distressed plight; let us see, if we can draw an argument or two for their instruction from the remedy prescribed for the cure of their ills by Mr. Warnes and Sir Charles Burrell.

The protectionists (as they facetiously call themselves) tell the farmers that the unprofitable price of wheat is caused by the importations from abroad. Now, the whole of the foreign wheat and wheaten flour entered for home consumption this year amounts to about 750,000 quarters, or less than a tenth part of the whole consumption. During the same time, 800,000 cwt. of foreign flax have been imported, or more than a third of the whole consumption.

Again, we are told that the English farmer cannot compete with the *serf-labour* in Russia. Yet it is a notorious fact that a great portion of the flax is imported from Russia.

Then, Sir Robert Peel tells us that the English farmer has heavy burdens, such as poor rates and highway rates, to bear, to which Lord John Russell has added county rates: but are not these all borne by the flax-grower as well as by the cultivator of wheat?

The national debt of this country, we are told, prevents the English farmer from competing with foreigners; but does the tax-collector pass by the door of the flax-grower?

The Duke of Richmond assures us that the Corn

Law is for the protection of the labourers: does the peasant who ploughs, sows, and harrows in the wheat field earn higher wages than his neighbour who works for Mr. Warnes in rearing flax? Your answer, my Lord Duke!

We have said that a hundred-weight of good flax is now worth as much as a quarter of Lincolnshire wheat, which weighs upwards of 4 cwt. It follows, then, that the freight upon a cargo of wheat from Russia will be four times as much as upon flax of the same value; so that in the item of carriage the British farmer enjoys only one-fourth as much protection upon flax as wheat.

We are told that we must not take corn freely from foreigners unless they take our manufactures; yet we make no such stipulation about flax.

A duty of 1d. per quarter upon foreign wheat would be as high a protection as is now enjoyed by the flax-growers of this country. We are willing to agree to this amount of fixed duty for the sake of registering the imports at the Custom-house. The protectionists say that this would ruin the farmers; but they have not shown us why it would be unprofitable to grow wheat on the same terms as flax. We hope that the next time Mr. Warnes, or his patron Sir Charles Burrell, addresses a public meeting he will be called upon candidly to explain how it is that flax can be cultivated without protection, whilst wheat is unprofitable with a protecting duty of 20s. a quarter. It cannot be because less manual labour is required in raising flax, for one of its chief recommendations is the increased employment which it affords in the growing, steeping, bleaching, heckling, &c. In short, we have tried to look at the matter in every point of view, and, for the life of us, we cannot discover the consistency or common sense of the men who rave against the League, and at the same time offer the best practical illustration of the soundness of our views by exhorting the farmers to place their reliance upon flax and Free Trade, in preference to wheat and Protection.

THE DOMESTIC CUSTOMS OF ALL WORKERS. IN AGRICULTURE.

CHAPTER I.

An Introductory Glance at several English and Scotch Counties.

There seems to be a general desire at present for information on all matters affecting the condition of that portion of our people who live by the skill of their hands and the sweat of their brows. Since I wrote an account of a visit to Earl Spencer's estate, and made the remarks with which my account concluded relative to the improved dwellings of the working people there, and the unimproved dwellings of the working people elsewhere, it has occurred to me that an inquiry into the domestic comforts and customs of the working population throughout the kingdom would be interesting and useful; and having visited most parts of England, Scotland, and Ireland, and observed rather closely the various circumstances affecting the comforts of the working people, I think I can presume to offer an analysis of their domestic economy.

I propose that the progress of agriculture, the rent of land, and other contingent subjects shall be noted and remarked upon at the same time.

But which is the proper way to arrange this analysis? If we begin geographically, taking county after county, or district after district, we must repeat and renew many of our inquiries and remarks, because there is a sameness in some things over many counties; and if, to avoid that repetition, we take only one county or district as a specimen of others, we shall omit some matters important to be known; for every district of country differs in some things from another district, though it is similar in other things. A geographical rule will, therefore, not suit us.

I propose to take some prominent domestic custom or article of food, as the distinctive mark of counties or districts; and, to follow out that idea, I thought at first of such a classification as the oatmeal eaters, the cheese eaters, the hard-pudding eaters, the wheaten-bread eaters, the dried-bacon eaters, and so forth. But none of these are distinct and restricted enough for the marking of localities; the oatmeal eaters, for instance, include all Scotland and the north of England as far as the Derbyshire Hills. But it appears to me that the different customs in the preparation and the cooking of food are sufficiently distinct and local. Thus, continuing the oatmeal eaters, we have districts of country which may be called crowd districts, brose districts, water-porridge districts, milk-porridge districts, and so on. The crowd district, for instance, takes in Northumberland, Durham, Westmorland, Cumberland, and North Riding of Yorkshire; yet we shall find some more distinctive articles of food and customs of domestic economy in some parts of these counties than the eating of crowd.

In Lancashire we have the oatmeal eaters, using oatmeal in the shape of jannock—a very peculiar kind of bread. In the west of Scotland oatmeal is also used for bread, but it is made in a very different way from the jannock. In the counties lying north of the Yorkshire Hills, oatmeal bread is seldom used until we get westward of the Lothians in Scotland, taking a line of march out of Lancashire to Edinburgh, so as to cross the Tweed between the Cheviot Hills and Berwick. In the district

of the Lammemoor Hills, oatmeal bread may be seen occasionally; but it is very rare on the shores of the Firth of Forth at the bottom of these hills. Other kinds of bread vary in a similar way.

To some this may seem unimportant. But on investigation it will be seen that the former condition of a district, as regards soil, rent, and style of cultivation, may be traced and compared with its present condition by inquiring into the kinds of food used. For instance, there is a class of oatmeal-crowdy eaters in the county of Durham, and a class of wheaten bread and beef eaters. We shall find that the wheaten bread and beef eaters are the pitmen in the collieries, and the crowd eaters are the farming men who plough and sow the land. In Lancashire we shall find that those who plough and sow the land, eat the oatmeal jannock of their forefathers, which was used in the days of old because the county produced nothing better than oats; and because it is never the custom of any county to have other bread than its own staple for the growers of bread to eat. So we shall find that there is a class of wheaten bread and beef eaters in Lancashire—a class of working people, who, for their number, eat more wheaten bread and butchers' meat than any other class in the kingdom. They are the working people engaged in manufactures of various kinds. The millions of pounds sterling paid by these people in a year for flour and wheaten bread and butchers' meat—which are brought into the county, not produced there—is one of the most astounding facts that the mind can contemplate in connexion with the progress of British manufactures and commerce. These eaters of wheaten bread and butchers' meat, in an oatmeal-jannock county, will give rise to reflections at once curious and instructive.

And when we come to the cheese eaters we shall see some curious facts of another class. Cheese is an article of diet, less or more, over all the kingdom; but in some counties it is, with bread, the chief article of diet. We shall see that in Staffordshire, the workers in iron and the workers in pottery's earth are the eaters of wheaten bread and butchers' meat; while the workers on the farms subsist, more particularly, on a very curious kind of cheese. In the southern part of the county, near Tamworth, we shall find the cheese of such a nature that it can be cut, and is sometimes cut, in derision, into plough wedges by the farming men; that is to say, the coulter of the plough, which is usually fastened in, elevated or depressed, with iron wedges, is wedged with slices of cheese by some of the young men who live in the farmers' houses, and are victualled by the farmers; not because cheese is given to them in such abundance that they cannot use it at all; but because it is so impracticably tough and hard, it is thus exhibited by the young wits of the plough as a thing to be laughed at. I was myself guided to a field near Fazley, on a farm belonging to the estate of the Prime Minister, this year, where I saw cheese thus used in mockery.

In Suffolk there is a population of cheese eaters; and there, too, the cheese is exceedingly hard. It is locally denominated "Suffolk bang." Robert Bloomfield, in an apostrophe to *Giles*, the Farmer's Boy, describes the cheese of this his native county, and also the causes which make the cheese what it is. Bloomfield, having been a farmer's boy, became a shoemaker, and worked in a densely-populated district of London, where he found himself able to get—and saw the common inhabitants getting every day—that kind of food brought direct from Suffolk which neither he nor any other farmer's boy could partake of in Suffolk; and that for this reason—that then, as yet, the best of everything was sent to the great towns for money to pay the rents of the farms. What Bloomfield says of "Suffolk bang," and of the London demand for butter, may be said of the plough-wedge cheese near Tamworth, and the demand for the butter and the best of farm produce in Birmingham, Wolverhampton, &c. And it is worth remarking that, since there was railway communication from Tamworth to Birmingham, the farming men who are distasteful to their masters' houses complain that it is more difficult than ever to get a bit of butter or anything else to eat that will sell in Birmingham. Everything brings ready money there, and is carried to the market.

Thus we shall find that a good butter district is generally a poor cheese district; and, by tracing causes backward, we shall find that the butter-making districts did not become so from any superior natural advantages in making butter. Suffolk, for instance, made its butter in such abundance as to accommodate its manufacturing population; and when its manufactures decayed and died away, it sent its butter to London. Had there been no London to send it to, then the farming Bloomfields must have ate it at home. In that case they might have been better fed; but where would the rents of land have come from? But as they became shoemaking Bloomfields, and crowded into shoemaking towns, the butter, and beef, and mutton followed them. They exercised their skill and their strength in making articles of human comfort, which they sold for money, and with which money they bought other articles of human comfort; to wit, wheaten bread, good butter, beef, mutton, and so on. And the money received for shoemaking and paid for these articles of food went down to Suffolk to pay the rents of the farms.

In all this there is nothing but straightforward trade; and it is only mentioned here to show the exceedingly natural channels through which trade runs. I do think that neither the "Suffolk bang" nor the Staffordshire plough-wedge cheese is fit to be a staple article of food

for men employed so laboriously in the production of food as the Suffolk and Stafford ploughmen are; yet I do not mention it to rail at those who give them such food; I only write of it to show what the customs of domestic life are, and what has given rise to those customs; therefore I quote Bloomfield's poem of the "Farmer's Boy," to show why the cheese of Suffolk is so hard that "pigs grunt at it, the dogs bark at it, but neither of them dare bite it," as the local saying is:—

"Unrivalled stands thy country cheese, O, Giles,
Whose very name alone engenders smiles;
Whose fame abroad by every tongue is spoke,
The well-known butt of many a flinty joke,
That pass like current coin the nation through;
And ah! experience proves the satire true.

"Provision's grave, thou ever-craving mart,
Dependent, huge Metropolis! where Art
Her pouring thousands stows in breathless rooms,
Midst poisonous smokes, and 'steams and rattling
looms;
Where Grandeur revels in unbounded stores;
Restraint, a slighted stranger at their doors!
Thou, like a whirlpool, drains't the countries round,
'Till London market, London price, resound.

Through every town, round every passing load,
And dairy produce throngs the eastern road;
Delicious veal, and butter every hour,
From Essex lowlands, and the banks of Stour;
And farther far, where numerous herds repose,
From Orwell's brink, from Waveney or Ouse.
Hence Suffolk dairy-wives run mad for cream,
And leave their milk with nothing but its name.
Its name derision and reproach pursue,
And strangers tell of 'three times skimmed sky blue.'
To cheese converted what can be its boast?
What, but the common virtues of a post.
If drought o'ertake it faster than the knife,
Most fair it bids for stubborn length of life,
And, like the onken shelf whereon 'tis laid,
Mocks the weak efforts of the bending blade;
Or in the hog-trough rests in perfect spite,
Too big to swallow and too hard to bite."

Bloomfield goes on to praise the cheese of Cheshire and of "Severn's flowery meads" (the Glo'ster); but, had he been as well acquainted with the banks of the meadows of the Dee and the Severn as he was with the meadows of the Stour and the Orwell, he would have found that Cheshire and Glo'ster cheese is like Suffolk butter, made to be sold and taken off the farms, not to be eaten by the farm labourers. When we come to speak minutely of the domestic economy of the cheese-making counties, we shall see that they are not cheese-eating counties. Suffolk is a cheese-eating county; but it is not known in the cheese trade for cheese-making. It only works up the refuse of its dairy produce, the "three times skimmed sky blue," into cheese to feed its own labourers.

One of the most interesting subjects of inquiry—the most painfully interesting—will be how far, in certain counties, the food of the common people is retrograding in kind and quantity. We shall find that south of the Yorkshire Ouse and the Trent the food of the labourers is very considerably changed to the worse within these last seventy years, while the land on which they labour has in that time increased very much in rent. We shall find some apparent exceptions to general rules in Lancashire, and in that district of Yorkshire about Goole. But on close investigation the exceptions will disappear, and we shall find the causes which give the labourers a superior dietary there to be the same causes that have deteriorated the dietary in other agricultural counties.

With this outline of the scope and purpose of our inquiry into the domestic condition of the people, I shall proceed to one single locality, and thoroughly investigate it before introducing the reader to another. I shall call it the Boiled-porridge district. I might call it the Water-porridge district; but, though water porridge is the staple food, there are also milk porridge and whey porridge made within the same limits. These last are not said to be boiled: they are called scalded milk, and scalded whey; but the scalding is in reality a kind of slow boiling. This district might be called the Kail-pot country, as the making of broth, or kail, so broth is called there, is very common. But kail is only made about three times a week in a labourer's family, probably in one-half of them not more than twice, while boiled porridge is made once a day all the year round, and twice a day for five or six months in the year.

ONE WHO HAS WHISTLED AT THE PLOUGH.

AN INQUIRY INTO THE EFFECTS OF ENGLISH LEGISLATION UPON AGRICULTURAL WAGES, PROFITS, AND RENT.

BY A BARRISTER.

(Continued from page 5.)

The fifth witness who states that the condition of the poor has improved, is the Rev. Francis Joseph Faithful, of Hatfield.

"You have stated that the condition of the poor has been very much improved within the last few years, at the same time that the condition of the farmers has become worse; how do you account for the improved condition of the poor?—By the reduced price of provisions. I conceive that the rate of wages to the poor has not fallen in proportion to the price of all the necessaries of life."—*Minutes of Evidence*, p. 270.

But it appears that the circumstances of this case are special; that, besides the earnings of the head of the family being above the average, the children's earnings by straw plait are considerable.

"What is the general rate of weekly wages in Hatfield parish?—From 9s. to 12s.

"Have they, out of these earnings, been able to make any considerable savings?—Not out of these earnings; but I conceive that they have out of their general earnings, because in most instances in a large family they add considerably to their weekly earnings by straw plait.

"Can you state the sum that has been put into the savings' bank, or into any place of deposit, during the last year?—I received £375 in the last year from the poor.

"What portion of that has been returned?—It was all returned to them at the end of the year. It had been deposited in the Sunday bank.

"Have any of them any considerable sums now in the savings' bank?—Not any considerable sums in the savings' bank.

"Are there any particular instances which occur to your knowledge of large families having been brought up without any assistance from the parish?—Several. There is one in particular, a poor man with nine children under 14 years of age, who has not received relief for several years from his parish; his earnings during that time have been 11s. and 12s. a week, and his children have been enabled to earn from 5s. to 8s. by their plait."—*Minutes of Evidence*, p. 276.

CHAPTER VI.—Section 2.

It has also been asserted by some writers of authority, that the labouring classes generally have never been so well off as since 1815. Thus the writer of the article on the Corn Laws in the *Encyclopædia Britannica*, says:—"The improvement in the condition of the labouring class since 1815 is, indeed, too obvious to admit of dispute. It is true, that in some districts of the south, where the pernicious practice of mixing poor rates and wages has been adopted, the situation of the lower classes is far from satisfactory. This, however, is only a local, and, it is to be hoped, also a temporary evil; for it has been shown again and again, that a stop may be put to its further progress, and that it may be rooted out, by merely reverting to the system of poor laws established previously to 1795. Throughout all the north of England, in Scotland, and wherever, indeed, the practice of eking out wages by allowances from the poor rates has not obtained, the poor are decidedly better off at this moment than at any former period of our history."

In regard to the observation that "the poor are decidedly better off at this moment than at any former period of our history," we must, first, remind the writer of what he had himself stated only a few pages before, that in the reign of Henry VII. a labourer could earn a quarter of wheat by 20 days' labour, a quarter of rye by 12 days' labour, and a quarter of barley by 9 days' labour; and, secondly, although it is undoubtedly true that the wages in the northern counties which were least affected by the operation of the poor laws were very considerably higher than in the midland and southern counties, yet it is by no means clear that even in those northern counties the condition of the agricultural labourer had materially, if at all, improved even with respect to the period immediately preceding the rise of prices after 1792; while, with relation to the period before 1765, it certainly had deteriorated; and we must beg to call his attention to the following evidence as to the agricultural labourer's condition in the north of England at the time of which he speaks. It is from the Appendix (B) to the Report of the Poor Law Commissioners of Inquiry (made in 1834), which appendix is characterized by the Commissioners themselves in their said Report (p. 2, 8vo. ed.) as "the most valuable part of their evidence." One of the queries issued by the Commissioners was, "Is the industry of the labourers in your neighbourhood supposed to be increasing or diminishing; that is, are your labourers supposed to be better or worse workmen than they formerly were?"† The following are among the answers to this question from the four principal northern agricultural counties:—

CUMBERLAND.—Alston.—"The labourers here are obliged to use much greater exertions than formerly, and, indeed, much more than is consistent with health; but in doing this they are quite unable to provide for their families, and they seem altogether in a most deplorable state."

Bewcastle.—"They wish to be employed; but, as the farmers often cannot employ them in the winter, some try smuggling and poaching."

Kirkland.—"The labourers are supposed to be less tollsome than formerly, which may arise from their mode of living, which is less substantial now than formerly."

Walton.—"Better workmen in general, and equally, if not more industrious; but owing to the hazard of losing employment, and the scanty wages they receive, compared with the advanced price of provisions, and not being allowed victuals as formerly by their employers, their liability of mind is exchanged for distrust and gloom. Their appearance and conduct are nearly the very reverse of what a few years ago they were; while the distaste at which they are held by their employers has nearly, or perhaps wholly, broken the tie of attachment which once existed between the farmer and his labourer."

DURHAM.—"From this county many of the answers are of this kind:—"Much the same;" "No alteration;" "Labourers are as good as ever." But there are also

indications of a change for the worse; as, "Rather worse;" "A great deal worse;" and the following answers—though one describes industry to be increasing, the other diminishing—agree in bearing testimony to a deterioration upon the whole:—

Framwellgate.—"The industry of the labourers round here is not supposed to be increasing, but rather diminishing. From the want of sufficient encouragement to agriculture, the farmer is not able to give employment to so many as formerly; there are, therefore, more children apprenticed out to trades, so that the class of real good farming labourers is on the decline. Many who now labour have been brought up to other trades, which failing, they fall back on labour as a last resource; hence they are more deficient in the work."

Winterton.—"I think they are increasing in industry; but it is not considered any disgrace to apply for parish relief, as it used to be formerly."

NORTHUMBERLAND.—Whitfield.—"Diminishing; the labourers avow it themselves, because the wages do not keep pace with provisions."

Westmorland.—Hartop.—"Worse as workmen; less strong and striving; more delicate in body; perhaps worse fed than formerly."

Kendal, and surrounding country.—"There are many good labourers who work hard and do not apply to the parish; but there are many more who are idle, and go to the parish for relief in the winter; which class is on the increase."

YORK, EAST RIDING.—Beverley.—"Agricultural labourers are much less industrious from the miserable state they are reduced to by low wages, together with aid from the poor rates. Mechanical labourers are not less industrious; they are more scientific and skilful."

YORK, WEST RIDING.—Barnsley.—"For want of employment the price of labour is much reduced; the workmen are as good as can be; much superior to what they formerly were." The same witness (the assistant overseer) had before said, in answer to the question "on what food could the family subsist?"—"Very little animal food is consumed by this description of persons in proportion to what was formerly. They subsist principally on potatoes."

Stanley cum Wrenthorpe.—"As industrious as formerly; but, owing to the diminution in wages, have become spiritless and dejected. They can neither procure sufficient substantial food to enable them to work as heretofore, nor raiment suitable to attend a place of worship. The farmers are so overwhelmed with national, local, and parochial taxation and tithes, that some of them are fast verging to the condition of labourers."

But a still more grave authority has pronounced upon this question:—"We can state," say the Poor Law Commissioners of Inquiry (in 1834), "as the result of the extensive inquiries made under this commission into the circumstances of the labouring classes, that the agricultural labourers when in employment, in common with the other classes of labourers throughout the country, have greatly advanced in condition; that their wages will now produce to them more of the necessities and comforts of life than at any former period. These results appear to be confirmed by the evidence collected by the Committees of the House of Commons appointed to inquire into the condition of the agricultural and manufacturing classes, and also by that collected by the Factory Commissioners. No body of men have money whilst they are in want of what they deem absolute necessities. No common man will put by a shilling whilst he is in need of a loaf, or will save whilst he has a pressing want unsatisfied. The circumstance of there being nearly fourteen millions in the savings' banks, and the fact that, according to the last returns, upwards of 29,000 of the depositors were agricultural labourers, who, there is reason to believe, are usually the heads of families; and also the fact of the reduction of the general average of mortality, justify the conclusion that a condition worse than that of the independent agricultural labourer may, nevertheless, be a condition above that in which the great body of English labourers have lived in times that have always been considered prosperous. Even if the condition of the independent labourer were to remain as it now is, and the pauper were to be reduced avowedly below that condition, he might still be adequately supplied with the necessities of life."

One would imagine from reading this passage, that the English agricultural labourer was in an absolute plethora of prosperity; but one would not imagine that the evidence upon which this report is grounded did not fully bear out the above assertions—that, on the contrary, it proved the direct contrary. Before entering on the question of how far this conclusion is borne out by the evidence on which it professes to be founded, it is proper to observe that the assertion, that the wages of the English agricultural labourer "will now (1834) produce to them more of the necessities and comforts of life than at any former period," is in direct opposition to the fact proved by the most unexceptionable evidence, and recognised by many writers of authority, among others by Mr. Senior, in his *Lectures on Wages*, delivered before the University of Oxford in 1830, that "the labourer in the reign of Henry VII. earned two pecks of wheat a day, and now (1830) earns only one."†

But, let us now examine this string of statements and endeavour to learn how far they are supported by the evidence.

The first statement is, that "the agricultural labourers throughout the country have greatly advanced in condition; that their wages will now produce to them more of the necessities and comforts of life than at any former period;" and this statement is expressly announced "as the result of the extensive inquiries made under this commission."

It does certainly appear, taking together the price of wheat and the returns of agricultural wages from more than twelve hundred parishes in England, printed in Appendix (B. 1.) to the Report of the Poor Law Commissioners of Inquiry, that in the two years, 1832 and 1833, the wages of the agricultural labourers would procure them a larger quantity of wheat than at any time since 1794, when in consequence of a succession of bad seasons, as has been shown above, a rise took place in the price of food, unaccompanied by a corresponding rise in wages. According to the above-mentioned returns the average summer wages (11s. 5d.) taken for the whole of England, would, at the mean price of wheat for the years 1832 and 1833, purchase 104 pints of wheat per week. Now, according to the returns in the Report on Agricultural Wages in 1824, the average wages at the then price of wheat would only purchase 68 pints of wheat weekly. The fall in the price of wheat in the interval will not account for the difference, but it is fully accounted for by the following fact. One of the questions issued by the Poor Law Commission of Inquiry was, "Can you give the commissioners any information respecting the causes and consequences of the agricultural riots and burning of 1830 and 1831?" In a large proportion of the returns the respondents assign low wages as the cause. But, whatever difference of opinion might exist as to the causes, there could be none as to the effects; and in 99 cases out of 100 the witnesses state a rise of wages to be the consequence, generally about 2s. a week, and never less than 1s.* And if for the words, causes and effects, we substitute the words, antecedents and consequents (as merely indicative of matter of fact, without any admixture of opinion), we may state it as a fact, supported on the most unquestionable evidence, that in all the counties where wages were lowest a rise took place after those riots sufficient to account for the comparatively high general average of 1832-33, but by no means sufficiently stable and natural, to be assumed as a correct index of an improved condition of the agricultural labourer. Moreover, the preceding account must be taken with the following qualifications as expressed by some of the witnesses:—"It is difficult to take an average for the district, for the labourers not constantly employed are nearly the whole winter and early part of the spring upon the parish; and often, when employed at other times by the farmer, are paid at a lower rate of wages than other labourers."† It is also to be borne in mind, that the sum put down as wages does not constitute all that the labourer's family have to subsist on through the year, an addition being made to it either by the earnings of the labourer's wife and children, or by an allowance from the parish, or perhaps sometimes by both. It will be found, on examination, that the whole sum on which the labourer and his family subsist through the year varies considerably in different places, varying from £20, £25, and £30 to £50 a year, and even, though very rarely, somewhat higher.

We often find the labourer's whole year's earnings stated at from £20 to £26, or £28, and those of his wife and children at from £5 or £6, to £8 or £10;† in some places at £15 and £20, and at £1, £5, or £6 respectively; in other places the man's earnings are stated at from £20 to £30, with very little or no employment for his wife and children;‡ and a witness states that, at Bowcastle, in the county of Cumberland, "the cottage labourer has 10d. or 1s. per day, and 1s. 6d. in harvest, with victuals; but, as employment is not constant, no cottager makes more than £10 or £12 a year, upon which they live economically without relief, except in sickness."§ The same witness states that, as soon as a boy is fourteen, he generally engages as a house servant (i. e., with a farmer who finds him in lodging and victuals, with wages). He adds, "As there is no manufacture in the parish, the wife and young children earn nothing in winter; but they get employment in summer."¶

The statement of other witnesses from other parishes in the same county are very nearly to the same effect.‡‡ How, then, can it be asserted that the agricultural labourers' wages will produce to them in 1834 more of the necessities and comforts of life than at any former period, when £26 a year has been shown to be not very unfrequently the whole amount of those wages; and when it is borne in mind that Sir Matthew Hale computed the necessary expense of a labourer's family of six individuals in Gloucestershire‡‡ about the time of the Restoration at

* The evidence given before the Lords' Committee in 1830, is to the same effect, a rise of 2s. a week, and in some instances much more, viz., from 2s. 6d. to 5s.—See *Minutes of Evidence*, pp. 13, 20, 31, 87, 93, 99, 103, 110.

‡‡ The returns from some places in Gloucestershire make the whole of even the money amount of wages very little more than in the time of Sir Matthew Hale. Thus the return from Tewkesbury gives for the labourer's whole year's earnings £24, 6s., and those of his wife and children £7, 18s., making

£26 a year; and when it is also kept in view that the average price of the Winchester quarter of wheat for the twenty years from 1686 to 1705 was £1. 16s. 3d. 1-9th, whilst the average price of the imperial quarter of wheat for the ten years, from 1825 to 1834, was £2. 19s. 10½d.?

The fact stated in the evidence by the churchwarden and overseer of the parish of Great Henny, in Essex, that when flour was at 2s. 9d. per peck, the wages in that parish were raised from 8s. to 9s. a week,* certainly indicates a lower standard of subsistence than that of the period extending over no inconsiderable portion of the first three quarters of the preceding century, during which the day's wages of the labourer amounted to rather more than the price of a peck of wheat. But there is much positive evidence to the effect that the condition of the agricultural labourer had deteriorated even within the memory of the witnesses. We have already quoted some portions of this in the preceding pages, and shall have occasion to quote more before we have done. We shall here only add one or two passages where the witnesses distinctly make the comparison between the periods before and after 1794.

"They are worse workmen than formerly; for they have not now strength sufficient to perform their work properly."†

"Not such good workmen generally as formerly, which must be attributed to their not living so well as they did some years since, that is to say, previous to the last war."‡

Upon the whole view of the evidence collected under that commission, we should conclude that, at the time of the reform of the poor laws in 1834, not only the moral, but the physical condition of the English agricultural labourers had fallen considerably below what it was down to within a few years of the commencement of the present century.

The next statement is, that "these results appear to be confirmed by the evidence collected by the Committee of the House of Commons appointed to inquire into the condition of the agricultural classes." Now, we have shown, a few pages back, that the evidence collected by the Committee, both of the House of Lords and the House of Commons, so far from "confirming these results," is in the proportion of about two to one against them.

The next statement is, that there were "nearly fourteen millions in the savings' banks, and that upwards of 29,000 of the depositors were agricultural labourers, who, there is reason to believe, are usually the heads of families."

This statement is grounded (we presume, for reference is not made to any authority in the Report, and the Parliamentary returns do not classify the depositors according to occupations) upon information communicated by Mr. J. Tidd Pratt, who is officially engaged for the savings' banks, to Mr. Chadwick. In his report from London and Berkshire, Mr. Chadwick says:—"Mr. Pratt has examined for me the official returns made in the year 1827 from 273 savings' banks in England and Wales, from accounts made up to November, 1826. The total number of depositors in these banks was 288,798. Among them were 9082 small farmers, and 29,020 agricultural labourers."§ Mr. Chadwick concludes, from the answers to the inquiries he made on this subject from the persons connected with savings' banks, that the greater proportion of the agricultural depositors were married men. Mr. Chadwick goes on to say:—"So far as I have been able to examine the answers to the query circulated by his Majesty's Commissioners, whether the family of a labouring man in full work could lay by anything? it appears that a great majority of the respondents state positively that the labouring man cannot save anything. About half the respondents from Devonshire make no answer to the query. W. J. Coppard, the minister of Plympton St. Mary, says:—"A few have trifling sums in the savings' bank." The other respondents either express a strong doubt whether anything could be saved by a labouring man, or declare positively that he could lay by nothing; yet we find upwards of £70,000 saved, under all obstacles, by 2000 labourers, or by one out of every ten heads of agricultural labourers' families in this same county."||

Notwithstanding this, however, many of the respondents from various counties answer the question evidently with a full practical knowledge of what they are writing about. The Rev. Philip Serle, J. P., Oddington, Oxfordshire, says:—"I fear there are few instances of a labourer with a family laying by anything. I know cases of single men and married labourers without children who have saved considerable sums."¶

"Few persons are enabled after marriage to lay by anything, though many make deposits in savings' banks previous to marriage."—George N. K. Lloyd, rector and J. P., Selattyn, county of Salop.**

"I do not think that a married labourer with a family can lay by anything; and the single man, or the married man without a family, seldom does."—John Woodford, Chilton, J. P., Chilton Canteloe, county of Somerset.††

But the following evidence of the Rev. William Otter,

together with the following evidence of the Rev. J. Jordan, curate of Handborough, Oxon, and contains some important observations.

vicar of Kinlet, Salop, who states the average wages of a family, consisting of a man, his wife, and four children (the two eldest able to earn something), to be about 14s. a week in his parish,* is conclusive as to the operation of savings' banks in parishes not demoralized by the poor laws.

"In the early and later stages of a cottager's life, if he enjoy good health, he is able to lay by from 6d. to 2s. per week. In the course of fifteen years we have had 150 accounts in a population of about 550 persons, some of which have been so high from savings as £20 or £30; and though many of these have been closed in consequence of removals from the parish, deaths or marriages (in most of which cases it had effected its object), yet others have come in, so that the average number of members is now about as great as it was at first (about 60). I know one or two families which, before they had children, or when they had only one or two, were able to subscribe, which ceased altogether when their children became more numerous and burdensome, and which have now resumed their subscriptions, their children being grown up and employed. There is no difference in the wages of the married or unmarried, either when employed by individuals or by the parish. There are no able-bodied men receiving an allowance from the parish, either on their own account or that of their families. The saving bank described above has done some service in this respect, being in the village, and solely for the village; it is brought home to them very closely; and having the landlord and the vicar, &c., as trustees, they have quite confidence in it."‡

And the following evidence points to the distinction between the power to lay by to any purpose, and such a power as the agricultural labourer has:—"In agriculture, little or nothing, depending on the number of the family. A pitman can, and does, lay by a good deal, which forms a fund to enable him to strike work, and contend with his employer for an increase of wages."—William Loraine, J. P., Chester-le-Street, county of Durham.‡

It is evident, even from the statement of the Report itself, that the agricultural labourers do not lay by to anything like such an amount as to enable them to contend with their employers for an increase of wages. The returns cited show the depositors among the agricultural labourers to be one-tenth of the whole; they also show the agricultural depositors to be about one-tenth of all the depositors. Is that the proportion which the agricultural labourers bear to all the other classes of people who are depositors in savings' banks? Surely not.

As to the "fact" of the increased duration of life amongst the agricultural labourers, we should require two conditions in order to derive from it the conclusions assumed here. 1st, That it is a fact. 2ndly, That though it should turn out to be a fact, and, as such, proving a removal of some of the agencies which are fatal to human life, by improvements in medical science, and by some of the same means which have raised rents—the drainage of marshes and stagnant pools, and the clearing out of receptacles of filth for manure—it may be quite consistent with a life of great hardship and privation, not only of comforts, but necessities.—There is nothing paradoxical in the supposition, that by help of the parish doctor, and the decrease of pestilential exhalations around them, they may drag out a wretched existence beyond the period allotted to their grandfathers or great-grandfathers. Some of the witnesses have fully expressed the sort of life we allude to.

"The wages they receive will not support them properly to hard work. When a man has worked hard all day, to come home at night to potatoes and bread, it lingers him along; it is not living."—Wm. Gardener and P. Elton, Eastone, county of Oxford.§

"Both body and mind are enfeebled, so that, when called on to do a good day's work, they are incapable, being unused to work or out. This is melancholy, but true, and is rapidly increasing."—George Robinson, Chelston, county of Suffolk.¶

"The labourer is ill-fed and spirit-fallen; and his children, from being ill-fed when young, must be a puny race, not even so stout and robust as himself."—John Amphlett, churchwarden, Stone, county of Worcester.¶

"Low wages, and consequently bad food, which does not give the requisite strength. Food is worse now than formerly, owing to the labourer's not living in his employer's house."—Sir Harry Verney, Bart., J. P., Steeple Claydon, county of Bucks.**

There is much of the evidence that goes against the fact itself.

"Their morals are more corrupted; and, from bad living, their strength and constitution are impaired. Aqueous and low fevers are prevalent amongst them."—Robert Kirbrell, Wymondham, county of Norfolk.††

All this is corroborated by the evidence of the medical witnesses, published in the recent Reports on the Employment of Women and Children in Agriculture, which will be more particularly noticed in the next chapter.

We can only make room for two more extracts from the evidence on this point. The first is from the Rev. J. Jordan, curate of Handborough, Oxon, and contains some important observations.

"By a careful examination of the past and present state

* Appendix (B. 1.), p. 300, question 12.

†† Appendix (B. 1.), p. 32 c, question 37.

of the labouring classes, I find that now they are in a much worse condition than they formerly were. I believe that, previous to the American war, they were well provided and paid, compared with their present condition, and that they enjoyed many comforts from which they have been excluded by the many subsequent enclosures. I believe that they were far better paid then, in proportion to what money would provide, than they now are. I believe that the unjust operation of the poor laws, which prevented labour rising in proportion with the necessities of life during the war, has been the chief cause of their depression and consequent disaffection. I think that these circumstances ought to be fairly inquired into and examined, and that, if it be necessary, labourers themselves be heard as witnesses, of what their condition once was. If these statements be found true and correct, then let justice be done to the labourers. At any rate let it be fairly inquired into, and candidly stated, whether the labourers are properly paid; that is, whether they are paid in the same proportion in which they once were, when a man could maintain a family without application to the parish on the birth of every third and fourth child."*

The next is from William Steele, a Cumberland labourer (Walton, Cumberland).

"As the present unprecedented mode of inquiry into the real condition of the agricultural labouring class induces a belief that the present Administration really wish to render it relief—though I can scarcely hope that the observations of one, who, born in that low but useful and once respected walk of life, and with whose habits and education he has alone been made acquainted, can hope to merit your attention—I would gladly, if you will permit me, offer through this medium (contracted as it is, yet forming the only opening available) an opinion, which, however humble the source from whence it originates, may not be altogether unworthy of notice, as possessing what legislators cannot always obtain—the unsophisticated statement of a sufferer.

"To the present distress, which has rendered the agricultural labourer the very reverse of what a very few years ago he was, no public administration, however wishful, can perhaps afford immediate benefit. To the internal policy of agricultural affairs—to the relation between master and servant, which no public ordinance can, perhaps, effectually reach—is to be traced the germ of the evil. The monopolization of land into large farms has thrown a threefold quantity of labour into the market. When farms were small, the same quantity of land which maintained, because differently cultivated, three, four, or more families in comparative plenty, and produced to the proprietor as much rent, and more assessed taxes to the state, now aggregated into one, supports one family, the habits of which very little resemble those of the plain unimproving country farmer of other times. The displaced families, with, perhaps, little or no capital to embark in any business of a commercial nature, are reduced to labourers, and, without any resource than the labour of their hands, become totally subject to the present occupier, who, knowing that there is no minimum of hire, excites competition amongst those whose only alternative is to labour, and that, if competition be great, for the smallest remuneration, or be totally deprived of the means of subsistence."

"The farmer thus co-operating with his neighbours, the labourer has no appeal, no resource, no redress for his grievance; but whatever the farmer deems proper to allow him as a reward for his labour, he must accept or be reduced to all the sufferings of real want."

The Cumberland labourer then goes on to point out as among the secondary causes of the deterioration in the condition of the agricultural labourer—viewing the aggregation of lands into large farms as the primary—the payment of the labourers in money, and the enclosure of commons.

"The practice of paying in cash the wages of labourers, by subjecting their fixed allowance to all the fluctuations of price in the corn market, is another cause. In some parts of Scotland, and in the county of Northumberland, a much better mode exists; there the labourer, always resident on the lands of his employer, obtains, as a part of his stipulated hire, a portion of corn, vegetables, and milk. These, besides rendering the fluctuations of price of these indispensable articles of no moment to him, give him an interest in the prosperity of the crop, of which he is himself a sharer; as if such crop is properly managed and secured, his own part is of more value. From that county, his Majesty's Commissioners will, I have no doubt, receive very satisfactory accounts of the state of the agricultural labouring population; and these, when contrasted with other counties where no such plan is acted upon, will show forcibly the superiority of the system.

"The enclosure of commonages, too, has been a severe blow to the prosperity of the agricultural labourer. These commonages, when used as such, and open to all real-estate near them, were a high benefit to the labourer, allowing him the privilege of at least keeping one cow for the use of his family, nearly free of expense to himself, and with certainly very little accounted loss to the real proprietors, who seldom reckoned of much value such un-

* Appendix (C), p. 452.
† Some of the witnesses attribute the incendiary fires of 1830-31 to "revenge of many, whose ancestors or themselves have been renters of small farms, which are now thrown into large ones, and which consolidation has rendered them beggars and labourers."—Appendix (B. 1.), p. 422, question 62. North Curry, Somerset.
‡ Appendix (C), pp. 422, 423.

enclosed portions of land, and the pasturage of the poor man's cow was totally overlooked."

He concludes with the following recommendation:—

"The subdivision of land into smaller portions as farms; the payment of labourers on those farms more in corn than in specie; and the not allowing any cottage to be let in agricultural districts without a small portion of land attached to it."

Upon the whole, we have very carefully examined the evidence collected under the Poor Law Commission of Inquiry, and, though undoubtedly there are some witnesses who state that the labourers "are better off now than formerly," the proportion of these to the witnesses who state the contrary is less than one to ten. In attempting to estimate the precise value of this evidence, we are not unaware of the propensity in the old to be *laudatores temporis acti*, or, to use the words employed by one of the witnesses themselves, to "undervalue the present in comparison with the past." There the evidence is, however, and the reader may take it for what it is worth. If it proves nothing else, it proves that a very large majority of the witnesses who gave evidence under that commission gave it with a strong conviction that the physical as well as the moral condition of the English agricultural labourer had very generally deteriorated.

But the voluminous Appendix to the Poor Law Report of 1834 supplies collateral evidence which leads to results still more conclusive respecting the condition of the agricultural labourer. One of the questions circulated by the Commissioners through all the agricultural districts of England was this:—"Is the amount of agricultural capital in your neighbourhood increasing or diminishing?" Now, out of the 1172 parishes throughout the different counties of England which have answered this question, 41 have stated agricultural capital to be increasing, and 14 have stated it to be stationary, while the other 1117 state it to have diminished—to have very much diminished—and to be diminishing every year. And the Population Returns for 1801, 1811, 1821, 1831, which are printed in Appendix (B.1.), for each parish or district, making returns to the queries, exhibit a very large increase of population throughout the period thus marked by such a decrease of agricultural capital. Now, if it be true, which we see no reason to doubt, that the average rate of wages, or the share of the capital or fund appropriated to the employment of labour falling at an average to each labourer, must depend on the extent of the fund compared with the number of labourers among whom it has to be divided; and if the fund to be distributed has decreased, while the number of those among whom it is to be distributed has increased, the conclusion is inevitable, that the share of each will be diminished.

The whole of the evidence taken together (we might print volumes of it) is corroborative of the conclusions given above as the result of the evidence before the Committee on Labourers' Wages in 1824, before the Poor Law Committee of the Commons in 1828, and of the Lords in 1830 and 1831, that, taking all the circumstances affecting the case into account at the period of which the Report speaks, the agricultural labourers had not greatly advanced in condition; that their wages, even when in full employment, would not produce to them so much of the necessities and comforts of life as at many former periods.

(To be continued.)

MEETINGS.

PLYMOUTH FREE-TRADE ASSOCIATION.

(From the *Devonport Independent*.)

The first meeting of this association for the ensuing season took place at the Mechanics' Institute, Prince's-square, on Thursday evening, C. B. Calmady, Esq., the president of the association, in the chair.

We observed upon the platform, among others, J. S. Trelawney, Esq., M.P.; J. Rundle, Esq., Tavistock; W. Burnell, Esq.; J. Bayly, Esq.; W. Bryant, Esq.; Dr. Hamilton; J. Tanner, Esq.; Dr. Tyndall; C. B. Calmady, Esq.; George Freeman, Esq., &c.

The President having briefly opened the business of the evening,

Mr. Symons, the secretary of the association, read the report, which, after stating the objects of the association, and its progress from the commencement, announced the intention to supply lecturers throughout the various districts in the county, in order that farmers and others might become better acquainted with the actual operation of the hateful Corn Laws, and the urgent necessity which existed for their removal. After the report had been read,

J. S. TRELAWNEY, Esq., M.P., rose to propose the first resolution. He said:—Ladies and gentlemen, I rise for the purpose of moving a resolution, which, I am confident, when I shall have submitted it to you, will receive your cordial support. The resolution is, that the report which has just been read be received and adopted. The proposition, then, which I have just submitted to your notice affords me an opportunity of addressing you on the present occasion, and of expressing my sentiments upon the subject which has caused you to assemble here this evening, and my views in reference to the object which you are met to promote. The present condition, then, of this question is such as should encourage us all to renewed exertion, and little doubt exists that our efforts will be crowned with success. The principle for which we contend is a good one; for what can be better than free trade in corn, free trade in all the necessities of life, and the removal of every commercial restriction? (Cheers.) I would ask, what better thing we could desire than Free Trade by a Free-Trade Cabinet, and what more can

we ask for? My reply is, immediate and unconditional repeal of every existing law which restricts the operations of commercial industry. But in what way have our representations hitherto been met? Why, it is that whatever has been urged as beneficial for the interests of the people our enemies have not deigned to regard, but have skulked out of their baseless fabrics of argumentation like so many rats from falling houses. Even that formidable and truly Roman plea of mortgages, marriage settlements, and younger sons, has been unaccountably forgotten of late. (Hear, hear.) Perhaps it has been found out that labourers sometimes have younger children, though they have not yet learned the luxuries of marriage settlements. (Hear, hear.) Another reason which has been advanced why we should not have a Free Trade in corn is, that land possesses peculiar burdens. God knows it does. The bad management of their property by landlords themselves is a peculiar burden under which it is a miracle land has not sunk long since. (Laughter.) It could have wanted little extrinsic aid if it has survived even that. But, whatever their peculiar burdens be, perhaps, hereafter, when the sagacious pamphleteers of the monopolist party shall have discovered them, their employers will not object to a committee of inquiry to enable the public to judge of the pressure of such burdens upon landed property. Whatever they may be, they must have been imposed by the landlords themselves, as they have monopolised the legislation; and this, perhaps, is a new proof of their disinterestedness. We have heard a great deal about Free-Trade reciprocity on the part of foreigners. We are told that, by removing our own protection laws, our example would not be followed to the same extent by our foreign relations, and that, consequently, we shall inflict an injury upon ourselves for the advantage of others. And so, by this argument, one portion of the world is to be deprived of the advantages of Free Trade, until the whole is disposed to embrace the principle. This is as bad as it would be to keep a whole school from breakfast because some of the scholars were lazy. (Laughter.) Such a state of things cannot, I am confident, long exist; and you must rally round, and do your best to support those who have done their best to support you. There are symptoms existing highly favourable to the realization of our wishes. The supporters of Lord Ashley and his Ten Hours Bill have evinced symptoms indicating that at no very distant day we shall have their support in obtaining the abolition of laws which press so heavily upon the poor man. I perfectly well recollect the auspicious cheer in the House of Commons which followed the sentiment that, "If the Corn Laws stood in the way of shortening the hours of labour, let them perish for ever." I well remember that cheer, and the occasion out of which it emanated, and I am inclined to think that at no distant day there will be no lack of supporters of the principles we now advocate, and that there will be plenty of others to advocate them, and to come here and address you upon the necessity of abolishing laws which are confessedly bad in principle and operation. In the mean time you will all do your duty, and seek by every means in your power to advance the interests of the many against that of the few. I am disposed to think Sir Robert Peel himself will not be found unwilling to proceed with measures which will strike at the root of monopoly. He only requires compulsion. Unlike *Kalstaf*, he has no objection to give reasons upon compulsion. (Laughter.) I believe in his secret soul he is dissatisfied with the tardiness of popular discontent. Like the lady in the town which was stormed, I doubt not he frequently asks within himself, "When will the excesses begin?" However, be this as it may, the days of so glaring an absurdity are numbered. Like belief in astrology, witchcraft, magic, cure of disease by royal touch, and many other things with respect to which it is now only our marvel that so many were ever taken in by them, the Corn Law folly will pass away, and Free Trade will dawn upon the horizon, dissipating with its genial ray the troubled clouds of monopoly and restriction, which result in poverty, misery, and war, and kindling the earth to its highest degree of productive energy, ensuring by natural causes what it were idle to expect from any positive enactment—a fair day's wages for a fair day's work. (Cheers.)

R. P. COLLIER, Esq., seconded the resolution, expressing his pride and satisfaction at seeing the town of Plymouth entering the field in the good cause of Free Trade. Mr. BLACKMORE, a Chartist, who sat in the body of the room, desired to say a few words before the resolution was put from the chair. He was very glad to find the working classes had not been forgotten by the two last speakers. He was sure if the two gentlemen were to adopt the principles which they had introduced at the conclusion of their speeches—"that a fair day's labour should receive a fair day's wages"—they might rely upon the assistance of the working classes. He contended that the working classes had not the power to agitate. The speaker here referred to the support given by the Free-Trade Traders in opposition to the Ten Hours Bill of Lord Ashley, but was called to order by the President, who reminded him that the meeting had assembled for the transaction of business, and not for the purpose of discussing political questions.

The resolution was then put from the chair, and carried unanimously.

W. BURNELL, Esq., proposed the next resolution, which was, that the best thanks of the meeting be presented to Charles Biggs Calmady, Esq., for the ability and kindness with which he has filled the office of president of this association since its formation, and for the interest which he has always evinced in its proceedings, and that he be earnestly invited to retain the office for the year ensuing.

T. CATKIN, Esq., seconded the resolution, which was put by Mr. COLLIER, and carried unanimously.

Mr. CALMADY briefly returned thanks. Votes of thanks to the vice-president and secretary were then put and agreed to.

Mr. J. NICHOLSON, in a long speech, proposed the thanks of the meeting to the council of the association; for their efforts in the cause of Free Trade.

Mr. H. TUCKER seconded this resolution.

Mr. ROUNDELL, who sat in the body of the hall, offered some observations upon the method of conducting the operations of the association, contending that it was imperative upon the council to exert themselves, in order to the moral regeneration of the people, before they could hope for any beneficial results. This gentleman inveighed most bitterly against the monarchical system, which, with the domination of the aristocracy, was the primary cause, he asserted, of the present lamentable condition of the

people. The speaker further argued that the best means of ridding themselves of the grievance would be by abolishing parliamentary property qualification, and paying representatives for their services.

The resolution was finally put and carried.

J. RUNDLE, Esq., said he had great pleasure in moving the next resolution. In his opinion, the present moment was the most favourable for considering the great question under discussion, because they could now approach it entirely divested of that feeling which too frequently accompanied discussion. This was the time when it behoved the public to call for the abolition of the monopoly code, because now it could be removed without causing any serious difficulty, or affecting any interests. He perfectly concurred in the course chosen by the gentlemen connected with the association, and he would take that opportunity of complimenting them for having come forward as they had done. He would also beg to compliment their president for the course he had pursued. He believed that he was only following the bent of his own self-interest, for he (Mr. Rundle) was satisfied that no class was more interested in the abolition of restrictive duties than the landowners themselves. They had a larger stake in the general prosperity of the country than any other party, and it could not but be supposed that they were proportionately interested in all that concerned the welfare of the country. The last speaker alluded to the repeal of the Corn Law, as if the tax had been imposed for Government purposes. Now, his (Mr. Rundle's) complaint was, that it was not levied for the purposes of the Government itself—that is, to provide for the necessities and expenses of the Government—but was simply the taking money out of the pockets of one portion of the population to put into the pockets of another portion. (Cheers.) He thought the principle of Free Trade had made great progress during the past year. One of the chief arguments used against the removal of these duties was that, if the restrictions upon imports were removed in this country, other countries would still maintain their prohibitory duties. They said Free Trade was a good thing if all countries adopted it. He contended that all restrictive taxes were injurious ones, and it was the duty of the Legislature to impose only such taxes as were necessary for the purpose of carrying on the public business of the country. They should at all times be laid on as lightly as possible, and they had no right to inflict them more heavily upon one portion of the community than another. They had no right to compel one man to buy his goods of any particular party. The principle was bad, and the sooner it was abolished the better. If prohibitory laws were good, and Frenchmen were told they should not bring their goods to this country because they were not upon the same footing of equality in regard to cost of production, it would be equally just to say to the Cornishmen, you shall not bring your commodities to this Plymouth market, because you are not rated so heavily as ourselves; and, unless you consent to have the same burdens put upon you as we bear, we will hold no communication with you. The speaker here proceeded to illustrate the fallacy of monopoly as beneficial to general interests; but we regret that want of space compels us to very much curtail our report of his arguments. Having inveighed against the impolicy of continuing monopoly, and urged the Plymouth Free-Trade Traders to renewed exertions, the honourable gentleman resumed his seat.

Other resolutions followed that proposed by Mr. Rundle, and thanks having been moved to the president for his able conduct in the chair, and duly acknowledged the meeting separated.

FREE-TRADE LECTURE AT KINGSBRIDGE.—In consequence of the invitation of some leading individuals of Kingsbridge, Robert Collier, Esq., kindly undertook to deliver an introductory lecture on the subject of Free Trade. A meeting was held at the Golden Lion, Kingsbridge, on Friday evening the 27th ultimo. The large room was crowded by a respectable assemblage. Mr. Collier came from Plymouth, accompanied by a deputation from the Free-Trade Society established in that town. The chair was occupied by Mr. Pearce, a landed proprietor, who, after opening the proceedings, introduced the former gentleman to the meeting. The lecture, which lasted more than an hour, was warmly received. At its close, Dr. Hamilton, at the request of the chairman, made some observations. Some appropriate remarks were also made by Mr. Nicholson and Mr. James. A gentleman having requested an explanation of some of the statements made by the lecturer and one of the speakers, received from them a reply with which he expressed himself satisfied. After the usual vote of thanks to the chairman, the meeting broke up. Since the meeting several registration sheets have been filled up with the names of persons desirous of becoming members of the League.

ENCOURAGEMENT OF INDUSTRY!

(From the *Examiner*.)

The experimentalist of Hierocles had nearly taught his horse to live without oats when the animal died. The horse wanted encouragement. Had a prize for living without food been in prospect, he would have known better than to die.

We do not despair of seeing the time when associations of country gentlemen will be giving prizes to labourers for living without food—a silver fork to Thomas Dobson, who has not tasted meat for forty years; a gilt knife to another, who has left off bread for half a century; a gold medal to a third, who has discovered the art of living on cabbage broth, i.e., the water in which cabbage has been boiled, without the vegetable.

It is amazing how little people can live on if they will but try. Franklin and his fellow travellers on the North Pole expedition fared on a pair of leather breeches for many days. We do not throw out this for imitation, for leather breeches would be too expensive a diet for rural labourers, and, if taught to indulge in it, they might have a hankering for the squire's wether garments; but it shows what may be done, and as gentlemen could breakfast, dine, and sup on a tender piece of doekskin, surely connoisseurs might contrive to make a meal of old harness, saddles, and such like. A prize to a labourer, aged 26, who had lived a week on an old shoe, would be of excellent example. A horse trace might be ate, like Epping butter, by the yard.

The keys of an old spinet or pianoforte, filed to powder and boiled to jelly, would support a man for weeks; and it would be good to see encouragement given to John

Thomson, field-labourer, who had lived on a C natural for three weeks. Glue is nourishing diet, but too dear.

We agree with the *Times*, that Societies for the Promotion of Agricultural Industry are as much out of place in present circumstances as associations would be for the encouragement of great eaters in a besieged place short of provisions. "Too much of water hast thou, poor Ophelia." The misfortune is, that there is far more industry than work.

A society more to the purpose would be one for the encouragement of small wages, giving twopenny-halfpenny prizes to labourers who had worked for the longest time on the lowest wages. This association would lead the way to the other we have suggested, for the promotion of living without food.

The Societies for the Promotion of Industry have, however, the excellent tendency of keeping up a redundant supply of labour, as every candidate for the prizes must have a large family of children to exhibit and exercise his economy on.

A few extracts from the list of prizes of the South-east Hants Society will illustrate the working of the encouragement:

"A premium of £5 to Coker, of Fareham, aged 39, in the employ of H. P. Delme, Esq., for having supported eight children without parochial relief. Candidate pays for the schooling of two of his children, is a member of a friendly society, and also of a burial club.

"A premium of £4 to David Grezory, of Westmeon, aged 36, in the employ of the Hon. T. W. Gage, for having supported eight children under fifteen years of age without parochial relief, except at the times of his wife's confinements. His employer adds that he has only spent 2d. in beer since Whitsuntide.

"A premium of £1.10s. to Thomas Ballard, of Titchfield, aged 42, in the employ of Mr. Thomas Monney, for having supported nine children with only £1.2s. 7d. relief, the greater part of which sum was received during severe illness. Candidate's family has been much afflicted, and he has paid for medical attendance on many occasions himself; he has been a member of a benefit club twenty-five years.

"A premium of £1 to Joseph Laishly, of Blendworth, aged 39, in the employ of Mr. Richard Gale, for having supported seven children without parochial relief except medical attendance. He is a member of the Hambledon benefit society.

"A premium of £3 to William Ferris, of Titchfield, aged 32, in the employ of Mr. Edward Norris, for having supported six children, under 13 years of age, without parochial relief. He has never been out of employ since he was seven years of age, he fits a pig every year, and is a member of a benefit society."

William Ferris supporting only six children would hardly have got a prize, but for his fattening a pig, which of course is the only creature he does fatten. The pig is honourably contradistinguished from the children.

All these children are of course reared most suitably for future circumstances. From their earliest hour they have been practised in privation, and in due season will compete for employment on the lowest wages. The country gentlemen who give these premiums thus lay them out at good interest, throwing the sprat to catch the herring, for the tendency is to keep the labour market handsomely overstocked, so that wages may be low, and the labourers well accustomed from their infancy to starvation.

But here is a fine example, without the claim of children:

"A premium of £2 to Robert Aburrow, of Eastmeon, aged 73. About twenty years ago he was obliged to discontinue labour from infirmity; he has supported himself and wife ever since with what he had previously saved from his earnings, and his wife kept a little school to within the last four years. The candidate used often to commence work in summer as early as three o'clock, and keep on till dark, to make double time."

At 53 he was disabled. For forty years this man toiled, in summer, for eighteen hours a day! And as a noble reward for this agony of industry he has a premium of forty shillings, precisely one shilling a year for his time of labour, or about the seventh of a farthing per day, or in round figures a farthing a week!

Oh, had but Robert Aburrow foreknown his good fortune! Could he but have contemplated, when working eighteen hours a day, that the misfortune of the country gentlemen would, twenty years thence, add a farthing a week to the price of his labour, and give it the handsome name of a premium, surely he would have cried—

"Visions of glory, spare my aching sight,
Ye uncoined farthings, rush not on my soul!"

And this is the reward of industry! A labourer must work eighteen hours a day to make a provision for his old age; and with his double toil, what privations and self-denial he must have practised! and the reward of all this is retrospectively the magnificent addition of a farthing a week to his wages.

Is not a society which blazons such a case, and so deals with it when exhibited for honour, virtually an association for the encouragement of idleness? A stronger moral for idleness could hardly be enforced.

And, by the way, we should rather like to see a society for the promotion of idleness instituted. Instead of showing how a man who worked eighteen hours a day for forty summers laid up enough to keep him from the workhouse, it would set forth how such people as six clerks, or sixty clerks, and the like, who had never worked at all, had their thousands and tens of thousands a year as provisions for their days of idleness to come, in compensation for the nothing to do, and the large pay for it, which had been taken from them.

The system of rewarding labourers for living on their wretched wages reminds us of Mr. Disraeli's Lady C— who, having stuffed the page under the seat of her crowded carriage, gives him a sugar-plum for being so good a boy as not to be suffocated.

THE AGRICULTURAL SOCIETIES.

(From the *Spectator*.)

Two years ago the agricultural societies of this season attracted great notice by vague and ambiguous words of apparent concurrence in the financial reforms that were then under discussion; last year the country gentlemen besied themselves chiefly in qualifying and unqualifying their liberalities; this year they are conspicuous for a still

more negative characteristic—general incompetency to grapple with the perils that beset their rustic homesteads. They are energetic and outspoken in meeting the distant perils of Free Trade, but keep remote from the contest with the imminent dangers of incendiarism: for the future and contingent danger they are quite prepared—for the present visitation they have only speculation, future and slow-working remedies, placid despair, or trivial coaxings. With the brisk and profitable employment of the harvest, incendiarism abated; the work of the harvest ceases, and incendiarism blazes anew. What are the country gentlemen about? Read the many inane reports of agricultural after-dinner speeches, seldom noticeable except for their inanity. The country gentlemen meet, show each other stock and tools, dine, clamour for continued "protection," and congratulate themselves on improvements. And how does the condition of the labourer benefit? Little, if at all. The improvement is in the beasts and the machines; the peasantry remain poor, as stolid, as comfortless, as dangerous as ever. And are they quite neglected at the dinners? Not quite: the diners preach good fellowship between landlords and tenants and labourers; but the practice falls very short of the preaching. At the meeting of the East Cumberland Agricultural Society, Mr. G. H. Oliphant complained that few landlords attended:—"Had the petty price of the dinner frightened them? was it because they did not like to see their tenants at the same board? This might be so; but where was the landlord who did not receive his tenant with a smiling look when he went to pay him his rent?" Ay, the vaunted companionship between the gentleman and his tenant is hollow: the landlord asseverates that their interests are one—that they are to be united hand and soul; but the hand is only cordially taken on rent-day; and at a dinner the salt-cellar must stand between their souls, or the lord or the soil is like to have his appetite spoiled! So suspects Mr. Oliphant. The labourers are treated with a yet more distant pride. Look, for instance, at the South Derbyshire dinner. Certain labourers had money-premiums for meritorious services: they came into the feasting-room, not to sit at the board, but to take their money, to drink a glass of wine apiece, and to receive a didactic encomium from the chairman. All very affable and condescending; but where is the community of feeling? "This," says Mr. Colville, in substance, to the labourers, "is the virtue that you are to learn—to serve us well; waste not your time, for it is our money; it is your duty, and ought to be your wish, to serve us; and, if you do not attain to that perfection of servile piety, we will give to a picked few of you, once a year, when we celebrate our own triumphs, a little money, a glass of wine, a nod of approval, and a lecture." The prize-labourers, it is said, looked pleased; but that they should be pleased does not indicate the independent and intelligent state of mind which makes a man most diligent, able, and moral. The annual chuckling of a calculating lawyer—his investment in insurance on good conduct—to a few labourers, *de haut en bas*, is not Christian and humane fellowship; the mind that is content with that bounty must be little elevated above the trained domestic animal—contented when well fed, ready to bite when hungry. There is nothing in this selfish affability of the employer to endear rank to the poor.

REGISTRATION.

CITY OF LONDON.—The business in this court is proceeding slowly, and will occupy still a considerable time. The state of the revision up to Wednesday night leaves parties in the following position:—

Free-Trade claims allowed	76
Free-Trade objections sustained	334
Monopolist claims allowed	410
Monopolist objections sustained	272

Majority for Free-Traders 138

MANCHESTER BOROUGH.—After all the outcry that was raised in this borough by the Monopolists and their press against the League on the ground of taking frivolous objections, in not one single case did the revising barrister feel called upon to award costs to Monopolist voters. The borough revision has closed, and the following is the result:—

Objections struck off	139	0
Claims substantiated	6	248

SALFORD.—The Free-Traders struck off between 30 and 40 Monopolists, and established about a dozen claims.

WARRINGTON, Oct. 1.—(From our Correspondent.)—"I have pleasure in forwarding you the following result of our borough revision:—"

Township of Warrington—	Gain.
Monopolists struck out	21
Free-Traders do.	6
Free-Trade claims allowed	18
Monopolist do.	7
Monopolist	5

Township of Latchford.—

Loss to Monopolists by destroying over-seers' lists	6
Loss to Free-Traders by do.	0
Gain to Free-Traders by do.	6
Do. to Monopolists	4
Free-Trade claims allowed	3
Monopolist do.	1
Monopolist	2

Total gain to Free-Traders 32

SOUTH LANCASHIRE REVISION (Hotton District).—The Free-Traders have succeeded here in striking off 24 names, whilst the Monopolists have not succeeded in doing so in one single instance.

Rochdale District.—The results of the revision have the same gratifying aspect here as in the other districts of the division, the total gain to the Free-Trade party being upwards of 230.

NORTH LANCASHIRE REVISION.—Chorley, Oct. 1.—This day the Free-Traders have sustained 58 out of 68 objections, independent of what have been struck off on the overseers' objections.

Preston, Sept. 30.—In the court held this day by Preston we have sustained 62 out of 72 objections.

Garstang.—At the revision of the lists for this district on Friday last, the Free-Traders sustained 16 out of 26 objections.

Poulton.—The barrister held the court for this district here on Saturday last, when the Free-Trade party sustained 28 out of 45 objections; in addition to 61 struck off on the overseers' objections.

Leigh.—The revision has been very favourable to the Free-Trade cause in Leigh. We are informed that, whilst the Monopolists have only succeeded in striking four Free-Trade voters from the lists, the Free-Traders have sustained no less than fifty-five objections against their opponents.

Bury, LANCASHIRE.—The revision of the list of voters for the borough of Bury took place on Saturday last, September 28th, at the Eagle and Child Inn, before the Honourable Richard Denman. The following is the result:—

	Claims.
Free-Traders	5
Monopolists	2
	3
Free-Trade objections sustained	12
Monopolist do.	0
	12
Majority for Free-Traders	15

BRIDGEWATER.—The parliamentary list of borough voters was revised by Charles Saunders, Esq., barrister-at-law. The following, we hear, is the result:—Objections by Free-Traders, 7; sustained, 2. Objections by Monopolists, 23; sustained, 7. Struck off the list for non-payment of rates, &c.: Monopolists, 16; Free-Traders, 5. Gain to the Free-Traders, 6.

NORTH DURHAM.—In North Durham the Liberals and Free-Traders have had a clear majority of 61 on the claims and objections.

CHILTERNHAM.—The result of this year's revision appears to be highly favourable to the Free-Trade party, as the following analysis will show:—

Objections by Free-Traders	Objections by Monopolists	Total
Sustained. Failed. Total.	Sustained. Failed. Total.	
99 19 118	61 20 81	

From the numbers sustained by each, 12 should be deducted, that being the number of those struck off upon objections by both parties. Then the number which the Free-Trade party will gain by objections is 87, and the Monopolists 39, giving a majority upon the objections in favour of the Free-Traders of 48. There were 26 new claims established by the Free-Traders, and 12 by the Monopolists; majority of claims in favour of Free-Traders, 14. The total result is as follows:—

	Objections.	Claims.	Total.
Free-Traders' gain	87	26	113
Monopolists' gain	39	12	51
Majority by Free-Traders	48	14	62

We believe the correctness of the foregoing figures is not disputed by either party, so that 62 is the admitted majority upon the registration in favour of the Free-Trade party.

The original list contained 2180 names. From these were struck out upon objections 138 Deaths 0-144

To which must be added new claims 2042 88

The register will then contain 2080

The old register contains 2121 names; but we believe, although a larger number of names, there were not so many voters upon the register as the new one will contain by 40 or 50.

WEST RISING.—Among other objections taken by the Free-Traders for this revision were four against Lord Lowther, and the Honourables Cecil, Arthur, and Henry Lowther. In the two former cases the objections succeeded, and the names were struck off. In the two latter, after a very long argument, the court reserved its judgment.

MALDON.—(From our Correspondent.)—Both the South Essex and Maldon borough registration are concluded. In South Essex we had a majority of 112 objections sustained. In the borough we had a majority of objections sustained of 45, and of claims 6; making a clear gain of 51.

CARMARTHEN, Sept. 21.—(From our Correspondent.)—"I have this week attended the registration court for the borough of Carmarthen. The result has been favourable to the Liberal and, I may safely add, to the Free-Trade cause; the particulars are subjoined on the next leaf. The general result is a gain of 42 by the Liberal and Free-Trade party."

	Loss.	Gain.
Llanelli	Monopolists .. 4	Monopolists .. 1
	Free-Traders .. 0	Free-Traders .. 1
Carmarthen	Monopolists .. 4	Monopolists .. 0
	Free-Traders .. 0	Free-Traders .. 34
Total gain of Free-Traders		42

BOROUGH OF DEVEREAUX.—The Free-Traders made 10 claims and 3 objections, of which the claims were all allowed; 2 objections withdrawn, 1 lost. The Monopolists made one claim and one objection. Objection withdrawn, claim allowed.

FROME.—J. N. Oxenham, Esq., the revising barrister, appointed to revise the list of voters for the borough of Frome, held his court on Monday last. The following is the result of the revision:—

Free-Trade claims allowed	14
Monopolists expunged from list	12
	28
Monopolist claims allowed	3
Free-Traders expunged from list	8
	11

Majority for Free-Traders 16

Mr. Henry Miller appeared for the Monopolists; and Mr. Fairbanks and Mr. Huggott, of the Anti-Corn-Law League, for the Free-Traders.

BRANDFORD.—The revision for this borough commenced on Wednesday. The details are not yet published, but the result showed a decided increase in favour of the Free-Traders.

WARRINGTON.—The revision in this borough is greatly in favour of the Free-Traders.

OXFORD.—The revision in this borough shows a gain to the Free-Traders of 13, independent of a considerable gain in the new names on the list unobjectioned to.

CONTRIBUTIONS TO THE £100,000 FUND.

Subscriptions received during the week ending Wednesday, October 2, 1844.

N.B. As the subscription list is made up from Wednesday to Wednesday, contributions received on Thursdays and Fridays are not published in the LEAGUE of the Saturday immediately succeeding, but are included in the list of the week following.

THE LOWER AND THE UPPER CLASS.—In the city of Durham the number of miners is nearly double that of the labourers employed in the cultivation of the surface.

THE IRISH CHARACTER.—Many indolent, do-nothing politicians contend that it is of little use to legislate for Ireland, as nothing can remedy the greatest evil which afflicts that country—the character of its people. How false this notion is may be seen from the following testimony borne by Dr. Durbin, an American traveller, to the habits and disposition of the Irish in the United States. After describing that people at home, he says, "But the Irishman in America is another being. With the prospect before him of securing a bit of land, even a farm and a comfortable home, he soon shakes off his idle habits, works as diligently and saves as carefully as any of his neighbours. The truth seems to be, then, that nothing but *welfare* is wanting to make the Irish industrious and economical."

LETTERS ON THE CORN LAWS, No. I.

TO THE RIGHT HON. LORD ASHLEY, M.P., &c.

MY LORD,—You aspire to be regarded as the Friend of the Working People. It is one of the most respectable forms of ambition. Nor is its gratification difficult, so far as a large proportion of those who labour is concerned. Their alleged suspiciousness of the higher classes is a very superficial feeling. A few symptoms of sympathy will win their hearts. They do not scrutinize severely. Much more is needful to deserve their confidence than to obtain it. At this higher mark I would have your lordship aim. I give you credit for a kindly and noble nature. The concession is too large, should you content yourself with the plaudits of that credulity which looks to "Young England" for leadership towards intellectual progress, and to Feargus O'Connor for guidance to political emancipation.

You advocate a Ten-Hours' Factory Bill, and you oppose the repeal of the Corn Laws. There are many with whom the advocacy gains you a popularity which the hostility does not, for the present, materially impair. Those who feel are more numerous than those who think. It is easier to sigh over the sadness of prolonged labour than to trace the operation of the causes by which labour is mercilessly prolonged, in order to earn the means of subsistence. But this is required of the true friend of the working classes. Stopping short of this, as your lordship has hitherto stopped short, you may render yourself the idol of those who mistake soft heads for tender hearts, and be canonized as the patron saint of a sickly sentimentalism; but history will not award you the enduring honours of a genuine philanthropy.

Reconsider, my lord, the incongruous combination in your conduct to which I have just adverted. You are anxious to diminish labour, and yet to preserve undiminished a tax upon the food which that labour has undergone to earn. You introduce a bill which proclaims to the poor man "thou shalt not work so long;" other things remaining the same, your bill actually says, "thou shalt not eat so much." The limitation of work can only fail of being the limitation of wages when coupled with other measures which unshackle trade, and leave food to its natural price in the world's market. Your Ten Hours' Bill, alone, is but a one-sided benevolence—benevolence with only its weak and blind side; it would have proved itself a bill of pains and penalties. I dispute not the sincerity of your humane professions; I address you now in the faith that you meant well; but "the road to hell is paved with good intentions," and the hovel of starvation and crime is a house of call by the way, erected by a blundering legislation.

Your Factory Bill is yet untried, and likely to remain so unless advocated with a sterner disregard of party interests than you and your supporters evinced last session; but your act for regulating mines and collieries is in full operation. Mr. Trevelyan's report contains items on which, with reference to your adherence to monopolistic principles, it is well that your attention should be fixed. In the main object you have, thank Heaven! succeeded. Young children are no longer immured, through the livelong day, in dens of darkness. Dependent women are not now degraded into filthy beasts of burden. Blessings on you for that; and the honest heart will pour them forth unsparingly. The forced employment of the young and helpless, in ways beyond their strength or debasing to their nature, is not Free Trade but slave labour; and its abolition an occasion for universal satisfaction. But, my lord, even in this rejoicing, who pays the piper? The collier families were poor enough before; and very many of them now are poorer still. The female form was then debased by dirt; now it is attenuated by starvation. Again and again do we read, in Mr. Trevelyan's report, of the expelled women "stealing" down into the pits for employment; and steal down they must, or be driven to steal above ground. Prosecutions are commenced, and more are threatened. Here is a new version of the law, "thou shalt not steal." Such legal punishment as usually awaits the thief impends over those who only sought to steal into the way of earning an honest livelihood. Does it not strike some misgivings into your mind, when the judicial terrors of our tribunals are invoked for the suppression of this novel criminality?

On "women of mature or advanced age," Mr. Trevelyan says, "the provisions of the act have fallen with great severity." (P. 2.) In truth, the provisions of the act seem scarcely to have left them any other provisions. In all parts of the coal districts where women had been employed, complaints were numerous of the hardships that the act had occasioned to elder females, widows, orphan daughters of mature age, families where there were no sons to aid a father who was old or ailing; and other similar cases." (P. 2.) These poor creatures, my lord, were unluckily on the blind side of your benevolence. Their numbers are not few. In one parish, Newton, in Mid Lothian, the report mentions that of 180

females excluded from the coal-pits, only 49 had since obtained permanent employment. Some of these unquestionably are suffering greatly, having been reduced from a position in which they could feed and clothe themselves in comfort and decency, to the necessity of resorting to the most humiliating employments, such as *collecting manure on the roads, &c.* The minister of the parish mentioned two instances, which may be taken as representing the difficulties to which many of the same class must have been exposed:—

"The daughters, of the ages of 49 and 40 respectively (of a father aged 75), have been left to shift for themselves, and have had recourse to making and vending camstones (a kind of white clay used for washing the earthen and stone floors of houses), since they cannot hope to be received as domestic servants; after having been for so long a period nothing better than beasts of burden. In this occupation, when the weather admits of their going abroad, they make on an average *about three-pence a day*, and to do this they have sometimes to travel as far as Haddington, a distance of 14 miles." (P. 4.)

Think upon this, my lord; and remember that it is *your doing*. Remember also that, besides the privations inflicted directly upon those ejected from their former occupation, there is a large atmosphere of injury in the reduction of wages amongst those who are subjected to this sudden competition. This too, my lord, is your doing. The good you achieve is tainted. The fountain of your beneficence "sends forth sweet waters and bitter;" very bitter indeed to many of the most helpless and most deserving in that class of which you claim to be the legislative friend and champion.

The accident of Mr. Tremeneer's report enables the public to see distinctly, in this instance, the evil which is inseparable from your mode of dealing partially and superficially with the miseries to which working people are liable. That evil will corrode all your efforts, so long as you avoid going to the bottom of the question, and probing the depths of the disease. Your application mitigates the eruption on the skin, while the vital organs are losing their functionary power. People work hard and long, and set their wives and children to work, when they can, not from the cravings of a wicked cupidity, but from the drivings of an inexorable necessity. More work in proportion to their numbers—that is what is wanted; and more work can only be created by more trade. Your lordship upholds the system by which the trade of the country is restricted.

The association founded by your lordship for the benefit of the poor sempstresses of the metropolis boasts, by advertisement, of having mitigated their condition. Very good, so far; but I ask, again, at whose expense? If at that of the inmates of the workhouses, losing thus their hard-earned but welcomed little privileges of tea or snuff; or at that of the ragged wretch for whom a very cheap shirt was the only chance of not going shirtless; why then, assuredly, the drawback upon the good done is not inconsiderable. There is a removal of the heavy burden from some weak shoulders to other weak shoulders. The pressure passes from poverty to poverty, but not from poverty to wealth; it passes from industry to industry, but not from industry to monopoly. You change its distribution; and, so far as you change it for the better, I give you heartfelt praise. Inasmuch as in these changes you still leave it upon the poor and working classes, and allow no atom of it to touch the monopolist landowner, I praise you not. To keep women and children out of mines, is well; to keep class taxation out of the bread-basket, is better. "These things should you have done, and not leave the other undone."

Even during the present comparatively cheap and prosperous season—prosperous because cheap—there is too little of food and of employment in the country for the wants of its working population. Of this pervading evil the forms of suffering that elicit your lordship's sympathy are only different phases or modifications. With more food and more work many of the mischiefs which you deprecate would of themselves disappear; others might be removed by judicious interposition; and injurious results, like those inflicted in the coal and mining districts, be altogether avoided by that rapid opening up of new sources of employment which Free Trade, by extending commerce, would not fail to realize. Compensation would thus be provided for the victims of your reforms. And those victims belonged to a more powerful class in society, your lordship knows very well that "compensation" would have been the first word uttered in Parliament on the introduction of your proposition, and have stood in the margin of the first clause of any bill that you expected to carry through the House. Parliamentary justice demands not of compensating the poor and helpless. No, not when, as in the present case, the best and most appropriate compensation is a measure at once of simplest equity and of national policy. Whatever else may be said of the Corn Laws, it can scarcely be contended by any that they do not enhance the price of food and limit the extent of trade. Humanity is against them; humanity, which your lordship takes politically for your

guiding star. By implication, you acknowledge their mischievous character. In your various efforts, whether the mine or the factory be foremost in your view, it is with the results of the Corn Laws that you are struggling. And how long can your head be satisfied with your heart for feeling strongly some of the miserable results of a cause which you leave not only unassailed, but prolonged for the further multiplication of wretchedness by your support? For shame, my lord; abandon your palliatives of petty wrongs, or wage your war with the monster mischief. Be not a pedler in the small wares of partial charity, while you help to blockade the island against the admission of justice. Have some regard for your consistency and good name. The working classes are willing to be your grateful debtors for the most trifling improvement in their condition. But they know they are wronged. In their name I demand the impartial application of your principles of humanity. Abate the great source of evil in the cupidity of your own class, and its abuse of the sacred trust of legislative power. Become a Corn-Law repealer; or sink into a renegade to the philanthropy which has been the solitary and honourable distinction of your political career.

A NORWICH WEAVER BOY.

AGRICULTURAL CORRESPONDENCE.

We receive an immense number of letters from the agricultural districts, and they are all written in the same tone, expressing dissatisfaction with the present state of things, and describing the lamentable condition of tenant-farmers and agricultural labourers. We give below a few extracts as specimens.

"I believe the time is fast coming when anything but the present scale will be caught at. Sale after sale of agricultural stock and produce bespeak the wretched state of the farmer, who is ready to throw up all in despair. Nor can it be better under the present system."

"The greatest distress prevails in our district, and bills announcing sales of farming property are daily crowding on public attention, and in almost every instance the parties walk out much worse men in pocket. We are persuaded that nothing can substantially benefit the farmers but long leases and education, combined with Free Trade."

"The farmers now are many of them in a state of great distress, owing to the low price of corn and high rents; yet, at the same time, they are afraid to complain, whether of high rents, the ravages of game, or the operation of the sliding scale, for fear of being served with notice to quit. The competition for farms is so great, that if a farmer is turned out it is scarcely possible for him to obtain another. About three weeks ago there was a farm to be let in this neighbourhood, and I have been told that there were fifty-eight applications for it in a very short time. One great cause of this competition is the baneful system which prevails here, of annexing small farms to large ones as the tenants are sold off. Large tracts of land thus come into the occupation of a single individual, who fancies that the larger his farm becomes, the greater will necessarily be his facilities for cultivating his land with profit. But here is his great mistake. His acres are too extensive for his capital, his land is not half cultivated, and not only himself but the public at large are the losers."

"I can assure you that there are very many farmers here fast progressing towards our cause. From the experience of the last few years they have learnt that pauperism and crime have made rapid progress, whilst under their much-vaunted 'protection' they have scarcely kept their capital together. Hitherto the great dread they have had of Free Trade has been derived from the exaggerated statements of interested individuals, of the boundless supplies of foreign stuff ready to inundate our market on the repeal of the restrictive laws. On that point argument has not been without effect, and the maxim 'that goods cannot be bought unless by labour,' is fast making ground amongst them."

"The farmer's condition—miserable in ordinary times—will now become so intolerable as, in all probability, to make them cast about for some remedy."

"I have no doubt but that many of the farmers in this district are Free-Traders at heart, and wish the cause success; but they dare not speak, as they are all under the dominion of the Pembroke family. The farm-labourers too, they see that the abolition of Corn Laws would be to their advantage in every respect; but with their present wages they are mere serfs and slaves, compelled to do that which in reality they abhor."

"A farmer said to me the other day that he and his fellow-farmers had signed an Anti-League petition, and that as soon as they had all signed it he said to his brother farmers, 'Well, we have just been cutting our own throats.' 'Well then,' said I, 'why did you sign it?' 'Oh, what could we do?' The landlord sent his steward, and if we had not signed it we should soon have had notice to quit."

"You may make what use you like of this. Everywhere I find the farmers afraid of their landlords; and some who at first seem most violent against the League, when they can express themselves freely, are no friends to the monopolist landocracy."

"St. Ives, Hunts, Sept. 28, 1844. 'The farmers are very poor, and I think they will ask themselves a few questions at another election. My own opinion is, the sooner we have Free Trade the better. I look upon the Free-Traders as the liberators of the farmers, for they dare not liberate themselves.'"

"Oxon, Sept., 1844. 'A friend of mine, in conversation, said, 'You have lived here many years, surrounded by the tenantry of the Earl of Macclesfield.' 'Yes, I have,' I replied, 'between forty and fifty years.' 'Can you tell me how many you recollect having made a competency under his lordship's farms or lettings?' I was staggered at first by the novelty of the question. I considered about five minutes, and then said, 'Give me another five minutes and I will tell you of at least twenty that I remember who came to breaking stones and other day labour, who were once his tenants, and who lost their all; and further, I know of but one now who is considered to be possessed of property, and that one is indebted to deceased relatives for it.'"

"Newport, I. W., Sept. 30, 1844. 'The farmers are beginning to discharge their men, and some, I am assured, have not cash sufficient to pay the labourer his small pittance of 8s. or 9s. weekly.'"

"Berkeley, Sept. 22, 1844. 'There is that fierce competition for farms which places the farmers entirely at the mercy of their landlord. I have heard numbers of them declare solemnly they shall not make half their rent of the land this year. And it is no uncommon thing to hear a farmer say that £40 would not repay him for the damage he sustains in one season from game. I heard a farmer in my shop a few days since tell the steward that £20 would not compensate him for his loss on one field of wheat. Another farmer told me that of two acres of wheat and six bushels of barley, he had not a single handful—it was all devoured. This is not confined to a few farmers, the complaint is general; and yet they must not complain aloud, or they would be noticed out.'"

"There was a Pro-Corn-Law petition secretly sent round the parish last session, and signed by the friends of Mr. H. Berkeley, who is pledged for total repeal. There was one at Dursley also, but they could not get more than about 30 names."

"Shepton Mallet, Sept. 27, 1844. 'The farmers say, 'What are we to do? If we oppose the landlord, his agent, or the parson, we are warned out, and the competition for farms has been such that the landlords have been able hitherto to carry out their scheme of monopoly with the assistance of a landlords' Parliament.'"

"It is very evident that too much dependence is placed on the protection supposed to be afforded by the present law, which, if removed, would tend greatly to induce the farmers to rely more on their own exertions."

"Ross, Sept. 24, 1844. 'I think the present, or rather the ensuing winter will tend to open the farmers' eyes. Providence has blessed us with bountiful crops, the prices of which will, of course, be low; that under the present system is ruinous to farmers.'"

"Eillingham, Sept. 30, 1844. 'The farm we occupy is 210 acres, under a lease; it is mostly arable. We took it under Corn-Law protection. We should rejoice to see Free Trade to-morrow, because we see that our burdens would be lowered in proportion as the labourer found constant employment and good wages.'"

A TRUE "FARMERS' FRIEND."

(From the *Sussex Advertiser*.)

The late Earl of Leicester, beyond all comparison, was the earliest, the best, and staunchest friend to agriculture as an art, and to the farmer as the artist. He first raised farming to the high character it assumed, and, but for the elevation he introduced and encouraged, the great probability is, that England would have fallen, if she had not perished, under the prohibitory policy of Bonaparte. But for the vast impulse given to farming in the few previous years, famine must have subdued the spirit and the enterprise of the country. This was doubtless, in a great degree, attributable to the supply being always below the demand; and to the attendant elevation of the price. But Coke of Norfolk, by enlarging his farms, building excellent houses, and other incitements, chiefly his personal attention, allured men who possessed adequate capital, great knowledge, and no less activity and enterprise, to become his tenants. Rent with him was secondary—the improvement of his estate, and the advancement of the art, the first objects; and at his death his average rent per acre was perhaps lower than that of any Norfolk proprietor. We have heard him express his opinion a hundred times that no land was so barren as not to pay for skilful cultivation. But what was his pancea, his universal provision? A LONG LEASE. He secured the farmer against all risk of loss. He inquired rigidly into the personal character and pecuniary means of all who offered for his farms, and he admitted no man who had not sufficient capital and adequate skill. He could estimate the worth of land as well as the best judge in England; and once, during a visit we made him, he valued a farm of 1400 acres against his tenant in contemplation of a renewal of a long lease: the tenant's valuation exceeded the landlord's by the small sum of eight pounds, and, when both had finished, the tenant joyously refused to have the farm at Mr. Coke's, but insisted on paying the rent he himself had fixed. On another and similar occasion a tenant came to him (it was in the year of agricultural distress, 1834), when the following colloquy took place:—

"Squire, you let me my farm ten years ago, on a fourteen-year lease; I married and married it, according to your recommendation. It has repaid me very well, but I think it has run out a little sooner than I expected. If you will now renew my lease for fourteen years, I am ready to pay an advanced rent."

"An advanced rent, Mr. G.—I What now? In these times of agricultural distress? This is rather unexpected. But open your mouth."

"And he did open his mouth," said Mr. Coke, "and my reply was, 'You shall have a new lease directly, Mr. G.' to which Mr. G. replied, 'Since you are so kind, Sir, let the new rent begin from last Michaelmas.' It was then the month of February."

Such were the methods by which this true friend to agriculture raised not only the value of his property and the cultivation of his estate, but his character, estimation, and regard amongst his tenants, to the high pitch it had attained—the very highest, perhaps, of any landlord in the empire; and we must also mention another trait. When a tenant died he invariably offered the farm to some branch of his family. Mr. Hudson, of Castleacre, the agriculturist whose name appeared in the late report of the Glynde sale, and one of the first farmers in Norfolk and in the kingdom, is a living proof of this principle and its importance.

FACTS versus FALLACIES. (From the Preston Guardian.)

Passing events, we think, cannot fail to convince the operatives of the unsoundness, not to say absurdity, of the position in which too many of them once joined, that cheap food would reduce wages. It is now demonstrated that, if the price of food have any influence in the matter, the very opposite is the effect, and must be so, except the supply of labour was unlimited. Engaged, as a great majority of the working people are, in manufacturing clothing, bedding, furniture, and all the extra comforts and luxuries of which working people are fond, and in which they have a right to indulge, nothing can be plainer than this, that if they begin to save in food, they begin to spend money in other things, and consequently, by creating an extra demand, they increase the rate of wages.

The remarkable activity in the cotton manufactures cannot be accounted for by the increase of exports. The export of cotton yarn in the first six months of this year, is less in value by £51,773 than in the first six months of 1841; while the increase in cotton manufactures in the same periods is only £972,487, being short of two millions for the year. But while this will not account for the increase of work and the increase of wages, the saving in the price of food betwixt the two years, putting it down only at thirty millions, will fully account for the change.

Another delusion which passing events will dissipate is, that masters have the power of fixing wages, instead of wages being fixed by supply and demand. If they have the power, we must allow that during the past year they have exercised it somewhat generously, for, instead of dropping wages with cheap food, they have advanced them, and in some trades, such as moulders, for instance, wages are almost doubled. But masters have no such power, and hence every advance is not to be attributed to their generosity, but to the regular control of supply and demand. When profits are good, other capitalists are tempted to enter the trade, and, in order to get hands, are obliged to advance wages; and if a number of masters in one town combine, masters in other towns always look with jealousy upon any who are giving lower wages, and will be more ready to support the men than the masters, to prevent themselves being undersold. Competition among the masters is as sure to bring the wages up, as competition among the men is to bring them down. Labour finds its value in the market as certainly as corn or potatoes, though the changes are not so rapid or frequent. We always wondered how any political leader, who constantly cried up the supremacy of the people, should at the same time maintain that the wages of the operatives were under the absolute control of the masters, and that upon the return of cheap food they would inevitably drop them. Many clever men, we think, must now feel ashamed of having been the dupes of such misguided leaders. The *Preston Chronicle* undertook some time ago to show that cheap food almost invariably occasioned low wages. Where will it now find a corroborator of so preposterous a position? Evidently not in the experience of the present day. The *Chronicle* itself has lately recorded several instances of advance of wages in this town and neighbourhood, and at the same time the prices of food exhibited a downward tendency. How, then, can cheap food produce low wages?

TO THE EDITOR OF THE TIMES.

Sir,—The *Standard Express* of last week contains the unprecedented number of 70 advertisements for the sale by auction of farming stock. Ten of these are mere general notices of sale, and furnish no particulars, but the remaining 60 give the following immense quantity of live stock (to say nothing of agricultural implements and household furniture) to be brought to the hammer within the space of a week or ten days:—388 horses, 1098 neat cattle, 8927 sheep, and 557 swine. If some two or three of these are sales of "fancy" stock, on the other hand there are the ten advertisements which are not brought into the account.

But what an index is here afforded to the state of the country! Can any one fact show more clearly the "form and pressure" of the times on farmers and the agricultural population? It is all very well for landlords and the clergy to prate about "high farming" and giving employment to labourers, but farmers, as a body, are a poor class; and if all the produce of their farms is required to meet the payment of rent, tithes, and taxes, the labourer must go unemployed. The farmer is fully aware, and needs no telling, that no outlay of money on his farm is so beneficial to himself as that spent in the employment of labour—it stands to reason; and he must be hard up, indeed, if he does not secure a sufficiency of it. Therefore, you may be quite sure, Sir, that when the labourers are out of work, it is because the farmers are too poor to pay them.

I have read your reports about the unsettled state of Suffolk, and they remind me a good deal of what Arthur Young says about the condition of France before the great French Revolution—the poverty to which the farmers were reduced, and the want of employment for the people—so much so, that the labourers were lying idle about the roads and villages without work and without food, and the land was either insufficiently tilled, or the landlord had to supply stock and tackling to keep his farms in cultivation, yielding the produce with the tenant. This he calls farming on the "Metayer" system; and he goes on to say he was quite at a loss to account for all this until he read the "*cahier*," presented to the National Assembly, detailing the *Army rents*, taxes, exactions, and oppressions under which agriculture groined. I think it would do some folks good to read Arthur Young.

I am, Sir, your obedient servant,

Sept. 25.

A SUSSEX FARMER.

CORRESPONDENCE.

THE ANTI-LEAGUE TRACTS.

To the Editor of the League.

Chelmsford, Sept. 19, 1844.

Sir,—I much admire the ability with which you continually bring the Anti-Leaguers to witness against themselves; but your quotations being often only from careless reports of careless words, they may say they were misunderstood. There is, however, a copious store of their deliberate statements no less to our purpose, namely, their tracts; and, indeed, these call for notice in themselves. Your neglect of them cannot have been lest you should be thought to think much of them. Nor do I wish them noticed fearing their influence. On the contrary, they are in themselves so utterly absurd and self-contradictory, that we could not fail to help our cause by merely assisting in their distribution; but, unless exposed, the knowledge of the mere fact that the Anti-League has extensively printed (which really is all that most of their nominal adherents appear yet to know, or likely to know), cannot but strengthen their position; as it is only natural to assume they would not take so much trouble unless they had something to say for themselves. And, from the extremely trashy nature of their publications, the Anti-League have themselves furnished us with weapons against them, which we shall be to blame if we neglect.

I have now before me all of these tracts that I have been able to procure here. They consist of the two pamphlets of the Central Society by Mr. Cayley and Mr. Alison, and ten local tracts. I have long hoped our Council would publish direct replies to the two first, and then circulate them together. This could not fail to greatly assist us. Though some misstatements in the first were at once exposed, yet these were not nearly all. I have been at the trouble of hunting out all the professed quotations from Smith, and, without an exception, in every instance is the meaning perverted; and as Mr. Cayley is a gentleman of character, this clearly shows how grossly ignorant of his subject he must be. To give two more instances:—At page 8, Mr. Cayley professes to find authority for excluding foreign competition on account of our taxation, "because taxation increases the price of labour." Now, there are no such words in Smith (B. 4, c. 2), and, though the sentiment is there, it is only put into the mouth of an opponent to be refuted; and this Smith does at length, observing, that "taxes upon the necessities of life have nearly the same effect upon the circumstances of the people as a poor soil and a bad climate;" in which case "it would be absurd to direct the people in what manner they ought to employ their capitals;" and "to lay a new tax on them because they are already overburdened with taxes," "is certainly a most absurd way of making amends."

Then at page 10 Cayley professes to quote Smith as saying that the high character of our farmers is due to the protective laws; when, in fact, he attributes it to our liberal political laws rather than the Corn Laws (B. 3, c. 2), which, he says, "are altogether illusory." (B. 3, c. 4.) How pointed are his preceding remarks:—"All for ourselves and nothing for the people seems in every age of the world to have been the vile maxim of the masters of mankind;" and "the laws relating to land were all calculated for what they supposed the interest of the proprietor;" but "avarice and injustice are always shortsighted, and," as one instance, "they did not foresee how much 'making tenants' tenure uncertain' must obstruct improvement, and thereby hurt, in the long run, the real interest of the landlord." (B. 3, c. 2.)

Alison's tract professes to refute the Free-Trade doctrine, and he does not even know what it is. Instead of stating it to be that, if we take care of the imports, the exports will take care of themselves; and all we have to do is to buy in the cheapest markets, and not absurdly trouble our heads lest the seller should take nothing in exchange, as that could only be by his giving us his goods for nothing, Alison supposes we assert that, if we lower our duties, foreigners must lower theirs; and that we admit the former to be an evil till compensated by the latter, when it is obvious that foreigners keeping up their duties can only *lessen the benefit* by checking our imports to whatever extent it checks our exports, or, in other words, limiting our purchases by disabling us from paying for them. The major part of the pamphlet is occupied with disproving this supposition of his own.

His next head is evidence in support of his assertion that Free Trade ruined Rome, which, doubtless with inadvertent candour, he says "well might" excite our indignation. Having referred to his authority (Gibbon), I do not find him the least supported, but, on the contrary, that his quotations are shamefully garbled.

Then he persists in the assertion that the price of labour is regulated by that of food; and (will it be believed?) to get rid of the complete disproof of this in America and our colonies, he actually denies the facts. I can only expect to obtain credence by giving his very words; they are:—"Provisions of all sorts are extravagantly dear in every part of America, Canada, and Australia." (P. 37.)

Leaving these pamphlets to abler hands, I must add a few words on the local tracts. These are entitled to some notice in your columns, from Essex boasting that it originated the Anti-League; and as you probably know, the Duke of Richmond heading the subscription, a piece of plate is about to be presented to the principal mover, Mr. Baker, for having killed the League.

First, for a specimen of consistency. The above assertion being made to mislead the labourer, to frighten the farmer too, three of these tracts state the direct contrary. They assert that wheat was bought in America for 22s. per quarter, and sold here for 32s. Which statement do they expect their dupes to believe?

I cannot give better evidence of their inanity than by mentioning their repetitions, and particularly what are their favourite statements. Thus, short as they are, several ring changes on 7-9ths of the population being agriculturists; or point to the smaller proportion of goods sent direct to the countries whence we import most corn than to other countries. Nothing can be added to the power with which, and with no less humour, Mr. Cobden has exposed this nonsense. Then five of them point to the low rent abroad; and actually six repeat the tale of £120,000,000 of our manufactures being consumed at home, £299,000,000 of them by the agriculturists, and only £47,000,000 being sent abroad; and of our agricultural produce being sold for half as much again, and for twice what it would fetch abroad. One really is at a loss to guess

what they fancy these their crack topics prove for them. Do they think to act the big bully by letting us know they are seven to two? Were it the fact, it would only make the sure victory of our righteous cause the more signal; and, let me tell them, the more forward they put such arguments the worse for them. Or do they think to enhance their importance to the nation by proving that it takes seven farming men to do half as much again as two manufacturers? And that without their monopoly their produce would fetch even less? Or do they not know that in pointing to the pound and more per acre left over in England for rent, after paying for cultivation, while there is but from 3d. to 8d. in Poland, they are themselves exposing that most utterly absurd of their allegations, that they cannot compete with the foreigner? And one would almost think they were trying to show their wit (though how sadly misplaced, with our million and a half of paupers and starving sempstresses!) when they proclaim for themselves that their monopoly enables them to wring from the people £300,000,000 for what would otherwise fetch a much smaller sum; and that the landowners really have the kindness to the manufacturers, in payment for their food, to relieve them of £100,000,000 worth of their goods! Could self-stultification go beyond this?

I had intended to add a word or two on their tracts on wages and prices, which are most grossly dishonest, but the length of this warns me to break off.

Yours, &c.

A FREE-TRADE FARMER'S SON.

RIGHTS OF LABOUR.—The rights of labour are definite and definable: they consist in the freedom of the labourer to work in his own way, and on terms of his own approval, and to exchange the fruits of his labour, at his own price, in the best market he can find.—P. Harwood.

SIGNS OF THE TIMES.—We understand that contracts have been taken for the South Stoneham and Southampton Unions for the ensuing quarters at the following rates:—South Stoneham, bread, 10d. per 8lbs.; Southampton, 10½d. Best ox beef at 4½d., by the long fore quarter; mutton, by the carcass, 4½d. Good fine flour, at 32s. per bag.—*Hampshire Independent.*

POOR'S ALLOTMENTS.—The following is a report of the advantages of the allotment system upon the estate of Mr. Daniel Sutton, in the parish of Wigginton, near Tring:—About 12 months since a field of arable land in a convenient situation was divided into 34 allotments, varying from 20 to 80 poles each, and let to labourers for £2 per acre, including tithes, rates, and taxes. The land to be cultivated after the first time by spade husbandry. The land was in a foul state, although naturally good corn land. The rent to be paid once a year. Monday last being the day appointed, the tenants assembled and paid their rent, with one exception, and that was a case where a man took rather more than he could manage late in the season, and had not been able to gather any of the produce. After the rents were paid, and the tenants had partaken of some good old English cheer, prizes were distributed for the best specimen of the produce, and for the best cultivated allotment. The whole of them expressed their thanks for the benefits conferred, and the tenant who gained the latter prize, Charles Smart, who has a wife and five children under 15 years of age, thus alludes to it:—"I consider my rood of land has done me a great deal of good and filled up my leisure time, and I hope next year to do still better. This year I have gathered peas for my own use, and having dug up several rows of potatoes, by which I can safely say I shall have 70 bushels altogether, which I consider worth 1s. 4d. per bushel; besides this, I have part in turnips, which I would not take £1 for, making the value of one year's produce upon a quarter of an acre between £5 and £6." The parish of Wigginton has ranked foremost in the list of thieves and poachers, and gained the appellation of "Wicked Wigginton," but it is gratifying to observe that not one of the occupants of the allotments has been convicted of a theft or misdemeanour; and the parish has been very quiet and peaceable, and great improvement is visible.

CONDITION OF THE FARM-LABOURER.—Look, for instance, at the condition of the farm-labourer; who will venture to say that it is in any one respect what it ought to be; that it has kept pace with the march of improvement—that the introduction of new modes of husbandry or of new manures have brought any increase of comforts to the field-labourer? This is the season for agricultural dinners and festivities of all kinds; this is the time for farmers' meetings and discussions; now fat oxen win prizes, and well-bred wethers carry off rewards; it is now the virtues of guano can most appropriately be celebrated, and irrigation and sub-soil draining most effectively enforced; but amidst all these new methods for increasing the fruitfulness of the soil, and calling forth its latent properties—amidst all this attention to the precious secrets of agricultural chemistry, and to the improvement of horses, oxen, and sheep, where can he look for any corresponding efforts to ameliorate the condition and brighten the prospects of the farm-labourer? Agriculturists at their feasts and in their more sober moments affect a great horror of the doctrines of political economy, but act upon these doctrines with rigid exactness in their dealings with agricultural labourers. With them as with every other class wages are governed by the rule of supply and demand; and consequently, while the lord and the acquire chant the praises of the protective duty and the sliding scale, the labourer is handed over to the rigorous logic and unsympathising philosophy of Adam Smith. And herein lies, we think, the secret of incendiary fires and other midnight outrages; herein lies the source of that sullen and sultry vindictiveness which is come over the spirit of our rural population, converting cheerful cottages into dens of gloom and discontent, and their soured and poverty-stricken inmates into midnight incendiaries. What to the wretched labourer, unable out of his scanty earnings to keep his wife and family from wanting the common necessities of life, is the "agricultural interest" or the sliding scale? Low and inadequate wages when employed, short commons and brooding thoughts when idle, are his portion, dashed it may be at times with a view in the distance of the union workhouse, and yet noble lords and sagacious senators are utterly at a loss to account for the phenomena of burning ricks and blazing homesteads which glare around them, and obstinately refuse to recognise in them indications of the reckless hopeless misery that oppresses so large a portion of the labouring population.—*Cambridge Advertiser.*

REVIEW.

An Aide-de-Camp's Recollections of Service in China.
By Captain A. Cunyngname. London, Saunders and Oiley.

This work is written in a plain, soldier-like style, making no pretensions to literary excellence, but exhibiting considerable powers of observation and reflection. We are not disposed to follow the author through the thrice-told tale of the Chinese war, which was throughout a mere repetition of slaughter rather than of fighting; but shall rather select those illustrations of Chinese character and manners which best serve to illustrate the nature of the extraordinary people with whom we are brought into increasing commercial contact. Neither shall we now discuss the justice, the policy, or the wisdom of the Chinese war: it is over, and we trust that the bonds of mutual interest arising from the extension of trade will effectually prevent its repetition. Whatever lessons the natives of the Celestial Empire may have learned from the valour of British soldiers, they are but as dust in the balance when compared with the lessons which we trust will be derived from intercourse with British merchants. Commerce has been justly described as the great agent of civilization, not merely because it leads to a free circulation and communication of knowledge, but because commerce necessitates the establishment of moral principle. It soon teaches that fraudulent bargains are the ruin of trade; that no traffic can be permanent which is not based on the highest principles of honour; and that credit, which is the very soul of commerce, can only be maintained by the most unswerving integrity.

Captain Cunyngname informs us that many leading persons in the expedition lamented that, when we had the power of dictating our own terms, we did not stipulate for the possession of some territory, instead of the privileges of commerce. Such complaints show very little knowledge of colonial history: in almost every instance the occupation of a country is infinitely less profitable than an open trade with it. Colonization of a country already inhabited involves more or less of injustice; and injustice cannot be maintained without entailing heavy expenses, and returning little or no profit. India is far less profitable to England than it would have been if its natives had been left independent; and even now its value as a consumer of British commodities would be progressively increased if means were taken to prepare the Mussulmans and Hindús for the task of self-government. We shall at an early opportunity compare the relative advantages of commercial intercourse and territorial occupation; but we cannot forbear expressing our approbation of the conduct pursued by the British Government, in steadily rejecting every proposal made for seizing on any of the maritime provinces of China.

In extracting from these pleasant volumes some characteristic traits of Chinese manners and customs, we shall follow the desultory course of the author himself, who merely noted down his observations as they occurred to him, following no order but that of time. We shall first extract an account of the value placed on that whimsical appendage of a Chinese head, "the tail":—

"A Chinaman's love for his tail is proverbial, and it is truly amusing to see the pains and trouble they take concerning them. Most of them are dressed and plaited with singular neatness and care, and are of such a length that they sweep the ground when walking. Those, however, who are not sufficiently fortunate as naturally to possess a very handsome appendage borrow a portion from their barbers; and, should it get disengaged from his head, the owner has to bear the same ridicule as an unfortunate dandy does who, in Europe, by ill luck, should chance to lose his wig. The front portion of the head is very carefully shaved, for which purpose they make use of a curious and very peculiar description of razor, resembling in miniature a butcher's chopper. This use of their tails produces a very easy method of restoring order and restraining personal violence, when any cause of discussion or dispute may arise among them. The police, or government police, catching some half-dozen of the crowd by these handy ornaments, deliver them over to one of their force, who, with a drawn sword, holds them in check, threatening, upon the slightest unruly movement, to raze their honourable appendages. The intense love for their old friend and companion, that has grown with their growth, speedily overcomes their passions, and, rather than run the chance of parting company, they submit with patience and resignation to the dictates of the authorities."

Turn we next to the description of a quarrel between Chinese boatmen:—

"The personal appearance of the Chinese themselves, as well as their language and manners, cannot fail to strike the stranger with the conviction of how totally different they are from the nations of the West—every action, every word, being at variance, as day is from night, with our own. One of the most amusing scenes which I ever witnessed was from the deck of our ship; it was a quarrel amongst the boatmen who surrounded her with vegetables, &c., for sale. One unfortunate boat, having incurred the displeasure of the rest by offering its wares at a reduced price, was in consequence attacked by them *en masse*. At first they commenced by pelting the owner with pears, eggs, and the like missiles; their fury increased in consequence of some opprobrious epithets which were applied to them; they next sent a volley of china plates, dishes, &c., such as many a fair lady would have been envied the possession of; these either smashed about their

ears or sank in the water. They were all soon devoid of missiles, and, the boats coming into closer contact, the stronger party boarded the weaker, attacking them with long bamboo poles, armed with sharp iron points, with which they are all provided, to defend themselves from the attacks of the pirates who infest this coast. The unfortunate crew thought it high time to decamp, and sought shelter in the water; the boat being now deserted, with the exception of one poor woman, it was reckoned the fair booty of the victors, who, jumping on board, without any hesitation, thrust their long spears into the body of the poor creature, wounding her in many places.

Matters having arrived at such a desperate stage, one of the ships' boats was sent to stop the disturbance, and render assistance to the sufferers, which she effectually did in a very few minutes; all the remaining ones taking to flight, as fast as their oars could carry them, for fear of the consequence, when called up before the police, and the possible, nay, probable, loss of the tails of their owners."

All travellers have borne testimony to the great care bestowed by the Chinese on the cultivation of the soil, and particularly on the attention given to the collection and preservation of manure. Captain Cunyngname informs us that they have long been acquainted with the value of guano, and pays the following tribute to their agriculture:—

"Nothing can exceed the high state of cultivation which the whole of this group is under, every inch of land being occupied with some description of kitchen-garden stuff. All is tilled with manual labour alone, with the exception of the low, wet paddy fields at the base of the valleys, which are occasionally ploughed by the assistance of the ox. We were much surprised to see so much cultivation, evidently the work of a large population, but so few houses; and I am still of opinion that this, in a great measure, is to be accounted for by reason of the people living so constantly in their boats, that they have no necessity for other habitations, being husbandmen and fishermen alternately, according as the different seasons grant them employment in either of these separate avocations."

The greatest degree of pains and care is taken by this thrifty nation to improve their soil by constantly manuring it, thus enabling them always to obtain two crops, and very constantly three, from the same land in one year. They have for centuries been in the habit of transporting manure from the large towns on the sea-coast to the fertile districts in central China, made up and pressed into a form very much resembling our oilcake. A laughable circumstance occurred to some of the sailors in H.M.S. *C*, who, at the blockading of the river leading to Ning-Po, spying some of this composition on board a junk, and taking it to be patent preserved soap, immediately appropriated a portion of it. Notions of bird's-nest soup, sharks' fins, and other Chinese dainties flitting across their minds, they determined to revel in luxury for many a day, and a large portion was boiled in the ship's coppers. The dainty was not much relished at the time, but judge their disgust when made acquainted, some days subsequently, with its real nature; it ever after assumed the name amongst the expedition of *C*—soup."

Our readers will be both surprised and entertained by the description of a Chinese junk:—

"On our way towards the landing-place we visited a gigantic junk which had been captured by H.M.S. *Colubrine*, near the Rugged Isles. She was laden with silk and copper, and was supposed to be from Japan; she was awaiting condemnation as a lawful prize, it being generally set down that she would prove a rich one. After peace had been established, she was eventually given up again, to the unexpected delight and happiness, no doubt, of her owner, she having been proved to be the property of a private individual, and not that of the Government, it being considered politic to show that we were not at war with the Chinese people, but solely with the authorities at present ruling over them."

"This huge box (I cannot bring myself to call it by any other name) was far the most extraordinary thing of the kind I had ever seen, although, after being constantly accustomed to see them, the novelty soon wears off; yet, the first impression cannot fail to be that of wonder, how any people could dream of navigating the trackless ocean in this huge coffin. She must have far exceeded 500 tons burden, according to a rough calculation, which by eye-sight alone we made of her. The upper part of her poop was at least as high as that of a seventy-four, with curious staircases and passages communicating to the different portions of the ship, more after the fashion of a house; her mast was a magnificent spar, eleven feet in circumference, and of prodigious height; her cables, composed of coir, made from the outer covering of the coco-nut, for durability and lightness unequalled; and her wooden anchors, although primitive in their construction, would, I doubt not, have answered perfectly well in any but a rocky bottom, which is scarcely ever to be met with on the coasts or harbours they are accustomed to anchor in. Her sides were painted with a rude imitation of ports; and with her numberless flags and streamers, her huge, unwieldy mast sails, her gigantic rudder, and antediluvian-looking crew, she presented a novel and striking sight; but certainly she could in no way merit the term of 'walking the waters like a thing of life.'"

A new method of levying "black mail," devised by the soldiers of the British expedition, deserves notice:—

"Great lenity was invariably shown towards the inhabitants of the different towns which we occupied, strict orders being given by the heads of departments not to molest or interfere with the people in any way, and by no means despoil them of anything they had in their possession. Some of the soldiers were, however, far better financiers than their chiefs imagined; and, being placed as sentries at the different gates of the towns, politely requested—and, it is needless to add, were seldom refused—a sum of money from every Chinese who passed through. In times of alarm this species of black mail amounted to a considerable sum, it being almost impossible, when discovered, to make the people themselves understand that this tax was not levied by authority. Upon one occasion an officer of very high rank was stepping through the gate as this impost was being levied, and, in the hurry and confusion of presenting arms, the sentry let his whole leg fall to the ground. An inquiry was immediately made

into the circumstance; and, upon examination of his purse, it was discovered that, although the man had only been at this post half an hour, no less a sum than forty dollars was found in it, clearly showing what a good harvest he had reaped from the financial speculation which he had undertaken."

Such depredations, however, formed but a small part of the horrors of this war. We reluctantly extract the description of the fearful scenes exhibited after the storming of Ching-kiang-foo; the details are perfectly sickening:—

"Every house was plundered, and an immense portion of the town, in various places, had been set on fire: this was principally the work of the Chinese rabble, who are the readiest at conveying away property, and the most disorderly of any in the world, and were frequently known to set fire to both ends of the street, in order that they might more effectually, and with less chance of being disturbed, plunder the centre. As to putting any effectual stop to these depredations, that was utterly impossible, for many reasons: first, considering the great extent of the town; and secondly, its immense population, which was stated to be between one and two hundred thousand; moreover, in some few instances, the very property which was carried off was that of the owners themselves, to have deprived them of which was contrary both to instructions received from head quarters and also to our own wishes, it being the constant desire of our chiefs to impress upon all the troops that the war was not directed against the Chinese people, but against their present rulers. Tartar and Chinese soldiers were lying dead in all directions—women, either poisoned or with their throats cut by the hands of their own husbands and fathers, and children by that of their own mothers; while many a poor little infant lay helpless upon the ground, deserted by its unnatural parent, who, from fear of the dreaded barbarians, had terminated her own existence, either by hanging herself in her own house, or drowning herself in one of the small wells in the courtyard of her once happy home. Indeed, to such an incredible extent did this horrid system arrive, that I was assured, by an individual upon whose word I could implicitly rely, that in one house alone he had counted no less than sixteen women and children, some dead from the effects of poison, but the majority with their throats cut from ear to ear. It would be superfluous to say that I thanked God I had not seen this last sight, so complete or extensive a tragedy not having fallen under my own observation. It is difficult to state the precise reason for this wholesale murder; the only way in which I could account for it was, that the mandarins had taken care to impress upon the people the most outrageous and absurd ideas of the monstrosity and savageness of all our actions, declaring in proclamations, which they had caused to be freely distributed through the town, that no crimes were too black, no cruelties too great, for us to perpetrate; thus hoping to terrify the people, in which they but too well succeeded, and make them to resist us to the last extremity, trying to make them believe that they had nothing to hope for, upon the capture of the town, but the most cruel of deaths. Many of the soldiers fought with the most determined bravery, hand to hand conflicts being very common; indeed had it not been for the watchfulness of a marine, the admiral would, in all probability, have met his death from a Tartar, who, utterly regardless of himself, had approached close to his excellency, and was only bayoneted when in the act of discharging his matchlock. Every means had been used to stimulate their courage; large bribes of money had been given them, and silver medals, according to Chinese custom, had been distributed before the action to the soldiers, rather to stimulate their courage than as a reward and distinction after it should have been completed."

The Chinese nails are scarcely less remarkable than the Chinese tails:—

"In a secluded hermitage at Po-too-co we found a man who probably had seen some eighty summers—a venerable-looking priest, his beard white as driven snow. Our attention was, however, immediately attracted from all other portions of his person to that of his left hand, the examination of which, so far from being opposed to his inclination, on the contrary, afforded him infinite pleasure and pride. To use a nautical phrase, we perceived "lashed" at the back of each finger a narrow slip of bamboo, as a means of defending the nails from any casual blow; indeed, without this, they could not have lasted, without breaking, even for a week. At our request, he carefully removed one or two of these splints; he said he had cherished these felicitous weapons he knew not how many years, and through dint of great care, during the whole time, without accident. It is needless to add, that his hand was totally useless to him. We had the curiosity to measure the longest, and found it to exceed eleven inches in length; they tapered considerably towards the point, and at the extremities much resembled shrivelled quills."

"I heard of an old man, at Amoy, who possessed a nail seventeen inches in length, but, not having seen it myself, I cannot vouch for the fact; if so, it beats my Po-too-co friend by half a foot. This elegant habit, as you will readily believe, is confined solely to those whose manners of life are entirely free from manual exertion; but so common is the practice, that the very fact of not possessing what some would call these hideous talons is here as sure a mark of a man being devoid of wealth, or rather perhaps, I should say, dandyism, as a splaw foot, a badly cut coat, or a dirty glove would be at home."

Our next extract shall be the ceremonial of a Chinese oath:—

"The mode of administering an oath in the court of justice is far too extraordinary to be omitted to be mentioned. The Chinese, upon being placed at the bar, are not sworn to tell the truth, either by reverence or fear of their gods, but by the formality of cutting a cock's head off. Thus, upon any doubt being had in regard to what they state, they are instantly tested by this, to them, the sovereign of all trials, and which I was assured they would, on no account, undertake, provided they were not thoroughly certain that what they were then stating was the fact—their asseverations of the truth of their statements being couched in the following terms:—'I hereby swear I am ready to cut the cock's head off to the truth of what I now say.' This is the form of a Chinaman's oath now used in the courts of justice at Hong-Kong."

An amusing military incident is too good to be lost: it is introduced by a paragraph which gives strong proof of civilization:—

"No higher proof, perhaps, may be adduced of the high state of civilization to which they have arrived than that the military profession, so far from being considered the most honourable, is, with the exception of their priesthood, considered the lowest: the first station in society being given to men of letters, the second to merchants, and the last to the paid military defenders of their country.

"Upon the conclusion of the war, the most friendly feelings were evinced by the Chinese of all classes, as I have often mentioned, towards us, and in no place were they more so than at Amoy. English pony-races and other sports got up by the officers of the garrison were duly attended by the mandarins, and interchanges of complimentary visits were constantly made between both parties. Upon one occasion a party of young Chinese gentlemen were inspecting the military barracks of the Royal Irish. Of a sudden, the harmony of their visit was interrupted by the cries and screams of one of their number, who was seen flying across the barrack-yard, loudly calling for help, pursued by no less fearful a personage than a certain Meg O'Flanigan, terribly *en deshabille*—a second Molly Maloney—with an immense broomstick, and, by no means contenting herself with the demonstration alone of this ugly weapon, she was applying it with extreme vigour, and screaming at the height of her voice—"I'll teach the long-tailed black-gard to spy upon the Irish girls." It appeared that, prompted by a vain curiosity to view more narrowly a Panqui-so (a foreign devil-wife), he had been sufficiently rash to peep through the aperture of a half-closed door, where the said Mrs. O'Flanigan was in the act of performing her toilet, when, much to her surprise, she perceived a reflection in the glass of a long-tailed gentleman looking over her shoulder. The sequel is readily understood: to use her own expression—"Faith, I made the long tailed blackguard get out of that." No wonder, said the affrighted mandarin, on recovering himself a little, "that the men are such devils, when they are begotten by such she-devils."

A very singular traffic has sprung up at Hong-Kong which we must leave our author to describe:—

"The harbour at Hong-Kong was generally very crowded with Chinese native craft. The gayest and most highly decorated boats which arrived at our port were those which brought from Canton a mercantile commodity very commonly trafficked in by the Chinese. These were young ladies who were bent upon the speculation of marriage, being brought from the exuberant population of the interior towns to supply this deficiency amongst the numerous settlers who had come from the continent to our new colony, to many of every trade and occupation having already flocked in vast numbers to the island. These boats arrived with drums and gongs beating, and colours flying, generally coming to an anchor immediately under my own window; tea-tables were soon arranged, and the young ladies, from twenty to forty in number, arrayed in their smartest jackets and trousers, might be seen endeavouring to bewitch those visitors who flocked to the boats. I was informed that the price, generally speaking, averaged from 100 to 200 dollars, the greater portion of which money was transferred to the mother of the young lady, a due proportion being charged for the expenses attendant upon the voyage, together with commission, &c., upon the bargain. I have known instances of some of the natives of India becoming purchasers; but in that case they would obtain solely the refuse of the community. Upon one occasion, a himutgar, or table-servant, a native of Bengal, complained to me, and entreated my interference, stating that he had entrusted a friend of his own, who had gone to Macao, with 100 dollars, all his savings, for the purpose of buying him a nice comely wife; but, when she arrived, she by no means answered the description given of her, being too short and too old, and by no means a 100 dollar wife, but not more than a thirty dollar one; when, much to his grief, as well as surprise, he only got laughed at by me for his pains."

The following brief description of the occupation of the Company's servants at Canton, in "the good old times," was given to the author by one who had been initiated into the service:—

"Upon one occasion I asked him how, in these halcyon days, did so large a body of the Company's servants as then existed in China employ themselves? 'Sir,' said he, 'they spent six months in Macao, having nothing to do, and the other six months in Canton, sir, doing nothing. Ah! sir, those were fine days in the time of the Company.'"

Here we shall conclude, but we recommend the volumes to such of our readers as find time heavy on their hands, and wish to while away a couple of hours by a lively representation of some of the most striking peculiarities in the manners of an original race, whose system of civilization has been completely developed from within and owes nothing as yet to external aid.

REPRESENTATION OF BEDFORDSHIRE.—There is a question we independent advocates of "measures not men" feel it our province to touch upon. It is the parliamentary representation of this borough and county, which has been resigned to a party for the benefits which the electors would receive from that party. As far as we are concerned we may ask what are those benefits; as far as the farming interest, the manufacturing interest, and labouring classes of this county are concerned, we may ask where and what are the benefits they have derived by exclusive party representation. The fluctuations in the price of grain and of bread have been greater, as was seen in a table published a few weeks ago, and the remuneration of labour has been gradually decreasing, whilst pauperism and crime have been increasing. Where are the benefits of one party to represent Bedfordshire? When we look at the condition of the borough of Bedford our question rolls to and fro, leading us to hope that echo will furnish an answer; but no, its silence says none! The usual expenses of the county representation are now not paid, and the expenses of the registration are unprovided for. Where then is the use of one party representing the town and county of Bedford? What does echo say?—*Bedford Mercury*.

AGRICULTURE.

A REAL FARMERS' FRIEND.

The reader may recollect a speech delivered about a year ago at the *West Herefordshire Farmers' Club*, by Col. Powell of Hardwick, in which he strongly insisted upon the necessity of leases for the security and welfare of tenant-farmers. That speech elicited the warm approval of the farmers and of all others of the district who desire to see the tenant-farmer a thriving and an independent man, and it was at once determined to present to Col. Powell a testimonial of the sense in which his honest and public-spirited conduct was held by his neighbours. A committee of private gentlemen and farmers accordingly commenced a subscription, and on the 10th of last month a splendid piece of plate was presented to Col. Powell, at a dinner held in the town of Hay for that purpose. The inhabitants of the district seem to have spared no trouble to do honour to the occasion: triumphal arches, banners, and a procession, composed of the yeomanry and various societies of the industrious classes, "occupying the road for a mile," gave evidence of a general and spontaneous movement of the middle and humbler classes. No titled lord was present,—

"But school children of the National Schools of Hay, Llowes, Dorstone, Clifford, the Hay Wesleyans, Independents, Baptists, and Welsh Methodists, each headed with neat flags, with the mottoes to which they belonged, and the words 'Colonel Powell, Patron,' on them, rendered the scene still more soul-stirring, and such a sight numbers declared they never saw before. It is calculated that upwards of 1000 children walked in procession, being joined by vast numbers of Sunday-school children. The worthy chairman, A. H. Wall, Esq., attended by John Tomkins, Esq., of the Weir; W. Bridgewater, Esq., of Glusbury; William Higgins, Esq., of Hay; W. Acton, Esq., High Bailiff of Hay, followed in Mr. Wall's private carriage, drawn by four beautiful horses, splendidly decorated, ridden by postillions; and all marched in procession to the upper lodge gates of the Moor estate, where the gallant colonel was met in his private carriage, from which he stepped into the carriage of the president, with whom he returned to Hay. The air was literally rent, as it were, with the shouts of the assembled thousands, and as the loud huzzas went along the line of procession, upwards of a mile, the effect was beautiful in the extreme."

At the dinner the same absence of high and titled names is apparent; but three hundred hearty and earnest admirers of the *REAL FARMERS' FRIEND* are reported to have been present; a great number of ladies also graced the gallery with their presence. The chairman, Mr. Wall, in proposing the health of Colonel Powell, after remarking that, "This is not a meeting for any class of dependents to pay homage and respect which they do not feel, or to bend the knee to the rich aristocrat or grandee, but to show our worthy guest that his public utility, as well as his private worth, is not only felt but acknowledged by us;" and, after referring to his general charitable and philanthropic character, said:—

"Great as these are and have been, there is one that calls for especial notice. I allude to a public declaration made by him at the late anniversary of the *West Herefordshire Farmers' Club*, and which at that time extensively engrossed the attention of the public press of this country. It was a speech characterized by sound sense and liberality of sentiment, and not only did honour to him but also to the society. There are circumstances upon which men may differ; some say this plan is best, some that; but there is one point on which we all agree, viz., that a lease will give to the farmer security and confidence, that in laying out his capital he will reap the advantages arising therefrom, and when he goes into his farm he may expect to remain in it for life, and may call it, as it were, his freehold and his castle. We all know that the tenure of a tenant-farmer is a very uncertain one, and a man knows not how long he may live under his landlord; he may be in his farm to-day and have notice to quit to-morrow. There are others employed by landlords who are sometimes more oppressive than those for whom they act; sometimes the tenant has almost a hundred parties to serve, and, unless he pays proper respect to all, he frequently has to leave his farm in consequence. The plan of the gallant colonel would give him comparative independence, and gladden his eye at the prospect of success, and of securing to his family a decent and respectable livelihood. Many entertain these views, but have not boldness publicly to give them utterance."

Such expressions are common enough amongst farmers in private, but the novelty is to hear them made openly and in public. It is a sign that the thralldom in which tenant-farmers have for years been held is shaken, and needs but the removal of the Corn Laws to come to an end. Colonel Powell, in returning thanks, spoke with no less effect than upon the occasion which gave rise to the present tribute of respect. He said:—

"I have likewise to return my thanks individually and collectively to the members of the *West Herefordshire Farmers' Club*, particularly for the firm and manly example continued by them during this manifestation, and also to the general body of contributors, I beg to return my most sincere thanks. There is one subject closely connected with this day, to notice which I would humbly beg your attention for a short time: it is relative to the present and future state of agriculture, and the views different parties have taken for bettering the condition of the farmer. There are three most powerful parties, each anxious to be considered the farmers' friend; but the means they take to obtain that distinction are as wide and as distant from each other as the poles are separated."

These parties he thus described:—

"In the first place, there are the fixed-duty men—cautious, prudent, and very wary, saying little and doing less, taking especial care not to follow the example of others in clapping their hands into their breeches pockets to back their opinions, and, did we not know to the con-

trary, we might be led to believe that they were natives of the north side of the Tweed. Then come the League, who are honest, straightforward people, no doubt, if you listen to their statements, who want cheap bread to obtain cheap wages, to enable them to produce cheap manufactures. And what cheap bread, cheap wages, and cheap calicoes have to do with bettering the condition of the farmer, they leave you to find out. Then comes the third and last, and by no means the least party in their own estimation—another section of protectionists, who tell you positively that, unless the farmers obtain the protection which they term the sliding scale, both tenant and the labourer must inevitably be ruined; but they take especial care not to let you know what is to become of the landlord. If the farmer and labourer were to be ruined, the landlord, I think, would be treading pretty closely upon their heels."

If Colonel Powell had applied his sound manly sense to facts which are notorious, he would have seen the error he had fallen into in attributing to the members of the League the desire to obtain cheap bread, for the sake of obtaining also cheap wages; for, whenever bread is cheapest, manufacturing wages are highest, and on the other hand, when food is dear, wages are low. If men like Colonel Powell are content to receive upon trust the misstatements of the monopolists with regard to the objects of the League, it is plain that the monopoly could never have been successfully assailed otherwise than by the copious information and widely-extended inquiries which the exertions of the League have induced. Does this gentleman recollect the price of corn in 1840, when wheat touched 80s. a quarter? What was the rate of wages then? We ask him and other unprejudiced and clear-headed men to contrast the wages of 1840, when bread was dear, with the wages of the manufacturing districts at this moment, when bread is cheap. With wheat at 43s. a quarter, the operative is receiving much higher wages than he received when wheat was 80s. a quarter. Can there be a more complete demonstration that the manufacturing members of the League cannot seek Free Trade to lower wages? So much for the fallacy of cheap bread lowering wages; we shall see presently that the means proposed by Colonel Powell for improving the condition of the farmers and farm-labourers are identical with the constant recommendations of the League for the same objects. Speaking of the protection societies, Colonel Powell said:—

"The farmers in general look upon the newly-formed protection societies with a cautious eye. You will rarely see the name of a tenant-farmer attached to either of their lists—they know their own position too well. The only protection they want is to be put in a position to be able to protect themselves (CHERRA); and this they could easily do if FARMS WERE LET ON LEASES AND CORN RENTS."

We have often pointed out the absence of all independent farmers from protectionist meetings, and the active interference of the half farmer half land-valuer, as undermining tests of the real character of those landlord-created meetings.

But to the point. What has the League always said?—that the farmer wants no other protection than the power of reaping what he has sown, security of tenure, and rents calculated on real, not fictitious, prices. Have not nearly a million copies of Mr. George Hope's tract, recommending long leases and corn rents as the true protection for the farmer, been circulated by the League?

We are right glad to find the same recommendations so well supported as by Colonel Powell, who said:—

"The additional quantity of grain that would be produced would in a very few years, by improved system of husbandry, be more than would be required for the consumption of the population of this kingdom; and instead of being, as we are now, and, unfortunately, have been for a long time, an importing, we should become an exporting nation."

It is by no means improbable that we might in favourable years become large exporters of wheat if a large part of our land was well cultivated; but to any general extension of improved husbandry the uncertainties and fluctuations occasioned by the Corn Laws present insuperable obstacles.

Colonel Powell then stated an instance of improvement under a secure tenure:—

"There are many cases that have come within my own knowledge to prove these facts. Twelve years back I knew a tenant-farmer that took to the off-growing crop at a valuation taken by two neighbouring farmers at ten bushels to the acre; the coming-in tenant had a lease of fourteen years, and at the expiration of his fourth year he had 18 bushels of wheat and 23 bushels of barley to the acre; and for the last seven years, down to the present period, his average wheat crop has been from 18 to 23 bushels, and from 25 to 30 bushels of barley. That is one advantage, amongst many, of the consequences of a lease without a corn rent."

Then as to a corn rent:—

"Now, let us see what will be the advantages of a lease with a corn rent, and we will take the corn rent from the wheat crop only, and we will put the price at 6s. per bushel; and whenever wheat is at that price, or a fraction under, in this country, neither the farmer nor the foreign grower can compete with the English farmer in the home market. (Hear, hear.) We will take a farm of 200 acres, 120 of tillage and 80 of meadow and pasture, of fair-quality land, that had been let for the last twenty years at £1 an acre, and which have been known to produce, within the last ten years, 20 bushels to the acre. The custom of this county we know to be one-third of the tillage as the old mark for wheat. The third of 120 will be 40. The average of the present tenant's wheat crop for the last ten years has been from 12 to 15 bushels per acre. Now, we will take it at 15, the maximum; 15 bushels from 40 acres would be 600; take

away 80 for seed, would leave 520; 520 at 6s. would be £316; that appears to be the average value of the present tenant's wheat crop for the last twelve years, according to the tenant-at-will system. Now, let us see what would be the value of the tenant's wheat crop on the same farm, on a lease and corn rent for 17 years out of 21, allowing him the first four years for getting his farm into that state of cultivation that would ensure him that return. Now, this farm has been known to produce, within the last ten years, 20 bushels per acre under the bad system of tenant-at-will; and, if it has done that, we have a right, surely, to take credit for what we know it to have done, if not for more, under a better system. We will take it for what we have known it to produce, 20 bushels per acre; 20 bushels for 40 acres would be 800; and at 6s., taking away 80 for seed, would leave 720, which would be £216. This would appear to be the average value of the tenant's wheat crop on that farm under a lease, at a corn rent, for 17 years out of 21, leaving him, as I said, the first four years, with some allowances, for the purpose of getting it into that state of cultivation which would ensure him that return to which I have alluded.

And Colonel Powell recognised the fact, that improved husbandry would benefit the farming-labourers, when he said:—

"It would be equally beneficial to the labourer, inasmuch as, in all probability, only one labourer would have previously been employed on the farm during the year; and if a tenant had a lease upon a corn rent, he would likely keep three or more labourers."

But it may be objected that a lease won't give a farmer capital, and the want of capital is usually the reason why too few labourers are employed. The answer is short and simple, and it was thus made by Colonel Powell:—

"It may be asked, what use would a lease be to a farmer who had not capital for the purpose of carrying out those improvements that would cause an increased production? There are some gentlemen sitting on my right who would readily answer, that the beneficial interest he has in the lease would be sufficient to enable him to borrow the money, provided the lease was made good to his family."

This is one of the most important points to which the attention of landowners should be directed. Instead of encumbering their leases with restrictions on assignment, it should be their object to render the lease beneficial, which would afford them far more security than any restrictive clauses. A simple covenant, that one-fourth of the land shall every year be applied to growing green or root crops to be fed off, would prevent any deterioration of the land, far more than all complex restrictions now in use, which, in fact, never prevent a bad or a poor farmer leaving his farm in most wretched condition. One of the great obstacles to good farming at this moment is the great expense a moderately good farmer must incur to repair the damage done by his predecessor; and without leases this difficulty will never be generally overcome.

Colonel Powell stated that, notwithstanding the great local advantages for obtaining lime, the tenant-at-will system prevents farmers of that district from availing themselves of them. Upon that miserable plan of temporary abatements he said:—

"There are many great, good, humane, and excellent landlords, who had shown a willing inclination to relieve their tenants, by returning to them 10 or 15 per cent., and certainly they deserve very great credit for so doing. But what says the tenant the moment he quits the room? He says, 'It has done me good just now; I have been returned 10 per cent., which I am very grateful and thankful for; but I am thinking, if wheat get up to 10s. per bushel, my landlord will clap it on again.'"

Moreover, the abatement is a mere pittance in comparison with the sum the farmer loses when the Corn Law fails to keep up prices to the act of parliament level. Landlords, as Colonel Thompson has pithily said, "take with the bucket but give with the spoon." The abatement by per centages illustrates this. Of Sir Robert Peel's last year's exhortations, Colonel Powell observed:—

"We all know that Sir Robert Peel is a great landed proprietor, and if, instead of supplying his tenants with Birmingham bulls (immense laughter), he would set the example to the great landed aristocracy of the kingdom of letting his farms on leases at corn rents, he would be the greatest benefactor to the agricultural community this kingdom ever received; the landlord would be satisfied, the tenant happy, and the labourer comfortable, and we might all whistle at free trade in corn."

The injury the actual system—which he it remembered is the offspring of the Corn Laws—does to the labourer is thus graphically described:—

"We often hear at public meetings observations made relative to the condition of the agricultural labourers of this kingdom, as compared with men of their class in other countries, and some will go so far as to say that our agricultural labourers are better fed, better clad, and better housed, than any others of their class abroad, and that they generally get a hot dinner most days of the week. Now, if these gentlemen who make these assertions at these meetings, for political purposes, to deceive others, would only, when they are taking their morning ride, and paying their morning visits; when he is partaking of his midday meal, they would then see the man, and his wife with three or four children, around the table, with a huge bowl of smoking hot potatoes and salt; no bread, no butter, no bacon. Such is his meal, in many instances, when working near home; but let them watch that man when he goes to work at a distance, and is compelled to take his meal with him; in the middle of the day he may be observed retiring to rest himself under the shelter of a thick hedge protecting himself from a strong north-easter, and taking from a little bag a piece of bread, often of very ordinary quality; when he has done pecking it he may be seen directing his steps to the nearest place where he may obtain a draught of clear water. Such many of you know to be the case with many an honest, hardworking labourer. Let those gentlemen, when they are travelling abroad, condescend to alight from their car-

riages, and taking a little more than a bird's-eye view from the roadside, let them thoroughly explore a little of the interior of the agricultural districts they pass through; and then they will see that the foreigner is often better off than the agricultural labourer of this country—THE DESTRUCTION OF THE LATTER IS MAINLY CAUSED BY THE INJURIOUS AND IMPOLITIC SYSTEM OF LETTING LAND."

And the Colonel concludes this part of the subject by the following statement with reference to his own experience:—

"Whenever the time arrives that the contract between landlord and tenant is based on leases and corn rents, then the agricultural labourer will become a comfortable and happy man; he will have plenty of employment, which is all he requires to make him so. I have been a landowner and occupier upwards of forty years, my income is derived entirely from land, and I am a decided advocate for leases and corn rents, as the only means of restoring that kindly feeling and reciprocity of action that formerly so happily subsisted, but, unfortunately, of late years has been so deplorably defective, between landlord, tenant, and labourer."

Well might Mr. Tompkins, in allusion to this speech, say:—

"As an agriculturist, I have frequently attended Hereford agricultural dinners, and have as frequently upon such occasions had an opportunity of listening to the observations of many of the landlords of this and other counties. Some of them, who are legislators, tell us that great experiments have been made in a change of the laws which protected our interests, and that we must now put our shoulders to the wheel, and look to ourselves; lay out more capital in draining, and in the purchase of artificial manures, with other such like advice; but I have never heard any observation made by them calculated to give confidence to the farmer, when compared to the declaration of our honoured guest." (GREAT CHEERING.)

Such sentiments as those of Colonel Powell will have a great and wholesome effect upon the minds of the tenant-farmers of the country, who will not fail to remark that not a single monopolist or political landlord was present at this most gratifying demonstration of respect to A RURAL FARMER'S FRIEND!

PREACHING WITHOUT PRACTICE.

At the meeting of the North Staffordshire Agricultural Association, Lord Sandon, the monopolist member for Liverpool, gave expression to the following liberal sentiments in relation to agriculture, which contrast strongly with his illiberal votes in Parliament:—

"At the shows of the Royal Agricultural Association of England nothing afforded more gratification than the implements. It pleased him (Lord Sandon) to see the two great branches of the industry of the country as they were upon that occasion shaking hands together. There was the genius of the mechanist employed to assist the cultivators of the land. He hailed with pleasure anything which could bring these two classes of the population cordially together."

Does his lordship suppose that the best way of bringing them together is to tax the industry of the one class to foster the indolence of the other? Such is the practical operation of the Corn Laws he so strenuously upholds in Parliament. He afterwards said:—

"He was one of those who did not look despairingly at the difficulties attendant upon the growing population of the country. He believed that England had within herself resources quite equal to the difficulty. So far from improvements in agriculture superseding manual labour, he believed it would promote and increase its employment. The farmer, enlightened as to the best mode of cultivating land, and encouraged and enriched by superseding manual labour in one direction, would gladly find new sources for it in another; sources which his enlightenment would point out; which the increased means put into his pocket by mechanical invention would enable him to avail himself of, and which no mechanics could ever exceed. He had seen something of it in Lincolnshire, where mechanical inventions in agriculture had been introduced to a great extent, and in no county in England was labour better employed and better paid. Labourers in that county did not stand in the market-place asking for employment. (Cheers.) No; the farmer had to go and look for the labourer. The farmers competed for labour, and not the labourers for employment. The labourer was consequently paid higher wages, and the farmer was enabled to do this because, being enriched by the application of machinery, he was enabled to look round for new sources of labour for the improvement of his land."

Does not this monopolist perceive that the successful agriculture of Lincolnshire is owing to the farmers seeking to raise a large produce by a liberal outlay? And can he not imagine that there is something more than mere want of "interest" and excitement amongst farmers which prevents the general adoption of good husbandry as he seemed to imply when he said:—

"He brought the farmers there assembled not to let the interest excited upon agricultural subjects evaporate with the occasion of their being then called together. It was by following up the subjects referred to at such meetings that the practical good was to be effected. Do but make them the fashion and they must succeed. Whatever Englishmen fancied to do they did well. Now they wanted to make it a fashion, instead of horse-racing, for landlords to look after their land. Let them make their land their hobby, and they would act wisely. They (the landlords) did not grudge much for their hobbies, whether in pictures, books, &c. 'It is only a few hundreds, or a few thousands, lost this year,' said they; but if they lost on their year's farming they thought themselves hardly used. This they had no right to think. They ought to make the land their hobby, and let others profit by their experiments."

Nothing is more absurd than to suppose that landlords can benefit agriculture by making it their "hobby" and the "fashion;" yet such is the namby pamby nonsense

a member for the second commercial city in the world has to offer to the agricultural capitalists of Staffordshire. Then of what value to the farmers are landlords' experiments which cause them "to lose on their year's farming?" Thanks to monopoly rents and Corn-Law created fluctuations, the farmers have made somewhat too many experiments of that sort for themselves.

MR. CHARLES BARCLAY AND THE AGRICULTURAL LABOURERS.

At the Surrey meeting, held on Friday week at Capel, Mr. Charles Barclay, being in the chair, is reported to have stated his opinion that the labouring population were better off at the present time than they had been at any period during the last century. He said his attention had been called to the "fact" that in the year 1744, just a century ago, wheat was the same price it was at present, viz., 5s. 6d. per bushel, and at that period the wages of labourers were 6s. per week, and they were now 10s. per week. We have printed the word "fact" in italics as being the important word in Mr. Charles Barclay's speech. The great difficulty in this world is to get at facts. The difficulty is not to draw correct conclusions from correct premises (any chop-logic can do that), but to obtain correct premises; that is, correct facts. Mr. Charles Barclay has not informed us on what authority he asserts "that, in the year 1744, wheat was 5s. 6d. per bushel," claims to be enrolled in the category of facts. The best authority, as far as we know, for the price of wheat at the time specified by Mr. Barclay, is that of the Audit Books of Eton College. The prices of wheat at Windsor market in the year 1744, set down in those books, are £1. 4s. 10d. per quarter, nine gallons to the bushel; and £1. 2s. 1d. per quarter, reduced to the Winchester bushel of eight gallons. Now, if we take the larger measure, we find the price per bushel to be 3s. 1d.; and if we take the smaller or Winchester measure, we find it to be 2s. 10d., a fact certainly a little different from 5s. 6d., as stated by Mr. C. Barclay. Moreover, according to the best authorities on the subject (see Tooke's "History of Prices," vol. i., p. 65), the labourer's wages at the time specified were not 6s. per week as asserted by Mr. Barclay, but 7s. a week. From which it appears that at that time the agricultural labourer's daily earnings were equal to somewhat upwards of a peck of wheat. Now, the agricultural wages are at present surely nearer 7s. a week than 10s. as an average, though they may be as high or higher than 10s. in some localities. Consequently the labourer in 1844 is worse off than the labourer in 1744 by about three pecks of wheat a week; that is to say, he is worse off by one half, in other words, he is not only getting lower (in spite of Mr. Charles Barclay's assertion to the contrary), but he now receives less than one-half the quantity of produce for his labour, whilst the landholders obtain about four times the rental for the same fields as in 1744; a fact, which leaves no doubt as to the true causes of the present distress of the agricultural labourers.

CHEAPNESS AND PLENTY.—Mr. Talbot Clifton insisted last week that the words "*cheapness and plenty*" are not to be found in the Common Prayer Book. This comes of reading such papers as the *Standard*, which bites the first, and the *Post*, which daily laments the second. Mr. Clifton should read his Prayer-book, where he will find those words so obnoxious to monopolist ears. Let him enter into the spirit of the beautiful prayer for "Plenty," and we shall then have hopes of his conversion to our views.

UNEQUAL PROTECTION OF THE AMERICAN TARIFF.—The *Rochester Daily Advertiser* gives a specimen of the unequal protection of the present tariff—viz., for example, striped shirting for the labourer pays a duty of 65 per cent., while gold-edged cambric pays but 33 per cent. Iron chains used by farmers pay more than 100 per cent., while gold watch chains for the rich are taxed only 74 per cent. Common brown sugar is taxed 70 per cent., and the wines of the rich but 60. The hammer of the blacksmith pays 70; the saw of the carpenter 75; the irons of the hatter and tailor 110—but the silks of the belle pay only 40, and the cigars of the beau but 20. Common carpets pay 103 per cent., while the finest Brussels and Wilton pay 30 to 50. Coarse cotton goods pay 100 per cent., and the finer only 33. The cheap calicoes pay 100 per cent., and the dearer ones 33. Common shawls pay 88 per cent., and the finer ones for the rich only 35. The low-priced velvets pay 150 per cent., fine velvets only 40 per cent.—*New York Paper*.

PURITY OF BLOTION.—It is a notorious fact that on the nomination day about 400 "free and independent" non-electors were hired to join Mr. Clifton's tenantry in hooting down any speaker whose observations might be displeasing to the youthful ex-cornet of Dragons, and his equinearchical supporters. How these men fulfilled their disgraceful duty is well known to every one who was in the Shire Hall on that occasion. They hissed, booed, yelled, and clamoured to perfection, in obedience to signals from a certain Conservative attorney, who acted as fag-leader. The "consideration" for which they made such a liberal use of their "sweet voices" was 3s. a head, which was publicly paid them within an hour after the proceedings terminated, by Nicholson, the town-sergeant, on behalf of the Conservative attorney above-mentioned. Who will ultimately "pay the piper" few of our readers, we imagine, will be at a loss to conceive. Whilst we regret that men in a humble walk of life can be found base and foolish enough to lend themselves to such a despicable purpose for a little pelf, language is inadequate to convey our detestation of the authors and abettors of this wholesale system of demoralization. The barefaced manner in which they went to work is not the least remarkable feature in this scandalous transaction, and proves them to be as destitute of shame as they are deficient in common fairness to political opponents.—*Lancaster Guardian*.

TO COUNTRY SUBSCRIBERS.

Any person forwarding 3s. 3d. by Post-office order to the Publisher, 67, Fleet-street, London, will have one quarter's copies of the LEAGUE forwarded by post on the days of publication. Subscriptions for the paper may also be left with J. Gadaby, Newall's-buildings, Manchester; and the LEAGUE may be had by order of any news-agent in town or country. Subscribers who receive coloured envelopes on their papers must bear in mind that their subscriptions are due.

POSTSCRIPT.

LONDON, Saturday Morning, October 5, 1844.

Politics are asleep, and politicians in general are taking their ease. There are, however, politicians of one class who are doing a little business on their own account in the midst of their rural enjoyments. These are the political landlords. They are everywhere busy in persuading, or trying to persuade, farmers to employ more labourers, to use guano, and establish liquid-manure tanks; but with remarkable tact they contrive to steer clear of the word rent—as that real farmers' friend, Colonel Powell, said a year ago, "that little word seems to have fallen out of their vocabulary." Some of them even go so far as to advise leases, but they forget that the great body of farmers dare not take leases in the present unsettled state of agricultural affairs; and these protectionist squires will find themselves egregiously mistaken if they suppose their present laggard liberality in relation to leases can now set them right with their tenants. No, rents must be readjusted—not merely lowered, but reconstructed and recalculated to meet a new state of circumstances, in which farmers will look for profit from moderate prices and large produce. Then as to the labourers. The landlord notion that the allotment system can form a remedy for the existing depression is a fallacy so transparent, that even its most earnest advocates at the late meeting at Bury St. Edmund's were obliged to append a proviso to their nostrum, that in the event of its failure they had no resource but immigration. Monstrous absurdity! Hear what the *Times* of yesterday, in one of its stinging articles on the present aspect of rural affairs, says upon the subject:—

"So, as long as the call to emigrate is merely a rude demand of wealth upon poverty—a sacrifice to be made by the many for the convenience of a few—we can hardly desire it to receive much attention. Wealth is always able to take care of itself, and needs not our superfluous sympathy. So we are rather disposed to retort upon wealth its own complaint—Why do not you emigrate? Wealth, of course, replies that it has no need to do so, and would rather stay at home. Our answer is, that it is wealth which constitutes no small part of the pressure, by its enormous power of turning the resources of the country to the luxury of a few instead of the necessities and comforts of the many. At present, however, we wish to suggest a friendly caution, that, while landlords are urging emigration, they may possibly find their advice followed too far. They who are charged with the stewardship of great benefits are under a temptation to administer them only just as far as suits their own purposes; and perhaps would, most of all men, abhor an excess beyond their own control, and the demands of their private convenience. Under such a temptation confessedly are our landlords, who seem very little aware how much their wealth, as well as their pressure, arises from the numbers crowded in these islands."

"There is one dire contingency, more fearful some will say than probable, more possible we are disposed to think than imminent, of which it is well to give due warning to agricultural England. What say they to the chance of a mania for emigration seizing the rural labourer? At present no man is more home-tied. * * * Suppose the labourer to have a little more knowledge of geography than he has now, and, consequently, a little more expansion of mind. * * * A familiar acquaintance with maps and descriptions of our colonies would greatly help a taste for emigration. Many clergymen and other good people, in all simplicity, are taking pains to communicate this useful knowledge. Suppose, further, a good strong contagion. * * * Villagers now receive letters from their Canadian relatives at a very trifling postage, only a fortnight after date. To the above conditions add one or two more:—A little less demand for labour; a little more of the workhouse test; one or two such bad harvests as we had 20 or 30 years since; and such a check on our commerce and manufacture as to close that outlet of rural poor. Put these ingredients together, and you have a receipt for a good securing emigration—a gulf stream of labourers to America."

"Imagine the affair once set in motion. The mania would spread till checked, and there is nothing in the ordinary course of nature and Providence to check it."

"One single season could easily carry off a quarter of our agricultural poor, in the strictest definition of that class. Think how wages would rise. No to long leases, rents, settlements, and otherwise embarrassed properties. A rise of wages, it is true, would cut both ways—as a reason for contentment at home, and as rendering it easier to acquire funds for the passage. But, arising from so permanent a cause, it would tend wonderfully to make Englishmen more precious than they are, both in the eyes of their employers and their own. It must be remembered, too, that the cost of emigration is much more within the compass of a young labourer's savings than he commonly supposes: while it is really almost the only way in which a mere labourer can invest a small saving so as to secure a good return, and help him on in the world."

These are views of the subject which it becomes every reflecting man to consider. For ourselves, we believe that nothing is more to be deprecated

than the encouragement of emigration as a system amongst our agricultural population. To this let us add the testimony of Mr. Robert Peel (cousin of the Premier), who, when presiding a few days since at the *Burton Agricultural Society*, said, "Nothing would repay them [the farmers] better for money laid out than agricultural labour judiciously applied. It had become a song throughout the land, that they had too many agricultural labourers; that they were being compelled to leave the country for want of employment, although he was quite certain there was not an agricultural labourer in the country for whom permanent employment could not be found. It was all very well to encourage agricultural labourers by prizes. They were useful things in their way, and calculated to stimulate their efforts; but what was the use to give encouragement to those people to labour if they did not find employment for them? What was the use of encouraging them in habits of industry if they did not afford them an opportunity of exercising their industry?"

These are truths which must lead every man of common sense, even though he be a deeply-mortgaged squire, to that point of the inquiry where he will find the Corn Law is "the lion in the path." Monopoly bars the way to all general improvement.

DREADFUL COLLIERY EXPLOSION.

HASWELL COLLIERY.—A dreadful explosion of fire-damp occurred at this place on the afternoon of Saturday last, when the lives of 95 men and boys were sacrificed. Haswell Colliery is situated in the very centre of the great Durham coal-field, about seven miles from the city of Durham, and nine from Sunderland. It is the property of Messrs. Clark, Taylor, Plumer, and other wealthy coalowners connected with the district. It is 150 fathoms deep, and the workings are in the well-known Hutton Seam. The character of the mine in respect of ventilation has always stood high. During the pitmen's strike a few of the off-hand men were employed as hewers, and a few new men introduced; but since the termination of the strike none but experienced workmen have been employed under ground, the others being employed at bank. It is unnecessary to enter into the heart-rending details of individual suffering caused by this dreadful calamity: the reader must be left to his own imagination. Not a soul has been left to tell the mournful tale of how the accident occurred, the whole of the men employed in the working having been swept into eternity without a moment's warning. Four men, who were at the bottom of the shaft, escaped by the fire having burned itself out before it reached them. The inquest was held on Monday before T. C. Maynard, Esq., and a respectable jury.

Cornelius Brown, an under-hewer at Shotton Colliery, examined:—On Saturday last, with other men, I went down the pit at Haswell, having heard that an accident had happened at half-past four o'clock in the afternoon. Mr. Scott, another person, went down with me, and we found, about 300 yards from the shaft, that an explosion had taken place, as a number of tubs were upset, and a horse and rilly driver were found dead. We proceeded a certain way, and, on reaching the "Meadows," we found a boy lying dead. We went up the Meadows branch for about 250 yards, when we found the air so bad from choke-damp that we were compelled to return. We came down to the end of that branch, and Scott returned into it again, and I went up the Brockley Whim-way to within 50 yards of the station at the sidings, where the air was so bad that I could proceed no further. I was then satisfied there could be no person in the pit alive. Seeing that nothing could be done to save life, we immediately began to put in air-stoppers, and had to wait till a current of fresh air was got in. After getting the air in, we proceeded on to the Flatts station in about three hours after, where we found 14 dead bodies, which we laid aside. We took 95 dead bodies out altogether. The explosion took place in the ninth headway course of the Meadows way. I saw that a jud had been drawn there by the deputy overman. A jud is part of a pillar of coal left to support the roof after the working, and is afterwards removed; and I think the removal of the jud had caused the explosion, as the effects of the fire were more visible there than in any other place. Three men had been working there, and were found dead. Did not find their Davy lamps. Saw nothing which indicated the cause of the explosion. The deputy, Williamson, had been in the act of taking the jud away, and was found within twenty yards of the place, dead. He had been at work at the jud when the explosion took place. The gas in some cases is found in considerable quantity, sometimes suddenly on the removal of the coal. That part of the mine was worked by Davy lamps. There was not a candle used there. It was not considered a dangerous pit; but, indeed, one of the safest in the trade. Had known it from its commencement, and up to the 14th of August was in it for about three months, almost daily. Have not been in the pit since that time, till after the explosion. I am of opinion the ventilation had been good up to the time of the explosion. In my opinion this explosion would not have taken place if a Davy lamp had not been injured. At the jud some stone had fallen from the roof caused by its removal. The lamp might be injured by the fall of stone, and that was probably the way in which the accident occurred.—This witness was cross-examined at much length.

James Scott, under-viewer at Haswell Colliery, said:—About three o'clock on Saturday afternoon I was in the colliery-office, when one of the off-patters came and said he believed the pit had fired. I went as quickly as possible down the pit, and along the North Rolly way, about 30 yards, leading into the "Little Pit." I tried the air with a candle, and found it good. I then got a safety-lamp, and went along further, and I found the air good all the way to the mouth of the Stone Drift. At this point I found a great deficiency in the quantity of air, and the current was not in a right direction. On proceeding along the Stone Drift, the two-man-hole drifts at the end were blown down; also the air-crossings beside it. The fresh air which ought to have gone along the main line was escaping at these two places. Along the main way, from the mouth of the Stone Drift, I came to a set of rollers with empty tubs on them. The horse at the

end of the rollers was dead, and its driver, a boy. I proceeded on with the overman, John Miller, whom I met, about sixty yards, and came to a set of rollers in a siding laden with tubs. The horse at the out-by end of the rollers was dead, and also the drivers. We went forward other fifty yards, and at the Meadows-way end we found another body dead. For want of air at that point we were obliged to return. We went back about 300 yards, where there was more air, and we considered the best thing we could do was to get in the stoppings, to carry the air forward. From what I saw I was quite convinced that all the men in the pit when the explosion took place were dead.—This witness was further examined and cross-examined, as were also several others. An adjournment of the investigation to the following day (Tuesday) took place.

Several of the unfortunate victims were interred on Tuesday in the Sutton Hetton Churchyard; thousands of spectators, many of them from a considerable distance, attended the funerals.

The inquest was resumed on Tuesday, continued on Wednesday, and further adjourned to Wednesday next. The pit is to be left in its present state in order to afford every facility for arriving at the most correct conclusion as to the origin of the explosion, with a view, no doubt, of adopting such additional means of security as will lessen, if not altogether prevent, these terrible calamities.

EPITOME OF NEWS.

FOREIGN.

FRANCE.—Sunday being the day appointed for the ceremony of placing the Morocco trophies in the Church of the Invalides, the occasion was celebrated by a grand review of the troops in garrison in Paris, and a military procession to the church, where all the trophies taken by the French (with the exception of the 3000 destroyed by Marshal Marmont before the entrance of the Allies in 1815) are now placed. The King was present, accompanied by his two sons, the Duke de Nemours and the Duke de Montpensier, and a brilliant staff. The Queen, Princesses, and Court were also present. Active preparations for the King's visit to England are in progress.

CATHOLIC MISSIONS.—The *National* states that the receipts of the Society for the Propagation of the Faith, of which the head-quarters are at Lyons, amounted during the year 1843 to the sum of 4,163,065 francs. The society supports with its funds 139 bishops and 4220 missionary priests, who are at present preaching the gospel in Africa, America, and the Pacific Ocean.

SPAIN.—Letters from different parts of Spain give deplorable accounts of the depredations committed by banditti. Among the sufferers is the Count de Varennes, Minister of France at Lisbon, who was stopped, on the night of the 15th, by five robbers, between Valdepenas and Santa Cruz de Mudela. He was travelling by the Seville diligence, and he and M. de Ceuto, the Secretary of the Spanish Embassy at Lisbon, were stripped of everything, including 16,000 reals and a quantity of jewels.

A terrible accident happened at a bull-fight, at Roa, near Valladolid, on the 19th instant. There were about 1000 persons on a platform, raised three yards from the ground, and which commanded a view of the area where the bull-fight took place. About six p.m., in the midst of the bull-fight, this platform gave way, and above 200 persons were more or less injured: three were killed on the spot, eight others being mortally wounded, and 20 others very severely so.

RUSSIAN TOLERATION.—The *Presse* mentions the publication of a recent ukase at St. Petersburg, enacting that in future when a synagogue or an Israelite school is to be erected in a street where a Greco-Russian church exists, it must be separated from it by a distance of 100 khattors (200 yards). "Whilst this measure," adds the *Presse*, "was being adopted in St. Petersburg, the Polish Government at Warsaw decreed the addition to the form of the oath required of Israelite recruits on their entering the army of the following paragraph:—'I swear to be faithful to my colours, and never to desert, even were the Messiah to descend upon earth.'"

THE ZOLLVEREIN.—A Palermo journal of the 4th announces the departure for Germany of the Duke de Serra di Falao, charged with the negotiation of a treaty of commerce between the kingdom of Naples and the German Customs' Union.

BOLOGNA.—Letters from Bologna of the 24th ult. state that the utmost anarchy pervaded the Legation. Every day fresh accounts of robberies, murders, incendiary fires, and collisions between the people and the military reached from various parts of the province; no less than five assaults occurred in the streets of Bologna during the night of the 22nd.

UNITED STATES.—The British and North American Royal mail steam-ship *Hibernia*, Captain Ryne, arrived in the Mersey at 10 o'clock on Sunday night. She left Boston on the afternoon of the 16th inst., and Halifax early on the morning of the 19th. The run from the latter port may therefore be called nine days and a half. She brought between 40 and 50 passengers.

It appears from a statement, entitled the "Eplatie of the Twelve," that the Mormons have no further election or selection of a prophet as head of the church, but that the succession to Joe Smith is given to a band of 12 men, whom they call apostles, and who are appointed to preach to the sect throughout Europe and America.

The *New York Journal of Commerce* announces that the British Government has taken formal possession of the Mosquito territory, the British flag having been hoisted at head-quarters, Bluefield, the 6th July with the usual ceremonial. "Great Britain," says the above paper, "attaches great importance to this portion of the American continent. It is fertile, salubrious, and beautiful, possessing some of the largest natural harbours in the world (the Cheripul Lagoon can hold 1000 ships of the line at anchor safe). It has 19 large rivers, some of them navigable 100 miles from the sea."

THE COTTON CROP.—By the arrival of the *Hibernia* steamer at Liverpool, on Saturday evening last, we are put in possession of the usual annual statement of the growth and disposal of the cotton crop of 1843-4; which, after an almost unexampled series of fluctuations in the estimates of its produce, has proved to be 2,030,409 bales, being about 400,000 bales above the estimates of the more sanguine of the American speculators, and about 100,000 beyond the average amount which we had deduced from a comparison of the progressive results in this and former years. With respect to the prospects of the coming crop,

all the accounts from the United States concur in representing them as most favourable. The estimates of the crop vary from 3,200,000 to 3,500,000 bales.—*Manchester Guardian*.

WAGES IN CANADA.—Common labourers are now receiving 3s. a day, but they have turned out for 3s. 6d., and some of them want 4s. The *Gazette* thinks that 3s. 6d. is not an unreasonable price for a day's work; but we believe we are correct in saying that it is an unprecedented price in Canada, and we doubt whether contractors will receive money enough on their contracts to pay it. Taking into consideration the low price of provisions of every kind, wages are decidedly high at 3s. a day for common labourers.—*Montreal Herald*.

MEXICO.—In Mexico, the governors of the several departments have received an official notification of the number of troops to be raised by each towards the army of 70,000 men intended for the reconquest of Texas.

The Governor of California has applied to Santa Anna for a force to enable him to drive off some American emigrants lately settled on the Rio Sacramento, with the intention, it is said, of usurping the lands of the republic.

The *Jamaica Despatch* of the 10th ult. states that letters from St. Juan de Nicaragua report an awful earthquake, by which almost the whole of that city was destroyed. The blockade still continued.

BRAZIL.—The *Peterel* packet arrived on Saturday at Falmouth, from the Brazils. The packet, which left Rio on the 28th July, had been detained there 14 days beyond her usual time. It was expected that she would have brought home the new treaty of commerce, but it is understood that it has not been signed. A material reduction in the Brazilian tonnage dues was announced to come into operation on the 6th of November next.

TAHITI.—Two interesting letters from Tahiti to the 25th of April, giving particulars of a murderous conflict between the French and the natives, were published in the *Times* of Wednesday. According to the writer it appears that the natives to the number of about 1000 took up arms, and with considerable military skill intrenched themselves at a place called Mahana. They mounted on their rude fortifications six guns. The French commenced landing near this place on the morning of the 18th of April, under cover of the guns of the *Uranie* frigate of 64 guns and the war-steamer *Phaeton*; and about 10 o'clock they moved forward under the guidance of an individual named Henry, the son of a missionary, and headed by Governor Bruat in person. The French were enabled to gain possession of a hill which commanded the Tahitian encampment, and, having planted some field-pieces upon it, caused much havoc among the natives. The attack on the trenches then followed, and a dreadful struggle ensued, the natives fighting with great determination; and the writer is of opinion that had they all been armed with muskets, not a French soldier would have escaped. As it was, armed with spears, and about one-half with firearms, they killed and wounded upwards of 100 of their enemies. One man in the agonies of death picked up a stone which he aimed at Governor Bruat, who barely avoided it. The Tahitians at length retreated into a wood in the rear, with the intention, as subsequently added by the writer, of drawing the French into an ambush; but the latter thought it more prudent not to pursue them, and withdrew on board their ships, carrying their wounded with them. The conflict has been disastrous to both parties, and the Tahitians, burning with vengeance, have declined the offers of peace made to them by Governor Bruat, having replied to his overtures "that before any propositions would be considered the French Governor must restore the lives of their murdered countrymen." The writer states that the property of the missionaries, nearly all of whom had left the island, had been seized and confiscated by the French.

SYDNEY.—The papers from Sydney to the 30th of May represent the markets there as having recovered from their recent depression. Wheat and domestic provisions were abundant, and the value of stock was increasing.

INDIA.—The Indian mail to the 27th of August has arrived, bringing intelligence from Bombay to that date. Sir H. Hardinge had arrived there on the 23rd of July, and was immediately sworn into office. Lord Ellenborough had taken his departure on the 1st of August, on board the steamer *Tenasserim*, which had started for Suez. The rainy season in the north-western provinces had prevented all military movements. The detachments of troops sent into the territory of Shikarpoor had been compelled to retreat in consequence of the want of water and the intensity of the heat.

The mutiny of the 64th Regiment of Bengal Infantry, which had been repressed, had produced the most stringent proceedings on the part of Sir Charles Napier, the Governor of Sindh. Two colours were taken from the regiment, and the trial of the 40 ringleaders of the mutiny was going on with the greatest care; and a strong example would, it was expected, be made of those who should be proved guilty.

The news from the Punjab represents that country as a prey to anarchy and confusion, and the lowest intrigues of assassination and plunder by the chiefs.

An expedition was being prepared in Cabul against the King of Bokhara. It is to be commanded by Ukbar Khan.

Sir Henry Pottinger embarked at Bombay on the 27th of August, on his return to Europe.

There has been considerable discussion respecting the cruel mode in which some of the sick Coolies who were sent back from the Mauritius to Bombay had been put on board, without any comforts, or even the common necessities for the voyage. One of them died, and the coroner's jury warmly expressed their dissatisfaction at the manner in which he had been put on board.

There was considerable satisfaction felt at Bombay in consequence of the mails from London having arrived there in twenty-eight days and sixteen hours, and it was expected that the voyage would be performed in much less time by powerful vessels placed on that station.

CHINA.—The intelligence from China represents that considerable excitement prevailed along the sea-coast, in consequence of the appearance of an American man-of-war, and several French vessels of war in the Chinese waters. Riots had occurred at Canton between the populace and a party of American sailors, owing to an attempt on the part of the former to pull down the American flag, after having forced their way into the square of the American factory. The Chinese authorities sent the military to clear the square, in which they succeeded; but they appear to possess but little power over the populace. It is said that, unless prompt measures are taken by the

English, there will be little security for either life or property.

ALEXANDRIA, Sept. 21.—The *Geyser* sailed hence early yesterday morning for Malta, having on board Lord Ellenborough. The *Berenice*, from Bombay, arrived at Suez on the 17th instant, with the mails and twenty-five passengers, amongst whom is Sir Henry Pottinger, who proceeds this day to England by the *Great Liverpool*.

DOMESTIC.

Her Majesty and Prince Albert landed at Woolwich on Thursday afternoon, on their return from their recent visit to Blair Athol.

On Sunday afternoon, during a gale of wind off Yarmouth, a large foreign schooner was seen to capsiz suddenly and disappear. She had signals of distress flying, and was apparently running for the land when the catastrophe happened; it is feared that every soul on board perished.

On Wednesday last, at Salford, a large steam-boiler in the Islington mill exploded, blowing away a portion of the building, and killing a man named James Atkins.

Died, on Saturday last, at Euston-hall, in Suffolk, his Grace the Duke of Grafton, in his 85th year.

Mr. Alderman Gibbs was, on Saturday last, elected to the office of Lord Mayor; and William Hunter, Esq., and Thomas Sidney, Esq., have been chosen sheriffs for the ensuing year.

The annual meeting of the British Association for the Advancement of Science commenced at York on Thursday evening. The attendance of eminent men of science from all parts of the empire was very large. The Dean of Ely was elected president.

Mr. Jacob Smith, a Wesleyan minister, was drowned last week at the North Sands, Monkwearmouth, while bathing.

This week a large reduction in the fares on the great northern lines of railway, including the London and Birmingham, Grand Junction, York, and North Midland, has taken place.

The munificent sum of one thousand pounds has been bequeathed by the late Rev. Henry Tudor Barnwell, of Bury St. Edmund's, recently deceased, to the institution for the Indigent Blind in the city of Norwich, which sum has just been paid to the treasurer of that establishment, free from any legacy duty, by the executors of the late reverend gentleman.

The registration for the borough of Southwark commences on Tuesday next at the Town-hall, and for the borough of Lambeth on the 10th of October. In the latter place the list of voters will be greatly augmented, in consequence of a number of lodgers occupying apartments of £10 per annum claiming to be inserted on the registry.

A numerous meeting of members of the medical profession was held on Monday at Exeter-hall, when resolutions condemnatory of Sir James Graham's medical reform bill were unanimously agreed to.

Since Mr. O'Connell left Dublin, on his intended visit to Darrynane, he has met with a triumphal reception on his line of route. "In Naas, Kildare, Monastereven, Maryborough, Mountrath, Borris-in-Ossory, the people decorated their houses with laurels and flowers, and threw triumphal arches across the road, whilst they poured forth abundant blessings for their friend, advocate, and champion." At Roscrea he was presented, amidst an immense concourse of people, with a congratulatory address. At Limerick the people attempted, much to the learned gentleman's annoyance, to take the horses from his carriage, and, as he said, "wanted to make beasts of themselves."

The Repeal Association met at the Conciliation Hall on Monday. In the absence of Mr. O'Connell nothing particular occurred. The rent for the week was announced to be £349. 18s.

Lieutenant Puddicombe, who was charged with having stolen a quantity of silver plate from the house of Captain Warren at Cork, was on Friday sentenced to be confined in that city, and unanimously acquitted by the jury amidst loud plaudits from a crowd of spectators.

Last week, William Humble, a private in the 61st Regiment, having committed an outrage by breaking the shop window and destroying property to the amount of nearly £10, belonging to a Mr. Coleman in Cork, with a clew, as he declared, to get transported, he was handed over to the military power, and was sentenced by court-martial to receive 150 lashes, and to be put under stoppage to the amount of 6d. per day until the damage he caused should be liquidated. The unhappy man has undergone the first part of the dreadful sentence, from which he has suffered severely.

Several attempts at incendiarism have lately taken place in the vicinity of Lymington, and last week the Mayor, Mr. Hicks, received an anonymous letter in which destruction was threatened to the barns and stacks of several persons. On the 23rd ult. an incendiary fire broke out on the premises of Mr. Thomas Ivatt, of Hampton, in Cambridgeshire. The flames burst forth simultaneously from two stacks, at a distance from each other, and speedily communicated to twenty others, and to the farm buildings, the whole of which were completely destroyed, nothing escaping but the dwelling-house. The value of the property destroyed is estimated at £4000, only £2000 of which are covered by insurance.

It appears by a return to the House of Commons that the Middlesex and Westminster magistrates have the patronage of 220 places, the aggregate annual income of which is £22,250. 8s. 2½d.

The whole of the effective military force now in Ireland amounts to 26,000 men.

The deaths in the metropolis last week amounted to 932, being an increase on the weekly average for the last five summers of 32, but a decrease on the average of the last five years of 14.

On Monday last, a boat containing a party of five persons from Plymouth, namely, Mr. Fowler, cabinet-maker, and his wife; Mr. Knowles, shoemaker; a Miss Ryder, and a Mrs. Morgan, who had been to visit a brother of the latter on board her Majesty's ship the *Queen*, capsized when nearing Riding Point, Mount Edgcumbe, when the whole party perished.

The subscription towards the fund for providing public pleasure-grounds for the people of Manchester now exceeds £21,000, and is daily swelling in amount.

THE LEAGUE-BLAYER.—The *Herald* says the League is not quite dead, but announces its speedy dissolution because it is *illogal* (all-League-all).

MISCELLANEOUS.

GLASGOW COTTON-SPINNERS.—The operative cotton-spinners of Glasgow have presented a memorial to their employers, requesting a small advance on their present rate of wages. The applicants ground their claim upon the present comparative prosperous state of trade, and the example recently given by the English masters, who have considerably raised the wages of their workmen. Several of the principal millowners in the vicinity of Glasgow have already acquiesced in the prayer of the memorialists.—*Glasgow Examiner*.

MR. BASHALL'S NEW MILL, PRESTON.—On Thursday evening week a sumptuous supper was given to upwards of 200 of the workpeople, at the Shelley Arms Inn, to celebrate the above occasion. Mr. Stephenson was called to the chair, and the evening was kept up with great spirit. Messrs. R. and W. Bashall, Boardman, Snell, and several other gentlemen, attended upon the guests, and afterwards adjourned to another room, where a splendid dinner was provided.—*Preston Guardian*.

ANTIQUARY ENACTMENTS.—In 1721 an act was passed imposing £5 on the wearer, and £20 on the seller, of a piece of cotton cloth. In 1726 calicoes were tolerated; "provided the warp thereof was entirely of linen yarn." In 1774 the Legislature tolerated calico both weft and warp at a duty of 3d. a yard; but in 1806 the Legislature, alarmed at its liberality, added 4d. to the protective 3d., together with some salutary stamping on the calicoes, to legitimise them. In 1813 madness ended, and calicoes were freed.—*J. C. Symonds*.

VENTILATION OF COURTS AND ALLEYS.—The London parks have been called the *lungs* of the metropolis, but they are lungs placed *outside*; the Town Council of Manchester wish to place them *inside*. Parks are breathing places to those who can walk to them; the opening up of close courts and alleys will permit air and light to visit the sick and helpless in their wretched abodes. Public footways are a legacy from our ancestors which ought to be carefully preserved; parks and places of recreation are to be the rich legacy from the present to succeeding generations; and the ventilation of obstructed streets and blocked-up courts is for the present and future health of the over-worked and the poverty stricken. Benevolence may take a more showy but not a more useful direction. Next to the removal of poverty is the removal of the inflections which unnecessarily fall upon poverty.—*Manchester Times*.

OVERSEERS CALLED TO ORDER.—PARISH OF ST. MARY, ISLINGTON.—In this extensive and populous parish it has been the practice of the overseers to rate the owners only of all the smaller tenements, so that the humbler classes of society have been deprived of the parliamentary franchise. This custom of compounding has been pursued notwithstanding the 23rd clause of 59th Geo. III., cap. 12, which provides that nothing therein contained shall be held to authorise the assessing of any owner not being an occupier in any borough where the right of voting for a member of Parliament shall depend on being rated to the relief of the poor. The omission of the occupiers from the rate is also in direct defiance of the order of the Poor Law Commissioners of June 22, 1837. Under the advice and with the assistance of the Registration Committee of the League, the Islington Free-Trade Registration Association instigated a prosecution against the parish overseers for the penalty for disobedience to an order of the Poor Law Commissioners, under the influence of which "persuasive force" the overseers have placed 1017 compound householders on the rate-books, who will all next year be qualified to be registered.

THE KILMARNOCK HERALD.—We are glad to welcome this new ally in the cause of Free Trade; and, judging from the two numbers which have reached us, we think it merits, as we trust it will receive, the support of the friends of Free Trade in Scotland, especially in Ayrshire. We take the following extract from the editor's preliminary article:—"Free Trade.—Holding the cause of Free Trade to be the most urgent political question of the day, we shall labour to give it a constant and vigorous support. Few articles of a Reformer's creed are of equal importance—not one of them is, for the time, in so vigorous and workable a condition—as Free Trade; and we shall therefore give to it that prominence to which, both by its intrinsic importance and present position, it is so justly entitled. Refusing to pledge ourselves to the policy or the particular acts of any party or confederation, we shall, nevertheless, accord to the National Anti-Corn-Law League that hearty support and cordial trust which every good Reformer feels to be due to the leaders and members of that body for the unparalleled energy and skill with which they have so long and so well fought the good fight."

CHINESE AGRICULTURE.—We passed the batteries which had so recently been the scene of such dreadful slaughter, and, stemming a strong current, proceeded rapidly up the river. The country through which it winds its way was a perfect flat as far as the eye could reach, and in as high a state of cultivation as the market-gardens around London. Small farmhouses stood in every direction, neatly encircled with flower-gardens, the whole presenting a perfect picture of wealth, fertility, industry, and comfort; and when we were informed (a circumstance we had every reason to believe perfectly true) that the same state of things existed, not only throughout the whole of this, but of all the neighbouring provinces, any one of which, as regards extent, would make a handsome kingdom for a European potentate, some slight idea may be formed of the endless internal agricultural wealth of the Chinese empire, and the little concern the Emperor of this mighty country has been accustomed to bestow on foreign nations, their commerce, trade, or anything else concerning them. Numerous implements of agriculture, which we supposed only to be known to the most scientific and highly-instructed European nations, were discovered in great numbers, and in constant use among them, from the plough and common harrow to the winnow and thrashing-machine, with which scarcely any farmhouse, however small, was unprovided. Added to which, for the purpose of irrigation, scarcely any considerable field that did not possess its chain-pump, for the purpose of irrigating their crops by drawing water from the lower levels, with comparatively small labour to themselves; from which models I have not the least doubt those at present in use in our navy or merchantmen were taken.—*Recollections of Service*.

BULLS AND BLINDNESS.—Neither Sir R. Peel nor his bull was present at the Tamworth gathering of farmers this year. The latter say that the cause is owing to the honourable baronet's legislative blindness.

THE LEAGUE.

No. 55.]

SATURDAY, OCTOBER 12, 1844.

[3d.]

NOTICE TO THE PUBLIC.

LEAGUE FUND, £100,000.

All Subscribers of £1 and upwards to the ONE HUNDRED THOUSAND POUND FUND, will be entitled to, and receive, a copy weekly of this publication for twelve months from the date of the receipt of their subscription.

Subscribers of half-a-crown, and under £1, will have forwarded to them a copy of THE LEAGUE, containing an acknowledgment of their subscription; and it is requested that all subscribers will be kind enough to send their names and addresses to the Offices of THE LEAGUE, Newall's-buildings, Manchester, or 67, Fleet-street, London.

N.B. As there is considerable risk in the transmission of gold and silver by post, parties wishing to forward small contributions to THE LEAGUE FUND are particularly requested to make their remittances by post-office orders.

The Council of the League would also suggest to their friends in the country, the importance of transmitting their copies of the LEAGUE newspaper, after perusal, to such parties (more especially farmers) as may be either hostile or indifferent to the question of Free Trade.

We beg to inform our subscribers that bound volumes of the LEAGUE newspaper, containing the whole of the first year's numbers, may be had on application at the Offices either in London or Manchester.

WHY HAS TRADE IMPROVED, AND WILL THE IMPROVEMENT BE PERMANENT?

There are periods when those in pursuit of truth, with the view of testing their principles, may pause with advantage to review the experience of the past, to consider the present, and to reflect upon the prospects of the future. Such a period has arrived with Free-Traders. We are emerging from a season of appalling distress unparalleled in our commercial annals for duration and intensity. When we look back to "the report of the conference of ministers of all denominations on the Corn Laws, held in Manchester in August, 1841," and read the heart-rending details of suffering furnished by all parts of the country, and compare it with the existing state of things, we can scarcely realize the amount of misery from which we have so recently escaped. What are the causes of these changes? Have they been satisfactorily explained by the monopolists? Are they reconcilable with the principles of Free Trade? "The knowledge of a disease," says the Father of Medicine, "is half its cure." What knowledge of the causes of the late distress have the monopolists exhibited? We cannot forget that for some time after its commencement the monopolist Government boldly denied the existence of the distress in the manufacturing districts; then they said it was partial and exaggerated; but the rapid increase of pauperism and crime, the crowds of starving operatives filling the streets instead of the manufactories, became too notorious to be longer trifled with, and the same Government, which a short time before denied the sufferings of the people, ordered sermons to be preached, and collections to be made in all the churches to relieve it.

Being obliged at length thus to acknowledge the existence of the distress, it is instructive to call to mind the reasons they assigned for it. There was one point in which the Government and its monopolist supporters were all agreed, and that was that the Corn Laws had no share in it. No. They attributed the wide spread distress to over-population, to over-production, and to too great an increase of machinery.

Now, the causes they assigned are perfectly irreconcilable with any change for the better so long as population, production, and machinery continued to increase, and yet, happily, the distress has been changed into prosperity, notwithstanding that a million of souls have been added to the population since the monopolists complained that the people were too many. Distress is passing away, not from the production of manufactures being diminished, but by its increase to a greater extent than at any former period. There is now more machinery than ever was known, notwithstanding the monopolists said that there was previously so much that it displaced labour and caused distress, by throwing the people out of employment. Mr. Horner, the Factory Commissioner, in his last report, says, "I not only do not hear of any persons being out of employment, but that in some places hands are scarce." It is clear that the arguments adduced by the

monopolists will not bear the test of examination or experience. The existing state of things proves that we have neither too many people nor do we produce too many manufactures, nor have we too much machinery. What, then, were the real causes of the late distress? We have always attributed it to the scarcity and high prices of provisions; let us see how far facts warrant this view of the question. The years 1834, 1835, and 1836 were years of unparalleled prosperity, which was shared equally by the working classes and by the manufacturers. Mark, they were years of low-priced provisions: the average price of wheat in 1834 was 46s. 2d. per quarter; in 1835, 39s. 4d.; and in 1836, 48s. 8d. per quarter. In 1837 the change commenced: the average price of wheat rose to 55s. 10d. In 1838 it rose again to 64s. 4d. Here began the distress. In 1839 it rose still higher, to 70s. 6d. Distress increased. In 1840 the price was 66s. 6d.* Distress was sore in the land. In 1841 the price was 64s. 5d., when the distress increased almost beyond endurance; and why? Because in the last four of these years the people had paid upwards of £200,000,000 more for their food than in the four preceding years. During this distressing period of dear provisions the earnings of the labouring classes were nearly all absorbed in obtaining necessary food; they had little left to spend in clothing; hence those who were engaged in manufactures for supplying the working classes were thrown out of employment; and their distress was aggravated by the like falling off in the foreign demand for manufactures, because our inability to consume foreign as well as home productions disabled foreigners from consuming our manufactures; and thus high-priced food produced bad trade in the foreign as well as in the home market, and was the source of all the suffering which the people endured in that memorable and never-to-be-forgotten period from 1838 to 1842.

But why has trade improved? Is it the result, as some contend, of the wisdom of a Conservative Government? Or is it caused, as Mr. Gladstone boasts, by Sir Robert Peel's tariff and new sliding scale? We shall demonstrate that neither the one nor the other has had the least share in our returning prosperity. We had prosperity in 1834, 1835, and 1836, greater than that which we now enjoy, and yet during those years we were neither blessed with a Conservative Government, nor the new tariff, nor the new sliding scale. It is not then the change from a Whig to a Conservative Government that has wrought the improvement of the last two years; it is the change from scarcity and dearness to "cheapness and plenty." The decline in the price of food has left money in the pockets of the mass of the people (who are at all times the great consumers of commodities), which has enabled them to purchase clothing and foreign produce, and thus employment has been created for our artisans and manufacturers. In the first number of the LEAGUE (September 30, 1843) we pointed out the causes and the process by which trade was then improving, and we refer to it as an evidence of the correctness of our views at a period when the improvement was beginning to manifest itself.

"Nothing (we observed) affects the condition of the people of any country so much as the price of food, because food is indispensable to our existence; and to obtain it we must, if needful, lay aside luxuries of every kind, and for a time even many necessities. The consumption of grain in this country is estimated at 20,000,000 quarters of wheat, and 40,000,000 quarters of all other kinds of grain. It appears from the *Gazette* returns of the average prices of grain, that the price of wheat, during the four years, 1838 to 1841, was about 20s. per quarter above the average price of the first six months of the present year, and the price of all other kinds of grain was about 8s. a quarter higher; it follows, therefore, that the additional cost of grain in each of those years would be, say—
20,000,000 quarters of wheat at 20s. £20,000,000
40,000,000 ditto all other grain at 8s. 16,000,000

on 60,000,000 qrs. total additional cost £36,000,000

"But it is also estimated that the consumption of potatoes, meat, cheese, and all other kinds of agricultural produce, is equal to the total quantity of grain consumed (say 60,000,000 quarters); and as the price of one is governed by the other, taking the advance in price in these as equal to 8s. per quarter, we have a further addition of £24,000,000 to make to the cost of grain, making a total of about £60,000,000 per annum paid by the people for food in each of the years from 1838 to 1841 more than the same food cost during the first six months of the present year.

"Here, then, is the secret of the present improvement in trade. During the first six months of this present year (1843), the people have paid £30,000,000 less for food

"The average price of wheat during these years affords no criterion of the real price of wheat for human food. (Owing to the wet seasons great quantities were sold for pigs' meat as low as 30s. per quarter, whilst sound wheat was worth 80s. per quarter.

than for the same period for five years past. The enormous sum of £5,000,000 a month has been left in their pockets to spend in other things; and this sufficiently accounts for an increased demand for cotton, linen, and woollen clothing, for stockings and shoes, for hats and bonnets, for mutton, beef, and bacon, for sugar, tea, and coffee. This accounts for the increased demand for labour for providing the clothing for home consumption, and also for divers manufactures to be exported to foreign countries in payment of the various commodities for which the demand has increased. This accounts for the increased demand for shipping, and for the increased traffic on our canals, roads, and railways, carrying to and fro goods imported and exported. This accounts for the increased demand for labour in the manufacturing districts; the advance in wages, and the consequent increase in the comforts of the people. This accounts for the increased demand for the thousands of empty houses, people quitting the workhouse to live at home, or from being huddled three or four families together, to live in decency, each in a house of their own. This, in short, accounts for that improvement of which all are partaking, from the highest to the lowest, each sharing more or less in the £5,000,000 a month saved by the decline in the price of food."

Since the above was written, a year ago, the people's food has cost from £50,000,000 to £60,000,000 less than in each of the five years of calamitous distress from 1838 to 1842 inclusive. This enormous sum, having been expended in clothing and other necessities and luxuries, sufficiently accounts for the increased employment and comforts which the people have enjoyed during the past year of abundance.

Now, what the good harvests of the last two years have effected would be permanently established by the adoption of Free Trade, because Free Trade would give us at all times that abundance which we only now enjoy in those seasons when the effects of the Corn Laws are mitigated by good harvests. We can never have prosperity without plenty. We challenge monopolists to show a single period of prosperity from the passing of the infamous Corn Law of 1815 to the present time which was not a season of abundance. But, when we are blessed with prosperity, by what a slender thread it hangs! We have the authority of one of the most extensive corn-merchants in the kingdom for the opinion that at the commencement of the present harvest the stock of corn was probably not more than equal to seven or eight weeks' consumption; and, if instead of good we had had a succession of bad harvest weather, the price of corn would probably have risen 50 per cent. in the course of the following two months! Only seven or eight weeks' stock of corn on hand with a population of 27,000,000 of people to feed!! Such are the results of the corn monopoly.

Sir Walter Raleigh, in remarking on the effects of freedom of trade in Holland, and its great trade in corn, relates that when he was at Amsterdam there were no less than 700,000 quarters of wheat stored in the warehouses there. Now, the population of Holland at that time (250 years ago) could not have much exceeded a million, and, reckoning the consumption of wheat there to be the same as our consumption at the present time, the stock of wheat in Amsterdam alone was sufficient to supply the whole country for nearly twelve months. Such were the results of Free Trade in corn in Holland, and such would doubtless be the results of Free Trade in corn in England, because such are the results of Free Trade in every other article. At the very moment that we had only eight weeks' stock of corn on hand we find that we had on hand of other articles in which the law imposes no impediment to a regular (Free) Trade as follows, viz.:

Cotton, a stock equal to	40 weeks' consumption.
Cocoa	40 do.
Rum	40 do.
Saltpetre	40 do.
Rice	35 do.
Tea	50 do.
Sago	50 do.
Indigo	60 do.
Coffee	70 do.
Nutmegs	70 do.
Mace	100 do.
Cloves	100 do.
Ginger	100 do.
Pepper	130 do.
Cinnamon	160 do.

What a striking contrast to the above do the stocks of monopoly articles present:—

Of corn, stock equal to	8 weeks' consumption.
Colonial sugar	10 do.
Foreign sugar (prohibited)	13 do. in bond.

We have a larger stock of foreign sugar on hand, although the law prohibits us from consuming a single pound in England, than we have of monopoly sugar. Every pound of the foreign sugar on hand must be exported, and yet, notwithstanding these

obstacles, so powerful are the principles of Free Trade in providing abundance, that, if foreign sugar were allowed to be consumed in England as well as foreign coffee, there is no reason why, instead of our present stock equal to 10 weeks' consumption of consumable sugar, we should not have a stock equal to that of coffee, viz., 70 weeks' consumption.

Can any rational man doubt, with such facts as these before him, what have been the causes of our recent distress, and of our returning prosperity? Looking to the experience of the past, and reflecting on the present state of things, can he doubt that the principles of Free Trade—the law of the Almighty—are founded in truth? If, then, these principles be true, looking to the future, what ought we to expect? Will the improvement in trade be permanent? We answer decidedly, "No." We have no more security for the continuance of prosperity than there is for exemption from the eruptions of a volcano. The same elements which have produced disorder and distress before are still in existence, and, like the volcano, only await the operation of the same train of events to break forth again. Insufficient harvests will again bring with them all the derangement in the currency and in trade which we have before experienced, and its concomitant distress. There is, and there can be, no security for the future but in the total repeal of the mischievous and iniquitous Corn Laws. We call, therefore, on every reflecting mind in this season of calm to weigh well the consequences of a perseverance in the existing corn and other monopolies; and we earnestly urge upon those who see the insecurity of our present position to redouble their efforts to abolish monopoly and to emancipate industry as the only means of placing our trade and commerce on that permanent footing which can alone lead to the prosperity and happiness of all classes of the people.

SOIREE OF THE MANCHESTER ATHENÆUM.

The great assembly in the Free-Trade Hall of Manchester, on Thursday, October 3, was an event of too much significance to be dismissed in a hasty paragraph. A collection of more than 3000 persons, belonging to every variety of political party and religious persuasion, brought together for the promotion of a common object, is a phenomenon too rare in our days of angry controversy and dissension. A meeting for the promotion of intellectual culture and mental recreation in the great metropolis of manufacturing industry recalled to the mind the glorious days of the merchant-princes of Italy, under whose sway the progress of taste kept pace with that of trade; the fine arts and commerce advanced together, and every fresh acquisition of physical wealth was accompanied by a corresponding development of intellectual greatness. The hall itself, one of the largest and most elegant rooms devoted to the use of public meetings in England, was an honourable testimony to the spirit and enterprise of the men of Manchester; it had arisen almost as suddenly as Aladdin's palace, at the spell of the League, and had been the scene of some of the most important meetings connected with the great cause of Free Trade. Plain and simple, yet highly effective in its decorations, constructed on the best acoustic principles, and so laid out as to afford the greatest possible convenience, it seemed a structure peculiarly suited for the meeting of those who are ardent to promote the social improvement of their fellows, irrespective of all selfish considerations. In the vast multitude that filled it there was an obvious unanimity of sentiment; the desire of each and all was to secure for Manchester a career of mental and moral greatness worthy of the position it has already obtained by the development of physical and industrial resources. When the chair was taken by Mr. Disraeli, he was regarded less as a literary wonder than as an able instructor, who had sketched in the character of Milbank the true ideal of an independent merchant and manufacturer. His "Cunningby" was the only work of modern fiction which showed a thorough appreciation of the ideal in the commercial character, and of the ennobling tendencies which are latent in mercantile pursuits. His address was chiefly directed to this point; he showed the young men of Manchester the resources that were within them and around them, and he eloquently portrayed the advantages, both moral and intellectual, to be derived from such institutions as the Athenæum. After a brief description of the institution, he said:—

"It is difficult to conceive how a nobler purpose could have animated your intentions. When we remember the class of your community for which this institution was particularly adapted; when for a moment we conceive, difficult as it is to conceive, surrounded as we now are with luxury and pleasure, the position of a youth, perhaps of very tender years, sent, as has frequently been the case, from a distant district, to form his fortunes in this great metropolis of labour and of science; when we think of that youth, tender in age, with no domestic hearth to south, to stimulate, to counsel, or to control—when we picture him to ourselves, after a day of insupportable toil, left to his lonely evenings and his meagre lodgings, without a friend, without a counsellor, falling into dissipation from sheer want of distraction, and perhaps involved

in vice before he is conscious of the fatal net that is involving him—what a contrast to his position does it offer, when we picture him to ourselves entering, with a feeling of self-consciousness which supports and sustains him after his daily toil, into a great establishment, where everything that can satisfy curiosity, that can form taste, that can elevate the soul, that can lead to noble thoughts and honourable intentions, surrounds him! When we think of the convenience and the comfort, the kindness and the sympathy, which, with a due decorum of manners, this youth, who, but a few hours before was a stranger, is sure to command, one looks—viewing it only in this limited sense—upon an institution like this as to a great harbour of refuge; I would say a great harbour of intellectual refuge and social propriety."

The advantages of intellectual culture were thus eloquently described:—

"It is knowledge that equalizes the social condition of man, that gives to all of us, whatever may be our political position, possessions which are in common—enjoyments which are universal. It is like the ladder of the patriarch's mystic dream: its base rests upon the primeval earth; its crest is lost in the shadowy splendour of the empyrean; while the great authors, that through traditional ages have kept the chain of science and philosophy, of poetry and erudition, are like the angels ascending and descending on the sacred scale, and maintaining, as it were, the communication between man and heaven."

Mr. Cobden was the next speaker; he dwelt emphatically on the fact that the Athenæum was a self-supporting institution, created because the necessity of intellectual culture was felt, and maintained because the advantages of such culture were appreciated. He had himself taken a leading part in the establishment of the institution, and he spoke of it with an earnestness of affect which was almost parental. The main lesson of self-dependence was most appropriately given when the institution was profiting by the sympathy of strangers, and the young men of Manchester throughout the audience were taught and felt that in the meeting of which they formed a conspicuous part there were duties to be learned as well as enjoyments to be shared.

Lord John Manners then addressed the meeting on the importance of combining intellectual amusements and healthy recreations with mental culture and literary instruction. He referred with just commendation to the honourable exertions which have been recently made to provide parks and public gardens for the town of Manchester, and concluded with the following eloquent appeal:—

"Be it yours to remove the reproach which, I trust, now has become obsolete,—that manufactures must produce a dry, unpoetical, and material spirit. Be it yours to refute the terrible contrast which has been drawn by the master architect of the day between a supposed Manchester of 1480 and a real Manchester of 1840. Be it yours to soften and elevate the tastes of those by whose exertions the wealth of this great metropolis has been made. And beyond all this do I know well enough that there remains a still higher and a still more difficult task to perform. But do this, and you will have done a great something; and believe me that your children's children will bless those evenings which were spent, as this evening is being spent, in good fellowship, in the interchange of sympathies and of kind wishes between the various classes of the community, and in an endeavour—I trust it may be a successful one—to soften the harsh tendencies of toil and wealth by the gentle influences of literature and the fine arts."

Mr. Milner Gibson directed attention to the democratic constitution of the Athenæum, which gives every member a share in its government, and a consequent personal interest in promoting its prosperity. He contrasted its position with that of the many educational institutes in our land, which have been founded by patronage and perverted by peculation. In conclusion he said:—

"Men of all political and religious creeds were agreed as to the refining influence of intellectual pursuits, and that with education we should become a better and a happier people. He cordially wished prosperity to the Manchester Athenæum. He trusted that similar institutions might spring up over the length and breadth of the land, extending their benefits far and wide. Let them hope that with the progress of education a desire to acquire knowledge would be aroused amongst all classes, and that the humblest peasant might be brought under the humanizing influence of intellectual and moral culture. Then would the sacred maxim, 'Honour all men,' be a living reality, and England would become as remarkable for the mutual respect, gentle manners, and social happiness pervading her families, from the most exalted to the most humble, as she was now eminent for that manufacturing skill and commercial enterprise which had placed her in her present elevated position among the nations of the earth."

Many circumstances conspired to render the Hon. Mr. Stuyt's address the most remarkable speech of the evening. Young, ardent, and enthusiastic, he had shown in his history a fancy's power of entering into the feelings and appreciating the best impulses of men the most opposite in all the external circumstances of political association. He had proved himself equally capable of estimating moral principle in the Vendean Loyalist and the Parisian Jacobin. Just returned from a tour through the Rhenish provinces, where the ruined castles of titled robbers attest at once the crimes and the ruin of aristocratic tyranny, he found himself in the midst of a flourishing mercantile community, which nothing but the high principles of commercial justice and commercial honour could hold together. He felt himself in a

land of contrasts; and not the least of these contrasts was the honour paid by Manchester to literature, represented in the person of the chairman, and the position which literature holds in the hierarchy of the English state:—

"It seems to me that you, to use the words of your chairman, represent a great necessity,—that you, men of Manchester, have arisen to do honour to letters. (Hear.) It seems to me that, with a spirit worthy of a younger and freer age, you have resolved to offer to the author and the man of letters a reward of a simpler and less sordid character than the mere hire of this newspaper or the pay of that review; or, with intentions yet more far-sighted and profound, you may have resolved to correct some of these, the anomalies of a country which is governed by its journals, but where the name of its journalists are never mentioned; of a country where, by the most unhappy of inventions, it is the inventor who starves; of a country where, if the men of science aspire to the highest honours which you have to bestow,—the suffrages of their fellow-citizens,—those men of science will poll by units, where mere politicians will poll by hundreds. And it seems to me especially meet, and right, and fitting, that you, the men of Manchester, should redress these evils; because there is an old, an intimate, and a natural alliance between literature and commerce."

After having dwelt strongly on the honour paid to literature by foreigners, and the almost implied reproach to England which the ambassadors to our court, selected for their eminence in letters, present, he continued:—

"I will venture to predict for the literature that shall result from such a meeting as the present, that shall derive its impulse from such a meeting as this, that shall be fostered and encouraged by such sympathies as yours—a destiny yet more lasting and auspicious; because it will not, as Mr. Gibson has said this moment—it will not lean upon the reed of patronage; it will not be patronized by monarchs; it will not be fashioned by nobles; it will not be confined to classes. It shall be free, independent, universal, and, above all, tolerant as your own free, independent, universal, and tolerant commerce. [Applause having broken and interrupted the conclusion of this passage, the hon. gentleman said,] I ventured to ask you to let me finish my sentence, because that will explain the diffidence which I feel at this moment—the awe which I feel at having penetrated this, which I believe to be the elemental idea of this meeting: it brings me face to face with a great thought, which carries me down, amongst future generations, into the very presence of immortality."

He then referred to the great man on whom the hopes of the intellectual and the generous were once fixed, the lamented Canning, and did justice to his memory in a burst of resistless eloquence, resistless because it came from the heart and went direct to the heart. Years have passed since this great man was taken from us, but his memory is yet green in the souls of those who shared his aspirations for the moral greatness of England, and who hoped to see her banner ever in the van of civilization, ever in the first rank of the march of human improvement. The tribute to his memory was worthy of the speaker and the hero:—

"Remember for a moment the fate of our last great man; remember how he was branded and proscribed as an adventurer, because he was born to no hereditary fortune; and then, when the gentle judging and the generous, when men with large thoughts and large feelings, when men such as I see around me this evening, when the few gathered about him, to fight his battle against the many, he was again branded and proscribed, because they were a few, as a caballer and an intriguer. Remember how through his life his views were thwarted, how his spirit was crushed, how his genius was blighted, how his heart was broken, how he was hunted to his grave; and then you may well understand how, amidst calumny and destruction, how, amidst small men's envy and the insults of men yet smaller, he must often have pined for some such neutral ground as this, to which his harassed spirit might have flown away and been at peace. (Applause.) And you, with eloquence such as you have heard this evening, there are none, with the prospect of this happier hour of toleration of which this meeting is the guarantee—there are few, even in this hour, now that fifteen years have passed over his grave, who will hesitate to exclaim with me, 'Oh, for one hour of George Canning!'"

But the part of his speech which made the most thrilling impression was his description of the contrast between the catholic spirit of British commerce and the narrow selfishness of aristocratic oligarchies:—

"There is nothing small, there is nothing exclusive, there is nothing partial, there is nothing—to use the words of my friend the chairman—there is nothing sectarian in the spirit of British commerce. It was out of a temper as catholic, as universal, that the humiliated first sprung; it will be out of a temper as catholic that here, in the metropolis of English enterprise, great things will again be done. Even at the risk of fatiguing you, I will venture to illustrate my meaning. There is a city, which is, as it were, the capital of literature,—at once the capital of free letters and of free commerce;—it was at Mayence, in a time of darkness and oppression, that a simple citizen arose, strong in justice, strong in the despair of the many, strong even in the wickedness of the few, who resolved to confront those knightly highwaymen who exacted a toll upon every article, even those of first necessity, which passed through their dominions. That simple citizen was seconded by an enlightened Sovereign, pledged to just principles of commerce. That simple citizen and that enlightened Sovereign prevailed. They became the founders of free commerce—I use the word in no partial or party sense—they were the founders of the Rhenish and the Hanseatic Leagues; and the ruins of those knightly fortresses upon the banks of the Rhine still inform the traveller what is the fate of the unjust. But what followed? Out of the impulse thus given, out of the spirit thus

awakened, out of free commerce, there sprung free letters. It was in the same Mayence that Gutenberg invented printing—it was, then, the destruction of monopolies in trade that proved the destruction of monopolies in knowledge—the emancipation of the one proved the emancipation of the other."

The allusion to the Rhenish League was naturally and, perhaps, involuntarily suggested by the locality in which the speaker was placed. The hall in which he stood had witnessed the exertions of simple citizens, "strong in justice, strong in the despair of the many," and "strong," we may add, "in the selfishness of the few," who have banded together to deliver themselves from an unhallowed impost levied upon the first necessities of life. The injustice of the bread-taxer is hardly less palpable, and is certainly more oppressive, than that of the titled levier of black-mail or knightly plunderer on the highway. In the same immense proportion as the commerce of Manchester exceeds that of Mayence does the amount of population dependent on free commerce for the means of subsistence exceed that which was supported by trade in the middle ages. Monopoly then counted its victims by scores, it now reckons them by myriads; every restriction is paid for not only in money but in life; and every commercial crisis which monopoly produces is scarcely less fatal to the manufacturing districts than the visit of the destroying angel to the camp of the Assyrians. Mr. Smythe was labouring under the consciousness of this great truth, but he regarded it with hope and trustfulness. He said:—

"Here, then, in a country as free, and with a Sovereign, let us hope, no less anxious to give active relief to the misery of her poorer subjects than was Rudolph of Hapsburg,—here, with merchant-princes around me, animated with a munificence as large as Walpode's, there shall be to Manchester a renown as great as that of Mayence. I speak not of your local munificence; but I see your argosies and vessels daily laden, not with bales of cottons and silks and cloths, but with goods which have no declared or official value,—they are laden with truths borne from this free island which tend to elevate the character of man; they are laden with principles which tend to unite all men in one fair confraternity of reciprocal assistance. And when out of a spirit so catholic, a power so universal, the old world shall again have received one of those moral shocks which, like printing or steam, throw it one stage forward on its career, when civilization shall be one hour nearer its meridian, you will remember that this meeting, too, had some share in the work of progress; because here, even at this very hour, we are proclaiming the banns of a marriage which represents the primal alliance between the spirit and the matter; for this, too, is an alliance between spirit and matter,—it is a marriage between the industry which has conquered the world and overspread it 'as the waters cover the sea,' and an intellect which is young, of the people, and which by God's help, shall continue pure."

The other addresses were merely formal, and the rest of the evening was devoted to festivity and social enjoyment.

There may be some disposed to think that we have taken too high an estimate of the importance of this meeting, because many are led to undervalue the enunciation of great principles unless they be followed by an immediate and practical application. There is some truth, but there is also much error in this objection; it is true that theory may be held independent of practice, but it is not true that theory can be propounded without leading to practice. When Mr. Smythe eloquently vindicated the principles on which the Houseatic League was founded, he showed that those of the Anti-Corn-Law League were based on recognised and immutable truth. We see that the identity is perfect; he may need further research before he reaches such a conclusion. We do not claim him as a convert, but we do claim him as an eloquent expounder of that eternal truth which forms the justification of all who associate against social injustice, that monopoly is in itself ignorant, and the perpetrator of ignorance; that it widely injures communities, and yields little profit to individuals; and that, having exhausted its powers of evil on its victims, it turns in the end upon its authors, and involves them in a common ruin. On the other hand, the emancipation of industry, itself derived from intelligence, becomes in its turn the propagator of intelligence, and fixes the foundations of social prosperity at once on mental strength and moral excellence.

YOUNG ENGLAND AT MANCHESTER.

(From a Correspondent.)

We do not wonder at the "difficulty" and "embarrassment" expressed by Mr. Cobden and Mr. Gibson on rising to speak at the brilliant *soirée* of Thursday week in the Manchester Athenæum. Though the occasion was not of a kind on which men earnestly and heartily interested in the people's cause usually find thought difficult and utterance embarrassing; and though it is not characteristic of these gentlemen to deliver themselves with difficulty or embarrassment before assemblies, whether of friends or foes, in Manchester or elsewhere, we can readily understand that at the particular meeting in question the difficulty in which our Free-Trade leaders found themselves must have been great, and the embarrassment formidable and perplexing. So difficult, to avoid saying the exact thing which ought not to be said! So impossible, to rise after such speeches as those of Mr. Disraeli, Lord John Manners, and Mr. Smythe, without being full of

thoughts of which the courtesies of the occasion forbade the utterance. The thing which we will venture to say was uppermost in every Free-Trader's mind after hearing those speeches—the thing which it would have been easiest to say, and must have cost a strong effort to keep unsaid—was precisely the thing that could not be said without disturbing the harmony of the meeting, injuring its object, and violating the rites of hospitality to the strangers who had so handsomely given it their presence and co-operation. We would not willingly, even in appearance, turn to a party use the proceedings of a meeting which was in itself a strong practical protest against every kind and degree of party spirit; which had nothing to do with party except to illustrate, by contrast, the mischief that party does in sundering good and true men whose real, ultimate aims are the same; but we must confess we have found it impossible to read the speeches of this Manchester *soirée* without being reminded, at every turn, of our own special question. There is Free Trade, by implication, all through every speech that was spoken. Every speaker seems full of Free Trade, though no one names it. Every speaker goes within a hair's breadth of Free Trade, though no one quite touches it. It was, in fact, a magnificent Free-Trade meeting—as good, for practical, substantial service, as the best of the Covent-garden ones—though the word was, by tacit and honourable compact, carefully left out.

The object of this *soirée* was, as our readers will recollect, to celebrate the success of the members of the Manchester Athenæum—an institution founded in 1836, for the purpose of affording "to the youth of the middle classes those intellectual advantages which can only be obtained by wealth, or the combination of numbers"—in their efforts to liquidate debts that had been accumulating in former years to an amount that not only limited its usefulness, but menaced its existence. The debts have, it seems, been paid off—the institution is saved—and the number of its members trebled or quadrupled. Now, if we ask why this noble establishment was ever thus imperilled, and why it is at present safe and prosperous, we are answered by the chairman, Mr. Disraeli, in the opening sentences of his admirably eloquent and philosophical speech:—

"When I last had the honour of addressing the members of the Manchester Athenæum, they were struggling for the existence of their institution. It was a critical moment in their fortunes. They had incurred a considerable debt in its establishment; the number of its members had gradually, and even for some years considerably, decreased; and in appealing to the sympathies of the community they were, unfortunately, appealing to those who were themselves but slowly recovering from a period of severe and lengthened suffering. A year has elapsed, and the efforts that you thus made to extricate yourselves from those difficulties may now be fairly examined. That considerable debt has been liquidated; the number of your members has been trebled—I believe quadrupled—and I am happy to say that your fortunes have rallied; while that suffering and surrounding community once more meet together in prosperity and success."

Nothing simpler. Manchester Athenæums, and other such civilizing and humanizing institutions, dwindle and decay, or live and thrive, with the power that gave them being—the trade and industry of the people. This fine institution was at death's door during the years that the Corn Law was in operation, famishing the industry and crippling the commerce on whose superfluities it subsists; it lives and flourishes again for a while, because a good harvest has, for a while, repealed the Corn Law. Exactly what Mr. Cobden said at the last Covent-garden meeting, in his prophetic sketch of the ensuing six months:—

"You will find mechanics' institutions thriving and increasing in numbers, and Lyceums and book-clubs also extending. * * * You will find the energy and activity of the masters and the middle classes in Manchester devoted to the extension of education, and the founding similar institutions to the Athenæum there; promoting religious and scientific establishments, and giving to moral objects that energy and exertion which, during three years past, they were obliged to devote exclusively to the miserable contest for bread."

A most safe prophecy was this, founded on the simplest data of cause and effect. Material and industrial prosperity is the indispensable condition preliminary of intellectual and spiritual civilization. The "miserable contest for bread" must end before anything better can begin. Manchester left off improving her mind for years together, because bread rose and trade fell under bad harvests and the Corn Law. Manchester begins again improving her mind, because bread falls and trade rises under a good harvest, which suspends the Corn Law. Mr. Disraeli, we see, would have the prosperity of Athenæums independent of these things. He laments that "this institution has been looked upon in the light of a luxury, and not of a necessity." He regards it rather "as part of that great educational movement which is the noble and ennobling characteristic of the age in which we live;" and, "viewing it in that light, he cannot content himself that it should be supported by fits and starts." We fear that such suggestions, however well and wisely meant, can be of little practical avail. Athenæums, and all other such agencies of popular improvement, will, we are afraid, continue to be supported only by fits and starts so long as the resources on which they depend come and go by fits and starts. These things are, no doubt, in a sense, "a necessity," but not quite in the same sense in which food and clothing are necessities; they are just the kind of things on which struggling tradesmen and plucked arti-

sans practise their first lessons in domestic economy. The "great educational movement" itself will be a movement by fits and starts so long as fits and starts remain an established condition of commercial and industrial life in England. If our civilization is to go on otherwise than by fits and starts, we must have our food and trade emancipated from their dependence on the fits and starts of the barometer and weathercock during certain critical weeks of the British summer. Will Mr. Disraeli and his friends help us here? Will he and they add to the good service which they have so gracefully and generously rendered by their speeches at Manchester the yet better service of voting in Parliament that civilization shall not be kept on the see-saw of a sliding scale, nor put in the vice of a fixed duty; that, when the next cycle of cold summers and bad harvests comes, it shall find us and our great educational movement independent—with that independence which Providence designed when it made the ocean navigable—of the chances and changes of the most changeable climate under heaven?

We own we have our hopes, even of this. When we read those speeches of Mr. Disraeli, Lord John Manners, and Mr. Smythe—speeches charged full of generous sentiment and fine thought, expressed with the grace which only sincerity can give; speeches recognising so heartily the beauty and grandeur of that which monopolists vilify that they may get a plea for crushing it—we cannot but believe that the pledge thus virtually given will be handsomely redeemed. That the speakers of such speeches will ever again be found voting in "another place" for chaining and starving the industry to whose worth and nobleness they have so eloquently done homage, is what we will not believe till we see it. Party feelings, we know, are strong, and party ties not easily rent, even by clear-sighted and right-minded men. But these are not party men. Mr. Disraeli tells us, that "the period has arrived when a great effort must be made to emancipate this country from the degrading thralldom of faction;" to which Mr. Smythe responds:—"This meeting is an earnest and guarantee that these absurdities (of faction) shall cease, and these barbarities have an end." We do not as yet know precisely what and how much this denunciation of "faction" means; but we should think it cannot mean that Mr. Disraeli and Mr. Smythe will again give their sanction as legislators to a system which holds the whole industrial power of this country in thralldom to a miserable, monopolizing, factious "interest?"—which perpetrates the absurdity of protecting production by prohibiting exchange, and the barbarity of interdicting starving men from earning their bread where they can get it.

We do feel that we have a right to ask of men who thus avow and manifest their superiority to class and party influences, something more than speeches, however eloquent, sentiments however noble and nobly uttered, sympathies however earnest and generous. We have a right to ask for their parliamentary votes, and their extra-parliamentary influence as public men, to emancipate, from the iniquitous oppression of their order, the commercial and manufacturing energies of which Manchester Athenæums and the like are the natural product. We cannot believe that the evening of the 3rd instant will be quite without its effect on future legislation. Oxford and Manchester, Conservatism and Progress, Aristocracy and Industrialism, Conglutiny and Millbank, have met and shaken hands; have we not a right to look for *monstrum* as the first fruits of this treaty of peace and amity? The representatives of the "ancient civilization" of Aristocracy and Church have formally recognised (we use Mr. Disraeli's words) the "new powers" that are at work in the manufacturing districts, developing and organizing a "new civilization;" will they not give these new powers fair play? They have done homage to Knowledge, as the "basis" and "moving principle of society;" they have frankly recognised the "immense revolution" in the midst of which we are living, now that Knowledge is "no longer a lonely eremite, but is found in the market-place, a citizen and a leader of citizens." Will they withhold their sympathies and co-operation from a social movement which is nothing else than the diffusion and practical application of one large and important branch of knowledge? They have seen with their own eyes, and eloquently attested with their lips, that which monopoly most insolently and angrily denies—the worth of Manchester to the empire, the grandeur of that civilization of which it is the focus. "Every Englishman may claim a share in the greatness of Manchester," says Lord John Manners; though we think he might have excepted those Englishmen who legislate to make Manchester little. The "old, the inflexible, the natural alliance between literature and commerce," proclaims Mr. Smythe, in a speech which justifies the hope that he means this alliance to be not a mere "historic fancy," but a living fact. This gentleman says further:—

"It is impossible to study our history for the last half century, and not perceive that Manchester has always been foremost in the great work of national advancement. It is not because you did as much, perhaps, as all our sublimities, or all our arms, in our long war with Napoleon—it is not because, since the peace, you have done far more than all our Ministers to promote the common wealth—but it seems to me that you, who have carried your national triumphs to the remotest corners of the earth, have yet remembered that there was another world to conquer. Nor will your triumphs in the spiritual world be less remarkable, because they

same creative power which in the world of action is called invention, and ministers to man, this same creative power in the world of thought is called genius, and governs and provides for man. But in either sphere, whether of thought or action, it is your high and holy mission to benefit mankind. *There is nothing small, nothing selfish, nothing partial, nothing exclusive in the temper of British commerce.* It was out of a spirit as catholic that the humanities first sprang. It will be out of a temper no less catholic that here, in the metropolis of English enterprise, great things will again be done."

From which we think ourselves entitled to infer that Mr. Smythe does not approve, and will not henceforth by word or act sanction, the smallness, selfishness, partiality, and exclusiveness of the temper of British landlordism. He certainly does not approve of the fundamental landowning dogma, "Independence of Foreigners;" for he makes it the climax of his eloquent eulogium on Manchester commerce, that it "tends to unite all nations in one fair confraternity of reciprocal assistance."

We have often been sorely disappointed in public men. Unredeemed pledges, broken promises, forgotten and disowned opinions; high-sounding professions of political truth and public virtue "in the abstract," with dirty and shuffling acts in the concrete: with these and the like we are familiar enough, and we know of no reason for indulging the hope that we have yet seen the last of the tribe of recreants and shufflers. But our political experience is not as yet sufficiently extensive to furnish an instance in which the deliberately-formed and earnestly-expressed opinions of men of refined, cultivated, and independent intellect and large sympathies have been altogether falsified in their after career. For the present, we respectfully ask Mr. Disraeli, Lord John Manners, and Mr. Smythe to reconsider—in the light of the truths to which they gave so eloquent utterance on the evening of Thursday, the 3rd instant—their votes of last session on Mr. Villiers's motion.

A VISIT TO THE BIRTH AND BURIAL PLACE OF WILLIAM COBBETT.

If any person who has the convenience or the inclination will look at a map of the county of Surrey, it will be seen that on the right-hand corner, at the top, there is the mark of London. Proceed to the left hand, up the river Thames, and come round by the border of Berkshire; then down the border of Hampshire until the point is gained where the one county is dovetailed into the other, and there will be found in the Surrey dovetail the mark of a town called Farnham. That Farnham is the birth and burial place of the late William Cobbett, who said that, rather than see the working people of England reduced to live upon potatoes, he would see them all hanged, and be hanged with them, and would be satisfied to have written upon his grave, "Here lie the remains of William Cobbett, who was hanged because he would not hold his tongue without complaining, while his labouring countrymen were reduced to live upon potatoes." I lately paid a visit to Farnham and its neighbourhood; to the farm which Cobbett occupied at his death, to the house where he was born, and the grave where he is buried; and believing that many readers of this paper would have willingly shared in such a journey had all circumstances permitted, I shall endeavour to take them with me, by briefly describing to them how I went, and what I saw.

On a lovely morning, the sun so bright that the fog which at first showed itself durst show itself no more, I was seated on a stage-coach, and bounding at a sound rate out of London over Putney-heath. We had just taken up the last of the passengers and the luggage, and the coachman said he hoped there were no more people waiting with luggage to be taken up, for he had no more room, and he was behind time. So away we went, competing with the railway, which has not swallowed up all the traffic down through Surrey and Hampshire.

We had sometimes a healthy common, sometimes a mansion and a park, occasionally a village, and very frequently the enclosed fields of a farm, and the farmery itself, on each side of us. We rattled over the heathy downs, through the lofty woods, and athwart the grassy meadows. We saw the churches and the beershops, had a glimpse now and then of a policeman sauntering along, saw occasionally a highway with six or eight or ten or twelve pigs, which were eating the acorns that fell from the branches of the oaks that overhung the road, he at the same time shaking such branches with a long rod to force them to drop their fruit to his hogs; all such things we saw, and many more.

We were in due time in the town of Guildford, thirty miles from London, and were dragging—oh! such dragging—to keep the coach from taking a leap to the bottom! down that most singular of streets, before we could see what a very curious old town Guildford is. Surely, there is no other town in England nor in Scotland that has such a street. Berwick-on-Tweed has a street that very nearly stands on the crown of its head, but acts of Parliament do not allow Berwick to belong to either England or Scotland. Neither is the Berwick thoroughfare in Scotland, nor that of Guildford. It stands as if it leaped from the hillside, or as Tom Scott did when he stood on a rock on the wall on the crown of his head, his master, saying, "That's the way to the top of the hill." But Guildford's thoroughfare is a long Tom Scott standing with its head on the hillside, and its feet trailing against the height above that it is supposed to have never seen anything like.

There is a great fair for the sale of the Farnham hops at Weyhill in the second week of October. All that I saw of the hops was when being packed into long bags

Everybody and everything answerable for the safety of passengers is used to it, however; and the drags allowed us to come down safely enough. But where to go seemed the next puzzle. There was a river in the deep valley, the river Wey, and there seemed to be no room up nor down by its banks for coaches. But, by some quirk to the right and again to the left, our coachman managed to get his horses' heads turned up a road that might well make us congratulate ourselves on not being coach horses. Yet on they go; and up, up, never halting. On each side the land is cultivated, but the soil is white-faced and ill-looking. If we look behind there is a fine view of Guildford clinging to its hill-side, and looking over to us as if it laughed at rather than pitied our poor horses. Below, in the valley, is a railway making, to connect Guildford with a station upon the South Western seven or eight miles distant. Across the country, over two or three miles of farm-fields, hedgerows, and thickets of forest timber, and beyond that, over two or three more miles of open heath, we can see a long earthy-coloured line intersecting the heath for several miles, which line, we are told, is the South Western Railway. We are with our faces to the west while thus looking to it; and far to the north-west, as far as the horizon, we can see some dots of white upon a dark ground, and these dots of white, we are told, are the stands and other erections upon Ascot racecourse.

There is a twinkle in the eyes of some of our fellow-passengers, who have travelled this road often, who point out those places to us, and who agree that the view westward and round to the north is broad and fine. They seem to indicate that something is coming. What can it be? The railway goes almost in the same direction that we go, and keeps at that respectful distance; and they tell us that the country through which it goes continues to be the same brown heath which we now see it; what is it, then, that we are to see? We have been kept with our eyes turned to the west for some length of time looking to the right of the coach; let us wriggle ourselves round, and look to the south and the east; for surely we must now be to the top of that whity-brown hill which stretched up to our left awhile ago.

Great heavens! what sight, what scene, what enchantment is that? A new world—a fairy land—lies down below us. What is there elsewhere on the earth to compare it to? We are on a high narrow ridge. Our road is along the summit of this ridge—along its very back bone; and there, on either side, we might almost leap down into those woody countries which lie below. This narrow hill, so long, so thin, so bare-sided, is seven or eight miles in length. We might fancy it some enormous reptile; if so, its huge head has been cut off, and Guildford has been disgorged. We got up somewhere about the shoulders; and now we are travelling at the rate of ten miles an hour, until we shall get off at the tail, which tail ends imperceptibly in that low country between our vision and the smoke which issues from a hollow. That smoke comes out of the chimneys of Farnham, and Farnham is lying in that richly-wooded valley, out of which this vast hill seems to have crept before its head was cut off, and it could go no further.

But before we descend by the tail let us look upon that great twenty miles broad stretch of woody country. It is all below us, but it is not a level. It is a succession of hills and valleys of several sizes and many shapes. If we could imagine a garden twenty miles in breadth, all turned up by the snout of some monster which would do to twenty miles of country what a sow would do to a bed of onions, then we may have some idea of the shapelessness and brokenness of this mass of fantastic little hills below us.

Descending by the tail, I found myself, in the course of three or four miles, forty-one miles from London, in the town of Farnham. It consists principally of one street, from a half to three quarters of a mile long. It is stretched in a valley, or rather a gentle hollow, by the side of a stream. Some green meadows with cows in them separate the main part of the town from the stream—I am not sure but it is called a river; if so I beg pardon—a river; it is separated by the meadows from the main town; and the meadows are somewhat broken and disjointed by gardens and hop grounds.

The cultivation of hops is the great staple of this neighbourhood; and a good staple it is. The soil is exceedingly rich, and the hops are said to fetch in the market a price one-third over that obtained for hops grown elsewhere. One grower will sell £10,000 worth of hops this year. Land is very high-rented, and much money is paid in wages for labour. As much as £500 per acre has been paid of late for the purchase of prime hop ground; and an annual rent of £10 per acre is said to be common. The wages of labour in higher here than in the corn-growing districts. The work is all done by the piece; but the men average 12s. a week, besides which their children and female relatives work with them. At the present season the chief thing to be seen in connexion with hop-growing is the setting up of the poles upon which they grow singly in summer, in piles formed by a quadruple alliance. Four pillars of poles of fifty or more each meet at top and form a mutual support; and, as they are from twelve to twenty feet long, these piles studded over some miles of country look singular to a stranger.

There is a great fair for the sale of the Farnham hops at Weyhill in the second week of October. All that I saw of the hops was when being packed into long bags

called "pockets." This seems to be a serious piece of work for the men who pack. They must not put less than two hundred-weight and a quarter in each; to effect which, the empty bag is slung up and kept open by a hoop at the mouth. A man goes in naked, or nearly, with an iron weight to which is attached a rope. This weight keeps the centre, and he tramps and dances all round it, pulling it up as the hops rise; and these are let down upon his head in small quantities at a time by some of his children, or other young assistants. It is most suffocating work the packing of these bags.

Though I did not see I was told of the other processes of hop-growing and gathering and preparing; but I shall not at present say more on that head.

COBBETT'S GRAVE.

Having ascertained at the Bush Hotel, where I took up my quarters, what the various sights in the town and neighbourhood were, I walked out to see some of them. There was the Bishop of Winchester's residence; the castle, standing aloft among old forest trees on the north-west or right-hand side of the town, our backs being towards London; there was Waverley Abbey two miles off, and there was More-park not quite so far; and in More-park there was Mother Ludlam's Cave, in which Swift wrote some of his works; and there was the house close by in the town where Cobbett was born.

Nothing was said of where he was buried, but I knew he lay in that churchyard; and I had heard in London that there was a tombstone; so, without any questions, I set out to the churchyard. It is rather spacious, is well filled, and has a great number of neat headstones of various shapes. As there are paths through it, I saw several people of whom I might have inquired for the particular stone I wanted to see, but I preferred reading my way to it. I was, after much reading and several journeys round the church, obliged, however, to inquire, and a person led me to it, almost close to the front door of the church. It is a flat stone, seven or eight feet long, and about three wide, laid upon some coarse brick-work, which raises it about 20 inches high. It occupies a triangular point of ground at the junction of two paths, and is most conveniently situated for a seat. And what between being used for a seat by the lazy and the tired, and as a platform for the boys to leap on to, and off from, it, being a soft stone, is wearing rapidly away. Some carpenter or painter of ploughs and waggons has reared himself on it with his blue paint, and has amused himself while he sat by daubing his broad brush upon some parts of it. Others have chipped out part of some of the letters; and one corner is chipped away two inches or more, the last time the roads had been muddy, some youngsters had been jumping on to it from a certain distance, for the mud from their nailed shoes stuck to the edges where they had got their feet to, but lost their balance from, preparatory to their falling backward.

I asked why it was not better protected, and was answered that it first had been the intention to put a railing round it; but that for some reason it was not done. Perhaps this notice of its present condition will remind the relatives or political friends of the deceased of this unperformed duty. In the course of a very few years, if it remains exposed as it is to the ruthless feet of the young "chopsticks," the inscription will be illegible and the stone a wreck. The inscription is as follows:—

"Beneath this stone lie the remains of

WILLIAM COBBETT,

born in the parish of Farnham, 9th March, 1762. Enlisted into the 5th Regiment of Foot, 1784; of which he became Sergeant-Major in 1785, and obtained his discharge in 1791. In 1794 he became a political writer. In 1833 was returned to Parliament for the borough of Oldham, and represented it till his death, which took place at Normandy Farm, in the adjoining parish of Ash, on the 18th of June, 1835."

Next to this stone and grave is an upright stone bearing the name of George Cobbett, who died at the age of 59, in the year 1760. I did not see the name on any other gravestones.

I found the house standing near the stream of water aforementioned, where report says Cobbett was born. It is at present a public-house, and bears the sign of "The Jolly Farmer." Across the stream, amid some houses which skirt the road leading up to and over the high ground between us and Waverley Abbey, I saw a mean-looking beerhouse, bearing the sign of "The Farmers' Retreat." I remarked that, if the Corn Law continued, the workhouse was more likely to be the farmers' retreat, as it had been to many of them and their labourers during the last thirty years. The delusion practised upon the farming class by that most treacherous thing called Corn-Law protection has made the whole labouring population, with but a few local exceptions, paupers, or poorer than paupers, and it has brought the farmers to the verge of insolvency. Where was there, or when was there, in this country or in any other, a whole class, and so large a class, spread all over the kingdom in such difficulties? Who ever saw master tailors or master shoemakers, or shopkeepers of any class, so universally and so very often, so almost continually, in distress as the farmers are? Can they have any doubt that something must be wrong? Yet many of them think they must not, not a few dare not, listen to any instruction which would explain to them why and by what means they are kept in distress; they must not listen to anything affecting their condition but what comes from the gatherer in of the rents.

Whether the little beershop has been the retreat of some

broken farmer who has become its landlord, as is very often the case with beershops and broken farmers, or whether the sign indicates that any farmer, vexed with the world's cares, may hide his head in that little hole, and pour beer into his throat to kill care, as water is poured into rat-holes to drown rats, I cannot say; farmers, amid all their difficulties, generally find a better place to drink their beer in than that now referred to at the bottom of the hill. But from what I saw of the game, and from what I heard of its destroying practices to the farmers occupying land on the hill and over the hill, I should deem it the most natural of consequences if they, whose crops are so destroyed, were to rush down and hide themselves in this or in any other hole, and never go near the farm again. It is, in short, enough to break the heart of any man whose heart is not cast iron, to see his crops destroyed by vermin bred there, and preserved for the pleasure of some one who bears no part of the expense.

But of this hereafter. Bad as it seemed there, I have since seen it worse elsewhere.

WAVERLEY ABBEY.

Having come over this high ground, instead of coming round its elbow and down the valley, I descended by a steep road into this valley, and by a road overhung with lofty trees, the trees towering on the sides of the bold height on my right hand; a succession of green meadows lying to my left, with the river in the centre, or sometimes loitering in the shady places by the side; with deep, heavy woods rearing their heads beyond the meadows, I journeyed downward to the south, and at last found a gate, which I was told led into Waverley Abbey.

This was a famous settlement of Cistercian monks, who dispensed their hospitality to all comers, and their bounty to the poor, previous to the spoliation by Henry VIII. Cobbett gives a glowing account of the monks' garden in his "English Gardener." It continued to exist in the time when he was a boy, and he says it was the first garden in which he "learned to work, or rather to eat the best kinds of garden fruit." It has since been, as he expresses it, all pulled to pieces. The old Abbey still remains; but a new house is built, and the old gardens made into a lawn. It has changed proprietors several times since the monks' garden was destroyed, one of whom was the late Poulett Thomson.

MOTHER LUDLAM'S CAVE.

Leaving Waverley on the right, I crossed the river, and turning into the dark shady woods on the east side, turned up by a path which I was told would lead back to Farnham by the bottom of the woods and the verge of the meadows. The greater part of this way was within the enclosures of More-park. The cave is in the bottom of a sandy hill overgrown with branchy trees; and a spring of water issues from it, and crossing the path, falls down to the river.

Dean Swift used to visit Sir William Temple at More-park, and was fantastic enough to come (so tradition says) and study and write in this cave. I went into it as far as I could get, and drank of its water. As a cave it is nothing better than a sand-pit. It may be twelve feet high, and twenty feet wide at the mouth, and fifty or sixty feet lengthways into the hill. It was probably dug out to collect the various springs of pure water which ooze through the sand into one. Or probably it was dug out for the purpose of putting good Mother Ludlam's story into it. Being in the bosom of a forest, secluded from every human eye, it answered the purpose of those who had an interest in keeping up a belief in ghosts and witches exceedingly well.

Mother Ludlam was reputed to be a spirit of rather amiable temper, a kind of benevolent witch in profession. She was to the villagers of Farnham and people round Waverley in those olden days what the Corn Law is to the farmers in our days. At great trouble to themselves, and at the cost of much dread and terror, they, when they wanted assistance,—when, for instance, they wanted to borrow some utensil of domestic service, which their own want of skill or their poverty—poverty caused by those who deluded them—had prevented them from acquiring in a more direct and reasonable way,—they went here at midnight to ask Mother Ludlam to help them, or to lend to them. It was of course absolutely requisite to profess not to be afraid of her. They were obliged to call upon her by saying, "Good Mother Ludlam, come and give me" so and so. If they had no faith in her goodness, or if they spoke evil of her, some agent of hers punished them. If they were not punctual to the very letter of time in repaying her for the assistance lent, she was very severe with them.

Her manner of lending was this:—They called upon her at midnight; and, if they spoke her kindly enough, she put what they wanted at the mouth of the cave, which they found waiting for them in the morning. The whole was beyond question an imposture on the part of those who had an interest in keeping up a spiritual terror over the common people. To keep the good Mother Ludlam from doing any harm there was enough to be paid to the priesthood. And as those visiting the cave to borrow from her had to be prepared by faith and prayer with some priest, it was always known beforehand what they wanted to borrow; consequently the article was procured and conveyed to the cave.

So much for Mother Ludlam. And so much for the delusion of the Corn Law.

ONE WHO HAS WHISTLED AT THE PLOUGH.

P.S. Cobbett's farm, and other particulars of this district, will be given next week.

NOTES OF A TRAVELLER IN THE SUMMER OF 1844.

No. IX.
